* Alt-tech is THE moral subsitute to traditional social network sites, hosting providers and domain registrars. Alt-tech started when groups related to the FLOSS philosophy started to be concerned that traditional social networks were harvesting their users' information for commercial purposes and to collaborate with the US government. This made that alternatives to traditional social networks such as GNUSocial, Quitter and Diaspora made available. Although they focused on decentralization and privacy, they were not as successful and are only being used by free software and FLOSS enthusiasts. However, it was during the Donald Trump administration that alt-tech companies started to be much more known, after both mainstream media and traditional social networks began to establish editorial policies focused on the left side of the political spectrum and social justice. As a result, many hate groups, neo-Nazi associations, and people with controversial or contrary opinions found themselves with their social network accounts, bank accounts, websites, and web domains closed.

But by constantly telling the child stories about Tarquin's heroic deeds without revealing anything bad about his deceased older brother, Victus has effectively put Tarquin on a pedestal, made Tib seeing himself as unworthiness and thus damaged his self-esteem beyond repair when he grew up.

* Alucard at one point shows his considerable power as a vampire by crossing the

* Alucard invokes this trope on numerous occasions, even quoting the trope verbatim during his first fight with Anderson.
* Alucard is the most obvious example, but certainly not the only one. That series runneth over with badasses.
* Alucard lets loose a parade of jokes about this trope when he first encounters Father Maxwell and Alexander Anderson. It comes back a couple times during Episode 8.
* Alucard, pretty much all the time. Even enemies who know he's an immortal vampire still try. Though they may imagine they have a chance of slowing him down, it's likely that all the drama surrounding his regeneration is purely for his amusement.
* Alucard's a weird case. He'll gleefully slaughter ordinary humans just for being ordered to attack him, but he also believes that monsters like himself are, in truth, weak because they could not bear to live mortal lives. He believes firmly that humans are the only ones who could ever truly defeat him, the way Abraham Van Helsing and his companions did in the past. Thus he has a loathing for humans who choose to become monsters for the sake of power, especially the power to defeat him.
* Alucard's fledgling, Seras Victoria, was a police officer before joining the Helsing organization so little has changed for her. It's just that now the criminals she hunts are a lot more dangerous.

* A Lullaby Sinister has the Surrogate School that students get pulled into when they hit REM cycle. Dying there means dying inexplicably in your bed in real life. To make things worse, the Surrogate School induces amnesia during waking hours, making people forget about its existence until they find themselves back in the location. The only safe way to avoid the Surrogate School is to simply never hit REM. But of course a lack of REM sleep forces your body to induce REM more often.
* A Lullaby Sinister has Yunosuke Kawabata. Subverted sometimes but more often than not, Yunosuke gets into more trouble when he's actually not trying to be perverted and frequently involves Sadako Kojima. One instance takes place at the beach where Kaito Inoue declares a contest to see who could find the coolest object from the ocean floor. Upon surfacing and declaring that his sea cucumber was definitely the winner, Sadako knocks Yunosuke unconscious with a conch shell fearing he was about to flash himself.
* A Lullaby Sinister, Kaito Inoue is obsessed with anime, manga and video games to the point of it invading his everyday conversations. He is unaware that his references typically go over everyone's heads.

Alum's replacement with more commercial grooming products mean the only people who risk this experience these days are traditional shaving enthusiasts and people who aren't very good at making homemade pickles.

Her second skill is a Windrunner Power Shot-like skill shot with a very long range and startup time. She can enhance all her abilities with her ultimate to steal more attack speed, gain 100% evasion chance, and multiple 0-cost global range shots. All these combined makes her a powerful laner who can gank and support with a very fast autoattack speed to let her persist late-game.

* Alvin and the Chipmunks, Alvin hears about having an oldest fan, and thinks she's just in her twenties, while she is actually a senior citizen.
* Alvin and the Chipmunks: Alvin, Simon and Theodore, as well as Brittany, Jeanette and Eleanor are obviously intended to be the chipmunk equivalents of human children. Throughout the franchise's history, though, they have cycled through all three stages of schooling (elementary, middle, high) with no visible signs of aging.
* Alvin and the Chipmunks. Alvin tries to get a private audience with the Russian ambassador, but his efforts get him, his brothers, and Dave thrown in jail. Dave asks for his one phone call only to be told they don't apply in espionage cases.
* Alvin and the Chipmunks, and Jeanette and Eleanor as the stepsisters. When the dream ends with Miss Miller refusing to let her marry Prince Alvin, Brittany awakens and finds the real Miss Miller willing to compromise with her, making Brittany realize that she isn't living with a mean stepmother after all.
* Alvin and the Chipmunks a network series at the same time: the first 65 episodes (five standard length seasons, and half of a long sixth season) were produced specifically for syndication, but were also network-broadcasted, while the other 39 episodes of the series (the second half of Season Six, and the last two seasons) were not initially included in the original syndication package, and only aired once during the show's original run on NBC (however, international markets do include these 39 episodes).

* Alvin and the Chipmunks cartoon, Alvin is left at home as punishment while Dave takes Simon and Theodore to an amusement park; Alvin has to clean the house while they're gone. Simon and Theodore make a bet over whether or not he'll actually do it, with Simon betting he won't and Theodore insisting that Alvin learned his lesson. When Alvin sees Theodore collecting from Simon at the end of the episode, he's outraged that Simon would bet against him.

* Alvin and the Chipmunks episode "No Chipmunk is an Island", Alvin, Simon, and Theodore move into separate bedrooms after a fight, only to have nightmares about what would happen if they were left unchecked by each other's presence:
* Alvin and the Chipmunks episode "Operation Theodore", the Chipettes volunteer at a local hospital. Their Candy Stripe uniforms include pink blouses, striped pink nurse hats, and striped pink pinafores with extra lace and bows.
* Alvin and the Chipmunks felt, realizing that a coprophagy gag was now mainstream enough for what was ostensibly a children's movie.
* Alvin and the Chipmunks films changed the Chipettes so that they end up being adopted by Dave instead of Miss Miller. This means that they're legally the adopted siblings of the Chipmunks while still being their love interests.
* Alvin and the Chipmunks, flat out stating he is going to pretend he has a lunch to go to.

On one occasion, he even adds having a full head of hair as a reason for being too young to die.
* Alvin and the Chipmunks is a male example. He is the most nice and sweet member of the Chipmunk. But he is also very ingenue and nearly a dupe with Alvin take advantage of this in his schemes.

* Alvin and the Chipmunks is an earlier example that targets kids: taking studio recordings and pitch-shifting it up to comical levels that sounds like it could be sung by Chipmunks.
* Alvin and the Chipmunks. Jeanette of the Chipettes is both the brainy one and the brunette in the Chipette trio.
* Alvin and the Chipmunks: Jeanette of the Chipettes is the shyest and clumsiest of the group, with her thick glasses emphasizing this.

* Alvin and the Chipmunks Meet the Wolfman) early aging is due to how stressful her job is; she's getting an early retirement.
* Alvin and the Chipmunks Meet the Wolfman has received two Czech dubs. One for VHS release in 2001 and the other for airing on Minimax.
* Alvin and the Chipmunks Meet the Wolfman with Theodore as he is walking out from his house carrying his lunch after asking for meat from Dave.
* Alvin and the Chipmunks mentions "white gold", better known as cocaine. The G rating does not allow any drug references at all outside of an educational context.
* Alvin and the Chipmunks movie, Dave elicits one of these when he throws his music equipment into the yard. Unnervingly, he proceeds to throw the rest of his equipment in the same general direction.
* Alvin and the Chipmunks played with this in the 1988 episode "Food for Thought" (in which Alvin and Simon are helping Theodore prepare for a history test). One scene shows Alvin (portraying General George Custer) about to be ambushed by the Indians during the Battle of Little Big Horn.

* Alvin and the Chipmunks. Theodore gets hooked on a soap opera where one of the characters has a disease called Zomboid Rigadosis. Alvin and Simon try to convince him it isn't real, but they all panic when Dave appears to have become stiff and motionless, and try to find a way to cure him. It was actually a wax statue. Things get especially amusing when they try to take "Dave" out to get some sun, and he begins to melt.

It was the wrong choice.
* Alvin and the Chipmunks: Though the Chipmunks are still the main characters, it still follows the "unlucky guy in love has cartoon characters as pets" formula. That said, the human in question, Dave, was a part of the franchise to begin with, acting as their father figure.
* Alvin and the Chipmunks throws out because he realizes he cares too much for them, but many weeks later, they find the crumpled piece of paper and assume that Dave is pretending to enjoy their company — just when they had been getting along — so they decide to leave him, join forces with Dave's former boss, and go on their contractually-obligated worldwide concert tour.
* Alvin and the Chipmunks was "The Chipmunk Song", aka "Christmas Don't Be Late".

* Alvin and the Chipmunks when Dave catches Alvin taking a shower in the dishwasher while singing "Don't Cha".
* Alvin and the Chipmunks. When Olivia is lucky enough to be adopted, Grudge kidnaps and locks the Chipettes away so she won't be able to take them with her, intending to make money off the three little chipmunk girls. They barely manage to escape and then hide in a ship sailing to the USA...

However, it uses so much electricity that a torch-and-pitchfork mob, led by Dave, Simon, and Theodore, chops a tree down onto his power lines, causing the wave pool to malfunction and send him spiralling down a whirlpool.
* Alvin Fog and Mark Scrapton do this in order to get access to the prison where 'Handsome Phil' Foote is being held in
* Alvin Law was born without arms. You may have seen him on an episode of
* Alvin Lucier's 1961 composition "Elegy For Albert Anastasia" is mostly made up of inaudible low frequencies, with the few audible sounds being extremely quiet or

fleeting.
* Alvin — Brittany: The leader of the group, argumentative, superficial, most likely to follow traditional gender roles.
* ALVINNN!!! and the Chipmunks: At the end of "She's Got Style," Brittany is chased by a dog and runs up to the camera, her mouth closing in on the camera.
* ALVINNN!!! and the Chipmunks: In "Family Spirit", Dave states he met The Chipmunks seven years ago, cancelling out the events of the earlier series.

* ALVINNN!!! and the Chipmunks, "Principal Interest", shows that Alvin has a crush on the principal.

* Alvin Purple by a group of hysterical fangirls, and it all goes downhill from there.

* Alvin, Simon and Theodore end up doing one of these on an episode of
* Alvin's Swap Shop has the eponymous main character take up ownership of a "swap shop", starting with a "trained ant" and moving up to having the entire shop full from trading.
* Alvin starts off with Alvin taking a bubble bath with the product while singing its jingle. Mighty Mouse is nearby and hears it. He comments "Uh-oh... someone's in trouble!"
* Always a Bigger Fish. All we really learned was that he was very protective of his family, he was sleeping with Katherine, and he had a bitchy werewolf friend who came back to haunt us. The writers like this one, because we also have: Jules, who was pretty much just a slightly sympathetic jerk who tortured Caroline, taught Tyler how to be a werewolf, was used by Klaus, and, oh, died. All after about four episodes.
* Always a Bigger Fish Leslie Rudd. Collin was always obnoxious, but in the one case he had every right to be annoyed - Rudd having sent Collin's boyfriend into serious danger - he got smacked down by the one character with no right to criticise. Oddly, while Fox suffered a backlash from the fandom (and perhaps, the creator) when his Karma Houdini Warranty expired, Rudd was universally adored...and as he adhered strictly to the terms of his warranty, got a happy ending.
* Always a Bigger Fish: The heroes are saved when the monster gets eaten by a bigger monster.
* Always a Bigger Fish: Where the heroes are saved from a scary monster by a scarier monster.
* Always a Bigger Fish: Your life gets saved by something that wasn't aiming to rescue you.
* Always a Child to Parent: A parent has trouble treating their children like adults as they mature.
* always aim for the head, so the zombies never got close to them and the soldiers didn't know what they were dealing with and had no reason to try and find out.
* Always a Live Transmission: A work that would probably be pre-recorded still appears to be happening live.
* always angry, has an intense rivalry with Haohmaru, and is just a sociopath in general. The only time he ever seems to enjoy himself at all is when he's cutting someone to shreds.
* always arrive before the race between Rainbow Dash and the bullies, and Starlight can interrupt it in several different manners, while Twilight tries various tactics to stop her. It also shares the common element of finding the "right" way to stop it, in this case convincing Starlight to renounce her revenge.
* always a side unto himself, and never works for anyone, just tricks people into

doing his bidding.
* always a strand of it over their faces, even during battle scenes. Bonus points for Ururu's case, whose strand for some reason is always divided in an upside-down "Y" shape, framing her eyes and nose. When Rukia was dangled upside down by Gunjo in the fourth movie, that strand of hair of hers didn't even move an inch. Hell, her hair, apart from the tufts of it at her shoulders, weren't moving at all.
* always at least twice and someone dies either to him or directly because of him every other week.
* always at some point. Of course, this can be just as much the fault of the GM, who could also use this against players to surprise them.
* always attack Clive, if he's still alive. Combine this with some liberal use of the Revive spell, and the battle becomes trivial.
* always been Mephistopheles and the immobile double on the throne was a fake. So his loyal subordinates were proven loyal and the disloyal element was tricked into exposing themselves for a purge.
* always being prepared this is one of the three shinobi lessons Naruto learns when he starts trading scavenged weaponry for tutelage.
* Always be on a diet, always for cosmetic rather than health reasons. View food in a bizarrely moralistic manner, considering herself "good" for eating healthily (almost invariably yogurt) and "naughty", "decadent", and "sinful" for eating chocolate. Or she's bloated. Watch any television program aimed at women - it will have at least three ads detailing how you can be less 'bloated', either by pills or a drink.
* always between any potential intruders and the Garden regardless of which direction they approach from.
* always blamed his shortcomings on other people, made the Banana Guards wear wigs resembling his hair, have Finn and Jake wear clunky, weird-looking armor, and was willing to send his subjects to their deaths in battle against the Cloud Monster.
* always boost damage regardless of what side the targets are on: for example, the Ennead share Ra's nemesis icon and so will deal bonus damage to each other.
* always bring that vital evidence to the courtroom in time. But notice basic logical discrepancies? Not a chance.
* always But unlike most examples, this was part of the reason why he was so well liked by the fans (also helped that he didn't come off as completely infallible). It also helps that he was a lot less active than the other Decepticons so he didn't suffer from overexposure.
* Always Camp: The idea that certain professions attract drama queens and people with campy sensibilities verge into the stereotype area (when "camp" is equated with "gay"), which leads to assumptions and rumors about people in those jobs.
* Always capitalize and use trademarks in their correct form.INCORRECT: The image was Adobe® Photoshopped.
* Always Chaotic Evil and could be attempting to achieve... well ... anything in the long term. If anything, since conspiring in general is praise to Tzeentch, he could be slurping power out of all the bickering and politicking in the Imperium with eventual plan to re-introduce magic into their ranks, participating in wars and invasions to provoke further in-fighting in the Imperium. We just don't know, no-one has ever really tried to tell us, and that's why Tzeentch SHOULD be a manipulative bastard but tends to more feel like a very clever scooby-doo villain with no specific motivations that the bad guys can stop.
* Always Chaotic Evil and enjoy inflicting suffering. Though whether celestials and fiends need to eat varies from edition to edition and sometimes even writer to writer.
* Always Chaotic Evil (and, once, the multiverse) other than themselves, and they often tend to find themselves dealing with Earth.
* Always Chaotic Evil: An entire race or species is evil and aggressive.
* Always Chaotic Evil Anti-Paladin class in an early Dragon Magazine article. An Anti-Paladin was an "aficionado of the fine art of poisoning," who considered "poisoning to be both an aesthetic pleasure and a means of artistic expression." He used poison at every opportunity, including to test a new poison just distilled for

him, to determine if his stock of vintage poisons was still potent or simply to see if he can get away with it.
* Always Chaotic Evil: A race or group is treated, justifiably or not, as so innately evil that they're over the line by default.
* Always Chaotic Evil beings managed to ascend and attempted to use the Ancient knowledge for his own benefit. Because his ascension had been aided by another the Ancients responded by only partially de-ascending him, leaving him with all of his knowledge (as well as being effectively unkillable).
* Always Chaotic Evil, but Arrancar have free will and individual personalities.
* Always Chaotic Evil, but female oni tended to be very beautiful and sometimes married particularly brave and heroic men.
* Always Chaotic Evil cannibalistic witches) who take the forms of lions, leopards, hyenas, jackals, crocodiles, snakes, bats, dogs, pigs, water buffalo, geese, grasscutter rats, wildcats, and sharks. They use these shapes to kill and eat people, dig up graves, destroy crops, and other heinous acts.
* Always Chaotic Evil, Dark Iron Dwarves have become a playable race for the Alliance.
* Always Chaotic Evil, even the Lowlies - the oppressed slave cast of their world subjected to constant abuse (so constant, in fact, that the idea of freedom is entirely alien to them) that ends with death - are said to be just as corrupt as their masters. Exceptions to this rule exist, such as Orion (due to him being raised by someone far nobler), his wife Bekka (born and raised in Apokolips and heroic in every way that counts), and Big Barda (groomed from young age to be a ruthless warrior for Darkseid's elite before she switched sides).
* Always Chaotic Evil few), living in disorganized and backwards bands in swamps and marshes and attacking those who wander into their territory.
* Always Chaotic Evil have an evil alignment, but this seems to be just a way to give her the Assassin specialisation.
* Always Chaotic Evil have elements of this, being both proud and warriors, though these traits in them stem less from honor and belief and more from their extremely animalistic natures.
* Always Chaotic Evil, it was eventually revealed that the Tuskens are a humanoid alien race (called either "Ghorfa" or "Kumumgah" in their own tongue) with slightly feline facial features, although occasionally there are some Human Tuskens who've been adopted into a tribe.
* Always Chaotic Evil: Mesopotamian examples include the Allu, Asakku, Gallu, Rabisu.
* Always Chaotic Evil murderers, but children who think they're playing a game with other species.
* Always Chaotic Evil other species enough to warrant galactic conquest. They split over whether it's better to lock them up or kill them just to be sure.
* Always Chaotic Evil species that both Atlantis and Xebel fight against.
* Always Chaotic Evil subordinates. By the time of the series, he clearly realizes that he made a dreadful mistake and condemned his species to extinction.
* Always Chaotic Evil that are always the enemies. Not only you can choose a Minotaur as your starting race this time, but there is an entire friendly city of them (which was flooded by tidal wave at the beginning of the game), unlike in any other game. Even more, they are one of the required members of an alliance you have to form against the cataclysm that is happening, and their leader will agree to help you if you can save their city.
* Always Chaotic Evil), the level of support they've garnered is almost shocking.
* Always Chaotic Evil. (This doesn't explain where they went, though...)
* Always Chaotic Evil. This is also lampshaded with an in-game holiday dedicated to helping the orphans in every city.
* Always Chaotic Evil to the point that even the 'good' ones are only comparatively good because they don't immediately resort to murder every time their tea is too hot or it rains on their picnic. Note that absentee parents are pretty much universal among the errants outside of the epilogue, so most of the long-term relationships end in the human NOT taking them back.

* Always Chaotic Evil used by the Goa'uld, for why some of them become evil and others don't. Along with the fact that most of the Tok'ra are descended from a single queen who broke with the other Goa'uld in early days before they had become fully entrenched in their evil. They've had a very few turnovers from the Goa'uld since, but none in the last few centuries.
* Always Chaotic Evil was the last straw. He returns after Thrall convinces him that the New Horde is better.
* always claimed he was retired, but the thing is, with wizards, being "retired" isn't always that straightforward. (Folks in the Realms often suspect that a wizard who makes this claim is up to something, and they're usually right.)
* Always CloseThe cutscenes that follow a timed mission don't reflect the actual amount of time the player had left to complete it. They always treat it as if the player escaped at the very last second.
* Always Close: The video game shows the player escaping in the nick of time, even if there was plenty left on the clock.
* always crazy (and the "but for ..." is usually some fundamental physical constant of the universe, or at least of Motie psychology).
* always decloak facing the enemy, no matter which way they're facing when under cloak (this is to counteract that fact that players flying them also can't see them).
* always defenses to protect them, then detonating the bombs at an opportune time to mill your opponent's deck (which served as their hit points).
* always denying band, picked up a large Christian fanbase in the '90s due to their religious beliefs and their vaguely spiritual lyrics. Then frontman Doug Pinnick came out as being gay, and suddenly their fanbase condemned them as "traitors" to the Christian rock scene.
* ALWAYS disproportionate. They also respected the diplomatic immunity of foreign messengers carrying messages to them.
* Always: Dorinda Durston is shown on a fire aviation airstrip, surrounded by pilots, and mechanics and sooty firemen. For her birthday, her boyfriend gets her some "girl clothes", an off-the-shoulder form-fitting white dress, that has the entire house lining up to dance with her.
* always encounter The Samurai from Episode 4. Of all of the characters of the day he is the most frequently appearing, quite possibly for being the first. Similarily when a fic does try to shake things up from canon, either with adding game plotlines into the anime or doing additional plotlines between gyms original to the fic, it usually doesn't happen until after the Pewter gym making the span of time from Pallet to Viridian to Viridian Forest to Pewter pretty much a plot bottleneck.
* always ends in 0 or 5, but never 9. 10 Chances is also one due to every price always ending in 0.
* Always explanation. The funny thing is how the natives in the party more or less ignore these.
* Always Female works on the same principle as other examples. Nobody's going to go against a unassuming older Catholic priest are they?
* always forgives him, no matter what he did, and always wants him to come back when he is absent, for reasons that go beyond the advantage of having an angel on his side.
* always fun and exciting. The Navigator, a human mutant who has a third eye capable of seeing in the warp, sits in a chair that he is literally wired into (including a tube that deposits saline capsules into his mouth to prevent him from dehydrating), which is then raised into a transparent hemisphere on the surface of the ship, where he pilots the vessel as it travels through hell. The only navigational landmark for him to use is the Astronomican, and eldritch horrors that would drive a normal person insane constantly gnash and throw themselves at the vessel, kept at bay only the Gellar Field which the ship generates for (relative) safe passage through the warp. The results of a ship's Gellar Field failing are, to put it lightly, rather unpleasant.
* Always Gets His Man: A cop, detective, or vigilante who boasts that they always succeed in capturing the criminal they pursue.

* always getting his shirt ripped off when he flexes his muscles. Lampshaded by Greed in one of the outtakes.
* always given a chance to repent, usually followed by "or else, I'll have to stop you." The "a chance" part is quite specific, too. They get exactly one chance. They aren't told what will happen if they don't take it, but they learn the hard way that the Doctor does not play around.
* always given a funeral pyre. This is not due to respect, though. Some Nighthawks are Black Slayers, and if you don't burn them, they'll come back from the dead and attack again.
* always has his entire face covered up in whatever media he's appeared in, such as a commercial, a magazine, and even the DVD! (The hole in the middle of the DVD was actually placed in a way so that it too covered Mike's face).
* Always" has the lead singer take off her head and place it on a nearby table as her headless body strips down to her undergarments before her very eyes not long before said body takes a shower.
* always have to clarify "The State, not the City" when mentioning that they come from New York.
* Always Having Juice ability amounts to this; if he ever messes up, he strikes a pose and goes back in time to a point where he can start over.
* Always Having Juice, and not a single one of the fifteen main characters is ever seen having juice even once. It was named after a song by Dan Deacon, but the song in question is a chiptune with no lyrics and no relation to the blog's actual content.
* Always Having Juice are driven to complete and utter bedlam because of their power, then AHJ's Chaos Emeralds definitely qualify as these. This makes the Master Emerald's role in keeping them at bay all the more important.
* Always Having Juice kept afloat by magical (and occasionally evil) artifacts from the ancient past. That's just the tip of the iceberg.
* Always Having Juice was born without wings, but it doesn’t seem to bother her anymore.
* always hits it off with a beautiful woman before the end of the story, but he's good enough that nobody really minds.
* always honest, except when they're deceiving, misleading, or flat out lying.
* always human, complete with an appropriate background for their particular Pilgrimage.
* Always Human due to her inability to use "mods", nanotech body modifications used in the sci-fi setting, which offends the latter.
* Always Human gives herself one after deciding to change her college major.
* Always Human is a lesbian romance story that takes place in a future where most people modify their bodies at will using nanotech "mods". One of the main characters is the daughter of a gay couple and at least one side character is non-binary.
* Always Human use mods if she could, but the two have a happy ending together.
* Always Human, while others are as intensive as full-body modifications to withstand long space journeys. One of the main characters has a condition that prevents her from using most mods, which is what kicks off the plot.
* Always Identical Twins: When twins of the same sex are mentioned in fiction, they are almost always identical, not fraternal.
* Always in Class One: Works about or in a school usually take place in Class X-A or Class X-1.
* always. In many episodes, Courage would start looking for something in the pockets that he didn't even have, either as a weapon or an item to trade or something to solve a problem with. In fact, there were episodes where he would pull out boats, other animals such as ducks or WHALES, and even a full-size anchor (which was one of his favorite possessions).
* always involving killing any potential rival; we've seen no evidence the sex itself is violent.
* always, is guaranteed to have a good television audience. When the tournament is hosted by Canada (which happens quite a bit), these scenarios frequently result in

sell-out crowds, especially in the three aforementioned scenarios. However, the international prominence of the tournament has grown too; Canada's six-year drought has given other countries time in the spotlight, including the Czech Republic, Finland, and Sweden, and the U.S. When Finland won the tournament at home in 2016 in overtime, the atmosphere could have easily been mistaken for a game involving Canada.
* always keep this in mind when handling two of them, unless you enjoy having two flying chunks of metal making a sandwich out of your fingers.
* always killed by the addicts for his drugs before you got that far in the game. This problem was never completely fixed—in the expansion, Shivering Isles, a certain quest was almost impossible to complete because the NPC was killed for stealing spoons before the player could talk to him. The fix for this was a patch that just made the NPC immortal.
* Always Lawful), depending on which episode in which series you're watching.
* "Always Look On The Bright Side Of Life" has become such a popular standard that some first time viewers of
* always made a point of reading the morning paper so he could tell King Yemma what's going on in the world if he died that day.
* always meets and hangs out, and is immediately kicked out and barred from coming back to the diner by the group's usual waitress Kiffany.
* Always Murder: In police/detective shows, the vast majority of the crimes they investigate involve a dead body and it's a homocide.
* Always Murder suspicions by explaining that the overwhelming majority of arson cases are just insurance scams. Suffice to say, in reality the motivations for arson are more varied, from murder to revenge to hate crimes.
* Always Need What You Gave Up: Character tries to give up their powers or weapon, then ends up in a situation that they could've dealt with easily had they kept their powers or weapon by then.
* always neutral sillit. They can use any mirrored surface as a portal to and from their home plane, and spend their time spying on the Material Plane or abducting key figures, specifically to generate their victims' mirror duplicates, which regardless of their alignment are subordinate to the nerras. It's thought that this activity is a prelude to a nerra invasion of the Material Plane.
* Always Never mind that the A-26 was a medium bomber from WWII and designed to be able to survive bullets through the wing...one flaming splinter is all it takes to make the plane explode. From the fuselage, natch.
* always, never the incisors or the canines) and kick out all the little "plaque particles"... even though it's well known that plaque is actually a whitish bacterial film.
* Always Night: A location — or story in general — is in constant and unending darkness.
* always nude. The episode "A Fistful of Meg" had him shave his fur off to "even the score" with Peter, who is constantly harassing Brian by appearing naked in front of him.
* always of the past contestants have had their progress hurt by making friends in the house, the "bitch" of the group never seems to win, and the winner of each cycle always seems to have made at least one close friend, usually having had amiable relationships with most of the contestants.
* Always on Duty: No matter what time of day or night, the main cast are always the ones on duty, ready to deal with problems.
* always, one for the Defence Minister and one for the Chief of General Staff. An actual nuclear strike requires receiving the command from at least two out of three devices.
* "Always One of a Kind." Show your individuality by wearing a red-and-white shirt all but identical to everyone else's!
* always perform a Tactial Withdraw and regroup after falling back. As of their latest Codex, they also have the "Combat Tactics" special rule, allowing them to voluntarily "fail" a morale test, fall back, and then rally thanks to the aforementioned special rule.

* always pick a body just to seduce a human. Instead of a sexy lady or a young stud, Crowley (King of the Crossroads) possessed something along the lines of a well-heeled, middle-aged Englishman.
* Always Plenty of Light at the Starlight All Night Diner Sam has a lot of one-night-stands despite being in love with Jessa.
* always pronounced with the emphasis on the second syllable until one day Milhouse came out with the obvious pun. Turns out none of the kids had ever thought of it before.
* Always: Quite a few among the aerial firefighters, but Pete stands head and shoulders above the rest, with Ted eventually rising to a similar stature.
* always referred by everyone in the film as "The Shadow Man", although no explanation is given as to why.
* always refer to himself as a thief no matter what his side-job is. There are no interactions between two party member who share jobs (as primary and side-job).
* always, refer to Rule One. In other words - put up, shut up and don't argue.
* Always remember Rule 1: Do not act incautiously when confronting a little bald wrinkly smiling man.
* always returns the vehicle (usually off screen, unless it's a plot point) "reasonably intact" (which admittedly can mean "after a head-on collision"), and if he steals it from a business parking lot during business hours, it will be returned by 5:00 PM if at all possible.
* always right or left (which can cause confusion when anatomy students encounter photos of people in other contexts, where the camera's perspective is often used). It also uses subject's-perspective terms such as anterior, ventral, proximal, or superficial to avoid ambiguities that terms like "ahead" or "below" might entail; what exactly does "further up" mean when the someone is lying on their back?
* Always Running a confessional novel about Mexican gangster in California at the end Luis meets a disturbed man who has lots of disgusting scars on top of his head that he hides with a beanie hat because of gang warfare.
* always runs out of hot water when she's in it. Cut to Peter admiring Jason working the magic shutoff valve.
* always said with the integral article. Even if it would make no grammatical sense in context, his name is always "The Cheat", never just "Cheat". Same goes for his old-timey counterpart, The Sneak.
* always Satanic), but still be a good guy. The woman incidentally is nearly always a raped nun who dunks her newborn into holy water to wash evil away from him as soon as he is born, but he still grows up a horny bastard with a taste for young virgins — the modern tellings tend to forget that aspect of his character.
* Always Save the Girl relationship with the girl is more important than others' suffering!
* Always Save the Girl: Where the hero values the life of their love interest over absolutely everything else, often including the rest of the world.
* Always Save the Girl. While she is determined to live up to her mother's expectations for being the Nishizumi heiress so that Miho will not have to, she also does not want to do anything that Miho would not approve of, feeling guilty when she unwittingly shoots an enemy tank that was on her way to rescue some of her teammates.
* Always Second Best: A character is always one-upped by their rival no matter how hard they try to beat them in competitions.
* always shown wearing opaque full body environmental suits, is known mainly as an Ice Planet, but according to Weyoun is "actually quite temperate." The planet itself is never actually seen, and this confusion serves to reinforce the mystique of the Breen.
* always sold as "patriotic" mementos, and owning one isn't just owning a coin that has no real cash value, but it's owning a piece of history, so we'll never forget! No national tragedy is too powerfully painful for them to exploit.
* Always Someone Better arch-rival who keeps one-upping him with better funding, equipment, henchmen and general level of success. They rarely actually fight, though Drakken has been known to steal from Dementor because his inventions are

grudgingly better.
* Always Someone Better: No matter how good a person is in their field, there's always one person who is better at it than they are.
* Always Someone Better one once he works up the nerve to get away from the Krusty Krab and Mr. Krabs.
* Always Someone Better to Chandler. However the writers make it very clear that Monica moved on from him and it's Chandler, with all his neuroses and insecurities, who is the love of her life.
* Always Someone Better to the trio initially, by their later appearances they're near equally bumbling and prone to childish bickering with the three over who is superior.
* "Always Something There to Remind Me", best known today for the '80s synthpop version by Naked Eyes.
* Always Sometimes Monsters revolves around this. Your protagonist discovers that their ex is getting married at the end of the month, and is desperate to make it across the country in time to stop the wedding.
* Always Sometimes Monsters seems like a title that makes little sense on reading. It does make sense later in the game, as it becomes clear the story is about the fact that people will always do things wrong sometimes in order to get by.
* Always Sometimes Monsters's right to make their own romantic choices is rarely touched upon.)
* Always Sometimes Monsters to events that shaped the protagonist's past.
* always speaking in an obviously affected manner, so most of the usual tells simply don't apply.
* always start there as you have no reason to ever play the introductory area ever again. Also, as this level isn't broken into separate acts, when you reach one of the other peaks and the name of the area appears it will also tell you if you've found the time piece or any treasures there.
* always stay gone during the mass interview. During the "mass" part of the mass interview when House is still having everyone wear numbered tags so he doesn't have to remember their names, one character who is fired just turns his tag upside down and claims to be a different number. House notices and calls him out on it, but considers it good initiative and lets him stay anyway.
* always takes five days. Then you get to the Demon City, which is layers upon layers stacked on top of one another - but each layer has Ligier, the Green Sun, shining above it, no matter how deep down it is.
* always talked and acted like an eccentric, even in her original human life.
* always tells Bond what his evil plan is who actually explains the evil plan to the villain, often to stroke their ego, distract them to buy time, or get them to drop their guard.
* (always temporarily) after she lost control of herself as a result of the Scarlet Witch's manipulations.
* always that boring, enjoying such hobbies as Hammond Organ music, morris dancing, studying 20th century telegraph poles, and recounting the events of his Risk game move-by-move.
* Always the Quiet Ones reveals she has one which she uses to open Fluttershy's door. For obvious reasons, the Rainbooms find this concept disturbing.
* always Throughout the series, we're casually shown Dazai attempting suicide a number of times.
* always to the audience, though we don't witness any eyebrow-to-eyebrow combat with Seven.
* always to work properly. When they see the Tau equivalent that works perfectly and doesn't go out of focus at the edges, the Imperials are more creeped out than impressed.
* always tries to reinvent its villains to squeeze new life out of their future appearances, most famously with the New Dalek Paradigm, who didn't even get to fully display their purposes in the series because fans ridiculed their designs to death.
* always turn to stone during the day. Various characters will do this, most

notably the Magus of the first few episodes, which sets off the entire series by having the Gargoyles be stone even during the night.
* always up for grabs, 24/7 (or at least, whenever the Hardcore Champion was on camera). In essence, if you could, by hook or by crook, get the Hardcore Champion on his back, put your hands on him, and get a referee to issue a 3-count, you won the title.
* always uses age-appropriate voice actors for every book they record.
* Always using missiles or other weapons that take a long time to reload, even when a
* always wake up in their beds the next day; and, anyone who stays the night in the town (or dies there) will suffer the same fate (and, will have to find accommodation to wake in every day). The villagers do have a fairly good idea of what is going on, but don't exactly know all of the details. They simply try to soldier on as best they can.
* always wears women's clothing out of insecurity and Ayame is an equal-opportunity sort who runs a fetish costume shop. Momiji is more of a downplayed example, since his casual outfits tend to skew feminine but he always wears shorts instead of skirts or dresses.
* Always: While Pete is dancing with Dorinda, he signals to the band and they start playing "Smoke Gets In Your Eyes", which is "their song".
* Always you may as well summon the demon and just walk around without giving her a specified target.)

* Aly & A.J.: "This is our Potential Breakup Song, our album needs just one..."
* Aly & A.J. version, especially with lyrics like "This is the potential breakup song: our album needs just one".
* Alya's father is a portly man with bushy, unkempt hair, while her mother is more conventionally attractive.
* Alya: She has appeared in every episode of the first season. Beginning in season 2, she would start gaining several absences. Those inculde "Riposte", "Reverser", and "Sandboy". In season 3, she is absent in "Weredad", "Silencer", and "Heart Hunter". So far in season 4 she is absent in "Furious Fu."
* Aly has triplets, according to Pierce, and shows no signs of slowing down. This technically makes Alanna an Action Grandma. Observe the entirely unsurprised fandom.
* Alyosha, Alyosha seemingly wins a PS3 at a carnival game and gives it to her friend Ryunosuke. Upon closer examination, he discovers it's a "P53", a Chinese knockoff with 53 games built into the console.
* Alyosha Popovich and Tugarin the Serpent, and it's believed that the gold was returned by divine intervention.
* Alyosha!. She achieved a near-perfect SAT score at the age of 6 and graduated at the top of her class at MIT when she was 12.
* Alysanne is very fond of calling Kersea "Puppy". She later explains that this is because she sees her as exactly as cute and innocent as a puppy, though also just as weak.
* Alys Karstark flees to the Wall to escape her arranged marriage to her Cregan Karstark, who is maybe three times her age, her cousin, and has had his last two wives die. She believes that she'll suffer a similar accident once they're married, allowing Cregan to become lord of Karhold. She not opposed to arranged marriage in principle though,
* Alyson Belle, usually with an LGBTQ twist thrown in the mix as well.
* Alyson Court (voice acting example, but also starred in some live-action works as

well)
* Alyson Hannigan as she had the same colour as Sarah Michelle Gellar. She ended up keeping it for most of her career.
* Alyson Hannigan gave up vegetarianism during her pregnancy, in favor of meat, cheese, and ginger ale.
* Alyson Hannigan. Perhaps the fact that Willow herself was allowed to grow up (and come out of the closet) may have had something to do with that.
* Alyson Hannigan pregnant throughout the season, but the writers still passed on the chance to write it into the story.
* Alyson Hannigan Weekly which her favourite episodes were in an interview in October 2005:
* Alyson Stoner's music videos came out in 2018 and states she's attracted to "men, women and people who identify in other ways."
* Alyssa Edwards and CoCo Montrese (stemming from real-life bad blood between the two former pageant rivals)
* Alyssa has her hair dyed purple. Her darker roots imply she also bleached it beforehand.
* Alyssa herself never outright claims to be sexually active, but her boldness when it comes to the matter makes it seem like she already knows what she's doing. When she says she's a virgin, James seems genuinely surprised.
* Alyssa Milano chopped off her long hair into a pixie cut because she wanted to do something shocking for her 30th birthday.
* Alyssa Milano, especially when Phoebe's hair is long and light brown.
* Alyssa Milano got a pixie cut to celebrate her 30th birthday, which was right before Season 6 started filming. Rather than making her wear a wig, they threw in a couple of lines referencing Phoebe cutting her hair.
* Alyssa Milano is the only other notable member of the cast, but he was already an established star.
* Alyssa Milano. She's had few major roles since the latter show ended and is nowadays far more known for her outspoken progressive politics during the Trump presidency than for her acting.
* Alyssa Milano, there was a studio mandate that none of the actresses could change their hair without permission).
* Alyssa Zaidelle, who should have died in the Purge, but is erased as a result of the protagonists fixing the paradoxes.
* Alyss has a dagger. It's not balanced for throwing and is only meant as a weapon of last resort, for good reason. Alyss prefers negotiation and manipulation, and if a fight's broken out she's already failed.
* Alyx Vance appears to have an electronic one about half-way through
* Alyx Vance reports in the commentary saying that co-workers tend to peek out of the corridor when they hear her talk.
* Alyzon Whitestarr features two of the main protagonists, Alyzon and Harrison, sneaking into a library to find out about Alyzon's sister. When a military-looking goon comes along, guess what happens.
* Alzheimer's Disease, which normally takes years and years to build up, not only progressed ten times faster than real life but then slew Mike Baldwin in a matter of mere
* Alzheimer's, meanwhile, is to some extent a problem because the failsafe works too well: the brain is equipped with so many tiers of redundancies and backups that it can suffer a huge amount of neural degradation before the person's everyday performance is noticeably affected by it - but this means that by the time the symptoms are obvious, it's because everything that the brain can do to try preventing Alzheimer's from happening already
* Amália Rodrigues: Portuguese singer, known as the "Queen of Fado".
* A Macabre Myth of a Moth-Man. Dr. Wu performed gene-splicing on multiple subjects, including Ozzy and Moth-man. And Dante Eclipse performed experiments on the cult he heads, believing that humanity is inherently flawed and they must transcend their species to survive.
* A Macabre Myth of a Moth-Man, Nina tells Moth-man how she's written the whole

adventure they were on down in her diary. Moth-man recommends she hold on to it, in case she ever wants to turn it into a book. To account for how his chapters are in first person, he also suggests she switch to first person for him, so he seems more like a private eye from some detective noir film.
* A Macabre Myth of a Moth-Man tendencies. Learning that he can contract melanoma from sunburns only makes things worse.
* A Macedonian phalanx was a sixteen-thousand-or-so man with light armour and shields and incredibly long pikes. It just kept marching until it trampled everyone in its way. At least until they met
* A MacGuffin Full of Money: The MacGuffin is simply a large amount of cash.
* A machine-gun is an "endless repeater" (it's obviously some form of repeating firearm, and they never see or hear it reloading, hence "endless").
* A machine may have one payoff rate if you bet a single coin per spin (which most casual gamblers do) and a completely different rate if you bet the maximum coins per spin. For example, the payout for a video poker game might be $1000 for a royal flush if you bet one coin, but $7500 if you bet five. The advertised payout rates assume the player is playing maximum coins, so a casino can have a slot machine that has a completely legal and legitimate payout ratio of
* Amachi's was a partially successful trial run, but could not fully switch back to human form. Amachi made himself into a perfect hybrid, but ultimately discovered that without any skills other than becoming scaly, he wasn't the ultimate warrior he'd hoped.

* A madcap ghost is on the loose at Murkey Manor in the episode "Roll-A-Ghoster," and the two plume-hatted heroes are tasked to get rid of him.
* A Madea Family Funeral different affairs — finally hit a boiling point during the wake. As things start blowing up, Madea's group make it clear they're going to sit back and watch it happen, with Bam stating that she wishes they had some popcorn to enjoy it with.
* A made-for-TV Hallmark movie had the main female trying to get into an airport, and ended up professing her love for the main male. Which turns out to be a good thing.
* Amadeus, a heavily fictionalized biography of Salieri, one of Mozart's contemporaries.
* Amadeus and Prague was somewhat behind the times due to the wonders of communism.
* Amadeus, and then pushes him to work without pause until he collapses and dies, leaving the Mass unfinished. In real life, overwork is believed to be one contributing factor to Mozart's death, though not the only one (the main cause is thought to be rheumatic fever), and Salieri had nothing to do with it.
* Amadeus caused people to want to hear more of Antonio Salieri's work, and sparked an interest in Salieri's music, the likes of which had not been seen since the man himself was alive.
* Amadeus Cho again) and the currently MIA Kristoff Vernard von Doom (the adopted son of Doctor Doom, and while he's aided by having the majority of Doom's knowledge downloaded into him, clearly Doom would never think of choosing somebody without brains of their own as his heir).
* Amadeus Cho has this as his superpower. He can stop a charging rhino with a grape seed.
* Amadeus Cho) inverted, as the aforementioned Amazon Gorgon got her looks from Medusa, while Cho is always drawn quite handsomely.
* Amadeus Emperor playing Salieri's "Welcome March" at the piano, much to Mozart's confusion.
* Amadeus ends with the narrator, the Italian composer Antonio Salieri, in a sanitarium for patients with chronic delusions. Either we've been listening to the rantings of a madman who somehow knows the intimate details of Mozart's life, or the real Salieri has been declared mad for believing he is himself.
* Amadeus has Mozart delivering a shrill, obnoxious, hyena-like cackle (which as

the Real Life folder below shows, is historically accurate!).
* Amadeus hates Mozart with a passion. However, he never lets on that he does, and actually is rather nice to the younger man when they are in each other's company.
* Amadeus, Mozart is equally important and prominent. This can also apply to the original play, though Mozart's role is more supporting in that one while he and Salieri are co-leads in the movie.
* Amadeus, Mozart ripped a loud one while caricaturing Salieri at the piano.
* Amadeus, Mozart's nemesis Salieri is a glutton for both sweets and women. According to historical accounts, the real Salieri did indeed have quite a bit of affinity for candy, pastry, and desserts.
* Amadeus. Nevertheless, the film did help renew interest in his work, which — in many cases — was even recorded on albums for the first time!
* Amadeus, Salieri follows Mozart to a masked ball, at which Mozart ridicules Salieri to the delight of the crowd.
* Amadeus, this aspect (unlike the killing Mozart one) was true of the actual Salieri as well.
* Amadeus, this trope practically defines Mozart's relationship with Salieri. In one scene he says to Salieri, "I did some variations on a piece of yours. A funny little tune, but it yielded some good things."
* Amadeus where both leads were nominated together, it varies with the stage show, as the role of Mozart has been nominated as lead at the Tonys and supporting at the Oliviers. The correct placement for the part onstage is a bit more unclear, given that while Mozart is by far the second largest and most central role, it is also undeniably secondary to Salieri, who remains onstage for the entire show, even when he's not present for some Mozart centric scenes. When transitioning the story from stage to screen, playwright Peter Shaffer made many alterations, with one of them being Mozart and Salieri now being roughly equal leads.
* Amadeus, where the king has banned ballet sequences in operas because he considers them to be too overused.
* Amadeus Wolfgeist, a musician Boss Ghost, takes a respectful bow once he realizes he can't escape his capture.
* a madness-driven villain intent on vengeance against Captain Strong!

* A mad scientist in an original series episode invents a means of switching the minds of individuals (including the Flintstones, Rubbles, and even Dino).
* A Mad Tea Party, 200 years in the future, there are iPad-like things for breaking into cars and checking medical files on the internet.
* A Mad Tea Party, Earth fought a war against giant alien robots a generation before the story starts, which we apparently won.
* A Mad Tea Party, Earth's genetically engineered super-soldiers have organic weapons to use against alien robots.
* A Mad Tea Party, genetically engineered people are derisively labeled "Genie".
* A mafia godfather discovers that his deaf bookkeeper has cheated him out of a million or so dollars. (Some re-tellings add the detail that the bookkeeper was chosen for his deafness - he can't testify in court to something he didn't overhear.) He confronts the bookkeeper one day and brings along an ASL interpreter. Godfather asks the bookkeeper where the money is, interpreter relays, bookkeeper signs that he has no clue what the godfather is talking about, interpreter relays. Godfather presses a gun to the bookkeeper's head and asks once again where the money is, interpreter relays, bookkeeper signs that the money is in [a location irrelevant to the joke]... at which point the interpreter tells the godfather "He says you don't have the balls to pull the trigger."
* A mafioso confronts a man with an offer he cannot refuse: Sign a contract or die. The man grabs a pen, airily comments that the criminal's extortion methods are

flawed, jots down something on the contract and hands the paper back to the crook. When the mafia man looks at the document he realizes that, rather that signing with his name, the man has signed the contract with the words "I'm suicidal. Fuck off."
* Amagami ends with Junichi and her apparently closer, but still in his "friend zone". SS+ solves this problem.
* Amagami. Fortunately, every character is given their own arc in the anime.
* Amagami, Haruka gets dragged away from the swim team's Oden stall by Hibiki... followed shortly by a drunk Takahashi-sensei, by the members of Ayatsuji's student council.

* A magazine ad from 1977 shows two adjacent mansions (one of which looks remarkably similar to a mini-White House) and two distant human silhouettes in one of the doorways. The ad copy reads:
* A magazine article from the 1920s said that it was "Sex O'Clock in America".
* A magazine posts fake news and it says it's real. Some days ago I found a magazine showing some fanmade
* A mage PC (Warden, Hawke, or Inquisitor) in any of the games can invoke this by romancing a non-mage love interest. A male non-mage Warden can invoke it by romancing Morrigan, the only potential LI who is a mage. A non-mage Hawke can invoke it by romancing either Anders or Merrill, the party's mages, and a non-mage Inquisitor can invoke it by romancing either Dorian (if he's a gay male) or Solas (if she's an elven female).
* A mage's combat transformation is pretty elaborate (especially for female mages), taking up almost a minute of screen time. However, as shown as early as the second episode, the in-universe transformation time is a couple of seconds and the transformation creates a barrier. The second
* A Mage's Power: A bird will poop on Nolien in every chapter he appears in.
* A Mage's Power Annala clings to Eric's arm because she's rattled and in need of security.

* A Mage's Power: Basilard is both the sergenant and mentor for Dragon's Lair Team Four. He stays calm even when a pack of Xethras are attacking.
* A Mage's Power, because he's an otherworlder and she wants to study him. She finds comparing otherworlder humans and local humans to be a fascinating area of study. Her other experiments are more about solving a puzzle (i.e. curing a disease) and giving the solution to everyone.
* A Mage's Power, circumstances arrange for Eric and Kallen to eat together at a restaurant. After it's over and Kallen has left, Eric realizes that it was the closest he's ever come to a date.
* A Mage's Power: Dengel is famous throughout Tariatla because of his accomplishments in codifying the science of magecraft and he fills Eric's mind with bragging about his personal legend.
* A Mage's Power Eric becomes a novice battle mage for a mercenary company during peacetime.
* A Mage's Power: Eric improvises a death spell by saying "From its toes to its head, make that monster dead!" but because he has no idea how necromancy works, it's an impotent rhyme.
* A Mage's Power, Eric is unable to use magic for a brief period of time.
* A Mage's Power: Eric starts off as this trope, asking questions to inform the reader because he's new to the world of Tariatla. Then he spends nine days in a library and doesn't have to after that. At that point, he will recall stuff he'd

learned at times where he would otherwise ask.
* A Mage's Power: Members of the Bladi Clan have a unique branch of magic that uses their blood as its catalyst. The blood of anyone else is useless for magical purposes.
* A Mage's Power orchestrated Kasile's kidnapping and then the coup at the climax in order to become king.
* A Mage's Power: Orcs don't grow facial hair, and as a Proud Warrior Race, all of them are this by default.

* A Mage's Power she hunted soulcrafters in Najica with her husband, Retina.
* A Mage's Power: Since the most common form of magic is acquired through study and practice, there are a lot of these:
* A Mage's Power: The Dragon's Lair hierarchy is built with this in mind. Proving that he can kick ass is how Eric promotes from Apprentice to Novice. At the top of each Squad is a captain more powerful than several regular members and at the top of the guild is The Dragoness, who could fight all five captains at once.
* A Mage's Power Then it's out into the wilderness to fight monsters...
* A Mage's Power: There are many skeletons in the sewers beneath Roalt and they are animated by a combination of ambient mana and lingering spiritual power. Dengel suggests that they are the remains of past adventurers, and stupid people on dares. Eric has to blow them up to stop them.
* A Mage's Power to be part of every team. Nolien fulfils this role for Team Four because he has the skill for it. He's still developing a healer's sensitivity.
* A Mage's Power who exploits laws to avoid punishment for unlawful actions.
* Amagi Brilliant Park and globes-for-heads to a failed mayoral candidate and a normal-looking girl with a perverted serial killer for a brother).
* Amagi Brilliant Park, due to the unenthusiastic workers, broken and/or boring rides, and missing cast members for many of the attractions. Turns out that the park isn't doing so well, and he's asked to manage it to make it more successful.

* Amagi Brilliant Park, then kicking the pirate's asses. He then attempts it for real, but slips and falls.
* Amagi Brilliant Park. The second promotional video created by Tricen to promote the park resembles something a film student would've created for a film project, causing Seiya to reject it, and go with the boring first video created. Tricen then tells him he secretly uploaded it online, and Seiya is shocked to find out that said video already has nearly a million and a half views, along with over seventy-four thousand comments.
* Amagi Brilliant Park, Tricen is told by Seiya that his first promotional video for the park is too bland, and has him redo it with more input from the other characters. They give him varying suggestions based on what they think it should include, such as Moffle wanting more action-oriented stuff. When Seiya sees the second video, he wonders what the heck it's supposed to be about, and ends up running the first video instead. Tricen then reveals that he uploaded the second video online, and Seiya is shocked to find out that its garnered almost a million and a half views, along with over seventy thousand comments.
* Amagi Brilliant Park, Triken constantly records, watches, and edits videos of sexy girls. He often comments that he'll need to hunch over for a while.
* Amagi Brilliant Park where he epically breaks free and defeats the pirates, but when he actually tries it he slips and falls into the water.

And what the hell has Kon got to do with all of this? Since when was he a hacker? Does he even have a family?
* Amatsuki. But even this is nothing compared to Ginshu and Byakuroku—their hair drags along the ground.
* Amatsuki is all about modern day city kid Tokidoki being trapped in a computer simulation of the Edo Period.
* Amatsuki is always being told how cute and good-looking he is, and has people falling for him left and right. Kon never gets treated like that. The manga does briefly acknowledge Kon as handsome, but he's apparently "not much fun."
* Amatsuki, particularly concerning the backstory and the real world timeline.
* Amatsuki regularly wears one, accentuated by the fact that he never puts his haori on properly. Kon joins in on the second volume cover.
* A Matter of Faith: A lot of Kamen and Stephen's exchange devolves into this.
* A Matter of Faith. Portland claims that even if the stars fell from the sky to form the phrase "God is real", it would still be deemed a trick by atheist evolutionists.
* A Matter of Faith: Portland is the only person of color in the movie with a significant role.
* A Matter of Faith. The original film argues that evolution is true and compatible with Christianity. This film provides creationists with a film that's similar but advances that perspective.
* A Matter of Gravity, has Magica alter Donald and Scrooge's personal gravity, causing them to "fall" sideways like they would otherwise fall downwards. At one point they're in the park, standing sideways on a tree, trying to think of a way to get to Magica before she can get away. A picknicker spots them, does a double take, then throws away the pickled sausage he's eating and sniffs the brine suspiciously.

* A Matter of Life and Death: did Peter Carter's head injuries cause his visions? Or are the angels really discussing the proper thing to do with him?
* A Matter of Life and Death, Englishman Peter Carter is put on a trial before a

celestial jury to determine whether he has the right to remain on Earth. The prosecutor is American Abraham Farlan, who hates the British for causing his death in the American Revolutionary War. Carter's defender, Doctor Reeves, challenges the composition of the jury, which is made up of representatives who are prejudiced against the British: a Napoleonic French officer, a Boer soldier from the Boer War, a Russian killed in the Crimean War, an Indian killed in the annexation of the Punjab, a Chinese man who died in the Boxer Rebellion, and an Irishman from the early 20th Century. When the British advocate allows the jury to be replaced with Americans, each is replaced by someone of the same national origin but an American citizen, such as an Irish-American policeman and a French-American chef. The only difference, and a rather odd one, is the Indian is replaced by an African-American GI.
* A Matter of Life and Death hope for survival is to bail out without a parachute and hope that he is wrong about the height he is flying at.
* a matter of life and death, however, it's more likely that one character is just embarrassed to be seen in public with the other, and demands that they pretend not to know each other.
* A Matter Of Life And Death singing. Newer fans, and music journalists, regard it as one of the band's best albums, mostly because it virtually lacks the pop sensibilities that are on the band's other albums and thus fits in better with the modern image of metal as being dark and serious.
* A Matter of Life and Death starts with them meeting over an SOS call.
* A Matter of Life and Death, this is the entire premise. A young English pilot who's just fallen in love is abruptly informed he was supposed to have been killed in what was originally a near-miss airplane crash, and has to face a jury of the dead in his plea to be allowed back into the world.
* A Matter of Life and Death), where David Niven plays a World War II pilot who strikes up a romance with a female radio operator after a near-death experience, which becomes complicated when he is approached by an agent of Heaven who informs him he was supposed to have died.

* Amazin' Adventures spliced in footage of two children interacting with the titular characters.
* Amazing #122. The narration and artwork strongly imply, and later stories would fully confirm, that this was the exact moment that Mary Jane realized that she truly loved Peter Parker.
* Amazing (Adult) Fantasy. Many were eventually fully taken over by superheroes who debuted in them.
* Amazing Amanda can have accidents if you don't put her on the potty soon enough.
* Amazing Amanda dolls, if you fail to get them their food, they will say, "No more [meal/food item] for Amanda!".
* Amazing Animals starred Henry the Lizard talking to an unseen, unnamed narrator who explained to him everything about the animals the current episode deals with.
* Amazing Engine with crystal ball TVs, elemental-powered cars, and so on.
* Amazing Fantasy. After gaining spider-powers from a spider bite, Izuku gets flagged down by a universe-displaced Peter Parker, who offers to mentor him. Izuku is initially hesitant and asks for time to think about it because of his own insecurities. After the Prowler incident, All Might decides to catch Izuku on his

way home and assures him that he's going to be an amazing Hero before running off. All Might's blessing is what gets Izuku to take up Peter's offer.
* Amazing Fantasy. After getting powers from a spider bite, Izuku is ecstatic to find that people are talking to him like a normal person and not "Quirkless Deku". At the same time, he's leery of hanging out with the people who spent the last decade bullying him, since they're only trying to surf off his fame as the Prowler Kid.
* Amazing Fantasy after it's brutally mutilated by Mysterio. He laments that he was the only emergency contact listed and is on the verge of breaking down in tears when Gran Torino arrives to help him process his grief.
* Amazing Fantasy, All Might is introduced by coming out of nowhere to punch Prowler down the street while she has Mount Lady held hostage.
* Amazing Fantasy at the same time. He ends up blacking out and going into a coma for two days after being rushed to the hospital.
* Amazing Fantasy, Aunt May succumbs to a heart attack and hits her head on the desk while Peter was out stopping Screwball. He regrets not being there for her to this day.
* Amazing Fantasy, Bakugou's middle school classmates admit behind his back that they can't wait to be rid of him and only fall in line out of fear rather than respect. He loses almost all of his social clout after Izuku manages to humiliate him twice by accident. Bakugou himself is shaken by this and falls back on old habits rather than trying to correct his behavior because he doesn't understand what he's doing wrong.
* Amazing Fantasy between him and Izuku and uses charades to try to communicate. It's for naught when Izuku reveals that he has a rudimentary understanding of English.
* Amazing Fantasy, both Clash and Boomerang want to escape to Peter's universe due to their dissatisfaction with their own, but not before shattering the status quo first as members of the Enforcers.
* Amazing Fantasy, Clash has sonic cannons built into the palms of her costume. They're powerful enough to blast Fat Gum away and even match his strongest attack, albeit at the cost of breaking an arm.
* Amazing Fantasy comes at the cost of intense nausea and vertigo. He has to fight the urge to blow chunks every time he passes through a wall.
* Amazing Fantasy ever, and it's one of the three most famous comic book issues in the history of superhero comics. However, most people who've heard of it don't know that it contained several back-up one-shot stories apart from the Spider-Man adventure, and even fewer have read any of them.
* Amazing Fantasy for the other thing involved. It isn't pleasant for Izuku either, as his vision swims and is warped into psychedelic colors while in this state, exhausting him and making him more and more nauseous the longer he uses it.
* Amazing Fantasy from his audience. His teenage self has a tendency to take Peter's jabs and jokes at face value.
* Amazing Fantasy, Ganke flexes for the camera at Hero-Con even though he's a rotund teenager. Miles just rolls his eyes at his antics.
* Amazing Fantasy had been introduced the previous year, Spidey wasn't even the first or most impressive superhero in the Big Apple.
* Amazing Fantasy has All For One and Mysterio teaming up. Mysterio would provide a steady stream of Marvel-level equipment far more advanced than anything available to the Heroes in Izuku's universe, while All For One would provide the manpower and supplies Mysterio needed to further their plans.
* Amazing Fantasy. He decides in advance to wear a pair of exercise shorts over his outfit just in case. It becomes especially important after he finds that his new muscles make the costume uncomfortably tight, particularly around his butt and crotch.
* Amazing Fantasy impersonator instead of the real thing because Spider-Man is considered fictional in Izuku's universe. Because of this, the police refer to him as a "Spider-Man copycat" or a "Vigilante dressed as Spider-Man" and mistake his webshoosters for a web-producing Quirk despite people on site clearly seeing that

he stopped a careening truck.
* Amazing Fantasy. Inko dotes on her son Izuku but tries not to be overbearing while doing it. She quickly sees through his lies about where he's going at night, but decides to trust him and doesn't confront him about it until the night before the U.A. Entrance Exam. This is after she begins worrying about how his pseudo-celebrity status as the "Prowler Kid" would drag him into trouble.
* Amazing Fantasy: Inverted. Peter has a dual degree in chemical engineering and computer science, but is stuck delivering pizzas as it's the only job he could get in Izuku's universe without documentation.
* Amazing Fantasy isn't practical in the long-term on his Earth, but he just doesn't want to let his dream of being like All Might go. In the end, it takes a spider bite to give him the powers he needs to achieve his dream.
* Amazing Fantasy is still grieving the death of Eddie Brock in "Let the Devil In". He constantly compares his new partner, Katsuki Bakugou, to Eddie and throws fits when Bakugou tells him that he needs to move on.
* Amazing Fantasy, it's frowned upon in Izuku's universe to base one's superhero or supervillain identity on a comic book character, as it's seen as unoriginal and proof that they can't stand out in the crowd. Izuku ends up taking up the title of Spider-Man anyways after getting Peter's blessing early on in the story.
* Amazing Fantasy. Izuku admits it wasn't fun, but he also knows it's necessary if he's going to get into the school of his dreams.
* Amazing Fantasy Izuku and Jirou have Bakugou tied up and at their mercy after a successful ambush. But Izuku decides to talk about how he isn't going to shirk under him anymore, using up time that gets the hero team to rush out instead of tying the catching tape around him. This pisses Bakugou off so much that he ends up breaking free after discovering that intense heat melts Izuku's webbing.
* Amazing Fantasy, Izuku and Peter encounter what they think is an unidentified life form while clearing a fridge of an angry raccoon and rotting food. They agree to never go looking for it or speak of it again.
* Amazing Fantasy. Izuku can only use his Venom Strike once a day, limiting him to one usage of it in any given fight, but he'll be able to use it again after a full night's rest.
* Amazing Fantasy. Izuku easily outpaces all of his middle school peers and can run faster than an Olympic sprinter after the spider bite, but he's no speedster like Ingenium or All Might.
* Amazing Fantasy, Izuku feels deathly cold while reeling from the effects of the spider bite. The feeling persists up to the point that he collapses. He doesn't die, but he does end up in a coma and the doctors at the hospital are amazed that he survived.
* Amazing Fantasy, Izuku is bitten by a genetically-altered spider and is training with a universe-displaced Peter Parker to become his universe's Spider-Man. At the same time, Mysterio is producing a number of unofficial successors to lesser-known Marvel villains with dangerous equipment, such as Rocket Racer, Big Wheel, and the Grasshopper.
* Amazing Fantasy Izuku ripped and athletic for a fourteen-year-old, quickly outpacing all of his middle school peers in almost every physical activity. But his wiry, acrobatic build is hardly indicative of his ability to carry refrigerators with one hand or bench press ten tons.
* Amazing Fantasy, Izuku says the day after he got a grasp on his Venom Strike and shocked Peter again, he tried it again and let the sparks fly... before admonishing the reader and saying that they know what he means.
* Amazing Fantasy, Izuku's less spidery powers work this way. His phasing ability only works when he feels enough of the flight-or-fight response to activate it, which he can do at will by latching onto the terror he felt while running at the Prowler. He later learns that his Venom Strike is activated by his feelings of resentment and desire to lash out at others for years of mistreatment.
* Amazing Fantasy, Izuku's neuroticism hampers his attempts to learn how to use his web-shooters, missing by a longshot after spending several seconds trying to aim at a still target. Once he stops worrying about the minute details and goes with the

flow, he finds that both web-slinging and web-swinging come to him more naturally.
* Amazing Fantasy Izuku's spider-based powerset makes him this in 1-A. He's the physically strongest in class, but lacks the widespread destructive ability of Bakugou and Todoroki. He's superhumanly fast, but still outpaced by Iida. He's tough enough to take continual beatdowns, but not bulletproof like Kirishima. He's stealthy, but not outright invisible like Hagakure. His Venom Strike is a powerful tool for subduing foes, but it lacks the same usability, range, and power as Kaminari's Electrification.
* Amazing Fantasy Jirou catches Izuku and Uraraka in this while escaping the zero-point robot at the U.A. Entrance Exam. He finds it terribly embarrassing.
* Amazing Fantasy Jirou still has this as one of her defining traits. When Izuku asks if she feels ready for the U.A. Entrance Exam, she replies with an immediate, "Hell no." to his shock. It's also deconstructed later on, as she has trouble maintaining a circle of friends because of her unfiltered commentary.
* Amazing Fantasy like himself as well as the downtrodden and insane to turn Earth-2018.688 into one giant offering to Knull. Their efforts are opposed by the Katsuki Bakugou of that world, who has since bonded with the Venom symbiote and is taking down their members one-by-one.
* Amazing Fantasy, Mayday never knew her father was Spider-Man until she overhears by accident from her mom and Lyja Storm, being upset by this. Embarrassed of the bitter things she thought of them and angry they lied to her about the truth. Even more so when learning that she is not allowed to be involved in the investigation of her father's disappearance.
* Amazing Fantasy, Mistress Sinister cheerfully hums while doing her research, which involves vivisecting people and exposing them to chemical concoctions that cause them to breathe fire and die.
* Amazing Fantasy, Mitsuki Bakugo is so busy at work that she rarely takes the time to sit down and get to know her son. While she knows that his ego has been ballooning since he discovered his Quirk, she had no idea that he and Izuku have been growing apart, or that Katsuki was essentially friendless.
* Amazing Fantasy, most of the goons Mysterio outfits with Marvel Universe equipment are dangerous enough to take on the average Pro Hero because of how advanced it is. But Peter notes that many of them, like most of the Rocket Racer Gang, aren't seasoned fighters, which lets him overwhelm them by picking several of them off before using his superior skill to divide and conquer.
* Amazing Fantasy, Mysterio fashions himself as the foil to All Might: a Villain who dominates his foes through trickery and illusions versus All Might's overwhelming strength. Mysterio also has this relationship with Peter, being a non-powered old man to Peter's spider-powers, albeit the gap has been narrowed by Mysterio's new super-strong robot avatar.
* Amazing Fantasy, Mysterio has his personal squad of assassins, the Enforcers, deal with anyone who fails to pay him for using his equipment.
* Amazing Fantasy, Mysterio outfits his robot avatar with a translator that translates his speech into Japanese when he makes his grand debut in Musutafu. The result is noticeably scratchy and artificial, but otherwise does its job perfectly.
* Amazing Fantasy, Natalie Essex reminisces about when her "brother" Nathaniel's experiments horrified Josef Mengele, all while she's busy humming and vivisecting people.
* Amazing Fantasy, Ouka Oosawagi is a struggling broadcast reporter who seizes on her ability to provide five minutes of "commentary" in her stand-ups to lambaste Peter for views and clicks. She spreads conspiracy theories and rumors about him, often with little basis, and jumps on any opportunity to get a story even under mysterious circumstances (like when the U.A. barrier is suddenly decayed away by an unknown force).
* Amazing Fantasy out of the effective range to signal the detonation.
* Amazing Fantasy, Peter baits the leader of the Rocket Racer Gang into punching a brick wall with his rocket-powered glove. Since the glove wasn't designed to hit anything harder than the human body, his hand is horribly mangled after it goes right through.

* Amazing Fantasy, Peter decides to become Izuku's mentor after watching him jump out of traffic the way he had as a teenager.
* Amazing Fantasy. Peter discovers that he can't make web fluid the way he knows how because the chemicals he used don't exist in Izuku's universe. They end up developing an entirely new web formula from whatever Izuku can procure to replace it.
* Amazing Fantasy. Peter had it rough starting out as J.J.J. ran his classic smear campaign against Spidey. But after decades of saving the day over and over, people wised up and began supporting Spider-Man wholeheartedly while the Daily Bugle was forced to tone down its blatant bias against him.
* Amazing Fantasy, Peter has this reaction after using a Japanese public bath for the first time, immediately trying to change the subject rather than discuss it further.
* Amazing Fantasy, Peter is constantly on the run from police as superpowered vigilantism is actively prosecuted in Izuku's universe.
* Amazing Fantasy, Peter is dropped into Izuku's universe with nothing but the clothes on his back and his web-shooters. He has nothing to subsist off of other than a portion of Izuku's allowance, forcing him to get creative to carve out a living. He hacks into a local radio tower for cellular service, lives out of an abandoned amusement park, and tells Izuku to mix up web fluid in class since neither of them has the cash or equipment to make it otherwise.
* Amazing Fantasy, Peter is Izuku's mentor and the other major lens of the story. Much of Izuku's early development can be tied back to Peter, whose actions and presence in Izuku's universe change the course of the story.
* Amazing Fantasy, Peter keeps his daughter Mayday away from his apartment, leaving her with his ex-wife Mary-Jane. He hopes that Mayday won't learn of his superhero activities and won't worry about him over them, or worse still, get involved in them.
* Amazing Fantasy. Peter makes a point that most superheroes, like regular people, get old. He and several of the other Avengers have been active since the 70s and have aged appropriately. Peter is an overweight father who's down on his luck and struggling to pay the bills. He's also one of the last "old guard" members of the Avengers, as the others have left, retired, or died.
* Amazing Fantasy. Peter often cusses when he's stressed or when he's speaking casually, but he tries not to. Clint mocks him for it.
* Amazing Fantasy, Peter Parker is as smart as ever, hacking into a phone tower with tweezers and safety pins to get phone service and making all of his own equipment. Izuku, his protégé, is no slouch either, managing to cram a semester's worth of college-level physics, chemistry, and mechanical engineering into his head in three weeks.
* Amazing Fantasy, Peter Parker keeps up a chipper and joking persona around Izuku, but weeps at night out of worry for his ex-wife and daughter as well as the stresses of being a superhero.
* Amazing Fantasy power electrocutes Peter when he mistakes him for a mugger.
* Amazing Fantasy proud. Jirou sees this and waves her hand in front of his face.
* Amazing Fantasy, she drapes another comforter over him before turning off the lights.
* Amazing Fantasy. She manages to control her urges to make her getaway.
* Amazing Fantasy, Spider-Man is considered fictional in Izuku's world. Peter's reaction to this news is to stop eating for five seconds before continuing like nothing ever happened. Lampshaded of course.
* Amazing Fantasy that instantly paralyzes others with fear. Phil uses this to completely disarm Daniel, giving him the opportunity to free himself and stab him with his own sword.
* Amazing Fantasy that's about two sizes too small for him. Izuku is subsequently humiliated as he realizes how stupid he looks.
* Amazing Fantasy, the 14-year-old Izuku strikes up a friendship with the 47-year-old Peter Parker when they meet under surprising circumstances.
* Amazing Fantasy, the Bakugou of Earth-2018.688 is self-entitled prick who wants

nothing more than to beat the crap out of Izuku, who he blames for ruining his life. As Venom, he's menacing, has little regard for property damage, never takes responsibility for his own mistakes, and is a thoroughly unpleasant person to be around. That said, he repeatedly puts his life on the line out of a genuine desire to save people and stop Carnage.
* Amazing Fantasy, the Beetle Gang, a group of minor upstart supervillains who were given Mysterio's tech, is offed as part of the Enforcers' introduction.
* Amazing Fantasy, the only place Peter can find work in Izuku's universe is a crappy pizza joint with a sleazebag for a manager. He has to fight the urge to curl up and cry on the sidewalk at hitting rock bottom like this.
* Amazing Fantasy, the Prowler is All For One's liaison to Mysterio and the primary driving force of the plot in the early parts of the story. She's responsible for raiding an illegal biology lab, which let the spider that bit Izuku to escape. Her bungled attempt to assassinate Peter led Izuku to run in to help him, which in turn inspires All Might to give Izuku the confidence to become a Hero. Her new equipment also draws the eye of law enforcement, which gets them to start looking into Mysterio.
* Amazing Fantasy, the Prowler is a woman when he's normally the very male Hobie Brown in the comics.
* Amazing Fantasy, the "ribs" of Boomerang's costume are actually storage units that store a wide variety of boomerangs while adding next to no bulk to his biker-style outfit.
* Amazing Fantasy. This is also why Izuku is confused when she spares him and tells him to mind his own business when she could have easily killed a Quirkless kid like him.
* Amazing Fantasy to get rid of it, being thankful that male superheroes like him wear cups while out in the field.
* Amazing Fantasy, Vulture's Quirk, "Bushwacker", allows him to turn his arm into any kind of single-shot firearm. He can then load marbles into them and fire them like a real gun. But since they run on compressed air taken from his lungs, he has to spend time sucking in air to produce enough force to fire them. The amount of time is proportionate to the strength of the gun he's using.
* Amazing Fantasy. When Izuku's Venom Strike power first activates, it shocks Peter so badly that he's sent flying down an alleyway. Izuku is horrified and worries that he accidentally fried Peter's brain, racing to call a hospital until Peter stops him.
* Amazing Fantasy. When Peter is busy getting his ass kicked by the Prowler, a coalition of Pro Heroes including Mount Lady, Kamui Woods, Backdraft, and Death Arms are dispatched to contain collateral and stop the fight. But their efforts are thwarted when Prowler embeds a bomb in Mount Lady's neck to take her hostage, forcing them to stand by and take care of the gathering crowd instead of intervening. This means that Izuku is the only one willing to rush in and help (and it nearly gets him killed) until All Might swoops in and steals the detonator.
* Amazing Fantasy while being a universe away from all of his friends and family.
* Amazing Fantasy while he was unconscious. He only realizes the change after Dr. Tsubasa mentions it while doing blood tests.
* Amazing Fantasy who are run by All For One that have utterly wrecked the planet and ruin lives on a whim. Kyouka Jirou is Spider-Woman and is resisting against the system, but she might be just a pawn in both players’ schemes.
* Amazing Fantasy, whose passing in 2018 spurred the author to spin this idea into a full story.
* Amazing Fantasy, who would have torched them if not for Bakugou's willpower and resistance to heat.
* Amazing Freaking Grace. All of this in a scene that again, lasts less than 30 seconds.
* Amazing Freaking Grace in "iPie", and performs an entire song in "iDo".
* Amazing Freaking Grace: The hymn "Amazing Grace" is played at funerals.
* Amazing Grace and Chuck, the explanation of why this is in place in the nuclear missile control room (and why the men stationed in such a secure area are armed) is

part of what terrifies Chuck when he's touring the silo.
* Amazing Grace and Chuck, this trope is used to explain what an NFL Linebacker is to a little girl.
* Amazing Grace and Chuck, with most of his former teammates turning on him, kids picking on his little sister, and his mom and dad both getting harassed by the other adults in town.
* Amazing Grace claims the author's slave ship was caught in a sudden storm, causing him to repent his evil ways on the spot, and that the song was written shortly thereafter. What is true is that John Newton was a slave trader, he did pen the first verse of the song following a brutal storm at sea, and he did finish the song after giving up his slaving ways. However, it wasn't the storm that made him change his ways, he continued shipping slaves for years after that. The Damascus Road-esque instant conversion story was made up after the fact by people who didn't think the original was uplifting enough.
* Amazing Grace he is finally able to shed are clearly a great weight off his soul.
* Amazing Grace, one of the main characters, after winning a huge victory for anti-slavery, pours alcohol into (freed slave and emancipation activist) Equiano's grave, with the bittersweet line, "I know you don't normally drink, but this is a special occasion".
* Amazing Grace, William Wilberforce pulls out of a card game when his opponent bets a slave, something the opponent did for the express purpose of testing Wilberforce's abolitionist convictions. Needless to say, a serious example.
* Amazing Kong/Awesome Kong/Kharma had never seen her in gear or character before their first match in TNA - so when Kong made her entrance, Gail could be seen mouthing "oh shit" on camera.
* Amazing Kong/Awesome Kong/Kharma has been booked as a giant style wrestler, but she can play this role as well. Best seen in TNA where she started as an immovable giant but became better known for never staying down, her all-around skill and her evil manager.
* Amazingly, after fans had largely given up on the idea that Reigns would ever turn heel again, Reigns returned at the end of
* Amazingly and bafflingly, there's a knockoff of this knockoff. The trains have generic smiley faces on them instead of the trademark Thomas face, but the molds are otherwise the same.
* Amazingly, another 555 number is used in the episode, but it's "real".
* amazingly-embarrassing mother. However, she still has the occasional embarrassing side.
* Amazingly Embarrassing Parents due to Kushina putting specific focus on the fact that he has a cute girlfriend.
* Amazingly Embarrassing Parents: Parents who can't help but embarrass their children all the time.
* Amazingly Embarrassing Parents: Parents who embarrass their children.
* Amazingly Embarrassing Parents: Parents who tend to accidentally embarrass their children in public.
* Amazingly Embarrassing Parents: Your parents are so immature they're embarrassing.
* Amazingly enough (He's poisoned and chokes on his own vomit while the guards and his parents are unable to help him).
* Amazingly enough, Paperinik himself gets hit with it from time to time. It usually takes the form of a new superhero showing up and the people of Duckburg worshipping him and forgetting Paperinik because the new guy is cooler (never mind that the new hero is invariably revealed as a screw-up or
* Amazingly, Hercule/Mr. Satan is capable of bunshin. It's amazing, because he mixes
* Amazingly, he's able to work his way up to a telescope, which he ultimately swaps with Jim for a packet of "miracle legumes".
* amazingly high in cholesterol and fat; a little over a 100 g can easily exceed 1000% of the recommended daily cholesterol intake.
* amazingly loud, its mom practically fled the birthing chamber in terror when it

started squealing its lungs out!
* Amazingly, one NPC manages it: Innocent-MAN's name saves him from being terminated as a traitor (due to a bug in the justice software), his mutant power of regeneration saves him from being killed accidentally, then the "dirty" part finally kicks in after The Computer crashes and lots of clones stop getting dosed with hormone suppressants.
* Amazingly, that's not the only time there was an argument on Wikipedia over a fictional character's nationality.
* Amazingly, the Russian dub happily rectifies all of the awkwardness. The translation and dubbing were apparently given much thought and labor, and the end result is suprisingly convincing, bold and heartfelt performances in Russian (even though some expressions still betray a little of the foreigner's perspective). Russian dub version of the movie shows very sure and organic performances of noble and humane Russian sailors in a (sorely lacking) Russian heroic-but-tragic war movie, with acting by Ford, Neeson, Sarsgaard and others as a cool bonus.
* Amazingly, they do manage to escape but it's more sheer blind luck than anything they could have planned for.
* Amazingly, this ends up working fairly well, at least until the book gets dropped while the plane is in flight.
* Amazing-Man, but is called the Prince of Orphans due to copyright reasons.
* Amazing Man Comics, although the cover title did use the hyphen until it was redone two years in (and shortly after that, Centaur went out of business).
* Amazing Man Comics, has the powers of intangibility and teleportation. The Amazing Man himself could become intangible when he turned into the Green Mist.
* Amazing-Man, the character, was usually spelled with a hyphen, but not always. The series he starred in was apparently formally titled
* Amazing Nurse Nanako, where the protagonists empty everything they can out of a plane that has run out of fuel in mid-air... including Nanako's clothes.
* AmazingPhil who've lived together for years, work and frequently travel together. (Although neither of them are heterosexual and Dan's coming out video implied that they were, at least, romantically involved in the past - and any further details regarding their relationship then or now are none of their fans business.)
* amazing Slasher Smile to Osgood, too, complete with a creepy reveal from the shadows.
* Amazing Spider-Man #143 (1974), Mary Jane Watson accompanies Peter Parker to JFK airport from where he and Robbie Robertson are going to fly to Paris for a story. The two had been dating for a while, but it is only now before they are saying farewell that she asks him to kiss her. It is a good kiss, and a major turning point in their relationship, and set up that their love had now grown so strong that not even the introduction of Gwen Stacy's clone (that very issue) could derail it.
* Amazing Spider-Man #150, which served as an epilogue to the original Clone Saga, Spider-Man comes close to dying and then realizes that his thoughts turn to Mary Jane Watson and his feelings about her (and not to Gwen or Aunt May). This realization that he loves Mary Jane is not so much important in itself as it is the factor that finally convinces him that he is the real Peter Parker and not a clone.
* Amazing Spider-Man #1, Spidey hopped onto the Chameleon's helicopter and ripped the door off in order to get to him.
* Amazing Spider-Man #247, The Toad, Frog-Man, and The Spectacular Spider-Kid were all vying to become Spider-Man's partner, much to his consternation. In the end the three Super Zeroes form their own super-team, the Misfits.
* Amazing Spider-Man #400 moment, and a good send-off for the character.
* Amazing Spider-Man #500, Spidey sees a vision of a possible future, the end of his career. His future self is at his aunt's grave, the cemetery itself surrounded by a SWAT team. a plainclothes officer approaches him, addresses him as "Peter" and pleads for him to surrender, claiming the plea bargain still stands. (Whatever crime has been committed remains unknown, but is likely murder.) Spidey refuses, gives a few words of encouragement to the younger one watching, and then turns to fight the police, eventually being gunned down.

* Amazing Spider-Man #589, where he managed to fight Spider-Man to a stand-still.
* Amazing Spider-Man 600 there's a short story about Uncle Ben and Peter's relationship. Ben keeps telling Peter "your father would be so proud of you" but what Peter wants Ben to say is "I'm proud of you". And he eventually does.
* Amazing Spider-Man and a series of Marvel staff layoffs. Some were staffers which DeFalco himself had hired for Marvel, and he felt partly responsible for the company letting them go like this. Per "The Life of Reilly": "In his Daily Bugle scenes, Tom D. worked in a lot of in-jokes and references to what was going on at Marvel, all of which probably went over the heads of people on the outside, but were glaring obvious to anyone who was working (or had been working) at the company."
* Amazing Spider-Man) and by taking in everything Otto built, he wasn't taking responsibility for it.
* Amazing Spider-Man are watching a music program which is suddenly interrupted by a special bulletin with breaking news of Rhino's rampage.
* Amazing Spider-Man has Peter and Mary Jane finally kiss after years of being apart due to editorial mandate.
* Amazing Spider-Man is Spidey's first appearance in his own comic in the black alien costume that would later become Venom, but the issue itself is a very calm and low-key look at Spidey settling back down in his apartment, dealing with everything he missed when he was on Battleworld, and testing out the suit, with the closest thing to "action" being him scaring away a mugger while on patrol and realizing his new suit is much more intimidating. At the end of the story, he takes two teenagers webslinging to show them the beauty of New York and what it means to him, in a rather sweet illustration of his role as, well, their friendly neighborhood Spider-Man!
* Amazing Spider-Man of the X-Men. The story was apparently testing the waters for an Iceman/Doctor Strange split-book that had been planned, but the series never materialized.
* Amazing Spider-Man, pencilled by Charles Vess, featured a demonic spirit called Wendigo who descended upon New York during a fierce blizzard. No relation (that we are aware of) to Marvel's regular Wendigo.
* Amazing Spider-Man, sending death threats Dan Slott's way before the book even hit stands.
* Amazing Spider-Man's story "Lucky to Be Alive", Peter ends up naked after confronting Gypsy Moth who unraveled his suit, minus the mask and a made-on-the-spot webbed underwear. The surprised bystanders start taking pictures of him and posting them online, one girl coining #SpideyWhiteys.
* Amazing Spider-Man. The Crime Master is mortally wounded in a gunfight and then declares that if he's going down, the Green Goblin will go down with him. He attempts to reveal the Goblin's secret identity (which was not known at the time). "The Goblin is..." and then he dies. The lampshading comes when one of the police officers at the scene comments "If I saw that happen in a mystery movie, I'd laugh at how corny it was."
* Amazing Spider-Man the joke in the kid's ear, and he immediately starts crying.
* Amazing Spider-Man to Spidey for what Doc did to her as the Superior Spider-Man.
* Amazing Spider-Man vol. 2 #45 during the separation of Peter and Mary Jane Parker. Peter goes to Hollywood to ask MJ to return to him, but she still finds it too hard dealing with sharing her life with Spider-Man:
* Amazing Stories: A 1990s story is set in a world that's spherical, but with more than 360 degrees of rotation. In other words, if you sail 360 degrees eastward you end up somewhere that has the same time zone as your origin, but which isn't the same place.
* Amazing Stories, a death row inmate gains special healing powers but is put to death anyway just so the episode can pack a dramatic punch. Said punch is somewhat lacking due to the inmate being played by Patrick Swayze.

* Amazing Stories episode "Mummy Daddy", an actor playing the role of the Mummy in a horror film receives a phone call that his wife has gone into labour. On the way to the maternity hospital, he is mistaken for a real Mummy by superstitious villagers. They start shooting at him, and one of the shots spins the road sign for the maternity hospital.
* Amazing Stories girl. Of course they are pulled together and when she tries to kiss him little sparks fly between the two.
* Amazing Stories, "Mr Magic": Old-timer Lou Bundles, once a world-famous magician, is now fumbling every trick, and desperately purchases an amazing old deck of cards at a small magic shop in hopes of going out in a spectacular display of legerdemain.

* Amazing Technicolor Wildlife: Animals with bizarre, unrealistic colors.
* Amazing Technicolor Wildlife in a work come in many different colors.
* Amazing Technicolor World: The entire world is a kaleidoscope of color.

* Amazing True Stories that contained a particularly eerie real-life example of this trope: In 1915, there was a woman who dreamed about being on a sinking ship. In the dream, she was not concerned about her own safety, but that of her husband's. She approached an employee of the ship, who had blond hair and brown eyes, to ask about her husband and the guy said he helped him get into a lifeboat. At the time, her husband was on the Lusitania, which of course was torpedoed. He survived the incident and returned home to his wife, and when she recounted the dream she had about him, he told her that a man with blond hair and brown eyes helped him escape.
* Amazing X-Men storyline World War Wendigo, a confrontation between two Canadian meat packing plant employees resulted in one accidentally killing the other. The perpetrator decided to cover it up by running the victim's body through a meat grinder, which ended up being consumed by several people, resulting in a mass break of the Wendigo curse.
* Amazo from DC Comics is an android that can copy any superpower of any superpowered being it comes in contact with, and thus becomes incredibly versatile and capable of doing just about anything. Considering Superman himself can do an inordinate amount of things with his array of superpowers, Amazo is a nightmare.
* Amazo has to say the name of whatever Justice League member whose powers it has copied before it can use them. Given that Amazo is a robot, and that this was his first ever appearance within the continuity of the show, this is more understandable than most examples. Although this provides a clue to Amazo's weakness, and the team uses that to defeat it. (Like Jo Nah, this version of Amazo can only use one power at a time.)
* Amazo manages to break her bonds before she and her teammates suffocate.
* Amazon and walking a dog. She makes the comment regarding a product displayed on her smartphone and he asks "Dog lice?," then points to the phone and says "That's a low price."
* Amazon Brigade: A group of Action Girls who consistently work together with no male teammates.
* Amazon Brigade all have beehive hairdos, little Florence Nightingale latex things and lace-up boots.
* Amazon Brigade are cyborgs, though they mostly appear to be normal humans, save for the superpowers. Otome is the most mechanical of the group, having to "feed" herself through an electric cable.
* Amazon Brigade as a flaw but never bothers mentioning the fact that they're all women.
* Amazon Brigade of assassins who were born and raised for the sole purpose of killing Jack. Training ranged from being forced to fight a giant muscular woman as children to being shot with flaming arrows in the dark to hone their senses. They are not allowed to see the outside world, any distractions are punished with repeated punches to the face, and their final test is a battle to the death with their trainers (except for the High Priestess, who stays alive to declare their training complete). The result is that they are brutally efficient and far more dangerous than the typical foes that Jack faces.
* Amazon Brigade of blonde, white-clad sniper women with a hate-on for the Russians.
* Amazon Brigade of Cara Dune, Fennec Shand, Bo-Katan Kryze and Koska Reeves vs. the Stormtroopers, which the women win with relatively little issue.
* Amazon Brigade who must either anonymously give up the child or leave their order should they become pregnant, become this for Rand, since he is the only child of a Maiden to ever be publicly known as such. While most instances of this trope have a sexual subtext (when it's not just plain text) to a man being in a position of importance and authority to a symbolic harem, in this example, Rand is seen as a younger brother at best, and more often as a son, by his bodyguards.
* Amazon Chaser: A female character is desirable because of her proactivity.
* Amazon Chaser: A girl being physically strong is what this guy finds most attractive about her.
* Amazon.com does this automatically with its best-seller list, narrowing the

* Amazon.com offers free shipping on orders $35 or over (add or subtract ten dollars depending on the seller). It does not on orders of 34.99, leading to customers buying 9 cent washers to push it over 35.
* Amazon.com, while not noted for its firings, tends to have absurdly high rate standards (pick rate at 100% is an estimated 1200 picks per day which turns out to be a pick every 1/2 minute). Given that most workers are temps until "converted" this means potentially every new worker has this type of job. On the bright side, they are a good holiday employer.
* Amazoness!, the Amazons' female slaves seem to enjoy their captivity and Belandi is even outright rebellious against Pantariste. Then again, this is set during a time where they wouldn't be treated much better in a non-Amazonian free area. In fact, the patriarchal tribes would likely subject them to forced pregnancy on top of treating them like slaves, regardless of official status.
* Amazoness! with the revelation that Eutropia is a boy. At least one reader had guessed this several comics before, and by the time the actual reveal occurred a good number had already figured out where it was going.
* Amazon: Guardians of Eden: After clearing an episode, the game says "Don't miss our next exciting episode!" Shortly after, the next episode starts with a title card and recap. You don't even get a prompt to save.

* Amazon: Guardians of Eden: When a tribe thinks Jason and Maya are a pair of fair-skinned gods while their shaman thinks they're demons, a medicine man tells them to prove they're gods. They accomplish this by throwing fireworks into a fire, which impresses the natives but the medicine man remains suspicious. He tells them to heal the sick boy, which they do and receive a canoe as well as some supplies. Failure to do either of these things results in the main duo getting eaten by the natives.
* Amazon has filed a patent for an airship-based warehouse that launches delivery drones.
* Amazon High, she helps the tribe rise to greatness. The tribe renames themselves the Amazons at Cyane's suggestion.
* Amazonia by James Rollins. Four years after all contact with an expedition into the Amazon basin, the lost expedition's destination, which holds the key to the cure to a worldwide plague, must be discovered at any cost. * Amazonian Beauty: A girl whose tomboyish bulk is considered a key factor in her attractiveness.
* Amazonian Beauty games, which makes him only known to the bigger fans of the franchise.
* Amazonian Beauty grunts and shouts to the sport. Nevermind that for the better part of a decade they were indisputably the #1 and #2 female tennis players in the world, only trading the spot back and forth between each other, and almost unbeatable as a doubles team.
* Amazonian Beauty manages to marry just about the only guy in the world that prefers Jennifer Walters to seven feet of green She-Hulk.
* Amazonian Beauty: Most barbarian warrior women fit into this category.
* Amazonian Beauty: The beauty standard of the decade, owing to the consciousness

* Amazonian Beauty whose looks have been commented on quite often in-universe.
* Amazonian sex goddess DiDi was, for the first several years of the strip, unable to reach orgasm during sex. This is largely because men are overwhelmed with her beauty and can only last a few seconds with her, but on at least one occasion another woman performed cunnilingus on her until the woman's jaw went numb, without solving the problem; in addition, she appears to fake satisfaction to avoid disappointing her boyfriends. Her desperate need for an orgasm led to

* Amazon is attempting to avert this trope with its new Underground service. Many popular games (some listed above) such as
* Amazon Lily and even more so when Luffy tells them they're his "family jewels".
* Amazon Lily Arcs as they basically each become the hero of a different island so Luffy can have an adventure with a fresh supporting cast. This differs from the normal split up arcs because we don't get to see the crew's stories while they are away, it's just implied with sparse glimpses and tellings. However, in the anime, they each get episodes explaining this more in-depth every so often while the story still mainly follows Luffy. This stops at the Return to Shabody Arc.
* Amazon Lily. He also shows nothing but annoyance towards flirting and is described by Monet as downright "unsociable".
* Amazon Lily Island has a gladiator arena that they use to execute criminals (men) or just throw a few more or less friendly fights to see who's the strongest (along with heavy betting).

* Amazon's Prime service once offered many items with free shipping with a guaranteed delivery of no more than two days, excluding Sunday. They were so committed to this that they would provide at least a month of free Prime (a value of over $8) if the item does not arrive in that timeframe. These days, though, they only offer free 3-5 day shipping with Prime, possibly because of too many instances where they weren't able to deliver on the former. (They sometimes used FedEx, which had a bad habit of turning packages over to USPS in certain cases, which ended up delaying the shipping.) This does depend on the country. In the UK next-day delivery is still guaranteed with Prime.
* Amazons Quartet; It's hard to find a hairstyle weirder or more impossible to reproduce than JunJun's. (She's the one in green, in case you were wondering.)

* Amazon UK screwed up with the release dates and dispatched DVD/Blu-Ray copies of the second half of series 7 to pre-order customers before the final episode had been shown on TV. As a result, Moffat said he would release some footage of Matt Smith and David Tennant together on the set of the 50th Anniversary if no spoilers were revealed. For once,
* Amazon Women in the Mood" involves Fry, Zapp Brannigan, and Kif being sentenced to "Death By Snoo Snoo" by burly muscular Amazons. Their response is a combination of cheers and groans of pain as they are locked in a room and the entire tribe systematically lines up to have their way with them. They are rescued (eventually) before their pelvises are crushed, and no lasting damage is done. (Note that Fry and Zapp don't seem to have any resistance to the idea itself until it starts really hurting; Kif, who does, manages to escape it, and is rescued by Amy.)
* Amazon Women on the Moon features a roast/funeral. The widow steals the show.
* Amazon Women on the Moon features a youth trying to buy a package of condoms. After hitting some of the usual aspects of this trope (embarrassment because the pharmacist is a family friend, etc.), the trope is spoofed when the youth is surprised by the president of the condom company coming out of hiding and informing him that he is the condom company's one-millionth customer. This "wins" him the privilege of being the condom company's public mascot for a year, at the cost of entirely spoiling his planned evening of passion.
* Amazon Women on the Moon from his apartment in a shower of broken glass, a nearby street-sweeper reacts with a "feels like rain" gesture.
* Amazon Women on the Moon, in which a grieving widow watches her dead husband's funeral turn into a "celebrity roast", and she is ultimately compelled to give a classic roast-style speech (the deceased's "rebuttal") as her eulogy.

* Amber Benson later stated that, even though neither of those theories panned out, he likes that she stayed dead because it sent the message that Willow could still find love and move on with her life.
* Amber Benson, since Willow was becoming too powerful to convincingly put in any real danger. However, Benson quickly won them over with her ability to play awkward and vulnerable.
* Amber Bleys is called this in the RPG. Ranked second or third among all the siblings in all or nearly all of the stats.
* Amber Brown, Amber's dance teacher (and later her Dad's girlfriend), Miss Isobel, is bad at remembering names and keeps calling her a different gem every time she sees her - "opal," "topaz," etc. Eventually, she remembers her names, but still calls her other gem names as a friendly joke. It's also never made entirely clear whether she actually knew Amber's name from the start and was joking the entire time.
* Amber Brown and Elizabeth Levy, whom Danziber described as her two best friends, with permission from the family. Reviewers generally agreed that the quality was so good that readers would not know the new books were not written by Danziger if they didn't know she was dead and if not for Coville and Levy's names on the covers.
* Amber Brown books, Amber Brown's favorite Amber-sitter, Brenda, is this. She once made Amber a meat loaf with a hard-boiled egg in it. Another time, she told Amber of her Velveeta whipped potatoes and spaghetti diablo, but fortunately they already had pizza on the way.
* Amber Brown books, Amber can sometimes be easily distracted. She has to go for special classes because she has trouble concentrating to take standardized tests.
* Amber Brown books featured rather younger versions of Amber and Justin, before Justin moved away and Amber's parents got divorced.

* Amber gets some of her medical info from Wilson, but quickly puts it all together and figures out for herself that she's doomed.
* Amber G is a very early one, having been around since at least 2003 (the year of her first album), her most recent album (her third) was released in 2008. However,

her "career" never really went anywhere. Any "fame" she may have had was likely restricted to the website.
* Ambergris, has Partials, people who voluntarily go through this process to become akin to fungus cyborgs.
* Ambergris-stories make a pretty good case of this being pure denial that the sceptics pursue to protect their own peace of mind.
* Ambergris: The Partials consider themselves to be a human subspecies. Whether they actually are, or if they're just cyborgs with fungus instead of machinery is debatable.
* Ambergris. They are also implied to communicate by breathing spores of their symbiotic fungi on each other.
* Ambergris to begin with. He's also dressed as a frog, who could be eaten by any one of them.

* Amber is in love with Danny - unfortunately Danny is in love with Amazi-Girl. Who is Amber in disguise.
* Amber is used as a frequent metaphor for the inability to let go of the past. Guillaume la Million, the detective's disco icon, is described as having 'an amber mane', and the Paledriver keeps a photograph of Gabriel Buenguerro, a Mesque movie star whose career was peaking 50 years ago, in an amber frame ("why do you need plastic when you could make the world out of amber?"). * Amberley is disappointed that her fellow Inquisitors treat Cain's memoirs as light reading instead of food for thought. Given that the real world readers would have no idea who Cain was before they picked up the book, they wouldn't be overly surprised to discover he seems to be a self-serving coward which would greatly surprise people who have been watching his work for decades. Also, the books are much, much lighter than other 40K books whose grim setting is supposed to be dramatic and thought-provoking, often times to make people examine human nature or just for the shock value the setting provides. Comparatively, the Cain series is light-hearted and tongue-in-cheek which is more "light" then the darker material.
* Amberley's footnotes also point out that he follows this trope without even noticing. For example, one time a group of men swarm a tank (
* Amberly Vail clearly has lots of adventures fighting enemies of the Imperium in between those times when her path crosses with Cain's. Her footnotes occasionally make references to these.

* Amber's No-Brainers page 6, Amber receives a letter asking when the last time her house blew up was. Her roommate comes in and tells Amber to cover her ears, and before the confused Amber can finish saying anything, the house blows up, leaving both of them charred.

* Ambience: A Fleet Symphony, the villains can and do much, much worse.
* Ambience: A Fleet Symphony: While ship girls are flawed, some very much so, it's baseline humans who commit or order most of the worst atrocities in the story. As Damon himself says on a few occasions, despite their artificial nature, ship girls generally are more humane than the actual humans.

The hands somehow ended up designed in such a way that they resemble cow udders with big red teats. Some people see the fingers as phallic instead. It should be no surprise that a lot of people think the design is gross.
* Ambissions expansion are essentially a more primitive version of the Servos, and can fill the same purposes.
* Ambition Is Evil: "Ambitious" in fiction means "Will screw over everything and everyone for prestige".
* Ambition Is Evil: Even if the ambition is noble, obsession with self-improvement corrupts the characters.
* Ambition Is Evil: People who wish to live to better standards than those they are born in are amoral and evil social climbers!
* Ambition Is Evil: The path to success requires you to commit morally reprehensible deeds.
* Ambition Is Evil). There are also strong hints that the caste system's so strict as a result of human population crowding the supernaturals together; there are fewer sidhe Courts and fey societies than there should be.

* Ambition Is Evil: Trying to climb the social ladder tends to knock everyone else down a rung; therefore, it is evil and shouldn't be done.
* Ambition Is Evil: Trying to make your wishes come true will turn you to the dark side.

* ''Ambition,'' line above. The speaker, in this case, is Harry himself. A pack of Ravenclaws lived to regret it.
* Ambition of the Red Princess, two of his companions have obviously fixed smiles on their faces while the third is chugging her beer as fast as she can.
* Ambition of the Slimes the player's slimes can possess enemies to control them at will. There's one slime in particular (Phoenix) which can revive anytime after its current host is defeated, allowing the player to jump from body to body almost at will.
* ambitious. (Compare and contrast his daughter Katherine, who in her own grab for power after his death plays the trope dead straight and promptly ends up thoroughly wrecking the very Federated Commonwealth he's only just helped establish again.)
* Amblin Entertainment for Netflix can be owed in large part due to this trope. There's creepy monsters and cool psychic powers for the younger viewers, teenage angst and romance for the older teens, emotional family drama for the adults and a tone that hits the perfect balance between genuinely spooky and nostalgically sentimental, especially in the scarier moments, which are quite effective but never too intense or violent for brave kids to appreciate. It even won a Kid's Choice Award in 2018, a rarity for a show not targeted for children.
* Ambridge Mansion, at the beginning of the games, you play through Silas'

nightmares. You wander around a creepy monster-infested house until you die in your dream.
* Ambridge Mansion takes place in a haunted mansion in its own alternate dimension. Everywhere outside of the house is blackness, giving the appearance that it is always night, although there is no real day or night there.
* Ambrose Bierce allegedly kept a relative's ashes in a cigar box and occasionally knocked his cigar into it.
* Ambrose Bierce: "A mistake in taste, for which the wisdom of the future will adjudge a punishment called 'trigamy.'"
* Ambrose Bierce. A troop of Union soldiers on an exploration quest through Arizona is approached by a mysterious man who narrates the story of four previous explorers, Ramon Gallegos, William Shaw, George W. Kent, and Berry Davis, who committed suicide while besieged by Apaches in a cave rather than dying of thirst. When a listener scorns and curses him for abandoning his comrades in their death, the stranger does only tell again they were four of them who died, and disappears. With uncanny calm, the troop's Captain acknowledges that years before there had been found and buried the bodies of four men, mutilated by the Indians, and the storyteller had been just whom he said he was, Berry Davis, who even if shot again "couldn't have made him any deader".
* Ambrose Bierce attempts to scry for Blaze's location, but is hit by her magical defences and finds that he can't see. He reassures his employer that "struck blind" curses generally wear off in a day or two, not realising that
* Ambrose Bierce said that a jury was "twelve men tasked with deciding who has the better lawyer".
* Ambrose Bierce's "The Damned Thing", a creature, judged by ignorant folk to be a mountain lion (from its leavings, since the creature itself is never seen), is a color that the human eye cannot see and makes noises that the human ear cannot hear. This inverts this already inverted trope because the color is natural and it is humanity that has become too alien (or at least insensitive) to comprehend it.
* Ambrose Bierce sufficiently complex creates intelligence and the weaknesses that come with it. So a fully mechanical chess-playing automaton can be not only intelligent but a sore loser, and a murderous one at that. (And you thought it was only wookies.)
* Ambrose Bierce. The mysterious disappearance of this author has also inspired younger storytellers.
* Ambrose Bierce, who vanished somewhere in Mexico in 1913 after time spent accompanying Pancho Villa's army as an observer.
* Ambrose Bierce wrote there were four types of homicide: "felonious, excusable, justifiable and praiseworthy." Most examples on this page will skew towards the latter three-quarters of that list.

* Ambulance Chaser: A lawyer who eagerly goes after clients who have been injured.
* Ambulance Chaser attempts to sue Jessica in a wrongful death suit, figuring that her insurance company will settle out-of-court rather than face the hassle of a

trial. At the end of the episode, he is disbarred after it is revealed that he bribed a witness to change his testimony.
* Ambulance Chaser if he ever tries it on someone else. When Barney points out that such words could be considered "noble," Arnold threatens to sue him for slander.
* Ambulance Chaser: In some jurisdictions (such as Europe), being one of these is illegal. Even places where it's legal still take a very dim view of this. Taking a worthless case just to shake someone down with a scary letter and make them panic-settle may, at the very least, net you an envelope in the mail with a none-too-polite letter from their attorney. The same goes for representing clients in an overly aggressive, belligerent, and uncivil manner; taking a no-holds-barred, scorched-earth approach to representation is a great way to lose cases, get sued for malpractice, and, again, find yourself on the wrong end of a smackdown from a pissed-off judge or state bar association.
* Ambulance Chaser out to cash in on a Medicaid scandal using stolen documents to make his case. However,r it turns out that Karras had nothing to do with the theft and has dedicated his decades-long career to social justice issues and helping low-income clients who can't pay him much. The lawsuit which costs him his life is driven by a desire to help a young mother whose husband has multiple sclerosis.

He then takes a bite out of the patty, and it immediately cuts to a sickly Mr. Krabs being rushed into the hospital.
* Ambulance Cut: Right when a character is about to do something hazardous, the scene cuts to the ambulance driving them to the hospital.
* Ambulance Match — One wrestler must put the other in the back of an ambulance and shut the doors to win.
* Ambulon, the wandering city, is built on the back of a titanic legged machine that walks across the unstable rocky centre of Scintilla's main continent. The machine itself predates the Imperium's arrival to Scintilla — Ambulon was built on it secondarily. The city itself is a mobile settlement, making endless tours of the planet's oil, gas and gemstone deposits to harvest resources to send to its other, static cities. As with all other complex technology in the setting, Ambulon's mobility is poorly understood and kept going mostly by ritual — no one knows exactly what would happen should it stop, and nobody wants to. As a result of these factors, the engineer guild that operates its engines and navigation wields immense political power. The city itself also experiences considerable
* Ambuscade/Stuntman, especially in, ironically enough, his heroic incarnation, where a fair few of his abilities actually get bonuses for him popping up in other people's turns to use them. He even has a card called "Steal the Scene" to let him do so. That being said,

* Ambush Bug even has the authorities going "Aaaaaw!" rather than trying to destroy it. It sounds really funny doesn't it? Then there's the fact that it goes "Niknak!".

* AMD actually beat Intel to the punch with the FX line of Athlon 64 processors, which thanks to more balanced performance and price ($999 vs. $733) was seen as a better deal at the time. After several years of struggling with the Bulldozer line (and a failed attempt with the FX-9xxx line), they returned in 2017 with the 16 core Threadripper, which had the effect of sending Intel into a panic and upping their top Extreme Edition from 10 to 18.
* AMD has been consistently doing this to itself and it’s rival Intel ever since it found it’s champion in the Zen architecture. On Zen’s maiden year, AMD created not only the ThreadRipper, a 16-core CPU for workstations, but also the Epyc 7601, a 32-core CPU for servers (scalable to up to 64 cores by using

two CPUs). The next year they one-up themselves in the Workstation market with the 32-core ThreadRipper 2990WX CPU for workstations and the 64-core Epyc 7H12 for servers (this time scalable to 128 cores using two CPUs). For the third year, they actually upped the ante for desktop PCs by introducing the 16-core Ryzen 9 3950X and the 64-core ThreadRipper 3990WX workstations, while still holding back on their server CPUs. And oh, they’re increasing their core counts while trying to keep the pricing consistent, which is still way lower than Intel’s offerings. Once can only imagine what server CPUs they are currently still keeping under wraps. Intel is rightfully
* am-dram companies started amateur theatrics without even bothering to seek Pratchett's permission. He was willing to give it, but they had to ask first. * Amélie hanging around at a Paris train station but he declines since he doesn't work on Sundays.
* Amélie has many elements of the romantic comedy; probably it's not considered so by most people because it's so original in terms of not only its story but also its art direction and acting that it's hard to associate it with the romcom's reputation of formula.
* Amélie is a twofer; it's shown in French classes as entertainment and language immersion.
* Amélie is a vague example, the headshots in one of his pictures come alive and argue over whether Amelie is all that attractive. Some will only say that she's Special Average, but another insists that she's World Class beautiful.
* Amélie. It's barely noticeable by many audience members. There was also a scene in which Amelie turned into a puddle of water in order to convey a sad mood. These are just two examples.
* Amélie keeps her cheating husband's loyal dog stuffed and mounted on a table, staring at a picture of its old master. This is meant to show how pathetic the woman is. (It works.)
* Amélie, the title character's mother dies when a tourist committing suicide via freefall lands on her.
* Amélie. To anyone who's seen that movie, that may seem... strange, but Bess certainly can be seen as a dark subversion of the MPDG archetype.
* Amélie uses this to get the plot started, as the titular protagonist reacts in shock to hearing news of Princess Diana's death and drops the lid of her perfume flask.
* Amélie was cast. During the press tour, one reporter even asked Jean-Pierre Jeunet why he had bucked his previous tradition by casting such a conventionally attractive actor in the lead.

It seems to go either way on whether the eels were eaten cooked or raw, and at least some versions had the eels and bitter almonds being made into a paste together. This one can actually be potentially dangerous, as bitter almonds contain higher levels of cyanide than the sweet variety normally consumed.

* A Melhor Banda De Todos Os Tempos Da Última Semana", or "The best band of all time of last week".
* Amelia, all due to her own selfish obsessions. By the time she reappears in Book 3, she's cooled her jets significantly and is actively working to fix her mistakes... but not without some severe snark and cynicism.
* Amelia and Franz's A-Support ends up in a mutual one, with Amelia vowing to be his shield to protect him, while Franz's promises to be her sword to fight for her, assuring her that
* Amelia Atwater-Rhodes' books have a genetic, female-only species of witches. These witches can breed with normal humans, but their powers are genetic, so there are a few very specific witch lines. These can work magic, and each line has a different specialty, but witch society as a whole tends to spend most of its time

hunting the vampires that run rampant in these books. One witch line carries a vampiric taint. While a witch can be turned into a vampire, turning one into a blood bond (which effectively makes a human immortal but not a vampire) is usually disastrous. Then there are the Tristes, immortal witches who are quite like the vampires they so often hunt. They have their own "sires" after a fashion, in which specific trainers and their initiates have varying levels of powers. Also like vampires, Tristes "feed" on energy rather than blood. Their blood is poisonous to vampires, unless the triste consents under specific conditions.
* Amelia Atwater-Rhodes that many of the vampires in her canon are bisexual, having grown tired over the centuries of being romantically involved with a single gender.
* Amelia Bedelia, Amelia Bedelia is alone on a bus to a summer camp she doesn't really want to go when she is joined by a girl named Alice who has just been picked up by the bus. Alice is very amicable and they quickly strike up a conversation, though Alice does most of the talking. Eventually Amelia Bedelia falls asleep not out of boredom but simply exhaustion because among other things she's tired from crying. When she wakes up, after sleeping for four hours, Alice asks if she knows that she talks in her sleep. Whatever Amelia Bedelia was saying must have been pretty specific because Alice asks "Who's Finally?" which is the name of Amelia Bedelia's dog, but she couldn't have known that "Finally" was a "who" and not a "what" simply from hearing the name.
* Amelia Bedelia, Amelia Bedelia's mother does this after Amelia Bedelia suggests that she could have twins.
* Amelia Bedelia, Amelia falls into the remains of an old pirate vessel. She shouts for help and her dog, Finally, is first to find her. She asks her to go get help, but she just stands there digging. She makes an on-the-spot resolution to watch more old movies with her once she gets out.
* Amelia Bedelia & Friends, Amelia Bedelia's friend Joy tells her to take one step to the right. She promptly takes a step and is told by Joy "I meant to your right." Amelia Bedelia responds "Right! I like being right." Joy tells her "more to the right," but she still doesn't get it, resulting in Joy taking her hand pulling her to the correct position.
* Amelia Bedelia A popular selection for elementary summer reading lists
* Amelia Bedelia literal minded. If you ask her to dress the chicken, you will receive a fowl wearing a very cute dress. If you ask her to watch for the fork in the road, she will quite diligently keep an eye out for said utensil lying in the roadway. And so on.
* Amelia Bedelia Road Trip! books, when Amelia tries to take charge of the planning of the trip she's told that this is the parents' job and it's the kid's job to ask "Are we there yet?" Later, when she does this, she is told yes, because the trip is an adventure road trip to nowhere in particular, so anywhere they go is there.
* Amelia Bedelia's First Day of School, her teacher tells the class "Try wiggling your fingers on that clay," so she does just that on one of her classmates who is named "Clay" until he starts laughing so hard he can't stop.
* Amelia Bedelia shows Amelia Bedelia's father working on a laptop, even though personal computers didn't even exist during the 1960s time period in which the books with the adult Amelia Bedelia were first published.
* Amelia Bedelia still appears in new stories after Peggy Parish's death, courtesy of her nephew, Herman Parish.
* Amelia Bedelia, the book "Amelia Bedelia and the Baby" has the titular character describe things as "plumb [adjective]" a lot.
* Amelia Bones writes a note which she arranges to have sent to her two hours later, in case Dumbledore or Snape Obliviates her while she's investigating suspicious activities on their part.
* Amelia Earhart, after all). Another theory has the same happen, but with them actually being spies.
* Amelia Earhart. Marshall recalls that a Lockheed airliner was found in Deadwood Park and suspects that it may be her plane. Simon wonders whether the old lady whom they always see jogging around town is secretly Earhart.

the consequences, which turn out to be a long and happy marriage.
* Amelia Peabody: Amelia got this from pretty much all her brothers, but especially her oldest brother James:
* Amelia Peabody. Amelia herself could actually fit this trope in many regards, although it may be more her old-fashioned manner of narration than excessive verbosity.
* Amelia Peabody and her husband Emerson both like to claim to be better at detective work than they actually are:
* Amelia Peabody and her husband have some interesting conversations: What do you talk about while crawling through the unstable, half-crumbled passages of an un-excavated pyramid, hoping that your 7 year old son is right when he says he knows a way out? The similarities of construction with other 12th Dynasty pyramids, of course!
* Amelia Peabody and Radcliffe Emerson. Amelia frequently describes her husband as "Herculean".
* Amelia Peabody and Radcliffe Emerson, Egyptologists who detect because their path is littered with the bodies of murdered tomb robbers, spies, etc.

* Amelia Peabody Emerson is an Action Mom who carries a steel tipped parasol, a gun and a knife — and still is unequal to her son Ramses.
* Amelia Peabody, Emerson kisses Amelia right before the final battle, "even at the risk of surviving to face the consequences."
* Amelia Peabody finds watching her husband Emerson fight the 'Master Criminal' Sethos for her quite an 'interesting and stimulating sensation.
* Amelia Peabody novels center around a family of Egyptologists working in Egypt in the 1880s-1920s (so far). Since they have to make discoveries periodically, the author has them make all the discoveries of Flinders Petrie, a real-life Egyptologist who worked in the same era. In order to avoid the awkwardness of actually meeting him, the author gave the main character's husband an uncontrollable dislike of him.
* Amelia Peabody series blends mystery, romance, and comedy in its stories about crime solving Egyptologists. The series spans a thirty-eight-year period from 1884 to 1923, with most of the stories taking place in Egypt.
* Amelia Peabody: she often expresses exasperation at the inconsistencies and inaccuracies in the text, such as the signs that the journals were rewritten many years later with an eye towards publication ("Little did I know..."), and Amelia's tendency to put her own opinions in the mouths of her famous contemporaries.
* Amelia Peabody turns out to be that it has a lost will hidden inside.
* Amelia Peabody, without repeating the style of Peabody and Emerson (although they do produce yet another generation of alarmingly precocious children).
* Amelia Rules! and her friends spent a lot of time wondering whether Kyle asking her to escort him to the banquet at St. Johns Elementary School was a date or not.
* Amelia Rules!, despite being great in most other respects, abuses this trope and seems to have built later parts around it. Although occasionally averted or lampshaded, this trope is mostly played straight; the eponymous character (who is 9) has two love interests (also 9).

* Amelia Rules! has them playing a game called 'Thank God you're open,' which specifically invokes this trope; you're supposed to rush madly into a shop with $5 or so, breathlessly tell the cashier the name of the game, and ask for the most outrageous combination of items they can get.

* Amelia tried this once on a member of the Mazoku race, which feeds on negative emotions. It was so effective that they had him writhing on the ground in pain.
* Amell family could be considered this, since the line seems to blur between whether they're a family that produces an unlikely amount of Mages, or just a family of Mages with quite a few non-magic children. It's mentioned that despite their best efforts to breed magic out of their family line to retain their noble high standing in Kirkwall, it always managed to find its way back in.
* A member of another alien race, the Zaruboggans (a race that absorbs pollution and detoxifies them, and they have no gender and reproduce through their detoxifying process), develops a feeling towards a female human. You then help out said alien handle this feeling.

After convincing them not to do it, he sends them back to a few minutes before the crime that got them to him in the first place. If successful, he only has a vague notion that he helped someone, no longer remembering the details. If not, he remembers that he tried before. He normally gives a criminal three tries before giving up and handing him back to the justice system.

* A Memoir By Lady Trent but there are still no more than a few thousand left.
* A Memoir By Lady Trent is set in a fictional world, but the countries correspond to real-world ones (Scirland is Britain, Bulskevo is Russia, Akhia is Arabia and Egypt, etc.).
* A Memoir By Lady Trent. It's a low-lying area between two higher plateaus that three major rivers pour into, which has turned it into a vast, swampy morass filled with a trackless tangle of jungle life. The swamplands are swarming with insects and leeches, most of which carry diseases, and home to large populations of poisonous snakes, aggressive pygmy hippos, schools of flesh-eating fish, and crocodile-like dragons. Its native people love it dearly and know how to live there successfully, but to outsiders it is justifiably known as the "Green Hell".

The CO was not amused.
* A memorable commercial for Krazy Glue in the late 1970s showed a construction worker whose hat is stuck to a steel beam and whose legs are dangling wildly, glued to the beam by one single drop of the adhesive. Since the commercial was a 30 second commercial it didn't have time to resolve whether the worker was ever rescued from the beam.

* A memorable example occurs on "Bunker Hill Bunny". Sam carries a powder keg over to Bugs' fort, not realizing that it's leaking powder into the back flap of his pants and overflowing into a trail behind him. Bugs extinguishes the keg's fuse, then lights the trail on fire, which then follows Sam everywhere he goes. It eventually catches up to him on top of a tree he's hiding in.

* A Memory Called Empire, sacrifices are required by law to be volunteers not because it's inhumane to kill, but because picking out someone or taking someone random would take the chance of having that honor away from someone more dedicated.
* A Memory Called Empire: The government employees Three Seagrass and Twelve Azalea are old friends from school who call each other Reed and Petal respectively. The protagonist hears this before getting to know them and finds it incredibly cute.

* A Memory of Flames He forgets that he's wearing the armor of a dragon knight when he walks into a village filled with people who have hated dragon knights for generations. All the more bizarre when the character himself hates knights.
* A Memory of Flames, the Speaker of the Realms has a group of "Adamantine Men" serving as their personal guard. The fanatically brave and loyal Adamantine Men also served the Realms by helping the Alchemists control dragons for the various Kings and Queens.
* A Memory of Light have all traded their senses of humor for oversized chins.
* A Memory of Light that knew what it had been like to live in an Age of such wonder, he remarks that, yes, it was beautiful but the world government was ignoring problems that didn't mesh with the idea that their society was perfect. It was getting bad enough that war probably would have erupted within a generation or two if the Bore hadn't created a different problem.
* Amen along these lines — among the men on the show, he is the first to chastise the others for eyeballing attractive women and making comments about them — before wholeheartedly agreeing with them.

* Amen is preparing to catch a boat to Argentina with help from a Vatican cardinal.
* Amen made of chocolate. But by this point of the film, neither Gerstein nor the audience would have put it past him.
* Amen. Neither Thelma's maternal grandfather nor Reuben's mother show up at their wedding. Quite glaring considering that Ernie, Thelma's father, reconciled with his former father-in-law (he cut his daughter off when she defied him to marry Ernie) and explicitly invited him to the wedding, and Reuben's mother had appeared in the previous episode and tried to take over the wedding planning.
* Ame Nochi Hare, Hazuki and his friends turn into girls whenever it rains. He gets gets more friendly with love interest Asumi as a girl than as a guy.
* Ameno Sagiri takes this to a truly ridiculous extreme. Its voice is so deep that if not for the aid of subtitles it would be incomprehensible.
* Amen, Reuben suffers this shortly after marrying Thelma—the combined stress of his work as a minister, a new marriage, and living up to Thelma's expectations. After confiding in Frye and Rolly, they both vehemently deny ever having the same problem.
* Amen, Santa visits the Frye house and encounters the streetwise Clarence, who speaks to him in typical hip-hop lingo. Reuben suggests that Santa doesn't understand, but Santa informs him, "I'm down with all the speak, dude!"

* A mentally-broken Kotonoha snaps on Sekai and cuts off her throat on a bridge in broad daylight.
* Amentep and his wife Taia were born in Ancient Egypt over four millennia ago.
* Amen Thelma almost does this to her would-be groom before finally sitting him down and gently telling him that she doesn't love him the way he deserves to be loved. Similarly, Reuben hem-haws on proposing to Thelma, then faints during their (first) wedding, basically a physical manifestation of his fears about marriage. She then basically pulls this trope again by storming out on him and refusing to accept his apologies.
* Amen: Thelma is apparently this to Reverend Reuben Gregory; his backstory includes a fiancée who left him at the altar.
* Amen: Thelma went from announcing her pregnancy to not only being ready to deliver, but being two weeks overdue within a few months.
* Amen. This is despite numerous snide comments from everyone regarding how terrible her cooking is and her nearly burning down hers and her husband's home. She's also quite convinced she's a wonderful singer when she's just as bad at that.
* Amen, though it's more about dealing with the grossness of the process (he faints when watching a birthing video) and being able to handle Thelma screaming at him. When she does go into labor, he basically snaps himself out of it, determined to be able to support her.

Two goons in suits get out, approach an old man in his old car and ask him: "Hi, now you owe us so-o much... you're going to pay or we'll talk ...differently?" Old dude replies "Ah, I haven't much money with me, perhaps you need to talk with my son." "And who's your son?" "Chief of the poultry farm." "Well, call him." * America. In practice, the new land created in the Mediterranean would've been salt flats useless for agriculture, the Mediterranean fishing industry would've been ruined, the African lakes created by the Congo River projects would've destroyed vast swaths of the Congo rainforest and displaced millions of people, and the climate change caused by shrinking the Mediterranean would've turned Southern Europe and North Africa into deserts and plunged Northern Europe into a new ice age.

* American Animals disguise themselves as old men because old people are easily ignored. However, they actually stick out among the college students of the university library. During their second attempt, they simply dress in suits.
* American Animals: Early scenes emphasize how much fun Spencer and Warren are having being criminals and planning their heist. One scene has them rob a meat locker and drive away while exultantly singing along to Johnny Thunder's "I'm Alive."
* American Animals: Spencer and Warren are sitting in Warren's car in a parking lot, smoking weed and talking about how their lives are going nowhere. They are watching a bunch of people just hanging out in the empty parking lot, two of whom are pushing each other around in a shopping cart. Just before they leave, they see the now empty shopping cart rolling down the hill on fire.
* American Animals: The film begins with a message "This is not based on a true story," but then turns this on its head when words drop out to leave "This is a true story." The plot is mostly a dramatization of real-life events, but this is

occasionally intercut with talking-head commentary from the real people being portrayed. In several instances, the real people appear in the dramatized scenes ,watching or interacting with the events.

* American Beauty even more than being unemployed, especially when he catches her cheating on him at the drive-thru.
* American Beauty had the tagline in the trailer "If you think a comedy can't be moving, if you think a drama can't be funny, look closer". * American Beauty. Kevin Spacey's character is initially a depressing version of this, but as the movie continues he manages to shirk the mantle.
* American Beauty, Lester Burnham lets loose with a short one of these at his wife when she catches him masturbating: "Oh, all right! So shoot me, I was whacking off! That's right, I was choking the bishop, chafing the carrot, you know, saying "hi" to my monster!"

* American cavalrymen used sabers throughout the 19th century, not just the Civil War. They were used during the Mexican-American War, the Indian Wars and even as late as the Spanish-American War. Sabers though were used as a last resort if the soldier had no ammunition left. These weapons were disparagingly known as "Old Wrist-Breaker".
* American Chinese cuisine. Originally developed in Chinese restaurants that decided to work around American tastes and/or a limited selection of ingredients, American Chinese food has since been re-imported to China and can even be found there in dedicated restaurant franchises. At the same time, more "authentic" Hunan and Schezhuan cuisine has become popular in the U.S., particularly in areas with large Chinese-American populations, such as L.A. and San Francisco.

* American Civil War century women were relatively small-breasted due to inadequate nutrition, and many figured out the trick of padding out their waists instead of trying to completely eliminate their breasts, which was often helped by ill-fitting uniforms and the sartorial customs of the time, which required several layers of relatively thick and unyielding fabrics and often resulted in people resembling unmade beds.
* American Civil War, Elisha Hunt Rhodes went from private to colonel.
* American Civil War employed during most of the war. The Confederate strategy relied on a series of decisive victories in pitched battle that would quickly force the Union to the negotiating table once they lost their stomach for war. The Union strategy (mostly) involved attrition and the control of key locations, knowing it would be able to outlast the Confederacy in any prolonged conflict due to their industrial superiority and population advantage. The dual Union victories at Gettsyburg and Vicksburg in the first week of July 1863 illustrate the success of one strategy (the Union gained complete control of the Mississippi River, further tightening the noose around the Confederacy) and the failure of another (Lee banking on a decisive victory on Union soil and being utterly foiled, resulting in a decisive tactical and strategic defeat the Confederacy could not recover from.)
* American Civil War had this trope as the win condition for the South — whilst the North had to actively go forth and defeat them, the South only had to hold out long enough for the North to sue for peace due to war weariness or to be recognized as an independent nation by Britain and France (the superpowers of the age). The South knew it had been done before with the American Revolutionary War less than a century prior. Both of these came close to happening at different times during the war.
* American Civil War, he was in reality a handy strategist. His battles in the Eastern Theater of the war and during the Vicksburg Campaign would not have been won just by using raw numbers of troops, no matter what his critics like to say. Furthermore, while Robert E. Lee was a battlefield general skilled in winning individual battles, Grant was a big-picture strategist who could take all his nation's forces in his plans and have the skill and will to use them through a series of battles to most effectively win the war. Indeed, it would be his military reputation as a lauded strategist that would later land him into the presidency.

* American Civil War. It was also one of the bloodiest battles of the entire war, even though, as a battle in the Western theater commanded by not terribly famous generals, it is largely forgotten except among Civil War buffs and Tenneseeans. In the end it was a narrow Union victory, but both Confederate general Braxton Bragg's Army of Tennessee (losing 11,700 out of 35,000) and Union general William S. Rosecrans' Army of the Cumberland (13,000 out of 43,500) suffered terribly.
* American Civil War it was not uncommon for people to number their letters, so the recipient knew if one had gotten lost (which was pretty common).
* American Civil War, many however actually see the Battle of Antietam as the real turning point of the war, because this was the last real chance the Confederacy had of not just temporarily carrying the war north (there was also a Southern offensive in the west at the time, while even if Gettysburg had been won by Lee, Vicksburg still would have fallen to Grant), but also to gain recognition from the major European powers. Gettysburg had essentially no impact on the long term reputation of Lee and his army; the Northern public and the South alike considered him undefeated when Grant began his offensive in 1864.
* American Civil War mistakes to be blamed on the respective general, but they could easily have said "a better subordinate would have carried the day" as many of their contemporaries did.
* American Civil War most Confederates up to Lee himself were pardoned. Jefferson Davis underwent two years imprisonment.
* American Civil War), rehabilitated his reputation as a sensible commander Lee should have heeded in the first place.
* American Civil War's advice to first manoeuvre around the Union Army to get between it and Washington DC, and then disregarding his warning that Pickett's Charge would be a costly debacle.
* American Civil War saw a conflict between a master strategist and a master tactician when Ulysses S. Grant fought Robert E. Lee. Lee was by far the superior tactician, and would typically come out on top of any one engagement. Grant, however, had a clearer view of the big picture, and understood that every battle they fought left Lee's position more and more untenable: the South, with its smaller pool of manpower and lack of developed industry, could only afford to bleed for so long, while the North, with its giant population and burgeoning industrial economy, could pour men and money into the war effort for a lot longer so long as the political will remained to pursue the war. So long as the Union could achieve a banner victory in the field every now and then to shore up popular support for Lincoln and the Republicans, Grant could focus on simply wearing Lee down. As a result Lee won most of the battles, but Grant ultimately won the war (Case in point: the Overland campaign was a series of battles over the course of a month and a half. Most battles were inconclusive or Confederate victories; at the end of the campaign, the Confederates had retreated almost a hundred miles). That said, Lee was aware enough of grand strategy to know that political will was the North's key weakness: his invasions of the North and willingness to continue engaging Grant and his commanders despite heavy losses were informed by the knowledge that the more depressing the news that the Northern public got from the front, the more likely it was that Lincoln would be voted out of office and replaced by a peace candidate who would come to terms with the Confederacy; this almost worked, but when W. T. Sherman conquered Atlanta in early September 1864, the Union had exactly the kind of banner victory needed to boost morale- and thus Lincoln and the war- all the way to Election Day in November.
* American Civil War sent in to save what could be saved, but by then it was too late and the officer who had suggested the assault (and the use of black troops) was sacked. In all however, African Americans had a lower rate of survival, received worse treatment in hospitals (as evidenced by their higher death rates) and were described frequently by comrades who had been rampant racists in 1860 as gallant and valiant and the best soldiers one could wish for while often being sent on missions as dangerous as they tended to be during the civil war, when some generals still thought in terms of Napoleonic charges against WWI style trenches.
* American Civil War, the Confederacy issued several letters of marque. This made

sense as they had very little in the way of a proper navy, and most shipyards, along with all the factories that could produce cannons and steam engines, were in the North.
* American Civil War, there was an unsuccessful plot to steal Lincoln's corpse and hold it for ransom. One of the first investigations ever carried out by the U.S. Secret Service was launched against the ring of counterfeiters, who were plotting to steal Abraham Lincoln's corpse and hold it hostage for the release of their imprisoned engraver. This is, in fact, one of the ways how a governmental department originally established to protect the nation's currency became responsible for guarding Presidents, living or dead.
* American Civil War was a failed attempt by the rebellious southern states to form a new country due to fears that the country would restrict or ban Slavery (and a bunch of other, minor political and social tensions as well). The same conflict led to the creation of the state of West Virginia, when it turned out that those Virginians living in the Appalachians wanted nothing to do with the whole 'slavery' or 'secession' stuff and decided to secede from Virginia and rejoin the glorious 'murrikan motherland.
* American Civil War was one such war (but then the highest ranked casualty on either side was Albert Sidney Johnston, a general killed at Shiloh) - sometimes the people who got killed (or were sacked) were actually incompetent due to being stuck to notions of warfare decades out of date. But on the Confederate side, the deaths of leaders like "Stonewall" Jackson (who was shot in the left hand by a friendly fire incident and died of pneumonia while trying to recover from the wound) left the army paralyzed and blind adding to their already substantial manpower and equipment disadvantages.
* American Civil War was to aggressively expand into Central and Southern America. They got hung up on the step before that, though.
* American Civil War went to advise the Khedive of Egypt and to train his army. Ultimately it was all for nought as the British took over anyway.
* American Civil War. When Pickett's Charge was repulsed at Gettysburg, the retreating survivors were taunted with shouts of "Fredericksburg!" In that earlier battle, it was the Army of the Potomac that suffered frightful casualties in failing to break a fortified line. Almost one year later, one soldier wrote in his diary: "June 3, 1864. Cold Harbor. I was killed." Which he was. Many other soldiers pinned nametags to their uniforms before this and other battles so they could be identified if they were killed; ironically, the author of the diary omitted his name in the book, and it has been suggested that the diary entry is apocryphal.

A famous part of "Greek" college life is "toga parties," but togas were actually a Roman article of clothing. The Greeks wore chitons, not togas. On the other hand, the bedsheet-togas of "toga parties" is actually nothing like the Roman toga (which was a complexly draped semicircular piece of woolen cloth, typically worn over a tunic, and covering both shoulders anyway, it was the Roman equivalent of a three-piece suit and not good for parties) and a lot like... the Greek chiton (which were made of a rectangular piece of linen, and were often worn as a tunic with other garments like the chlamys—a rectangular woolen cloak—on top, often not covering one shoulder, they were the Greek equivalent of a white T-shirt and quite excellent for parties). Also, unlike at toga parties, women did not usually wear togas or chitons. Instead, they wore dresses or long

tunics, and if they were married, they wore a garment called a

* American Dad!. A shapeshifting alien offers him one last night of sex, and even takes Hayley's form so he can pretend to spend it with her. Jeff almost goes through with it, but ultimately realizes that if it's not the Hayley he knew, it wouldn't be worth it.
* American Dad! as himself, willing or not (this is hinted at when his backstory is revealed, he was duped into being a crash test dummy for an aircraft traveling to Earth with the claims he was chosen to evaluate the human race, even placing an apathetic note to ignore the supposed crater and corpse the test would leave). Roger was clearly shocked that they'd use him as a test dummy, and originally there was nothing hinting that either Roger was the problem or he's actually a nice guy by the standards of his people. Other members of Roger's species are finally seen in "Lost In Space" with them being ruled over by the evil Emperor Zing. The emperor only went crazy due to Roger cheating on him, which Zing kept a secret from the rest of his people. and most of his subjects were disgusted by him when Jeff revealed the Emperor's deceit towards them. While its never stated why Roger was sent to Earth as a crash test dummy, the aforementioned episode strongly implies that Emperor Zing did this to Roger to get revenge on him for his affair as the rest of Roger's species, which makes sense because Zing was the emperor and Roger's offense towards him was in Zing's eye's tantamount to committing treason (and the reason why Zing chose Roger to go to Earth was because the man Roger slept with was a human from Earth).

* American Dad! episode "Camp Refoogee". While the rest of the family is away, Roger and Francine disguise themselves as a couple to socialize at the country club. On the fly, Francine changes Roger's backstory (calling him an economics professor, instead of a political scientist). Roger responds by inventing a fake weight problem for Francine, and the situation devolves from there.
* American Dad! episode "Crotchwalkers", when Steve is caught shoplifting, Francine lambastes him not because he was shoplifting in the first place, but because he got caught, because she's been shoplifting for years without ever getting caught, so she decides to teach him what she knows and go on a shoplifting spree with him.

Later, after he explains that Francine is in real danger, a monkey randomly pops out from behind his desk, making the official crack up.
* American Dad! episode "Stan of Arabia", Stan is reassigned to a post in Saudi Arabia after screwing up his supervisor's anniversary roast party, and naturally his family goes with him. It doesn't go well.
* American Dad! episode "Stan Smith Is Keanu Reeves as Stanny Utah in Point Break", Stan happens to be standing on a beached jellyfish that attracted wolves, who are in turn being hunted by poachers. One of the poachers says to Stan that he's seen too much and points his gun at him.
* American Dad! episodes that have aired during the same years. An episode focused around Bush showed him to be pretty stupid.
* American Dad! episode "Surro-Gate", Francine, carrying Greg and Terry's future daughter, attends Lamaze with them and Stan. Francine does the exercises, while Greg hyperventilates.
* American Dad! episode "Tears of a Clooney" after Stan befriends George Clooney, he later refuses to fistbump him because has to inform George he is "leaving" him to move back to his old home.
* American Dad! episode "Tears Of A Clooney", when Francine punches the car's glove compartment while she criticizes Clooney's trademark of tilting his head down, then squinting his eyes before he speaks...
* American Dad! episode "The Magnificent Steven", Roger manipulates Hayley and Francine into one-upping each other until a cat-fight inevitably breaks out, all so he can film it and win a t-shirt from a website devoted to mother-daughter cat-fights.
* American Dad! episode "The People vs. Martin Sugar". He is always eager to attend jury duty every year as he sees it as one of the duties of a true American, even renting out a hotel room during the trial to make sure he stays impartial. It turns out the defendant is one of Roger's personas who attempts to charm the entire courtroom, with no effect on Stan.
* American Dad! episode "The Scarlett Getter", after Francine blasts her with a shotgun, Scarlett rolls into a nearby fireplace and immediately turns to ashes. Stan comments that she was really dry.
* American Dad! episode "The Talented Mr. Dingleberry", Roger poses as a ventriloquist dummy to help Steve win the school talent show. Of course, Roger lets his persona go wild that he ends up killing most of Steve's expendable opponents until Steve manages to save Snot from drowning in his water cage trick that Roger shut its door of escape with a broom. Roger later says the mascara cream was what

drove him crazy.
* American Dad! episode "Toy Whorey", Roger's cliffside estate has the garage doors leading over the cliff, so when he backs up out of the garage, he falls over.
* American Dad! episode was about Stan having a mental breakdown after he was repeatedly bested by a car salesman who kept selling him expensive cars at inflated prices instead of the sensible one at half. Since he couldn't provide for his family, Francine has to work three jobs to stay afloat and Hailey resorts to prostitution. The salesman eventually sold Stan the car out of pity, only to realize Stan only pretended to be mad. The episode ended with Stan gloating in his new car, not caring about the damage he has done to his family just so he can "win".
* American Dad! episode, where Roger drops his elbow onto the head of the bad guy as he falls from the ceiling of a warehouse, shown four times with increasingly gruesome close-ups. The episode ends a scene later with Roger asking Stan if that guy was okay.
* American Dad! episode "Who Smarted?", Francine tries to cheer up a depressed Hayley with "one of those fucked up Sonic the Hedgehog ice creams".
* American Dad! episode "Wife Insurance", Roger and Steve, roleplaying as Wheels and the Legman, lay out several fish-related puns while interrogating Klaus.
* American Dad! episode "You Debt Your Life", Roger discovers that Stan has rented out his attic to Andy Dick, which leads to this exchange:
* American Dad! especially in The Most Adequate Christmas Ever, where he gets killed and fights his way up to God Himself in order to get brought back to life to save his family. As God points out, there's no better metaphor for "I know everything" than pointing a gun to God's head and insisting He's wrong.
* American Dad!-esque bug who's dying of neglect) begging Stan to kill him. He then finds actor Tom Skerritt stuck to the wall in a white web-looking cocoon. Tom begs Stan to "Get me work!"
* American Dad!-esque depictions of demons and angels doing battle on earth. Later, the episode shows those very things actually happening.
* American Dad! eventually kills one-hundred people, which causes his repressed conscious to manifest as an altruistic split personality that takes over whenever Stan falls asleep, so Stan feebly tries to stay awake until he can figure out a way to beat "Sleepwalking Stan".
* American Dad ever had, and just a few episodes before "Black Mystery Month", two characters visited Burger King with absolutely no trace of parody whatsoever.
* American Dad! falls off the wagon during a dinner the Smith house (Stan won an essay contest, the prize being dinner with the President). He proceeds to continue drinking and runs off into the night with Stan and Haley on his trail. By the time they catch up with him, humping a replica of the Washington Monument on a mini-golf course, he's completely naked and wants to quit being president. Stan reads the first sentence of his essay, which he wrote about Bush's presidency, to cheer him up. Elated, Bush demands to hear more, but Stan refuses until he puts his pants back on.
* American Dad! fan who thinks that by resetting Earth to the middle ages, he will start an age of magic.
* American Dad! features a CIA holodeck machine that scans the memories of people and projects them into the holodeck. The machine has a literal nostalgia filter. When Stan revisits his childhood with the filter on, it's bright, warm, comforting, and his dad is a nice person. Turned off, the place is a dump and his father is cruel, as it really was (not that Stan is bothered by it).
* American Dad! features "Local anchor partners" Greg Corbin and Terry Bates, two gay news anchors who are in a relationship, who move next door to the Smiths early on in the series. They often bring their domestic lives into the news.
* American Dad!. First, Klaus is seen pretending the Smith family was on a DVD, and he's doing the commentary. This is forgotten until the final hobo-fight showdown, where he mentions one of the actors supposed to be in the scene had died beforehand, before apologizing for speaking over the funniest line in the entire episode (apparently). Then, just before the credits, we get a behind-the-scenes

shot of Stan joking around with another actor, with 'In Memory' superimposed.
* American Dad!: For many years, Steve's friend Snot had a crush on Hayley, who made it clear that she did not reciprocate. In "The Missing Kink", Snot finally convinces Hayley to go out with him. Hayley ends up falling for Snot, while Snot completely loses intetest in Hayley.
* American Dad! for this class only to prove to Steve that he is not completely immoral.
* American Dad!. Fortunately, Roger leaves him for good at the end of the episode.
* American Dad!, Francine is revealed to have a spanking fetish, and she even offers to let Stan "punish" her every time Steve does something bad. A lot of the humor comes from Stan's unwillingness to go through with it.
* American Dad! Francine's (adoptive) parents are very much the first generation stereotype of Asian Americans, speaking in short, curt, sentences and dropping articles.
* American Dad! Francine used to live in an orphanage before her Chinese parents adopted her. In that orphanage, any time she tried to use her left hand (being naturally left-handed) the nuns would smack her with a fish. Which is a reference to a now rarer practice of forcing people to be right-handed that was once common in Catholic schools, and also happened in some secular schools.
* American Dad!: Francine. With her high-energy, she can be somewhat crazy.
* American Dad!: Freddie, Roger’s friend for Steve from an episode, screams so loud everyone’s eyes pop out.
* American Dad! had an episode where Stan tries to have a romantic date with Francine while also taking care of his boss's prostitute. At one point Stan and Francine are playing Scrabble, and Francine is the one who points out that Stan can play words like "man", "takes", "smokes", "to", "skank", "across", and "lake".
* American Dad! had an episode where Steve and Roger are tasked with finding an old man's inheritance to his grandson. It's just a burlap bag that lights up when opened.
* American Dad! had Stan late to a CIA nuclear war exercise. Director Bullock had told everybody that once the exercise begins, everybody is to act like the crisis is 100% real. Stan rushes in and asks if it's real, and Bullock says, "One Hundred Percent!" Causing Stan to panic and rush his family to the woods.
* American Dad! had Stan wolf down an entire jar of horseradish, causing him to blow out his sphincter.
* American Dad! had symbols all over the place for the Peanut Butter Conspiracy episode.
* American Dad! had the episode "One Little Word", where Stan is portrayed as a doormat for his boss Avery Bullock, constantly at his beck and call no matter how inconvenient or demeaning his orders are. In particular, Bullock is having an affair and orders Stan to help cover it up and take care of his mistress, all while Stan is supposed to be on vacation with his wife Francine. At the end of the episode, Stan finally decides to say "no" to Bullock...but he does this immediately after he's been shot by his enraged wife and is on the floor pleading for help (and Francine, who'd spent the whole episode trying to get Stan to assert himself, is practically begging him to call 911).
* American Dad! had this happen in the episode where Stan finally learns to ride a bike, arriving at the courthouse in time for his father's probation hearing, he approaches the courthouse triumphantly, and then...
* American Dad! has an episode where Stan finds out Hailey has been having an affair with Deputy Director Bullock, but when Hailey breaks it off, Bullock attempts to kill her boyfriend Jeff. At one point, he has Stan carry him around like a horse, until they track Jeff and Hailey down to a diner.
* American Dad! has an independently mobile pancreas with fangs that runs away when Hayley accidentally removes it.
* American Dad! has an in-universe example. CIA Director bullock sends himself and Stan on a 16 hour flight to Japan and meets him in full Kabuki dress in a Japanese tea house.
* American Dad! has an in-universe example with Wheels and The Legman, a crime-

fighting duo made up by Steve and Roger whose whole existence works upon this. He has working legs. He doesn't. They fight crime! ...well, not really.
* American Dad! has a shift from traditional animation to CGI after Roger eats an exotic bird, which sends him on a drug trip.
* American Dad! has a very bizarre one in the form of Steve and Snot's relationship, which has had the Ho Yay ramped up or outright confirmed them as gay or together in the future. It becomes jarring when nearly every episode with Snot in it will mention or hint at this, no matter how unfitting or unnecessary it is.
* American Dad! has been shown to be pretty attractive when she wears a more flattering outfit and hairstyle.
* American Dad! has been suspended or lost his job in some way a number of times, yet at the beginning of the next episode, he's always right back at work.
* American Dad! has done this a few times with Steve and Roger. The two of them enjoy watching buddy cop shows, and decide to form their own duo, and they eventually settle on Wheels and the Legman, the gimmick being that one of them is in a wheelchair and the other isn't. The two of them argue over which of them gets to be Wheels, which leads to them splitting up, both in wheelchairs, and getting their own partners. Steve gets Bill Elliot (Who's catchphrase is "You're on a roll, Wheels) and Roger gets a fat black girl dressed as an angel (Who's catchphrase is "You gonna finish that?"). After Steve deduces that Roger's partner isn't a real angel because she eats devil's food cake, Roger concedes and the two get back together with Steve as Wheels and Roger as the Legman.
* American Dad! has episodes like these. Noticeable when Stan was sent to prison where he enjoys staying and doesn't want to leave.
* American Dad! has Francine wearing a pink sundress and her husband Stan wearing a navy blue suit.
* American Dad! has Hayley telling Stan that he can do some crazy thing 'when pigs fly'. He then calls a CIA lab and tells them to keep working on the flying pig experiment. In one episode, Stan calls the CIA and they tell him that it's almost complete and it shows a pig with only one wing.
* American Dad! has Klaus the goldfish who can blink and has eyelids. He also doesn’t have to breathe underwater; only some part of his body has to touch water, and even then, it can be any liquid.
* American Dad! has Mount Rushmore weaponized with a newly-installed CIA anti-missile laser defense to destroy missiles trying to destroy the monument. It turns out both Stan and Hayley were unknowingly part of a test made by Bullock, who disguised himself as a hippie wanting to destroy Mount Rushmore.
* American Dad! has one of these where Stan reveals that despite being a CIA agent he's never killed anyone. Francine found his alpha male status erotic and so this disappoints her. At one point:
* American Dad! has Stan get an invite which he is told he must memorize within the next ten seconds. He does so, then eats the paper. He is then informed that the paper will self-destruct. Everyone else's paper crumbles into ash, and Stan breathes a puff of smoke.
* American Dad! has Steve wanting to tell his father something important, but he's not home, so we get a fast-forward of him patiently waiting for Stan. When Stan does show up, he insists on reading the mail first, giving us a second fast-forward as he does so, randomly laughing or cursing at the letters he's reading.
* American Dad! has Steve who is always getting attacked by animals, bullies or suffering other injuries. He often injures himself horribly but always comes back in the next episode as if nothing has happened. Interestingly, he very rarely breaks his glasses, unlike what would probably happen in real life.
* American Dad! has the Smith family go on a tropical vacation. Stan keeps getting annoyed at a Hispanic gardener who keeps one-upping him. Then again, the first time, Stan was being a jerk by trying to explain to a "native" what a camera phone was. Then the gardener pulls out an identical phone.
* American Dad! has the Smith family visiting the American Safety Museum, which has an exhibit on Augustus Seatbelt, inventor of the airbag.
* American Dad!, Hayley dates her father's CIA body double. The same episode

implies that her insane anger issues stem from feeling like Stan never accepts her.
* American Dad!, Hayley gets angry at Reggie for shrinking her purple top in the wash.
* American Dad!, Hayley's attempts to stop industrialists from bulldozing a forest include shoving a banana in the exhaust pipe of a bulldozer, but she's interrupted by a group of eco-terrorists who ask her to join them.
* American Dad!, Hayley's head had been shaved by Stan, and while she's working as a pole dancer her wig accidentally comes off, provoking cries of revulsion from the crowd saying "that's the only place you want them to have hair!"
* American Dad!. Heck, every one of the main characters exhibits this at multiple points.
* American Dad! he does. As soon as he's finished that sentence, he proceeds to karate-kick a random student in the face right in front of the entire class.
* American Dad!, he goes to his personal Heaven, which brings him back to Earth at the beginning of the episode. Whether that means the rest of the series is Stan's heaven is not mentioned/discussed.
* American Dad! he had already subjected him to a genuinely brutal beatdown.
* American Dad!, he reappears moments later with a crown and a sword (which he uses to cut his way out of a monster's stomach) and claims to have been gone for sixty years.
* American Dad! (he's actually just there to steal Francine from his past self). Stan and Francine comments on his weird accent, which sounds like a mix of Spanish and Canadian, and Cyborg Stan reveals that this is because Mexico and Canada form an alliance and takes over the U.S in about 100 years.
* American Dad!. He shows up on their doorstep and quickly aggravates them with his overly sunny disposition. They ditch him at Costgo, only to realize how much they miss him. They go back to get him but he annoys them again on the car ride home so they jump out of the car to get away from him... only to immediately complain that they miss Tungee again.
* American Dad!. He uses it to run a scam where the family will roll into a town, offer to put on a show, sell tickets, and then leave with the money without actually performing the show. Eventually they are forced to actually perform, at which point they realize that with all the practice they put into their fake auditions, they actually became skilled enough to perform the show.
* American Dad! him, after which he reveals that empathy is fatally toxic to his species.
* American Dad!. His home planet is actually much colder than Earth, so he has no problem with exposure to the elements.
* American Dad! "Hot Water" as this. In the episode Cee-Lo Green narrates this twisted tale of Stan buying a hot tub to relieve his daily stress, only to get into hot water when the hot tub begins killing his family and friends.
* American Dad! idea, no matter how practical, is automatically doomed to fail on the mere grounds that he thought of it.
* American Dad! "I don't even know why I wanted him, but I wanted him."
* American Dad!: In "American Fung", Stan forgets about his wedding anniversary and decides that the best course of action is to forcibly commit his wife to a psychiatric hospital so she doesn't find out. However, the doctors quickly realize that there is nothing wrong with Francine and release her, prompting her to immediately lash out at Stan for being a horrible husband. In an ironic twist, the hospital staff interprets her outburst as an anger disorder, wrongfully committing her once again.
* American Dad! in an episode where Francine becomes the school's guidance counselor. Steve notes how awkward it will be to go to his mom for counseling, but Francine tells him she's fine with it. This causes Steve to put aside his reservations and ask her for advice.
* American Dad!: In "An Incident At Owl Creek", Stan dines on a particularly greasy brisket at a neighbour's pool party, feels the urge to poop, and attempts a cannonball into the pool. Do the math. An interesting side note: the ensuing Failure is actually the kickoff point for the rest of the episode.

* American Dad!: In "Black Mystery Month", Stan delivers this line to Steve:
* American Dad!: In "Bullocks to Stan", Hayley breaks up with Deputy Bullock over the phone during a news conference, and the "C-Spin" ticker shows headlines regarding the scenario.
* American Dad!: In "Dirty Rotten Merlot Shame," Francine is trying to tell Stan that Roger kissed her while they were on a wine-tasting trip but Roger keeps finding ways of stopping her. He ties a hot air balloon's tow rope to Francine's foot, causing her to dangle upside down when it takes off.
* American Dad!: In "Don't Look a Smith Horse in the Mouth," Francine yanks Steve's glasses off his face and asks if she looks smart in them when she and Stan come home drunk one night.
* American Dad!. In his first appearance, he even had a theme song and a montage dedicated to his cuteness. The fact that he's a secret agent who works for the CIA probably makes him even more adorable.
* American Dad!: In "Love, American Dad Style", Roger overhears Hayley singing in the shower and decides to hire her to sing in his upstairs lounge.
* American Dad!: In one episode, Hayley makes the decision to test Roger to see if he cares about anything after she gets tired of his selfishness and jerkassery. She does this test by purchasing his home star and pretending to be its queen. She keeps on annoying Roger with her queenly claims until Roger responds in a way she wanted to all while saying that she won. Roger then decides to get revenge on Hayley for testing him by killing a goat that Hayley donated to an African family and then butchering it and serving it to Hayley and the Smith family for dinner, all while disguising the dish as a lamb dish and then subtle telling Hayley what she was eating by telling her that the dish was "similar to lamb".
* American Dad!: In "Poltergasm", Klaus stays at a beachside hotel and breaks his back, and leaving him unable to move and be driven insane by the video loop on the TV's information channel.
* American Dad!: In "Pulling Double Booty", Steve and Roger get jobs at a poultry plant, inspecting chicks to determine their sexes; Steve can tell easily, while Roger struggles at his job.
* American Dad!: In "Rabbit Ears", as Stan and Tuttle escape from the supernatural TV show they've been trapped in, they're pursued by the demonic entity that runs it, which begins to force itself through the television screen...until the TV suddenly shuts off, and Tuttle reveals that he pulled the plug ("Look what I got!" *twirls plug*).
* American Dad!. In real life, there have been black people in Germany for century and half. Like many other European countries, Germany's history of Colonialism means that there are many descendants of slaves and African immigrants still living there. In more modern days African American soldiers have had children with Germans as have "guest workers" in both east and west and immigrants from "socialist brother countries" to the GDR. Any major German city will have quite a number of black Germans, if less than in the US
* American Dad! In "Roger and Me", Francine (suspicious about what happened during a trip to Atlantic City) uses this technique to listen in when Roger calls Stan at work.
* American Dad!: In "Stan's Night Out", Roger and Hayley go to the mall, and later argue over who a Craigslist Missed Connection is about. They both return to the mall where a frat boy approaches Roger and not Hayley. Roger believes the frat boy finds him to be more attractive than Hayley, but the boy then brings Roger to a pig party at the fraternity. Roger returns home and apologizes to Hayley, and he then dresses as a frat boy and brings Hayley to the pig party as his date.
* American Dad! in that aspect. This includes, for example,many of the things Roger does.
* American Dad!: In the episode "I Can't Stan You", Stan fights with another CIA agent over a disintegrator, and accidentally blasts the other agent with it; apparently, Stan mistakenly believed it to be a penis enlarger until then. "That almost went horribly wrong!"
* American Dad!: In the episode "Old Stan on the Mountain," Stan, having been hexed

to become an old man after expressing his disdain for the elderly in front of one, assumes that climbing Mt. Kilimanjaro will break the hex, with Steve and Hayley agreeing to help him. While Stan is relieving himself, Steve and Hayley squash a bug and talk about how they should "put him out of his misery" and that they're sure "he'd rather die than live like this." Stan's hearing aid only picks up those parts, and he quickly assumes that they took him out to the mountains to kill him.
* American Dad!: In "The Phantom of the Telethon", Stan steals Roger's idea for a telethon to raise finds for the CIA's torture program, leading Roger to try to sabotage it. Roger claims that he actually invented the telethon in the first place, but Jerry Lewis stole the idea from him then too.
* American Dad!, in the same universe as Family Guy, has Klaus and Reginald. Klaus is a german olympic skiier whose brain was put into the body of a goldfish, and Reginald is a homeless man whose...brain was put into the body of a koala. Both are seen openly talking to/interacting with people outside the CIA/Smith family (Klaus interacts directly with Jeff, and Reginald and Hayley have gone out together in various public places), and neither are ever reacted to as an oddity.
* American Dad! in the show's run about White House counsel Harriet Miers that was so outdated by the time it actually aired that the showrunners themselves forgot who she was and had to look it up online.
* American Dad!: In the two-part episode "Stan of Arabia", Stan is reassigned to Saudi Arabia, forcing the Smiths to move. The family finds the country horrible due to their strict and oppressive laws, but for hardcore conservative Stan, it's a dream come true.
* American Dad! invent peanut butter. Peanut butter actually dates back to the Aztecs and Incas, and the first patent was issued to Marcellus Gilmore Edson in 1884. (Carver did invent a lot of peanut products, but his main accomplishment was his environmentalist efforts and creating various techniques to prevent soil depletion.)
* American Dad! invokes this trope somewhat, claiming to be incredibly sadistic due to being German.
* American Dad! involves Jeff Fischer, along with all sorts of space aliens, being kept as slaves on a spaceship mall. One of the slaves is a horny shapeshifting alien who seduces other aliens by transforming into their dream partners.
* American Dad! involves Stan's boss and his (college age) daughter, and kills his appetite.
* American Dad! involves Steve and Snot cloning their high school's most popular girls so they can go with their clones to the prom. Stan only realizes that the girls are clones when he tells one of them to get a belly button ring and she responds that she doesn't have a belly button.
* American Dad! is a good example. He sadistically tortures and kills cats for fun.
* American Dad! is an inversion of the typical 'Chinese baby raised by white people' scenario - she's a white woman who was raised by Chinese people.
* American Dad! is dedicated to masturbation. Stan reveals he has never masturbated before in his life and rather has repressed his urges through other, more 'wholesome' activities. In an attempt to instill this mentality in Steve, he tries to teach him woodcraft. Stan directs Steve to plunge a hot poker into a piece of wood that is held directly over Stan's lap, resulting in obvious (and painful) injury. The doctor gives him a special cream which he mistakenly thinks he must rub over the 'affected area' each day, essentially masturbating with lubricant. Stan soon becomes addicted to it and attempts to masturbate at any chance he can get. He is eventually caught by Steve while the latter was cleaning the gutters, causing him to fall off the ladder and break his arm. And they manage to not once in the entire episode ever use the words "Masturbation" or "Masturbate".
* American Dad! is hiding in a convention, and the only way to get to him is using Steve's proficiency in elven language.
* American Dad!) is "How to Read Upside-Down". Either the book is upside-down, or the title is printed upside-down on the back cover.
* American Dad! is known to do this fairly regularly, which stands in contrast to his otherwise very conservative mannerisms.

* American Dad! is played completely straight here, and plenty of people like Henry actually exist and use the same tactics against their victims.
* American Dad! is seen phoning the local Jury Commissioner about whether they received his letters requesting him to perform jury duty. (Which actually means, as said below in the Real Life folder, that he will never be on jury duty - and, indeed, he hasn't.)
* American Dad!. It might refer to Burger King’s status as one of the show’s original sponsors.
* American Dad!: Jeff Fischer, whether it be a surprise Birthday party, a birthday present, a movie's summary/ending or that Roger's an alien. If He were a Doctor, who's supposed to stay true to Doctor-patient confidentiality, his license would be revoked as he would automatically break it.
* American Dad!, Klaus and Haley consider using their telepathy to screw with Steve, but decide on a different plan instead.
* American Dad!, Klaus tries to pull this off with Haley in order to prevent ICE from deporting him. The problem is, he's stuck in a goldfish's body. So, Haley puts her mind in a female goldfish's body and pretends to get married, much to Jeff's displeasure. Unfortunately, ICE later catches onto the scheme and sends both Haley and Klaus to Mexico despite Haley's United States citizenship and Klaus being from Germany.
* American Dad!. Lampshaded in a secondary headline saying it was a slow news week.
* American Dad! landing their basket on the dog, crushing him to death.
* American Dad! later appears (albeit much younger) in another episode.
* American Dad! leading him to try and murder the Smiths for having said incredible hurtful things to him at his birthday roast (a roast he wanted). Immediately after Stan finishes explaining Roger's no longer a threat, Terry on Action News reports "breaking news from Asia!" Steve dully states "oh no" as it cuts to a photo of Roger using a raft made out of the severed limbs of the prison guards.
* American Dad!, leading to the house being washed off its foundation and flooded. It goes downhill from there as Stan's decisions just make things worse at every turn, and almost gets Hayley and Francine killed. In the end, they have to be rescued by Buckle, the mountaineer.
* American Dad! loves spoofing this. One example, from "The Phantom of the Telethon":
* American Dad! makes use of this in a particular episode where Roger encounters a very blonde girl. Almost every other line she has provoked this response.
* American Dad! manages to get the best of Stan, he attempts a Stealth Bye, only for the camera to pan over and show him with his head in the mailbox. "Damn! I can't even exit mysteriously anymore!"
* American Dad!, "May the Best Stan Win" claims that "Japanese Funk" is what everyone listens to 1,000 years in the future. We hear a brief sample during a montage with Francine and future cyborg Stan.
* American Dad!: Mostly happens with Stan, likely as a result of him being sturdier than average due to his CIA training, though sometimes other characters get in on it.
* American Dad! movie premise that is so popular in the genre and makes a lot of fun of it by having Steve overreact to everything, but it goes out of it's way to be played as much as one as it can, even using a different art direction than the rest of the series, such as a sepia-tone overlaying the episode and camera angles that are common to them.
* American Dad! news anchors Greg Corbin and Terry Bates comment on a recent economic recession by saying that the numbers are so low they could only do a 68 last night.
* American Dad! noncanon Christmas episode "Rapture's Delight", the Rapture comes and half the Earth's population ascends into heaven while the rest are left behind as Jesus returns to battle the Anti-Christ. In seven years the world becomes a wasteland in the war between the angelic forces of Jesus and the demonic armies of the Anti-Christ. One battle is mentioned, the "Battle of Boca Raton".
* American Dad! often shows the outside of the Smiths' house, especially at the

beginning of episodes.
* American Dad! of the events that took part during those seven years.
* American Dad! of torture sessions. At one point, however, he cuts to pornography, planted there by Roger to sabotage the telethon.
* American Dad! once was given a message that he quickly destroyed himself by eating to impress his boss, but it turns out it incinerates itself. He keeps his stride by joking that "at least it's better than my wife's cooking", but then laments that he'll be pooping blood for a while.
* American Dad!, one episode had Stan be completely against the mere idea of a child being raised by a gay couple that he went on the deep end to ensure a baby wouldn't be with their gay neighbors. This becomes even worse when an understanding female gay couple tries to show him things can work out, but he completely shuts them off and kidnaps their children behind their backs. Ironically, the two children he kidnapped sounded just like Steve and Hayley, except with the roles reversed, and this is what finally makes Stan realize what their mothers were talking about.
* American Dad!, one of Roger's alter-egos stabs Steve for not getting an anniversary present for their parents. He and Hailey flee to Argentina when his scar starts to hurt.
* American Dad!, one of the few things known about Roger's home planet is that it's an ice planet. Roger has stated it has an atmosphere roughly 400 degrees colder than Earth, and he himself has shown an immunity to hypothermia.
* American Dad! on Francine, but Stan comes home before anything can happen.
* American Dad! on his fridge, which he'll adjust according to his paranoid delusions.
* American Dad! on the paper. Hayley takes the form, says "Pleasure doing business with you," and walks away grinning.
* American Dad!. Originally it was a quite spacious desert island with many luxuries installed, until a tidal wave submerged something like 95% of the island underwater. Stan and Roger survive by eating mostly seagulls. They attempt to escape with a raft made from seagull carcasses which immediately sinks, but then discover that Rogers body is bouyant enough to function as a makeshift flotation device.
* American Dad!), or missing an arrow; they even had an episode where the color code changed to blue and everyone in the CIA acted like it was a major cause for celebration.
* American Dad!: Parodied in "Iced, Iced Babies", when Steve "breaks up" with his mother.
* American Dad! parodies this trope with Steve often pretending to be a detective duo called "Wheels and the Leg Man" with Steve as "Wheels"(because he's in a wheelchair) and Roger as the "Leg Man"(because he can walk).
* American Dad! parody episode "Tearjerker". Roger (as the titular villain) falls into an active volcano. The last scene shows the top of the volcano with the words "The End", but a moment later Roger's badly burned hand reaches up and grabs onto the "ledge", as a question mark appears. ...But then Roger loses his grip and falls back, the question mark disappearing as well.
* American Dad! parody "For Black Eyes Only." Stan and Tearjerker (Roger) try to interrogate the location of Black Villain (Principal Lewis) out of Tchochkie Schmear (Klaus). He finally relents, leading to the over-the-top line "The thing that you do not know about the location of Black Villain that I do is..." and is promptly assassinated.
* American Dad! "Permanent Record Wrecker" features Stan being fired from the CIA, then looking for a new job. During an interview, he tells a prospective employer that he once worked for the CIA, who doesn't believe him, calling up Stan's former employer, Avery Bullock, to confirm. The interviewer is still incredulous, believing that Stan put one of his friends up to the supposed prank, even having him end the call with the "now that I told you, I'm gonna have to kill you" line. Seconds later, the interviewer is shot through the head by a sniper from across the street, a pleasant looking fellow who cheerfully waves to Stan, saying "Hi Stan!

You gotta stop telling people, Stan!" Later in the episode, the sniper strikes again, after Stan mentions his CIA background to a new coworker. Still jovial, the sniper follows up with "You really gotta put a sock in it, Stan!"
* American Dad! picked on by the other guys at summer camp, because they were wearing "whiteys of tight" which designated them as geeks. They go off to purchase boxer shorts, but then get tricked by a shady salesman selling bikini-type underwear called "culos." They then wear the culos and think they'll be the coolest kids at camp. It... doesn’t go as well as they expected.
* American Dad! plans to make a fortune by giving toys to everyone whether they are naughty or nice and buying shares in toy companies.
* American Dad! plays this straight. Front door stage left, stairs upstage in the living room, kitchen stage right, back door stage right with a table in. This presumably makes it easier to plan action sequences.
* American Dad! plays with this trope in one episode. Steve propositions his date, she says yes; he sadly says he understands and leaves. Halfway home, he realises what she said.
* American Dad!. Poor Steve had it even worse since their companion was an attractive woman who openly stated that she wanted to sleep with him.
* American Dad! provide the page image. Stan constantly tries to help his son with various "masculine" activities to avoid letting Steve repeat the same poor experience Stan had in high school.
* American Dad!. Really Roger just sent him with drug dealers, one of them told Steve "Lavate las manos" which he believed to be a spell, actually was "Wash your hands" in Spanish.
* American Dad! revealed he had never killed anyone to his colleagues, and Roger, decided to help him, setting up several scenarios for him to pop his killing cherry, as they termed it. One had this advice.
* American Dad! reveals the CIA has a program that trains dolphins to help on missions and in turn they teach humans to speak dolphin, which Steve has picked up after years of being brought to the lab by Stan. Stan believes this is neat, but Steve complains that all dolphins ever talk about is fish. Later in the episode, this ability comes in handy for Steve, as he asks dolphins to save him, but in the end he just ends up getting pissed off because the dolphins won't shut up about mackerel.
* American Dad! "Ricky Spanish". Steve spends several months in juvie as a result for trusting Ricky Spanish. He became bitter upon being released.
* American Dad!, Roger and Steve call a company to complain about a shoddy novelty product they bought. They are left on hold for what is implied to be days, only to be transferred to voice mail.
* American Dad! Roger creates two personas; his plan is that one will sexually harass the other and in that character, he will claim compensation. The name of the harasser personality was Luke Fondleburg.
* American Dad!, Roger describes a run-down bar as something to the effect of "filled with the most pathetic, miserable people on the Earth. It's like Applebee's, but with a bar. Oh, wait, Applebee's has a bar. It's like Applebee's.".
* American Dad!, Roger gets a job handing out coupons dressed a cup of juice. When he is assaulted by a competitor, he moans "Why does everyone hate the juice?"
* American Dad!: Roger goes so crazy from trying to keep the house clean that he spreads gasoline everywhere and lights a match. Cut to a fire truck passing by the restaurant at which Stan and Steve are dining.
* American Dad!: Roger met Stan Smith, for the very first time, during a raid at Area 51. They met in a surgery room that was soon flooded with grenades. They managed to escape through a nearby laundry chute and landed in a van that was heading outside the base. Later in the series, Roger takes Stan back to Area 51. They acquire Roger's lost fanny pack. It contains a lotion that he uses to repair Stan's broken legs. Moments later, they are confronted by scientists and soldiers. The soldiers chase Stan and Roger throughout the base. They escape through the same chute, like last time, and end up in a van heading outside Area 51.
* American Dad!, Roger's alien race can acquire a person's memories through

probing.
* American Dad! Roger sells a Senator's daughter to a drug lord and can't remember who he is or where to find him because he's always high when they interact. Sure enough, taking a hit (I think it was cocaine) enables him to give perfectly lucid directions.
* American Dad!: Roger Smith apparently looks so good disguised as a teenage girl even his old friend Steve is fooled. They even dated for a while and he never even tumbled to the truth.
* American Dad!, saying that they're ugly and "90% nips". Jeff (Haley's husband) pulls this trope.
* American Dad! script (which includes fifty pages of an orgy rocket refueling).
* American Dad!, season 9 "The Longest Distance Relationship", when Hayley is moping in for room due to the one-year anniversary of Jeff's abduction thanks to Roger, Francine suggest she sees a therapist but Stan said he has a way to "smoke her out". * American Dad!'s horrific attempt to reconstruct Hayley's face in her sleep in "The Mural of the Story".
* American Dad! showing that Stan changes the future and is buried with her after all.
* American Dad shows Stan Smith as a living embodiment of the trope. Stan believes that when it comes to sports, you either win or you're just a pathetic loser. The episode "Every Which Way But Lose" has Stan constantly belittling his son, Steve, for not coming in 1st place in any sport. When Steve teams up with Roger and beats Stan's team in a football game, Stan takes the loss so badly that he almost commits suicide, believing he would rather die than to live life with a loss on his record.
* American Dad! shows the family celebrating holidays on Stan's and Francine's side. (It turns out they celebrated all those holidays in one week to make each other feel bad.)
* American Dad! similarly utilizes this to an occasionally sociopathic extreme.
* American Dad!, since it faded away pretty quickly following this episode.
* American Dad! Snot asks Steve Smith to help out on his uncle's farm.
* American Dad!, Snot attempts to buy a bag of off-brand Cheeto knockoff's called Cheeso's, the same his now deceased absent father used to buy him. When it gets stuck, he has an emotional breakdown in a parody of heavy-handed symbolism prevalent in indie films.
* American Dad! song, since Canada can't afford the publishing rights, so they start to sing, "Hey..." but get cut off before they say, "Jude".
* American Dad!'s season 8 episode "The Scarlet Getter", Steve realises that if he wears his sister's thong, they act as a lucky charm for him until he takes them off. Unfortunately for him, he would've gotten away with it for another day if best friend Snot hadn't seen them show above his pants as he bent over to search through his bag on the school bus.
* American Dad!'s second longest-running animated series and the only one that was revived on a cable network)
* American Dad!, Stan and Bullock come to blows over Hayley, who Bullock had been dating. Just as Stan is about to finish him off, Bullock lies and proclaims that the entire fight was an act to test Stan's loyalty, complete with a nearby window being replaced with stunt glass. When Bullock tries to prove this, he finds that the glass is too rigid to jump through until he fires a few bullets through it, and is heavily injured when he finally breaks through.

It's as if...her mind has been put through a cleaning, scrubbed or rubbed vigorously with soap and water...brainpolished...mindscoured..." She looks at Stan, who just shrugs.
* American Dad!, Stan brings Steve to a neighborhood for rich people in construction. Stan sees a house of their dreams up in the hill and has Steve look at it, but then, Stan tells him to look at the other house on the other hill...which is exactly the same.
* American Dad!: Stan cannot handle Hayley's denial that she was carrying a flask:
* American Dad!, Stan does like the MST example above and shouts "Gun! Call for help!"
* American Dad!, Stan does this to Steve a couple times when he finds out about some things he did wrong. Usually accompanied by Stan suddenly being in the room.
* American Dad!, Stan does this when he first gets his family jewels burnt, and then a second time when he discovers masturbation.
* American Dad!, Stan gets a secret order. He promptly eats the file - then he's informed that it will self-destruct in ten seconds.
* American Dad!, Stan has both his legs ripped off by a vicious polar bear, after being pushed in by the bear's tank by Roger, who wanted to save Stan and pretend to be a hero, so he'd let him move back in with him.
* American Dad!, Stan mentions offhandedly that he's been trying and failing to create a new catchphrase. At least Klaus liked it.
* American Dad!: Stan needs to access a computer to find Francine's birth parents, so he sets Roger on fire for a diversion.
* American Dad!: "Stan of Arabia: Part 1" has Stan sing a musical number about how he wants Francine to adhere more to this trope.
* American Dad!: Stan reveals in the episode "The 42-Year-Old Virgin" that despite working at the CIA for years, he is a virgin when it comes to killing. This winds up making Steve hate him and Francine losing sexual interest in him, but gets the approval of Hayley. He gets his first kill at the end of the episode, a poker buddy named Bad Larry, albeit by accident.
* American Dad!: Stan Smith did the same thing as well when he was celebrating.
* American Dad! Stan Smith is put in a wheelchair by a bullet only to be later be brought out of it - by a bullet.
* American Dad! Stan Smith veers to this with his self-serving ideas of what is right, and it doesn't help that he has access to dangerous CIA resources.
* American Dad!, Stan spends an episode plowing his face into the wall every time someone says something he doesn't want to hear. This goes on until he puts his forehead straight into a stud.
* American Dad!, Stan tells his gay neighbor Terry that his haunted house will "scare you straight!" Terry mutters "Every year..." under his breath and walks off.
* American Dad!. Stan, while being high on crack, kills a monkey this way (which wouldn't really be that hard). He also kills Jay Leno this way in a fit of anger.
* American Dad!: Stelio Kontos, a man who bullied Stan in his childhood and is sometimes paid to beat up others, never utters a single word in either of his appearances
* American Dad!, Steve and Hayley try to break up a couple because they have crushes on the people involved. In order to do this, they call up the girl with a phone telephone survey, then use Stan's CIA equipment to edit the audio, then call the boy and play a fake message that makes it sound like his girlfriend is meeting another guy in the park.
* American Dad!, Steve and Roger attempt to come up with their own detective team, "Wheels and the Legman", but bicker over who gets to be in the wheelchair, try to outdo each other for interesting backstories, and eventually split up into rival agencies and hire their own partners, including Roger's "Wheels and the Angel" ("One's a wheelchair-bound detective, the other's an angel who has to solve 100 cases to get back into Heaven!").

* American Dad!, Steve and Stan go on a road trip to find a spare part for a DeLorean that Stan was building. Along the way, Steve teaches Stan how to blow a bubble. Stan finally gets it, but he blows it too large. It pops and covers his eyes, and they almost end up driving over a cliff as a result.
* American Dad!. Steve apologizes and reveals it was his friends, but he gets targeted along with them.
* American Dad!, Steve's friend Toshi only speaks (subtitled) Japanese. People assume several times that he has said something completely unrelated to what he has actually said, often the exact opposite.
* American Dad!, Steve's high school principal is shockingly good at this, as shown when Francine frames Steve for possessing cocaine.
* American Dad! Steve shouts a mournful one whenever attacked by a vindictive crow in one episode:
* American Dad!, Steve Smith learns how to become a lucid dreamer by using a bouncing red ball in his dreams, to remind him he is dreaming and the dream can therefore be whatever he wants it to be. Being a teenage boy, he uses this for sex and revenge dreams often set in the school that derides him for being a nerd. When he refuses to teach the technique to Hayley or Klaus, they take revenge by bouncing a red ball at his feet while he is fully awake. Led to believe that he is dreaming, he drives to school (causing traffic chaos and pile-ups) while wearing only his underpants, punches a teacher, sexually molests a cheerleader, and leaps out of the window with her believing that they can fly...
* American Dad!, Steve tells Stan that his English teacher hates him and that's why he has a failing grade. Stan says in a sinister tone that he'll "pay the teacher a little visit." Cut to Stan having a friendly chat with the teacher and his family, implying that he had come over for dinner and had a wonderful time with them all. He then walks to the door, starts to say his goodbyes, then says, "I almost forgot..." (pulls his gun and slams the teacher against a wall) "Why are you failing my son?!?"
* American Dad!, Steve tries to make his junk look bigger by stuffing a bunch of sausages down his pants. Unfortunately, this just leads to further humiliation at school with a drug dog smells them and tears his pants out.

* American Dad!: Steve, who is often shown to be awkward and creepy, mentions that he uses a taxidermy armadillo to practice talking to women.
* American Dad!'s "The Great Space Roast". Roger wears Ray-Bans throughout the set and pretends to join in the fun, until he removes his sunnies to reveal tear-streaked cheeks. He spends the rest of the show trying to assassinate the family with guns and bombs. This is likely a reference to the incident with Chevy. At the end of the episode Roger forces the family to roast each other and is honestly shocked that they can take it with such good humor, suggesting that he didn't understand what a roast was about in the first place.
* American Dad! such as "May the Best Stan Win" (by cyborg Stan), digitized on TBS airings despite four-fingered hands.
* American Dad! team. In photos, he's shown playing against Italy. The Italian hockey team was not at the 1980 Olympics.
* American Dad!. Thankfully, the second half of season 1 saw to it to get rid of many of the political humor, as well as completely removing the cutaways. Ever since then, it has been wildly regarded as the funniest animated series on Fox.
* American Dad! that forces her to obey his orders. However, a side effect of this is that Hayley wants to kill Stan. As a result, Hayley's wedding ends with her chasing down Stan, trying to kill him.
* American Dad! that he's just playing it off like that to keep Stan from brutalizing him further.
* American Dad! that the contractor Tearjerker hired to build his evil lair was incompetent and cut corners everywhere.
* American Dad!: The 2-part episode "Stan of Arabia" has Stan defect from the USA and convert to Islam, whereupon he takes a second wife for himself whom he

nicknames "Thundercat." Thundercat makes it very clear that she plans to usurp Francine's position as "#1 wife", and does as much as she can to butter up Stan while undermining Francine. At one point, Stan starts a "point system" to needle Francine.
* American Dad! the Anti-Christ was the opposite of him in every sense, so if Jesus was badass, it's obvious that the Anti was not.

* American Dad!: The episode "Morning Mimosa" had Francine decide to neglect Steve when the latter cusses her out and just when Steve reaches the end of his rope, he ends up learning how to be more independent and does this to Francine when he makes pancakes.
* American Dad!: The episode "Roy Rogers McFreely" has Roger getting pissed off at Stan when he doesn't buy grenadine for him to mix with warm cola and make a Roy Rogers, because he hates it. Later on, Roger gets his revenge on Stan by pouring cola and grenadine down his throat.
* American Dad!: The episode "Shallow Vows" reveals that Stan only married Francine for her looks, but eventually grew to love her and even blinded himself to prove that he can love her without looking at her. Later, it turns out that Francine in turn married Stan so he can provide for her, and they both decide that they're even.

* American Dad!. The grueling nature of Hayley's employment is cemented when Hayley's boss cheerfully tells her to put away her phone because she's not allowed to think about the outside world.
* American Dad!, then quickly forgets about them to focus on the earlier episode's change to the status quo involving Haley and Jeff instead.
* American Dad!, there's always something to ruin Steve's chances with attractive women.
* American Dad!, there was an abandoned playground in the vasectomy clinic video showing the wonders of a childless future.

* American Dad!. The same cut is used, and another avalanche occurs, at which point one of the animals asks why they keep grazing there.
* American Dad!, they also had the members of the band My Morning Jacket play themselves, having to deal with Stan's slightly-stalkerish obsession of them, especially the singer Jim James.
* American Dad!, this is actually a plot point in one episode, where Steve pretends that Greg and Terry are his parents so he won't have to introduce his new girlfriend to Stan and Francine. His reasoning is that his father would either drive her away by saying or doing something stupid, and if not, then his mother's crappy food would kill her. It's further cemented when Klaus reveals that Stan keeps a pack of "inbred dinner wolves" in a trap-door under the kitchen floor to feed Francine's food to instead of eating it himself. Despite the silliness, it's still portrayed seriously, as these and other problems were all secrets the family had been keeping from each other instead of dealing with the problems.
* American Dad!, though after getting praised a lot she quickly takes rule of their fantasies, annoying Steve, until she snaps out of it.

After he gets a vasectomy, Francine finds out that Stan banked some sperm back in the '80s and goes to the CIA storage facility with the intent of getting her hands on his "swimmers".

* American Dad!, to the point that humans are perfectly capable of talking even when their minds are transplanted into animal bodies, while their original bodies will only make animal noises.
* American Dad! turns out to be the actual man, frozen. But when he refreezes himself at the end, he realizes at the last second that he forgot to go to the bathroom. The new "statue" is holding its crotch in agony, implying that this trope will come into play if he is ever unfrozen again.

* American Dad! used a character (Klaus) explaining that he and another character are just a framing device, and not part of the actual story as a joke.
* American Dad! visiting Stan has only just gotten the job, and Stan is actually her first client. Her time magic doesn't have any established limitations, so it seems to run on San Dimas Time just because she's not good enough at temporal magic to realize that it doesn't have to. She ends up late to stop Stan's meddling in the timeline because she had to get Francine's help in finding him and wound up lost in the Jurassic era. At the end of the episode, she gives Stan a present while saying she was just able to get to the mall in time to buy it.
* American Dad! was once denied a second chance at life, and then pulled a gun on a court full of angels. They all laughed and said an earthly gun can't hurt them, so Stan punches out a bailiff and takes his heaven gun, which can kill anything (one may seriously question why they have those).

* American Dad! when she is dumped), Stan poses as Bill and decides to be utterly obnoxious so as to make Hayley do the dumping. It doesn't work, but he ultimately ends up sharing some more loving moments that Hayley wasn't aware of, pleasing Hayley enough that she doesn't care when Stan actually dumps her... at least until she realizes that she's with her father, and not Bill.
* American Dad!. When Stan finds out, his immediate response is to yell at Hayley for "tarting around town". She angrily points out that she didn't do anything, and Stan says that he always assumed this would happen to Hayley, so it's what he's prepared for.
* American Dad!, when Stan gets fired from the CIA, he takes up the job as a meter maid, much to his initial disdain. He soon discovers that collecting quarters for his own gain instead of giving them to the city earned him much more money that affords him and Francine a luxurious lifestyle. When an investigator knocks on their front door, Francine and Stan panic and start trying to flush dozens of quarters down the toilet when they think the jig is up.

* American Dad! where it shows a younger Hayley refusing to eat her vegetables until Stan tells her she needs to eat them in order to get strong and fend off sexual predator Bill Clinton. masturbating during the interview.
* American Dad!", where Steve is having bully troubles and Francine tells him that fighting back is not the answer... until she finds out that said bully is her own husband.
* American Dad!, where Steve plays the Q character, S, and all his inventions make the boobs of the nearest woman larger. Of course, it comes in handy later on...

* American Desert by Percival Everett, this doesn't quite work out, and most of the clones are horribly deformed physically and mentally. One researcher on the project appears in-story, despairing at his failure-until the main character asks how one mouthless clone can eat, and the researcher realizes that it's survived without anyone ever feeding it.
* American doo-wop revival/a capella group 14 Karat Soul practically made a second career out of this trope, appearing in Japanese spots for the above-mentioned Suntory Whiskey, among other products.
* American Dragon as a literal American Dragon, but Paul was just so left field Danielson would often have to slow him down just to make sense of him(usually resulting in something even weirder).
* American Dragon. Don't talk about your favorite wrestlers around him either, unless you compare him to them in a favorable way. He'll take not being mentioned as an insult.
* American Dragon: Jake Long (a dentist) then proceeds to say, "What? It—It's some kind of shield!"

* American Dreams quickly put together, but it wasn't screened until 2013.
* American Dreams). The show was notorious for its musical anachronisms. The very first scene in the entire series features Stevie Wonder's "Uptight (Everything's Alright)" playing while the caption reads, "Philadelphia, 1963"... not only three years before the song we're hearing was recorded, but arguably the biggest three-year gap of the rock era in terms of how music changed.

* American Elsewhere evil, uses up the bodies and jumps to new ones as its whims dictate.
* American English favors using a Z, instead of an S that sounds like a Z, in various words, including "recognize" and "analyze." This follows the general trend for American English to favor more symplified and phonetic spellings even when it messes with the etymology. However, 'recognize' (though not 'analyze') is a permissible spelling in British English, and is in fact closer to etymology: Latin 'izare', Ancient Greek 'izo, izein'. Spelling analyse with a Z is further from etymology, however; it is not '*anal' + 'ize' with an odd spelling shift, but a derivation of 'analysis'. The Z in '-ize' and 'lyse' does not simplify spelling, because the regular spelling for these words ending in similar sounds is S, and so a Z is aberrant. (This is not to say American spellings do not mess around with etymology, but only a few do: 'ae' and 'oe'/'e', for example.)
* American English pronounces "route" as either "root" or "raut." British English pronounces "route"
* American exercises off Libya in the 1980s, especially the Gulf of Sidra incidents.
* American ex-military junior pilots sometimes also have this problem. They are among the best in the world technically, but they can occasionally fall back on their conditioning to respect a chain of command.
* American Express cards in order of exclusivity: green, gold, platinum, black, etc.
* American Express commercial finds his American humor falling flat with British audiences. After immersing himself in English culture, he returns to the comedy club and nails it.

* American Express had a series of ad campaigns in the 70s and 80s for American Express Traveler's Checks: "Never leave home without them" — and every commercial was about somebody getting robbed while on vacation somewhere.
* American Express was able to carve out a niche for itself as the credit card of the (somewhat) upper-crust, in contrast to Visa's and Mastercard's more plebian demographic. Most notably, the Amex Centurion, the application fee is around $5000 and the yearly service charge is $2500.
* American fast food, particularly of normal restaurants instead of food chains. If you want a good, heavy, greasy meal, you want an American mom-and-pop diner/restaurant/whatever. Also, with the emphasis on "fast," America is rather unique in having a whole culture around food trucks.
* American Federalism that can also gum up the system. Considering that even with a single party majority party rule, it's very difficult to push through changes through.
* American film adaptation has been released, directed by Adam Wingard. A sequel is now in the works.

* American Flagg! dedicated to fictional drugs appearing in the series.
* American Flagg! full of sex, violence, drugs, and references to just about anything and everything.
* American Flagg! has The Plex, which runs the former United States and Soviet Union from its new "temporary" headquarters on Mars. Another Mega Corp, Four World Industries, appears to essentially control the government of one of Earth's two superpowers, the Brazilian Union of the Americas.
* American Flagg! is set in a dystopian (and eerily prescient in some ways) 2031.
* American Flagg!, is something of a hybrid. He has a large human-shaped but clearly robotic body, and a hologram for a head. While his head usually appears as

a friendly and obviously non-human cartoon image, he can also use it to impersonate other characters. He successfully impersonates Flagg at one point, and the image is apparently flawless, at least on a video screen.
* American Flagg!, the deactivated body of robot deputy Luther Ironheart serves as this for talking housecat Raul, who "pilots" the body from where Luther's holographic head would ordinarily be.
* American Flagg!, the Plex represents the former governments of the USA and USSR, but (particularly since the Plex seems to be largely abandoning Earth for its Mars-based "temporary" headquarters), the world's true superpowers are now the fascist Brazilian Union of the Americas and the communist Pan-African League, which has also conquered Italy.
* American Flagg!, we have the Gotterdammercrats, Illinois Nazis who most people seem to treat as tame and mostly harmless, but then ally with the also fascist, but violent and genuinely revolutionary, American Survivalist Labor Committee (A.S.L.C.) to take over Chicago.
* American Flagg! were responsible for driving Chicago's "go-gangs" crazy and leading to armed attacks on the PlexMall once a week.

* American folklore is a forest creature able to contort its body to hide behind any of the myriad trees, bushes, rocks, and other objects of its environment while stalking its prey.
* American football, and specially the Super Bowl. Shiny pre-game and halftime shows, loaded with cheerleading, celebrities... in stark contrast with the gritty roughness of the game.
* American Football as well. Briefly, each team gets three time-outs per half. However, if a player is injured, the officials call a time out that is not charged to either team. Thus the well-timed "cramp," often induced by a look to the coaches on the sideline. This is somewhat balanced by the rule that a player who is "injured" has to sit out at least one play, and (in some circumstances) can also cause a 10 second run-off of the game clock.
* American Football: Big passes and fancy trick plays are crowd-pleasers. But teams can often get even more mileage out of quick passes to the center of the field. It's not difficult to get 5 or 6 yards minimum per pass this way, and if you have a good tight end or receiving tailback, or a wideout that runs a lot of short patterns to the middle, they can rack up yardage while the big-play players are given more coverage. A team who can get consistent gains on boring runs up the middle will quickly wear out the opposing defense, which will leave their opponent helpless to stop either their running or their passing attacks in the late stages of the game. This is why there were so many Super Bowl routs from the mid-'80s to '90s: the AFC teams, with their flashy passing attacks led by quarterbacks from the 1983 draft class and their light 3-4 defenses, were physically dominated by the power running games and smash-mouth defenses of NFC teams of the time.
* American Football consequences for one's chances at a franchise-changing pick. And even a team that expected to be good might have their season turn irreversibly sour after only a handful of games. Tanking is thus particularly rampant and obvious in football:
* American Football, ensuring that the Green Bay Packers are unique in their league in regards to the ownership situation. Fans of other NFL teams whose ownership is deemed incompetent often lament the fact that they can't band together and buy the team in a Packers-style arrangement.
* American Football has a few rules against "palpably unfair acts", which function as the referees having fiat to make a judgement call on anything that they deem unfair but isn't specifically against any one rule. They're not used very often, and when they are, it's usually an obvious case when the advantage gained by the offending team was so extreme that a lesser penalty would not be sufficient to

mitigate it (such as somebody running onto the field from the sidelines and tackling the guy with the ball).
* American football has an excellent example in Donovan McNabb. In 11 years with the Philadelphia Eagles, he took them to a Super Bowl, five NFC championship games, and set most - if not all - of their passing records; this amounted to the fans booing him at every opportunity and his name being brought up every offseason when it came trade time.
* American Football has had plenty over the years... but one stands head and shoulders above all others in terms of sheer insanity. It is known, even to Wikipedia, simply as "The Play". In 1982, college football teams representing arch-rivals California
* American football has seen a remarkable incident of an "own touchdown", on October 25th 1964 during a game between the Minnesota Vikings and the San Francisco '49ers, when the Vikings' defensive end Jim Marshall lost his sense of direction, ran the ball 66 yards down the field into his own end zone for a "touchdown", and threw the ball away in celebration, scoring a two-point safety against his own team.
* American football has this as well. The 2008 Miami Dolphins implemented an uncommon offensive formation: the "Wildcat" formation, in which the ball is directly snapped to the running back. This surprised most of their opponents, who had no idea how to defend against it, and as a result the Dolphins went from a league-worst 1-15 record to 11-5 and the AFC East title. Since then, however, opposing teams have devised effective countermeasures to the Wildcat offense - specifically by lining up the defensive tackles on the same side that the offense has put their extra blockers - and the Wildcat has since faded in popularity.
* American Football his opponents in every game without anybody apparently having a problem with it!
* American football in Germany has undergone at least one cycle of this, though outside factors played a huge role. Back in the 1990s and early 2000s, the World League of American Football and later NFL Europe brought (semi)pro football to Europe and Germans in particular liked what they were getting — big shows, concerts, American talent and the big stadiums where soccer games were normally held. In addition Football was part of the pay TV package you had to buy if you wanted to see soccer on live TV, so many Germans had the NFL on their TV anyway and ratings were solid. Even the domestic German league managed a couple of games with attendance figures like 30.000 for a Braunschweig-Hamburg final.
* American Football in the history of the game. Imagine superman playing football, and you get an idea of what it looked like. He wasn't diagnosed with DID until he retired from the NFL and his angry persona suddenly no longer had an outlet.
* American football it's not uncommon, in a short-yardage situation on fourth down in field goal range, for the offense to line up and try to draw the defense offside. If it works, they get the first down and continue the drive, and if it doesn't they can call a time out (or take the five yard penalty for delay of game if they're close enough) and try for the field goal. Since this is so obvious, the defense typically knows they're trying this. However, on some occasions the offense does run a play, catching the defense off-guard because they know the defense knows they're trying to get an offside and not run a play. However, the defense knows that the offense knows that the defense knows what they're trying, so they're on the lookout for an actual play. However the offense knows that...
* American Football. Many of these stereotypes seem to be held by people who aren't aware that football has moved beyond "three yards and a cloud of dust" and is much more based on complex strategy and physical finesse these days.
* American Football. Of course, hardly ever will players or coaches admit to that
* American Football offensive linemen screw up their blocking assignments, the quarterback usually doesn't have the strength or mobility to do anything except brace for impact and try not to get hurt by the 300+ pound men piling onto him. Mobile quarterbacks like Dak Prescott or Deshaun Watson have the speed to evade defenders, but exposing themselves out of the pocket keeps the trope in force: both quarterbacks have suffered gruesome injuries — Prescott a compound fracture

of the leg when tackled on a run during a game, Watson tearing an ACL in practice running a read-option play — trying to make plays on the go.
* American Football placeholders until better talent comes along. During training camp and even late in the season, it's not uncommon to have a player be cut or waived and then resigned a couple days later, depending on how the season is going.
* American Football players get their team penalized yards because someone on the opposite team faked them into crossing the line of scrimmage before the play begins, they're grumbling this trope at themselves.
* American football players, though they're not considered evil. (Although the ones that do a lot of tackling—mostly defense positions—have a reputation for psychopathy, e.g.
* American Football players will often do several of these in a row when calling out signals.
* American football plays often use this sort of naming, especially when calling audibles since it's much more concise when your play clock is running out and timeouts are a precious commodity. Z-95 I-right flex!
* American Football right after it's been used the first time. The first category is often not even considered a "trick" any more and includes stuff like play action passes, the second includes stuff like fake punts and the third includes stuff that is usually subject to quite a bit of controversy afterwards.
* American Football, rotator cuff injuries to the throwing arm have been a death sentence for quarterbacks. Probably the most tragic case was Cincinnati Bengals quarterback Greg Cook, who after a rookie season in 1969 that left many excited about his NFL future, tore his rotator cuff and was out of football with only that rookie season under his belt.
* American Football somewhere down the line. This is so pronounced that most European leagues of American Football actually limit the number of "Americans" per team in lieu of a salary cap.
* American Football Stadiums and Soccer Stadiums have a more difficult time doing this since the configuration of a stadium can make it difficult to provide good viewing, and great scenery beyond the field. Nevertheless there are a few notable exceptions where at least a significant portion of the crowd gets an amazing view.
* American Football. There will often be one guy who gets dogpiled by everyone else because he has the ball.
* American Football, this is basically the whole idea behind the 'sack', with the commander being the quarterback.
* American Football was released in 1999. Their next album was released in 2016.

* American Gangster about he's responsible for all the other members of his family being in the drug trade, because they never would have gotten into it if not for him. Then she says that all of them, including her, will walk out on him if he does something as suicidal as to declare war on the cops, which was exactly what Frank was planning to do at the moment.
* American Gangster: A corrupt cop has killed a man in a drug deal gone bad, and his neighbors are close to rioting. The cops have paramedics bandage the corpse, open his eyes, and prop him up on a gurney. They then wheel him to the ambulance, pacifying the crowd by assuring them that he'll be fine and they're taking him to the hospital.
* American Gangster for a few moments, before putting the screaming man out of his misery with a few gunshots to the chest.
* American Gangster. Frank Lucas and his smuggling ring used coffins carrying dead US soldiers back to the United States to smuggle heroin from South East Asia, though the drugs were hidden in the pallets used to carry them rather than the coffins.
* American Gangster, Frank Lucas first attracts police attention when he's spotted in the front row of a high profile boxing match wearing a mink coat.
* American Gangster, Frank Lucas got onto Richie Roberts' radar because of the extravagant clothes he wore to the Ali vs Frazier fight.
* American Gangster: Made in 2007, the very last shot of the film set in 1991.

* American Gangster plays this one almost painfully straight; the one time he goes out in public (under protest) wearing a pimp coat instead of an understated business suit turns out to be his downfall.
* American Gangster shows Frank Lucas stepping out of prison in 1991, in a New York that has changed dramatically since his reign as drug lord. The first thing he hears is gangsta rap blaring from a car rolling down the street.
* American Gangster subverts this with Frank Lucas being a believer in dressing conservatively both as a way to avoid the attention of the law and as a sign of strength. In fact, the only time he disregards this personal standard with a flashy fur coat and hat for a night out turns out to be the biggest mistake of his life as the cops notice this fancy-dressed newcomer in the New York crime circles and they investigate him.
* American Gigolo were, for the time, impeccably fashionable, and the movie is credited with establishing Armani's popularity in Hollywood.

* American Girl, despite being a company aimed at girls between the ages of 8 and 12 mostly, has a very large fanbase of adult women, usually middle-aged or older with either children outside of the target age or no children of their own. There are at least three popular adult collector forums (with thousands of members each) and most of the secondary market is fueled by the demand from adult collectors.
* American Girl doll, Rebecca, began to surface in the adult collector community as far back as 1998 when Mattel trademarked the name of the character. Eventually, details leaked that she'd be the first Jewish history, and after that, she seemed abandoned, with dolls such as Native American Kaya and '70s girl Julie (and the entire Best Friends line) appearing instead. Rumors of prototypes of Rebecca being seen by company insiders floated the entire time, with various descriptions given of her appearance, but most of the collecting world has given her up as an idea dumped on the drawing room floor. Following the retirement of Samantha in 2008, American Girl finally confirmed they were producing Rebecca, who was released in May of '09.

* American Girl remained the leader in brand recognition, marketing, and quality; most of these rivals have quietly gone out of business.
* American Girl, Samantha does this when making a speech about factories as a symbol of American progress. Her original speech is largely approving and portrays factories in a positive light, but after she sees what really goes on behind the scenes, she realizes her version was sanitized and not based in reality, and throws out her original speech in favor of one that exposes the horrible truth she's learned.
* American Girls Collection, and usually end up contributing to the sense of history, or to the story — or both!
* American Girls Collection has a skating dress trimmed with white fur, and in one of the books she has an outfit with a white fur hat and muff.
* American Girls Collection in 2020 included Kirsten, a character who had been archived 11 years prior, so the target 8-12 age range wasn't likely to know she even existed unless they were active in the fandom or had seen her books in the library. Fans started to speculate as to whether she was coming back — and whether she'd get an all-new collection like Samantha or be screwed over like the last two returning archived historicals, who were limited to one new outfit (and in one case, a set of underwear) on rerelease and became shelfwarmers.
* American Girls Collection: In the first Addy book, the slave driver makes her eat slugs off the tobacco plants.
* American Girls Collection, keep good memories of her and her books, and point out that her story and personality are not reduced to being a “slave doll”
* American Girls Collection: Launched with the first three characters in 1986.
* American Girls Collection of dolls, none of the "tan" Just Like You dolls are given a specific race, and can generally be whatever the purchaser chooses. The tan dolls now actually have more facial diversity than the light ones. Sometimes this happens with the dolls that are given a specific race. For example, the face template used for the Girl of the Year doll Sonali, who is Indian, is not too different from the template for Addy, who is African-American.
* American Girls Collection over the course of the book involves her coming to understand the difference between "helping" and "meddling".
* American Girls Collection respectively, are palette swaps of each other, bearing the same coat pattern with the colors inverted.
* American Girls Collection were actually derived from those by German dollmaker Götz. AG founder Pleasant Rowland was looking for a manufacturer to produce her doll line, and found one in Götz. She then bought the remaining stock of Romina dolls and retooled them as Samantha Parkington, one of the first three historical characters to be released by the company in 1986.
* American Girls Collection, where they have several adventures with the main character. Since the books are aimed towards younger readers (late elementary to middle school), no endings result in death or major injury and the protagonist is always assumed to return home safely to her own time without major issues.
* American Girl. She is only ten years old, so it makes a little more sense that she can fit through the bathroom window.
* "American Girls" is by Rivers' side project Homie, and is their only officially released song. The rest of Weezer had minor contributions to the track, however - the rhythm track is mainly a loop of Patrick Wilson's drumming, while Matt Sharp and Brian Bell sing backing vocals.
* American Girls: Kit, whose stories are set in the Great Depression, initially believes her father when he says he's going out to lunch interviews every single day. Eventually, though, she discovers that the "leftovers" he's bringing home are from a soup kitchen.

* American Girls series had a spinoff line actually called "American Girls History Mysteries" featuring characters unconnected to their main lines, but having the same little section about the historical part in the back. The main lines have spin off mysteries too.
* American Girl story "Happy Birthday, Molly!" one of Molly's friends tries to curtsy while wearing pants when she meets the English girl, and she says that she thought English girls always did that.
* American Girls watching London be bombed may have something to do with her quietness. Molly's mother also invokes the stereotype at first, and one of Molly's friends also expects Emily to curtsey because that's what English girls do, according to her stereotypes.
* American Girl toy line had brown eyes in the tie-in books that came with the dolls, yet the doll herself shipped with grey eyes for some reason — likely to differentiate her from Samantha. A later character, Ruthie Smithens, had the same thing happen years later, but this wasn't an example of an early draft as her doll was released years after the books she debuted in.
* American Girl when series creator Pleasant Rowland sold the line to the toy giant in 1998.
* American Gladiators and the contestants mixing it up in the heat of competition. Once, Turbo actually punched a contestant during Sling Shot.
* American Gladiators had this as half of the two-part 'Breakthrough and Conquer' event. The 'Conquer' half required the player to force any part of the Gladiator's body out of a round wrestling-style ring within the allotted 10 or 15 seconds. This was probably toughest and often funniest when the female contenders were trying to do it to six-foot tall Sky.
* American Gladiators point score that mattered and the Eliminator simply added to the points accrued); first across the finish line won. The points scored in previous rounds were merely used to determine how big a head start the leading player got (one half-second per point).
* American Gladiators produced a revival of the UK series which borrowed much of its aesthetic, and a few new events, from the new American version.
* American Gladiators, promotion to Gladiator in the second season was one of the grand prizes.
* American Gladiators revival had a few Subway replays and the "Toyota winning moment".
* American Gladiators show, competitor Wesley "Two Scoops" Berry gave an ever-increasing percentage of effort for every show he won, topping out at six digits for the championship.
* American Gladiators (The Gladiators) a female gladiator called Bjørk/Björk first appeared in the ninth season in the mid-2010s. The commentators would frequently introduce her as "the unknown daughter of Odin". Her name really is Björk Odinsdottir ("Odinsdaughter"), presumably being of Icelandic origin.
* American Gladiators. The last part of The Eliminator challenge involved the contestants deciding which (paper) door to burst through. If they chose correctly, they had a free run to the finish line. If they chose the wrong one, they had to get past one of the gladiators.
* American Gladiators (the pilot apparently had fake backstories for the Gladiators, but that element was discarded) and attempted to portray the Gladiator Arena as an almost-otherworldly place. By the second half, this stuff was tossed out and things were made much more like an actual sporting event, which stuck around for the rest of the show. Nothing was staged, and all the athletics were real.
* American Gladiators, though there were plenty of injuries; crash mats and foam pads helped to prevent real messiness, and weapons, when used, were things like pugil sticks (those giant Q-tips) and tennis-ball cannons.
* American Gladiators was a toned down version of this. The two contenders would have to traverse a variety of obstacles, typically including (but not limited to) spinning cylinders, a climbing net, a zip line and a set of reverse treadmills. The

Gladiators themselves would be involved, either enforcing penalties or operating/using some of the obstacles.
* American Gladiators were generally more covered up that the women, Nitro's first season costume consisted of spandex shorts and two strips of fabric across the chest, which had a tendency to slip down his shoulders.
* American Gods (2017) and not celebrating Coming of Spring anymore (plus thanks to Wednesday's manipulations and New Gods threatening her life) and declares war on the New Gods by taking away spring — ie, killing all vegetation in America.
* American Gods (2017): "A Prayer for Mad Sweeney" highlights how the Thirteen Colonies were once used this way for convicts from Britain, with the story of Essie McGowan.
* American Gods (2017), Argus. He uses bird-shaped drones (presumably as either a nod to or a mockery of Wednesday's own) among many of his other tools of trade to spy on people. One of them is destroyed by a raven right as it picks up Shadow's whereabouts.
* American Gods (2017). Bonus points for his footsteps illuminating the tiles beneath his feet - it would look silly if he wasn't so terrifying.
* American Gods (2017) features the title as a hotel sign with some of the letters unlit; the illuminated letters form the phrase AM I A GOD.
* American Gods (2017)). God singular, meanwhile, is not seen (but multiple forms of Jesus are) and it's him she most insists isn't a real being.
* American Gods (2017) has Shadow and Mr. Wednesday visit Vulcan, Virginia, a small suburban town full of gun carrying citizens, wearing black uniforms and red armbands (although the armbands are adorned with the Vulcan name instead of swastikas).
* American Gods (2017). In a flashback, Shadow tries to cheat in a casino but is warned by Laura to walk away before the casino has him arrested. He though that he positioned himself in a spot where the security cameras could not see him but those were the cameras he was meant to spot. He missed a number of other hidden cameras who were recording everything he did and various casino patrons around him were actually casino staff observing him.
* American Gods (2017) is seen smoking from a glass pipe full of synthetic toad skins. Shadow describes the smell as being like an appliance fire.
* American Gods (2017): Played with with Laura Moon, who is persistently accompanied by flies due to her being a reanimated corpse (although the show also uses the motif in flashbacks to when she was alive, which serves to foreshadow her fate and also indicate that during life she was more or less dead inside — after being reanimated she finds a sense of purpose). She's not evil, exactly, but she's not especially good, either.
* American Gods (2017) reveals in several interviews that he ended up being roped into writing the character bibles and scripts for several characters, including Bilquis, Salim, the Jinn, Sam Black Crow, Mr. Ibis, main characters Shadow and Laura Moon, and his own character Mr. Nancy.
* American Gods (2017): Ricky Whittle, like Shadow, is half Black and half White.
* American Gods (2017), the show doesn't really make any attempt to actually hide his identity. His old friends call him Wodan (one of Odin's names), he is followed by two ravens who occasionally talk to him, and the New Gods even offer him to give him a bunch of sacrifices using Odin-class missiles. When he makes his reveal speech in the season finale of season 1, it's clear that the only one who is supposed to be surprised is Shadow.
* American Gods (2017) to reflect the emergence of rich, powerful tech bosses.
* American Gods acting on a comment from a god who knew what was going on, and was trying to clue him onto it.
* American Gods, Anansi tells a story of how he tricked a tiger into swapping its tiger's testicles for his own tiny little spider testicles.
* American Gods, ancient Egyptian God of the dead. It's implied by Shadow, who is observing, that eating the heart is reverential and a sign of deep respect - or at least, he notes that that's how it feels, and he's surprised he isn't bothered by it.

* American Gods by pushing a spear through her own stomach and into his while he's standing behind her. OK, she has detachment and determination brought on by being undead, but wouldn't that be rather tricky to pull off?
* American Gods culminates in a succubus-like reinvention of Bilquis the fertility goddess/the Queen of Sheba devouring a man whole through her sexual organs. There is later mention of a young recently-enslaved African girl (a twin, and thereby believed to have magic powers) convincing a would-be rapist that she had this.
* American Gods: Czernobog and Mr. Nancy dress as police officers to get Shadow out of prison.
* American Gods deities born out of modern-day obsessions. One can also conclude that because these gods and their stories ACTUALLY happened simultaneously to each other, other creatures from their respective mythologies must exist as well. This is alluded to by the presence of a taxi driver who turns out to be a Djinn from Arabic mythology.
* American Gods doesn't do it either, and is blunter than Quoth on the subject.
* American Gods explains that gods give up their mortal existence to live as memes, recreated indefinitely in people's minds in a thousand different ways.
* American Gods goes further as the conflict is shown to be between the "old gods" (from old pagan beliefs) and "new gods" (embodiments of modern constructs, such as The Technical Boy, god of the internet.)
* American Gods had Mister Wednesday and Shadow meet in such a location. Bikers and smoke abound.
* American Gods has quotations from a book being written by one of the characters, Mr Ibis.
* American Gods, however. Though he did kind of grant the wish of the guy he had a one-night-stand with by liberating him from his dead-end life, and giving him a chance to start over as a New York cabbie.
* American Gods (i.e. referring to sleight-of-hand magic as prestidigitation).
* American Gods includes scads of gods including Mister Wednesday, Mister Nancy, Media, New Media, Technical Boy and Easter. Also a djinn, a zombie and a leprechaun.
* American Gods is king of the dwarves because he's the tallest at 5'9".
* American Gods. Jacquel mentions how the widower of the dead old lady he and Shadow are carting off to the morgue will soon be dead himself, since women are much better at surviving their men than the other way around. Considering he's actually a death god, he presumably knows what he's talking about.
* American Gods. Later, he shunts himself, Shadow, and the Winnebago they're driving into an alternate plane to avoid a roadblock by sketching runes in chalk on the dashboard.
* American Gods. Laura's a zombie, so she takes the night shift at a gas station, thinking people won't realize that she's a rotting corpse so easily. Creepy or not, she's actually one of the good guys.
* American Gods. Mister World insists that Wednesday is old enough and has enough knowledge and wisdom that he deserves the respect of an honest deal instead of a Leonine contract.
* American Gods Mr. Wednesday looks old, has looked old for at least thirty years, and regularly beds women who are barely legal.
* American Gods. One of the gods also mentions that Afghanistan's Jesus is having a rough time, and can't even get people to pick him up when he's hitchhiking.
* American Gods. Possibly on purpose, considering that the mother-in-law lives within spitting distance of them.
* American Gods Shadow attempts to show Wednesday how much time they've spent "backstage" by showing him a newspaper. Wednesday only sarcastically comments on the first headline he sees.
* American Gods, Shadow expresses lack of faith in his electronic plane ticket - where he doesn't have a physical ticket, just a number to give at check-in - because it just doesn't seem real to him. It's nice foreshadowing of his siding with the old gods against the new, technology-based ones.
* American Gods, Shadow gets into conversations with several TV sets. Justified in

that one of the "new" Gods is "Media". And she is really petty.
* American Gods, Shadow hitches a ride with a fellow who tells a tall tale about a deer that literally jumped out of its skin to escape a hunter, then was given a replacement knitted by local women.
* American Gods: Shadow suffers from shy bladder, as evidenced when he has to ask Sam to turn around when he steps out of the car for a leak.
* American Gods: Shadow's wife, Laura, called him "puppy"; when their landlord said they couldn't have pets, Shadow joked that he'd be Laura's puppy.
* American Gods She talks normally and remembers everything from her life, and she doesn't crave human flesh, but she's slowly rotting, and won't hesitate to kill anyone who threatens Shadow. Apparently, being dead made her forget that the living consider dying a big deal.
* American Gods, so act the way they're supposed to act, rather than because it makes sense.
* American Gods tells one of his tall tales about how, when it got cold enough, his great-grandfather would dig a trench and give his wife, children and hired help a drink of herbs, then freeze them and bury them in the trench and dig them up in spring.
* American Gods. That's a pretty creepy place. It is abandoned, but not technically haunted.
* American Gods the anthropomorphic personification of money has three creepy Girl Scouts who speak in unison acting as his heralds/doorkeepers.
* American Gods: The God of the Internet and the Television Goddess Media, while no more evil than the old gods, were callow and vapid in comparison.
* American Gods, the mooks used by the New Gods are literal Faceless Goons. As in, they literally don't have faces.
* American Gods The other residents weren't told by their ancestors who made the pact and chalk the disappearances up to runaways or custodial disputes. It turns out the Hinzelman kills anyone who figures it out, including one of the father of one of the residents. When the chief of police figures it out, he is horrified and promptly kills Hinzelman to stop the cycle.
* American Gods the protagonist's cell-mate, "Low-Key" Lyesmith, had scarred lips from where someone had once sewn his mouth shut.
* American Gods, the protagonist's wife Laura is resurrected as this; unfortunately, as the months pass, she rots severely, even despite the embalming.
* American Gods, the reveal that the character named Low-Key Lyesmith is in fact the god Loki Lie-Smith depends largely on the reader not noticing that the words would be pronounced the same. As a result, it's much less surprising in the audiobook version.
* American Gods wants him to go to Cairo (Illinois), and to "fuck off" when Shadow asks it to say "Nevermore".
* American Gods when Shadow is lost in the woods and a talking bird gives him a message and then caws at him to follow — "You want me to follow you? Or has Timmy fallen down another well?" Only this isn't a cute woodland creature: it's an oversized and frankly scary raven which has just been "brunching on Bambi". (This is Neil Gaiman, after all.) Shadow then proceeds to demonstrate why it probably should have played this one straight.
* American Gods when Shadow meets Ostara. Considering she's a love/fertility goddess, it's implied to be a function of her divinity (later in the episode, Shadow meets an incarnation of Jesus who is surrounded by a literal glowing halo of light).
* American Gods Which hardly needs saying. Neil Gaiman's everything is different, at least from the pop culture version.
* American Gods. Which only works if you pronounce it in the English way, and not the Norse/Icelandic way. Since it's revealed that the American analogues have little connection to the originals, the only proper way to pronounce it is in American English.
* American Gods, while lamenting that its time, most assuredly, has passed. The con involves one artist purchasing jewelry or stones with a legitimate roll of

banknotes, but on one of which the ink has been smudged. The jeweler calls to verify the veracity of the notes, and finds that they are real — but then a 'police officer' comes in, harangues and accosts the first artist, and walks off with partner, notes, and the merchandise that the first guy attempted to purchase. For evidence, of course.
* American Gods, who is always enjoying life, even on those occasions when he's (temporarily) dead.
* American Gods with this one: historically, many Native American cultures had a practice by which a male or female person could fully embrace the duties, roles, and appearance of the opposite and from that point on be treated as if they were born and lived the other gender.
* American Gods won the Nebula and Hugo Awards for Best Sci-fi book of the year, the Locus Award for best fantasy book of the year, and the Bram Stoker Award for best horror book of the year. It's also a meditation on the "meaning" of America, and reflection on the different immigrant stories.

* American Gothic (1995), ends up being taken in by his charisma and accepting him as his true father who's been wrongfully maligned and only wants to help raise him right.
* American Gothic (1995) he truly is. On the other hand, there are quite a lot of people in town keeping their own secrets: Dr. Crower, Gail, the coroner, the priest, Ben, Selena...
* American Gothic (1995). In an interesting inversion, however, her primary sexual usage in the show, aside from being Buck's mistress, is not to turn a good man evil, but to keep a man nominally on the side of evil—Ben Healy—from defecting to the good.
* American Gothic (1995): In the episode "Strong Arm of the Law", a drunken thug is given something that knocks him out, only to wake up and find himself inside a coffin, laying next to the body of the man he killed; the coffin is in the process of being buried.

* American Gothic (1995) so that Shaun Cassidy had to wrap everything up far too quickly and nonsensically. But some surely isn't.
* American Gothic (1995) turned out to be the set-up for Selena trying to kill Lucas for entirely selfish reasons and framing Billy for it.

* "American Gothic" is about foul things lurking unseen in the darkness.
* American Gothic, which appeared to manifest as an immense, slug-like dark form,

* American Government by James Q. Wilson and John J. DiIulio, Jr. (used in American AP Government/Politics classes) has a surprising number of subtle examples.
* American Government by Wilson and DiIulio contains a hypothetical scenario in which you are asked how you, as a journalist, would deal with inside information about terrorists from Ruritania.
* American Graffiti, Curt, who is underage, attempts to purchase a pint of whiskey at a corner store by casually mentioning it in the middle of a list of other items that he asks the owner to get for him. It doesn't work; after the other items are bagged up, Curt is asked for proof of age.

* American gymnast Dominique Moceanu sued her parents for emancipation at the age of 17, stating that her father was abusive and controlling and had taken and squandered all of her (substantial) gymnastics earnings, and was more concerned with building a "brand" around her than with her as a person. A New York Times article stated that:
* American gymnast McKayla Maroney has been gracious in her public comments, saying that she is grateful and appreciative of her silver medal in the vault despite being an overwhelming favourite for gold. Still, her face is the picture for this trope, and it could sour fresh cream, as well as having launched a meme (which, to her credit, she's had fun with) – and, given that she

* American History X a new editor was brought in with Norton to deliver their own version. The finished product was well received and Norton earned an Oscar nomination, so he apparently won the argument.
* American History X by Edward Norton so he had more screen time. Kaye, outraged, wanted to be credited as "Humpty Dumpty" instead of "Alan Smithee", which was

flatly rejected. This lead to a war of words culminating in a $200-million-plus lawsuit between Kaye and New Line, and probably costing Edward Norton an Oscar.

The poster to the film also features Norton trying to cover the tattoo with his hand.

* American Horror Story: Freak Show but interestingly enough, he doesn't seem to be a racist. He never makes any negative remarks about black people and although he hates the family maid, Dora, it's because she's not afraid of him, not because

she's black. He rants at her that he hates her but never calls her any ethnic slurs.
* American Horror Story Freakshow. He comes out of it horribly burned and permanently scarred.
* American Horror Story: Freak Show husband threatens to kill him if he tries it. The series ends with her marrying a new man and having two children with him.

* American Horror Story: Freak Show: Twisty. For the first episodes, you would probably only refer to him as the evil clown. But once his backstory is revealed, he truly becomes the sad clown. Perhaps the saddest clown ever.
* American Horror Story: Freak Show when her son Dandy was a baby. Now that he's grown up a sociopath, she's unable to control him.
* American Horror Story (Horror). Could be considered a genre anthology as each season is a self contained story with a start, middle, and end, with few characters/settings in common.
* American Horror Story: Hotel and practically immortal. Despite being vampires in all but name, they are never named as such.
* American Horror Story: Hotel is a lot fancier and more expensive than this trope usually suggests, but described as a "no-tell motel" by Liz in one episode.
* American Horror Story: Hotel of H. H. Holmes, then taken over by his vampire wife after his "mysterious disappearance." If her habit for fresh blood wasn't enough to add to the reputation, he still haunts the hotel and regularly has the ghosts of other serial killers over on Halloween.
* American Horror Story: Hotel the murders are revealed as the work of Valerie Solanas and her radical feminist cult SCUM. Strangely the two contradict despite the stories supposedly taking place in a shared universe.
* American Horror Story: In keeping with the show's premise as an anthology series, every new season-long story tends to go with a main cast of core characters who are as different from the previous season's core cast as possible—often giving the actors a chance to show off their range by playing characters that deliberately contrast their previous roles in the previous seasons.
* American Horror Story: In the first episode, Fiona Goode drains the life out of a doctor when he decides to resign and insults her age. This causes him to rapidly age to death, allowing Fiona to temporarily appear younger.

* American Horror Story: Murder House is a rapist and killer who runs around in a full latex BDSM suit.
* American Horror Story: Murder House: Made and set in 2011, flashback to Tate Langdon's death happened in 1994.

* American Horror Story: Murder House's Larry Harvey was set on fire by his lover's son.
* American Horror Story: Murder House. The ghosts are real, but intentionally either appear only to Vivien, or convince the other characters to lie when asked about seeing them.
* American Horror Story: Murder House, the house is haunted by numerous previous residents who died there. Anyone who dies on the premises becomes a ghost, and this leads to something of a snowballing effect when the ghosts start killing people.
* American Horror Story). Reportedly this came about as a result of Cromwell learning that his character would be featured in flashbacks and immediately recommending his son be cast, since "He looks just like me at that age."
* American Horror Story: Roanoke and reveal this in place of her face.
* American Horror Story: Roanoke, possessing long scraggly hair, clinging to the walls, walking on all fours and contorting in impossible ways.
* American Horror Story seems to fall into this. Satan, The Antichrist, and other malevolent deities make frequent appearances throughout the series but God or other benevolent deities are nowhere to be found. The only forces that appear on the show that aren't explicitly evil are either morally gray or indifferent towards humanity.
* American Horror Story", sees the trope deployed twice. Freak Show proprietress Elsa Mars enters the hospital where conjoined twins Bette and Dot are being treated under the pretense that she's looking for her sick aunt. She charms information on the twins' room from a Candy Striper named Penny, inviting Penny to visit Fraulein Elsa's Cabinet of Curiosities. Elsa then infiltrates the secure wing having disguised herself as a Candy Striper, complete with uniform, goody-cart, and balloons.

* American Horror Story was its own 'verse, but season four confirmed that they are not.
* American Horror Story "workroom". He catches her and sends her through a trap door down into his murder dungeon. There, he keeps her captive, chaining her to a bed and holding her there because he's been obsessed with her for sometime.

* American Housewife home run is something else entirely. We never learn what that something is, other than that at least one of the participants has to lean forward at one point.
* American Housewife's ninth episode and Christmas special has the youngest daughter think that her mother is the Krampus.
* American Housewife: The episode "Surprise" takes place on Oliver's 13th birthday, and his date of birth is revealed to be January 17, 2004. The episode originally aired on January 17, 2017.
* American Housewife, though this is mostly because of his materialistic and self-centered personality.
* American hurdler and bobsledder Lolo Jones. Despite two world championships in the 60m hurdles and various indoor records, her career has been stamped as this trope due to her high-profile shortcomings at the Olympics. In 2008, after winning the national and world indoor championships, she was leading the 100m hurdle finals at the Beijing Olympics until she clipped and stumbled over the penultimate hurdle, plummeting her to a 7th-place finish. In 2012, expectations were higher due to not just continued success, but becoming a celebrity due to various photoshoots and endorsements taking advantage of her attractive appearance, and a well-publicized interview in which Jones admitted she was still a virgin. Jones finished 4th, missing a medal, and had salt poured in the wound when two of her teammates (who won silver and bronze, on top of a gold in 2008) criticized the media and Jones on national TV the next day over Jones being a
* American Hustle and neither Irving and Rosalyn know how it really works.
* American Hustle is implied to have been something of a trophy wife. She's much younger and more attractive than Irving, and now that he's grown sick of her, he only stays with her because of her son (who he genuinely loves).
* American Hustle - though she wants to escape that life and settle down.
* American Hustle was very loosely based on the events regarding the FBI ABSCAM in the 70s and 80s. At the beginning of the film it offers the disclaimer, "Some of this actually happened."
* American Hustle with Rosalyn. She and Irving are in the middle of a rocky marriage for the bulk of the film, and she wears her hair up. In their wedding photo - and it's implied they were happier when they got married - her hair is down.
* American Idiot ends. JOS, after being stuck in a dead-end job and becoming a rebel without a cause, ends up going home and forgetting about his old girlfriend, Whatsername.
* American Idiot movement and by the time "Letterbomb" occurs, JOS realizes he's the real American Idiot, but still counts since mindless rebellion is just as bad as blind obedience.
* American Idiot's Johnny/"Jesus of Suburbia" acts the way he does. ("And there's nothing wrong with me, this is how I'm supposed to be.") St. Jimmy, too, though he is quite a bit closer to the trope than Johnny is.
* American Idiot's music, the main character Johnny was named after the actor who plays him — John "Johnny" Gallagher Jr.
* American Idiot spawned a Broadway Musical in 2009, which in turn spawned an album of the original cast recording. It even won a Grammy for Best Musical Show Album.
* American Idiot thrust them back into the limelight after nearly a decade in obscurity and brought them a new generation of fans, as well as a new generation of older fans complaining about how they had sold out. Even older fans of "old school" punk rock, who complained about Green Day commercializing the genre and watering it down for the masses.
* American Idol. ABC rode that wave of success back into second place while NBC tumbled all the way to fourth.
* American Idol after 15 seasons. Following a brief hiatus, ABC revived the series in 2018.
* American Idol again. And he not only spoke, he sang. Well enough to get 4th

place.
* American Idol and produced by people who claim to have never heard of American Idol, Krusty uses an applause-o-meter so he won't have to pay attention to the songs.
* American Idol awful auditions get on TV, so they deliberately up their awfulness.
* American Idol, but it was deemed ineligible. It also bubbled under after its original artist, Leonard Cohen (himself an example of this trope), passed away in 2016.
* American Idol contestant Chris Daughtry declined band Fuel's offer to replace their lead singer in favor of having his own band, Daughtry. Daughtry has recorded several huge hits since.
* American Idol for shutting down the site in 2013. By that point, the show's ratings were circling the drain (it would only last another three years afterwards), so as far as he was concerned, he and others like him had effectively won in terms of shining a spotlight on all the show's flaws and making it impossible to take it seriously, and there was no point in kicking a dead horse any further.
* American Idol got his or her status from outlasting at least one favorite to make the final two, if not win. These favorites include:
* American Idol had a text-message contest during season 7 that was similarly ridiculously easy. Of course, you had to pay to text.
* American Idol has several of these in the first couple of episodes of every season, usually capping off each montage with someone good.
* American Idol intervening in things that one has no business meddling in.
* American Idol it's gotten even more publicity on this side of the Atlantic.
* American Idol. Kelly, however, hates the song, and since then refuses to sing it at her concerts.
* American Idol location they visited, making you wonder if they weren't setting the doors up like that on purpose to further embarrass the contestants.)
* American Idol love to tantalize the viewer with clips of a really good or really bad singer...and then shove them in at the very end of the episode.
* American Idol. Midway through the series, amid low ratings and with little advance warning, Bravo threw in the towel — and moved the series to 8 pm Fridays, where it quietly finished its run.
* American Idol, one of the doors in the double-door exit from the audition room was locked. There was a hilarious montage of auditioners, jubilant after being accepted or angrily stomping away from rejection, trying to burst through the wrong door and Simon having to correct them. (One auditioner actually managed to shove his way through the locked door, to the amazement of the judges.)
* American Idol regardless of whether or not there are any local contestants.
* American Idol, which led to the first season of the revival producing multiple couples.
* American Idol with fog machines while singing "Mad World". It didn't necessarily make him badass, though.
* American III: Solitary Man: A backstage shot of Cash, though he's in profile and his face is mostly obscured.
* American Imperial Navy as terror tactics against anti-AE guerrilla forces. Batou came across some of Amoretti's handiwork in the war while stationed there with a JGSDF Ranger contingent and is determined to stop him.
* American Indian wrestlers mostly had savage gimmicks in the 1920s and 1930s, during the early days of gimmick characters — ergo, to promote "cowboy and Indian" angles. One retrospective, "The Idiot's Guide To Professional Wrestling" (penned by
* American. In some newspapers, they even debuted on the exact same day!
* American International Pictures leads up to a melodrama sawmill setting, and perpetual biker-shnook Eric Von Zipper gets comically sawn in half, with bloodless, cheap effects photography.
* American International Pictures target demographic will also include his younger siblings and his girlfriend.

* American. It was never fully explored how much was actual change, and how much was Pintsize screwing with people, though.
* American IV: The Man Comes Around: A profile shot of Cash in shadow.
* Americanized reprising their respective roles from the anime series.
* American Justice an interesting experience, especially when you recognize a case you didn't know had been ripped from the headlines.
* American Justice: Sheriff Payden, in an attempt to hide his corruption, frames a vacationing cop for a murder one of his men committed, fully intending to kill him in jail and disguise it as an escape attempt.
* American Justice: The main villains are small-town cops who run a protection racket against the local criminals, and frame a fellow cop passing through town for a murder they commit.
* American kids who grew up in the '90s are more likely to have sung
* American Kirby Is Hardcore: A work with a cutesy cover has a more badass-looking cover in overseas releases.
* American Kirby Is Hardcore: A work with a cutesy-looking cover has a more badass-looking cover in an overseas release.
* American Kirby Is Hardcore: Outside the country of origin, media is promoted to seem more exciting, subversive, or badass, without changing the actual media.
* American Kirby Is Hardcore: The person is Badass wherever they're shown in, it's just that certain regions play the person's "hardcore" image more intensely than others.
* American Kirby Is Hardcore: Tweaking a work's marketing (or, in more extreme circumstances, presentation) to make it more suited for a region's preferences.
* American lawyers and judges will always capitalize the word "Court" whenever it refers to the

* American M2 Bradley were developed to counter the BMP, what ensued became infantry carrying, tank busting, all around cool machines.
* American M551 Sheridan Armored Reconnaissance/Airborne Assault Vehicle was also a fully-tracked light armored vehicle with turret-mounted main weapon system, which could easily fit into the light tank category. As it was intended primarily as an airborne and cavalry anti-tank, fire-support and reconnaissance vehicle, it was not officially classified as a tank.
* American-made aircraft stand in for enemy planes in air-to-air combat training programs such as TOPGUN (nowadays replaced by the Naval Strike and Air Warfare Center, or NSAWC for short). When the
* American-made, and by the early 1950s when the reporting name system was created there were still over a thousand of them in active service.
* American-made films do occasionally suffer due to the differences in ratings between the United Kingdom and United States. This is because the U.S. ratings go from 13 to 18, and the UK system goes 12 to 15 to 18. While some R- or NC-17–rated films fall naturally into the 15 range, others get cut to force them into it, as it is deemed more profitable than 18. For example, the subway fight between Smith and Neo in
* American Made has the 2012 indent play for a few seconds before abruptly cutting to the 1963 logo (with Comcast byline). The other producer plates receive similar makeovers, with Imagine receiving its actual late-80s logo and Cross Creek and Hercules Film Fund getting specifically-made versions. 1980s era TV clips also play in-between each logo.
* American Made he recorded in a hotel room to provide state's evidence to protect his family, shortly before Cartel soldiers find and kill him. The film telegraphs the fact that it is this trope by showing Barry reading a biography of Al Capone around the halfway point.
* American Mark 14 Torpedo often ran too deep, failed to explode, or exploded prematurely, doing no damage to the enemy but loudly announcing the presence of an American submarine to any destroyer within 25 miles.

* American Mary: After being raped by Dr. Grant, Mary has him kidnapped and then uses him to practice her body modification surgery.
* American Mary, medical student Mary is reduced to applying for a job as a masseuse at a sleazy strip club to pay off her debts. However, during her 'interview', a medical emergency arises that opens up a whole new career path for her.
* American Ma(u)l (sic). The show opens on Thomas Jefferson's plantation, with all of his slaves at work in the fields, singing a mournful-sounding work song... and after a moment, it becomes apparent that what they're singing is actually a re-do of Nelly's "Hot In Here".
* American McGee's Alice: Alice in Wonderland was pretty surreal already, so of course a darker version of it is going to evoke this.
* American McGee's Alice: Alice Liddell, Full Stop. Her mind is a very scary place.
* American McGee's Alice: Alice's dress slows down her fall (and also helps her float over air vents).
* American McGee's Alice allows you to freeze time and everything around you (except for Alice) for around 30 seconds or so.
* American McGee's Alice and as part of its Complete Collection release. This updated version added native support for widescreen resolutions, Xbox 360 controllers, improved character textures, and compatibility fixes for modern Windows systems.
* American McGee's Alice, and the circumstances that keep it following you are quite ridiculous. Completing the level without being squashed gets Alice the Ice Wand.
* American McGee's Alice, averts this trope by giving Alice's hair pretty complex animation.
* American McGee's Alice - a world that represents her mind. Given that at the time Alice is in an asylum, Wonderland is virtually a nightmare, twisted by her insanity and depression.
* American McGee's Alice, but they still try their best to eat Alice, so they fill the role.)
* American McGee's Alice can only be damaged by attacking a glowy soft spot on its underbelly.
* American McGee's Alice can open up and spawn smaller, weaker copies of themselves.
* American McGee's Alice can't harm Alice (except maybe to get in the way) and she cannot hurt them even if the player wants to; if she tries, it just doesn't work.
* American McGee's Alice has a powerful recoil that knocks Alice backwards on her rump whenever she uses it, making it dangerous to use near ledges and cliffs.
* American McGee's Alice has many levels designed to play on Alice's awareness that she is locked in a mental institution, especially the Mad Hatter's asylum where he carries out experiments on his patients.
* American McGee's Alice, in which an insane and catatonic Alice is force fed by two employees at the asylum she's kept in. She gets revenge by stabbing one in the cheek with a spoon.
* American McGee's Alice is a famous example of this, in which the monsters Alice fights are physical representations of her own psychological issues, mostly regarding her survivor's guilt after the death of her family.
* American McGee's Alice is the Croquet Mallet, which she can either use like a bludgeon or to launch a lethal croquet ball at an enemy.
* American McGee's Alice — The Queen's castle is made out of her own organs, with tentacle-like veins acting as walls throughout the game.
* American McGee's Alice one of the first thing you notice in the now Eldritch Wonderland are large, fleshy tentacles in some areas. When you fight the Queen of Hearts is revealed that all those tentacles belongs to her.
* American McGee's Alice, one of the weapons is a jack-in-the-box that breathes fire.
* American McGee's Alice: Quite a few of the enemies, and other characters qualify.
* American McGee's Alice reacts pretty strongly when fire is brought up, probably

because her whole family was killed in one.
* American McGee's Alice, she has a sneezing fit, causing her head to explode.
* American McGee's Alice, there are nightmarish children wandering around some levels. Many of them have their skulls cut open, with brains exposed.
* American McGee's Alice There'll be nothing left of whatever enemies she's pointing at but bloody gibbets.
* American McGee's Alice. They barely react to that fact, simply asking for tea. The Dormouse is the extreme example, though.
* American McGee's Alice very nicely. Is Wonderland some sort of objectively real dimension Alice is traveling in? Is it nothing but Alice's insanity? Is it somewhere in between and that nasty "psychiatrist" is helping crack poor Alice? You're never really sure, especially since the opening cinematic implied that the denizens of Wonderland woke Alice to save her life during a house fire.
* American McGee's Alice - while they have needles with what is symbolically a sedative liquid, getting jabbed by one of them causes the screen to go bizarre for a few minutes.
* American McGee's Alice will do this to Alice. If approached, the box sprays a red mist into Alice's face, causing her to scream in agony as she becomes demonic in appearance, with red skin, clawed hands and horns. The resulting transformation increases her striking power immensely.
* American McGee's Grimm adaptations of books rather than any of the films based on the original written material.
* American McGee's Grimm just loves its ridiculously bloody cartoon violence.
* American McGee's Grimm, pausing the game in any episode from the seventh onward results in a tinny Muzak rendition of the opening theme. The style and tinniness make it clear that this trope is being invoked.
* American Me is about a gangster who practically grew up in the prison system and has difficulty adjusting to the outside world when he is released as an adult.
* American Me. This earns Santana notoriety but also gets him convicted of murder and his sentence (initially for robbery) extended by years.
* American mobsters didn't really use "Mafia" or "La Cosa Nostra" to refer to themselves until they adapted those terms from law enforcement and film and television. In Italy
* American Murder Song brings us "Murder! Murder! Murder! Murder!" and "Murder be thy name."
* American music fans know "Billy Don't Be a Hero" as a song by Bo Donaldson and the Heywoods; however, the song was originally a UK hit for the band Paper Lace. Paper Lace wanted to have a U.S. hit with it, but Donaldson's version beat them to the top.
* American Nightmare" Dean tells Sam about how Castiel and Crowley have teamed up to hunt Lucifer. "One's an angel, one's a demon, and... they solve crimes."
* American Ninja 2, who never forgets to demand money for service rendered.
* American Ninja does that early in the 1st film. He rescues a young woman from kidnapping and needs her to move through the jungle quickly. He breaks heels off her shoes, then cuts her tight skirt and ties the shreds to create less constricting shorts.
* American Ninja has this. Jackson starts a fight with Joe, when Joe effortlessly kicks his ass, Jackson becomes his buddy, willing to risk court-martial for his new friend.
* American Ninja, Michael Dudikoff's character, the American ninja Joe Armstrong, in one scene gets a butt-chewing from his boss, an Army colonel. After being dismissed, he salutes in a limp-wristed way, with his hand curved instead of straight, almost dismissively. Any officer worth his salt would send him to the brig for disrespecting an officer.
* American Ninja Warrior consists of a tournament of four teams (of three players each) in each episode. Each tournament is three rounds. The first round is only used for determining seeding of the second round (the winners of each branch of the tournament's first round face the losers of the opposite branch). It is only the second round that determines which teams move on to the third round. From a game-

theory perspective, the absolute best strategy would be to immediately jump off the obstacle course and lose every heat of the first round, thus preserving the team members' energy and eliminating any risk of injury, to be fully prepared to take on the second round, where it actually matters if you win.
* American Ninja Warrior end with a climb of some sort, in particular the iconic Warped Wall. Many competitors will let out a scream of triumph after completing the course.
* American Ninja Warrior has a celebrity edition to celebrate Red Nose Day 2017. Celebrities involved in this special are: Natalie Morales, Erika Christensen, Derek Hough, Jeff Dye, Nick Swisher, Ashton Eaton, Nikki Glaser, Mena Suvari, and fan-favorite Arrow star, Stephen Amell. While most of the celebs cheated a little, since the special's purpose is to donate nad have a fun run, Amell is at a peak of the human physical condition that he is not only able to plow through six obstacle with ease, but also become the only celebrity to attempt the city finals course, starting with his fitness tool, the Salmon Ladder.
* American Ninja Warrior has a significant problem with this when it comes to its season finales. Once they get to Stage 3, if the show is nearing the end of its running time, you can bet that nobody is going to clear the stage.
* American Ninja Warrior has Kacy Catanzaro, who, despite being five feet tall, was able to complete the course in Dallas. She said she felt that other women had the potential and just needed someone to show them that it could be done.
* American Ninja Warrior series. Ultimately, Esquire went off the air in June 2017, with the unfulfilled promise to switch to an online model.
* Americano). American in English it's also the demonym for the native of The Americas (as in Organization of American States) but rarely use in that context.
* American Odyssey, a PMC named OSELA features in the pilot. Their troops don't much care for adherence to rules of engagement or for basic courtesies between regular US forces and mercs.
* Americano Exodus is a rather unique take on the genre. Several of the main characters are young girls descended from the nobility of a parallel world, sent to earth in order to hunt down members of the Twilight Dawn organization, who are hiding out on our planet. While the girls do have magic and costumes, the magical girl elements end there. The main character, Amel, is actually a teenage boy who must pretend to be a girl in order to protect the integrity of his household and his own life. Since only women are supposed to be able to use magic, any men with the ability, while rare, are imprisoned and sometimes executed.
* American-on-American: This is what happened to Army Ranger Spc. Pat Tillman in Afghanistan, 2004. Official story: Tillman's unit was ambushed and split in two during a patrol and his section moved ahead to get into a better position to provide support. The other part of the unit mistook the Tillman's section for the enemy and fired on them killing Tillman and an Afghani soldier. Tillman was also a professional football player, a safety for the Arizona Cardinals, making the situation even more delicate for the U.S. Armed Forces. Initially the fact it was friendly fire was covered up. Tillman was portrayed as leading a heroic charge against the enemy. The truth was revealed when Tillman's family got suspicious and started investigatng. There is some evidence that Tillman's death was not an accident, as he'd begun to criticize the military and the Afghan war. He had planned to meet with Noam Chomsky, a well-known scholar who's been highly critical of U.S. foreign policy, and possibly run for office after his service.
* American-on-British: In January 2008, two Apaches, one British and one American, were called in to support a unit of Grenadier Guards and Afghan forces fighting the Taliban in the Helmand Province. The British Apache opened fire on the Taliban, while the American Apache attacked the Grenadiers. Only one person was wounded. After the incident, a high ranking British Army officer claimed that in contrast to the UK's full-time professional air forces, most American pilots are merely reservists, implying that this is why British-on-American friendly fire incidents never happen.
* American-on-Canadian: The Tarnak Farm incident of April 2002. A U.S. Air National Guard F-16 mistook Canadian Army soldiers for Taliban fighters with anti-

aircraft weapons. The farm had previously been used as a firing range by the Taliban, but was now being used by the Canadians for anti-tank and machine gun exercises. Although denied permission to attack by the controlling

* American Pie 2 has a drunk guy peeing down a balcony, and hitting Stifler... who initially likes it, thinking it was a hot girl pouring champagne.
* American Pie 2, Michelle helps Jim get Nadia, the girl he's always been in love with, only to find that she's fallen in love with him.
* American Pie 2. Michelle, who in the first film tells him she shoved a flute up her pussy, does it to him, being all kinky and everything.
* American Pie: After several mundane (and utterly boring) stories from band camp, we are treated to this:
* American Pie and its sequels. The page image is the infamous pie scene, while Jim is also caught with a tube sock in the beginning.
* American Pie before its theatrical run. The creators apparently admitted that the release of that version was due to piracy.
* American Pie: effectively all episodes involving Jim Levestein. The first movie has him prematurely ejaculating in front of a hot exchange student broadcast all over the internet.
* American Pie - even funnier, more explicit and more em-bare-assing in the unrated DVD version.
* American Pie, features all the characters crammed together on a white background with a bold red title above them.

* American Pie insisted on having a monkey in it somewhere as "any film with a monkey in it is twice as good as the same film without a monkey".
* American Pie in the 2000s as a slew of new films in that style came out.
* American Pie in the 2nd film, he always found women his own age wanting for one reason or another.
* American Pie is still the most-remembered of the franchise. In addition to being released the most times of any of the films (in both rated/unrated Collector's/Ultimate editions and compilation boxsets), it featured most of the signature moments the series became famous for.
* American Pie, its contents deal almost exclusively with sex positions. It's an interesting variation in that it's clearly been edited and updated by everyone it's been passed down to... meaning it's a Paper Wiki!
* American Pie, Kevin Myers is as hesitant to say "I Love You" to his girlfriend as she is to have sex with him, and for pretty much the same reasons.
* American Pie may as well be the poster boy for embarrassing dads. He has a habit of walking in on Jim at the worst possible times and also trying to prove that he's cool.
* American Pie — Raunchy teen comedy series, with 7 installments since 1999.
* American Pie, Nadia is referred to as "that Czechoslovakian chick," despite it being 1999. This was changed to Czech in (at least) the Czech and Russian dubs.

(Not that this is an error in dialogue. Americans tended to refer to both Czech and Slovak nationals by the name of the former country well after it was dissolved.)
* American Pie Oz discovers a sensitive side, Kevin realises that his relationship probably won't last after school and nerdy Jim realises there's more to life than just sex.
* American Pie Presents: Band Camp. The MC is challenged to a musical "duel". He's recently taken up the triangle. His competitor, of course, is much better. Then the MC pulls out an instrument he, unexpectedly, plays well.
* American Pie Presents: Beta House: The frat guys engage in wild parties, hazing rituals, keg stand competitions, playing pranks on rival fraternities, etc. You kind of wonder if they passed ordinances to turn the college into a legal brothel and just forget about studying.
* American Pie Presents: Girls' Rules: At the start of the movie, Annie accidentally gives herself a hanging wedgie when her panties get caught on the top of a fence while attempting to climb it.
* American Pie sequels. However, his popularity among the franchise's fans is one of the big reasons the movies were successful.
* American Pie series brings us Noah Levenstein, a.k.a. “Jim’s Dad”. He’s incredibly understanding of the antics in his son’s life, and those of his friends. In the direct-to-video sequels, it turns out he’s the source of alot of the lore, such as the “bible” and the “Naked Mile”. At the end of the main series, he even gets to hook up with Jeanine Stifler, a.k.a. “Stifler’s Mom”.
* American Pie series idolizes his mother and hates the thought of her having sex. This directly works against his mother's rampant promiscuity and willingness to have sex with his friends, much to Stifler's embarrassment and rage.
* American Pie series: Though not a true villain, Steve Stifler, particularly in the first two movies, has been dubbed this in the commentaries by the directors.
* American Pie, since while the other boys tend to find relationships, she and Finch only ever seem to have sex once and then that's it.
* American Pie, Stifler goes to a sex addicts' meeting in his college hoping to find easy targets. After he commends a speaker's bravery for finally being abstinent for a while, she looks at him and it is followed by them having sex in his dormitory. However, her hypersexual behavior causes him to eventually trick her and run away. His roommate then comes looking for him, and the still nude female student orders and immediately pushes the stranger to bed, and jumps on him.
* American Pie, Stifler plays dumb when the other friends offer lame excuses as to why they didn't call him to hang out with them. Later, after they yell at him for mocking Finch's arrest, he calls them out on this, forcing them to realize that even though he's a jerk, he's also a true friend to them by virtue of being a dick and making things much less boring.
* American Pie: "This one time, at band camp, I stuck a flute in my pussy."
* American Pie when he tries to convince Heather that he's not just a jerk jock. Subverted in the beginning in that he joins the Glee Club just to get Heather into bed, though later he does develop feelings for her.
* American Pie when the girl finds the Porn Stash and starts masturbating.
* American Pie where Finch, who has indicated that he never uses public bathrooms for fear of germs, gets his drink spiked with laxatives at school. Cue the boy's bathroom being down for repairs, no toilet seat covers, etc.
* American Pie: while Jim still gets caught masturbating, Stifler makes someone else come into unwanted contact with his feces, and he has sex with Finch's mom.
* American Pie, whose style of teen movies caused the genre to fall out of favor in the late '80s and '90s.
* American Pie with the four main dudes making "The Pact" to not graduate high school virgins.
* American Political System them to vote, and all electoral college ballots are final once submitted. At most Evans might delegitimize Dalton's win and cause him political problems down the road, but he can't actually overturn the election once the electoral college and House have already voted.

* American Political System, who have been known to choose running mates (and future Vice Presidents) who are as different from them as possible — increasing the chances that voters can personally identify with at least one of them. To name a few notable examples:
* American Pop covers four generations and their relationship to popular music in America.
* American Pop: One character is seen playing the piano, and as he moves his arm his sleeve repeatedly flickers to a lighter shade than the rest of his shirt.
* American Pop Zalmie's wife Bella is killed in an explosion after she opens a package containing a bomb left by the mafia, everyone reacts in horror except for their son Benny who just glances over at the sight and goes back to playing his piano, barely showing any emotion, he never brings up his mother's death for the rest of his screen time.
* American Prisons of murders there, so expect them to portrayed as very fearsome antagonists towards any unlucky inmates who cross paths with them. Occasionally, Neo-Nazi gangsters might be found outside of prison, and are not any less ruthless.
* American producers attempted on several different occasions to adapt
* American Pronghorn Antelope are no more related to Old World antelopes than to goats, deer, and cattle, though they do share a certain resemblance. They are, in fact, the last remnants of an otherwise extinct uniquely American group of animals. The pronghorn family, Antilocapridae, is a sister group to both the Cervidae or "deer family" and to the Bovidae, which includes cattle (including buffalo and bison), goats (including sheep), and the various other kinds of "antelope". And giraffes. The "antelopes" of the Old World are typically no more closely related to each other than to other Bovid groups like goats or cattle.
* American Psycho 2: All American Girl: At the end, Rachel fakes her death and takes another identity which she gets into the FBI using later.
* American Psycho 2: All American Girl, being killed by the new killer Rachel Newman.
* American Psycho 2: All American Girl, or that she's using a fake name (Rachel Newman) while at college.
* American Psycho 2: All American Girl: We never find out Rachel's true name and history beyond her killing Patrick Bateman as a child.
* American Psycho 37 times. One chapter follows his train of thought at a video rental store as he picks the movie out "as if he'd been programmed." He also pretends to ignore "the horrified reaction" of a store employee who recognizes Bateman upon being handed the movie box when renting it out for what would be the 38th time. He sometimes likes to describe some of the film's more violent moments to both the reader and other characters throughout the story. "The power drill scene" is Patrick's favorite part.
* American Psycho and frequent hallucinations, it's entirely possible they were the right answers, or at least that he thought they were.
* American Psycho: As part of the ambiguity of the plot (is Patrick Bateman a brilliant sociopath or a deluded wannabe?), the police are portrayed inconsistently, and there is zero police presence when Bateman goes on his more murderous rampages.
* American Psycho believes that ultimately, everything is meaningless. "Everything I have been taught: principles, distinctions, choices, morals, compromises, knowledge, unity, prayer — all of it was wrong, without any final purpose. All it came down to was: die or adapt."
* American Psycho, both the book and the movie. Patrick Bateman commits a series of heinous crimes including chasing a hooker with a chainsaw, going on a shooting spree, blowing up several police cruisers, and hiding in his office as a helicopter searches for the perp. While hiding, he phones his lawyer and confesses to everything, but later on, nothing has come of this. He meets his lawyer, who laughs the whole thing off and mistakes him for someone else. Bateman becomes angry, (who had just called "Bateman" spineless, after all, Patrick Bateman couldn't pull off a murder, let alone about 20), informs the lawyer that he IS Bateman, and insists the crimes actually happened. He is apparently saved again when the lawyer informs him

he had dinner with someone he supposedly killed just a few weeks ago, tells Bateman he no longer finds this funny, and leaves. Bateman slinks down in his chair and delivers a speech about how there are no more barriers to cross, etc. In both the book and the movie, Bateman is shown to suffer from hallucinations and other psychotic (duh) episodes. It is left unclear whether he really does embody this trope, with the reason being that everyone is so interchangeable to each other that they can't notice when someone dies, or whether he imagined the whole thing.
* American Psycho could invoke this, depending on your interpretation of the movie. It's deliberately made ambiguous to what extent Patrick Bateman is telling the truth, but some moments are a bit too blatant to ignore, like casually telling a barrista that he wants to "stab her to death and play with her blood". She doesn't even react.
* American Psycho different shade of white from that of his colleagues. His main motivation for becoming a serial killer is more or less that it's the only thing in his life that makes him unique.
* American Psycho, Elizabeth went to Sarah Lawrence College, as did the actress who played her (who also wrote the film), Guinevere Turner.
* American Psycho ends with the words "This is not an exit" (on a sign that the protagonist reads).
* American Psycho has four Latin Spanish dubs: one in Mexico City, one in Venezuela, one in Argentina, and one in Cuernavaca, Mexico.
* American Psycho. He even stops to chat with neighbors, who are clueless he is doing anything other than replacing a soiled carpet.
* American Psycho is more narcissistic than two clones of Narcissus screwing in a room full of mirrors. At one point he actually admires his reflection in a mirror while having sex. Not to mention every single other character.
* American Psycho: Like the novel, the film adaptation was also controversial for its violence towards women, yet the director and writers of the film, Mary Harron (director/writer) and Guinevere Turner (writer), are women. They made conscious decisions that project the female influence on this adaption. The film changes the focus from purely Bateman's perspective to showcase the faces of the women at certain scenes.
* American Psycho, Luis Carruthers is in love with Patrick Bateman. Unfortunately for Luis, Patrick is not only straight but virulently homophobic as well.
* American Psycho: Made in 2000, set in sort-of-1989, based on musical information from the protagonist.
* American Psycho — Psychological horror series. 2 films since 2000.
* American Psycho met with Wall Street bankers as research. They took him out to lunches, dinners and clubs, but not once did he see them work or spend time in their offices. The one-upmanship between them inspired him to change the course of the story.
* American Psycho, murders Paul Owen (Paul Allen in the film) with an axe.
* American Psycho). Nevertheless, he feels infinitely superior to his brother, who lives on explicit parental handouts because he earns his own money.
* American Psycho numerous times, to great comedic and disturbing effect. A fine example:
* American Psycho, Patrick Bateman declares at several serious moments that he has to "return some videotapes".
* American Psycho, Patrick Bateman fills in one crossword with "meat" and "bone", over and over again, because he's slipping.
* American Psycho, Patrick Bateman films himself eating the brains of a woman he murdered, and later shows the film to another woman before killing her as well.
* American Psycho, Patrick Bateman invokes this trope when reviewing Genesis, making claims such as the song "That's All" sounding too much like their previous song "Misunderstanding".
* American Psycho: Patrick Bateman kills an annoying coworker which results in his face being covered in blood. Then he takes off his raincoat that was keeping his suit clean, sits down at the desk facing the coworker's corpse, and smokes a cigar.
* American Psycho, Patrick Bateman's apartment is stark white and spotlessly clean,

which goes towards displaying Bateman's psychotic fixation on appearance and utter shallowness.
* American Psycho: Patrick Bateman tries to get a last-minute reservation at hot restaurant Dorsia... and the maître d' starts laughing hysterically before slamming the phone down and cutting him off.
* American Psycho: Patrick Bateman wears a clear plastic raincoat over his suit, to prevent it from being stained with blood.
* American Psycho Patrick draws pictures of naked women being killed. Sometimes he draws them in public.
* American Psycho: Patrick sometimes films himself torturing women to death. He once shows one of these videos to a woman before killing her.
* American Psycho, Paul Owen, Marcus Halberstam and Timothy Price in the novel become Paul Allen, Marcus Halberstram and Timothy Bryce in the film.
* American Psycho that is Patrick imagining all of the horrible things he is said to have done in the novel/movie.
* American Psycho. The ending throws into question everything we saw happen in the film and we never get an answer as to what really happened.
* American Psycho (the movie), Patrick is involved in a shootout with the police. He shoots at them and misses, hitting their squad cars, which explode in a humongous fireball. Patrick just stares at his gun with an utterly confused expression, giving evidence that the incident was just another product of his insane mind.
* American Psycho. The sequence may have been a figment of his deranged imagination. Not only does he kill her with the chainsaw, he drops it on her from several stories up and kills her. Ignoring the fact that most modern chainsaws have a safety on it so that if you let it go, it'll turn off. If you look closely you can see judicious use of Duct Tape.
* American Psycho). This is much in line with Bateman's desire to be seen as special, contrasting with his inability to do anything outside the box.
* American Psycho to change. He is not going get what he wants this time. The film ends with the ominous certainty that his confessions are meaningless and his hellish existence is inescapable.
* American Psycho when a young woman is attempting to escape the lethally insane Patrick Bateman and she runs into several corpses all over his apartment.
* American Psycho, when Patrick Bateman is listing his priorities before Christmas, one of them is "saw a hardbody's head off and Federal Express it to Robin Barker – the dumb bastard – over at Salomon Brothers".
* American Psycho will run after you naked with a chainsaw — provided you let him keep his tennis shoes on.
* American Quitters, Frank burns the signature cross onto his face so he can make it through a horde of Crossed to kill Zeke the Geek and fulfill Errol's revenge. He manages to get to and kill Zeke but is set upon immediately afterwards.
* American Ragan Smith qualified second into the Women's All-Around despite a fall and was largely considered the favorite to win the title. While warming up for the All-Around competition, she seriously injured her ankle and could not compete, exiting the arena on crutches.
* American R&B singer CeCe Peniston, who is perhaps best known for the gay anthem "Finally". Her surname would occasionally be rendered as Pennington in platforms where the word "penis" is censored.
* American Recordings: A full-length picture of Cash, also shot from a low angle.
* American remake has Sally simply trying to figure out how she died. During the first season she subconsciously tends towards Type A, although she does try to veer into Type B territory to take revenge on her murderer but can't find it in herself to follow through with anything.

restoring a Kotex vending machine.
* American Reunion is both a reunion in-universe for East Great Falls High Class of 1999 and in reality with all of the original cast members coming together for the first time in over a decade.
* American Reunion, Michelle's attempt to type in the first four letters of "amazon.com" reveals that her husband Jim had used the computer to visit "amazingcollegesluts.com".
* American Reunion: The opening sequence has Jim being caught masturbating by his son. He injures himself, enters the bathroom to find medicine... and finds Michelle "using" the shower head.
* American Revolutionary War, his grandson, Sir Peter Parker, 2nd Baronet, was also shot in the thigh by American militiamen. Unlike his grandfather, however, the wound proved fatal and he died from a severed femoral artery.
* American Revolution shows this best with the Templars having male and female agents and leaders in seemingly equal numbers. Of course, the modern-day Templars are even more egalitarian, naturally.
* American Richard Basehart portrayed a British stage actor on an episode of

* Americans Are Cowboys: Need to quickly display that a character is American? Just stick a ten-gallon hat on his or her head and a six-shooter in each hand and call it a day.

* American Scarecrow: During a confrontation with the killer, one of the cast shoves a drill into his back.
* American Scarecrow: Near the end, it's revealed that the killer, Brother Dean, was mortally wounded in the army, and had to be rebuilt into a robot to survive.
* American Scarecrow starts with about 6-8 people. Only two remain by the film's end.
* American Scatecrow: When the killer claims his second victim, there isn't any blood on/around the corpse.
* American sense) has so much trouble becoming a party with any real power. There are simply too many different groups that consider themselves Libertarian to ever organize.

* American Shakespeare Center operates out of a reconstruction of the Blackfriars playhouse in Staunton, Virginia. As such, there are support columns that obscure the view of a few very particular seats. A good portion of the upper level can also be rough on those hoping to see a majority of the stage.
* Americans Hate Soccer Soccer. The fact the song refers to a quarterback at one point is the least of it.
* Americans Hate Tingle: A character is despised outside of their country of origin.
* Americans Hate Tingle: A hated character seems to be more excused on his homeland for some reason.
* Americans Hate Tingle: A work or person is not as received abroad as it is at home.

* Americans Hate Tingle: Your work fails to gain a large foreign audience.
* American shipping company Federal Express rebranded to FedEx, a popular nickname, and used both till 2000.
* American Sign Language has the sign for "girlfriend" literally being 'girl'+'friend', and the same is true for "boyfriend". It can usually be resolved by adding that you're 'together' or 'going steady', or adding airquotes. Also, when learning ASL, it's very common to get the four types of "love" (intimate love, brotherly love, "hey just messin', love ya", and love of inanimate objects ("I love that movie")) mixed up.

* American Sniper, a couple of PMC's show up during Kyle's various tours of duty in Iraq. In a rare twist, they are presented in a heroic light for once. Aiding the American forces in firefights against the insurgents.
* American Sniper an example too. He writes glowingly about "The Elite Elite" of the SEALs, the famed SEAL Team Six.
* American Sniper follows Chris Kyle's career in the US Navy when he was deployed in Iraq, engaging Al-Qaeda in Iraq.
* American Sniper, he notes that there were so many insurgents around Ramadi that the soldiers and SEALs fighting there would deliberately try out new weapons just for the challenge.
* American Sniper more strict (and thus more accurate) than those used in the mid 20th century, so unlike most of those already mentioned, he's good for every single one of those kills.
* American Sniper received a lot of flak from critics who accused the film of being propaganda for the military and glorifying its subject matter (Chris Kyle and the war in Iraq), with others also accusing the film of being anti-Muslim as well. Still didn't stop it from having the highest opening weekend in January - a whopping $89 million - and eventually becoming the highest-grossing film (in terms of domestic receipts) of 2014. Though considering the film was successful before the critical noises came out, it's debatable what effect the bad publicity had on the film.
* American Sniper: The Kyle brothers' father was a very firm sort of parent. During his "sheep, wolf, and sheepdog" lesson where he's teaching them how to fight the wicked, he takes off his belt and places it on the dining room table suggestively while mentioning that they'll be in a lot of trouble if he sees them turning into wolves.
* American soldiers in the Vietnam War threw away the remains of their combat rations in the jungle after having a quick meal while on patrol. The Vietcong quickly learned that a common fragmentation grenade fit right in an empty can from the ration kits, and they built booby traps with a piece of string added that pulled out the primed grenade when it was tripped.
* American soldiers left behind children. The children's lives were even more complicated by the fact that they are half white (or black) and obviously "foreign." Many of them were ostracized in their communities, although they are now using DNA testing to locate long-lost relatives in the US.
* American soprano Patricia Racette fell in love with American mezzo-soprano Beth Clayton during a production of
* American soprano Sondra Radvanovsky and the late Russian baritone Dmitri Hvorostovsky had performed together enough number of times for them to have become incredibly close friends in real life, and they have had a strong partnership on the stage together. Radvanovsky even playfully called him her "opera boyfriend" at one point, and Hvorostovsky had often expressed admiration for her.
* American spies were supposedly outed by the Germans for crossing their legs the

American way, by resting their ankle on the opposite knee. Europeans cross their legs by resting the back of one knee over the other.
* American Splendor: Harvey Pekar's story, much of it taken directly from his comics, is dramatized through actors, who sometimes interact with stock footage of real events and the actual people they're playing.
* American Splendor integrates comic book aesthetics in its presentation, like showing drawn scene transitions, comic book-style caption boxes or using an animated Harvey Pekar in a live-action backdrop, or when Harvey is annoyed by a jewish lady keeping him stuck in the line at a convenience store with an animated version of himself expressing his thoughts and trying to convince him to take action.
* American Splendor showed that comics could depict adult life without idealizing it.
* American Splendor stories is about Harvey getting called in to jury duty. He gets out by just explaining his views about the criminal justice system, and how it would make him a terrible juror.
* American Splendor the extra change the cashier gave her by accident.

* American sports fans often refer to the semifinals of any championship tournament as the Final Four, thanks to the high popularity of college basketball. The National Collegiate Athletic Association (NCAA) is quite firm about reminding fans, media outlets, and advertisers that Final Four® is a registered trademark in the United States, and may ONLY be used (with permission) to refer to the semifinals of the NCAA's own postseason championship tournaments.
* American Standard markets toilets that are powerful enough to flush several golf balls without clogging. * American Stuffers commence petting and fussing over their preserved pets when they collect them from the taxidermists'. Granted, this trope is the whole point of that side of the business.
* American submariners on the Pacific front complained a lot about their torpedoes too. Early U.S. Navy torpedoes were equipped with magnetic detonators that were supposed to detect the change in the magnetic field from being close to the hull of an enemy warship and detonate while underneath it. Since water is not compressible, this would create a massive air bubble underneath the ship, robbing it of structural support and causing the keel to split in half, instead of punching a small hole in the side that could be plugged as would happen in contact detonations. Problem was, instead of detonating under the boat, the torps would blithely continue on their way, without ever detecting the target ship. The Navy had been worried about operational security and cost (as the detonators were quite expensive, given the technology of the time) and as a result, they were not adequately tested before the war and there were, consequently, a LOT of problems. Eventually,
* American Sugar Bear is much more sinister. He often flat out steals cereal from an old lady with magic powers, going as far as to go back in time to make sure she doesn't get any cereal. And this is just in the early 90s. In the 80s, Sugar Bear outright committed

* Americans wouldn't know what Korea was, and after World War II broke out was typecast as Japanese characters, to the degree that some audiences thought he

* American Tabloid, Big Pete Bondurant does this whenever he is arrested. It's treated as a parlor trick to impress whatever cops arrested him rather than a feat of determination and strength. Of course, the fact that Bondurant is able to do this so casually only makes this more impressive.
* American Teen, artsy outsider Hannah says a version of this when she's pursued by the school heartthrob, Mitch: "I mean, there are so many girls in this school who would give their left boob to be with him"

* American tenor Jan Peerce, who sang with the Metropolitan Opera in the mid-20th century, was so nearsighted that, whenever he was offstage, he had to wear glasses with lenses that were, in his own words, "as thick as the bottom of Coca-Cola bottles."
* American tenor Matthew Polenzani and Polish baritone Mariusz Kwiecien have performed together many times in many different opera productions to the point that they've connected with each other's voice and style, and have become comfortable working together. Despite the fact that their characters usually fight over a woman, they still have a rather magnetic unity together that has earned comparisons to other tenor/baritone partnerships like Jussi Björling/Robert Merrill and even Plácido Domingo/Sherrill Milnes.
* American theatrical songwriters Frank Pixley and Gustav Luders were known for "The Tale of a Bumble-Bee" from
* American Top 40 (and various spinoffs and successor shows). The first such episode aired in 1971.
* American Top 40: Compare the Casey Kasem of 1970 (the show's earliest days) to his retirement from radio in 2009. His delivery was much different during the early shows (1970-early 1972), before changing into the form that fans know him best for (c. 1973-the late 1990s). By the early 2000s, age began taking its toll, and although he was definitely still Casey, his voice had grown much weaker. Despite the changes in his voice, Casey was still sharp as ever and — approaching his late 70s by the time of his retirement, was still able to show enthusiasm and sell the music that listeners more than 50 (and sometimes 60) years his junior were avidly listening to.
* American Top 40: The finale of the original run, from January 28, 1995, was hosted by Shadoe Stevens. With obvious clues announcing that this was the last episode, Shadoe played a Long Distance Dedication to loyal listeners — James Brown's "Move On." The end theme was replaced by the song "Happy Trails" by Roy Rogers and Dale Evans.
* American Top 40 would profile a one-hit wonder, or early prolific star of the rock era who suddenly disappeared off the charts, quit recording, etc. Casey would simply explain what said artist (or group, as appropriately) had been doing in recent years, if they were involved with current projects, and so forth. Sometimes, he'd even play the song they were best known for.

At the climax, he finally proposes while surrounded by a SWAT team and the National Guard; she manages to say "yes" before they both get tased.

* American Vanessa Marshall did a fairly good English accent as Strangelove in
* American version late in the production, multiple actor recastings and other problems, British series footage had to be used to fill in the holes in the episode. A brand-new higher-quality Kryten suit was made for the pilot which Llewellyn was allowed to keep and re-use in further British seasons following the American cancellation.
* American version's big rig episode, Tanner accidentally activates his truck's windshield wipers while trying to figure out how the mechanics of driving it.

Especially amusing since Tanner is a professional racecar driver and is usually the most proficient with the vehicles on the show. Of course, he still ended up winning the most challenges in the episode.
* American Virgin had one of these while the cast were visiting Australia. People were in fetish gear or cross dressing, though it was only for men, since on seeing the main character's step-sister kissing another girl, one of the patrons asked aloud "Who let the vagina crowd in?"

* "American Whoopee" starts with pals Teddy and Gil watching popular girl Millie walk down the street.
* American wigmakers, who historically used real hair (donated by sick or already balding people) in their trade, once placed a premium on blond hair, and therefore highly prized hair taken from residents of the Great Lakes states (Ohio, Indiana, Michigan, Illinois, Wisconsin, Minnesota) because of a concentration of German, Dutch or Scandinavian ethnic markers in that region. Of course, blond hair can now be found just about anywhere in America, especially since (as a result of the

* American Wrestling Association as AWA and then WSL collapsed with noisy thuds

while CWF M-A was active when the latter fell and CWF M-A survived said fall.

* American Wrestling Association, was cheered when working heel against Greg because he managed to, ever so briefly, take the belt from him.

* American Wrestling Association went under, former employees got together and started using and selling the AWA to upstart companies, till WWE torpedoed this budding revival.
* American writers had scripted a scene where a character is to be "strapped in" (seatbelts fastened), the Japanese animation team thought this meant "tied down with ropes" and animated it accordingly. The same thing happened when the script said that a character was "hauling ass": he was drawn running with his hands on his rear.

* America, Queenan describes an occasion when he went to Atlantic City and sat in on a table with experienced poker players. Not really knowing anything about the game, he just bet when he felt lucky, and started winning — and got a lot of derision from the experienced players for screwing up the 'system'. After one of them took him aside and explained it to him, he started betting by the system — and promptly lost all his winnings and more besides. Not entirely surprisingly, he concluded that the system blows.
* America's "A Horse With No Name": "The heat was hot and the ground was dry..."
* America's Army, are generally pretty tame. Makes sense since the games are essentially recruiting tools and wouldn't work very well if foul-mouthed, abusive Drill Sergeants dissuaded prospective recruits from signing up. Supposedly it's possible to reprogram to this though.
* America's Army as a free download to the public. It's at least as much aimed at training people in realistic combat (i.e., team-killing is murder, not comedy) as actual skills, but it probably qualifies.
* America's Army, during Combat Lifesaving training, you are specifically told several times that no cheating or talking is allowed. This doesn't stop you at all from asking the student beside you for answers to the test and getting a perfect score.
* America's Army example above, you can attack/kill an instructor during the tutorial and get yourself court-martialed.
* America's Army is the United States Army's very own recruiting tool in the form of a tactical first-person shooter.
* America's Army lets you train your character to take part in para missions.
* America's Army series, which eschews many FPS tropes in favor of realism. Note that without hacking the base game, the player must create an online account that records their game performance.
* America's Army, the vast majority of online servers ran the Bridge map. Possibly because it was a simple map with simple objectives. And on that map, Defense was the preferred team of choice, since all they have to do to win the round is prevent the other team from crossing the (narrow) bridge. Assault, on the other hand, only had a handful of minutes to make it across or they lost.
* America's Army to help save the life of someone in a car crash. Healing people in the game is a matter of pushing the left mouse button, but qualifying as a medic requires sitting through and passing 3 tests on first aid.
* America's Army, to the point that players always see themselves as U.S. Army infantry, while the opposing team appears as terrorists. This isn't surprising

given that it's openly a propaganda tool authorized and funded by the United States Army.
* America's Army was developed by the U.S. military for use as a recruitment tool.
* America Saves the Day: Aliens (or other villains) are threatening the entire world - but it's up to the USA to beat them!
* America Saves the Day: A world-wide problem is solved by the United States.
* America Saves the Day turns out to be a CIA mole, except for the parts which they can misconstrue as "proof" that the Russians are the real bad guys.

* "America's Best Comics! Where 'quality' isn't just a motto — it's a slogan!"
* America's Best Dance Crew before focusing mainly on production work and as a features singer.
* America's Best Dance Crew example of this. Almost every crew have "kool letterz" their name, but as an example three crews have the word "crew" in their name. Here are the ways they spell that otherwise simple word: "Cru," "Kru," and "Cr3w."
* America's Best Dance Crew remake, then suddenly it went back to the end of the ABDC ad.
* America's Dumbest Criminals, a man's house has been robbed and he calls the police. He lists the various things that have been stolen: his wife's jewelry, his computer terminal, his TV, his VCR, his bag of dope.
* Americas Dumbest Criminals makes use of goofy ones, usually exaggerating how dumb the criminal was in the process.
* America's Dumbest Criminals of a businesswoman who, after a long summer drive, decided to skinny-dip in a river to cool off. While swimming some men arrived at the river and blocked the route to her clothes. Too embarrassed to head for said clothes, she jumped in her car, sped home, and was pulled over by an officer who was shortly quite embarrassed himself.
* Americas Dumbest Criminals of a drug bust where he was wearing two devices. The dealer insisted on searching him, found one of them and accused him of being a cop. He said it was a pacemaker. The dealer believed this, then found the other wire. The cop convinced him it was an insulin pump. The dealer said "Man, you shouldn't be doing drugs, you're ill!" Then sold him the drugs, and was arrested.

* America's Funniest Home Videos has these clips in too many eps to count. Mostly involving children.
* America's Funniest Home Videos initially aired on Friday nights on ABC, but apparently did well enough for the show to be moved back to its old Sundays at 7 p.m. timeslot. It's thrived there ever since. Given that the show was effectively treated as cheap filler by the network after Bob Saget left, the fact that its

comeback came in a death slot is extremely impressive!
* America's Funniest Home Videos introduces a banana peel as "a great source of pratfalls" as he drops one at his feet. The series of clips that follows are pratfalls, but none involving banana peels.
* America's Funniest Home Videos. It showed clips of stage performances while Tom Bergeron "read" reviews of them and the Quote Mined version appeared on screen. The final review was so bad it was reduced to "The Happy Musical is... A show!"
* America's Funniest Home Videos likes to do backward video montages sometimes.
* America's Funniest Home Videos managed to compile a whole sequence of people saying "sex" instead of "success" (see Real Life below).
* America's Funniest Home Videos, many clips randomly feature Disney character or franchises, and the grand prize is always a trip to a Disney park.
* America's Funniest Home Videos once featured a production video in which the ultimate horror of the workplace was "The Boss's Kid".
* America's Funniest Home Videos once had a challenge to film men getting their chest waxed. One even got invited to the show to use one of the props to pull a patch off his chest.
* America's Funniest Home Videos (original pilot aired in November 1989, from there January 1990-present. From 1999-2000, it ran only as occasional specials, but the Tom Bergeron-hosted revamp returned it to series status)
* America's Funniest Home Videos. Some of them had cheeky grins on their faces, indicating it was deliberate on their part.
* America's Funniest Home Videos's "Young Americans" being used to underscore cute toddler clips. The song is a cynical look on life in America at the time, bringing up things like McCarthyism and black repression.
* America's Funniest Home Videos the dog went out. Same story when the dog wanted to get back in: the owner would step through the door and open it, and only then would the dog go.
* America's Funniest Home Videos, the John Fugelsang and Daisy Fuentes version. One of them would say "the bad news", show the clip and then say "the good news..." and say something funny.
* America's Funniest Home Videos. This was because his marriage was falling apart at the time.
* America's Funniest Home Videos, Tom, while waiting for the clips to start, says that one of the girls in the audience gave him her phone number. He began reading it out, starting with "555".

* America's Funniest Home Videos, videos that feature the song replace it with a wordless version (la la la).
* America's Funniest Home Videos was describing a spit take on screen with a member of the audience when the woman he is interviewing participates by reading a line from the Teleprompter just as Bergeron is drinking from a glass of water.
* America's Funniest Home Videos was taken during a high school ceremony of some sort, perhaps homecoming; one girl was crowned as queen before the announcers realised, oops, the girl next to her had actually won.
* America's Funniest Home Videos. When Tom is introducing a series of pool clips he warns "Don't make the water around where you're swimming suddenly, mysteriously, curiously, warm..."
* America's Funniest Home Videos: Whereas the tape may double as a fine collection of clips from the show, the game involves predicting a player's rating for three consecutive clips, answering questions about them, or determining which player gave each caption.
* America's Funniest Home Videos, whereupon he sinks to his knees and frantically signals to his assistant for a time out.
* America's Funniest Home Videos, whose side effects apparently includes knocking yourself unconscious after taking said pill.
* America's Funniest People of him performing "It's a Most Unusual Day" backwards, and then reversed the footage so that things around him (balloons popping, a person

riding a bicycle, and a man eating a banana) appeared to be happening in reverse.
* America's Funniest People where he advertised a razor with six blades. The first five didn't so much cut the hair as rip it out of its follicle, and the sixth was actually a tiny roll of tissue paper for staunching the blood.

* America's Got Talent performed an act to the song of the same name in which he danced a Tango in between having her smash cinder blocks on his stomach while on a bed of nails among other things.
* America's Got Talent, the crowd will tell the judges to send fantastic acts to the Las Vegas rounds by chanting "Ve-gas! Ve-gas!" Horrible acts, on the other hand, just get booed.

* Americasia: A setting where the dominant culture is a blend of American and Asian culture.
* Americasia: Western North America was colonized by East Asians instead of Europeans.
* America Sings without bringing up the death of 18-year-old hostess Deborah Gail Stone. Nine days after it opened in 1974, Stone was caught between a rotating wall and stationary wall and was crushed. The attraction was temporarily closed and modified to prevent further accidents. America Sings would continue to operate without further major incidents until it was permanently closed in 1988, but a shroud of morbidity still hangs over it to this day.
* America's Most Hated, which provided a composite sketch of Freakazoid disguised as a Shetland pony.
* America's Most Haunted by Samuel Salazar's tombstone, which reads "His wife Lisa tore him apart."

* America's Most Haunted makes this a feature of the game — the software is fully open sourced, the sound files can be replaced by any PC, and the PinHeck controller board allows owners to make updates by swapping SD cards.
* America's Most Haunted none of the ghost hunters are given any names in-game.
* America's Most Haunted: Subverted; an animated clip shows a ghost getting punched in the face, causing its teeth to fall out.
* America's Most Haunted the display shows a ghost near the pop bumpers, top rollovers, or Stairs passage. Shoot the corresponding location to collect a reward.
* America's Most Haunted the ghost of the Historic Theater is defeated when the player completes his unfinished play.
* America's Most Haunted the tombstone for Captain Dixon, ghost of the War Fort, reads "He grew too fond of war."
* America's Most Haunted the War Fort has apparently been turned into a burial

ground for the former soldiers there.
* America's Most Haunted via the two different versions of the game. The "Animated Blue" version has hand-drawn cabinet and translite art, while the "Reality Green" uses photographed models. The playfield art is the same in both cases, though.
* America's Most Haunted which grabs its schlocky premise in a lowbrow death grip and never lets go.
* America's Most Wanted. And now that he was in prison for life one way or another, why would he lie about committing murder now? Dahmer was indeed telling the truth, and he had nothing to do with Walsh's death.
* America's Most Wanted re-enactments, this was apparently a recurring problem as tipsters would frequently call the police to report seeing the actors instead of the actual crooks. Apparently a couple have had to have special cards assigned to show police because it happened so frequently.
* America's Most Wanted should have never been moved to Saturday night in the first place. In 2011, the show was reduced to a series of quarterly specials on Fox, as well as regular showings on Lifetime TV, but it chugged along until 2013.
* America's Most Wanted, still airs to this day as a standalone program, even with the cancellation of the original series.

* America's Next Muppet that possibly would also have functioned as a genuine talent-reality show for puppeteers.
* America's Next Top Model a contestant named Tiffany was eliminated during Cycle 4. She took the elimination in stride and said that she has had such a hard life and cried so much, getting eliminated from a reality show was pretty small by comparison. This rather famously sent Tyra into a complete rage.
* America's Next Top Model, as the almost always long-haired models have their hair cut, sometimes a great deal. At least once, this caused a contestant to quit the competition.
* America's Next Top Model had the hopeful models stick their heads through a wooden plaque mounted to a hole in the wall in order to portray this.
* America's Next Top Model, Howard keeps pointing out which of the contestants is "the future Mrs. Wolowitz". Of course, Howard being Howard, "the future Mrs. Wolowitz" is pretty much every contestant.
* America's Next Top Model is particularly fond of this trope. One example is when Jay tells the final four on Cycle 1 that they would be posing with diamonds... nude. Cue open-mouthed gaping, crickets.
* America's Next Top Model she is ever so fond of. Hell, even with his silly accent imitations, the flamboyant J. Alexander (Miss Jay, also a fan favorite) can get his point across with next to no mumbo-jumbo. There is a reason many fans did not like the news that they all left (though Miss Jay did return).
* America's Next Top Model showed Jaclyn putting out a swear jar... and promptly getting a huge payoff.
* America's Next Top Model the girls often have to create poses for their photo shots. In the show, the girls must avoid stereotypical modeling cliches and instead find new and interesting poses that highlight the clothing, the theme of the session and their natural assets. This puts the focus on skill over looks, as judges have stated even when they think some contestants are better looking, their modeling abilities aren't good enough compared to others.
* America's Next Top Model the girls were supposed to read from a prompter, pretending to be a red carpet announcer. Kahlen read the stage directions "looks to the left" out loud, followed by an "oops".
* America's Next Top Model. The song itself is about a teenager entering high school, seeing how pretentious and superficial people are, and waiting it out for four years... then discovering that the rest of life is the same way. First verse: "Four years, you think for sure / That's all you've got to endure / All the total dicks, all the stuck-up chicks / So superficial, so immature / But then when you

graduate / You take a look around and you say 'Hey, wait! / This is the same as where I just came from / I though it was over, aww, that's just great.'"
* America's Next Top Model the stairs on the way to accepting an award
* America's Next Top Model. The Wii version in particular suffered from buggy controls, the occasional weird glitch (such as the model's head coming OFF in the final catwalk) and both unoriginal gameplay, flat voice acting and a very cliched boring story. On top of that, once you "win" (quite easy to do), there's one last line you say (which isn't awe-inspiring or anything) and then blank screen. That's it.
* America's Next Top Model, this would be the enforced hairstyle for "30-Never" Eboni. Much to her irritation.
* America's Next Top Model, though the subjectivity of the competition barely qualifies it as such.

* America's Stepbrother, America's Enemy, the entire 2012 US is transported to the world of 1984. They decide to liberate the rest of the world from the totalitarian superstates, but they allow the countries they liberate to rule themselves, but many of them vote to join the United States. These include Canada, Mexico and a few Caribbean Islands.
* America's Sweethearts is about how two actors' on-screen chemistry translated into off-screen romance and how the deterioration of that relationship resulted in on-set tension and conflict.

* America (The Book) hits both ends of this trope: "Russian women are known for three things: their beauty, their heartiness, and the speed with which one turns into the other." This is illustrated by a picture of a young, attractive woman, captioned "Miss Vladivostok", and an old crone, captioned "Miss Vladivostok, two weeks later".
* America (The Book), in the chapter on the judicial system. It presents an open-and-shut murder case, which has "this guy is guilty" written on it in big red letters, and then the "verdict" column begins going through possible extenuating circumstances such as marital abuse and fatty foods.

* America vs. the Justice Society Congressman Phillips remains reasonable and impartial throughout the hearings. Phillips' colleague Congresswoman Vasquez is more hostile toward the JSA. Still, she does ultimately agree that the hearings should be canceled after the star witness (an imprisoned super villain) demonstrates his untrustworthiness by trying to use the hearings as an opportunity to escape.

Apparently all of these bans are because of a "lust for causing trouble".
* A Midsummer Night's Dream among many others. In one comic, Daniel Hall wanders into the Dreaming and encounters Eve, Cain and Abel. They each tell him a story, Eve tells a slightly altered version of the Book of Genesis, and Abel tells the biblical story of Cain and Abel. When Matthew the raven asks if they are the actual biblical figures, and how their life stories are supposed to fit in with the Big Bang and evolution, Abel says "Well... this wasn't exactly Earth..." before Cain cuts him off.

* A Midsummer Night's Dream editing in order "Not to offend/frighten anyone".
* A Midsummer Night's Dream, Egeus wants his daughter Hermia to marry Demetrius and extremely disapproves of her beloved Lysander (without giving any actual reason beyond believing Lysander's affections to be false). He is forced to change his mind only after Demetrius falls out of love with Hermia.

* A Midsummer Night's Dream features Hermia, who is betrothed to Demetrius despite being in love with another man, Lysander; matters are further complicated by the fact that Hermia's friend Helena is in love with Demetrius. He used to love and court her but dropped her for a better marriage to Hermia. The matter is finally resolved when Oberon and Puck enchant Demetrius to go back to Helena; when he cancels the previous arrangement, Hermia's father allows her to marry Lysander instead.

* A Midsummer Night's Dream, Helena is aware that her passion for Demetrius is wacked out even before she betrays Hermia and Lysander to him.
* A Midsummer Night's Dream, Hippolyta (the vanquished Amazonian Queen marrying Duke Theseus) is mostly a background figure. However, in the movie when the Duke and his party discover the lovers in the morning, Hippolyta pulls Theseus aside and has some words with him, which go unheard by both the audience and other characters. Afterward Theseus announces that the lovers may marry according to their own wishes, rather than according to the decree of their families.
* A Midsummer Night's Dream, in that the happy ending required one of the men to be permanently affected with a love charm.
* A Midsummer Night's Dream is called such — the action onstage all takes place in less than 48 hours, and all but the very beginning and end happens in one night.
* A Midsummer Night's Dream is particularly bad about this with three to four endings depending on what you consider a satisfying end. You have Oberon setting things right for the lovers and removing the enchantments on Titania and Bottom. Followed by the lovers sorting things out with Theseus and Egeus. Then comes the mechanicals' play. And then the actual ending.
* A Midsummer Night's Dream (Killbles) into a far more drawn-out affair.

* A Midsummer Night's Dream, notably Nick Bottom (who has spent the night making love to the fairy queen Titania): "I have had a most rare vision, a dream to pass the wit of man to say what dream it was..." Unusually for this trope, none of the characters is ever disabused of the notion.
* A Midsummer Night's Dream Oberon sends Puck to get a certain flower, "Love-in-Idleness," which was created when Cupid's arrow missed a would-be lover and hit the flower instead. * A Midsummer Night's Dream, the relationship between Titania, Oberon and Bottom as well as the central love quadrangle.
* A Midsummer Night's Dream, Titania accuses Oberon of this, and Helena's got it, in spades.
* A Midsummer Night's Dream we learn that Lysander has done this to Hermia offstage, much to the annoyance of her dad.
* A Midsummer Night's Dream when all of his friends run away from him. Bottom decides to sing a song that isn't about Titania as they've never met, but he happens to be outside her bower. * Amigas y rivales: In a subplot of this Mexican telenovela, Irene is a fat woman in love with the handsome Luis, who in turn finds Irene annoying and is dating Irene's best friend, the beautiful Tamara. In the final episodes of the telenovela, Tamara ends the relationship with Luis because their personalities are incompatible, and a devastated Luis gets to know Irene better and falls in love with her. Finally, at a romantic dinner where Irene reveals her tragic family history and the origins of her obesity, Luis finally declares himself to her and the two share one of the most romantic kisses in the telenovela.
* Amigas y rivales: Luis meets Tamara and Irene, and falls in love with Tamara. Irene insists on remaining close friends with the couple and flirting with Luis in the hope that he will notice her. It fails miserably... for a while. In the second half of the telenovela, Tamara and Luis end the relationship, but he continues to be living at her house (it's a long story...) and tries to convince her to date again. When he is finally forced to admit that Tamara does not want to date him again (in the most humiliating way possible, when she brings a boyfriend to her house and throws Luis out of her house), he comes to known Irene better and falls in love with her. In the end, Irene got what she wanted.

Considering the (unexpected, unless you like old folk songs) quality of the music, and the fact that you're basically watching the same movie from an entirely different vantage point, it's actually pretty cool.
* A Mighty Wind, Mitch Cohen's solo work after the breakup of the group Mitch & Mickey mimic his growing depression and mental instability, featuring such albums as "Cry for Help" (cover: Mitch in a padded room restrained by a straightjacket) and "Calling it Quits" (cover: Mitch waist-deep in a grave holding a shovel, with a tombstone behind him reading "RIP Mitch Cohen"). Like almost everything else in the movie, this is played for laughs.

* A mild example is the possibility to terraform your own inhabited worlds into something better (usually a Gaia world). While it doesn't lead to any noted extinction events, it does incur a severe happiness penalty from that planet's population while the process is ongoing, implying that the whole affair isn't exactly pleasant to live through.
* A mild example late in the first season is how, after a road accident, Team Rocket's Meowth cries over how he lost his charm (the huge coin on his forehead), and there's a deep gash where it should usually be. So deep, in fact, that Meowth didn't seem to realize that the charm was actually just stuck

* A mild humorous example. Critic Alexander Woollcott had a portrait of himself he was very fond of. A couple fellow Algonquin Round Table members had a series of near-duplicates made with details just a tiny bit askew. For months they would periodically swap in a new duplicate and query, "Alex, whatever is happening to that painting?"

* a mildly-psychotic Maester Grand Maester, and only replies: "Faint praise, my Lord."
* A mild Real Life example is Thomas Midgley Jr., who discovered that engine knocking in automobiles was slightly reduced when iodine was added to fuel. Further experiments revealed that lead would eliminate knocking completely — leading to the worldwide use of leaded petrol, and the poisoning of the atmosphere for generations. Some sources claim that he felt guilty about the global health ramifications of leaded gasoline, and that guilt may have led him to invent a substitute for the harmful ammonia, chloromethane, and propane used in refrigeration: dichlorofluoromethane, the first of the freons. Midgley died

* A Million Ways to Die in the West, a sheep pees on Albert when he is hiding from Clinch, complete with a close-up of the sheep's penis.
* A Million Ways to Die in the West Doubles for Arizona. A little odd since the location in Arizona, Old Stump, is a fictional location so it wouldn’t have made any difference if they just set the film in New Mexico.
* A Million Ways to Die in the West takes this trope to ridiculous levels with

Ruth, a prostitute who sleeps with 10 guys on a slow day, but won't have sex with her boyfriend Edward because they're Christians and she wants to wait until marriage.
* A Million Ways to Die in the West, the day before a duel with Albert over Louise, Albert's ex-girlfriend, Anna spikes Foy's drink with laxative and then bets that he can't finish his drink faster than she can finish hers. He suffers a sudden potty emergency later that night while in bed with Louise. The next day, Foy is late to the duel and staggering as if he's about to faint. He defecates into his own hat and then into another man's hat that he swiped immediately after. Albert quits the duel before it even begins anyway when he realizes that a relationship should be a two-way street and that Louise is a nice girl, but a gold-digger nonetheless.
* A Million Ways to Die in the West. The joke evolved into "riffing on the idea of how dull, depressing, and dangerous it must have been to live in the Wild West."
* A Million Ways to Die in the West. When Foy wages a dollar on the shooting match, townspeople don't believe he even has that much money, until he takes it out and shows them.

* Amilyn Holdo's hair and dress go a long way towards undermining the image of her supposedly being a competent and professional military officer, particularly when compared to Leia's prim haircut and her rough-and-tough military-style coat. In contrast, Holdo's outfit looks both impratical and sloppy, and has been compared by many as making her look like a giraffe. Especially since so much had been made in the supplemental materials about the Republic government being run by pretentious politicians and the Resistance is depicted as dirt poor. This may have been the point, given Holdo's character arc over the course of

* a mind flayer sees the heads of each of the party members as different kinds of food, depending on their intelligence level and personality.
* A Mind Forever Voyaging depicts a world where the US is in danger of becoming this. The player experiences several simulations of a possible future, each one set 10 years after the previous one. The situation worsens with each simulation, as the economy collapses, law enforcement becomes more brutal and corrupt, a border security force frequently searches homes (and becomes less apologetic and more harsh about it in each period), racism and religious intolerance become more overt, and dusk to dawn curfews are enforced. In the final simulation, the last vestiges of authority have collapsed, and anarchy ensues with the city streets now home to violent gangs and wild dogs killing weaker people for food. Naturally, the player's goal is to prevent these possible futures from coming to pass.
* A Mind Forever Voyaging has you as a computer AI, with the real world around you simulated, and now you've been let in on the gag. Believe it or not, it was released in 1985.
* A Mind Forever Voyaging: the world in 2081 is portrayed as a post-apocalyptic ruin filled with barbaric gangs and feral dogs. It's never explained just how civilization collapsed; the player has no memory of the event and the surviving humans aren't exactly keen to enlighten you.

* A Mind Switch In Time, Euphor's emotion-eating powers have a representation visual for the reader's benefit: some kind of blue energy surrounds his target before moving to him. No character shows signs of seeing it in-universe.

* A Mind Switch In Time is a time-travel story where Superman finds himself stuck in 1969.

Nonetheless, Superman's patience at last has been exhausted, and he actually considers to get rid of young Lex "before [he grows] up to be an even greater menace", but he's talked down by Smallville's chief cop. Feeling ashamed, Superman reminds himself once again he can NOT change the past.
* A Mind Switch In Time's reaction to his minions getting killed by their own powers is uttering "How tragic! Oh, well— There's more where they came from!" and transforming another person.
* A Mind Switch In Time, Superman and his younger self attempt to time-travel at the same time and collide with each other. Since nobody, not even Pre-Crisis Superman, can co-exist with himself at the same time, each one is tossed back to their own time, but with their minds swapped.
* A Mind Switch In Time travels to the future and ends up stuck in 1982. Teenager Clark is rather shocked to learn how much the world has changed for good and for bad since 1969: women are bolder, NASA's space program has truly taken off, and Metropolis is bigger and shinier… but it has also become plagued with corruption and crime.

Like in the manga, Kaido defeats Luffy with barely any effort to show that Luffy doesn't stand a chance against the seemingly invincible Emperor of the Sea, but the anime makes the fight seem a bit less one-sided, such as Luffy landing a King Kong Gun on Kaido just before Kaido takes him down in one hit.
* A minor character apparently studied "comparative Gal-West lit, with an emphasis on memetic Terranism" before she started working fast food. * A minor example, but in games with two-sided playing fields like Capture the Flag where being on your opponents field puts you at risk of being 'out', a valid tactic is to just casually stroll across the line, and calmly make your way towards the objective. Your opponents tend to assume that since you're not running with the rest of your team, you have some valid, non-game related reason to be on their side, and will usually let you get a fair way in before they realise somethings wrong. Of course, this only works once or twice before they start catching on, but if you're a fast enough runner to back it up once they notice you the first time...

* A minor example in the same game is Kobayakawa, the principal of Shujin Academy. * A minor example with Setsuna F Seiei — whilst he does appear to fit this trope both within Celestial Being and in the wider Gundam metaverse in regards to protagonists, his Middle Eastern homeland forms a two-episode story arc in the first season and plays a large role in his interactions with the princess of a neighbouring country. However, the Middle Eastern aspects of the story only serve to represent the region and 21st-century problems to Japanese audiences, and beyond that, have no real importance to the story as the series progresses.

* A minor one is the Sullivans not knowing what trick-or-treating is when they move to New York. Halloween was never a particularly big deal in Ireland (ironically it was Irish immigrants who introduced it to America in the first place), and there wasn't much of an industry for costumes (especially in the poor economy of the 60s and 70s when the parents would have grown up) - explaining why they make their own. So in 2002 (when the movie takes place) the family not knowing about trick-or-treating is especially odd. Making their own costumes, however, is justified by their poverty at the start.

* Amnesia: Later, and that his split personality is more likely to appear when Ukyo is tired, hence keeping himself away from her when it gets to nighttime.
* Amnesia: Later lets this happen in Ikki's After Story. He asks the heroine if he 'can be sweet' on her, then puts his head on her lap when she agrees. Though he notes that both have to be aware, since he's rather drunk at this point, and his self-control may not be as good as when sober.
* Amnesia: Later: Shin does this to the heroine in a flashback because she injured her ankle. And the After Story for Ukyo has him carrying her like this out of the burning university, and later while 'kidnapping' her from the wedding café photoshoot.
* Amnesia!Light and Watari are also this to L, being just different ages in Watson.
* Amnesia Loop: A person discovers something and gets their memories wiped repeatedly.
* Amnesia: Memories) ability to make any girl who looks into his eyes fall in love with him. In his route, he becomes interested in the female protagonist when she proves to be the only girl in the school capable of resisting his magical charm to some extent.
* Amnesia: Memories, and part of Ukyo having been a secret character. However, the latter only applies to the first game, as Ukyo is a well-known character in the other games.
* Amnesia: Memories downplays it in Kent's After Story. The heroine is flipping through his notebook and reading all the new recipes he's written down, only to come across a page where he wrote down tips and ideas on how to create the perfect moment for a proposal. Kent tells her to not read it, but she ends up reading it out loud, much to his embarrassment. He decides to go along with it and just proposes to her then and there, and she accepts.
* Amnesia: Memories. During the ending's party at the café, the manager actually asks her about Ukyo, who had been a regular customer, and wondering where he's gone off to. The heroine herself doesn't know who he's talking about.
* Amnesia: Memories expanded her amnesia to include having forgotten her own name.
* Amnesia: Memories for Joker World involves the two of them to overcome this fate, both surviving to the end of August and being happy.
* Amnesia: Memories had long since agreed to their relationship, and they were merely waiting for her to finish university.
* Amnesia: Memories has several occur in Kent's After Story. Both are trying to kiss, but when it isn't the egg-timer in the kitchen going off to interrupt them,

it's Kent's cellphone.
* Amnesia: Memories has Spade World ending with its final CG and event being Ikki kissing the heroine in public. They previously kissed in a more private setting, so this kiss symbolizes Ikki's determination to be open about his feelings and relationship with the heroine in public.
* Amnesia: Memories has this be the relationship between the heroine and Toma in Spade World. Toma explains to a concerned Ikki that his mother and the heroine's father got married, making the two of them stepsiblings. Eventually, the marriage fell apart and they got divorced, taking away the legal relation between Toma and the heroine. Nonetheless, the two still consider each other siblings and treat each other like that.
* Amnesia: Memories, Ikki's After Story has him tell the heroine to not try and deal with her father on her own anymore because they are living together now, and that means to share their burdens. Later on, the heroine tells Ikki the same thing, after he tried to deal with his fangirls on his own. And even reminds him of having said that about her problems with her father. Ikki realizes that she's right and agrees that they'll be more honest and open with each other about their problems.
* Amnesia: Memories puts Orion into this role much more than the mostly-silent heroine. He serves as not only the one explaining what is going on, but points out reasons for the boyfriends' behaviors or asking what is going on. The fandiscs put this role back onto the heroine, as Orion is no longer merged with her.
* Amnesia: Memories, Spade World has the heroine's father cite that Ikki isn't a good match for his daughter because of this. Ikki politely informs him that he's a fourth-year university student, and already has a well-paid position ready to start in a rather well-known company upon graduating.
* Amnesia: Memories's route. The heroine gets locked into a large cage at his home, so that he can keep his eye on her and 'protect' her. The cage gets filled with plush toys, she's given books and games to entertain herself with, really good home-cooking, and he lets her out to go to the toilet and bathroom.
* Amnesia: Memories still hasn't gotten over Shin beating him out for the heroine's affections over a decade later...
* Amnesia: Memories that telling the girl he liked that it was her fault that her dog died and that death is an inevitable outcome not worth getting upset over might make her mad at him.
* Amnesia: Memories that the heroine still chooses him, despite everything he has done. And by revealing that she is just as oddly obsessed with him as he is with her.
* Amnesia: Memories: The Good Ending for Kent has his Japanese voice actor say, "I'm sorry for waiting" in English. Since he was the second person to arrive at their meeting place, what he meant was he was sorry for making the heroine wait. The localized version fixed the mangled English sentence.
* Amnesia: Memories: The second time the heroine and Ikki go to the movies, he nonchalantly holds her hand before the movie starts. Since the heroine is still missing a lot of her memories, and isn't too sure about her feelings for him at that point, she doesn't react much to it, but also doesn't let go.
* Amnesia: Memories: Ukyo gets a pasta dish, loaded with extra spicy habanero sauce he knows nothing about, adds tabasco on top and eats it. The guys that put the habanero sauce on there as a prank are amazed that Ukyo ate it without flinching or even commenting on the taste.
* Amnesia: Memories, when he does want his relationship with the heroine to get physically intimate, he mostly asks if she's ready to go further and only once ends up pushing her boundaries beyond what she's comfortable with. And that's because he's kinda drunk, and he immediately apologizes for his actions and pushing her.
* Amnesia: Memories when he thought the two of them were dating. Fortunately, since both have realized they love each other, Toma and the heroine are happily dating.
* Amnesia, press 8 and state your name, address, phone number, date of birth, social security number, and your mother's and grandmother's maiden names.

* Amnesia: The Dark Descent has The Shadow, a cosmic force that generates walls and lumps made out of some kind of acidic, pulsating, and fleshy substance.
* Amnesia: The Dark Descent, Heinrich Cornelius Agrippa is found alive and trapped in an extremely aged shell of a body, kept alive by magic. An optional side-quest allows you to rescue him, and is required to be done for the 'good ending'. Johann Weyer is a character that's mentioned and heard, but never met in person, he's implied to have been a pupil of Agrippa.
* Amnesia: The Dark Descent hisses at you. It is very loud, seems to come out of nowhere, and will still get you the twelfth time it happens. However, it is completely and utterly harmless.
* Amnesia: The Dark Descent it leaves behind on its trail. Other sanity draining creatures are the otherworldly, water-dwelling Kaernk.
* Amnesia: The Dark Descent. It's kind of hard to keep a straight face through that.
* Amnesia: The Dark Descent leaves a tough leather-like mass similar to muscle, that can even pulsate in places. Standing on it for too long hurts Daniel.
* Amnesia: The Dark Descent lurks in the water, but instead of the water being opaque, the Kaernk is invisible and can only be seen when its moving with its footsteps visible.
* Amnesia: The Dark Descent, mostly towards the beginning of the game.
* Amnesia: The Dark Descent of Alexander's (each containing a single vague memory) scattered throughout the castle.
* Amnesia: The Dark Descent plays a very grating variety of scare chord when Daniel spots an enemy.
* Amnesia: The Dark Descent since the game takes place in 1839. Blood groups weren't starting to be identified until 1901. How blood-borne pathogens work and the intricacies of vaccinations was also not as well understood at the time.
* Amnesia: The Dark Descent starts with the player character waking up close to one of these, informing him that he wiped his own memory willingly, and now has to kill a certain baron of the castle he finds himself in. As the player character progresses, he will find more notes from his pre-amnesia self explaining who he is, why he ended up here, who the castle baron is, their relationship, why he erased his memories in the first place, and what he hopes his current self will do with the knowledge now that he knows.
* Amnesia: The Dark Descent takes place in a castle in 19th century Prussia, surrounded by black forest and the small village of Altstadt.
* Amnesia: The Dark Descent. The Grunts have grotesquely distended mouths, stretching all the way to their chest and past the sides of their heads. The Brutes, on the other hand, don't even have faces - their heads are ripped up masses of flesh with teeth protruding in random places and a single eye somewhere within.
* Amnesia: The Dark Descent. While staying out of the light too long will reduce your sanity, it is also the only place you are safe when being attacked by the monsters.
* Amnesia: The Dark Descent, yet inexplicably can't be used on its own in the game.
* Amnesia: The Dark Descent, you can find random parts all over if you look hard enough. Especially in Custom Games, where people have put human torsos over keys in dresser drawers. Some levels can be beaten by actually throwing these parts at enemies so they chase them, letting you hide.
* Amnesia: The Dark Descent you go and is truly unstoppable. It will NEVER stop chasing you until it decides otherwise.

* Amnesia: The Dark Descent. You have no means of self-defense, so if you encounter a monster, your only hope is to run as fast as you can and hide until the monster stops chasing you.
* Amnesia: The Dark Descent you'll hear this phrase as a disembodied whisper.
* Amnesia: The Dark Descent, you will often run into paintings of the castle's owner throughout your exploration. However, should your sanity start to slip (due to looking at monsters or staying in the dark too long), the face will change into something grotesque. What makes it especially creepy is how nonchalant it can appear as you're exploring, until you realize something's wrong...

* Amnesty International's involvement with major human rights cases also falls under this trope. As with the above, both groups are non-profits, so attorneys working for them are likely making considerably less than they could in other jobs.

The other middleweights make the difference on other criteria: Luigi is balanced at a more advanced level, his strong areas being top speed, handling and acceleration, while its weak stats are weight and drift, which are nearly useless when you want to cross offroad and spam drifts on straight lines. Waluigi is on the heavy side, sharing Luigi's top speed on heavier but less nervous vehicles. Daisy's strong area is drift, which like stated above, actually is a handicap at a more advanced level.

* Among cars, the 2003-2008 Toyota Corolla range (particularly the '04, '07, and '08) is legendary for its extreme reliability, longevity, and general ease and affordability of maintenance, save for one key caveat: its rocker panels rust out extremely easily, necessitating a substantial sum in body work. This is due to a design flaw that creates a crypt in the front of the rear wheel wells where the rockers meet, which allows slush laden with road salt to accumulate, rot through the metal, and collect in the inside of the panels and rot those out as well. It is because of this that anyone seeking to purchase a used Corolla from this year range should check the rockers to see if they are free of rust or have been replaced, or if someone sanded off surface rust and painted it without treating the rot itself.

He's still only the second-oldest Elf alive, however — the title of eldest most likely goes to his mother, Morathi, who's still quite alive as well. * Among the Kislevites you have the Eastern Slavic-inspired Gospodars, the Turko-Mongol Ungols and the Germanic-flavoured Roppsmenn; the Gospodars and Roppsmenn are the original inhabitants of Kislev, while the Ungols were a nomadic steppe people who fled the rising power of Chaos and conquered Kislev as a new homeland. The cultural division persists into the present, with the southern parts of the country and its urban centers being dominated by the Ungol elite and the northern, eastern and generally rural areas being home to the Gospodars and the Roppsmenn's remnants.

That is, until he saw the sect as increasingly using doctrine and dogma to justify their own debauched and murderous attitudes. At the big Sabbat party of the year, Giangaleazzo burned the only original copy of the founding doctrine of the sect, lit his villa on fire with all the partiers still inside, and promptly defected to the Camarilla.

* Among the Yup'ik Eskimos, the word "ircinrraat" (singular ircinrraq) covers many beings which are like the European Fair Folk. The word also covers a specific species, about three feet tall: if you fight an ircinrraq, it is advised to fight them until they offer you a gift, which you should accept. They also like to mislead travelers, which can be a matter of life and death. One story involves a village of ircinrraat and a village of humans which were in close contact, so the humans were invited to an ircinrraq potlach of food, fur and dog feces. A particular poor family was advised by an ircinrraq friend to collect dog feces they found alongside the path. As they neared the village of the ircinrraat, the dog feces became fur and food, while the fur and foods of their neighbors transformed into dog feces. Another notable legend involves a man who saw the ircinrraat dancing, and watched for what seemed like a few minutes. When he looked away, a year had passed, just like in many European stories where joining a dance of the Fair Folk causes a great deal more time to pass than is experienced by the protagonist. An interesting aspect of ircinrraq stories is that many of them mention how, if you encounter these people,

* Among Us depicts this as the motivation behind Impostors. When Orange is unwillingly transformed into an Impostor and wakes up mid-transformation, the hunger is so intense that he's forced to eat the body of an earlier-murdered Crewmate just to keep himself from killing someone else in his desperation.
* Among Us: If everyone suspects someone being an imposter, their innocence will only be proven if an actual imposter kills them. (Or if they actually get ejected, and the game says they were not the imposter.)
* Among Us: If there's no hard evidence to prove someone's a crewmate, no one will believe anyone isn't an imposter until the game ends, which always reveals who the crewmates and imposters are.
* Among Us in Character is taken over by an alien parasite that twists her body and mind and uses her to go after the remaining crewmates.
* Among Us it's expected for players to report a dead body on sight; not doing so is grounds for an Impostor accusation. However, the one who reported the body isn't safe from accusation either, since they're also in range of the crime scene, and Impostors are able to report their own kills to try and look innocent.
* Among Us kills a crewmate. The amount of strength needed is justified, since the Impostors are after all shapeshifting aliens.

* Among Us saw a massive increase in popularity in 2020 and, as a result, gathered

more players. Because of this, many fans say the game was a lot more enjoyable before it got popular due to factors in public lobbies like hackers, whistleblowers who tell their friends/siblings who the impostor is outside the game, people calling emergency meetings for frivolous reasons (such as trying to be funny or to plug their social media) and gullible players who believe one-sided claims with little to no evidence.

While the game does contain violent acts that are uncommon in a PEGI 7, the cartoonish nature of it convinced PEGI to give it a lower rating.

And she wants Celestia to do the same thing, stepping down as Lady of Day and accompanying her in becoming an Adjunct of Dreams and Nightmares before they leave Equuis's solar system together with her people.

Flash, joined by Lunarian sergeant Nightingale, responds by leading his guards in fighting back.
* A Moon and World Apart: Chapter 25 reveals that Flash's predecessor as Captain of the Royal Guards, Captain Hackpole, died at the hooves of some pony who wanted to do this to he and the other Guards, setting the building they were in on fire. They succeeded with Captain Hackpole, when he and the criminal died in the blaze after he'd made sure everypony else got out.

* A Moon and World Apart: In chapter 24, Twilight and Shining Armor teleport out of her apartment and into one of the other domes together. Seconds later, Sunset

Shimmer teleports after them, having traced the initial teleport and followed it; when she explains this, Twilight is quite impressed.
* A Moon and World Apart: It's established early on that Sunset has a natural talent with fire-based magic, to the point where she was able to invent a spell that could boil the alcohol right out of a target's body and sober them up in an instant without hurting said target in the process. It's later revealed this same talent is what let her hatch Spike's egg; dragons' eggs need a great deal of external heat to hatch, and she was able to generate that heat all on her own.

When they finally get the chance to sit down and talk about it peacefully later on (and Luna does finally tell her about said new position), Celestia admits that she can't do that — after Luna left, the other nobles forced through a law preventing any Prince or Princess from abandoning their duties in such a manner, effectively making abdication illegal, so as to ensure they wouldn't lose their only other alicorn.
* A Moon and World Apart: Princess Cadance has dedicated herself to countering the effects of those who would spread fear and hatred of others simply for their beliefs, and spreading an understanding of those persecuted instead, so as to undermine said "avengers"' mentality and reduce their influence; she also helps reconnect those who live further away with the rest of their nation.

Vinyl's horribly embarrassed by their words, and promptly apologizes to Octavia for it.

* Amoral Attorney is presenting him with various tax dodges and money-laundering methods to stop the police from getting suspicious, only for Jesse to adamantly refuse, because what's the point of being a criminal if you're going to have to do the same annoying legal stuff you'd have to if you were an honest businessman?

* A more benign pair of examples are the Monk, who is restricted to any of the Lawful Alignments, and the Barbarian, who cannot be Lawful (and are typically therefore played as one of the Chaotic alignments). While the Monk supports its teammates and strives for personal enlightenment, the Barbarian

* A more canon example would be Mata Nui and Kiina. Sure, at seven-and-a-half feet tall, Kiina is hardly "tiny" by most people's standards, but when you consider that Mata Nui's original form is
* A more civil example exists between Houses Tyrell and Martell; while not openly hostile towards each other like the Starks and Lannisters, they have a long enmity dating back centuries that they're still not entirely over today. They mostly get by using passive-aggressive digs at each other and giving whoever's in charge of dealing with them when they're in the same place a headache. A notable exception is Willas Tyrell and Oberyn Martell, who are pen pals and get along nicely, despite being the pretext for the current generation's mutual hatred; Oberyn crippled Willas in a tournament, and even though it was a fair match and a complete accident caused largely by
* A more climactic example is Veronica Donovan, who was killed at the end of the Season 2 premiere.
* A more comedic example happens in a bonus section included in Volume 7, in which the cast's grades in five different subjects are shown in a pentagon graph, along with comments on their strengths and weaknesses. Akari, who
* A more comedic example is the town of Zozo, where the first guy you meet says "Zozo? Never heard of it.", and the level's boss says "Good day, gentle folks. Can I be of service? I hate fighting, so I'd better let you pass." right before attacking you.
* A more comedic example occurs in "The Man With The Twisted Lip": Holmes has been hired to find a woman's missing husband and all the evidence points to the man having been murdered. He breaks the news to his employer in the most sympathetic yet professional manner... and the woman replies that her husband can't be dead because she's just received a letter from him. Holmes springs out of his chair and shouts "
* A more common example is singer Charly McClain (short for Charlotte).
* A more common Godzilla Threshold move in baseball is putting in pinch hitters and/or runners in late or extra innings. The manager is gambling that a player he doesn't use much will bat or run successfully enough to win the game without taking the risk that might be involved by the player's subpar fielding. If it doesn't pan

out, he may have to double down on the trope by putting in
* A more complete definition is "to understand something so completely that it becomes a part of yourself", as your body does with water. In modern casual language, it's mostly been simplified down as "to understand a subject intuitively". A common example is that when learning a new language, you haven't "grokked" it until incorrect grammar (or syntax, in the case of programming languages) sounds 'off' to you.
* A more complex case comes up later on; Quentyn Martell arrives at Meereen to act on a marriage pact he has with Daenerys Targaryen, which she herself is completely ignorant of, but finds her already married to the local Hizdahr.
* A more complicated system that took into account Cloud's treatment of the girls/ Barret in battle (gaining him points for healing them/Covering them, losing him points for hitting them/having them Cover him, etc) was planned in development, but scrapped for being too confusing to implement. This does lead to some dialogue being
* A more comprehensive list of common signals in the United States is the steady "Alert" tone for weather-based warnings which can also include severe thunderstorms, the wailing "Attack" tone which is intended for an incoming enemy attack back during the Cold War days, an alternating "Hi-Lo" tone usually reserved for fire calls, etc. This is by no means what every state or city uses, as some use their own system of tones, leading to the infamous "broken" siren in Chicago that sounds "Alternate Wail" which is a combined wailing and hi-lo signal.
* A more concentrated example happens in "Sin Francisco," which focused on the
* A more concrete example would be John Diggle's brief romance with his widowed sister-in-law, Carly. While they did have an attraction, it's implied that John's feelings for her partially stemmed from wanting more of a connection with his brother. That's why they broke up, as no matter how much they cared for each other, there was always going to be three people in that relationship, and they both deserved better than that.
* A more consistent example is Eragon and Arya. It's explicitly stated that they're the other's perfect shield mate.

* A more difficult one to spot is Demona's second in command, who is nameless, but is listed as Second. He appears frequently in her past, being one of the first recruited, he questioned her callousness against humans, and even lost his mate when they went against the proto-hunter. He later saves Demona from the Duncan's men, and is one of the few (exactly four) survivors of the rogue Gargoyles. He continues to be allied with Demona even assisting her with her alliance with Macbeth, despite being 139 years old (which is even older than Demona at this point). He dies offscreen in a massacre.
* A more difficult version of the game has the player swap "buzz" for numbers divisible by the number as well as numbers
* A more direct approach involves plugging a cable into a port in one's temple, which people get at the same time as the implant. The port is normally covered by false skin.
* A more direct example comes at the climax when Lydia, suddenly garbed in her red wedding dress, slides effortlessly to Beetlejuice's side. Though this is not of her own accord.
* A more direct example is when Strong Bad is asked by a fan what would happen if someone poked Pom Pom (a character who resembles a giant balloon) with a pin. After

attempting said experiment (it didn't end well... for him), he says "It had to be done in the name of science. Or more accurately, because some kid emailed me and told me to."
* A more direct example would be TennoGen, the cosmetic equipment made by players and voted for on the game's Steam Workshop, for PC players. They have to pay money to get these unique cosmetics. Fortunately, the creators get a cut when their TennoGen sells.
* A more disturbing example shows up in a sidequest in the first game. Shepard is called to investigate an abandoned ship. It turns out that

* A more egregious example of this trope are the scenes with Paris Hilton, considering how she has a ridicilously large amount of screentime although the only purpose of her character is to get killed in the most gruesome way possible.

* A more extreme case of this is when the Theocrat insists that all "true fans" must agree with the creator's political views, especially if the work in question is political in nature and the creator expresses strong political views in public. Such Theocrat has the urge to exclude fans of a work who favor a different political party from the creator's political affiliation.
* A more extreme example is Jiemma, the Guildmaster of Sabertooth, who is willing to publicly humiliate and kick out of his guild any member who so much loses one battle.
* A more extreme version of this theory holds that Rose not only made up Jack Dawson, she was never even on the
* A more extreme version when Sideshow Bob drives around the neighborhood with a list of people who will "not be killed by me" everyone's on the list except Bart. Homer celebrates, in front of Bart, about how he is on the list.

* A more fitting example are the Night Trolls, who resemble the more ogrish and monstrous kinds of Unseelie fairies. Occasional marauders who live in caves, they kidnap mortal spouses and corrupt them into similar beings, when they aren't simply eating their flesh. Their grotesque features are even procedurally generated, so that no two Night Trolls are alike.
* A More Flawed Gem, uses a simple butterfly knife in contrast with his classmates' more exotic weaponry.
* A more frequent example might come from the character Odo, particularly concerning his initially unrequited love for Kira.
* A more general Russian nickname for the rank and position is "Ванька-взводный" (
* A more general (that is, not focused on a single body part) application is the production of insulin from bacteria. We used to use pig or cow insulin, but they don't work quite as well for people, it's easier to retrieve from bacteria, and there is a chance of an allergic reaction to residual bits of pig or cow.
* A more generic Ork example are the Stormboyz, who have rebelled from a

* A more glaring issue is with the design of the mecha themselves. Their defenses and offenses are based entirely upon 2D combat, with absolutely no defenses from below or above (or heck, behind even). Why not just attack from the legs, which are just needlessly large landing platforms in the first place? Amazingly this issue never seems to come up in tactics or strategy.
* A more good natured case in "Strained Relations", which featured Grandad's funeral to coincide with his actor Leonard Pearce's passing. While the episode is fittingly poignant and respectful, it is characteristically laden with a few light hearted gags and hiccups. In particular, one moving scene has Del Boy put what is supposedly Grandad's trademark hat inside his grave to be buried with him, only for the priest to later ask where his hat has gone.
* A more gruesome take happens in one of the Screaming Author Bad Ends -
* A more harmless, benevolent version of Gray Goo involves theoretical space exploration. It's believed that once we acquire the right technology, we'll be able to create interstellar probes out of nanobots. Once they land on a planet they'll convert as much matter needed into ten more nanobots and fire them out into space. However, others have speculated that such a system would devolve into a straight version of this trope given time (Carl Sagan argued that if they were viable this would already have happened); in fact swarms of so-called Von Neumann probes are an entire subgenre of this trope, including the deliberately malicious version often referred to as Berserkers.
* A more heroic, for lack of a better term, Indy Ploy is the MO of Moist von Lipwig in the
* A more human example, the fluff sometimes makes notes of many former Imperial Guardsmen settling down on planets they conquered. This led to some robbers finding out the hard way that a bar called The 127th is named after a certain platoon, that the grumpy old men are veterans of battles against unimaginable horrors, and that the lasgun above the bar is not a replica.

* A more indirect attack of this manner is seen with the Snack Basket ability in
* A more in-line example comes from the episode "Edwina", involving a nurse named Edwina Ferguson ("Nurse Eddie") who was accident-prone and had never been on a date before. The other nurses go on a "date strike" until someone goes out with her. The guys draw straws and Hawkeye gets the short straw, meaning he has to ask her out.
* A more innocent variation during the classic Legion stories, when Luornu Durgo, then going by the name Duo Damsel, was first dating Chuck "Bouncing Boy" Taine. One book showed Luornu splitting into two bodies, each one kissing Chuck on opposite cheeks at the same time.
* A more innocuous one is the golden pickaxe: used to break up rocks in a mountain cave
* A more... interesting example is that many fans are willing to forgive
* A more intuitive example in golf has come around with the PGA Tour's FedEx Cup structure, a way of breaking the season down into a "regular season" and four-event "playoff" schedule (three beginning in the 2018-19 season). Thanks to the way the

points are awarded in the playoff tournaments (several times their normal value) and reset after the third playoff tournament since 2009, every winner of the FedEx Cup since its inception in 2007 had either won the final playoffs event (the Tour Championship in Atlanta), or already held the points lead entering the final event, until Justin Thomas in 2017 who overtook Jordan Spieth with a second-place finish.
* A more justified example is how every season starts off with the tribes building a shelter, looking for water, looking for edible vegetation, etc.
* A more lighter and mundane example is when an online service purges inactive accounts. This is done to keep databases tidy and the servers running effectively.
* A more likely explanation for the adjusted tempo of "Your Fault" (and other tongue-twister lyrics, like the "Witch's Rap") is that filmmakers thought the wider moviegoing audience would have more difficulty following such fast-paced songs than a theatre audience did.
* A more literal case happened during the "8 Mile Street Fight" at the
* A more literal example caused the suppressed version of the Smith & Wesson Model 39 pistol to be called a "Hush Puppy." Its purpose was for special forces teams to covertly eliminate sentry dogs and guards without alerting the main target. There is also the more openly marketed "Velo-dog" revolver, specifically developed for early cyclists to defend themselves from dogs.
* A more literal example from Japanese tradition are haniwa: clay figures and effigies made to house the spirits of the dead (and to act as retaining structures for burial mounds.)
* A more literal example is "Black Jack" Ketchum, hanged in New Mexico Territory, 1899. There are at least three reports of his last words.

* A more literal, semi-dramatic instance of this occurs in the comic
* A more literal translation though is: "You gotta choose the right game, or she will own you."
* A more localized example is the Elven civil war, where the somewhat-less evil side has been fighting their psychotically evil kin for millennia. Both sides having suffered so much in the fighting that they are going extinct. Oh, and the latest plans of the psychotic versions have included undoing the above mentioned spells that keep the world safe from the denizens of Hell...
* A more low-key version happens in "They Saved Lisa's Brain" when the local chapter of MENSA takes over the Springfield city government; their
* A more malicious example happens later, after Kimiko unwittingly gives herself a serious popularity boost in the otaku community after defending fanboys on a radio interview. She goes to work to find the place mobbed with fans, and Piro disguises himself as a busboy to help her out. As the night goes on, he realizes that the fanboys are using carefully-hidden cameras to catch upskirt pictures of Kimiko. He proceeds to "accidentally" kick the cameras out of the way while waiting on the tables, leading to the fans realizing that he too is a "fanboy" (since otherwise, he wouldn't realize what they were up to) and believe that he's "selfish" in keeping them from

* A more minor example is the supplies dropped by crates. They're dependent on the player's current status, so someone low on ammo might get a few more rounds, while someone with low health could find a medkit. It's done subtly enough that it's not really noticeable in-game — you just know that you managed to find that crate at

* A more minor example: Sakura focuses on lightning-elemental abilities, being the first ally in the game with Thundaja. This is a direct result of her having previously been Veritas of the Bolt.
* A more minor example: The first book states that each apprentice must visit the Moonstone before becoming a warrior: they travel there with the leader when he or she decides to

Their cockpit lights are run at the lowest setting that lets them see their instruments, because any bright light will force them to start all over again trying to readjust to the darkness of night. As a result, airports will often actually be

The corporation is dissolved, and all 2500 of staff are fired. About an hour before midnight on the 11th of June 2013 major transmission points went off-air after riot police seized most transmission sites. He had grown up in Kuwait and later went to Iraq to study. While there he joined Saddam's ruling political faction, the Baathist Party. Sometime after returning home he joined the Kuwaiti Army and held the rank of lieutenant when the invasion began. But rather than fight the invasion, he latched on to it and was appointed head of the "Republic of Kuwait" puppet regime. However, just one week later Saddam declared Kuwait was now part of Iraq and rewarded Ali by making him Deputy Prime Minister of Iraq. After Kuwait was liberated and Saddam's

* A more recent example would be the advent of App Inventor. Many long time programmers turn their noses up at it, arguing it is too simplified and coddles its users. Never mind the fact that it is very useful in beginning level classes, and can get people interested into programming that would never have considered it if all they had to jump into was traditional languages.
* A more recent explanation is that the detonation of the atomic bombs merely triggered an explosion in mutant birth rates.
* A more recent same-sex example is also from the WNBA, with active superstar Diana Taurasi and recently retired superstar Penny Taylor tying the knot in 2017.
* A more recent Spider-Man story went into the Bar With No Name's origins, with it being claimed to have been as old as time and once had the devil himself as its bartender (a flashback panel shows a collection of upper-level Marvel threats drinking at it, including Thanos buying a drink for Death). Peter then casually

informs the audience that this is all false, and that the bar was just a random speakeasy in the prohibition era that had a kitchy title. The C-List villains who go there have a weekly Spider-Man trivia contest for a large pot of cash, and this storyline's kicked off when one of them drags
* A more recent unofficially-named rule in MLB is the "Chase Utley Rule", cracking down on "takeout slides", in which baserunners slide into opposing fielders instead of the base in order to break up double plays. The rules had already banned this, but it wasn't enforced in practice. After a playoff game where a takeout slide broke Rubén Tejada's leg, the rule was updated over the off-season and colloquially named for Chase Utley, the baserunner in question. A similar rule for collisions at home plate is the "Buster Posey Rule", named for a catcher who was injured in a play similar to Utley's.

* A more shining and optimistic example of this trope is Optimus (Captain Smooth) and Ratchet (Sergeant Rough) for the Autobot team stationed on Earth.
* Amore Si by Tanita Tikaram is a heartfelt evocation of unrequited homosexual attraction where the singer's acceptance of the impossibility of a relationship collides with blind love. Going with a friends-only relationship is tearing the protagonist apart.

However, they know that it won't work and the goal is to distract the security and have the guy take some pills that cause foam to come out of his mouth. He's taken to the company's medical room. Meanwhile, Kruger and the witness pretend to be paramedics and use the opportunity to sneak in this way.

normal circus animals (an elephant, a seal, etc.) wearing clown facepaint and other accessories. However, the show's theme song informs us of their true nature:
* A more straight example would be the Cleveland Browns. From a functional perspective, the Browns players and staff moved to Baltimore to become the Baltimore Ravens, and a new expansion team started up in Cleveland three years later, complete with an expansion draft to build its roster. However, Cleveland was able to retain the history of the Browns, and is officially noted as "having suspended operations for three years" while the Ravens are

* A more straightforward example occurs later in the Dressrosa Arc with Sugar, who's fruit power not only turns people into toys but erases everyone else's memories of those people. Which makes for some drama when the toys try to get their friends and family to remember them and are seen as defective and taken away, more drama when

* A more straightforward example would be Yeardley: his whole "my life's a work in progress" line brought the
* A more straightforward version arguably also applies to Arthur's father Uther for the first three seasons; he's ruthless in his hatred of magic, but when magic wasn't involved, Uther was a good enough king that Merlin recognised that letting any of the villains kill him would leave Camelot in a vulnerable position before Arthur was truly ready to take the throne himself.
* A more straight-up application of the trope is the board of inquiry in
* A more straight version of this trope is actually Scarlet Witch and The Vision. Scarlet Witch is the only person who can "kill" Vision (by destroying the stone in his forehead)...so naturally she's the one he falls in love with. It doesn't hurt that Wanda is a superpowered
* A more subtle case is the fact that call order (whoever says "mid" first gets mid) is a thing in unranked games with no specific pick order. This does frequently lead to flame wars, but may god have mercy on you if you disregard this "rule" and just pick a role without calling it first.
* A more subtle example: any undergraduate who has taken a statistical mechanics course has probably encountered Kittel and Kroemer's
* A more subtle example occurs in "Monkees a la Mode", which features a character

named Rob Roy Fingerhead. Whenever his name is mentioned, Mike and Micky look at each other in disbelief and mouth the words "Rob Roy Fingerhead?" to each other.
* A more subtle example would be Zuko at the start of season three. After spending the first season being kinda ugly and the second being dirty and scruffy, the viewers finally got to see him
* A more subtle fourth wall-break happens earlier in the film when Stitch is adopted, with a nice little
* A more subtle instance is towards the end of episode 155. There's a brief scene where Chibi-Usa and Momo are showing off the sports day ribbons on their shirts, and their friend Kyusuke is nearby with a blush on his face, making you wonder if he's catching a look down Momo's shirt (particularly since Momo as portrayed in SuperS is already filling out).
* A more subtle issue is the general lack of globalized production. The Grimm make trade and communication between civilizations incredibly difficult, to the point where there are only four recognized kingdoms on the entire planet. It's telling that all the above examples of technology come from the kingdom of Atlas, which is isolated from the Grimm by virtue of their

* A more traditional depiction of Baphomet is seen in the Black Swordsman arc. While the Count was a devout man who would frequently go on witch hunts, his wife took to pagan worship, which often translated in her hosting orgies in the castle. The Count found out about this when he returned home and stumbled upon one of these orgies, with his wife straddling a massive idol of the goat-headed demon itself.
* A more traditional example appears when Goku first turns Super Saiyan against Frieza: Goku dodges Frieza's death beam attack, previously so fast no character even saw it being performed, by simply shifting to the left a few inches.
* A more traditional example happens as the ending line of every campaign's score summary: "X number of zombies were harmed during the making of this film" where the X averages to a four-digit number.
* A more traditional example is Nefertimon and Pegasusmon, who have an attack that requires both of them.
* A more traditional example is that it almost always takes several seconds for Sonic (or any of the other characters, but especially Sonic) to slow down from full speed.

* A more traditional kappa character also exists. He's a legendary yokai.
* A more traditionally Freudian family-related one would be in "Somebody's Going to Emergency, Somebody's Going to Jail," when Sam finds out that his father has been having an extramarital affair for the last twenty-eight years. On the same day, a friend of Donna's asks him to look into clearing the name of her grandfather, a State Department staffer accused of being a Soviet spy in the 1950's. He throws himself into it, only to find out that the guy actually

* A more tragic case is the death of King Ramposa III. When the Sorcerer Kingdom declared war on the Re-Estize Kingdom, he knew his kingdom was doomed and his life was forfeit. Having accepted his death, all he wanted was to face Ainz with dignity as the last king of the Re-Estize Kingdom. Sadly he doesn't even get the chance to surrender to Ainz. Instead, he is stabbed in the back by his own daughter Renner to

cement her allegiance to Ainz. Even worse, she kills him with Razor Edge, the National Treasure that had protected the royal family for generations.
* A more tragic example: The value of elephant-tusk ivory and rhinoceros horn (considered an aphrodisiac in some cultures) has led to both creatures being hunted to near-extinction.
* A more trolling version. After a thousand years have passed in the last chapter, Yuuki is seen with two children: it's left ambiguous whether both of them are Zero's, or one is Kaname's. With the release of a bonus chapter however, the girl is confirmed to be Kaname's.
* A more twisted version is used in the earlier episode "Planets Aligned", where a man who has kidnapped two girls puts a shock collar (the kind meant for training dogs) on their legs, telling them that if they leave the house, an underground wire will administer a lethal shock (it also gives a warning buzz if they get too close, reinforcing this idea). It's not made clear if he's telling the truth about the "lethal" part, but the SRU eliminate the wire before
* A more typical example is Wash, at least as long as he's piloting; check out the scene in the pilot episode when the Reavers are chasing them: he's the only one in the entire ship who's completely calm. Wash's dissonance works both ways: He's very calm when, say, he's being chased by Reavers or has to pull off some crazy-ass aerial stunt, but he acts panicked when things really aren't that bad.
* A more typical example later in the film when the poor cat is murdered and its mangled body left on the doorstep. Aside from warning the journalist to back off as he's clearly getting closer to the truth, the killer is no doubt also warning him that he could easily have killed him as well, given that he was right outside his door.
* A more typical example occurs in "The City of New York vs. Homer Simpson" where Bart attempts to scam a bunch of indifferent New Yorkers while riding the subway. After licking a pole, he admits defeat.
* A more typical example occurs in "The End", when Dean meets Lucifer in person for the first time:
* A more typical progression of this is probably provided by Lady Loxo, who used to be soulbound to the Demon of Treachery back before Karnak exploded Hell into submission, and who becomes all serpentine and scaly after beginning to consume souls out of the 'feeding pits.' Bulgak Adrak is much more conflicted and his transformation doesn't progress nearly so smoothly, even once he gives in. Then he has an epiphany and

* A more useful way to look at it might be an acknowledgment that different times and cultures have different standards of beauty. A person considered ugly as sin in their native culture might be found to be drop-dead-gorgeous in another (the ancient Greeks, for example, were so big on women with
* Amoridere alludes to this again, where the subject (who's not in a good place) would rather be lobotomised (or close to it) than to deal with her situation.
* Amoridere, parts of her name, and the fact that she spends/spent much of her time at home (according to her earlier photos).
* Amoridere seems to have a fondness of these and a notable example would be Toki and Doki, her twin sister, however, downplayed. They have their moments of feuding but, regardless, they will come through for each other. The same thing would go for Toki and her friends, as she cares for them but doesn't hesitate to brawl with them or beat them up, either.
* Amoridere. The subject's injuries aren't too severe (only bad enough to need stitches) but she makes the titular comparison while she's bleeding from a head wound. Though, she's already dazed,so who knows what her reaction would have been.
* Amorous Professor Cherry), this is both played straight with supporting character Mamiko, who willingly nails students who obviously are hot for her, and slightly

subverted by ultra-naive Chieri, who isn't originally this way, but will eventually become this trope, depending on the ending. Said ending can then either play it straight/subvert/avert this even then, as the game has many branches that can entirely alter this trope.
* "amorous" (she just can't let go of grudges, keeps any emotional actions as proof of her own beliefs) fit her to some degree.
* Amorous until the second date. Whether they turn out to be male or female changes depending on your choices.
* Amorphis is a metal band (generally), but no one really knows what the hell they are beyond that. While their early material was pretty straightforward death/doom metal, their later material has been decidedly more oblique, mixing progressive rock, folk metal, melodic death metal, gothic rock, power metal, and jazz fusion to create something that can only really be described as theirs and theirs alone.
* Amorphous+, a number of which can engulf the player or eat him. Then there's the Amalgam, who like its namesake suggests can absorb other Glooples to become stronger. Of course, the Amalgam can engulf the player too if they're not careful.

* Amos Diggory, a boastful and impolite man in the books, portrayed as much more quiet and amicable; he does not boast about Cedric in any way and when he meets Harry, Amos is very pleased and shakes his hand happily, never once giving Harry a hard time.
* Amos has taken it upon himself to "fix" the latest edition of Poor Richard's Almanac by adjusting the lists of maxims and the tides table. This doesn't end well, but he was certainly was good-natured in his intentions.
* Amos 'n' Andy reached the top spot with a paltry 8.4 share, coinciding with the moment more than half of all U.S. households had a TV.
* Amos 'n' Andy shorts, since the bulk of the cartoon has Tom & Jerry disguised in blackface makeup and acting like the then-popular radio duo. They even talk, often—something they almost never do in previous shorts.
* Amos 'n' Andy starred a pair of white men (Freeman Gosden and Charles Correll) as the title characters. When the show moved to television, the roles were re-cast with African American actors.

* A most recent example: In 2006 after losing the presidential election of Mexico, former candidate Andres Manuel Lopez Obrador, submitted a lawsuit against the U.S. to the International Court of Justice in Hague, demanding the return of the California, Nevada, Arizona, Utah, New Mexico, and Texas territories to Mexico, alongside with reparations for the Mexican-American war. It's unlikely it will prosper (particularly given that the ICJ can only hear a case if both parties to the dispute agree to their mediation), but still...
* A most sombre cowboy enters a bar, orders several shots and starts gulping them

down. The concerned barman inquires if something is wrong. The cowboy replies: "there are times, Bill, when words are useless. This morning I went to the barn to milk the cow, but that lousy creature kept kicking and toppling the bucket over. I got some rope and strapped her legs to the poles, but then it swinged its tail and toppled the bucket again, and I was out of rope, so I pulled the belt out of my pants and strapped its tail up. My pants fell down, and right then my wife came into the barn... there are times when words are useless."
* A most thought-provoking, or perhaps scary, example can be read on government-sponsored electronic bulletin boards across the game. One article found at the very beginning of the game tells readers to keep an eye out for terrorists and report any suspicious activities. The messages are clearly intended to be alarming signs of the dystopian state of the current government, both in the fear mongering "everyone can be a terrorist" message used to scare everyone into accepting the
* A Most Unusual Camera", when Chester Diedrich and Woodward begin fighting over the camera that can predict the future, Chester accidentally takes a photograph. It shows Paula, Chester's wife and Woodward's sister, screaming. Chester and Woodward each conclude that Paula is screaming because the other tried to kill him. The two of them fall out the window to their deaths while fighting, causing Paula to scream. When the crooked waiter Pierre comes up to their hotel suite to blackmail Paula, he notices that the photograph has more than two bodies. Paula rushes over to the window to see and trips on the carpet, falling to her death. Pierre then notices that there is a fourth body in the photograph and falls out the window himself.
* A Most Violent Year: Abel has 30 days to secure $1.5 million to purchase the shipping terminal. He very nearly fails, due to Julian's breakdown and the charges levelled against his company.
* A Most Violent Year: It galls him greatly, but when Abel's bank pulls out and he's unable to complete the purchase he travels round the city asking for more loans and for more time to put the money together.
* A Most Violent Year: The police show up to search the premises during the middle of a child's birthday party. Anna and Abel excuse themselves to say goodbye to their guests, then scramble to hide file-boxes of tax records underneath their back porch.
* A Most Wanted Man. An adaptation of a John Le Carre book (of which the character is known for utilizing this trope in his realist spy novels), Bachmann is the typical Le Carre protagonist where he is jaded and cynical about his world and the corruption around him but seeks to do the best job he can anyway because of some personal morality. It is Philip Seymour Hoffman's last movie

While Maleficent is initially attacked because the people of Auradon assume she's just the 'local' Maleficent, when Mal follows after Maleficent to introduce herself properly, both are overcome as Maleficent meets her biological

daughter and Mal finally receives actual affection from her mother. Even after the two Maleficents confront each other directly, Mal continues to refer to Maleficent as her mother, sympathising and horrified when Maleficent shares her story with the other residents of Auradon (although Maleficent then takes it 'personally' when she meets Audrey and learns her identity).
* A Mother's Love, Groo still breaks up with Cordelia due to her love for Angel, but Wesley also decides not to pursue anything with Lilah after Illyria’s warning.
* A Mother's Love; having taken Connor from Holtz, Illyria kills the hunter by literally kicking his head off, with that single blow sending Holtz’s head flying out of sight as his body falls to the ground.

* Amphetamine-based stimulants in sufficient amounts can also induce aggression and a feeling of invincibility, with methamphetamine ("meth") and the synthetic cathinones ("bath salts"/"plant food") being the worst for doing this due to fast onset, relatively low dose needed for effect, and their being used in the most immediate delivery methods (snorting/smoking/injection). Cocaine, MDMA, less effective pill amphetamines (e.g. Ritalin/Adderall/Vyvanse), and even caffeine in high enough dosages can also have the effect. Combine any of these with alcohol's pain reduction, and it becomes even more so.
* Amphetamines are now much stronger and have the potential to keep people awake for days at a time. Military pilots now call them "go pills" and they also have "stop pills" for when the need to stay alert has passed. The latter being basically sedatives. Both are passed out by doctors if requested. An over-reliance on these drugs is somewhat controversial though, since they may also have negative effects

on things like alertness, situational awareness, judgment, etc.

* Amphibia episode "The Domino Effect", Anne blames a loud noise from her new pet killerpillar on a "basement ghost".

* Amphibia has an episode where the Plantars get taken by some dangerous wildlife,

causing Anne to have a stress-induced hallucination of Sprig for the remainder of the episode as she attempts to rescue them from being eaten. Interestingly enough, Anne is fully aware that she's just hallucinating, but thanks the hallucination for their guidance and help anyway, while the actual Sprig questions what she's doing.
* Amphibia has Anne undergo this in the episode "Breakout Star", when a case of acne makes her popular among the frog residents of Wartwood. In an interesting variation, her adopted family doesn't resent her for her newfound fame and ego, and instead continues to support her. When Anne's acne clears up, she's humbled by the lengths they go through to help her fake still having it so she can keep her new life. At the end of the episode, she decides to give everything up when she realizes that continuing the charade means they can no longer be a part of her life and apologizes for letting the adoration go to her head.
* Amphibia". Hop Pop and Grime open with incredibly crude drawings that are correctly identified as a dirtsnake and "Sergeant Campbell Bilgewater and the Horsefly Rebellion of '48". Sasha draws a fairly detailed picture of a tree, which somehow all the Plantars identify as the time they blew up Toad Tower.
* Amphibia: In "A Caravan Named Desire", Anne recalls starring in a dental hygiene-themed play as a child, where she knocked over a toothbrush prop that somehow resulted in the stage lights falling and the stage catching fire.

* Amphibian Assault: Frogs, toads, and other amphibians portrayed as threats.
* Amphibian Man by Russian SF author Alexander Beliaev gives a breathtaking poetic account of undersea beauty as experienced by a young man with gills, which naturally force him to spend most of his life in the ocean. Beliaev, who was paralyzed and ill for much of his life, had nothing but his imagination to take him to incredible places, and he clearly put a lot of thought into a picture of the young man's underwater environment, a cavern that he furnishes with seashells, pearls, and various plant life.
* Amphibian men resemble bipedal frogs with arms, and are around a third the size of a dwarf. They live is small tribes deep

* Amphibia smartphone is seen as "magic". In order to charge it, she and her host family had to travel half a day to find some lightning bugs.
* Amphibia starts off with the very incident: Anne opening a mysterious music box.

The second episode tackles this in more detail, showing that she stole it from a pawn shop.
* Amphibia) that will try to eat you, but even smaller critters often turn out to be potentially deadly.
* Amphibia: The Calamity Box that transported Anne, Marcy and Sasha to Amphibia has three colored gems on the lid (blue, green and pink, in that order, which became colorless upon transportation. Throughout the series, each girl seems to possess some superhuman ability which manifests as the colors of the gems glowing in each respective girl's eyes, implying the gems' power was imbued into them when they got teleported. When the gems get recharged in the second season, the glow in their eyes drains, hinting they lose their powers.
* Amphibia, the creator of the show, stated while Marcy was not written with that intention in mind, they are still learning about their characters as they write them and he is glad that people identify with her in that way.

* Amphibia transported the protagonist and her two girlfriends to the titular universe where sapient, anthropomorphic amphibians live in a rather dangerous swamp world of monstrous predators. Season 2 has their king reveal that the device was created by his ancestors to traverse various alternate universes, and it needs to be taken to three temples they built to recharge it for another trip.
* Amphibia: Upon introduction, Captain Grime finds one of his soldiers to be wearing a breastplate as pants.
* Amphibia was cast. Braly still liked their auditions, however, and would go on to cast them as Anne's best friends Sasha and Marcy, respectively.
* Amphibia we have the case of Toadie, the Mayor's loyal assistant. To this day, he has been pretty much the main example of a doormat. He is the one who receives physical abuse on this matter passed as a comedic relief moment, like he being used as a carrier (A small Frog, actually the smallest adult species) for the Mayor (a massive Toad) when the Mayor lost his own hot air balloon or being used as a stepstool. Also, he is ok with everything he could say or do.
* Amphibia, where Anne keeps her host family from watching her favorite show too late in the night because of her experience with this trope.
* Amphibia who inhabit Amphibia. Said frog-people also keep some of them as pets or farm animals, with the Plantar family owning a giant snail named Bessie they use as a pack animal.

* Amphibious Assault Ships serve a similar function, being designed to launch smaller landing craft and amphibious vehicles, often featuring a flight deck for aircraft.
* Amphibious Assault Submarines is supposed to be a derivative of the Russian Typhoon class ballistic missile submarine, which is something that the Russians actually considered at the end of the Cold War.
* Amphicoelias was by some estimates the single largest land-based animal — never mind dinosaur — on record. 40 to 60 metres (130 to 200 ft) in length, and may have had a mass of up to 122 metric tons (135 short tons). Unfortunately, it's only known from a single piece of vertebrae that was mysteriously lost over a

century ago.
* Amphiterra are the dominant species. As such, they fill the niches of other animals, such as the Tree Frixel, resembling a mix of tree frog and gibbon, or the Catastrophic Fraggon, a large predator resembling a cross of a toad and a tyrannosaur.
* Amphiterra, being an alternate Earth where frogs, instead of reptiles and mammals, became the dominant species of the planet, has frog versions of many different animals of our timeline, such as the gibbon-like tree frixel, the tyrannosaur-like catastrophic fraggon, and the mammoth-like foaming squander.
* Amphiterra has the Temperate Freeple, a species of sapient frogs that walk on their hands while using their hind limbs for grasping.
* Amphiterra. While the early descendants resemble frogs of today, they quickly become a wide array of forms, such as barnacle-like sessile filter-feeders, arctic grazers with an insulating coat of secreted foam, or giant T. Rex-sized apex predators, as well as two sapient species that evolve 65 million years apart from each other.
* Amphiterra whose amphibian biology make fire use difficult (their skin and respiratory systems are far too sensitive to handle the smoke). Instead, they selectively breed plants and animals that can produce their needed materials, such as a "bush that grows shovels" or a "pet that produces gloves", among other things.
* Amphitryon this trope somewhat by having the god Mercury explain to the audience that there's a precedent for having the gods be active characters in this play: wasn't it just last year that somebody performed a play on this very stage in which someone in dire straits called on Jupiter and (lo and behold) out popped Jupiter to save the situation?

Where did it come from, how was it made, how did Trixie find out about it? And it's now sitting in Zecora's hut where potentially anypony could find it or one of the cast could retrieve it and use it in a dire situation? The Alicorn Amulet is a tanker truck of fanfic fuel all by itself.
* Amplifier Artifact that it's located in also has many ancient techniques and spells in the lower reaches.

* AMP suit also walks the line; the pilot's body is entirely within the torso cockpit, but he/she directly manipulates the legs with foot pedals and the arms with servo armatures, worn by the pilot so that the AMP's larger arms follow their exact movements.

* Amputating limbs is done with an electric saw. It also looks and acts a lot like a regular hand tool. Before those, sawtoothed knives were used for the amputations. There's a reason why in times past, one common nickname for a doctor was "sawbones".
* amputation and cauterization were often the only treatment available to the wounded. Although not normally a combat role, it was most certainly a traumatic one.

* Amtrack Wars: The Mutes worship the Great Sky Mother Mo-Town. While the Federation seems to be technically atheistic, they have a quasi-religious reverence for the First Founder George Washington Jefferson. It's strongly implied that this was deliberately engineered by the Federation's leadership to keep the rank-and-file in line.
* Amtrak also introduced liveries in 2011 for its 40th anniversary that resembled its 1970s and 1980s paint schemes.

* A much better example from the same book is when the main character visits his mother early in the war (roughly 30 years has passed since he left due to relativistic effects.) His brother, who lives on Luna, tells him not to smoke his mother's pot ration, because Earth pot is drugged.
* A much better example of this trope is none other than Ted Turner himself. An ardent fan of professional wrestling (often saying that "wrestling built the Superstation"), he bought the company that would later be known as World Championship Wrestling for the sole purpose of preventing Vince McMahon from attaining a complete monopoly on televised wrestling. It wasn't an investment or a way to make money: he kept WCW around because of his love for the business. It was often said that no matter what hardships WCW went through, it would never close down as long as it had the weight, power (and money) of Ted Turner behind it... a statement that was sadly proved all too true after Time Warner (which bought out Turner in 1996) merged with AOL, removing Ted from any influence. It didn't take long for WCW- by this time making massive losses- to be shut down, ironically by being absorbed into the WWF (which later became WWE).
* A much bigger one occurs in the Interlude to Chapter 26, where it is revealed that
* A much creepier variation occurs later the characters turn on a TV to find out the news, and
* A much darker example comes in a two parter midway through the series. Sisko returns home to an earth that has been placed under martial law because of the threat of changeling infiltrators, with people being subjected to random scans and blood tests. One of said changelings, (mockingly assuming the form of Chief O'Brien) saunters up to Sisko and asks him to guess how many changelings are actually on earth. The answer?
* A much darker example. "Pack Up Your Troubles" ("in your old kit bag and smile, smile, smile") is known as one of the most optimistic songs ever written. Its writer George Henry Powell later committed suicide. The context of the song and the suicide, however, are different. He wrote the song in 1915 when he was 35 years old with the explicit intent to raise morale for the British troops during
* A much darker example with discipline collars, which give the wearer a thrill after they follow an order and make it painful to refuse one. They were originally invented as a means to subdue powerful furycrafters, but the slave industry soon became the collars’ largest market.
* A much darker version happens within Akatsuki - when Souma finally finds out exactly what his seniors are planning for Kanata, someone he cares very deeply about, he's extremely upset and
* A much darker version occurs during Atem's duel with Raphael in the Doma filler arc, where Raphael taunts him and claims that when Atem was a Pharaoh in ancient Egypt, he was an evil, bloodthirsty tyrant. Atem has total amnesia and knows nothing about his past except a couple of visions of himself battling his high priest and of his God Monsters towering over a ruined city, and the claim, therefore, strikes a nerve, making him so infuriated by the possibility that it's true that...he punishes Raphael by playing a magical evil card that will rip Raphael's soul from his body forever if he loses. Way to prove you're not a bloodthirsty tyrant there, Pharaoh! (Admittedly, he realizes how idiotic a move this was soon after, but by then it's too late.)
* A much-disliked pilot in the Royal Navy's Fleet Air Arm, renowned for bratty manner, overloading his crew with irrational and unnecessary demands, and other failings in human management, insisted his hangar crew rename his plane after his girlfriend. He was not nice about it and did not ask - he ordered. The irritated crew painted the name "Phyllis" on the nose of his plane as ordered. The pilot pronounced himself satisfied. After a discreet interval, the letters "SY-" were painted in front of the name. The pilot did not notice. Everyone else on the carrier did.
* A much earlier episode had Cosmo catching the "Fairy Flu", which caused him to randomly lose control over his powers every time he sneezes (one sneeze summons a

merry-go-round, another transports the house to the moon, etc.). For
* A much earlier episode has the parents of Odyssey banning Halloween because it's a Pagan holiday. Two kids are skeptical and go to Whit for help. After confirming that the adults are correct, the kids briefly are torn between going along with the non-Christian crowd but disappointing their parents or missing out on the fun parts of Halloween but ultimately they get the idea to host a Bible character dress up party in celebration of All Saints' Day at Whit's End, which Whit personally caters meaning that the menu features items from Whit's End including ice cream.
* A much earlier episode highlights how unlikely this is to occur accidentally - at least nowadays. Modern undertaking practices include draining all of the blood from the deceased, ensuring that if you weren't dead when you came in, you most certainly were by the time you were buried.
* A much earlier example is arguably Yzak's destruction of a shuttle full of civilians during a battle with Kira. Even if Yzak's assumption that the shuttle contained fleeing soldiers was correct, shooting an unarmed shuttle is still a pretty heinous act. Yzak gets to see this from the other side later in the series. He was at the Battle of Panama mentioned above. It's also worth mentioning that Yzak was
* A much earlier occurance comes in Valkurm Dunes. There is a large elevation difference half way in the map proper with a difference in elevation the equivalent to two feet on a largely gradual slope. Because there is no jumping players are forced to go around it, necessitating crossing over to the far side of the zone just to go around the difference. This can result in passing dangerously close to several mobs where groups are required.

* A much later issue sees 12-year-old Klara Prast trying to hang out with the older kids while they play Truth-or-Dare. Karolina asks Nico which of them is the best kisser. Chase tries to argue that he's the obvious choice. Nico shuts him up by loudly declaring that
* A much less conventional hybrid between a plane and a boat is the ground effect vehicle, also known as ekranoplanes. These often look like strange flying boats with short wings but rely on the ground effect principle, which basically means they ride on a cushion of air that forms between the wings and the ground (or the sea). While smaller ground effect vehicles are basically high speed hovercrafts, the larger are often solely relegated to the water and often function as high speed cargo haulers. It still isn't decided if they technically planes or ships, which is important as they could be considered the fastest ships or the heaviest airplanes.
* A much lesser, but still strong, example would be Eric and Jack, Cory and Shawn's older brothers. Jack in particular complains that, even years after the last time he saw Eric, he still hears Eric's voice in his head constantly
* A much less serious, but more common, example that many of us have committed ourselves. Some computer programs cause the same dialogue boxes to appear so often that users can get into the habit of clicking away
* A much milder example, in which the victim is a salmon, is mentioned in the
* A much more benign version of this occurs in bears during the autumn months — they experience a shift in their metabolism called hyperphagia, which allows them to keep eating without ever feeling full. Justified as this is the last part of the year they have to pile on the pounds before going to sleep for the winter. And fortunately for humans, people are very rarely on the menu, with salmon and other migrating fish being their preferred prey.
* A much more chilling example: Jesse instructs several armed men to "Fuck off," and they do, turning around and running away. One of them, as they run, looks to

another with absolute terror in his eyes and asks, "
* A much more dramatic example happens when Vivi attacks Luffy when he said her plan for no innocents to die in Alabasta was doomed to fail. Despite Luffy being made out of rubber, Vivi actually manages to make Luffy bleed.
* A much more literal example comes when Gohan and Goku return from the Hyperbolic Time Chamber having learned how to become Super Saiyans in their daily lives — they attempt to have dinner with Chichi but Goku and Gohan can't help smashing glasses in their hands due to their insane strength.
* A much more mundane instance of this trope is mentioned with Frederick Langston, the supervisor/warden of the Federal Bureau of Control's containment sector for

* A much more popular one (still, among the few furries interested in SCP) is 1471-A, a creepy but apparently not dangerous creature that looks like a canine furry with a skull for a face. The image that inspired it is actually a photo of a furry fan in a "skulldog" suit.
* A much more severe version of this happens later during Hange's tests with Eren to mimic the Female Titan's hardening ability. The third time he transforms, his Titan form is missing about half of its flesh and is causing Eren to fuse with it. By the time they cut him out, he is missing his eyes and parts of his skull are exposed. Thankfully, due to his healing factor, Eren heals up in about a day.
* A much more subdued example: as you progress through the final world, you find that
* A much, much older lady trying to make sure her twentyish charge doesn't go for someone remotely his own age is a plot point in
* A much older and more prominent example: when Everton were first founded, they played their home matches at Anfield. In 1892, after a dispute over rent, Everton left to go play at Goodison Park instead and Anfield's owner, John Houlding, decided to make his own team. He thus founded Liverpool F.C. with some of his old Everton friends, and one of English football's fiercest rivalries was born. Other teams in Europe, such as Italy's Inter Milan and Spain's Real Betis, were founded in a similar way.
* A much older or younger person lying about their age, especially if they are underage or 10+ years older than their listed age.
* A much older story featured an unusual inversion where Don kept mysteriously winning with increasingly improbable ways, while Gladstone's failures became utterly spectacular, culminating him to swallowing his own ball. At the end it turned out that a man who had been observing them for all the time was a reporter who was going to reward the

* A Muddy Romance: Mack Sennett, hearing that Echo Lake was being drained, sent his actors, writers and cameramen to film it, and came up with the storyline en route.
* A Mugging The Monster situation can evolve into this if the attacker is not instantly demolished, yet doesn't have the sense to back down and retreat after finding out what they're up against.
* Amu Hinamori, the main character, is known as the "cool and spicy" girl at school because of her unique fashion style and her blunt attitude. However, she actually just wants to be normal and girly, and it's actually because she's shy that she puts on a cool girl act.
* A mule as a Beast of Burdon. In 5e, a mule costs 8 gold, and has a Carrying Capacity of 420 pounds, averaging out to 1 gold per 52.5 pounds, making it rather affordable to buy for most low-level, and cash-strapped, parties — in fact, most parties could get at least two mules, possibly more, depending on cost of feed of course. Also, with the release of Tasha's, it's possible to apply the Warrior Sidekick class to the mules, or any other CR 1/2 or lower mount, and make them decently effective tanks for the party, which is useful for a party full of spellcasters and others with low health and armor class and no dedicated tanks. In

short, that mule can become one heck of a Bad Ass.
* Amulet. After being kept alive for fifty years thanks to his Amulet's Spirit, he ends up letting himself rapidly age to death after a combination of turning on the Spirit, and being called out by the memory of his deceased best friend.
* Amulet. And again, in The Last Council, it's revealed that Ronin, Pierce, and all the other Academy students bar Max and Emily are dead, having been nothing more than reanimated statues that took on the appearances of people who died.
* Amulet appears to be a living pink plush rabbit, but he's actually a robot. Somehow.
* Amulet has an extreme version: we actually see Emily's father die before our eyes, and his death is a large part of her current personality.
* Amulet has sky eels. Despite their rather terrifying appearance, they're quite docile.
* Amulet in that when the heroine announces that she must stay in the fantasy world, her mother declares that in that case, the whole family will too.
* Amulet: Navin convinces Emily to let him to pilot the Albatross due to his experience in playing flight simulation-type games. He turns out to be a pretty good pilot in general.
* Amulet of Annihilation, and he'll wind up surprised that you spent so much money on a "worthless piece of cra...ss jewelry."
* Amulet of Kings it's evident that it refers to the Dovahkiin (Dragonborn), humanoids with the souls of dragons, of whom the Septim Dynasty is one line.
* Amulet of Life Protection and raise a basic, mindless undead creature that would be easy to possess.
* Amulet: The eternally-storming Golbez Cycle contains Sky Eels, docile creatures with impossibly long wingspans.
* Amulet, the population of Kanalis. Unusually, it's due to a curse, and we actually see people in the process of turning into them.
* Amulet waging war...until it's revealed that the spirit of the Amulet (who so far has been a guide of sorts, if somewhat evil in its own special way) is the real cause behind everything. To top it all off, this isn't the first time the Amulet spirit has done this either, having done the exact same thing 500 years prior.
* Amulet: Whilst hot on the trail of Emily & Co, when Luger and his soldiers come across the glade of sentient Gadoba trees, this ensues.

* Amumu has his Bandage Toss ability, allowing him to come flying into the fray from massive ranges while stunning his target and often setting up his mass-rooting Curse of the Sad Mummy.
* A mundane technology version is the rocket launcher used against the Judge in "
* A mundane version also occurs, after an erumpent (imagine a giant rhinoceros with an explosive horn) breaks into the Central Park Zoo looking for a mate, and most of the animals escape. The first sign the main characters have of this is when they see a lion walking casually down the street.
* A mundane version of this happens with no less then three villains! Deathmaiden dies and returns almost exactly 20 years, and Diane Castle quotes this trope.
* A Muppet Family Christmas: "Don't miss it or they'll send you a fruitcake!"
* A Muppet Family Christmas is shown at the kitchen door, looking approvingly at the Muppets enjoying themselves, before deciding that he's going to have to wash the dishes.
* A Muppet Family Christmas was re-edited, removing a few scenes for time (including a scene where Fozzie's mom hangs his stocking), adding new fade-ins, putting some of the audio over shots of a fireplace and Christmas tree, and

removing some of the background music. This version has been used for all subsequent rebroadcasts and video releases (which remove more scenes due to music rights).

It turns out that the fact that the central heating is on so early in the autumn season is a vital clue — it meant that the murderer had intentionally left the fireplace off, ensuring that there would be no light when the power went out.

None of it caused any physical harm, but she was still deeply traumatized.

* Amusing Injuries if they're inflicted on women. This is sexist against men in that it limits the roles male characters are allowed to take, but it's also sexist against women in that it carries a subtext that women are weak, and incapable of inflicting serious injuries.
* Amusing Injuries in almost every episode. In "The Procrastinators" he's shattered, eaten, lit on fire, disintegrated, and blown up in just one episode.
* Amusing Injuries. Mr. Poopybutthole almost bleeds to death after getting shot through the heart and needs physical therapy to recover from such a horrific injury. He also refuses to see Beth or the family while in therapy due to the trauma of the incident even though he understands it was all a misunderstanding because he was shot by someone he thought he could trust.

* Amusingly, all the cheating was for naught; aircraft carriers proved to be vastly more important than battleships, which played only a relatively minor role in the war. The only real battleship vs battleship engagement in the whole of World War II was pretty much pointless. And the nations which focused on aircraft carriers instead of battleships had an advantage. Incidentally, this was exactly how the Americans, the authors of the treaty, got around it.

* Amusingly averted in most of the media surrounding Boba Fett. A dizzying number of bounty hunters loathe him, believe themselves to be his rival, and think they can take his place as the galaxy's greatest bounty hunter by killing or defeating him. None of them are anywhere close to his level, however, and he himself views them as annoyances rather than actual threats (either to his job or his life).

* Amusingly enough, if one sits on the menu screen for long enough in almost any of the games, the background music reveals itself to be an incredibly long intro to a voiced ballad. Sung by Bjorn Lynne, both versions (Wormsong and Wormsong 2003) detail a single event of mortal combat in the near-eternal cycles of wormy war. Still no real plot for the actual game, though.
* Amusingly enough, in "Hyde and Hare," the audience is supposed to laugh at Bugs Bunny for pronouncing it that way, reading off the title page of a score, "The Mine-ute Waltz, by Chop-pin." For someone who can't pronounce "Chopin," he then proceeds to do an excellent job of playing it on the piano.
* Amusingly enough, J. K. Rowling has stated that Vernon Dursley's genes as having this affect as well, not to say the man himself is immune to magic. However, she has gone on the record saying that she considered having Dudley at the Hogwarts platform dropping off a magic child in the last book, "But no magic would have made it past Vernon's Genes."
* Amusingly enough, Linkara initially used the "It's magic, I don't have to explain it!" when asked how his Magic Gun works.

* Amusingly enough, the character in question also thought it was ridiculous. He'd idly sworn to "eat his hat" if a third character did something not relevant to this example. When that oath was called due, the only way he could think of to carry it out was to wear something edible, such as a cabbage, for a sufficient time for it to qualify as his hat. He'd been walking on eggshells (figuratively) waiting for somebody to bring it up.

* Amusingly, the rules don't take gravity into account when shooting a ranged weapon straight up or down, even though realistically if you drop a boulder or whatever straight down it should just fall indefinitely until it hits something. It also doesn't affect your ability to throw things straight up, meaning a normal human could throw a boulder 150 feet straight up.

One, it's the title of the song, and two, in protest to this, the band, as the last time they said it, replaced the lyric with "snortin' cocaine."

* "A Mutt in a Rut": Elmer Fudd— in a rare cartoon where he stars as the hero, not the sympathetic villain— loves his dog, Rover, and has no plans to kill him. However, Rover – having just watched "The Dog-Lover's Hour" and host Carlton Canine speak about how some dog-owners shoot and kill their dogs once they've grown old— becomes paranoid after hearing Canine ominously editorialize, "Two go out ... but only one comes back!" Rover, annoyed at not always getting his way, is convinced Elmer has him marked for death but— since he is a dog— is unable to tell Elmer specifically what is bothering him, and is set off when Elmer suggests a good hunting trip will do him good. Rover, thinking he's saving himself, decides to kill Elmer off himself and makes several attempts to off his unwary master; however, Rover gets the worst end of things. Only at the end of the cartoon, when he sees Rover somehow limp to the

studio to attack the host of "The Dog-Lover's Hour" does Elmer even start to get an idea of what is bothering his beloved pet; Rover had finally become convinced that his place in the Fudd household was secure after his last attempt went awry, and was now determined to make Canine pay for needlessly stressing him out.
* A mutual version. Kilowogg eats a giant bug (in some kind of glaze, defeating Hal's assertion that he'll eat glazed anything), then inquires as to what "cheese" is (Hal's rations being grilled cheese in a can), and is so disgusted by Aya's explanation he asks Hal to eat in a closet from now on.

* "Amy's Choice" Chillingly, the Doctor figures this out because, in his own words, "only one person in the universe hates me as much as you do".
* "Amy's Choice", he sums up his mission (and life philosophy) in two sentences:
* "Amy's Choice" involves the Doctor, Amy and Rory trapped in a dream state by psychic pollen where they switch between two realities, one on the TARDIS and one involving a future where Amy and Rory have stopped travelling with the Doctor and are living in a town called Upper Leadworth. * "Amy's Choice", the Doctor, Rory and Amy keep going back and forth between two lives — one where they're all on the TARDIS and one where Amy & Rory are living on Earth & she's pregnant — and have to decide which is the "right" timeline.
* "Amy's Choice". The TARDIS breaks down, and Rory asks why they can't just send a call for help; "Of course, because the universe is really just a small place, and somebody's sure to be near by," is the Doctor's snarky reply.

* A myth about an otherworldly shapeshifter woman who transforms from her natural form to that of a beautiful maiden through the use of her garment exists. A young male passerby spies her bathing and (eventually or immediately) steals her garment, hiding it away and forcing her to marry him and bear his children. After many years, she discovers her garment (sometimes herself, sometimes because her husband permits her to see it, and sometimes because of her unknowing child finding it) and, taking it, departs forever, leaving husband and children. This rather specific tale is that of the Orkney and Shetland selkie, the Japanese Tennyo, the Swedish Swan Maiden, the German Three Swans, or one of several other similar stories together classified as "AaTh 400".

* An accidental one of these is what basically won the Battle of Hastings for William the Conqueror. Harold's forces had a strong position at the top of a hill, and William's plan to remove them had failed because Harold's shield wall was too strong and well disciplined. The battle devolved into vicious hand-to-hand fighting at the shield wall until a unit of Williams, nearly destroyed, turned and ran down the hill. Nearby units (realizing that their flank was now open to attack) turned and ran too. Some of Harold's forces gave chase and in the following melee, the battle completely changed face. Harold's forces who gave chase were essentially butchered, leaving a hole in his lines. William regrouped and attacked again, only this time the now weakened shield wall faltered and he won the battle.

In terms of anachronism, Falstaff mentions potatoes, which were unknown in Henry IV's England, but had been introduced to England a little over a decade before the play was written, and the ghost of Herne the Hunter is believed to be based on a legend from the reign of Henry VIII.

However, there was a particular instance where Hercules Mulligan's actor, Okriete Onaodowan, came to a rehearsal wearing a skull cap and the designer really liked the way it looked, so he was asked to keep it on. After that, it became a regular part of the character's costume.

* Anachronox, Anachronox is an artificial planet created by a long-dead race that serves as a transportation hub for the entire galaxy. Sender Spikes are able to warp any ship that approaches them to a companion Spike at the destination, and vice versa. One NPC you meet makes a living testing Spikes that haven't been used, a dangerous occupation since there's no guide as to where these Spikes send ships, no guarantee that the companion Spike will still be there, or even that the destination won't be immediately fatal. Late in the game, the crew attempt to use a Spike only to have its position disrupted by a shockwave, flinging their ship to parts unknown. Lucky for them, they happened upon a planet.
* Anachronox features Grumpos Matavastros, a grumpy old man and scientist whose world (non-combat) skill is 'yammer.' Play a mini-game to fill his lungs and he'll spout off about 3 pages of run-on sentence, causing whoever was standing in your way to get annoyed and wander off.
* Anachronox has Dr Rho Bowman, who employs weaponized scientific principles in battle and is your go-to girl for any advanced devices that needs to be messed with.
* Anachronox has the main character in trouble with a local mob boss who he owes a large amount of money to. However, being an RPG you can make huge amounts of money from fighting monsters. Alternately, the next locale you visit has trading robots which you can use to make a fortune with. Problem is, you cannot use this money to pay back the mob boss - the option simply doesn't exist and the debt comes back to bite you later on.

* Anacondas: The Hunt for the Blood Orchid — flowers that can prevent aging — can grow to be much bigger than normal (okay, technically these carnivorous snakes are consuming the animals that themselves eat the orchids).
* Anacondas: The Hunt for the Blood Orchid: Played with. The jungle expert notes that there's no way a single anaconda, even a giant one, is going to pursue the others after already eating one of them. However, the film justifies the trope by explicitly featuring a large group of hungry snakes who are all in the same area because of a mating season and the humans simply cannot avoid running into them. The travelling male snakes are hyper-aggressive for the same reason.
* Anacondas: The Hunt for the Blood Orchid: When Gail gets attacked by a crocodile, rather than grabbing a rifle, Bill simply jumps into the water and starts wrestling the crocodile with a knife. Lampshaded:

* An Akane to Remember is memorable for being set away from the usual Furinkan hijinks. Only Ranma and Akane appear in this story, with Ryoga joining them later. The rest of the cast (Genma and the rest of the Tendos) appear only briefly in the beginning where most of them have no lines and the rest of the cast (Kuno et al) don't appear at all. This is a quieter story that focuses more on guests Shinosuke and his grandfather. Ranma and Akane's relationship is explored slightly but mostly in relation to Akane's past acquaintance with Shinosuke. There's no usual "Ranma you IDIOT!" in this story and Ryoga is there mostly to lend moral support.

* Anakin finds out that his relationship with Padmé and that she's pregnant with his children is not so secret when Aayla Secura openly asks him to be named the godmother, leading to him finding out
* Anakin himself turns out to be not much better than Obi-Wan at this when he tries convincing Padmé over to his side, saying that the Jedi were taking over the Republic and that he saw Mace Windu try to assassinate the Chancellor. Conveniently leaving out the part about Palpatine being a Sith Lord who has been plotting to take over the galaxy.

* Anakin promptly gets into a starfighter that he's never seen before in his life and manages to fly it well enough to not only kick ass, but blow up a massive spaceship. Later in his life, while rescuing the Chancellor, he successfully lands

planetside a ship whose controls he's never seen before, which is not designed for atmospheric , not designed for human pilots, has broken gravity generators, is missing about half its mass, and is on fire. He sticks the landing (right outside the Jedi temple, having a whole planet of landing sites to choose from) and walks away from the smoking wreckage.
* Anakin's character is a massive deconstruction of this trope. He adamantly refuses to give up on those he loves, even though the Jedi preach non-attachement, and even when giving up is the healthiest thing to do. The loss of his mother is the first time he truly fails, which causes him to rage out and murder everyone within reach, and Obi-Wan only barely manages to convince him that they should prioritize capturing Dooku over going back to get Padmé. Tracy's motives for ratting Melissa out are a mix between Petty Patty and Snobby Sara; while Melissa did break a rule in order to help Anaksha, Tracy also didn't much like Melissa to begin with and most likely did it to get back at her for having Anaksha copy her music collection onto her new MP3 player.

* Analytically, there are 4 different timescales to be concerned about in speaking: the time of the speaker, the time of the receiver, the time of the event, and the time of the comparative event. In standard life, the first two are equal and the latter two can be present, past, or future to the speakers or each other, leading to the seven standard tenses: present, past, past-past (formally the pluperfect "had"), past future "was going to", future, future-past (or future perfect, "will have"), and future-future (omitted in English and most other languages). If time travel is possible, this means both speaker's and listener's timespans have to be referenced. As these are completely independent of the event timescales, we cannot omit the present tense on either, so we must multiply by three twice for a total possibility of 54 tenses. While some may be omitted as redundant, this still presents a formidable linguistic challenge should time travel ever be possible.

However, this was considered the more humane way of killing; the alternative choice among more sadistic crews was locking one of the treads over the hole, then spinning the tank around, slowly and painfully grinding and crushing the poor soldier into a pulp.

* An American Tail ends with Fievel riding on the back of his pigeon friend Henri. When he looks to the west, beyond New York City, and asks if he can explore more of America, Henri replies "Someday, you will!" * An American Tail features a police force who savagely beat down protesting factory workers with their clubs, are being paid under the table by corrupt factory owners, and deliberately start a race riot.
* An American Tail, Fievel and his friends pass through a Death Course while exploring underground caverns on their way to the hideout of an underground tribe of Native American mice. Later on in the film some corrupt policemen are tricked

into going through the death course themselves. There are noticeably fewer of them after they come out the other side.

* An American Tail: Fievel Goes West, a mouse trap is disguised as a stage for the mice to sit on, which would be used to kill them all.

* An American Tail: Fievel Goes West Considering he's a mouse it's not that surprising.
* An American Tail: Fievel Goes West, Fievel and Tiger walk past each other in the desert, under the assumption that the other is just a mirage. It doesn't even help that they address each other "Hi, mirage of Tiger", "Hi, mirage of Fievel".
* An American Tail: Fievel Goes West- it has some very solid animation for the time, and a few genuinely great songs.
* An American Tail: Fievel Goes West, it's implied that law dog Wylie Burp trained Tiger to be his replacement. As he says at the end; "Just remember Fievel, one man's sunset is another man's dawn."
* An American Tail: Fievel Goes West just before Tiger falls off a building because of a dog.
* An American Tail: Fievel Goes West. Mama Mousekewitz just scoops the produce off the walls and into a skillet to prepare the dinner, and Papa jokes that she should keep singing so that the hecklers (who just hear it as musical squeaking) will literally throw in dessert as well.
* An American Tail: Fievel Goes West only shortly before being stuck into a toddler outfit.
* An American Tail: Fievel Goes West she's a child, seemingly only slightly older than Fievel (the novelization says she's 8 years old). The sequel doesn't seem to take place more than a year or two later, since Fievel is still a young child and their baby sister Yasha is still only a toddler. But Tanya now looks and acts like a teenager or young adult, definitely older than 9, and her plot line of becoming a singer at a saloon is really only fitting for a teenage character, not a child.
* An American Tail: Fievel Goes West's involvement and feels radically different in art style and tone doesn't help..
* An American Tail: Fievel Goes West, Tanya becomes narcissistic after her singing performance in front of the cats is a success, completely ignoring her brother's concerns and even signing an autograph for him when he is trying to warn her about the dangers of her new manager Cat R. Waul, who is plotting to eat all the mice in town except for Tanya because he’s entranced by her singing voice.
* An American Tail: Fievel Goes West than the first movie, which had more than enough angst to go around after Fievel got lost.
* An American Tail: Fievel Goes West the final climactic battle is fought with

slingshots rather than real guns.
* An American Tail: Fievel Goes West: The only nice cat, who gets repeatedly pushed around, abused, and chased (either by dogs, native american mice, or even dog fish!) all the way to the American west, takes a level in badass when he gets trained by a reluctant aged, canine gunslinger. When he sees his love in danger, he goes into a literal barking rage and takes down almost the entire Big Bad's cat mook army.
* An American Tail: Fievel Goes West: There is a slightly altered version as Fievel is chased by a hawk whose first attempt to grab him fails and Fievel escapes into a burrow. Unfortunately, while backing away to the entrance from the scorpion within the burrow, the hawk this time catches Fievel and carries him off.
* An American Tail: Fievel Goes West, there's a bit where the Mouskowitz family ends up riding the fierce currents of a New York sewer. After the ride ends:
* An American Tail: Fievel Goes West: Tiger is worshiped as God by a tribe of Native American mice because he bears a striking resemblance to a rock formation.
* An American Tail: Fievel Goes West, Tiger passes by a buffalo skeleton that rises up to pounce on him, only for Tiger to turn around and prompt it to revert to its prone form. It attempts again, but Tiger again turns around. He then repeatedly looks away until he catches it moving, at which point it dances and collapses. Only after Tiger gives up after the fact does it finish the pounce and trap him. Turns out there was a tribe of mice controlling the skeleton.
* An American Tail: Fievel Goes West when you realized that it's possible to stay in what seems to be forever in the dream world and then wake up to discover that only one night has passed in reality).
* An American Tail: Fievel Goes West, which was a musical adventure about hard times (i.e. immigration, separation, and a war between mice and cats).
* An American Tail: Fievel Goes West: While lost in the desert, Tiger sees what he thinks is his girlfriend Kitty, and as he calls for her, she only asks "Who?" It's only when he comes to give her a kiss does he realize that it was actually an owl sitting on a cactus.
* An American Tail: Fievel is separated from his family on their way to America, and again in the sequel on the way to the West.
* An American Tail: Fievel Mousekewitz and his family are the protagonist Jewish-Russian immigrants who come to America to escape cat cossacks and find a better living. This doesn’t quite fit the standard version of the trope, though, since they was escaping the Jewish pogroms in the Russian Empire rather than the Bolshevik regime.
* An American Tail: Fievel, who is listed as "Feivel" in the beginning credits of the first movie, which is the actual Yiddish spelling. The spelling was changed to "Fievel" to avoid confusing American audiences who might otherwise pronounce it as "Fay-vel", but in other countries where the movie was released the "Feivel" spelling was left intact. Ironic because that's actually how it's pronounced in Yiddish too.
* An American Tail for not being thanked for his efforts to reunite Fievel with his family, but he receives a kiss from Bridget and all is well again.
* An American Tail had just finished a nasty divorce with Amy Irving, voice actress of Miss Kitty. What does the film introduce Miss Kitty doing? Breaking up with Tiger.
* An American Tail has a really gut-wrenching example between Fievel and his father after the former gets caught outside on the ship. As Fievel yells for help, Papa tries to grab his son's hand, but loses his grip when Fievel's sleeve rips and a tsunami hits them. Fievel eventually falls overboard and does not see his family again until the last few minutes of the film.
* An American Tail has a scene where one of main villains, NYPD chief Chief Mc Brusque, and one of his men beat a mouse that is smaller than either of them because he was protesting. To be even more brutal, the protestor had big glasses that after the beating were broken.
* An American Tail in some overseas markets, muddying the waters further. It's not uncommon to find screencaps from the film with a "copyright Disney" watermark on

the corner still floating around on the internet due to this.
* An American Tail in the scene where the three orphans torment Fievel, two of their voices were redubbed: the fat one and the short one. Originally they were voiced by children, but in the redubbed dialogue the fat one is given a low gravely voice and the short one is given a nasally voice, both by grown men.
* An American Tail is a thinly veiled reference to the golem legend. While a machine rather than an animated statue, it was created, just as the Golem of Prague was, to protect an oppressed Jewish community.
* An American Tail made it the highest-grossing animated film ever at the time. This scared Disney enough to start trying to step up their game.
* An American Tail, mirrors what life was like for immigrants in New York during the 1880s.

* An American Tail movie has an inversion where Tiger ends up with a more complicated word than the original: "A spy- a spee- a spididid- an arachnid!"
* An American Tail movies basically act as moving scenery, making little to no direct interaction with the mouse characters that make up the main cast.
* An American Tail movies every other day, sometimes twice in the same day.
* An American Tail, near the Castle Garden immigration center in New York, a salesman is literally selling the Brooklyn Bridge.

* An American Tail of the series, has a montage while training to be like a dog so he can help Wiley Burp and Fievel take on Cat R. Waul. The montage includes Tiger doing push-ups, walking through tires, beating up a Cat R. Waul dummy, and fetching a bone.
* An American Tail one and tangential to the main plot of Fivel reuniting with his family and then kicking out the cats.
* An American Tail, one of the villain's cat underlings talks like Jerry Lewis.
* An American Tail. Some of the voices on the DVD version were redubbed for whatever reason.
* An American Tail - Specifically, the original movie. While it had downright heart-wrenching moments, there were some funny moments in between.
* An American Tail the camera zooms into Tanya's mouth during her high note. (as seen above)

* An American Tail, though he really wants to be a reporter and when he becomes discouraged and his rant begins to show it. *in a flat monotone voice* "Hey, get your paper here, whoop-dee-do paper here..." When someone passes him by he yells "Fine! So stay ignorant!"
* An American Tail: Tiger manages to catch the train to escape a pack of dogs. Who should he meet inside but the engineer's dog?
* An American Tail to establish a niche where they are free from predation.

* An American Tail: where else would a story about (anthropomorphic mouse) immigrants from Europe be set?
* An American Tail, which was produced on a $14 million budget with a box office return of $38.7 million.
* An American Tail, which was released as a single performed by Linda Ronstadt and James Ingram. While the film was hugely successful and indirectly led to the Disney Renaissance, the single version was successfully able to shed itself of its origins, and ended up being a hit on the Billboard Top 100 and a Top 40 radio hit, reaching #2 on the charts in March 1987. It also becomes deliciously ironic when played at proms, since it details family separation.
* An American Tail while he and the others defend the Native American mice.
* An American Tail: Young Fievel is separated from his family on their way to America, and spends the rest of the movie looking for them, barely missing them on several occasions; this was partly because his sister Tanya is the only one really looking for him, while the parents believe he's as good as dead or assume it's impossible he'd make it to America.
* An American teacher living in Japan was becoming annoyed that so many of his co-workers and students were commenting on-and complimenting/congratulating him on his recent weight gain. A colleague finally told him that they weren't trying to insult or ridicule him. Quite the opposite in fact — they had assumed that he had met a woman who was a good cook —

* An American Werewolf in London has a small but noticeable continuity slip as Dr. Hirsch's beer gets fully refilled for a final sip in the pub.
* An American Werewolf in London has more than a little of this. Especially the impossible-to-insult policeman. The xenophobic villagers are also worth recognizing, as is their 'opening-up' via humor (if we decide to like you, we'll make fun of you).
* An American Werewolf in London horror movie that plays the werewolf's brutal killings completely straight.

* An American Werewolf in London in the mirror after he closes the medicine cabinet.
* An American Werewolf in London is done by the film's two lead actors, David Naughton and Griffin Dunne. It has some funny moments, but other than that mostly has one asking the other "Do you remember filming this scene?", interspersed by long silences.
* An American Werewolf in London isn't about a French lizard man in Detroit.
* An American Werewolf in London is seemingly made of this in some parts. Griffin Dunne and David Naughton are laughing it up, joking about the superstitious villagers as they walk along the moonlit road one second and in the next second, Dunne's throat is ripped out on-camera and Naughton is slowly bleeding out from a werewolf bite. Later, Dunne reappears as an increasingly-rotten corpse to confront Naughton, yet the duo can't help but revert to the same snarky buddy-buddy humor.

* An American Werewolf in London: Lucky Briton Gerald Bringsley gets stalked and eaten there by the eponymous werewolf.

* An American Werewolf in London, the small English town of East Proctor's Dark Secret is, unsurprisingly, a werewolf.
* An American Werewolf in London" The Spanish dub correctly calls them "coche lobo", car-wolf (as opposed to "hombre lobo", werewolf). Werecar implies that the monster is some sort of mix between a man ("were") and a car, and Bender is a Man-bot.

* An amusing example of this form of semantic drift is that the original word referring to a woman's makeup table has shifted so dramatically that it now refers to a different piece of furniture, with a different function, in another room of the house. This gets rather jarring when reading stories that take the original meaning, and have women stepping out for the night in style by splashing themselves with toilet water (now known as perfume).

* An ancient Chinese story tells of a comatose general being saved from hunger by two beggars. The dish in itself was terrible (consisting of trampled spinach, rotten beancurd and non-potable water), but he didn't notice because he was semi-conscious, instead thinking it delicious. When he became emperor, he ordered said beggars to present said meal to his ministers. Afraid to lose face, they all gulped it down. The Emperor, realizing how horrible the dish was, still drank it all. The two beggars ended up rich.

* An ancient example: in the 80s, the prominent word processor was WordStar, which defined several standard controls that the present Windows editing controls are based on, such as WASD. Their scheme was based on control+ letter for functions, and interestingly was written before cursor arrows became prominent on keyboards. Then in the late 80s / early 90s, the up-and-coming text editor was WordPerfect. WP took advantage of the rapidly expanding computer market to push their own standard

instead of supporting existing ones. The result is that anyone familiar with WS is completely incapable of handling WP, and vice versa. F1 for help? Nope, that's F3. ^Q for quit? No, better try F7. And so on and so forth. The scheme relies on control/alt/shift+ F1-F10 for literally everything. About a decade later, Microsoft pulled the same trick with expanding markets to push the Word standard, but at least that one is comprehensible to a novice. WordPerfect's keyboard shortcuts were so complex (and, at times, unintuitive) that there were overlays one could put above one's function keys as a reminder of which key combinations did what.
* An ancient example: Though it's hard for Alexander the Great to disobey orders, seeing as he's the one giving them, he had an easy enough time disobeying the entire conventions of warfare of the time. He would deliberately ask his older generals for advice, knowing that they would give him conservative answers, and then did the opposite, making him completely unpredictable to his enemies on the battlefield.

Within the facility, a number of Tevinter mages and demons who were locked in battle are frozen in time, along with a Fade rift. The building itself is also collapsing in certain sections, and the rubble hangs mid-air. This effect was created through the mages' experiments with Fade energy and time; it is strongly implied that the experiment got out of control, and one of the mages was only barely able to restrict the effect to the facility. The Inquisitor must restore the flow of time in order to close the Fade rift.

Nevertheless, the story's adult protagonist couldn't remember the occurrence and had a difficult time believing that his father was a god until his magical twin showed up. The whole world resembled a "dirty" ashen world to him, and he fell into a depression for a while. After a year or two, though, he saw his vision as being "more refined" than "normal" vision. When a suggestion was made at this time about a surgery that could possibly restore his color vision, he turned it down, preferring to stay in the world he had grown used to rather than to readjust to the old world.

* Anarchism as a whole, to paraphrase the founder of anarcho-syndicalism Rudolf Rocker, can be thought of as a synthesis of an Enlightenment philosophy (classical liberalism) with a Romantic philosophy (socialism), incorporating the belief in progress and individual liberty from the former, and the support for social egalitarianism and cooperation from the latter. Hence the alternative name for anarchism-libertarian socialism. Though different strands of anarchism lean more towards one or the other. For example, individualist anarchists, post-left anarchists, and anarcho-primitivists are Romantics who tend to dislike the ideals of the Enlightenment and think that on the whole it's made the world worse and not better. On the other hand, social anarchists, anarcho-communists, and social ecologists see their ideas as originating in Enlightenment humanism and dismiss Romantic influences on the left-libertarian movement as mere "lifestyle anarchists", more interested in personal rebellion than effective social change.
* anarchist bombings which had rocked the US in 1919, due to one of the bombers accidentally blowing himself up. A flyer discovered by his body was traced to the print shop where Salsedo worked (an anarchist newspaper was printed on the premises). Salsedo was held by the Bureau of Investigation (precursor to the FBI) for eight weeks incommunicado, without a lawyer, and reportedly harshly interrogated. Whether he killed himself or was murdered has been a source of controversy. Some claim he chose suicide to avoid implicating fellow anarchists if he broke during interrogation. Others claim he did give names, so perhaps he killed himself out of guilt. There have been allegations that he was severely beaten by BOI agents during interrogation, and thrown to his death. Whatever the case, his fate was overshadowed with the arrest of Sacco and Vanzetti (connected with the same group) just two days later.

While it takes training to teach someone to use a sword properly you can hand anyone a gun and say "point and shoot". Sure more training makes a gunner better, but ultimately an inexperienced mook with a gun is more deadly then an untrained mook with a sword. Thus guns would allow a large mook army with little training to overwhelm a smaller, better trained, army using the more powerful magic and melee abilities. Of course for this argument you would have to assume that guns were mass-produced and not as rare as they are in the game.

Since the average human body needs roughly 2000 calories a day to stay alive, one would need to eat at least a half-pound of small pills (or a single giant half-pound pill) every day. This is because the four sources of calories (fats, carbohydrates, proteins, and, yes, alcohol) provide a set number of calories per unit of mass, so it's just not possible to make food that weighs less yet has the same calorie content. That does not factor in the necessary vitamins, minerals and fiber you would also need to stay healthy. * Anastasia, Anya/Anastasia the title heroine has a nightmare during the boat scenes at stormy night while things start off with her family swimming around happily in the water beckoning her to join them, they then suddenly turn into the bat-like demon minions of undead sorcerer Rasputin. It's made even more horrible by the fact that Anya is a sleepwalker, so when she watches her family's swimming from a cliff she's actually standing at the railing of the deck, and the demons are trying to make her fall into a certain death. The dream was caused by Rasputin in the first place, and so was the sleepwalking - he was trying to use his dark magic to make her commit suicide in her sleep. When Dimitri stops her from throwing herself into the water, that's when the spell is broken and the dream becomes a nightmare.

* Anastasia, the youngest of Nicholas II's four daughters, was labeled by many the trickster of the family and was known for her habit of mimicking people and making funny faces. Surviving cousins recalled that she was not afraid to bite, scratch, or pull hair to win games, and she tended to dominate over her more mellow older sister Maria.
* Anastasia turned it into a musical with Rasputin as an undead sorcerer with a talking bat sidekick, among other changes (the play had already been faithfully adapted to a 1956 film starring Yul Brynner and Ingrid Bergman).

There were some people that tried to clam they were the only son, Alexis, but she also never bought it because he had hemophilia and there’s no way he could have survived the injuries he would have sustained.
* Anastasia uses the extra time of a stage show to fill in aspects of plot and character. In particular, Dmitry and Vlad's pasts are more fully fleshed out, and the context of the Russian Revolution and its aftermath become integral to the plot, rather than incidental or glossed over.
* Anastasia version of Empress Marie and Sophie's final dialogue after Anastasia leaves with Dimitri, where Sophie laments that it seems like just yesterday she came back to them, and Marie replies "At least we had that yesterday. She has her

Despite this, Aztecs eventually did rise up against conquistadors, going so far as to kill Montezuma when he, on the orders of his captors, tried to quell the unrest that arose in the capital.

The book explicitly states that all angels are sexless by default unless they really want to make an effort and Neil Gaiman has said that while Aziraphale and Crowley were written as having a "love story" in the TV adaptation, them being an angel and a demon means that they don't subscribe to the same gender or sexuality norms that humans do.

* An Australian man discovered that his bank would allow him to overdraft his bank account without any limit. He used this to pay off his mortgage and then spent the next few years living it up. By the time the problem was discovered, he had over-drafted his account by more than a million dollars. He was convicted of fraud and sent to jail. He represented himself at his appeal and argued that while his actions were immoral they were not actually illegal under Australian law. * Anchorman: The Legend of Ron Burgundy had one of these as its main character, although he was a consummate professional until the events of the film take place.

* Anchorman: The Legend of Ron Burgundy has a name for his penis. It's called "the Octagon". He's also nicknamed his testicles: his left one is "James Westfall" and his right one is "Dr. Kenneth Noisewater." You ladies play your cards right... you just might get to meet the whole gang.
* Anchorman: The Legend of Ron Burgundy has Channel 2's news anchor losing both arms.
* Anchorman: The Legend of Ron Burgundy. Highlights include Ron jumping into the Bear Pit to save Veronica from certain danger (without thinking his plan all the way through) and a rival news anchor getting his (one remaining) arm ripped off.
* Anchorman: The Legend of Ron Burgundy high opinions of themselves. Large portions of the film involve the new reporter on the block, Veronica Corningstone, putting them all in their place while all of them but Ron fail to land a date with her. And Ron ends up losing even that due to his vanity and fury at being upstaged by her.
* Anchorman: The Legend of Ron Burgundy is called "Escupimos en su Alimento," which is Spanish for "we spit in your food."
* Anchorman: The Legend of Ron Burgundy is set in the 1970s and plays up the cultural dissonance of the age, including the rampant smoking and male chauvinism.
* Anchorman: The Legend of Ron Burgundy — "What? I'm on right now?... I don't believe you." Ron Burgundy in fact cheerfully and obliviously subverts this two more times in the movie, being compelled to say anything that's written on the teleprompter — something which takes a much darker (though still hilarious) turn when a mean-spirited prank causes him to say "Go fuck yourselves, San Diego" in place of his usual sign-off phrase.
* Anchorman: The Legend of Ron Burgundy. Needless to say, this trope was in full force with this sequel.
* Anchorman: The Legend of Ron Burgundy parodies this straight to hell. The two hosts hate each other; their on-screen banter is all scripted, and over the station credits they improvise:
* Anchorman: The Legend of Ron Burgundy popular with people who work at TV stations.
* Anchorman: The Legend of Ron Burgundy: Ron blows on a conch shell, then proclaims loudly "NEWS TEAM, ASSEMBLE!", only to discover his cohorts are right behind him.
* Anchorman: The Legend of Ron Burgundy, Ron Burgundy himself uses this phrase right before a fight:
* Anchorman: The Legend of Ron Burgundy, Ron fantasizes that Veronica is married to him, and works in an apron — and nothing else.
* Anchorman: The Legend of Ron Burgundy: Ron's dog is able to bark at him in both English and Spanish (though, Ron mistakes English spoken with a mild Hispanic accent for actual Spanish later so there's some doubt). He's also able to communicate with a bear later on, talking the bear into not attacking Ron.
* Anchorman: The Legend of Ron Burgundy starts thinking that he's dead and has to be convinced that he's still alive. In the second film, he meets an equally strange woman and they end up getting married.
* Anchorman: The Legend of Ron Burgundy talks about hookers and gets drunk with the director. Then, two actors who didn't get cast in the movie show up, and attack Ferrell. Then, after that, Lou Rawls, of all people, shows up!
* Anchorman: The Legend of Ron Burgundy, the character Wes Mantooth pulls it out in a battle of wits.
* Anchorman: The Legend of Ron Burgundy, the news teams come together for a fight and establish some ground rules:
* Anchorman: The Legend of Ron Burgundy; there was so much extra footage, as well as a completely different sideplot involving Symbionese-esque bank robbers, that they put together a whole new movie.
* Anchorman: The Legend of Ron Burgundy: The title character is supposed to be a big deal; people know him.
* Anchorman: The Legend of Ron Burgundy, when a brawl between rival news broadcast teams escalates to ridiculous levels as all the other stations in San Diego show up one by one.
* Anchorman: The Legend of Ron Burgundy, when Ron and Veronica's rivalry finally

spills over:
* Anchorman: The Legend of Ron Burgundy. When Ron tries to explain how his feelings for Veronica Corningstone go beyond the desire for sex, he decides to explain the feeling of love, by singing "Afternoon Delight", a song about two people whose relationship is mostly sexual.
* Anchorman: The Legend of Ron Burgundy When this story failed to strike a chord with audiences, all references to the Alarm Clock were removed, and a sizeable chunk of the film was reshot to include the familiar panda subplot. Also, Baxter (initially a large, masculine dog) became little, fuzzy and cute, adding another memorable element to the film.
* Anchorman: The Legend of Ron Burgundy, which is Spanish for "We spit in your food".
* Anchorman: The Legend of Ron Burgundy, who seek to "wake up" San Diego. The problem is, they don't know what they mean by "wake up", and they're incompetent to boot.
* Anchors Away": The victim was a journalist who had been demoted to vapid journalism duty thanks to newsroom politics, and the two news anchors were similar as well.
* Anchors Aweigh, is sometimes quoted as having the line "we sail at the break of day", but the actual line goes "we sail at break of day" (no "the" before "break"). And, of course, thanks to the lovely world of homonyms, the title tends to be misspelled as "away", not the correct "aweigh".
* Anchors Aweigh The Bouncing Souls had "Todd's Song", in which they sang: "I grab into my sixpack and raise a can to another fallen friend...With a heart so big that you can't hide you took the path of a a slow suicide. And all those feelings that you had, they killed you from the inside...I can't say that I don't understand. I know you tried. I'll see you when we all come home."
* Anchors Aweigh, two Navy sailors take a runaway kid back to his home, where he lives with his aunt. They think she must be old, and are surprised that she is about their age.
* Anchors Aweigh was released as a morale booster for the US Navy. While WWII was clearly coming to an end in Europe, it was still raging in the Pacific where the Navy was actively engaged against the Japanese. The opening sequence of the film is clearly designed to make the nation feel good about its naval forces.
* anchor) trying to segue back into the program. Garment explained in a telephone interview that he'd been in the studio with Rayburn, but facing away from him, having an argument with producer Parker Gibbs about Vietnam. He didn't know they had opened Gene's mic just before he uttered the magic word. (If you want to hear it, it's at the Earthstation1 website — look for "Truth in Reporting" under Broadcast Bloopers.)
* Anchorwoman Katie Killjoy is openly homophobic. She died in 1992, some time before LGBT people were widely accepted in mainstream society.
* Anchovie, AKA The Pizza Guy/Dude, was a young man that was deeply in love with Germaine, even though she always rejected him. He slowly became a stalker and even borderline rapist no matter how many times Germaine rejected him.

* Ancient Aliens", claims that the Voynich Manuscript is in an alien language.
* Ancient Aliens, Giorgio A. Tsoukalos, is a rare live action and western example. His hair seems to progressively stick up more and more over the years.
* Ancient Aliens. The ancient Bolivian city of Pumapunku, for example, is claimed to have been built 17,000 years ago with diamond-studded tools that didn't exist until the 20th century, though this is more of a case of the documentary's frequent number skewing and distortion of the facts; the actual city is less than 3,000 years old and is built with soft stones that the basic metal tools of the time

could chisel.
* Ancient Aliens theory of the week is that episode. If they say something sounding like it's explicit support for the premise, odds are that the interview was cut off just before the interviewee said something essentially like "...and some people say that, but it is, of course, bullshit."
* Ancient Aliens - wasn't done by humans; it was actually aliens behind it!
* Ancient and medieval folklore is full of these, and were often used to fill out the blank spaces of a map in a similar vein to "here there be dragons." One good example was the cynocephali, dog-headed humanoids said to live in the far-flung regions of Africa and India; supposedly, St. Christopher was one of these but turned into a human being after he converted to Christianity.

* Ancient Athens, in which people would hold a vote on whoever was seen as the worst threat to society. The selected citizen would then be banished from Athens for a period of ten years. Notably, the penalty did not include confiscation of property or any other loss of status; very often, the ostracized citizen was actually very well-respected, but had gotten into some kind of fight with another well-respected major figure, threatening the stability of the city, and thus one or the other had to go to keep the peace.

* Ancient Conspiracy of the vampiric elders, but the advancement of science and technology are frequently presented as the first and final hope for overcoming the oppression of these old monsters that cannot change or adapt. * Ancient Domains of Mystery, all teleportation is random unless you have teleport control (which is rare: either drink randomly from pools — which can cause dooming — or eat a blink dog that leaves a corpse). The teleportation intrinsic causes you to teleport now and then without being able to choose when, and there are also teleportation traps, wands and spell. All of these are random without the control intrinsic. Trying to aim controlled teleportation into a blocked area also results in a random destination.
* Ancient Domains of Mystery. At least they give you a moderate defense and armor boost while you search desperately for that scroll of uncursing.
* Ancient Domains of Mystery, but it can be worth it for classes with low starting PV who otherwise wouldn't be able to fight half as well clothed.
* Ancient Domains of Mystery. Even a handful of the (exclusively giant-sized) spiders present in the game fill up a cavern with obstructively sticky webs quicker than you can type "You hear a slurping sound." However, since the narrow, narrow corridors in the Caverns of Chaos are absolutely swarming with adventurers, robbers, demons, spirits and all manner of predators of all sizes, you can hardly blame the things.
* Ancient Domains of Mystery, ghosts and their variants have an aging touch attack. If you're an elf or a dwarf with a lifespan of hundreds of years, this isn't too big a deal. If you're something with a short lifespan, like a ratling or a troll, well...
* Ancient Domains of Mystery golems. Many of these also breathe fire. Oddly enough, most of them can be pickpocketed, even though fictional golems often don't wear clothes.
* Ancient Domains of Mystery has a Dorn Beast. Its exact looks are unknown, but it is grey and purple and black and grey and white and has sixty-three eyes. Well... its exact looks, seeing as ADOM is a roguelike, is a purple F. It can be safely assumed that some of the sixty-three eyes are not on the head, anyway.
* Ancient Domains of Mystery has hurthling (halfling/hobbit equivalent) cakes — cursed ones contain real hurthling and stun non-troll characters.
* Ancient Domains of Mystery has quicklings. They spew out their chat lines without any spaces. That's as close to this trope as it's possible in a roguelike. It might be justified - in the game, a "speed" value is assigned to all beings. The base speed of a player character of any race is 100. A basic quickling's is 400, and it only goes up with rank.
* Ancient Domains of Mystery. It's kind of amazing anybody's ever collected it at all.
* Ancient Domains of Mystery, may the gods help you if you accidentally teleport out of a shop without paying. Shopkeepers have absolutely no sense of humor.
* Ancient Domains of Mystery once you've broken the elemental lock. After that, you can only go onward, to glory or death (or quitting, but where's the fun in that?)
* Ancient Domains of Mystery scream will instantly kill your character if they're not deaf or put beeswax into their ears first.
* Ancient Domains of Mystery: Shops have finite inventories (randomly generated), and if you change your mind after selling them something, you can buy it back... provided you have enough extra cash to meet their higher sell price.
* Ancient Domains of Mystery, so Andor Drakon, the ElDeR cHaOs GoD, is the God of Evil. And the player can kill him to take his place.
* Ancient Domains of Mystery though, as the graphics are too simple to actually show the setting.
* Ancient Domains of Mystery to assume every basically genderless humanoid model is male.

* Ancient Domains of Mystery to pay the remaining cost. The cost may be fatal, which is to be expected in this game. Amusingly, however, a sufficiently skilled caster can pay for a healing spell from hit points and heal more damage than he just took. In addition, some older versions allowed casting spells from books and still have a greater healing rate than HP loss, without any other cost.

Both festivals also involved participants waggling sculpted phalluses in commemoration of the dismemberment (Osiris' member was replaced by a wooden one, as a fish ate it; Dionysos was of course a fertility god and also "the party god," so the association with phalluses came naturally).

He averts the Trope in that he never came back in some monstrously horrific form, but true to it in that afterwards he was usually worse off than he was previously. And green.

* Ancient Egyptians had a vision of the afterlife that was virtually identical to their mundane lives, which seems to indicate that their mortal lives were good enough if not almost perfect. To ancient Egyptian religion, LIVING forever is awesome.
* Ancient Egyptians poured libations to the dead, or at least to dead kings, since Old Kingdom times.
* Ancient Egyptians used this as punishment for grave robbing a royal tomb, which was considered to be the ultimate crime.
* Ancient Egyptians valued the symbolism highly enough that the hieroglyph representing a city, town, or settlement was a crossroad shape.
* Ancient Egypt) is dotted with the tombs of the kings of Khemri, who were buried with their servants to rule the afterlife. Unfortunately, the rituals went wrong, and they returned as skeletons and mummies. Now there's a single country with a few dozen legitimate rulers, each technically correct when they say they're the rightful king.
* Ancient Egypt. It was a collection of various spells for different Pharaohs printed on the walls of their tombs. These spells or "prayers" differed from individual to individual, although some were very similar or even identical, but each combination was unique and could only be used by the Pharaoh to whom they belonged. The spells were usually some form of magical protection against demons in the underworld, or incantations to help one reach paradise.
* Ancient Egypt of whom could be allowed to marry without rock-solid guarantees of their would-be spouse's loyalty.
* Ancient Egypt's tomb in the 1920's and the touring exhibit of his relics in the

* Ancient Egypt-themed planet looking over the plans for a new statue while Bender whips them. The whole gag is obviously contrasting the idea of modern, professional architects with the slave-fueled primitivism that we see in the rest of the episode and Egypt-related pop culture in general, but it's honestly a lot more accurate to how large Egyptian monuments were actually built. As far as modern Egyptologists can discern, the construction of pyramids really did involve a lot of skilled workers and professional architects, and those architects were held in very high regard.
* Ancient Egypt typically had a Great Royal Wife, who held the highest status of all the wives.
* Ancient Egypt we have Hathor, or at least her clergy, who is often shown to represent this - who equates frequent sex with spreading goodwill.
* ancient eldritch horrors which could obliterate planets with a mere gesture.
* ancient email a soldier-in-training receives a package and a note from her girlfriend, who she'd been fighting with. It's a toy armadillo and the note says "I'm sorry, hon. Arma dilling with some personal issues." The soldier breaks up with her. Using a lame pun to brush over a major fight seems to have been a last straw.
* Ancient Empires, affecting movement and defence. Bare ground and wooden bridges have no effects, grass/snow slightly increases defence, forest and hills moderately increase defence but also slightly reduce movement, mountains greatly increase defence and reduce movement, water greatly reduces movement (except for amphibious or flying units), and buildings greatly increase defence and (if an allied building) heal units each turn.
* Ancient Empires and its sequel. They are expensive but have the highest defence of any unit and high offence as well. Interestingly, they look different between games and also attack differently. The first game's Golems are humanoids made of rock that attack by rolling into a ball, while the second game's Golems are round boulders with a single eye that attack by slamming the ground.
* Ancient Empires, and their attack poisons their target (inflicting a debuff that lowers stats for several turns). They first show up in the middle of a forest and are referred to as forest spiders, suggesting that this is their original habitat.
* Ancient Empires has archers do additional damage towards wyverns (dragons in the sequel), the only flying unit. Combined with their ranged attack and much cheaper cost, they serve as an effective countermeasure to what is otherwise the most powerful unit in the game.
* Ancient Empires of Wisps. Though not particularly powerful, they can be produced in large numbers and are useful for missions where you don't have a castle to buy units from.
* Ancient Empires. They can attack by throwing magic at the enemy, but this isn't their primary purpose (their attack is weaker than a Soldier's despite being more expensive). If they are next to a gravestone (a structure produced when a unit dies) they can raise a Skeleton from it, consuming the gravestone in the process.
* Ancient Evil: An evil force that is thousands of years old or even older
* Ancient Evil by a Bulgarian Army expedition, it goes on a rampage, killing any and all humans that it comes across. Thankfully, a team of Army Engineers blows the cave it was found in, burying it once more.

* Ancient Fruit, They're blue-coloured fruits grown from ancient seeds that according to the description have been dormant for eons, they're the third most valuable crop, and also inedible but can be used to make Jelly or Wine which sells for an even higher price.
* Ancient Future Trilogy. The notion that Jesus might have been one of the Chosen Immortals is brought up, but the cast decides not to pursue it due to the trickiness of the subject. Then addressed indirectly in the sequel trilogies.
* ancient God, and Zeddemore muses that the ghosts are actually souls who return

* ancient gods have their own entire otherworldly realm, but find themselves repeatedly forced to pass through ours. Unusually, traveling to the other dimension and back is easy enough that Dirk is able to develop the knack as soon as he realizes it's actually possible.
* Ancient Greece and Ancient Rome for how romanticised and glorified they're in pop culture. People praise them for being the cradle of western civilization and providing the world with philosophers, theatrical plays and the Olympic Games. And then, you have those who will remind you of its bad side: class systems, people dying early of diseases we nowadays have proper treatment for, slavery, democracy only for rich upperclass males citizens, bloody battles etc.
* Ancient Greece and Rome produced much pederastic poetry. Particularly well-known authors in this vein were Anacreon, Theognis of Megara, Theocritus, Meleager of Gadara, and Straton/Strato of Sardis (ancient Greece), and Horace, Martial and

* (Ancient Greece), can use very powerful spells using few (and sometimes only one) word, while modern magic users need one minute to conjure magic of such power, it's no wonder that her "High-Speed Divine Words" skill is at A level. Even the exceptionally rare True Magic (which cannot be learned and only randomly crops up as the inherent trait of some lucky magus) can't compare to magic from the Age of Gods, as it tends to be extremely specialized whereas Caster can use her ancient magic for basically anything she pleases.
* Ancient Greece had it very uniquely compared to contemporary examples for quite a while in its time: all citizens were expected to serve in military campaigns-but citizens were of the middle-class and the lack of a standing army concept in the area ensured that conflicts would be short (usually a single battle) and only took place in the summertime since it wasn't feasible for city-states to maintain an army and keep their city's lifeblood away from their day jobs for any longer. Many city-states (such as the Italian communes of the middle ages and Rome in its early days) followed their example.
* ancient Greece itself, since some stories have Heracles freeing him from the torment that Zeus put him through, and his punishment becomes merely symbolic by having to wear a metal ring on his finger to represent his chains.
* Ancient Greece respectively. In the related Cypriot script that was used until the 4th century BCE, /l/ and /r/ were written with two sets of syllables instead of one as in Linear B.
* Ancient Greece she used to live in when she was young. She gets referred to as "the Thessalian" by several of the supernatural characters.
* Ancient Greece, slave revolts were especially feared by the Spartans, who oppressed the helots in an annual tradition and since the helots outnumbered the Spartiates by a sizable number, they more or less lived in constant fear of a slave uprising and so rigidly maintained a brutal and conservative regime to prevent it. Despite this many helot uprisings happened annually.
* Ancient Greece stay there day and night to be on call for a crisis), but its festival calendar (used for religious and agricultural purposes) was a 12-month lunisolar calendar, and every other state had a different (and similarly crazy) scheme. Some historians tried to cut through this by using Olympiads, based on the Olympic games.
* Ancient Greece which was once Thera, an island city-state in the Aegean Sea, very advanced compared to its neighbors, even possessing indoor plumbing, but erased (along with the middle of the island) by a volcanic explosion about 36 centuries ago.

* ancient Greek and Roman comedy, where his lacking grasp of the Greek language results in the Birds hornswoggling the Gods.
* Ancient Greek clothing can be seen as the forerunner to the Roman styles. (The Romans borrowed a fair amount from Greece.) New Olympus can be seen as sporting the latest fashions that they knew of.

* Ancient Greeks often dedicated captured shields and armor to temples. Spartan boys were regularly shown the piles of captured gear at the temple of Artemis.
* Ancient Greeks went so far as creating a goddess who embodied this trope: Nemesis, the goddess of retribution for evil deeds and excessive pride.
* Ancient Greek texts described the "cameleopard", a creature with the body of a camel and the markings of a leopard. What they were actually describing was the long-necked, "spotted" giraffe.
* ancient Greek theatre features Pentheus angrily confronting a disguised Dionysus verbally, and Dionysus ultimately convincing him to dress as a woman to spy on the Bacchae, luring Pentheus to his (offstage) violent death.
* Ancient Greek tunics and dresses were open at one side. While there was enough fabric that nothing was actually going to show, the suggestion of it was always there (particularly on a windy winter day). Presumably, this was just how they liked it. The men's tunics invoked this trope much more strongly than the women's dresses because the tunics were cut no longer than absolutely necessary. Again, they did wear underwear so there was no danger of actual nudity: but if the wife had done her job correctly, there would be a strong suggestion of it. Greek painting and statuary also made heavy use of this trope: particularly in depictions of heroes, gods, and goddesses. Paintings and statues of course
* Ancient Greek warriors had a distinctive battle cry. They would flip their tongues rapidly, at very high pitch (and, since there could be hundreds of men all shouting at once: earsplitting decibels) producing an "alalalala" sound. It was perhaps intended to sound like an eagle, or maybe they just realized it was scary. The Latin word for "to scream" is "ululare": suggesting the technique was very effective. Caused their friends to consider them
* Ancient Grome, pointing out they were diverse and complex societies, whose values were totally alien to medieval man, let alone early modern man.
* Ancient Grome. Terra, the Roman version of Gaia and the Earth Mother herself, is said to marry... Ouranos, the Greek version of the deity that Terra actually mated with... Uranus.
* Ancient Grome: The Romans themselves would place plays in Athens or other Greek cities, to avoid slandering the state, but leave everything else Roman-like.

* Ancient Magic, you destroy the source of magic and cause all magical things to fade from the world.
* Ancient Mai, a miniature senior citizen type, has an incredibly sharp intellect

and deduction capabilities. What is known is limited, but when the hero Harry Dresden sees her escort of battle harden Wardens, magical soldiers trained to kill other mages and dark things, one is holding her umbrella. She has made guardian statues able to detect dark magic.
* ancient major general? The Roman emperor Gallienus, according to Gibbon: "was a master of several curious but useless sciences, a ready orator and an elegant poet, a skillful gardener, an excellent cook, and most contemptible prince. When the great emergencies of the State required his presence and attention, he was engaged in conversation with the philosopher Plotinus, wasting his time in trifling or licentious pleasures, preparing his initiation to the Grecian mysteries, or soliciting a place in the Areopagus of Athens" (Ch. X)
* Ancient Median and Persian nobles wore a riding coat both at court and in battle called the
* Ancient men believed in a stone called a Draconite, which had to be removed from a dragon while it still lived (sites of origin being rumored to include the brain and the heart, this was no simple task). True to the trope, draconites were believed to have magical powers.
* Ancient Minoan dresses were topless by default. To be more descriptive, the most common costumes for Minoan females consisted of two types: an every-day dress that consisted of a full, ankle-length skirt, and a loose, short-sleeved blouse which was fully open in the front; and a ceremonial dress consisting of a long, mulch-layered skirt, and a tight bodice cut to fully expose the breasts. Minoan women apparently didn't believe in hiding their assets.
* Ancient Order of Protectors. Since then, the Pentius Oculatus has risen up to replace them in service to the Emperor.
* Ancient or exceptionally powerful vampires can only gain sustenance from the blood of other vampires, which is seen as horrific even in undead society. At that point, resting in Torpor for a few decades until their blood weakens to manageable levels is usually the best option, though some learn how to direct their Horror Hunger at
* Ancient people often classified animals differently than we do today, leading to this trope. Dolphins and other cetaceans were considered fish, which we obviously now know is wrong and the fact that all cetaceans are mammals. Bats were considered
* ancient Persian military. The Scythians, a neighboring people, also apparently had women warriors who fought alongside men with the same armor, weapons, soldiers' tattoos, and burial rites.
* Ancient Phoenician-influenced Sardinia could count. They had iron weapons, conquered Italy and southern France, and had huge stone fortresses long before the Middle Ages. The end of the Sardinian civilization also coincides with an eruption of Vesuvius, plus the geography and political state of the island could match the description.
* Ancient Relics that have been reduced to planet-wide ruins. They can be refurbished at great expensive, but their real value is in the archeological artifacts left behind.
* Ancient Roman gladiators would train using heavy swords, then were given the actual, lighter weaponry when fighting in the Colosseum, proving this trope
* Ancient Roman military training, that included the soldiers exercising with an equipment twice as heavy as the actual weapons and armor and the trainers beating their soldiers with vine sticks was so harsh that the casualty rate was actually higher than during actual combat (hence the vine sticks: they caused harsh pain but didn't cause actual damage), leading to the motto "Bloody training and bloodless battles." And then we had the infamous centurion Lucilius nicknamed Cedo Alteram ("fetch me another"), a
* Ancient Romans entirely. Oddly enough, until the 1st century BC, any Roman publicly admitting to being interested in Greek culture was considered abnormal. Even Hadrian (2nd century AD) was made fun of for being a bit too Greek (his nickname was Graeculus, little Greek). Meaning that while there was a clear Greek influence, no Roman would be caught dead admitting it.
* Ancient Rome. At any rate, it is referenced in the Cambridge Latin textbook

series with a similar outcome to Mithridates.
* Ancient Rome at Tarquinia (~60 miles northeast of Rome), which depict mostly olive-skinned people with dark eyes and hair (as well as other typical Mediterranean features such as curly hair and large noses), plus a smattering of pale light-eyed blondes/redheads, matching modern Italian looks.
* Ancient Rome certainly held this view. Not surprising, considering that, according to legend, Romulus, the first king of Rome, was the son of Mars, god of war and
* Ancient Rome - composed of every male citizen without regard to his property - gained a measure of political clout.
* Ancient Rome gathered the majority of its riches by beating up neighboring countries and instituting colonial taxation.
* Ancient Rome). In coastal communities, fisheries often have the same effect on the local economy; within the US, for example, New England, the Gulf Coast, and Alaska are all famous for production of fish, crab, shrimp, lobster, and other seafood.
* Ancient Rome. Individual pagans, largely priests, were put to death for practicing their religion, which was forced underground just as Christians had been. This was echoed in many countries that were then converted to Christianity in later centuries too-the choice of becoming Christian was often involuntary, with kings who had taken up the religion afterward compelling their subjects to as well.
* Ancient RomeIn fact, one version of the story of Romulus and Remus claims that their mother was a Vestal Virgin seduced by Mars, and she was sentenced to this fate by her uncle, who also orders the death of the twins by exposure. Both means would avoid his direct blood-guilt, but her sons are luckier; the servant tasked with killing them can't bring himself to do so, and leaves them by the banks of the Thebes, where they are found by Lupa.
* Ancient Rome in particular took this to the next level by not only casting British and Irish actors for all the Romans, but bringing a few actual Italians in... to play Germanic and Celtic characters. The same treatment also extends to Greek and Egyptian characters in other media with very few exceptions.
* Ancient RomeIt's also worth remembering that the training of a gladiator was expensive and it didn't make sense to send them out to be slaughtered first time out if you could help it. Of course, the same did not apply to the criminals condemned to the arena, who were expected to die and very much fall within this trope.
* Ancient Rome itself is often considered by contemporary media to be a World of Ham, what with
* Ancient Rome. Needless to say, Victorian, Romantic, Modernist and 60s Art movements are all seen and invoked the same way.
* Ancient Rome's favored tactics for conquest was to promise a local chieftain that he would be able to rule as a petty king over the conquered land if he agreed to provide information or troops to the Romans. What made it particularly effective was that the Romans punctiliously kept their word; submit, and Roman armies would protect you from others; don't submit, and the results would be very messy and very bad for you.
* Ancient Rome, so gladiators inevitably featured in a couple of his paintings:
* Ancient Rome: the former caused the phalanx to be trampled by the Roman phalanx supposed to hold it down, and the latter ended with the broken up phalanx trampled by the Romans advancing in compact formations.
* Ancient Rome ('the Tarpeian Rock is close to the Capitol'), a warning that one's fall from grace can come swiftly.
* Ancient Rome; this one was delicious if you didn't mind chewing on the bones.
* Ancient Rome ("throw to the beasts"), in which the victim was unarmed and possibly fettered.
* Ancient Rome took place at a Senate meeting (actually at Pompey's Theatre, acting as a temporary meeting place) on March 15, 44 BC. His conspirators chose to kill him there precisely because, in an attempt to prevent this trope, senators were forbidden by custom from carrying weapons or bringing in bodyguards, so he would be

totally defenseless.
* Ancient Rome, whether or not a general got a triumph was dependant on how many thousand enemies his army had killed.
* Ancient Ruler Dinosaur King DKidz Adventure when released in English.
* Ancients also had phasing technology, but only Janus was shown using it. Apparently, Ancient, Asgard, and Goa'uld technology is much easier to figure out than that. Which is strange, as the Tollan are human, while the others are alien. You'd think they would have similar thought processes.
* Ancient Shuriman for the Black Rose cabal. Like Warwick, she has mixed feelings about the transformation—at first, she absolutely despised it, and there are still signs that she doesn't entirely approve of her new form. But the chance to use that power to serve the Black Rose and simply *take* what she wants directly instead of having to scheme for it is proving quite appealing...
* Ancients option: the building could plausibly contain automation designed to repair its own death traps. As for the Star Maps, those were designed to repair themselves.

* Ancients who would have no reason to put one on a world that would kill you the second you exited.
* ancient symbol for fascism since the late 18th century (before fascism was even a thing people could imagine).
* Ancient tech is purposely made for this trope due to the fact that many operate via a wireless neural interface. Anyone with the necessary gene can activate it by just thinking at it.
* ancient technique to fight their enemies with fluid grace. They can also upgrade their pistols to hand flamers or inferno pistols for extra power.
* ancient. They are said to possess "unfathomable" knowledge from the Dawn Era, the earliest days of creation before linear time existed as a concept.
* Ancient Tomb: Tombs, burial chambers, sepulchers, mausoleums, charnel houses, ossuaries, catacombs, crypts, sometimes even dungeons.
* Ancient tropical kingdoms such as the Aztecs and Mayans in South America and numerous empires in South East Asia often portray their prominent figures shirtless.
* ancient weapons of Admiral Robert April in the final two issues "Thanatos" and "Nemesis" is left unfinished.
* Ancient ZPM module is plugged into a Wraith hiveship (already one of the largest ships in the universe), it grows to enormous proportions, thickens its hull to rival Ori shields (weapons that cut through Ori shields like butter barely dent the abnormally thick super-Hive armor) and grows larger-caliber energy weapons, turning it into the most powerful ship in the known universe.
* Ancienverse: Both Zinnia and Dalton serve as this for "Teamwork" and "Turbulence", respectively. Lusamine, as per the games, is this for the entire "Alola Trilogy".
* Ancienverse, DARC regards the main universe as useless and expendable.
* Ancienverse: Diantha meets with Travis in prison to obtain information on DARC's plan.
* Ancienverse: Guzma resorts to chewing the scenery with his dialogue whenever he's in a scene.
* Ancillary Justice and consider it odd that others don't do the same.
* Ancillary Justice and its sequels, loves choral music and often sings to herself. Unfortunately for everyone around her, she has a terrible voice.
* Ancillary Justice are benevolent to some degree. In Ancillary Mercy, the Station AI has protecting its inhabitants as its top priority, and, within the limits of its programming, actively antagonizes people who harm its inhabitants, for example by broadcasting violent acts that were intended to take place in secret on TV.
* Ancillary Justice behave a lot like Space Romans: they are a vast empire that's expanded by conquering systems, offering the locals Radch citizenship (neatly assimilating later generations), leaving around a local Radchaai governor and army,

and folding local pantheons into the Radchaai one. They even have a client/patron system modeled on the Roman one.
* Ancillary Justice, being completely unaware of human culture, biology and psychology, tend to act out in a funny way as a result. On the flipside they serve as a reminder of just how terrifyingly alien the Presger are, in that they're able to make 'humans' to communicate with that still act in some ways terrifyingly inhuman.
* Ancillary Justice bodyguards being female, at least grammatically. Since the protagonist's culture also doesn't place much importance on biological sex as a means of discrimination, it can be assumed that about half of the bodyguards are, in fact, female.
* Ancillary Justice) can become citizens and thus proper people, but only through being conquered by the Radch.
* Ancillary Justice created to communicate with humanity after having learned, through trial and error, how to pull humans apart and put them back together again. Though they look human at first glance, their internals and especially their psychology are anything but, and most humans tend to give them a wide berth as a result.
* Ancillary Justice dominant religion's view is that only humans can be pure, so impurities introduced to the body reduce your humanity. People who are sufficiently altered are considered so damaged they might as well be aliens. Not that that stops anyone from the Radch getting audio-visual implants installed for pure practicality.
* Ancillary Justice expansion, giving her an odd sort of functional immortality.
* Ancillary Justice is an interesting example, where it's obvious that there is a lot more to the story by the first book (certainly more than just "mostly resolved but with a sequel hook"), the storylines to the second and third books are tied together quite closely.
* Ancillary Justice is effectively a Rogue Drone, being the last remaining fragment of a many-bodied starship AI (that had already begun to develop its own sub-identity even before the rest of itself was destroyed) which has grown into its own unique persona and gone off on a highly-personal revenge quest.
* Ancillary Justice. Note that Breq is not quite an example of this trope because she lives in a society that does not have gender, despite the novel using the female pronoun for everyone in that society.
* Ancillary Justice on military ships towards their crew, such as the protagonist Justice of Toren.
* Ancillary Justice or they use it to dull emotional trauma. If used for the latter it can be incredibly habit forming and addictive.
* Ancillary Justice soldiers called ancillaries, hears some children playing a game and singing about them.
* Ancillary Justice. The protagonist is one of the latter until her ship and all but one ancillary body are destroyed.
* Ancillary Justice. The protagonist is one such AI that has been reduced to a single remaining body.
* Ancillary Justice 'translators', their way of thinking is completely alien to ours and they don't seem to understand individuality or personhood, or at least not in a way translatable to us.
* Ancillary Mercy. Interestingly enough, Presger translators can be killed by rather mundane means otherwise.

This still has about a 26-second error per year, but it will be a long time until that matters enough to change our calendar.

Antonio in particular was reputed to be so good that anyone who was not Juan would end up dead dueling him. They also both had a hot-blooded streak: Antonio's temper was so explosive that his men were scared of him (especially when his face contorted so much he got the nickname "Cafre" for it) and Juan, though calmer than his brother, murdered his wife and mother-in-law.

Combine that with the fact that alchemy and enchantments have their own perks and can make each other stronger, and the fact that smithing can be buffed by skills and enchantments and alchemy, and you can potentially kill the final boss in 10 hits by stacking enough bonuses, and kill the final boss of the final DLC so fast that it literally breaks the game because it's scripted to be a multi-stage boss fight. * And also Tyler Reks's finisher, which is called the Burning Hammer yet is notably different from Kobashi's move.

* And a mimed banana peel causes a nasty accident in "Daylight Robbery on the Orient Express".
* And a minor example from the third game: In the section where you play as Edgeworth and talk to Iris for the first time, you'd typically ask the questions in order as laid out for you. Doing so triggers a Psyche-Lock, cluing Edgeworth in that Iris is hiding something. The next dialogue option has him directly ask Iris if she's the murderer, and Edgeworth figures out she's telling the truth because the psyche-locks are absent. However, if you ask her about being the murderer FIRST (without finding out about the psyche-locks) Edgeworth's internal monologue reveals he, rightfully at the time, has no way to actually know if she's lying or not.
* And a minor example is an unknown soldier from the first movie who rings the bell to call Norrington back to the besieged ship. Injured as he was, the guy could have easily played dead, but he did the one thing that was most likely to help his comrades while being almost guaranteed to get himself killed.
* And a more minor Spidey foe is the Squid, who is essentially a slender, not especially bright, and organically tentacled Doc Ock.
* And a motorbike, after admitting to the owner that the Ferrari he just totaled wasn't his and neither was the guy's bike.

* and) and, more intriguingly, by being one of the few members of said rogues gallery to seriously reform (he was only 'defeated' in the first place after he surrendered in remorse, and later served his time and rebuffed a gangster's attempt to recruit him once he got out). His final appearance implied that he might return again, using his powers for good, but he never did and has seemingly vanished off the face of the planet.
* And And that Alpha Centauri B's perihelions (in the game) are responsible for significant climate changes that result in Mind Worms attacking your bases even more ferociously than usual?
* and and the Holy Roman Emperor, and this trend continued well into the Elizabethan Era.
* And an earlier book mentioned the shortest reigning King of Ankh-Morpork, who was assassinated only 1.4 seconds after being crowned. Presumably at that point he was declaring his epithet, as he is recorded as King Loyala the Aargh.
* And an earlier episode had an ad for "Dr. Porkenheimer's Boner Juice", which proclaimed, "If you experience an erection lasting more than twenty-four hours, call a friend and brag about it!"
* And an episode where Xandir acts as Toots lover for her fat camp reunion.
* And a new guy also has those for Banner. Good news: his link with Hulk has been concealed to the public, so nobody knows it was him. Bad news: unlike his previous Hulk change, now the "Hulk cells" remain and formed a permanent bond with his system.
* And Angels also play a role in many New Age believes, generally seen as the most common pop cultural representations of benevolent good winged humanoid. Similar to other traits from different spiritualities (like karma, chakras or cristals) is re-interpreted into a more post-modern way with little to non connection with the original biblical conception of angels (who are more closed to be monsters and who can kill sinners and destroy cities in attacks of wrath). If it gets too independent and too strong, your reflection will detach, jack a bunch of your troops and go off on its own campaign, and you have to chase yourself across the land before you do something (both of) you regret.
* And an... odd version later: Hermes was the one that approved Bender in the production line (even though he shouldn't have been), making him, in a bizarre sense, Bender's father.

The only cure was a rare type of gem called Caring Crystals, which Grumpy Bear had to collect while the others held back the bubble onslaught with a force field.

He promptly stopped reading any comic books or playing with any toys, and when he got married, later, refused to let his son do either of those or play outside. When his wife divorced and placed him with a restraining order, he understood he was in the wrong, and blamed Laughing Larry for making him that way, deciding to kill him with a lethal

back.
* And another, in which Fry is trying over and over to tell a joke to his date and Laurie is a waiter who enters to interrupt every time he approaches the punchline; he eventually reveals that a concealed microphone enables him to do this.
* And another is our ability to learn from the past, namely by recording our ancestors' innovative achievements and building on them in turn. Apes and monkeys have a lot of similar advantages to humans, but in thousands of years, they're still using the same techniques to get fruit, bugs, etc. While in thousands of years we've gone from the invention of the wheel to space travel. It's called the Ratchet effect.

* And Another Thing by Eoin Colfer, a book continuing the Hitchhiker's Guide series, is littered with references to the books Douglas Adams wrote. It is a fun book with some interesting ideas, but it could be convincingly argued that it contained far more call-backs than were sensible for no other reason than to cater to fans who simply have to see the phrase "Pan-Galactic Gargle Blaster" on every other page.

If the launcher is about to explode or otherwise fail catastrophically, the crew capsule is detached and the LES activated to put it at a safe distance. The LES is typically jettisoned when the spacecraft nears orbit. This has only ever been used for real once, with a couple of other similar aborts:

* And in a later sketch about a citywide wave of uncontrollable vomiting. The paper stops spinning, and the camera pans right to show the guy who's been cranking the turntable it's on — and who is now retching violently.
* And in a "Marvel What-The" parody, with Wolverine putting his claws to good use against the Punisher.
* And in an earlier episode. He does ask for paper at first, but of course the rest of the crew have no idea what paper is.
* And in an earlier episode where Courage and Muriel are looking on the internet for a recipe to cure a sick Eustace, Muriel accidentally presses a button on the keyboard and opens another page. Hers and Courage's reaction combined with the accompanying
* And in an early episode, Charlie scribbles all over Teddy's face when she was

forced to sleep in Charlie's crib before her big audition the next day. Ironically, this actually helped her get the part. Teddy lampshades this during her video diary at the end of the episode.
* And in an episode that addresses the destructive nature of Buffy's
* And in an episode that depicts the human race a million years in the future, humans are leaving the Solar system as the Sun is about to go nova, implicitly
* And in a nested example of this, even these will no longer accept bulky old-model televisions because they simply
* And in an even earlier strip, he actually gets a "B" and fears that his dad will punish him because of it.
* And in an even more interesting note, another Paul - Paul Caravello - would join the band to replace Peter Criss as drummer. You probably know Mr. Caravello by his stage name, Eric Carr.
* And in an example that both inverts this AND plays it straight, the
* And in an interesting (read: mind numbingly stupid) twist, "cis". It's a Latin prefix which means the opposite of the Latin prefix "trans", and became used first in academia to have an inverse but equal term to "transgender", the same way as "homosexual" and "heterosexual" work. It then spread outside academia. However, since most people weren't aware of "cis" meaning the opposite of "trans", using "cisgender" leads to a lot of people of a certain kind flipping out in rage declaring they're not "cisgender" and considering the word "made up" because they don't understand what the word means (or don't care to). Even when the term wasn't in common usage and hadn't been for 2,000 years, this issue still happens.
* And in an inversion, Brox discovers a spell that turns inanimate objects into living creatures.
* And in a non-canon story, a filly created via magical accident who shares traits of Trixie and Twilight inherits Trixie's odd culinary tastes — she refuses to eat a bowl of soup until someone adds a large amount of mustard to it, then drinks it all.
* And in another, a juror dies in the jury room. Turns out that he was honking off the rest of the jurors with his attitude, and had happened to mention his peanut allergy (loudly and repeatedly). One of the others then decided to lace his chili with peanut butter to bring him down a peg or two, not appreciating the potential consequences of his allergic reaction.
* And in another case, a disgruntled coworker was caught on hidden camera
* And in another episode, an investigation on a murder led to the discovery that the suspect, a married man with a teenage daughter, had seemingly had incestuous sex with said daughter (that had left her pregnant) and so the investigators theorized that the murder (of the man's wife) had been because she figured this out. It then turned out that

* And in another episode, his phone is hooked up to a tape machine that plays a recording of him saying the catchphrase when someone calls.
* And in another episode, House preemptively shut down any allegation of racism Foreman might have been about to make about him. After asking if he's been picking on Foreman worse lately, to which Foreman replied "yes", House stated "that rules out the race thing. You were just as black last week."
* And in another episode, it happened within the usual exchange, but with Brain providing the final example. After Pinky suggests that they package their trading cards with something pink and chewy that everyone likes so that people will buy them, Brain sees the obvious answer —
* And in another episode, "The Boys' Night Out Job", Nate talks to Elliot and Hardison on a cell phone, while at the podium at an Alcoholic's Anonymous meeting, in front of a crowd of other people who think he's talking to his ex-wife.

* And in another episode the family goes shopping at a 33-cent store. Marge finds a bunch of her green dresses for sale: "33 cents? I paid almost double that!" She then puts a bunch of dresses in her cart, stocking up.

* And in another episode The Monarch forces a prostitute into a deathtrap gauntlet. Featuring the polar bear from Lost.
* And in another episode when Graham comes up with another idea that's Crazy Enough To Work.
* And in another episode, when Marge was doing the tests to join to the Springfield Police Force, in one of them, she tried to climb a wall, but she has problems with it. Chief Wiggum notices that all the women had the same problem, that they don't use the door to cross the wall.
* And in another episode, when the guys turn on the TV to find it's already closing down for the night:
* And in another episode where the janitor accuses J.D. of stealing toilet paper:

* And in another example, a sicko who confessed to poisoning ice cream treats (one of which killed a boy) gets off because the DNA evidence that led NCIS to him is ruled inadmissible. Shortly thereafter, he gets into his car and is garroted to death by a bailiff who's tired of seeing killers like him get

* And in another one, Skrulls invaded the Earth. The Human Torch sacrificed himself to defeat them. Alicia gave birth on the last page, and comments on how she (though blind) could tell how he resembled his father.
* And in another sketch, where someone is undergoing persuasion to quit the Masons, we see what he's seeing as a voice-over asks "do you want to stop being a Mason?". The image he's looking at is repeatedly replaced for brief intervals with an image of a naked woman alongside a large "YES". When the sequence is over,
* And in another strip where John, Garfield and Odie go on a picnic and Odie "accidentally" locks the doors of the car, "trapping" himself inside while Jon and Garfield try to instruct him on unlocking the doors. The final panel has it pouring rain, Odie enjoying the picnic meal while listening to the radio, and Jon and Garfield stuck in the rain wondering if Odie's not as dumb as he appears. In the
* And in another two strips, Hobbes tells him that he has unique words for different smells, such as "snippid" for burning leaves. When Calvin asks what the word for his smell is, Hobbes can't resist saying "terrible", causing Calvin to chase after him.
* And in another vein, the Elder Wand itself may be an item promoting this. As a wand of immense power, nigh-unbeatable by any challenger who is not the rightful wielder of it, its owner would consistently grow stronger and stronger (barring an opponent killing its owner in a secretive way, which was common occurrence) until in theory, it would reach the pinnacle of its power (a wielder who would never be beaten and die peacefully) where its power would vanish as there would no longer be a rightful wielder.
* And in a positively whimsical aversion, Dumbledore claims to have a scar above his left knee in the precise shape of a map of the London Underground.

* And in a reversal, Poe's inability to see Admiral Holda's legend (stemming from off-screen battles) when he meets her in person and be able to trust that she knows what she's doing leads him to come up with a plan of his own, which is the centerpoint of his and Finn's arc in the movie.

* And in a similar vein, the now-defunct Tangerine Cafe in Louisville proudly advertised itself as having the "Worst Food in Kentucky".
* And, in a strange if amusing coincidence, wendigos in the game (as well as the sasquatch and yeti that share its wireframe) are among the only creatures in the game that actually have functioning, individually-rendered toes instead of sock-shaped feet with the toes painted on.
* And in a strange inversion, an actor playing a Donald Rumsfeld stand-in features in one episode of NCIS, but the scene is shot to make it look like crappy stock footage of the real Rumsfeld.
* And in a strange variation of Wife-Husbandry in the same novel, Elizabeth was adopted by Victor's parents in the hopes that she'd marry Victor when they grew up. So this isn't so much adopting a child to marry her yourself, but adopting a child so she'll marry her brother.
* And, in a subversion, or lampshading or.. something, one will occasionally find amidst the deranged wall-scrawl such oddities as, 'Sorry, family emergency. Where were we again?'
* And, in a very meta twist, characters on the Discworld who are well-versed in those stories can predict the future and act with imperfect knowledge because they know the Discworld will ensure that events unfold according to the story. More of a mythropic principle. On the other hand, it is very easy to cast yourself in the wrong role and have it rudely turn around on you. Are you the plucky tailor who kills the troll with luck or one of ten peasants the troll has killed before the knight arrives and slays it?
* And in between generations, there are Pokemon that are rare or even unique in one game or region, but more common in another. For example, Eevee was only obtainable as a gift in Generation I, but can be found in the wild in certain areas starting in Generation IV.

* And in case you were wondering by this point, yes, you have these as well, although generally a lot less than the mutualistic/commencialistic symbiotes as your immune system tends to wipe out the parasitic ones before they become too uppity. Most infectious diseases are caused by parasitic symbiotes and the immune response to them.
* And in chapter 165 this is Naruto's response upon finding out that Kabuto is actually a sound village spy and Orochimaru's subordinate.

This often leads to specialized variations on the average Kroot body plan, but continuously eating too much of certain species risks a permanent regression to a bestial state. Several subspecies have been formed this way, like the vaguely-canine Kroothounds, apelike Krootoxen, and carnosaurid Knarlocs, which are now used as beasts of burden and battle.

The entire load of liquid hydrogen and LOX was released and was quickly consumed in a large fireball, but what actually destroyed the shuttle was that it was turned sideways during near maximum aerodynamic forces, not the fireball. The largest components to survive were the boosters... and the crew compartment.

* And in Swedish oral tradition, if a mother killed her infant, the ghost would remain around the place where she had disposed of the body. For some reason it is normally depicted as a three-year-old, rather than as a newborn (when it doesn't appear as a bucket or box, supposedly what it was buried in). Sometimes it is said to demand vengeance on its mother, sometimes it wants the body to be put to rest in a proper churchyard, and sometimes it just... hangs around and scares people. And sometimes it kills mom and then goes on to kill as many other people as it can until it finally encounters one with the bravery, the occult lore or just the plain human compassion to give it what it wants: a name. There's a folktale about the Lapp (a magical people to the Swedes) who named the baby's ghost and in so doing put it to rest. The name for this type of ghost is an utburd.

* And interestingly, the album Vespertine was released during the beginning of their relationship, when she was head over heels in love with him. The result is a very intimate and sensual work. Vulnicura, on the other hand, is intimate also, but for a different reason: it deals with such a personal subject (a break up) and the lyrics detail her anger and grief over the end of their partnership. Vulnicura would then have a successor by the name Utopia, which is widely rumoured to be about Björk's newfound love with Robin Carolan, the owner of the label Tri Angle Records. They apparently share their own songs with each other and play DJ sets together.

* And it was a failure. The troops were scattered, and the 1st Airborne were dropped far away from their target (the critical bridge over the Rhine at Arnhem, the whole reason for the operation). There were more German troops nearby than

expected, namely two Waffen-SS Panzer Divisions resting up (intelligence from local resistance forces on German troop concentrations was received by the Allies, but was ignored); the Allied intelligence thought the only troops at the area would be just secondary quality, such as Volksgrenadiers. The 1st Airborne managed to take the bridge anyway, but they were eventually overwhelmed and forced to surrender before the Allied relief forces could arrive. Despite the taking of several other bridges leading to Arnhem by the rest of the Allied airborne units, the primary objective of the operation, capturing a bridge over the Rhine in order to bring an end to the war in Europe in 1944, was not achieved. Estimated Allied losses are between 15,000 and 17,000 people.

* And Jacob keeps the pattern going. All his sons except Joseph were considered The Unfavorite, as Jacob lavished Joseph with a special coat that made his other sons jealous. When Jacob believes Joseph has been killed, Joseph's other full brother Benjamin became the center of their father's attention. In Jacob's case, he's furthering Polygamous Favoritism: practically the first thing we learn of Leah, his first wife, is that "Leah was not loved."

This goes against everything you learned so far, being immortal isn't a breakable rule and only Judgemaster should be able to use advanced laws. The last boss just says Screw the Rules, I Make Them!

Later, Bane forces Batman in a situation where he either has to die or kill one of his enemies, hoping to play on his "Thou Shalt Not Kill" policy. The same series that retconned the Plumbers also revealed that the Knights' ultimate goal is to use alien tech to slay an alien dragon they captured 1000 years ago. * And let's not forget the Blood Axes: a clan of orks who completely understand logistics, strategy, pinpoint strikes, evasion and when to use them. When these guys are calling the shots, they are terrifyingly good at taking anyone by surprise (explicitly taking advantage of the unsubtleness of other clans, like the Goffs, to keep their enemies from thinking orks are capable of sneaking or even being quiet). The most notable lore example involved a Tau supership called the Korst'la, which could obliterate anything the local Waagh! could throw at it. The solution? Some Blood Axe Kommandos realized there was only one spacedock big enough to rearm and refuel that ship, and used a captured Tau transport to deceive their way in, at which point

* . (And many of the comics that Sonty railed against were actually some of Parker's favorites.) At times it bordered on outright trolling, as he would occasionally post — in-character as Sonty — on webcomic messageboards or the comments section of John Solomon's blog. Though people who mistook Sonty for a real person were more likely to feel sorry for the poor fool than to be angry at him.
* , and many other fairy tales, a man who finds his child doomed to marry a poor child tries to kill them with many tasks, before and after the wedding. It never works.

* And Maureen herself only wears her eyepatch to hide her heterochromia, which is seen as an ill omen.

* And members of all three sides taking the opportunity to attack rivals within their own faction — occasionally with the help of members of another faction.
* And mentioned again when Castle tells Beckett to hide his Porn Stash from his daughter Alexis if he dies.
* And Metropolis, a city that had similarly been extensively damaged by Lex Luthor shortly before, was fixed magically (by GOTHAM NATIVE Zatanna the Magician) but nothing was done to restore Gotham (until, ironically, Luthor paid for the repairs to get the publicity that got him elected President).
* And Michaelangelo, being the cool party guy, uses the coolest ninja weapon of the '80s:

* And more generally, due to this trope, Infrared-level citizens as a whole are subject to less scrutiny and surveillance than those who are officially more "trusted". Most of them really are too stupid and drugged to do anything really bad, but occasionally Internal Security will hide an agent that way.
* And more hilariously, Welles himself lost weight to play Falstaff in
* And more horrifically, those that serve under Ironwood directly seem to be following him under the belief that personal feelings should be suppressed in loyal service to their duty, implying that this sort of thing is
* And (more likely considering the source material) a reference to "frog" being a racial slur for French people.
* And more mildly (and truthful) is Gary's dedication to his brother, where he explains that it was due to his brother that he learned to appreciate "the wonder and beauty of a jellyfish. And it was he who taught me the wonder and beauty of smacking your sibling upside the head with said jellyfish". Followed by a strip of what he imagines
* And more modern occultists have given some extra names for Pan; Pan Pangenitor Panphage - Pan All-Maker All-Destroyer. Unfortunately the historical deity's name probably wasn't synonymous with the word "pan" - "all". The god Pan's name comes from the same root as the word "panic." Because his domain is temporary insanity.

* and. Most of her warping is done through childishly wishing something to be different.
* And most shadowy of all is the Officio Assassinorum. Their forte is stealth and secrecy, and as well as external threats, the Officio Assassinorum often deals with rogue planetary governors. So capable is the Officio Assassinorum that one Grand Master of Assassins, Drakan Vangorich, used the temples to slay the other High Lords of Terra and take over the Imperium himself. It took 400 Space Marines to defeat his army of 100 Eversor Assassins and the battle left one lone Space Marine of the Imperial Fists standing to claim the Grand Master's head. Since this event, deployment of even a single Assassin requires the authorisation of at least two thirds of the High Lords of Terra, and the lasting distrust means the Space Marines have

* And much later, in the final season, a rival distributor offers Walter, Jesse, and Mike $5 million each for a shipment of methylamine they lifted. This is more money than Walter could ever spend, and an order of magnitude more than he originally intended to make, but he turns down the offer so that he can keep cooking meth in order to make even more money.
* And much later, Mark (the boyfriend, and eventual husband, mentioned above) and Dan bond over the fact that they ARE so similar, with several characters commenting on how similar they are. (David, Darlene's eventual husband

* And Now for Someone Completely Different: After getting used to one hero, out of the blue you are forced to control a different character.
* And Now For Something Completely Different featured a different extension to the Hungarian Phrase Book sketch. "Can you direct me to the railway station?" is translated in an incriminating phrase book as "Please fondle my buttocks." As a Hungarian in London approaches a civilian:

* And Now For Something Completely Different: In the Hungarian Phrasebook sketch, a constable knocks a citizen off his bike and uses it to go to assist a tobacconist who has been assaulted by a Hungarian national. It's rather telling that there's a specific penalty called just for "fighting" and the only punishment is that five-minute trip to the box. Other sports would charge players openly fighting with violating more generalized personal misconduct rules and almost certainly eject them.
* And, of course, the big one that sets the whole setting off. Creation has been in a precarious position for centuries, with the overworked Sidereals, the Lunars driven to the edge of the world, the heavily corrupt (or absent) gods, the almost equally corrupt Realm, the forces of the Underworld massing, and the Fair Folk being just barely kept in check. Into this comes the person controlling the Realm (and its big superweapon that keeps most of the other big enemies at bay) mysteriously disappearing, bringing it to the verge of a civil war that could tip Creation over the edge. And then... the Neverborn and the Yozis conspire to break open the Jade Prison, and use its captives to make their own Exalted. Half of those captives escape them. They become the Solar Exalted.

* And of course, whether Hamlet really is mad and/or is just "putting an antic disposition on" has been the subject of massive debate for a couple hundred years. A convincing textual argument can really be made for either, or both. His supposed madness is even lampshaded. Hamlet wonders if the ghost he saw was a hallucination, or a demon sent to him to trick him. He tests this theory out by attempting to make his uncle feel guilty for the murder the ghost described to him. How does he do it? He talks some actors, who are hired to put on a play for the royalty, to modify the murder scene so that it more closely resembled his father's supposed death. His uncle tested positive, making it harder for audiences to argue that Hamlet was simply mad.

And in the First and Second Ages when they were on good terms with other humans, the Drúedain apparently didn't marry outside their own people either.

By 1989, CPUs were in the 8 to 25 MHz range for home computers; going into the 1990s pushed that up from 100 to 600 MHz, and merely halfway into the 2000s, from 1 to 3.4

Not only that, but William's offensive tactics (archer screen softens the English infantry, then his own infantry engages, then his cavalry breaks through and routs them) weren't as effective as he'd hoped, due in part to the English shield wall blunting his archers' effectiveness and the English ranks maintaining strength and cohesion. The Norman charge was thus ineffective and became mired in fighting when the English withstood it (and taking heavy casualties on the way up the hill), forcing him to commit his cavalry sooner than anticipated, which splashed off the English shield wall with minimal impact. The Norman left flank broke and fled, forcing the rest of the Normans into retreat. The English army then began to pursue, only for the Normans to regroup and slaughter most of the knights. With the loss of English cohesion and the successful regroup, the Normans managed to turn the tide and win the day. The English had every advantage and if they hadn't abandoned their superior position to chase the fleeing Normans, they would have won. Never bring foot-soldiers to a horse-race.

Contrary to other generals of the same era who tried very hard to compensate for their lack of initial schooling by studying hard in their adult life, he never cared much about deepening his culture, instead relying on his instinct to make war.

* André the Giant was in constant pain for most of his life because of his gigantism and the strain it placed on his body. It eventually killed him, though he still lived more than twice as long as Wadlow.
* André the Giant was notorious for his ability to drink somewhere in the region of 7,000 calories of booze each day. Thing is, being a giant that already drank a lot on principle (and had done so all his life), it took INSANE amounts of booze to get him drunk — for example, 1,428 oz (that's 119 12-oz bottles) of beer to make him pass out.
* André the Giant was once a defensive end for the Washington Redskins. The truth is an aversion - what actually happened was that the 'skins invited him to go to training camp in 1975, but apart from a short visit which was little more than a publicity stunt, he did not attend the camp or play for them. As one of the first true superstars of professional wrestling, he was making twice what a star football player was making in those days, and his busy schedule didn't allow for him the opportunity to seriously try out even if he'd been willing to take a 50% paycut to give up wrestling for football.

In season 2, Hershel is unable to kill his zombified family members and instead keeps them in a barn. Shane goes and kills them all anyway.
* Andrea Libman still does her own singing as Fluttershy, and even Pinkie on occasion. According to Libman, this is because Pinkie's speaking voice can be very straining for her; one can only imagine doing the singing voice would be even harder on her vocal chords. Pinkie Pie's Smile Song notably has Libman providing backing vocals, making it a rare case where both singing and voice actors for Pinkie Pie are heard together. Andrea Libman also provided Pinkie Pie's rap in "Testing Testing 1, 2, 3".

When he refuses to take a dangerous action that could save the world, Andrea calls up his mother, puts her on speaker, and tells her that she needs to come pick him up as if he's a misbehaving child at a school trip. She lambastes her son for being ungrateful, and manages to guilt him into saving the world.

* Andrei Belyanin, after which the monks, now utterly convinced that he's trying to cast a spell on them, order him captured and executed.
* Andrei Belyanin, being unfamiliar with the term. Then he waves it off, saying it's a requirement of his position. Apparently, they've never heard of interpreters. When he later marries an Austrian princess, his speech to her is filled with both Russian and German phrases, mostly of amorous nature. In a later book, he receives a Japanese delegation, and starts peppering his speech with Japanese words.
* Andrei Belyanin by a genie at the wish of Omar Khayyám. While Omar is initially disappointed at the genie's choice (he expected a Middle Eastern man, not an infidel), Omar eventually accepts the protagonist as his student in thievery. The subsequent books have him be summoned again by the genie, although, by that point, he's hardly an "everyman" anymore.

* Andrei Belyanin. However, the second and third times, he remembers everything. While this seems like just a claim by the author's friend without any proof to the author, the third novel breaks this by having a character from Ancient Arabia show up on the author's doorstep to tell the protagonist's story. Also, the protagonist's comments in the third novel imply that the author may have taken some liberties in writing the books.
* Andrei Belyanin, in which an English crusader ends up in modern-day Russia thanks to a witch's spell.

* Andrei Belyanin reveals that the current queen of the land plotted to kill Jack, the rightful ruler so that his brother (and her as his wife) would ascend to the throne. Jack's brother is a good man and wasn't happy about how he became king, but he's blind when it comes to his wife. Jack ends up defeating the queen but decides to leave his brother on the throne and go on adventuring.
* Andrei Belyanin series also includes several parallel worlds that are in the past (such as the Aztec Empire during its final days). In most of the novels, there is a good deal of anachronism; however, this is deliberate on the author's part, who notes the absurdity of the situation.
* Andrei Belyanin taught in the art of thievery by a genie's spell, but he has no magical powers of his own, so it's unclear how some of the acts of theft take place. In the third novel, he feels a bit rusty and "practices" by running through a Kokand bazaar, stealing things and giving them to other people without so much as stopping for a second, causing a great commotion. Someone even claims that his camel has been taken. Another person is happy that the thief has taken his mother-in-law.
* Andrei Belyanin, the protagonist is a well-educated but undisciplined Don Cossack named Ilya Ilovayskiy sent by his widowed mother to serve in his late father's host. Who is in command of the host? Why, Ilya's own first cousin once removed General Ilovayskiy XII (Ilya just calls him "uncle"). Ilya's rank in the host is Khorunzhiy, a junior officer rank corresponding to a Second Lieutenant. Ilya frequently pulls stunts and displays the amount of insubordination that would get another Cossack whipped or kicked out (the first thing he does in the novel is steal his uncle's prized Arab horse and nearly gets the horse and himself killed), yet his uncle feels obligated to forgive his nephew in memory of Ilya's father. Given this, it can be easy to see that Ilya got his officer rank not on his own merits.
* Andrei Chikatilo Despite Slivko sincerely wishing to help, his guesses turned out to be almost all wrong. What makes it all the more terrifying: Slivko was on death row at the time. Kostoev spoke to Slivko mere hours before his execution. Kostoev knew it. Slivko didn't.

Men are cut down and shot with arrows, thatched roofs are set aflame, women of all ages are raped, a cow is set on fire, a horse falls down a flight of stairs; general pandemonium ensues. The majority of the townfolk barricade themselves in the town's cathedral. What makes it so heinous is that they are being guided by a pretender to the Moscovian throne and many Russians are among their ranks.

However, Professor Farnsworth started the series in his 130's, so the perception of aging in the future is likely different.

* Andre Norton, at the end, Shan Lantee finds he's been given a cadet uniform at the end, although he's a casual laborer — and then finds that he's been appointed cadet.
* Andre Norton because he had been able to recruit the desperate in a refugee camp.
* Andre Norton, because the children (the point of view characters) pay very little attention to talk of war on the radio, and leave their unhappy homes without much regret — so the implied destruction of the human race is quite casually dismissed (the Ka'ats certainly don't care about us).

At the end of the book, the intervention of a time-traveler from the future (our present) prevents the sinkings from occurring and both islands appear in the modern world.

* Andre Norton: The planet Korwar is the home of the incredibly rich, but it has a dark spot: the Dipple, a slum filled with the dregs of the galaxy. Many of them are war refugees and all of them are poor. Some join the powerful Thieves' Guild or sell themselves into offworld slavery to escape.

Against all odds, Jackson survived his own gunshot wound, though the bullet was too close to his heart to be removed and it would give him chronic pain for the rest of his life. Jackson got a chance to show off his fighting prowess in 1835 when he became the first US President to survive an assassination attempt. The assassin, 35-year old Richard Lawrence, approached the 67-year old Jackson and tried to shoot him with two pistols, both of which misfired. Jackson then proceeded to savagely pummel Lawrence with his cane, and

only stopped when Lawrence was subdued by bystanders.

After granting this wish, the spirit leaves since this last wish essentially caused the ex-stonecutter to replace him as the mountain's spirit. The new mountain spirit is satisfied with his wish at first, until he feels another stonecutter chipping away at the mountain...

However, being in love with another woman, he refuses to marry his cousin — who had been engaged to and in love with his dead brother but finds being refused rather insulting. Fortunately, Prigio revives his younger brothers, and so they agree to let him marry his love and the niece to marry his brother.

* Andrey Livadny between human and Insect descendants of the original colonists), several novels involve conflicts between humans and Insects with hints that one is inevitable. Unfortunately for humanity, the Insects far outnumber humans (and "de-evolved" drones don't value their lives), and several hives are attempting to learn how to use human cybernetics against them. Fortunately, humans far outclass the Insects in space and ground combat in the technological capacity.

The game takes place in the Darg System and involves conflicts between several sentient species (primarily humans, Dargians, and Haash), none of whom possess instantaneous communication.
* Andrey Livadny. Interestingly, one novel reveals that the "sphere" is a misnomer, as the structure is, in fact, an ellipsoid and looks like an American football from the side. The wider sides are the habitable ones. Naturally, the Insects' modern-day descendants have forgotten all about their glorious past.

* Andrey Livadny probably ended up like this (i.e. some malfunction has resulted in the crew and settlers never waking up and, eventually, dying when the power ran out).
* Andrey Livadny series. At the start of the setting, Earth is overpopulated and suffering from ecological catastrophes. As a result, the President of the Earth Alliance initiates a war with the Free Colonies in order to provide space to "offload" extra population. The war lasts for decades, resulting in massive casualties and constant emigration of Earthlings to newly-discovered worlds. After Earth is defeated, the newly-created Confederacy of Suns leaves it alone. When a character returns to Earth 1000 years later, lush forests and jungles cover it. There are barely any cities left, given that the entire population of Earth is now barely a few million. However, the oceans are not reborn (they dried up earlier) and are instead covered with plant growth. Not that anyone cares about Earth at this point. Humanity has moved on and only remembers Earth in the context of the war.
* Andrey Livadny series, everybody uses Gauss weapons firing tiny metallic spheres as everyday weapons. However, these small arms are woefully ineffective against armored targets. Not so with "ancient" automatic rifles firing chemically-propelled bullets (which somehow work despite centuries of not being used). Then again, this trope is much less prevalent, and advanced technology usually wins the day.
* Andrey Livadny that, after they're recovered from the battlefield. their AIs eventually start exhibiting characteristics of their former pilots. After a while, the minds of the dead pilots are "reborn" in the AIs, and the epilogue has them return to save the creator of the AIs.
* Andrey Livadny that routed the invaders. The pissed-off admiral of the fleet has the planet nuked so thoroughly that 1000 years later it's still uninhabitable. In fact, even after a millennium, the mere mention of Dabog is enough to stop a fight. However, the destruction of the colony only serves to band the colonies together and, after decades of vicious fighting, take the fight to Earth itself.
* Andrey Livadny. They are offered a chance to explore and settle faraway worlds in new bodies, thus starting new lives, completely separate from their old lives.
* Andrey Livadny under Earth control in order to solve Earth's overpopulation problem. He sends a strike fleet to one of the more developed colonies called Dabog. The admiral of the fleet opens the invasion by nuking two major cities on the planet from orbit without warning. When the colonists are able to successfully fight off the invasion forces, the admiral pulls his forces back and has the planet sterilized by repeated nuclear bombardment as a message to the other colonies. This only serves to unify the Free Colonies against the threat, and the bloody war drags on for several decades instead of being a quick show of force, ending with the colonies coming out on top. Even a thousand years later, Dabog is still too radioactive to re-settle. Instead, it serves as a silent memorial to all those who refused to bow down to tyranny.
* Andrey Livadny Veil gravity generators that bend light around it in a continuous

In fact, many of the hardships of the ridiculously small crew (for most of the series) are the fact that, even with a shipwide AI and a supply of humanoid android laborers, there are simply not enough real people around to do everything. Trance ends up screwing up so bad, that it throws the ship 300 years back in time. Later on, though, she can be seen piloting without problems. Given what is revealed about Trance's nature later on, it's entirely possible she meant for the time jump to happen. Another episode involves a probe sent centuries before in order to prowl slipstream and map it out. Supposedly, a complete map of the network would allow efficient, safe passage to any ship, whether piloted by a living being or not.

* Andromeda, as he grew up on Earth, a hellhole of a planet where the remaining population was enslaved by the genetically-enhanced Nietzscheans and preyed on by raiding troups of the man-eating Magog. Consequently, Harper grew up as a thief, loyal only to people who treat him well, trying to survive at all costs and willing to swindle and steal equipment at gun-point if the crew needs it.
* Andromeda as well. The AI holds the position of ship's XO (and holds an officer's rank) but is required to defer to the judgment of an organic captain barring extraordinary circumstances.
* Andromeda blind jumps; they lack the natural intuition of organic beings, so each jump has a 50:50 shot at picking the right branch. Since the average slipstream jump involves several such branches, their chances of getting to the right location decrease with each screw-up. In the backstory, the titular starship spent decades trying to make it back to charted space after its original crew was wiped out; without anyone to chart a path for it, the on-board computers kept feeding it random guesses that just got it hopelessly lost.
* Andromeda called "Dance Of The Mayflies", about a race of parasites which has been changing hosts for 50,000 years. They are giving a nice speech on the subject. The heroes are not convinced.
* Andromeda carrying 40 of them was enough to send resident badass and proud warrior race guy Tyr into a fit because it was enough firepower to conquer an empire. The bombs cause stars to go super-nova, and can be volley-fired into black holes to turn them into white holes.
* Andromeda, Chuck points out that things are bad because the character shields are down.
* Andromeda class), and Dylan uses the device again. However, Gabriel has been aware of the device's existence for this whole year ("For an AI, it's an eternity") and has managed to devise a countermeasure. To be fair, though, it would still probably work on any AI not aware of the device's existence.
* Andromeda, Commonwealth warships had a complement of 40 NovaBombs —

missiles designed to destroy a star by cancelling out any gravitational forces, literally, pulling it apart and causing it to explode. In the pilot the Andromeda Ascendant uses up her entire complement canceling out a black hole's gravity.
* Andromeda, Dylan is being chased by members of the most powerful Nietzschean pride while transporting another Nietzchean from a rival pride to a wedding with another rival pride. However, she's actually on a mission to assassinate her intended groom. Dylan instead draws the big bad pride out into combat with members of both the other rival prides, forcing them to join together. Thus, the Sabra-Jaguar Pride is born and the Drago-Kazov Pride is no longer the biggest bully in the playground.
* Andromeda, Dylan's Commonwealth (which spanned three galaxies) fell while he was in the black hole, and his own world in particular is gone and is widely believed to have been mythical by people in the future he returns to.
* Andromeda) earlier in the same episode and even singing in them. However, this was because he had All-Systems Library downloaded into his brain. After it was extracted, he forgot everything about that day.
* Andromeda, Earth is an utterly unimportant backwater first overrun by the Magog and then conquered by the Nietzscheans. Harper occasionally does express this attitude and is confused why nobody else cares about the human homeworld, but it's usually dismissed by the others as sentiment for his birth planet.
* Andromeda ended up as nothing more than warring bands of supremacist thugs.
* Andromeda ends up stuck at the event horizon for 300 years with barely a second passing inside the ship.
* Andromeda, environmental extremists, and other enemies who are harder to place. In one episode the captain convinces a newly crowned feudal monarch to abdicate in favor of a democracy.
* Andromeda episode "A Rose in the Ashes", the prison warden does a one-handed neck-snap to a revolting inmate. Justified, in that the warden is an android.
* Andromeda episode 'Belly of the Beast', made by Beka after she is tossed around the bridge in yet another explosion.
* Andromeda featured an episode with "Squorms," large, genetically engineered mining beasts that looked like fat worms, moved through rock, and excreted aluminum.
* Andromeda featured a variation of this where the heroes basically lost the ship to one of their own; engineer Seamus Harper accidentally reactivated a deactivated version of the ship's AI programme that had been created before a secret mission, causing the old AI to assume that it was still undergoing its original mission and regard the crew as intruders.
* Andromeda features an in-universe comedic example when the captain and first officer are discussing diplomatic negotiations with a race of humanoids genetically engineered to breathe water.
* Andromeda from Greek Mythology is supposed to be Ethiopian in origin, but
* Andromeda gives it to Harry using male and female cloth dolls for demonstration purposes.
* Andromeda had 40 of them). This didn't work on the Nietzscheans, as they correctly figured that the "weak" High Guard would never use them.
* Andromeda had the "Lancers," which appear to serve the same functions as Marines traditionally do.
* Andromeda had to escape from one in the episode "A Rose in the Ashes". The planet was specifically chosen for the abundance of alkali metals in its soil, preventing the inmates from farming, forcing them to rely on the guards for food. Fortunately, alkali metals are perfect for recharging Rommie's batteries.
* Andromeda had to seriously fight them not to lose precious human habitable worlds.
* Andromeda-half-) member of a highly developed culture which was at the heart of the old Commonwealth. In later seasons, the series begins to pursue those "lost people" because of their amazing advancements which have since been lost, only to learn they intentionally closed themselves off from the outside barbarism.
* Andromeda: Harper has to use time travel/warping several times, including to cure

himself of an infection by altering time-space.
* Andromeda has been traveling through the universe collapsing all the stars in whole galaxies as part of a plan to destroy the universe. The galaxies the Commonwealth occupied are about all that's left. Almost nobody knew about it because the light from the time of the collapses hasn't reached known space yet.
* Andromeda has one case of a ship collecting fuel from a recently supernovaed star.
* Andromeda has several prison planets and a planetary system that accepts garbage from other systems.
* Andromeda has the planet Galena, which started out as a mining colony, switched to agriculture when the mines petered out, then to tourism when agriculture turned out to be not particularly profitable. This is also a capsule history of the town of Galena, Illinois.
* Andromeda has Wayism, founded by a Magog who found God and decided all religions were true.
* Andromeda heavy cruisers were also used for long-range exploration because of this capability.
* Andromeda. He even throws away his weapon. Towards the enemy. Set on overload...
* Andromeda; he often references culture from our time that confuses everyone else, as he is the only main character from Earth. Examples include comic book references, a desire to learn Gaelic, and surfing (although that seems to still be popular all across the galaxy.)
* Andromeda, Hunt is the captain smooth, while Valentine bears some traces of sergeant rough.
* Andromeda in addition to their array of seemingly overpowered conventional weaponry. Nietzschean Garuda-class fighters were also OP, with small packs of them being able to destroy High Guard and other Commonwealth capital ships and warships with ease.
* Andromeda). In a pinch, this defenseless ship can use the same engine to incinerate enemy ships at the cost of precious fuel.
* Andromeda: In "Lava and Rockets" Molly Noguchi and Dylan are stunned to learn that the police will accept a bribe in public. The reason is low taxes and a high crime rate.
* Andromeda (interestingly, they also tend to be the ones who end up being avatars of more than one ship, either because the AI switches ships or because a new AI is given a deceased AI's appearance).
* Andromeda in the series fighters need to stick close to the Andromeda while under remote control, and combat usually takes place at distances of several light-minutes.
* Andromeda is a blockade runner. The Commonwealth Argosy also had a number of other ships classes such as battleships and troop carriers, which occasionally make appearances 300 years after the fall. The Magog have a worldship that is more accurately a mobile artificial star system.
* Andromeda is made and edited by SAM, who is limited to information they (and by extension, Ryder and the player) are aware of. SAM strives to be accurate, but with some things, everything's limited to guesswork and extrapolation.
* Andromeda is still less than one day. This might be considered a long time to a computer, but since Rommie had been offline for longer periods previously, that makes it a mistake.
* Andromeda. It helps that Dylan has Argosy Special Operations training and tends to fight smart.
* Andromeda it is possible to travel near-instantaneously between stars but not to a location without stars. The system is also so random and illogical that computers can't navigate it, but sentient beings can do it intuitively.
* Andromeda Klein, to the point that the cover of the book has the Three of Swords. Andromeda does several tarot readings to communicate with her dead friend, and mentions having a crush on A.E. Waite.
* Andromeda later when trying to remember where he hid some of the data.
* Andromeda, Liam and Cora. Most humans in the setting are stereotyped by other

races as being pushy and believing that they should be in charge, Liam is trying to coordinate with some Angara behind the scenes but only takes charge at what he does best (disaster response) and knows when to fold em in favor of keeping the peace between other cultures. Cora has completely adopted asari culture after performing a service with asari military, something almost unheard of in any race. She even muses that if it wasn’t for the fact that she’s straight, she would think that she was born into the wrong race.
* Andromeda made heavy use of temporal anomalies and the like, even incorporating them into the eponymous starship's construction.
* Andromeda — Aspects of the Magog that are not already covered by the subtropes: they spit on people, and have exposed noses.
* Andromeda mentions attempts at using slipstream to send messages, but packet loss was ridiculously high, and the attempts were abandoned.
* Andromeda mentions that the common house cat has been extinct for thousands of years.
* Andromeda Nebula or class distinction. Humanity is guided by governing councils and academies of experts, but is otherwise anarchic.
* Andromeda Nebula; our utopian future is to become antithetical and pretentious much like Greek gods.
* Andromeda Nebula was forced to land, and how its inhabitants were killed one by one by some unknown creatures which always attack from the dark.
* Andromeda: Nietzschean's are another subversion where they wished they were these.
* Andromeda). No longer having a strong position, the Drago-Kazov pride is unable to stay in charge, reducing the unified Nietzscheans into a bunch of squabbling prides who are more concerned with power than creating civilization. Cue 300 years of total chaos.
* Andromeda, not usually his normal style, but when facing a group of screaming monks, returned one of his own, causing them to flee.
* Andromeda obviously there's no problem with drinking, although nicotine seems to have become obsolete. The only drug left seems to be 'Flash', which is used as eye drops.
* Andromeda. Oddly, the Nietzschean who is also present (from a society where being a father is considered the highest honor achievable) doesn't bring it up when she announces that choosing Hunt was essentially random.
* Andromeda of Commonwealth children, who, due to years Voltarium exposure would cause them to die by adulthood. It's not so much only fatal to adults so much as 20 years of radiation exposure with no radiation treatments kills you.
* Andromeda. One episode, which revealed that Gaheris Rhade killed Dylan in the original timeline and took his place as the re-creator of the Commonwealth, had Rhade create a hologram of Dylan, mostly as someone to play Go with, but also providing sage advice during crises. It's partly the hologram that makes Rhade realize that Dylan would do this job far better than he, so he goes back in time and throws the fight, allowing himself to be killed.
* Andromeda, only instead of being directed to a single goal like O'Neill, Harper began and abandoned dozens of projects.
* Andromeda: Organic pilots are needed to navigate slipstream. A ship's AI can't make the intuitive leaps that a living brain can, which is necessary to navigate slipstream.
* Andromeda. People honestly have no clue what might be lurking right next door (in interstellar terms) to their own planet despite an empire that spans three galaxies because their FTL method doesn't involve traveling through that space.
* Andromeda pilot episodes, Dylan gives four people he barely knows positions on his ships - because, apparently, one person cannot launch the Nova Bombs even though one can arbitrarily give out the positions necessary to do so.
* Andromeda prefaces its episodes with quotes from all manner of things, including famous philosophers, poets and commanders (some real, some fictional), battle-hymns of some of the setting's militaries, and on one memorable occasion an Argosy Special Operations requisition form.

* Andromeda) reproduce by laying eggs in communal burrows. The eggs mix genetic material, meaning that all the resulting grubs are biological siblings and all the adults that participated are their biological parents. Unsurprisingly, their society involves a complex web of family relationships.
* Andromeda reproduce like nova bombs or highly specialised engine parts.
* Andromeda, Rev Bem was a religious "Wayist", despite being a member of the Magog, nightmare-inducing plague of the galaxy. Apparently the religion was actually founded by one of his race, but very few of its members are.
* Andromeda reveals an alternate timeline where Rhade, Dylan's second in command in the first episode, kills Dylan in their fight in that episode. It results in him taking the role of trying to revive the Commonwealth, and showcases a few important episodes of Season 1 with him in command. In the end, Harper mentions that he seems like a scumbag, and Dylan replies "everyone is the hero of their own story."
* Andromeda revolution, may count too, as it started at the beginning of the first episode. The episode then jumps 300 years in the future, to the main plot, not only skipping the downfall of the revolution, but also the civil war among the ones who caused it, the High Guard.
* Andromeda. Rhade is visibly confused as to why Dylan is angry at him. He naturally assumes that everyone behaves that way, if they want to survive.
* Andromeda, right after the crew went through a battle stations drill.
* Andromeda Rommie's android avatar has realistic cloned human skin, presumably designed by Harper for his own benefit.
* Andromeda's AI downloaded himself into Rommie right before destruction and stayed dormant until she came into contact with another ship of the same class he had been that lacked an AI.
* Andromeda's AI. The unnamed fourth ship was destroyed in port by the Nietzscheans.
* Andromeda salvage. And the force lances could be rigged for grapple-launching as well (Though it doesn't quite qualify as a "pistol" since the lance is extended for grapple-launching.)
* Andromeda, Seamus Harper had a dataport in the side of his neck, which allowed him to plug into, and interface with computer systems.
* Andromeda series, capital ships occasionally got close enough to one another to fire Anti-Proton guns at each other. But most of the time they lobbed relativistic missiles at blips on the tac screen several light-minutes away. And due to gravity manipulation most ships could maneuver like fighters anyway.
* Andromeda Shun gets this a lot, even in-universe. His own older brother fell in love with a girl who looked identical to Shun "except for her gender and the color of her hair." It doesn't help that his patron constellation is Andromeda the
* Andromeda, since Harper programmed her with a perception filter that causes her to think it's blood.
* Andromeda since one of his two older brothers was supposed to inherit the throne. Dylan quickly finds out that Florin was cut from the same cloth as Constantine. Constantine plans to have Erik assassinated and rule in his stead and is not above using human shields to get his way. The other nobles are behind Constantine. In the end, Tyr, who pretended to ally with Constantine, kills all the nobles, and Dylan's influence convinces Erik to turn Ne'Holland into a democracy (by promising any soldier who lays down his arms a piece of the land formerly owned by the nobles).
* Andromeda situation. Unlike most examples they also tend to be caring parents (protecting their genetic legacy) with children one of the few things they'll sacrifice their lives for.
* Andromeda's "Music of a Distant Drum", a season one episode. Tyr loses his memory after a crash and slowly regains it bit by bit. When he finally remembers:
* Andromeda's registry is XMC-10-284. Each High Guard ship class has its three letter code, but the personal number is given for only a few.
* Andromeda starts this way. They attempt to slingshot around a black hole to escape an enemy fleet, but sabotage leaves them stranded in orbit so close to the event horizon that from their point of view a few seconds went by, while a whole 300 years passed in the rest of the galaxy.

* Andromeda Stories, earth is seeded with life when the twins Jimsa and Affle crash land and perish after escaping the destruction of their homeworld, located in the Andromeda galaxy.
* Andromeda Stories, get into a relationship before learning of their heritage. Weirdly, they decide to stay together after the truth comes out, citing the fact that incest is fairly common in royal families.
* Andromeda sure got their money's worth from the "asteroid base" cave set built for their fourth episode, as it appears over and over again for a variety of caves, asteroid bases, underground command centers, and so forth.
* Andromeda that an Order, but when stuck between the Nietzcheans and the Magog, anyone could put on the white hat.
* Andromeda that Vedran years were roughly equal to those on Earth. Then you have the most recent calendar, AFC (After the Fall of the Commonwealth), which has only run for about 300 years (AFC 1 = CY 9787).
* Andromeda the Andromeda gets caught in the event horizon of a black hole which makes time stand still for Dylan Hunt. A salvage crew pulling the ship out 300 years later kicks off the plot.
* Andromeda the crew comes across a group of children/descendants of the Commonwealth who have survived the past 300 years in isolation. They can't read so all information has been pasted down orally making military orders into a religion. When Dylan turns up he's mistaken for a God and struggles to stop the children from destroying their enemies with solar-system destroying bombs he inadvertently unlocked for them.
* Andromeda: The crew of the Eureka Maru were originally planning to do this to the Andromeda Ascendant. Well, technically they weren't expecting anyone to still be alive after three centuries orbiting a black hole but their employer still brought along a few mercs on ice. Instead, the captain and the ship's AI were still there, and he actually recruited most of them into his crusade to restore the Commonwealth.
* Andromeda, the first shot in the title galaxy is of the Hyperion exiting hyperspace in this manner and then starting the wake-up sequence after its centuries-long flight.
* Andromeda, the genetically modified Nietzscheans (Homo Sapiens Invictus) have bone blades in their forearms that can be extended and retracted at will.
* Andromeda, the High Guard's Force Lances can be set to overload and used as a grenade. This is a built-in feature.
* Andromeda, the Knights of Genetic Purity consider the Nietzscheans (and all others with genetic mods) an abomination.
* Andromeda: The lineage-obsessed Nietzscheans tend to carry DNA scanners on them, and in "Music of a Distant Drum" a DNA biometric lock is one of the three locks on Tyr's safe. The High Guard's force lances have similar biometric security on them.
* Andromeda: The Magog employ this tactic, as their worldship has trillions of them and billions of swarm ships. Lampshaded in the first episode of season two:
* Andromeda: The Magog reproduce asexually, laying their eggs in a host which then eats the host from the inside.
* Andromeda there are several subspecies of human genetically engineered for different planets, including heavyworlders like Dylan's mother, Castalians with gills, Inari adapted to volcanic planets, and Nietzscheans who were designed as generalists that were even more adaptable than baseline humans.
* Andromeda, the ship docked at a station run by a tribal society of teenagers (everyone died young due to radiation poisoning, so the oldest survivor was sixteen). When the teens gained access to star-destroying bombs, they immediately went out and blew up inhabited solar systems with them.
* Andromeda. The Systems Commonwealth, at its largest, spanned the Milky Way, the Small Magellanic Cloud and the Andromeda galaxy, with its capital, Tarn Vedra, situated in Andromeda. The resident way of FTL travel is independent from normal space, meaning that two systems that are next to each other in FTL may be in different galaxies.
* Andromeda the Systems Commonwealth's force lances have DNA readers and shock

unauthorized users.
* Andromeda: The title ship was built for a crew of thousands rather than the five or six who currently crew her. And the ballroom and dining hall are for hosting diplomatic functions. The arboretum is large enough for a full-sized tree, but the tree's main purpose is air recycling, although the room is also used for enjoyment.
* Andromeda, the titular ship and its captain spend three centuries at the edge of the event horizon of a black hole where only a few seconds pass. Enough time for a massive civil war and the subsequent collapse of civilization.
* Andromeda the titular ship is very shiny (and the remnant of a shinier age) while everything else is gritty.
* Andromeda, this isn't the case for Captain Dylan Hunt and his ragtag band of adventurers. They regularly travel between three galaxies, the Milky Way, Andromeda and Triangulum, and they only reason they don't go further is because those other galaxies haven't been colonized or contacted yet. It has been stated in the background material that the more well-traveled a slipstream route is, the easier it is to transverse.
* Andromeda to act in a more human manner. On at least one occasion android Rommie got into an argument with hologram-Rommie (which generally acted more "human" for interaction with the crew) and Andromeda the ship (which was generally the most computer-like of her incarnations), with Rommie deciding to act like a human would in the situation they were in, versus the hesitancy of hologram-Rommie, versus the full-blown "that isn't logical" of Andromeda. It wouldn't be out of character for her to refuse to use connections that the rest of the crew couldn't.
* Andromeda to a sea monster, since otherwise their kingdom would be destroyed by it. To the parents' relief, however, Perseus killed the monster and saved Andromeda.
* Andromeda Tonks decides to resume the Healer internship she abandoned when she became pregnant with her daughter.
* Andromeda Trance Gemini can see multiple timelines and pick the best one possible. One episode focused on her shows her reviewing different possibilities and rejecting them by pruning one of her plants.
* Andromeda Trance Gemini is eventually revealed to be the avatar of the sun of Tarn-Vedra and exists across multiple realities.
* Andromeda, Trance offers a second chance to the man who killed her in the pilot, and after a few threats and a chase scene he accepts. As Trance explained to Harper at the end of the episode. "Everyone deserves a second chance.... or as many as they need."
* Andromeda". Trance turns out to be a member of some immortal elf race, and intends to sacrifice her immortality to live with Harper. When Harper asks another member of the race why can't they make him immortal as well instead, the guy explains that, for one thing, a sacrifice of her immortality is much more socially acceptable, and for another, he can say from personal experience that this trope doesn't really work out in real life.
* Andromeda tries to stretch known physics only as far as necessary. The main sci-fi element in space flight and combat in this series is mass manipulation. Spaceships can fly fast because they can adjust their mass to a tiny fraction of reality, whereas kinetic missile warheads pack a punch by reducing their mass in-flight (to get to 90% speed of light) and then re-amplifying their mass just before impact so they tear through enemy ships (which are thus designed with small parts with lots of open space between so that any kinetic impacts pass clean through and have less chance of impacting a vital area).
* Andromeda, trying to restart the Commonwealth despite being the last soldier of the High Guard in existence.
* Andromeda, two out of the three women on the main cast were an avatar of a star (it only became apparent rather late in the series, but she was believed to be older and immortal much earlier), and a just about immortal android. This made the trope common enough.
* Andromeda used Flash, a "stim," to boost her reaction times and become a formidable pilot, but eventually quit it.

* Andromeda used the same footage each time the Nietzschean fleet came out of Slipstream.
* Andromeda use Swarm Ships to punch holes in the attacked ship and swarm in.
* Andromeda using Nova Bombs to obliterate the entire Nietzschean fleet is seen as further proof that the Commonwealth softens people. By the time the final big battle of the rebellion takes place, the Commonwealth is down to about 100 warships.
* Andromeda was also put aside after the actor left the series. Finally, in season five all previous storylines were virtually abandoned until the final episodes.
* Andromeda was divided into the Home and High Guard, with members having to have spent several years in the Home Guard before being eligible to join the High Guard.
* Andromeda" was "Enlightened self-interest", which could be made to justify just about any action the plot required them to take. (Turn on my friends? Sure, if it's in my long-term interest. Not turn on my friends? Sure, if I think it'll be useful for me to keep on their good side. Sacrifice my life to save the universe? Sure, if it makes me posthumously famous and gets my kids all kinds of breaks in life.)
* Andromeda was having an affair with her captain, but during a losing battle, she destroyed the planet and her entire crew because she was ordered to purge her memory to avoid capture, which she interpreted as an attempt to hide their relationship.
* Andromeda when the trees are once referred to as "terraforming Pines".
* Andromeda, where communication over interstellar distances requires a living courier.
* Andromeda where Harper has a massive database downloaded into his brain, he starts speaking in various languages and suggests that someone make some kind of nanite that lets you speak any language. Some of those may be incomprehensible to the viewers, but are perfectly understood by at least some of the cast members. Dylan, being born on Tarn Vedra, would probably be fluent in Vedran. Rev Bem was also able to translate Harper's mis-quote "A fast swimmer keeps no pets" (Harper meant to say "A wise man knows his limitations") from Vedran.
* Andromeda, where on the bridge, they call out the distances and mention distances measured in light seconds, and have unexciting displays where symbols fire at each other. However, the CGI battles are usually done up close and personal.
* Andromeda where Trance asks Beka how she got rid of Harper's advances. Beka explains she slept with him once, taking care it was bad enough that he didn't want to do it again. Well, Trance decides to take her advice, but since the extent of her powers was never quite clear in the series... try and guess what Harper's last words in the fanfic were.
* Andromeda where Trance explains an alternate history which is what he would have done with the series if he hadn't been fired during the second season.
* Andromeda, while treating Rev. Bem for injuries Trance tells him that he has four broken ribs and a hurt "something that only Magog have."
* Andromeda, whose pragmatic worldview means that women serve as breeders (and run damn near everything but combat and inter-clan politics; the leader is an alpha male, but the old women can depose him). Most prides kill sterile females. Surprisingly, the only pride that doesn't are one of the bad guys. The Drago-Kazov Pride instead sends sterile females to the military, where they can prove the genetic superiority of their relatives.
* Andromeda who soon hatch and mature into full-grown beast men. Because of the genetic memory of their mother, they all had knowledge of her peaceful ways, giving them a stark contrast to regular Magog, who are bloodthirsty killers.
* Andromeda, with one instance running on a gynoid avatar named "Rommie".
* Andromedrons live in sanctuaries because their biology is incompatible with normal Earth environment, unlike the other alien species freed from the Ethereals. Those sanctuaries are thus constructed with environmental condition required to keep Andromedrons alive without them needing to wear exosuits. However, the point about segregation problems are still played straight, with relations between Andromedron sanctuaries and post-war government being strained at best.
* Andro Melos (and have been reocurring villains since their comeback in 2015),

wears such faceplates alongside their helmets. The younger brother Juda Spectre wears a golden mask with large, piercing red eyes and a sadistic smile, while the older brother Mold Spectre have his facemask resembling a scowling skull.
* Andronicus Valois initially don't even realize Agatha is a Heterodyne, instead thinking she's a random servant.
* Andronikos Revel, who finds the Inquisitor's mix of insanity and power perfect for him.
* and Roo when performing the Whoop-de-Dooper Loop-de-Looper Alley-Ooper Bounce, but with the Wheel o' Feet being perpendicular to the body instead of under it, evoking the image of helicopter blades more than the image of wheels.
* And Rosalina then writes herself into her own story where she finally finds the white Luma she accidentally left behind in the Mushroom Kingdom at the end of the first
* And Rose is considered to have as much of a "happy ending" as she can without the Doctor — her mother and father are reunited. Only it's the parallel counterpart of her Dad — the home version is still dead, and the local version of her mother is

Towards the end of the war, Pink faked her death in a bid to get Homeworld forces to leave, which it did thanks to the other Diamonds attempting to destory the planet wholesale out of grief
* Andros Sr., Andros Jr., and the other aliens. In "Judgement from Outser Space" and "Mind Stealers from Outer Space", human looking aliens visit Earth for various reasons. Andros Jr. played by Dack Rambo, has
* Androsynth are refered as Androsynth, as they are no longer Earth-connected AND make pretty clear that they are not in friendly terms with Humans. Not that we can blame them. 100 years of racism and slavery can cause it, just because you weren't born in the normal way.
* And Rygel has one in "Throne for a Loss". Having been kidnapped and held for ransom by the Tavleks, he spends most of the episode buried up to his waist in mud and being forced to eat out of bowls made from the skulls of previous captives, but remaining fairly hopeful about the situation. Then his cell-mate Jotheb (Future Ruler of the Consortium of Trao) offers to pay his ransom if it doesn't arrive; after Rygel has been re-buried up to his neck in mud, Jotheb explains that his apparently selfless act of compassion was in the hope that Rygel's empire and all six hundred billion of its inhabitants would be absorbed by the Consortium; Rygel promptly
* and Ryouko! The difference between Haruhi and the Interfaces is that Haruhi can create "data" out of nothing, while the Interfaces can "only" alter existing data. That's why, in-universe, the Interfaces are treated as Reality Warpers while Haruhi herself is considered, well, basically a God, if not "the" God.

The only one to achieve success on par with Miku or IA, Kagamine Len, was bundled with a female voice bank, and while Kaito is modestly popular now he tanked hard when first released. At least 25 years of life is the buy-in: winning means you can regress to your younger self or not age for that amount of time, while losing means you age rapidly or die. There are no tricks involved, as the only ones who play the witch are those who search him out knowing full well what the game entails. Interestingly, the witch never cheats (he's been playing and winning so long, he doesn't feel the need to), tries to dissuade potential players whom he believes don't have a real shot at winning, and on one case, he folds a hand he's certain he'll win and voluntarily ends the game, just to give an aging opponent enough extra years of life for him to see his granddaughter's Bat Mitzvah. The Black Planet pins are pretty good by themselves, but put all six of them in one deck and you've got what is possibly the most destructive pin set in the game, because all of them deal substantially more damage if all six are in the deck together. The catch? You only get one of the pins from

Three of the same piece with all 8 pawns still on the board. Quadrupled and quintupled pawns. In general a mishmash of board configurations that are either completely illegal or even if just barely legal, mindblowingly unlikely to ever occur in any real game between actual real players.

Eventually, she carries a pregnancy to term, only for complications to arise during labour due to a combination of the child being breech and Jetamio's hips being too narrow, resulting in Jetamio's death. The local healer tries to save the child (a boy) by performing an emergency c-section, but is unable to get the child out in time. When Thonolan is told about this, he says he "doesn't want to see the son that killed her", suggesting that, even if the child had survived, he would have blamed him for what happened to Jetamio.

Fortunately, everyone in North Fork realized how insane his military command was, and his superiors got a message from Lucas McCain about his incompetence, recalling the Major back to headquarters. He tells Stan and Kyle (and thus the audience) a fairly ridiculous plan to get a pony to bite Scott's penis off; this plan already seems likely to fail. Furthermore, Stan and Kyle warn Scott of this plan just to spite Cartman. It turns out Cartman was expecting Stan and Kyle to undermine him, and this was actually part of a larger, unspoken plan by Cartman that does work spectacularly.

All it really is is an updated copy of the original RX-78 Gundam made using modern technologies, and thus ceased to be anything special when those same new technologies were incorporated into the new generation of mass-produced mobile suits.

* And then the future arc in Graces f shatters that stoic personality altogether. Keep in mind this is after
* And then the lawyers strike, and it marks the real turning point of his disillusionment with the practice of law.
* And then the Nationals faced the Houston Astros, who had the best record in the major leagues. The Nationals took Games 1 and 2 in Houston, and returned home to lose the next three games. Returning to Houston, the Nationals won Game 6 and 7 back in Houston
* And then the next day, when she finds out about Ritsuko and Maya's
* And then the Penguins switched from yellow "gold" to a metallic "Vegas gold" in 2002.

* And then the perspective is flipped in "War is the H-Word" where it turns out the planet Earth just won is the Ball alien's home planet.
* And then, there are also women who are bald, due to a medical condition, or because of chemotherapy.
* And then there are characters who couldn't be wearing underwear outside their costume, yet conform to the color scheme. A few versions of
* And then there are Combiners, which is what you get when you take a number of ordinary Transformers and merge them mentally and physically — which also results in their total mass increasing a factor ten or so, and their total strength a factor hundred. Combiners are officially designated as super-warriors.
* And then there are corsets and bodices. The popular expression for the relief of removing such a garment is "bodicegasm".
* And then there are hellwasp swarms that can enter a dead body and animate it... or enter a living body and
* And then there are Laris and Zhaban, Picard's loyal housekeepers at his chateau, who are both
* And then there are metaphors that still have literal meanings relevant today, but are probably not going to be encountered by the layperson. For example an uphill battle is indeed still un-ideal and a dumpster fire can get very bad quickly if somebody doesn't take charge of the situation.
* And then there are people who seek out relics of long-dead retail stores and chains, ranging from price-tags and reciepts to former locations that have been repurposed, or often left to rot, often with "labelscars" (a scar left behind by a previous sign) adorning the building. There are whole communities that revolve around this stuff, ranging from regions to one chain.
* And then there are supporting characters Hilgya Firehelm, Leeky Windstaff, Reegon Mithrilspear, Hiran Sinkeye, Clang Killitchy, Deergar Bluehawk, Firuk Blackore...
* And then there are the cartoons where the flame creatures even have
* And then there are the forces of Chaos, who are actually split into those who want to kill everything, those who want to rape everything, those who want to infect everything with hideous diseases, and those who betray their allies at the worst possible moment. Fortunately for the rest of the galaxy, they hate each other as much as they hate the rest, and thus will cheerfully turn on each other at the worst possible time.
* And then there are the kids who thought that the Turtles stole it from Pee-Wee...
* And then there are the Middle African and Indian Containment Zones, both of which have collapsed into anarchy and are rife with warlords, micro-states, roving ethnic militias and cults, and all kinds of preternatural activity.
* And then there are the organizations that are dedicated to pieing people.
* And then there are the Original Seven, the first Anchors, who are so unfathomably old that they are stronger than
* And then there are the other ranges, such as the Eighth Doctor Adventures and the Fourth Doctor Adventures, just to name two. The EDAs have four full seasons with some specials mixed in there as well. As for the 4DAs, they're still going ever since 2012!
* And then there are the Pattern Spiders. They are god-machines who are responsible of causality in the Universe, they are sentient, and they can be affected in many ways. The aforementioned Ebon Dragon has Charms solely to screw them.
* And then there are the Sarkists, originally started as a revolution against the Daevites by a slave who managed to steal the flesh and power of an ancient supreme being, they are even more brutal and horrific than the Daevites who bore them, nearly wiping out the world with biological warfare in the bronze age. While some isolated groups do teach self sacrifice and honor, modern neo-sarkists are utterly psychotic, caring nothing for anyone else's suffering for their own dark purpose. "Do as you will, to whom you will" being a common proverb among their people.
* And then there are the Seven Swordsmen, who (as the name suggests) are all

capable of various impossibly-awesome feats.
* And then there are the Shadowlands, sites of past atrocities and mass murder where the border between Creation and the Underworld is just a bit thinner. Regaining Essence is hampered (unless you're a creature of the Underworld, in which case it picks up by comparison), ghosts can get around more easily, and improperly buried bodies tend to rise as zombies.
* And then there are the Vulcans, who had very little metal and as a result skipped right to making a spacecraft to get some from off-world.
* And then there are the Woses, who are implied to be the original humans who built the first civilisations in middle earth.
* And then there are those for whom half the fun is spending a few hours planning out a characters level progression, and dont find 4.0 to be as fun because there is little planning involved (no true multiclassing, so every ranger is rather similar to every other ranger, while in 3.5, my rogue3/ranger3/bloodhound10 it pretty much unique.
* And then there his older brother Killbus who can outdo Blood Stalk in the Cross-Z V-Cinema.
* And then there is an uncomfortable border line occupied by characters who
* And then there is Donnie Pfaster, the necrophiliac. It's hard to describe just how creepy he is and how scary his initial episode is — oddly because it inverts the show's formula in that there really isn't a paranormal aspect to it. He's just socially awkward enough to come off as unassuming, but not quite charming. He lures his victims to his apartment (except Scully, then he goes the kidnapping route), where he makes them bathe before he kills them and cuts off their fingers to keep in his freezer. Yikes.
* And then there is Face McShooty, who, normally, yells at you to SHOOT HIM IN THE FACE, but at one point he has a brief moment of sanity:
* And then there is Gwen, whose electric powers are always on, forbidding her from touching people. At least if she wants them still alive afterwards. She eventually gets around this by obtaining an electronic
* And then there is Josie Perkins, The "Desperate Housewitch". She's essentially the
* And then there is Smoky Quartz, a combination of Amethyst and Steven who shares both of their fun-loving natures and is almost always smiling, but also shares both of their insecurities. When Smoky fails, the self-deprecating jokes are noticeably harsh.
* And then there is Starscream making clones of himself to attack Megatron, similar to Animated.
* And then there is the department who has the rule "don't shoot the messenger". So they tarred and feathered them instead.
* And then there is the episode "The Losing Edge" where Randy goes through a training montage training to beat the other fathers at Stan's baseball games set to the song
* And then there is the fact that she gives a bit...more E-crystals than anyone else.
* And then there is the Motorized Patriot, who in his introductory video is actually described as being this, He feels no pain, he does not falter, no sense of self-preservation, he has no
* And then there is the reaction from older British people who utterly loathe the American version of wrestling, which they see as over-produced, over-contrived, over-glitzy, over-glamorous, and unfortunately over here to the point of having displaced the native version from British TV screens. Like the American Army in
* And then there is the scene in between acts 1 and 2 where the Githyanki storm the Sunken Flagon and
* And then there is the story where Lúthien, who can be considered a badass at this point, gets into a mess and needs the help of a dog to escape.
* And then there is the types of shoes they wear. Most students wear brown shoes. However there are exceptions: Todoroki wears sneakers, Bakugo wears black shoes, even the

* And then there's "A Boy And A Priest" wherein Father Maxi considers leaving the priesthood because of the residents' constant mockery, despite having never done such things. He eventually decides to stay because if he leaves, another
* And then there's Alexander, who reveals himself to have been the father of the original Marcus Corvinus; still alive after approximately 1,600 years.
* And then there's all the fun things the Combine do to biological lifeforms...
* And then there's all the things in the levels themselves. Amongst other things you'll have to do for 100% completion there's skateboarding, yeti boxing, first person shooter sections, rail shooters, racing, cat hockey, submarine combat, turret shooting and other stages which changed the way the game itself played, such as sections where you had to do an
* And then there's also Robot Strippers, which don't wear cases. (Think along the same lines as the case on your computer.)
* And then there's a much more controversial case of Countess Vera Rossakoff in "The Double Clue" short story. True, she's only guilty of robbery, not murder, and Poirot makes her return what she had stolen, but otherwise she was let off scott-free — for the sole reason that the famous detective fell for her.
* And then there's Arystar Krory, whose name is supposed to be a reference to Aleister Crowley ("Alistair Crawley" could be an acceptable version)...
* And then, there's a whole category of finishing moves that are just weird and/or surreal.
* And then there's Bad Horse, the leader of The Evil League of Evil, with his "terrible death whinny".
* And then there's Basque Grand's entry in Ishval: "I am the Ironblood Alchemist, Basque Grand! Iron and blood, might and manpower! If I do not lead the charge, then who will?!"
* And then there's Bill Cipher, the bright yellow triangle with stick-figure limbs, a dapper top hat, and a joke for every occasion... who's also an
* And then there's Bloatware, where a mind tries to access vast amounts of data and tooling and secondary systems without actually boosting its intelligence to the point where it can comprehend all the data it suddenly has pouring into its mind. Some just go catatonic, but others can easily turn into Blights or Perversities.
* And then there's Booji Boy himself, who is Mark Mothersbaugh in a baby mask singing with a disturbing falsetto.
* And then there's Brand, the Rivan Warder. Always a solid and dependable person,
* And then there's Button Gwinnett, an animatronic museum display piece that developed a complex personality and began to genuinely believe it was the historical figure it had been built to emulate.
* And then there's Cleveland Brown, the token black guy who in the later seasons becomes a portmanteau for black stereotypes that had nothing to do with his established personality. And you can't bring up minorities on the newscast team without talking about "Blackuweather forecaster Ollie Williams." Another episode, perhaps unintentionally, provides an explanation: most black residents of Quahog are disguised as whites to avoid police harassment. One example is when Cleveland is in the golf course the second time with a Richard Nixon mask.
* And then there's Commander Chenkov, whose strategy is based entirely on "send all the infantry towards the enemy at once", using them to clear mines by walking over them, attack fortresses and defenses without benefit of artillery, sends troops against Tyranids without tanks or artillery (Tyranids being the guys who
* And then there's Commissar Yarrick, a human with a prosthetic arm and
* And then there's "Complacency of the Learned", a wizard fan fiction by Rose Lalonde.
* And then there's Cubert's "father", Hubert Farnsworth, who shows very little interest in Cubert beyond the fact that he is a successful experiment.
* And then there's Darth Nihilus from the sequel, whose mask can be obtained to get you more Force Points, and who is coincidentally extremely close to being an
* And then there's Data. It seems that every single Data fan has fanfic detailing what happens after
* And then there's dehydrated water, a necessary staple when deployed on an alien

planet. You just add water and you get... water! Though it doesn't taste as good as regular water.
* And then there's Desert Wars, where the various megacorps field armies and have a war. In a desert. They use the event for advertising and to field-test their latest military hardware, same as
* And then there's Dilbert's dad. He went to an all-you-can-eat buffet during the Christmas shopping season of 1992, but never left, because he hadn't yet eaten "all he could eat." His family didn't even realize what he'd been up to until June of 1996, and all evidence suggests that he's
* And then there's Drago, who comes back in time to eliminate all rivals to his power in the future, including Jade. Because of this, the Matriarch (Jade's future self) sends her servant Karasu back in time after him to stop him. Meanwhile, Drago also ends up fighting present-day Jade's foreman Blankman.
* And then there's 'effing Tzeentch, a one-god ancient conspiracy who has his hand in
* And then there's Emil Danko, who is an operative of the US government. And although he doesn't hunt for fun, he does enjoy his job and hates the people he hunts.
* And then there's Eridan's planet, which is even worse. Between all of his consorts going on a homicidal frenzy, and Eridan shooting anything that moves, even the most hardened badass trolls were afraid to set foot on the
* And then there's Frobisher, companion to the Sixth Doctor in the comics and Big Finish audio plays. He's a shapeshifter who generally takes the form of a penguin.
* And then there's Galen Erso, whose lies (that his wife died, that he enjoys farming) don't hold up when Director Krennic shows up to "recruit" him for the Death Star project. And then
* And then there's Gellert Grindelwald, who was considered to be the most powerful and dangerous Dark Wizard in the world before Voldemort came along. When confronted by Voldemort himself, wandless and helpless, instead of going along with Voldy's demands, Grindelwald openly defies him and even
* And then there's Gravemind, the pure and awesome manifestation of hamminess. When it first reveals itself, its first words are
* And then there's Grumblemon of the fourth season: he can usually be found
* And then there's Guts, who is the most disturbing case. He did this
* And then there's Guybrush's often used insult "You big old bed-wetting doody head."
* And then there's half-japanese/half-(african)american Nils Nilsen from
* And then there's her mana supply — or rather, the "lack" of it. Lucia is a pure spellcaster, and doesn't possess a physical attack — at the worst she'll chain-cast a single-target damage spell on an enemy. However, her MP supply reads "null", just like any pure physical-damage warrior. And then you realize... oh yeah, she's a

* And then there's his friends, Kargath Bladefist and Kilrogg Deadeye, who earned their epithets through
* And then there's his unrequited crush on his uncle's wife... who also happens to be his boss' boss' boss, is very fond of him but not that way, and also married to the one person Silk genuinely respects.
* And then there's Homer's experience with boudoir photography, in which the photographer smears Vaseline on the lens with a
* And then there's Homestar's The Cheat disguise, which is more extensive than most of the above - painting himself yellow with spots, adding a tuft to his head, walking on his knees, and saying "meh" a lot. It's about as good a Cheat disguise as someone with Homestar's looks could possibly manage... but considering the Cheat is a third Homestar's height and significantly plumper and
* And then there's Homura herself with Akane Ichimonji. The two are best friends since childhood, although Akane feels from time to time the need to take a break from Homura and avoids her, as shown in an Event in Childhood Mode. Speaking of

Akane, in the 10th Drama CD,
* And then there's Humpty Dumpty, who doesn't even resist arrest. In fact, he even helps Batgirl with her dislocated arms.
* And then there's Hurley, who loses the perfect opportunity to get rid of some of that pork on the island when he runs into the Dharma junk food stash in the hatch. And then later
* And then there's Ingrid the Snow Queen, who, in addition to her plan to force
* And then there's Jason's father. When he shows up again, Jason remains dumbstruck, until his father says he finds some form of physical greeting appropriate for a 'long lost parent'. Jason immediately punches him.
* And then there's Jesus — Prince of Peace, Savior of the World, and
* And then there's Kandyce Azeat, who's worn her pair of Jet's go-to wedding heels for so long that when she converted to an overall Beta in the Rainbow Angels' roster the harem's spell for keeping non-Prime Series girls in their Series-mandated shoes transferred from one of the many padlocks from the cuffs she had until then used to keep her pair on to the heels themselves.
* And then there's Keiko. Whenever Kanon asks her a favor, or whenever they team up as the Beauty Bat duo, all she does is screw up her plans.
* And then there's Kevin Baugh, who fakes being taken over by his alternate personality so he'll be allowed to keep hanging out in his conquered nation, then sets to planting doubts about the Nostalgia Critic's leadership skills. Bonus points that everyone knows he's doing this but roll with it anyway.
* And then there's Klimpaloon, the Magical Old-Timey Bathing Suit Who Lives in the Himalayas.
* And then there's Koji from "Good 'Quil Hunting", who's introduced making it clear that he's entitled to any Cyndaquil in the area, just because. When Ash captures one first, Koji makes him battle for the right to keep it — and even when Ash wins and Cyndaquil makes it clear that is chooses him, Koji tries to steal Cyndaquil. Just like Damien, he gets a well-deserved ass-kicking.
* And then there's Kuroko Sanada-Sato, Sensui's predecessor as Spirit Detective. Sure,
* And then there's Leviathan, a later Ancient Conspiracy created to be
* And then there's Lieutenant Der Trihs, who essentially has a prosthetic
* And then there's Liquid Ocelot, the King of Ham, who out-hams all other characters in the game combined.
* And then, there's Lori's boyfriend Bobby Santiago. He enjoys watching sappy romance movies, theatre, unicorns, and getting facials. He's also not afraid to
* And then there's Lucrezia and her other sister, Demonica, not to mention Demonica's daughter Zola. During a complicated argument between The Other and Zola, she simply asks why Zola, whom she'd knocked out, strapped down and prepared to hijack with her own brain, doesn't just give her the information she needed earlier. Zola's only response is a meaningful silence.
* And then, there's Lyra. She's a popular background pony, but the wider fanon on her is pretty one-note compared to certain others. She sat like a human in a blink-and-miss moment, so she's treated as obsessed with humans, sometimes to the point of having no other personality traits or interests. However, her brief in-show appearances paint quite an interesting
* And then there's Makoto, who the villains make damn sure nothing goes right for if they can do anything about it.
* And then there's Miss Talula Really-Obvious-Fake I-Can't-Believe-You-Haven't-Noticed Not-A-Man. "She" is still Mister Benevolent, and he manages to fool Pip Bin long enough to get
* And then there's Mitsuo Kubo's fish-eyed face making him look for all the world like the Gerber Baby, but in his case he's supposed to be unsettling for a different reason.
* And then there's Mr Burns...usually treated as being just on the high side of 100 years old, but one throwaway gag had him mentioning his birthplace:
* And then there's Mr. Chang, the Chow Yun-Fat character. The few times we see him in action, he's wearing a very nice black longcoat with a big white scarf that

looks like it came right out of a John Woo movie. He's awesome enough to earn Revy's respect (it's natural respect:
* And then there's ninjatwist's Blood Pact charge, also from the second game. It would allow the godmodder a heal of 1 HP for dealing 150,000 damage to his own side and giving the player in question a permanent +1 bonus to his charges. This was done after
* And then there's Obito, a Kakashi's dead teammate. He's the only Uchiha ninja shown to

* And then there's Project Freelancer's cleanup crew, who are headed by Agent Washington, also known as '
* And then there's Ran Ronen, an Israeli Air Force ace who in 1966 engaged in a dogfight with Jordanian aircraft and chased one into a canyon, eventually shooting it down and making it out unscathed. He later said the Jordanian pilot was one of the best he had ever fought.
* And then there's Red, who, prior to the game's beginning, managed to
* And then there's Reverend Lovejoy's sermon following Homer's supposed alien encounter:
* And then there's Rufus, who turns up alive in the movie after being last seen in the game getting blown up real good. Particularly irritating is that Cloud rather rudely shuts up his explanation of how he survived, the one piece of exposition in the film that fans of the game were actually interested in.
* And then there's Ryoga, who is depressed over the fact that Akane sees him only as a friend and nothing more. Or rather, he
* And then there's Serena. One of the memetic depictions of her is nicknamed
* And then there's Shendu, who in this time period is ruling over half of China, and a chunk of Southeast Asia, with an iron fist.
* And then there's siege weapons. Ballistae are bad enough, what with how they just keep going until they hit a wall; shooting them into a melee is one way to get a multicolored shishkebab. And catapults and mortars... it's pretty much impossible to
* And then there's Sky Lynx, a skilled and powerful troop carrier/dino-bird/lynx/griffin who holds the rank of Lieutenant Commander. His massive size is dwarfed by his even more massive ego.
* And then there's Smile Dog, Mr. Widemouth, the Suicide Mouse image... Creepypastas are FILLED with these.
* And then there's SNAP Mode, which can best be described as a playable game over (thus far only unlocked if one gets the 'Heartbroken' Ending, but planned for some of the others):
* And then there's Sokka's actual boomerang. It makes repeated appearances throughout the show, usually for comedic purposes... then it makes one final emotionally-charged appearance in the show's finale, just when you were least expecting it.
* And then there's Spike's Buffy dummy, shortly replaced by the Buffybot.
* And then there's Squidge, who is only too happy to prove that one can
* And then there's Storm, whose face is slammed through a glass table during a fight scene, yet she doesn't suffer from any cuts.
* And then there's Ted Buckland (5'11) and his girlfriend, 'The Gooch'.
* And then there's the 1812 Overture. No less than 16 cannon shots are written in that piece.
* And then there's the 1980s movie (and the subsequent musical adaptation)
* And then there's the Aeon Yojimbo, who you recruit by haggling an astronomic amount of money and the damage of whose attacks are based on how much money you pay him before each attack. He can even kill any enemy (even bosses) in one hit if you pay him enough (though the amount scales with how powerful the enemy is).
* And then there's the Alpha timeline, in which Dirk feels this way about having

* And then there's the Andalites, whose names run the gamut, but are always at least three part. Aximili-Esgarrouth-Isthill, anyone? The middle name is from one of the parent middle names, if you look at Ax's parents' names in
* And then there's the Apostle Paul. Started as a Pharisee who openly persecuted Christians, ended as possibly one of the greatest evangelists who ever lived and writer of most of the New Testament.
* And then there's the Cat, which is quite clearly a post-organic super intelligence who
* And then there's the conversation in the page quote. Superman almost sounds like he's jealous.
* And then there's the Cthaeh, which is omniscient and always tells the truth. Problem is it enjoys telling the truth that will hurt the listener the most (it's omniscient so it already knows all of the listener's reactions to anything it says), and that will cause grand-scale disasters. It's regarded with fear even by other fae — they sealed it into a tree in Faerie that's guarded night and day by archers who will shoot anybody who gets close enough to talk to it, and even Felurian, in a rare break from her usual childlike demeanor, reacts with genuine sorrow and concern when she hears that
* And then there's the Deep Sea Research Center, a huge artificial island built upon the ruins of some ancient civilisation (predating Centra) that could give Lunatic Pandora a run for its money. The facility has been abandoned for an undisclosed amount of time to the point its entrance and top layer is completely overgrown with vegetation and in severe disrepair, yet the bottom layers, all consisting of huge glass walls isolating the ruins from the surrounding ocean, seem fine. There's not a single leak or broken glass in the massive cylindrical structure, and the machinery inside still operates and has enough steam power not only to allow the party to reach its bottom, but to launch excavations. All of this despite utter lack of mantainance in such a harsh environment as deep ocean.
* And then there's the Devil Gundam itself. The official story given by the Neo-Japan authorities is that Kyoji stole the Gundam and ran off to Earth.
* And then there's The Doctor, who gets promoted from "supplemental diagnostic tool" to Chief Medical Officer.
* And then there's the DSM, or Directed Spatial Manipulator, a super-weapon so powerful it can only be fired manually, which can blow up planets and suns.
* And then, there's the DVDs themselves, which contain a few episodes so badly cut down due to licensing issues, it may well be a self-imposed
* And then there's the E3 2019 trailer that served as a direct follow-up, even playing out almost the same way. This time,
* And then there's the episode in which Miss Piggy sings an old music hall song about a woman left at the altar by her fiance, dressed for the occasion in a wedding dress
* And then there's the episode, "New Kid On The Block", where the girl Bart is interested in, Laura Powers, tells him she has a boyfriend, and worse, it's Jimbo. Bart

* And then there's the fact that he's the Patron Saint of Coffee, which the team collectively ingests in large quantities.
* And then there's the flip from triumph when you finally kill that one unit and mentally pan out to see that the entire rest of the opposing army is within assault

distance next turn.
* And then there's the forum metagaming, where classes and specs underplay their effectiveness to ridiculous levels in order to obtain buffs in the next patch. Whether or not this is actually effective is a topic for much debate.
* And then there's the fun of the completely non-canon skateboarding minigame in the PS2 version of
* And then there's the generation that has never heard the phrase "It's Howdy Doody time" outside of

* And then there's the Heterodyne castle (well, part of it) pointing out the things Gil has to offer:
* And then there's the holographic AI that looks like a female anime character that is so lifelike that the state of New York allowed him to legally marry it.
* And then there's the Imperial Starfleet uniforms from "In A Mirror, Darkly", which are generally like their prime universe counterparts, but now include Sam Browne belts and black and silver rank epaulettes. As well, the MACO insignia is now a Totenkopf-like skull rather than the Mako Shark.
* And then, there's the instances where characters aside from Chuck gain the Intersect.
* And then there's the inversion of "Done It" Duncan, who confesses to every single crime ever committed, even if it's completely impossible for him to have committed it. The Watch humours him, because his confessions
* And then there's the IS-7 heavy tank, which there were only three made, but actually had an 130mm S-70 naval destroyer cannon as a main weapon, in addition to no less than 8 machine guns as secondaries, of which two fired 14.5 mm anti-tank rifle rounds. And although its gun was almost as good as the Maus's 128 mm, and the frontal armour was in many ways equivalent (similar thickness, greater angle - sufficient to deflect 128 mm shells) it subverted the trope by being
* And then there's the Key to Time, which briefly stopped time for the
* And then there's the killing machine, Paragon, though she's not really one of the Imperfects.
* And then there's the Klingons, who sidestep the issue by believing their ancestors
* And then there's the Lamenters Chapters. Founded during the Cursed 21st Founding, they are Blood Angels successor chapter who seems to be free of the Red Thirst and Black Rage. Unfortunately, they seem to be cursed by terrible,
* And then there's The Mended Drum, "the most reputable disreputable tavern" in Ankh-Morpork; someone with the name Uglag the Invincible would quickly be proven not to be, but a child walking in to order a glass of lemonade need fear nothing more than a clip upside the ear (and that from the child's
* And then there's the moment when all the Glee guys, even the ones who used to bully Kurt, defend him in front of Karofsky.
* And then there's the moment where Qrow discovers the girl he is in the middle of having sex with is Jaune's sister—while he still believes Jaune is Raven's son. There is a
* And then there's the movie ("Paint it, White!") where he appears again and sings a rock version (!) of his Heaven and Hell song. It doesn't even make sense in context... well, the context itself doesn't really make any sense, either.
* And then there's the mutants from the episode "Mutantcy on the Bouncy". The Rubber Chicken is essentially made of stretchy rubber, which is a pretty useful power
* And then there's the mystery of exactly what nature of being Jones is.
* And then there's the one-episode character from season one (played by Sean Hayes), who is eternally optimistic about the chances of a little boy in his care until finally he suffers a

* And then there's the ones that say it's Seattle, which does make a degree of sense, considering that the White Base's next stop was in British Columbia. This is possibly supported by the fact that, during that event, White Base hides out in what appears to be the Kingdome.
* And then there's the Ordo Malleus, IA for the Inquisition. Though specifically consorting with daemons, after all, what other reason could there be for an Inquisitor to go bad?
* And then there's The Others in 1954 who use a storm of flaming arrows to kill off a large number of 815 survivors.
* And then there's the other variation with character traits and yet another one with nationalities. Now, guess who's the third nationality?

* And then there's the pirates' opinion of the Pirate Code: "The Code is more what ya might call 'guidelines' than actual rules."
* And then there's the process of ceremorphosis, which a mind-flayer tadpole is inserted into the ear of a hapless humanoid (usually a captive human, orc or drow), which eventually turns them into a new mind flayer.
* And then there's the rather obvious fact that the Sun's expansion isn't going to stop, and that Earth has only a few centuries of life left at best before it becomes an uninhabitable hellhole (and the knowledge and resources needed to leave and restart elsewhere are likely no longer extant).
* And then there's the Red Bull X2010. It was created because Kazunori Yamauchi (GT creator) wanted to know what the ultimate race-car would look like (no rules, no regulations). Powered by a gas turbine generating 1,483 BHP, with 8Gs, or
* And then there's the rest of his family, the assault cannon class. All of them would be considered anti-materiel weapons in
* And then there's the ridiculous heist involving Achievement Hunter itself and Rooster Teeth normal. As shown in
* And then there's the romance between Florence (a genetically modified wolf with human-level intelligence) and Winston (space-adjusted human), which wasn't explored in terms of actual physical capabilities yet, as they've decided to become an official couple just recently, but is already hindered by the setting's pre-existing laws forbidding humans to mingle with non-human mammals. Ironically, this would not apply if Florence's mind (officially classified as an A.I.) was housed in a fully mechanical body, with which the law has no problems whatsoever, showing how robots and cyborgs are a much more common and established presence in the setting than Florence's prototype species.
* And then there's the Sabbat, who could be considered the predecessors of both the Lancea Sanctum
* And then there's the scene in the hot spring between Tidus and Yuna in
* And then there's the seemingly-unstoppable yet ultimately defeated Mongolian Horde. The Horde was a well-disciplined and massive fighting force of horseback archers, with some auxillary lancers and siege engineers taken from the conquered Chinese, and bested the Europeans in open battle in the plains of far eastern Europe, but their Chinese engineers were not up to the task of actually besting a European Castle, and the Mongolians themselves were foiled by the less monolithically plained land further into Europe, which exacerbated the issue of their light composite bows difficulty in piercing the heavy armor of the European knights (contrast the massive yew longbows of the English, which had far less difficulty in performing this feat), and had their ability to outmaneuver their foes limited, which would lead to Mongolian lancers with lamellar armor on small steppe horses being forced into head-to-head confrontations with the European Knights in full maille atop the larger, more aggressive Destriers with longer lances, and no time to wear them down from afar with arrow after arrow, and worse yet, the death of
* And then there's the sequel that adds incendiary ammo where one fire bullet is

all it takes to set zombies on fire, although special infected will have the fire be put out after a while unless you keep pumping them with fire bullets.
* And then there's the story of the final island and likely location of One Piece. In Japanese it's spelled out as "Rafuteru" in katakana. Fan translations AND official translations referred to it as "Raftel" for several years. However with a double hit of
* And then there's the Telstra ad which teaches us that Emperor Nasi Goreng build the Great Wall of China to keep the rabbits out.
* And then there's the thankfully not elaborated method of how Irwin's mom (A mummy) and his dad made a kid.
* And then there's the time an amateur astronomer spots an asteroid on a collision course with earth and is trying to convince a switchboard operator to transfer him to somebody in authority when big cars with tinted windows pulls up and men in suits and sunglasses come pouring out.
* And then there's the time the Smoke Monster punted Richard into the jungle with no mention of whether he was okay or not until the series finale.
* And then there's the time when a program about how to extend life in canines is interrupted for "several episodes of
* And then there's the time when she's being questioned, is asked to "show how her powers work," and then
* And then there's the Transformers: Crossovers toy line which features an AT-AT which transforms into a giant robot.
* And then there's the Tuck Rule Game., led by the coach they'd traded away that offseason, who brought the scheme for their high-powered offense with him. Afterwards, they've avoided this trope by the interesting strategy of not making the playoffs at all.
* And then there's the version that's told to kids, in which it's instead a magic slide and the third man yells "WHEEEEE!" He ends up falling in a yellow liquid,
* And then there's the VERY CREEPY rhyme that Hespith recites in the Deep Roads.
* And then there's the Warrior's axe-critical from the GBA games. Judging from the fact they basically turn into a tornado, they're apparently part Tasmanian Devil.
* And then there's the White Council of Wizards. They range from pretty dangerous under the right circumstances all the way up to
* And then there's the whole story about Kyouko and Kou's engagement, which mainly seems to serve to show that Kyouko is
* And then there's the Wobblies. The Computer heard rumors and sent a Troubleshooter team to investigate, but they'd died out long ago, so the team reported finding nothing— and was executed for failing to follow orders. A dozen or so teams later, one team
* And then there's this classic, when Mulder and Scully are examining a weird viscous substance:
* And then there's this other one, it has a bear in it prowling around the house and turns into a human after eating Weetabix.
* And then there's Trinary, which is spoken by uplifted dolphins and translated as haiku. Though many of the human characters understand the clicks and whistles.
* And then there's unicorn blood. It will, according to Firenze, "keep you alive, even if you are at the brink of death, but at a terrible price. You have slain something pure and defenseless to save yourself, so you will have but a half-life, a cursed life, from the moment the blood touches your lips."
* And then there's Varys, who arguably fits in the school of the "scheming eunuchs" mentioned below. No one knows
* And then there's Viral, who is actually immortal due to not aging and a
* And then there's what Jaime Lannister does to that Bran Stark at the tower due to him stumbling upon
* And then there's Whirl. At one point he acknowledges that he was specifically ordered not to engage, which he is going to interpret as a veiled order to engage because
* And then there's "Whiskey in the Jar", an Irish folk ballad recorded by a whole bunch of artists (most notably Thin Lizzy and Metallica), in which the first-person

narrator encounters the rich Captain Farrel, whereupon our intrepid highwayman "first produced my pistol/ And then produced my rapier/ And said, stand and deliver/ Or the Devil, he may take ya..." (of course, some versions replace the rapier with an equally (badly) rhyming saber).
* And then there's Wonder Woman's position as the secretary of the original
* And then there's Xigbar, he's the organization member with the power over
* And then there's Zepar and Furfur, twin demons who are stated to be of opposite genders, though it's never revealed which is which. They serve as a
* And then there was a "businessman" who wet his pants as he was dragged into a dark room so a bunch of mobsters could bash him up.
* And then there was Edge and Lita's infamous "Live on Air Sex Celebration" on Raw 2006. The two were just starting to get it on when along came Ric, waltzing down the ramp with a bold offer to teach Edge "how to pump the lady" and making it clear he wasn't gonna take no for an answer. This enraged Edge, who then proceeded to beat the interloping Flair to a pulp before he could even enter the ring, much to Lita's relief (and everyone else's).
* And then there was Eleanor Roosevelt, Teddy's niece and also FDR's fifth cousin and (later) wife. The woman had balls as big as Teddy, singlehandedly redefining the position of the First Lady in an era when the position was strictly in the background. She was a feminist and staunch supporter of Civil Rights, publicly opposed her husband's order to send Japanese-Americans into internment camps during WWII, lobbied her husband to provide asylum to groups persecuted by the Nazis, and was constantly active on the homefront in support of the war effort.
* And then there was Harmony who no-one took seriously at first. She eventually got the gang's attention... well for a moment, but once Buffy saved Dawn, Buffy completely forgot about her. Harmony continued to think Buffy was after her though, even asking Spike to harbor her. Harmony even hid in a coffin when Buffy came to Spike's crypt once thinking that Buffy had found her and was going to kill her. Buffy was actually there to question Spike as usual and had no idea Harmony was even still around.
* And then there was Homer's ad for Marge's political party, which featured several really, really obvious appearances of "NO ON 232". Homer being...well, Homer, Marge's party needed a YES on 232, a NO on 2
* And then there was Jill (during the Fairy Arc), who looks to be around Schierke's age, and was likewise crushing furiously on Guts. To the point where she persistently followed him around, trying to get him to agree to allow her to stay by his side.
* And then there was Mouse, who dual-wielded automatic shotguns in a
* And then there was one episode "Nemesis", where Daniel Jackson has only a minor part in the beginning, when he was out of action due to appendicitis. The real Michael Shanks had been unable to feature in this episode for the same reason, so they added that first scene in later while he was still recovering.
* And then there was "Operation: B.U.T.T." It wasn't all too funny for Numbuh One, of course. (The Delightful Children had a robot swipe his shorts while he was at the beach, and then take his picture. Before he even found out they had the picture, everyone laughed at him. Then he finally made it home, and it got worse. After he got their blackmail note and left to deal with them, his teammates found it, and
* And then there was Roger Abbott's impersonation of Jean Chretien, who is not technically speaking a foreigner, but whose linguistic idiosyncrasies got him portrayed like one anyway.
* And then there was that ad that began with a hapless nerd in a suit entering an elevator where another man had just sprayed his cologne. A sexy woman in a short skirt comes on and sniffs the air, then immediately pushes the nerd against the wall. The doors open (implied) much later and the nerd's suit and hair are disheveled while the girl is
* And then there was that other Jewish fellow, two thousand years ago...
* And then there was that time he posted a big, dramatic-looking flash animation that took ages to load...

* And then there was the case where IA attempted to "disappear" several girls to cover up an anthrax threat. They were only returned after the timely intervention of Olivia and a plucky reporter who exposed their acts to the public.
* And then there was the city where people constantly fought each other in arena for status, and any travellers who entered were automatically forced to participate. The winner would become a first class citizen, and could also make a new law for the city. Kino probably ended up making the place even more bloody than it already was, but also ensured peace in the long term.
* And then there was the episode where it was revealed that every man from his grandpa's line dies at midnight of his 81st birthday. Arnold's grandfather thought that he was going to die but then he realised that he did a miscalculation and he has 10 more years to live.
* And then there was the episode where they were fighting over who invented the lawn. "Nobody invented it, it's grass!" "Oh yeah? So cavemen had lawns?"
* And then there was the even more disjointed era of 1999-2000, due to the nonsensical, incoherent booking techniques of
* And then there was the Gary Kroeger version, which had two: the first had points accumulated translated to positions in an untimed stunt, last to finish is out; the second was a variation on Bid-a-Note from
* And then there was the incident with sending the family car into a ditch ...
* And then there was the infamous timeline debacle that lasted up until (and continued after) the release of the
* And then, there was the premium option of "Uh Oh! Deluxe", which was the same. Except it was worth more points, or your partner got
* And then there was the Russian 9K22 Tunguska. Although referred to as Anti-Air, its four barrels, inhumane fire rate, excellent accuracy, and ability to fire at ground level meant it was more of Anti-
* And then there was the time when he tried using one to fling himself across a gorge. The rock was too much for the ledge the other end was on, so it smashed through and turned the catapult into a ramp poor Coyote slid down to his doom.
* And then there was the villain whose bones were broken and his skull buried upside-down at a crossroads. "Ideally, this is how we would dispose of all our enemies."
* And then there was the Volkssturm...every male who could hold a rifle was drafted. Regardless of age.
* And then there were early Christians, who honestly thought Nero was so evil that they expected he was the antichrist and would return from Hell to bring about the Apocalypse. This can partially be explained by the fact that early Christians read a character in the Book of Revelations as referring to him; his death, therefore, put a crimp in their readings of its prophecies.
* "And Then There Were Fewer" included at the beginning a dedication to Seth MacFarlane's mother, Ann Perry MacFarlane, who died of cancer in July of 2010.
* And Then There Were None (2015) changes Blore's crime of false testimony against a frail man to beating him to death for being arrested on a charge of "degeneracy" (i.e., being homosexual in public). When the gramophone record charges Blore with the murder, Blore claims that the man "fell down the steps to his cell."
* And Then There Were None (2015) miniseries, Vera is given a tot of brandy to settle her nerves after a fright, then the other three survivors simply begin passing the bottle around. Soon after they dig out the dead Marston's stash of cocaine, put on the phonograph, and get blitzed out of their gourds as they dance, laugh over the accusations on the record, and try to party away the mortal terror of being trapped on an island to be murdered one-by-one.
* And Then There Were None (2015), offers to help them pin all their murders on Lombard, her lover who had tried to genuinely help her mere minutes ago, and makes it clear that she knowingly lied through her teeth to the police about Cyril's death and would do it all again in a heartbeat to save herself.
* And Then There Were None: After the murder of General Macarthur, Judge Wargrave admits he does not have a good alibi — he was sitting by himself on the terrace at the approximate time of Macarthur's death. He gives his word that he

never left the terrace, but in the spirit of intellectual honesty he says that his word is insufficient without proof... and that practically everyone present is in the same uncomfortable situation.
* And Then There Were None, be it a girlfriend (Marston), a son (the Rogers), close friends (General Macarthur), or an older person they were providing for (Armstrong and Blore).
* ...And Then There Were None, Bobby Singer pours out a bottle of Johnny Walker Blue onto his friend and old hunting partner's grave.
* And Then There Were None. By the time the commanders of the ship realize how infectious the locals way of thinking and living is, half the enlisted men on the ship have gone AWOL and disappeared into the local population while half of those left are locked up drunk in the brig chanting the philosophy over and over in defiance. The Federation ship is forced to depart immediately, lest they lose any more essential crew-man and end up stranded because they can't even run the ship. They end up classifying the world as not worth conquering with a dangerously insane culture that warrants a social quarantine to prevent it spreading and infecting other places.
* And Then There Were None changes General MacArthur's name to General MacKenzie, because at the time of the play's release in 1943, the real-life General Douglas MacArthur was an important figure in the Allied forces of WWII.
* And Then There Were None, devoted to his own pleasures but unable to consider the wishes of others. Interestingly, the murderer generally kills from "least guilty to most", and while Marston committed a pretty terrible crime (running over and killing two children), he's actually killed first on the logic that he's amoral and has no comprehension of right and wrong.
* And Then There Were None has this as the killer's motivation. Notable in that killer, though innocent before the events of the novel, recognizes that he is now a killer himself, and takes the only appropriate (for the trope) action.
* And Then There Were None has to be the killer. The phrase "acquitted too late" refers to the death itself, which clears the victim of said suspicion, but by then it doesn't do them any good. Even this turns out to be false as when the "death proves innocence" idea takes hold, the killer fakes his own death to throw suspicion off himself.
* And Then There Were None. He grows to regret his action years later.
* And Then There Were None, in which ten people are invited to an island because they've all committed murder in such a way that they could not be blamed for it - deliberate neglect, emotional abuse driving a victim to suicide, sentencing an innocent man to death, etc. - and then killing them all off in the manner of the nursery rhyme?
* And Then There Were None is a former cop, whose crime is fitting up an innocent man, leading to his victim being sentenced to hard labor and dying in prison. Blore is presented as devious and amoral, suggesting this was indicative of his general behavior as a police officer.
* And Then There Were None is essentially a slasher written decades before the genre was established.
* And Then There Were None is pushed off a cliff into a still-choppy sea.
* And Then There Were None rather than focusing on the much more interesting mystery that made up the original story.
* And Then There Were None similar to the plea he makes in the 1945 and 1965 films... and then having Vera — who is revealed immediately afterwards to be 100% guilty of the murder she was accused of — shoot him dead anyway.
* And Then There Were None: The guests arrived on Indian Island on the 8th of August. According to the epilogue, a distress signal was spotted on the 11th and a rescue party was sent on the 12th. They arrive on the island to find everyone is dead.
* And Then There Were None they mention a "red herring" right in the poem. For good reason, because the killer Judge Wargrave fakes his death and then drowns his assistant, Dr. Armstrong, leaving the remaining characters Vera, Philip, and William to suspect each other of being the killer. And when Dr. Armstrong

disappears, murdered by drowning by the real killer, the other recall the poem saying "red herring" and try to be genre savvy and believe that the former was faking this death.
* And Then There Were None, this leads to the death of a child. You see, his governess was in love with the child's uncle, who was in this position because of the child's existence. With the child out of the way, the uncle would inherit the family fortune and be able to marry the governess. She did fail to factor in that the uncle genuinely loved his nephew...
* And Then There Were None when she realizes U. N. Owen is enacting the bedtime rhyme and they're all gonna die.
* And then there were the medical experiments, such as those on hypothermia and survivable levels of blood-loss. The actual doctors expressed a particular contempt for
* And then the same happened for both Blu-ray and DVD releases in Iceland, Brazil and Latin America in 2020.
* And then the second game managed to upp the bovine deification meter
* And then the segment rewinds itself and plays it in again, as if to say, "Yeah, he REALLY said that."
* And then they go dropping Dean into the 1940s for an episode, with him being specifically dragged into a suitmaker because his usual jeans, flannel shirt, and jacket combo won't work in that time. Dean would look good in a paper bag, but when he steps out in a perfectly fitted suit and fedora, it's even better than the tux.
* And then they learned why it's a really, really bad idea to build your economic and military center on a ring-shaped island with an awesome central harbor that from time to time does strange things like boil or emit fumes. about sunken islands and labyrinths with bull-headed monsters.
* And then they make "Super Hero Teams" consisting of random figures. What? You never heard of the time
* And then they utterly skewer this trope in episode 25, where the team drinks some "Wake-Up Juice" in order to battle a nightmare monster; said drink peps them up enough that they perform the entire transformation sequence
* And Then They Were Puppies", the Puppy Master's lair is introduced. It looks like an observatory with a dog bone on top.
* And then this is reversed near the very end of the movie, with Carter thanking the Chinese flight attendant in Chinese.
* And then to muddy things further, The Bonzo Dog Band showed up in a scene in the film
* And then topped by Kaiba (oddly enough) when he and Alister battle
* and then tripping himself up on his roller-skates and jamming himself head-first into a toilet which then begins flushing. "Always check the box, Perry the Platypus..."
* And then we get to Dino Fury... in which four of the five rangers were major fans before becoming rangers, and the fifth is an alien from
* And then we have Djaq, who is at least given a reason why an Arab Muslim woman would be in Medieval England. However, after her introductory episode almost no one remarks upon the fact that a) she's obviously not English, b) she's a Muslim in a time and place where that would be intolerable, c) she's a woman who dresses and acts like a man, and d) she's from a nation who the King of England is currently fighting for Palestine.
* And then we have Subaru (a die-hard fan of Nanoha herself) is part this, part
* And then we have Terminus, a supposed "sanctuary for all". "Those who arrive, survive" as they say.
* And then we have the Bit Beasts, which are powerful spirits that are
* And then we have the ending of the film, where Jack Slater returns to the movie world with full knowledge of being a movie character and begins to refer to everything around him much like the main once did.
* And then we have the episode where Helga drinks an 'anti-love potion' to erase her feelings for Arnold, and stops bullying him. Cue an
* And then we have the parasprites from "Swarm of the Century". They eat any and

every sort of food until Twilight Sparkle casts a spell to stop them from doing so — whereupon they start eating everything that
* And then went on to retcon the original torching - it wasn't Old!Loki who took over Kid!Loki, but a copy Old!Loki had created to screw Kid!Loki over. He was haunted by guilt over killing Kid!Loki and subconsciously used his reality-warping powers to manifest the Kid!Loki ghost. Once he owned up to what he'd done, the ghost disappeared.
* And then we see that she was showing off her ability to tie two cherry stems in a knot with her tongue. Both of them are fully clothed and on a date in a cafe. However, this boy does have a tongue fetish, which Shitara was
* And Then What?: The villain hasn't considered what they'll do once their plan is successful.
* And Then What?? They do not have the resources to commit to fighting this specific crime long term. A permanent police presence will only move offenders somewhere else. So how to find a more permanent solution...most are in the unfortunate position of having to scale back to business as usual when it is not a serious or political enough to act on.
* And then, when Aahz finally takes him on as a full partner, he willingly shakes Skeeve's hand to acknowledge Skeeve as an equal. Skeeve, specifically remembering the earlier refusal, is touched by the display of newfound respect.
* And then, when everyone else is busy trying to keep a rival gang from invading your neighborhood, Smoke eats
* And then when he finally does get his hands on Laurinaitis, he loses
* And then when Misa and Takada have dinner together, Misa says that if Takada goes too far, she'll get the death penalty.
* And then when said episode premiered on Adult Swim, they replied with
* And then when the Five are identified and brought together, things go pear-shaped, one of them ends up dead and resurrection tech is truly lost for good.
* And then when you arrive at Banshee, your ship crashes. The can breaks, the evil is unsealed, and the Sadistic Choice (or
* And then Winnowill, the series' main villain, discovers that her healing powers allow her to make mortal elves immortal. Against their will. And teaches Leetah, the hero's lifemate, that her own healing powers would allow her to do the same. After being kidnapped 10,000 years into the future, and believing (with good reason) that all of their friends are dead, Skywise (the hero's best friend) asks Leetah to make him immortal... only to find out several
* And then you fought your way through the biggest battle that's ever been fought, taking huge amounts of damage, watching people die around you, and you FINALLY rescued Ace. Great! Wait, what's that?
* And then you get even more tanks with Wargame: Airland Battle, featuring nothing less than 12 nations and their respective array of tanks, also, the new armor stats system has made most
* And then you have Commander Kubrik Chenkov, whose only strategy is to throw more men at the enemy without armor or artillery support, whether the goal is to take a fortress or clear a minefield. This somehow succeeds despite losses that are horrifically high
* And then you have medications intended for post-menopausal women... which warn you against taking them "if you are pregnant or may become pregnant". Most of the intended users of these are past having to worry about pregnancy...
* And then you have space battles, where it typically costs everyone 1 EN to move a square, there are fields of debris, and the occasional terrain with HP/EN regeneration.
* And then you have Spike the Dragon, who usually eats gemstones (although dragons do that in this universe), but he also
* And then you have the Blood Pact, a terrifying Khornate faction due in no small part because they have psykers called
* And then you have the Charlotte family, which is Yonkou Big Mom and her 85 children (plus spouses, plus grandchildren) running a pirate empire.
* And then you have the non-poisonous animals that mimic the appearance of

poisonous ones to trick predators into not eating them. This is called Batesian mimicry.
* And then you have the Planetary Defense Forces, who are seen as this by fans
* And then you have the songs that pack a bunch of dance moves into one track, something like a dance-move
* And then you start encountering bears (and bear-like enemies called Miacids) in the open-world zones of the
* And then you unlock and buy the Infinite Launcher, which is more expensive but takes up no more space.
* And then you've got Princess Luna, though that can be excused for being
* And then you wonder why Plankton doesn't just cater to a more...carnivorous clientele? There's bound to be some somewhere in Bikini Bottom.
* " and the OAV version were all "as mad as a box of frogs," and sent them to a meeting of the eponymous support group. It goes about as well as you might expect.

* And the one between Cameron and that other terminator who she twisted up like a pretzel.
* And the one person she trusted betrays her on her loyalty mission and ends up getting killed.
* And the one when Joey and Chandler are fighting over the name of Phoebe's baby.
* And the one where a boy liberates a genie and uses his first two wishes to put his parents in jars. The third wish is just the icing on the cake.
* And the one where a toymaker at a practical joke company shows one off to his boss who, unamused, makes a sign reading "aargh ya got me pal! (flop)" come out of his mouth. Followed by "You're Fired" coming from his ears.
* And the one where he wins a figure-skating competition for a box, and the kids steal both the Trix and the trophy.
* and the one who thought of sending Acheron on the quest, finding him expendable.
* and the one who tried to shoot Dante, but shot Sonny instead! He's dead now. He's not missed.
* and the only one that is still activated, and figuring out how to repair himself using the corpses of his brethren.
* And the only reason a lot of people have even heard of Horatio Hornblower in the first place is that
* And the only reason he has unusual abilities is that Carbosilicate Amorphs are descended from swarms of
* And the only reason Trunks didn't achieve this with Frieza's henchmen was because it took him about 3 seconds to kill about 20 of them.
* and the only survivors are Nog, Jake, and one girl — the rest of Red Squad dies.
* And the original framing sequence (which was removed from the DVD release) implied that it was a ghost story that old Indy was telling to some kids on Halloween.
* And the original Pantskat pixel of him has been inserted into at least two later flash animations.
* And the original series had the world-conquering supercomputer WOTAN based in the Post Office/BT Tower.
* and the other parahumans arrive in the 35th Millennium free from Chaos, setting in motion the plot.
* and the other sensei punish him for it. Harribel punishes him because he didn't chamber his first kick properly, causing him to tear his abdominal muscles. The other sensei punish him for getting caught beating Sasuke.
* And the other team starts a cult after him after he says that it's okay to be a pervert.
* And the other: The first baby can come any time after the wedding, but the second always takes 9 months.
* And the pak'ma'ra on the base of their neck. This makes the very popular 'adult

entertainment' (ahem) film "Who's Your Little Pak'Ma'Ra" an anatomical impossibility according to the doctor in
* And, the Pamela Hamster-centered episodes did this with hamsters: Pamela Hamster lives in "Hamsterwood", and she's an actress who has been in shows such as
* And the paratron shield, which effectively displaces everything hitting it into hyperspace. Since hyperspace in this setting isn't a place where unprotected objects can exist for long, this generally means that such things either end up in a random alternate universe with usually no way back (if they're lucky) or cease to be altogether.
* and the player chose a Juggernaut character, and even then it's impossible to recreate any of these teams.
* And the presence of a cathedral radio, and a few anachronistic cars (by
* and the presence of oxygen was lethal to nearly all other living beings). However, this isn't to say the chemical reaction involved in photosynthesis (or any other that gave O₂) might not be possible without life.

* And there’s Lacie, the root of the story itself. But she’s never played any part of the story in the present, unlike Jack and Glen.
* and the reactor. Stepping into the mess would cause damage to your Mech's legs.
* And there are also sorcerers who come from Númenórean descent as well, though according to Faramir this generally does not happen in Gondor. The Witch-King himself was one prior to his, ah...
* And there are at least three Italian stories. In the 1987 Mickey Mouse story
* And, there are less economical one-on-one mixtures such as Navachristians and Buddislamics (who divide into Zensunnis and Zenshiites).
* And there are several hints that Giles used to be one as well. Ethan frequently remarks that he never got even close to his old friend in both power and depravity.
* And there are the transapients, whom nobody understands to any great degree anyway. It's believed that the Kedric Incident, in which the questionably-sane archailect Kedric for some reason kidnapped billions of intelligent beings and re-engineered them all into some strange bio-mechanical construct, may in fact be an example of transapient "artwork".
* And there are the various shape shifting aliens that can go from something the size of a mouse, to a human and back. While this could be explained as simply increasing density rather than reducing mass, Dr. Bashir even notes Odo's ability to change mass in one episode of
* And the reason he bothers is he's so desperate to go back home that he's willing to do anything
* And the reason it fits this Trope is because Proctor doesn't get the hint right away. A minute later he starts to hum "Jingle Bells", causing Harris to grab hold of him while holding his holster with the other hand, threatening, "Go ahead... Make my Christmas..." (
* And the reason that JJ has to leave the BAU is extremely close to the reason that AJ Cook had to leave the show:
* And the reason that there were even warning placards in the first place? In 1972 there was a American Airlines flight that had the exact same problem, but that one got a small but significant lucky break: not all of the control lines were severed, so the pilots retained some level of control and managed to land the plane with no loss of life. Because the only way that the FAA could force McDonnell Douglas to fix the planes was to ground them all and not let them fly before the door was repaired, there was a gentlemen's agreement between the head of the FAA and McDonnell Douglas to put in this "failsafe" rather than fix the fundemental issue.

* And there's Castform, a Pokemon with the special effect to change type (AND appearance) depending on the weather (Sun, Rain, or Snow). It also comes with the attack Weather Ball, which works the same way (and its power doubles during weather). Strangely, Weather Ball becomes Rock-type during a sandstorm but Castform's appearance doesn't change to reflect this.

* And there was a villain who was obsessed with killing Spider-Man and for some reason would only use giant spider robots called "Spider Slayers" for the job. One version of the Spider Slayer was a scorpion though, which makes a bit more sense, given that scorpions do commonly prey upon spiders. This was the original reasoning in giving Mac Gargan the power and abilities of a scorpion to serve as Spider-Man's

* And the Standard time is not exactly, but close enough to human time that people use them interchangeably. Alternatively, as Shepard has been in the military for years, it's quite possible the references to years are actually to the Galactic Standard and not Earth years. The game offers all three possibilities, but never gives a definitive answer.
* And the story about the mining robot who was supposed to be sent offworld to Titan or somewhere, but its crate ended up on Earth, somewhere in the American midwest. Being programmed for a different planetary environment, the robot went a little bit insane (while still following the three Laws of Robotics), and in an attempt to fulfill its programming ("use a laser drill to mine ore") it tried to build an industrial laser from whatever old stuff a farmer had lying around his shed ... and ended up building the world's first fully functional disintegration cannon
* And the Story Continues, but the emotional baggage is still there now that Erin's developing a romantic interest in Stephen. It's probably why she decided this time around to ask him up front how much he liked her.
* And the Story Continues getting close to her and proceeds to bully and humiliate him from the outset to drive him away out of sheer jealousy.

Seska tries to fabricate evidence that the other officer stole the device in the first place, but Tuvok is monitoring the computer program to see if this will happen, even anticipating that the other suspect was trying to do this to Seska.
* And the Telmarines are descended from old naval era brigands. But remember, the good Narnian humans of the subsequent books are Telmarines, not to mention Caspian himself. Only this one movie would feature Telmarine antagonists, and apparently, the common people backed Caspian over Miraz given the parade at the end.

* And the worst is this is all entirely deliberate: the last time a single man controlled every branch of Imperial power, it led to the Age of Apostasy.
* And the worst offender has to be L.T. Colonel Safida: the guy couldn't even put together a shopping list if his life depended on it, with his overworked and unthanked top subordinate keeping the regiment together. He orders pointless and cruel attacks on the native population, and when they rightfully rebel, he gets several battalions of his army killed by ignoring environmental conditions (like mountain sickness). He even gives a hostile nation a perfect excuse to launch a jihad thanks to his constant abuse towards spirits.

* And those are just the official ones in the game backstory. Technically, anyone who starts a supergroup (this MMO's version of a guild) has begun their own Heroes R Us organization.
* And those are just the ones mentioned. like this is called out as an oddity every time he's mentioned.
* And those are just wars involving the Exalted. The occasional hint is dropped regarding wars waged by gods in the era before humanity, and even occasionally to conflicts involving the Primordials prior to the existence of Creation.

* And those who hated their life usually had another reason than immortality to hate it. For one, it was the horrors of war.
* And those who succeeded their plans will also do this, because they're in delighted mood.

* And though not technically soldiers, the Silver Horde consists of barbarian adventurers who are all at least eighty. The fact that they are all still alive after more than half a century each — in a line of work that kills most people that go into it in a year or two — means that they are very,
* And though skilled in many areas, the fact that Angel isn't a particularly good detective does get lampshaded, to the point that he ends up having to hire a private detective in one episode, despite ostensibly being one himself.

* And "Tipp-Ex" in the UK, France, the Netherlands, and Sweden. There was a time when Snopake gave Tipp-Ex a serious run for its money in the race to be the first to lose its identity.
* And to add insult to injury, these flavors — whether natural or artificial — rarely taste anything like what they're supposed to imitate. This is because the flavors of actual fruits and such are hideously complex blends of up to thousands of chemicals, which are tricky (and expensive) to make in a lab. What cheap producers often do is simply isolate the few strongest chemicals in the flavor and synthesize that. This is how you get "strawberry flavor"
* And, to a lesser degree, the Gallente Vexor. Though built as a drone boat, the low cost, combined with the sheer versatility of drone options makes this cruiser useful for combat, salvage, logistics.

* And to perhaps complete the cycle, there is the case of the Chaos god Nurgle, horrifying and ugly in the most maximal senses of the word, and that’s without factoring in the virulent plagues and diseases has coursing through the very air he resides in, let alone his skin. Bloated, dead-looking, maggots and worms writhing everywhere, and one of his attributes is kindness. His followers while all hideously ugly as well, and bloated/diseased, are nonetheless also jovial and welcoming. To make it even more insane, when the Eldar pantheon fell in the birth of Slaanesh, the goddess of fertility, healing, and presumably beauty, Isha, was captured by Slaanesh to be his/her/it's plaything forever. When she screamed and begged for help across the cosmos, none other than Nurgle and his followers wage war on Slaanesh to get Isha out. Nurgle kept her in his garden then and had her drink his plagues - she, of course, could heal herself, and so would then tell all mortals how to rid themselves of his plagues. While she could leave, canon seems to indicate she willingly stays with Nurgle. He absolutely adores her, and likewise, she loves him.

Again, many devs left and forked the last Sun-produced version, this time into MariaDB.

* And, to top it all off, the United States is a NATO member, has a number of unilateral defense treaties with other nations, and is in general much more popular than China, India, or Russia, which are the only three countries that could fend off a conventional land invasion by the USA (though not a determined naval and air campaign). Anyone looking to resist an attack by the USA would have few if any, allies to call upon. Anyone looking to invade could well see much of the developed world in the USA's side. For now, an invasion of the USA is a 'pipe dream'.
* And to worsen the karma even more, it seems it was one of the first places in America where lobotomy as we know it was practised.

Any constantly-glowy melee weapon will also be called an Energon Whatever (presumably meaning it's powered by energon, rather than being made of the stuff, because stuff that explodes when struck doesn't make a good sword.) However, some series have somewhat different rules for the stuff:

* And true to the trope, blood magic is enormously powerful. Going deep into blood magic and relying completely on the armies of demons it allows you to summon is a valid strategy all by itself. Some of the strongest nations in the game are that way because of how well-suited they are to that strategy.

When she sees it's going over Jenny's head, she decides to simplify matters, scribbles something on Jenny's paper, and shoves her out the door. When Jenny looks at her paper, she sees a drawing of an ovum (labeled "US") surrounded by approaching sperm cells (labeled "THEM").
* and under the Sixth Amendment thereto, the trial of all federal crimes must be in the state and district in which the crimes were committed, meaning the government can only try the Leader in Arizona for crimes committed in Arizona. Plus, Book's defense of Sterns is that, as a gamma-altered individual, he is of diminished capacity. That would be fine, if and only if gamma alteration meant that Sterns either did not know right from wrong, or that he was under an irresistible impulse to commit his crimes. The problem is that two of Book's key witnesses, Jennifer Walters and Dr. Leonard Samson, are also gamma-altered, and both are moral, law-abiding citizens; Walters, obviously, is a lawyer and superhero, and Samson is a psychiatrist (and also occasional superhero). That doesn't mean Sterns isn't insane, but Book certainly hasn't proved it. Plus which, even if Book had succeeded, that would just mean that the Leader would just end up in an asylum for the criminally insane instead of in prison; the story was published in 2007, the same year New York abolished the death penalty.
* And undyingUmbrage. It was easy enough to write off his verbal aggression and death threats as non-serious - Dirk seemed to, after all. It got even easier in one conversation when uu hilariously demanded that Dirk draw porn for him...of people holding hands and reciting poems to one another, uu all the while acting as though normal human romantic behaviour was the most terrible of all weird fetishes, cementing him as a not-so-heroic

* And used as a plot-point in Season 3. Shaw fakes a rescue of Chuck and Sarah which includes shooting three enemy agents, and having a fight with two more. There is some horrible stage fighting, with punches and kicks being missed all over the place. It turns out that he's a double agent and the fight was staged intentionally. It's also telling that the only person who figured out that Shaw was faking was Morgan, thanks to many-many hours of watching bad

The Toa sets were all very similar, the Toa Nuva sets were basically the same as those but with armor, and the Bohrok and Bohrok-Kal sets were all totally identical with the exception of colors and weapons. This wasn't seen as a killer because a) it was early, and the later Rakhshi and Toa Metru redesigned even harder, b) the Toa and Bohrok sets were, if nothing else, very different from

* And while the books note that strictly speaking a chainsaw isn't a very practical weapon even in the hands of a colossal Juicer or Titan Juicer (that is, while stupidly deadly, they're still extremely clumsy in use), they admit that the potent symbolism and intimidation factor is the real reason they see widespread use among Juicers; entire Coalition brigades have run in terror at the sight of a mere handful of chainsaw-wielding Juicer shock troopers.
