For those of you who came here looking for the term's idiomatic meaning, that's a Cloud Cuckoo Lander . As for actual space cadets: A Discredited Trope from the early Pulp Magazine days of media science fiction (peaked in the 1950's in movie serials and TV shows), involving a hero who was part of an organization that handles law and order in outer space , much like in a Western... in space . Frequently the titular Space Cadet was a child or teen who was a new recruit or a sidekick to an older hero . May be the equivalent of Walking the Earth with isolated outposts and frontier planets; especially strange when the Kid Hero seems not to have a family at home. His training place would be the Space Cadet Academy . His great goal in life is to someday become Captain Space, Defender of Earth! . For the Robert A. Heinlein novel, see Space Cadet </. For the virtual pinball table, see Full Tilt! Pinball </ .

There are a few types of clothes people wear when they are traveling in space: Used Future settings avert this with jumpsuits and coveralls with lots of pockets. Today, Space Clothes are largely a thing of the past in TV and film (though not so much in comics or animation) as everyone goes military-style or contemporary . From an out of universe production standpoint, avoiding space clothes can serve as a method of dodging the Sci Fi Ghetto trap. The problem with this is that people may well not wear those sorts of things in the future and aliens certainly wouldn't. Additionally, the fashion trends have clearly been showing a pattern towards embracing old school, classic, back to our roots, and retro or even Retraux styles. This is probably due to a general notion that the future is no longer a bright and promising place. Many escape to the perceived coolness of the past . This might explain why Fedoras came back in style amongst hipsters. Not to be confused with clothes that have starfields and nebulas and other astronomical designs on them; that's Star-Spangled Spandex . See also Future Spandex and Rummage Sale Reject . Compare Spandex, Latex, or Leather . Closely related to Zeerust .

The Cold War! Recycled in SPACE! Considering it lasted about 45 years, the Cold War massively influenced speculative fiction and fantasy work during and after that period. Metaphors and analogies about nuclear weapons , superpower rivalry , communism , arms races , and the looming threat of the End of the World as We Know It ,

therefore, were bound to pop up in all sorts of fiction. Especially in Science Fiction . Note that this is not entirely without rational foundation, however. A technology capable of interplanetary (or even moreso) interstellar travel necessarily involves energy levels and destructive possibilities on a grand scale. Mutually Assured Destruction is quite plausible in a war between space-faring powers, making scenarios at least akin to the Cold War not entirely unlikely. To avoid such destructive confrontations, the powers involved may resort to engaging in Proxy Wars instead. Please note this entry is limited to exterior settings inspired by the Cold War and not stories that explicitly involve the actual Cold War. Moreover, this trope, despite the name, is not</ limited to examples set in space — any fictional setting will do. See also Enforced Cold War and Lensman Arms Race . Subtrope of Fantasy Conflict Counterpart .

There is no hope and You Can't Go Home Again . The Empire is spreading out. Even The Federation has too many Obstructive Bureaucrats . There is no way for free men to get out of the reaches of The Government and even mounting La Résistance will be of no avail. So what do you do? You become Space Cossacks. You flee to the border and live in a tough area where you all have to be sharp. You set up as Space Pirates or as Hired Guns or as Intrepid Merchants . Or all of these at once. With you are various dissidents like people who feared being Made a Slave . There might be a Noble Fugitive or two, perhaps even a Defector from Decadence . You and your brave band of Fire-Forged Friends will struggle on to survive and maintain your freedom and heed no laws but your own and respect no authority but that of your Team Mom and/or Team Dad . Songs will be written of your deeds The Empire most likely officially considers these guys outlaws, either in the sense that they're to be shot on sight, or in the sense that they're "outside the law" and are to be left alone as long as they stay out of the way. Either way, they probably consider them useful, as they both screen the empire from external threats and tame the fringe worlds into a state ready to be colonised. They may also provide a handy place to send people who are to be Reassigned to Antarctica Given the parallels to the Wild West , a Space Western is almost sure to be set amongst such people The reference comes from the old Russian custom of disgruntled people fleeing to the steppes and joining a Cossack band If they persist for multiple generations they may become Space People

Exactly What It Says on the Tin . These are spacecraft: vehicles and methods of transportation used for traversing the great voids of outer space. This index covers aesthetic design, method of propulsion, variations in functions and any other points of differentiation in types of Spacecraft .

A concept that gets kicked around a lot in Speculative Fiction as well as among real-life futurists. Exactly What It Says on the Tin : an elevator riding up into space on a cable stretched from Earth into orbit Physics dictates the placement. It would need to be placed on the equator, and stretch up in such a way that the center of mass for the system was beyond the geosynchronous orbit level. That means at least 22,000 miles up. Hope the music doesn't suck The best materials science we have today tells us that the only known material with a high enough strength-to-weight ratio

would be carbon nanotube cable. We so far don't have the ability to manufacture it in the lengths needed. Other theoretical methods include dynamic-support, essentially a stream of magnetized bullets whose momentum pushes up the cable. The idea is surprisingly plausible from a physics standpoint, is judged as medium-hard on the Mohs Scale , and would, once the construction cost was paid off, reduce the cost of putting payloads into orbit. It's been said that we could have a working space elevator about 50 years after everyone stopped laughing. Most of them have Many works of fiction suggest building a prototype on the Moon or Mars (before tackling Earth), as the lower gravity makes it easier (and safer in case something goes wrong). Those suggesting Mars are reasonable, although there is a moon between the Martian surface and synchronous orbit. On the plus side, there is a second moon just</ outside synchronous orbit, which would be handy to use as material to make the elevator. A lunar space elevator would need to connect to either the L1 or L2 of the Earth-Moon system, requiring it to be several times longer than its terrestrial counterpart, but the Moon's low gravity means it's still possible with current materials These are sometimes known as "beanstalks", after Jack and the Beanstalk </ Compare Star Scraper

There are certain races in Speculative Fiction that appear to occupy an equivalent niche that elves do in a fantasy setting: the idealized, Closer to Earth culture reaching toward utopian ideals, or the inscrutable, ominous Fair Folk for whom We Are as Mayflies , or both at once, of course. Similar to Angelic Aliens , but Alien Angels are defined more by their ethereal appearance than their own perception of being an "enlightened" species compared to others. When they are not behaving as a standard fantasy elf or, as is often the case, an enlightened mystic race such as Vulcans or Na'vi , they are off beaming up humans , cattle , and children just like their Fair Folk ancestors. Sometimes the elf-like race are implied to be Ancient Astronauts themselves, misremembered or otherwise. Sometimes they are literal Elves IN SPACE! or at the very least have elf-like characteristics such as longevity and Pointy Ears . Some anthropologists have speculated that the tendency to imagine any foreign intruders who are different from us as Elves vs. Dwarves is hard-wired, like the theory that humans are hard-wired to imagine dragons because of our bad experience with snakes. By this logic, we have an innate tendency to classify "powerful" cultures as inscrutable, slender (tall and/or diminutive) beings who were here before us , have better tools and are not to be messed with , versus swarthy, hairy fellows who are industrious, engage in untouchable occupations such as mining, and are migrants. Space Elves would thus occupy an extreme niche in the spectrum. Your Space Elves may be: Like other Proud Scholar Race Guys , these guys are the most likely characters to have Psychic Powers (possibly confined to a single gender) and the most likely characters in the setting to be Technical or Actual Perfect Pacifist People , in contrast to the warlike Proud Warrior Race Guy , who are ironically more likely to be literal Elves In Space. This is a supertrope discussing references to Space Elves in various tropes, including: Our Elves Are Different , Proud Scholar Race Guy , The Fair Folk and/or The Greys . Examples of each type would also fall under such other tropes. Compare Alien Fair Folk . Contrast Space Orcs .

See Proud Scholar Race Guy for more examples. </

See also The Greys for similar species. </ Psychic Green Space Babe Variety

A great many Science Fiction protagonists are Space Fighter pilots Some Space Fighters have room for two (or, rarely, more) crewmembers rather than a single pilot, but all are small and nimble, in contrast with larger Cool Starships such as The Mothership or The Battlestar . Typically Space Fighters are dependent on a larger vessel, since they themselves lack the space for supplies or (often) a Faster Than Light Drive ; however, there are exceptions Battlestars will deploy Space Fighters against enemy Cool Starships with an appropriate Fighter-Launching Sequence . Fortunately for the Ace Pilot and his Wing Man , large enemy ships will usually turn out to be Point Defenseless —at least as far as the protagonists' Plot Armor -equipped Space Fighters are concerned. Thus the enemy will need to scramble Fighters of their own . An Old-School Dogfight will ensue. Expect many a Red Shirt Space Pilot to lose their life, thus underscoring just how risky The Hero 's profession is, and making him or her seem all the more glamorous and heroic for it Quite often the Space Fighter will look just like a Cool Plane , because Space Is Air . At the very least, it's likely to have wings. This goes along with the use of the Old-School Dogfight , and is largely Rule of Cool : Whether a Space Fighter has wings or not doesn't necessarily have any bearing on whether it will ever be shown operating in an atmosphere. If it can</ fight in the air as well as in space, it's also a Space Plane Hard science fiction may instead employ more utilitarian-looking starfighters, with lots of engines and a completely un-aerodynamic shape. Some works may even opt for replacing Space Fighters with unmanned weapon systems controlled remotely or by AI —though in a setting involving Brain Uploading and The Singularity , the differences between a manned Space fighter and an Attack Drone could be very subtle As far as Real Life goes, actual designs for manned orbital spacecraft that could charitably be called space fighters and the Soviet Union even launched a Space Station (the program) armed with a cannon similar to those used on atmospheric fighters as a test of the concept (they destroyed some defunct satellites) See also Humongous Mecha (some may function as or even turn into Space Fighters). Space Fighters are a major part of the Standard Sci-Fi Fleet , and a common form of the Mook Mobile . If you're interested in discussing factors affecting the feasibility of Space Fighters in different settings, check out the Analysis page

When writing alternate timelines or playing around with maps, counterfactual historians sometimes don't see the point of coming up with lots of different countries, especially for regions they know little about. There may also be a need to make sure that the entire earth is PVP Balanced in more warlike stories. So what they do is just fill the map with large polities, even when there would be little plausibility to a single empire ruling these territories . This is referred to as a Space Filling Empire The number of empires will be at least three, the minimum number needed for alliances and betrayals , and popularised by the pictured setup of 1984 </ This trope is so prevalent that the AlternateHistory.com wiki even has for it Contrast Balkanize Me . See also "Risk"-Style Map and Spreading Disaster Map Graphic . Several types are found in United Europe , Expanded States of America , and Middle Eastern Coalition . Can lead to One-Federation Limit

Isaac Newton turned the world of physics upside down when he observed his first law of motion: This was earth-shattering stuff when he introduced the notion — in 1687! Sadly, most writers for science fiction TV shows and films are apparently still stuck in Aristotelian physics — according to which a body in motion will always</ slow down even in a vacuum — and just don't get a single clue of how proper Newtonian physics work. Basically, goes the misconception, if your engine breaks down in space, your ship will quickly slow to a complete stop. Writers do this because if the engine in your car breaks down, you come to a stop, and if the engine in your boat breaks down, you drift at a random low speed at the whims of the currents. Based on these experiences, it feels intuitive to write that spaceships will act this way. However, the reason these things happen is friction. On a straight road, with good tires, you can coast quite a long way on even a slight downgrade. In space, where there is no friction between the car and air to contend with, you can coast even at top speed almost forever</ (albeit perhaps not in a perfectly straight line, due to gravitation), or until you hit something, which, given how big space is, is literally astronomically unlikely. For that matter, the entire notion of only having enough fuel to travel so far is a little suspect: if you've got enough fuel to reach top speed, you've got enough fuel to go anywhere; once you reach top speed, you can just shut the engine off and coast, though this is assuming you're flying along a ballistic trajectory. Of course, it would become a problem if you don't have enough fuel to stop </ at the end — or if, for whatever reason, you have to turn somewhere, or if your engine fuel doubles as power generator fuel, which would cause a black-out in your ship (which, if it comes up in a Space Friction plot, generally means the crew has a few hours to restore power before running out of air). Even so, this would result in a broken-engined ship perhaps missing its target or crashing into another, not stopping dead. Exotic propulsion systems of the sort needed to exceed the speed of light are exempt from the normal laws of physics and can reasonably be presumed to expend energy even at a constant speed, just holding the laws of physics in check, but it's curious that the effects of such drives always cause space to behave exactly like an ocean —a ship said to be "adrift" will be moving at a random (low) speed and direction or practically not moving at all. A form of Hollywood Science . See also Space Is Air , Space Is Cold , and Gravity Sucks . Related to Friction Burn . Contrast Frictionless Reentry .

Space Is Air when a work treats spacecraft as if they were aircraft; they bank into turns, keep their engines firing at all times, and may even have wings built into their design. Aircraft-style design can be justified if the spacecraft is capable of operating in atmosphere as well as in space (like the space shuttle), but the main</ reason that this trope exists is because audiences are more familiar with how airplanes work than with how spaceships work. Thus, creators treat spaceships as if they are simply airplanes in space instead of using realistic physics, in order to avoid confusing the audience . This isn't necessarily a bad thing — after all, it can be used to great effect to make things look really cool — but it does push things down toward the softer end of Mohs Scale of Sci-Fi Hardness The way airplanes work is dependent on the fact that they're travelling through the atmosphere. Wings provide lift, flaps and rudders can reorient the plane by redirecting airflow, and their engines must

be on constantly in order to counteract the effects of friction and gravity — wings generate lift only when there's airflow across them, so a certain minimum airspeed is absolutely necessary for them to work. Because space is a vacuum, none of these things apply to spaceships — wings and flaps are useless, and the engine only needs to be on when the ship is changing speed or direction. This means that spacecraft use dedicated thrusters to reorient themselves, and change direction in sharp bursts rather than gradually. If you see a spaceship changing direction without using maneuvering rockets, or making wide, sweeping turns, then that's because Space Is Air. Many movies who feel obliged to acknowledge the lack of sound in space will nonetheless accompany motions of spacecraft or planets with deep, low frequency whooshing sounds, as if they were creating rushing currents of air. This trope occasionally extends to natural phenomena; for instance, the Sun is sometimes depicted, particularly in children's fiction, as literally on fire, implying that space is full of air to let it burn. Comets are almost always shown moving in the opposite direction to their tails, as if they were moving through air and their tails were the trails they left behind A subtrope of Artistic License – Space , and sister trope to Space Is an Ocean . Also a frequent cause of Space Friction , and may be why Batman Can Breathe in Space . If you see Old School Dogfighting in space, it's usually because this trope is in effect; it also dictates the appearance of many Space Fighters

Maybe it's the romance , maybe it's the adventure, maybe it's the obvious parallels to the Age of Exploration, but for some reason, when people write about space, they tend to make parallels to the sea, as President Kennedy (himself a former naval officer) did in his "Space is the new ocean" speech. Often, it goes far beyond metaphor. Science Fiction writers frequently use nautical analogies for pretty much everything</ in space, and fill in the gaps in their own knowledge about spaceflight with details specific to sea travel For example... In Space Opera , Science Fantasy and Steampunk Fantasy genres, writers are fond of filling Space with aether streams and solar winds, even magical ships with Solar Sails that literallySolar winds and sails are an actual thing. Bill Nye, for one, took part in a program that launched a small craft into space that, once up there, used a solar sail (essentially a large mirror made of mylar) to 'catch' the minuscule pressure imparted by reflected sunlight. Solar winds, streams of electromagnetically charged plasma emitted by stars, provide orders of magnitude less "push" per surface area than the light pressure used by a reflective solar sail, but can also be used for propulsion with very different setups known as electric sails and magnetic sails. Rather than being driven by the impact of particles against physical sheets of material, these use "virtual sails" of electromagnetic field generated by large antennae to catch the electromagnetic "push" that drives the solar wind. Prototypes have been successfully tested, and while simple reflective solar sail is simpler and requires no internal power, electromagnetic sail's have numerous advantages including lower weight, higher acceleration, and larger operating ranges from a star. In those cases, you may find you can even breathe in Space , and if you're lucky you can even ignore the vacuum. Characterization and plot may also come straight out of the archetypes created during the era of Wooden Ships and Iron Men as well—including intrepid explorers, lost colonies , an exotic beauty in every port , Space Pirates , and sightings

of the majestic Space Whale . To some extent, Space Is An Ocean is a Justified Trope : not only was space thought to be some kind of fluid until the turn of the 20th century , but seafarers long ago evolved the organizational techniques necessary to safely operate a self-sufficient vessel in a potentially hostile environment for an extended period of time, and it makes more sense to adopt nautical administrative and logistic features (and the terms for them) instead of inventing everything from scratch. As science fiction (and the aviation industry) has matured, Space Is Air has become a complement to Space Is An Ocean. Typically, large ships like The Battlestar will be based on naval craft, while smaller craft like the Space Fighter will be treated like aircraft. The two are not mutually exclusive — far from it, applying the tropes to different vehicles allows writers to recreate World War II (particularly the Pacific theater, with its pioneering of large-scale naval aviation) Recycled IN SPACE! , which is pretty cool, as it allows using the tactics of the Old-School Dogfight and having to close to broadside range with capital ship guns. Land transport metaphors tend to fall flat. Elements of road vehicles are generally Played for Laughs ; if a spacecraft has a manual transmission , it's a sure sign that Rule of Funny is a prime consideration. There is, however, a small but generally serious set of aversions (some listed below) that imagine space as a railroad instead—ranging from literal portrayals of trains in space to plots that take their inspiration from real-life railroad history. Lots of speculative fiction in all media depict spaceships designed to land on water, since an ocean provides what amounts to an infinite runway with a similarly infinite capacity for absorbing the heat of re-entry. Some examples include the Bebop from Cowboy Bebop </, the Seeker from David Brin's Startide Rising, most of the Space shuttles in Jerry Pournelle's CoDominium series, and the actual Apollo spacecraft sent to the moon (as well as the Mercury and Gemini spaceships that preceded Apollo) as well as the sent to Titan, Saturn's largest moon . In more realistic takes on this trope, spacecraft will often be likened to submarines instead of surface ships. There are a number of similarities between the two that make such a comparison useful: Finally, while not technically Truth in Television , this trope may well become so out of sheer cultural inertia; if it didn't become so as soon as NASA started naming space shuttles right out of maritime tradition. There's even a test shuttle named Enterprise </ (though that is a case of Defictionalization). There is also the fact that the orbits of most of the planets of The Solar System have an inclination of plus-or-minus 3° from (the "ecliptic plane"), and that the majority of the star systems within The Milky Way Galaxy spiral arms are within 1° of the plane of the galactic disc, though said invariable ecliptic plane is not coplanar with the galactic disk.

An inversion of Convection Schmonvection , Space Is Cold is the widely held misconception that space is in itself "cold." We hear Speculative Fiction writers talk about "the cold depths of space" or "the freezing void." If you get thrown into space without a spacesuit, you're going to freeze straight away, assuming you don't explode . While you would freeze in space eventually, you will not freeze instantly . In brief, there are two reasons why. Before exploring them, it's worth noting that "freezing" specifically means "heat leaves you". There are two ways heat can leave you: convection/conduction and radiation. Convection and conduction is simply touching an object, or liquid, or gas. If that which you touch has a lower temperature than you, your heat flows out of you

and into it, leaving you colder. So why isn't space cold (in the way we understand it)? The first reason is that temperature and heat are physical properties of matter. Space is the exact opposite of matter. Space is the absence of all matter — or close enough that the difference is academic. Asking "what is the temperature of space?" is like asking a bald person what their hair color is. This means you cannot touch space because there is nothing to touch in the first place. This in turn means heat loss by convection or conduction cannot happen in space. Like matter, energy can't be created or destroyed. Things cool off when heat goes from them into</ the surrounding matter, even the air; nothing for the heat to travel into means the heat doesn't leave you. (Touching the surface of your spacecraft, however, can be a whole different story). This is how a thermos works, by the way; there is a near-vacuum surrounding the storage space, preventing heat from passing through. The second reason is that radiating heat is a slow process, especially if you are in a space suit. Space suits are made to be cold (or hot for that matter) on the surface, meaning that as soon as the surface of a space suit turns cold, it radiates a lot less energy. And more important, depending on where you are in space, you can have incoming radiation that balances out — or overcomes — your heat loss. In other words, if you are too close to the Sun (or any other star) you will not freeze when exposed to space; you will either be kind of cozy, or you might burn. Where is the comfort zone? Suppose you put on your swimming trunks, don a fishbowl style helmet, and go outside your spacecraft for some tanning... what would happen? As for spaceships becoming incredibly cold when left without power, the real trouble with spaceships is getting rid</ of all the heat they produce, so that the engines don't cook the crew to death. Indeed, spaceships are designed to radiate heat as much as possible, and have heaters that kick on when their electronics aren't running or they pass into the shadow of a world. That's why everything was cold in Apollo 13—all the 60's era electronics that doubled as space heaters were turned off to save power. Generating heat is much easier than generating cold, which is why spaceships are designed to be slightly in the negative in their heat generation without the heaters running to compensate. For more information, visit the analysis page . Nonetheless, "cold space" is a near-universal trope in Speculative Fiction , to the point that aversions are met with disbelief . This all aside...you still WILL freeze in (deep) space. It will just take much longer than you'd think.

Once you leave the surface of the Earth, all bets are off. What we think of as immutable laws of nature are merely local phenomena, and all manner of things unexplainable by anything we know are out there between the stars — planets identical to Earth in every way, elements that no one has ever suspected existed, chemical compounds that don't behave the way "our" science says they should, and creatures with powers that seem paranormal. Why? Because they're from outer space </ . See: Applied Phlebotinum , Deus ex Machina , Artistic License – Space . Subtropes: In Science Fiction , space is rarely deliberately magical, but rather ends up that way due to insufficient research, the Rule of Cool , or excessive handwaving . Thus it's better described by its related tropes. However, when fantasy ventures into the final frontier, space is literally magical. Natural law isn't just ignored; it's shown the door and told not to come back. It's entirely replaced by a Here be Dragons sign. This is typical for fantasy, but when it's applied to outer space, things can

get... weird. The changes in the laws of physics generally do not cause manned spacecraft or the humans aboard to malfunction, shut down, or fall apart. Such a spacecraft is usually contained in a bubble where earth science remains 99.9% reliable.

Whenever a satellite or space vessel of any kind is shown, there will be either a beeping in time with one of the lights (for satellites) or the sound of the engines, which is usually a low rumble. Whenever weapons are fired, there will be an accompanying sound, especially with "laser" weapons (which do not produce any kind of sound anyway, " PEW PEW PEW !"). Explosion will be clearly audible. An Earth-Shattering Kaboom is sure to make a terrible, ghastly noise . This is mostly due to The Coconut Effect , but can sometimes be taken to extremes. One particularly strange case, combining it with Batman Can Breathe in Space , is having characters talk to each other</ in space Only rarely will characters who find themselves outside of the ship use the one way to talk to somebody in a vacuum without radio, going up to them and touching their helmets together, allowing the vibrations to transmit directly Acoustic License prevails. It is standard cinematic convention that sound is subjective. You hear what the characters are hearing. Since the ship can hear itself, and there is nothing else in the scene, it is natural to include audio from the ship's point of view. Deleting audio would only be correct if a character was somewhere able to see, but not hear, the ship. Another more 'technical' explanation has more to do with the rules of television production: a silent space battle is somewhere between incredibly boring and incredibly unsettling</, and unlikely to attract viewers that have just tuned in or may even turn viewers off simply because our brains are telling us we should be hearing sound even if there is nothing to hear The best justification so far actually links into the above in "auralization", where a ship creates sound effects as part of an In-Universe Viewer-Friendly Interface for its crew. If we</ can have 3D positional sound with home acoustic systems, why should spaceships</ not have audio representations of events to complement visuals? Also, the sound of explosions could</ be justified by assuming that the radio equipment is destroyed last and transmits the sound of the explosion to the other ships Of course Tropes Are Tools , and this is Artistic License . Having the sound makes the scene more accessible to the Lowest Common Denominator without having to stop to have the characters get a science lesson, plus — it's usually cool In Real Life , the inside</ of a spaceship is often noisier than the same machinery would be on the ground, because sound tends to echo a lot with nowhere to go. That said, while sound may not travel well, pressure waves do (because they're the result of matter, however scarce, interacting with each other) and so depending on how you define sound, things in space can produce a sort of 'noise' This is a subtrope of Artistic License – Space

Earthsearch </. Lampshaded when the Custodian of the Past supplies sound effects for her lecture on the origin of the solar system, despite there being no sound in space. In Season 2, the axon disabling beam sent through interstellar space to disable the Challenger</ makes a musical sound, but this is handwaved as being caused by harmonic resonances created when the beam strikes the ship.

There are a number of challenges associated with surviving in

outer space: the current human need for oxygen, water, food, waste management, heating, as well as space's lack of gravity , being unable to hear what is going on outside , and other issues all make space life a difficult proposition. Any Casual Interstellar Travel drive requires an hour to "warm up" and is the most fragile thing on the ship. A single pebble travelling sufficiently quickly could kill you, or at least destroy one of those important life-support systems; these systems are either very-high-maintenance or require the use of an AI to keep everything under control. If you were to send a Distress Call , the nearest help would be a week away. And the interior of your spacecraft is designed to look as cold, clunky, mechanical, and minimalistic as possible — it might as well be a flashy Haunted House . And that's when things are working correctly</ . Now throw in a malevolent or malfunctioning AI that controls all of the above, or hostile aliens that you have never seen before trying to use you for breeding . But you can't go outside without taking on even more risks, such as getting a puncture in your space suit or the doors locking. Everyone but you has died , and realistically your problems cannot be solved by simply shooting them . There aren't any other sentient beings within years of your location, but it doesn't matter since In Space Nobody Can Hear You Scream . Perhaps you can start an Apocalyptic Log so that when people do arrive, they know what you've been through and how to prevent the situation from happening again — it also allows you to talk to, and fill your days with, something, which might help prevent you from going mad from the isolation . Still, you will likely consider your slow, lonely death by maybe starvation, maybe suffocation, but probably not suicide as you don't even have the implements to end it all . You're alone, in the cold depths of space, without hope of even seeing another human or your home before you die. You may not know if you die, because space already looks like oblivion. </ For story purposes (especially in the past when hard sci-fi wasn't prevalent based on lack of knowledge) the deep sea works just as well , since it has similar conditions for survival and similarly severe risks for going outside. In some ways it is worse, given how humanity that could help are no more than a few miles away, but usually cannot be contacted. Sub-Trope of Sci-Fi Horror . Compare Eerie Arctic Research Station and Eldritch Ocean Abyss for more terrestrial counterparts. Functions by means of Enclosed Space and the Closed Circle . If the isolated people are instead focussing on their insignificance or the deep vastness of an unknowable universe, it's a Cosmic Horror Story — the two can overlap.

Stuff happening in zero gravity requires a whole new outlook on the laws of physics as we're aware of them, but most writers ignore that and just make things move slower and floatier Never mind that in many circumstances, objects move faster in zero gravity since, obviously, there's no gravity to slow them down. If you kick off from a wall, you'll travel as fast your legs propel you. This trope presumably originates from footage of astronauts deliberately moving very slowly, because they know it's easy to let momentum get the better of you and hurt yourself bashing into something. It may also be a weird side-effect of Space Friction , or of writers' only personal experience of "weightlessness" being a dip in the swimming pool Massively averted in an episode of Planetes </ where the crew barely manage to move a piece of debris out of the way of an oncoming spacecraft in time - said spacecraft flashes by very fast</

This trope gets its origins in popular media from 2001: A Space Odyssey </. Sure, everything was beautiful, but everything also moved at a crawl.</

Subverted at length (and with obvious relish from author Anthony Horowitz) in the space-set sequence that concludes the Alex Rider </ novel Ark Angel</ . The first thing Alex does in space is bang his head after getting up too quickly. At one point he gets stranded in the middle of a room and has to throw his shoes to propel himself in the other direction (equal opposite reaction etc). Later he throws a hammer at an enemy, expecting it to drift slowly - instead it zooms across the room and hits the guy very painfully on the shoulder.

Played so straight in the series Space: 1999 </ that they filmed moonwalking scenes in slow motion</ .

This is what gave Michael Jackson 's dance move the moonwalk its name. By moving backwards and forwards at the same time it provides the illusion that the dancer is on the moon.

Jackie Chan Adventures </: Jackie and Hak Foo end up fighting in space during the Moon Demon episode, and Hak Foo is forced to rethink his attack names . "Tiger prowls...through pudding? Turtle...fist! Sloth...kick!"

In the "Horizon Lunar Colony" map in Overwatch </, there's an airlock you can use to leave the colony and explore the surface. Doing so doesn't cause any actual damage , but it does gradually slow your movement speed to a crawl.

Partial Truth in Television : Anyone who watches live feeds of space shuttles in orbit gets the impression that everything moves slower because when they rotate the position of the shuttle, they do it at a snail's pace to make sure they don't overshoot. Never mind that just to be</ in orbit, said shuttle is travelling around the earth at tremendous velocity...

Something about the deep recesses of outer space seems to inspire insanity in a lot of fictional characters. Maybe it's the loneliness (what with them being cut-off from the rest of their kind), the feeling of insignificance it inspires, or more specifically to a story the things that mankind was never meant to encounter The trope takes its name from an episode of The Ren & Stimpy Show </, about, well, Ren's space madness (and only</ Ren's, because his moronic sidekick Stimpy seems to be immune). It is of course an example of Space "X" Compare Ocean Madness , since Space Is an Ocean and all that and Space Isolation Horror . Cabin Fever is a related trope, due to its similarities to the close confines of a spacecraft

This trope likely originated in 1950's experiments designed to test the effects of working in a cramped, low-oxygen environment — which could result in hallucinations and other signs of mental stress. Of course, this had more to do with the isolation and sense of claustrophobia created by such experiments, but as no-one had actually gone up into space at the time the results were not encouraging. However, the Trope does not apply to the relatively short missions

that the astronauts and cosmonauts undertook in the 1960's (the longest was about 15 days). The problem begins when longer duration missions start.

Since Space Is an Ocean , Space Marines are the troops carried by spaceships, their roles paralleling those of conventional marines: mobile deployment , boarding hostile ships , securing ports — including Space Stations — from Space Pirates These guys are the number one troops of choice for the humans in the Standard Sci Fi Setting Space Marines first turn up in the short story "Captain Brink of the Space Marines " by Bob Olsen in Amazing Stories </ Volume 7, Number 8, of November 1932, and a later followup, 1936's "The Space Marines and the Slavers." The trope, however, fully rose to prominence with the use of the term in the wildly popular Lensman Series </ beginning in 1934. In 1959, Starship Troopers </ codified the trope, popularizing the emblematic Power Armor , The Spartan Way of training, and the array of exotic weaponry they wield. Warhammer 40,000 </ from Games Workshop is notable for taking these aspects to a peak, achieving the ideal "SPACE MARINE" Super Soldier , augmented with Genetic Engineering or cybernetics (or both </ !) In many settings they fight as a squad, sometimes with Awesome Personnel Carrier support, swooping down in a Drop Ship , or launched right into the thick of it via Drop Pod . A notable exception to this are the many First Person Shooters that use the Space Marine background as a useful excuse to get a highly trained soldier alone on a hostile planet. This tradition starts with the much-imitated Doom </ series — see A Space Marine Is You and One-Man Army This page shouldn't be confused with the video game Warhammer 40,000: Space Marine </ , though that game pretty much is about them It should be noted that the name "space marine" is actually a misnomer — there's no water in deep space. Works aiming for more realism or a more Ray Gun Gothic feel may prefer to call them "espatiers", and the most direct Latin equivalent for the environment parses as "astroram". But for those wanting more to invoke the Romantic Space Is an Ocean trope the name space marine works just fine. Sometimes, "space marine" is culturally translated into "space [insert badass military unit here]" - for instance in Russia space marines are often called "space landing forces" (kosmodesantniki an airborne unit of the Russian military that has roughly the same reputation as the USMC and Royal Marines in American and British cultures Note: This trope is about the elite spaceborne soldiers themselves. Overly-generic Science Fiction military protagonists belong elsewhere, such as A Space Marine Is You for video games A primary inspiration for this trope is Robert A. Heinlein 's Starship Troopers </, though his Mobile Infantry are never once</ described as marines, and could just as well be based on army paratroopers except that Space Is an Ocean . His description of their bulky power armour and exotic weaponry is a classic which influenced many later designs. The spirit of the Mobile Infantry shows the experience Heinlein had of Real Life Marine drill instructors at the U.S. Naval Academy. It is oddly circular that Starship Troopers </ is now recommended reading for the Real Life USMC

The Expanse </: Both the Earth-based UNMC and the Mars-based MMC are straight-up examples, complete with power armor that turns a single recon Marine into a formidably lethal walking tank. While there's

no love lost between the two factions, the MMC reminds their troops that "the second most dangerous thing in the solar system next to a Martian Marine, is a UN Marine". Talvikuningas, a concept album by the Finnish band CMX, gives us the Praetorian cyborgs. They're exactly what you'd think they would be. Bulky armor, heavy weapons, modified genes and, oh yes, they're cyborgs. (But don't just take our word for it, watch the) Warhammer 40,000: Space Marine </: Exactly What It Says on the Tin .

, including Colonel John Glenn, the first American to make an orbital flight; as a result, Space Marines have been around, in a very literal sense, almost since the beginning of human spaceflight.

As we all know , Space Is an Ocean . So naturally, what does The Federation do when it needs someone to defend it in space? Why, it turns to its Space Navy. A Space Navy has a Standard Sci-Fi Fleet naturally enough, which probably includes at least one class of Cool Starship , possibly with a Fantastic Ship Prefix . Likely it will have an arm of space marines . But it has more. It has the same sort of atmosphere as a real navy. It has organization and obstructive bureaucrats . It has tradition and famous names . It might even have in-jokes, perhaps the same ones as when a given writer was in the navy. The heroes will likely be part of a Command Roster See also Space Sailing

Space Opera refers to works set in a spacefaring civilization, usually set in the far future or A Long Time Ago, in a Galaxy Far Far Away... . Technology is ubiquitous and secondary to the story. Space opera has an epic character to it: the universe is big, there are usually many sprawling civilizations and empires, there are political conflicts and intrigue. The action will range across part of a solar system at a minimum, and more commonly will extend over large tracts of a galaxy or several. It frequently takes place in a Standard Sci Fi Setting . It has a romantic element which distinguishes it from most Hard Science Fiction : big love stories, epic space battles, oversized heroes and villains, awe-inspiring scenery, and insanely gorgeous men and women. Historically, it is a development of the Planetary Romance that looks beyond the exotic locations that were imagined for the local solar system in early science fiction (which the hard light of science revealed to be barren and lifeless) out into an infinite universe of imagined exotic locations. Planetary Romance was more or less Heroic Fantasy In Space. While works such as John Carter of Mars </ by Edgar Rice Burroughs were pure Planetary Romance , Buck Rogers </ and its imitators had essentially codified the Space Opera concept in the popular imagination by the late 1930s, though the earliest strips took place on an After the End future Earth. (Flash Gordon </, at least in the classic Alex Raymond era, remained resolutely Planetary Romance , tied to the planet Mongo.) Military Science Fiction is another similar genre which may sometimes overlap, but is not quite the same. The main difference is, military science fiction places a greater focus on warfare, while space opera is epic and places a greater focus on adventure and Melodrama . Expect to see a dashing hero cavorting around in a Cool Starship , Green Skinned Space Babes , Crystal Spires and Togas civilizations full of Space Elves , Wave Motion Guns capable of dealing an Earth-Shattering Kaboom on a daily basis, and an evil Galactic Empire with a Standard Sci-Fi Fleet , including an entire universe full of beat-up mechanical objects capable of being resurrected with Percussive Maintenance . Note that

this is quite different from the original definition of space opera, which was originally a derogatory term, following "horse opera" (cheap westerns) and " Soap Opera " (so named because soap operas began as hour-long ads for soap), which requires no explanation. The phrase was coined in 1941 by Wilson Tucker to describe what he called "the hacky, grinding, stinking, outworn space-ship yarn". (It's said that before 1975 or so, the only author who ever intentionally set out to write a space opera was Jack Vance , who wrote a novel, Space Opera</, literally about an opera company in space.) Via semantic drift, well-regarded works such as the Lensman </ series are today held up as prime examples of Space Opera . As more authors and writers came to embrace the style, the term came to lose many of its negative connotations. Assisting that process were writers who regarded all tales of action and adventure in space as bad, and so tried to pejoratively label it all "space opera"; they succeeded with the label, but not with keeping it pejorative. The ideal space opera, as described by Brian Aldiss , contains most if not all of the following criteria: Star Wars </ is inarguably the most famous modern example of space opera. (Indeed, The Empire Strikes Back </ may have shifted "space opera" from insult to a more neutral genre descriptor, due to the involvement of veteran sf writer Leigh Brackett .) In Star Wars</, technology is either magic (the Force) or jazzier versions of today's gadgets (blaster rifles , hovercars, space ships). Any Star Wars</ character (evil emperor , farmboy , princess) would feel at home in a thick fantasy novel , in part because editor-publisher Lester del Rey derived the "epic fantasy" template partly from Star Wars</ and partly from The Lord of the Rings </ , though also because these works borrow from the same source of Jungian imagery. The genre is useful for long story and character arcs but also expensive to film, unless rendered in animated form, like countless anime series Space Opera is defined above all by one thing: hard science will never be allowed to get in the way of storytelling. How</ exactly the hyperdrive works to jump from planet to planet isn't important. The focus is on the characters, politics, and themes of the overarching story. For the same reason, certain common tropes like Planet of Hats and Single-Biome Planet tend to appear frequently in Space Opera (though harder science fiction is by no means immune to them) For storytelling purposes, interstellar civilizations are analogous to countries, and planets analogous to cities . Space Opera is an Earth-sized story lifted onto the galactic scale. The logistical challenges that would actually result from this are safely ignored. While Hard Science Fiction defines itself in part in opposition to space opera (and vice versa), in recent years, however, there has been a trend towards incorporating hard science fiction elements into</ space opera, as in Starship Operators </, the 2000s Battlestar Galactica </, Firefly </ and especially Alistair Reynolds' Revelation Space </ . In fact, "New Space Opera" has gained some currency as a term referring to works that combine fast-paced adventure plots with some degree of hard SF rigor. See also Space Western , Two-Fisted Tales , Pulp Magazine , and Wagon Train to the Stars . In many ways, this is the science fiction equivalent of High Fantasy . Note that while many more famous space operas go to the "ideal" side of the Sliding Scale of Idealism vs. Cynicism , more recent ones are harder and more cynical: Babylon 5 </, Battlestar Galactica </ and Firefly </ being most prominent in Live-Action TV . Sadly , there aren't too many actual Operas set IN SPACE! One famous example in the music world, however, is Swedish composer Karl-Birger Blomdahl's Aniara</ (1959), based on Martinson's poem (1956).

As You Know... , Space Is an Ocean , so it's only logical that it must have pirates as well. Depending how you view the future, lawlessness will always</ be present in society. There's always</ going to be a shadier, nastier way of doing business, and that will almost certainly follow humanity to the stars. Thus, sci-fi authors will include Expies of modern and historic un/organized crime, be they space mafia, gangs, or—in our case— pirates</ . It's not as anachronistic as it might seem. After all, Ruthless Modern Pirates have made a Real Life comeback in Somalia and South East Asia, and it's a lucrative enough "business" that it's taken a multinational military response to fight back. Surely an established society in outer space with significant trade and commerce would suffer similar problems! …well, maybe. The major problem with space pirates preying on space commerce is that space is </. The challenge of catching commercial shipping in open space is orders of magnitudes more difficult than catching them on the open seas. On the other hand, detecting</ commercial shipping in open space is orders of magnitude easier, just because it is so empty and clear. Sometimes, this is cleverly worked around and justified. Most of the time, however, it isn't. Particularly since doing so would require working in a plausible means for the pirates to escape</ undetected after plundering their target. As with Pirates in general, there are two kinds of Space Pirates in science fiction: It is possible for a mix of the two types to occur, with an otherwise relatively realistic space pirate who's familiar with the history of piracy on Earth adopting some of those pirate cliches just for fun . But this is much less common; the "cliche" style of space pirates usually have no attempt at a "realistic" justification at all. Compare Sky Pirates and Salvage Pirates . See also: Pirate and Pirate Girl . You will often see them fighting Space Marines and/or Space Police .

In essence, a spaceship that can take off and</ land like an aircraft, as well as also looking like an aircraft. Many ships have Vertical Take Off Or Landing (VTOL) capabilities; these babies, though, can use a regular runway too. Saves you the cost of a space launcher that you only use once. The obvious technical issue is that you need a store of liquid oxygen on board for the actual space bit of the journey — as you need something to burn the hydrogen with once the air gets too thin. Another issue is the ability to get to Mach 25, but that's not too hard. Both of these are obviated by the Sci Fi favourite propulsions of fusion torches, antimatter annihilators, reactionless drives and what have you. Please note that this list only include SSTO (Single Stage to Orbit) or to sub-orbit to qualify. Nobody's built one, as of 2021. The most promising design so far is the a British-designed European project, which recently cleared a key hurdle in engine development. Therefore, the following are not</ space planes by the definition used here: The Space Shuttle, which required two boosters, a launch pad and a huge fuel tank to get into orbit. It was also incapable of any real powered flight, having to glide back to Earth. It pretty much defined the term " Flying Brick ." In some settings, the definition "must be able to take off, fly into orbit, and land again" may not entirely apply; the ship in question may be used in both atmosphere and space, but it might be unclear whether they can fly from ground to orbit. This definition wouldn't work at all in settings with multiple habitable worlds, as that distance changes. Space Planes may be launched by The Battlestar , descend into the upper atmosphere and come back up (or not), but may not be able to land on a terrestrial runway at

all</ ; many space fighters do lack wheels as a part of their landing gear. However, as previously stated, they may be able to use their thrusters in VTOL (Vertical Take Off and Landing) style. Usually an example of the Cool Plane . See also: Space Fighter .

Quite simply, an organization of peacekeepers in outer space This is not the same as a Starfleet-style fleet of ships . For one, those usually exist for the purposes of exploration and/or war; for another, Space Police tend to work in small groups and have a certain jurisdiction. In other words, it's much like the difference between the real police and the military Where they get that jurisdiction from, though, is often different. They're more likely to be part of a huge, galaxy-spanning organization, and are often more of an elite force than just regular policemen. They may not even answer to the government. They might even have superpowers or gadgetry that is more advanced than that of Earth Adding to the aforementioned "elite force" feel, they may have some kind of exclusive technology that can only be manufactured in limited amounts, or an ability that only certain individuals can use Sometimes, the space police is introduced to the plot unexpectedly, especially if it takes place on a planet that is yet to discover other space-faring civilizations (read: Present Day Earth). In this case, the space police, while preferring to not interfere with local affairs, intervenes as a sudden external force in matters that they deem to have interplanetary if not interstellar consequences. In addition, in the typical Super Hero universe, they are the ones who can take powerful alien criminals into custody after they are defeated without upsetting the status quo by Earth having to deal with such criminals See also Super Cop , Time Police , Space Cadet and Superheroes in Space . For the military equivalent, see Space Marine . Also, Space Pirates are likely to be among the criminals that Space Cops pursue. Captain Space, Defender of Earth! can be a parody of this trope The Space Patrol in Space Patrol Luluco </ . All the main characters work for the Ogikubo Branch (a city on Earth where humans and aliens live together)

A sort of three-way cross between Fantasy Counterpart Culture , Inexplicable Cultural Ties , and Planet of Hats , a Space Roman society is a human or Human Alien culture that, in an amazing coincidence, resembles a culture from Earth's history. This trope does not exclusively describe only those based on Rome, but any implausibly Earth-like society. Space Romans provide a handy way for the beleaguered writer to populate the galaxy with a variety of different, believable alien societies, but disbelief can easily be stretched to its limit if the writer isn't careful, or doesn't consider how the culture in question would be altered by being transplanted to space There can be a certain degree of practical cynicism in the use of this trope. In older film and TV portrayals, especially ones on tight budgets, these kinds of societies might crop up as a way to have something different and sort-of sci-fi that week, while at the same time recycling stock props and costumes from other shows. It also takes a lot less creative time effort to use off-the-peg "Romans in Space" than to build a convincing alien society and aesthetic from the ground up This is usually less offensive than Space Jews , who are inspired by ethnic stereotypes instead. See also United Space of America . Compare with Days of Future Past , in which a society on or originating from Earth revives an older culture in whole or in part. Contrast with Culture Chop Suey , where elements of several

cultures are blended together Two common variants are the Space Amish , a society of technological dropouts, and the Space Cossacks , rebels and/or exiles from mainstream society

As has been established, Space Is an Ocean , and in fiction, naval and maritime terms are often applied to spaceships. Some works, however, take things further beyond metaphors, and make their characters go Space Sailing on literal ships IN SPACE ! The reason for this? The Rule of Cool , and nothing else While, in Real Life , there are proposals for spacecraft with solar sails or , those are different concepts. Those would be spacecraft-with-sails but otherwise designed like any other spacecraft; these are literal oceangoing-type boats</ in space, with all the shape and features that implies A subtrope of this is the idea of a space Titanic</, an oddly common meme. They are invariably doomed Interestingly, Space Ships don't go after Space Whales as often as you might think. They are quite likely to house Space Pirates , though

Throughout history, many countries have observed the tradition of always referring to ships and other seafaring vessels as "she." This even applies to ships named after men (e.g., the USS Ronald Reagan</). These traditions continued with the development of aircraft , and the metaphor (in fiction at least) has also been extended to space travel So, what happens when the personification is taken a step farther? You get a walking, talking female avatar of a Sapient Ship —a Spaceship Girl She may be a holographic projection by the ship's computer, or she may be a physical manifestation created by Black Box technology, she may be a Wetware CPU running the ship, or she may simply turn into a human when she wants to ; but she is</ the ship, and thus requires special handling. Spaceship girls range from the deadly serious to the outright wacky, but they are never just machines. Hint: don't make her angry when you're parsecs away from the nearest planet... Or even if you're close to a planet Compare with Robot Girl , Sapient Steed , and Living Figurehead . A subtrope of Sapient Ship and often a kind of Genius Loci . Related to I Call It "Vera" and Living Weapon . Psychologically related to Companion Cube . Might become a love interest . See also Living Ship

Then the Ace Pilot makes a suggestion: Head straight for the planet / black hole! The rest of the crew look at him as if he was mad, but follow his plan, and like magic, they pick up speed and wind up shooting out of the gravity well at incredible speed using gravity to perform a (also called Gravity Assist or Gravitational Slingshot) and escape! Of course, pulling a successful Slingshot maneuver would require some precise maneuvering and calculations, but often in fiction, it's entirely possible for the Ace Pilot to just eyeball it. Because the pilot is just that good. Invariably, when the move is first suggested, almost everyone is incredulous, and it always</ fools the enemy. Almost like no-one has ever heard of a slingshot maneuver before, or is able to spot when the other side is about to perform one. And, of course, the maneuver is always used as a last-ditch desperation maneuver, rather than a standard tactic or move. Often used as an Establishing Character Moment if it occurs early in the work, to show the Ace Pilot 's skills. If calculations are made , it might act as such a moment for The Smart Guy , too. The closest thing in real life to what the pilot does is entering an unstable orbit. But no matter what, that black hole is definitely

pulling you in, and if you can't generate enough force to escape the gravitational field directly, you're probably screwed. In Real Life , gravity assists are a well-known and often-used phenomenon and have far wider applications (and limitations) than those depicted in fiction. The Other Wiki does a good job explaining the ramifications. See also Gravity Sucks , Unrealistic Black Hole , and Space Friction , which may factor into the maneuver. Sometimes combined with a Wronski Feint if the enemy is tricked into following and can't escape.

An artificial structure in space, where people live and work. Unlike the Cool Starship , the Space Station is usually fixed in orbit around a planet or at a particular point in space. It also allows for the construction of a standing studio set and avoids expensive location shoots Real-world space stations have existed since 1971 (Salyut 1) and four of them — the International Space Station, Tiangong-2 and Genesis I & II (both unmanned) — are currently in orbit. These are all much smaller than what one is used to in sci-fi shows. The list for the interested can be seen below Space stations in fiction have a tendency to be very large, sometimes housing an entire city. Many have adopted a wheel design for a centrifuge-based system of gravity (unless Artificial Gravity is employed), but this is not obligatory. If sufficiently large to support a sizable permanent population, a space-station may be referred to as an "orbital habitat" or "space colony". Don't drop it! The problem of gas exchange and food production is often solved by incorporating a closed ecosystem and green plants onboard, sometimes in dirt, sometimes hydroponics, sometimes algae aquaculture

Real Life Examples:

Sci-fi space suits tend to have exposed tubes leading from the air tank to the helmet, like twin-hose SCUBA gear . Since space suits are fully pressurized, not just the helmet, these serve no purpose but to be yanked out either to provide a moment of tension or an easy way to end a hand-to-hand fight, depending on if the luckless wearer is a hero or a villain. Even if reconnected, this may lead to an oxygen crisis Real space suits have no such dangerously exposed air hoses. Real SCUBA gear has a backup regulator should the first one go bad and the hoses are low pressure. Either sci-fi writers are making commentary on a dystopian future with no safety oversight , they've only ever looked at SCUBA gear (before the 60s that would be everyone) and at other fictional spacesuits that exhibit this trope, or they just need a cheap excuse to add tension

When space westerns decide to get literal with the genre name , these guys tend to show up They are usually depicted as, well, southern-fried semi truckers that happen to fly cargo spaceships instead. Usually easygoing, unflappable, and have a backwoods wisdom developed during the time spent alone on long hauls between solar systems. Occasionally they're smugglers, but usually aren't drug mules. From time to time, between hauls they'll stop at a local tavern and challenge various folks to a little arm-wrestling, drinking contests and then drunken brawls. Tend to talk in a Southern or slight Texan drawl Overlaps occasionally with the Boisterous Bruiser , Gentle Giant , Warrior Poet or other ersatz

cowboy-style archetypes Their ships are most likely Used Future pieces of junk, just barely held together — bonus points if they're blocky, and bear a surprising resemblance to modern Mack trucks or other 18-wheelers Often a subtrope of Intrepid Merchant and Hard Truckin'

Cowboy Bebop </: The episode focuses on hunting a wanted space trucker named Decker. Another episode features a group of small time Space Pirates who make a living by robbing other space truckers.

2000 AD </'s Ace Trucking Co.</ series In John DeChancie's Skyway</ trilogy, the only widely known form of faster-than-light travel involves driving ground vehicles</ along the highway/ Portal Network Precursors have built which seems to connect every place in the universe worth visiting. Most races don't even bother building sublight spaceships (though they do get used), and if anybody has actual FTL space drives they're keeping it very quiet, so trade equals truckers. And human truckers tend to be... well, truckers The Eureka Maru in Andromeda </ is this before its captain got hooked up with the Andromeda.</ Their contacts still come in handy

"Asteroid Named Rest Stop", a song by Julia Ecklar and Leslie Fish. The lyrics can be found

The aptly named board game Galaxy Trucker </. Corporation Incorporated needs a way to transport low-cost housing and sewer construction equipment to new colonies. What is the cheapest way to do this? Let people weld it together into random spaceships and fly it across the galaxy in exchange for getting to keep any profits they manage to earn along the way.

Elite </, its sequels and the many, many games that followed its example start from a basic premise of "A Space Trucker Is You". Over time, the concept expanded to the point where the player has the option of becoming a mercenary and/or bounty hunter , an Asteroid Miner , a Bold Explorer or a Space Pirate . Some games cross over into An Entrepreneur Is You and allow players to buy real estate and hire NPC ships and pilots Nip and Tuck 's </ Show Within a Show (movie within a comic?) "Rebel Cry" was based around a space trucker with a bone to pick with the Evil Empire

One episode of Futurama </ has a space trucker convoy. Their role in the story was basically just to throw cat calls at Leela.

Space Is an Ocean . This is a well-known phenomenon. For some reason, though, the ocean of space is pretty much devoid of fish. But not of whales. Somehow, at some point (probably in the 1970s), the ideas of space and whales became permanently interwoven in the collective unconscious. Why? No one really knows, but here is some wild speculation: But nevermind the whys and wherefores , space and whales are just two great tastes that taste great together. Bonus points are awarded if the whale in question is also a Living Ship , or an Eldritch Abomination . A planet-bound variant of the Space Whale is the Air Whale , which is often a Living Gasbag and found in settings where The Sky Is an Ocean . Whales are basically shaped like blimps with fins anyway, so it makes visual sense (if you hate gravity, and really, who doesn't ?). See also Sapient Cetaceans , Flying Seafood Special . Not to be confused with the Space Whale

Aesop , which is something quite different.

Taking regular words and giving them appropriate futuristic Space-Flair with a simple Space-Addition since the Space 1930's. A Sub-Trope of Call a Smeerp a "Rabbit" , rarely played straight these days but still used often when parodying or hanging a lampshade on a certain setting's Recycled IN SPACE! trappings. Constructions like "Batharian hound" or " Ar'ha'sds'gdian bat " also qualify. Of course, this kind of construction rests on an inherent geocentric bias. Contrary to how the word is often used , "space" does not refer to everything in the universe except for Earth; it refers to everything</ in the universe, Earth included. So a creature from another planet is no more "spacey" than a creature on Earth is — unless, of course, the creature can somehow exist in the vacuum of space without breathing gear . (Another possible meaning for "space" is everything rather far away from a celestial body, such as outside its atmosphere. This use, however, means that nothing alive can be "spacey" — except, perhaps, Space Whales and such.) There is, believe it or not, a Real Life precedent for this. Consider all the Sea Lions and Sea Anemones and Sea Horses and Sea Stars and Sea Robins and so on and so forth, not to mention all the Catfish, Dogfish, Parrotfish, Lizardfish, ad infinitum. (The reason for this, if you were wondering, is that in the early days of biology , it was thought that every land animal had an undersea equivalent. Obviously this theory didn't quite work out, hence a pretty epic level of Calling Smeerps Rabbits .) Compare the various Thememobiles , and Hold Your Hippogriffs . A type of Hyperaffixation . See also Space Jews and Sci Fi Name Buzz Words . Not to be confused with the material from which brand-name Latex Space Suits are made, nor the Real Life rocket company SpaceX . For Space-named Tropes, see Tropes in Space . Xandri Corelel </ : The Naftas, a race of borderline-sentinet aliens that resemble large weasels, are referred to as space pigeons because they get into everything and tend to irritate everyone else.

A Professional Wrestling Trope, the Spanish Announcers Table is, naturally, where the broadcasters for the Spanish-speaking audience sit to do their commentary. The one in WWE is currently manned by long-time play-by-play announcer Carlos Cabrera, and color commentator Marcelo Rodríguez, while the one in Impact Wrestling is manned by Héctor “Moody Jack” Meléndez & Konnan (for select PPVs) More importantly, ever since Diesel threw Bret Hart through it at the 1995 Survivor Series </, as a rule, the table gets demolished by a wrestling move at least once a pay-per-view. It has been confirmed that, unlike the English team's, the table is specially designed to collapse upon impact (something that Mick Foley credits with saving his life when The Undertaker famously threw him onto it from the top of the Hell in the Cell cage during their 1998 King of the Ring match). Presumably, it gets targeted so as not to interrupt the flow of the more lucrative English commentary. Kind of a wrestling in-joke, it has gotten to the point where if a wrestler seems to be setting up for a move on the regular announcers table (such as The Rock in his match against Chris Jericho at the 2002 Royal Rumble </), he will be directed instead to the other one. CM Punk also lampshaded this during the time he was on commentary; when John Cena put Heath Slater through the English table he was sitting at, he reacted thusly: "This is not the Spanish announce

table!" Outside of its regular use in pay-per-views, if the English announce crew even brings up the existence of the Spanish announce table during a televised show, it's a safe bet that somebody will be going through it before the night is over During the Attitude Era , former commentator Hugo Savinovich and Carlos would lampshade this trope mercilessly, acting surprised or even pleased</ if they went through a whole show with the table intact When the Spanish announcer's table isn't ringside, usually this role gets taken over by the B Show 's table. And in the rare instance that there's a third table for another language, it's even more</ doomed than the Spanish one Of course, the Spanish announcer's table has played other roles through the years ... or more specifically, the Spanish announcers WWE themselves put together a nice collage of some of the more famous instances of Spanish announcer's table destruction

A list with media originating in Spain . Media from other Spanish language countries is a different category.

Web Video

They are the bane of the Clock King . They are the worst nightmare of Manipulative Bastards everywhere. They are the monster in the closet that haunts The Chessmaster every time they close their eyes Their very presence causes even David Xanatos himself to rethink all of his life choices in the blink of an eye . Meet the Spanner in the Works . Whether it's The Ditz , The Fool , Inspector Oblivious , or a monkey Because another word for "spanner" is "monkey wrench" , and having a literal monkey ruin your plans is a Stealth Pun , the Spanner in the Works is the miscreant capable of derailing the most ironclad of plans by unknowingly taking an option that the planner hadn't even considered . They ruin the implausible Gambit Roulettes by exploiting their one, intrinsic flaw: their reliance on Contrived Coincidences , rigid patterns , and the assumption that nobody would be stupid enough to actually push the Big Red Button or fight the apparently unstoppable robot. How can they outdo the master at his own game with nothing but stupidity and clumsiness? It's precisely these characters are the fools and tools of fate that they are uniquely placed to derail these schemes with the gentleness of a butterfly flapping its wings... of doom! Put another way, the Spanner is an author's walking deconstruction or Lampshade Hanging of the Theory of Narrative Causality : as easily as a plan or plot can come together, it can be pulled apart even easier with the tiniest, most ridiculous thing. When the character ruins a protagonist's plans by unknowingly doing something small but crucial, he becomes an Unwitting Instigator of Doom . When the Spanner can trigger a series of coincidences, it's Disaster Dominoes . When the plan is screwed and the character is also aware that he will screw the plan, and doesn't care, he becomes a Leeroy Jenkins . Occasionally, may be Mistaken for Badass . If the focus isn't on them, they're often an Unknown Character . Compare Finagle's Law , It Began with a Twist of Fate , Nice Job Fixing It, Villain! , Outside-Context Problem , Remembered Too Late . Opposite of the Unwitting Pawn , often is</ the Unwitting Pawn until the final crucial moment. This is the main cause of Didn't See That Coming , this trope being the "that". Quite often an Achievement In Ignorance . Inverse of Unintentional Backup Plan , where a character accidentally completes an imperfect plan that would have otherwise failed. Compare with Out-Gambitted , where

someone's plan is (or could have been) successful but ineffective against a better-thought-out plan. Compare Too Dumb to Fool , where the character is too stupid even to be baffled by explanations. Also, compare Evil Cannot Comprehend Good , where the flaw is that the villain can't see someone being generous or brave or honest enough to foul up his plan. The specialty of The Fool . See also Immune to Fate , for characters that manage to be this to Fate itself. The trope is reputedly named for the Industrial Revolution -era practice of disgruntled workers throwing a spanner into a machine, either because of fears that machines would put them out of work , or as a bargaining chip for better working conditions (and often because they were the only ones who knew how to repair the machines as well). (Note for Americans reading this: "Spanner" is the Queen's English word for what you would call a "wrench", with the added benefit of it being slang for a stupid person. It has nothing to do with a Long Runner in development. The equivalent American phrase specifically involves a monkey</ wrench, known in the UK as a gas grip — "He really threw a monkey wrench into my plans.") Not to be confused with A Spaniard in the Works</, which was a 1965 book by John Lennon of nonsensical sketches and drawings whose title was a wordplay on this expression. Disgruntled French workers did this by throwing sabots

Both an adaptation trope and a death trope, Spared by the Adaptation refers to cases where a character who died in the source material does die in an adaptation The reasons behind these occurrences vary. Perhaps the Media Watchdogs , Executive Meddling , and/or the creator wanted to make it Lighter and Softer than the original. Maybe the character was a fan favorite and the crew wanted to throw them a bone . Maybe the death stood out as especially pointless, and people in charge decided they didn't need to kill a beloved character just to upset the audience yet again. Maybe the material is lacking in villains, so they took a minor character and decided to amp it up and make them a real threat to the cast . Maybe they just planned to make sequels when the source material didn't have any , and wanted to save important characters for the next story. Maybe the events where it happens are cut for other reasons. The sky's the limit as for why this happens, which probably explains why it happens so often Likely to occur during a Gecko Ending where the adaptation is made before the original is even finished</. If the character originally died in the ending, see also Adaptational Alternate Ending Compare with Schrödinger's Cast where a character's fate is different from the source material, but the source material is still ongoing (which may create the need for the adaptors to do a drastic rewrite if the character in question, or their averted death, becomes important later on in the source material) Contrast with Death by Adaptation , where a character dies in the adaptation, but not in the source material. Compare and</ contrast Dies Differently in Adaptation , in which the adapted character may be spared their original fate, but still doesn't make it to the end

As we all know, some film adaptations will alter things so a character survives where they died in the source material, while others will do the inverse . But sometimes, differences between the script and what ends up getting filmed - sometimes caused by Creative Differences and/or Executive Meddling - will have a character die in one cut but survive another Sometimes results from a Compilation Movie made from episodes where a character dies, but

their death doesn't make it to the film itself Also, despite the name, it has nothing to do with getting an actual physical cut - rather, a different cut of a film As this is a Death Trope ,

Characters in fiction frequently have a set of basic principles to live by. But sometimes, authors want to give the impression of a complex system of principles with a lot of thought put into it, without actually spending the time and mental effort to design the system One common way to do this is to declare that there are a large number of such rules, and then quote a few of them, in order to give the audience the general idea of what the rules are about. This trope is frequently employed in a TV series or a long book or series of books, so that the author(s) can add new items to the list as time goes by. Rule #1 from the list is inevitably mentioned at some point, usually early on, though it's not always the first rule to be revealed The name comes from , a technique used by computer programmers to efficiently manage large numbered lists with many elements missing May incorporate Obvious Rule Patches and be counteracted through Loophole Abuse . Characters may use these to Bother by the Book . See also the Great Big Book of Everything , or its subtrope, the Big Book of War , either of which may be where the characters are quoting rules from. This trope may be used for a game of Calvinball

This is distinguishable from The Virus in that the Spawn Brooder is not spreading itself, and from Face Full of Alien Wing-Wong in that it is an ability that takes a much shorter amount of time and is generally not considered that sort of attack . See also Flunky Boss , who might use this as an attack, Baleful Polymorph , and The Punishment . Contrast Weaponized Offspring which is about attacking or creating allies by giving birth; this trope is about attacking or creating allies by making the enemy give birth</ .

A character who walks into a scene, says a few lines at most, and departs . Essentially, an extra with a line. But hey, it's a part. You have to start somewhere,</ and they wouldn't give away a part this small unless it served some purpose in the story , however small... right? Plus it's usually enough to get you a card in one of the actors' guilds. Bit Character is the next step up. Compare with the Almost Dead Guy , who walks into a scene, delivers a message, and dies horribly. The term comes from Greek theater, specifically tragedy: While the plot of a given play focused on members of important nobility, the theater still needed actors to fill the role of their military entourage - you know, the kind of soldiers whose only job on the stage is to stand at attention and give a salute whenever a noble walks by them. It has also become the standard term for an operatic supernumerary, one of several silent extras (of either sex) who may carry anything from a flagon to a kidnap victim (See .) A Herald is usually more dramatic and foreshadows The Call . Compare The Cameo and Pursued Protagonist . Not to be confused with the native assistant of the Great White Hunter , or with The Lancer , or with literal wielders of spears . Can sometimes result in a One-Scene Wonder . Or a Red Shirt . For just a generally dull character, see Generic Guy .

NOTE: "Distaff" means "female". One common method used in creating a Spin-Off is taking the main character of the show, creating an

equivalent that's mostly the same except for being the opposite sex, and then packing the new character off to her own series. This allows the station or network to fill up extra space on the schedule with a known quantity, while (in theory) stretching its demographic to female viewers. This method is very popular among action-adventure series, which mostly appeal to young males. While heroes are usually the ones to get this kind of treatment, it's been happening more and more to villains too. There's also the third kind of Spin-Off , with a long-lost sister showing up or a new girlfriend brought in, only to repeat whatever circumstances gave the main character his powers/duties/what-have-you. Just like how many female characters are defined by their relationship to the default or already established male character, many distaff counterparts are defined primarily by their relationship to the male counterpart . This can be shown through their visual properties, narrative connection, and occasionally promotional materials. They are often a wife or girlfriend, but can be a sister or friend to the male counterpart. Often, and especially if the characters in question are animals, the female character will have a bow on her head or other Tertiary Sexual Characteristics defining her as female and to set her apart from the "default" male characters. In other words, the male character or characters may have little or no stereotypical masculinizing gender specifiers, but his or their distaff counterpart or counterparts will have stereotypical feminizing gender specifiers to mark them as female. If the distaff counterpart is a girlfriend, she is usually the Love Interest to the male character. A male character who goes through the Gender Bender will find himself turned into his own Distaff Counterpart. The implications for the character, writers, and audience are left as an exercise for the reader. Since "distaff" means "female", the inverse of this (a male counterpart to an existing female character or Always Female trope) is technically and traditionally a (which was named for the spearhead-shaped end of the symbol of Mars that represents males. You may also be thinking the "spear" meant something else ... and you'd be right, because that's what the Mars symbol is based on, too). SECOND NOTE: A "distaff" is a spinning device, used with a spinning wheel and, even before that, with a spindle. More Textile Work Is Feminine ; that's why it's used to symbolize femininity. Usually tends to wear a Gendered Outfit . Compare Gender Flip , which reverses roles based on gender, rather than cloning them. If a normally gender- specific trope is played on its opposite gender anyway, that's a Gender-Inverted Trope (otherwise known as a rare male/female example). If they're fan-created, it's Rule 63 . If this appeals to a fan fetish, it's a form of Fanservice . When you take this trope to its literal conclusion, you get an Opposite-Sex Clone . See also Contrasting Sequel Main Character . Contrast with I Just Want to Be Badass . The laws of probability and large numbers will in all likelihood turn this into Truth in Television eventually for most of us. Action Dad ↔ Action Mom

Always Male ↔ Always Female

In the real world, things which serve the same purpose tend to have similar form factors: different brands of car do look different, but they're all recognizably automotive. Different models and brand of tank, plane, or gun all look different, but are still similar enough that someone not well-versed in the particulars would still be able to identify them at first glance Not so in Science Fiction

: If two different races have similar technology, it must look radically different, even in the visual effects they use. One might think that Energy Weapons based on the same physical principles would give off a visual effect characteristic of that principle, so any weapon that works in the same way would look the same — not so. In fact, each weapon will reflect the race of its builder. This might seem doubly strange as the aliens themselves tend to all look exactly like humans with a funny nose glued on . The realm of Special Effects is the one place where show designers seem to remember that the product of alien development should look really radically different from Earth development — even though it's an area where one would expect form to follow function. Two species will not use the same special effects for the same technology, unless a point is being made that they are trading science (and not always then). Perhaps there's an intergalactic trademark office which registers the colors of laser beams. Lasers, incidentally, can be made any color but because the different wavelengths behave differently colors would probably end up distributed by the task the weapon was designed for rather than by species Note that this specialization is a comparatively recent phenomenon: In bygone days when budgets were lower, effects were harder and audiences cared less, everyone used the same film-negative effect for lasers, and the same V-2 spaceship design Specific form of Color-Coded for Your Convenience

When special effects look really cheap and dodgy, to the point of pulling the audience out of the narrative, you have a Special Effect Failure . All-too-common prior to 1980, and still with us today despite relatively inexpensive digital effects that can be very convincing and realistic... but often aren't The audience's expectations for effects have grown up with the media. For example, it is obviously a dummy being thrown from a train in The Great Train Robbery </ — but since it was filmed when filmmaking itself</ was in its infancy (1903 to be exact), people forgave it. If a modern remake had done that, however, they would not have been nearly as kind unless it was for other reasons ; Star Wars </ raised the bar for visual effects so high that only the most advanced pre-1977 effects can measure up. It should also be noted that the modern push to update everything to HD can also result in a retroactive form of this, as a matte painting in a 1980s VHS release looks fine, but on the cleaned up, "remastered" Blu-ray looks like, well, a cheap matte painting in the background. Same for video games when prerendered backgrounds look weird Sometimes a Special Effect Failure is caused by resorting to Off-the-Shelf FX . Many examples are just plain Bloopers (a literal failure of the effects). In a video game it can be because of Model Dissonance being revealed by a glitch or oversight. In animation, it can be lumped in with Off-Model Sometimes cheesy FX are regarded as part of the So Bad, It's Good charm of a work. Sometimes authors will intentionally aim for this as a form of Stylistic Suck Note that, despite the name, Practical Effect Failures go here too

Our heroes are in quite a pickle: There's a specific problem that needs solving, but they don't quite have the knowledge or ability to do it. Just before they can start brainstorming a plan, cue some very appropriate help in the form of an awfully specific book about just the very situation they are stuck in Due to this trope's

silly nature, it is usually restricted to cartoons and other works leaning towards the silly end of the Sliding Scale of Silliness vs. Seriousness . Furthermore, these books commonly have titles such as X for Dummies </, How to X in 24 Hours</ , and so on Sister Trope to Parodies for Dummies . Compare to Great Big Book of Everything , which holds information about every specific situation rather than just a single one, and Coincidental Broadcast , which pulls a similar effect with news stations

All forms of showing off in a work, to wow the audience. Frequently used to set the mood and serve the Rule of Cool For example, for Live-Action TV , this includes scenery, lighting , props, costuming, makeup, background music, sound effects, and Special Effects in general. For Comic Books , it includes things like coloring and lettering. And so on The name comes from Aristotle 's Poetics </ and is used more broadly here. He considered using spectacle to cover deficiencies in plot and character a flaw. If they are just in addition to good plots and characters, then these are just a bonus Not to be confused with Glasses Tropes See also Garnishing the Story , Opulent Outfits , and Rule of Index

(While you're on this page, listen to It will make the page even better. Why? Because spinning, that's why.) </ Presumably, this trope is the case because fast-moving things are generally better than slow moving things, and circular motion allows something to accomplish this while actually remaining on-screen. This trope shows off the awesome power of spinning things at high speeds, or flying around in a circle. In skilled hands, this ability can be used to create tornadoes or even bend the space-time continuum. Spinning makes pretty much everything</ cooler , so these are just a handful of the subtropes heavily affected:

"Speculative biology" (also referred to as "speculative zoology", though it is by no means limited to animals) is a sub-genre of science fiction which combines Speculative Fiction with creature design, and deals with evolution in the future, on other worlds, or in alternate timelines , the same way that many other sci-fi works discuss technology The most common situation discussed in these works is After the End : "What would the world be like once humans go extinct?" Another common situation is "What animal(s) could become as advanced as humans and how would they?" Other works focus on the question of "What if humans never evolved?", "What if non-avian dinosaurs didn't become extinct?", feature aliens on different types of planets, or just end up creating animals that could exist. Most of these stories tend to have no defined villains , or if there are, they're mostly just treated as an afterthought as the predators of the ecosystems portrayed in the story are enough of forces to provide conflict to these stories just like their past/earth counterparts . If an antagonistic force is prevalent in the story, it's often in the form Evilutionary Biologist who wants to see how humans/certain animals would end up if he/she hastens their "evolution" Speculative biology is very popular online among amateur biologists and animal fans, especially on sites like Deviantart and Reddit . This sort of work is also common in fandoms that feature fantastical animals; artists will invoke realism in their works and try to revamp the characters

in a way that makes more biological sense. However, it's also a topic that gets professionally discussed. Several books and a few documentaries have also been created on the topic of speculative biology. Most works of speculative biology at least try</ to obey real-world laws of science and are (in theory) generally higher on the Mohs Scale of Science Fiction Hardness , and if any sort of supernatural Hand Wave is involved, Magic A Is Magic A will be in full effect. Indeed, providing real-world explanations for fantastical and fictional creatures (just how do</ dragons breathe fire?) is another popular form of speculative biology That being said, many works of speculative biology are not very biologically rigorous . Many artists end up coming up with inaccurate animals and circumstances that most likely couldn't occur. Every so often however, years later a species is</ discovered that resembles a previously fictional animal . It's also worth nothing that our ideas of what is biologically plausible and what isn't changes all the time . For instance, it was believed for a long time that Big Creepy-Crawlies could only evolve in climates with high oxygen levels, until it was recently discovered that the famous giant arthropods of the Carboniferous persisted into the Permian, when the Earth's oxygen had lowered significantly, making it more likely they simply were able to evolve the way they did due to lack of competition with tetrapods These works often, but not always, take the form of a Speculative Documentary . Related to Fantastic Science

This genre openly combines elements of traditional documentaries This with Speculative Fiction . While the pure Documentary is This entirely based on fact, the Speculative Documentary adds This elements which are either an interpretation of actual events This based on a combination of speculation and extrapolation from This known science, or completely fictional. While a Speculative This Documentary can also be Hard SF , a Documentary of Lies , This or Mockumentary , the Speculative Documentary takes a very This scientific approach to asking "what if" that differentiates This it from other fiction. While Hard Science-Fiction places at This least some importance on characters , plots and justifying This fantastical elements, and the Mockumentary uses a documentary This style to tell a dramatic or comedic fictional story, the This Speculative Documentary handwaves any fantastical elements This and downplays characters and plots to focus on implications This and educating viewers about real science. Most dinosaur This documentaries fall into this category, due to how little we This know about their paleobiology often overlaps with Speculative This Biology in the case of documentaries dealing with alternate This evolution or alien worlds

Index for Authors , Directors , Mangaka , Screenwriters and other Creators (not counting actors) of Speculative Fiction (Science Fiction and Fantasy) See also: Horror Story Creator Index and Mystery Story Creator Index

Science Fiction , Fantasy , Alternate History and everything in between The term Speculative Fiction was originally a backronym for the initials SF; at the time, during the New Wave Science Fiction movement of the 1960's, some writers felt that science fiction, or 'sci-fi,' was equated to flying saucers and rubber monsters, and wanted to distinguish themselves with a new genre label. The desire

for a separate category became even greater when people began to apply the sci-fi label to horror films containing blatantly supernatural elements (such as various immortals), but few if any science based elements whatsoever. Over time, however, the term 'Speculative Fiction' grew to become a Super-Trope , covering not only what self described Speculative Fiction authors wrote, but also the Sci-Fi and Horror B-movies they were trying to distinguish themselves from. Nevertheless, Speculative Fiction can be applied to a work — correctly or incorrectly — in order to help it avoid the Sci Fi Ghetto ; it can allow the more pretentious to believe that their favorite work is a proper 'literary' work with no connection to, and thus obvious superiority over that geeky science fiction or fantasy Today Speculative Fiction covers practically the entire fantastic end of the Sliding Scale of Realistic vs. Fantastic , including Fantasy , Science Fiction , Horror , and other, less well known genres. (In this genre, Just Here for Godzilla is in full effect.) However, there are many speculative fiction stories that fall on the border between genres, and others that may be completely unclassifiable. Furthermore, many of these genres can be either used to terrify or Played for Laughs , with the latter producing such genres as comic sci-fi and comedy horror See the Analysis page for why the boundary between Fantasy , Science Fiction , and Horror is fuzzy, and why a broad term like Speculative Fiction is necessary The individual tropes are listed on Speculative Fiction Tropes . See the Speculative Fiction Creator Index for a list of pages for Speculative Fiction creators

Speculative Fiction with a heavy emphasis on LGBT themes Settings commonly used in Speculative Fiction stories typically fall into the Uncanny Valley — that is, they are similar enough to be accessible, but different enough to feel unfamiliar and uncomfortable. Because of (or in order to enable) this, there may be a larger or more prominent group of LGBT+ characters Also known as the "time-travelling lesbians", it is notable that Speculative Fiction is kind of the San Francisco of media genres — a much larger LGBT population than the rest of its kind, and with reason. The most widely acknowledged of these reasons is that the fantastical setting (as close as it may be to the society of its creation) is not 'Real', and therefore the creators have more room to discuss things that might be considered controversial or unusual. This may be used as a statement on the society in which the work is being produced, but is not necessarily. It is related to the Discount Lesbians trope, where a lesbian couple is deemed more acceptable if one or both (or more) isn't human and so they aren't really lesbians, though this would instead be where it isn't really Earth so it can't really be (or, so it's alright if it isn't) taboo Another reason to include non-heteronormative characters in Speculative Fiction may be to support theories of the future of humanity becoming largely bisexual , and also those that suggest potential alien civilisations may not even have sex as we view it It may also be, drawing back to the idea of the Uncanny Valley, being used as a marker in order to separate the Speculative Fiction world from the real world. There may be little changed in a humanoid alien civilisation or 20 Minutes into the Future , but a difference in view on gender and sexuality (whether global or just authorial) is a sufficient deviation from the norm that it would suggest somewhere very departed from current Earth's climate The use is also one way in which media connects the ideas of advancing scientifically and LGBT+ issues, making

discussions of gender and sexuality a decidedly modern concern In short, Speculative Fiction settings feature LGBT+ characters and themes because they are distanced from the real world This trope's modern Ur-Example may be either Theodore Sturgeon 's The World Well Lost</ (1953), acknowledging sexuality, or Virginia Woolf 's Orlando The Ur Examples for Lesbian Vampire may be older, but the early manifestations of that trope were very outwardly using lesbianism as a distinctly negative quality and to further create the monstrosity of vampirism . The latter is discussed on the Encyclopaedia of Fantasy's entry for " ", which includes many female time-travellers who deviate from conventions of gender and sexuality. Of all the variations upon the Other-ing nature of this trope, the time-travelling lesbian may be one of the most prominent as it allows for no fixed period to be set in which the acceptability is occurring, as well as for the issue to be discussed across past and future times, and perhaps also appealing to the presumed audience as a bonus Also note that, while some speculative fiction works project LGBT themes onto alien civilizations in order to explore them from a comfortably safe conceptual distance (especially a few decades back , when censors were a lot harsher), or exaggerate them to have fun with weird speculative space sex , others frame them around their hopes or thoughts regarding the progression of real-world civilizations. The latter group tends to present LGBT themes as relatable or commonplace, rather than as a matter of spectacle. Both are made possible because of the setting difference An authoritative work on the trope, Uranian Worlds: A Guide to Alternative Sexuality in Science Fiction, Fantasy, and Horror</ was published in 1983. The title is a Multiple Reference Pun to 'Uranian' meaning things pertaining to the planet Uranus, a euphemism for homosexual, and in some spaces a third gender This trope has, with the rise of podcasts, also become extremely</ popular in this medium, which has historically been more accepting and exploratory due to its grassroots nature Super-Trope to Discount Lesbians , Free-Love Future , Non-Human Non-Binary , Otherworldly and Sexually Ambiguous , and Supernaturally Validated Trans Person . See also Bizarre Alien Sexes , Have You Tried Not Being a Monster? , Exotic Extended Marriage , Lesbian Vampire , Magical Queer , Immortality Bisexuality , Non-Heteronormative Society , and One-Gender Race . Lady Land works may invoke this explicitly, or simply hint about what the ladies in question are doing for romantic and sexual satisfaction Compare Fetish-Fuel Future , when an author creates a futuristic setting where their personal kink is universally shared or tolerated

Tropes that are specific to Speculative Fiction , encompassing Science Fiction , Fantasy , and everything in between... </ See also: Asimov's Three Kinds of Science Fiction , The Grand List of Overused Science Fiction Clichés , Speculative Fiction Creator Index , and the Turkey City Lexicon website.

Imagine yourself meeting a gorgeous girl that seems to have come from the pages of a romance novel. She seems perfect in every way... That is, until she opens her beautiful mouth. Once she does, you realize that she either has pwofound twouble with her w's ,

s-st-tutters, lithpth or cannot speak clearly at all . Basically, you have a downplayed version of Disabled Love Interest When the speech impediment is shown to be debilitating (like a severe stutter), it is usually given to a fragile Shrinking Violet who is waiting for her knight in shining armor. Often, though not always, she recovers from the impediment by the end of the story; in this case, that's part of the Adrenaline Makeover with possible Unfortunate Implications because it makes out that a hero wouldn't want a disabled or otherwise "imperfect" love. At other times, though, the impediment serves as an endearing quirk which only adds to the character's charm (it may even be lampshaded in-story). In some cases, the Love Interest may even be unwilling to undergo speech therapy for exactly this reason Compare with Cute Mute . An inversion of this trope is a speech-impeded protagonist

One common way of portraying a character as moving very, very quickly in fiction is to make multiple images (technically speaking, afterimages) of them viewable at once. They appear to be moving so fast that they're in several places at once. For the sake of preventing confusion, usually the "non-static" parts are shaded with less color, so we're sure that a character is moving really fast as opposed to being a monster with eight arms. Indeed, this trope is much easier to show than it is to describe — it's one of those effects that usually has to be pointed out to a casual viewer for them to even realize it's there In some fiction, the echoes are more than just a special effect — they're literal. Other characters can see them and be confused by them, making them effective covers for highly elaborate martial arts attacks. In video games, they can be used as an excuse to force the player to use timing to hit the "real" image. For various reasons, using speed echoes for the Doppelgänger Spin doesn't really make a whole heck of a lot of sense , but eh, roll with it Note that sometimes this trope can be used somewhat lazily: a character will have speed echoes but aren't really moving all that fast. The echoes are just to make us think</ they're moving fast This is somewhat distinct from Doppelgänger Attack , although technically a work can employ both at once. Related to Speed Stripes and Flash Step , both of which often employ this trope in their basic function. Indeed, you can see examples of speed echoes in action in both of those pages' images. Can also overlap with Colorful Contrails

A playthrough of a game with the intent of completing it as fast as possible for the purposes of entertainment and/or competition There are two types of speedruns: "regular" and "tool-assisted" In both versions, Sequence Breaking , route planning, and tight play are the key. The notion of completing a game as fast as possible is frequently an example of Emergent Gameplay (excluding those games where speed is the whole point, such as racing games). It is worth noting, however, that some games simply don't have any (or have extremely few) currently known glitches to take advantage of, and as such no sequence breaking or out of bounds of any sort can be performed, meaning that the speedrun is simply a matter of figuring out the most optimal way through every required part of the game There are three common, typical categories: " 100% run " (where the player tries to collect everything in the game as quickly as possible), " minimalist runs " or "Low%" (where the

player must skip all non essential items while still completing the game as quickly as possible), and the "pure speedrun", also known as "Any%", or "Beat the game", "Complete (character)'s story", and so on, depending on the game. Any% runs usually comprise completing the game as fast as possible, with nothing off limits to assist with this goal, be it glitches that skip 80% of the game, momentum conservation, and other huge game changers. Many a popular Self-Imposed Challenge are also up for grabs Speedruns are usually created as an attempt to show off one's skills. They are not</ for people who want to enjoy the plot or explore the world. Due to the many methods used in speedruns, and overall design of different games, it is not a good judge of how long a game is for the average player at all; for instance, there could be exploitable bugs that are only possible to pull off in a Tool Assisted run, and others that can be done in realtime with only a great deal of dedication, skill, and luck. A specific example of this: some Tool Assisted runs use glitches that require hitting left and right at the same time, or up and down at the same time; those ones are basically impossible on any standard unmodified controller. The optimal path can be radically changed at every step based on whether or not these bugs are used According to , the top five games with the most players in their speedrunning community (as of November 16th, 2020) are Super Mario 64 </ (4,341 players), Super Mario Odyssey </ (3,548 players), Minecraft: Java Edition </ (3,016 players), Portal </ (2,194 players), and finally Celeste </ (2,013 players) Popular "regular" speedrun archive sites include and . For tool-assisted, technically perfect runs, see . For speedruns and speedrun races performed live for your viewing pleasure, head over to . For rundowns of the history of some popular speedgames, see Summoning Salt 's

A.I. Breaker : Tool-assisted versions practically exploit all A.I.s on a frame-perfect basis, whether it's a flaw in the script or by exploiting luck manipulation. Regular speedruns can also exploit AI patterns to do things quickly, or learn from tactics discovered in the TAS version.

Ace Combat </ has various ls where you have to take your plane through an enclosed area . So, naturally, people took the fastest plane available and went in with maximum power. Like taking "Greased Lightning" from Ace Combat 2 </ or "Aces" from Ace Combat 5: The Unsung War </ .

B-O-O-K Spell Books are books with various magic diagrams and incantations, presumably spells, written in them . This is where the resident magic users go when they need to get serious but the spell was just too darn long to memorize. Or if they're trying to preserve magical knowledge and expect to be dead by the time said knowledge is needed. They may also be magic artifacts themselves, imbued with arcane potency, and magic is cast by wielding the book rather than by reading what is written in it In Real Life , the Spell Book is called The Manual </ and allows the user to cast "Tech Support" without use of reagents (although like its fictional counterpart, beware the person who thinks they're a wizard just because they read the book and are eager to try out the powerful incantations therein). In Sci-Fi , the Spell Book may be called by a number of names, but reading Techno Babble aloud from its sacred

pages can produce limitless feats of technical wizardry People who practice Witchcraft call these things grimoires</ or Black Books. Also known as a Book of Shadows, they are usually more like commonplace books with collections of incantations, calendars, diagrams, recipes, journal entries, and notes on whether this or that spell worked Related to, but distinct from the Great Big Book of Everything which is an infinite source of information. The Tome of Eldritch Lore is also a spell book but has added implications of doom! . Some examples probably need to be moved over Older Than Dirt , as the ancient Egyptians thought magic could be performed by reading and performing specific incantations , and used collections of written spells in various forms. Writing itself was considered a magic art. Compare and contrast Limited-Use Magical Device , a magical item that only has a limited amount of uses before needing to recharge or becoming completely unusable

This trope describes characters whose names are almost never spelled consistently, usually because of transliteration issues. This tends to happen in Anime and Japanese video games that haven't been officially translated into English, although it also crops up in other languages that don't use the Latin alphabet. Situations include anything from drama between vowel additions to unique-cipher dropping, due to phoneme sets and writing systems. English, for example, is famous for many ways and rules of spelling (e.g., Americans generally dropping extra vowels such as in the word color</, as compared with its British spelling colour</), despite having far fewer actual sounds</ they represent. Japanese has separate vowel-heavy syllabic and ideographic writing systems; since the latter overlaps with Chinese, sometimes there is a question of whether a name should be transliterated from the Japanese or the Chinese reading. Spanish has several familiar looking letter combinations intended to be pronounced in specific ways. Complicating the issue is that some names simply become popular enough in other languages that they're modified to fit them better, and you can't be sure if it's actually intended to be meaningful . Another complication is when the name is only</ ever shown in modified form, meaning we simply have to guess Assuming an official release settles the issue , some fans deliberately use one of the alternate spellings to establish their "credibility" as fans . In true fan fashion, this often persists even in the face of overwhelming evidence to the contrary, such as Theme Naming , Meaningful Names , Prophetic Names , and direct proclamations by the work's creator . Eventually, this stops being cool and just starts making people angry, and the self-righteous morons have brought up a Fandom-Enraging Misconception In some cases, official translated versions will adopt bizarre transliterations for the sake of Writing Around Trademarks and/or establishing new ones — because, when a Cash Cow Franchise gets imported, it's more useful to have character names that can be trademarked for the sake of selling licensed merchandise This trope is omnipresent with Greek. The convention in English is not to transliterate, but instead to Latinize, Greek nouns and names. Hence nigh unpronounceable Latinizations like "Cynoscephalae" instead of "Kynoskefali" for Greek Κυνὸςκεφαλαη, "dog's head" This can also occur in translations of ancient texts written in outdated forms of modern scripts. For example, early Latin had no "J", but, as English has no consonantal "I", "J" is often used to signify such (notwithstanding that Y is

actually the closest equivalent to a consonantal I in English). To a lesser extent, this can occur when transliterating words that contain a thorn (þ), which is already well represented by "TH". In point of fact, it can even be seen in many English texts from before standardized spelling (yes, there was such a time), won ecksampel beeing þis frais. And anoþre beeing þis sentans. Þis won heer is a partickularlie gud ecksampel The trope's name comes from an Isaac Asimov short story, , in which a pair of Sufficiently Advanced Aliens use The Little Shop That Wasn't There Yesterday to stop The End of the World as We Know It —by persuading an obscure scientist to change one letter of his name from Z to S , and watching Hilarity Ensue (until they realize that The Watcher will know that there was supposed to be an Earth-Shattering Kaboom , and so are forced to come up with an equally subtle Reset Button). Asimov was inspired to write the story after having hisimov, or even Asenion</ once — one time too many. Incidentally, Isaac Asimov's original name in the Cyrillic alphabet was "Исаак Азимов" (Isaak Azimov</, with the initial "I" pronounced like "ee") and pronounced quite differently from how the American public and he himself pronounced it during his lifetime. Now in Russia, translations of his works use the spelling of "Айзек Азимов" Aizek Azimov</) to better convey the American English phonetics, out of respect for the author While it may apply to some folders this trope shows up on, this page MAY NOT include minor differences in romanization systems, such as the various methods of indicating long vowels in Japanese, or the use of the apostrophe to indicate syllabic nasals. VERY FEW EXAMPLES WILL BE MENTIONED AS THERE ARE TOO MANY TO LIST Contrast My Nayme Is , which is the intentional</ misspelling of one's name The opposite of No Pronunciation Guide , which is when the spelling/writing of the name is unequivocal but people can't agree on how it's supposed to sound. The tlopes can ovelrap, howevel, if a celtain sound does not exist in a a palticural ranguage May lead to a Who Names Their Kid "Dude"? Related to Adaptation Dye-Job (and/or other Adaptation Tropes , as the case may be). Compare with Rouge Angles of Satin , when a word or name is spelled incorrectly in a way that it is confused with another existent word, and Viewer Name Confusion for when the name is spelt consistently but the viewers get it wrong

Space Is an Ocean for all science fiction and it shows with two-dimensional space and Space Whales . So what do we need to complete the trope? Spices. Space "Spaices" , if you will. For some reason, all kinds of futures have a high demand for something called "spice", though it tends to be only tenuously related to flavorings on Earth. Space spice (try saying that</ ten times fast) is often a valuable Mineral MacGuffin , sometimes being the point of contention for all the known nations and smugglers. Sometimes controlling it is directly followed by controlling fates. In other futures, spice is just a valuable trade commodity. It is nearly always consumable but, depending on the canon, can do other things, such as fuel starships and act as drugs . This trope probably derives from the East Asian spice trade in the early modern era. These spices were enormously valuable in their day. For example, the cargo of cloves carried by the one ship of Magellan's that made it back reimbursed his backers for the entire cost of the expedition. The idea of a rare, extremely

valuable product that cannot be synthesized artificially (along with reasonably Casual Interstellar Travel), serves as a justification for otherwise economically dubious interstellar trade, which is a necessary background for many standard Space Opera tropes such as independent traders, merchant princes, smugglers, pirates, trade convoys and so on. Also see Alien Catnip .

One of the staples of late night advertising And, these days, online as well, often said to be "discovered" by "a mom from Suburbia ," and " Doctors Hate Her!!! " because she (apparently) knows something They don't want her to know . is the host of herbal remedies claiming to cure all known human ills. Having trouble shedding that last 10 pounds? There's an herbal pill for it. Can't concentrate or focus like you used to? We have magic plants for that, too. Sex life not what it used to be? There's a whole forest of herbs for that one. (And with that much wood, how can you go wrong?) These herbal cures are always packaged similar to modern pharmaceuticals, using plastic bottles or sheets containing pills or capsules. However, none of them have undergone any FDA (or other-country equivalent) scrutiny since they don't claim to treat a disease (not even normal food safety requirements), as their disclaimers would tell you if you could read them . That doesn't necessarily mean they don't work, but it means that we cannot be certain that they do; and even if they do, there is also no guarantee of consistency, since plants vary widely in their potency. Testing by consumer protection agencies in several countries has shown that potency of herbal remedies can vary between non-existent to potentially harmful, even between different batches from the same manufacturer; and contamination with harmful substances such as heavy metals and pesticides is a frequent occurrence and the actual levels of the purported active ingredient might even vary. Equally important, there are often no warnings of potentially harmful side-effects, or interactions with prescription drugs, foods, or even other herbal pills; even when there really ought to be. It's wise to remember that Nature Is Not Nice and is full of things that are trying to kill us . In the U.S., a law has forced advertisements of such herbal remedies, which are not run through the Food and Drug Administration, to say as much at the end of their ads. Thus, you'll hear or see the following : "These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, prevent, treat, or cure any disease." Which basically translates into " We just lied through our teeth " if the whole point of the ad was to imply that the remedy did</ "diagnose, prevent, treat, or cure" a specific disease The above disclaimer has been derisively dubbed by the medical community as "The Quack Miranda Warning". Similar disclaimers are also legally mandated in several other countries, like for example in the Philippines which could go something like this: Ang TV Tropes ay hindi gamot at hindi dapat gamiting panggamot sa anumang uri ng sakit.</ (translation: TV Tropes is not a drug and should not be used for the treatment of any disease.</) See also All-Natural Snake Oil . For something that actually works, see Panacea , or the more downplayed and plausible version That Old-Time Prescription . Compare and contrast Side-Effects Include... . Also consider the Placebo Effect , which means that even useless remedies can produce genuine results since Your Mind Makes It Real .

Metabolite, and everything else that contained ephedrine. After synthetic versions of the weight-loss chemical were banned due to violent side effects, people just switched to ephedra, a plant that

produces ephedrine naturally. Will people ever learn?

Some people are scared of spiders. Whenever they see a spider, they will become scared, either screaming in horror or trying to swat the spider with a rolled-up newspaper or stomp it to death if it's on the floor Essentially, this trope is when spiders are portrayed as being scary monsters in different forms of media. Sometimes, they can be giant monsters in horror movies, while they can be normal-sized, yet still retain the scariness that they are thought to have They're often portrayed as extremely venomous, capable of killing or incapacitating humans. This happens occasionally in Real Life and near constantly in stories. In these instances, the sight of a creeping spider is comparable to that of an approaching cobra or tiger. If anthropomorphic, they may be portrayed as more sneaky and manipulative . They may be Evil Puppeteers , due to the resemblance between a spider's webbing and a puppet's strings In reality, while there are indeed a number of deadly spiders on Earth, most of them are more likely to be found in relatively "remote" or exotic regions, such as Australia or Brazil—and even there, most spiders are harmless, and not all areas have particularly venomous spiders. In America, the most notorious deadly spiders are the black widow and the brown recluse, and the very name will have an air of death and apprehension. In reality, both of these spiders are extremely docile, and their bites are rarely serious — most fatalities are children or people with weak immune systems In lieu of either of these spiders, however, the spider most likely to be used to inspire fear and revulsion is one of a wide variety of tarantula species. Despite being relatively harmless to humans, their size and appearance is a grade of Nightmare Fuel all by themselves. Even when a spider really is dangerous to humans — such as the Sydney funnel web or Brazilian wandering spider — they won't aggressively attack people under normal circumstances (see Animal Assassin for more information). The former, in fact, has — all prior to the introduction of antivenom in 1981 In reality, more people are killed each year by champagne corks or falling vending machines than spiders. A rather unimpressive record compared to, say, bears , crocodiles , venomous snakes , or even canines or sharks . However, those animals all have two eyes, internal skeletons, and red blood. When it comes to narrative effect, otherness is always scarier than practical threat Compare Creepy Camel Spider , Giant Spider , Spider Swarm , Sneaky Spider , Scary Scorpions and Why Did It Have to Be Snakes? . Contrast Friend to Bugs , for someone who might love spiders, and Friendly Neighborhood Spider , for the opposite depiction of these animals Not to be confused with Demonic Spiders , which is a gameplay trope, though the two can certainly overlap

Simultaneously showing the passage of time and the impact of events by showing newspaper headlines. For added effect, the papers emblazoned with these headlines spin towards the camera before pausing briefly and fading out. It is usually also accompanied by a trumpet sound effect The Spinning Paper usually takes place against a black background but often fades in footage of people in animated conversation, using telephones or reading newspapers. It is also common to show the Spinning Paper as an overlay on footage of printing presses. It is usually prefaced

with either a newspaper boy yelling "Extra! Extra!" or a shot of a stack of newspapers being delivered The Spinning Paper is more commonly used in movies rather than TV shows and is so incredibly over-used that these days it is usually used not for dramatic, but for comedic value, as in The Simpsons </ . It has also become rarer overall as newspapers lose ground to television or (more recently) online news Back in the days before this device had been done to death, some B Movies would—as an alternative to printing up a custom faux-newspaper—apparently use certain stock layouts, with everything below the massive main headline cut-and-pasted from previous fake front pages. This is why certain news articles, like appear on completely unrelated front pages with such frequency. Which does lead one to wonder why, with the main headline proclaiming Armageddon , some papers consider "Building Code Under Fire" to be newsworthy A Spinning Paper will often display the Worst News Judgment Ever . See also News Monopoly Compare Spinning Clock Hands , Exploding Calendar to show the passage of time

Cartoons have a tendency to get spun off into new shows with younger versions of the original characters. No one is quite sure why producers do this, aside from the opportunity to make a new franchise for a new demographic out of an older, successful property. Often the concept of the original show is dropped entirely and replaced, but sometimes it's adapted to an elementary- or middle-school setting. Frequently parodied, due to the absurdity of some of the examples Note that those are usually not</ prequels , and not part of the original show's continuity. It's usual for people who supposedly met for the first time in the original show to meet in the "younger" show, or for characters with notably different ages in the original show to be babies/middle-schoolers at the same time. If they are descendants, then it's Spin-Offspring If any of the voice cast of the original series is still alive, expect them to have occasional-to-recurring guest roles as the parents of the younger versions of their original roles (e.g. Henry Corden, the regular voice of adult Fred Flintstone at the time, was the voice of young Freddie's dad and mom on The Flintstone Kids </) Contrast Time Skip , which tends to make the characters older instead. Compare Young Future Famous People , which does this with real people. If the characters start displaying hints of their main-series personalities, see Early Personality Signs

If you have a popular franchise, you probably have novels and action figures and DVDs and so on. What else will people buy? A cookery book is one option, especially, but not necessarily, if the franchise is known for Food Porn . The book may or may not be "in-universe"; that is a cookbook that exists in the setting. (If it is, there may or may not be some explanation for why it uses real world measurements and ingredients — especially if the setting is known for Alien Lunch or Foreign Queasine .) An Edutainment Show will also want to take this opportunity to talk to the kids in the audience about healthy eating. Sometimes the cookery book is officially released, or it can be fan-made. There is also a subset of Parody cookbooks with funny parallel Pun Based Titles . These are both loving and mocking in tone. They make fun both of the original work and cookbooks in general. The recipe names will most likely be punning, too.

Spin-Offs are when part of a successful show, usually characters, but sometimes a general concept (first you have the Law, then you have the Order), are taken and given a second show of their own From a producer's perspective, it's a chance to explore other aspects of a concept. Actors can find opportunities to grow in their craft, as well as rise in importance by moving from just being part of an ensemble to having a show built around them. For the networks, it's a chance to establish a show with a built-in audience, making it that much easier for them to sell advertising Lots of spinoffs go on to be successful shows in their own right, sometimes even surpassing the parent series in popularity . Others crash and burn (Joanie Loves Chachi</ , anyone?), suggesting that there is no such thing as a sure thing. Nevertheless, networks keep trying them

Where a character leaves a show and joins or starts another one, and the two run concurrently. Sometimes called a . Characters Crossover from time to time. Spinoffs are Older than You Think . The character of Falstaff, from Henry IV </ parts 1 and 2, was given his own play, at Royal request, by William Shakespeare . See also Distaff Counterpart . When a TV series is successful enough to produce a film Spinoff, this is The Movie . Video Game spinoffs often feature the same cast but differing gameplay genres or are Gaiden Games starring one of the secondary or side characters. When the spin-off focuses on the descendant of a character from a previous installment, it's a Spin-Offspring . If the spin-off reimagines the characters as little kids, it's a Spin-Off Babies . In the television industry, there is a technical difference between the terms "spinoff" and "sequel": a "spinoff" refers specifically to a television show that continues in (more or less) the same era as its predecessor, while a Sequel Series takes place after</ the parent series' setting. (Some older sources will also freely use "spinoff" for any</ mass-produced merchandise connected to a piece of media, from videogames to underpants; more modern terminology will usually favor "tie-in" for that,)

Spin-Offs are when part of a successful show, usually characters, but sometimes a general concept (first you have the Law, then you have the Order), are taken and given a second show of their own From a producer's perspective, it's a chance to explore other aspects of a concept. In the television industry, there is a technical difference between the terms "spinoff" and "sequel": a "spinoff" refers specifically to a television show that continues in (more or less) the same era as its predecessor, while a Sequel Series takes place after</ the parent series' setting. (Some older sources will also freely use "spinoff" for any</ mass-produced merchandise connected to a piece of media, from videogames to underpants; more modern terminology will usually favor "tie-in" for that,)

A Spin-Off Sendoff</ is when characters and settings from one series is used to transition to those of a Spin-Off show or next installment of a Series Franchise . This is usually done by having the first episode of the new series feature these characters in one final appearance, though it can also come in the form of the new characters showing up in The Stinger of the original show's final episode Doing this has the advantage of guaranteeing a built-in audience: it not only raises interest by establishing the new show as being in the same universe or continuity as one the audience is already fond of, but the former case also entices viewership by promising the return of their favourite characters for one last time Compare Poorly Disguised Pilot , where an episode of the original series suddenly shifts focus to a new set of characters, and Required Spinoff Crossover , in which characters from the original series regularly make appearances on the new series See also: Passing the Torch

When, rather than using Spin-Off Babies (the main characters of an older series being made younger) you instead make a show about the descendants of people from the original premise. Sometimes evolve out of a Kid from the Future . May overlap with both Generation Xerox and Legacy Character , but can also exist independently of both tropes Sub-Trope of Changing of the Guard . The current heroes may become Kid Hero All Grown Up . The kids might be Expies of the original heroes Popular Fan Fic device: see Fan-Created Offspring . Ascended Extra or O.C. Stand-in may also apply for canonical descendants who appear at the very end

If you tell this character to Bring It , they'll say, "Can't wait!" You tell them you're stronger than them, and they'll say, "Then this should be a good fight!" If you beat them, they'll say, "I guess I need to train more and face you again when I'm stronger!" If you lose to them, they'll say "That was fun! Train hard for next time. I can't wait to fight you again!" This is a character who lives for a challenge. It doesn't matter where they are or what lies at stake, what they really love is the battle, the challenge of going against someone who is a Worthy Opponent , no matter what the venue or the game is. Usually they hold no grudges, and have no one they'd consider their enemy. (Their rivals , on the other hand...) Instead, they have those whom they relish challenging again and again, so that they can enjoy themselves. The win or the loss doesn't matter to them so much as the chance to test themselves and face a challenge. If they lose, they're usually a Graceful Loser and even if they win they never engage in Unsportsmanlike Gloating but rather

encourage their opponent to get better so they can have a rematch. These characters are mostly heroes, but, if they are antagonists, they are usually Punch Clock Villains and, even without that, they are almost always Friendly Enemies . They certainly make the best rivals . These characters' main motivations are usually to find the ultimate challenge , the one who can truly match their skills, and sometimes, taking that to the extreme, their motivation is to find someone who can finally defeat them . Sometimes, they have no motivation other than to fight/have a challenge. In any case, they certainly don't mind losing . Any series where the main focus is a form of competition, from martial arts to chess, has at least one of these. If this character is really in it for the brutality and/or rush of a physical fight (and who will thus rush into any fight, big or small, just to get their jollies, and never back down from a fight), not the challenge, then he is a Blood Knight , not a Spirited Competitor (a Spirited Competitor will probably avoid a conflict that wouldn't challenge them or doesn't involve someone they feel is worth it). If he's in it for sadistic pleasure, then you've got a Psycho for Hire (or a Combat Sadomasochist , if he also injuries). If the character wishes to face challenges while striving to be the best, then he wants To Be a Master (usually such characters become these after a while). If the character is completely laid-back or carefree about the challenges, or even nonchalant about them to the point of cockiness, then he's a Cavalier Competitor . Subtrope of In Harm's Way . Advanced V.G. </ has several among its main cast, with Yuka Takeuchi being the primary example:

While a Spiritual Successor is for any</ plot that is reused without the same setting/characters, a Spiritual Adaptation is when the plot and even characters are used in a different medium. This often occurs because the creators in the new medium are not the same creators/producers of the original medium, which means they don't have access to the intellectual property rights of the original storyline It's particularly evident with video games; most people have certain movie characters with tons of potential they dream of playing as in an amazing game, yet as most movie licensed games are terrible , there's little chance of that happening. The storyline may deal with the same themes or problems faced by a very similar cast of characters, but without getting the license, the creators have put together an original work instead. Fans check out the new work, and recognize story elements from a work in a different medium A Sub-Trope of Recycled Premise , where it's the story that is reused for another work. A Sister Trope to Spiritual Successor (where any work that shares the same themes/creators is written in a separate universe), Spiritual Crossover (when one work has the characters encounter Expies from another franchise or work) and Recycled IN SPACE! (where the same premise from one work is also reused for a similar but distinct work in another setting). Compare Divorced Installment (where a work did</, in fact, begin life as a straightforward adaptation, only to have the Serial Numbers Filed Off during production) and Spiritual Antithesis (where one work has the same characters and themes as its predecessor but done completely different). See X Meets Y , where two or more works are combined together and The Mockbuster where a work doesn't just have similar characters and plot from another work but deliberately rips it off to capitalize on its success

A polar opposite of the Spiritual Successor , the Spiritual Antithesis is (intentionally or not) referencing or invoking an earlier work by using similar characters and themes, but going in a completely different direction. Often set at the opposite end of Sliding Scale of Idealism vs. Cynicism . May serve as a Deconstruction , Reconstruction (if the original work was a deconstruction itself) or Stealth Parody of the original work. The trope is also popular and commonly applied in case of titles that came out around the same time and share a lot of similarities but accomplish different outcomes, be them Dueling Works or works in different medium altogether, especially in case of those that run for long enough to have divergent evolution. It can best be described as the concept of foils applied to works instead of characters . Often seen as a Take That! against the original work (though it may simply be meant as commentary or as a What If? scenario, and is occasionally even made by the same people), and closely related to Satire . May involve Whole Plot Reference . Sometimes is actually a sequel to the original work, in which it usually serves as an Internal Deconstruction . The Moral Substitute is a related trope, where the work is meant to be the antithesis of what its creators see as moral failings within another work or genre. Of course, nothing prevents a work from being the Spiritual Antithesis of one work and the Spiritual Successor of another at the same time, which may often result in said work being X Meets Y or This Is Your Premise on Drugs . Genres that play this role to each other:

A Spiritual Successor is a type of sequel that is not part of the same world or story as its predecessor, but is nonetheless considered to be a successor because it shares common themes, styles, and elements, and may even be made by the same creators. In other words, it’s a sequel "in spirit" The reasons for this are varied. Sometimes creators are unable to retain the rights to their original work, which makes a direct sequel impossible. A creator may strongly echo another's work as a sort of "professional Fanfic ", implying a connection or parallel while keeping a respectful (and copyright-avoiding) distinction from the original. Other times, they may not want to directly continue the original work (and risk Sequelitis), but their distinctive style and thematic interests remain. Producers may try to adapt a different work following the model of a previous success of theirs, while maintaining a prudent separation between the two Canons . And then sometimes it occurs completely by accident Present in all sorts of media, although the term "Spiritual Successor" may have originated within video games (also known as companion games), because developers might own the engine and game code with publishers owning the trademarks to the franchise A spiritual successor may succumb to Better by a Different Name The series version of an Expy . Often overlaps with Serial Numbers Filed Off . Compare Spiritual Adaptation . Contrast They Copied It, So It Sucks! , Dolled-Up Installment , In Name Only , Dueling Shows , and Thematic Series . See also Production Posse The opposite is Spiritual Antithesis , though it is possible to be Spiritual Successor to one work and Spiritual Antithesis to another at the same time

A Reaction Shot to an unexpected event that involves spraying food or, more commonly, drink from a character's mouth. In some cases,

the character sprays their drink out of their nose instead of their mouth. It can be Truth in Television , as many people can attest, though in real life laughter is more likely than shock to induce such a reaction. The non-eating version is generally a "pfft" Why surprising news or the punchline of a joke is so often delivered when a character has a full mouth can only be ascribed to Rule of Funny . May also be part of an I Ate WHAT?! reaction to the efforts of a Lethal Chef or Cordon Bleugh Chef A common Lampshade Hanging for this trope is when a character pauses to take a drink just so he has something to spit out in reaction See also: Double Take , The Take and Discreet Drink Disposal . Not to be confused with Spit Shake . Compare Spraying Drink from Nose , which is usually caused by laughter instead of surprise. Unrelated to Spit Shine

Splatter horror is not just a film genre: certain authors of Sextreme horror novels have adopted the term splatterpunk to Sdescribe works that include gory depictions of violence ubgenre of SHorror and Sister Trope to Slasher Film and Exploitation Film

Bloody Hilarious : In splatstick, the blood and guts are played for laughs.

A Speculative Fiction variant of Separated at Birth : Our hero meets a character who appears at first to be his long-lost twin - until it is revealed that they are, in fact, the same person split in infancy by Applied Phlebotinum Often the "twins" are characterized as inverses (either Polar Opposite Twins or Evil Twin) since the original's personality traits were divided unevenly between them (e.g. one "twin" got all the confidence, leaving the other timid and introverted). Note, however, that the "twin" is not necessarily evil or even antagonistic; he may simply be an alternate version of the character See also: Shadow Archetype and Starfish Character See Separated at Birth if the character is a real twin

In real life, (or DID) is a condition believed to be most common among survivors of severe and/or chronic trauma occurring before the age of 6-9. While typically depicted as rare and often misdiagnosed due to lack of education among clinicians, the disorder is actually estimated to occur in 1 to 3% of the population worldwide, placing it on a similar scope to autism and obsessive-compulsive disorder. A simplified (maybe simplistic) explanation by psychologists: the condition is thought to sometimes result when a child/teen copes with abuse by convincing himself that it's happening to someone else; as such, the trigger is generally some experience the child/teen is trying to dissociate from by means of creating an "alter ego" who gets put in charge. (The multiple personalities form the source of the disorder's original name, "Multiple Personality Disorder"; it was changed because the new name provides a better explanation of motivation.) Note that without receiving psychological counseling, the symptoms will carry over into adulthood. The individual has no control (at least initially) over when the personalities "switch" and may not initially remember what happens to him while they are switched. To put all that in Tropese: you go to your Happy Place while some poor Red Shirt has to deal with the Trauma Conga Line or Humiliation Conga — so stereotypically, the personality who has to deal with it is not a nice person ... But that's not

entertaining enough (although it's formed the basis for hundreds of popular nonfiction books on the subject), so television does it differently, and in several different ways. Two (or more) personalities may be sharing memory or not sharing memory or have access to each other's memory as external to their own in symmetric or asymmetric fashion, they can switch at will or involuntarily and be in clear war or some form of pact. It even may be the very same personality (i.e. having the very same mind, memory, and desires), but changing 'behavior mode' between several clearly distinctive states. Ironically, this is closer to Truth in Television for what real multiples report experiencing. Characters with a split personality are surprisingly common in fiction, but most of them don't quite match the textbook definition of DID. In older media , it will often be called "schizophrenia" even by psychologist characters, despite the fact that they are completely different disorders</. In schizophrenia, the person experiences auditory and sometimes visual or tactile hallucinations. (The word schizophrenia literally means "split mind," because a main symptom is scattered, unconnected thoughts.) See also Double Consciousness , Identity Amnesia , Jekyll & Hyde , Napoleon Delusion , Superpowered Evil Side , Split-Personality Merge , Split-Personality Makeover , Split-Personality Switch Trigger , Split-Personality Takeover , and Talking to Themself . If the split personality is the antagonist, it's the Enemy Within . Shapeshifting is sometimes involved. If the personalities are flipping back and forth, Flip Personality often ensues. Compare Trauma-Induced Amnesia . If the two personalities are aware of each other, expect a Gollum Made Me Do It situation to develop. Resolving it may require the weaker of the two to say " I'm Not Afraid of You !" If the Split Personality gets its own body, it becomes either a Literal Split Personality or an Enemy Without (if said personality is antagonistic or evil). See also Heroic Safe Mode for one explanation as to how a side like this can be created.

Tropes about people who have or think they have multiple alternate Tidentities, personalities, or selves his is a sub-index of Madness TTropes

Spock Speak (as in Mr. Spock from Star Trek </) is a dispassionate , precise and technical way of speaking, indicating the speaker's distance from human society, but also gives the sense that the speaker is very smart. Common for aliens, robots, people from the past or future, geniuses and/or people from stereotypically formal cultures. Similar to Robo Speak - smarter robots will use Spock Speak. Specific affectations usually include: Bizarrely, these affectations can be combined with Ye Olde Butcherede Englishe in some examples of Flowery Elizabethan English . Much of literal Spock Speak , spoken by the character of Mr. Spock himself , can be traced back to (of all things) American commercial aviation . Gene Roddenberry served as a US Army Air Forces pilot in World War II and then worked as a Pan Am (Pan American World Airways) pilot before he moved to Los Angeles (where he made his living as a cop). The limitations of 1940s and 1950s communications equipment made it hard for a listener to tell the difference between a quick "yes" and a quick "no" - both would sound like a staticky "uh". "Affirmative" and "negative" were easier to differentiate. Standard, precise language also made it easier for pilots to communicate in emergencies — they didn't have to stop to think what to say. Roddenberry may have based the

character of Spock on pilots he knew, in the same way that he based the character of Kirk on Daryl Gates of the LAPD. Yes, that one. Contrast with: Compare with:

Everyone knows It Was His Sled , but most of the time, posting a Spoiler without any warning will get you cursed, flamed, and even

The Hero has been progressing in his quest against the Big Bad . Then he dies . Wait! What?! That's not supposed to happen! Well, now what? Do we have a Downer Ending ? No, no, we need a replacement Hero. Time to present The Lancer Ascendant: someone who will take up The Hero 's sword (and other weapons) and go on to defeat the villain. This can be literal, invoking It Was a Gift , or metaphorical. When it's not only literal but the MacGuffin , see the subtrope I'm Dying, Please Take My MacGuffin . Most often used at the beginning of a show, to explain exactly how some callow youth loser got the job of defeating the Big Bad . In this case, it was a head fake that had you thinking The Mentor was actually The Hero . (Which makes the first guy a Decoy Protagonist .) Occasionally done with the original Hero as a ghost or shade, unable to rest until someone completes his aborted quest When it happens later in the season (or in later seasons) it can be a real shocker. May feature in Dying to Be Replaced . Occasionally used at the ending , to slightly sweeten the tragedy by showing that someone will continue the fight. When it happens to superheroes or supervillains , it is often the case of Legacy Characters . In military situations, often combines with a Field Promotion by the dying hero. This is likely to create a Mirror Character . Subtrope of Changing of the Guard . (Specifically, if the position is vacant by death.) Good Counterpart to the Dragon Ascendant . Related to Her Heart Will Go On , Determined Widow , Taking Up the Mantle , and Bequeathed Power . In its darker forms, leads to Feuding Families , or may be a genesis to, or simply another stage in, the Cycle of Revenge . See also, The Chooser of The One . Passing the Torch is when The Hero decides their succession... and is still alive for a while afterwards . Naturally, this trope is prone to . When listing examples, remember that it has to be more than the literal "someone gives someone else a weapon" part to qualify.

When something really horrible happens or someone tells a character really bad news. It can happen three ways, but it usually played for comedy. Bob tells Alice horrible news. Bob says to Claire, 'I think she's taking it well'. Alice then starts freaking out. (Yelling, getting a weapon, screaming, hurting herself or others, etc) See also Obviously Not Fine . Film - Animated Film - Live-Action

Webcomics stern Animation

A plan for villains who think on a large scale. The bad guys isolate a community from the outside world and then loot it at will The typical plan is to cut off communications (e.g. take down phone lines) and then isolate the town (blowing the only bridge in is common). Local law enforcement will be eliminated (often being captured and locked up in their own jail) Expect at least one hero to stage a "Die Hard" on an X . Compare and contrast Take Over the City and I Own This Town

A form of Heroic Sacrifice where, when a villain fires a weapon at

someone and another character leaps into the path of the weapon, receiving the injury instead Time often slows to a crawl , and the shielded one will shout a Big "NO!" . The leaper will then have a scene where they weeping-ly tell the character how important they are before losing consciousness, while cradled in the arms of the survivor. Sometimes they get better, sometimes they don't, but it's close, either way. Usually results in tears and/or an angry How Dare You Die on Me! moment, especially if the person they took the bullet for loved them in any way. A More Hero Than Thou dispute may result, even though it's obviously too late This may be a minor character protecting a major one, or sometimes a villain will do this following a Heel–Face Turn , in which case they're probably not going to pull through This turns into a Diving Save if the rescuer pushes the victim out of the way without being hit by the shot. Can be done with any other projectiles: a common gag is to do it with something utterly harmless, and really ham up the shot For some reason , the Big Bad rarely succeeds at any attempt to empty the next bullet</ into his original intended target. Nor will the diver not get there in time to stop the bullet, or the bullet continue through the diver to the original target . Considering how much could theoretically go wrong with this trope, it's almost surprising how (relatively) rarely it gets played with There might also be the possibility that the character who took the bullet is Immune to Bullets (or whatever it is that's thrown at them), has certain protection (usually a Bulletproof Vest) or at least can recover from the injury by themselves The United States Secret Service (which protects the president) calls this "catching the bullet", although it is rarely actually performed. In real life, the technique is obviously different, as bullets are far too fast to react to. Instead, the human shield will stand in front of the defended individual (hopefully) prior to the shot being fired. For instance, when Kennedy was shot, the agent with Johnson (the vice president) threw him to the floor of the car and then threw himself on top of him until they reached a secure location If this trope is executed poorly, usually because there were more intelligent alternatives to Taking The Bullet, it can come off as a Stupid Sacrifice . On the other hand, there may very well have been No Time to Think Compare Go Through Me , Jumping on a Grenade , Tuck and Cover , Load-Bearing Hero , Draw Aggro . Human Shield and Bulletproof Human Shield are the unwilling versions that often happens in hostage situations. Misguided Missile is when you do this with air-to-air weaponry In Real Life , this is another term for Taking the Heat . Try not to confuse the tropes, though. Note also that modern small arms munitions, especially military grade, are perfectly capable of penetrating right through someone and retaining sufficient energy to kill or severely injure the person being shielded, so this is very much a last resort tactic if trying to stop someone else being shot Due to the nature of this trope , . You have been warned

A crime has been committed, usually a murder. In the subsequent investigation, Bob seems to be going out of his way to make</ himself a suspect. He may confess right at the start, or just draw attention to himself by refusing to co-operate with the investigators, even when it would appear to be in his interests to do so. Or he may not make himself known immediately, but will suddenly show up at the cop shop two-thirds of the way through, ready to confess, even though he's never been a suspect. Why?

Because he's Taking The Heat for Alice In a classical whodunnit, it will usually turn out that Alice is innocent after all, and Bob was acting on a misapprehension. (Whether Alice is more flattered by Bob's care or offended that he was able to think she'd done it will vary from case to case.) Some authors have gone for the double-whammy, where Bob tries to take the heat for Alice while Alice tries to take the heat for Bob, and in fact, neither did it . Another variation is for the actual perpetrator to offer a deliberately implausible confession so that everybody thinks</ that he's taking the heat for somebody else In more " cynical " series, it may instead turn out that Alice did indeed do it, but Bob has some reason for feeling she should be spared punishment: Alice can't handle prison, Alice has less than a year to live, the victim raped Alice and only Bob knows, Alice has a degenerative brain disorder and doesn't know </ she did it ... and sometimes, Bob may actually think he's protecting an innocent Alice - all while she's pulling his strings to get him to take the heat for her In classic whodunnits, the usual way to expose Bob's lie is by lying right back at him ; in the same way as the murderer always gives away that he knows too much about the crime , Bob can be tricked into revealing he doesn't know enough</ . Saying "So it was you who shot him?" when the victim was clubbed over the head usually does the trick May overlap with the Fall Guy or False Confession . Compare to Silent Scapegoat and The Scapegoat . Contrast I Won't Say I'm Guilty and Then Let Me Be Evil

You're really</ in trouble now. You've been defeated, captured or otherwise humiliated by your enemies, and are now at their mercy. But you've got one last ace up your sleeve. The only problem is, this final attack is going to spell death for you as well as your enemies. But hey, you're going to die anyway! Might as well try to take some of them down with you . Cue Earth-Shattering Kaboom via a Superpower Meltdown by using a Dangerous Forbidden Technique involving a Painful Transformation into a One-Winged Angel , or anything that suits your tastes, really. Don't forget, however, to growl in a menacing tone: "If I'm going to die, I'm Taking You With Me," or perhaps " See You in Hell ." When this trope is invoked, the hero usually survives, and the villain nearly always dies, regardless of who is trying to take whom with them. If it's the villain trying to take the hero, the attempt inevitably fails. If it's the hero trying to take the villain, the attempt inevitably succeeds, and it's likely (but not certain) that the hero will find a way to come out of it alive. (Exception: If the hero is a redeemed bad guy , the attempt inevitably succeeds and kills both of them .) One form of Taking You with Me is when a villain deliberately sets up a Load-Bearing Boss situation, hoping to collapse his lair on the victorious heroes (over cries of "You'll kill us both\all!"). When cornered, one might decide that it's Better to Die than Be Killed , and take a Cyanide Pill ; too bad that those don't bring down the opponent with you. Alternatively, the threat</ of taking an attacker down with you can allow you to achieve a Victory Through Intimidation . If this action is taken by a usually stoic villain, may have been preceded by a Villainous Breakdown . If all of the universe/reality is included with "you", this becomes a Suicidal Cosmic Temper Tantrum . A Last Stand is a prolonged version of this, involving more characters. It may, in fact, have several Taking You with Me incidents in it. This trope often goes hand-in-hand with Do Not Go Gentle . See also

Sealed Evil in a Duel , Self-Destructive Charge , Last Breath Bullet , Mutual Kill , Suicide Attack , and Heroic Sacrifice . May occur after crossing the Godzilla Threshold . The Double Knockout is a nonlethal cousin of this trope. May be the purpose of some variants of a Dead Man's Switch . Compare Last Ditch Move for (not necessarily lethal or even offensive) scripted final actions. Someone pulling the Self-Poisoning Gambit may be doing this if they don't have any means to counteract the poison. A Sore Loser might resort to this if they're upset enough. Contrast Villain's Dying Grace . Not to be confused with Taking Them Home With Me . It also should not be confused with Backstab Backfire , where the death of the person trying to do a last ditch effort in killing his enemy did not plan the possibility of death when attempting to backstab them after being defeated. As a Death Trope , all spoilers will be unmarked ahead. Beware.

In a lot of fairy tales , there is one hero and one heroine (though The Prince and the Pauper and the like are notable exceptions), there will be a lot of emphasis on how infinitely talented the girl is, but not as much on the guy. The girl (who is usually either a princess or a regular girl who will become a princess later in the story) can have any range of talents, including singing (obviously), dancing, cooking, painting, or even kicking people's asses . This can occur in one of three situations: She spends most of her time living in her castle/house, and likes to keep a few things in practice so she doesn't get bored. Same if she's been living in a tower. Or maybe, in some cases, it's part of her job. As for the guy? The guy may or may not be a prince, but he is usually given one of three talents: Swordfighting/any other kind of battle Subtrope of Men Are Generic, Women Are Special . Compare Useless Boyfriend .

People, ordinary or celebrated, compete in a given field for the votes of the viewing public. Singing, dancing and stand-up comedy are the most common fields. Prone to filler . Differs from a Reality Show in that the contestants should have at least some genuine talent. Frequent tropes: If you're looking for a common plotline involving the characters of a show participating in something which may be called a "talent show," see Talent Contest . US

Many cartoons have them — some animation companies have made their entire core casts out of them. Very simply, these are animals who talk. The term "talking animal" is typically used to describe any</ animal character that talks, whether it be a Nearly Normal Animal or a Funny Animal , but there are so many examples of animal characters that talk, this page will only cover characters that aren't: This page will only include characters that, despite their ability to speak, are still animals in almost every other way, particularly when it comes to instincts, priorities and motivations They very rarely wear clothes, and they are often vocally proud of the fact they aren't human. They may even choose to talk to no one but a single human, who typically finds this very disturbing. They may even break the Fourth Wall and talk only to the viewer. Like many Speech Impaired Animals and Nearly Normal Animals , many Talking Animals lack hands and walk on all fours, negating the possibility of performing many human tasks and behaviors. A few examples are bipedal if their species is flexible enough. However,

when required by a joke, the Talking Animal can sometimes act like the more anthropomorphic Civilized Animal or Funny Animal . Since these are otherwise normal animals who are able to talk, the issues of Furry Confusion don't usually come up. The issue of What Measure Is A Nonhuman , however, is far more likely to affect a Talking Animal than a Funny Animal. That said, Talking Animals are likely to voice just what they think about humans ... The Fairy Tale is more likely to feature a talking animal than a fairy. (Although they do often turn out to be humans under a curse . Or even ghosts.) Polly Wants a Microphone is a specific sub-trope for when in fiction, most animals can’t talk, but parrots can talk instead just of mimicking. Lots of verbal jokes involve talking animals, with the humour usually deriving from a trait of that animal or a pun based on the word for the animal. A common subversion of these jokes is to replace the punchline with something along the lines of "Holy crap, a talking horse!" See also Not in Front of the Parrot . Fun fact: As ridiculous as it sounds, there are some books like Charlotte's Web</ that were banned in some areas of the U.S. because they had talking animals in them. Many Weasel Mascots , Non Human Sidekicks , and Team Pets are Talking Animals. Talking birds are a separate subtrope . Compare Intellectual Animal , Sapient Steed , and Uplifted Animal . For the next step "up" in the latter, see Partially Civilized Animal , Civilized Animal , and Mouse World . See also Sliding Scale of Anthropomorphism . Don't expect the problem of the animal's vastly different (or completely absent) vocal tract to be explained. Compare Animal Talk . Contrast Pantomime Animal .

A couple, wearing pajamas Mainly a Sitcom trope nowadays, but serious instances have been around much longer; for example at the beginning of the medieval Irish war epic The Cattle Raid of Cooley </ . Not to be confused with Talking in Your Sleep (which is exactly that). Expect a Modesty Bedsheet . For more badass characters, it's a good time for a Scar Survey .

You're asleep, you're dreaming — you're really talking with someone else. Or fighting them. Or — Dreams that are secretly (or openly) a form of two-way interaction. (The other person may or may not be asleep.) Harm can only come to the dreamer through psycho-somatic effects, or as mental damage . Maybe the other person is a Dream Walker . May shade into Dreaming of Things to Come / Opinion-Changing Dream , if the other person tells of or shows the future, or Dreaming of Times Gone By , for the past. Dream Spying is particularly likely to overlap, letting the dreamer see the present with the other as a guide. May be mistaken for Dreaming the Truth , or if a Dead Person Conversation , be indistinguishable . May take place in Dream Land . Supertrope of Your Worst Nightmare . Can be a form of Adventures in Comaland , if you are seriously out of it. Not to be confused with Talking in Your Sleep , which may or may not share similarities with this trope.

In several of CLAMP 's works, dreamseeing and dreamseers are important elements of the plot and can speak with the dead, especially in X1999 </, ×××HOLiC </ and Tsubasa -RESERVoir CHRoNiCLE- </ , in the latter two cases allowing people to communicate across dimensions.

In Iron Man </ # 20 "Haunted-part one", Tony talks to the then-dead
In Captain America in his dreams the first known version of "
In Beauty and the Beast ", Beauty has repeated dreams of a handsome

In young man begging her to save him. Only after she agrees to In marry the Beast does she realize that he and the man in her In dreams are one and the same

In the Jackie Chan Adventures fic Queen of All Oni . Later in an interlude Big-Lipped Alligator Moment , he tries to contact her directly, but that doesn't work. The researchers in Dreamscape

Abridail's power in Super Powereds </ . He uses it to keep Globe in contact with the Melbrook gang In Anne McCaffrey 's Talents </ series, the Mrdini have a limited ability to manipulate human dreams. This works out quite well for first contact betweeen humanity and Mrdini: they're able to communicate through dreams until they learn enough of each other's language to do so verbally One possible use of Oneiromancy in Changeling: The Lost </

I and You

Used by Rose during the fifth chapter of Dragon Quest IV </ to show those who stay at Strathbaile's inn her whereabouts and how to get inside.

In a deleted Parallel Dementia <// Emergency Exit </ mini-crossover, Eddie does this in order to talk to Fall after he's been forbidden to visit her dimension in real life.

In Brennus this way.

In Jackie Chan Adventures </ , Jade does this multiple times when using the astral projection of the sheep talisman.

Dreams, occurring in REM (no, not that R.E.M.) are the subconscious mind's way of rooting through thoughts and concepts the brain is trying to process while the owner of the brain is sleeping. When a sleeper is dreaming, they sometimes also talk. In Real Life , these verbal fragments are more likely to be random nonsense like in the page image than anything linear or relevant — let alone any kind of deep or embarrassing secrets — but this is fictionland... In fiction and media, anything spoken whilst dreaming is intelligible and (usually) deeply meaningful, offering up insights into the hidden life of our heroes. The Bully may reveal himself as a Bruiser with a Soft Center or a Jerk with a Heart of Gold though he's still obnoxious while awake. Your tough-as-nails Mama Bear may have nightmares about things from her past , which of course gives The Hero something to comfort her over. The Stoic may show his hidden fears . Your shy Shrinking Violet may call out the name of the one she loves in her sleep, though she never gives a hint while awake (bonus points if she does so rather... passion ately). If it isn't one of the above, most likely there will be crucial information imparted. Even if the sleeper knows all the secrets in the story, the one piece of information the listener needs will be what is murmured between nonsensical babbles. If something delicate is revealed, there's a good chance that the listener will misunderstand it and causes hilarity to ensue . If what's said actually is</ nonsense, then the medium is most likely comedy, or the trope is being used for comic relief. Can just as often lead to tragedy, depending on the secrets spoken and who's been overhearing or listening. A common variation involves the 'sleeper' pretending to talk in his sleep to misdirect eavesdroppers . Supernatural intrusion into dreams is a method of justifying the

dreamer speaking in lucid sentences. Nor is this trope restricted to natural slumber — drugged sleep or unconsciousness brought on by drugs, alcohol, or a blow to the head will work just as well. Sleep talking can be accompanied by Sleep Walking and Fever Dreams as well. Truth in Television as there are many people who talk in their sleep in Real Life . Probably related to the fictional idea that dreams are generally coherent experiences that consist of the dreamer reliving past experiences, instead of surreal flashes of (seemingly) unrelated things . Not to be confused with the half-awake babble someone makes when awakened abruptly by the phone in the dead of night. Sleep-talking also tends to be the last thing that happens before the sleeper's own words cause them to snap awake and sit up in bed . Not to be confused with Talking in Your Dreams , where two or more dreaming characters are communicating with one another. See also: Dream Sequence . Compare with Non Sequitur, * Thud . Not to be confused with Talking in Bed (which is a conversation between two characters in bed who are both awake). If a person is saying stuff from a daytime fantasy, that's Acting Out a Daydream .

The Talking Lightbulb is some visual effect, often a simple blinking light, that flickers away whenever a robot or computer speaks, for no reason other than to look cool. Maybe it's supposed to help the audience focus on a character that doesn't move its face when it speaks, generally because it has no face. It is often used in combination with Robo Speak . Can be justified as a user-friendly feature, since for people on both</ sides of the Fourth Wall , it's the simplest way to make obvious at a glance which one is speaking when several robots, computerized appliances, and talking alarm clocks are around Compare Head Bob , Action Figure Speech . For literal</ talking lightbulbs, see Animate Inanimate Object

RAAAIIIIID!! </ * boom

The advertisement features a representative of the creature or item the product is supposed to wipe out. The Talking Pest will start by bragging about how well things are going for it. Then the product is used. Sometimes the pest is evicted, and bitterly complains as it is leaving. Sometimes it is killed, and viewers get to hear its last scream. Sometimes the Talking Pest is cute. On occasion, it is the basis of merchandising The logic behind it is to convince viewers that the various insects and maladies out there are making them miserable not as a by-product of them doing what they naturally do, but rather because they just love Of course, this can result in Fridge Logic when you realize that showing the graphic death of an insect is more disturbing when the insect is anthropomorphized so much that it has apparent human intellect and speaking ability See also: Meet The Meat . Peeve Goblins may sometimes play a similar role in advertising as well

... But what if they could? Sentient feces. Living dung. Intelligent droppings. Basically, poo that's alive. Doesn't necessarily have to speak, as long as it's sentient. Anthropomorphised doodoo is generally for comedic purposes, but there are exceptions. A subtrope of Toilet Humor and Animate Inanimate Object .

The hero has cornered the vicious monster. It's taken out everyone who has confronted it thus far, and the hero seems like no exception That's when the hero, rather than drawing a sword, pulls out his cue cards. He begins a speech about the good things in life, the wonders of good, how Humans Are Special and the monster should respect that, and that the monster should know better than just give into his evil nature, etc And it works </. This hideous monster surrenders, lets itself die, chooses to Ascend to a Higher Plane of Existence , disappears in a Puff of Logic , or what-have-you. Basically, an organic version of the Logic Bomb More cynically , it moves the monster just long enough for the hero's friends to open fire , shuttering out that one chance of redemption... Or it doesn't work at all and just gives the monster some open spot to attack the hero Done well, this can be a very moving finale. Done badly, it comes across as a giant cop-out (See: Swiper, No Swiping!). Sometimes spoofed by having the monster giving up just to make the hero shut up A favorite tool of the Guile Hero . Often an illustration of The Power of Language . See also To Win Without Fighting . Also related to "The Reason You Suck" Speech

Professional voice actors pride themselves on range. So, hiring a few good voice actors means you can take care of many, many characters with a small cast (especially if one or two actors are a Man of a Thousand Voices) Oftentimes, this results in funny situations, like two characters played by the same person having intense conversations and heated arguments with each other. The talent is in making sure the audience doesn't know it. If jokes are made about this, it's Actor Allusion Sometimes this can happen in real life for technical or legal reasons where a person is required in one capacity to write themselves (in another capacity) a letter. For example, in most US states, for small corporations, a corporate officer can file an authorization to the board of directors to waive the corporation carrying workers' compensation insurance on that officer. Now, in the case of a corporation with a single owner (who therefore is both Chairman of the Board of Directors and President), the President of the corporation (who is the only officer) has to write a letter to himself</ , as Chairman of the Board, informing himself that he (as President) is waiving the Workers' Compensation coverage on himself (the letter being sent to the Workers' Compensation Board) In voice acting, the process is fairly simple, with the actor just doing a different take (although some good voice actors can do it in real-time). The actor's vocal range is the only thing that might betray commonality This is sometimes actually invoked on purpose</ , as it can make you think, "Ohey, they're a clone? Why didn't I realize that before?" In Live-Action this has historically been difficult, requiring split screen or otherwise splitting the image and requiring perfect synchronization between the different takes. Normally, the camera was stationary for this, but Back to the Future Part II </ pioneered a motion controlled camera that allows for complex panning shots that have the same actor in multiple roles. More modern works are able to do it a bit more easily due to advances in computer editing See also Solo Duet , where a singer does two different voices to make it sound like a duet, usually Played for Laughs Not to be confused with Informing the Fourth Wall , Sounding It Out , Thinking Out Loud or Talking to Themself . Compare Holding Both Sides of the Conversation , which is an

in-universe example of this trope, where a character is pretending to hold a conversation with another non-present (or non-existent) character, in order to maintain some kind of charade

A mute character — or one who has been rendered speechless by events — will communicate with hand-held signs on which are scrawled his comments and questions. Flipping the sign will often display additional messages — often more than the two one would expect from a simple two-sided object These signs appear and disappear (like so many other possessions of cartoon characters) as needed Usually they are examples of No Fourth Wall , as they frequently bear comments made to the audience, not other characters. Compare Hand Signals for those who communicate with hand gestures. Reading Foreign Signs Out Loud may ensue in dubbing. This trope is very useful for a Silent Snarker

Talk shows exist both in and out of universe as a genre to entertain, inform, exploit, or just plain point and laugh. Oftentimes, a character may decide to go on a talk show to settle some single episode or plot-mandated strife, they may have gained some kind of fame and go on the talk show to promote the project or they may have gained a talk show themselves. Cue hilarity. Needless to say, whatever success or resolution the protagonist or protagonists are trying to achieve will fail for a variety of reasons. It could be because one character could be trying to Keep in mind that this trope can be flexible. The time on the talk show doesn't have to last the entire 20-something minutes of the episode or major plot point of a film; it could last half the episode or even last for just one memorable scene. Also, although talk show implies a national or local program, it can also mean public access television (usually in the hopes of it becoming more famous). Closely related to The Show Goes Hollywood , although here the show is usually broadcast or just happens to be in the city the protagonists are located in , especially if it's New York , Los Angeles or Chicago . Game Show Appearance is its game show equivalent. While it may end up with actual fistfights occurring, it has little to do with Talk Show with Fists .

The Talk Show ("Chat Show" in the UK) genre encompasses a number of different formats, but all talk shows share certain characteristics: Talk shows are (almost) exclusively nonfiction (when they are not a Show Within a Show). Quite often, they are named after their host or "with [insert the host's name]" . Most talk shows follow one of a number of standard formats: Light news, commentary, and fluff pieces. Examples: The Today Show </, Good Morning America</ . For a list of notable TV presenters, see Presenters

The thing about these talk shows is that they seem to always end violently. Usually the host calls out a wrestler and proceeds to either insult the wrestler directly or brag his ass off while at the same time insulting the guest. At this point, the guest's finishing move is often applied to the host's face. Sometimes, however, the guest decides to say something to the host and then, inexplicably, take his eye off of the host. Which is frequently followed by the host taking the guest's head off In short, regardless of the wrestlers involved, who's hosting, who's the guest, and the specifics of who is beating on whom, they always

end in violence Was incredibly popular in the early 90s, when just about every heel in WWE got one. It made a resurgence amid the COVID-19 pandemic in 2020, when there was a need to make segments with fewer talents. With several stars who could put on one of these (The Dirt Sheet , VIP Lounge , The KO Show , A Moment of Bliss), it wouldn't be impossible to see multiple on one TV episode Not to be confused with Jerry Springer </, Jeremy Kyle </ , and their ilk. Any wrestling there is only incidental

Well, Everyone Loves Blondes , Heroes Want Redheads , and of course there's the sensual Brunette. But for men, there seems to be one main perceived ideal: Tall, Dark, and Handsome. Sometimes, it's a Tall, Dark, and Handsome Stranger Tall, Dark, and Handsome Stranger was a pulp fiction trope, particularly in mystery novels. Romance novels still play it straight sometimes. This then led to a Tall, Dark, and Handsome casting trope for leading men: Clark Gable , etc. This is also one of the defining attributes of the Latin Lover stereotype Historically, "dark" referred to the man's hair and often eyes, not necessarily his skin color. If the man had "dark" skin too, it was meant to refer to a "healthy" or "bronzed" i.e. tanned complexion at best, as opposed to being too</ pale or "pasty", and connoting an active lifestyle, getting out in the sun and doing proper manly stuff like horse-riding or hunting. By default he was assumed to be white due to society frowning on interracial relationships , to put it mildly. So while the phrase could literally apply to a black man, it's unlikely to be used this way unless it's in a modern work, and thus a slight subversion Most Tall, Dark and Handsome men display an aloof, cold, and distant personality, but they do have a gentle and caring side Being one of the oldest tropes in the book, it's nowadays more often used in subversions and deconstructions . The actual invocation of the trope Tall, Dark, and Handsome Stranger is often parodied or might be played straight but usually isn't highlighted if it is See Aloof Dark-Haired Girl for the Distaff Counterpart , and Tall, Dark, and Snarky when combined with Deadpan Snarker or Gentleman Snarker

Alice just started her period and has run out of tampons. She is busy so she nonchalantly asks Bob, her boyfriend, to get them for her. Bob just stares in horror. Alice explains that she can't go, but she needs them as soon as possible so he would have to get them. Bob freaks out as he embarks on the most horrifying journey to the store that he will EVER have to face: the Tampon Run Can also apply to menstrual pads (or sanitary napkins) Played for Laughs , this trope exemplifies just how much of a big deal men stereotypically make out of menstruation. For whatever reason, testosterone makes men think that this naturally occurring event is the most terrifying thing in the world. He may be seen talking to himself, shouting to nobody in particular upon finding out that "they come in sizes?!?!?!", and trying to hide it. Men might try to play it off by asking if they come in larger sizes . Bonus points if he sees another guy in the same boat or if the sales clerk calls for a price check effectively announcing to the whole store that Bob is buying tampons Compare to Wacky Cravings where it is also often exaggerated by the husbands or if the writers are guys and to All Periods Are PMS where the poor unfortunate guy is being sent on the errand because every 28 days his loving mate turns into an evil conniving bitch </. Contrast No Periods, Period . Trojan Gauntlet will often involve many of the same embarrassing circumstances

and might be the closest possible thing to this trope's Spear Counterpart

A tandem bicycle is that type of two-seat bikes with two sets of pedals that aging liberal couples and teenagers in Public Service Announcements ride everywhere. It works on the principle "2>1", according to which, it's easier to ride if there are two people doing the pedalling But, not all is good, because, as always, evil rears its ugly head in the form of a Tandem Parasite. This is the one in the back seat, whose parasitism is not visible to the hard-working front-seater. The rear-seater doesn't pedal at all, but rather crosses his leg and smiles as the poor soul in front of him does twice the work he should be doing - the idea here is that the rear-seater is mockingly taking advantage of the rider It should be noted that, sometimes, the parasite has some reason not to pedal, like being distracted, or having been hurt, if you buy those cheap excuses A Dead Horse Trope , or even a Dead Unicorn Trope

In large modern warfare engagements, infantry may as well be Cannon Fodder . You want something that can Hold the Line . Something with a BFG and/or More Dakka , crawler treads and (literal) tonnes of armor. You want a tank. Real Life tanks have large cannons to take on other tanks and fortifications, and (usually) secondary weapons to deal with infantry or aircraft. In fiction and reality, other tanks may use anti-infantry or anti-aircraft weapons instead of cannons. These do exist in Real Life , but they're not called tanks. To make the distinction even more difficult, many of these are based on existing tank chassis, so they look like tanks that have had their turrets swapped out. Cue journalists and the general public calling them "tanks" anyway . The tank's size and mobility may also be used as a weapon to crush people, cars, and walls. The armor is thick enough to stop small arms fire, most of it in the front, with the weakest areas being the rear, bottom and top. Expect enemies to take advantage of this for massive damage. Of course, the above paragraph refers to tanks around the size of today's main battle tanks. Sometimes that's not enough. They need to be bigger! Big enough to crush the other tanks</! And carry loads of weapons! While racing donuts around them! And the armor is able to withstand Martian Death rays! And it has NBC protection! It's a FLIPPING BUNKER ON TRACKS. Oh, and the wheels on the tracks are equipped with armored gun pods. Other armored fighting vehicles, like armored personnel carriers , self-propelled artillery and tank destroyers may be called tanks. They're not. Don't be fooled! Likewise, don't listen to the deranged lunatics who keep wanting to put legs on them . Ridiculously impractical, that. Related to Cool Car , Cool Bike , Cool Train , Base on Wheels , and other vehicle/warfare tropes—this is basically Cool Tank. Has nothing to do with Shorttank , which makes you say tank goodness in a completely different way. Also has nothing to do with playing a damage-sponge character in an MMORPG , or with the oxygen storage unit strapped to the back of a SCUBA diver. Well, maybe this trope has * a little to do with these things: tanks in MMORPGs are named after * this kind of tank, because they are heavily armoured characters who can soak up a lot of damage while also dishing it out; as for the kind of tank that holds gas or liquid — that is actually the * source of the term as used in this trope, odd as it may seem! When the first practical tanks were being developed around the time of World War I , they were so called in documentation as a code term, to confuse the enemy and throw any spies off the track; for one reason or another,

the code name just stuck. They might just as easily have ended up with the admittedly cooler name of "land-ships." For armed tank-like vehicles, which have legs instead of good ol' treads, see Walking Tank . For ones which float , see Hover Tank . For ones that can travel underground, see Drill Tank . When the military geniuses of the world finally realize there is no firepower like battleship firepower, one may witnesses the ultimate tanks: Land Battleships. For when things in video games (such as people) act like tanks when they shouldn't, see Tank Controls . Sapient Tanks can think for themselves. When tanks are useless in media, see Tanks for Nothing . For inaccuracies with armoured vehicles, historical and otherwise, see Tanks, but No Tanks . For information on tanks and other armored vehicles, see Armored Fighting Vehicles . If you looked up Mechanized Infantry and expected to see a giant robot with a gun, try looking up Real Robot instead. For like in Thomas & Friends , see Cool Train . Although the "tank" class/role in video games gets its name from the role of literal tanks, they have nothing to do with this trope . By the way, they are called "tanks" because when the British were first developing them in World War I, they were called water carriers or water "tanks", in an attempt at secrecy.

Tank Goodness somebody noticed! Writers often play fast and loose when it comes to vehicles. They are usually Just Plane Wrong , and use artistic license when it comes to ships . This applies to armored vehicles as much as anything else, either getting details wrong or using stand-ins. One of the most common mistakes is to treat all armored vehicles as tanks. Armored cars, self-propelled guns, armored personnel carriers and several other types of armored fighting vehicles can be and frequently are misidentified as tanks, just as every warship is a "battleship" to most civilians. In real life all of these vehicle types and more are commonly lumped together under the catch-all term "Armored Fighting Vehicles" which is usually contracted to just "armor" or, if you want to be all snooty about it, AFV (no relation). Despite the common logic of "if it looks like a tank, acts like a tank, smells like a tank, it's a tank", many AFVs that look like tanks don't fit the definition, as tanks are usually characterized by being more of a product of old warfare, therefore way</ more heavily armoured and generally built to take the brunt of enemy fire than their AFV cousins, which usually possess lighter armour and rely more on indirect combat. Of course, this makes tanks rather expensive to make and maintain compared to other armoured vehicles, which is why we're seeing fewer actual tanks portrayed by the media these days. In most war films, particularly those set in the Second World War, historical tanks and armored vehicles will be replaced by either modern or more widely available contemporary vehicles that have either been painted in appropriate (or at least stereotypical) color schemes or given cosmetic makeovers to disguise their foreign or anachronistic features. The amount of effort that goes into this varies rather wildly. There are many very good reasons for this . Firstly, most survivors are historical artifacts belonging to museums and obviously cannot be used recklessly or destroyed. Moreover, many types of antique armored vehicles are actually quite scarce, and some were quite rare in the first place - the WWII Axis were the worst offenders as they favoured shorter production runs and a far greater number of variants. Just 492 King Tiger panzers were produced, as against 47,000 M4 Sherman tanks (all variants), and many contemporary Italian or Japanese vehicles were produced in even

smaller numbers. In many cases surviving examples aren't available (e.g. submerged in a Belarussian swamp) or simply don't exist due to the ravages of combat, the temptations of scrapping/salvage, and the passage of time. Next, as the Sherman production numbers above suggest, Anglo-American filmmakers naturally took advantage of the huge glut of cheap surplus U.S. Army equipment in the immediate postwar period. If a studio has running vehicles in their prop inventory that are available for filming without much hassle, then simple convenience means they'll get used, accurate or not. These days, most armored fighting vehicles that don't meet their end on the battlefield will probably be scrapped before anyone else can get their hands on them. Tanks have never been particularly attractive on the surplus market since they are huge, heavy, fuel-guzzling lumps of steel that can easily cost more to restore and preserve than recycle. Even contemporary vehicles in operating condition can be prohibitively hard to find and incredibly expensive to hire, transport and maintain for filming. After all, tanks tend to be just so flipping big</ and in part because military vehicle collectors are often understandably leery of renting their rare and often irreplaceable treasures. Then there's the matter of Real Life politics, where vehicles you'd ideally want for realism simply can't be obtained at all since they're currently being used or held by an unfriendly power. It's easily forgotten today that prior to The Great Politics Mess-Up , getting realistic Soviet or Eastern Bloc military vehicles for filming many a Cold War thriller was darn near impossible unless you were an Eastern Bloc filmmaker. Whereas today, you can just phone the Russians and ask them nicely (and offer to pay cash up front). Similar to its sister tropes, this one happens out of practicality more than anything else, especially if you're not Backed by the Pentagon and just don't want reality to get in the way of Tank Goodness . Just find something vaguely tank-like, add a coat of stereotypical (but historically inaccurate) panzer gray paint and a few crosses and voila</! instant Tiger. And—let's be honest here—aside from a few vehicle enthusiasts and history buffs, most viewers wouldn't even notice (or care), anyway. If it has tracks and a gun, it's a tank as far as they are concerned and it doesn't violate their Willing Suspension of Disbelief . To those who know what to look for, however, it can quite jarringly break it. For producers who care, there are a number of ways around it. One is to use surplus or 'backup tanks' from modern armies such as Russia or Spain: Most T-34 and Sherman tanks used in WWII films were not actually from the war but modernized vehicles from the immediate postwar period. Another is to take a more common modern or contemporary vehicle and give it a cosmetic makeover to give it the appearance of the correct historic vehicle ; sometimes these conversions can be quite sophisticated with only a few detail differences such as turret location and suspension design that only dedicated military vehicle enthusiasts would likely notice (these folk are often called "rivet counters" in the trade and are usually considered to be very annoying and hard-to-please people). Finally, there are always models of both the real and the Computer Generated variety, which naturally come with their own sorts of problems. Feel free to post aversions here, as they're rather rare and always a pleasure to see. For information on what qualifies as a tank and other armored vehicles, see Armored Fighting Vehicles .

Main Battle Tanks are a crucial part of modern armed forces. They combine the mobility and speed of motor-vehicles with the killing-power of artillery, and can also help infantry

assault entrenched defensive positions. Modern tanks are all but invulnerable to the crude and improvised weapons used by most partisans and rebels, making them invaluable in the extermination of such groups. All in all, a properly-used and handled tank of a sufficiently modern model can be a formidable weapon However, this is not true in fiction. Tanks will be destroyed right and left by the Humongous Mecha or Monster of the Week , with their firepower doing little to no damage . Essentially Red Shirt for armored vehicles, this is where a normally effective force of tanks serves as nothing but cannon fodder to make the enemy look intimidating This is when tanks are completely useless for any purpose other than getting blown up for dramatic effect, even when you'd normally expect them to be effective. A tank column getting wiped out by the enemy through good tactics and properly placed weaponry is not this trope. An entire company of tanks firing at the enemy and doing no damage at all, followed by getting destroyed in one shot is this trope. This is about tanks themselves being useless, not just incompetent leadership. Also bear in mind that this can even apply in situations where the tank's introduction makes it rather badass, i.e. mowing down a squad of soldiers or weaker vehicles before being blown away by the real</ threat. In those cases, the swift destruction of something that was until recently kicking ass and taking names can serve to make it clear that this new threat is nothing to be taken lightly In Real Life , tanks have been designed for two purposes: winning battles, and winning campaigns. NATO and the USA specifically designed tanks for the former purpose, and the USSR and Warsaw Pact designed their tanks for the latter. More specifically NATO focused on fielding high-maintenance nigh-invulnerable tanks that could beat WP tanks in set-piece tank duels and hold the line due to their numerical inferiority, whereas the WP focused on fielding cheap tanks with good reliability and fuel-efficiency that could go long distances at high speed across rough terrain and defeat NATO logistics personnel in hit-and-run engagements, as well as flank, while not losing too much if a single vehicle was destroyed, since they have numerical superiority What this works out to on the field is tanks fighting while or inbetween speeding along with other vehicles, and tanks fighting while crawling alongside infantry on foot. Despite their higher costs, even NATO tanks are very vulnerable to (handheld) anti-tank weaponry in the latter role. Indeed, despite what we said about 'being nigh-invulnerable against ill-equipped opponents' urban warfare tends to expose the weak top- and rear-armor of tanks to potentially lethal attacks and ambushes by infantry at short ranges. Good tank commanders always know how to balance the need to avoid losses and their need to accomplish their immediate objectives - losses are inevitable, but they will never be wasted </ But in many Kaiju series, tanks are very poorly</ commanded and used. Tanks will be shown to line up directly in front of the monster and get stomped, despite the fact that modern battle tanks can reliably hit small-ish targets many kilometres away (and even over the horizon</). Additionally, despite most militaries carrying ammunition designed to penetrate the thick armor plating of other tanks and defensive fortifications, they will never be able to cause even superficial wounds to the monster Even in more "realistically" based Humongous Mecha shows, the mecha can destroy tanks with ease despite being larger targets and not having any heavier weapons or armor than battle tanks. In fact, these reasons are why most militaries consider the idea of Humongous Mecha to be impractical to begin with. This can be

justified if there is an extreme technological gap between the combatants. Usually, conventional tanks would have about the same problems with any</ Impossibly Graceful Giant war machine as they do with their old nemesis the ground attack aircraft, but in a practical situation the technology enabling that grace would be applied to the tanks</ first. Tanks could be said to be the Red Shirt counterpart to the Mecha-Mooks of the enemies In superhero series, tanks are never any threat to superheroes, usually only serving as an impromptu missile, getting swung at another tank, or flipped upside down. This can be justified if all the characters have Super Toughness in addition to Super Strength (as is usually the case), but you'd still think the military would learn their lesson after a while When tanks are not</ useless, and are, in fact, quite awesome, then it's Tank Goodness . If the things being destroyed are called "tanks" but aren't or the depiction of tanks is incorrect, then it's Tanks, but No Tanks . A Sub-Trope of Armor Is Useless . Compare The Worf Effect , Red Shirt , and Five Rounds Rapid . Contrast Mecha-Mooks , when it's the Humongous Mecha that are getting crushed. For the helicopter version of this trope, see Hellish Copter

Back in the day (and even to this day, thanks to programs like TiVo and Video On Demand), one could record a favorite show, film or song via a VCR or a tape recorder to the radio. It was a great way to preserve that airing that would always last... unless someone taped over the recording itself with one of their own. Obviously, this is quite a quandary since the first, lost recording is now considered irretrievable Although this is usually an accident, it could also be done intentionally due to the original owner of the tape doing the re-recording due to running out of room for a new program and being pressed for time and the like to find another place for it Because Technology Marches On , this has the potential to become a Forgotten Trope to future audiences, unless you count the digital equivalent of deleting a file to free up enough memory for another file This would be considered the in-universe version of a Missing Episode . Compare and Contrast We Should Get Another Tape , which is oftentimes deliberately done and which focuses on the result of a recorded over tape instead of the reaction. Obviously Truth in Television , so listing real-life examples would be redundant

The programming for a television station is typically stored in Tha large "refrigerator" containing data, video tapes and other Thmedia. Tape Switch occurs when it's 4 p.m. and Tony in the Thbroadcasting booth accidentally puts in the hair gel commercial Thinstead of the Gillette razor commercial that's supposed to be in Ththere at 4 p.m., and you get a "blip" of the wrong commercial, or Thmaybe half a commercial, then a complete commercial for something Thelse. The same "blip" occurs nowadays for a different reason with Thsome cable companies, who overlay their own local commercials in Thsome breaks; the blip happens if Tony at the cable company is Tha second too early or late in flipping the switch. Most large Thbroadcasters now run from media servers allowing for a high Thdegree of flawless automation when it works, luckily they're Thfairly reliable. But don't consider this a Trope Breaker just Thyet, as many smaller outfits who have been around long enough Th(server based transmission co-located with other networks much Thlike web service providers is more the rule than the exception

Thnow for newer broadcasters) may still be running their channel Thout of the old tape fridge is also happens in radio. When it cuts Thto the same commercial ("Hey, Tony, I guess it was the right Thtape after all!"), it's Repeating Ad . Often the commercial Ththey yanked may be more intriguing than the one they put in, Thespecially when it's the local cable operator cutting away from Ththe network feed for local commercials (usually to advertise the Thservice you are already watching it on)

As the on That Other Wiki states, "Taps" is a musical piece sounded at dusk, and at funerals, particularly by the U.S. military. It is sounded during flag ceremonies and funerals, on single bugle or trumpet, and often at Boy Scout, Girl Scout and Girl Guide meetings and camps The history of the tune (and its rarely-heard lyrics) is the mother of all tear-jerkers In fiction, "Taps" is usually used to mourn an honorable person, especially military characters, though in comedy it can be used for just about anyone. Often combined with a Moment of Silence , hats off. "Taps" can also mean a metaphorical death, like a death of one's hope. If a civilian has died, Amazing Freaking Grace is much more likely to be heard This is not the page for The Atlantic Paranormal Society (TAPS), or the film Taps </ A part of the Funeral Tropes . See also Standard Snippet . May be accompanied by a 21-Gun Salute

In The Wild West and other American Frontier settings, a common form of mob justice short of actually lynching a wrongdoer (or suspected one) is to cover him with tar and feathers, parade him through town riding a rail, and run him out of town. May be found in other settings as well, and the sticky substance may not always be tar. Tarring and feathering seems to be the epitome of American folk justice (well, if we exclude lynching , that is). The belief that it is extremely dangerous seems to be an overreaction to the belief it was purely comic, there seems to be no corroboration on the use of boiling tar for this purpose (frankly, pouring boiling tar over a person's body is moving into lynching territory). The essential aspect of the punishment was to use the filthiest feathers possible Often played for comedic effect, but the reality was that this was hardly a mild punishment; being run out of town without your belongings was harsh in itself, and the physical damage inflicted by the tar varied wildly, ranging from being a mild irritant requiring hours of scrubbing to clean off your skin if it's relatively cool (pine tar becomes a spreadable liquid at about 25° C / 77° F) to causing life-threatening burns if the tar is near boiling. In addition, they tended to suffer fairly severe injuries from being forced to straddle the rail Note: The rail in question would be a splintery wooden fence</ rail, not a steel track section as shown in the page illustration. Even an angry mob would be hard-pressed to lift someone on one of those

"Spotting" is a military term for relaying the coordinates of the enemy to an allied unit (usually an artillery battery or a sniper) so it can take them out from a long distance, without putting itself in danger. The spotter is usually a small mobile unit that approaches the enemy hopefully undetected, calls in a shot and moves on—but really, any unit can act as a spotter, given long range backup. A snipers' spotter also has the additional job

of guarding the sniper from flanking attacks, something that is a little hard to do when they're currently focused on lining up their shot through a zoom scope Target spotting is often a gameplay mechanic in tactical games where some units deliberately have longer firing range than viewing range. This allows these units to target enemies even without a direct line of sight, provided another friendly unit can see them. Whether they need a direct line of fire</ , depends on their type: snipers usually do, artillery usually doesn't For handheld target designators</ (with which these spotters may be armed), see Puppet Gun May overlap with Seeing Through Another's Eyes in speculative settings

Depressingly, the latter is also Truth in Television ; throughout history in any society where slavery was practiced, being a beautiful slave has never been a desirable position since they were often lusted after by their masters, and rape was disturbingly common. Some women even resorted to scarring their own faces so they would turn away any possible abusers. Of course, the less extreme cases are way more common in normal society: not everyone who is naturally attractive wants to be the center of the attention so they want to downplay their beauty just to fit in better Compare with Life-or-Limb Decision , Evil Makes You Ugly , and So Beautiful, It's a Curse . Extreme versions are considered forms of Self-Harm , though it may happen under Power-Upgrading Deformation (especially when the character in question is very attractive or considers themselves as such). Contrast with She Cleans Up Nicely

Originally created for European gambling games, the Tarot deck has now become almost synonymous with fortune telling and prophecy. For info on what the cards actually mean, see Tarot Cards But what is the point of all that? Isn't it more fun for a writer to use them to hint at terrible danger ? After all, most people only know one Tarot card, Death, which makes an unambiguously sinister omen. As audiences grow more trope-savvy, writers instead use The Tower and/or The Hanged Man, which are often illustrated with alarming pictures, for the same purpose Common writer tricks with the Tarot include the introduction of new cards, duplication of existing cards (usually Death), or a "good" card appearing reversed</, which the Tarot-reading character will explain means that the opposite</ will happen (i.e. another bad omen) When themes are lifted from the Tarot but no actual reading takes place in the plot, that's Tarot Motifs . See also Portent of Doom for other ways an author can foretell danger for their characters

An Expy of Tarzan </, and the Spear Counterpart to Jungle Princess . A Tarzan Boy is a white man who lives in the jungle , usually in the Darkest Africa . He's usually Raised by Wolves after being marooned in the jungle as a child. Expect the Nubile Savage trope to be in play, as the Tarzan Boy will always be handsome and surprisingly well-groomed and clean-shaven for a guy who lives completely isolated from civilization. Often he will have one or several animal companions and is able to communicate with them . He'll wear a Loincloth and travel around by Vine Swing Tarzan Boy usually finds his "Jane" in a civilized white woman he has to rescue . Sometimes, however, he will choose his Distaff Counterpart , the Jungle Princess , or occasionally the native Chief's daughter

(who will inevitably be drawn in a much more attractive manner than the other natives who are seen) This trope was extremely popular up until The '50s . As with many pulp tropes, its popularity waned in the second part of the twentieth century, but there were still occasional attempts to revisit it, either parodic or serious. Interestingly, this trope's Distaff Counterpart , Jungle Princess , eventually surpassed it in popularity Subtrope of Nature Hero . Compare Handsome Heroic Caveman , the prehistoric equivalent. Contrast Frazetta Man (these are usually present as Tarzan Boy's enemies, to further emphasize the contrast between them)

This is an audience reaction to works that are strongly attempting to be kid-friendly — using almost all the tropes of cuteness and idealism , like there's some kind of checklist. ' ' is the watchword. Viewers react to this with anything ranging from cutesy cuddling to violent revulsion. Always, there will be fun, colorful settings, Narm or generally hammy voice acting , an aversion to anything resembling death except for that one final and dramatic battle (if there are any battles to begin with) , and no matter the situation, if you have friends, you will win because you can only win with friends. The sun shines a lot, and when it's night, the moon is full and bright. Also, there is smiling. Tons of smiling. Even when it's not appropriate, there is smiling. The Big Bad (if the show even has any villains in it at all) is Obviously Evil with no attempt to look otherwise, and flips between being born evil (maybe even worse) or redeemable, depending on the story . Chances are, he/she may not like it there . Alternatively, the Big Bad and any other villains may be completely harmless , with any scheme they have being no more elaborate than mildly annoying everyone . Keep in mind that levity and sweetness are not necessarily bad . With proper usage, it may result in an enjoyable series where the cuteness is somehow justified or just part of the environment. When it monopolizes the series, or puts being adorable ahead of things like actual plots or likeable characters, then</ it becomes a problem. Cute in and of itself isn't wrong, but given an audience's general conditioning to the notion that Silly Rabbit, Idealism Is for Kids! , that Real Men Hate Sugar and Real Women Don't Wear Dresses (a side effect of targeting masculine elements towards women as much as men), even this wiki has something of an aversion to cuteness as an entity as the incredibly long list of examples below attest. This cultural reaction is also one of the core reasons why American Kirby Is Hardcore . Not to be confused with Sweet Tooth or Sugar Bowl settings in general, as this is an Audience Reaction. Use caution when mixing with Gorn and Crapsack World as Grotesque Cuteness or Wide Eyed Idealism may result, respectively. Repeated consumption of this product may result in becoming a Glurge Addict . Be aware that excessive cheerfulness can be used to disguise a Crapsaccharine World . Also not to be confused with the real-life Types 1 and 2 diabetes</, which are definitely not at all</ cute, sweet, or adorable! See also Super-Cute Superpowers . A Crapsaccharine World is often deliberately designed to cause this . Contrast with Testosterone Poisoning (for this reaction's opposite on the stereotypical gender roles scale) and Too Bleak, Stopped Caring (for its opposite on the Sliding Scale of Idealism vs. Cynicism).

Momentary tasting colors/ temporary synesthesia. This is where a character, due to magic, poison, drugs, blow to the head, etc. starts tasting/smelling/hearing colours or other variations. Related to and

may be preceded by Non Sequitur, * Thud . Colors like blue and purple are popular. This is likely because it would be considered the most bizarre and unlikely in nature (Name any color, and you can probably think of a few natural foods that are of that color; "tasting red" might lead to thinking of apples, or "tasting yellow" could lead to bananas or lemons. Aside from blueberries, which as George Carlin noted are "blue on the vine, purple on the plate," blue is a rare color in nature.) Either that, or purple is just an objectively funny color. Often played for humor. Doesn't cover characters just speaking metaphorically. A key difference between this trope and Tastes Like Feet is that normally it would be impossible for people to taste or hear colors, but it is quite possible for people to taste things like feet and motor oil. The exception of course is those with the condition synesthesia. And most of the color examples at Tastes Like Feet are metaphors: a food with color X is described as tasting like color X. Those don't belong here. Only include examples where a character is made to taste (or hear or see, but taste is most common) something which rightfully does not have a taste at all. The character tastes something which rightfully does not have a taste at all, or experiences other synesthetic weirdness. May be related to Insubstantial Ingredients , where whatever they're eating actually contains</ abstract concepts. Not to be confused with Editorial Synesthesia where the characters sense things normally, it's just things have to be displayed differently for the viewer. For the conventional taste of unconventional things see It Tastes Like Feet . See also When Is Purple and Magical Sensory Effect .

So you're moving into a new place, taking a break between boxes to meet the neighbors. The guy from Apartment 4 down the hall seems nice enough, but for some reason you can't quite put your finger on, you feel there's something off about him. Maybe it's the glassy-eyed menagerie of stuffed animals he keeps in his study. Or the fact that he prepared all of them himself, including his late dog This trope is when taxidermy is portrayed as an innocuous yet somehow sinister hobby that provides a handy shortcut for writers looking to establish a character as strange or unnerving. The taxidermy-enthusiast isn't necessarily evil, per se, but this hobby doesn't help to assuage anyone's fears. In this respect, compare the Creepy Mortician See Human Head on the Wall for when taxidermy is taken to its creepiest extreme Subtrope of Pastimes Prove Personality . See also Taxidermy Terror . See Uncanny Valley for one of the main reasons many people find taxidermy creepy

In media, every</ villain base, haunted castle, or scary old house seems to have a scary stuffed animal tucked away in a dark corner somewhere. Crocodiles, bears, gorillas, wolves, lions, owls (the huge unblinking owl eyes that seemingly follow you around the room, admit it, that's freaky)... or worst of all, it could be a Human Head on the Wall These are typically encountered by a child or teenager exploring the house, creepy background music optional. Sometimes the character gets up in the middle of the night to find a bathroom and/or a drink of water and encounters the stuffed monstrosity that way. Sometimes, the character walked right past it when the beast was brightly illuminated during the daytime, but now that it is night, and the house is dark, running into the animal freaks them the hell out. Bonus points if the person stumbles into it in the dark, shines their chosen source of light on it, screams,

and runs away. Double</ bonus points if, instead, a lightning strike outside the window lights up the room so it can be seen This rarely</ happens to any character past their mid-twenties Also rarely, the animal will occasionally come alive, due to some kind of Applied Phlebotinum , and when it does come alive, expect it to attack Not to be confused with Taxidermy Is Creepy , which is more about taxidermists themselves, rather than the products of their profession

Full name Thomas Benjamin Abrams, I'm an amateur artist and High School Student from Fairville, Transilvania. Easily the most obscure person, both IRL and on the net, and don't really feel like changing that. I'm also a character from the webcomic The Fan </, by BT Isaac , which can be found . Now let's see, what to say about myself, because obviously, there's bound to be someone out there who cares whether I live or die, no? Anyway, I'm a 16 years old high school kid who lives with his dad. I go to school, he goes to work and weird things happen. I got two friends, Adel and Simon, and we go to adventures together that couldn't possible happen in real life, yet somehow, they do. Probably one of the most preposterous things was meeting Yuki, a girl from Osaka, Yamato . Now we're classmates, she's sitting right next to me, and get this: we now live in the same apartment, like in some bad Wish Fulfillment fic written by one of those losers Encyclopedia Dramatica likes to make fun of so much. At least we didn't Meet Cute , that would've been really embarrassing. Regarding my interests, I like to watch Anime, play games, and dream of exotic lands in the far east. Which makes my meeting with Yuki all the more ridiculous. I'm somewhat of an otaku . I even used to look like (sort of) the guy Sasshi turns into on the respective trope page's image. Now I look like the picture for this page, where I happen to be cosplaying as Ikari Shingi (I'm not really good at it, but Dad is an expert when doing Gendo impressions, and he doesn't even know who Gendo is). As a result of a certain incident, I am taking over my writer's position as troper. TB Abrams provides examples of the following tropes: Animesque : Guess what. I actually look like that. Some think I overdosed on watching Anime.

In fiction, this is commonly one of the worst nightmares for students: their bachelor/bachelorette parent dating one of their teachers. Even worse, their teacher becoming their step-parent</. Even if the teacher is a Cool Teacher , it's usually awkward and embarrassing to be involved in their student's personal lives. Many students don't even think of them as actual individuals Teacher/Parent Romance occurs when a teacher courts, or at least falls for, the parent of one of their students. In some areas and time-periods, it's against the law, or at least is socially unacceptable to do so, leading to either a Secret Relationship or waiting until the child is no longer the teacher's student Compare and contrast to Teacher/Student Romance , which is when a teacher outright dates their student and is thus more of an Unequal Pairing . When the parent's new relationship is with a privately-hired tutor</ instead of a teacher, Marry the Nanny may be a closer fit. Related to Hot Teacher . Can happen when Students Playing Matchmaker and Kids Play Matchmaker overlap

It is a pretty good bet that just about any show that features adults and teens interacting in an academic environment will eventually explore a romantic relationship between a teacher

and a student. The basis for this type of relationship — if it's actually</ a romance and not just a Sextra Credit arrangement — can either be the adoration and respect toward the teacher/mentor figure or the teacher's protective and caring instincts or both. The illicit, forbidden, and most often scandalous nature of these relationships can be mined for angst, and generally doesn't cause real-life issues because the actors themselves are generally all above the age of consent thanks to Dawson Casting . But even if the student is eighteen or in college, this sort of extracurricular activity would still be a massive</ breach of professional ethics in most of the world and in some jurisdictions is considered illegal, regardless of age, in some circumstances (some teachers have been charged for relationships with high school students, even if the relationship didn't begin until after the student turned 18 and the teacher her/himself was only a few years older). Even if it was not illegal, the scandal that would erupt from this socially unacceptable affair would be so devastating it would basically cost a teacher or professor his or her job forever There are usually different levels of moral endorsement of the relationship, depending on the ages and genders of the participants. As far as age goes, whether the student is above the age of consent is the critical factor, and after that the larger the age gap, the less acceptable a relationship will be seen. For gender, relationships between male teachers and male students are condemned the most harshly. When a male teacher and a female student are together it results in the teacher being viewed as a pervert and sometimes the student being slut shamed . When it's the other way around, a female teacher with a male or even a female student is taken far less seriously. An even more outrageous double standard is that emphasis is often placed on how attractive</ said female teacher is — the more attractive said teacher, the more acceptable the relationship is. That said, the trope in fiction probably will</ involve a Hot Teacher , if only for fanservice purposes An author might attempt to make this relationship less squicky by having the student fulfill the Wise Beyond Their Years trope, by keeping things to Courtly Love only, or by making both participants older — a graduate or returning adult student falling in love with their</ professor is less likely to cause moral outrage than a high school student doing the same thing due to both participants being adults, though the professional ethics of the situation remain pretty much the same The relationship may be initiated by a Fille Fatale . A subtrope of Unequal Pairing , and also frequently overlaps with Power Dynamics Kink . Compare Mrs. Robinson . See Likes Older Men , Likes Older Women , and Stacy's Mom for young people lusting after older people in general, Precocious Crush for a more innocent variant, Age-Gap Romance for when there's a significant age difference between them, Inherently Attractive Profession when the teacher position is part of the appeal, and Mentor Ship , when fans ship a mentor and their protegee. Can lead to I Will Wait for You if the teacher decides to wait until their pupil has graduated to get together with them. There's a version specific to magic users called Merlin and Nimue , which takes its cue from Arthurian Legend where Merlin formed such a pair with several women. Teacher/Parent Romance occurs when a teacher falls for their student's parent This group of tropes is among The Oldest Ones in the Book . Although generally frowned upon in Real Life today, it's had varying levels of acceptance throughout history . It was most famously acceptable in Ancient Greece , where it took the form of Lover and Beloved

The opposite number to the Team Mom , more often than not the disciplinarian, lead-by-example-kind of character in contrast to the warm, nurturing tendencies of a Team Mom. The Team Dad tends to be the oldest member of The Team , but it's more about attitude than age, because if he isn't The Leader , he's certainly The Mentor . He tends to be strict and gruff, but he never hesitates to put his life on the line for his team members. Sometimes the facade might even crack and he'll show undisguised pride over his "kids", particularly if the team members are True Companions Like the occasionally male Team Mom , Team Dads aren't Always Male , but female ones are</ very rare If a team has a Team Mom and </ a Team Dad, expect them to either play a Good Cop/Bad Cop routine on the rest of the team or come in conflict over their "parenting" philosophies. Cue " Mom and Dad are fighting " jokes from the "kids" if Team Mom and Team Dad aren't a couple, quickly followed by " It's not like that </, we swear." Bonus points if the response is in unison from them (but they're very</ likely to end up together, anyway) Compare Papa Wolf , whose children are his Protectorate ; while the tropes can overlap, the Team Dad strives to make the "children" (who also tend to be older than the Papa Wolf 's, and are less likely to be blood relatives) able to fight and defend themselves. A stern version of The Face since no one's going to argue when he says not to and will take the responsibility of speaking for the group Compare also A Father to His Men

In an ensemble show, especially of the fighting kind, there needs to be someone to hold this Ragtag Bunch of Misfits together before they kill each other or wander off into the woods like so many Player Characters . The Team Mom basically acts as the mother figure for everyone else in the group, regardless of age or family relations. Although the role itself is traditionally female, the Overprotective Dad or older brother can qualify for Team Mom, and the same goes for a Cool Big Sis who grows Older and Wiser . In many cases, she actually is a parent or older sibling to at least one other character Not always The Leader in action or adventure, but the leader The Team needs in everyday life and practical matters. Quells fights, makes sure everyone cleans behind their ears and eats their greens. Can be pretty bossy. Usually, they're gentle , cute , kind, and capable of stern mothering (or papaing , even) Often enough, they're The Medic or The Heart . May be a Nice Girl , White Magician Girl , or All-Loving Hero . If they're a literal mom and a more physical fighter, might be an Action Mom . They are by definition never the loner , and will in fact tend to be the one who pulls them into the cast's orbit as a Sixth Ranger . If anyone can break through and bring about a Heel–Face Turn or Cooldown Hug , it's them While they tend to be less combat capable than their teammates, Beware the Nice Ones most definitely</ applies; if any of their surrogate children or siblings are threatened, they can snap into angry Mama Bear mode and kick some ass. Their absence (be it emotional or physical) will most certainly put the team on edge as their ability to function as, well, a team</, comes into jeopardy. Thus these instances serve as a reminder of their value when the team grows complacent. And by the way? Villains should NOT</ threaten or harm them. Ever. Her family will not be pleased </ The Team Mom is frequently shipped

with the Team Dad , for obvious reasons See also the aforementioned Team Dad , a role that tends to take a slightly stricter, more disciplinary approach. If these two frequently work together, they serve as the Designated Parents . The high school counterpart is the Cute Sports Club Manager . Related to The Face . Compare and contrast Cool Big Sis , Morality Pet . See also Only Sane Man , Only Sane Employee , Harem Nanny , Promotion to Parent , A Father to His Men , and Apron Matron . May be the person holding the Morality Chain Not to be confused with the MTV show Teen Mom </

Most of the time, the Team Pet is comic relief. For obvious reasons their mere presence can ruin a dramatic scene most of the time. More seriously, their motivations for fighting may seem kinda vague, especially when they are Optional Party Members . You wish more of them were If the Team Pet is an otherworldly being, it may end up as an Amusing Alien . It may also be a Pet Monstrosity . In some cases of this, the Team Pet is a unique, "tame," example of a type of creature which the heroes usually fight Team Pets do have their other uses, however. We hear lots of stories of dogs pulling people from burning buildings or otherwise saving their lives, for example. Also, the Team Pet can go get help if its master (or someone else on the team) gets in trouble . And a Team Pet can act as an adorable scene partner for a heartfelt Surrogate Soliloquy . It can be a Sealed Evil in a Teddy Bear if it is a Not-So-Harmless Villain once its Restraining Bolt is loosened Gratuitous Animal Sidekick is a special category of this, often used in an Animated Adaptation of a live-action show. See also A Boy and His X , Intellectual Animal , Nearly Normal Animal , Talking Animal , and Timmy in a Well Tagalong Kid is the human equivalent to this, Robot Buddy the artificial version. Together, team pets, tagalog kids, and robot buddies were an irritating staple of 1980s Saturday morning cartoons , rendering many of them difficult to sit through today

On shows where the main characters are grouped together, goals ranging from winning games to defeating monsters are achieved only by teamwork A useful lesson , one supposes. It might be nice, however, to occasionally see a Too Many Cooks Spoil the Soup episode Also see The Power of Friendship , Save Our Team , Together We Are X

Some viewers are impassive when it comes to what they watch. They've seen it all. No fictional death, sacrifice, emotional display or confession can move them Except these Since most of these involve death scenes, shocking twists, or something just as major, expect unmarked spoilers. However, they can also be as simple as the right imagery, tone, and music coming together - for the sole purpose of working those tear-ducts This being one of the YMMV items, one person's Tear Jerker may be another's Narm , which is often a failed attempt to induce this. Comments such as "If you didn't cry at _____, you have no soul" are welcome here; since this is defined by emotional reaction, what causes someone to burst into tears may cause another to shrug or even laugh, and guilt-tripping people just because they don't experience the emotions you want them to is not cool Many Downer Endings and Bittersweet Endings include tearjerking moments. Either way, make sure to bring the Kleenex. If you want to avoid them altogether, then you might want

to consider heeding the Snicket Warning Label Some tear-jerking moments, especially of deaths, can wind up being horrifying or traumatizing as well. Compare Harsher in Hindsight , which may be a Tear Jerker in and of itself. Contrast Heartwarming Moments , which can induce tears for more positive reasons, although they can overlap

Abusive Parents : Being horribly mistreated by the very people who gave you life is traumatizing.

There are few sights more gruesome than that of a human face with all the skin removed. Something about the absence of eyelids, lips, and the nose combined with the rather bloody results makes this an extremely powerful image. Sometimes, a character will have their face completely destroyed, while other times, their face will be cut off and preserved. The one who does the cutting may end up wearing the face for themselves . Note that simply damaging the face isn't enough - to qualify, the entire face must be removed, leaving only some combination of muscle, teeth, blood, bone, and (usually) eyes . In a more cartoony version, it's probable that only the skull will be left behind the face. Despite having just been deprived of lips, the victim's ability to talk will be rarely impeded Very much the scariest part of Flaying Alive , and often the M.O. of the Face Stealer Subtrope of Facial Horror . Not to be confused with the end of a "Scooby-Doo" Hoax (in that case, it's Dramatic Unmask)

Oooh faced! </

When humans cry, their tears are used to convey various emotions — most commonly, anger , happiness , sadness , and when having a breakdown . But tears also fall if people are scared out of their wits . If this happens, it may or may not be an indicator that they are slipping into insanity or panic as a result of the fear Can be used in a serious sense to show a character becoming emotionally broken or a comedic sense to show the character as a big baby. Never used as a form of Manly Tears . For many, this is Truth in Television Not to be confused with '80s New Wave band Tears for Fears

Sometimes you get the feeling that a series creator is having a little too</ much fun messing with their audience's collective heads This is a creator who loves to mess around with their audience, keeping them hanging for as long as humanly possible. They'll hint, contradict themselves , be deliberately vague and occasionally outright mock the Epileptic Trees offered... only to prove said Epileptic Trees right at the very moment the majority of the fandom gives up on them. It only really counts as a meta-trope though - all stories aim to keep their audience guessing, but this creator does so outside the story itself, be it in interviews, on a blog or at conventions. Shrug of God is their language of choice There's a fine line to walk here. This tactic can create genuine suspense, since the creator is so unpredictable. Or it can annoy the fans, and make them feel like they're being unfairly toyed with by a superior being, perhaps leading to cries of Small Name, Big Ego . However, it can also be a reaction to Fan Dumb :

if the creator makes a concrete statement which is then ignored in favour of speculation, they might decide "screw it" and play along Tends to be most popular in webcomics, since they're one of the few remaining mediums that can genuinely be kept under wraps, spoiler-free Ship Tease is a specific variety of this trope, as is The Walrus Was Paul . Differs from Shrug of God since there is definitely a deliberate tactic being employed, and it isn't always in response to fans' questions - in fact, you get the feeling the the fans are being provoked</ into asking questions. Compare Trolling Creator , when this gets outright malicious

Tech Bros tend to be confident men in their twenties and thirties, and some of them are even charismatic — the social awkwardness of a classic nerd is usually gone. Some of them are keen on partying and getting up to wacky hijinx — they may use the phrase "work hard, play hard". They're less likely to be shy around people they're attracted to than a classic nerd, and may be depicted with stereotypically masculine traits. Rather than being social rejects, tech bros are often in a position of prestige and may see themselves as leaders (or even as visionaries). That said, a Tech Bro's social skills will often be depicted more as manipulation rather than genuine empathy; the idea that nerds don't really</ understand social connection is often still present, and many Tech Bro characters have a bit of sociopathy about them They can differ from classic nerds in appearance and style, too — a classic nerd is generally considered uncool and unfashionable, but a Tech Bro usually shirks the sharp suits of his corporate precursors for a more youthful, business-casual look. They might pay a lot of attention to their clothing and personal grooming — if they have any trace of a classic nerd's unkemptness, it's only as a carefully cultivated fashion statement. They're more likely to live in stylish, airy, bright houses rather than in a dark basement full of old fast food containers , and their office is either the same stark, monochrome minimalist style of interior design or a Wacky Startup Workplace (bonus points for being located in real-life tech hubs like Silicon Valley). Some of them espouse trendy or progressive causes and might believe that their tech will solve all the world's problems. Also, a Tech Bro is often in good physical shape, perhaps aided by fancy health-tracking gadgets, personal trainers, and faddish diet regimes — classic nerds, by contrast, are usually either overweight or scrawny weaklings Many Tech Bros aren't just interested in tech — they're interested in monetizing it. They want to found the next big tech company and are at home in the corporate world. They'll talk about stock options and capturing market share as much as they do about research and coding. They might be a Rich Genius — or they might just be a manager of geniuses. Their marketing department will tell you how they're improving the world by disrupting everything, and they tend to think that "outdated" rules shouldn't be allowed to constrain their new business model The Tech Bro archetype mainly came to public prominence with the rise of tech-focused businesses like Google, Facebook, and suchlike — the founders of such companies are often models for tech bro characters in media, to the point where you can sometimes tell which specific person a character is inspired by Compare with Yuppie , for another, older portrayal of young and ambitious white-collar workers, and Playful Hacker , for another portrayal of glamourized computer geeks. A tech bro who works in social media

may be used for a Social Media Is Bad aesop

Transports. We all know them. Slow. Weaponless. Altogether quite vulnerable. But what if you could fix that little issue? In comes this thing; A humble battlefield bus turned into a substitute front-line tank. Or gunship. And it can still drop off its passengers and cargo most of the time. But who'd want to? Schlock Mercenary </: The Maxim 39</ is technically just a science vessel, but it's a famously moddable hull and has been outfitted with all the weapons and gadgets its Mad Scientist captain could wish for. The Toughs use it as a support frigate, but it's a very well-armed one. To contrast, Shiplord Srabben is stupid enough to think it's still</ just a stock support frigate, and assumes that his own fleet of stolen civilian ships with guns glued on will be able to destroy these military warships.

In Real Life , poison is usually detected and identified thanks to its bitter taste and/or smell. But how can we identify a poison as such in visual mediums, where taste and smell aren't an option? Of course, the color itself! Eastern media tend to portray poisonous substances in a dark purple color , usually bubbling. In Western media, Sickly Green is more common because of the former popularity of arsenates, which really are fluorescent green. There are also other works from both sides of the Atlantic showing poisons and venoms of various other colors. It may be shown melting stone and steaming foul vapors. Thanks to these distinctive colors, the audience can instantly perceive whether a substance is toxic or not . There are instances of this being Truth in Television , as shown below - especially when dealing with organic poisons, where signaling to predators that a particular plant or animal is poisonous is necessary for the poison to provide protection. Seen often paired with Poisoned Weapons , Poisonous Person and Perfect Poison . See also Sickly Green Glow for that iconic pop culture depiction of radiation, Purple Is Powerful for strong things connected to the colour purple in general, and Purple Is the New Black .

A Sub-Trope to the Dystopia , a technological dystopia — that is, a dystopia caused by the introduction of new technology, not just one featuring it — is a Bad Future setting that isn't particularly crapsack . It looks nice and clean, and normal, and progressive — maybe even overly nice and fluffy . Robot servants wait on your every need, death is at an all-time low and everyone looks happy Don't thank the robots and you'll be imprisoned for social rudeness. Death is not a way out. Nobody knows the truth , or Happiness Is Mandatory Everything is monitored , and technology has replaced enough of interaction to give it unofficial control over the world (either literally or figuratively) so much that one update change or unfixed minor bug could shut a country down. And technology, a human invention, is one clever way to explore more of humanity's flaws and how we have brought this on ourselves It's also a useful way to explore if this dystopia could, perhaps, be the world we are living in. It looks like Utopia , but computer says no A twist on the setting is to discover that the humans being oppressed are actually some form of robot or synthetic life form, beginning a discussion on what makes a human What usually makes it is that the people living there think this is the best the world can get when it's clearly designed for

the audience to be appalled at the situation. It usually takes an Audience Surrogate outsider to enter the dystopia or get a knock on the head in order to start up La Résistance Typically features the Mega-Corp , AIs that are crapshoots , the 'i' aesthetic , and Killer Robots , often 20 Minutes into the Future . Compare Cyberpunk , a darker and grittier subtrope which takes this concept and combines it with Film Noir -inspired aesthetics/themes

Modern works are set in modern times, often, and especially so when the creators want to appeal to a young, hip audience. As a means of definitively proving that they themselves are securely young and hip , the creators may highlight how a character, perhaps of their own age or older, is not in any way The greatest way to do this is to have the cool young people using some technology invented since Christmas and the ever-wanting-to-seem-cool older person wanting to get involved but having absolutely no clue what on Earth their gadgets are. Often Played for Laughs when it's the parent who pretends to know what it is before hastily leaving, or trying to punish the kids by confusedly confiscating their... gizmo. May trigger a "back in my day" story Compare Fish out of Temporal Water , when someone is displaced from his own time and so can't possibly know what all the new technology is, rather than that he didn't bother catching up because of any number of reasons the older character may have: The olden days were better , they see it as more trouble than it's worth , or just plain extraneous, or there's no point because the tech isn't necessary and will be replaced by something else in a few days, anyway. Contrast What Are Records? , the inverse. Subtrope of Technophobia . Subtrope of Hopeless with Tech , which is not about any age group See also Pop-Cultural Osmosis Failure

A Technological Pacifist is a scientist, corporation, or organization that — no matter how smart they may be or how many other things they create — will never, ever design, produce, or sell weaponry or military products. Why they may do this may vary, but generally it's given that using their genius to make weapons would go against their core principles Of course, often whatever they create ends up getting used as a weapon anyway by someone who starts to Just Think of the Potential ; alternatively, they might make a Weapon of Peace that inevitably gets used for war Compare/contrast to Prime Directive for groups that have no problem making weapons for themselves, but simply refuse to share them with less advanced cultures The title comes as a pun on Technical Pacifist

In Agent Carter </ , Howard Stark refuses to create inventions for the military, and tells Carter why. He once produced a serum called the Midnight Oil for military application. It didn't go against his principles, because it wasn't deadly in and of itself; it was supposed to allow troops to stay awake for long periods of time. However, it failed and instead turned test subjects psychotic. When Stark found out that General McGinnis stole the serum and used it on Soviet troops, he took a swing at McGinnis and cut ties with the military.

The Sirta Foundation in Mass Effect </ doesn't produce any weapons out of ethical concerns. They will however produce Biotic Amps that can give a user the ability to kill people with their mind</ as well as omni-tools that can be used to shut down people's brains</. Well, they

aren't technically weapons</ , now are they? They also produce the medi-gel that you will mostly use to allow your teammates to continue blasting the hell out of everything in their path.

Inverted by Jerkass Mad Scientist Dr. Nesbit in Supermegatopia </ .

The mutant Jericho, at Whateley Academy in the Whateley Universe . He's working on power armor. But his power armor is for medics and EMTs to wear so they can help people in the middle of wars or superhero fights.

The episode "Blind as a Bat" of Batman: The Animated Series </ marked Bruce Wayne's first, last, and only time developing anything for the military. After the troubles that stemmed from that, Bruce declared that Wayne Corp would never develop weapons again. This came up in several later episodes, but most notably in the Batman/Superman</ crossover event "World's Finest", when Lex Luthor and Bruce work together on a tech project developing robotic spider drones. Lex tries to sell Bruce on military applications, but Bruce forcefully and authoritatively shuts him down.

Tropes pertaining to technology, those who use it, and people's attitudes towards it.

In Hollywood, people seem to believe that technology starts at fire and ends in people turning into energy ; the interim would follow the exact same steps on every possible world . Often, this takes the form of people not from Earth creating exact replicas of Earth technology right down to the last detail — such as interface panels ripped right out of the Apollo missions on an alien space station. These copies are often similar enough that people who are from Earth often have no trouble at all using the device, or even interfacing their own hardware with it Similarly, seemingly distinct and diverse technologies will always develop at the same rate. An alien world with "Renaissance-era" technology in firearms will also possess lenses, ships, mathematical principles and sometimes even fashion</ identical to those of Earth (never mind the odds that an alien world would develop in a manner identical to a historical period that was a specifically European cultural phenomenon involving the rebirth and innovation of classical Greco-Roman civilization) It's only rarely that a civilization will break off the path, and usually as a result of external forces providing them with something outside their capabilities (intentionally, accidentally or incidentally), such as a 1920s planet with fusion power, or a 1700s planet with radios. However, mastering this technology does not actually give them an understanding of related concepts, or even concepts which would be required to use this technology in the first place (thus averting Possession Implies Mastery) Remember, don't think path, think tree </, just as with the evolution of biological lifeforms. Except, in this case the distant descendants of unrelated branches can inspire and influence the future of others. For inspiring viewing, see the James Burke documentary series Connections </ , which shows the sometimes ludicrously unlikely places where inspiration and discovery come from, and the web-like connections between seemingly-unrelated inventions I, for one, can only look forward to the day that crystal-based technology paves the way for our conversion into energy See also: Enforced Technology

Levels , Evolutionary Levels , In Spite of a Nail , and Tier System . Contrast Schizo Tech , Aliens Never Invented the Wheel , Sufficiently Advanced Bamboo Technology , Alternate Techline , Anachronism Stew and/or Fantasy Gun Control This has some actual reference in the real world (how much</ total energy one gets to play with, no matter how</). The Other Wiki used to have a list. See Abusing the Kardashev Scale for Fun and Profit for some fun speculation

So little Timmy is watching a show from the 1990s. In one episode, the characters are all excited because of a new computer game that will be released very soon. A computer game — on CD-ROM! And Timmy says, " CD-ROMs? " You see, Technology has marched on, and things like CD-ROMs and VHS cassette tapes and so on have relatively recently become either so little-used as to be obscure, or obsolete altogether. This isn't Zeerust , which is about futuristic tech becoming old rather than about modern tech becoming old. The important qualifications of this trope are as follows: As far as that last point is concerned, remember that there have been spectacular technological leaps in just the past twenty years — within the lifetimes of many (read: most) Tropers, in fact! For the most part, once a technology is invented, it tends to develop at warp speed. Remember, it took only about 65 years (1903-1969) to go from one rickety plane barely able to get off the ground to putting a man on the MOON! So this can lead to some odd moments for those who grew up watching certain things go from "absolutely essential" to "taking up space in your basement". To clarify, an excellent example would be a scene in a 1995 episode of Friends </ where Chandler gleefully describes all the awesome features of the brand-new laptop that he has received from his company. Then, it really was pretty impressive, the joke being that he'd just be using it to play computer games and type out lists. But now...</ There was a time when these specifications would be mockingly contrasted with a then modern counterpart. However, technology has moved on so far and so fast that Chandler's computer is now unimaginably primitive; within twenty years of the episode's first airdate, even a low-end </ smartphone was multiple orders of magnitude</ more powerful than that in every way, while fitting in the user's pocket and costing considerably less than he would have spent. Because of this, most writers nowadays don't get too specific about computer performance, to avoid sounding dated before... well, before next week, frankly. Somewhat related are those moments during not-so-old films where you realize the entire plot could be resolved with something the world takes for granted today — cell phones, for instance. A perfect example of this would be Home Alone And even if Cell Phones Are Useless , if Kevin had one, unless it was broken, had a dead battery with no way to charge it or had no service , then someone could easily get in touch with him directly or through someone else in the area at the touch of a button on their cell phone via a messaging app, social media or email (among other easy methods) using one of the ubiquitous free airport wifi hotspots as opposed to having to go through the hassle of finding and gaining access to one of the limited number of coin-operated Pay Phones in order to place an international call to Chicago PD to send an officer to the house to check on him. A related and increasingly common source of humor shows down-on-their-luck characters as only able to afford the kind of older technology found in thrift stores today. Additionally, shows set in the past will often lampshade this for humor. A Long Runner might even have its

earlier episodes/books/etc. have one level of technology, and later installments have more up-to-date technology with little or no Hand Wave at all. Often turns a work into an Unintentional Period Piece . Can sometimes be a Trope Breaker : A change in cultural context that affects Tropes. A cousin of sorts to Our Graphics Will Suck in the Future . See Magic Floppy Disk for cases when the tech onscreen in a futuristic series was dated when the show was made</ . See also Science Marches On , Abandonware , Computer Equals Tape Drive , What Are Records? , and some examples of Aluminum Christmas Trees . Contrast I Want My Jetpack , where the writers over</estimated the advance in technology. A fictional world where technology doesn't</ march on despite the passage of time is in Medieval Stasis or Modern Stasis . The question of how "advanced" a piece of technology looks</ to a layman observer, and what that even means, is part of The Aesthetics of Technology .

Except that... the figures stated have been surpassed or near so, and there is significant overproduction. This is largely thanks to the which, in addition to mechanization of planting and harvest, also included breeding a lot of high-yield and drought- or pest-resistant crops. (Not all "technology" is machine-based.) Related to Sci-Fi Writers Have No Sense of Scale and Society Marches On when it comes to population growth; many of these examples have populations in the low billions and treat it as catastrophic overpopulation, not merely in terms of agriculture but in terms of population density. For comparison to many of the numbers below, Earth's population is 7.6 billion and climbing as of this writing. It should be noted that many of the agricultural technologies of the Green Revolution depend on agrochemicals whose precursor chemicals are usually derived from crude oil, which isn't getting any cheaper or easier to extract in the long run, so Post-Peak Oil settings do not fall under this trope. Whether this stays true depends how well various proposals for turning various waste products (ranging from plastic to sewage) back into crude oil pan out. Another thing to note is that even today there's still debate on whether we've hit overpopulation. As noted above those who say yes point to dwindling natural resources and say that we can't sustain this level of food production forever, while those who say no indicate that mathematically there is still enough land to grow food for all 7+ billion people today and</ give each of them a few acres to live, and the issue lies more in logistics. (Those who say yes will retort that one can't just dismiss the whole thing because a model that assumes everything is run perfectly optimally says so, and need to take into account real-world factors.) Can be justified by the world's agricultural breadbaskets having been contaminated by drought, pollution, radiation or disease, leaving too little viable land to farm even hyper-productive crops on</ .

Many civilizations that have access to technology more advanced than modern day humanity in speculative fiction works have some sort of law against sharing tech with "lower" peoples. But then there are those who not only are willing to trade with the local primitives, they might even see it as their "duty" in some way If a work has both a civilization that uplifts and one that doesn't interfere, they can be portrayed in one of two ways depending on the author's sympathies. The uplifters could be exploitative imperialists who use their "clients" for cheap labor, or those who refuse to share tech could be stuck-up elitists who treat less advanced societies like wildlife. Rarely, both sides will be

sympathetic , with no clear right answer May result in Low Culture, High Tech if screwed up. Giving Radio to the Romans is when the uplifted and uplifting culture are temporally rather than spatially separated. ET Gave Us Wifi is kind of an unintentional example. Often involves Imported Alien Phlebotinum . See also Uplifted Animal , when the client race initially isn't even sapient and is modified by their patrons

A "technopath" is someone who can control machines and bend them to the user's will, either through a physical or mental interface link. In some cases, this power also allows them to "hear" what a machine is "thinking" and establish a direct line of communication with the machine. Might be referred to as " Technomancy ." It's not rare to see technopaths bringing formerly inanimate objects to life (e.g. toasters moving around and firing Projectile Toast at disgruntled users), which is much easier to do if Everything Is Online . Closely related to Magic from Technology . Not to be confused with a character who's pathologically bad with technology , or made a psycho/sociopath by technology . In modern-day settings that have many people with superpowers walking around, this is frequently the power given to children, as a magical metaphor for the way that people who grew up around technology are generally more comfortable with it. Compare with Walking Techfix , which is usually not deliberate. Contrast with Machine Empathy , where a character is closely attuned to a machine's behavior simply due to prolonged experience, and Techno Wizard for people capable of only metaphorical</ wizardry. Not to be confused with Walking Techbane , which is when a person is destructive to technology just by being near it.

Marvel Comics

The Techno Wizard is the guy or girl who can make a computer or electronic device do anything Among other things, they know all the Omniscient Databases ; they know how to use the Enhance Button and the Facial Recognition Software for the best results; they can look at a wall covered with Billions of Buttons and immediately figure out which unlabeled one is the one that turns off the Self-Destruct Mechanism ; they can jury-rig an iPod into an Everything Sensor They may or may not be a Mad Scientist as well, depending on how fantastic the show is. They will often have Machine Empathy , especially for devices they use regularly. Expect lots of Hollywood Hacking Compare the Gadgeteer Genius , who is more mechanically inclined than electronically inclined, and the Technopath , who is capable of magical control over technology. Not to be confused with Magic from Technology . When genuine magic is integrated with technology, see Magitek Despite their names, Techno Wizards may not be able to create a Robot Wizard (robots that can actually perform wizardry) Doesn't necessarily have to do with the music genre Techno , though in that case you might be looking for Magic Music

A common western action cartoon format that was very popular in the 1980s and 1990s (after the success of Teenage Mutant Ninja Turtles </ spawned a crop of imitators) and still continues to this day. The format is more or less this: A team of heroic monsters

(aliens, mutants, or magical beings) are somehow created, awakened, or arrived in the modern world. Usually a modern American city. They are honorable creatures who set out to fight crime . The average person fears them for their appearance, and they must hide from Muggles or humans. However, they befriend one or two open-minded humans, usually either children or career women. These women or children end up being the team's friends and guides to modern Earth, and are Secret Keepers , and may also be the Kid with the Leash . Together, they all fight supervillains and evil creatures in a City of Adventure . Since these shows are usually aimed at young boys, expect The Smurfette Principle to be in full swing. The heroes are usually The Last of Their Kind , with no females except maybe The Chick . Consequently, Interspecies Romance will usually be explored, particularly by fans , especially if the Secret Keeper is a career woman. The Secret Keeper will often be hiding them in the beginning, but since the monstrous team is usually a Five-Man Band or Power Trio , they usually get their own headquarters. It's a good thing that Abandoned Warehouse /office building/ornate palace was around! These series tend to be Merchandise-Driven . Not to be confused with Ninja Pirate Zombie Robot , though the Rule of Cool often plays a role.

Any show where the central focus is on teenagers, their angst , pimples, and/or clothes. Best describes shows like Beverly Hills, 90210 </ and Dawson's Creek </ (or anything else on The WB or The CW , really). Most likely place to find the Very Special Episode The kind of show where everyone's too old and too short to be teenagers, they have to bring new people in , the men keep taking their shirts off , there are no more than two non-white main characters , the teens talk much more like adults than teenagers , and anyone over a specific age is bad news See also Kid Com which also features teenage protagonists and many of the same tropes, but generally in a far more light hearted manner. Young Adult fiction is the rough literary equivalent of the teen drama. Compare Soap Opera and Prime Time Soap When the lens is reversed to focus on the flaws of the kids' entire families, it's Stepford Suburbia See Tween Drama for the child-friendly equivalent to the Teen Drama

The Teen Genius is just that: a genius who happens to be a teenager. This character is responsible for coming up with the magical answer to any given episode's problem, while at the same time being generally angsty and teen-like. May be exposed to discrimination by those that don't know them, because they're Just a Kid Oddly, the Teen Genius will not normally have any of the odd behavioral quirks of the TV Genius , even if the series lasts long enough to let them mature into an adult. A version of where smart kids and teens can relate to their maturity, they are Wise Beyond Their Years On a show with an ensemble cast, the teen genius is usually included as a (generally misguided) attempt to appeal to a teen audience. On a show with a teenaged Competence Zone , this is about the only way for the Five-Man Band to include the requisite Smart Guy A Teen Genius may sometimes also be Book Dumb , despite the apparent contradiction. A female Teen Genius may be a Ditzy Genius or Genius Ditz . A younger version is the Child Prodigy

An entertainer who is idolized by teenagers. People have been declared teen idols for as long as being a teenager has been recognized which, by the way, is Newer Than They Think - until the

'50s, anybody under the age of 18 was simply a "child" . Many, but not all, have been specifically groomed for this purpose. They generally have several things in common: The most basic way to tell if a celebrity is truly a Teen Idol is by whether they wind up in magazines aimed at the teenage market (like Sassy</, Tiger Beat</, YM</, Seventeen</, and Teen People</) and by whether they become a poster celebrity. It should be emphasized that Tropes Are Not Bad and many idols, particularly musicians that legitimately wrote their own material, gain critical defenders as time goes on . Often, if the teens of the era have a social conscience, a Teen Idol will be the way The Man Is Sticking It to the Man . This trope commonly overlaps with the Idol Singer , although not all teen idols are singers. See also Boy Band , Girl Group , and Teen Pop . Not to be confused with the Meg Cabot novel, Teen Idol , or Marina Diamandis ' song "Teen Idle" (though Marina is given to playing with the trope).

In their striving to try to be taken seriously, teenagers are susceptible, gullible, and downright dangerous to anyone who wants to manipulate them. They are the best targets for demons, vampires, or The Virus . Sometimes they're just delinquents with no respect, sometimes they are only a hair's breadth of sanity away from shooting up the place and they'll stay that way as long as you don't treat them like a kid Much of this trope is fueled by a distrust of teenagers by the adult population. Also, many parents of young children dread the day that their innocent little angels grow into back-talking, angst-ridden, hormone addled teenagers , which can sometimes even happen earlier than expected . However, television producers are often worried about offending the very lucrative 13-to-17-year-old market, so usually the heroes are also teens , or at least there will be a very prominent "good" one Ironically, the much milder version of this trope occurs with shows aimed toward younger</ children who find teenagers cryptic, pushy, and intimidating for other reasons Some cases of Royal Brats and Military Brats can be attributed to this trope. This trope often has the teenage monsters in question have been previously sweet kids . If teen monsters run society, it's a Teenage Wasteland . See also Big Brother Bully , Kids Are Cruel , and Humans Are Bastards Some teens act this way because they don't know any better. Some others however do, know they will get away with it because they won't get caught, and might have For the Evulz as their main motivation. Others</ may have been taught to act this way by their parents or are even dealing with their own huge troubles at home . Whatever the reasoning, the results are basically the same Of course, this can be — on an individual basis — Truth in Television (ask any high school or middle school teacher/student); there are monster teens in Real Life in the same fashion that we can find some mean kids and cruel adults . The mere fact of being a teenager doesn't make people automatically good or evil; it, contrary to popular belief, does not make any</ given person susceptible to reckless and selfish behavior. There are just as many, if not more, selfless, sweet teenagers as there are selfish, impulsive adults, and age does not necessarily correlate to behavior Compare and contrast Troubled Teen , a usually more sympathetic portrayal though one can develop to a monster

13 </ : With all the drug usage, underage drinking, underage sex (and numerous other illegal acts) that goes on in this movie well... let's just say this film is a parent's worst nightmare on what will happen when their sweet little angels become teenagers.

Sometimes in Real Life , people on the same side don't get along. In fiction, this often occurs when there are multiple villains trying to work together , a mismatched team of heroes , or a situation where former enemies have to team up . The problem with this sort of team is that they have trouble using The Power of Friendship or The Power of Love to win–likely because this is essentially the more cynical version of those tropes. It's still not at the far cynical end of the Sliding Scale of Idealism vs. Cynicism , however, because it still assumes that people can (and should) at least work together Generally, the imperfect teamwork generated serves as both a good source of drama and/or comedy, depending on the situation. It's particularly dramatic if the group undergoes a period of Divided We Fall first. It also helps ensure that the group is interesting and varied without raising questions of why they work so perfectly together This dysfunctional teamwork often takes the form of Family Drama (in cases where the team includes at least part of a Dysfunctional Family). The touchstone of enmity is family, after all The Leader may often find himself demanding an Ordered Apology Compare with Fighting the Lancer , where animosity between teammates actually does lead to a fight, Headbutting Heroes , where the heroes are not necessarily working together, and Can't Default to Murder , where a hero has to force his villainous teammate not to kill Contrast Sour Supporter , who is convinced that the team is doomed to failure, but works well with them anyway. If the series goes on long enough (and becomes less cynical), with enough Aw, Look! They Really Do Love Each Other moments, this might turn into The Power of Friendship or The Power of Love . Conversely, this trope is a good counterpoint to True Companions ; it is a way of introducing some conflict and authenticity into works that would otherwise be too sugary Contrast We ARE Struggling Together , and A House Divided where there's lots of infighting on the same side but no teamwork. An Enemy Mine and Colliding Criminal Conspiracies usually results in this trope. Chained Heat is a more specific version of this trope involving being forced to work with someone by some method of a physical attachment. Frequently a by-product of Jurisdiction Friction . Family Drama usually has this within a family. Not to be confused with teams whose members always clench their teeth , or with pronounced determination shared within a group If they really</ don’t like each other, than usually one side or the other will give them an Implied Death Threat , and depending on who reaches their goals first, they will proceed to carry out a You Have Outlived Your Usefulness Often, this is how Fire-Forged Friends start out. Also compare with Forced into Evil

In our modern day and age, when communication needs to take place, we can do it with landlines, Cell Phones, text messages, and/or The Internet It is a really good thing, too, because when the hero(es) need help, this trope comes into play There's a situation that's too big for our main character to handle on his/her own. But he/she knows a good number of people, perhaps because they are popular and friendly, or just from Walking the Earth . Either way, it's time to enlist their aid, and because the heroes are the heroes, anyone called on the phone is only too happy to pitch in and help. Not only that, but they're willing to call the next person in the chain of phone numbers to help get the giant group effort underway that

much sooner A variation common in older productions: the viewer is treated to a splitscreen as more and more people become involved in sending the message out This trope may be considered the modern day equivalent to Gondor Calls for Aid , though usually it's more friends than Gondor Calls for Aid 's "friends, enemies, anyone the heroes can get to pitch in" Can be subverted, particularly online or in print, by Astro Turfing

Powers like teleportation can be very dangerous if you don't look where you're going. If you teleport into someone else, or someone else teleports into you... splat The term comes from early First-Person Shooter Video Games , where it is possible to teleport or respawn in the same space as another player. But the hitboxes lining up could cause a lot of trouble, so usually what happens is the person who was there first dies, and the person teleporting in is perfectly fine. It's called the "last one standing" rule. Whoever is the last one to arrive, survives This is also known as interpenetration, especially when there is no exploding involved In the cases where this is harmful to the teleporter, the dangers of teleporting into a space currently occupied by air and dust are usually ignored . This can be handwaved by stating that the teleporter is capable of displacing gases, liquids, and minuscule solids therein, or by the fact that compared to about every other substance humans normally deal with, air is very thin stuff The usual aversion is Swap Teleportation . Then, if you appear inside a mountain, a statue appears at the starting position, but you're still Buried Alive unless you can teleport again immediately (bearing in mind that being entombed this way tends to impair one's ability to speak , move , or indeed think clearly .) In this case, any living being who is teleported into</ will be horribly eviscerated, while the one doing the teleporting may be merely psychologically traumatized The opposite of a Portal Cut (a perfect guillotine made by disconnection of the gate's surfaces while someone or something is passing through, or otherwise using partial teleportation to cut something apart). If the teleporter isn't fine tuned, expect a Teleporter Accident to result See also Portal Slam (when there's something in the way when you try to enter</ a teleportal). Can be used to defy Inertia Is a Cruel Mistress by destroying the offending obstacle, or as Weaponized Teleportation . The supertrope is teleporting things to anyplace that's inherently extremely dangerous even if it's not actually inside a solid object, such as into deep space, over lava, or 100 feet straight up. A No Flow Portal may be deliberately designed to have this sort of effect on the unwary Not to be confused with Telefang </

TELEGRAM MESSAGES NEVER CONTAIN PERIODS STOP IT WAS ORIGINALLY A JOKE STOP SO EVEN WHERE IT CAUSED CONFUSION IT DIDN'T STOP STOP COMPARE WALKIE-TALKIE GAG, OVER AND READING STAGE DIRECTIONS OUT LOUD STOP Telegrams charged by the word; therefore, the objective was to make the message with as few words as possible while still being clear. Marks of punctuation, such as the comma, period, dash, colon, etc., are not transmitted in telegrams unless the sender specifically requests it, and then they are counted and charged for, as one word each. From the 1928 booklet, This is a Broken Trope these days, since International Morse Code uses .-.-.- for periods (though telegraph companies would charge extra for punctuation). Or you could just send a text message .

Telepathy/Mind Reading is a psychic power that allows a character to read another person's thoughts and/or communicate with them mentally. Usually, those thoughts are Conveniently Coherent Thoughts . At its most basic level, it functions as a short range radio, allowing the character to pick up the thoughts of those around him. Sometimes, it has limitations such as touch or proximity, or only being able to "hear" rather than "see" thoughts. A common hurdle comes from being unable to probe deeper into the minds of those around them, as well as being something of a Fainting Seer whenever an especially strong-willed or horrifying character is around. Psychic overload is also common in crowds, represented by a Psychic Nosebleed . Being a passive receptor and not being able to shut other people's thoughts out can easily drive a psychic insane, making this potentially Blessed with Suck . More advanced uses of telepathy involve receiving and transmitting thoughts and memories , and probing beneath surface thoughts into memories, or outright going into a Journey to the Center of the Mind or dream travel. Some telepaths may be able to use Astral Projection , or at least see through other people's eyes At its strongest, a telepath will be able to Mind Control others, sometimes even to the point of possessing their bodies , create Fake Memories after applying Laser-Guided Amnesia , create a Split Personality and let it take over , or in general be a terrifying god who can Mind Rape their opponents. It's worth noting that for the above reasons telepathy is one of the most potentially pervertable powers, since it's basically an invasion of privacy of the worst kind. The telepath is the sighted man in the kingdom of the blind, and, provided he's discreet, he can know everyone down to their most intimate detail, and can use them accordingly . This is a lot worse when he's the overlord. Thus, mind readers in Real Life would be complete Paranoia Fuel . This is why in settings with un- masqueraded telepaths, they are often persecuted, policed, and registered . That is, when they aren't used as weapons or killed . Heroic telepaths are thus in a difficult position both inside and outside a story proving Bad Powers, Bad People is not true. An author wants them to be heroes, but has to somehow assuage the reader the character isn't a mental voyeur (or if he is, he's got a chivalrous side) and the character will also have to put their colleagues at ease that they aren't likely to turn into a Mind Probing Hive Queen . To solve this, they often practice what they preach with Mind over Manners . Telepathy comes in a lot of flavors: In a setting where there are telepaths, expect people to use Psychic Static to protect their thoughts, and telepaths to construct a Psychic Block Defense to give each other a Poke in the Third Eye when they're snooping. Usually indicated by the Pstandard Psychic Pstance . When the ability requires physical contact it's Touch Telepathy . Subtropes:

The DCU

A popular way to convey details about people's relationship is to have them sing about their telephone calls. One person is often singing about how much they want to call another person, or for another person to call them. The singer acquires his true love's phone number and has to muster the courage to call her; or maybe he's nervous because she promised she would call him and he's starting to have doubts. The song might convey a call's dialogue with one or two people singing about their conversation. The song could also take place in the aftermath of an attempted telephone

call and describe its emotional toll While these types of Telephone Songs are popular, the genre also covers a wide range of situations involving telephone calls, including gossip, prank calls, and advertisements. As communication technology has evolved, so have songs about them. In many countries payphones and phone booths are disappearing, so songs that mention them are becoming rarer. Mobile phones are becoming more popular, though landline phones are still prevalent in popular culture Often overlaps with Break-Up Song . Super-trope to Phone Number Jingle

When a character needs to travel to where another person is calling him on the telephone from, he will just simply get there lickety-split by entering the receiver of the phone he's talking on, then coming out from the other receiver that the other character is calling from. Often played for Rule of Funny A common variation in cartoons is where characters making a Split-Screen Phone Call simply walk over to the other side of the screen Compare Reaching Between the Lines and Television Portal Contrast Supernatural Phone , where a phone is used to use supernatural powers and other impossibly cool abilities. The difference between this trope and Supernatural Phone is that in that trope it is the phone that is magical. In this trope, the phone is an ordinary telephone, it is the traveler who has the special ability A character who can Ride the Lightning may use telephone wires as a conductor. Not to be confused with Electric Slide or instances of a certain blue police phone box vanishing into thin air

Sometimes characters or devices with the power of teleportation suffer from a specific form of Power Incontinence . They just can't control where they're going. Depending on the range of their powers, they could end up on the other side of the galaxy or two feet to the left of where they're standing. Or inside a wall . Whether this is the result of a limitation of the power, a desperate gambit to get out of somewhere in a hurry when there's no time to properly designate a target location, or plain old human error, sometimes teleportation is just random If it's terrestrial teleportation, it'll have the courtesy never to put the victim inside a wall or 30 feet in the air. It's more believable with space travel, because space is so frigging big that something the size of your average ship named Enterprise need not emerge inside a planet no matter how many times something sends it where it doesn't want to be Sub-Trope of Teleportation with Drawbacks due to a drawback in the area of "control". If you're lucky, you can control when it happens. See also Teleporter Accident , Blind Jump , and Random Transportation , for when it's totally out of control

Tropes about portals, teleporters, and transporters. See also Faster Than Light Index and Time Travel Tropes .

Teleportation is a tactical and strategic game-changer in any setting. Defensive methods become necessary. This trope covers that eventuality. There are a number of ways to limit the power of Teleportation magic/technology to prevent excessive advantage : Compare No Warping Zone . Teleportation with Drawbacks is the opposite way of restricting the power, by affecting the power itself, instead of defending against it.

When in trouble, or in need of opening a file of whoop-ass, a Super Robot 's limbs extend, armor appears, Death Rays will sprout up from nowhere, hatches will open up in various parts of their bodies to reveal missiles (beware the missile codpiece </ and bustier!</) and they become ten metric tons heavier than before. The cooler sequences will qualify as Technology Porn See also Transforming Mecha , Hyperspace Arsenal , Swiss Army Weapon , Impossibly Compact Folding , Retractable Weapon , and Shapeshifter Baggage . Can lead to a Macross Missile Massacre . Human-sized robots with this power are usually Super-Powered Robot Meter Maids and/or Do Anything Robots

Marathon television show, almost always broadcast to raise money for a charitable cause. Can run anywhere from 24 hours to a week or more of combined Variety Show and pointless filler The first telethon, broadcast by NBC in April 1949, was a fundraiser for the Damon Runyon Cancer Research Foundation. (In fact, NBC executive Sylvester Weaver coined the word "telethon" — a portmanteau of "television" and "marathon" — to describe the program, which was a radically different event that he hoped would entice people to buy TV sets.) The Foundation's first big fund-raiser, the telethon ran a then-unprecedented 16 hours with Milton Berle as its host, and raised $100,000. In all ways it was more or less indistinguishable from "modern" telethons, from the stars and celebrities who performed and urged donations, to the big on-screen bank of telephone operators taking calls

The most famous would be Jerry Lewis 's Muscular Dystrophy Telethon</ , which ran on American television annually for 49 years, 1966-2014 (a true telethon aired in syndication from 1966 to 2012, then as a short-form telecast on ABC for its last two years).

My Bride is a Mermaid </: Parodied when Lunar holds a telethon for Mikawa when everybody thinks he's dying .

Americathon </ : In a future America, the country holds a 30-day telethon to repay its debts or risk foreclosure by Native Americans The video for Cinderella 's song, "Shelter Me" deals with a telethon to save rock & roll. Little Richard plays the host

American Dad! </ : In "The Phantom of the Telethon", Stan steals Roger's idea for a telethon to raise finds for the CIA's torture program, leading Roger to try to sabotage it. Roger claims that he actually invented the telethon in the first place, but Jerry Lewis stole the idea from him then too.

All about the medium of television, its sub-categories, and TV-specific tropes that cross those divisions.</ Television "TV" is traditionally viewed on a television set, after the early 2000's people can catch up on their favorite programs via computer and mobile devices. Commercially available since the 1920s (though television as we know it today dates from 1936, as the result of the invention of a key component by Vladimir Zworykin of RCA and Philo T. Farnsworth) Both the first experimental videophone service, and the world's oldest TV channel (BBC One), started in this year , but only really catching on in the 1950s . Home televisions were black & white, analog, heavy, and at 4:3 aspect-ratio; gained color in the 60s; and after the Turn of the Millennium became digital, lighter, and wider with a 16:9 aspect-ratio. Television is what the TV in our

name stands for . But you probably already knew that. See also Camera Tricks and Formats .

Welcome to the Television Portal. Most often a form of Nightmare Fuel ('cause who wouldn't be freaked out by a television image coming to life?) and Paranoia Fuel (do you know how many hours of television you</ watch?). Sometimes results in Up the Real Rabbit Hole , Trapped in TV Land , Refugee from TV Land . May start when The Television Talks Back . A quite literal version of The Fourth Wall Will Not Protect You May extend to coming out or going into a television set or other electronic device with a screen (i.e. a computer) Compare Reaching Between the Lines (the same effect, but used as comedy). A subtrope of The Fourth Wall Will Not Protect You

A television format similar to a series of Mini Series . Rather than airing a self-contained episode each week, long stories are broadcast broken into a number of individual parts. This format derives from the serial format used by the short films once shown before a feature, and, before that, the publication of novels in magazines. (Many of the works of Charles Dickens and Arthur Conan Doyle were originally published as serials.) The modern Cliffhanger evolved from the custom of ending most episodes of a serial with a suspenseful scene which left our heroes in peril (often, literally hanging off a cliff). All the episodes of a story are usually considered as a single unit. In syndication or video release, they may be edited together into a "movie format" which stitches the episodes together, usually removing the Cliffhanger . Differs from the Soap Opera in that the narrative is not continuous throughout the entire series. Typically, each story would last between three and eight episodes then end. Differs from a Story Arc in that each episode is not</ a complete story on its own. Though the format is not mutually exclusive of a Story Arc , continuity between episodes which are not part of the same story is generally minimal (though this is probably entirely a result of arcs having been rare when the serial format was common). Today, the Television Serial is a deprecated format, having been largely replaced by occasional two-part stories in a mostly stand-alone series and the Myth Arc . For some reason, this format was particularly common for British science fiction series. British series: Doctor Who </ (used throughout the 1963-1989 Classic Series; dropped in the 1996 telemovie and the 2005-present revival series, save for 2009's "The End of Time") Non-British series: Rocky Jones, Space Ranger </ Sometimes used as a format for one segment within a Variety Show : The namesake segments of Rocky and Bullwinkle </ .

The symptoms exhibited by real patients are usually signs of common, boring diseases, so when a patient with such symptoms checks in to the hospital, it is these routine diseases that doctors should test for first</ , before considering the remote possibilities of them contracting something rare and exotic. On medical TV shows, it's usually the exact opposite: a disease that a real doctor might encounter only once in his whole career, or even dismiss as an urban legend, could show up on three different shows if it's sufficiently dramatic , and will definitely</ show up if it's made the news recently . The cast usually knows how rare the disease is, and frequently provides a Lampshade Hanging of its rarity. Some of these diseases are: Allergies : In this case, it's not allergies themselves but the strange things characters are allergic to</, especially in comedies . The reactions are also unrealistic, especially in cartoons where an allergic reaction causes the character to instantly puff up

like a blowfish. In live-action, the amount of swelling typically shown would almost certainly be accompanied by anaphylactic shock and the airway swelling shut(a life-threatening condition). Note that not every common condition on TV is an example of this; some are Truth in Television . If every other TV child carrying an asthma inhaler looks unrealistic, consider that the rate of childhood asthma in many developed countries is between one in ten and one in five</ . Related to the Million-to-One Chance and Arkham's Razor ; see also Artistic License – Medicine . No connection to that TV show that literally causes brain tumors .

A Stock Phrase that strikes terror in the hearts of single parents and Parental Substitutes the world 'round. (Can be Gender Flipped , but usually is the father.) Generally indicates that the child, who has no memories of the parent, has an unrealistic view of Disappeared Dad (or Missing Mom). As such, particularly hard on the child with a villainous parent, or even a No Hero to His Valet father. But hearing tales about, or actually meeting , the father, is almost always a shock. However, if the child has heard the parent vilified , it can lead to his learning that his parent was better than he had been told. (If not perhaps all that he had dreamed of.) This may lead to a "Your father would be So Proud of You ." Bonus points if the child has recently done things that were very brave or noble, and, when he asks about his father the response is " You remind me of him " Or, of course, both. As the page quotes show. If the child knew the parent, but Parental Abandonment happened after, the child will want to know about changes since then — as when a father went to war and the child wants to know about his service. A parent or other relative who wants him not to Turn Out Like His Father , especially when it's dangerous , will resist as long as possible . Unfortunately, this usually results only in the mysterious parent taking on the allure of Forbidden Fruit — which may result in a harder than usual crash . In cases of Parental Abandonment , the child is usually curious about only one parent, to simplify the plot . Perhaps he knew one parent but not the other, but sometimes, he is just fixated on one — usually the father. Muggle Foster Parents usually try to evade this, partly because it brings up Secret Legacy , partly because they think his safety lies in being Locked Out of the Loop . If Dad ran off, possibly without even knowing about the kid, Mom is particularly apt to be bitter about it. The child's idealism sets them up for a clash. If the parent is dead, may overlap with To Absent Friends for the people telling the child. Dead Guy Junior may express this about the person he was named for, even if unrelated. Often happens if child is Someone to Remember Him By . May result in How Dad Met Mom . Not to be confused with Tell Me About Your Mother .

In most western animations and anime, you have a character whose e
size can moderately or drastically change for just a few minutes e
as the scene calls it, or even for the whole episode. However, e
when the scene or episode ends, usually the affected character e
will be back at their regular size as if nothing ever happened. e
Characters may either gain weight, lose weight , grow muscles , e
or be inflated with air or liquid according to the script. Rarely e
used in live-action television and/or film since the actor has to e
wear heavy padding and special make-up, which is expensive and e
makes them very uncomfortabl Not to be confused with Your Size Maye
Vary , where stylistic change may make someone merely seem larger e

or smaller without necessarily changing bulk. Contrast Sizeshiftere , Incredible Shrinking Man or Attack of the 50-Foot Whatever . e Compare Balloon Belly . The Heavy Voice is sometimes a side-effecte of this trop e

Some things just shouldn't be said , even in jest. Taunting a monster or Bullying a Dragon is likely to end badly. (Mugging the Monster definitely</ will.) Monologuing will invariably give The Hero the time he needs to defeat you. And then there's this trope Tempting Fate is when a character says something that dares the universe into making things miserable for them, and the universe takes them up on the challenge . Oftentimes, the character is commenting on how they've hit Rock Bottom and how things couldn't possibly get any worse — right before things do</ turn From Bad to Worse . Conversely, they may talk about how things are absolutely perfect, only for their world to come crashing down five seconds later. Also watch out for a Gilligan Cut And sometimes tempting fate can get downright lethal</. For example, that guy in every horror movie who tells his friends "I'll be right back" before wandering off by himself is most assuredly not</ going to be back. Or that guy in every war movie who shows that picture of his family to the others and expresses his hope to get through this and make it back home to them, which all but ensures that he won't</ make it. Or that veteran cop in every action movie who's just a few days away from Retirement , and thus doomed to be gunned down in his final case. This particular variant of Tempting Fate is known as a Death Flag The fate-tempting words may be followed up by a friend saying " You Just Had to Say It ! </ " Of course, whether fate really had a hand in it or not depends on the situation. After all, it's not like fate just magically materialized that guard ambushing you from nowhere, right? What matters is that events pre-planned or not conspire to make things terrible the moment such phrases are uttered For the supertropes to this, see Trope Telegraphing and Be Careful What You Say . Compare Schmuck Bait , Instantly Proven Wrong , Speak of the Devil . Contrast the Godzilla Threshold for where things really can't</ get any worse. See also Too Good to Be True And don't forget the Evil Overlord List , either "At least it isn't raining." — Cue the Rain . Alternatively, a worse type of weather will occur instead

A group of people are invited to attend a get-together, usually held at an Old, Dark House often in the middle of the lush countryside or (more recently) on someone's private island , by a mysterious and/or eccentric host. Suddenly one of the guests (or even the host) is murdered and circumstances prevent the others from leaving , usually a heavy storm or a cut bridge, or even both. Our heroes soon learn that one of their party is actually some manner of villain (typically The Mole , though a random escaped criminal is not unheard of), but, for various contrived reasons, that's all the information they're going to get. So it's up to them to work out which of their supposed colleagues is really The Mole before he can kill them all. And you can't trust anyone until you do . Luckily, however, there's (usually) only one mole involved. Often results in everyone being Locked in a Room . This can be self-imposed, as our heroes can't chance The Mole reporting back to headquarters, but a character may force this upon everybody, which will usually raise everybody's tension. Circumstances will always contrive to prevent our heroes

from getting in touch with the outside world to find out who The Mole is, which may range from the aforementioned storm knocking out the telephone poles, to someone cutting the telephone lines, to outright smashing all the phones to pieces. Accusations are hurled , secrets are uncovered and more murders are committed as the Dwindling Party tries to determine who is the murderer in their midst. General outcomes of this plot: A: One person will seem to actively hinder the investigation. He'll drop the radio, breaking it just before a description of The Mole is broadcast. He'll have a panic attack at a critical moment endangering the group. He'll be suspiciously uninformed about whatever his job is supposed to be. This person is never</ The Mole . He's just an idiot. (See Hanlon's Razor .) In a well-done example, the audience will work out who The Mole is only seconds before the heroes do, though they'll typically be led to an incorrect guess from early on. Non-recurring characters are subject to being killed off one-by-one by The Mole . Of course, strictly speaking, no one is above suspicion, even our heroes, and at least one member of the group will panic, accuse the heroes, and run off to a certain demise. The audience (usually) knows better. Named after the 1939 Agatha Christie novel And Then There Were None </ which was originally titled Ten Little Niggers</ and then renamed Ten Little Indians</ before arriving at its current name. Often the modus operandi</ in a Reunion Revenge . Occasionally a Final Girl or other survivor(s) may be spared, but if the writers are really bloodthirsty, it only ends when they Kill 'Em All (or, if you're at the beginning of the series, Everybody's Dead, Dave); if they're feeling devious, they may also throw in a few instances of Suspect Existence Failure . Newer installments may have this combined with/be the byproduct of a Deadly Game Or a Hunting the Most Dangerous Game Scenario. The actual game</ version of this setup, where it's one or some killers against everyone else, is Social Deduction Game . Don't be surprised if a Mexican Standoff or two pop up, especially for the finale. This trope goes together with A House Divided like peanut butter and jelly.

In the middle of a crisis, calamity, or sheer unadulterated apocalypse, something terrible happens (but not, typically, any more terrible than happens in any given episode) and The Hero completely and utterly gives up. Common lines that go with the phenomenon are "I'm too old for this," " I can't do it ," " There is nothing I can do ," " The best thing to do is to get out of here ," or " Somebody else can ." May even be the follow-up to a Heroic BSoD , which is similar but involuntary. After some kind of epiphany, often accompanied by a "No More Holding Back" Speech , the character comes out of retirement and announces that they are back on the job, typically followed by the show's equivalent of a Foe-Tossing Charge — anything from actual foe-tossing to kicking butt in the school spelling bee. (See also Look What I Can Do Now! , which is similar but involves a character leaving and returning much badder than before.) It's also a common Romantic Comedy trope to have one of the principal couple suddenly decide to quit working with or for the other, vowing to never come back, only to return a few scenes later. See also: Achilles in His Tent , Conscience Makes You Go Back , Changed My Mind, Kid , and We Used to Be Friends . Opposite of Passing the Torch , where The Hero seriously hands on the responsibility to someone else. He's Back is what happens when the character returns to action. Breaking the Fellowship is the equivalent for a whole group rather than a mere individual.

Two characters have been Locked in a Room together by their friends because they think they have a crush on each other. They spend the episode talking, sitting close to each other, coming clean with each other , and usually kissing at the end when their friends charge in cheering for them. A complete Retool of their character relationship accomplished in the span of one episode Used in sitcoms—usually of the teen-oriented variety—when they want to do a somewhat suspenseful episode based on romance, or when the writer wants a relationship to form between the characters but can't do it normally Can result in Slap-Slap-Kiss or An Aesop about meddling in other people's lives Named after the party game (also known as "seven minutes in heaven") where two people are forced to spend time alone in the dark to… "talk" Can easily turn into a Clip Show Subtrope of Romance Ensues . Related to Caught in the Rain . Compare Locked in a Room which is not necessarily romantic. Compare Spin the Bottle , another teen party game designed around romantic tension This has nothing to do with Trapped in the Closet </, which is eighty-something minutes, not ten. Or with that oth er kind of closet

In the book </ , he devotes the entire book to these frameworks, breaking them down even further, giving each five sub-groupings of their own. Many he calls "primal," saying you should be able to "pitch (the idea) to a caveman." Snyder knows his subject well, as he wrote both Blank Check </ and Stop! Or My Mom Will Shoot </ . Snyder's (named) categories are as follows (rearranged somewhat):

One simple rule here: Don't get eaten.</ The three basic ingredients are vital to the success of this tale. Without the , there's no reason they couldn't just up and leave, letting others deal with the problem . Stick the characters in a room, a building, a small village; put them in a spaceship, or on an island, or in a quarantined city. Suddenly there's no place to run. According to Snyder, a is committed, "prompting the creation of a supernatural monster that comes like an avenging angel to kill those who have committed that sin and spare those who realize what that sin is. The rest is run and hide</." He includes movies from Alien </, and Tremors </ to Jurassic Park </, and even Fatal Attraction </ along with just about every horror movie out there. Some movies, such as Saw </ , have monsters that go after the "sin" of ignorance. The archetypal " Monster in the House " tale is the myth of the Minotaur: You're stuck in a maze with a half-man, half-bull guy trying to kill you. You might call this plot the... inverse?... of Booker's Overcoming the Monster </ tale, where the Hero leaves home, gathers weapons, and heads across the world to find and destroy the monster that's been terrorizing the countryside. In Monster in the House</ , the Hero can't leave home, has no chance to build his arsenal before the showdown, and either destroys the monster for his own sake or fails to destroy it at all. This plot deals with wishes and curses . On the wish side, we have a hero who makes a wish that gets unexpectedly granted. Or, less directly, perhaps he needs some help and gets it from an unexpected source - Snyder points out The Mask </ as being another tale following this plot. Then we get a classic Wish Fulfillment tale, although of course there's going to be problems. On the curse side, we have the " comeuppance tales." Liar Liar </ and Groundhog Day </ both count. There " must be something redeemable " about the hero, because he's going to have to change his ways in

order to survive. And, eventually, because he's finally worthy of it, the hero gets what he wanted all along (in Liar Liar </ , it's "the respect of his wife and son"). The three important ingredients are: A that is to be learned from the experience.

Snyder points to Chinatown </ as "perhaps the best Whydunit ever made." It's a walk on the dark side of the city, and once we've unraveled the mystery, we discover "something unexpected... dark and often unattractive" about human nature. This sort of tale makes us take a long look at ourselves and the things we're capable of The Whydunit isn't about the who somewhere, breaking the rules, even his own, in order to get to the bottom of the mystery

Here's Snyder's version of The Quest , which he connects with the Road Movie , a series of seemingly unrelated encounters that cause Character Development for the hero. He may never reach the goal he set out for, but he does reach a different goal: self-discovery Which explains why this sort of movie has always seemed a little disconnected. It's not supposed to be - externally Snyder then lumps in "all heist movies" along with "any quest, mission, or treasure locked in a castle" plot The essential ingredients are a to be won—going home, obtaining a treasure, securing a birthright, etc Compare Booker's version of The Quest

Here, the hero undergoes "pain and torment" from a vague force that turns out to be, well, Life. The hero has to come to grips with the realization that everybody goes through stuff like this, and surrender to reality - accept that there are aspects of reality that he "cannot control or comprehend," yet continue onward with a level of peace about the whole affair Any sort of "life transitions" story fits under here. Also compare Booker's Rags to Riches plot the essential ingredients are a of a hard truth, and the knoweldge that it's the hero who must change, not the world around him For the sixth season of Buffy the Vampire Slayer </, the enemy was said to be). So that probably counts here, too

This is the tale of a group: the mental patients of One Flew Over the Cuckoo's Nest </, the doctors of M * A * S * H </, the Mafia family of The Godfather </ . The story details the pros and cons of "putting the group ahead of ourselves." It honors the group - yet exposes "the problems of losing one's identity to it." According to Snyder, there's always a "breakout character whose role is to expose the group goal as a fraud." But there is also, often, a newcomer to the group, through whose eyes (and questions) we come to understand the dynamics of the group. After all, we're usually dealing with a "crazy... even self-destructive" environment, and unless we understand what's normal and what's crazy, it'll be hard to figure out what's going on. The essential ingredients are a must be made, leading to one of three endings—join the system, destroy it, or commit some form of "suicide."

The theme of this story can be boiled down to "My life changed for having known someone else"</ There are three basic types, as outlined by Snyder: The Boy and His Dog gives us a "catalyst" character who enters the hero's life, changes him, then leaves. The movie ET </ is like this. And stories like Rain Man </ and Lethal Weapon </ give us a main character who changes drastically while the secondary character changes little or not at all. But, in general, the Buddy Love</ plot involves two characters who start off hating each other,

realize that they need each other (and work well together!), hate that</ even more, conflict conflict conflict, have one big final fight... and then "surrender their egos to win." Snyder includes in this category such gems as Wayne's World </, Thelma & Louise </, Butch Cassidy and the Sundance Kid </, and Finding Nemo </ . They all share the dynamic of two characters debating "important story issues."

"Anybody who's ever been shot down at the PTA or sneered at for bold thinking in a meeting at work," says Snyder, can identify with the great man who has to "deal with the likes of us little people." It's the same story, whether it's Gulliver's Travels </, Gladiator </, A Beautiful Mind </, X-Men </, Batman </, or Frankenstein </ . It's all "the plight of being misunderstood" and "gives flight to our greatest fantasies about our potential, while tempering those fantasies with a dose of reality." Compare Fish out of Water .

You ever wake up, look out your window, and realize that aliens are landing on your front lawn? This is the plot that covers how you handle it As a man thrust into a situation you're ill-equipped to deal with , you've got the audience's sympathy almost from the get-go. As you try to defeat the aliens, or escape from the killer robot , or save your wife from the terrorists , we'll be pulling for you. And you'll eventually triumph over the villains - though not through show of force

This goes a step beyond being The Everyman and moves into being the Village Idiot . He's the underdog, the overlooked, the ridiculous, and he's set against a Goliath of an enemy , often an "establishment" bad guy. But they underestimate him, and because he's The Fool , he's got the forces of luck and good nature on his side . He may not fully understand the danger he's in, but whatever his goal, he won't give up - and the villain doesn't stand a chance. This sort of plot pokes fun at things we take too seriously. Snyder proposes that "no establishment is too sacred to be skewered." After seeing Life Is Beautiful </, where a fool takes on The Holocaust , it seems his hypothesis won out. Also, there may be a Straight Man "who is in on the joke and can't believe the Fool is getting away with his ruse." (One example given: Lieutenant Dan in Forrest Gump </ .) This character sees the Fool for what he is - and, if he's "stupid enough to try to interfere," he'll "get the brunt of the slapstick." Compare Blithe Spirit . Sources: </ , by Blake Snyder. Michael Wiese Productions, 2007

It's dark. The guy we're watching is running out of light. The match is burning down. The candle's nearly done. His flashlight's flickering. In any case, darkness is imminent. These are scenes often played for dramatic tension. Directors use them in horror movies. Other times the lack of reliable lighting might be an inconvenience for the protagonist in a slapstick comedy for whom everything goes wrong. A hasty scramble to ignite a Hard-to-Light Fire may follow Ten-Second Flashlight is the "gameplay mechanic" version of this. Contrast with Blackout Basement , where fading light is a level's gimmick

in "Textual Poachers" includes a section about ten different ways a show can be rewritten as a fanfic Recontextualization</ - Filling in the gaps in broadcast material and providing additional

explanations for characters' conduct. See Fan Wank and Fix Fic Of course, these are the rules of fanfic. If you're a pro, just stick 'em on a rocket . If you are interested in more ideas about writing fanfiction see So You Want to Write a Fanfic

An entire ship, city, society, planet or galaxy that depends on a single piece of Phlebotinum to survive. This piece of phlebotinum can take any form: It may be the energy fuel for power generation or Faster-Than-Light Travel , a single all-purpose crop plant or breed of livestock , a Master Computer Or The Internet that sees all and plans everyone's day , a Hive Queen or Fisher King keeping the subjects in a Lotus-Eater Machine , a Genius Loci that maintains a Ghibli Hills Utopia , or a spiritual source of life . Or maybe it's just magically linked to every citizen , or to the land itself . In any case, no one can imagine living without it... or literally</ live without it. It may or may not be sentient , but the point is it's grown completely beyond the control of the people. Even in those cases where it's originally man-made Then it breaks down. Or disappears. Or becomes sentient and decides to Kill All Humans , play games with them , or worse, smother them with love . Or it absorbs all lifeforms into itself and becomes a God. And everyone who depended on it is now doomed. The technology that was used before the machine was invented has long since been forgotten, or the dying life source makes the citizens magically ill, or it's simply grown too strong and humanity has become too weak to fight back. This is especially common when the Phlebotinum is Powered by a Forsaken Child Being doomed isn't always a bad thing, though . Maybe the society simply Ascends to a Higher Plane of Existence , or discover The End of the World as We Know It means their world has simply changed</, not ended. They can survive just fine by giving up the wanton hedonism of their old existence. Of course, it may turn into an Inferred Holocaust if no one knows how to plow a field. Or maybe the good guys can use the energy source to conquer all the bad guys who depend on it Fantasy and Scifi like to use the Terminally Dependent Society in conjunction with a Fantastic Aesop about the dangers in abusing Aesoptinum . This is often paired by having it created by foolishly enthusiastic scientist , you can expect its noxious properties to manifest quickly . Interestingly, a Mad Scientist who designs a dependence causing device in order to take over the world will have it break down/addict him/escape his control as punishment for his pride In sci-fi, these days it's almost always a metaphor for the internet (especially in cyberpunk); or in older works, for computers in general (which, up until the 80's, it was generally assumed would always remain centralized and few in number). Electrical power and fossil fuels are other good candidates. In fantasy, it's generally a metaphor for limited fossil fuel. Generally, these aesops lead to No Blood for Phlebotinum . Expect two or three characters to escape and become the new Adam and Eve. Mind the inbreeding A lot of sci-fi stories predicted the internet, and many of them describe a society completely depending on it. One of the earliest is from 1909 . There's probably earlier ones out there, but in any case this trope is Older Than Television In horror stories, it can close every door , remove air supplies wherever it wants, create monsters or hallucinations , and it probably looks like a humanoid Eldritch Abomination spouting existentialist Author Filibuster once the heroes finally destroy it See also: No Ontological Inertia , Bee People , Keystone Army , Cosmic Keystone , The Magic Goes Away , Multipurpose Monocultured Crop . When people think that the object

in question can save them from some kind of disaster, it becomes a Chemical Messiah . Creating this set up is a common means for an Evil Overlord to try and seize power. Or the creator/controlled uses it to seize power

A character (either heroic, villainous, or both) which bears a large resemblance to one of the various models of Terminators </, whether the mechanical "robotic" versions of the creatures or the versions formed from Nanomachines or metallic liquid Pastiches of these characters typically have at least three of the following traits

Subtrope of Mechanical Lifeforms . Related to The Ahnold , which is more about the other roles of Arnold Schwarzenegger and other 1980s action stars Also, see the pages for expies to its fellow Dark Horse Comics opponents: Xenomorph Xerox and Predator Pastiche

Two warriors are sent back in time . One to change history , one to ensure it takes its established course . Or, at least, to prevent the first one from changing things. A game of cat and mouse ensues Can also be thought of as Evil Counterpart IN TIME! If it does not overlap with Set Right What Once Went Wrong , it will instead overlap with Make Wrong What Once Went Right : In this case, the historical event in question goes as it originally did in the "good" timeline, and is averted in the "bad" timeline Occasionally also occurs with dimensional travel with both the protagonist and the antagonist Trapped in Another World Named, of course, for the Terminator </ movies, wherein a robotic superassassin that looks like a real human is sent back in time to pre-emptively kill the future leader of the human resistance in a Robot War . Paradox schmaradox! Compare Scry vs. Scry , where it's oracles doing this with clairvoyance

People who try Terra Deforming see any area that is not housing humans, catering to humans, or creating resources for humans as wasted and views any effort to convert it into a human-usable space as a good cause. These changes often take place, or are predicted to take place, 20 Minutes into the Future . Because Science Marches On , these ideas have devolved into Zeerust and lead to the almost inevitable unfortunate implication that Humans Are the Real Monsters This is rarely shown as positive, even in cases where having humans leave Earth's environment behind gives it a chance to recover If taken to its extreme, can lead to a " City Planet ", one of the categories under Single-Biome Planet In modern science fiction, evil cultures are sometimes shown adopting this view (providing an opportunity for a Strawman Political), or else human society adopted it long ago and later suffered the consequences ; either way, it's an opportunity for a Green Aesop Compare Horde of Alien Locusts , in which the troublemakers are not Homo sapiens</ In episode 6 of Kimba the White Lion </ , Kimba visits the World's Fair and sees, among other things, plans to melt the frozen polar regions so the space will be habitable

In the original Magnus Robot Fighter </ comic, North Am was a city that covered most of the North American continent.

This is basically the policy of the government in Silent Running </, in which the last remaining forests are housed in satellites orbiting Earth. This of course annoys the Conservationist hero no end, resulting in the film's Green Aesop .

In one episode of Space: 1999 </ the Alphans make contact with Earth, where it's a couple of centuries later due to Relativity or something, and the entire population lives in domed cities because the outside environment is toxic. That exact phrase "Who needs nature" has become something of a Catchphrase , and you get the sense that nobody on Earth is too bothered about the loss of the ecosystem. For that matter, the writers don't seem too bothered either, making it something of an evaded aesop.

The first two verses of by Joni Mitchell .

Sly 2: Band of Thieves </ villain Jean Bison lived this trope. Having become a Human Popsicle during the Canadian Gold Rush and later thawed out due to Global Warming , his mindset is that of a nineteenth century golddigger, consequently wanting to dam every river and cut down every tree for... humanity to use.

When Europeans began exploring tropical Africa, they found that the Africans only cultivated small portions of the land. The Europeans seized all the "unused" land for farmland. Turns out that, because rainforest soil is so poor, it is necessary to leave it fallow most of the time. When the Europeans tried to farm all of it, it quickly depleted and could grow nothing.

A Speculative Fiction staple, the act of turning an otherwise human-unfriendly environment into an Earth-like, or "Terra-formed" planet. Narratively, this is done to give the cast a place to go outside the ship (off Earth) that won't require them dressing in Space Clothes constantly. Within a given setting, it's often done to showcase humanity's drive to explore and colonize new places for the famed trifecta of God, Gold and Glory. (Hey, at least one setting actively proselytizes, at gunpoint!) Often used to explain why All Planets Are Earth-Like . Terraforming itself is an actual area of study right now, as scientists try to design methods to create both self-contained environments (Bio-Domes being famous examples) and species that can survive in a hostile environment and improve it until it has a self-sustaining biosphere that can sustain humans. Easier said than done. Literally,</ because soft sci-fi settings tend to sneeze out terraforming efforts and planets like Martians with a cold. According to the NASA, terraforming Mars is simply not possible with our current technology (see press release). Harder scifi settings can construct entire books about the sciences and engineering involved, not to mention the political and social effort these huge undertakings would entail. Sometimes though, the planet is only harsh to humans, not other forms of life. The planet is plenty alive... too alive </, with man-eating plants , semi- to hyper-evolved sentients, and scores of other dangers. A few old sci-fi serials and pulps would have their heroes' effort designed to create a "domestication" of savage planets, much like The American West was "tamed" with all the attendant heartache and extinctions. Often applied to the Colonized Solar System . As seen in the trope picture, Mars is likely to be a popular target for any terraforming operation in both fiction and reality. It has one of the shortest

travel distances (second only to Venus), and is solid. Venus is also a popular candidate in fiction, being almost completely similar to Earth in terms of size and gravity, but it's second to Mars because warming something up is a lot easier than cooling it down , and unlike Mars, Venus's slow rotation would have to be dealt with. More recently, some shows turn this around by showcasing how terraforming an already-living world can be ecologically disastrous, or ethically questionable, or even weaponized; or just plain pisses off the near omnipotent residents . Some works even turn the concept inside-out, showing how aliens arrive on Earth and mess the ecology up so badly that the planet becomes barely habitable, if at all, for humans (with similarities to Global Warming). This is Hostile Terraforming , sometimes termed xenoforming or un-terraforming. Compare the Genesis Effect , for when an entire planet is actually created instead of just made livable.

This is a trope where the topology of an area of ground is altered by the conscious effort of some person or group This can happen on almost any scale, depending on the way it's made. A molehill isn't very impressive, though making one at the snap of a finger is pretty cool. As cities grow, the ground on which they're built is altered greatly, but because of all the buildings on top we are seldom really aware of how great the change is. Meanwhile, causing a mountain (explicitly volcanic or not) to rear out of a plain is just awesome, no matter how difficult or time-consuming it is The uses are manifold. First and foremost is tactics. Controlling the existence of passages, obstacles, and high ground for allies and enemies alike yields a supreme advantage in battle. It can also be helpful to prevent natural disasters, improve land arability, or facilitate transportation (by extending a river, say). It can be done to separate peoples or forces that shouldn't be so close together, or simply as a sign of one's power, to lord it over, literally, those less mighty The power to do this may be specific to a person, because of some elemental power over earth . But on the larger scales they're more likely to be a Physical God . Alternately, this will be done with the aid of some kind of Applied Phlebotinum , in which case anyone with access to the technology can do it But it can also be done in a more mundane way, with dynamite, earthmovers, and patience. This method is less evocative, but the end results are just as impressive. When thinking about an earthworks project (canals, dams, field-tilling, etc) for this trope, consider the magnificence of the creation or the end result For alteration of a whole planet's ecology, see Terraforming . For the manipulation of terrain for human settlements, see Terra Deforming . For defacement of monuments, see Rushmore Refacement . For defacement of the moon, see Deface of the Moon . A common small-scale form of this in real-life is an Artificial Riverbank . Can overlap with Regional Redecoration Because Tengen Toppa Gurren Lagann </ centers around drills , this naturally crops up. Mostly toward the end of the first arc, where Team Gurren, for example, traps the enemy battleship Dai-Gunzen in a huge pit. The resulting battle causes the nearby volcanos to (predictably) explode

Dark City

As it is a creation myth, this is seen in The Silmarillion </. In the beginning of the world, the Valar tried to shape it according to divine plan, while Melkor came along and undid their work. The end result was that the world was very gradually formed.

In the new Doctor Who </, Rose and the Ninth Doctor travel to the year Five Billion to see the Earth be engulfed by the sun. When Rose questions why Earth's continents haven't shifted, the Doctor explains that the continents did</ shift, but were simply moved back to maintain "classic" Earth.

This is common in creation myths and attributed to a creator god or, often a group working in tandem. The typical ways of creating the earth involve piling up dirt until it lies above the ocean (which is presumed to have always existed), and sculpting it out of primordial matter.

Dungeons & Dragons </

Age of Wonders </ has Level Terrain and Raise Terrain spells in the Earth school.

An episode of The Magic School Bus

Land reclamation has been used to create or extend landmasses into water for various reasons (usually to alleviate overpopulation). A famous example is the in the Netherlands, undertaken to fight the continuous sinking of that country. The resulting island is now, by a certain metric, the largest manmade thing in the world.

A sub trope of the Travelling Salesman Montage , specifically of the job interview iteration. However, that trope focuses on the interviewer, whereas in Terrible Interviewees Montage, the interviewees</ are the problem. They are all dreadfully unsuitable (and often slightly unhinged) leaving the poor interviewer traumatized to some degree. Expect him to say " Get Out! " and/or "Next!" a lot. This may be a job interview, a performance audition, speed-dating , or any number of situations The montage usually ends with someone perfect (or at least, not QUITE so horrible) for the role coming along and being hired. That, or the interviewer calling it a day, only to find the perfect person for the role outside of an interview situation a scene or two later. Alternatively, the interviewer already has someone who would fit the job just fine, but is trying to avoid hiring them for some personal reason. The series of awful interviewees is then a Rule of Drama plot device to force them to hire someone they don't want to have around The advent of speed dating provides an increasingly common premise for the appearance of this trope in any Romantic Comedy If the montage focuses on the interviewer's reactions, it may overlap with Bill... Bill... Junk... Bill... . Compare the Reality Show equivalent, Hopeless Auditionees

A pick-up line is a flirtatious one-line conversation starter, typically used to indicate romantic interest. Well-written pick-up lines are flirty, but not creepy. Delivered well, they can be a humorous way to introduce yourself while making your interests clear Poorly written pick-up lines are none of the above. They may be overly sexual or crude. They may lack nuance or humor. Or it may be an otherwise decent line, but delivered in an off-putting way Some people have a knack for saying the right thing to make a

good impression on someone who attracts their interest. Some people ... don't. The really inept ones spout worn-out cliches, crude come-ons, and regrettable remarks that are more likely to result in a disdainful eye-roll, a quick retreat (possibly with a blatantly lame excuse), or even a Megaton Punch than a romantic encounter. This is almost always Played for Laughs , so it's a Comedy Trope . Expect any pickup line involving an Incredibly Lame Pun to generate a corresponding Lame Pun Reaction See also Compliment Backfire , if an otherwise decent pick-up line is delivered poorly No Real Life Examples, Please! This is not for criticizing people's pick-up lines Examples have been sorted in alphabetical order

In fiction, many character groups possess someone whose (usually self-proclaimed) job is to provide the humor. To be the token goofball who cracks painfully lame jokes, and often annoys everyone But what if someone else comes along? Someone who also likes to play the clown, and can seemingly do it better? In this situation, the group's original clown usually won't be happy about it. They may even think the new guy is trying to "steal" their position as the group's funny guy, and set out to fight for their role. And thus, Hilarity Ensues The challenger to the comic relief's position may be a Foil of some kind, utilizing a different style of comedy (or simply a better delivery) that proves more popular with the group This can also apply to when the comic relief places such importance on their jokes and routines that they react with anger when they see someone else using them Compare with Cast Speciation and Dislikes the New Guy . See also Plucky Comic Relief , The Gadfly , and Class Clown . Not to be confused with Fighting Clown

Teenagers enjoy making out in cars. This is probably because they expect that no one will see them, and they won't see anyone. However, teenagers at Make-Out Point ironically tend to be the first witnesses of the alien invasion, or the zombie apocalypse, or the dead body at the bottom of the cliff . Quite often, they will be brutally murdered to show that the Monster of the Week means business. Why? Perhaps Rule of Funny . Perhaps they are considered Acceptable Targets . (Bonus if they get shot at .) This is something of a Dead Horse Trope nowadays, considering that it is parodied more than it is used. Plus, health and safety prevents such things happening nowadays, with traffic regulation orders enforcing road signs such as "No motor vehicles" at the locations. Truth in Television - the Department for Transport have a fair few enforced at cliff-faces. Nevertheless, as you'll see under Real Life, this has</ happened, as a few serial killers have made it their preferred modus operandi</ . Always involves a Make-Out Point and Auto Erotica , or at least teenagers contemplating such.

There is a common misconception that the use of fear and terror against one's enemies is a cowardly, evil method of fighting . Not to these characters . To them, targeting a foe's psyche is every bit as valid a tactic as more direct methods. To do this, they prey upon a villain's fears, attempting to break them, thus making them easy prey. Often times, said character is either an Anti-Hero or someone who's a more clear-cut hero but isn't particularly nice , who uses these tactics as a way of turning fear on those who prey upon the fearful . Can be a very effective weapon for those with a no-kill code . Alternatively, a hero could just as easily

exploit their frightening reputation as a means of scaring someone into submission. The terror hero typically tries to avoid direct combat unless no other options are present. In order to count, the use of fear and morale breaking must be a standard tactic rather than something used once in a while There are five types of this kind of hero The Cowl The type made famous by modern incarnations of Batman . Specializes in exploiting the primal fear of becoming prey. Uses a scary costume and ambush predator hunting tactics in the dark of night In terms of gameplay, characters who use fear are typically rogues or spell casters with a specialization in illusions. Warrior types are typically limited to the use of mean warrior therapy, intimidation, and dread. Note also that any of the other types can eventually evolve into The Dreaded if given enough time and myth-making Associated with Bad Powers, Good People . A common tactic when Dark Is Not Evil . Related to In-Universe Nightmare Fuel for obvious reasons. Often causes a Mook Horror Show . Can lead to Moral Dissonance if used poorly. Compare and contrast with the Horrifying Hero , who's horrifying to look at as opposed to the Terror Hero who is typically normal-looking but uses tactics designed to turn their foes into blubbering, terrified wrecks. Related to the Guile Hero who uses trickery, cunning, and misdirection to defeat his foes. Heroic counterpart to The Dreaded . The Cowl is a sub-trope dealing with a specific scare tactic

Terrorism is defined by The Other Wiki as "the use of violence, or threatened use of violence, in order to achieve a political, religious, or ideological aim". Some things associated with terrorism include murders, bombings, shootings, hostage-taking, and other threats. There are numerous real-world terrorist groups that make an appearance in fiction and countless fictional ones. They are usually portrayed as villainous While terrorism has appeared in fiction for years, the 9/11 attacks made terrorists, specifically the Islamic Fundamentalist type, as the main villains in Hollywood movies, replacing the Dirty Communists of the Cold War Compare Rebel Tropes , The Only Righteous Index of Fanatics! , and Organized Crime Tropes for another kind of terrorists</

Terrorists in action movies generally represent no organisation, movement, religious sect, or political tendency known to the real world. Even if they are identified with a real organisation (the IRA , the Russian Mafia , Basque separatists, whoever), they will be described as a Renegade Splinter Faction , not the parent organisation. In many cases, they actually represent no identifiable cause at all, beyond making things go BOOM</ Apparently, terrorists are willing to kill, maim, torture — not to mention putting their own lives at risk — merely For the Evulz . These can actually be very dangerous opponents, being ruthless, impossible to predict, and impossible to negotiate with, and generally occupying the place once held by demons throughout world mythology Obviously, this is not a realistic representation of how terrorism actually works. Terrorism, by its definition, is intended to further some ideology or goal. Rather than engaging in random violence, terrorists generally pick their targets based on symbolic or strategic value. Rather than wearing their evil on their sleeves, terrorists generally believe they're the good guys . All of these things are often ignored in media, especially in

propaganda Not only is this done in order to not insult anybody's religion or politics (or earn the ire of people with a known tendency to blow up people they don't like), in many cases, a cause is simply irrelevant to the plot , the macho Action Hero just needs a plausible excuse to kick/shoot at things without a second thought. Moreover, any cause, if presented, runs the risk of actually making sense (if only to some people), maybe even more sense than the hero's animalistic urge to Kill Them All with extreme prejudice They are related to and might occasionally be the literary descendant of Bomb-Throwing Anarchists , who were the main type of terrorism in late 19th century and early 20th-century literature, especially short stories. Terrorism by anarchists was, in real life, mainly committed by Frenchmen, such as Ravachol, possibly explaining why anarchists seem to have mainly been used as villains by British writers. Anarchists however have political motives then and now (absent a few like Illegalists that might fall into this category however, saying crime itself</ was the motive) In addition, these may be confused with terrorist groups that are just plain silly . A real-life example is Comité Régional d'Action Viticole, an organization made up of French wine growers who don't like foreign competition. Not to be confused with Martyr Without a Cause , which is for characters who look for any excuse to commit a Heroic Sacrifice

Writers tend to assume that for some reason most viewers will assume that the protagonist is a guy by default . So to make absolutely sure there's no Viewer Gender Confusion , developers will assign Tertiary Sexual Characteristics to the female characters, and sometimes the male characters as well. The male characteristics tend to be less obvious. Note that many, many animals already have distinct sex-specific characteristics, though these are almost guaranteed to be totally ignored in designing fictional animal characters. (They are</ likely to remember that male lions are the only ones with manes, though.) The writers either didn't do their research , which can end up with Animal Gender-Bender , or assumed the viewers wouldn't know what they are . For animal characters, this is caused by the assumption that the only way to convey gender in such characters is through gender stereotypes in design. Feminizing accessories and traits include: A bow, or, less commonly, a flower of femininity . Masculinizing accessories and traits are naturally far more generic: A baseball cap or top hat. Occasionally, the only difference between a boy and a girl will be the location of the bow If it's a bowtie, it's a boy, and if it's a hairbow, it's a girl. (The bow itself may even be identical.) Human girl characters are sometimes depicted wearing bows on their head, but this is not as pervasive as depicting a female animal character this way. On the positive side, these gender identifiers are pervasive enough to be considered shorthand for viewers who may be hearing impaired. On the negative side, they are pervasive enough to lead to Viewer Gender Confusion for male characters with stereotypically "girly" traits , including many a Bishōnen . Remember though that Tropes Are Tools and that use of these characteristics aren't bad in and of themselves and helps dispel Viewer Gender Confusion in a quick and easily understood manner. A Super-Trope to: Compare Secondary Sexual Characteristics , Group-Identifying Feature , and Non-Mammal Mammaries . For more drastic and often bizarre differences between the sexes, see Bizarre Sexual Dimorphism .

A list of tropes that prove one's worth and competency.

A man has experienced a sensation that something isn't quite right, and the first order of business is to check that his genitals are still intact before anything else A common response to a Near-Miss Groin Attack Not to be confused with testing whether someone else has testes. Compare Man, I Feel Like a Woman

Sometimes, a writer doesn't</ want Protection from Editors . Perhaps they have enough self-awareness to realise that they are as capable of bad writing as anyone else. Or maybe they just see the value in their work being appraised by a fresh set of eyes. Either way, they view the editor's role as a valuable and worthwhile one. But how to be sure the editor is doing their job? Put something in just for them to catch. It could be a plot hole, something that doesn't work, or that the editors won't let past. The point is that the writer has no intention of it being in the final product. They're just testing the editor. Compare Censor Decoy , for when the offending material is included to distract from something the writer actually wants to include. Also see Getting Crap Past the Radar for moments where editors fail the test and unwittingly allow more risque content through the publishing process.

So, you're suffering from Unrequited Love , or you don't know you're in love with your best friend , and you're on a date with someone else. Suddenly, a thought jumps to your mind "let's do that thing I love to do with my best friend/ Unrequited Love ." You know the thing, that quirky game or activity that you participate in with that special someone. Related to, and sometimes involves, the Test Kiss This is a character's way of testing the relationship to see if it can work, even if they don't know it yet. If the date fails this test (which they usually do) they are never seen again Commonly used in romantic comedies or teen dramas, this trope is usually a quick and easy way to show that a person cares very deeply for their best friend/ Unrequited Love . It can also be used as a Love Epiphany for one or both characters A common variation of this trope is for the date involve playing a game in a way that is different than the normal way. Such as playing poker with Oreos instead of clay chips. Normally this will end with the date saying "this is stupid", or, "why can't we just do something normal?" Mysterious Girlfriend X </ has Tsubaki almost try this with his "ritual" he and his girlfriend Urabe do with his previous crush, Hayakawa. He only really blurted it out out of unresolved feelings and it does somewhat lead to a small arc

In </ , Hori attempts this several times with Kashima, and is repeatedly thwarted by her aloof and carefree nature. He is finally confirmed of her feelings not by her, but Mikoshiba of all people. Shows up in the film Made of Honor </ , it is used as one of the clues that the male lead is in love with his best friend:

Appears in Zoey 101 </ , while Chase is on a date with Lola.

In the primeval world of Six Ages </, several cultures dictate that the guy has to prove himself to his prospective wife's clan...even if she loves him back. You see , marriages are as much a business transaction as they are relationships between individuals, and nobody wants to tie themselves to a son-in-law who's poor/cowardly/disloyal.

Worthiness is usually shown by a generous , a display of battle prowess, or positive omens from the gods. In the case of Redalda, a heroine of supreme importance to the world, her clan requires before they will give her up.

A purely platonic version happens on Arthur </ when best friends Francine and Muffy have a fight and break up. Muffy auditions a long list of her other friends and acquaintances for the role of "best friend", but when she finally settles on a candidate, she keeps suggesting things she would do with Francine, only for Binky to be completely uninterested.

The Spear Counterpart to the Estrogen Brigade , the Testosterone Brigade is an enclave of male fans within a traditionally female-dominated (or at least gender-neutral) fandom . While they may dislike the frequency of the Female Gaze or the presence of Mr. Fanservice characters, it's very likely that they were pulled into the series in the first place because of one or more female characters they find pleasing to the eye. Depending on the series, they may view it as a Guilty Pleasure due to the number of female fans. Occasionally, as with an Estrogen Brigade , both sides will butt heads over largely superficial issues , with buckets of opposite-sex awkwardness, which can get defensive. It should also be noted that not all male fans within such a fandom are necessarily of the Testosterone Brigade A Testosterone Brigade is easily attracted by hints of Les Yay or by fanservice from main characters. See also Multiple Demographic Appeal , Guilty Pleasure , Best Known for the Fanservice . When the creators of a work acknowledge this demographic and make a "girly" show that's actually aimed at men, then you've got a Jiggle Show or the trope What Do You Mean, It's Not for Little Girls?

This trope is in play when a work or character is loaded with such absurd/extreme examples of "masculine" stereotypes that you pass into parody. It is, simply, badass made silly. Works with testosterone poisoning are often intentional parodies; characters can contract it accidentally far more easily. While the trope Rated M for Manly employs many motifs, it is first and foremost a celebratory trope played straight: Testosterone Poisoning is about works that parody manliness, or play it for laughs, by taking it to the extreme. Some works which start out as Rated M for Manly can cross over into Testosterone Poisoning territory later; two fairly reliable indicators that it's got a case of Testosterone Poisoning are the presence of the phrase "Are you man enough for...", or something in a similar vein; and a direct statement that the product or work is "not for women". The Darwin Awards website uses the term to describe people who died attempting to pull off absurdly masculine stunts — the sort of things that would end up on this trope page. It was even used in the title for one death where a man lopped his own head off with a chainsaw in an attempt to "prove" to his friend that he was tougher. Compare with Not to be confused with the actual act of putting oneself in harm's way to prove one's manliness: that one is covered by Macho Masochism (although overlap is common). The phrase was possibly coined by Alan Alda for a book on feminism, and popularized in 1984 by Dr. Helen Caldicott, a physician strongly opposed to nuclear weapons. In her book Missile Envy</ ,

she speculates that the arms race is partly fueled by this. Contrast Tastes Like Diabetes . Macho Latino is a subtrope. Spacebattles.com's Let's Play series has featured BLAST HARDCHEESE, name taken from MST3K </ . He has killed men simply by flexing his biceps until their heads explode. Chuck Norris Facts is all about this trope with playing up Chuck Norris as a Memetic Badass . And also heavily robbing from Bill Brasky .

Modern academic textbooks represent a curious duality. On the one hand, people expect them to be a clear, accurate and legitimate explication of the topics contained therein. It is expected that they are written by intelligent scholars with a clear grasp of the information, and the expected seriousness of the learning environment tends to lend an air of sobriety to the proceedings On the other hand, many intelligent people are snarky goofs , and one of the main target audiences for these books is the snarky goofs of tomorrow It is a bit of textbook prose, often appearing in the homework problems, that, while being entirely legitimate, suggests that the author doesn't mind a little breeziness in the discussion of the material, or at least recognizes the difficulty of immediate application of some of the concepts involved A variant of this trope involves jokes sneaked into original research papers Discovering one of these is almost guaranteed hilarity, and often subject to Memetic Mutation inside the classroom Related to Edutainment Show and Easter Eggs Problems will be left unanswered as an exercise for the reader

Tropes that occur in media relating to how letters and symbols appear, from Fonts to title text. Text Formatting Rules for this site are here See also: Para Text all lowercase letters : the letters of an object or person are intentionally lowercase

A list of media originating in Thailand .

Alice is perfectly fine. She's walking along, enjoying herself. Out of nowhere, Bob bumps into her and, by sheer accident (we think), grabs her boob. Alice may forgive Bob, but at the same time she could resent him (even hate him) or use this as an opportunity for blackmail. More often than not, however, she will hit him The Accidental Pervert is contractually obligated to have this happen at least once, if not Once per Episode Subtrope of Suggestive Collision . Somewhat related to Funbag Airbag . See also Not What It Looks Like . Compare and contrast with Skinship Grope

Intelligences created by or dependent on humans, especially robots, frequently view their creators or hosts as deities This often leads to variations on "Thank God" or "For heaven's sake" with "creator" substituted, as a science-fiction variation of Oh My Gods! Compare with Physical God , where the creations' worship is because the creator(s) are</ gods, Living Toys , where the characters are usually inexplicably aware and tend to rely on their owners for meaning in their lives, and Deity of Human Origin , where the act of creating AIs is what make the humans divine. Thank The Maker adherents consider their creators benevolent or at least generally benign See also Robot Religion and Religious Robot Not to be confused with The Maker , although there's an obvious overlap

A character says something innocuous, but it can easily be misconstrued as something really dirty. Different from Innocent Innuendo in that the audience isn't misled—it's just the character isn't filtering their thoughts properly. Other, more dirty-minded characters may make fun of the speaker or chime in with " That's What She Said !" More commonly, the speaker catches herself and, after a beat , acknowledges it with the title phrase or something to the same effect like, "You know, now that I'm saying this out loud, I realize how ridiculous/idiotic/wrong it actually sounds". Several tropes can be used as a result of the things that come out wrong. For example, if a character says something that unintentionally includes Ho Yay in it, then that character often gets Mistaken for Gay as a result. A related phenomenon is this sequence: Verbal Backspace may be employed to select a more appropriate phrase. May degenerate into Digging Yourself Deeper or Freudian Slippery Slope . See also Freudian Slip , Open Mouth, Insert Foot , Lampshaded Double Entendre (which this is a subtrope of, specifically one where the same speaker is also doing the lampshading) and Ambiguous Syntax . Compare Accidental Innuendo , where this isn't intentional on the writer's part. Related to It Seemed Like a Good Idea at the Time in a non-innuendo way, where an idea sounded good in your head but turns out to be terrible out loud. Not to be confused with Came Back Wrong . Basically the verbal version of Not What It Looks Like .

This trope is when a character flatly accuses another of outright This lying. This can be phrased in different ways: "You lie," This "That's a lie," "You're lying", "You are telling a lie," This "You're a lying liar that lies," etc is usually the response This to a trope from the Family Twists Index . This can happen This either while the receiver is speaking or when he is not This speaking. Occurs when a character speaks Blatant Lies and This another character knows that he is lying. Often Played for This Drama . Common in trial scenes when some witness has just This attributed an incriminating remark to another person present. This See also Suspiciously Specific Denial and Villains Never Lie . This Contrast I Lied

A Stock Phrase uttered by someone who's been completely subsumed by their alter ego . The idea is that they have completely abandoned their past lives to the point where they wouldn't even recognize themselves. It's almost always a major turning point for the character, though there are a few cases where it merely emphasizes what the audience has already observed. If a genuine hero utters it (though they generally use one of the variations below), it's because their past life was naive, evil, or selfish, and it's a sign that they've overcome their problems in the beginning and are ready to ascend to the grand finale. If an Anti-Hero utters it, it's to emphasize their dark (or at least rebellious) nature. If a villain utters it to another villain, it's to show that they're Eviler Than Thou . Finally, if a villain utters it to a hero (particularly if they've done a Face–Heel Turn , though usually their past life is relegated to Backstory), it determines their fate: If they speak this line with contempt, then they're irredeemable and will die; if they speak it with regret, then The Power of Friendship will prove them wrong and... well, they'll probably die anyway , but they'll feel better about it. Occasionally, mentioning the old life may be a Berserk Button . If a Split Personality is involved, then it's a Split-Personality Takeover . Very common when somebody is Becoming

the Mask . If they ever purposefully mention their previous life, they will remark that No Doubt the Years Have Changed Me . Commonly, these characters Used to Be a Sweet Kid . Usually this is just speaking figuratively, but Death of Personality , Demonic Possession and More Than Mind Control can make it literal. Variations: It may be inverted when the character gives up his second identity, and embraces his basic civilian life. The quote then is something like "I'm not Captain Righteous anymore, I'm just Joe". May overlap with Artifact Alias . Compare Demoted Memories , Do Not Call Me "Paul" , and Third-Person Person . Don't confuse with He's Dead, Jim ; in that case, someone is quite literally deceased.

Played straight ater

That One Boss is, well, that one boss that falls victim to poor Thplaytesting or was thrown in by especially cruel developers. ThYou're leveling up normally, plowing through every battle, until Thyou reach this particular battle and suddenly meet a nasty road Thblock. Eventually, you Rage Quit , or you go on the Internet Thlooking for assistance . In the event that you stop by the game's Thmessage board, lo and behold, everyone else is having the exact Thsame problem, with entire topics asking "how do I beat That One ThBoss?". Walkthroughs usually list the worst offenders as " the Thhardest boss in the game ", and eventually, such a beast receives Tha reputation for being just that freaking hard . A few of them Thmay be awesome , but that still doesn't mean you won't be chewing Thon the controller in frustration despite it ey are sometimes Thcalled the "brick wall boss", for obvious reasons

Because there are so many examples of this trope, they have been categorized by genre for your viewing convenience. Compare with the non-video game equivalent of this trope, Invincible Villain . Atlus ... no, this isn't</. Yes, this one company made so many</ games with sadistically hard bosses that it needs its own section </ !

Minecraft </ :

A veteran detective is haunted by that case they could never solve (or perhaps it was solved officially, but the guy thinks something isn't right) and it haunts them to this day. Nearly always a serial killer (or at least a very gruesome murder) and/or personal . Even when they are officially off the clock, they will still work the case on their "free" time, because it is that important to them. If they are told to leave the case alone they may get fired over it , but still continue even when they are not a cop any more Sub-Trope of My Greatest Failure . Compare Revisiting the Cold Case Truth in Television : A number of homicide detectives have solved cold cases that were haunting them or are haunted by the still unsolved ones. Generally murdered children cases

There are times in video games where, instead of a boss becoming infamous for being frustrating and/or difficult, a level does. It could be that it is infested with Goddamned Bats or Demonic Spiders , is really long , lacks items or checkpoints , is home to That One Boss , is home to That One Puzzle (or at least one with a Guide Dang It!), has you trying to outrun an Advancing Wall of

Doom or otherwise sticks you with auto scrolling , tasks you with keeping a NPC without any basic survival instincts alive , has a different mechanic in play (often from a level-specific Unexpected Gameplay Change , such as a Stealth-Based Mission or Action-Based Mission), or is The Maze level. If you experience frustration and anger at a level that may have one or more of these things, congratulations: you're playing That One Level Sometimes, these levels are polarizing; a portion of players find it infuriatingly hard, while others don't have much of a problem with it. This can be a matter of general skill, familiarity with a particular control scheme or just plain luck, depending on the level. Game forums are literally packed with examples of this, which often results in discussions about said levels turning into flame wars Although it isn't a necessary requirement, it should be noted that many of these levels are hard on all difficulty settings. If a level is difficult on the highest difficult setting, it's to be expected. Chances are that one level is almost as infuriating on easy as it is on Harder Than Hard These levels might not always have a sign at the start that says " Welcome to Hell! ," but they might as well Escort Missions , Slippy Slidey Ice Worlds , Under the Sea and Down the Drain -esque stages tend be more receptive to becoming these levels. For an optional level that is intentionally difficult, see Brutal Bonus Level See also That One Boss and That One Sidequest . Compare Ridiculously Difficult Route . Often contains the Last Lousy Point . Contrast Breather Level Please note that there is an emphasis on the "One" in "That One Level". If every, or at least most levels in the game are difficult, then you have Nintendo Hard . The level has to stand out in difficulty compared to the other ones in the game to qualify as an example

Card Game Digging Game Edutainment Game The line of Junior Arcades by Humongous Entertainment typically had at least one instance. Full Motion Video Match-Three Game Mecha Game Multiplayer Online Battle Arena Mini Game Game Star Wars Expanded Universe Stealth-Based Game Survival Horror

Tower Defence Games Visual Novel

Tabletop Game

When something big, loud, shaky, or forceful happens, we may hear car alarms going off outside or offscreen to indicate the magnitude of this event. If it's really big, it'll set off all the car alarms in the area Similar to Disturbed Doves , but not (usually) That Poor Cat Loud sounds can indeed shake a car enough to set off the alarm, making this Truth in Television Not to be confused with extreme damage to a car , although sometimes they overlap where the extreme damage also causes the car alarm to go off Not to be confused with The Alleged Car , which is a car with unreliable building qualities or bad safety features

</ Every time a vehicle crashes, trash cans fall over, something blows up , or any chaos occurs off-screen , after the sounds of breaking glass and other Stock Sound Effects , we hear some poor cat yowl, in pain or perhaps just startled. Just like that poor Wilhelm fellow of Stock Scream fame, this unfortunate feline is everywhere</ , attracting disaster and voicing its unhappiness even in areas where a cat couldn't or wouldn't be present. The most used cat sound

is Disc 2, Track 26 from The Hollywood Edge's "Premiere Edition 1" released in 1990 labeled "Cats, Two; Angry Yowls During Cat Fight, Close Perspective" or "Angry Cat Yowls; Cat Fight". Very much an Undead Horse Trope . Often falls under Dude, Not Funny! . On the other hand, depending on Values Dissonance , if you are a sadistic animal hater . Cat might be a tragic version of Cute, but Cacophonic . May also be related to The Cat Came Back , considering it sounds like the same cat each and every time. Avoids Offscreen Inertia by occurring out of the audience's line of sight , no matter how tortured that poor cat may sound, and in several cases, because it's just funny to imagine how the poor kitty got hurt or startled rather than show it. Compare with Kick the Dog , which on rare occasion overlaps. Should not be confused with That Poor Car and That Poor Plant , which are entirely different tropes. Also not to be confused with the movie That Darn Cat! </, or with Cat Scare (which is when the cat is the scarer instead of the scare-ee). See also Cat Concerto , where the cat's yowling is a musical performance on the back fence. While it should not be confused with Cat Fight , someone is sure to punctuate such a showdown with the signature yowl.

Need to show how the Phlebotinum du Jour affects living things, but the character isn't evil enough to test it on an animal ? Well, plants are fair game. Therefore, plants tend to get mistreated a lot in fiction. Are you a scientist who wants to test your new mystery formula ? Just take an eyedropper and drop a few drops in the soil of your philodendron. If it's a miracle cure , the plant will go from wilting to flourishing — and possibly to horribly mutated . If it's deadly poison, as it so often is, it will go from healthy and green to a sad pile of ashen leaves and shriveled vines. (Do note: for added drama, the plant will often wait to transform until you're sure that nothing is going to happen and leave the lab disappointed Then</ it will probably turn into a monster and start wreaking havoc.) Do you suspect that your friend is infected with The Virus or some sort of radioactivity? Do you want to make sure it's still safe to go near him? Have him go near a potted ficus. If your friend is dangerous, the tree will instantly shrivel and die, all its leaves falling off at once. Is your friend a Lethal Chef , but you don't want to hurt their feelings? Do you just want to make sure their cooking is safe to eat? When they're not looking, dump the -er- food into the dracaena's pot. The plant will probably curl its leaves and die at once from the toxic substance meant to be comestible. Good thing you</ didn't eat it. It works with drinks, too. Incidentally, none of these tests would work so well in real life. If you're paying attention at all, you may have noticed that humans and plants are very different living things . It should be noted that most of the plants you see out your window today are the ones that are the most</ resistant to disease and dangerous substances. Houseplants are often specifically marketed as air purifiers, meaning that they are also very resilient to the kinds of things that would easily make an animal sick. And we haven't even touched how long it could take for the substance in question to be absorbed into the soil, and then absorbed from the soil into the plant, and then</ for the substance to actually start killing the plant. Vegetation is also apparently an excellent barometer for magical evilness. Has your character gained incredible nature-based powers and is Friend to All Living Things ? Flowers and plants will sprout wherever she walks . Meanwhile, the Enemy to All Living Things is likely to be surrounded by dead trees and blackened grass . Despite what the name implies, has nothing to

do with either That Poor Cat or That Poor Car . Also please refrain from adding examples where plants are harmed by situations other than those described above. A Sister Trope to Ill-Fated Flowerbed . Contrast Soulful Plant Story , where bad things happening to plants are taken very seriously.

A Stock Phrase : Someone in command orders a subordinate to do something, and adds, "That's an order." It may be to overrule objection, such as More Hero Than Thou , or to show seriousness. It may be worded differently (for example: "I wasn't asking"), but it's always to make clear that he's in charge and what he says goes. Often used in jest, when the commander orders the friendly subordinates to do something extremely mundane, like asking for a coffee, or telling them to shut up, and jokingly adds, "That's an order." May also be worded as "Do you need me to make that an order?" Often paired with a With Due Respect comeback on the subordinate's part. It may lead to Just Following Orders later on if the subordinate is subsequently asked to justify his actions to others. Not to be confused with That Wasn't a Request , which is said by people who have no official command over others but, for the moment, are ordering them around anyway and are about to use force to back up their demand. Can be Truth in Television in the military, but somewhat rare. This is because technically, anything</ a lower ranking person is told to do is considered an order, and both people know it.

The visceral joy one gets from ruthlessly smashing or otherwise destroying some inanimate object, especially if said object (or whatever it represents) has caused you a great deal of annoyance. Implements favored for this kind of catharsis include, but are not limited to: Baseball Bats , Sledgehammers , Chainsaws , Woodchippers, Heavy Construction Equipment, Clubs, and in some cases High Explosives. As a general rule, the more over the top the means of destruction, the greater the satisfaction For obvious reasons, this is rarely something you can do in real life without legal consequences at the least Sister trope of Agitated Item Stomping . Ring Ring Crunch is a subtrope. Compare Percussive Therapy when the item being smashed was unrelated to the cause of the rage. Die, Chair, Die! may also be related to this when used as a Catharsis Factor . Not to be confused with Sickening "Crunch!" , which involves living beings instead

Characters traveling in an unfamiliar area choose to stop at a landmark. They discover that it's not terrain, it's something,</ and much bigger than that something has any right to be. The specific something can vary considerably, but it's typically either a living entity, its remains, or something created by living entities, such as a building, a vehicle or the like. Often accompanied by a Reveal Shot Common Subtropes of this trope include characters finding out that the giant crater is actually a giant footprint , that an asteroid, moon, planet or other astronomical body is a gigantic spaceship or station, that the asteroid cave you're hiding in is a giant space slug , or that a mountain, hill, or island is a sleeping giant / troll / turtle / earth elemental . Sometimes, the elephant is</ the room, metaphorically, and entire world you're on is a giant turtle . Or maybe it's still just the kind of place you thought it was, but alive For ships/stations that may literally be confused with moons

(or planets)</, see Planet Spaceship . See also Big Dumb Object and Dyson Sphere . If it's a real-world location, may overlap with Weaponized Landmark . Whatever the actual object turns out to be the discovery of it can often lead to an Oh, Crap! moment. Contrast No Mere Windmill , Genius Loci

A corruption or misuse of a word or phrase by people who have obviously heard it used, but understand the concept very loosely and have no idea of its origins. This can be Played for Laughs , with the comedy coming from the audience understanding the original significance of the word. Alternatively, the original term might be very significant, powerful or evil but its misuse is incongruously trivial. Finally, it might be insignificant and simply used to set a scene as being related to the real world, or as a throwaway gag when the setting is clearly alien Often used in Future Imperfect settings, where the borrowers of the term are the descendants of the originators The Nightmare Before Christmas </ has Sandy Claws

In the Planet of the Apes (2001) LS" sign on the ship.

In the Harry Potter </ series, the phrase Avada Kedavra</ is the incantation to possibly the most powerful curse known to the wizarding world. Muggles, on the other hand, know Abra Kadabra</ as a nonsense "magic word" used by stage magicians. It is implied that the sheer power of the word has allowed it to filter through The Masquerade .

In the Star Trek: The Original Series </ episode "The Omega Glory", the inhabitants of an inexplicably Earthlike planet retain several of the founding documents of the United States of America, but mispronounce the words — for example, they read the Preamble to the U.S. Constitution as "Eee Plebnista, norcom, forcom, perfectumum..." — and blindly venerate the documents as "holy" without understanding what they mean.

The Fallout </ games have several settlements whose names are apparently derived from corrupted names and degraded signage:

In an Intragalactic </ strip, Captain Benjamin tells the story behind Joelmas , which is a corruption of the plot of Mystery Science Theater 3000 </ .

Futurama colliding with each other. The name illicits a chuckle from Fry whenever it's mentioned.

, the Kenyan superhero/ Memetic Badass was born from one of these. His name comes from a mispronunciation of Dirty Harry's famous phrase: "Go ahead, make my day!</ "

In the middle of a wacky plot, Bob gets knocked out. When he awakens, he tells Alice that he dreamed the wacky plot that just happened. He will then be in for a nasty shock when he discovers that it wasn't</ a dream and typically respond in a comedically over-the-top fashion Will generally be Played for Laughs , but serious examples aren't uncommon. Equally, the realization that it wasn’t a dream could be negative or positive

In a certain context, it sometimes overlaps with Bedmate Reveal , regardless of the nature of the situation Not to be confused with Or Was It a Dream? , which is when it's left ambiguous whether it was a dream, or In the Dreaming Stage of Grief , which is when a character copes by pretending it was a dream

When a lawyer goes: Your Honor, I Object!</ or Objection, Your Honor!</, one would expect them to follow that up with a devastatingly accurate reason, which could either turn the tides of the court, or shut the other side down, hard. But when Courtroom Antics are involved, objections are usually followed by complete non-reasons like: "I object on the grounds that it sucks for me" or "I object for it being objectionable !" Most would expect that such a nonsensical move would get the lawyer doing it a lot of flak, and have the objection overruled, and most of the time that is how it will go down. But one can take this up to eleven by having the objection somehow sustained</ . Objections are used by lawyers in court when they feel the opposing lawyer has asked a witness an improper question that the court should not hear the answer to. In comedies, expect the phrase to be used by someone who isn't a lawyer at all, believing it to be something you say anytime you disagree with someone. Can be a case of I Always Wanted to Say That . Intentionally excessive use of this (see Real Life below) can be a type of Chewbacca Defense . See also Disregard That Statement .

A character refuses something that is offered to him or may even destroy said thing. Afterwards, he learns that the item was his reward for a recent task he successfully or exceptionally completed. In some cases, the spurned/destroyed item was meant as a gift (e.g. birthday, wedding, Valentine's Day) Usually meant as An Aesop or could also be Laser-Guided Karma if the character in question is a Jerkass or arrogant . Also may be Played for Laughs May overlap with My New Gift Is Lame and Vandalism Backfire . Compare Undesirable Prize , which the character knows is meant for them but may actually be tempted to refuse or destroy, and Off the Table , when there's an attempt to claim the gift but it will not be given after the initial refusal A car commercial has the guy sneak into his garage at night at destroy the car with a sledgehammer so his wife will be forced to agree to buy a new one, then slips into bed. The next morning, his wife tells him that he was right after all, and that she'd traded in the car the previous day, the new one is in the garage..

In Burn Up! Excess </, a rich young man, whom the Amazon Brigade assisted, offered one of the ladies 500 acres of desert land. She refused it, because it's just a pile of sand. Then she found out about the oil, but he had already left.

The 1932 Laurel and Hardy short The Music Box </ plays this trope to a tee. While trying to get a player piano delivered, the duo angers Professor Theodor Von Schwarzenhoffen. He turns up at the end of the short and destroys the player piano in a fit of rage - only to learn from his wife that it was intended as his present.

A story by H. G. Wells called "The Lost Inheritance" invokes this trope. An eccentric and wealthy uncle writes dull literature and his nephew, Ted, covets his uncle's wealth. As his uncle is dying, he gives Ted a book to read. Ted lies to his uncle about having read it

(he never does) and the uncle dies. The uncle's will is never found however, but an early will is located. It gives the uncle's fortune to a distant relative who squanders it quickly. Years later, Ted stumbles across that book his uncle gave him and opens it up... only to find the true will that would have given him everything !

One episode of Lois & Clark </ had Lois being harassed by a guy known as the Prankster. At the end she receives a large bouquet of roses which she assumes is another prank and throws it in the trash and pours coffee all over them, then...

One famous legend involves a boyfriend/husband thinking his lover is cheating on him and seeing a brand new car parked outside. Thinking the car belongs to the adulterer, he has cement poured into the car to ruin it. His shocked wife/girlfriend comes out from the house and reveals that car was a gift for him.

In the season 3 of Le Donjon de Naheulbeuk </, after killing the Big Bad , the Dwarf is looting his place for treasure and rips some useless paper in his search... Which turn out to be bearer bonds.

The Raccoons and not only ends up losing on the game show but also refusing the envelope that the tax agent had...which turned out to be a considerable tax refund !

Why did you come to this page? You're not allowed here! And don't click on any of these tropes! They are all forbidden for a reason! Do you not hear me? These tropes are not to be touched! Even one of them can put you in grave danger! Are you comparing this to Censorship Tropes , Did You Just Index Cthulhu? , Lovecraftian Tropes , There Are No Indexes , or Tropes About Taboos ? The 50 Greatest Cartoons is a list compiled in 1994 by animation historian Jerry Beck of Cartoon Brew , along with many others in the animation field. The criteria were that each cartoon be under 30 minutes long and cel animated (with Gertie the Dinosaur </ being the sole exception, since it predates cels). Tellingly, 43 of the shorts are from The Golden Age of Animation with two shorts from The Silent Age of Animation , two shorts from The Dark Age of Animation , and three shorts from The Renaissance Age of Animation ; 17 of those are from the Warner Bros. studio (a full fifth of the list having been directed by Chuck Jones) Compare to The 100 Greatest Looney Tunes </ , which shares many of the Warner Bros. cartoons featured on this list

A Sub-Trope of Gag Dub and a type of Crack Fic , that deals specifically with shortening works of fiction, and making fun of it . The first of these was Yu-Gi-Oh! The Abridged Series </, which posted its first episode on YouTube in 2006 — however, the idea of abridging works for fun started way earlier , dating back to The Complete Works of William Shakespeare (abridged) </ (a play first performed in 1987), as well as Adobe Flash cartoons in the late 1990s and early 2000s. Other YouTubers who liked Yu-Gi-Oh! Abridged</ began abridging other popular series. Originally, abridging was simply a Follow the Leader , but over the years has become a genre in itself . In the mid-2010s, a sub-genre based on " MENT " emerged. Most are on YouTube , but some can be found elsewhere, like Also be aware that different episodes of certain abridged series may be scattered

across different users. Generally, the existence of most of these fall into a legal grey area, at least as far as US law is concerned While all of them are generally parodies, which are legal as per the Supreme Court decision in This has led to YouTube pulling abridged series such as OPA Studios, Sailor Moon Abridged </ and Yu-Gi-Oh! The Abridged Series </ , to mixed success. Remember that this is a genre, not a trope. Do not put a link to this page in the source work trope list. Instead put it under " Referenced by... " in the work's Trivia sub page. Compare Fan Vid and Remix Comic . See also Abridged Series Tropes . Doesn't really have much to do with Abridged for Children , though some may be made more humorous in a manner similar to this trope. For straight</ adaptations of series that shorten the length, see Adaptation Distillation . Before adding something to this section, please make sure it DOESN'T have its own page and thus belongs in the above section. List the source first, then link to the abridged series artist; there should be at least two episodes</ made; please place new series in alphabetical order by title. If there are multiple authors, those should also be alphabetized. Oh,</ I get it, it's... A bri dge! </

The Ace is someone who is ridiculously good at what they do, whatever that happens to be, and everyone knows it. People look up to them, envy them, and are in awe of them. He or she has a reputation for doing the impossible , and may be Shrouded in Myth , as people are unable to separate their real accomplishments from unfounded rumors In a work revolving around a specific activity, any kind of Serious Business , the Ace will be the best at it. Other characters may refer to the Ace as "the best of the best" at this activity. In works lacking that sort of focus, they'll probably be extremely talented at everything</ The Ace is rarely The Protagonist , typically acting as the living embodiment of Always Someone Better . They'll drive the protagonist to greater efforts either out of envy or by inspiring them . As such, if they're a main character, expect them to be either The Rival or The Mentor . If they're a minor but reoccurring character, then they'll almost certainly be Hero of Another Story However, The Hero typically evolves into an Ace by the end of their story by virtue of having the most potential to unlock . By the time this happens the original Ace will likely be hit by The Worf Effect a few times or both will be standing on equal ground. However, The Hero starting the story as an Ace is not unheard of, and it can serve as a reconstruction The Ace is common in the Romance genre, but what they are good at usually has little effect on the romantic plot. Some Dystopian settings feature an Ace, though they tend to be the victim of Tall Poppy Syndrome to show they're also good at dying . Protagonists in role-playing video-games are almost always Aces If the Ace's talent is operating combat vehicles, then they're an Ace Pilot , but note that not all ace pilots are an example of this. If the Ace's private life isn't nearly as great as it seems from the outside, then they're a Broken Ace . Take this too far and you risk accusations of a Mary Sue (especially if the Ace is female). Though this trope is often played for comedy, Ace's impossible talents being the joke. If (s)he isn't really that amazing, then see Feet of Clay or Fake Ultimate Hero . If their talent is due to intelligence instead of simple awesomeness, see Impossible Genius . If they perform exceptionally well within a specific field but are hopeless anywhere else, see Graceful in Their Element . In a High School setting, they're typically the Big Man on Campus Related

to the Renaissance Man , who is capable of a myriad of seemingly unrelated talents. See Ultimate Life Form for a character that is literally</ perfect. See World's Best Warrior where this is solely about combat success. Compare Master of All and Broken Ace . Contrast Loser Archetype and Classical Anti-Hero . Has nothing to do with Asexuality (despite "ace" being a common shortened form of "asexual")

So, you've got a mysterious and strange character that needs a name... Oh, it's a male? No worries, then. Just slap an adjective in front the word "man", place a "the" in front of it all, and bravo! You have a name! For some reason, these characters tend to almost always be villains with a hidden agenda , and, as can be inferred by the name of the trope, almost Always Male (though some cases might be better described as " male-ish "). There's something about the phrase "the _____ man" that just seems to appeal to people. Perhaps it's the right degree of familiarity mixed with strangeness ? Or perhaps it brings up images of strange people we see often but don't know the names of? The implication that it's anything other than a normal man? Or perhaps it's all just a great big coincidence ? No matter the reason, there's just something primal about this wording Different from Something Person in that characters following this particular naming convention aren't superheroes, also there's the "the" in front of the name. Also different from The Adjectival Superhero , where the "the" and adjective are an optional addendum to the name. This trope is surprisingly prominent in Sci-Fi and Horror stories, which may explain why most examples tend to be supernatural and/or antagonistic. Compare Everyone Calls Him "Barkeep" , Mister Descriptor , Person with the Clothing . Not to be confused with The Man . Compare The Adjective One .

The Aesthetics of Technology is a manifestation of The Coconut Effect dictating that if something looks</ more advanced according to the viewer's own personal standard, it is</ more advanced The viewer's own standard will, in these cases, not actually map directly to the viewer's own life-experience, but will be surprisingly weighted toward Zeerust : high technology is expected to look high-technological, so a visually complex special effect implies more technology than a visually simple special effect. Robbie the Robot has lots of flashing lights and moving parts, so to many he looks more advanced than Commander Data , who just looks like a plain old human with a funny skin tone In real life, form follows function, but only up to a point; once the requirements of function are met, the rest is cosmetic. Function decrees that Gizmo-XYZ has to have an outer casing of some sort, but whether that casing is sleek and curvy like an iPod, full of straight lines and hard angles like a 1980's home computer, partly transparent to leave some of the nifty inner workings exposed to view like Robby the Robot , or made of mahogany and covered with curlicue carvings like old-fashioned radio sets (which were designed to look like attractive pieces of living room furniture) is completely arbitrary. None of those aesthetic design choices (except perhaps the transparent one) have any bearing on how advanced the tech inside the device is For fans, this tends to come up with Long-Runners or Series Franchise , where something built to look "futuristic" by a modern design aesthetic does not look "futuristic" by the previous one Note that this is completely inverted by Sufficiently Advanced Bamboo Technology ,

where extremely advanced technology appears deceptively primitive in the form of stones, crystals, idols, monuments or ancient ruins For reasons that ought to be obvious, this fallacy is largely absent among fans of Steampunk . See also Shiny-Looking Spaceships , Used Future , Excessive Steam Syndrome , Raygun Gothic , Everything Is an iPod in the Future and High-Tech Hexagons . See also Cosmetically Advanced Prequel . Compare to Technology Marches On , which has to do with the substance and capabilities of technology, rather than what it looks like

This character is Immortal , but not because they have Nigh-Invulnerability or can regenerate any injury. They are immortal because they don't age, nor do they usually sicken. This character will never die from natural</ causes. However, they are just as vulnerable to injury as a normal person, and any normally fatal injury will prove fatal to them as well. This is frequently a racial trait of elves and almost always a feature of robots and vampires Of course, this trope can be combined with many other Immortality Tropes , particularly Nigh-Invulnerability . Characters that are extremely difficult to kill while also unable to age provides convenience for long-running series , and can also give villains credibility in terms of their threat (an Evil Overlord that can rule the Earth forever</ is clearly more threatening than one with average human lifespan) Frequently overlaps with Immortality Begins at Twenty . Also frequently overlaps with immortality by Healing Factor or From a Single Cell , to the point it's more unusual to find someone with a Healing Factor without</ slowed or stopped aging than one with it. If this trope is combined with Nigh-Invulnerability and taken to its logical extreme , it may become Complete Immortality Compare Long-Lived , Really 700 Years Old . Contrast Life Drinker , which involves stealing lifeforce from victims to maintain immortality, rather than the non-aging being an innate trait to begin with

Downplayed in both Doctor Who</ and Torchwood

The Super Hero genre is best-known in the medium of American Comic Books . But even there, its fortunes have gone up and down, and this has influenced the perception of superheroes in general. Each age has had its own good and bad qualities, its classics and its trash. And the pendulum swings on...

Although a "Platinum Age of Comic Books" is recognized, it was comprised of reprints of newspaper comic strips , not original material. It did pave the way for original comic-form stories, by developing a production-system for such compilations and establishing a market for that publication format.

An Affectionate Parody of 1980s action stars . It could be an actor, or a character based on one of them, or a futuristic killer robot . The most common star used for this trope is Arnold Schwarzenegger , particularly exaggerating his accent (most examples use a Germanic accent, but occasionally one will have a Russian one), hence the trope name. But other stars, like Sylvester Stallone , Jean-Claude Van Damme , and Dolph Lundgren happen as well Common signifiers include a very obvious Fake Nationality (usually Not Even Bothering with the Accent), near- Testosterone

Poisoning attitude, a Heroic Build , fondness for More Dakka in their weapon choices, and a tone of voice that fluctuates between bored monotone and enraged bellowing This is a subtrope of No Celebrities Were Harmed and a supertrope to Terminator Impersonator

Lisa's father in Persona 2: Innocent Sin </ is a carbon copy of Steven Seagal, right down to the martial arts badassery. His first name is even Steven!

WHERE'S MY BOURBON? This person likes their liquor, and in large amounts. They may realize they have a problem, and get on and Off the Wagon , or they may be a Drunken Master , and this is merely a part of their "training", or a result of their — "skills". Sometimes, this character is merely Drowning Their Sorrows and will bounce back later in the series. Other times, they've been this way from the beginning and has no plans to stop anytime soon. Worried friends may try to help by Nailing Them to the Wagon , though this attempt at forcing them to go Cold Turkey will result in </ (hence why it is a tradition in psychology that when rehabilitating someone, do it step-by-step). Real Life alcoholics are not always lying in the gutter — sometimes they are just people who drink alone, or for the sake of drinking, but never appearing to drink to excess (due to tolerance). Commonly, alcohol is drunk due to its effects as an anti-anxiety drug. It is entirely possible that successful people may be alcoholics on the inside. The is proof that sometimes you cannot tell an alcoholic by mere appearance, and they may be in fact be in lofty professions such as law and politics (both highly associated with alcoholism; there are even specialized help lines and recovery networks for lawyers and judges needing help with alcohol and drug use). Hollywood, however, prefers the " Straw Boozer " form: someone wandering the streets in a stupor with a bottle in their hand is more obvious and pathetic than a high-functioning alcoholic who usually stays in their room with a glass in hand contemplating. Many fictional alcoholics experience Pink Elephants — another trope that only loosely touches on the reality. There is no known cure for alcoholism. Someone who has managed to quit the habit is considered a recovering alcoholic , and if committed to it, remains in whatever therapy he or she used to become sober. That said, there are people who quit without therapy, or who stay sober without therapy, as well as some (very) rare people who don't become sober but do become moderate and responsible drinkers (and their mere existence</ is controversial to the point of Flame Wars over whether they are "in denial" or if it really is possible to drink responsibly once having become addicted). Note that making a Real Life actual alcoholic (as in a physically addicted to alcohol one, not just an emotionally addicted one or ordinary irresponsible drinker) go cold turkey is putting their life at risk,</ as alcohol withdrawal can lead to delirium tremens,</ which, if untreated, results in death. Physically addicted alcoholics must</ be tapered off of alcohol, slowly reducing the amount they drink, or weaned from it in a proper hospital setting where if they begin to go into delirium tremens, it can be treated. The Always Female versions are Hard-Drinking Party Girl and Lady Drunk , but alcoholism is only one of her character traits. The Alcoholic Parent is a parent who happens to be an alcoholic . Compare The Stoner , Drunken Master , Vodka Drunkenski , Hard-Drinking Party Girl , Off the Wagon , Beergasm , Quick Nip , I'll Tell You When I've Had Enough! , and Addled Addict . If the whole plot is about

how a character became an alcoholic, it's an example of Descent into Addiction . Oddly, there are "alcoholics" who can get drunk off of milk . The Teetotaler is the direct opposite. We also have a Useful Notes page on Alcoholism and Alcohol Abuse . The Wizard of Id </ has Bung, named after a wine cask's stopper , (and the other characters call him "sot", which is a historical word for "drunk" more often than they call him by his name) who is almost perpetually drunk, although that apparently doesn't (usually) stop him doing his job competently. In one strip, the King describes the most remarkable part of Bung's act as, " he sobered up ."

Often, when someone is suspected of a crime, they can prove they were somewhere else at the time, or otherwise physically incapable of committing the crime. This is called an "alibi." It's a common plot element in the mystery and crime genres, but sometimes pops up elsewhere. Note, however that the term "alibi" is sometimes misused First an alibi is rebuttable evidence that the person suspected of a crime requiring them to be where the crime took place was not there It is rebuttable</ which is a technical term meaning the prosecution can show it's not valid, is wrong or is faked. Second, unless the evidence is showing you were someplace else than where the crime was committed, and</ the crime requires you to be there during its commission, the evidence is not</ an alibi. Catherine Trammel's books describing how she'd murder people in Basic Instinct </ are not</ an alibi; despite the (reasonable) argument that she'd have to be really stupid to murder someone in exactly the way her books describe and her lawyers could easily attribute it to a Loony Fan , they do not prove that she was somewhere else when the murders took place. For some evidence to be an alibi, it must either show you could not have committed the crime and/or show that you were no where near where the crime took place (if the crime requires you to be there at the time). A witness stating you were in Chicago at the time someone was stabbed in Los Angeles is a reasonable alibi. A traffic ticket you signed while you were in Chicago when the murder happened is a great alibi. But again, it's rebuttable if the prosecution can show there is enough time for you to commit the crime and still get to Chicago, or someone's lying. An alibi showing you're somewhere else doesn't help if you don't have to be at the scene of the crime. If you built and/or mailed someone a bomb (knowing it was one) and it blew up, killing them, it doesn't matter what evidence you have to prove incontrovertibly that you weren't there when the bomb went off, no alibi is going to be available, because you don't have to be there to commit the crime, thus proving you weren't there when the bomb went off does nothing to prove that you didn't make the bomb and that you didn't mail it. The only way that an alibi would work in the above example is if it can show it was impossible for you to construct a bomb and mail it or have it mailed, and that you could not have mailed a bomb that someone else made. Any other evidence is not</ an alibi. A common use in fiction is for a Wrongly Accused person to have an alibi, but the one person who could prove it is missing, or for some reason denying the truth. Another is for the alibi to be inherently unverifiable - being at home in bed is a perfectly reasonable and often true explanation of one's whereabouts at the time of a crime committed in the middle of the night, but it's hard to prove, especially if the suspect lives alone - which can cause the authorities to assume that the suspect just made it up and was actually out committing the crime. Alternately, a suspect may have a false alibi, and it's up to the protagonist detective/police to break the alibi. Readers and viewers familiar with the mystery genre

may immediately suspect the one person in a mystery whose alibi is too</ airtight. Alibi accounts for the . A character who is found to have the remaining two (means and motive) will usually have his alibi scrutinized by the investigators. Another use of the alibi in fiction is for the suspect's alibi to be that they were committing another crime at the time (traditionally adultery) and thus being unusable . Conversely, especially in short fiction from the viewpoint of the perpetrator, the ironclad false alibi they set up makes them the number one suspect in a completely different crime. It's worth noting that in many jurisdictions, the use of an alibi defense requires the defense to notify the prosecution of the alibi ahead of the trial so that the evidence can be investigated before the trial begins. (This can save the time and expense of a wrongful trial.) Contrast Conveniently Unverifiable Cover Story , in which the point is to make it impossible to check whether a person was where they claim to have been; and Leave No Witnesses , which tries to prevent anyone from being able to say they saw you at the scene of the crime.

It was cheap, it was affordable, it was there. It's a car... allegedly. And it has many maladies you choose to interpret as charming quirks. It tops out at about 40 miles per hour (45 going downhill). It breaks down a lot, especially during plot-critical moments , and gets parking tickets while in motion</. It needs to have special-order replacement parts since the dealer, manufacturer, and country </ it came from no longer exist. The only parts that aren't about to fall off are the ones firmly rusted in place. It has more duct tape than paint on it, has been in the news more times than on the road, and looks like it came out of a junkyard In other words, it stands accused of being a motorized vehicle, but this has yet to be proven in a court of law The polar opposite of the Cool Car . Often found on The Rez , in fictional foreign countries , or in the parking lot of Honest John's Dealership . Expect My Car Hates Me to happen a lot when driving this junker. Compare and contrast Sinister Car , which is in perfect technical shape, but can be even more dangerous to its driver and bystanders than the Alleged Car Sometimes, though, the owner of the alleged vehicle will become quite emotionally attached to it. Sometimes it's because only the owner knows the car's little quirks and can keep the thing running. Sometimes it's Stockholm Syndrome . Sometimes they've been through so much together, it's hard to let go The Hero's Classic Car is a dated model; it can be Played for Laughs if the car is in bad shape If a horse, a house, or a computer gets this treatment, then you're respectively dealing with The Alleged Steed , The Alleged House , and The Alleged Computer . The subversion of this trope, where a car looks like this but is secretly a Cool Car , is What a Piece of Junk . A Chronically Crashed Car may become one of these if it gets repaired one too many times. A Rice Burner is often an attempt to make one of these look like a Cool Car . Either this or a bicycle (or worse, an alleged bicycle) will be part of a Real Vehicle Reveal . It may have been purchased at Honest John's Dealership Real Life examples have their own page. Two of them. Many, many real-life cars have become inspirations for what you see below; any such real-life cars should be placed on that page. There is a depressing number of them

It's a rusty old computer that takes over a minute to perform a

simple operation. A beaten-up computer that restarts unexpectedly and at the last</ time you would like it to This is The Alleged Computer. This computer, to put it kindly, isn't the most viable to use to lollygag or search. In fact, you could probably benefit using an old mobile phone with internet capabilities over this type of "computer". Their best use is probably a novelty doorstop If it runs overly slowly or breaks with a single touch (or only works properly with a very strong touch), it definitely fits here. If a computer is actually much more efficient than it looks, see What a Piece of Junk Compare The Alleged Car , The Alleged House , and The Alleged Steed for severely underperforming automobiles, homes, and horses. Also see No Backwards Compatibility in the Future and Our Graphics Will Suck in the Future Walking Techbanes turn any computer around them into this trope

There is the Cool Horse ... and then there's , the four-legged equivalent of The Alleged Car , a broken-down nag destined for the knacker's yard or the glue factory — or it would be, if it hadn't somehow wound up in the hero's possession Any member of the genus Equus</ can qualify If the animal's appearance turns out to be deceptive and it's unusually strong or fast , or Took a Level in Badass , then it may be a stealth Cool Horse Could perhaps make more sense being retained than the inanimate related tropes, given that the steed is alive, so disposing of it would be unheroic and they're more conducive to becoming attached to May overlap with Moody Mount . See Horsing Around for healthy horses with attitude problems. Compare with The Alleged Car , The Alleged Computer , and The Alleged House for other items of dubious quality

When All You Have Is a Hammer... meets Running Gag Some people, when facing a problem, any problem, will suggest X, without even trying to consider some of the other, probably better, and usually more rational solutions. Why? Maybe they had a difficult past , maybe they were trained that way , or maybe they just can't think of anything else . The fact is, they have one and only one answer for everything, and it's not like it usually works This is a Super-Trope of Kill It with Fire , Murder Is the Best Solution , Duct Tape for Everything , More Dakka , Nuke 'em , Your Answer to Everything and others. If examples fit better on one of those pages, please list it there rather than here. Sometimes used in conjunction with Percussive Maintenance

The idea of networking computers together is as good as inherent to the idea of the computer itself. The first modern computer networks started appearing in the late 1950s and the early 1960s . From there it was only a short conceptual leap for science fiction writers to imagine a computer network on a global scale It wasn't until The '80s that what we now know as The Internet appeared, and it wasn't until The '90s and the Turn of the Millennium that it exploded into the mainstream. Writers aren't the types to just sit around and wait, however, and many began working Internet-like global computer networks into their fiction long before it became a part of everyday life In the hands of the more prescient among these writers, their fictional proto-Internets are nearly identical to what we now have in real life under a different name. The effects the Internet has had on society and the applications to which it's been put were anything but predictable, however. In the hands of writers whose imagination fell short of — or

just went in a different direction than — reality, this can easily fall into Zeerust territory In some stories set in the future, a variation exists in which the Alternet is a fictional successor</ rather than alternative</ to the Internet we know. This is especially true in stories set After the End , in which the Internet has been destroyed and rebuilt, or in space , in which new technologies that alter the Internet's basic functionality are necessary in order to extend its reach beyond our planet Compare It's a Small Net After All , which is when what is purported to be the modern-day Internet works very differently in fiction than in Real Life No relation to , a left-wing American political news website

The Antagonist is the opposite number to The Protagonist . This is Thebecause the antagonist exists for the purpose of opposing the Theefforts of the Protagonist. They don't have to be a Villain , Theor even morally objectionable in any sense (though they often Theare); they merely have to oppose the Protagonist. For example, Theif the Protagonist is evil , then the Antagonist is the one Thestanding between them and their goals. The Antagonist usually Theprovides the conflict and thus the story. Because of this, the TheAntagonist is about as Omnipresent as the Protagonist, though Thethere are stories that have No Antagonist re's the Sliding Scale Theof Antagonist Vileness for, well, how vile an antagonist can be Thefull list of Sub Tropes is listed on Antagonist Tropes

The Anticipator is a character who (whether villain or hero) can somehow sense the presence, or, without fail, await the supposed-to-be-a-secret arrival of another character. Sneaking up on someone, or trying to get past them, can be an excellent tactic if done correctly. But some people are simply too badass to be surprised. This is the essence of The Anticipator. No matter how hard another character tries, they cannot manage to sneak up on or get past the Anticipator. Because the Anticipator is expecting them to try. Although it seems as if the Anticipator is Crazy-Prepared , usually they are simply cool, wise, or are very seasoned . They expect you to be sneaking through the window, hiding behind that pillar, creeping in the shadows, and even using that Invisibility Cloak of Invisible Fabric... and don't even think about opening a door to stakeout in a room to surprise them later: they'll already be waiting for you there. The Anticipator is very likely to say one of the following: "I've Been Expecting You..." Sometimes, in a tragic-dramatic twist of fate, the Anticipator will be waiting for their opponent calmly and patiently after uttering one of the above phrases, because there's Nothing Left to Do but Die . If they are tired of fighting, then they may enjoy One Last Smoke before the big showdown . This is a Super-Trope of the following tropes. Only add examples here that don't fit in one of these categories: It the character actually possesses real live Clairvoyance or Psychic Abilities, they have Spider-Sense . This type of character may exploit their power to invoke this trope. If the enemy has an unfair advantage due to artificial intelligence, programming, or an ill-placed cut-scene, then it's The All-Seeing A.I. . Compare Out-Gambitted , Crazy-Prepared , and Seen It All . Contrast With Catlike Tread . Compare and contrast Stealth Expert .

Few comedians truly tell jokes. A proper joke seldom fits the format and atmosphere of stand-up comedy, and jokes end as soon as the audience knows the punchline. One joke prevails over all others,

however: </ , a joke comedians keep back to tell each other (or themselves, as a warm-up act). The details of the joke change with every telling (and who tells it), but the basic structure remains the same no matter what: 1) A family act goes in to see a talent agent. While the agent doesn't want to hear them out (because he considers family acts too cute), the father finally convinces him to give them a chance. 2) The comedian telling the joke describes the family's act in as much detail as they prefer. Sometimes, the father tells the agent a blow-by-blow description of the act, while other times, the family performs it live for the agent. The act always</ involves the family performing shocking, heinous, risqué, disgusting, and downright illegal acts. 3) At the completion of the description, the shocked agent can only ask what the family calls their act. The father proudly replies, "The Aristocrats!" In the past, the joke served as a form of satire about the upper class, but that take doesn't really apply these days ; in modern times, it's not particularly funny as a joke anymore (since it's essentially a "Shaggy Dog" Story with a weak bit of irony as the punchline). The real point of the joke these days involves the description of the act itself: anyone who tells the joke must cross the line as many times and in as many directions as humanly possible. Most comedians traditionally invent the act on the spot as they tell the joke, which turns it into an improv comedy exercise. Standard ingredients for the description of the act include incest , paedophilia , rape , death (the messier the better), torture, necrophilia , coprophilia and urophilia , bodily fluids, bestiality , and pretty much every vile sex act and fetish one can think of — and every horrific act of violence, depravity, and otherwise immoral human behavior that nobody wants</ to think of. Extra risqué versions will also try to work in offensive political themes on top of everything, such as racism, blasphemy, sexism, homophobia, etc. (like the family insisting on including blackface and minstrel songs into the act). A variation upon the joke leaves the act completely tame, but gives it a shockingly disgusting name. There is also a documentary for the jokes released in 2005. Do not confuse with The Aristo cats Humorously enough, the documentary has a segment in which comedians discuss making that mistake .

Aristocrats Are Evil : If the punchline isn't taken as ironic, then it would be a straight example of this trope.

The ones in the movie .

Derived from a Latin word for "chest" (see also The Ark of the Covenant), an ark is now best known as a vessel (usually a boat, or at least boat-shaped) in which people seek sanctuary from some great cataclysm This doesn't necessarily mean the people go by themselves. If they're smart, they'll bring flora and fauna with them. And if they're pressed for time or resources, they may not go bodily: The ark may simply contain the distilled knowledge and culture of the civilization, and maybe some of their DNA, in the hope that they will be reconstructed or at least remembered by someone else. In this case, the Voyager</ spacecraft, which possess detailed descriptions of Earth and its people, could be considered arks — except that we didn't build them under the imminent threat of our own destruction The concept of the ark owes most of its form to the biblical story of Noah's Ark (which is itself suspiciously similar to even earlier stories like). Most iterations of the ark today either directly identify with or at

least reference the Noah story, including such elements as: The Great Flood ; the ark builder being divinely inspired to prepare for the flood, and mocked by his neighbors who don't know the cataclysm is coming; the ark housing pairs of animals, implied to be all the animal species in the world, who enter and reside therein compliantly without eating each other; and, the ark builder sending a dove or other bird to search for dry land to signify that the Flood is ended The original Ark still crops up from time to time, usually as a Public Domain Artifact for the characters to hunt down. But new arks are just as common, and these days seem to be as likely spaceships as oceangoing vessels , with the cataclysm necessitating their construction being a supernova or similarly world-destroying event. Any structure which bears the last remnants of an alien race is likely an ark Sister trope to Colony Ship and Noah's Story Arc . Compare Generation Ships and Fling a Light into the Future

Our Angels Are Warriors . The Heavenly Host is organized as a rigid military structure to fight against the forces of evil in the name of God . With the big man being The Omnipotent , this tends to imply a Powers That Be or Have You Seen My God? portrayal that necessitates his servants to fight his battles for him The Legions of Hell are their enemy, and these soldiers will be the ones fighting on the front lines on Earth or to defend their home base when Hell Invades Heaven The Celestial Paragons and Archangels will be the ones in charge of the lower angels, with Archangel Michael typically as the field commander and the one to personally smite Satan The Good Counterpart to The Legions of Hell . See also Valkyries

There are villains that want your stuff, villains that want you to do what they want, villains that want you dead. This guy is nowhere near as wasteful. He wants what makes you you</ , and he wants it for himself When he beats you, he will take your abilities , your uniqueness , your everything </ and make them his own. He usually does this by literally absorbing or consuming you, though sometimes he'll just take the pieces of you he likes and discard the rest. Either way, the more he gets, the stronger he gets. The stronger he gets, the more people he gets. This is his motivation This is a common attribute of zombies ; zombie hordes tend to become more dangerous the more zombies are in them, so by zombifying humans they are essentially adding that human's strength to themselves This trope is about the character, the article about the plot is Assimilation Plot , oddly enough. Sometimes overlaps with The Virus and/or All Your Powers Combined . Distinct from Power Copying as it requires death or injury to the other party. A form of Human Resources , assuming the victims started as human. Compare Cannibalism Superpower , You Are Who You Eat and Unwilling Roboticisation which describes methods for acomplishing this trope. The replacement by assimilation may be part of a plan to make things over In Their Own Image He may fall victim to Assimilation Backfire All heterotrophs are this in a way. By the simple act of eating you are assimilating another organisms biomass, quite possibly the biomass of another sentient creature, into your own with the purpose of using the nutrients it provides to build yourself bigger and stronger to go and do the whole process again. Like a very mundane Thing

Even the stage has its shining examples.</ See also Theatre Tropes
Aeschylus

Once, there was a major villain named Bob. He committed every crime one could think of, and he did it with a song in his heart and a skip in his step. Then, something happened to make him see</ the horror of what he was doing . He realized how much pain he had caused, and he set out on a personal quest to try to make it right. The Atoner is an evil character who has realized the error of his ways , possibly wants to make amends , and has decided that they will do so via heroic deeds. Simple imprisonment won't do , because it does nothing to make recompense for what he's done wrong. Besides, he still has all these amazing skills and resources from the Bad Old Days — wouldn't it be better to use them for good? The problem is, Bob often has to wrestle with the temptation to return to his old ways, along with the massive guilt built up over years of carefree evil. Also, said previous villain skills usually involve killing people in very messy ways , which can result in karmically harmful situations. Other times Bob's evil side won't go down without a fight, and manifests itself as an Enemy Within . Ultimately, it comes down to the fact that morality isn't a book that can be balanced—no amount of babies saved now will bring Bob's past victims back to life. The Atoner usually realizes that "Redemption is the path, not the destination" thanks to The Redeemer and continues for the rest of his life. Sometimes 'the rest of his life' is short because Redemption Equals Death . Generally the only Atoners who avoid this are main characters who are already in the atoning stage by the series' start. Atoners often end up as Knights in Sour Armor . Those who believe redemption inherently </ equals death may well become Death Seekers . A subtrope of this is " Assassin Wants to Quit ". Stories involving them allow us to cheer on the assassin as they battle their former employers using the same murderous skills they honed during their previous career. Atoners sometimes go on a Redemption Quest in order to atone. If their deed of atonement is especially painful, it may overlap with The Penance . Would-be Atoners who are not sincere are trying to Buy Them Off . Not to be confused with The Aloner , though they can both coincide if the character is trying to atone for killing off everyone else on the planet. And especially</ not to be confused with The Stoner (unless they turned to drugs to cope with their guilt). The Atoner may face rejection and hatred from those who don't believe he's reformed, which is Reformed, but Rejected , and more importantly, he must be careful not to run into the Heel–Face Door-Slam . In some instances, however, there are characters who will acknowledge The Atoner's change of heart, but do so in a grudging manner . The Atoner must also beware of one character who actively seeks to end his path to redemption . The success rate of atoners depends on where the work sits on the Sliding Scale of Idealism vs. Cynicism . In more idealistic works, or at least ones that posit that people can change for the better, atoners may have a greater chance of success, as proof that no matter one's actions may have been in the past, it's always possible to change for the better and do good. Genuine atoners have a high chance of becoming The Woobie , especially if they were an Anti-Villain in the first place. See also, Be All My Sins Remembered , where they continue to suffer a guilt complex over their past misdeeds. Contrast with My Greatest Failure — instead of a formerly evil character turning from their past, a good character feels the need to atone

for not preventing a bad outcome (regardless of whether they could have changed anything), and Retired Monster — a villain who has retired from their villainy but hasn't shown any regret or remorse for their misdeeds nor has made any attempt to redeem themselves. The Atoner may have experienced Go and Sin No More , and may enact a Self-Punishment Over Failure or have a Guilt-Induced Nightmare .

Even the stage has its shining examples.</ See also Theatre Tropes Aeschylus

Works for the theatre first produced in the 1940s .

The Phantom of the Opera </, based on the book and play, is considered by many to be one of the best movies of all time due to its gripping combination of drama and horror. The title character himself is very intriguing, being a masked madman with a lot of tragedy and sadness has made him one of the most iconic villains (if not characters) in movie lore. As with most successes, the concept of a "phantom of the X" has since been used countless times since its introduction. In comparison to the original, characters based on the Phantom are often varied. Sometimes they are a Captain Ersatz , sometimes they're a thoughtful parody of their inspiration, but they often share a few key features: Oftentimes people forget the original novel's Phantom had a full black mask; the movies and the play made the popular White Mask of Doom a staple. Usually this mask covers only half of the character's face, but full masks aren't unheard of. The mask usually covers some kind of gruesome deformity, though as with the original Phantom, the derivative characters have gotten Progressively Prettier over the years. If a character like this does appear, don't expect many other references to the original story. The Theatre Phantom may act similar to the Trope Namer in the original story, but often the other characters and the plot of the original work will never be alluded to at all.

Tropes used in Theatre , and tropes about theatre in fiction. See also Musical Number Index and Movie-Making Index (which despite the name, also covers theatre). All Musicals Are Adaptations

Combat choreography is often done using explicit and implicit cooperation by all involved to minimize injuries while doing maneuvers that remain extremely dangerous. To help maintain the Willing Suspension of Disbelief , the person at the receiving end of the dangerous maneuver must appear to show that the move hurt.</ This is the Theatrics of Pain Usually, it is quite easy to tell in wrestling if someone has been injured for real or is "selling" the move by its absence. It is harder in film and television because the stuntmen (whose job it is to do all the dangerous maneuvers) are trained to handle such situations professionally in a contained environment—and such things are all behind the scene anyway When a wrestler pretends to be uninjured by the move, this is the No-Sell . When an actor does, it is The Stoic or Made of Iron Sometimes, wrestlers will hit too hard. This is called "stiffness". Usually, it's harder to show any level of pain other than the true

level, making them difficult to work with. That can happen in film and TV, too; we are less likely to see </ it there, however, because of the magic of editing A common place to find unscripted</ Theatrics of Pain is in Association Football . As the game allows tackling for the ball but penalises reckless or deliberately injurious tackles , it's in an unscrupulous player's interest to sell any physical contact whatsoever as theatrically as the referee can be expected to believe, often including crashing to the ground and rolling around wearing a grimace of agony. Such "diving" is stereotypically associated with Latin American/South European styles of play , but can in truth be found all over the world. Some fans are of the opinion that the game should adopt a rule of "If you're not bleeding profusely, or can still play, you don't deserve the foul", but the sporting gods hold that it's important to deter unsportsmanlike behaviour like intimidation, reckless tackles and shirt-grabbing (plus, multimillion-dollar-losing broken ankles are as terrifying to owners of football clubs as those of racehorses.) For the polar opposite of the stereotypical Fragile Speedster footballer, see Rugby Is Slaughter Compare to Reality Is Unrealistic

A sketch during a Sketch Show that focuses on the actors preparing for the next segment, or just enjoying their downtime. If these are the majority of the episode, odds are the sketches are just a Show With In A Show .

We're all used to heroes winning out over the bad guys . The bad guys get theirs, justice is done, and the heroes walk away happy. Sometimes things are a little more bittersweet , but we at least expect the villain to lose in the end. One can even get away with a Downer Ending where it ends badly for the heroes, but many of these kinds of endings are "nobody wins" affairs where everybody pays the price (fatally or not). Even if the villain wins in these kinds of endings, it's usually at great enough personal cost to the villain that they are utterly ruined as a result Not so with this ultimate of Downer Endings . The Bad Guy Wins is Exactly What It Says on the Tin : complete and ultimate triumph for the villain, and complete and utter devastation (frequently with death or worse) for the hero or heroes who dared to oppose them. A bad guy who wins is a Karma Houdini by definition, and such endings can frequently be depressing as hell itself — even more so than your regular Downer Ending . When this trope is parodied, it is the happy ending stuck on for the villain instead which is despairingly from the hero's perspective History has plenty of examples of this trope, especially in stories of failed rebellions against a powerful empire or recountings of real life tragedies. But in Fictionland, when this kind of ending shows up, it's often used either as a hook for a sequel that will give the hero (or a new hero) the chance to succeed where they failed in the first one, or as a way of showing how much of an utter, hopeless Crapsack World that the characters live in — particularly in the case of Dystopias , where it serves as a warning to those living in the here and now not to let this kind of thing happen for real. There can be any number of other reasons for the bad guy winning: simply for the sake of a twist ending (especially in horror stories, which are often most effective if they leave the audience with

a hugely emotionally negative final shock); out of the writer's desire to be original or to throw in a new twist to keep things fresh or unpredictable; because the writer is really pessimistic and/or believes that True Art Is Angsty ; because the villain is a Well-Intentioned Extremist and in this case The Extremist Was Right ; or just because the writer couldn't find any other way to end the story which suited them. Sometimes it may all just be part of a Black Comedy anyway Doomed by Canon often requires this trope. If the Big Bad 's Backstory involves the Big Bad attaining all kinds of success to get him or her into the position that started the story , the Prequel requires them to win — and kill off any major characters , no matter how sympathetic, who do not make it to the original story, especially when the original story mentions the villain killing them. More generally, Villain Protagonists will benefit from this trope, particularly in video games where the player takes on the role of a bad guy Some stories may attempt to use this trope, yet still try to soften the blow. Perhaps the villain's goal is ultimately a good thing . Or the heroes aren't really that different after all and their loutish behavior keeps us from feeling too sorry for them . Another variant is for the villain to create a Villain World that the heroes must topple in a future story In cases when the hero was particularly well-liked and/or the villain particularly hated, the audience may call for a sequel in which the villain gets a proper comeuppance. Or lacking that, they may decide to write their own The sixth form of You Are Too Late is one technique to bring this about. Another technique to invoke this is to form a Xanatos Gambit : the villain wins something</ regardless of whether the heroes foil their Evil Plan or not. A Last Stand commonly features them Doing this too often or having this happen almost inevitably will result in Invincible Villain This would overlap with Hate Sink , likely the Audience and Moral Guardians would likely increase their wrath and would despise the villains a lot more See also: Downer Ending , Karma Houdini , Industrialized Evil , and Shoot the Shaggy Dog . Dystopias often end this way. Compare Team Rocket Wins , when the bad guys in question are usually so ineffectual the audience may actually be happy</ for them to catch a break. Contrast The Good Guys Always Win . Can overlap with Godwin's Law of Time Travel . May be considered a form of You Can't Thwart Stage One if it happens in a serial work. Also compare Meaningless Villain Victory , in which The Bad Guy Wins, but the victory is rendered hollow or meaningless or actually becomes a defeat due to some technicality or unforeseen chance. Near-Villain Victory is a typical subversion of the trope in which the bad guy does win for a time, only for the good guys to rebound and take that victory away Compare Pyrrhic Villainy when the villain's victory came at a great cost. This is NOT necessarily the same with Karma Houdini and Downer Ending , as there are plenty of happy endings where villains escape unscathed and a plenty of Downer Endings where the villains suffer as much as everyone If the story lacks a villain , nature (or the heroes' own flaws) might defeat them instead </ This is a Spoilered Rotten trope, that means that on this list is a spoiler by default and most of them will be unmarked. This is your last warning , only proceed if you really believe you can handle this list

The Heroes need to lure the Big Bad into a trap. For this you are going to need bait. While you could use a MacGuffin , we all know that the best bait is live</ bait. But who is going to take on this

wonderful job ? If you're the Heroes then you need to look for volunteers. There are two versions that pop up. The first is one of the Heroes agrees to be The Bait risking a Heroic Sacrifice . The other version is for the resident Butt-Monkey or Chew Toy to become a Less Than Willing Volunteer . A common resulting conversation in a Five-Man Band is as follows: Of course, the bait ends up being The Smart Guy (Cue the "Why do I always have to be The Bait?" whining) or The Chick . Occasionally it will end up being The Lancer , which is more likely if he and The Hero are Rivals . Sometimes the argument between Hero and Lancer will get so fierce that, instead of volunteering to be bait, The Chick or whoever will just sneak out and make themselves bait, while the argument rages on. Or possibly the Hero or the Lancer may decide to use Percussive Prevention on the other so they can do it themselves. If anyone insists there is no way</ they will act as the bait, expect a Gilligan Cut to prove them wrong. Villains usually just get themselves a hostage for bait—although occasionally a Mook will get stuck with the job Being villains, they usually are not happy about it. Super-Trope to Serial Killer Baiting . Compare We Need a Distraction . Sometimes overlaps with Why Are You Looking at Me Like That? on the part of the bait.

The flagship of the future that encompasses both artillery and piloting tropes: a hybrid carrier/battleship . Let's backtrack a bit. During World War II, the honored tradition of building more and more powerful gun-toting battleships came to an abrupt halt when naval artillery became largely supplanted by the aircraft carrier . It had none of the battleship's armament and durability, but it could project force hundreds of kilometers away, without ever endangering the ship itself — which made most WWII aerial/naval battles decidedly one-sided. Modern warfare may eventually subvert this trend. Currently, major warships that aren't carriers or amphibious assault ships are missile ships, each capable of launching a relative Macross Missile Massacre , so the other side better hope it isn't Point Defenseless . As missile technology and remote piloting advance, the aircraft launched by the carrier may become unmanned smart munitions , blurring the line between missiles and attack craft. However, warfare largely dominated by purely automated systems can take away from importance of human characters in a war story. Thus, authors are likely to explain that missile combat didn't take for various reasons, such as abundance of electronic countermeasures to disrupt missile guidance, accurate point defenses , or electronic warfare potentially compromising the effectiveness of remotely piloted (or automated) craft. This progression takes us back to the battlestar: It has the heavy armor and big guns of a battleship, along with the fighters and point defense weapons of a carrier. This makes perfect sense, assuming carrying fighters in space makes sense , because: A) Lack of gravity means you don't have to waste the entire top on runways and the entire bottom on being underwater. This trope is named for the Battlestar class of warships from Battlestar Galactica </ (1978), one of the first such depictions to reach widespread audiences. Often part of a Standard Sci-Fi Fleet . May also have a "little brother", the Airborne Aircraft Carrier . Naturally comes hand-in-hand with the Space Fighter ; given that strikecraft are an important part of a Battlestar, see also their Analysis page for some arguments on their use or lack thereof, which may have knock-on effects on the feasibility of Battlestars. As a general rule, the Battlestar is portrayed in one of three ways:

The largest ones may be examples of Mile-Long Ship or even Planet Spaceship . Not to be confused with the 1981 game show Battlestars </, the elite Autobot fighters from Transformers: Return of Convoy </, or John Walker's former sidekick . Compare/Contrast with its primary competing/companion trope, The Dreaded Dreadnought . Both fixtures of a Standard Sci-Fi Fleet , but both can and do appear in other settings. Both usually occupying the slot of "scariest thing around," but while the Battlestar is about the vessel's combined aircraft carrier/battleship nature, The Dreaded Dreadnought is about the tendency to call the scariest vehicle in a setting a "Dreadnought."

A character who pretends to be another's Significant Other in order to perpetuate a deception.

Most often seen in the sitcom A man dated by a lesbian to make her appear straight is known as "a frock" in British English. A frock makes a woman appear feminine much as a beard makes a man appear masculine Gay men who marry The Beard do this generally as an elaborate refusal to come out of the closet . They "prove" it to themselves and others that they are not gay because they have a wife (that they never touch) so they most definitely are not leading a gay lifestyle . Other times, it's an open arrangement with the wife in order to abide by social standards — sometimes the wife herself may be a lesbian Occasionally, someone's Beard will have to be someone they're in a Will They or Won't They? situation with. It usually ends up pushing them closer, but gets a Snap Back at the end Not to Be Confused with Growing the Beard , where a show significantly improves at some point. Nor is it to be confused The Beard and The Suit setup of a technology startup, the Beard who handles the technology, and the Suit who handles the business side and stops the Beard from walking into traffic or excitedly explaining his proprietary secrets to the first person who expresses an interest Subtrope of Fake Relationship . Supertrope of Undercover as Lovers , Operation: Jealousy , Citizenship Marriage , Girlfriend in Canada , Shock Value Relationship , Boyfriend Bluff , Romantic Fake–Real Turn and Wedding Ring Defense . Compare Emergency Impersonation , and Sorry, I'm Gay . When this trope is inverted, see Faux Yay

In team sports or other team games, if there is a given limit of how many players are allowed to participate (either on the field or in the game itself), it is not unusual to have reserve players in your team. Actually, it is often necessary to have those. If one of your players is unable to participate because e.g. of an injury or from being absent, the reserve player comes in play to takes their place. But why aren't they main players? The most common reason for being a benchwarmer is simply that the player is lousy at the sport, or at least worse than other players on the team. The rest of the team considers this character The Load . Other times, the player may suffer from Crippling Overspecialization , or have a rare skill that is only occasionally useful in the game. More rarely, the player may be skilled, perhaps the best on the team, but is being benched to tactically conceal this fact, or to invoke Put Me In, Coach! to pull off a surprise, last-minute victory. There could also be other

reasons why someone sits on the bench. Maybe it's their personality or the way how they play, maybe it's their relationship with other player, maybe they have a deeper purpose for sitting on the bench, etc. Sometimes, a character might be Demoted to Extra because a superior character has taken his place and the former main player is now degradated to a benchwarmer. However, in other cases, a character might become an Ascended Extra , ranking up from a benchwarmer to a main player. Importantly, the benchwarmer has to be a . Compare and contrast Benched Hero , when a main player sits on the bench because he is injured, exhausted or ill, not because there are too many main players. When the benchwarmer is allowed to play and wins the game, see Put Me In, Coach! and Miracle Rally . Closely related to Picked Last . In role-playing video games with a Player Party , this trope often overlaps with Lazy Backup and Can't Catch Up if there is no Leaked Experience .

The Bermuda Triangle is a popular place for works of fiction to place mysterious events, especially the disappearances of ships and airplanes (sometimes in connection with other Stock Unsolved Mysteries , such as the fate of the crew of the Mary Celeste </). Often, it will turn out that something really</ weird is involved with the area, such as aliens, paranormal activity, Eldritch Abominations , Atlantis , or something even weirder. If the events are of human origin, it's still something weird like an Ancient Conspiracy or the work of a dangerous Cult Part of the Hollywood Atlas . The Bermuda Triangle is a region in the Atlantic Ocean, much of which is south-west of the coast of Bermuda. Before it became popular in pure Speculative Fiction , the triangle started out as an Urban Legend . Although that legend has since been discredited , it continues to live on through its popularity in fiction

Arrow: Rebirth </: The location of Xebel, Atlantis' rival kingdom. Upon learning about them and their Fantastic Racism , it doesn't take long for the Justice League to figure out the real</ cause of all those mysterious disappearances.

The Berserker is a character who throws himself into a fight with such reckless abandon, it seems like he wants</ to die. It could be over - enthusiasm , overconfidence, Unstoppable Rage , or the desire to die (in battle) . Whatever the cause, it's usually accompanied by a bellowing warcry . Sometimes with total obliviousness to whether he's actually fighting the enemy . And he never, ever retreats . For extra points of terrifying spectacle, oftentimes the Berserker is inexplicably immune to pain and/or injury . It's one thing for the screaming, frothing lunatic hacking people down left and right to simply be too savage to get near, but when they take so many arrows they look like a porcupine and it just pisses them off even more it is quite another. When they shrug off a cannonball with little more than a feral scream, that's usually sufficient for the opposing army to collectively shit itself and run . </ Berserkers are equally capable of being good or evil. If they're good, then out of battle, they will likely brood about whatever it is that causes their berserk fits or remorse about losing control of themselves. Most end up one of two ways: being taught by their teammates to control themselves after a particularly close call, or dying in a dramatic fashion while lamenting that they died without completing their mission. Good Berserkers are also very prone to Heroic Sacrifices , for very

obvious reasons. When this is not played for drama, the Berserker may have a Boisterous Bruiser attitude when not in his battle rage. An evil Berserker, on the other hand, is generally just unrepentantly Ax-Crazy and very often Chaotic Evil . The trope's title refers to the berserkr </ of Viking Age Scandinavia : Warriors who are said to have thrown themselves into battle wearing only animal hides for armour and with no regard for their own safety. Their 'battle-madness', whose exact nature is presently unknown (some say it came from ingesting weird mushrooms or some other mind-altering substance before a battle) is said to have been a gift from Odin. The word "berserkr" means "Bear-shirt" in Old Norse, referring to either their going into battle with the ferocity of bears or for wearing bear pelts into battle. Their effectiveness in battle is up for debate, but they were an imposing and terrifying nightmare to the continental Europeans — and, if The Icelandic Sagas are to be trusted, to their own civilization. Some Norse societies would eventually outright ban the practices of the berserker, no doubt influenced by its people converting to Christianity. With terms used in sources that speak of the Norse berserkr also occasionally giving off some implication of Shapeshifting (or at least stating their ferocity was like</ they became savage animals...), it's a possibility the tales of the berserker would later inspire that of the Werewolf . Berserkers that truly do wish to die in battle are better known as Death Seekers — those who don't often overlap with the Blood Knight or Barbarian Hero instead. When foolishly done without any regard to strategy or planning, the Berserker becomes a Leeroy Jenkins . Because of its historical root, berserkers are likely part of a Proud Warrior Race . Compare Berserk Button , which is when pressing a character's Trigger turns them into this. Compare Hulking Out for cases where the berserk character changes physically as well as mentally. If the Berserker fights this hard so that no one else needs to help him, he might also be a Martyr Without a Cause . Contrast Blinded by Rage , where a berserker's blind rage proves to be his undoing. When the Berserker is pitted against an ace who matches him in combat, but also has a much cooler head on his shoulders, see Arrogant God vs. Raging Monster . This trope should not be confused with the recurring character title of the Fate Series </, the now-disbanded Australian grindcore band The Berzerker , the Berserker </ universe, the manga franchise Berserk </, the classic arcade game Berzerk </, or the 1967 B-horror movie Berserk </ .

Some people will do just about anything for a bet, so wagers are a great excuse to have characters do just about anything. Just have someone bet them they won't. Regardless of how crazy the challenge, and how disproportionate (or nonexistent) the reward, they will go to any lengths to win. Maybe they want to show up their rival or make a point or maybe they just want to win the reward. Either way they're sure to have a whole lot of adventures trying to succeed, especially if their rival is trying to sabotage their efforts. And just maybe they'll end up learning that there are some things that are more important than winning the bet Examples only count when the bet is a major part of the story, if not the whole reason for the plot. So if The Hero and The Rival have a bet on who will win the sports tournament they've entered, that doesn't count because winning the tournament is the objective, the wager just adds to the rivalry. It doesn't have to be the main characters who make the bet though, they could equally be the ones being bet on, so long as the bet is the reason for the plot. May be

made by the Professional Gambler or The Gambling Addict , or be part of an Absurdly High-Stakes Game . More minor examples may count as a Side Bet A common Romance or Romantic Comedy version of The Bet is when a character is bet that they won't/can't win over/date/sex up a certain lady. The guy will almost inevitably end up developing genuine feelings for the girl , and the girl will just as inevitably be pissed off when she finds out about the bet, thinking that she is some prize or object (in most cases, was not completely wrong, at first). Trust is lost and she wants nothing to do with him. This may lead to The Grovel when he asks for her forgiveness Compare to On One Condition , which is essentially a dead person betting their estate that you won't fulfill the conditions of the will. Also see Humiliating Wager

A straight-A student has just received a report card... along with some distressing news: there is a B in one subject. This makes the student disappointed at having their perfect record tarnished, while others wonder what the big deal is since they'd usually be content to get a B. When they truly understand how upset the person in question is, there usually is a pep talk reminding them how great they are and offering An Aesop about how an occasional stumble is nothing to be ashamed of . Their overreaction is often caused by an Education Mama Frequently this trope happens with grades of "A-" as well A case of Truth in Television , as anyone who has seen high school A.P./I.B. students receiving their grades can attest. With the onset of the Internet and teachers posting grade updates online, this usually happens well before the report card actually arrives. Also pops up in Video Games with end-of-level ranking systems, especially when multiple scores are given across an entire stage; ending with twelve S-Ranks and one A-Rank means an A-Rank for the entire stage The bane of The Perfectionist . If someone else got a higher grade, it can be a case of Second Place Is for Losers and if it happens often it can become a case of Always Second Best . What Do You Mean, It's Not Heinous? is often the character's response to "It's just a 'B.'" If your character isn't bright enough to be traumatized by this trope, then perhaps they'll balk at their F-- . On the other hand, if even a B is too high</ of a grade for them to be happy, see Deliberate Under-Performance . A similar attitude regarding reviews of works, particularly video games, is known as 8.8

A display (whiteboard, blackboard, chart, map, 3D hologram, whatever) can serve the dual purpose of establishing that the characters are evaluating information and providing quick exposition for the audience This trope includes tabletop maps where people use a "croupier stick" to move around counters. The Strategist , Insane Admiral , and The Brigadier tend to argue standing around this variety while in The War Room . General Ripper has a bad habit of breaking the pieces that stand for enemy troops. Chessmasters may use a literal chess board It also includes "vertical plotting boards". That's the clear piece of glass or plastic that, in the real world, is written on with a grease pencil backwards on warships. In fact, transparent versions are way</ more common in fiction than in reality—in the real world, their use is limited by the fact that they're hard to read, but in film and television they're frequently used as a way to get the standard "actor's face behind a sea of equations" shot. Also included are dioramas, which are simply models of buildings or areas May be used as an Exposition Diagram or Spreading Disaster Map Graphic Note

that Reality Is Unrealistic and most examples of this look far more dramatic in media than in Real Life Compare Holographic Terminal , Ominous Multiple Screens , Room Full of Crazy , String Theory , Model Planning , Planning with Props Not to be confused with Big Bad , the game board used on the game show Press Your Luck </, or the level of the same name from Wario Land 4 </

A kiss that is Serious Business , with all the spectacle that entails. In all probability it's a First Kiss that finally puts an end to Unresolved Sexual Tension and/or other typical obstacles that get in the way of True Love. The scenery will be epic , the camera will go wild , the music will swell . The most straightforward way to telegraph a They Do which isn't an actual wedding Some tropes, such as Smooch of Victory , Hollywood Kiss , Concert Kiss , Beach Kiss , and Lip-Lock Sun-Block , are almost always examples of this as well. If a kiss is built up to be this but fails miserably, it's probably an Awkward Kiss

Usually has nothing to do with Big Damn Heroes . However, if the heroes do a Smooch of Victory , then it does qualify Eureka Seven Renton and Eureka finally have their first kiss in what they believed to be the final act of their respective lives , only to be saved by Nirvash's sacrifice so that they can enjoy the third epic kiss as they float down from orbit

In any decent team , someone's gotta be the powerhouse. Like the name implies, they're usually the largest or the strongest member of the team, in charge of heavy lifting. If someone needs to bust open the door, hold the line against the enemy, break down boulders, or help you move your furniture , you turn to them. In a fight they're often the one who holds off the mooks while the others challenge the Big Bad . While The Leader and The Lancer fight side-by-side , The Big Guy can be a One-Man Army . Against stronger enemies they might end up suffering The Worf Effect ; getting trounced to set up the villain as a credible threat. While most are passionate and unflinchingly loyal, what holds them back from leadership among the core team is being Dumb Muscle . They know how to knock heads together but don't do much in the way of strategy. Despite this, as renowned warriors , they may still exercise authority over the support troops . : The Big Guy may not</ necessarily be the strongest in the team, (and usually isn't by the end.) They just have to be the one who specializes</ in fighting or physical duties. Traits common to the Big Guy include:

More women are filling this role, which used to be a rarity unless the whole team </ was composed of women . Since physical strength is usually a masculine trait, she may be a tomboy, Lad-ette , or mannish . But you can flip this on its head by making her the Amazon: big , and beautiful . If she's playing the tough guy straight, her softer side is often a secret cache of girlish habits which she finds embarrassing . On rare occasions, she may be revealed to be a Butch Lesbian , a Tsundere , or even a Violently Protective Girlfriend . When there are Two Girls to a Team , the Big Girl and The Chick commonly form a Tomboy and Girly Girl pair. Most of the time, the Big Girl is the tomboy and the Chick is the girly girl. Not to be confused with The Strongman (though overlap is not unheard of) or that other</ Big Guy . Can have some overlap with Scary Black Man , The Strongman and the Proud Warrior Race Guy especially when dealing with dwarves. Often a victim of Big Guy Fatality Syndrome . DC Universe : Marvel Universe :

The story (or a segment/side plot) is about a race, or races in general. This works as a plot device for several reasons: The concept is readily understandable with little explanation required. Say there's a race in the offing, and you can immediately move on to explain the terms (i.e. the course, the prize, the rules). A common feature is a long race with several "stations" where the racers go to rest. These stations often have a Good-Guy Bar . Races like this can go across unusual and difficult terrain and have the advantage of being able to dominate an entire movie. Super-Trope of Chariot Race , Wacky Racing and Epic Race . See also Tournament Arc and Big Game . Nothing to do with racial stereotypes .

The pathogen , is to this day synonymous with both "widespread threat to society" and "lethal contagious disease": The Plague . It's believed that an outright majority of Europe and Asia's population was killed by this outbreak. In terms of absolute numbers, with anywhere between 75 million and 200 million deaths, it was the absolute deadliest pandemic ever recorded and proportionally the single deadliest event in recorded history.</ Keep in mind that the disease is not called the "bubonic plague"; it's simply "plague". "Bubonic" is merely one way the disease plays out: by infecting the lymph system and colonizing the lymph nodes, which swell up into "bubos". In coastal areas, the most common form of plague at that time was pneumonic plague, which affects the lungs. Septicemic plague affects the bloodstream. The difference? Pneumonic plague kills all but a handful of sufferers, mostly within a week of the first symptoms. Septicemic plague is always fatal and can kill within hours of the first symptoms appearing, and may even kill before any symptoms occur Bubonic plague victims, on the other hand, can take days or even weeks to die, and around one-third actually survive</ with long lasting traumatic damage to their internal organs and immune systems- with the effect of making these victims the most noticeable and horrifying. The disturbing explanation for the disease's alternate name, the black death, is that in both the septisemic and bubonic presentations, the victims are left in a horrific swollen and decaying state due to a combination of ruptured lymph nodes and frostbite-like patches of black gangrene — before they die</. Following the plague pandemic, this image was so burned into Europe's psyche that it spawned our modern visualization of The Undead , a stark contrast to the prior depictions of liches and kin as unusually pale but otherwise unremarkable , animalistic , or totally skeletal . There have been many other outbreaks of plague other than the 1348-1350 pandemic. The most recent occurred at the beginning of the 20th century, killing tens of millions in India and China, and the earliest outbreak for which we have definitive historical evidence (at least according to some historians) is The Plague of Justinian in the 6th Century. The growing use of antibiotics, the invention of vaccines centuries later, and the improvement of hygiene conditions have ensured that no plague pandemic of such scale can happen anymore in most modern countries, but there are still limited outbreaks in the areas where there's a lack of these. When this appears in a story you know things are quickly going to go downhill for the heroes (if there even are heroes). Due to its transcending memories of death, destruction, and desperation, such stories generally have a Downer Ending . It tends

to be used because to most cultures, death is feared and a reminder of our own mortality is chilling. Compare: The Spanish Flu , COVID-19 Pandemic . See also The Plague for devastating pandemics in general As a Death Trope , all Spoilers will be unmarked ahead. Beware.

The Twilight Histories </ episode “Mask of the Plague Doctor” takes place in Medieval Florence in 1348, the year the plague arrived in Italy.

The human brain is hardwired to recognize faces. Humans will even see faces where there are none, such as The Man in the Moon . So there is something very disturbing about a person without a face. Meet The Blank The Blank is a humanoid character with no face. Perhaps it is a disguise to unsettle opponents. Perhaps they were a victim of some entity that steals faces , a common form of Transformation Trauma . Or perhaps they're just that good at poker . How the character is able to see, breathe and talk without eyes, a nose or a mouth is not likely to be resolved While The Noseless or No Mouth characters often have part-time facial features with Sudden Anatomy , this seems to happen less often with The Blank. Presumably, The Blank is generally done for dramatic impact, while those others are sometimes simply for creator convenience Not to be confused with The Faceless , which is where a character's face is hidden from view rather than nonexistent. Compare Faceless Eye and Eyeless Face . The Nondescript might as well not have a face, given how tough theirs is to recall. See also Malevolent Masked Men and its extra-blank subtrope White Mask of Doom Has nothing to do with Story of the Blanks </, or with Warhammer 40,000 </ Anti-Magic

A universal trope , most often spotted in comedies and Author Tracts One character, in desperate need of advice on a pressing matter, solicits the help of a second character claiming to be an expert on the subject. Hilarity Ensues when it is gradually revealed that the person giving the advice is a far cry from an expert, and in fact may know even less than the person they were supposed to be helping. More often than not, neither character realizes this, and the first character, after a devastating failure, often ends up wondering what could possibly have gone wrong Compare Little Known Facts . Frequent result of consulting a Know-Nothing Know-It-All . Related to Hanlon's Razor

Largely associated with Mystery of the Week television series, this is an episode that is wholly or in part structured around the sport of boxing. These episodes tend to crop up most often in action/adventure and crime solving series , but they can also be played for laughs in sitcoms The episode may simply take place in the world of boxing, where the characters must interact with boxers and coaches to solve some problem. In these cases, one character will often reveal a detailed knowledge of boxing that will only exist for this one episode. Another style of the trope is for one character to, by choice or not, step into the ring. Comedic examples usually make a wimpy character struggle to harness his inner badass to survive, while dramatic examples more often showcase the fighting skills of a tough character Mixed Martial Arts may be used as a substitute for boxing. May involve an element of Fight Clubbing , Gladiator Games or a Forced Prizefight . Often

this will be the result of a former boxer falling on hard times and entering a world of underground fighting to make ends meet , provide for his ailing child/wife/etc , or as an attempt to hang on to the limelight Compare with Pro Wrestling Episode and Baseball Episode . For films and other works that are actually about boxing, see Sports Stories

Any senior military person in a sci-fi drama who is a good guy. Will sometimes be skeptical of the existence of the Monster of the Week . When convinced and facing the current menace, Five Rounds Rapid is usually his default response to deal with it. However, when that fails, he is generally ready to admit when he is wrong and is immediately open to other ways to handle the situation. By senior, we mean someone above the rank of Colonel or naval Captain . Often, The Brigadier is also a Reasonable Authority Figure Often paired with a Technical Pacifist main character, either to prove that violence wouldn't solve the problem anyway, or to allow the Technical Pacifist to have someone else fire the guns A natural employment for an Officer and a Gentleman . See also: Four-Star Badass . The law-enforcement equivalent is The Commissioner Gordon . Contrast General Ripper , Insane Admiral In the rankings of Authority Tropes , the next lower step is Colonel Badass and The Captain . The next steps up are are the Four-Star Badass , The Caligula , The Good Chancellor , Evil Chancellor , Standard Royal Court and Decadent Court Note that The Brigadier is not necessarily a</ Brigadier (as in General), but may have any number of stars

Someone</ has to be the true powerhouse of the villains; this would be Evil's answer to The Big Guy . A Giant Mook with personality , the Brute is huge, all muscle, loves to fight and is very</ good at it. However, while he may at first appear to be The Hero 's equal or even superior in combat, subsequent battles will in all likelihood establish the Brute as being a constant jobber to the Hero He is usually a bully with a hot temper , and more often than not, also pretty stupid (though there are exceptions). Super Strength and Nigh-Invulnerability are common among powered varieties . Female brutes are rare outside of all-women groups , although not unheard of If The Dragon isn't the one that gets sent out to antagonize the heroes on a regular basis, it's this guy. He is usually the lowest-ranking member of the inner circle's hierarchy, and his abrasive personality means he generally gets little respect from them, though he may exercise authority over the mooks He is often the first opponent the heroes face after their successes require that someone more capable be sent to take care of them. He tends to be either blindly loyal or just too thickheaded and incompetent to ever stand a chance of overthrowing the leaders. Despite his role as the primary brute force of The Evil Army , he is rarely ever as strong as The Dragon One thing to keep in mind with this character type is that it's the role</ and rank</ as opposed to just the personality that defines it. Pete from the Disney canon is a classic example of the Brute personality type: a big dumb bully that just loves to throw his own weight around. However, he's generally used as a Big Bad (or, in works like Kingdom Hearts II </, The Dragon). As such, in most appearances, he is not technically a Brute Considering his aforementioned general role as the mean, stupid, and disrespected meat shield for his team, the Brute tends to be especially susceptible to

Humiliation Conga and The Worf Effect . A Brute whose demeanor becomes implacable will quickly ascend to the status of Juggernaut , while the more emotionally volatile risk becoming The Berserker . Be wary too, recruiters, of a Brute who pets the dog , lest he prove to be a closet Gentle Giant and, if you mistreat him once too often, may very well eventually pull a Heel–Face Turn (if not a Humiliation Conga of his own) on you. The Dog Bites Back , in other words Compare: Smash Mook

The Super-Trope of Jerk Jock , Alpha Bitch , and other bully characters. This is the Schoolyard Bully All Grown Up in his heyday. The guy who gave you wedgies and tied you to a flag-pole. The girl who humiliated you in front of the entire school and broke your self-confidence on your first day in. In Western Animation , it is required by law for the bully to refer to his victims by last name only , because, well... you're not exactly their friend. Like dangerous creature predators, it’s not always the case that bullies are villains; they typically just act antagonistic, and are often considered neutral characters A bully is simply defined on as "A person who is cruel to others, especially those who are weaker or have less power." This sums this character up in a nutshell. They will target anyone who is less popular than they are, those who are unable to fight back, or anyone who won't fight back . Comes in different flavours as listed below Because Adults Are Useless , frequently students have to take matters into their own hands to deal with these characters, leading to a Bully Hunter . Alternatively, the bully may not get his comeuppance from his victims or their protectors, instead running foul of a bigger villain and having to be rescued by the very people he used to torment. Can lead to a Reformed Bully , if the bully is willing to admit to it. Otherwise the status quo returns to normal despite past events Particularly thick bullies will often try picking on the (currently) pacifist superpowered or extremely strong kid who simply isn't very sociable . This is called Bullying a Dragon , and it always</ ends badly, unless the dragon ends up saving the bullies and thus shutting the bully right up. This doesn't always happen Bleach </ : When Ichigo expresses concern that Ichika has wandered away from her parents without their knowledge, Rukia tells him not to worry because a Soul Reaper has nothing to fear from human opponents. This merely increases Ichigo's worry because he interprets Rukia's words to mean that Ichika likes bullying helpless humans

After a main character gets explicitly written out of a story , we often never see them again. This trope is about when they return once again, to work with the current main characters This works several ways: we may get to find out what they've been up to, and then they go back to whatever it was; or it's used as a way to advance their character development even though they're no longer on the show. At the end of the episode, the character generally ends up on a different, longer bus In rare cases, the character in question returns for good and resumes their major role. This can happen when the character's been an Ensemble Dark Horse and the authors are either trying to fix the removal that was controversial in the first place, or simply attempt to win some favors from the fans . In this case the character has all the chances to turn into a Spotlight-Stealing Squad . Or it might be that it's the show with

Loads and Loads of Characters and this particular one simply was Out of Focus , if maybe a bit too long. It may also occur when an actor recovers from an illness, finishes work elsewhere or when legal issues are resolved. Actresses who go on maternity leave may have their characters Put on a Bus only to be written back in once the actresses are ready to return Often The Bus Came Back is invoked as part of Gondor Calls for Aid , where the main characters bring characters back from the bus to help in a dire situation. Sometimes this even involves bringing back former villains to fight against the current Big Bad , because Even Evil Has Standards . If the returning character suddenly has a new personality or a new actor from the one showcased before, it's respectively either a case of Not as You Know Them or The Other Darrin Compare with Commuting on a Bus , where a former major character turns into a recurring</ guest character (regularly getting on and off a bus). If the character takes the bus and returns in the very same episode (or, despite his plans, never manage to actually take the bus), then he was simply With a Foot on the Bus . Back for the Dead , which is the subtrope where the character dies at the end of the return episode; and Back for the Finale , where a character returns expressly for a show's final episode. If, on the other hand, a character never</ comes back even though it'd be easy for the character to return for at least one episode, then it's a Long Bus Trip Not to be mixed up with He's Back , which is when a mainstay character recovers from a personal crisis

One of the most familiar clichés of Mystery Fiction The stereotypical example is that a bunch of people are invited to a dinner in a wealthy man's house, and the wealthy man is poisoned while they are all eating dinner. All the guests debate who among them is the killer, only to discover during the climactic summation gathering that the guilty party is none other than... the butler , who nobody bothered to think twice about ; he's just part of the furniture, as if the table was the culprit The butler is the avatar of the most unlikely suspect that turns out to be guilty because the author wasn't creative enough to come up with a better way to surprise the reader. It's the mystery writer equivalent of the Ass Pull , except that you can see it coming a mile away, making it, for modern readers, The Un-Twist . Ironically, because this trope is so well known, when an actual</ butler is involved he rarely "did it", or, when he did, it's often a parody and Played for Laughs The expression "The butler did it" is commonly believed to have been coined by mystery author Mary Roberts Rinehart in her 1930 novel The Door</, although this is actually a real-world example of Beam Me Up, Scotty! . The actual plot device goes back still further, and was already regarded as hackneyed even then; the earliest verified</ explicit statement of disapproval regarding its use dates to S.S. Van Dine's 1928 essay . (It might be noted that these rules would disqualify the authors who defined the genre, including Wilkie Collins , Edgar Allan Poe , and Arthur Conan Doyle — indeed, rule 20 says that a good mystery should not include certain types of clues that Doyle introduced into the mystery genre on the grounds that they were now overused — and Van Dine's essay could more accurately be titled "Twenty Rules for Writing a Fair Play Mystery ".) article explores in detail the origin of this strange semi-existent trope. It's possibly related to the Real Life stereotype that, if something goes missing in a home, the hired help likely stole it This is a Dead Unicorn Trope in murder mysteries, essentially a form of The Dog Was the Mastermind that's

too well-known to use. It is okay, however, for a butler to be a suspect, primarily to mislead the reader Not to be confused with A Wizard Did It , which is a form of Hand Wave (and doesn't have much to do with actual wizards) Obviously,

Parodies, subversions, Lampshade Hangings , etc Ace Attorney </ :

In a hereditary monarchy , every so often the throne is inherited by someone completely out of their gourd . Maybe it's the fault of that lead-lined plumbing, or those mercury-laced medicinal elixirs, or maybe it's genetic (in which case you're in some deep trouble). Whatever the cause, the sovereign is still given the full power and support of the state despite their obvious insanity, with inevitably disastrous consequences. The Caligula will be wildly irrational, violently moody , extremely debauched, will never tolerate being told anything they don’t want to hear, and are probably afflicted with a god complex . In short, they will be a Psychopathic Manchild with the power of life or death over everyone whom they can reach. They may be a sexual deviant, or they might take pleasure in the pain and suffering they cause . They may indulge in renaming cities or even the entire country after themself or throwing out increasingly ridiculous decrees with brutal punishments in store for anyone who breaks them . Whatever form the madness takes, one thing is certain: to do anything the Caligula finds displeasing is to inevitably be dragged off to a grisly death or worse . Of course, any number of things might trigger their rage , and they might even decide on a whim to punish those who have not done anything at all. And while all of this is going on, the land over which the Caligula rules is rapidly going down the drain due to their neglect Here, in particular, they have a decided advantage over most other crackpots when it comes to messing things up: they can start wars. Be it for the perceived personal glory or their obsession with perceived enemies , the Caligula's country will probably be in a constant state of war. Due to their continuing close proximity to the Caligula, members of the court (decadent or otherwise) will be the primary targets of their fits of rage. Nobody within reach is safe from them, whether they be nobles, servants, bureaucrats, foreign ambassadors, or even members of their own family. The Caligula is very definitely a Bad Boss . With any luck, thanks to The Starscream and/or La Résistance , a conspiracy will eventually develop to remove the crazy sovereign from his post... permanently . This is not limited to sovereign heads of state. The Caligula can be anyone wielding great power within an organization while being completely nuts. Named for what is probably history's best-known whack-job, Roman emperor better known as Caligula (Little Boots</, his childhood nickname); remembered for talking to statues, locking granaries, declaring war on the god Neptune (and "winning", then commanding his soldiers to collect seashells as war-prizes), making his horse a consul (admittedly, this one may have simply been a gesture of spite towards the senate), and boning his sisters . (Though the veracity of some of these claims is in question, the reputation persists. See here for all the details.) In terms of the ranks of Authority Tropes , the tropes that are equal are The Good Chancellor , Evil Chancellor , Standard Royal Court , and Decadent Court . The next step down is The Brigadier . The next steps up are The Evil Prince , Prince Charming , Prince Charmless , Sheltered Aristocrat , Warrior Prince , The Wise Prince , and all Princess Tropes .

Mega Man Zero </: The first game's Big Bad who made a recurrence in Zero 3. It's a shame that in order to do that, he decided the easiest thing to do was to genocide reploids on even the flimsiest excuses for being Mavericks in order to conserve energy and resources. Also, in the same series, we have Dr. Weil in Zero 3</ and 4</, known in history for starting the Elf War, which resulted in the annihilation of a large percentage of humans and reploids and the creation of the Crapsack World the series takes place in, and he's incredibly insane . This resulted in him being sentenced to exile in the wastelands he created in an undying mechanical body. Once he succeeded the Neo Arcadia throne Even his Dragon , Craft, realized how insane he was that he fired Ragnarok on Neo Arcadia in a (failed) attempt to kill Weil.

This is a classic urban legend horror scenario: a young woman who is home alone. Often she is a babysitter. She gets a creepy phone call asking "Have you checked the kids?" She calls the police. They trace it and they tell her "The calls are coming from inside the house." A Discredited Trope from the early days when residences had only one phone line. The terror comes from the fact that the "caller inside the house" would presumably have to be using the house phone line, so most people couldn't call someone else in the house - inside the house was the last place expected. The sense of dread that a phone call is coming from the very building you are occupying may be lost on people who are used to being able to call anyone from anywhere at any time. However, learning that instead of being safe in your home, you're actually locked in the building with the psycho who's been making threatening calls, can still be pretty scary, cell phone or not. This trope predates the adoption of 911 services, (as well as Caller ID and Call Waiting,) especially as the original version of the legend usually highlights that the victim has to "call the operator". For the modern variant, see I Can See You . See also Short-Distance Phone Call , Evil Phone , Disconnected by Death . Not to be confused with The Call Knows Where You Live .

A brief appearance by a well-known star or other famous person in a role that would otherwise be an extra or walk-on . Most often used today as a surprise or punchline of sorts. It can be accented with a character's leitmotif . Can also indicate a similar surprise appearance by an animated character — often as a Continuity Nod — in a production in which they play no real part. The term originated with producer Mike Todd, when he was describing the literally hundreds of Hollywood and foreign movie stars who made brief appearances in the original 1956 film version of May be a One-Scene Wonder and/or a Big-Lipped Alligator Moment . See also Special Guest , Stunt Casting , and Tuckerization . When a movie or show only appears</ to have a cameo after some years have passed, that's Retroactive Recognition . Cameo appearances may often go uncredited .

Told from the criminal viewpoint, a group plans and executes an elaborate crime. The criminals are usually more rounded than the opposition, or at least more colorful. When the crime is a robbery, the plot is called a "heist." The Caper is more action-oriented than The Con . It often revolves around a brilliant Gentleman Thief who

Just Got Out of Jail hoping to do One Last Job , usually by Putting the Band Back Together (in comedies, a Ragtag Bunch of Misfits). However, almost any type of protagonist can be found planning a caper, often out of necessity when their usual methods won't work or aren't available . If one or more of the crew works for the target, it's an Inside Job . Can lead to Just Like Robin Hood as a way of Caper Rationalization . The crew's leader will inevitably present the job as A Simple Plan that is certain to go off the rails due to unexpected variables. The members of a Caper Crew fall into standard roles. For targets, see Bank Robbery , Armed Blag , The Casino , Train Job . See also Impossible Mission , The Infiltration and Double Caper . Not to be confused with The Cape . Can contain an A-Team Montage or Avengers, Assemble! sequence. Heist Episode is for when works that are normally not about thievery pay homage to the Caper genre for an installment, usually by having the characters steal something. Not to be confused with the webseries Caper </. One of the reasons heist films may be so popular is that conceptually,

The Captain — from the Latin caput</, meaning "head" — is in charge . The Commanding Officer of The Squad or the Command Roster . It's good to be the Captain . Whether this character is the Mission Control or actually working in the field, he/she is clearly the one running things. Any Cool Ship must have The Captain — no matter whether it's a Cool Boat , a Cool Starship , or a Cool Airship . He is expected to stay with that ship no matter what . And any Captain must have a Captain's Log The Captain will almost always hold said actual rank, even if their performance would allow the Captain to move up the chain of command. (Also true in non-naval branches of the armed forces (Army, Marines, etc.), since Captain is the highest of the Company Grade ranks, i.e. the officer ranks that participate in actual combat. From Major onward, officer ranks are more administrative.) This is sometimes confused by the naval convention that anyone in command of a given ship is referred to as "captain", no matter their rank (for most vessels smaller than a cruiser, the Captain is Commander , and smaller vessels like minesweepers can be commanded by a Lieutenant) — and all other "captains" receive a promotion for the duration of their stay. Horatio Hornblower </ becomes a captain while still a Midshipman Regardless of actual rank held, however, under most modern and historical laws the captain of a naval vessel is the Omnipotent Being on it when out in sea, since it is his</ personal responsibility to return to land with his crew complete and his ship in one piece. And not even the God-Emperor of the Universe can give orders past him in this case. To this extent, portrayal of The Captain as a Reasonable Authority Figure , an Officer and a Gentleman (sometimes in contrast with officers from other military branches) is undoubtedly Truth in Television Assuming he is a part of the main cast, The Captain (often along with his senior officers) is often depicted doing things that really should be delegated out to lower-ranked, more expendable personnel in order to have some tangible things to do (unlike in real life where officers are often doing lots of important but boring "office work"). However, since there's no drama in conferences, meetings, and paperwork, most writers would rather have him behave unlike a real captain and hope no one notices . Often his participation in minor issues serves as Character Development , so that when a grave decision has to be made , he will be able to say " I Did

What I Had to Do " without alienating the audience in the process Sometimes, however, The Captain is instead a background Reasonable Authority Figure , while the narrative focuses on people under his command. It's a road less taken because it's dramatically tricky to carry off, at least in a visual medium. Star Trek: The Next Generation</ tried a form of it in the early days, leaving Picard on the bridge and having Riker be the 'field guy'. While it made sense, it just didn't work in regards to drama. Indeed, this approach works best when The Captain is considerably older and noticeably unsuitable to physical action for reasons such as age or infirmity. This leaves a younger, less mature character to act as the "deputy" who is allowed to run around, get in and out of trouble, make mistakes, get involved romantically, learn valuable lessons, discover new things about himself, and do all sorts of things that The Captain would have already done to be where he is today, the general perception being that by the time a character reaches the point of becoming The Captain, his character has little room left for development. This approach is occasionally taken in anime but in many such cases, The Captain is often fated to die sometime before story's end so that the younger character may truly develop into a mature character and live up to the hope his mentor had for him A median approach between the two is to imply that available personnel are in a relatively small number, thus forcing and justifying the presence of the Captain and senior officers in field situations, or to outright establish that The Captain's skill and experience are just that indispensable due to Authority Equals Asskicking , thus making him the best one to handle the Monster of the Week Compare The Hero , The Good Captain , Supporting Leader , Commanding Coolness , Colonel Badass , Majorly Awesome , Captain Superhero . Contrast Da Chief . Do not confuse this with the Captain in Commedia dell'Arte , who's a Miles Gloriosus This trope concerns captains of ships and vessels of all kind and is almost exclusively a Navy trope. A Captain in the army is a lower-level officer who might at most command an infantry company of 120-160 men, or a tank squadron, or an artillery troop. He is higher than a lieutenant but lower than a major, and the rank equates to a Navy lieutenant (a few grades below a Navy captain). An Army captain might be viewed as a with five or six years practical experience, and it is the highest level to which a British Army officer is automatically promoted: promotion to higher ranks is by competitive selection

A Forgotten Trope in which a good, Puritan girl is captured by Indians and has to resist their culture, the Captivity Narrative was pretty popular in America from the 17th-19th centuries. These were often folktales that were made up long before the printing press and other forms of culture were readily available in remote settlements. These, oftentimes, exploited The Savage Indian archetype for the sake of Rule of Cool or Rule of Drama . Many of the early examples were based on true-life stories, fictionalized a bit to tell a more exciting story, but later they became more overtly fictional A variation of this trope—a white woman is kidnapped by Indians, but chooses to stay with them because they are Closer to Earth noble savages —has become common in modern romance novels The trope has its roots in a much older mediaeval one where virtuous European Christians were kidnapped by Muslim corsairs and offered to convert to Islam over the course

of their captivity. Unlike the later American version, this would virtually never end with the protagonist joining the natives. Per the dogmatic religious mores of Europe at the time, the aesop of those stories was the nobility of persevering through suffering to hold to your beliefs Contrast Going Native , in which assimilation to the native culture is framed as a good thing rather than a bad one. See also Damsel in Distress and the more hazardous version of this trope, Captured by Cannibals

The ladykiller, the player — a man who relentlessly pursues, lands, loves, and then abandons members of the opposite sex, a skill bestowed upon him to demonstrate just how attractive he is. Sometimes comic, sometimes sinister, always successful, this character leaves behind a string of broken hearts, and occasional vows of revenge that are rarely fulfilled. Casanova's only motivation is indulging his lust and desire, sating them with the bodies of his completely willing conquests Contrast with the unsuccessful Casanova Wannabe . Compare with the inexplicable Kavorka Man . A guy who gets the girls like a Casanova, albeit unintentionally, is a Chick Magnet . If kind-hearted, may overlap with Chivalrous Pervert . The Charmer is equally charming but less sex-obsessed. If they really get around but want to settle down, it's Looking for Love in All the Wrong Places . A Handsome Lech has more negative connotations and a sparser scorecard than the Casanova The trope is named for Giacomo Casanova (1725-1798), an Italian soldier, spy, diplomat, adventurer, and librarian whose extensive but unreliable autobiography (in which he almost literally described himself as God's Gift to Women) established his eternal fame as a lover. It should be noted that the historical Casanova was closer to a Chivalrous Pervert who really was looking for love... just with women who were locked in loveless political marriages — and also achieved his successes despite being famously ugly . (he was) Interestingly, he was one of the few 18th-century men who bathed almost daily and asked the same thing from his partners For the juvenile version — all of the above without the sex — see Kid-anova . Contrast the Serial Romeo (who falls in love with a long succession of women, one at a time and for reasonable periods). If the guy is actually only rumored</ to be a Casanova and has no evidence onscreen, it's the Urban Legend Love Life . If he develops feelings for one of his conquests (or someone who refuses him), he's a Ladykiller in Love . See More Friends, More Benefits for when the mechanics of a game encourage the player character to act this way. If he's malicious, he may be an Intentional Heartbreaker Note: It should be mentioned that even after the affairs were over, most of Casanova's ex-lovers still liked him, and he was reputedly quite the gentleman. This trope would probably fit (the fictional) Don Juan better Finally, a warning: Despite Maneater being a redirect, this trope should be confused with I'm a Humanitarian or the Literal Maneater Super-Trope to Spies Are Lecherous and Really Gets Around

Some screen actors have talents other than acting—singing, dancing, what have you —and the show they're in will want to make use of it at some point. In most cases, this doesn't derail the story (much), often leading to viewers exclaiming, "I didn't know [actor/actress] could [sing/dance/whatever]!" However, it's not unheard of for the plot to stop dead just to allow such an

actor (usually the lead) to show off The line between this and Cast the Expert can be quite thin indeed. Contrast Irony as She Is Cast (in which an actor who is good at something [singing, dancing, etc] in real life has to play a character who is not good at whatever the talent is). Show-offy moments that center around brazenly exploiting star's beauty or sex appeal are usually classified as Fanservice

A specific form of Memetic Mutation , it is the cultural effect that a runaway hit show can have on everyday language. Characters' personal vocabularies often seep into the real world, especially if they give a name to a phenomenon that didn't have one before Compare Person as Verb . Related to Defictionalization

The favorite era for the Swashbuckler , the 17th Century is the age in Europe when lusty musketeers dueled with each other and got sucked into intrigues involving dauphins, Corrupt Churchmen and vampish courtesans. Hats with large feathers and big bucket-topped boots were in fashion for men. Also The Golden Age of Piracy on the High Seas , when eyepatched and peg-legged buccaneers buried stolen gold, brandished cutlasses, and tied up buxom, bodice-wearing maidens and then forced them to watch as their hapless boyfriends walked the plank Somewhere in the middle, Britain had a civil war . Dashing Cavaliers fought dour Puritans the length and breadth of both islands, and the son of the King hid in an oak tree. The Puritans won, and abolished Christmas, then the country abolished them. The surviving puritans left England and founded the United States, Charles II climbed back out of the oak tree, London burned to the ground, women were allowed to be actors on stage and Isaac Newton invented gravity. Somebody named Pepys kept a diary Later still, King James II, a believer in absolute monarchy, was run out of Britain in a Glorious Revolution. Parliament's invitation of Stadtholder William III of Orange as the new King made it real clear who was really in charge of the island from now on as modern democracy took its next step toward fruition. Meanwhile, in the Bahamas, this was the best kind of news to the pirate, Captain Blood and his crew, who were enslaved by James II, as they accepted the new king's commission to join the British Navy Across the Atlantic, English settlers of all codes and creeds took over a patch of land along the eastern coasts of the New World Back on mainland Europe the Thirty Years' War was fought; France, Sweden, and Austria contended over the Holy Roman Empire , hastening its long, painful decline. East of Germany, rowdy Polish nobility alternated between fighting in perpetual wars against Sweden, Muscovy and Turkey, and generally making a mess around themselves. More to the west, the Dutch had an economic and cultural boom, ushering in their Golden Age which lasted a whole century, and France became a militaty, economic, and cultural powerhouse starting with the reign of Louis XIV Then things settle down a very little, and The Enlightenment kicks in. But there’s a lot</ of overlap between the two periods, what with pirates, highwaymen, exploration, colonialism, and so on Sometimes explicitly called the Age of Exploration, especially if pirates are involved. If you want to do the pirates thing on land, remember that after the Restoration in England was the heyday of The Highwayman , so adventures featuring Dick Turpin and Claude Duval will be set at about this time Writers and

artists of the first half of the 19th century LOVED this era , as a reaction against the Industrial Revolution and The Enlightenment of the previous century See also the Edo Period of Jidaigeki , the Japanese equivalent coinciding with this era. Also coinciding in this era are The Thirteen American Colonies across the pond. The later years of The Protestant Reformation overlaps with the time period, and religious warfare is often a background feature in the swashbuckling plots of this setting

When the police/military/other supporting group arrive at the scene only after the hero has defeated the monster, killer, or Big Bad . Sometimes this is played for humor, or to play up their uselessness compared to The Hero . Often, though, it serves the same purpose as No Ontological Inertia — while the hero has to defeat the Big Bad alone for the purposes of the story, The Cavalry is necessary to sweep up loose ends and ensure a happy ending, especially in real-world settings where the hero is on the side of law and order. Thus, they'll arrive just too late to interfere in the big fight, but just in time to handcuff the crooks... and to ensure that the hero isn't anticlimactically killed by a stray remaining mook or some other logical but narratively unimportant danger that wouldn't necessarily have gone away with the Big Bad's death. It also makes Post-Victory Collapse less hazardous for the hero, or allows the After-Action Patch-Up to go on without worrying about clean-up. Usually signified by the growing sound of sirens in the background. On occasion, the knowledge of their approach is what makes the villain's attacks especially frantic, or especially powerful, or what have you — he has to finish the hero and flee. (Note that this is really about cases where the cavalry arrives, as it were, just after the nick of time. If the hero defeats the killer, then phones the police to come to mop up, and they turn up 15 minutes later in response to the phone call, that doesn't count.) Contrast Big Damn Heroes and Just in Time for when reinforcements arrive before the villain is defeated, and You Are Too Late for when the good guys</ are defeated before reinforcements arrive. For moments when it's the hero</ coming to someone's aid, only to find they've</ got it taken care of, see Non-Protagonist Resolver . As this is generally an ending trope, beware of

Things are looking bleak for our heroes: they gave it their best, and may have even briefly looked like winning , but in the end, the villains were too strong, the heroes too few, and all that's left is just enough time for some last words and a Last Stand ... ... Wait, what's that? Did I just hear a bugle? It's The Cavalry, riding in to save the day! Maybe they're some minor characters who've banded together to mount a rescue, or maybe they're the local Men of Sherwood , or maybe they are characters Not Quite Dead after all, but ultimately they exist to storm in at the last minute , save the heroes and convert a Downer Ending into an out-and-out win for the good guys. If done badly, this trope represents the ultimate example of the Deus ex Machina . If played well, it can be an immensely satisfying climax to the plot and a nice reminder that the heroes aren't in this alone . In some cases the entire reason for the heroes' heroic stand may be that they know the cavalry is coming, if they can just hold on long enough. This and other related tropes are named for the classic Western trope of the US cavalry charging over the brow of the hill just in time to save the beleaguered settlers from the Indians in far too many Westerns

to count. When it is specifically a vehicle with heavy firepower, it is also a Gunship Rescue , and when undead forces are used to save the day, it is a Cavalry of the Dead . If the heroes are part of a larger organization, the cavalry is usually led by a Hero of Another Story . Compare with the Big Damn Heroes , where the heroes are</ the cavalry for someone else, Gondor Calls for Aid , where the heroes put some thought into it and call in the cavalry ahead of time, and Always a Bigger Fish , where the cavalry are morally neutral and usually a monster of some kind. If the heroes have asked for the cavalry's help before but were turned down, it's Changed My Mind, Kid . If the heroes are fighting in a Mecha Show or happen to be Ace Pilots , then this may dovetail into I Got You Covered . See Gideon Ploy for when no cavalry is coming and needs to be faked. The expectations that accompany this trope can be subverted into providing a Hope Spot . The cavalry could turn out to be a Redshirt Army , utterly useless and readily destroyed by the threat Alternatively, the heroes could find themselves victims of Cavalry Betrayal , where the supposed cavalry are also</ hostile to the heroes. If it's clear who is supposed to be the cavalry, yet they refuse to help the heroes for some reason, that's a Cavalry Refusal . Both the Betrayal and the Refusal often lead to a Bolivian Army Ending . Not to be confused with Calvary, a place outside Jerusalem where The Roman Empire performed crucifixions (including Jesus 's). Compare Come with Me If You Want to Live — in which the cavalry show up to spirit the hero away rather than to win the battle — and Conveniently Timed Attack from Behind . Occasionally, the cavalry will show up after </ the heroes have managed to turn around their "hopeless" situation.

It is well known that the second act of any story is one of the most important parts and one of the hardest to get down right. So to keep everyone enthralled during this period you come up with the Centerpiece Spectacular The Centerpiece Spectacular is a point in a story that is certainly not the climax, but it is situated during the middle of the story or sometimes even the beginning to really get their attention Now, there can often be a downside to this. It isn't a bad thing to make the centerpiece the high point of the story, but if the climax doesn't even come close to approaching it then it can end up being a let down. And if the running time of the story has too great a distance between the centerpiece and the climax, you can run into Ending Fatigue The placing of the Centerpiece Spectacular can vary wildly, though it is never the climax. If this sequence happens towards the beginning of the story, it can overlap with an Establishing Character Moment . In early Act 2 it is intended to get the plot flowing fast. In late Act 2 it is a set-up for the climax

A very messed-up theory as a variant of typical karma . The basic premise of karma is: "Don't do something bad, because later on something bad will happen to you</ ." This, on the other hand, is quite different. As a scenario, a man running a company is under a great deal of pressure from his superiors to produce the product faster. He's just been yelled at. Obviously, he can't talk back to his supervisor since he'd get fired, so what does he do? He yells at his normally best worker on something small. Well, the target man doesn't want to be known as a guy who beats his wife , so he shouts

at her when something wrong happens. Because of the marital strife, she screams at her kid all the time. The child has no weaker human to take it out on, so the kid beats the family dog, which bites the nearby cat. And so on. The strong harms the weak, who gives similar treatment to the weaker, who in turn harms the next weaker. This theory has a number of assumptions: The act of abusing someone weaker or lower-ranking than you to displace frustrations because of similar treatment from someone stronger or higher-ranking than you is often known as Kicking the Dog , but that term has a different meaning on this wiki. Contrast to Cycle of Revenge , which directly targets the person causing harm. Compare to Revenge by Proxy , Delegation Relay , and Troubled Abuser . Breaking the Cycle of Bad Parenting is an effort to avert or defy this. If you were looking for examples of people using chains to harm others, see Chain Pain . See Freudian Excuse when this is used in a villain's backstory as an explanation for their behaviour now. Sometimes played as An Aesop (e.g. "Don't be mean to someone because someone was mean to you, or it will go on forever").

A sad form of Real Life Writes the Plot and the Logical Extreme of Written-In Infirmity : a character is written out of the show or even (and usually) Killed Off for Real because the actor who portrayed them has left not just the show , but the mortal coil itself In other words, the Grim Reaper himself arranges an (obviously long) bus trip . In these circumstances, don't expect the character to be Put on a Bus to Hell , but rather an episode directly (and often respectfully) dealing with the death and deceased This often causes major changes in the cast dynamic. If the character was a big enough part of the show, it could be derailed or even ended altogether. It's usually</ seen in Anime, Western Animation , and Live-Action TV , but this can happen in film as well if the movie is a series (see Indiana Jones </ below) The inverse is Character Outlives Actor , when a character is taken out of a show and is still alive, but the actor who played them has died and sometimes in the case of animation, replaced with a soundalike This is a trope, as the event affects the narrative. Contrast Died During Production which stops the narrative cold. However, outside of the narrative, it may prompt an episode or credits nod In Memoriam . Fans may do this preemptively via Death Fic If a voice actor dies (or otherwise stops being available) but the character simply stops having voiced appearances, it's Actor Existence Limbo Because this is a Death Trope , unmarked spoilers may be ahead The Blacklist </ : Following the death of his actor, Clark Middleton, between seasons in October 2020, Reddington's tracker Glen is revealed in early Season 8 to have died offscreen. They even take it a step further and mention that he died in-universe from the same cause (West Nile virus)

Ahhh... ice cream. What prevents us from being parched during scorching hot summer days whenever the ice cream truck comes to the neighborhood. And looking at the stickers you see... that one of your favorite characters is featured as a popsicle! Since the late 1980s or earlier, ice cream bars themed after cartoon characters have been popular as a feature of ice cream trucks and convenience store ice cream cases. Now kids can enjoy eating their favorite characters' heads or such. These often have a tendency to look only somewhat like the character when taken out of the packaging. Subset of The Merch

The Chessmaster gets their name from their ability to manipulate events (that is, they cause events to develop in the way they want in order to produce a desired result through planning them out) as if they were pieces on a chessboard. Chessmasters tug at their strings of influence, patiently move their pieces into places that often seem harmless or pointless until the trap is closed, and get innocent Unwitting Pawns (who else?) to do all the heavy lifting. The best will also have layers upon layers of misdirection and backup plans in case some unexpected hero appears to gum up the works . Chessmasters can sometimes be on the side of good , but if so they'll almost certainly be the Anti-Hero (the Pragmatic Hero variation) at best or the Well-Intentioned Extremist at worst, as it's very hard to plan a Chessmaster scheme that doesn't sacrifice a few pawns along the way . Heroic Chessmasters are very often introduced as a Mysterious Employer . The Svengali , in acting for the (supposed) good of his protégés, will often be this (and if he isn't, he'll pretend). Chessmasters can occasionally or can always denoted be The Strategist , although given the volatility of war, most Strategists will only ply their schemes one campaign at a time, with an emphasis on short-term goals (and an eye towards all possible future contingencies). The Game Master may be a Chessmaster also, but many of them prefer to give their orders more directly. Many chessmasters are Villains With Good Publicity , but they can also be someone no one has ever heard of . Almost all Ancient Conspiracies are led by a collective of chessmasters , silently working toward their goals over generations. Chessmasters also tend to be overconfident and usually panic when their "perfect" plans fail — unless they just start laughing instead. This is also usually averted when Magnificent Bastard and Chessmaster overlap, since a Magnificent Bastard is quite good at rebounding from defeat . Fond of a Battle of Wits . Of course, actual chess ability is implied, and some Chessmasters take it literally , mapping their plans out with an actual chessboard, occasionally with pieces shaped like the main characters. Don't ask how this works, or where they get pieces . This is most likely a result of Smart People Play Chess . Compare the Manipulative Bastard who tends to be more personal and controlling in her/his manipulations. Compare/contrast Opportunistic Bastard as well. Contrast Spanner in the Works , though it's possible for a character to be both of these. Chessmasters are usually (but not always) non-physical and unsuitable for action due to age, infirm, or simply being a thinker, not a fighter. If the chessmaster is the villain, when the hero defeats them it's usually via the one move they didn't plan for . Not to be confused with The Chessmaster, a long-running series of chess videogames.</

An odd sort of polar opposite to The Woobie , The Chew Toy is a character the audience loves specifically because</ their misery amuses them so. The Chew Toy is roughed up or messed with on a constant basis... and is always, always</ used for comic effect and treated with a light touch , generally glossing over the meaner undertones of the idea Whatever the reason is, these characters just can't catch a break. Did they do something wrong in a previous life? This life? Or are they just Innocent Bystanders who look as if they'd blow up in a more amusing manner than anyone else in the crowd? Who knows. Either way, the powers that be tend to inflict punishment on them for seemingly no reason, generally but not always of the slapstick physical variety Unlike

Woobification, Chew Toys are generally designated as such in the series proper, and often have a tendency to bemoan their fate. If they're lucky, the writers will Throw the Dog a Bone a time or two. If they're unlucky, they'll Yank the Dog's Chain . It can sometimes be a delicate balance. Throw too often and the character can be Flanderized into The Eeyore ; Yank too much and the audience may no longer find it funny . The latter will happen mostly if the character is both deliberately and unfairly mistreated by other characters If a female Chew Toy is regularly used for physical comedy she probably is also a case of Slapstick Knows No Gender Compare with the Butt-Monkey (a character who is mistreated regardless of audience opinion), and The Eeyore (whose depression is usually in excess of their actual mistreatment), and the Iron Butt-Monkey (who seems to suffer injury and accidents more frequently than anyone should, but is capable of taking it). Contrast with The Woobie , whose suffering inspires sympathy and a desire to make things better for them instead of amusement . The polar opposite is Karma Houdini , where characters do horrible things while karma (and occasionally the other characters) sits back, watches, and eats popcorn . Villains and Unsympathetic Comedy Protagonists , though, do make good Chew Toys as they bring the bad stuff on themselves. Also by making it a self-inflicted role (most often because of a character's stupidity and short-sightedness) it also makes the torment more palatable If the entire cast is made up of Chew Toys of some kind or another, then you're probably watching a Sadist Show . Compare Humiliation Conga

The " feminine ", " spiritual ", and " heart ", aspect of the Five-Man Band ... and generally the only woman It's the people she gathers and keeps at her side who'll do a lot of the heavy lifting. She'll encourage loyalty and teamwork, give them the courage or hope to unlock their true potential , be a Token Good Teammate that keeps her friends from Jumping Off the Slippery Slope . She's usually a Nice Girl , but her demeanor can go anywhere from shy and demure, to brave and adventurous. She is rarely The Heroine of a story Her functional role will often be The Heart , the social influence of the group. Sometimes this means she'll serve as the Team Mom , taking care of the smaller details, both within the group and in the world outside. She looks after innocents, delivers The Aesop , mediates the arguments , and slaps some sanity on The Lancer before he ends up getting too dark . It's not the coolest job in the world, but it's helpful Yes, we understand that a male can fill this role, but this trope is a component of a Five-Man Band , which specifically uses women for this role. Examples of male characters acting in this way can be found in The Heart

Only you have been deemed worthy to describe the secrets of... The Chosen One. </ Take it for granted that they are The Only One . These characters have been chosen by some force and they are now the only ones capable of resolving the plot. The methodology may be imprecise, and bonus points apply if "chosen one" is actually used in the work The key here is that these characters are held in esteem for their expected potential, occasionally determined by past accomplishments That said, always be wary about what the character has been chosen for</. If their job description involves "defeating the darkness" and involves long years of danger and struggle, chances are good

that they've been made The Hero . If, on the other hand, their job description involves getting pampered by half-naked temple virgins, then chances are very good that they've been chosen to be a sacrifice instead! And woe betide the world should the Chosen One be chosen to be a villain</ instead of a hero...

Compare Giving the Sword to a Noob , where someone obtains a powerful weapon, but is not able to wield it properly. See also Stumbled Into the Plot , where the protagonist instead of being chosen is simply someone who found the Inciting Incident by chance.

If the fans conclude that the writing team will never resolve its plots, then they will probably stop following the work.</ It's said that no one ever went broke underestimating the taste of the viewing public , but sometimes a show comes along that promises stories so complex and subtle that they'll make War and Peace </ look like " Frog and Toad Are Friends ". If it's done right , then this is catnip to a certain sector of the viewing public , who will often give such a show a surprisingly long time to set up its plot arcs before getting antsy for a resolution. The catch for the creator is that, the longer an arc runs and the more complicated it gets, the more awesome its payoff must be for it to feel satisfying to the fans. It's much easier for a writer to keep kicking the can — piling mysteries on top of mysteries — rather than finish storylines This trope was invoked in the British TV serial The Singing Detective </ , in which mystery novelist Philip Marlowe asserts that fiction, like life, should be "all clues and no solutions." That said, most audiences are savvy enough to recognize a framing device when they see one. Plots resting on a single Driving Question (Where is the Sunflower Samurai? Who is Mrs. Mosby?) are allowed some leeway ; otherwise, the production team would be out of work and the story would end. The Chris Carter Effect happens when a work is wholly focused on twists or not building up to a satisfactory resolution, or the plot gets so bloated that there no longer can</ be a satisfactory resolution (see Ending Aversion). Another contributing effect could be the unsatisfactory resolution of long-running side-plots. At this point, even the most ardent fans will start to feel jerked around, or perhaps even channel flip to something else. Sometimes, the lack of a resolution is not the writers' fault: the network might have pulled the plug early or compromised the original vision by having it focus on more merchandisable elements or to keep adding to or expanding on the author's intended story. See also Kudzu Plot and Commitment Anxiety . Specifically, the combination of a Kudzu Plot with Webcomic Time can have a similar effect on the audience, even when a finale is in the works, if the piece stretches out long enough that the fans lose track of the original premise of the series. Arc Fatigue is this trope on a smaller scale, in which just a single story arc goes on for too long without any resolution rather than the entire series. Can be connected to Franchise Original Sin in that the Myth Arc is successful at first before devolving over time into less-successful territory. If fans doubt that such a show will even survive</ to finish its story and don't bother tuning in, that's The Firefly Effect . Compare Writing by the Seat of Your Pants , which does not focus on how the audience reacts to it. Named for Chris Carter , creator of The X-Files (not the baseball player(s) or the electronic music pioneer) which some believe to be the godfather of this trope It has nothing to do with the former Minnesota Vikings wide receiver, Cris Carter. Note the missing "H" in his name. It also has nothing to

do with Beatles DJ and former Dramarama member Chris Carter. Contrast Fan-Disliked Explanation .

One of the oldest storytelling devices in history, the climax is the point, usually in the third act (sometimes the second), in which the story reaches its very height, where the Conflicting forces collide in a manner that resolves the conflict — one way or another — with the Dénouement sweeping up the pieces. When the Big Bad and The Hero duke it out over the MacGuffin . When the detective has his showdown with the murderer. Etc Climaxes are often associated with a big fight of some sort (which frequently occurs in the action genre), but more low-key stories can have climaxes via The Reveal or other devices. It depends on the nature of the conflict that the story has been running on since the Inciting Incident In an arc-based TV or radio show or comic book, it is common to have a minor climax in each episode, and build up to a major climax at the end of the season or the series . Additionally, the final episode or two frequently make up a Grand Finale , a massive climax which wraps up all (or at least most) dangling plot threads In soap operas , each story line tends to have a climax which brings together most of the characters involved, and is the dramatic high point of the arc. This climax often occurs in the middle of another arc ; thus, when one climax is resolved, the show starts building up to another, separate one Often accompanied by Climactic Music The subversion of this trope is known as an Anticlimax If you're looking for that</ kind of climax, we would like to direct you to Sex Tropes

The Coconut Effect describes any sound effect, special effect, or design feature that is unrealistic, but still has to be included because viewers have been so conditioned to expect it that its absence would be even more jarring . The trope namer is the traditional foley effect of using hollow coconut shells to recreate the sound of horse hooves in theater, and later radio, film and television. Horses hooves do</ sound like a pair of coconut shells being tapped together... when the horse is walking on cobblestones or some other hard pavement. However, it's fair to say that the vast majority of depictions of horses are upon dirt, grass, or other unimproved terrain where the sound would be muffled to inaudibility Nevertheless, filmmakers and radio producers stuck the coconut sound on the audio track even when the horse was on grass or gravel (rarely even in synch with the movement of the horse) until audiences came to expect the specific audio cue. Real recorded hoofbeats on later, more sophisticated productions sounded "wrong" to test audiences (or more likely, clueless producers). Many other Stock Sound Effects are prime examples: This trope does not apply exclusively to sound, but to any instance of an element that is used simply because the audience, consciously or unconsciously, expects it to be included, and/or because Stock Visual Metaphors allow writers to avoid long expositions via Show, Don't Tell : This trope has a sister trope in the Rule of Perception , which explains why one would bother with any of these effects at all. The color version of this trope is Stock Object Colors and Typical Cartoon Animal Colors . See also Reality Is Unrealistic , Artistic License , Science Marches On , Common Hollywood Sex Traits , Mickey Mousing , Radio Voice , Vinyl Shatters , and the semi-related Extreme Graphical Representation . Related in concept is The CSI Effect and Eagleland Osmosis . Nothing to do with Coconut Superpowers (except insofar as both relate to Monty

Python and the Holy Grail </). Thankfully, this won't be causing any real-world casualties . We hope. Compare Aluminum Christmas Trees and Small Reference Pools . Also see Necessary Weasel .

Also regarding typewriters, some of the early computer word processor programs in the 1980's had an option to produce a typewriter "click" sound for each key pressed for those who weren't used to silently typing. Now, if included, it's merely a cute nostalga thing were mechanical and did have plastic buttons that clicked into place when you pressed them (hence the nickname "clicker"). In the earliest remotes (like the one linked), the clicking sound wasn't just a result of a mechanical button being moved, it's how they sent the signal to the T.V. Each button flicked a different time, setting it resonating (like a tuning fork), and the T.V. was able to detect this sound; different tones would trigger different functions. Naturally, there isn't a lot of bandwidth there, so these early remote controls did little more than adjust the volume, power, and sometimes change the channels. Said limited bandwidth could be sometimes problematic, with random noises (such as a toy xylophone's overtones) triggering the T.V., and the ultrasonic signals could be heard by (and annoy) some a la "The Mosquito". It was only later that televisions began to be signaled electrically, first by wired remote and later wireless (via infrared or radio-frequency)

Just because a character's as jolly as a sloth with major depression doesn't mean they can't be funny. A Comically Serious character's lack of reaction to embarrassing, undignified, or just plain bizarre situations can subvert our expectations of embarrassment, hysteria, or insanity and make for comedy gold. When they're not serving as the 'straight man' for all the wacky hijinks the universe throws their way, the character is likely to be a Deadpan Snarker , The Stoic , The Killjoy , or The Quiet One Typically works as a Straight Man in the cast, although they may have a quirky Achilles' Heel . They may also serve as an Only Sane Man , and oftentimes become the victim of Not So Above It All Comically Serious characters often turn up in Brit Coms Bizarrely enough, has a very similar comedic style to the certain kinds of Cloudcuckoolander , in that the Cloudcuckoolander's comedy often comes from serious reactions to their own oddities, while The Comically Serious's comes from serious reactions to other peoples' oddities. Might also be the Butt-Monkey in settings where being serious is seen as an offense A Sub-Trope of Bathos . A Sister Trope to Serious Business , Comical Overreacting Compare No Sense of Humor ; So Unfunny, It's Funny ; Narm . Contrast Laughably Evil ; Dude, Not Funny!

A character — more often than not female — is revealed to be a traitor She however has a "Get out of Jail Free" Card . Her love interest, family member, child, woman's equivalent of a mistress , or cat has been arrested by the Secret Police in Commie Land and unless she helps them, they'll be finding a very familiar severed head in their mail. Maybe it's Martians that want a human to do their probing for them, or it's a crack dealer who wants his arrest records off the books, or maybe it's a needlessly complicated plot for love This may lead to Always Save the Girl

when this person ends up committing a misdeed, or helping the villain doing it, that leads to mass amounts of casualties in the name of saving one (or a few) Somewhat of a Truth in Television , as death threats to loved ones does often provide incentive to do one thing or another. However, in a world of common sense, most incidents like these would be reported to the police. Hopefully Compare to I Have Your Wife , only more versatile . Subtrope of Forced into Evil WARNING: Due to the nature of this trope, everything below is a spoiler and may not be suitable for everyone

The ugly truth is, not all Knights Templar are human. Some are artificially-intelligent computer programs that have been programmed to "stop war" or "safeguard mankind" and then took things either a little too literally or not literally enough . As a result, they rule mankind with an iron fist (literally). Because they aren't human, the computer tyrant sees nothing wrong with killing as many people as necessary to bring about its primary function...which is to safeguard humanity, remember? (You remember the old saying about making omelettes and breaking eggs , don't you?) There is no arguing with one of these beings; their sense of logic has convinced them that their actions are just and fall in line with the entire purpose of their existence. Thus, anyone who opposes them must also be eliminated. Emotional appeals are useless, because generally they have no idea what emotion is or means anyway. Occasionally, one of these computerized guardians of humanity actually proclaim themselves gods . A Sub-Trope of both Knight Templar and A.I. Is a Crapshoot . Compare Three Laws-Compliant , especially the Zeroth Law . Can tie in with Big Brother Is Watching . For when the computer is actually, unironically your friend, see Benevolent A.I. . Named for a frequent Catchphrase from the game Paranoia </ .

Yes, this is basically the act of pickpocketing , except that instead of having dexterous hands, the confidence man has a silver tongue . Sweet-talking the victim might take only a few moments (where you're probably only getting the money they had in their wallet and maybe not even all of that), or they might take place over the course of several days and weeks (in which case, you'll probably need some help to keep the scam going, but you're looking at a much bigger payday). A short con ("Hey, can I hold your wallet for a moment?") by definition doesn't take very long and establishes the conman's credentials. A longer con can form the basis of an entire storyarc, pulling an elaborate theft by multiple members of the crew gaining the trust of their victims and betraying that trust in a critical moment. A fictional version of the long con may involve a payday of millions of dollars for everyone in on the scam. Other roles in a confidence game include: Not to be confused with a Fan Con vention , or with someone who is in jail due to being victed of a crime; though an unsuccessful confidence man might end up there.

A Number Two who is the Number One's voice of reason. Their advice is valuable to the boss because they're usually right, which puts them in a unique position to "Speak Truth To Power" when other staff might be scared to contradict the boss. This kind of job security is largely self-reinforcing— the boss won't fire him because he needs his uniquely honest advice , but he only has the freedom to be honest because he knows the boss won't fire him. Often the smartest guy in the room , or just a calming influence to a Hot-Blooded boss. There's a high likelihood of his being a

retained lawyer Similar to The Mentor , but usually the same age or younger than their charge. Possibly, but not necessarily, the Only Sane Man . Might be the Chessmaster Sidekick if it turns out that he's actually the one in charge , or the Hypercompetent Sidekick if their boss would be useless without them. If he uses Obfuscating Stupidity to get away with Brutal Honesty , he's using Mirth to Power (and might be a Court Jester himself). Contrast with Evil Chancellor ; compare and contrast The Good Chancellor Sometimes, he'd make a better ruler than the real one, but he doesn't want to be in charge for some reason. His boss may even recognise this , which could be a source of jealousy or mistrust This position isn't only reserved for employees. It's not unusual for the wife of a powerful ruler or businessman to take on this role, particularly if she is a Proper Lady or Yamato Nadeshiko . They will have the Silk Hiding Steel necessary to point out problems without undermining him. This might overlap with the Lady Macbeth , if her husband is of a less-than-scrupulous character Named for the Mafia position made famous by Tom Hagen in The Godfather </ (so any self-respecting Don will keep one on staff as a matter of principle) In case you were wondering— con-sill-YEH-reh</ . Sort of. It's Italian for "counsellor" or "advisor" The Higher Self is the voice of reason as a character facet, while this trope is that as an external character See also Commander Contrarian

A stock plot in Caper movies, where some kind of store is right next to a bank or jewellery store criminals wish to rob, so they will rent that property for the purposes of tunnelling through to their target. Sometimes, in more humorous examples, the crooks actually become competent at their front business and will eventually pursue that legitimately in opposition to the Cut Lex Luthor a Check trope. The Ladykillers (2004) </ has a group of criminals posing as musicians who practice in the cellar of a boarding house, while tunnelling from the cellar to a vault they intend to rob. (In the 1955 original , the robbery is a straight Armed Blag , and the boarding house is just where they meet to plot the job beforehand and regroup afterwards.) Older Than Television : The Sherlock Holmes story The Red-Headed League

An episode of Car 54, Where Are You? </ was based around an eatery next to a bank. A single scene at the end of the episode replayed the entire plot with the buildings' next owners, who were posing as stamp dealers.

Chip 'n Dale: Rescue Rangers

For the Gunpowder Plot of 1605, the conspirators needed a way to get a great amount of explosives inside of the parliament. Conveniently the basements right under the kings throne were for rent, making any tunnel digging attempts unnecessary.

Pretty much any Police Procedural will at some point note that the person who "finds" a body is usually a pretty good first suspect. However, this is simply a starting point for the investigation, and the evidence will usually lead to someone else - if it didn't, there wouldn't be much of a story In other genres, though, the first suspect is the prime suspect. End of Here's the scene: Our

hero, usually someone Walking the Earth , arrives in the Adventure Town late at night when some intrigue is going on. Suddenly, he hears cries of alarm, and, being a hero, rushes off to see what's happened. He finds a hapless Red Shirt , recently killed by this week's murderer/monster/freakish otherworldly phenomenon. He stoops down to check the body and see if there's anything he can do to help Approximately two seconds later, the authorities arrive on the scene. Often, they will be led, unknown to everyone, by the Real Killer . Since the hero was found hunched over the body , he is instantly assumed to be the murderer, and it will be damned hard for him to convince anyone otherwise In Speculative Fiction , it will usually turn out that on this Planet of Hats , the local justice system is sufficiently ill-conceived that being found hunched over a dead body is considered absolute legal proof of guilt , unless the suspect can produce the actual killer himself In some instances, this can be justified as racism: in works taking place in a racist society, a nonwhite or foreign person will automatically be considered the murderer, because these people are corrupt, white/local/superior race people are obviously righteous and no person of that kind would murder someone This trope is often (and cheaply) accompanied by a sub-trope: "Don't pick up the knife!"</ The person standing over the corpse feels inexplicably compelled to pick up the bloody knife, smoking gun, or gory fireplace poker lying next to the victim. This makes it easier for the writer to justify the police ignoring all other evidence and possible suspects, but is counter-intuitive: what instinct or rationale could cause a normal human being to touch such a horrible object, let alone pick it up? With embedded knives, this is worse as removing a knife from a stabbing victim can actually cause more harm by unplugging the wound A related scenario (which sometimes but doesn't have to involve murder) is Possession Presumes Guilt , where if someone has been burgled/mugged/kidnapped/the victim of vandalism/etc, whoever is first found with the victim's belongings (or pieces thereof) in their possession is assumed to be the culprit A special case of Wrongly Accused . Compare Red Herring As a Death Trope , all Spoilers will be unmarked ahead. Beware

Not to be confused with The Corruption , which is more of an impersonal force, this character's primary role in the story is to bring out the worst in everyone around them. Often, their ultimate goal is getting the hero to do a Face–Heel Turn They fulfill this role willingly and knowingly — perhaps they are doing it For the Evulz , or because they seek validation by dragging others down to their level. Perhaps corrupting the hero advances their own agenda in some way — perhaps opening the hero to recruitment as an ally , perhaps something more subtle . Or maybe they just think that Humans Are Bastards and are trying to prove it In any case, do not expect these guys to get a whole lot of development themselves — they are less characters in their own right than they are the metaphorical devil on someone else's shoulder given physical form. If they do</ get much Character Development , they will probably be a Shadow Archetype for the character they are trying to corrupt. Expect them to be very smooth and clever, though precise competence level will vary This character will almost always be a serious villain, though they can be parodied by being made particularly inept. If they're not</ the Big Bad , expect them to still be an important villain with a lot of screen time — this trope doesn't work too well if you can't interact with the

characters you're corrupting Do not expect these guys to pull a Heel–Face Turn ; they are more likely to go into a Villainous Breakdown if they are definitively rejected. If they fail, it will probably be because they cannot comprehend good . Perhaps they want to rule with the hero , though this is by no means a universal trait, and not everyone who makes that offer is an example of this trope. May offer a Deal with the Devil at some point, but is just as likely to use mental and emotional manipulation to force their victim's hand without any sort of formal bargain — see Break Them by Talking and "The Reason You Suck" Speech for some favorite tactics Sometimes the Corrupter cares more about turning the hero than his own life, and invites them to Strike Me Down with All of Your Hatred Can be of any evil alignment; a Lawful Evil who wants a new minion , a Neutral Evil who wants an apprentice to continue their work, or a Chaotic Evil who just likes screwing with people. If it turns out that it was all a Secret Test of Character or otherwise necessary, see A Chat with Satan Closely related tropes are Manipulative Bastard , The Chessmaster and Toxic Friend Influence . See The Vamp or Lady Macbeth if female. Will often overlap with an evil Warrior Therapist , an Evil Mentor or Treacherous Advisor . See The Corruptible for the typical victim of this kind of villain, and Incorruptible Pure Pureness for those immune to their wiles. Contrast The Conscience , which tries to put someone on the right path, and The Redeemer , who brings someone to atonement The Shoulder Devil is a literal version of this trope, though these days is one more likely to be played for comedy Not to be confused with the movie with the same name

The Corruption is a force of chaos that gives some of its victims a Superpowered Evil Side before (or while) it mutates them into mindless monsters. The Body Horror transformation progresses gradually, and the final result tends to be a hideous, slithering creature which looks like the spawn of an Eldritch Abomination , an Enemy to All Living Things capable of inflicting the Corruption on any creature falling into its tentacled clutches In the standard plotline, it will usually infect The Hero at some point. While seeking to cure himself , the infected hero must struggle with malign influence and limit use of the evil powers granted by the Corruption, since using them tends to corrupt him further This often works by an interesting rule: Mooks and Red Shirts tend to be turned into raving, mindless beasts/monsters. If the hero or the villain catches it, they get Cursed With Awesome superpowers. Heroic Willpower is probably the reason for this temporary(?) emotional stabilization . Named villains and extras will usually give in to it much more quickly for the powers, and quickly betray humanity because of it. Expect them to get Drunk on the Dark Side and suffer a Super-Power Meltdown because of it. Remember, Evil Is Not a Toy Nastier versions require a Mercy Kill . They may, in Dying as Yourself , recover just a few moments, but only if mortally wounded. Contrast with Power Degeneration , where the cause of eventual death is overuse of superpowers, or simply having them In video games, a Non-Standard Game Over may occur when the player is corrupted too much. You can tell you're getting too close to the edge if the PC gets Tainted Veins and Undeathly Pallor Often related to The Dark Side . Compare with With Great Power Comes Great Insanity and Evil Makes You Ugly , and contrast The Corrupter , who also does their best to turn other characters evil, but is also a character in their own right, rather than an impersonal force. It's usually represented visually by gaining Volcanic

Veins , a Red Right Hand , and a Game Face or even a full on Slow Transformation . Someone with Incorruptible Pure Pureness may be immune to its influence or may become a victim of a metaphysical variant of The Worf Effect , succumbing to show how powerful the Corruption is Due to the Body Horror involved, it's a potent source of Nightmare Fuel For when the evil force corrupts a location</ instead of a character, see Evil Tainted the Place Not to be confused with the third game in the Metroid Prime Trilogy </ (even though it uses this trope as a critical story element). Nor should it be confused with corruption of the political variety . Or the corporate variety . Or the visual variety

What's a Dom Com without a couch? It's usually center-stage and positioned so that anyone sitting there is facing directly into the audience; presumably it's right in front of the Fourth Wall . Sometimes a TV is set between it and the audience. The couch is typically set in the center of the room, rather than pushed against a wall, so that standing characters can converse with sitting characters while both are still facing the audience And everybody</ sits on The Couch at some point during each show. Even the dog. They probably sit in the same place every time , too If you can remember the show, you can almost certainly picture the living room (or coffee bar) and the requisite couch The couch is, of course, prepackaged in Standardized Sitcom Housing (however, you do have to buy your own TV), and can often be found in a Social Semi-Circle . (That said, don't put two gamers on it) See also Local Hangout

Useful Notes

Tropes pertaining to anything the creators of a work seemingly abandoned or forgot existed.

"The _____ Job" is a standard titling template for crime stories, especially caper stories. Often — though not always — the blank is filled in with the location where the crime is going to take place; as a result, the most common version of this is probably "The Bank Job" Compare Mad Lib Thriller Title . May be used to title a Heist Episode

The Nut Job </ , in which squirrels rob a nut store.

The Bank Job </

The Agent Carter </ episode "The Atomic Job".

Barenaked Ladies has a song called "Bank Job".

Train Job

One of the trailers for the DC Universe Online </ MMORPG depicts a mission called "The Job".

The Kim Possible </ episode "The Big Job", where Señor Senior Junior tries to pull off an impressive crime as a birthday gift to his father.

A particular form of Reality Is Unrealistic wherein a particular work is shaping the ways that crime is perpetrated, discovered, and prosecuted. It shows up in a number of ways:

No, this isn't true, but in some stories it is a Self-Fulfilling Prophecy . It was first reported in the news media in 2005. The Trope Namer is CSI </; it, its spinoffs , and its imitators have led juries to refuse to consider any evidence trustworthy except for the most comprehensive, and to equate its absence with reasonable doubt Whether or not this is actually true, or that CSI caused this if it is, doesn't matter to us. It is what the trope is called, that's all. Interestingly, the Season 15 opener of CSI</ was called "The CSI Effect"! Collecting this super-evidence takes much less time In-Universe in CSI </-like stories than it does in Real Life because of time compression — both to make the show fit in an hour with ads and to let a season take less than a few years In-Universe . In the show, DNA tests work in hours; in Real Life , it can take months (a DNA analysis can take a few days to complete and American crime labs are infamously overworked and backlogged). Unfortunately, jurors are frequently unaware of the time difference; getting evidence beyond a reasonable doubt by the CSI</ measure can conflict with giving the defendant a fair and speedy</ trial. And heaven help the prosecutor if the jury wants evidence of a kind that doesn't exist yet! At least one of the CSIs has had security camera footage rotated to see the back of something, for instance. Most of the trouble comes from forgetting the "reasonable" part. You don't need ironclad proof of someone's guilt to convict them; you just need enough that there is no credible scenario in which they're innocent. For example, it's possible that Defendant X didn't mean it when he said he wanted the victim dead, picked up the murder weapon just to look at it, left his DNA at the crime scene before the murder, and Googled "body disposal" out of morbid curiosity. But all that's a little much to ask a jury to swallow. On the plus side , some say jurors who expect forensic evidence are less likely to place excessive trust in the accuracy of witness testimony, and that this may reduce the risk of wrongful convictions. Witness testimony has been thoroughly demonstrated to be one of the least reliable forms of evidence and one of the most frequent causes of wrongful convictions. See the Real Life sections of Fake Memories , Laser-Guided Amnesia , and Weirdness Censor for just a few reasons why some groups advocate for the elimination of testimony as evidence altogether in favor of purely forensic-based trials. See these stories from </ </ and

These steps are usually relatively simple, such as picking up spent shell casings, or wearing gloves. Some criminals have deliberately planted DNA samples from other plausible suspects to derail any investigation. In Jermaine McKinney of Ohio committed a double murder, then cleaned the crime scene (and himself) with bleach to destroy DNA traces, bundled the bodies before transporting them and lined his car trunk with plastic to prevent fiber and blood contamination, collected his cigarette butts and took numerous other steps; he was only caught because he was unable to dispose of his murder weapon (a crowbar) in an unexpectedly frozen lake and simply left it sitting on the ice Note that some law enforcement officials believe this can be a good thing, as many criminals end up generating more evidence by trying to dispose of it . Max Houck, director of the Forensic Science Initiative at West Virginia University, gave the example of a man who would not lick his

envelopes to avoid leaving DNA, only to leave hair and fingerprints in the adhesive tape he'd use to seal the envelopes

This helps make up for the second effect One British kid, remembering something he'd seen in CSI: Miami </ , managed to preserve some evidence in a case — and got in the papers for it This phenomenon predates CSI</ by quite a bit. For example, during the Manson murder case, a kid found a gun in a field. Having watched Dragnet </ , he knew to pick it up by the muzzle to preserve fingerprints. Unfortunately the cops didn't, and grabbed the gun by the handle, obliterating any fingerprints Some CSI labs have complained that more police officers call them to crime scenes and submit much more evidence to them. Yes, that's right; real-life CSI techs are complaining about being expected to help solve more crimes. This is because real life CSI labs these days tend to have a month or two of backlog before</ they take on new cases. Making them take relatively minor cases hurts more than it helps

This one, when it happens, severely annoys defence attorneys. This happens even though the science behind forensics is constantly evolving, and many labs are using methods no longer considered certain. One notorious case down in Texas involved a man who was convicted on the basis of his lip prints — a method of identification that hasn't been widely considered reliable for decades. Even worse, a man in Oklahoma spent almost two decades on death row</ for a crime that it was later proved he didn't commit. The primary evidence against him, aside from blatantly specious interrogation tactics? The shape of his hair follicles, a mode of identification that was proven useless in 1885, over a century before the murder took place. Another notorious case in Texas has been the actual execution of a man accused of setting a house fire which killed his children. This one is very touchy for people on both sides of the issue of the death penalty for obvious reasons, but one fact which is beyond dispute (amongst experts not directly involved in the prosecution) is that the investigator used apparently clear signs of arson that research since the original trial has been demonstrated to not be ironclad proof of arson at all. The arson-evidence controversy later was explored in the Law & Order: SVU </ episode "Torch," portraying two fire scene investigators arriving at opposing conclusions about whether a man had set fire to his house, killing his family. The first investigator, near retirement, relied on outdated methods of interpretation of the evidence; the second investigator (with the help of a District Attorney played by Sharon Stone), recreated the scene and demonstrated that the other investigator's interpretation was flawed. The episode is discussed in See 24 </ for a similar phenomenon. Compare The Perry Mason Method , which inspired a similar problem in the 60's where some juries wouldn't convict unless the accused confessed in court.

The Cutie is a character who is known for being sweet and lovable, more comic relief than anything, who likes nothing more than to pet little puppies. They provide many Heartwarming Moments . They make you adore them, root for them and love them. Or they can make your teeth rot . Or both They are known for being very idealistic , cute and innocent. Some of them even may act in a childlike manner to emphasize their innocence with an upbeat and positive attitude. They also tend to be genuinely nice, loving , caring, and kind to

whoever is with them. They tend to take the most peaceful solution to a conflict and hardly ever (if ever) harm others in any way (though you really ought to watch out). They're most often female , though younger boys can also be this Their innocence and purity draws the sympathy of the audience for them. For this reason they tend to become The Woobie when bad things happen to them Related to Break the Cutie , Kill the Cutie , The Fake Cutie , and Corrupt the Cutie , but if these things happen they don't need to be mentioned here, except when the things go back and Heal the Cutie . Compare Moe , The Pollyanna , and All-Loving Hero . Also referred to as a "Cinnamon Roll" in the slang of some media fandom circles. If the Cutie Took a Level in Badass , they're Badass Adorable

A character who believes that the world is, to put it lightly, a bad place. Whenever they describe something, expect them to Accentuate the Negative . If someone puts forward an idealistic or optimistic premise, the cynic is about equally likely to respond with ' That's moronic ,' as 'That's a nice idea in theory, but it's never going to happen', probably pointing out all the flaws as they go. This character may be angry or indifferent to their (perceived) Crapsack World , or may be heavily critical and sarcastic Note that a cynic differs from a pessimist - while pessimists may not necessarily see anything bad in someone else, they tend to be either nervous wrecks or just sad and depressed because they've been put through a lot of pain and hardships . Cynics, on the other hand, are typically abrasive and grouchy jerkasses who find it hard to get pleasure out of things and put every single negative aspect of everything first, especially when it comes to other people and their motivations An extreme version of The Cynic is the Straw Nihilist , who always expect the worst out of everyone and everything (Anything that can go wrong will go wrong, the world tends to maximum entropy , Humans Are Morons and/or Humans Are Bastards , and that morality is grey and grey , grey and black or black and black). If used badly, you can expect them being called out as wangsty The Trope Namers , the Greek were not especially cynical as we now understand the term - they believed that people should reject all conventional notions of happiness, like those that involved wealth, power, fame, idealism, etc., and live a simple, natural life with no possessions, sharing some similarities with Buddhism. However, many of the Cynics (such as) took the philosophy to its extreme, criticizing Classical idealism while also preaching poverty and ugliness ('cynic' is from the Greek word kynikos</, 'dog-like'). Which is why the Cynics are depicted by the Enlightenment as hateful Straw Nihilists This character is likely to show up in either a Crapsack World , where they are always right, or in a Sugar Bowl , where they exist solely to be proven wrong . Of course, in more realistic settings, more nuanced forms of cynics can also turn up, their rightness index varying Polar opposite of The Idealist . Compare/contrast The Stoic . See also Cynicism Tropes , Sliding Scale of Idealism vs. Cynicism This is a Super-Trope , so examples should go to the relevant subpages if possible

A character whose name is clearly taken from the actor/actress portraying them. This shows up in TV a lot in shows designed as a vehicle for an actor's fame. By lending their name to the fictional character, there's some familiarity created already. The

most obvious way to spot this is to see if the title of the show incorporates the lead actor/actress' name, but not always. This seemed to hit its peak in the sitcoms of the late eighties and early nineties. A good majority of sitcoms were based on a stand up comedian's routine (Tim Allen , Roseanne Barr) and many of these comics already were developing fanbases. Creating the Danza was a way to leverage their fame as a comic into success as an actor Another common reason for doing this is that if an actor is famous enough, people will always refer to them by their real name even when discussing them as a fictional character (unless, of course, the character they are portraying is even more </ iconic , with the exception of said character being played by different actors and/or in multiple media). To avoid the annoyance or awkwardness of this character being constantly referred to as "[Famous name's] character", it's often best to just give them the same first name Sometimes this is used for child actors, to make things a little less confusing around the set. Also sometimes used for token ethnic minority characters, where it seemed that the program's staff were frightened to think up an original name and just used the name of the actor. In rare cases, it's an accident - the actor chosen to play the character just happened to share a name with the character From a directing point of view, using this trope also reduces the number of filming errors, since the actors all go by their real name (or at least, real first name), so the very real (and surprisingly common) mistake of accidentally addressing their colleagues by their real name instead of their character's name is ruled out, cutting down the need of retakes. This was the main advantage of the trope back in the day where film (which cannot be reused and have to be disposed or archived if a mistake was made) was the main recording medium, and has since been lessened with the advent of erasable magnetic media and later, digital. However, it does still save time and effort with the minimization of retakes It's not a Danza if the character already has the name from an adaptation; in such a case the character is not being named for the actor Not to be confused with an actor or celebrity actually playing themselves. That's As Himself (if they're a main character) or Special Guest (if they show up for a single episode). How to differentiate? Is Bob the Actor playing Bob the Actor? Or does he just happen to be playing a character that's also named Bob? The second one is The Danza Compare Character as Himself , Adam Westing , Ink-Suit Actor . See also Name's the Same and Author Avatar . If The Danza is the writer, then it may be Write Who You Know as well as Author Avatar Named for Tony Danza , whose frequent portrayal of people named Tony (see Taxi </ and Who's the Boss? </) has made him the butt of a few jokes, for example, for April Fools Day from Teevee.org. See at IMDB for another list

A common Horror Trope . A character is surrounded in darkness, aware that there's something lurking just in the shadows. They stare inquisitively into the abyss... and then a pair of eyes appears and returns the favor Usually, this is used for Rule of Scary , but there's many other uses. For example, a comedic effect could be that the entity shrouded in shadow could be invisible except</ for their eyes By the Lights of Their Eyes is a Sister Trope . A typical trait of Things That Go "Bump" in the Night . Compare Glowing Eyes of Doom The trope title refers to one of the many philosophies of the eternally quotable Friedrich Nietzsche , as seen on He Who Fights Monsters

The Evil Counterpart , corrupted version, or evil side of a morally good Sentient Cosmic Force ... and a considerable number of non-sentient, non-cosmic forces as well. Evil is addictive; the more of its power you rely on, the more evil you become. The Dark Side is when the temptation to fall has an added oomph.</ It's more than just the cumulative result of one's actions; there's an active corrupting force that speeds things along . This is often the Phlebotinum -powered justification of Jumping Off the Slippery Slope , which results in the Fallen forgetting why they fell in the first place . The Dark Side often promises pleasure with power and respect. Sometimes, the Dark Side even offers itself as the efficacious means to do good, leading to the hero falling into a He Who Fights Monsters situation. Once it gets you, there's an odd tendency to accessorize accordingly Like More Than Mind Control , it accelerates the more suppressed urges and wrong choices it has to work with May be fueled by an Artifact of Doom . May grant Black Magic and work through The Dark Arts . May result in The Heartless . Once it starts to taste good there's no turning back The trope is named after the dark side of The Force from Star Wars </ It's a component of Psychoactive Powers ; protective instinct is harder to tap on demand than righteous fury , but anger tends to feed on itself, resulting in Power Incontinence Of course, there are often also social, mental , moral , and sometimes physical costs that no amount of subterfuge can fully hide but by the time these aspects appear, it's too late Contrary to what the Well-Intentioned Extremist and Anti-Hero might say , you cannot</ "fight the Dark Side with the Dark Side" — Heroic Willpower notwithstanding, the consequences will inevitably lead to the user's Pyrrhic Villainy Compare With Great Power Comes Great Insanity . Often leads to displays of Drunk on the Dark Side and shouts of " Screw the Rules, I Have Supernatural Powers! " Also compare Evil Is Not a Toy , where the danger is not moral, but physical. The Dark Side tends to be, but is not always, associated with Discipline in Harmony Versus Discipline for its dominating aspects. Contrast Dark Is Not Evil . The Dark Side comes with its own built-in Aesop about the ends not justifying the means. See also The Dark Side Will Make You Forget , a scenario where a once well-meaning good guy uses the dark powers for good ends, and over time becomes a villain in the process

We would be honored if you would join us.

Tropes listed in the Wiki Tropes index are being discussed at the Trope Repair Shop . Click the link to join the discussion. You have just finished writing an article. More specifically, it is the masterpiece that TV Tropes has been waiting for. When you suggested the idea in , the number of replies was astonishing. Seriously, this article would move any troper to tears</ . it's so good! But, being the savvy troper that you are, you know better than to just go submitting it without a care in the world. You smite the Data Vampires , because right as it is about to send, you press the refresh button with lightning fast reflexes, saving your trope entry from a terrible, untimely demise. ...or so you think, as right as you have hit that refresh key, you see the following message: What happened? Surely this can't be right! After all, you took every step to stop the Data Vampires in their tracks! Well, unfortunately for you, you have not met the Data Vampires, you've met the database, and

it hates you. We're sure you're a very nice person but the database doesn't think so. Never mind the more probable impossible answer that TV Tropes is glitching, because TV Tropes is perfect and does not malfunction . You can't get to this page because you suck. It's that simple. But to avoid this sort of thing, write your article in Notepad or TextEdit before sending, or at least copy and paste your hard work before pressing 'save'. There, I finished that article on The Database Hates Me. Good thing, too, because at least three pages link to it . What? What do you mean it puked up an error? What? I have to type it ALL AGAIN? NOOOOOOOOOOOOOOO! For a more TV Tropes-specific version of this trope, see TV Tropes Wiki Hates Me

There are tons of dark prophecies of doomsdays and master plans that take a long time to put into action. The Day of Reckoning is the day that all the prophecies speak of... the day that the Evil Overlord wins, goodness and mercy are overthrown, and a new Dark Age arises on Earth.. At least, until the hero shows up, defeats the villain, saves the day, and returns everything to normal (usually with one or two characters sacrificing themselves to do it). This trope is about the final confrontation between the heroes and the coming evil. The long-awaited and foretold apocalypse. When the heroes finally get out from under the Darkest Hour and put a stop to the villain's plan for world domination A specific type of story Climax . See also Darkest Hour and Final Battle And nope, this trope has nothing to do with Universal Soldier: Day of Reckoning </ despite its title As an Ending Trope , expect massive unmarked spoilers ahead

There was a point when the Uncanny Valley was theoretical. Today, we have proof. Horrible, horrible proof. Computers have given producers incredible abilities to manipulate images and create breathtaking effects for film and television audiences. However, this power has a very controversial dark side Famous but long-dead celebrities have been digitally resurrected to lend their endorsements to numerous commercial products. Photographs or scenes from their filmed appearances are digitally processed to show them interacting with various products or people hawking those products. These appearances aren't limited to film and TV stars. Historical figures have given their digital support to numerous products and services as well The use of dead celebrities' images has diminished over the past decade, especially in North America. This is in part due to the public's growing distaste for the trend, but another influence has been the implementation of inconsistent personality rights laws across the continent that leave advertisers unsure as to whether they need to obtain expensive permission from a dead celebrity's estate to use the deceased's image. Twelve states (and Quebec in Canada) have laws on the books that prohibit the unauthorized use of such images, but the length of time these rights exist after death varies from jurisdiction to jurisdiction, and in most states the use of an image in a "work of art" is excluded - but in most cases nobody has defined whether advertisements are works of art. It's easier just to hire a double There have also been ethical and taste concerns raised about digitally resurrecting people who were murdered such as John Lennon and Judith Barsi A variation of this is to use historical footage of said celebrities from when they were still alive

The Dilbert Principle is a counterargument to The Peter Principle . It states that, generally speaking, the least competent workers are systematically and swiftly moved to the position where they can do the least damage: management. In other words, the persons who least deserve promotion (or most deserve to be fired) will be promoted instead of the competent Reasons for this range from good, old-fashioned cronyism to attempts to subvert the Peter Principle to... well, cronyism — though it's not uncommon for individuals to rise within a bureaucracy on the basis of superficial traits that have nothing to do with their effectiveness on the job (good looks , impressive height , etc) or skills that are more relevant to getting</ a job than to doing</ it (manipulation , flattery , etc). In any case, the human roadblocks are thus removed, leaving the employees who actually can</ work to get on with it... but if they wanted</ the promotion, their morale will take a hit The name of the principle was coined by cartoonist Scott Adams — naming it after his comic stip series Dilbert</ — who identified this trend as common in businesses. He wrote an article for The New Yorker describing the principle in detail, and later included the article in a book (also titled The Dilbert Principle</) detailing various similar office phenomena Compare Kicked Upstairs

One of the most important steps towards starting or growing any kind of business is the simplest, yet one of the most difficult to actually pull off: getting your name and product out there, and making sure people remember who you are. That one truism explains so much about the commercials you see on television: yeah, that commercial may have been stupid and annoying as hell, but if you remember it...well, mission accomplished. Of course, there are other ways to get people's attention that don't involve annoying commercials or manufactured viral ad campaigns; you could just create something that people don't see every day, and use that as an attention-getter. Something like...say, a van shaped like a 6-ton version of your new snack cake. It'll certainly get bystanders' attention and maybe some exposure on social media, and with a good marketing acumen and a bit of luck, you could parlay that into a successful ad campaign. Using vehicles as billboards to advertise products is nothing new — just look at any commerical bus or public transportation — but takes the idea to its logical extreme: the food item is not on</ the vehicle, the food is</ the vehicle. It refers to vehicles that are actually shaped</ like a piece of food — a hamburger, a hot dog, a carton of milk, and so on. While The Dinnermobile is most commonly used as a real-world advertising trope, the general concept (with or without the advertising bent) is also popular in visual media aimed at young children: cartoons, picture books, and so on. Even when they're not trying to sell food, food-shaped cars are memorable, whimsical, cute, and even funny. Some fictional media even take the idea a step further, making the food-based vehicles out of actual</ food that may or may not be wholly or partially eaten by the end of the episode. While most foods could theoretically be designed into a vehicle, things like hot dogs, hamburgers, and fruits are among the most common design choices for Dinnermobiles. This is partly a matter of precedent — after all, the iconic Oscar Mayer Weinermobile popularized the concept — but it's also a matter of practicality. These foods tend to have shapes that are relatively easy to design a vehicle around: they're fairly symmetrical, compact, proportionate, and three-dimensional. Or, more to the point, they're

not flat, ridiculously wide or tall, full of appendages sticking out of the sides, or anything else that would make them impractical or even unsafe to drive as a vehicle. That's why a sausage-shaped car makes sense, but even the idea</ of a car shaped like a thin-crust pizza would give any automotive engineer a migraine. Subtrope of Shaped Like What It Sells . As an advertising device, compare and contrast Anthropomorphic Food , where companies advertise food by, uh, giving it sapience ? In more fantastical fictions, Dinnermobiles may be driven</ by Anthropomorphic Food , or a regular character for whom the car resembles a Trademark Favorite Food . If a video game has a Level Ate , then it's highly likely that at least one of these will make an appearance. If the car is especially delicious-looking but not actually edible, a character might go Extreme Omnivore and devour it anyway . Likewise, driving one of these cars may result in being chased by any number of assorted stray animals . For cases where the food-shaped item is a stationary building, see Bizarchitecture .

The Ditz is a character whose defining characteristic is profound stupidity or quirkiness. In fiction, female ditzes tend to be sweet and naive, while male ditzes tend to be oafish but lovable (whether if they were inverted or not gender-wise). Either way, they're almost always friendly and sociable (or very kindhearted, honest, & humble in some instances), something that can't be said for the polar opposite side of this trope . The Ditz is written to appear unintentionally funny or humorous. In a drama series, they provide comic relief Unlike The Fool , The Ditz is seldom in any real danger and, even if they were, luck can often be counted on to save them. Though darker, or more cynical stories , tend not </ to favor them A good looking Ditz (of either sex) might be a Brainless Beauty . An independently wealthy Ditz is an Upper-Class Twit . A Ditz that's a Mighty Glacier (Most commonly as The Big Guy or The Brute) is a Dumb Muscle . A Sexy Secretary of this class would be a Ditzy Secretary A more competent if lucky Ditz will often become The Fool . Taken to its weirder extreme, the Ditz can evolve into a Cloudcuckoolander One reason you can find The Ditz on so many TV shows is that it gives the audience someone to feel superior to . No matter how stupid one might be, you are still smarter than The Ditz. In certain settings, this trait may also leave them suspect to be accused of having an Ambiguous Disorder to justify their general behavior See also: Asian Airhead , Genius Ditz , Obfuscating Stupidity , Dumb Blonde , and The Klutz (who can relate with having a foolish persona). Can overlap with This Loser Is You , but isn't the same thing In extreme cases, if the character dies because of their stupidity, see Too Dumb to Live . If the character puts others</ in danger because of their stupidity, see Lethally Stupid . May overlap with Idiot Hero

The "Male" Jessica from The Hot Chick In This is Spın̈al Tap </ , none of the characters are particularly bright, but nearly everything Nigel Tufnel says is, as David St. Hubbins puts it, confused.

When the villain is dispatched by an abused member of 'his' side when an opportunity for revenge presents itself. It's all gone to hell. The base is collapsing about your ears , your Evil Plan is unraveling , the heroes are lining up for the Humiliation Conga — what

more could go wrong? Well, remember that mook you humiliated in front of his friends? Or that victim you blackmailed, chained up, or enchanted? Or that member of your crew you abandoned to the cops when they came knocking? It doesn't matter who it is, but what does</ matter is that he's the one that you've hurt or abused one time too many , and he's been waiting for just the right moment to pay you back. And he's got a knife . Yes, that's a knife. Unlike the Bastard Understudy and The Starscream , this character attacks as a crime of opportunity. There is no danger that he will take over the villain's place in the grand scheme of things. There is, however, a possibility that he will menace the others as a True Final Boss . The backstabber often ends up dead, but this is usually not Redemption Equals Death because their motive is not noble. Innocent victims who turn on the villain typically do it only for revenge , while evil victims prove that they were fine with all of the Big Bad 's crimes except the one committed against them</ . In short, when a villain has underlings who aren't willing or loyal , there's no reason for them not</ to pile on when his doom is certain. The mistreated character can also betray the Big Bad passively by deliberately NOT helping when his wounded and powerless master calls for aid. This can sometimes feature an Ironic Echo if the Mook uses the Big Bad's own Villainous Demotivator lines as the reason he can't step in. Especially likely for the villain who doesn't give a damn about anyone but themselves . The Mole and/or Fake Defector may launch similar attacks, for similar motives, but in their case, the attack was planned, or else the plan was to look for such openings. Losing control of a Tyke-Bomb or a Psycho for Hire may result in this as well. Can result from a backfired attempt at Being Tortured Makes You Evil . One use of this trope is to spare the hero from the burden of personally dispatching the villain, similar to a Disney Villain Death or Bad Guys Do the Dirty Work . The hero may have tipped the balance, but ultimately the villain was brought down by the toxic work environment that he himself created . Often occurs in the form of Bodyguard Betrayal . For situations where the abused character defects to the hero's side, see Mistreatment-Induced Betrayal . Subtrope of Hoist by His Own Petard and Karmic Death . See also Nice to the Waiter . If the dog biting back does some puppy-kicking of its own, it's He Who Fights Monsters . If it's a pack biting back it's La Résistance , and The Revolution Will Not Be Civilized if they fall into evil themselves. If the hero deliberately leaves the villain at the mercy of his former henchmen, it's Do with Him as You Will . If the villain's original motivation is that the ones he served mistreated him</, it's Then Let Me Be Evil or even Woobie, Destroyer of Worlds . As a Death Trope , more than one Spoiler will be unmarked ahead. Beware.

Dolls. Everyone has played with at least one in their lifetime, and many enjoy collecting them well into adulthood. However, there's something a bit... upsetting about a large collection of dolls . Maybe they're a bit too human , or how they lay so deathly still in their pretty dresses, with their glassy unblinking eyes... Brrr! </ Which is why just about every horror , suspense and mystery series that runs for long enough will have a doll-themed episode. This episode will inevitably be incredibly creepy and unusually upsetting . If the show is already terrifying, then this episode will inevitably one-up itself . This may have to do with the perversion of childhood innocence, though many people think dolls are just inherently creepy. This trope tends to manifest in a number of common ways, many of which can combine with each other: The dollmaker or

collector will usually be a madman or woman who has taken a shine to the protagonists either as "something" to add to their collection, potential parts for their latest creation, or threats to themselves and their beloved collection, making them try to capture or kill them.

Alice is approaching a door, or is standing beside or in front of a door, when abruptly the door is thrown open from the other side by Bob. Alice is then revealed to have been squished against the wall by the door when it was smashed open While this is a type of Slapstick that is very common in animation, being hit by a door happens in live-action media also (not to mention real life). Definitely a case of Truth in Television : if you've ever seen a sign on a door warning you to open it slowly, chances are that sign was put up after</ someone got clobbered by that particular door There's also a second variant, where someone is rushing at an open doorway for whatever reasons he or she may have... only to have someone else close the door. This trope applies when the runner ends up splatted on the door; if they make it through, it's normally Impact Silhouette , and if the runner dives through a narrowing gap, you have an Indy Hat Roll variant Compare with Door Judo and Door Fu . Sister trope to Tae Kwon Door — for when this is weaponized during a fight. See also Toyota Tripwire for the car variant. Might be the deed of a Ghost Butler , or a side effect of Tactical Door Use . Can also overlap with Face Plant . Not to Be Confused with Heel–Face Door-Slam , although one might slam a reformed villain to death with a literal door. Also, not exclusively happening in Soviet Russia

The Big Bad needs a Number Two ; this would be the Evil Counterpart of that (or The Lancer). He's the main villain's closest confidant (or something akin to it), frequently acts as his Foil , and may be seen working as the front-liner of the evil forces to personally carry out his master's orders as one of his most dangerous and competent subordinates. Tropes related to The Dragon: Beta Bitch : Number Two to the Alpha Bitch , often fills the Dragon role when the Alpha Bitch is the Big Bad . For literal dragons and their permutations, see Our Dragons Are Different . Not to be confused with Dragon Lady , who is more likely to be a Big Bad than the Dragon, or Dragon </, which was a magazine. Definitely not to be confused with Savage Dragon </ .

When dealing with navies (or, occasionally, armies with vehicle support) in fictional settings, there is usually one class of vehicle that just outclasses everything else. It's the biggest, baddest, meanest thing flying (or walking, or rarely rolling), packed with weapons, armored (and possibly shielded) to withstand a whole other fleet's worth of firepower, and may be The Battlestar on top of it all. It's a fleet unto itself, it changes the face of the battle just by showing up, and conventional wisdom is that it can only be taken down by something just as powerful as it is. It is The Dreaded when it comes to large-scale vehicle combat. There is a strong tendency for such a vehicle to be called a Dreadnought. This has strong roots in Real Life naval history , specifically HMS Dreadnought</, a British battleship which revolutionized naval warfare for decades to come. Combining heavy armor, high speed, and a relatively small battery of relatively large guns , Dreadnought</ rendered every other battleship afloat, henceforth known as Pre-Dreadnought Battleships , obsolete. Ironically, Dreadnought</ was bordering on

obsolescence by 1914 and the outbreak of World War I due to rapid advances in shipbuilding, leading to bigger, more powerful, and more heavily armed Dreadnoughts (with later examples known as Super </ Dreadnoughts). In Real Life , the name gradually dropped out of usage after World War I , as the Dreadnought-type of battleship became the default type of battleship. Not long after, battleships themselves became obsolete as aircraft carriers became the rulers of the waves. In fiction, however, the Dreadnought designation lives on, due in part to the game-changing nature of the original HMS Dreadnought</, and partly to the undeniably metal nature of the word "Dreadnought." (Dreadnought, roughly, means " Fear Nothing .") In naval or space-based settings , expect a Dreadnought to pull double-duty as a Supervillain Lair . Compare and contrast with its primary competing/companion trope, The Battlestar . Both fixtures of a Standard Sci-Fi Fleet , though both can and do appear in other settings. Both frequently holding the spot of "scariest thing around," but while the Battlestar is about the vessel's role as a combined battleship/aircraft carrier , the Dreadnought is about the tendancy to call the most dreaded vehicles "Dreadnoughts." If both appear in the same work, and the Dreadnought is not also the Battlestar, expect one to overshadow the other. Either because the Battlestar's combined arms nature makes it Awesome, but Impractical compared to the Dreadnought's Nigh-Invulnerable More Dakka , or because the Battlestar's versatility and fighter craft allow it to give the cumbersome Dreadnought a Death of a Thousand Cuts while denying it a chance to fight back. Note: The vehicle in question must be specifically identified or referred to as "a dreadnought" to qualify for this trope. A vehicle not</ called "dreadnought," no matter how powerful or scary, is not this trope.

A villain or Anti-Hero whose primary characteristic is the fear the other side has of them To be the Dreaded, a character has to be far and away the most feared person in the story. These are people who make you quail not because of anything they are doing at that moment, but simply because you know who they are and what they're capable of... and sometimes the latter part is optional. Maybe this character has a reputation as a Hero Killer ; a person who kills the other side's strongest and noblest supporters. Maybe they use fear as a magical effect which triggers panic in others . Maybe they've done so many horrible things that nobody ever wants to speak of them again. Maybe they are simply so mind-breakingly horrible even the strongest of hearts falter. But the defining trait of the Dreaded is that they are feared</. Probably has a scary name , unless they use a really scary alias instead. If their ability in combat lives up to their reputation, then the only choice one has when facing them may be to Run or Die . When/if the Dreaded character dies, his/her/its death will almost certainly be followed by much rejoicing ...if he's actually dead, that is (see the entry from Vlad the Impaler under the Real Life section) One of the character's biggest advantages is how the terror they inspire in their opponents undermines the foes' ability and willingness to fight. If they end up fighting someone who is not</ afraid of them, the Dreaded's opponent might actually be able to fight them more evenly Although there are exceptions, (particularly on the other side of the fence) a key characteristic of this trope tends to be invisibility . In general, characters—villains,

in particular—who conform to this trope will not be seen directly the first few times they are mentioned. The show will tend to work on building up their perceived threat in the minds of the audience: a dark, shadowy something</ that's out there somewhere, but you don't know where, who or what they are, or even whether or not they can be killed, at least at first. As such, it usually involves acceptable forms of Character Shilling . It is possible for them to remain this trope after they come out of the shadows, but if they do not then beware Villain Decay Additionally there is a heroic equivalent called the Terror Hero , when there is a hero so renowned that the enemy would rather flee than possibly encounter them. They tend to be anti-heroes of some kind though (ranging from grades 2-4), due to audiences seldom associating dread as an emotion a pure hero inspires. Some criminals also tend to go for this in order to prevent anyone from informing on them Note that it isn't the audience's reaction to the Dreaded that matters, but the other characters' reactions to the Dreaded. Other characters think this person is pure Nightmare Fuel , whether they deserve this reputation or not See also Mook Horror Show ; when The Hero is the dreaded to his enemies, this is a common way of demonstrating it. For instances that mix this trope with Eviler Than Thou , see Horrifying the Horror . Not to be confused with characters who are merely dreaded , although both tropes may apply to the same character . Compare/contrast Respected by the Respected , where a character is defined by the respect other respected characters have for them. See Supernatural Fear Inducer for when a character can literally induce dread. See Hope Crusher where a character excels at snuffing out hope and/or spreading despair

There are children who are capable of self-entertaining. Leave them alone with a book or some toys, a video game console or even the television, and you won't have to worry about them for hours Then there's the child who invites you to The Dreaded Tea Party This child may be capable of self-entertaining but bored of it, they may be lonely and want real companionship, or they may just be a brat. Whatever the reason, plushies, toys and dolls around the tiny table all dressed up in their frilly, sparkly , pink finest are not enough and one more is needed to round out the attendance of the most important tea party in this child's life (for now) The child who ropes others into The Dreaded Pretend Tea Party can be a genuinely sweet kid who just wants someone new/different to play with and honestly doesn't see why someone wouldn't want to play tea party; or a devious and conniving Bratty Half-Pint who either has something to hold over the head of the one they invited, or will throw a major tantrum to get what they want. Expect older kids and adults to attend only under duress and with an expression of resignation In more fanciful settings, the tea party host and/or their hostage doesn't even need to be human. A dog or cat with Amplified Animal Aptitude will do; or whatever other sentient being happens to fall in the child's scope Applied Phlebotinum or Shrink Ray may result in the protagonist and/or cast having been miniaturized to just the right size for little hands, resulting in the child discovering "new toys" or "playmates". Such a child in this case can be sweet, and will either understandingly free their new playmates, or a Spoiled Brat who must be tricked or distracted and will then throw a major tantrum at the loss of their new toys What it boils down to is that almost nobody older than a year or two beyond the child in

question ever goes to play tea party willingly and must be coaxed, coerced, blackmailed or forced into it one way or another. This is especially true for grown men — the tougher they are, the more they will resist. The visual cues that accompany this reaction support the resistance: Pink Means Feminine . Pink Is for Sissies . No self respecting guy (unless he's a dad and it's his own daughter, or maybe a guy who believes Real Men Wear Pink) will want to humiliate himself in a girly pink environment Resistant or willing participant aside, at the core, the kid hosting the tea party really just wants someone to play with, no matter how cruelly or sneakily or viciously they go about making that happen. The "dread" of any older kid, adult or creature at participating is the idea that adults should not ever do anything childish, even for children they love; and if they do, they should only do it with a sense of embarrassment and humiliation. Unfortunate Implications ensue because the dread in teen boys and men comes from the idea that it's awful and terrible to participate in anything girly or feminine, and that such awfulness goes Up to Eleven if their male peers should also see them doing such a thing, no matter how vehemently they protest having been forced into it somehow The "tea party" is the most frequently employed scenario, but sometimes the child is playing some other form of make-believe. The host of the tea party is almost Always Female , but there are the odd few boy examples The most common variation of the trope is frequently used in family programming with a father acquiescing to his daughter's wishes. He puts on the wig, makeup, and dress, sits at the tiny table and hopes his buddies don't see him. This is often used as shorthand for "Daddy really loves his little girl" and "is a supportive parent who doesn't stifle his child's creativity". If they're not trying for the Aesop about good parenting , Daddy has to be bribed into it by the sweet-but-clever child A variation that involves the same girly acoutrements and a resolved but unhappy dad is that the girl is working on a sewing project and he is being the dress form, Played for Laughs , as dad and daughter almost never are that close in body type This trope is quite rare in Asian works, especially in anime , as tea for them is considered Serious Business with tea ceremonies more prevalent than tea parties This trope has nothing to do with parents throwing their small children genuine tea parties with real tea and cakes. Not to be confused with Fantastic Voyage , despite the Shrink Ray being something both tropes have in common. Also should not be confused with the American historical event called the Boston Tea Party, nor the 21st Century American political movement calling itself the Tea Paty Related to And Call Him "George"! , where a character also plays with another one against the latter's will, but with more fatal consequences. The tea party is frequently seen in the company of the Slumber Party , where it's part of the agenda along with the makeovers. Compare with The Mad Hatter -style tea parties Also likely to overlap with Pet Dress-Up

The Dulcinea Effect is the compulsion many male heroes have to champion, quest for, or die for girls they met five minutes ago. Dulcinea is the name Don Quixote gives to the (blissfully unaware) noblewoman of whom he is the self-appointed champion , ready to quest for her honor and die for her name. (He read too many books on chivalry, you see .) In the Spanish of the time, "Dulcinea" is an overly elegant way to say "sweetness", and the name persists as code for the object of one's hopeless devotion and idealized

love The Knight in Shining Armor (in non-medieval settings, The Cape) is a frequent user of this trope, with The Lady's Favour being its primary indicator. Medieval chivalric romances , indeed, portrayed knights who fell in love with a princesse lointaine </ (faraway princess) merely on hearing her described The Dulcinea Effect is often used to hook a hero into the story or steer him in a particular plot direction. Championing the Damsel in Distress is often an excuse for the hero to become involved in righting a larger injustice or confronting the Big Bad or foiling the Evil Plan when he otherwise might have simply walked away. Sometimes his devotion to her is a transparent excuse to justify his usual habit of traveling In Harm's Way . By application of the effect, the Damsel in Distress usually becomes the protagonist's Love Interest This is not to say that the motivation involved is solely (or even partially) out of lust or love. In championing the girl involved, the hero may have no other motivation than acting in support of an ideal, particularly in Romantic Era examples and those inspired by it. This trope is, after all, Older Than Print . The Failure Knight may be motivated by a desire to atone and Big Brother Instinct is possible if the Dulcinea is much younger than him Additionally, heroes under The Dulcinea Effect in more cynical settings (particularly Film Noir) tend to fall prey to a Wounded Gazelle Gambit set up by a Femme Fatale or The Vamp , who generally know about this effect and take advantage of it in the evilest way possible Seldom gets Gender Flip ; after all, Men Are the Expendable Gender but it happens nonetheless The Dulcinea Effect is also the main reason that women are put into a fridge in order to cause the male character angst and push him to drive the plot forward . Compare Loving a Shadow , which is being in love with the idea</ of someone rather than the actual person. Contrast Magnetic Hero , for a hero's ability to pull this on followers. Chronic Hero Syndrome is when the hero does this for any random stranger. If this leads to a highly implausible romance, it's a case of Strangled by the Red String . See also Living MacGuffin . It's quite possibly related to Love Makes You Dumb If the woman has little to no personality and this is her only purpose in the plot, it's a variant of Excuse Plot

The long, hot Indian summer between the death of Queen Victoria and the start of World War I . A time of elegant tea parties, Gentleman Snarkers , Art Nouveau , ridiculous Flying Machines and (mostly) unsinkable ships Strictly, the term Edwardian Era only applies to the British Empire during the reign of King Edward VII from 1901 to 1910, but it is usually extended up to the outbreak of World War I in 1914 to capture the end of an era, overlapping with the Progressive Era in The United States From the assassination of William McKinley and inauguration of Theodore Roosevelt in 1901 to entry in World War I in 1917 Roughly from the establishment of the Third Republic to World War I , also often incorporate The Gay '90s The early 1900s were a great age of technological transformation, and numerous scientific discoveries were made during the period. This was the period when the first Nobel Prizes were handed out, when Albert Einstein drew a line between traditional and modern physics with his Annus Mirabilis papers, when the Wright Brothers invented the airplane, when the radio was created and popularized, when cars like the Model T first became commonplace, and when the first expeditions to the North and South Poles were made. The 1900 Exposition Universelle

in Paris and 1904 St. Louis World's Fair remain some of the more famous world's fairs due to their showcasing of this great change In Britain, the Boer War brought a rather unpleasant end to the Victorian period and foreshadowed the brutality of conflicts to come, but Britons at home remained unfazed as the United Kingdom remained at the top of the world both politically and economically. France enjoyed a cultural renaissance as the country bounced back from the Franco-Prussian War and Napoleon III's dictatorship, returning to the spotlight as the cultural capital of Europe. The United States cut down on the corruption that had plagued it during The Gilded Age thanks to the reforms of Theodore Roosevelt's administration, while the Wild West became a little less wild Not all was well in the world, of course. In many parts of Europe, class struggle and ethnic tensions started to boil over. The Ottoman Empire was in a period of collapse as the Balkans became a hotbed of nationalism, which would go on to spark something a little bigger , while poverty among the Russian peasantry began to approach the breaking point as an insurrection was attempted in 1905 —the little brother of the 1917 revolution . This was also a period of extended colonialism; Europeans, most infamously the United Kingdom and Belgium —but also including France, Germany, Italy, Spain, and Portugal—solidified their rule over Africa during this period after its establishment in the late 19th century. The Raj was at its greatest extent in this era, and the Spanish-American War and the building of the Panama Canal were closely tied to American imperialism in the Western Hemisphere and in the Pacific, which, along with the Caribbean, the United States promptly converted into an "American lake" in short order, flexing its ascendant naval powers and ruthlessly crushing, dominating or colonising weaker nations, including internationally-unrecognised protostates like the Philippines . Meanwhile, the Empire of Japan got into the imperial game at around the same time the United States did, going to war with and defeating Russia in 1905 —the first time an Asian power defeated a (politically) Western/European one—and was in the early stages of expanding control over East Asia; by this time, Taiwan and the Korean peninsula were now both under Japanese rule In spite of its many problems and darker sides, the period still remains fondly remembered. It was especially popular as the subject of movie musicals in The Golden Age of Hollywood and still retains some cultural relevance today; it's the time when women's suffrage came in full swing, it's the time when one of America's most beloved presidents was in office and when one of Britain's current primary political parties first took hold, is a greatly influential era to anyone interested in the history of science and technology, and it's also the period when many sports took the shape of their current forms, including when modern sporting wear developed and when the modern safety bicycle was popularized. The comic strip as we now know it (see the folder below) essentially got its start during this era See also The Silent Age of Hollywood , the Meiji Restoration , Imperial Germany , The Mexican Revolution , The Raj , Romanovs And Revolutions , and No More Emperors for more specific information on the period in different places. The Gay '90s and The Roaring '20s are the decades before and after the Edwardian period "1901" by the French (Versailles-based) Indie Rock band Phoenix is a tribute to Belle Époque</-era Paris . To quote their lead singer, " Paris in 1901 was better than it is now " ("now" being 2009)

The Excessive Eighties: a time where you wake up before you go-go when you want to kick off your Sunday shoes as you walk the dinosaur like an Egyptian for 500 miles , hear doves cry or feel the Punky power like a virgin while you moonwalk the Thriller All the men were preppies who wore pastel suits with narrow ties, drove sports cars that Lee Iacocca personally stood behind and traded stocks on Wall Street— after all, as Oscar Wilde said, nothing says success like excess. (Unless they happened to be teenagers, in which case they were Totally Radical or studied Karate and learnt the meaning of " Wax On, Wax Off ".) Everyone had huge hairdos , enough make-up to sink a ship and power suits with shoulderpads big enough to knock the giant mirrored sunglasses off anyone who walked within a three foot radius of them. And those without them had flat-tops and wore gym clothes and break-danced on top of cardboard. Millennials (then known as "Echo Boomers" and later "Generation Y") started being born, one day to become the young adults of The Turn of the Millennium Computing technology first became a true cultural force in this decade, starting a trend that would keep on snowballing to this very day. The Eighties was the decade of cell phones literally sized and shaped like bricks, jokes about being unable to program VCRs, the death of Betamax, and the beginnings of personal computers and gaming consoles beginning to proliferate inside homes, perhaps one of the trends from this decade with the largest of cultural implications. Cable television also took off big time, with MTV , TBS , HBO , and CNN becoming household acronyms, though the video itself was all grainy, low-definition analog. However, this still looked better than the often-fuzzy antenna-based picture before cable Conversly, the eighties were also the high water mark of analog culture. CD players were a new and exotic technology. Heck, digital watches</ were still a (relatively) new and exotic technology. Most people still got their music on LP or cassettes (though the CD format would begin to overtake both late into the decade) and their news from newspapers delivered in the predawn darkness by Free-Range Children . The Commodore 64 was the most common personal computer and an actual PC cost as much as a used car, especially if it was equipped with one of those new and exotic five or ten megabyte hard drives. The internet was still confined to academia, the World Wide Web was still just a pipe dream, and what little connectivity existed was through Electronic bulletin board services (BBS) accessed over analog phone lines using screeching 1200 or 2400 baud modems In the US, it was also the second The first wave was Astro Boy </ up through Speed Racer wave of The Japanese Invasion , the inklings of which started in '78 with the dub of Battle of the Planets </, continuing on with Space Battleship Yamato </ ('79), Voltron </ ('84), getting even more hardcore with Robotech </ in '85, and hitting its apex by cranking the quality Up to Eleven with the nationwide release of AKIRA </ ('88). Japan additionally managed to break through in the US via the gaming industry, with the success of Nintendo 's Donkey Kong </ and wider success of the Nintendo Entertainment System leading Japan to become the leading theater of the video game industry in the US following the North American video game industry crash in 1983. Names like Capcom and Konami became major players in the software side of the industry with loads of smash titles that would eventually grow into major franchises, and while western developers were still around and making games for Nintendo's system, it was the Japanese industry that served as they key focal point While other hardware developers would fail to adequately crack Nintendo's

dominance for most of the decade, that all changed in 1987, when a joint venture between NEC and Hudson Soft resulted in the creation of the TurboGrafx-16 , which became a surprise success in its native Japan and outsold the NES, spurring Nintendo into action in creating a competing system to keep their place in the industry intact. The following year, Sega would introduce its own TurboGrafx rival, the Sega Genesis , with its 1989 debut in the US managing to both successfully stamp out the TurboGrafx's presence in the west and present the first real challenge to Nintendo as a hardware manufacturer. This battle, however, wouldn't truly take hold until the first years of the next decade, in part because it took Nintendo until 1990 (in Japan) and 1991 (in the US) to release their own new system Despite major successes in animation and video games, though, the Japanese Invasion never quite managed to crack any other fields of popular media in the same way. The closest anyone got was in music, via both the flash-in-the-pan success of Pink Lady (which promptly collapsed after NBC tried to capitalize on them via a disastrous variety show in the spring of 1980) and the longer-lasting but ultimately forgotten success of Yellow Magic Orchestra . While YMO's legacy would persist through their huge influence on later Synth-Pop musicians, they themselves would be reduced to a cult favorite at best decades later; such was the fate of most other Japanese media, in large part due to the wider difficulties in attempting to localize them for western audiences compared to video games and anime On the homefront, the 1980s produced a rash of pop-cultural icons that today are looked upon, at worst, with Affectionate Parody , and at best, as the national ideal. The conservative political culture of the era meant two rather contradictory things for the production of pop-culture; on the one hand, the surge of private enterprise together with new media technologies allowed corporations such as Hasbro an unprecedented ability to build massive franchises around their products, typically with a TV show and accompanying toys, but on the other hand, Moral Guardian complaints would challenge the ethics of making a show that was "essentially one large commercial" in addition to railing against any work of media that didn't meet their rigid standards. The result was the rather spoof-worthy And Knowing Is Half the Battle segment common to many mass franchise shows, shoving an Anvilicious moral into the action. Fortunately, these were conveniently located after the actual plot, so kids could just turn it off at that point and run down to buy the toys. Besides, the segments make great joke fodder. The prominence of moral guardians during this decade would have considerable ramifications in later decades, with "mature" content being galvanized as the artistic ideal from the 1990's onward the idea already started to take form with the New Hollywood era of 1965-1983, but solidified in the 90's as a result of the heavy amount of moral guardianship in this decade and companies who appealed to the idea of "family-friendliness" (most notably Nintendo) facing nothing short of ridicule once the conservative culture of the 80's gave way to 90's and 2000's cynicism Ironically, given its modern reputation as a breeding ground for nostalgia bait, the 80's were probably one of the most nostalgia-heavy decades in modern history, at least prior to the 2010's. Specifically, the 80's were extremely</ kind to The '60s , owed to the fact that this marked the point where the Baby Boomer generation (who, as the name implies, consisted of far more people than previous generations) reached adulthood and entered areas of the workforce where they could make their longing for their

childhoods known, aided by the conservative culture of the time that emphasized the supposed glory of "the Good Old Days." Ronald Reagan , for instance, ran on the promise to "Make America Great Again," perfectly encapsulating the public sentiment at the time that society had strayed from a supposed Golden Age from decades prior that historians will be quick to argue didn't actually exist ironically, Bill Clinton would reuse the MAGA slogan during his own presidential campaign in 1992, characterizing the Republican party under George H. W. Bush as the deviants from a nonexistent golden age; it would, however, return to its original right-wing association with its later co-opting by Donald Trump in the 2010's . Of course, the phenomenon wasn't a right-wing-exclusive one: even left-wingers held a considerable sense of longing for two decades prior, though often for different reasons than the other side of the aisle (e.g. an emphasis on the sociopolitical progress made during that time) Nowhere could this 60's nostalgia be more vividly found than in music: every veteran 60's act who achieved considerable levels of popularity during that decade were either still going strong in this decade or made a high-profile comeback, and production values throughout the decade were rife</ with 60's callbacks, from the heavy emphasis on reverb to the prominence of sax and horn parts (now achievable through synthesizers and samplers) to the amount of acts who flat-out covered old 60's hits. Even the Alternative Rock crowd, famous for their rejection of mainstream music standards, took heavy inspiration from 60's rock, albeit with none of the emphasis on synths and horns that mainstream musicians had and with some modifications to get rid of the more poorly-aged aspects (no weird stereo mixing here, for one). This was perhaps most apparent with The Smiths , who not only harked back to 60's rock and Baroque Pop in their songs, but also featured cropped and color-altered stills from 60's movies on their album covers; in fact, the band broke up in part because frontman Morrissey 's huge emphasis on 60's throwbacks was getting on everyone else's nerves Most significantly, Beatlemania reemerged among the general public following the high-profile assassination of John Lennon and how the consequent shock of it resulted in his surviving bandmates taking the time to tie up loose ends and rebuild burned bridges between each other before it was too late. The second wave truly galvanized with a series of highly important business decisions in the waning years of this decade: in 1987, the band's entire UK back-catalog was released on CD for the first time (consequently cementing those albums as the "canon" ones, much to the confusion of Americans who only had the butchered Capitol Records albums to go off of), in 1988, the band was inducted into the Rock 'n' Roll Hall of Fame and oversaw the release of Past Masters </ , a two-CD compilation of all their non-album singles, and in 1989, Paul McCartney finally fully embraced his Beatles heritage and cleared up the last few legal entanglements that had forced Apple Records into dormancy, enabling them to resume activity for the first time in ages. While the second wave of Beatlemania would continue into following decades (hell, it's still going on to some extent), it was most prominent during the 1980's, acting as a vivid microcosm on the sheer weight 60's nostalgia held during that time Politically, in the first part of the decade, Cold War tensions continued to escalate. The US did things like invading Grenada and the Strategic Defense Initiative. Some accuse this of being an intentional move by the West to render the economically inept Soviet Union infeasible by drawing its resources away from things like infrastructure and feeding its people, which market

economies could accomplish easily. While this is, essentially, what ended up happening (though more complicated than that in real life; in Eastern Europe the decade's real deathblow to communism was considered to have been all the new media technology), the fact that the other possible outcome of such a strategy was global thermonuclear annihilation had a profound impact on Western media tropes. Most obviously, dystopian Speculative Fiction , particularly set After the End 20 Minutes into the Future , enjoyed a surge. On the other hand, Star Trek </ became a defiantly optimistic mainstream Sci-Fi mainstay with the feature film series and its return to live action TV with Star Trek: The Next Generation </ The second part of the decade, however, couldn't be more different. Mikhail Gorbachev , spry for a CPSU leader at age 54 (this was the only time in the Cold War that the Soviet leader was substantially younger than the American), shook up the by-then sclerotic Soviet leadership upon taking power in 1985. Gorbachev restructured the economy (perestroika</) for "accelerated" development (uskoreniye</), encouraged openness (glasnost</), made tentative moves towards democracy (demokratizatsiya</), and went Karting with Reagan . For a hot second in 1988-89, it seemed like the USSR had reached a final rapprochement</ with the West. And then came The Great Politics Mess-Up Throughout this era, there came new problems like the spread of AIDS which created a public health panic that dealt first a body blow to the gay community with anti-gay people treating them as modern lepers (even though that community took the danger seriously far sooner than others) as well as ending the sexual liberation movement of the previous two decades by presenting an STI that couldn't</ be easily swept away with antibiotics (not that antibiotics would last forever, given later findings on drug-resistant strains of pathogens). However, the epidemic paradoxically later proved a partial blessing in disguise for gay rights as stricken people like Rock Hudson were shoved out of the closet, forcing the public to realize that LGBTI people were all around them, much like themselves. The Eighties also had the highest murder rate in U.S. history, almost twice what it is today. As for society as a whole, well, the left and right weren't quite</ the sodium-and-water combination that dominated the bulk of the '70s, though the dominance of conservatism with the Reagan and Thatcher administrations and the continuing fallout from the political blunders of the preceding decade (i.e. Watergate & Vietnam in the US and a severe economic recession in the UK) still kept them at odds with one another Politically speaking, the decade lasted roughly from January 20,1981 with both Ronald Reagan 's Presidential inauguration and the end of the 20 minutes later to the fall of the Berlin Wall on November 9, 1989 and the Soviet Union dissolving on December 26, 1991, amounting to almost 11 years. Sometimes Margaret Thatcher being elected Prime Minister in 1979 is considered the start, especially in the UK. Culturally, the decade lasted roughly from on July 12, 1979, the murder of John Lennon on December 8, 1980, and the launch of MTV on August 1, 1981 to the release of Nirvana 's album Nevermind </ on September 24, 1991 and in 1992 with both the rise of Grunge and the emergence of the heroin chic fad. Its worth nothing that Steven Spielberg , George Lucas and or Tom Cruise were involved in 9 of the 10 highest grossing films of the decade It's apparently still The Eighties in much of Fictionland, though this is an astounding four decades behind , so hopefully people will soon catch on See Also: The Roaring '20s , The Great Depression , The '40s , The '50s , The '60s , The '70s , The '90s , Turn of the Millennium , The New '10s

, and The New '20s

For the best reading experience, play the music from while reading. If a character enters an elevator for any reason, the music playing on its speaker system — regardless of the program's genre — is almost always of "The Girl from Ipanema" by the great Antônio Carlos Jobim. (If not, it's probably the "Theme from </ which would probably be referencing a comfortable break from the action .) Some trace this trope's popularity back to directors such as John Landis , who used it as an in-joke for every scene he shot inside an elevator. In Real Life , of course, it was once a common practice for elevators to have soft instrumental music piped in as a means to relax the nerves of jittery or claustrophobic passengers, this also being the rule for department stores/shopping malls and grocery stores/supermarkets. However, this fell out of favor in the 1990s and ever since the noticeably smaller number of places (including the relatively few elevators) that have</ music will have the actual songs rather than the instrumental knock-offs, making this in general a Forgotten Trope , and a Dead Horse Trope in the case of this song. Even to this day, lots of films and TV shows still add in music when composing elevator scenes; in part because of the Rule of Funny (people standing up straight and not talking to one another while soothing music plays is inherently quite funny), in part because the audience expects the music , and in part to avert Dead Air , as it otherwise makes the elevator ride very uncomfortable to watch (unless that's the intention of the filmmaker). That said, the familiar genre still survives on a few commercial services like SiriusXM satellite radio ( ) and Muzak's successor Mood Media ("Easy Instrumentals"), ready to be piped into elevators once again at a moment's notice. Usually an integral part of an Uncomfortable Elevator Moment .

The Evil Counterpart to The Republic . The Foil to The Good Kingdom . The Shadow Archetype (or evil twin sister) to Hegemonic Empire . The Rival to The Federation . The Arch-Enemy of La Résistance . The Logical Extreme of the Rising Empire The Empire's defining Grand Ambition is World (Or Interstellar/Galactic/Universal) Domination. Amassing The Evil Army , it sets out to conquer all of its neighbours and be the sole superpower by force of arms . Taking cues from history, it often resembles historical empires (or empire-esque regimes) in some way. Led by The Emperor , who is usually also an Evil Overlord , Emperor Scientist , God-Emperor and/or some kind of theocratic cabal . A theocracy of a Religion of Evil will almost certainly be the Empire. The Dictatorship can also overlap with the Empire, especially if they are ruled by a clique of totalitarians The Empire is typically Obviously Evil , but may still attempt to represent itself as the Lightbearer of Civilization, Defender of Faith, Domain of Law and Order, The Co-Prosperity Sphere, Central State of Humankind or Legitimate Regent of Humanity. A People's Republic of Tyranny may overlap with these titles. The Empire may be genuinely highly civilized, wealthy, organized, and/or vital, or corrupt, bureaucratic, sybarite and/or ossified. It may be militaristic and imperialistic, or pacifistic and turned inwards. In nearly all instances, the Empire features an original founding polity, usually a race or nationality, who stand above and enjoy special privileges that are denied to the Empire's various subject peoples . Overall will adhere to the trope Order Is Not Good Of course, there's going to be some kind of Resistance movement within

its borders, and small autonomous nations without who may need encouragement by the heroes to become The Alliance . They may also be helped by Les Collaborateurs . There may also be one or more powers that oppose it, often good kingdoms or republics , which may or may not band together into The Alliance . The Empire is usually too strong to defeat militarily (unless the story is set in a war strategy video game), but taking down the leaders while they're instigating their sinister plan is usually enough. Or La Résistance may well turn out to be nothing but a treasonous clique to overthrow the government or dynasty and replace it with something even more cruel and brutal , or a nationalist, racist or xenophobic separation movement. The actual legal definition of an empire is basically a country or polity that gets to boss around several other ones If the Empire and The Federation exist in the same universe, the two are usually at war, just recovering from a war, or dangerously close to getting into one (the latter two often coincide). If The Republic is a separate entity alongside The Federation , you'll usually find them taking shots at one another prior to forming a pact against the Empire; they could've been longstanding rivals, they might view the other as</ the Empire, or they might've been pinned against each other by</ the Empire. If The Good Kingdom is in the same universe, expect the Empire to occupy it (at best) or assault it (at worst); The Good Kingdom could've been neutral ground, the original head/proposer of The Alliance , or a simple victim of the Empire's bid for dominance. If the Empire is part of The Alliance , you can make a good bet for it being the Token Evil Teammate Note that just being called an Empire is not sufficient to qualify a nation for this trope . There's many stories, especially in the Heroic Fantasy and Historical Fiction genres, with polities called "empires" that are less overtly antagonistic. These types of empires may be better described as an expansionist monarchy, a culturally dominant Hegemonic Empire , a militaristic federation , a nationalist republic , or a more centrally controlled alliance Weakened or weakening versions of the Empire often become Vestigial Empires . If the Empire has been overthrown or mostly overthrown but what's left of it is fighting to get back into power, it's The Remnant . One of its provinces may be a Voluntary Vassal , rather than a conquered one. The Empire tends to have its Standard Evil Empire Hierarchy For works named Empire</, see this disambiguation page Suffice it to say that the Trope Namer is the Imperium Romanum . Other than that, No Real Life Examples, Please! . Most Real Life historical empires have fallen under the Hegemonic Empire class; infamously cruel empires tend not to last very long in the real world See People's Republic of Tyranny when The Republic or The Federation acts like an Empire despite not technically being one itself. These examples often have The Generalissimo as its ruler instead of the Emperor

Marvel Comics

This trope does not refer to the condition in the song by R.E.M. that is the Trope Namer for this trope, where Michael Stipe sings, "It's the end of the world as we know it, and I feel fine." Rather, it's the exact opposite. This is what will happen if the heroes don't stop the Evil Plan from doing its nasty work. It can be either supernatural or superscience, depending on the villain, but in either case the bad guy must be beaten down and his toys broken in order to save the planet, or the universe, depending on the focus

of the story. Usually it's figurative — expressed as "merely" the death of humankind, the obliteration of Civilization , or its subjugation to aliens, for example — rather than the literal rendering of the planet down to gravel . This is a common trope in Speculative Fiction , horror and over-the-top espionage shows, as well as many anime series. It may serve as a prequel to an After the End series, or the culmination of a Just Before the End story. May also include Cosy Catastrophe and/or Scavenger World elements — if so, let's just hope the dog lives. It's also very common in video games, where it's occasionally unavoidable, sometimes occurring halfway through the game; in other cases, poor play may result in the world coming to a bad end. If it's a Cosmic Horror Story , expect an Eldritch Abomination to be on its way and, should it make it to Earth before the protagonists can get the necessary power to stop it from coming, nothing can stop its rampage as such stories rarely end in a victory for humanity. If the heroes are slated to succeed in preventing the End, they (and the audience) may be treated to a detailed preview of what's coming. The most common subversion keys on the "as we know it" part of the phrase: the world may not actually end so much as be changed beyond of all recognition. Depending upon the world this may actually be an improvement. Inevitably draws the suitably heroic into a Saving the World plot. See Apocalypse How for various types of End Of the World. For when Take Our Word for It simply won't do, Apocalypse Wow is this trope given dramatic form. When asked just why</ they want to destroy the world as we know it, villains usually say something from the " Why You Should Destroy the Planet Earth " list. That is, if they even have one. May be preceded by Signs of the End Times . If the plot starts after</ End of the World happened, see After the End . If the villain does destroy the planet, it may be a case of The Bad Guy Wins and a possible Downer Ending , although it could end as a Bittersweet Ending if all hope isn't lost. The Omnicidal Maniac is defined by this trope; destruction of the world is their goal because that would destroy all life on it. It is a common source of Enemy Mine if another villain wants to Take Over the World , because after the End of the World as We Know It, there's nothing left to take over . As it happens, don't be surprised by the appearance of the Despair Event Horizon . A Depopulation Bomb is a downplayed version of this, although they can get pretty close to this. In Pokémon Diamond and Pearl </, the Big Bad Cyrus wants to use the power of Palkia and Dialga to wipe out the current world and create a new " perfect " one in its place. I feel fine , though. </

An Ending Trope when the closing of the show reveals that a villain, monster or other major threat is still out there, creating doubt as to whether or not the heroes have achieved a final victory This is usually a type of Sequel Hook , and often done as The Stinger . See also Eye Awaken , Finger-Twitching Revival , Not Quite Dead , Here We Go Again! and Karma Houdini Compare Or Was It a Dream? , Real After All , and Schrödinger's Butterfly . Can be subverted by a Shock-and-Switch Ending Or will there? Yes, there will

Dun Dun DAH! </

In war, equipment is an essential part of victory. From tents and rifles to bases and vehicles, no army can fight on manpower alone. They need tools, infrastructure, and people to build and maintain and move it. The average soldier actually does not have full knowledge

of how his equipment works, let alone have the knowledge or time to maintain said equipment. Bigger and badder pieces of equipment require even more know-how and maintenance. There are also myriad obstacles, situations, and types of terrain and climate which a soldier cannot handle or even be equipped to handle on their own. So, behind the glamorous officers and the rough-and-tumble enlisted soldiers, there's one man who will always be there to give them a technologically empowered hand: The Engineer. The Engineer is the go-to guy for any thing</ in this man's army. Just as The Medic takes care of any one</ and their wellbeing, the Engineer takes care of their equipment to make sure that the Medic is needed as little as possible. He's also the one that constructs shelter and support machines like turrets and gun emplacements to give the infantry cover and a little extra oomph. Perhaps most importantly, the Engineer is usually the main mechanic, handling upkeep of vehicles. The Engineer is rarely The Protagonist , since the frontline soldiers are the ones that usually get the spotlight. However, if the Engineer is in a story, he will always be an essential</ character, and you can expect his skills to be crucial for victory at some moment in the story. Engineer characters also usually tend to be older, more experienced soldiers who are a father figure to younger soldiers, be they frontline soldiers or younger engineers. They can also have elements of the drill sergeant , demanding constant effort and discipline from his crew, although this is not surprising considering the frontline soldiers depend on the equipment they service to survive. Younger engineers can have a tendency to be very passionate about their work , and have the gift of creativity and tenacity on their side. Expect young Engineers to come up with new technologies and strategies using existing technology that will give their allies a new edge in combat. Sometimes, an Engineer will get the spotlight on him. If an Engineer decides or is forced to fight, expect it to be awesome</. As it turns out, knowing how to build and fix machines and put structures together also gives you a wealth of knowledge in how to break</ them. Engineers are also the guys to call when terrain needs to be modified. From building roads to blasting obstacles, Engineers will clear the way. Combat Engineers and Sappers (explosives-oriented engineers) are a thing to behold: with their capacity to utterly destroy enemy equipment and fortifications and their specialized equipment, they can cause massive panic amongst enemy forces. Engineers can also be... a little eccentric . Sometimes, they can show more caring for a piece of equipment than a human being. If they're particularly skilled with explosives , they may also be a bit too quick at suggesting them as a solution to any problem . They can also have, in more fantastic settings, a little bit of mad scientist tendencies , inventing and testing new technologies that may or may not make a difference . In the UK and Commonwealth, the stereotypical engineer is a burly Brave Scot , a notion which has its roots in the early part of the Industrial Revolution when many educated Scots went south to escape endemic poverty and ended up working for the early railroads and factories, with many later returning to Scotland to found the 18th/19th century equivalent of a Silicon Valley startup. In Australia, a similar stereotype exists for New Zealanders, though the reasons for this aren't as clear. In the US, especially in comedies, they are often a Southern-Fried Genius , instead. Note that this trope is about The Engineer as a particular type of character, not as a profession, so it would not actually comprise ALL that army engineers do. An engineer who deals with sanitation and construction of things like storehouses and office/administrative buildings would usually but not necessarily be outside this trope ,

and most characters referred to as "engineers" in media are actually closer in function to mechanics in the civilian field then they are to civic engineers. This trope applies primarily to Engineers as a palpable force in combat, be it as support or participating in battle. There are various types of Engineers which feature heavily in media: Useless trivia: Combat engineers are also called . Not to be confused with Angela Spica, a.k.a. The Engineer , of The Authority </ (although with her powers and knowledge she fills the "engineer" role for them). Anthropromorphic examples include Resourceful Rodent .

The multitude of engineering officers in the Star Trek </ universe. They've proven their worth many times over.

An epic is a long story centered on a heroic character that describes a series of exceptional events, similar to and suggestive of epic poetry. There are numerous epics in fiction and storytelling. Epics are majestic depictions and capture impressive struggles, such as stories of war, adventures, and other efforts of great scope and size over long periods of time. Originally limited to literature and theater, epics have expanded into the visual realm with the advent of film. The Epic is</ The classic epics had their own guidelines: Can be divided into a few different subgenres. The divisions also come in two flavors, Form and Subject (may be subtropes/genres). Both forms can be divided by subject: This is a distinguishing characteristic of Space Opera and High Fantasy , in that both are the Epic versions of Science Fiction and Fantasy respectively. Not to be confused with the modern bastardization of the term just to mean "awesome."

An executioner is someone tasked with executing criminals sentenced to death by an official authority. In some cases this person could also execute other corporal sentences such as whipping or chopping off limbs. In the beginning, justice was based around private justice, i.e.</ feuds and vendettas: as such the victim or his relatives had to execute their sentence themselves. Oftentimes it was the community who executed the sentence, and some sentences, such as stoning, were based around this concept. Growing centralization made justice an exclusive prerogative of the state, and the execution of sentences became a public monopoly. First functioning by hiring hourlies, this position became later a permanent one. Subtypes: Of course, several subtypes could fit for each example. If the executioner also carries out the task of judging the culprit personally, this is Judge, Jury, and Executioner . If he acts without legal sanction then he's a Vigilante Man doing Vigilante Executions . Executioners will also overlap with Torture Technician and Exalted Torturer , as in medieval Europe, executioners also dealt with torture. Although historical executioners rarely wore hoods, depictions may show them as Malevolent Masked Men . Will most likely wield an axe . See also Public Execution .

Bob's been caught committing a crime, caused too much property damage , or pissed the wrong people off . As punishment, he's forced to leave his city, state, or country, and never come back, often receiving a Mark of Shame in the process. In some situations, this can effectively be a death sentence, if the location from which Bob's exiled is the one safe haven in an otherwise inhospitable zone. Escaping the punishment for a crime may lead to a voluntary exile While being exiled can sometimes

lead to Walking the Earth , it's usually</ more temporary than a Wandering Jew type of curse, either by Bob finding a new place to call Home Sweet Home , or by Bob doing one specific thing to absolve himself Subtropes include Remittance Man , Noble Fugitive , and Locked Away in a Monastery . Related to Put on a Bus , which is a narrative tool rather than a situation. Also comparable to Kicked Upstairs , which is placing a person in a position that, at first glance seems to be prestigious, but is actually a job that barely requires any work done and lacks any real power Can overlap with Reassigned to Antarctica if he is ordered to leave for a specific place and stay there for tasks When a whole group has to become collective exiles they might decide to begin The Migration . If the group in question was the original legitimate government they may become a Government in Exile . If this is Recycled IN SPACE! exiles can become Space Cossacks . If the exiled leaves on their own due to guilt, it would be Self-Imposed Exile Can be the fate of The Stateless Compare with Persona Non Grata , where someone who is not</ originally from a location is barred from returning. Compare and Contrast Forced from Their Home , where a character is only kicked out of their house rather than their entire society Truth in Television , of course

Tropes about ex-significant others, and the various ways they affect the lives of their former lovers This Index Broke Up covers tropes that involve break-ups. Naturally there is a lot of overlap Compare (and contrast) Love Tropes and Marriage Tropes . See also The Singles Index . Not to be confused with This Used to Be an Index

Alice and Bob have an argument, usually with Alice questioning Bob's planning or general capability Either way, Bob acts indignant and shocked, insists he knows exactly what he's doing and storms off After a brief pause, Alice politely points out that Bob is going the wrong way. Bob makes an embarrassed excuse and sheepishly wanders out in the right direction Common variations include Alice not saying anything, but seeing Bob go one way, then hurriedly switching to the opposite direction, or Bob entering a closet (bonus points if Bob stays in there a while out of embarrassment) Similar scenes can be used to show that a character is particularly flustered or worried, or that a character is an infiltrator that doesn't know his way around. As a variant, Bob may have just expressed sudden resolve and set off to do some dramatic, plot-important event, but his conviction turns into comic effect by his mistake in direction See also Your Other Left , House Amnesia , Door Focus , Crossing the Burnt Bridge . Often used as a tool of providing a Failed Attempt at Drama

The Exotic Detective is a detective who has some unusual quality that This important to their personality. While being a private detective This an unusual profession to most people, an Exotic Detective is Thone that has some very exotic trait that almost defines them. This Thwill often take the form of a major character flaw of some kind. is Thfalls into two broad subtypes:

One of the scariest things you can see on film is something you know is not</ alive acting as if it is; statues move, eyes of dolls pop open, parts of the architecture animating of their own accord. This can happen as someone is watching it, or out of the corner of the eye, ceasing as soon as the character looks right at it. It

doesn't matter, it is more than enough to send some unstable souls over the edge into madness (followed quite often by death) Note that this trope is particularly effective and chilling when the audience never knows if what they're seeing is real, or all in the character's head . And while such occurrences usually result in the demise of the witness, it's not required that they literally keel over due to fear. Quite often, the imagery of the moving/living inanimate implies a guilty conscience, if not outright stated Subtrope of Malevolent Architecture . Almost always produces Nightmare / Paranoia Fuel . (Although if done badly, this leads to Narm .) Often related to Your Mind Makes It Real and Clap Your Hands If You Believe Despite the trope name, it doesn't always have to be eyes. And while a particularly visceral, textual description is possible, this trope almost always appears in visual media Compare Uncanny Valley . Related to Demonic Dummy , Perverse Puppet , Portrait Painting Peephole and Living Toys . Sometimes overlaps with Eye Awaken , though that trope usually only applies to living (or at least sentient) creatures Not to be confused with the Charmed </ episode of the same name, which made use of Eye Scream rather than this trope. Or the Criminal Minds </ episode, also with the same name, which also</ makes use of Eye Scream

In a team character dynamic, this person is the Face of the team and they are the one you want doing the talking. They are charming, socially savvy, and otherwise know how to get things done with words. At worst they will be the least dysfunctional team member. This is the super trope for the characters that could fit in that role. They could be The Heart of the group and thus its moral compass. They could be The Mentor if they're more into guiding and teaching. They could be the Tagalong Kid if younger and perhaps less mature but possessing certain insight . They could be The Chick because everyone knows Women Are Wiser , and her girly clothing will contrast with the men. Together with The Big Guy and The Sneaky Guy , they round off the Combat, Diplomacy, Stealth trio. In a Talker and Doer duo, they constitute the former half. In an action-oriented series, their role could be Mission Control so they can do their social thing without being on the front lines. Their special abilities include Talking Your Way Out , Talking the Monster to Death and Break Them by Talking . If they have Personality Powers , they will also likely manifest as Psychic Powers : Telepathy , The Empath etc. Sub-tropes include: Not to be confused with Face . Also not the Face of the Band , though the roles can overlap. The name comes from the tradition of Dungeons & Dragons </ where a character in a Player Party would be the face of the group: they have stats and skill sets based on talking and resolving conflicts without fighting.

A variant of He Who Must Not Be Seen : The audience never gets a good look at this character's face. Specific variants include characters which are (almost) always... Closely related are: There are several reasons for writing a faceless character, depending on their role in the plot. For a recurring character, hiding their face lends an air of ambiguity to the character and their motives. If said character is a villain, this additionally serves to make them seem more threatening. Often the villainous Faceless are a Diabolical Mastermind , The Man Behind the Man , or even an Ultimate Evil . Non-recurring faceless characters tend to be Cannon Fodder Faceless Goons , whose facelessness removes their individuality, their

humanity, and — hopefully — the audience's squeamishness about their deaths. Real-world famous people/roles may not be shown , to prevent the work from becoming dated. Occasionally, a faceless character will be dramatically revealed . This generally happens at the end of the story, or at least the character's tenure in it. The Reveal may try to surprise the audience by showing a Nerd in Evil's Helmet , The Mole , or even no face at all . Perhaps we will see a Nightmare Face —common for villains —or perhaps they were Beautiful All Along , or maybe They Look Just Like Everyone Else! The Faceless exist to increase drama or impress people. Contrast this with the Faceless Masses , which is done for the artist's convenience , while the Scenery Censor hides other</ body parts, to please Moral Guardians .

Modern society has lived with the Disneyfied version of fairies for so long – the Fairy Godmothers of Cinderella </ and Sleeping Beauty </, Tinker Bell in Peter Pan </ – that it seems hard to imagine that some would consider fairies evil. And yet, some of them were The fairies of old weren't</ cute little bewinged pixies who fluttered happily around humans . Elves didn't</ make children toys or live deep in forests with no interaction with mortals . At best they would interact with humans with no thought to the consequences of their actions, or they would be tricksters that deliberately delighted in the utter mess they made of mortal lives (such as the classic character Puck from A Midsummer Night's Dream </). At worst, they're like serial killers with magic: otherworldly horrors who kidnap humans for explicit use as playthings to torment, assault, rape, maim, or eat – or sometimes to find even worse</, very abstract things to do to them (some stories in folklore get dark</). The Fair Folk almost always live in the Land of Faerie , often have Faerie Courts , and may be depicted as an Inhumanly Beautiful Race . They are usually vulnerable to Cold Iron , though not always (the Irish "Dullahan" are weak to gold) For more information, including much of what used to be this page's description, please see the Analysis tab In a manner of speaking, the old tales of fairies have been replaced with aliens . In both cases, you have creatures who are ineffable and don't understand humanity, who randomly abduct humans, play with them, and return them with Time Loss and occasionally strange powers/afflictions . Periodically, there are tales of those who have dealt with them and benefited, but for the most part, mundane people are merely their playthings. For more on this interpretation of this trope, see Alien Fair Folk Frequently found in concert with Grimmification , as the original folklore of the darker breeds of fairies needs little exaggeration. Compare and contrast Fairy Companion , Fairy Devilmother (essentially the Evil Counterpart to the Fairy Godmother), Witch Species , Our Elves Are Different , Our Fairies Are Different , Our Goblins Are Different , Our Pixies Are Different , Our Mermaids Are Different , Nature Spirit and All Trolls Are Different . See also Changeling Tale , a specific subtrope having to do with fairy abduction, doppelgangers , and the like . Not to be confused with Changeling Fantasy , which is a type of Cinderella Plot All of the above aside, it's entirely possible for the fairies to be as diverse in their beliefs and actions as humans. Some fairies may be malevolent, but others may be friendly to humans, or at least willing to leave humans alone as long as the humans do the same. In some cases, the fairies may be

more in conflict with each other</ than humans, and act accordingly Whatever the case, no matter how aloof, curious, silly, chaotic, flippant, ignorant, and/or light-hearted any may appear, they'll switch to their Game Faces if fundamental rules are broken near them — or even by them. Which will not go well for somebody</ The Wild Hunt is an often-overlapping trope from Celtic Mythology . Youkai are a rough Japanese equivalent. The Greys is a more modern trope with many similarities . Demons — when not The Legions of Hell — are often also portrayed this way (and sometimes there is rather little distinction). An extreme example may be a Humanoid Abomination

In " Tam Lin ", Tam Lin is spirited away by the Queen of Elphame [Elfhome]. He enjoys his stay there, but learns that every seventh year, the elves have to pay a "tithe [tax] to Hell". Fearing he himself will be the tithe, he flees. The Queen denies that she would have offered Tam Lin, but that still seems to imply the elves regularly sacrifice one of their own to the Devil. Now turn around thrice Widdershins, spit, and touch iron...</

What do you do when you need some big, tough guys to menace the heroes, but don't want to risk having them actually, you know, hurt</ anybody? You call in The Family for the Whole Family. They're not the scary, make-it-look-like-an-accident mobsters seen in Mafia movies; they're the harmless , ineffectual, and very, very</ stupid mobsters that are a staple of family-oriented comedies. No matter how many of them are in their group, you can be sure of two things: there will only be one shared gun among them (if they thought to pack any weapons at all), and they'll always forget that there's a trigger on it when they want to threaten someone Despite the name, this brand of goon doesn't necessarily have to be a member of The Mafia . They can be from any group who is normally considered dangerous by definition (i.e. gangsters, thieves, spies, hitmen, Yakuza , escaped criminals, et al), but when appearing in the context of a PG-rated film becomes highly susceptible to messy booby traps, banana peels , and precocious youngsters who know karate In the 1990s, it was popular to add these characters to Dom Com movies to pad the script with villains for a Home Alone </-inspired climax. (John Hughes , who wrote the script for Home Alone</ and a few of the other examples on this page, loved</ this trope.) Just to drive home the point of them being totally superfluous to the point of the movie, they are totally absent from most trailers and summaries of the film - only existing for some B-plot slapstick gags to add an extra 20 minutes on to what would otherwise be only 1 hour of screentime See also Terrible Trio , Neighbourhood-Friendly Gangsters and The Pirates Who Don't Do Anything . If there's two of them, they're also often a Bumbling Henchmen Duo . Contrast Quirky Miniboss Squad , Harmless Villain , Bad Butt . When the bad guys at least try</ to shoot people but fail miserably, that's Imperial Stormtrooper Marksmanship Academy

…stays together While it's not uncommon for some people skilled in a trade to pass it on to their children, sometimes the only thing a parent is skilled at that he can teach to his kids is murder, mayhem, and any other heartless criminal deeds you can think of. This will usually result in raising an evil clan, and

when the kids are old enough, the family collectively and regularly adds to a rising body count and a growing criminal file Usually, The Family That Slays Together consists of at least one parent (if it is only one parent, it's usually the father), and at least two children of blood relation to the parent. If a mother and father are both present in the story, it's possible for the family to have only one child join them on crime sprees. Aunts, uncles, grandparents, or cousins may be among the ranks as well from time to time, especially when family inbreeding is suggested One common variation involves an Outlaw Couple kidnapping a child or a group of children for the duo to raise as they would their own kids (typically, this either results in Stockholm Syndrome , which is rare, to betraying or outright killing their own kidnappers , which would be more common) Very often, this trope might overlap with Cannibal Clan , especially in the horror genre. Sometimes, they are also Professional Killers or Aristocrats Compare Villainous Mother-Son Duo , as well as Overlord Jr. / Daddy's Little Villain , where a single descendant of a Big Bad seeks to follow in his footsteps, and Unholy Matrimony which involves two villains being in a loving relationship or marriage. Siblings in Crime can follow, naturally, if there's more than one child in the mix. Villainous Lineage is related if the kids pick up on their parents' evil habits without having been directly exposed to any of their criminal behaviors and/or it's a persistent trend throughout the generations Contrast Mama Didn't Raise No Criminal , which involves parents denying that their criminal offspring are really evil, Evil Parents Want Good Kids , where villains take steps to actively keep their children away</ from all that, and Criminal Found Family , in which the criminal family isn't related by blood at all Compare and</ contrast the Badass Family , who can sometimes be this as well when villains but are usually more heroic, and all forms of the Generic Ethnic Crime Gang , particularly The Mafia and The Irish Mob

Adventures of Sonic the Hedgehog </ introduces Mama Robotnik, Robotnik's mother who is a far more effective and dangerous villain than her son, and constantly belittles him for NOT taking over the planet. It seems her major morals she tried to teach him are to never tell the truth, never play fair, steal, and try to destroy Sonic. She even beats Robotnik up when he admits he was kidnapped and forced to marry an intergalactic bounty hunter against his will. Her reason? He told the truth</ .

This character is, quite simply, a character whose defining trait is being well-dressed and extremely interested in fashion (and beauty) The Fashionista is often a woman, save for instances of The Dandy , or a Camp Gay guy (whether or not he is a fashion designer). The Fashionista will invariably love to shop, read Fashion Magazines , and watch (or be involved in if she is a model or a designer) Fashion Shows , and will either have an Unlimited Wardrobe or long for one. She may be the Girly Girl in a Tomboy and Girly Girl pair. If not she will — depending on temperament — either be Alpha Bitch / Rich Bitch or Spoiled Sweet Either way, she is often a prime candidate for Even the Girls Want Her . At some point in the story, she is likely to wear a Little Black Dress (or a red one). She is also likely at some point to give The Makeover to a character who is either Beautiful All Along or Cleans Up Nicely Sometimes, The Fashionista makes her own clothes, usually

if she actually works in the fashion industry or wants to. She may Really Get Around , but it is not a requirement. The Fashionista is usually skinny; it is uncommon to see a Hollywood Pudgy one, and in more cynical shows, she may have an eating disorder such as anorexia or bulimia An older fashionista may be a Silver Vixen , a White-Dwarf Starlet , a Stacy's Mom , or say " I Was Quite a Looker ." In movies and shows from The '80s , The Fashionista may also be a Valley Girl . Whether or not she is a superheroine, she will most likely be The Chick of her Five-Man Band and have multiple costume changes over the years. If she is a supervillainess, she will most likely be a Vain Sorceress . She's not immune to Fashion Dissonance though. If she also happens to be an Action Girl then you've got a Girly Bruiser or an Action Fashionista . A Selfie Fiend is frequently a fashionista If the audience does not consider her a fashionista, this is Informed Attractiveness A Sub-Trope of Costume Porn (personifying that trope in these characters) A Super-Trope to Fashion Designer (those who create fashion) Compare The Beautiful Elite , Impractically Fancy Outfit , Impossibly Cool Clothes , Pimped-Out Dress , Nice Shoes , The Dandy , Idle Rich , Sharp-Dressed Man , Fashion Model

The Fabulous Fifties: An era of identical pink pressboard suburban houses filled with smiling , apron-clad housewives . All the men wear slippers and fedoras and smoke pipes , all the girls are teenaged and wear poodle skirts , and all the boys are cute, freckle faced scamps with slingshots in their pockets . Parents sleep in separate beds and only kiss each other on the cheek. Anyone who isn't any of these characters are either greasers , Beatniks , gas station attendants, or Elvis (who, in this era, wouldn't be caught dead in a rhinestone jumpsuit). With the possible exception of the gas station attendants, everyone on that list is a direct threat to the upright morals and values of the era and will not be afforded a spot in the basement bomb shelter when the Reds drop The Big One . Meanwhile, Martin Luther King Jr. and the burgeoning Civil Rights Movement stride across America, slowed down only by the occasional Corrupt Hick . The birth of rock 'n' roll took place in this era, to the horror of Moral Guardians , which also showed a resurgence in popularity. That's the popular view of the Fifties, at least. In media, there are three versions of The Fifties. The first is the Fifties Fifties, i.e. how the time was portrayed in works that were actually made then. In this version, The Fifties were a suburban paradise where everyone was always happy, either forgetting the bad events that happened during the last decade or reminiscing the prosperous times of previous decades, and there were no problems except for all those juvenile delinquents running around. Unless the local college had some commies spreading un-American values or the flying saucers are landing . The fifties uptightness was linked to real world anxieties and atom-bomb jitters, after all. Don't expect the civil rights movement to show up. Hell, seeing actual black people is a bit of a crapshoot. The Fifties Fifties are in contemporary times a popular subject of The Parody . The next version is the Nostalgic Fifties of The '70s and The '80s . By that time, there were a huge number of adults nostalgic for the "simple times" of their youth and Hollywood obliged. The biggest difference between this version and the Fifties Fifties is that the rebellious teenagers are now the heroes. We learn that all the teenagers back then liked to hang out at the local Malt Shop , where a jukebox played Nothing but Hits . The girls were only seemingly wholesome and both sexes were experiencing their own

Coming Of Age Stories while necking down at the Drive-In Theater and watching Robot Monster </ like the unabashed B movie fans they were Finally, there are the Historical Fifties of The '90s and the Present Day . The Nostalgic Fifties are now starting to die out, replaced by other decades as there are becoming fewer and fewer writers in Hollywood who remember the Fifties... and many of these writers are the children</ of those former "rebellious teens", and take a somewhat more jaundiced view of their parents' upbringing. Therefore, the time period, as portrayed by Hollywood, is becoming more the textbook version. Films about The Fifties today tend more to deal with the political issues of that era (civil rights, McCarthyism, etc.) and less with its teen culture. Which is not to say it is necessarily</ any more accurate of course, merely that the decade is now filtered more through a political/ideological lens than a nostalgic one and teenagers aren't the only people that matter. During this period, there were currents that anticipated trends from later decades but because of the repressiveness and censorship of the culture, they were on the margins rather than the mainstream, so modern views are more informed from this perspective. For a glimpse of what (some) Americans actually living in the Fifties thought of their world, read the Time Travel stories of Jack Finney. His heroes are generally lonely, frustrated, unhappy bachelors eager to escape from their conformist gray-flannel-suited world, usually into The Gay '90s . Likewise actual 50s film are also a good depiction, not only Hollywood but also independent films such as Shadows </ by John Cassavetes (actually shot in 50s New York and dealt with working-class African-American characters). Film Noir was a major genre during the Fifties, that doesn't easily fit in with any of the mainstream versions of the decade listed above, even if many 50s Film Noir actually dealt with the underbelly of crime and represented it in this period and indeed one of the key period films depicting this time is of course Goodfellas </ (Henry Hill's childhood and teenage years). This includes modern noir set</ during the Fifties like L.A Confidential</ or The Black Dahlia</. The other popular genres in this decade are The Musical , The Western , the B-Movie , the Epic Movie , widescreen cinema. Formerly the 50s was considered a weak era for Hollywood, these days a growing contingent considers it the greatest period of Hollywood's Golden Age . Speaking of movies, this was the first decade when Hollywood was old enough to reflect upon itself, gazing fondly (or not) on the Silent Era . See movies like Singin' in the Rain </ for comedic takes on the subject, and Sunset Boulevard </ for dramatic ones. The political decade of the fifties began with V-J Day on August 15, 1945, the start of The Korean War on June 25, 1950 and the election of Dwight D. Eisenhower as President on November 4, 1952 ending two decades of Democrat dominance in Washington and ended with the March on Washington on August 28, 1963 and the Kennedy assassination on November 22, 1963. Culturally speaking, it started with the mass production of TV sets in 1946 and the premiere of I Love Lucy </ on October 15, 1951 and ended with the theatrical release of Psycho </ on September 8, 1960 and the American debut of The Beatles on The Ed Sullivan Show </ on February 9, 1964. In many ways it is one of the longest cultural "decades" since, when looking at the furthest possible endpoints, it covers the whole period between V-J Day to the start of The British Invasion (1945-64). Shifts in this period include 1955-57 as TV ownership reached a tipping point, tailfin cars got REALLY wild, women's skirts got shorter in reaction against the neo-Victorian "New Look" that had started in the late '40s, Rock & Roll started getting serious radio play and the first wave of Baby Boomers reached Junior

High . Another shift was the October 1957 launch of Sputnik which launched the Space Race, the point where the decade's futurism and science-fiction dreams went into government policy. Interestingly, the decade has triggered highly contradictory reactions among people who do not remember it well since the 1970s. Fifties cars are still admired aesthetically (in some areas, you can still find them on the street), Fifties clothes are enormously popular for costume parties, and Fifties music (at least, the sort that doesn't sound like holdovers from the Forties) will probably never be thought unfashionable. In addition, many seem to view the decade, with much sadness, as a forever-vanished idyllic time that was infinitely more conservative and family-friendly (although this is not what people actually living through the decade necessarily thought). At the same time, the 1950s is often treated as a sort of historical Butt-Monkey ; an all-purpose dartboard on which anyone who is irritated by social repression — especially</ if it concerns sex — can feel free to take out their frustrations. (Whenever you hear of someone described as having "Fifties values," it usually isn't intended to be a compliment.) But those who wish to Flanderize an entire decade should know that the 1950s were actually marked by great strides forward in social progress, sexual and otherwise, even if they still existed mostly on the theoretical level. And in any case, they were a lot less repressed than the eras that preceded them . The decade was also a period of relative stability and unprecedented optimism, both probably enhanced by comparison since the period was bracketed by the horrors of World War II and the upcoming turbulence of The '60s . This was particularly prevalent in the US, which had not only triumphed in the war but, more importantly, was just about the only major nation to come out of the conflict with its infrastructure intact. With no rebuilding to do, the focus was on innovation; there was a strong belief in the prospect of limitless progress through science and industry, which led to a lot of gee-whiz science fiction that's now covered with Zeerust . It's no coincidence that the ultimate embodiment of optimism, Disneyland , opened in 1955, with its cornerstone of Tomorrowland, promising a "great big beautiful tomorrow." Compare Aluminum Christmas Trees . For more information, see our swell Useful Notes page . Compare Victorian Britain across the pond, a similar era of prosperity with similar underlying problems (conformity, stratification, classism, and limited roles for women) - although as with the the 1950's, people were struggling for progress, as evidenced by the labour movement gaining steam and increasing demands for women's suffrage. See Also: The Roaring '20s , The '30s , The '40s , The '60s , The '70s , The '80s , The '90s , Turn of the Millennium , The New '10s , and The New '20s .

The version of 1955 seen in the Back to the Future </ films has elements of both the Nostalgic Fifties and the Historical Fifties, but seems to generally lean more in the direction of the Nostalgic Fifties.

A film based, sometimes loosely, on a television series. Like The Film of the Book , with one subtle difference. Unlike The Movie and the Reunion Show , which feature the original cast of (whatever incarnation of) the series, these most often happen when the series in question has been off the air for a while, giving it a new cast and updated sensibilities and commonly take place in an Alternate Continuity from the original. Sometimes, though,

as with Charlie's Angels </, the movie is presented as a Sequel to the original. Members of the original cast may appear in cameo roles . In a few cases, as with the film versions of Doctor Who </ and The Twilight Zone </ , they outright re-make televised episodes Usually, these adaptations will raise the stakes and use a more traditional "heroes saving the day" style of plot to ensure that it's a Big Damn Movie . Contrast with The Movie , compare with Continuity Reboot , contrast and</ compare with Non-Serial Movie . A subtrope of The Remake . If the movie is made up of scenes pulled directly from the original series it's a Compilation Movie instead Thanks in no small part to the success of The Addams Family </, these were especially popular in The '90s The inverse case, where a successful film spawns a TV series continuation or adaptation, is Recycled: The Series Semi-example: The 1987 film The Untouchables </ was pitched as the film of the 1950s TV series , but the director and writer went back to the original historical source material, then completely ignored that history and made up a totally fictional story. Coming full circle, it was adapted into a syndicated Revival series six years later

Sometimes, viewers are so afraid that a show will be Screwed by the Network that they refuse to watch it, even if it sounds appealing to them. </ The Firefly Effect refers to viewers being afraid of committing to a new series because they don't believe the series will last long enough to make up for the investment of time and emotions " The network is just going to cancel this, so I'm not giving it my heart ." If enough viewers think this way towards a particular TV series, it may become a Self-Fulfilling Prophecy —people don't watch because they think the show will be canceled, and then the show is cancelled because no one is watching it. Television executives don't tend to want to invest in intelligent or overly complex series, because they worry that the given show will be less popular, (and thus draw in less money from ratings) if viewers are required to use their brains . As well as the trope namer Firefly </, Star Trek: Voyager </ was a quintessential example of this trope—it had an initial premise which was very similar to that of Firefly</ in some respects, and although the show didn't get cancelled, said initial premise was basically scrapped... along with the series being made a lot less intelligent and a lot more violent. It can be a real problem for all the Lost </ clones and other Ontological Mysteries , which aren't worth watching if they don't get more than one season, and especially if they don't even get a full season—and they often don't. That is also the sort of TV shows most likely to be hit by this effect, but it can hit any</ show that makes it clear up-front that you need to be involved</ in the characters and/or overarching plot to make sense of the show in the long run. That up-front demand plus the uncertainty that there will be</ a long run allows The Chris Carter Effect to start before the TV show does, meaning the fans never start</ watching... In contrast, people usually</ don't think that they'll get overly attached to Crime Procedurals , Sitcoms , Soap Operas , or even Reality Shows ; thus, they'll feel free to watch episodes "casually" until the attachment to the show (or characters) sneaks up on them. Even some shows that seemed feasible only over one (22-episode) season (such as Reunion</, Day Break (2006) </, Kidnapped </, Vanished</, and Drive (2007) </) suffer from this effect, due to the episode order getting shortened to 13 . In Reunion</ 's case, the producers didn't even bother finishing the storyline, because it only made sense over a full 22 episodes rather

than the shortened 13 Incidentally, many of these shows (including Trope Namer Firefly</) were on Fox —basically because Fox was likely to give the sort of show that gets this effect an initial run, but tended to be too Nielsen-sensitive to be patient. Fox has been experimenting to test the nature of this effect, as evidenced by Fringe </ (which seems to have escaped this trope, airing for five seasons) and Dollhouse </ (if this trope can apply to a show that has run for more than one season, then Dollhouse</ is it). This is not yet a deprecated trope. But the rise of streaming and premium cable means cancellation—while not unheard-of—is less likely to occur before a major story arc is completed (i.e. a series with a six-episode story arc being cancelled after two episodes). For example, Jessica Jones (2015) </, released through Netflix , was never in any danger of being cancelled halfway through its first season, allowing fans to invest in the show without worry. Similarly, the streaming model allows viewers to choose how they invest their time. Someone who might not have watched one half-hour episode per week for an entire month to decide whether a new series is "worth it" will happily burn those two hours in one</ night. And it gives fans the flexibility to wait for word of mouth about a particular show before investing their time, though only to a point. However, some streaming shows have been cancelled due to lack of views within a certain length of time, and others have one season's worth of content broken up into mini-seasons, so the effect can still apply for people worried that either a season ends on a Sequel Hook or was cancelled before the other half of the season could be released.

Alice and Bob have been growing closer and closer, possibly leading up to a Relationship Upgrade … only there's a problem: Alice's ex, Charlie . No, it's not that Alice is still in love with Charlie, it's that the fallout from her relationship with Charlie has left her with serious emotional baggage that must be worked out before any new relationship can succeed. Can also happen when Charlie is dead and Alice still has grief issues to work out. Will often culminate in an Epiphany Therapy session between Alice and Bob, where Alice spills all her baggage If the emotional baggage is not worked out, Alice and Bob may become an Anchored Ship . Compare The Mourning After , if the ending of the relationship was particularly traumatic

As the number of trope examples gains magnitude, the probability of an example containing only Japanese titles and wiki words approaches certainty.</ See also: The Zeroth Law of Trope Examples . For more Laws of Trope Examples, see TV Tropes Wiki Drinking Game and Trope Example Laws .

Star Trek: The Next Generation </ included and ships named USS Yamato </ and SS Kobayashi Maru </ .

The quintessential Twenties (American, Western European or simply sophisticated) woman. A young lady even more spirited than the Spirited Young Lady , where Victorian morals were loosened the same time restrictive corsets were, thanks to newfound liberty, rising feminist movements, and, in the US, the 19th Amendment. Which forbids states from forbidding women from voting. Yes, that's confusing , but that's American Federalism for you. She listened

to jazz, danced dances like the Foxtrot, the Tango, the Shimmy, the Black Bottom, the Baltimore Buzz, and the Charleston , wore make-up for the first time since the 18th century, drank with the boys (in America, she was about as big an opponent of the 18th Amendment as she was a fan of the 19th), spoke in slang and cusses , and enjoyed various other delights The Roaring '20s had to offer. Short hair , short skirts , short, loose & low-waisted evening gowns , turned-up silk stockings , boyish figures , and swanky cloche hats were a must Their sexual liberty was a result of the feminist movements like women entering the workforce and women's rights to vote, and of women's growing hatred of the classic notion that promiscuous men were "studs," while promiscuous women were "whores". In their eyes, "sheiks" and "shebas" were equal, so they could be just as sexually free. Another factor was the then popular view of women as housewives and mothers who should be subordinate to their men and preferably not leave the house The popular image of the flapper we know of actually dates back to at least the 1910s . While the word flapper</ appeared in dictionaries as early as The Gay '90s , the flapper girl started to evolve during World War I and the Prohibition era. , flappers did not always wear sleek bobs, fringed dresses, feathered headbands, and open-toed stiletto heels. These were an invention of filmmakers in The '50s , who tried to evoke the era fit for Technicolor cameras. Actual flappers saw fringe as expensive and very impractical for dancing, hemlines at the time were knee length at its peak before dropping in the very later decade, headbands were Edwardian carryovers that persisted through the early 1920s when some women were reluctant to bob their hair before it went out of fashion by the middle of the decade when bobs became commonplace, and shoes were close-toed and the heels were thick Cuban or Louis. As the decade progressed, and with the help of prominent women like Coco Chanel , hats became tighter and narrower, skirts became shorter, and the silhouette more streamlined, like the image you see above The concept also spread east to Japan and China, where it spawned the "modern girl" (モダンガール modan gaaru</, or モガ moga</ for short) and "modern Miss" (摩登小姐 modeng xiaojie</) cultures respectively. The modeng xiaojie</ would likely wear high heels and high-slit, figure-hugging dresses called " cheongsams " in reaction to the painful foot binding and the antiquated loose robes of the Qing dynasty The flapper lifestyle and look disappeared after the Wall Street Crash and the following Great Depression . The high-spirited attitude and hedonism were less acceptable during the economic hardships of the 1930s Compare and contrast The Suffragette , her predecessor, and The Lad-ette , her direct descendant and Spiritual Successor

So, it has been clarified, immortality sucks </. You see all your friends and loved ones die off , you have to constantly come up with new forms of ID , and if you don't keep abreast of mortal matters, you're going to find yourself completely irrelevant in a century or two. On the plus side, you're a living witness to history. You could have been alive at the fall of the Berlin Wall, the treaty at Appomattox Court House, or even the signing of the Declaration of Independence. And you'll be able to recall that as long as you live, right? Well, hold on a second... see, one could argue that there's only so much space the brain can hold, like a video cassette . Which means that, if you live long enough, your brain's going to start recording over itself. You might forget where you were born,

what your parents looked like, hell, maybe even what your real name is. And it'll be lost forever to the sands of time. Sucks, doesn't it? Unless, of course, the immortal character in question records everything in a diary/volume of books or something, but how often does this happen? A common downplay is to have the immortal's friends and family be the only thing they still can remember. The tragedies, the wonderful days, the good times and the bad may all blur together after a while, but they can still remember those faces. In these cases, the memories of those people might be the only thing that holds the immortal together, as those memories are the one thing they can anchor their mind to, and without them, they would forget who they are and who they were. When this happens to societies, it's Future Imperfect . When it happens to an individual during their own lifetime, the person is Shrouded in Myth . Can be part of the backstory of an Amnesiac God .

The Fighting Forties was a memorably turbulent era, forever linked in the public consciousness with World War II (1937/1939-1945), the development of the first atomic weapons and subsequent Atomic Bombings of Hiroshima and Nagasaki . This also marked the start of the Cold War and the Arab–Israeli Conflict . But this era also brought many other changes on the world's political map. The Soviet Union annexed Estonia , Latvia , and Lithuania , while Burma , Iceland , India , Indonesia , Israel , Lebanon , Pakistan , Syria , and the Philippines gained independence from various European and American colonial empires. New regimes also emerged in existing countries; Republican Italy , West Germany , Red China , and East Germany all emerged in the second half of the decade The technological innovations of the decade included the first digital computers - notably Z3 by Konrad Zuse (1941, German), the Atanasoff–Berry Computer (1942, American), the Colossus Mark 1 and Mark 2 computers (1943 and 1944, British), the Harvard Mark I (1944, American), Z4 by Konrad Zuse (1944, German), ENIAC (1946, American), the Manchester Small-Scale Experimental Machine (nicknamed "Baby") (1948, British), Sergey Lebedev's MESM (1948, USSR), the EDSAC (1949, British), the Manchester Mark 1 (1949, British), and the CSIRAC (1949, Australia) While functioning radars were actually developed in the 1930s, they were first widely used in this decade, with several of the World War II combatants adopting and/or improving the relatively new technology. The first military jeeps were developed for the United States Army in 1940; the private companies creating them introduced civilian models in 1945. The German V-2, introduced in 1942, was the first successful ballistic missile and served as the progenitor of all modern rockets. Jet aircraft were still in an experimental phase during the start of the decade, but the jet-powered Messerschmitt Me 262 (1942, Germany) served as the first operational jet fighter aircraft, the first of many Television was still in its infancy. At the start of the decade, only a few countries had operational television stations (including the United States, United Kingdom, Germany, France, the Soviet Union, Mexico, the Free City of Danzig, Poland, Japan and Italy), and said stations only broadcast in major cities. Only a very limited number of people owned or had access to a television set - as of 1941, WRGB in Schenectady, NY was the only TV station outside a major world city anywhere</ . Later in the decade, the Philippines, Czechoslovakia, Chile, and

the Netherlands would get their first experimental broadcasts. Commercial television got its start in this decade with the launching of early privately-owned networks The hit toy of the era was the Slinky, a helical spring which stretched and bounced up and down. Developed by engineer Richard Thompson James, it became commercially available in 1945. Tupperware, an airtight plastic container for storing food, was created by the eponymous Earl Tupper in 1946. The first commercial microwave oven was introduced by Raytheon in 1947, based on the experiments of inventor Percy Spencer. Velcro was invented by George de Mestral in 1948, though it would not become commercially available until the late 1950s. Momofuku Ando embarked on his quest for instant noodles in 1947, finally succeeding ten years later The cinemas of several countries managed to produce influential films. The Golden Age of Hollywood was still ongoing, and hit films such as Citizen Kane </, The Maltese Falcon (1941) </, and Casablanca </ were arguably among its best products. The Film Noir genre rose to particular prominence. British cinema had some major hits in the adaptation of Shakespearean works by Laurence Olivier and the exemplary noir The Third Man </. In France, influential directors such as Marcel Carné, Robert Bresson, and René Clément scored major hits in the aftermath of the War. Italian neorealism was developed in this decade, with major directors in the genre including Roberto Rossellini, Vittorio De Sica, and Giuseppe De Santis. In the Soviet Union, Ivan the Terrible </ by Sergei Eisenstein was arguably the most notable film of its decade. Meanwhile, a new generation of directors managed to produce their own hits. In Japan, new director Akira Kurosawa began his career As for fashion, styles for dresses, suits (especially zoot suits) and sportswear were a continuation of 1930s silhouettes, like shoulder pads and backless evening wear , only more robust, mannish and simplistic. Hairstyles for women were often long and updone in which they often showed their foreheads. Fedoras and Latin American-influenced hats were popular headwear; while high-heeled wedgies, mary-janes, close-footed oxfords and peep-toe pumps were popular choices for footwear. Gloves were a must . The decade also introduced a new fabric — nylon — and it was used in hosiery, toothbrush bristles, ropes, and parachutes During the war, due to fabric rationing and the closing of fashion houses in Paris, many day dresses were American-made, strictly knee-length and plainly decorated. Nylon stockings suffered shortages due to the need for parachutes, and sportswear was often substituted for casual wear. Many more had innovated themselves in order to be more stylish, even while working on factories. For instance, some women applied makeup on their legs in place of wearing stockings, while other women had the need to borrow their man's trousers and suits while joining the workforce . And somehow, in a certain loophole , while dresses only used a limited amount of fabric and cutting, accessories such as hats, gloves and jewelry weren't. Hats, while they use fabric, but are considered accessories , can have wide brims and often decorated with fruit as they can get, gloves can be as high as they can reach the padded shoulders , and necklaces can go as low as they can hit the dancefloor. After the war, restrictions were still implemented but were gradually relaxed in 1947, when a Parisian designer named Christian Dior created a new set of style, which included long full skirts, rounded busts, wide hips and narrow shoulders. Journalists had dubbed it the "New Look" and the innovative style lingered on until the end of The '50s For music, jazz was the main ingredient to swing (the rage

of the dance floor), bebop (the cutting edge, characterized by extremely fast tempos and complex improvisation), and Latin dances like samba, mambo, salsa and conga brought by soldiers. And then, before The '50s popularized teen sensations, Frank Sinatra was the teen sensation Politically, the Forties encompassed at the very least the entirety of World War II (1939-1945) and at the latest stretched until the start of the Korean War in 1950, and the election of Dwight Eisenhower as President ending two decades of Democrat dominance of Washington in 1952. Culturally, the decade started with the New York World's Fair in 1939 and somewhat ended with the premiere of I Love Lucy </ in 1951. Please note that 1945 was a point of inflexion, marking the end of WWII and the start of the Cold War , as well as the first stages of the post-war boom. Also a nostalgic point during the second half of The '60s (with many war movies made during this time), as well during The '70s and especially</ The '80s (for the exaggerated fashions, of course) See Also: The Gay '90s , The Roaring '20s , The Great Depression , The '50s , The '60s , The '70s , The '80s , The '90s , Turn of the Millennium , The New '10s , and The New '20s

Love is the most important value of all. Everyone needs to love and be loved in return. This trope applies when a character's main motivation is to love, be loved or both. Because the word "love" can apply in many situations and circumstances, the ancient Greeks divided the concept of love into four different types (later expanded upon by C. S. Lewis in his The Four Loves </): Storge </ (Affection/Family) — This is fondness through familiarity, especially among family members or people who have otherwise found themselves together by chance, See for an analysis of why we don't have so much of storge nowadays. It's usually, but not always, reciprocated. The archetype of storge is mother's love for her children - and the children's love for mom. Lewis says storge</ is a very basic human need, comparing it to food - if you think you can do without , it's not a good sign, just like lack of appetite can be medically alarming. In fact, human children (and other mammals - see cloth mother and related experiments) have been observed to not develop right when deprived of storge. I Just Want to Have Friends is a manifestation of this need - see the trope page. Go Mad from the Isolation may happen to people deprived of it, even if they're technically not on a desert island . A fifth love, rarely mentioned in modern times, was called "xenia". Translated precisely as "guest friendship", we know it today as the Ancient Greek concept of Sacred Hospitality . It was so important to the Greeks that its patron was Zeus himself, in the epithet of Zeus Xenios. Also referenced as a minor note are loves for non-human things. Love for an animal (such as a pet) is redirected to storge</ according to C. S. Lewis , while modern animal rights proponents might argue for the inclusion of animals in general in agape</ , but love for nature and love for country are most noted as love for non-human things. Likings and preferences (for food, activities, etc) are also discussed especially as you can admire an object (like a painting for instance) just as you can admire a person. It is notable that these are rough categories of love and not exclusive to each other. That is, more than one can appear between the same people. For instance, if Alice meets Bob at a Sci-Fi convention and they continue to get together to talk about sci-fi, then they have philia</. If Alice and Bob in the process become each others' Love Interests , they will also have eros</, but if they still get together to talk about sci-fi they

still have philia</. If they are Happily Married for so long that they grow old together and like each other's company simply because they are there, that is storge</. And if they make Heroic Sacrifices for each other, that is agape</. In general, philia will normally make storge arise in time, and in the absence of hindrances (look here for a list) it's likely to bring about eros as well. Related to Like Brother and Sister and I Just Want to Have Friends . Agape</ is also a Super-Trope of Heroic Sacrifice and all four can be expressed by an Act of True Love .

Any halfway decent work of the Romance genre will deal with eros. The lighter, funnier shade of it will be explored in a Romantic Comedy (remember, Cupid's arrows fly blind!). Many works not in the genre have Romance Arcs , too.

A monster is on the loose terrorizing a bunch of innocent people. As long as the monster and the victims are characters in a fictional world, one would usually be correct to assume that the boundaries of the Fourth Wall will be respected. But then, Breaking the Fourth Wall , the monster assaults the omniscient narrator, or leaps out at the audience. Definitely Paranoia Fuel . Much easier to pull off with visual media like film, but a few literary examples also exist. An easy way to invoke this trope is to describe a Brown Note , and say that a series of horrible events happened to anybody who experienced it before, and specify that the first symptom is a sense of foreboding. Since foreboding is a base response, even rational people who know that they cannot be negatively affected by a work of fiction will feel the visceral reaction thanks to the nocebo effect . Paranoia Fuel can then set in; mission accomplished. This trope can be done far more effectively in video games due to the interactivity of the medium, especially on computers where it's easy for the game to directly refer to the player by account names , talk to the player or execute this trope in the most literal fashion by actually attacking and harming the machine , as demonstrated by Imscared </, or preserving information beyond replays and reinstalls, most famously shown by Undertale </ . See also Second Person Attack , Rage Against the Author , Scarily Specific Story , and The Most Dangerous Video Game . May involve Sean Connery Is About to Shoot You or a Tome of Eldritch Lore , or may implement Fission Mailed . The Computer Is a Lying Bastard is a game specific version of this, though it usually involves trickery instead of threats. If an action from the video game affects something beyond the game or its display or usual sound device, such as something in the real world, then it may be a case of Reaching Through the Fourth Wall . Abusive Advertising is a related trope where advertisements threaten to cause harm to the audience if they don't buy what's being advertised. In-universe examples may fall under Deadline News or Spectator Casualty . Can be subverted in a combination of Fourth Wall Psych and Shock-and-Switch Ending . Real life does not have a fourth wall, so

Embarrassing things happen to us all sometimes. When they happen, we trust anyone who saw said thing to afford us the dignity of not calling attention to it, and we typically do likewise when something happens to them. Besides, getting splashed by a puddle or dropping a stack of dishes isn't that</ funny to begin with When embarrassing things happen to characters in a comedy, however, every stranger within a 500-foot radius will go out of their way

to stop what they were doing, point out the thing in question, laugh loudly about it, and basically humiliate the character into feeling like a quivering little pile of crap. This is known as the Freelance Shame Squad, a group of otherwise unremarkable people who abandon their better nature and laugh like a sociopathic mob upon witnessing a stranger's misfortune Often illustrated with a Circle of Shame shot, as the focus of the humiliation looks around them and all they can see are laughing faces Thankfully, this is usually not Truth in Television , as in reality most onlookers will react with either confusion, surprise, annoyance, or just plain indifference when seeing someone else's faux pas. However, fear</ of this trope certainly exists in the minds of young people everywhere. This trope shares a bunk with No Sympathy , and like that, it's a trope that tends to really get on people's nerves . See also Embarrassed by a Child , Humiliation Conga , and Instant Humiliation: Just Add YouTube! Compare Open the Door and See All the People , when the character is surprised by a mob of onlookers. See also Shamed by a Mob , when the fallen character is met with the crowd's quiet look of disapproval. Compare and contrast Point-and-Laugh Show , when it's the audience who's expected to laugh at a contestant's misfortune. Related to Passing Judgment

In a group of otherwise good friends, there's one character who's an unrepentant Jerkass to everyone else. Or, if they aren't downright mean or cruel, they may be so stupid , annoying, or just plain weird that it's embarrassing to be seen with them. In any case, asking a member of the group "Why are you even friends with him?" is a perfectly legitimate question. It can usually be answered with one or more of the following explanations: —The group has known this person for a long time. They might have even genuinely liked him or her at one point, but years of maturity and development (either by the disliked "friend" or by the others) resulted in this member no longer fitting in. However, the group keeps them around anyway due to either obligation, loyalty or familiarity. It's not even that their friends aren't aware of their behavior, either. They're perfectly aware that the person is a jerk, or a geek, or a ditz, and will frequently treat them as such based on their behavior. They still get included in the group nonetheless, with the group often defending them if any outsiders insult or mistreat them . In some cases, it's discovered that the group really does care about this friend and vice versa. In other words, "They may be a pain in the butt, but they're our</ pain in the butt." Often uttered right before such lines as " You mess with them, you mess with all of us !" or "We're not leaving anyone behind!" The character may have a breakout episode that explains the reason for their attitude or reveals a human side that never showed before (such as a cute hobby or a Hidden Heart of Gold). More tragic examples may lead to the disliked character Jumping Off the Slippery Slope , and their former "friends" bitterly regretting that they tolerated someone so obviously malicious for so long. Mistreatment-Induced Betrayal can be at play if the friend gets fed up with the way they treat him. This is Truth in Television . Chances are you have a "friend" like this (or multiple "friends"), or you may even be that "friend" yourself. Compare Vitriolic Best Buds and With Friends Like These... , where this kind of attitude is usually limited to one or two select members of the group as opposed to being the opinion of the group as a whole (though the latter trope

can compliment this one if one friend is actively disrespected enough by the others). This trope may overlap with Loser Friend Puzzles Outsiders . However, in this trope the whole social circle hates the "loser" rather than an outsider to the group, and the person may actually have some cause for being disliked. In the other, the person is usually presented as being an innocent victim of prejudice, whether it's related to social Darwinism , jocks vs geeks, Slobs vs. Snobs , or racism, fantastic or otherwise. If The Friend Nobody Likes is a protagonist or otherwise portrayed sympathetically, he may instead become The Woobie . The Friend may also be The Gadfly if they aren't an up-and-out jerk. If someone is disliked to the point that people won't</ associate with them, All of the Other Reindeer is in play. See also My Friends… and Zoidberg! , The Complainer Is Always Wrong , No Accounting for Taste (when a romantic couple are similarly incompatible), and Token Evil Teammate .

We all know the type. Their beliefs are right, and anyone who does not believe as they do is stupid, crazy, evil or all three. The Fundamentalist is right, you are wrong, and being right is the only thing that matters A common behavior of The Fundamentalist is a tendency to dehumanize or demonize those not in line with their particular brand of belief, which allows them to lie to, abuse and otherwise mistreat those opposed to their beliefs, often in contravention of their own professed beliefs The most common Fundamentalists you'll meet in the West are Christian, but there are also breeds of Jewish, Muslim, Shinto and Hindu fundamentalism. Even Buddhism has had its "holy wars," exchanging campaigns of political repression, burning of scriptures, and outright murder with Taoists in ancient China Fundamentalism is also something other than a religious phenomenon. Non-religious ideologies like communism, capitalism, socialism, racism, environmentalism, fascism, democracy, anarchism and yes, even atheism, can all attract their own brands of "fundies" as well Fundamentalists crop up in Fandom . If, for example, you see Gollum as anything less than a direct agent of the Valar sent to destroy the Ring once and for all, the Tolkien fundamentalist sees you as bad and wrong. The Fundamentalist is pathologically obsessed with being "right," even in subjects that might not have a right answer — art criticism, hermeneutics, straight down to the best flavor of ice cream. Fundamentalism looks a lot like Fan Dumb , as points out A religious fundamentalist may also be a Sinister Minister . See also: Knight Templar , Well-Intentioned Extremist , Holier Than Thou , Moral Myopia , Single-Issue Wonk , Dry Crusader , Strawman Political , Windmill Political , Windmill Crusader , With Us or Against Us , Lawful Stupid and Poe's Law . Atheism is given this attribution in various instances when extreme skepticism is employed against the supernatural or religious beliefs, but most instances in fiction can fall under the tropes Flat-Earth Atheist , Agent Scully , and Hollywood Atheist . Also compare Totalitarian Utilitarian and Principles Zealot for similar attitudes to secular philosophies. Contrast The Soulsaver and Soul-Saving Crusader for religious fundamentalists who are objectively right within The 'Verse of the setting See also Egocentrically Religious , Black-and-White Insanity , Belief Makes You Stupid and Activist Fundamentalist Antics

Even at a funeral,</ Hilarity Ensues . This trope summarizes all the wacky hijinks that can commonly occur at a sitcom funeral.

It's the comedic flipside of the serious Due to the Dead The protagonist will see something in the casket that belongs to them, and must retrieve it without being noticed by the mourners or violating the corpse. This many times will result in the person's watch, bracelet, or cuff link getting snagged on something in the casket (going as far as on the zipper</ of the deceased) Or, he is asked to deliver the eulogy, and struggles because he either barely knew the deceased or hated them intensely If the deceased is cremated, dust to dust, Ashes to Crashes . The ashes are just waiting to be spilled, worn, consumed, or disrespected in some way. If it's a particularly black comedy, expect the coffin to be knocked over at some point, and for extra Black Comedy points, the corpse to be abused in some fashion Then of course there's always the "missing corpse/casket" situation, which often has the guest of honor rolling out of control down a street, dodging cars, fruit carts , sheets of glass , and other obstacles. And then there's the instance where a main character is declared "dead" to protect him from a bloodthirsty revenge-seeker , with matters sometimes becoming complicated when the villain discovers that his supposedly dead enemy is still very much alive Expect plenty of Black Comedy to be involved Or maybe the characters will play an Of Corpse He's Alive . This is the generally the opposite of the heartwrenching Meaningful Funeral , but there can be some overlap . Compare And There Was Much Rejoicing , Last Disrespects , or Speak Ill of the Dead , where the non-dead characters may indulge in this Or, finally, the heartwarming version that we get a bit in real life. The deceased was a comic (or even a Sad Clown) and would abhor the idea of people wasting a day and a gathering moping about their passing. This is the basis of a Cheerful Funeral : ultimately full of good spirits as everyone shares their fondest memories of the passed and honors their memory with a smile or two

In </ George plays a prank during Fred's funeral that turns the hair of every non-redheaded participant Weasley red. This is soon followed by enough fireworks to outdo Guy Fawkes' Day.

John Smith is a goodhearted farm boy from sometime in the past - but not earlier than the 13th century (as modern English would be near-totally incomprehensible to a speaker of that time or earlier.) But then he foolishly plays with the mystic Nazi time portal or there's a temporal equivalent of the Teleporter Accident , and ZAP!, he falls, screaming, into the Present Day (whenever that happens to be). Inevitably, within minutes of arriving in the bright, blinky, flishy-flashing future, he will be culture-shocked from his head to his toes. To drive home how much of a Fish out of Temporal Water he is, the filmmakers will slap him in the face repeatedly with the steamiest parts of contemporary culture, whether or not it's even remotely realistic in context. It doesn't matter if it's 10:00 in the morning or 10:00 at night. It doesn't matter if he's in a seafood night-market in Taipei, a busy sidewalk in Rio de Janeiro at the height of Mardi Gras, or a Turkish Cafe in New Delhi - somehow, somewhere there will be a TV playing porn. Usually hardcore, but maybe softcore at the Turkish Cafe. Alternately or additionally, he may also stumble across: A working strip-bar, complete with pole dancers. A more specific sub-trope of Fish out of Temporal Water . See also It's a Wonderful Plot , when the person sees what future difference is made by them specifically.

The Gadfly is a character who often says things that make fun of, or provoke, other people Maybe they have a hard time really expressing themselves. Or it could be they just like to watch others get annoyed, confused or angry at them. Or maybe the impolite behavior is a Secret Test of Character for the other party Usually they're not really bad people. They can be quite amusing as long as they're not going after you</, but their main targets seem to be their allies, who understand that it's all a joke to them. In the Forum Pecking Order , they may be a member of the Old Guard. Their amicable nature makes them fairly benevolent but they can set off strange conversations and arguments The Gadfly varies in its subject matter, of course. Sometimes they are The Tease , forever raunchy, or they love political arguments, or they are flat-out crazy.</ Others are a variant of the Attention Whore , and encourage aggression towards themselves. To keep them in line requires a Mod who has a long leash and a big stick Compare and contrast with Troll , a character who draws pleasure not from ludicrousness but from suffering See also I Shall Taunt You , Armor-Piercing Question , Devil's Advocate , Crying Wolf Contrast the Blithe Spirit and Manic Pixie Dream Girl , who often use a very similar M.O. to improve</ people's lives. The Devil's Advocate will do this in serious discussion to point out flaws in a stated position Not to be confused with the 1897 or unrelated 1955 of the the same name

The gambler follows a card (or dice) theme, uses cards , dice, darts, coins and gambling implements as weapons , and is very well-versed in blackjack, poker , craps, slots, and all sorts of casino games. They rely much more on luck and cunning than on skill or outright power, and very seldom take it too hard on the occasions they lose, usually due to believing it was due to chance They tend to be slick, either elegant or gaudy, just like professional card players from the past, and are more towards lean and nimble than strong and resistant. One would be hard-pressed to find a particularly slow-witted person, or a grunt, in the position of the Gambler The entire theme around the gambler makes him usually either an Anti-Hero or an Anti-Villain , due to a view that they usually revere luck and chance over pledged allegiances, and that they will usually be too chaotic to be too specifically good or evil, with The Joker being a rather brutal exception to this rule. This trope is almost entirely populated by men, and it has been increasingly common as time goes by. See also: Death Dealer (using playing cards as weapons), as well as Born Lucky and Winds of Destiny, Change! (when the character has actual powers over luck) In a video game, expect their skill sets to revolve around Gameplay Randomization even more than other characters, e.g. having Randomized Damage Attacks as part of their "luck" gimmick For actual</ gamblers, see The Gambling Addict or Professional Gambler

This trope, featured in stories which feature game-playing as an important element, occurs when the game the characters are playing becomes real. Either elements of the game start manifesting in reality, or the characters are drawn into the game. Winning the game is often the only way to escape, or to undo the changes the game caused. The Game Come to Life is usually a Board Game , a

Collectible Card Game or a Video Game A variation on this trope involves children playing a video game which turns out to be a remote-control system for actual combat machines Compare The Game Plays You , when the game not only makes things real but is also sentient and hostile See also: Trapped in TV Land , Refugee from TV Land , Inside a Computer System

In Project X Zone </, Kite and Black Rose can't seem to log out for some reason, Then when the rest of the party ends up going from The World</ to the real world, they follow as their game character-selves. They momentarily wonder what's happening to their real bodies.

Video Games are a medium that can easily be adapted from a book or comic series. Typically, to gain a mainstream audience a book is adapted into a movie . A less common occurrence is when a book is adapted straight into a game. These were common in the late 1980s and early 1990s when graphical computer games were becoming popular.

Tom Clancy is the Trope Codifier for this, with the Rainbow Six </, Ghost Recon </ and Splinter Cell </ series. Tom Clancy examples go all the way back to the late-1980s sub sim based on Red Storm Rising </ .

No, not the "gay" you were thinking of , nor The '90s you were thinking of, for that matter This trope covers depictions of the 90s, the realm of Oscar Wilde , William Jennings Bryan, Nikola Tesla , Arthur Conan Doyle and the Gibson Girl You see, back in the earlier half of the twentieth century, people became enamored with the 1890s. It was where what we now recognize as "decade nostalgia" was born, and The Gay Nineties became a popular setting for films of the 1930s, the 1940s and, to a lesser degree, the 1950s and 1960s, by which time it was seen as that innocent age before World Wars and atomic bombs If you lived in this time period, you were generally fortunate as long as you lived in wealthier countries of the world, as it was a time of relative peace (see below). On the flip side, if you were born in this decade, you would most likely live long enough to see and probably be involved in the First World War , The Spanish Flu , The Great Depression , the rise of totalitarianism, wartime genocides, and the Second World War . Further, if you weren't part of your country's majority ethnicity, and/or if you were female, your rights were not anywhere close to those of the men who were This was also the time of the last great gold rush in the Klondike region of the Yukon. Thousands of prospectors headed north to strike it rich, and while the American town of Skagway, Alaska may have been wild, the prospectors in Canada quickly learned that they were in a very different gold rush, with the North West Mounted Police under the command of Sam Steele keeping a firm hand on their behavior. As such, it was the most orderly of such affairs in history and the legend of the Mounties was born The automobile was just barely invented, so new that people couldn't agree on what to call it ("Horseless carriage" is the memetic old-timey name, but that only scratches the surface). Most people who lived in cities traveled around in horse-drawn hansom cabs, pedaled bicycles (built for two or otherwise, and often the kind with the enormous front wheel, called penny-farthings), and rode on trolleys, but most</ people still lived on the farm, and horse-drawn farm wagons were used as all-purpose transportation. In major cities, electric lights were replacing gas lamps and candles. Other technologies that would later be typical of the 20th century and beyond, such as planes,

telephones, and films, were also being developed around this time. Ragtime was the hottest music According to nostalgic films set in this decade, back then everyone was a rich white person who wore Gorgeous Period Dresses , with every lady wearing Art Nouveau inspired dresses with Giant Poofy Sleeves and carrying a Parasol of Prettiness Take note that the fashions in this decade no longer used bustles. The exaggeration shifted from the backside to the shoulders, leaving the skirts undraped in an A-line form, and giving the silhouette an hourglass look. Any fashion historian will tell you that the notion of everyone wearing bustles in the 1890s is like everyone wore neon powersuits with gigantic shoulder pads in the 1990s . , and they all liked to hang out in ritzy places located in major U.S. cities (for New York , this was Delmonico's restaurant at the Waldorf-Astoria hotel). In fact, the "everybody's rich" stereotype stems from a conflation of this period with " The Gilded Age " (1876-1896), as the Gay Nineties were also marked by economic depression and much labor agitation (see on The Other Wiki), not to mention the Spanish-American War . Even then, the term "Gilded Age" (as in, "coated in gold") was specifically meant to indicate that the good times were only a surface veneer, with serious problems lurking just beneath (as the Gay Nineties themselves later demonstrated). If you can find the graphic history book, The Good Old Days: They Were Terrible!</, you can see a sobering look at the real grimy realities of the era. It was certainly grim if you weren't a well-off white man in that time; racism was blatant and commonplace and not only had the backing of the law, with the Supreme Court ruling in Plessy vs. Ferguson</ that racial segregation was legal as long as it was "separate but equal" (a condition which no civil government took seriously), but was defended with pseudoscientific theories that lent a veneer of "scientific" legitimacy to pre-existing assumptions of the superiority of the white man . Mark Twain 's entire career involved him angrily mocking colonialism, imperialism and American Exceptionalism Abroad, things were jumping internationally. In France, there was the Dreyfus Affair where Alfred Dreyfus, a Jewish French Army officer, was made The Scapegoat of a trumped-up treason charge. The controversy tore apart France as conservatives and the Army stubbornly refused to have Dreyfus' case retried no matter how much evidence about his innocence piled up, citing the need to uphold the "honor of the army" (which apparently involved covering up and defending the lies enabling a blatant Miscarriage of Justice). Meanwhile, Britain found itself in its own version of The Vietnam War with The Second Boer War in Southern Africa . It proved a frustrating fight against a savvy, well armed, and determined foe that finally required the British rounding up the civilian population in concentration camps to break the will of the enemy. At the same time, King Leopold II of Belgium was making a mint with his Congo Free State, a massive swath of Equatorial Africa as his personal property which was exploited to the hilt with ruthless colonial brutality enforcing his will, causing a death toll estimated to be 10 million Africans. It would inspire the Joseph Conrad novel Heart of Darkness </, in which there was a very good real-life reason why Kurtz's last words were, "The horror... the horror..." Also, a French aristocrat by the name of Pierre de Coubertin would revive the Olympic Games for the Gay Nineties, which would be hosted in Greece (the site of the original Olympics) Meanwhile, Germany's international presence changed dramatically as Kaiser Wilhelm got rid of the master politician, Otto von Bismarck , and set his country onto a recklessly aggressive stance that

Bismarck strove to avoid, such as directly challenging Britain. And the Ottoman Empire, already beginning to split at the seams and having never quite recovered from losing Greece earlier in the century (in fact, political satire of the day referred to the empire as "the sick man of Europe"), showed its first signs of turning its Christian minorities into scapegoats, with widespread massacres that sent the first big wave of Armenian refugees to America and elsewhere (the next, even bigger wave coming during World War One) In Australia, the 1890s are among the most important eras of the country's history, politically, economically, and culturally. Australia's first art movement, the Heidelberg School, bloomed during this time. Bush Poetry also hit its stride here, most famously Banjo Paterson's Waltzing Matilda</. The decade's also seen as the beginning of a new chapter domestically: Melbourne 's Golden Age since the 1860s came to a very sudden end in 1893, and the city saw no growth both economic and population-wise for over a decade. In its place rose Sydney , which was recovering from nearly a century of constant plague, kickstarting a rivalry between the two cities that only seems to have gotten stronger since. Sports-wise, the Victorian Football League broke off from the Victorian Football Association in 1896, growing into one of the most followed and watched leagues in the nation, and today is slowly encroaching into what is traditionally Rugby League territory. The most important thing that happened, however, was the Federation movement. The distance between Britain and the colonies, the economic hardships they were facing, and the threat of Russian/French/Chinese invasion meant that if the colonies were to remain divided, they would remain weak and eventually end up being conquered. Spearheaded by men such as Sir Henry Parkes and Sir Edmund Barton, the Constitution was drawn up during this time, and New Zealand and Fiji were asked to join. They declined, though jokes about them being Australian states are still being made today. Western Australia tried to keep out of it but to no avail It should also be noted that the term "Gay Nineties" for this era, like the " Edwardian Era " that followed it, is primarily British. (In Britain it was also called "The Naughty Nineties", as it used to be seen as a comparatively permissive era.) In America there is also the aforementioned "Gilded Age" from the End of Radical Reconstruction until the entry into World War I, while in continental Europe you usually use the French la Belle Époque</ (roughly 1884 to 1914), the German "Wilhelmic Era" (Wilhelminische Ära</, 1890 to 1914), or the French-Austrian Fin de siècle</ (also 1890 to 1914) Films actually made in the 1890s were about thirty seconds long with little to no plot (people were still amazed that pictures could move</).
You can watch some of them Art in this decade had shifted from the traditional, realistic, and impressionist movements to the innovative, modernizing, and expressionist movements. Art Nouveau had its full blossoming glory after the style spread in Europe, and the works of Vincent van Gogh after his death, Paul Gauguin, Alphonse Mucha , and others went into full display Historically, the 1890s was one of the more iconic periods of American history, leaving an impression every bit as indelible as The '50s still does today. As a result, long after the actual decade had faded from memory (sometimes quite</ long after it faded), many of its tropes and stereotypes remained common fodder for depictions in the popular arts. This wasn't usually done without at least a bit of irony (usually only in satirical or Cloudcuckoolander works), but writers and artists returned to the Gay Nineties well so often that

its conventions became even more</ stereotypical

Art Nouveau with its fluid, naturalistic, and colorful forms. With the 2017 death of Emma Morano, who was the last known living person born before 1900, there is officially no one left to be nostalgic about this decade. This is a Forgotten Trope and the fact that the name "Gay Nineties" was never changed should give you an idea how long it's been dead . Of course, they still make films set in the 1890s, but the nostalgic version from the '30s and '40s is pretty much gone. In fact, some modern-day Hollywood writers seem to think any</ year not starting with "19" or "20" means "completely pre-Industrial Revolution." For example, see the entry on The Village </ farther down this page. However, today's general unfamiliarity with the period works set in the 1880s or 1900s may make their setting indistinguishable from the stereotypical Gay Nineties. As was suggested earlier, The '50s and later The '80s eventually replaced the 1890s as the nostalgic period of choice, with the result that those decade's tropes largely replaced the ones mentioned above (resulting in Still the '50s or the '80s , perhaps)? However, kooky Gay Nineties stuff still pops up occasionally, most often in works directed at preteen children, or in surreal comedy series such as The Simpsons </ or Family Guy </. Also, the rise in popularity of Steampunk may represent a new, updated reflection of the nostalgia for the nostalgia. Speaking of, Steampunk is when this crosses paths with science fiction, and Gaslamp Fantasy is when this crosses paths with fantasy. Ironically, in real life, the Gay Nineties were the period where the world began to move beyond traditional steampunk/gaslamp fantasy aesthetics because of new technologies and movements such as Art Nouveau. Nor is this trope exclusively American. If anything, the British seem to make a fetish out of it even more</. (This may</ be because the mid-1890s represented the high point of the British Empire before the Boer War took the gloss off and the Great War began its decline, and where Queen Victoria celebrated sixty years of her reign.) And in France, well, this era is known as la Belle Époque</ — "the Beautiful Era" — for a reason. If a story set during the Gay Nineties takes place in the western part of the United States or Canada, the Twilight of the Old West trope often comes into play. See Also: Regency England , Victorian Britain , The Gilded Age , The Edwardian Era , The Roaring '20s , The Great Depression , The '40s and The '50s , and also Two Decades Behind . Also see Steampunk , which is usually set in a fantastical sci-fi version of this period.

This page is about the trope. For the film, go here . </ We all know The Squad : A group of soldiers who are the best in their respective fields despite any psychological quirks . Often, the team is led by an intelligent, inspirational man, who took this Ragtag Bunch of Misfits and made them into a deadly fighting force that would risk their lives for each other in a heartbeat . But if Colonel Badass is so good, why is he here with these</ jokers, and not at Headquarters or the Front Line, where a man of his talents really</ needs to be? Well you see, a few years back, he got involved with a lovely young woman, whose father just happened to be his superior officer. And boy, was Daddy mad </ when he found him with his little girl . For this horrible transgression, he was sent to this dumping ground of a unit . Alternatively, he might have had a relationship with the wife of his commanding officer, which makes the lack of promotion still more justified.

As it turns out, not all genies have to be quasi-mystical creatures who arise by having their lamp stroked. In Sci-Fi , it is quite common for a genie to take another form entirely—that of the well-meaning but hopelessly logical computer program It just turns out that these are the breaks. Computers have a Viewer-Friendly Interface , an Omniscient Database , and can recognize plain speech, but they are notoriously bad at understanding figurative language. So if you tell your Robot Buddy or AI to "Give me a break", it will try to snap your legs. Tell it to "get lost" or "take a hike", and it'll wander off by itself. And so on Another common interpretation comes to us courtesy of the old days of MS-DOS. The computer prompt, not having any idea what your ultimate goal is, needs everything explained to it one step at a time. And heaven help the poor computer user who can't figure out what the correct command prompts are. You Can't Get Ye Flask is a common result of this kind of confusion Of course, You Can't Get Ye Flask is also much less fun than this trope, since a normal computer will just not do anything when given instructions it can't understand. So when wackiness is the goal, only this can provide the fun we desire while still maintaining a vestige of non-magical command prompts The machine version of the Literal Genie In the murder-mystery episode of Haruhi Suzumiya </, Haruhi asks Yuki (sort of a computer) to lock the door and not let anybody in. Later, she asks to be let in, and Yuki refuses. Kyon gets her to let them in by telling her the order has been cancelled. He then guesses that the ordeal might have been Yuki's awkward attempt at a joke. It has also lead others to muse that for whatever reason Kyon's commands override anything else; which makes sense given Yuki's absolute loyalty to him

Iznogoud </ : In "Iznogoud and the Magic Computer", Iznogoud buys a magical computer from a character who tells him a genie lives inside it and answers every question.

The plot of the movie SpaceCamp </ is jumpstarted when Max wishes he could go into space within earshot of the robot Jinx. The robot (having run a simulation that indicates a 4.9 million year wait for the specific accident he wants) engineers the fatal shuttle accident that forces Mission Control to launch the shuttle by activating its booster rockets (Jinx ignited a single booster rocket, which would have flipped the shuttle right into a nosedive).

After working out three simple laws that would render all robots totally safe, just about every single Isaac Asimov robot story would show how a robot could stick to the letter of the law and still cause an awful lot of trouble.

On Knight Rider </, KITT's Evil Twin , KARR, was ordered to defend itself, so it immediately locked itself down and refused to follow any other orders, since they might lead it to its destruction.

Red vs. Blue </ has Lopez the robot building an army of robots for Omnicidal Maniac O'Malley. O'Malley then orders them to attack, and they charge ... at a pace slower than walking. Why did they go slow? 'You asked for a day</ of victory.' The robots were set to win in exactly 24 hours.

In The Elder Scrolls IV: Oblivion </ , the "Radiant AI" for providing NPCs with aspirations and goals was much less impressive than originally hyped. Apparently, it proved far more difficult to do well than Bethesda expected.

While not quite</ a computer, Castle Heterodyne of Girl Genius tends to interpret orders in whatever way allows it to have the most fun (read: cause the most casualties). Thus, when Agatha tells it there are people after her</, it immediately tries to send helpful minion Moloch through a trap door ("Ah. Then perhaps</ you should have said: 'The people after us</ .'"), and when she takes it up on its suggestion to keep her enemies out of Mechanicsburg airspace, it interprets this as permission to send the Torchmen not only after the fake Heterodyne's airship, but Castle Wulfenbach as well.

One episode of Muppet Babies </ used this in the process of parodying as many sci-fi tropes as possible. "Gross me out" and "I need a bath" were among the "wishes".

Those tropers old enough to have worked with type-in programs, as well as DOS on a daily basis in general, know that this was all too often Truth in Television . Pre-Windows MS Word especially seemed to have at least three keys, any one of which would instantly delete all your work.

Often, you'll want to get some Parental Bonus or cool and hip comedy into your work to broaden your appeal to the Periphery Demographic . One common method of doing this in Science Fiction and fantasy is by having a non-human character or a magical creature of some sort appear to be in tune with the cultural Zeitgeist of the time period when the work was made, but not the one the work is actually set in </, adding an extra touch of spice to the Anachronism Stew . Thus, space aliens will watch Casablanca </, gremlins will cosplay as Rambo , and, yes, the Genie will impersonate Jack Nicholson . Logically, there does come a moment when you must ask, "This alien/gremlin/genie can do all of these insane things, but they can't violate causality?" This can be justified in various ways. Perhaps the character is a time traveler, or spent a great deal of time on Earth at one point, or has intercepted Earth's TV and radio transmissions and fallen in love with them. Though this particular gag did not originate in The '90s , it became very popular for a long time following the smashing success of Disney 's Aladdin . </ A bit of trivia: This trope was almost called "The Genie Knows John Wayne". In the original script, Genie was supposed to do a John Wayne impression (note the line about being a "straight shooter"). But Robin Williams did a better Jack Nicholson impression. Very much comes under the Rule of Funny and Willing Suspension of Disbelief . Compare to the Fish out of Temporal Water , who may make constant pop cultural references as a way to remind himself of home, even if none of his new friends understand them.

The male choices in female-centered love triangle usually comes with two archetypes: the kind-hearted, safe Gentleman and the edgy, dangerous Scoundrel. The Gentleman is a good guy: honest, upright, and noble. The Scoundrel is an outsider to the heroine's world (most of the time), dangerous and wild. It is a love triangle between a heroine and Noble Male, Roguish Male : a man who is safe versus a man who is exciting The Gentleman is likely someone the

heroine has known previously, the kind of man who represents the safety of her youth and home. The Scoundrel has a dangerous spark that attracts her into his world. That kind of danger is usually emotional in nature—the heroine risks a wild and unstable relationship with him, especially in contrast to the relative dependability of the Gentleman. Parents will favor the Gentleman and discourage dalliance with the Scoundrel, regardless of personality A discretionary angle features the heroine committing to a lifestyle via a man: choosing traditionalism vs passion or lasting happiness vs transient excitement . In these cases, one of the two men will almost always have a clearly undesirable personality. If the poorer character seems to fit the patterns of Gentleman better (or vice versa), the trope is Rich Suitor, Poor Suitor Unlike with Betty and Veronica , the heroine often chooses early or midway into the story, and who she ends up with is usually dependent on the length of the work and how early she made a choice . If a choice is made very early, the heroine is more likely to end up with with that first choice after several setbacks with him. If the choice is made mid-way, then it was the Wrong Guy First . Otherwise be prepared for a while of agonizing UST and Will They or Won't They? Bear in mind that not every</ love triangle with two men is going to fit Spear Counterpart to Betty and Veronica . Compare Noble Male, Roguish Male , All Girls Want Bad Boys and Single Woman Seeks Good Man . See Rich Suitor, Poor Suitor

A character who is often referred to, but never quite makes it onscreen. Sometimes just casually mentioned, but eventually played for comic effect as the camera (or lead character) just fails to catch them Sometimes the character is never seen because the viewer is, in essence, this character (and thus share viewpoints). In this case the viewers are probably being used as The Watson If a disembodied voice says—"Yes Ma, I'm coming!"—they're The Voice Not the Great Gazoo , but occurs in similar range of plot devices. Will also be an Impersonation-Exclusive Character if someone else uses the character's form. See also He Who Must Not Be Seen and Nothing Is Scarier (for when a character remains unseen for the Rule of Scary). For a concept, item or location, rather than a person, see Cryptic Background Reference . If it's an event, you can check out Noodle Incident . Often overlaps with No One Sees the Boss Compare and contrast with The Faceless where a character's face is never visible. For a character who is frequently mentioned but never seen because they died before the story began, see Posthumous Character and Death by Origin Story . If the character eventually appears, see Unseen No More . For a character whose existence can only be inferred see Unknown Character Sometimes related to Greater-Scope Villain when dealing with villains; compare The Dreaded For actual ghosts and spirits, see Our Ghosts Are Different . Not to be confused with The Spook , or with the 1990 film Ghost </

There are two parallel definitions of a gimmick: A cheat; either a method of doing something that appears impossible, or some device used for cheating. This is about that second, as applied to characters. The power of sheer gimmickry, when properly used, cannot be underestimated; a properly executed gimmick can make a character truly memorable. The true definition of a gimmick is if an Alternate Universe or Continuity Reboot equivalent (or a Captain Ersatz) isn't

"really" that character without the gimmick, then that's this. Most common in Comic Books and Professional Wrestling , gimmicks are so important to the latter that professional wrestling was the first category to get its own sub page, but gimmicks can show up elsewhere. See also Idiosyncrazy , for when a character's gimmick is driven by his insanity, rather than out of universe considerations. Compare the Dancing Bear . A whole team</ of people with a shared gimmick tends to result in a Gang of Hats . Compare Gimmick Matches .

Mystery Men </ has dozens of gimmicky superheroes and supervillains, most of them second-rate at best (though the main characters eventually do Take A Level In Badass . The Blue Rajah is notable in that he doesn't seem to know whether he's a British-sympathizing Indian prince or a guy who throws forks at people, and eventually settles on calling himself "a limey fork-flinger."

Nero Wolfe was best known for solving cases while never leaving his house. His narrator, Archie Goodwin, did all of the relevant legwork; the combination of the the Hard Boiled-styled detective and the very Defective Great Detective was the gimmick of the series as a whole.

An aggressive hug verging upon a flying tackle which sometimes knocks the recipient over and invariably ends up with the glomper wrapped securely around some part of the glompee's body. If the glomper's rather intense feelings for their target are not shared by the glompee, things will immediately get awkward at best or (if the glompee is a Tsundere) violent at worst . Stalkers with a Crush , Clingy Jealous Girls , and Abhorrent Admirers frequently glomp the objects of their affection. Usually considered a comedy trope, for obvious reasons While aggressive hugs are nothing new (in Real Life or in media) the use of the term "glomp" to describe them appears to have stemmed from its use as a sound effect in early manga translations by Viz Media . (One folk etymology asserts that it stands for "Grab, Latch On, Maintain Pressure"</, but that is a backronym applied to the word after it became popular.) The word itself appears to be a mutation of the established English word "glom" which means "to grab; to latch on" (as found in the words "agglomeration" and "conglomerate") with a final "p" sound added to give it more of a sense of definite action. Can function as an Unsound Effect This may also be used in a more positive manner if the glompee actually does reciprocate the glomper's feelings; in these cases, a glomp symbolizes one character literally bowling another over with affection, but there again it's typically played for comedy Whole-team glomping of anyone who's just scored a goal is also common in sports in Real Life . In soccer, it seems to be compulsory A Super-Trope to Cry into Chest A glomper is often the Cuddle Bug . See also No Sense of Personal Space , which glompers often exhibit. If the glomper is frightened, it's a Security Cling . If the glomper is genuinely attacking , </ it's a Deadly Lunge or Attack Hello . In Real Life, it can turn into a Deadly Lunge regardless of the glomper's intent, especially if the glompee is much smaller, possessed of a medical condition, or just doesn't like being touched

If a story has a hero who fights a villain (but not always), then the hero will win in the end. </ Sure, there might be stumbles along the way. It may take a Hero's Journey or two to Earn Your

Happy Ending . Evil might score a few victories first , and maybe even almost win in the Darkest Hour before Good can save the day at the last minute . In the end, however, there's usually never any doubt in the audience's minds that the forces of good will prevail. Even in video games that allow you to play as the bad guys , the minute the sequel comes out, expect it to make the "good" ending the only canon one, or in some cases, be inevitably thwarted by a Hero Antagonist towards the end.. It doesn't matter how big the Big Bad is or how puny The Hero is—not only can</ the Kid Hero foil the Galactic Conqueror , despite how improbable it logically ought to be, but the audience expects</ it, and will be sincerely shocked if he doesn't. This trope is so omnipresent , especially in works with Black-and-White Morality , that attempts to subvert it can easily lead to Like You Would Really Do It , and any work with a Downer Ending where The Bad Guy Wins for once automatically catapults itself to the cynical end of the Sliding Scale of Idealism vs. Cynicism . (Except for certain circumstances, like if the villain winning won't actually hurt anything .) Side effects of this trope may include Plot Armor , Invincible Incompetent , and Underdogs Never Lose . Compare Happy Ending and Happily Ever After , which are closely related, and Invincible Hero , where not only does the good guy win in the end, but he also wins in every intermediate step. May be justified with Evil Only Has to Win Once , where a villain victory would mean the end of the work (and often, the world within). Contrast The Bad Guy Wins . See also Villain Protagonist . The villainous counterpart to this trope is You Can't Thwart Stage One —the good guy's victories always come at the end, and the bad guy's victories always come at the beginning and/or in the middle. After all, there is a reason for the "Always" in the trope name . (Plus, we'd be here forever.)

To demonstrate how some situation has been progressing, a line graph is brought out as a prop, showing a line clearly proceeding upward or downward. The axes may be unlabeled, especially in parodies. Sometimes someone realizes the graph is on the easel pointed in the wrong direction and fixes it, and now the line is going in the opposite direction. In comedy uses, the line is sometimes drawn out Off the Chart and goes into the ceiling or floor, or just lies there in coils.

The Great Depression / The Dirty Thirties: Home to dust bowl farmers, reedy-voiced folk singers and rail-riding hobos . Life pretty much sucks unless you're lucky enough to be a rich socialite, in which case you can expect to be involved in a wacky screwball comedy which may or may not involve either three short, bumbling men named Moe, Larry and Curly , or two fast-talkers named Groucho and Chico and their mute accomplice Harpo (as the Depression drove prices plummeting through the floor, those who had money and managed not to lose it in the crash suddenly found their cash increasing in value). Or if you're female, you could ditch the dust bowl and head off to Hollywood, become an actress, and wear long, sexy gowns on premiere night, showing off some tanned skin . Otherwise, you would be scraping to survive, as Steinbeck wrote in The Grapes of Wrath </ and Of Mice & Men </. For some, it's a time to run wild to take what you want against the fat cats who exploited the people as one of the Public Enemies </ like John Dillinger or the bank robbing couple Bonnie and Clyde </. Others found more constructive paths, such as folk singer Woody Guthrie who rode the rails Bound for Glory</ singing as the voice of the underprivileged, or the pulp and newspaper-strip writers who were busily concocting Proto-Superhero

stories. Finally, two Jewish boys manage to sell their seemingly preposterous story of a titanically strong hero in blue tights and red cape that changed the burgeoning comic book medium forever with a whole new fantasy genre . Against this, President Herbert Hoover found himself completely in over his head, refusing to accept the reality of how bad the times were , while blindly mouthing absurd statements like "Prosperity is just around the corner." He was replaced by Franklin D. Roosevelt who attempted to pull America out of the economic ruin with his New Deal. The period lasts from The Wall Street Crash of 1929 up until the beginning of World War II and the World's Fair in 1939 (World War II being the political endpoint, the World's Fair being the cultural one. Although in America, the holdovers would last until December 1941; see Chandler American Time). Note that in Real Life there were several sub-periods; the Hoover years, the New Deal years up to 1937, a second recession and a subsequent 1939-41 recovery that was just picking up steam when the war build-up started. Also, large European countries experienced the worst, nightmarish part of the Depression during 1930-1932, with unemployment and widespread poverty being used as a springboard for fascist dictators scapegoating minority groups for the populace's problems (while also dismantling worker unions). It should also be noted that the mass suicides of financial professionals (jumping from office buildings or hanging) of 1929 are a long-standing Urban Legend — only about twenty people killed themselves immediately after the Crash and about one hundred in all. 23,000 people did kill themselves in the first year though. Also see: The Roaring '20s , The '40s , The '50s , The '60s , The '70s , The '80s , The '90s , Turn of the Millennium , The New '10s , and The New '20s for more decade nostalgia. See Films of the 1930s

Many events and changes in history catch almost everyone by surprise. One of the most notable of these was Christmas Day, 1991: the end of the Cold War . Prior to World War II , it was common to hear experts claiming that the Soviet Union was about to fall in a matter of years. During the first five months of the Soviet-German War, some in the U.S., Britain and Germany believed it would collapse within months. But from the winter of '41-2 onward, the Soviet Union acquired most of its fuel and war material from the U.S. via UK/USSR-occupied Iran, and by the war's end the opposite mood had set in. Many thought the Soviet Union would last forever, or long into the foreseeable future, and maybe even win the Cold War . It was thus assumed that the end of the USSR could only come as part of the general End Of Everything — most likely as a result of nuclear war . The relatively peaceful end that took place at the dawn of The '90s was unexpected and even mourned by some. Naturally there will be many references to divided Berlin and divided Germany in any genre of fiction set 20 Minutes into the Future but written before 1989. A lot of fiction written shortly before the unexpected events and set 20 Minutes into the Future without those vital events in place can seem funny in hindsight . Of course, the Soviet Union isn't the only major political entity subject to this trope. Because of the constantly-fluctuating nature of the world political stage (and even domestic political stages), there's bound to be a large number of works whose assumptions about politics in the future will end up becoming woefully obsolete within due time. Consequently, they accidentally become Alternate History stories by the sole virtue of having gotten their predictions about history wrong. Compare Science Marches On , Society Marches On and End of an Age . See also I Want My Jet Pack , Dewey Defeats Truman and Zeerust . See also

Make the Bear Angry Again if the mess-up is somehow reversed, and Jossed if this trope applies to canonical changes. Contrast Why We Are Bummed Communism Fell and Dated History . Note: This trope has been subject to a fair bit of misuse; it is not a synonym for the Cold War, or the transition period between the Soviet Union and the Russian Federation. This is for when writers make assumptions about political situations when writing works about the future, only for that situation to change, retroactively turning the work into an Alternate Universe . The main reason why the Soviet Union gets so much focus here is because it is simply the most prominent example, the reasons for which are explained above. </

Suppose the Big Bad has a very definite territory he calls his own, from where his hordes of darkness spawn. It's good because you always know where the baddies come from, but what do you do if you don't have the necessary manpower to end them once and for all? Simply: just put a wall between you and them. The bigger, the better. The Great Wall is what happens when you try to get your enemies not only out of your city but of your county, state or country, resorting to the simple mechanism of building a wall that will (one hopes) keep them out. There's usually only one of these : in most cases, no one bothers to make several</ walls to fall back in case the first one is breached, or, for that matter, any contingency plan or line of defense more complicated than this. It's similar to The Wall Around the World , except that this is more about separating two realms from each other, whereas The Wall Around the World is about separating one realm from everything else. The most famous Real Life example and Trope Namer is, of course, , which may have been the inspiration for many fictional Great Walls, although the and have also been influential. May be an Absurdly Ineffective Barricade if it doesn't work. Compare Insurmountable Waist-Height Fence . Invisible Wall works like that. Do not confuse with the 2017 epic movie .

The mascot of death. The nature and purpose of the Grim Reaper (often referred to simply as "Death") varies between two different versions: one version describes him as a simple guide, the being who takes you to the next world after you die (the fancy word for this is " psychopomp "); the other sees him as the entity of death, you die when he touches you Either way, he is generally seen as a tall, often skeletal , specter in a black hooded robe , who wields a Sinister Scythe when he visits commoners and a sword when he visits royalty, though the scythe is the most common of his symbols. He is also often shown with an hourglass as a symbol of elapsing life. These dual accouterments are Older Than Steam , but both were drawn from the ancient Greco-Roman god Χρόνος (Chronos). This god, in turn, was drawn from the Ur-Example of the Sassanid sect's Zoroastrian god Zurvan Akarana. He is sometimes described as mute, and in some accounts you can challenge him to a game of chess for the right to stay alive Often he picks up the characteristics of Charon, the boatman of the river Styx in Greek mythology , but even these characteristics are filtered through a Christian veil , i.e. "angel of death". The Grim Reaper, in his days as a frequent figure of folk tales, was originally used as a menacing, somber symbol of the inevitability of death. He first appeared in Western art and folklore with the outbreak of the mid-fourteenth century plague epidemic known to us as the Black Death As with most folklore-ish characters, he has many and diverse characterizations. He may be

sinister or come across as friendly . He may even be played for laughs as a Beleaguered Bureaucrat . Still other representations of death forgo the neutral or buffoonish guise and make Death a God of Evil that must be fought , i.e. Everyone Hates Hades . Others go the other way and say Don't Fear the Reaper ; instead of evil, he is benevolent A frequent variation is the notion that instead of the</ Grim Reaper, there is a</ Grim Reaper —that it's a position offered to certain people after they die When this concept was imported to Japan in the 19th century, they translated the name as Shinigami </ (while typically translated as "god of death", it is literally "death ", which doesn't have quite the same connotations). Japanese media then proceeded to play with the character to the point that many shinigami</ no longer have anything in common with the Grim Reaper, aside from the name. Shinigami</ are more typically spirits associated with death, rather than being the singular Anthropomorphic Personification thereof. Thus, the concept of being able to defeat or kill Death in combat (Castlevania </) or Grim Reaper figures themselves being able to die (Death Note </) can seem absurd to Western viewers. If something does</ take down the Reaper, you may have The Death of Death on your hands A subtrope of Psychopomp . May overlap with Destroyer Deity if they're not separate entities. Compare to Horsemen of the Apocalypse — for when the rest show up — and Afterlife Express — when the Grim Reaper is or rides on a vehicle, especially a train. See also Archangel Uriel , Enemies with Death , The Problem with Fighting Death , and Hanging Up on the Grim Reaper . For the Death Metal band, see Death . As with most public services, expect hilarity to ensue if Death Takes a Holiday , unless someone steps up to the task of Relieving the Reaper . A kinder interpretation may portray him as The Sacred Darkness . May overlap with God of the Dead , and the latter figures often draw inspiration from the Reaper's visual motifs

Wouldn't it be cool if a fictional character in your story was either wholly or partially responsible for a famous real-life historical event? If you're the author, you can make it happen! Though in many cases a well-written character in their own right, this character simply cannot get around the fact that a good chunk of their screen time is being the driving force behind major events that have already been written or described by others. In effect, they are made more interesting by association due to having "guest starred" in a suitably major event. Oftentimes the character will be written in so that they can contribute to or take the place of whatever causes led to the real event, without radically changing that event's outcome or legacy . For example, you can have superheroes, supervillains, robots, zombies, aliens, vampires, alien vampires and whatnot play a decisive role in World War II , but the Holocaust, the invasion of Poland, the invasion of France, Pearl Harbor, the invasion of Normandy, and the defeats of Germany and Japan will still happen, just for different reasons. On the other hand, you aren't necessarily prevented from creating an Alternate History where your character does</ cause history to take a different path. Supertrope to Historical Rap Sheet . Almost always the source of a Historical In-Joke . See Seemingly Profound Fool , Mistaken for Special Guest . When done poorly or overbearingly, can be a sign of a Canon Sue . Contrast Beethoven Was an Alien Spy where a real historical figure is given fictional adventures, and Julius Beethoven da Vinci where multiple real historical figures were actually the same long-lived or time-travelling person. Can often cross over with Noodle Incident and

Real Event, Fictional Cause . May or may not involve Time Travel .

Aaahh!!! Real Monsters </ :

The hero that Guns and Gunplay Tropes are for. It should be noted that for a while, guns and bullets were considered vulgar. Point, fire, they drop dead. This is so mundane that monsters and heroes who were cool enough became Immune to Bullets . After all, if it were that easy, the police would be able to deal with it . However, certain genres have put the "cool" back into guns. It's all about style, so expect a lot of flourishes that wouldn't work in real life, such as using Guns Akimbo . The Gunslinger is this hero. They might be from The Western , Film Noir , Heroic Bloodshed or just plain scenery-destroying action flicks. A wandering gunslinger is often The Drifter , one specifically out to do good is also the Knight Errant . But overall for some reason, alongside the Cowboy , gunslingers have also become a cultural image of American people and American warrior culture abroad. The Gunslinger comes in a few styles: The Young Gun is a Gunslinger in infancy. You get double bonus points if your gunslinger is a girl . Also expect Marked Bullets to be used. Particularly skilled gunslingers may name their weapons — whatever that implies . Gunslingers who obsess over their weapons or tend to collect them are probably Gun Nuts . For the eponymous Stephen King hero who epitomizes the trope, see The Gunslinger </. For the Beverly Garland/ Roger Corman film (and MST3K episode), see Gunslinger . </ Also has nothing to do with mechanical arms. Compare Superhero Packing Heat , Samurai Cowboy . For a character with similar traits who uses longer ranged weapons, see the Cold Sniper and Friendly Sniper . Their Sword Counterpart would be Master Swordsman ; while a Master Archer might perform a similar function in societies predating guns. A Smoking Barrel Blowout usually finishes off a successful shot. Sometimes involved in a Showdown at High Noon .

This trope applies to a team that consists of characters that fall This trope under Large Ham for the most part. There may be that one This trope member who is the Only Sane Man among them, but for the This trope most part, the team is pretty insane. If it is a team of This trope villains, Evil Is Hammy definitely will come into play. This trope The team may also be a Quirky Miniboss Squad at times, This trope but not always does not apply in a World of Ham unless This trope the team in question proves hammier than everybody else This trope in said world

The Heart is a personality aspect that comes up in just about any ensemble. They're the caretaker, the peacekeeper, or just generally the bringer of goodwill. The barometer of the team's emotional wellness. Their role is based on getting the others to recognize that there are more important things than personal grievances, especially if The Team isn't getting along among themselves, or becoming a group of Knights Templar and Well Intentioned Extremists . This is the person who will argue and fight against the justification of " I Did What I Had to Do ". Quite often The Heart character will also be an All-Loving Hero , where they go out of their way to help all of the little people. Within the ensemble this character will

most often be merged with the role of The Chick . Like The Hero and The Leader , they aren't one and the same, but they often overlap since they are a good fit. The Chick often has a higher emotional intelligence than other teammates, and may go out of her way to make sure everyone is taken care of. Alternatively, The Heart can also be The Hero (in the case of the Magnetic Hero) or The Leader , as their leadership skills keep the team from falling apart. Characters like the Plucky Comic Relief , the Tag Along Kid , and the Gentle Giant are also prime candidates for The Heart since they're often just as lovable to the characters as they are to the audience. This also means their death or loss is most likely to trigger Losing the Team Spirit for dramatic effect. Due to their usual relative introversion, and tendencies towards pacifism (whether technical or actual), this character is sadly often C-List Fodder and a prime target for a single-character (rather than the entire show) version of The Firefly Effect . Many series will start out with a Heart character, but the writers will begin to view them as boring and impossible to write for, so they end up being either Put on a Bus /kept Out of Focus at best, or Character Death at worst. This also tends to happen when studio executives want to replace the character with a more talented or physically attractive character, in an attempt to boost ratings. Given that said characters are usually sweet types, this also tends to seriously anger a certain portion of the fanbase, but because the studio executives care more about ratings than they do about upsetting what is normally a minority, the character will stay dead . If fan outrage is sufficiently vocal, and the executives haven't managed to completely alienate the actor, then the character may come back periodically as a ghost or a clone . Compare The Face who does the talking on The Team . See also Restored My Faith in Humanity and Morality Chain . Compare The Conscience , Token Good Teammate . Not to be confused with What Kind of Lame Power Is Heart, Anyway? , Heart Is an Awesome Power , or

In theatre jargon, the Heavy is the character that provides the most conflict in the story. The heavy is The Antagonist that creates obstacles for The Protagonist to overcome. At least to the audience, this character type is the face of the opposition to the protagonist In other words, this is the antagonist with the most screen time, the one that the audience is most familiar with as a character. This is the origin of the trope name, which comes as far back as the 1800s . The Heavy is a big role for an actor, sometimes the biggest role in the work, eclipsing even the main character. This means that the Heavy tends to have the most lines, and therefore the heaviest</ script The Heavy is an antagonist trope, not a villain trope, so this can be a Hero Antagonist standing in the way of a Villain Protagonist just as easily as being an Ineffectual Sympathetic Villain all the way up to the Big Bad . The Heavy can act as The Dragon , as keeping the Big Bad out of the limelight makes this character more mysterious, and thus scarier. That role often overlaps with a Non-Action Big Bad , where the Heavy is providing the muscle. But it is the relation of the Heavy to the audience that defines this type, not the interaction with the Protagonist Not to be confused with the band of the same name , or the Heavy Weapons Guy , though a skilled player can certainly MAKE him qualify. Also not to be confused with The Big Guy , although the two can overlap, or with The Load or The Millstone

Audience expectations are that The Protagonist has Plot Armor . But like most audience expectations, some writers like to subvert this. Which leads to the trope title; although it is not quite Exactly What It Says on the Tin since The Protagonist does not have to be a Hero Protagonist for this trope to apply, and this trope does not apply if The Hero is a Hero Antagonist . As long as they don't end up bringing the hero back later , this can also be a good way to show that Anyone Can Die When this happens in the middle of a work, make sure not to confuse this with Our Hero Is Dead , Disney Death , and Not Quite Dead . However, it can use a different protagonist afterward, either through Take Up My Sword or switching perspective When this happens at the end, it is one of the main causes of a Bittersweet Ending or Downer Ending . This can mean that The Bad Guy Wins , or it can be a Heroic Sacrifice . On the other hand, if the hero Died Happily Ever After or found peace in death , it might even qualify as a Happy Ending Of course, sometimes the hero's dead from the very start of the story; in that case, see Dead to Begin With and/or First Episode Resurrection Compare Decoy Protagonist , where the dead hero turns out to be not the real protagonist, who will appear later This is both a Spoilered Rotten and a Death Trope , meaning that EVERY SINGLE EXAMPLE on this list is a spoiler by default and will be unmarked. This is your last warning , only proceed if you really believe you can handle this list. That being said, it's also possible that examples may involve subversions or multiple protagonists

This person is a hero, pure and simple. They're almost always right, are a friend to all their teammates, and morally superior — without</ the usual flaws of Good Is Dumb or Well-Intentioned Extremist , unless it's a comedic work. They have a well-rounded skill set . They're not as strong as The Big Guy , or as intelligent as The Smart Guy , or as sensitive and socially adept as The Chick , but they're close. They can personally accomplish a variety of goals, but their real superpower is getting the whole diverse set of personalities to focus and pull together . They'll always know who to ask for help, and when — and usually</ how. Most often, they will be The Protagonist but there are exceptions to this rule . Just as often, they will be The Leader or otherwise the shining star that holds the Ragtag Bunch of Misfits together, but there are exceptions to this as well . In a team lineup , they will be front and center. The concept of The Hero is very old and every culture and nation has had individuals they identified as heroes. On account of Society Marches On and Values Dissonance , the notion of what the hero signifies has changed and diverged a great deal from the ancient world to the early modern world to the present day. Heroes in the ancient world were compelling because they embodied virtues and qualities common to the experience of people at the time (War, Violence, Survival) whereas later generations would seek idealized values from their heroes because of their desire and yearning for a better world. In Team Trope dynamics and speculative fiction, you may notice powers and skills common to the hero, including: In many games or settings, they'll be a Jack-of-All-Stats ; a well-balanced fighter with decent power and speed, and sometimes some ability at magic . The Hero is most often male and The Chick is usually in love with him . The primary romantic plot in the team is often between The Hero and The Chick , with The Lancer sometimes rounding out a triangle . The

Hero might also be a Chaste Hero or a Celibate Hero as an additional complication to romantic subplots. If the Hero has too many of the "positive" qualities listed above, they may degenerate into a Marty Stu . If they're too generic, then they're an Every Man (but please note that the Every Man does not have to be this trope or The Protagonist). They are sometimes the Only Sane Man trying to keep The Team together because they live in Dysfunction Junction . Because The Lancer is, by definition, The Hero's foil, The Hero and The Lancer usually have a special chemistry, either a Bash Brothers relationship or Red Oni, Blue Oni . They are often rivals with a strong mutual respect for each other, and are sometimes Heterosexual Life-Partners . They are likely to argue about who is The Leader , but as stated above, this role usually goes to the hero. The Hero does not have</ to be The Leader . Indeed, since Villains Act, Heroes React , the hero often arrives on the scene a little too late , so his role and function in the story is more or less reactive and predetermined rather than ones that have been set or chosen by him which is counterintuitive to the role of The Leader . Indeed, The Hero is likely to get his marching orders from the Big Good . When heroes are leaders, expect them to be Frontline General or Badass in Charge . When they are merely part of a crew, expect them to start out as something of The Load if they're a Mouthy Kid or The Fool , but don't worry — in time, they will reveal their great potential, eventually swaying friend and foe alike to their cause. Even if they need significant growing up to reach that point. Eventually, they may very well become The Leader . If there's a character cooler than the Hero, that character is generally Too Cool to Live . See also The Ace , The Captain , The Kirk , Messianic Archetype , The Chosen One , and Hero Protagonist . A superhero is, by the catch-all definition, a hero (often with superpowers) who dedicates their very life to... well, being a hero. : It is important to remember that while the hero is usually also The Protagonist , a.k.a the main character, they are not necessarily one and the same. Whereas the hero is defined by the character traits described above, The Protagonist is defined by their central role in the story. In Star Wars </, for instance, Luke Skywalker is an archetypical example of The Hero and is more or less The Protagonist of the original trilogy, but the prequel trilogy establishes the more antiheroic Anakin Skywalker as The Protagonist of the film series as a whole, even though he is a villain for more than half of the saga . See Supporting Protagonist for instances in which this is the case. : A character can be The Hero of the story without being part of a Five-Man Band . Also the generic namesake for Things I Will Do If I Am Ever the Hero .

The Hero's Journey is an archetypal story pattern, common in ancient myths as well as modern day adventures. The concept of the Hero's Journey was described by mythologist Joseph Campbell in his book The Hero with a Thousand Faces </ and refined by Christopher Vogler in his book The Writer's Journey</ . It can be boiled down to three stages: More elaborate taxonomies usually include the following stages, not all of which need be present: The pattern of the Hero's Journey can be found in shows ranging from Star Trek </ to Buffy the Vampire Slayer </. George Lucas claims to have used it as a guide when writing Star Wars </. Traditionally, the Hero's Journey was cyclic; a female Hero's Journey is more likely to be cyclic than a male's. Buffy The Vampire Slayer</ fits this to a tee; the movie is the first cycle, and each season roughly corresponds to one additional cycle. The game Journey </ intentionally fits this model

exactly, even referring specific steps in the soundtrack's titles. This sequence is so ubiquitous that even The Spongebob Squarepants Movie </ can be shown to follow it. The Harry Potter </ books can also be seen to be cyclic in this fashion, although the journey was followed more closely in the earlier installments. The sixth and seventh books are arguably one cycle divided into two parts. With the final book having been split into two films , the last three films kind of form their own mini-trilogy, with each installment covering a step in the departure-initiation-return model. An interesting element is the fact that in the first five books/films, the Muggle world is the ordinary world and Hogwarts is the world of adventure, but in the Prince<//Hallows</ duology/trilogy, Hogwarts has become the ordinary world and now it is the world beyond Hogwarts which is the world of adventure. This approach is not without critics, however. Some critics argue that Campbell's theory has become a formula on how to make hit stories and thus discourages originality since it is unsuitable for every type of story. Others (most notably Greg Egan) feel that the pattern is too vague and general to be a notable pattern among both classical and modern stories. Still others feel that the approach focuses far too much on what good stories do when how</ they get there and the problems they must solve are more important. Even when looking at the theory as a description of what already exists, that the pattern isn't really universal, because archetypes are culture-specific, and finding the Hero's Journey as a universal in stories from other cultures is only shoehorning them into familiar patterns. Compare Campbell's description of the journey with Booker's The Seven Basic Plots </, especially the plots of Overcoming the Monster</, The Quest</, and Voyage and Return</. Like Campbell, Booker invests a lot of symbolism in the various elements, to the point where messing up the symbolism kills the story for him (for example, he calls Star Wars </ flawed because they rescued the princess way before they killed the Big Bad , when ideally those should happen at the same time, since the death of the Monster causes</ the release of the Anima). Compare The Quest . See also Propp's Functions of Folktales . If you experience a Heel Realization mid-Journey and realize your efforts so far have been for the wrong side or wrong reasons, please take the detour to your Redemption Quest .

The Hidden Hour (a.k.a. the Witching Hour) is a period of time within the average day that is Invisible to Normals ; most people don't experience it, nor are they aware it even exists at all. Only a few people, often those with some kind of special power, know about this extra hour; and only they are able to act during it. To these people, when The Hidden Hour occurs, normal clocks stop ticking , Muggles freeze in place (or vanish entirely), and strange things start to happen The Hidden Hour frequently occurs When the Clock Strikes Twelve , due to the association between midnight and magic. However, this is not about magic simply being at its strongest around midnight, nor is it about planets whose day-night cycles are naturally longer than 24 Earth hours It's interesting to note that an extra hour added to a twelve-hour clock would be the thirteenth hour . You've got to ignore the fact that there are really 24 hours in a day for this to work, but numerology has never been shy about fudging things for the sake of Rule of Drama .. In spite of the name, The Hidden Hour is not necessarily 60 minutes long; it frequently lasts as long as the plot requires , which to those involved may feel like several hours, or possibly even days</

, before the Hidden Hour ends and normal time resumes

Hats as a clothing article were once a sign of social standing but are nowhere near as prominent as they used to be. Their unfamiliarity to the modern audience makes them a source of comedy This trope comes in two forms: silly hats or inexplicable obsession with hats Contrast Nice Hat , where the hat is respected, and Hat Damage , which may result in hilarity. A cornerstone of the Brotherhood of Funny Hats . A parody of the Hat of Authority is a common way of puncturing the fragile dignity of said authority

This is not a formula in the way a lot of people think of one, as having a negative connotation. They think "formula Hollywood movies" means Strictly Formula , the same cheesy things over and over again. What we're talking about is a recipe for Emotional Torque . Hollywood has a formula that has been developed over almost 100 years of cinema to get maximum emotional value out of every scene of a film. When you learn the formula, you can use it to shape your own works , in any medium, to get that reaction from the audience. A Hollywood Formula story follows the interactions of three characters through the Three-Act Structure . The Protagonist must be something concrete, definable, and achievable. Rather than "I want to be happy" or "I want to be rich", but rather, "I want him to fall in love with me</ so that I will be happy." "I want to win the game show that I'm going to be on</ so that I will be rich." "I want to rob the casino of the guy who's dating my ex-girlfriend , </ so I can be happy and</ rich." The story ends when the protagonist achieves</ or relinquishes</ his goal, defeats</ or is defeated by</ the antagonist, and reconciles</ with the relationship character. The closer together these things happen, the more emotional impact the story will have. First Act; beginning at 0% of the way through the story; Introduces the characters and their goals. At 10%-15%, the protagonist faces a fateful decision , a choice, and how they answer determines whether or not there is a story. Three-Act Structure is much more malleable than the character roles in this formula; for instance, Die Hard </ can</ be analysed as breezing through the first two acts to bring John McClane to his low point as quickly as possible. See also The Hero's Journey , which is a similar structure, focused on the plot and its events rather than the characters and their goals. Summarized as accurately as possible from Writing Excuses </, where it was described by who himself recounted the version by whose profession is teaching it to screenplay writers so they can make better films and to film executives so that they know what to look for. Compare Cast Calculus , Central Theme , Emotional Torque , Pacing Problems , Three-Act Structure . If you're looking for Hollywood-style mathematics , try E = MC Hammer .

Casablanca </ is the Trope Codifier . The antagonist is not always the villain: Rick isn't even aware of Laszlo's interest in Ilsa, and as a Resistance leader he's a hard man to dislike. The villains, if any, are the Nazis , but they merely create the situation that makes the story necessary (without the Nazis, Laszlo wouldn't have been taken to a concentration camp, meaning Ilsa wouldn't have gone to Paris and met Rick, etc., etc., etc.)

Many times, the main character of a story will have met someone early in their life whom they idolize — someone who is

well known and revered — and will then grow up wanting to follow in their footsteps. This can be anything, from sportsman to superhero At first, we don't see any signs that these characters are particularly skilled in their craft. In fact, often times they are quite bad at it. To help them on their way, the protagonist's idol will step in and personally endorse the character's success, sometimes leaving them with a memento to help them along the way. This can range from being a small token of encouragement to a full-blown Sword of Plot Advancement that grants them an ability they might otherwise lack Whatever the case, the main character now has the full support of the person they so desired to emulate, and thus their journey can truly begin Contrast with With This Herring . Compare with Touched by Vorlons and Super Empowering May overlap with Ancestral Weapon and/or Ascended Fanboy

A character who has entered the country illegally. They are usually female, speak with a Central or Eastern European accent (sometimes their home country won't be specified) and are being exploited by the evil people traffickers who brought them over. They will probably end up in a brothel or strip club Getting increasingly common in UK crime drama A common trope on U.S. police shows, as well. The nationality of the person being exploited varies. Exploited sweatshop workers or other blue-collar laborers are Latino, Asians, or occasionally Eastern Europeans. If the situation involves people trafficking for purposes of prostitution, the case almost always Asian women, from China, Thailand, and other semi-industrial countries. An appropriate mob organization (Russians , Tongs , Yakuza , The Irish Mob , Italians) will be the string-pullers In any case, the person in question, due to fear, language barriers, and poverty, will have little recourse. Cooperating with the cops can mean a death sentence A recent variation happens because illegal immigration is a political issue in the United States. Typically the illegal alien is Mexican, hardworking, speaks perfect English, can be of either sex, and is exploited only in minor ways which elicit sympathy for him without implying he would have been better off staying home. In fact, they are usually treated sympathetically. Some aesop may be delivered on how US immigration laws should change Sometimes Played for Laughs in US media by having the illegal be Canadian or some other comparatively outlandish nation. This version never faces deportation or exploitation, but might face resentment from (legal) Latino or Asian immigrants

This does not apply to depictions in animation where everybody's writing looks like random squiggles, or to small children learning how to write. This is when it is explicitly stated by a character that the writing looks like random squiggles or chicken scratch This attribute is often associated with doctors, lawyers and other professionals, as well as English teachers and secretaries Often Truth in Television . Not to be confused with The Unintelligible , which deals with a character that cannot be understood when speaking

Ancient Conspiracy . Omniscient Council of Vagueness . </ One World Order . Founded at the dawn of human history, if not earlier, they gather influence and wealth, spinning their webs of lies and deceit

in the shadowy heights of society. Or maybe they're just a bunch of rich old men with pretensions of grandeur. Either way, when a creator of popular culture needs a name for this group, they often turn to "The Illuminati" and their " Eye in the Pyramid " symbol; both have percolated their way into semi-general use, come across as refined and ancient, and (mostly) aren't under copyright . "Illuminati" means " the enlightened ones " in Gratuitous Latin . There was</ a Masonic-like organization of intellectuals which was given this name in Real Life Bavaria in the 1770s, but it was eventually disbanded by the Bavarian government. There are people who fervently believe the Illuminati survived this purge, orchestrated The French Revolution (as part of their One World Order efforts), and still exist, very much as described above; find more details under Real Life below, or go check out Wikipedia 's This name is bandied about a lot</ over in the Wild Mass Guess department. See also The Knights Templar . If you're looking for the Marvel Comics group by this name, see here . For best effect, listen to while reading the article.

There is a danger in using the term "Love" when directed towards a person who is not your relative (and sometimes even then). When done properly and the feeling is reciprocated, it ends up as a Relationship Upgrade , but if handled badly or too soon, it can kill the relationship. Because of this, even couples already in an official relationship will sometimes be afraid of using any terms besides "like" or "care for" In some instances, reaching the "I Love You" place is seen as point of no return, or at least an indication of a long term relationship. Ironically, sometimes declaring your love for someone ends up as a Moment Killer , not necessarily because the feelings aren't reciprocated but because the other person isn't ready for that commitment In contrast, The Casanova (and perhaps the Casanova Wannabe) tends to use this term so often that it completely loses meaning with them; should they become a Ladykiller in Love , they may not know how to articulate this brand new, profound feeling Note this is essentially an English-speaking world thing. In some languages a perfectly fine translation of "I love you" can be a much</ weaker sentence with much less powerful implications, as even in English the term can be used casually and in a wide variety of ways. A Woolseyism may be needed in translation to get the proper tone. In French " aimer And even within the English-speaking world, dating works differently in different cultures Compare the Love Confession , Love You and Everybody , Commitment Issues , Cannot Spit It Out , and The Four Loves . The recipient (or the one who'd said it, but wishes to cover up) might use I "Uh" You, Too in response Contrast Platonic Declaration of Love , in which "love" is meant in an entirely platonic manner with no hint of romance attached

Tropes related to paranoia, conspiracies, and - wait what was that? There was something there, I swear!</ Please move along, citizen; there's nothing to see here.

This is the character in Cop Shows , Detective Dramas , and Espionage Thrillers that everyone despises. Even the cops who make use of his services hate him. He is beneath the level of more dignified, "honest" crooks. He is a low level version of the Knowledge Broker ; perhaps even the minion of one. But where a Knowledge Broker is high status and has an arbitrarily greater reputation, this character is just a stoolie. (This difference is sort of like the difference between a courtesan and a street-walker... they are both

prostitutes, but one is considered "high class".) The Informant lives in a miserable fashion selling information. But he is needed, so he is tolerated. Sometimes a sort of patronizing affection is granted him. In such a case, he is likely to be a Lovable Coward as well as a Lovable Traitor . Probably there are those who will not find him lovable... A subtrope of Knowledge Broker . Mysterious Informant is a Sister Trope to, and The Stool Pigeon is a Sub-Trope of, The Informant. This trope may be averted entirely if a particular crime boss or criminal empire is considered too scary to inform on . Not to be confused with 2009 Matt Damon film The Informant! </, which is actually about a Stool Pigeon , kind of. Informants fear prison, since they probably become a Pariah Prisoner , fearing molestation or lethal violence. Compare Baker Street Regular for a more sympathetic version of the trope.

The Ingenue is a young virginal woman with the purity of a child She is kind, sweet-natured, polite, and optimistic, and on the Sliding Scale of Idealism vs. Cynicism , she falls very much on the idealistic side. Her innocence will often inspire protective feelings in heroic characters, and she is frequently one of the more beautiful characters because of the convention that Beauty Equals Goodness . Unfortunately, her innocence also often makes her woefully naive , making her a prime target for a villain seeking to take advantage of her, often in an I Have You Now, My Pretty fashion. As a result, the ingenue is one of the most common Damsels in Distress . She is also immune to sexual innuendo . In a worst-case scenario, the character will be given no personality beyond her purity and innocence The ingenue is a Stock Character found throughout all media but is especially popular in Opera where it is almost always voiced by a lyric soprano . The Princess Classic is one of the most common examples of this. If this character is played straight and not in a traditionally romantic setting, she may be Wrong Genre Savvy , and will usually be screwed over A young actress in a theatre troupe is often called an ingenue, as she is frequently cast in this role. Expect the White-Dwarf Starlet to wax poetic on how she</ was The Ingenue once Partially because All Men Are Perverts is alive and well in our culture, there are few modern Spear Counterparts to the Ingenue that share the same characteristics and positive connotations . The closest equivalents for male characters would be Tenor Boy , which is specific to theater, or Manchild , which is often viewed as immature and emotionally weak , with the emphasis being more on the lack of adult traits in the manchild versus their childlike purity. (During the sturm und drang</ period of Romanticism a couple of centuries ago, the Spear Counterpart would have been the various Too Good for This Sinful Earth Romantic heroes based upon the popular reinterpretation of The Sorrows of Young Werther </ The trope name is standard theatrical terminology and is derived from French for 'guileless' Compare Manchild , The Pollyanna , Princess Classic , The Cutie , Purity Sue , Parasol of Prettiness , Proper Lady , and the "Child" archetype of The Three Faces of Eve . These characters are particularly prone to the Caged Bird Metaphor Contrast The Vamp , Femme Fatale , Heroic Seductress , Innocent Bigot , Seemingly-Wholesome '50s Girl , Stepford Smiler , Wide-Eyed Idealist , Covert Pervert , Coy, Girlish Flirt Pose , Old-Fashioned Rowboat Date , Psychopathic Manchild , Yandere , The Hecate Sisters , and the "Wife" and "Seductress" archetypes of The Three Faces of Eve If she acts as The Heart to a Byronic Hero , you're looking at Brooding Boy, Gentle Girl

Ask anybody in the military, what's the most nerve-wracking experience they will ever face? Enemy tanks? Air strikes? Being shot to death? No, you may find they most lament having to deal with The Inquisitor General. This is a character whose job it is to go over everything you do with a fine-toothed comb and an electron microscope, making sure to catalog each of your transgressions , big and small. He could be a Drill Sergeant Nasty , The Neidermeyer , or even Colonel Badass . Assuming that he is a benevolent form of this trope, his goal is to help you become as flawless at what you do as possible, so you'll be less likely to make any mistakes when it counts for real . Of course, it's also possible that he's a Jerkass whose only goal is to make you look like an incompetent fool or get you angry enough to do something you'll regret. Given his role, the Inquisitor General will tend to be Lawful Good , Lawful Neutral , or Lawful Evil . This is, of course, very much Truth in Television for many organizations, who use these guys as checks against complacency and corruption. Sub-Trope to The Inspector Is Coming and a Sister Trope to Internal Affairs , which is more commonly found in works about the police. Compare and contrast with The Political Officer .

In media involving certain businesses, it is inevitable that a specialized inspector, or critic, will come sooner or later to rate the business, usually holding its fate by his/her rating. Cue the employees working hard to keep everything in good condition to get a passable rating. Hilarity Ensues if someone unrelated gets mistaken for the inspector . For the domestic variation, see House Inspection . In military settings, see the subtrope The Inquisitor General , while police settings will have Internal Affairs . See also State Visit . As many - particularly those in retail/customer service environments - can tell you, this is very much Truth in Television . Nothing can strike fear into the heart of a retail employee quite like the words "corporate visit."

The thing you're using right now The Internet is a massive group of interconnected computers world-wide (including yours!) that allows users to send and receive various types of information, usually documents (via rotocol) and other files ( ). This technology has revolutionized all forms of media communication, from newspapers to movies to video-games. It's hard to find a business, industry, or art form without an Internet presence these days. And the Internet is gigantic, at over , meaning you can get lost on sites like Wikipedia , Facebook , YouTube , and TV Tropes rather easily. There's also the seedy underbelly of the Internet, The Deep Web Initially conceived (by) as a way for The United States military to connect its distinct computer networks, the Internet was made public in the late 1980s. During the '90s, it started becoming mainstream and, by the turn of the millennium, the Internet became a cultural icon, representing a new era of global communication and technological advancement On a somewhat pedantic note, the Internet and the World Wide Web are not the same thing. The Internet is a very physical collection of computers, servers, routers, and the thousands of miles of cables and millions of wireless broadcast devices used to connect them all together. The Web is a system of interconnected hypertext documents hosted on countless servers around the world. To put it another way, the Internet connects

computers, while the web connects ideas. It's easy to mix the two up, though, as the web accounts for the vast, vast majority of the traffic on the Internet, and most protocols that existed before the web, such as email and file transfer protocol, are now more often than not controlled through a web interface In the United States, nearly all consumers access the Internet through one of several major Internet Service Providers. These ISPs charge a monthly fee for a prescribed level of access, called bandwidth, with rates that vary from state-to-state. Outside of the United States, private companies still control most access to the Internet, but some countries have mandated free, public Internet access for use by the general population See also: New Media Tropes and Trope Namers

Let's face it. The Internet — and a lot of people's computers — are full of Pornography . Sometimes deliberately, or maybe you've just got a bug on your computer that fills it with filth; it's totally </ your little brother's fault for clicking an unsafe link . Whether you're portraying modern days, the VR-laden future, or another universe entirely, any computer network of a sufficient size will have a place where one can indulge in the pleasures of the flesh. Porn constitutes about 30% of all internet traffic, according to Some even suggest (making the image to the right even funnier...) In fact, many of the internet's innovations — especially in e-commerce, encryption, and streaming video — originated with porn and the desire to consume it safely and efficiently. Even YouTube was founded partly in response to Janet Jackson 's Wardrobe Malfunction at the 2004 Super Bowl . Never undervalue the human desire to see scandalized naked flesh Partly a result of The Rule of First Adopters . Ubiquitous enough to result in Rule 34 . For some, the Internet has become such a convenient Porn Stash that it is single-handedly breaking the trope Poor Man's Porn , and increasing the mainstream acceptability of "adult entertainment". As noted in by Tim Alberta for Politico</, cracking down on and eventually banning pornography was a key aim of Moral Guardians in the United States as late as the early 2000s, but today, thanks to the internet revolution, even the most diehard anti-porn activists have largely given up on restricting porn, instead favoring PR campaigns designed to dissuade people from watching it. The only people who have to resort to porn substitutes are ones without the Internet A former version of this page claim people with censored Internet (where porn is often illegal) have to resort to porn substitutes, which is not true: the vast majority of Internet censorship-circumventing practices is for porn rather than political purposes. It's even said that if you can't find porn (in places with censored Internet), you are not innovative Seriously, what are you doing on this</ website? (Probably Addiction Displacement .) Contrast The Internet Is for Cats for the literal</ kind of pussy that you're likely to find online (unless you're looking for stuff about cat mating)

Superjail! </ : In "Superfail!", Jared takes charge of Superjail after accidentally knocking out the warden and implements his previously-rejected plan for a computer lab. He intended for it to be used for educational purposes, but to his disappointment (and to the surprise of what should be no one in the audience), the inmates are only interested in porn. Even Alice and Jailbot get in on the action. One would think that Jared would know of filtering software American Dad! </ : "Tyrannosaurus Rex; real. Babe-osaurus Rex; porn A symposium on the Pangea theory of the Permian Extin — WOW,

THAT IS SOME NASTY PORN!!!"

This basic theory underwrites Stripperiffic clothing, Impossibly Cool Clothes , and pretty much anything else you stick characters (usually female, but this can apply to men's clothing as well) into: what makes clothing sexy is the potential for a catastrophic Wardrobe Malfunction . The Trope Namer is William Ware Theiss, costume designer on Star Trek: The Original Series </ , who first codified the concept The allure of this trope is all in the tease — precarious as these outfits seem, they will never, ever</ fail to keep everything covered. (at least from the perspective of the viewer; other characters</ might be getting quite the eyeful). The TTT also takes advantage of an odd side effect: a particularly sexy outfit actually out-titillates </ frank nudity. Evidently, a woman who is not quite naked is more interesting than a woman who already is This trope is particularly common in Science Fiction and related genres, where exotic or futuristic landscapes (plus the Willing Suspension of Disbelief) make it seem plausible that these outfits could be everyday wear. However, on Will & Grace </ , Debra Messing occasionally wore outfits that would not be anatomically feasible for a better-endowed woman Though Theiss was a costume designer, according to Inside Star Trek: The Real Story</ by Herb Solow and Robert Justman, most of the costumes — following this theory — were actually somewhat more modest before being " improved " by Gene Roddenberry . According to the "Art of Star Trek" book, Theiss preferred to design costumes that only appeared</ to be in danger of slipping or coming off, through the use of strategically-placed sheer or skin tone fabric. He was further able to enhance the effect by the censorship rules of the time regarding what parts of the body could or could not be shown (the navel being the most well-known restriction). He found he could get surprising amounts of appeal from the carefully-arranged display of skin not generally considered erogenous Impossibly-Low Neckline ("What's holding it up, Absolute Cleavage and Sideboob ("What's keeping those two strips in place?") , Underboobs ("That shirt should ride up!") , and Godiva Hair ("All she has to do is turn her head a little are common forms of this. Strongly overlaps with Vapor Wear , when it appears a costume doesn't include any undergarments Compare Wardrobe Malfunction . Contrast Fetish Retardant

An older character holds back from romantically/sexually pursuing someone younger until the latter reaches a specific age at which point they're considered an adult. 18 is the most common, but it can be older or younger depending on the jurisdiction and time period The reason could be based on local laws, or because the elder of the two wants to stick to a personal moral code . Because even if the age of consent is lower than the age of adulthood, this is such a moral gray area that many people in this position prefer to wait until their crush is 100% considered an adult before pursuing them, to eliminate all ethical concerns The delay is solely</ and explicitly</ because of the age of the younger character. Because of the association between marriage and sex, choosing not to attempt marriage until the chosen age also qualifies as an example See Jailbait Taboo for discussions of the taboo surrounding an older character dating a character below a certain age Examples often overlap with Age-Gap Romance (two characters in different stages of life, such as adolescence and

adulthood), Old Man Marrying a Child (marriage between an elderly man and a very young girl) and Wife Husbandry (an older character is a guardian or parental figure who explicitly grooms the younger character for a later romantic relationship). Contrast Ephebophile (someone who doesn't necessarily wait for legal age) and Precocious Crush (a younger character is sexually/romantically attracted to an older character — usually a one-sided attraction). May relate to Bittersweet 17

A vigilante , usually a Knight Templar or Well-Intentioned Extremist , who, rather than killing his chosen targets, imprisons them. Unlike judges and prison wardens, this character typically has no legal authority to actually lock people up, and most often is doing this out of a desire to punish those they feel the law can't or won't, a desire for power over others, or quite frequently both. Don't expect this villain to be overly concerned about the rights of their prisoners The character alignment for this villain is Lawful Evil For jailers who actually abuse prisoners, see Wardens Are Evil

Fuck off!

Either check out the list of tropes that involve jerks in some way, shape, or form , or fuck off!

I'M DEAF! SPEAK UP OR FUCK OFF! Oh and of course, contrast us with ! those goody-two-shoed twinks at A Polite Index . BUT don't even ! think about confusing this for A Date with Rosie Palms (though ! virgins like you do that), or Tear Jerker (which makes pathetic ! weak pussies like you cry like anime fans on prom night), or the ! Steve Martin film The Jerk </ , let alone indexes that are just as ! shitty as you, or I'll kill you horribly !

No, not the hockey team (although the team is</ named after the creature) A cryptid which was supposedly first spotted in the 1700s in the Pine Barrens of South Jersey , the Jersey Devil is often described as a horned, hooved and bipedal Mix and Match Critter possessing bat-like wings, a horse or goat-like head and an inconsistent origin. The most common version of the creature's tale is that it is the thirteenth child of Mother Leeds, a woman (possibly a witch) who, while giving birth, yelled out "let it be the devil!" for varying reasons, such as preferring to birth the spawn of Satan instead of another one of her husband's children. Either immediately or shortly after being born, the child transformed into a monster, and fled into the wilderness, subsequently becoming " an East Coast Bigfoot " Some have noted that the Jersey Devil, the Dover Demon and the Moth Man may be one and the same. Also see Fearsome Critters of American Folklore , Our Cryptids Are More Mysterious , Chupacabra , Wendigo , and Bigfoot, Sasquatch and Yeti . May or may not be friends with fellow backwoods Joisey ghoul Jason Voorhees . Also see Our Perytons Are Different for a somewhat similiar-looking monster

A jinx is a living Bad Luck Charm , someone who unintentionally causes calamity everywhere they go. They aren't malicious and they

aren't trying to cause harm; they just happen to be very, very unlucky for those around, and bad luck spreads The difference between a jinx and someone who is Born Unlucky is the latter's bad luck falls only on himself. While there are many examples were both overlap, the jinx may instead be perfectly lucky himself but causes horrible bad luck for others; sometimes, it's the case that he causes bad luck for others because</ he's so lucky himself, as a form of Equivalent Exchange . Because of this, a jinx is likely to become a social leper— people avoid him to avoid the bad luck. Jinxes: Even when they win, they lose Oddly enough it would seem that in all media, no one has ever thought to consider the potential chaos a jinx could inflict in the world of insurance policies Compare Walking Disaster Area , where bad things follow the hero because he's the hero . Doom Magnet is an extreme form. When this is weaponized, it's Winds of Destiny, Change! . May be a Cosmic Plaything , Butt-Monkey , or Chew Toy . Approach with caution. Compare Lethal Klutz who directly causes problems to those around him, generally through clumsiness Super-Trope to Walking Techbane Not to be confused with Jynx , Jinkx Monsoon , or that Jinx

"Juggernaut" is a word meaning "unstoppable". The Juggernaut is just that. It is often fixated on a goal, reaching somewhere that it shouldn't be, trying to accomplish something that the heroes don't want it to accomplish. In any case, it is moving ever and continually forward, letting no one and nothing stand in its path . A Groin Attack ? Try again . Bullets? Pathetic . Rockets? Barely noticeable . Nuclear bombs? Might make him flinch, but don't expect the flames to stop him — and that's if you're lucky </. The group of powerful heroes we've been following are nothing more than the Redshirt Army to this thing. You Shall Not Pass! ? It's going to. And it's ever, continually moving forward. You can taste</ the invulnerability of this thing It also helps the illusion of unstoppability if The Juggernaut is also The Voiceless . If physical attacks don't slow it down, then talking it down isn't going to work, either. It sometimes won't even attack, preferring to just plow forward, as if the defenses trying to stop it aren't even there. Those determined to make you fear them or mock your inability to scratch them will take their time . Stopping this thing usually requires a last second gambit, or a Deus ex Machina to defeat. If it ever appears again, Villain Decay is almost certain. After all, if the unstoppable is stopped once, that means it's not unstoppable anymore, right? An epic Not So Invincible After All moment will usually occur in the process Compare and contrast Foe-Tossing Charge , the usually heroic version of this trope. Any Beast of the Apocalypse worth its salt is probably going to be this. Also compare the Determinator , who is powered by the sheer force of will. Compare Implacable Man , which can</ be stopped, but only temporarily, and will usually find ways to get past obstacles without simply destroying them; for example, if they encountered a wall, the Juggernaut would simply smash through it, while the Implacable Man would take the time to cut through or scale it. This may create a sense of false security in the Implacable Man's quarry that does not exist when dealing with a Juggernaut Compare Super-Persistent Predator , and the Perfect-Play A.I. , which usually applies only in gameplay terms. For those who manage to defeat a Juggernaut, it's Defeating the Undefeatable Not to be confused with the 1974 film Juggernaut </, which is about an extortionist who has planted time bombs on a cruise ship Note:

While the X-Men</ villain the Juggernaut certainly fits this Trope, much more detailed information can be found about him on this page here

In which a character touches a blood stain with his fingers, usually in order to make sure that it actually is</ blood Sometimes, it turns out to be ketchup or strawberry jam (something that's red, goopy and fake), especially if another character has been doing a Chicken Little impersonation over the supposed bloodstain. Being a vampire or a cyborg may also help for analysing the type of blood. In Real Life , it's possible that some animals (bloodhounds, brown bears, tyrannosaurs, larger sharks) may have a sufficiently powerful sense of smell, this (or simply sniffing the blood) might actually allow them to determine the species or even the individual victim involved See also Sniff Sniff Nom , Fingertip Drug Analysis . Not</ to be confused with The Ketchup Advisory Board

In a law enforcement procedural show, when the criminal gets away with murder or similarly heinous crime, like serial rape (either through skill on his part or mistakes on those of the cops or the lawyers) but gets killed before the end credits roll, usually in a Vigilante Execution A subtrope of Karmic Death . Often goes with Serial-Killer Killer . Often similar to Deus ex Machina . See also Off on a Technicality for how they get out, and Vigilante Man for the sort of guys who kill this sort of guys. If the cause of death was a method that the killer/victim employed, it becomes a Hoist by His Own Petard . For professional killers, this may overlap with Assassin Outclassin' In Revenge or Roaring Rampage of Revenge stories, making the killer the killed is the main goal of the protagonist, though he or she should be careful that he or she doesn't fall on the wrong side of the trope as well Not to be confused with The Hunter Becomes the Hunted

You can determine many things about the way an injury was inflicted by studying the wound. You can determine the kind of weapon used, and what kind of motion it was making. In fiction, you can also tell the handedness of the wielder. For this to be relevant, the killer must turn out to be left-handed (which goes hand-in-hand with A Sinister Clue), or the killer's right-handedness must rule out a leftie suspect This can clear one person and convict another. Even though one out of every ten people is left-handed (and even though it's perfectly possible to kill someone using your non-dominant hand), being left-handed is good enough to make you the prime suspect. This can be justified, though, if only one of the suspects is left-handed. For this reason, if it's discovered early on that the killer was left-handed, you can bet that there will be at least two lefty suspects so as not to conclude the case too early Although it was once a common tool in detection (for example, several scholars believe that the search for Jack the Ripper was stymied by the ultimately unfounded belief that The Killer Was Left-Handed), this trope is discredited in Real Life . "Non-secretor" status may be the next generation of this trope, although it's more commonly seen in novels than in other media like TV. About ten percent of people do not have antigens in bodily fluids other than blood, so sweat, saliva, semen, etc., cannot be

used for blood type comparison purposes

In Real Life , kidnapping is recognized as a criminal act and it is not considered nice at all to abduct someone. However, there will be that</ person who does just that</ and sees the act as a kindness to the victim. The modus operandi of the Kindnapper will vary according to the work and intended audience, but he invariably fulfills these requirements: Male pronouns will be used throughout this trope because the Kindnapper is traditionally a male role due to its usual associations with Abduction Is Love and Captive Date , though there are also female examples. Expect the Kindnapper's victim(s) to be in a Gilded Cage to highlight his good intentions. The Kindnapper usually intends to woo his victim , make them a better person , make them happy , take them on a date , or even just to keep them in the Gilded Cage "for their own protection"! Scenarios where the victim(s) come to think of their kidnapper as a benefactor go under Stockholm Syndrome . Sometimes the Kindnapper's victim(s) develop Stockholm Syndrome , but not always. the Kindnapper thinks of himself as kind and that's all that counts in order for him to count as one. The most sympathetic portrayals of this kind of kindnapping will highlight the Kindnapper's good intentions, but also make it clear that abducting people is no way to actually be kind. This type is otherwise known as due to the dearth of portrayals of this type of kindnapping being portrayed as actually benevolent. Many of those that you will find in the Real Life section are of this type. Another flavor of the Kindnapper is usually seen kidnapping someone to protect them from an immediate threat of being maimed, raped, tortured, or killed. Yes, in these cases, it actually was</ benevolent of him to save them from certain danger, even if it involved capturing them or transporting them against their will. However, these situations that somehow require for the endangered person to be abducted in order to successfully rescue them are highly implausible and are unlikely to occur in real life. Additionally, the fact that the kidnapping was done for the purposes of a rescue does not change the fact that the rescuee was taken away by surprise or force. This flavor of the Kindnapper is more likely to have a sympathetic portrayal. In some</ cases, it will be made clear that the rescuee was also a kidnap victim and he may even be called out on his actions , but you can reasonably expect this type's actions to be glossed over. Also known as due to the fact that his particular brand of kindnapping is part of an act of undeniable heroism. Compare the Well-Intentioned Extremist , who similarly uses a wide variety of questionable means in an attempt to do good on a large scale. In fact, part of his well-intentioned extremism may be</ kindnapping! See also Kidnapped by an Ally ; in this trope, the kindnapper is typically not</ an ally (when the kidnapping happens, at least) to the kidnapped. See also Come with Me If You Want to Live .

The Ku Klux Klan (or a fascimile thereof) has appeared a lot in fiction, especially in the Deep South . As one of the most well-known hate groups in history, and with their distinctive white robes , pointed hoods and their Religion of Evil , they are commonly found as Politically Incorrect Villains and sometimes Apocalypse Cults They almost always will have drawling accents , be hot-tempered , publicly ranting about how they want to kill anyone who isn't the same appearance as them (often with Cluster F Bombs and other slurs), and be as dumb as bricks (ironic because its earliest members had been classically educated, and "Ku Klux"

itself was inspired by the ancient Greek word for "circle") Related tropes are A Nazi by Any Other Name , Those Wacky Nazis , The Social Darwinist , White Gangbangers , Malevolent Masked Men , and Rebels with Repeaters Not to be confused with The Clan

Krampus is an Alpine mountain demon who figures heavily in the December traditions of Central Europe. According to legend, Krampus accompanies St. Nicholas during the early Christmas season. Depending on the story, Krampus is either a regular demon enslaved by St. Nicholas to do the Saint's bidding, or is a demon who willingly and gladly works as St. Nicholas's partner. Krampus acts as the Bad Cop to St. Nicholas's Good Cop, warning and punishing bad children , in contrast to St. Nicholas, who instead rewards good children In the Alpine regions, Krampus takes the form of a giant demon covered in goat, bear or ram fur, his head sporting large horns with a long, slavering tongue often hanging out of his mouth. Depending on the story, Krampus may have chained shackles on his wrists, signifying his enslavement to St. Nicholas. Generally though, Krampus will be wearing several large bells (as a warning to any who hear them that he's coming), along with a large wicker basket and birch rod. If someone has been bad, Krampus will either threaten a beating with his birch rod or actually give one . If his target has been particularly bad, then Krampus stuffs them into his wicker basket, and drags them off to punish them for their crimes . Depending on the story, Krampus will either bring them to St. Nicholas's home, Krampus's own mountain underworld, Hell , twelfth-century Moorish Spain , or simply Scare 'Em Straight and bring them back home Traditionally, young men in Southern Germany, Austria, Hungary, Czechia, Switzerland, Croatia, Slovenia, and even Northern Italy dress up as the Krampus during the first two weeks of December, particularly on the evening of December 5, known as Krampusnacht</ , and roam the streets in grand, sweeping parades through town. Often, they will go after adults in the audience who are in on the fun, especially tourists encountering their first "Krampus Parade" or attractive young women. Curiously, despite their fearsome appearance and reputation, the (plural) Krampusi are generally fairly kind to children, generally exempting them from the shenanigans they pull on the adults Despite the frightening overtones, Krampus is quite a popular character in the Alpine countries. He brings some harmless "scary" fun to the Christmas season, not unlike what happens at Halloween. He is also not alone as the companion of St. Nicholas. Compare him with a German character who performs a similar role (though more as a stern authority figure than a nasty devil), a Dutch character said to put bad children in a sack and take them to Spain, a female version of Krampus who can either be drop-dead gorgeous or hideously ugly, (Father Whipper, sometimes localized as Father Flog), a French version usually depicted as a dark-haired and black-wearing Santa Claus who whips misbehaving children, Czech putting naughty children in a sack and bringing them to hell, and a group of 13 Icelandic troll-like beings who historically caused mischief during Christmas, but became more Santa Claus-like in modern times . See also Bad Santa , which the Krampus is occasionally portrayed as. If The Krampus and Santa Claus are the same person, see Santabomination Another part of Krampus's popularity comes from a feature you might not have noticed in his picture up above. His very long tongue. Sometimes just a few feet long, sometimes ... excessively longer. Once that became part of the lore, Power

Perversion Potential came into play, and he became quite popular with the ladies . You can buy postcards of Krampus. Some show him menacing children. Some show him kidnapping women. Some show women kidnapping him</ If you're looking for the 2015 horror movie, see Krampus </

The male lead is about to go off to fight and there is a very real possibility that he'll be coming back in pieces. Knowing this, his female love interest decides it would be a good idea to hand him an object — some piece of jewelry, a trinket, a piece of clothing, a token of some sort — that she claims is of great personal importance to her. She makes him promise that he will give it back to her, thereby creating a small bit of assurance that he will return from the battle alive. He invariably will, if for no other reason than he promised he would return her "most prized possession." There are plenty of variations to this scenario. The guy could be facing off against the Big Bad , the Monster of the Week or just in The Tourney , perhaps even with her watching. The token could be something the lady made herself, a family heirloom, something worth a good deal of money, etc. Also, how important it really</ is is arguable. It may simply be an excuse to make her guy promise to come back. If the couple is still in Will They or Won't They? limbo, this is a sure sign that the scales are leaning more toward Official Couple . This is also a frequent possession of someone under The Dulcinea Effect . Tales taking place during Medieval times, particularly those involving Courtly Love contain a literal favour from the lady. It's generally an article of clothing made specifically for that purpose . Sub-Trope of It Was a Gift . Compare Memento MacGuffin , Her Boyfriend's Jacket , Favors for the Sexy , and Motivational Kiss .

The Foil for a hero of the closely allied variety. In general, the Lancer will often form one half of a Red Oni, Blue Oni contrasting duo with the main character. While they may butt heads with The Leader , they're usually the Best Friend by the end of it all. Traits common to the Lancer include: Being The Hero 's primary foil. Typically in some form of Red Oni, Blue Oni . Their force of personality makes them a partner or Friendly Rival of relatively equal footing when paired up with The Leader , rather than a Sidekick who is more of a helpful assistant. Due to most heroes being cheerful and passionate types, Lancers are often surly or analytical, but when the chips are down, Lancers are true as steel and will lay down their lives for the cause. If the rest of the members turn their backs on The Hero for some reason , the Lancer may be the only one who sticks by his side . In the event that The Leader of The Team is unable to lead, The Lancer usually steps up. This plot is used to contrast the leader's leadership style against what The Lancer's would be. A frequent ending for this plot is for The Lancer to gladly give up the reins of power while the Leader often notes that the team will be in excellent hands should he be absent after that. On the other side of the coin, if the Lancer's dissent gets too out of hand, they're likely to go off on their own to do what they think is right. Powers and skills common to the Lancer include: A contrast to the hero's abilities in a meaningful way. Super Power Lottery vs. Bad Ass Normal , physical strength vs mechanical or spiritual strength, Bare-Fisted Monk vs Hyperspace Arsenal , direct attacks vs sneak attacks and so on. This trope is named for the man-at-arms of The Middle Ages , the

term for a professional soldier. While the term also encompasses the members of the knightly class, a man-at-arms was not necessarily a knight. They were also men of lesser financial and social status than knights, but were equally trained and equipped to fight on horseback in full armour and with sword and lance , just like their social superiors. In this regard, he is most recognizable as King Arthur 's greatest warrior and right-hand man, Sir Kay, according to the source Welsh legends (and who was later demoted to comic relief). On that note, if you were looking for a trope on the actual appearances and usage of lances, that's the Jousting Lance trope. The Chick is usually the mediator between The Hero and the Lancer, making for a Power Trio (as well as a set-up for a Love Triangle). If it's a Love Triangle , the Lancer can either be the Hero's romantic rival or a potential love interest to contrast The Chick . If given enough individual focus, the Lancer may become the Deuteragonist . Not to be confused with the recurring character title of the Fate Series </, nor Lancer in Deltarune </, or the RPG of the same name .

A dialogue trope where a character makes a list of items, groups, or individuals and then deviates from the pattern established with the last one. Usually Played for Laughs . In literary criticism, this is called a syllepsis, or semantic zeugma. Typically used for comedy, the last item is normally a focus of insult or Butt-Monkey status. However, it is possible to just delight in the subversion of the theme listing. A Sub-Trope of Non Sequitur . A Super-Trope to: And the Rest : When several characters are deemed important enough to call them by name, except for a few unworthy others who are dismissed as the "rest".

First, fill something to the nick of overfilling. It doesn't matter what it is: a bag almost bursting with stuff; an ominously creaking cliff; an elevator nearing its maximum occupancy; a morbidly obese gourmand's stuffed stomach ; you name it. When you've finished, add just a teeny, tiny bit more. Watch your recipient blow/crack/shatter instantly and/or loudly Basically, a literal interpretation of "the last straw that broke the camel's back" This trope applies to situations where maximal capacity is reached, and even an infinitesimal quantity surpassing it causes effects far more massive than common sense could predict Often preceded by a character declaring how nothing could go wrong before the proverbial straw is added Although the most common variation of this is when a group of people/stuff is at a ledge and a light feather/dust powder lands and it simply breaks apart instantly (and painfully), it's not only restricted to those cases Compare Hair-Trigger Avalanche , Death of a Thousand Cuts , Cherry Tapping , Critical Existence Failure , Critical Encumbrance Failure , Exploding Closet , and The Stateroom Sketch . If you're looking for the trope where a character finally can't take it anymore and explodes because of something being the last straw for them</, see Rage Breaking Point and/or Rant-Inducing Slight

You're faced with a serious problem, and are in need of legal assistance — luckily, there's a reputable, established law firm nearby. They're even putting a named partner on your case! Only thing is, that name seems like it's trying to tell you something... Some common variants are: They have a Punny Name , such as Private Eye </ magazine's perennial foes, 'Sue, Grabbit, and Runne.' The

trope codifier is " ", which in and of itself has also been used in fiction, and still gets some mileage, even to this day. The joke also appears for other professions, such as a firm of cowboy builders named "Bodgit and Scarper" or "Blagget, Bodgit and Scarper".

Every detail given is important.</ We have 42 minutes. If we give a detail, it'd better be important . Oh, sure, we can set up a Red Herring or two, but we had better expect the viewer to attach importance to any detail we let loose in the plot. Shame on us, if we later expect the viewer to be surprised by the importance of the detail we let slip. This is an Omnipresent Trope . There is a fine line between having good Worldbuilding and rambling on about pointless crap—conservation of detail is all about filtering out irrelevant information to highlight the actual plot or interesting aspects of the setting. It is rare for an author to devote thirty pages of description to a character's choice of clothing, unless those choices provide great insight into a character or are being used as a metaphor for the human condition. When a medium has less time to tell a complete story, conservation of detail tends to be particularly pronounced. A TV show (with 25 or 50 minutes to complete a story) spends less time on details than a movie, which in turn has to provide fewer details than a comic book, and so on. How come people on TV always find a parking spot right outside their destination? Why aren't people shown actually traveling between destinations? How can a couple plan a date without discussing pertinent details? Why do high school classes never seem to last more than three on-air minutes? When do the characters go to the bathroom ? This is why. Video games have their own version of this law, in that any detail in the game requires a significant investment of time and manpower to develop between art asset creation, writing, programming, and insertion into the game. Details of lesser importance get economized: One-off NPCs rarely ever get anything more than a generic sprite or character model , have only the most generic walking animations, and have no name . You can tell that a character will play some role in the plot if they have an unusually complex character model or a unique headshot next to their dialog. Plotwise, this serves to separate Round and Flat Characters . Since artists create video game worlds from scratch, scenery also obeys the law. Suppose that they set a level in a supermarket; a real supermarket stocks thousands</ of individual products in hundreds</ of different brands, each and every one with different label designs, and the time it would take to design (or license) all that packaging and trademarks could easily add up to several games' worth of development cycles. So they use a handful of designs over and over. And it works to their favor: We accept less detail because it is not central to the game. This trope has probably caused more Epileptic Trees than every other trope combined, Dying Dream not withstanding, as people expect</ things to have a reason. Conversely, issues that are not fully explored due to the constraints of this trope often make for good Deconstruction material later on. Sometimes we see the payoff for a detail later, but we are still not done with it: it will prove to be important in a different way later still: the writers have used Chekhov's Boomerang . The predominant use of Chekhov's Boomerang is to let the writers surprise you. Any time a critic or a fan refers to something as "gratuitous", whether that be an obvious narrative tangent, a scene of extended violence, a sex scene, a comic relief scene, an extended bout of Scenery Porn , etc., they are invoking this trope. However, in this context it

is very subjective: one viewer's porn is another viewer's necessary character development; one viewer's "boring five-minute long tracking shot of a beautiful mountain range" is another viewer's "this is not a movie, it's art." For the drawing equivalent of this trope, see Rule of Animation Conservation . For the nonhuman equivalent, see Rule of Personification Conservation . When writers deliberately take advantage of this trope to overwhelm and confuse audiences, see The Walrus Was Paul . When a work flouts this trope and contains lots of little asides that are not necessary, that is Narrative Filigree . This trope is responsible for One Degree of Separation , Always on Duty , Everyone Is Related , Nameless Narrative , Nominal Importance , and sometimes What Happened to the Mouse? . When an adaptation removes explanatory details to save time or attention, see Adaptation Explanation Extrication . When the creators of an interactive work account for an absurd amount of obscure variations or things the player might do in a detailed way, that is Developers' Foresight . When the characters are exactly where they need to be, when they need to be, in order to move the story forward, it's a collaboration between Conservation of Detail and the Anthropic Principle . Combine this with Rule of Symbolism , and you get Everyone Is Jesus in Purgatory . See also Chekhov's Gun , Chekhov's Gunman , Uniqueness Value , and Inevitably Broken Rule .

The less actively a combatant puts an effort to defend themself, the less likely they to.</ The corollary: Any attack that forces someone who normally ignores self-defense to dodge (or block) the attack is usually an attack that can cripple or kill the defender . </ Frequently seen in Implacable superheroes/villains and Big Bads trying to make an impression. The Logical Extreme is the No-Sell , when the recipient of the attack makes no effort whatsoever to avoid or block it, and doesn't react at all when it hits. Although there are some real-life examples, attempting to use this in Real Life is more likely to cause quick and stupid deaths. It just doesn't work if you do it on purpose. The sad (terrifying) fact is that this is an instinctive response called the Peltzman effect, where someone will take more risks according to how safe they are in some kind of internal (insane) sense of balance. But since humans tend normally to overestimate their benefits... the result is nasty. Worse is that it's a constant effect that people do without realizing day after day. Not so different from pain tolerance; expected pain "hurts" less than surprise pain. Compare Punch! Punch! Punch! Uh Oh... . See also Good Thing You Can Heal (when fighters with a Healing Factor don't bother defending because "meh, I can grow that spleen back") and Nonchalant Dodge (a fighter expends the minimum effort to avoid an attack, but doesn't seem remotely fazed by it). A Not So Invincible After All moment usually occurs when said character bumps into the thing that poses a genuine threat.

The amount of jackassery in a fandom is a function of the fandom's obscurity.A unimodal function, that is, but if we start off with a word like "unimodal", pop!</ The readership disintegrates This means that the proportion of jackasses to normal people sharply increases with the obscurity of the fandom until it reaches a peak, then sharply drops off again For fandoms not too far from the mainstream, the fanbase is larger, and therefore its native level of jackassery becomes more representative of the baseline level of jackassery in the population at large. Jackassery is discouraged because the community is large enough to drown out the voices of individual jackasses As you move away from the mainstream, fandom

becomes more geeky, composed of people who are, at best, less normal, and often, less sane However, beyond a certain level of obscurity, the size of the fandom drops to a point where it can no longer support an elevated level of jackassery: if the whole fan community consists of six guys, they just stop hanging out with the guy who's a giant jerk . Thus, for example, the fans of The Hermux Tantamoq Adventures </ are some of the most nicest people you'll ever meet. All three of them Peak jackassery occurs when obscurity is sufficient that acting like a normal human being is no longer expected of the fans, but the fan community remains too large and diverse to make a unified stand against the jackasses. See also: Fan Dumb , Misaimed Fandom , and Why Fandom Can't Have Nice Things

The amount of work needed to activate certain Magic and Powers , or lack thereof, can provide a major advantage/disadvantage. In fiction, the audience is conditioned to become invested in effort; after all, a fight where the characters go through the motions is boring. Thus, this law exists to ensure that the more effort an ability requires, the stronger it is. If you're the good guys, at least. Heroes need a handicap, after all. Incontinence Note that there are two distinct, somewhat contradictory but not mutually exclusive, ways to use this trope. In the first, a set of powers or single ability which requires more effort to use is often going to be more powerful than one that requires less, for reasons of narrative Competitive Balance . In addition, characters may be able to boost their own power levels by putting more effort into it, in a sort of willpower-based version of Tim Taylor Technology . On the flip side, a character who displays less effort using their abilities can safely be assumed to be scarily badass, for reasons similar to the logic behind The Law of Diminishing Defensive Effort . The former generally applies to heroes and the latter to villains, but exceptions do exist. Sub-Trope of Power at a Price and Difficult, but Awesome . The middle-of-the-road tiers may cause a Psychic Nosebleed . Ki Manipulation almost have</ to follow this trope implicitly, because Ki is based on focus, physical health, and willpower. See also The Law of Diminishing Defensive Effort when it comes to using defensive efforts(or lack thereof). Compare Cooldown for when the price comes after</ usage, but can still use this scale. Compare Spell Construction for the kind of efforts you have to make to perform magic feats. Negima! Magister Negi Magi </ : My Hero Academia </ : Izuku Midoriya is a Quirkless boy who inherits One For All, the strongest Quirk a hero can possess. However, controlling the Quirk is an uphill task for him because his body cannot yet handle 100% of its output.

When people go around using magic at random in fiction, certain laws are employed to explain how such magic works. This is particularly true of Functional Magic . It is not, however, true of Psychic Powers , and Ley Line magic, Theurgy, Force Magic, Alchemy , and Wild Magic may operate on different rules. Some constants, such as the law of Association, may still be true though (a person with Psychic Powers may be able to sense someone due to common traits) These aren't the laws of the real universe; those are covered by science. Rather, these are quirks of human psychology. Magic that works by these laws will seem plausible enough (to a human audience) in a fictional work, and real-world human superstitions tend to take one of these forms This is not totally confined to fiction however, as some forensic rules also use these. For example, the Law of Association come under Locard's Theory , and anyone with a phone book prior to the age of cellphones

would be using the Law of Names to look up someone's name and number Related to Functional Magic and Magic A Is Magic A . See also Theory of Narrative Causality . Contrast with Scientifically Understandable Sorcery where magic follows the laws of the real universe except using an energy source and methods that fall outside science Not to be confused with the book series The Laws Of Magic</ , despite the story using many of the below

The Law Of Knowledge: With understanding comes control and power. (This law is responsible for things like Awesome by Analysis).

Every team needs a leader. Be it the Five-Man Band , the Caper Crew , the Badass Crew , the Badass Army , to the Ragtag Bunch of Misfits , they all have one. When push comes to shove, there's gotta be someone that stands up, takes charge, and makes a decision. Even if it goes unsaid, it's usually obvious to everyone who's calling the shots. The de facto</ leader does it out of necessity or their personality type. The de jure</ leader is officially agreed upon, and may hold the title or rank. Leaders in fiction typically come in four flavors, with of course some leeway and overlap: . Defining trait: Competence</. They often assemble their team for a specific purpose , and have clear goals in mind from the beginning. They rely on their smarts and ability to be one step ahead of their competition. They are masters of manipulation and tactics. Lighter versions are typically The Smart Guy , The Strategist , or a Guile Hero . Darker versions are usually evil geniuses or the Big Bad . They tend to work from the behind the scenes but be careful as Authority Equals Asskicking may still be in effect. See also The Chains of Commanding , the Sliding Scale of Leadership Responsibility , Still the Leader , Ordered Apology , and Badass in Charge . Compare The Captain , Only Sane Man , and both the Big Good and Evil Counterpart Big Bad . Usually The Hero is The Leader, but not always . Similarly, the Leader is not always, nor always interested in being, The Hero . Note: While the Incredible Hulk</ villain The Leader certainly fits this Trope, much more detailed information can be found about him on this page here . RWBY </: Ruby is named leader of Team RWBY despite being the youngest , and Jaune is named leader of Team JNPR despite being the least experienced . Despite this, Ruby makes a good Headstrong leader who is able to inspire her team to greater heights, and Jaune makes a good Mastermind leader who comes up with the plans (even if that plan is just " hit 'em with your hammer "). After the teams get shuffled around, Ruby ends up in charge of the combined team with Jaune as The Strategist , a role he is fine with.

Demons . Abominations . Monsters . Fallen Angels . Door-To-Door salesmen . There is a place where they go to, and a place from which they spring. Simply calling it Another Dimension doesn't do it justice. They are legion, for their numbers are many, and their powers are diverse. Sometimes Mooks of Satan , a Satanic Archetype , or a God of Evil (who — depending on the setting and/or the author's worldview — may or may not be the same person/thing), and residing in Fire and Brimstone Hell (or the real deal). There may or may not be heavenly equivalents , and either one can be treated in a Crystal Dragon Jesus manner. Heck, if they're in a Hentai work, they may even have tentacles. The Shinto version of the afterlife is

markedly different from the Christian version; thus, in anime not influenced by western notions of Hell and demons, Hell acts more Lawful Neutral than evil regardless of how it looks, especially the classic Buddhist and Chinese versions. Demons will be more like administrators than tormentors, often taken to the extreme . However, if Good Hurts Evil , one wonders why the heroes don't just "accidentally" let a nun, monk, priest, child, angel, or other nice being walk in and 'crash the gate shut with a resounding bang and atomized, no, disintegrated the great forces of evil.' If Satan is Good expect these guys to be The Cavalry . See also: Bonus Level of Hell , for guys slightly higher (or lower) on the infernal totem-pole see Demon Lords and Archdevils . For the non-demonic version: Alien Invasion . The Evil Counterpart to The Armies of Heaven . Red Spire Press's D20 game Dark Legacies</ has a far future Earth suffer both a dimensional migration of low-tech races and then an invasion by demons. If it weren't for a rising religious order with holy magic and alliances with some of these new races, the demons would have completely wiped out humanity. As it is, despite being thousands of years in the future, humans have been reduced to steam tech and crossbows as the height of technology.

You know the place. It wasn't there yesterday. But right now, there's a shop there that looks like it came out of Charles Dickens —or maybe H. P. Lovecraft . If you go inside, you'll find a quirky old shopkeeper who has any number of potentially magical - and potentially inconvenient - artifacts available for sale. Cheap. Today only. Just</ what you were looking for - although you may not have known you were looking for it when you came in. In fact, these items may look</ just like any other shop merchandise, but they frequently have some weird supernatural properties Just don't expect it to be there tomorrow.</ Especially if you need a refund.. Originally a literary device from the surge of weird fantasy writing in the 1920s and earlier—H.G. Wells used it in The Crystal Egg</ (1897) and The Magic Shop</ (1903)—The Little Shop That Wasn't There Yesterday still turns up occasionally. Nowadays, it's often a website . Frequently an element of the modern Creepypasta ; when the store is virtual, it overlaps with murder.com . A specific version of Revealing Continuity Lapse . A Mobile Kiosk has a good reason for being this

Probably one of the most hated characters in a movie or series fandom, The Load is a liability to the heroes. They are not</ always the proximate cause of the heroes' failures, but they're weak, they're often Too Dumb to Live , and for some reason they've just got</ to hang around with the cool heroes and be a part of the action all the time. It doesn't occur to The Load that, being an unathletic Muggle , it really might not be such a good idea for them to rush headlong onto the battlefield along with the heavily armored and super-powered heroes. Said heroes will usually have to spend at least half the battle keeping The Load alive. It's not hard to see why the fans hate them so much The Load must be played carefully, lest they become The Scrappy . If they must be protected, or come along despite lacking any useful skill, there should be a good reason for it, and not just as interaction, or perhaps they were not invited to the battle but brought themselves along. If a character who was once clearly

the Load starts upstaging the characters who are competent or powerful, they are even more likely to be hated The Load is the TV/movie equivalent of a powerless NPC in a video game Escort Mission — only, unlike a video game, you don't have the power to press the "B" button and throw The Load to the zombies if you start getting irritated by them What makes this trope especially grating is that The Load often actually does</ have powers or an ability that will come in handy for the heroes, which is, of course, why</ they must keep dragging The Load around with them. The one instance where The Load uses this power to save the heroes, however, does little to make up for the 99 percent of the time that they have spent being a screeching boat anchor Closely related to the Damsel Scrappy , Non-Action Guy , The Team Normal (if this character is the load because of a lack of powers), and the Satellite Love Interest . Can lead to a Live-Action Escort Mission , Badly Battered Babysitter , or similar. Might result from a Story-Breaker Team-Up where one of the members is out of their league. The character may be a Living MacGuffin If a Time Skip occurs in the series, expect The Load to have Taken a Level in Badass . Compare The Millstone , who is much more proactive in making failure the only option , and Helpless Good Side , for when a character with a Split Personality is the load half the time. Contrast The Drag-Along , who wants to avoid danger, but is forced to join a party of heroes against his will

When a character about to have sex cannot get it up. The cause is often a sexual version of Performance Anxiety , but may also sometimes be related to Unresolved Sexual Tension — for someone other than the person they're with at the moment. The "guy can't get hard for girl(s)" variation is the most common — the phrase, "It's okay, this sort of thing happens to lots of guys," is closely associated with this trope Usually a comedy trope, since the situation is usually temporary, and playing it for drama lasts longer. Double points if something like, "I'm sorry, I swear this has never happened to me before…" or the above-mentioned, "It's okay…" phrase shows up in the dialog Can be Truth in Television (and there are usually other ways to get the job done). One of the leading causes is the classic panic attack , which causes an adrenaline rush and in turn diverts blood flow away from the genitals - quite a lot of blood heads downward to facilitate sexual activity, yet much more blood is diverted back upwards when adrenaline is involved, mostly so that your essential organs can function at their best. Other common causes of erectile dysfunction include age (it's four times more common among men in their 60s than those in their 40s), poor cardiovascular health, stress, smoking, and excessive alcohol consumption The Distaff Counterpart to this trope (in which a female character is incapable of getting properly lubricated and/or) is not unheard of but, as the above description suggests, the male version is infinitely more common in fiction. There's an additional Double Standard in that male examples are almost invariably played for comedy with the man being the butt of the joke: female examples either tend to attribute the character's lack of lubrication to her partner's sexual inadequacy or unattractiveness, or to deep-seated psychological issues or traumatic sexual experiences Named as a pun for a song that has absolutely nothing</ to do with impotence, but the Double Entendre is too good to pass up Contrast Raging Stiffie , Speed Sex (for when the guy goes off too quickly rather than

not at all), Something Else Also Rises . Parodies of the latter are occasionally used as a visual gag — e.g. a skyscraper collapsing. Think Unsexy Thoughts is an inversion of this May be a result of a Paralyzing Fear of Sexuality , Incompatible Orientation , or Sex Is Evil, and I Am Horny

The city is in chaos. Crime is rampant, surging, and shows no signs of diminishing. Bad guys walk the streets openly, assuming they don't masquerade as upstanding pillars of the community to get away with bigger crimes. The police are outnumbered, out-gunned, and completely powerless to even begin to address the city's crime problem That is, until the hero shows up. No, they're not going to help him. They're going to chase him down as either a traitor, a vigilante, or a loose cannon In the process they're going to display such a show of force and numbers that it becomes truly baffling that the crime problem has reached these levels A sub-trope of the Police Are Useless trope, related to Arrested for Heroism and Crime of Self-Defense . Somewhat related is Arbitrary Skepticism ; despite seeing the dead walk, or dragons fly out of holes in the sky, or even just a gunfight with Slow Lasers , cops can be trusted to always</ call the hero a lunatic and attempt to arrest him rather than admit that maybe something weird is in the neighborhood. In many cases, the hero can end up having to fight cops because the villain</ called them, because Villains Blend in Better Also related is I Fight for the Strongest Side : Cops with any sense of self-preservation can tell that the better-connected or even just better-ARMED villain is a dangerous enemy to provoke, while heroes will either run, defend themselves non-lethally , or even meekly submit, not realizing that the cops are fully willing to throw the hero to the wolves to save themselves. Most of the time it can be easily justified by having the cops be on a criminal's payroll , but there are a few cases where this behaviour is purely a consequence of very, very Skewed Priorities Contrast Crooks Are Better Armed , when the police may display all the firepower they have, yet still</ they are under gunned by the criminals, as well as I Fought the Law and the Law Won , which is the police in a video game enforcing this trope for the sake of Video Game Cruelty Punishment or Railroading . A possible sign that the work is occurring on an Urban Hellscape

The Lost Lenore, AKA The Dead Love Interest — not parent, not sibling, not offspring, love interest</. One of The Oldest Ones in the Book , named for the famous deceased in Edgar Allan Poe 's " The Raven ". In short, the three defining criteria are: In determining whether a character who dies during a story can be classified as a Lost Lenore, the third criterion above is the most important: in order to fit this trope, the character must have just as much, if not more, importance to the narrative dead than they would alive. For example, Anna in Van Helsing </ is the hero's love interest and dies at the climax of the story, but she is not a Lost Lenore as all that happens after she dies is that Van Helsing is cured, lays her to rest, sees her happy with her family in the afterlife and roll credits. She does more for the story alive than she does dead. Characters who lose Lenore can go on to have other love interests, particularly if she is a Posthumous Character or the story is part of an ongoing series. However, in order to qualify for this trope, it must be clear that they grieved strongly for her

, and that overcoming their grief and learning to love again is a significant part of character/plot development. Sometimes subsequent love interests never entirely replace Lenore. It can go all the way to a Love Triangle . The Lost Lenore's mode of death can vary but popular choices include: The Incurable Cough of Death or other related terminal illnesses . Lenores can also become lost through suicide , Innocent Bystander Syndrome , a tragic accident, or Random Act of God. If she left children behind, the children often have considerable emotional baggage to deal with, including a father (or father-figure equivalent) whose grief can render him overprotective , neglectful, abusive , or absent . The children may feel, or even be told explicitly, that they are either too much like the Lost Lenore, or else not enough like her. Angst ensues. If the Lost Lenore was murdered and Stuffed into the Fridge , a Roaring Rampage of Revenge usually ensues. Which leads to a crucial identifying point: many Gwen Stacys are also Lost Lenores, but not every Lost Lenore is also a Gwen Stacy, as someone explicitly blaming themself for the Gwen Stacy's death is an identifying criterion for this trope, whereas this is not always the case for a Lost Lenore. After her death, whether it occurs before the story begins or during its course, the Lost Lenore is present in the thoughts, dialogue, and actions of living characters. Her memory may motivate the living characters to follow the example she set in life , or she can be a dynamic presence within a story through the use of Flashback and/or direct interaction with living characters in the form of a Spirit Advisor Conversely, forces of evil may evoke the memory of the Lost Lenore, or even masquerade as a manifestation of her , in order to manipulate living characters. Sometimes living characters encounter another living character who for whatever reason strongly reminds them of the Lost Lenore. This new character could be a relative, reincarnation, or even just an uncanny doppelganger. In this instance, a romantic relationship may develop, but this is always based primarily on the character's resemblance to the Lost Lenore and, yes, Angst can ensue. In some cases, the character may name a weapon or belonging after the Lost Lenore just to remember her and even develop a bond with them . Occasionally, due usually to a dramatic twist Lenore turns out not to be dead after all, or dead for reasons by means other than previously believed. The Lost Lenore can sometimes be brought back to life through an act of Time Travel or by magic but her death must be treated as a real event within the story. However, even if the audience knows or characters subsequently discover a twist in the tale, she must still satisfy the major criteria of having been loved and her perceived loss being of ongoing significance in order to qualify for this trope. Not to be confused with the comic book character Lenore the Cute Little Dead Girl who tends to cause death to other people rather than experiencing it herself. Related tropes include: Cynicism Catalyst , Death by Origin Story , I Let Gwen Stacy Die , Death by Childbirth , Stuffed into the Fridge , Crusading Widower , Too Good for This Sinful Earth , The Mourning After , Victorian Novel Disease . Contrast with: Disposable Woman , Forgotten Fallen Friend , Oh, and X Dies . The One That Got Away isn't dead, but still a lost love. Not to be confused with misplacing a bottle of the fabric softener "Lenor" ("Downy" in the USA). in D.Gray-Man </

Alice knows Bob well but doesn't care for him. And at times she treats him callously, with pranks that go too far or simply not giving due consideration. Alice most likely does not realise what she's doing; Bob simply does not register on her awareness of others. Then one day Alice goes too far, and Bob snaps at her. The result

is a loud, dramatic slap and he storms out. Alice is stunned at someone defying her so and realises that she deserved it. And starts seeing Bob very differently... The Love Slap of Epiphany sets a self-centered and manipulative character on the path to atoning . Expect a My God, What Have I Done? from the receiver, and for the sender to become their new Love Interest , and possibly their guide to redemption. It may also lead to a reversal of the romantic situation : the slapper most often decides he has had enough of her, exactly at the very moment she realizes he is the love of her life. A subtrope of Love Redeems and a more dramatic version of Did You Think I Can't Feel? . Compare Armor-Piercing Slap , where a character allows themselves to be slapped, but with no lasting effect on the person. For other kinds of life-changing slaps, see Get A Hold Of Yourself Man . Anime & Manga Film Live-Action TV Western Animation

Hard-nosed, gun-toting, take-no-prisoner Italians (and the ethnically and linguistically separate Sicilians , but it's rare for gangster-centric media to make such a distinction). Part tight-knit community, part protection racket, these paesani</ live by a code — which just happens to include vendetta</ (killing anyone who wrongs La Famiglia</) and omertà</ (going to your Don , rather than the cops, when you have trouble with a fellow Italian or Sicilian). Classically known as Cosa Nostra</ (" our thing ") for the Sicilians, and also called "wiseguys". Although the power of the Mafia (at least, the American Mafia) has diminished sharply since such heights as the Prohibition Era thanks to most of its bigger players either getting stuffed into prison or simply becoming too old to participate in the game, the mystique surrounding these organizations is so strong that they have almost replaced other established historical figures, such as knights or cowboys, as carriers of a romantic ideal While the Italian Mafia has an obvious basis in fact , it has remained a staple of entertainment even as the Japanese Yakuza , former Soviet-bloc Bratvas and Latin American drug cartels lapped it for sheer scare value in the real world (they may or may not share some of the Mafia's traditional features in fiction, such as the sharp suits or the loyalty to family). Note that this trope can also include similar Italian criminal organizations such as the Neapolitan Camorra or the Calabrian Ndrangheta which are also fairly prominent at home and overseas just like the Mafia. For the laughably inept, PG-rated version , see The Family for the Whole Family . If present as a global player, the Mafia may evolve into The Syndicate . See also Mafia Princess and The Don . It is obviously not connected with the Legitimate Businessmen's Social Club at all Compare The Mafiya , The Cartel , The Triads and the Tongs , Yakuza , The Irish Mob , London Gangster , the Kosher Nostra (which the Mafia sometimes employs), Gangbangers (who often fill the same role, but fit into a different archetype), White Gangbangers , The Yardies , and Generic Ethnic Crime Gang . For more information about the real organizations, see the Useful Notes page, The Mafia Compare and contrast Criminal Found Family

That's a real nice trope page you got here. Lots of work building this thing up. It'd be a shame if something were to happen to it... </

There's a magazine for everything.</ A character subscribes to a weirdly specific fandom magazine or trade publication you would

never expect to have an audience, or that speaks volumes about their character . This either represents their interest in a very niche hobby, or shows that a perfectly ordinary part of life is Serious Business to them. If it's a trade publication, they probably belong to a Weird Trade Union . As magazines are starting to fall out of fashion (particularly the niche magazines this trope parodies), this trope is becoming increasingly less common, but still maintains some ground. Named after The Wiki Rule , its online equivalent. Related to Collector of the Strange and Pastimes Prove Personality . If a Manly Man subscribes to Cross-stitch Quarterly</, it's Real Men Wear Pink , and if a Nightmare Fetishist has managed to find a publication devoted to Cross-stitch Bondage Babes</ , it's Rule Thirty Six. See also Severely Specialized Store , Niche Network , Specific Situation Books .

The past was an exciting time to live in : Magic was real, mythological creatures roamed the Earth, and humans lived side by side with elves, dwarves, hobbits and the rest . Such a shame that it didn't last and we're stuck with plain, old boring mundane life. But wait, reports are coming in that something strange is happening all over the planet: Mysterious creatures thought only to exist in storybooks have been sighted in isolated areas and their numbers are increasing with each passing day. Some humans are starting to exhibit fantastical powers that science can't explain. Strange, yet familiar humanoid beings have been seen going about their daily lives in the middle of human cities. What's going on? Why, the exact opposite of The Magic Goes Away . Maybe it completely disappeared at one point or maybe it didn't exist at all. Regardless of the past situation, however, magic is back and, as a result, can often pave the way for an Urban Fantasy setting. If magic and science are inherently opposed then certain areas of civilization may revert to a more primitive form as a result of magic nullifying technology or from clashes between the existing "science" civilization and developing magic. On the other hand, if they are not, then magitek and Post Modern Magic are likely to develop instead, leading to civilization to a more advanced form. Sometimes technological prowess will directly lead to Magic from Technology . This can be accompanied at times by The Dragons Come Back , but is not required on either end. This trope seems to be about evenly split between endings and beginnings. As such See also Nothing Is the Same Anymore .

So the Big Bad is defeated, right? All things are going back to where they ought to be. Order is taking over again. But there is no room in this new world order for magic . Perhaps magic has finished its work in the world, maybe the Big Bad was tied to the source of all magic, or maybe it was sealed away. Maybe a Masquerade Enforcer emerged to drive magic into hiding, and the magicians decided that it was easier to leave for some more magic-friendly Magical Land . but all traces of magic are now gone, or at least disappearing fast. The Time of Myths is no more Of course, with all magic gone, all beings whose very existence were tied to magic must go away, too. Either they vanish into nothingness, or travel to a better realm . Those that use the former may be more of a Downer Ending , as everything magical that the player worked hard for is now gone, while those that use the latter are more of a Bittersweet Ending , as even though they're gone, they're in a better place Sometimes they even become human , but either way, they're gone

with the magic as well Often this trope is to imply that this work of fiction may have really happened, as it makes way for the more magically incompetent humans and their technology This trope may be applied to other types of Phlebotinum , not just magic itself This trope is distinguished from Here There Were Dragons in that the work is about the events which result in (or at least happen around the time of) the magic going away. In Here There Were Dragons , the magic already went away long ago, and the story isn't about that disappearance. May overlap with End of an Age in that both involve the loss of wonder, but differs in that it is specifically about magic and magic settings. Can also overlap with Death of the Old Gods , although that does not necessarily mean magic goes away entirely so much as it becomes less obvious to and involved with the lives of humans; or Götterdämmerung , although that usually implies a more sudden, cataclysmic loss of the gods and magic than this trope. Often an example of Growing Up Sucks , but on a more universe-wide level. See The Magic Comes Back and Power Nullifier if this is a temporary status and it actually returns Also note that many examples will be spoilers in one way or another, as the titles of works that end this way probably won't be put in spoiler tags. Be warned Not to be confused with The Magic Goes Away </, the Trope Namer

A law of probability which only exists in television and movie poker , and can be expressed thus: Where L = luck, s = skill and i = importance. It describes the phenomenon in TV poker games whereby the better the poker player, or the more crucial the hand of poker being played , the better the players' hands are. In TV, the most talented poker players get threes of a kind, full houses, straights and flushes with remarkable frequency; it would seem that while actual</ poker savants are masters of risk management and psychological warfare , fictional</ poker savants are masters of getting dealt good cards . But even novice players can get full houses and flushes if the hand in question is an amazing climactic hand on which the plot hinges. When both factors are in play, the values of the hands hit the stratosphere - the best poker player in the world, playing the most important hand of his life, will probably beat a straight flush with a royal flush. In real life, he'd probably just beat two pair with a better two pair. Barring various methods of cheating, poker players have exactly zero control over what cards they get. They can only master reading their opponents, sending false signals, and throwing away crappy hands. In trading card games, this is referred to as "mising," mise being a Magic: The Gathering </ contraction of "might as well have" (drawn some specific obviously gamewinning card), or "topdecking". Of course, it's far more justified in this case than poker and similar games, since a key part of deckbuilding strategy is making sure that there are quite a few cards you can use to get yourself out of any seemingly unwinnable situation.

Of course, this also appears in other games of chance, of which poker is just the most common. It also appears with Roulette and Craps. If you have a Calvinball game, then this overlaps with New Rules as the Plot Demands . Overuse of this trope can make the player's skill to be an Informed Ability . Compare Moral Luck , in which a character is praised (or blamed) for doing something where the outcome depended almost entirely on blind luck Also see Hustling the Mark , a con or Card Sharp featuring a professional card player disguised as an amateur

In traditional fantasy , the available technology (as opposed to magic that just works </ like technology) is generally depicted as being relatively primitive, roughly equivalent to Real Life sometime prior to the development of modern firearms . In Science Fiction , just about anything, from the paranormal to the supernatural to Sufficiently Advanced Aliens with technology that acts like magic , is allowed, except</ magic. In the rare fiction where magic and advanced technology exist in the same universe, they rarely get along . In some cases, they merely interfere with each other for unexplained reasons. Sometimes it actually comes to blows, and that's where this trope comes in To be this trope, a series needs to have as one of the primary conflicts, an actual shooting war between a faction upholding magic and a faction upholding advanced technology and science. Typically one side is using magic spells, cavalry on dragons , etc., and another that prefers technological weapons like guns, tanks, Humongous Mecha , etc. Note that "Advanced Technology and Science" is a relative term. It may be as little as Industrial Revolution-era (compared to the standard Medieval European Fantasy), or even higher than modern times . A good rule of thumb is at least one "age" of technological development over that of the Magic-using civilization. The distinction will be made a lot more clear if the scientific principles are explained and comprehensible enough, if still unrealistic to contrast with the completely alien principles of magic that allow things to happen based on intent Sometimes the science side loses the war or destroys itself, in which case it nearly always features as a lost civilization, leaving behind the ruins of at least one Advanced Ancient Acropolis filled with Lost Technology , Superweapons , and Deathtraps Note that No Tech but High Tech is typically a built-in assumption in this concept. Technology, by definition, is the practice of using knowledge of the world to create or modify tools to achieve specific purposes; that is, any tool-use that isn't purely instinctive counts as technology. A gun, a shovel and a sharpened stick are all technological contrivances. These plots, however, only recognize advanced tech (typically anything postdating the industrial revolution) as "true" technology; anti-tech factions will rarely take issue with crossbows, carts or pickaxes, and when magic and technology directly interfere with one another only a certain set of advanced tools will have or receive any such effect Often tied to a Masquerade . The war could be the result of The Unmasqued World ; the Masquerade can serve to protect an Endangered Species or avert a Genocide Dilemma . Expect to see a Corrupt Corporate Executive , Evil Sorcerer , Mad Scientist or Wicked Witch . Compare Science Is Bad , Magic Is Evil

A society ruled by wizards. Wizard , plural, that is — a king or queen who just happens to be a spellcaster (such as the Benevolent Mage Ruler) doesn't count, nor does the traditional tower-dwelling Sorcerous Overlord . This is a relatively normal society (for a given value of "normal") that is governed by a magic-using oligarchy. Sometimes there is a Muggle figurehead on the throne , but clearly power lies with the spellcasters Every now and again you'll have a wizard race being the nobility with some manner of Wizarding ruler at the top, however Can be good, bad, or indifferent. Sometimes overlaps with Witch Species ; if everyone can cast spells, the Magocracy is usually depicted as good or indifferent. If the wizards rule over a population of Muggles , on

the other hand, they are more likely to be evil. A Magocracy can also overlap with a Magical Society , although it's quite possible to have a Magocracy which is more loosely organised than that. If Religion Is Magic , it may overlap with The Theocracy . The most sinister versions will have the society consist of undead wizards and double as The Necrocracy If the laws of magic require intense study and not just talent, a natural limitation may be sharing time between magic improvement and actual ruling</ . Then immortal wizards break this limit, having centuries to both accumulate knowledge and entrench themselves in power bit by bit Related to Authority Equals Asskicking (more likely ass- fireballing</). If there's not just a handful of magic-users but the whole society is influenced, it's likely to develop lots of Magitek . If the ruler maintains their power through magic but this is not</ part of the official political system, see Sorcerous Overlord . For mages who are part of the government but hold only subordinate or advisory positions, see Court Mage Contrast Anti-Magical Faction and Muggle Power

When a character previously positioned as a Big Bad is revealed in fact to be either the flunky , puppet , or spokesman for a higher authority. Note that gender of either is not relevant, so this trope could include The Woman Behind the Man, The Woman Behind the Woman, or The Man Behind the Woman The Man has deeper motives, bigger designs, and more power than the hero(es) could ever hope to smash in one blow; they will usually have to go through another round of dungeon diving just to stand a chance. When they reveal their reasons for being evil, expect the theme of the plot to unfold quickly and dramatically In many genres, the Man Behind the Man often has more sinister and apocalyptic goals than their predecessor. For example, while a Puppet King or greedy Mega-Corp may want to Take Over the World , the real Big Bad may want to destroy the world, or even erase all of existence Can be reversed as " The Man in Front of the Man ", in which case a person you thought was the Big Bad 's crony turns out to be the real Big Bad . See also Bastard Understudy , Dragon-in-Chief , and Dragon Ascendant . May be the one pulling the strings of the Puppet King Contrast Chessmaster Sidekick and Decoy Leader . In some (unsatisfying) occasions, The Man Behind The Man may be The Man Behind the Curtain . If there is no first man to begin with, or the first man is very obviously not</ the Big Bad , it's a Hidden Villain . If the mastermind turns out to be an innocuous character who was quickly overlooked, then it's a case of The Dog Was the Mastermind . If the Man Behind the Man is a previously-fought villain, then the plot has been Hijacked by Ganon . Sufficiently complex plots may involve The Man Behind </ The Man Behind The Man and so forth; the Sorting Algorithm of Evil usually, but not always, applies in these cases. Do this many times within a story (optionally mixed with the aforementioned tropes) and you have The Big Bad Shuffle A subtrope of Obvious Villain, Secret Villain . Compare and contrast Greater-Scope Villain , where a villain more powerful than the Big Bad exists, but is either not personally involved in the plot or is not a "person" to begin with. Not to do with a Gambit Pileup , though you might get one if everyone is trying to manipulate each other. This trope and/or Greater-Scope Villain may also come into play if the villains are terrorists backed by larger powers like Dirty Communists or Corrupt Corporate

Executives Rarely involves The Man , unless he was the one who created the personified conceptual authority on the first place Because this trope is often used as The Reveal whenever it appears, beware of spoilers

Your heroes have been working themselves to the bone. Victory is in sight! But what's this? Oppressive forces outside their control have undermined their plans Typically the work of some kind of bigoted, narrow-minded Straw Character . The heroes have failed through no fault of their own, but rather due to factors in the world beyond their control which are largely a problem with their society. Expect a Downer Ending with a possibly Anvilicious message about the real-world social ills that motivated the author to write this. Alternatively there's a message of redemption where the heroes manage to overcome the otherwise insurmountable obstacles. In this case it becomes an inspirational story. In either case, the villains tend to be treated more as a general group to be avoided/overcome/defeated/etc. than one man who has problems with the heroes Historical settings can frequently find justification without objections from the audience, but more modern settings tend to garner objections from the demographic being portrayed badly. When done well and properly thought out, a good case of fiction mirroring life can prompt change. Moral Guardians tend to be involved either way This may or may not involve The Man himself Compare with Glurge , where it's the villains or pitiable background characters who meet this fate- the heroes are safe in siding with the morally upright side The French film Z </ does this well, portraying the work of an unnamed junta taking power in an unnamed European country... but the Greek government that prompted the movie's creation is always mentioned in the same sentence when the film is described. In this regards it is similar to Missing</, by the same director, which is set in Chile, though never stated, and they even mention a few of the cities (including Santiago and Valparaiso). A similar film is It's Raining On Santiago</ , except that was explicitly about the 1973 military coup d'etat in Chile

1984 </ features a man in an oppressive dystopia finding a small measure of freedom, only to lose it when the secret police catch him.

The Wire </ does this, albeit in a more nuanced manner than most - the failure of systems, and conflict between individual and group interests, are major themes of the story. At first it paints the higher-ups as Obstructive Bureaucrats , but later seasons explore the restraints that they too experience as well as the burdens of leadership . In the end, the whole city and all its dysfunctional institutions are shown to be perpetuating themselves .

This trope is as old as the concept of oppression is understood by humanity . Central to Gnostic cosmology is that the God of the material universe, who the Gnostics call the Demiurge and is but a pale imitation of the true God, is very evil , as He keeps people from succeeding in breaking out of the prison that is reality and thus from achieving true wisdom. More mainstream Christians take this view of Satan and demons.

KULT </ is Gnosticism: The Tabletop RPG.

In Sinfest </,

When a large commercial corporation tells you via commercial that the best way to rebel against corporate social assimilation is to buy their products. Will often involve what Lindsay Naegle of The Simpsons </ refers to as a " spokesrebel " Also can refer to any commercial that attacks its general field, but claims they</ are rooting for the underdog, and are taking a stand against the greed of all the others. So give them your money. See: Lawyers, car salesmen, phone providers, etc. There is Conspicuous Consumption at work here May come about as the result of two competing incompatible functions of " The Man ". For instance, "The Man" is often seen as representative of censorship and regulation. A company that makes billions out of manufactured edgy and offensive content would thus call upon people to "stand up" against censorship groups. However, being motivated by profit rather than altruism is also a characteristic of "The Man". Or more simply, an attempt by the industry to respond to changes in society and tensions of its time and appeal to the needs and sensibilities of the public, even if they themselves don't share the same inclinations. Their main concern is self-preservation, and changing with the times is a historically proven method The antithesis of the Bandwagon Technique , and often used by competitors of companies that can use said technique. Tends to invoke the Rule-Abiding Rebel , since by nature they're telling you to rebel by joining a status quo. Hipsters are known to fall for this sort of trick Stealth Cigarette Commercial is a specific instance where tobacco companies are required by law to make anti-smoking Public Service Announcements . Rather predictably, the resulting PSAs tend to be along the lines of Do Not Do This Cool Thing The commercial may refer specifically to The Man . A type of Straw Hypocrite . Compare We Don't Suck Anymore and Biting-the-Hand Humor . See also Disobey This Message . One of the most prevalent causes of Undermined by Reality

In fictional relationships, there's a gray area between a Destructive Romance , a Friendly War and Romanticized Abuse . Sometimes the writers make it hard for the audience to figure out if the relationship is even supposed to be a good thing or not . Sometimes the writers don't even know the answer themselves , and sometimes this question isn't even meant to have an answer—the characters are there for the audience to laugh at, and that's all there is to it Two characters are supposed to be deeply in love — despite being blatantly unsuited for each other . They are constantly screaming at each other or worse, and yet the characters insist they like each other. Very often, the only indicator of the characters' affections for each other will be their jealousy when the other shows an interest (real or imagined) in a character outside of their tango Basically, there are two ways this trope can be played: 1) either the writers really</ don't get that the pairing isn't working out, or 2) the writers are fully aware and it's the characters</ who insist that their relationship is just great. In either case, the audience tends to quickly catch on, and you can bet that the shippers are already thinking up alternatives This is not the same as an Odd Friendship or Odd Couple , where everybody knows the relationship is strange and the characters very grudgingly learn to respect each other. In the Masochism Tango, the entire relationship hinges on the mutual hatred between the two lovebirds... for better or for worse The

partners dancing to this particular beat have already resolved the Will They or Won't They? issue (they did , and won't deny they're a couple) — it's just the wisdom of their hook-up that's in question. This is what happens when a Belligerent Sexual Tension couple gets together without actually solving the belligerence For the platonic version, see With Friends Like These... or Vitriolic Best Buds . In comparison, Vitriolic Best Buds is closer to this trope, while With Friends Like These... is more comparable to Destructive Romance . For a milder version, see Slap-Slap-Kiss , Belligerent Sexual Tension , and No Accounting for Taste . If the characters aren't</ at each other's throats, but their relationship feels contrived and artificial nonetheless, they've been Strangled by the Red String . Compare All Take and No Give . If the sadism and the masochism part in the coupling is off balance, also compare Love Martyr . Played for Drama , it can easily become Destructive Romance . If the characters are married, is also falls under Awful Wedded Life This trope is named for a song by Tom Lehrer , quoted above. As he explains it, a certain genre of love song is "the passionate or fiery variety, usually in tango tempo, in which the singer exhorts his partner to haunt him and taunt him and, if at all possible, to consume him with a kiss of fire ." In his version, the singer asks for whippings, broken bones, cigarette burns.. Note that this is actually Truth in Television for many people. Probably including many tropers If you are still confused, let Not to Be Confused with Real Life masochism . Or, for that matter, real tango . Or a . Then again, some works</ don't really make a distinction between masochism and being a victim of abuse ..

What you do for a living is typically a big part of who you are, and when you start getting serious with a boyfriend or girlfriend, you probably like to talk about how your day went. But what if you spend your day saving the planet from alien invasions? Or hunting down vampire serial killers ? What if what you do for a living is so fantastical telling them about your Secret Identity will convince them you are a liar (in which case they dump you), convince them you are insane (in which case they try to have you committed and/or dump you), or horrify them to the point where they (guess what) dump you? Of course, the people you work for in this fantastical world may insist that should you ever tell your significant other, you'd have to immediately kill them . Is it any surprise, then, that the Masquerade will (make you) kill your dating life? A lot of times, the pool of eligible bachelor(ette)s in on the Masquerade is rather small, and since Everybody Has Lots of Sex , it won't take long for you to work your way through them. But if you try to date outside of the masquerade, be prepared to stonewall every time your new beau asks "So how was your day?" or "When do I get to meet your friends at work?" or "Why do you always come home with blood-stained clothes and smelling of gunpowder?" Expect much angst about having to lie to the current most important person in your life that doesn't have a spot in the opening credits. That's if you can keep the many, many</ lies from collapsing in on themselves, that is. These relationships tend to end in one of three ways (don't they all?), with several subtypes: The strain is too much, and you break up. Usually, the Love Interest freaks out. Rarely... very rarely... the Love Interest doesn't freak out at all and instead reacts with some variation of "Huh... well that explains a lot." Of course, adding a regular character who is in the know will remove a huge source of drama, so any girlfriends or boyfriends that find out about the Masquerade have a life expectancy of a few hours . Compare It's Not You, It's

My Enemies . May be because she or he Loves My Alter Ego . Often the cause of a character being Hollywood Dateless . A subtrope of Keeping Secrets Sucks . If your heroic job threatens your dating life for reasons other than its secrecy, see Loved I Not Honor More . If letting the Love Interest in on the secret is what causes the break-up, that falls under Love Cannot Overcome . As such, it is an aversion of Understanding Boyfriend . See also Muggle–Mage Romance , on which this trope can negatively impact.

You all know Alice and Bob . Alice has a crush on Bob. Bob may or may not have a crush on Alice. Then there's Jane. Jane is a close friend of Alice who has nothing but Alice's best interest in mind. So she encourages Alice to go for it with Bob. Over and over again. Jane is a matchmaker More advanced cases will introduce Alice and Bob when they are strangers, because the matchmakers deems them perfect for each other This person is notable for several things. One, they can't seem to grasp the concept of personal space. Two, they seem to have a pathological obsession with hooking up their friends. If the subject is a single pair, the revelation that this person has feelings for one or both of them is entirely possible. Otherwise, this is something of a Love Triangle with only one romantic connection Take note that in older or period works, it is not uncommon to find an older figure who is rather skilled at this. Keep an eye out for professionals and relatives, and especially expectant parents who plan at Arranged Marriage A serial Matchmaker is often Oblivious to Love . Expect several attempts to make a match for the character madly in love with the Matchmaker, and resolution only to come at the very end. They may take cues from Astrology or Personality Blood Types when making their matches. If The Matchmaker is unsuccessful in their goal you get Matchmaker Failure See also Yaoi Fangirl , Yuri Fan and Perverse Sexual Lust , for variants. Compare Shipping for more meta examples, and Romantic Wingman . Shipper on Deck is a supertrope. See also Match Maker Quest , where the player can take on this role. Contrast Shipping Torpedo

You're watching your favorite adventure series. A group of plucky kids snoop around the place, get into exciting situations, and even get into danger and need to be rescued. And in the end, a cop arrests the criminal the kids were after. Supposedly, the kids didn't even help the police at all. Suddenly it dawns on you. The main characters aren't that useful! They did all the cool stuff (basically, get into all the danger), yet someone else ultimately stopped the bad guy and saved the day. What the heck? Why even bother with these "heroes" and their adventures? Because this is a story where the main attraction, if not the very point, is to watch ordinary people get into all sorts of excitement and danger. Yet they can't ultimately thwart the villain or solve the problem, because, well, that's not their job, nor do they have the actual skills for it. This is a way to get kid characters (or average, non-professional adult characters) into an exciting adventure while providing the realism of showing the real police or other professionals doing their jobs and saving the day. Note that despite the title, this doesn't have to be about young characters specifically; this is about when the main</ characters, regardless of who they are, are not the ones who save the day (though Character Development does</ happen). Also note that the full story of the defeat of the bad guy may be available elsewhere</, simply not at this particular story we are reading. In that case, the villain

was defeated by a Hero of Another Story . See also Little Hero, Big War , which is kind of this on a much larger scale, and with the hero having a larger chance of being the one who actually defeats the villain. Often if the main character pads a lot of the story failing to succeed it's because We Are "Team Cannon Fodder" .

Funny thing about adventure; people tend to get hurt, especially the heroes. Injuries are terribly inconvenient for questing, resulting in time lost recuperating (or making an out-of-the-way trip to the nearest Trauma Inn) at best, and a Total Party Kill at worst. So it's wonderfully convenient to have someone in the party who can make the hurting stop Enter the Medic. In modern or futuristic settings, the Medic is often a trained physician or EMT (emergency medical technician) and relies on whatever medical technology is available in that era and on-hand—anything from miraculous herbs , injections and bandages to Nanomachines . In fantasy settings, the Medic is a often a cleric or Mysterious Waif of some kind, using the powers of a White Mage or White Magic to restore people with Healing Hands (or something similarly glowy). They may also wield the Healing Shiv . Even the Standard Scifi Fleet might have Medics, in the form of tenders or repair ships Often caring and concerned, Medics tend to be The Chick or (if a guy) The Heart . Alternatively, they're less personable than rational, and they are thus a Smart Guy , even if The Team already has a Smart Guy. Regardless, team Medics will inevitably become the Team Mom —they simply leave the team if they can't. Regardless, everyone must obey the Doctor's Orders Medics are typically Squishy Wizards , possessing little in the way of raw strength or offensive combat ability. In most real life cases, this is more specifically because they are forbidden to carry assault weapons or engage in combat, even though all soldiers get the same basic training, regardless of role. If guns are standard, they'll usually have the smallest and weakest possible. In fantasy settings, they don't usually wear any armor, and tend to use staves as often as hammers or maces . They don't always get the flashiest abilities and their skillset tends towards Boring, but Practical , although they will occasionally pick up a few offensive spells. Holy Hand Grenade is popular among the rare Medics who fight Expect the Medic to be an Actual Pacifist and hold to Thou Shalt Not Kill (except, possibly, Mercy Killing), although he may not stick to it when he is literally the only person who can attack—especially not if the villain is willing to attack him or worse, the wounded . In Real Life , this is required; medical personnel are non-combatants, and so are protected under The Laws and Customs of War , but forbidden to fight themselves lest they forfeit this protection. Medical personnel are</ allowed to defend themselves or their patients, but cannot initiate offensive action. See If there's only one team member capable of healing, that person is automatically the Medic, even if they have other abilities, even if healing is their least</ proficient ability. If multiple teammates can heal, then the Medic is the one who is either the best at it or takes it most seriously. Even if the Medic should have awesome attack magic, or have the fortitude to handle melee combat, his role as healer, supporter, and protector is his top priority Be wary of pissing off the Medic on your side—you do not want to be in the situation where they decide that actually they don't</ feel like healing you right now because of something you said earlier. Hence the many variations on the phrase of "Never

mess with the White Mage " in the communities of any multiplayer game, from tabletop RPGs to shooters, that have this class. If this does happen, it can cross into Laser-Guided Karma or even Death by Irony A subtrope of Support Party Member . See the The Squad and the Command Roster for Ensembles likely to have a team Medic. In particularly large or specialized teams, it is not uncommon for the Medic to do almost nothing except heal the Stone Wall —in which case they are that fighter's "backpack" (this is standard practice for groups in World of Warcraft </). A backpack may also occur when one member has a specialized healing ability and another requires that specialized healing (typically robot/techie, The Undead /necromancer, or an inverted Revive Kills Zombie situation) A Medic who specializes in healing and support magic (sometimes with a dash of attack magic) is known as a White Mage . White Magician Girl is a specific type of White Mage that occurs with faithful regularity in videogame RPGs Also in videogames, when the enemy</ has one, Shoot the Medic First . The Combat Medic is a variant which can heal and support while</ beating down the enemies, and a medic who specializes in both healing and</ defense is often a Barrier Warrior . The Deadly Doctor has gone rogue and decided to use those same healing abilities to take people apart. Compare After-Action Patch-Up , After-Action Healing Drama

Joshua "Josh" Foley, aka Elixir, from X-Men </ . Elixir is quite possibly the most powerful mutant because he can manipulate DNA in order as his power and accelerate cell division. It manifests early on as healing powers, but he can just as easily kill you as he can heal you.

" Dearly beloved, we are gathered here today to together through this thing called life. Electric word life it means forever an-- </ wait, that can't be right... it is? Oh yeah, I forgot this was the Prince-themed wedding. That explains why the bridesmaids are dressed like Maya and Nandy. " Marriage is a sacred institution, filled with high emotions, decorum, tradition and loads of other things that apparently matter to some people. Suit and tie, white dress, cake, bothersome new in-laws, cute little flower girl and little ring-bearing boy with a habit of swallowing small, ring-like objects. Some people prefer to forgo the old ways in favor of something whimsical. It depends on those that marry, their friends and family, where the wedding will be held, when</ the wedding will be held, etc. Sometimes the bride will wear something out of the norm . Maybe a British couple goes to America for a wedding where everybody is dressed like cowboys and eat cake made of corn-dodgers and Ranch Style beans, or an Alaskan lesbian couple dresses like aliens and astronauts for a wedding in the Seattle Space Needle. Or maybe a polyamorous group of twenty strips naked and are married off by a clown priest in Pleasant Valley. Wacky, wacky! Subtrope of Themed Party . Compare with Cheerful Funeral , a similar traditional ceremony laced with intentional whimsy. Contrast with Wedding Smashers , where the whimsy and hijinks are unintentional and usually grinds everything to a halt.

Authors like to use themes to create a sense of unity or cohesiveness within their work. Some extend themes to the names of the characters, often beyond the similarities that would be expected for characters from the same culture or who all speak the same language. When the author does this, you have Theme Naming. For instance, all the female characters will have names of flowers or plants (occasionally the

male characters will get Gender Blender Names); all the names start with the same letter or syllable, groups of characters are named after groups of gods, demigods, or mythical heroes. As the list of subtropes demonstrates, there are a lot</ of possible themes (and that's not all of them, either) The Recurring Extras , Those Two Guys and Creepy Twins sometimes have thematic names that link them. Theme naming is also common for characters with unusual names as a mnemonic in order to keep track of a huge cast; it's easier to keep track of which character is associated with which other characters if each group uses a theme. Theme Naming can also be a Genius Bonus if it involves puns or other types of wordplay, names or words from languages other than the language the work is written in, or multiple layers of meaning in the name, or alternate or changed spellings.

Subtropes include: This page is for examples that don't really fit into any of the above subtropes. Those that do should be placed on the appropriate subtrope's page. See also Meaningful Name , Prophetic Names , Who's on First? , Steven Ulysses Perhero , Names Given to Computers , This Is My Name on Foreign . See Idiosyncratic Episode Naming for titles.

A commanding officer insists that his men are the top priority. This is a rich source of conflict, as every commanding officer cares for a different group of men . The largest body generally takes overall priority, though a The Men First approach by the smaller constituent units can lead to greater losses overall as per ' ' Medical attention for the wounded is a high priority — especially if doctors are trying to treat the officer, and his injuries are less serious — as is No One Gets Left Behind , but in less critical situations, he keeps an eye on such things as their shelter and food He may inform anyone who finds it strange that it is his men who win his battles. This is most likely when an Officer and a Gentleman is insisting on it for soldiers who are not Blue Bloods , but any officer who is not A Father to His Men may express surprise He may insist on getting no help at all if his men can't be helped. Compare In Its Hour of Need ; the commander will retreat if his men can be gotten away Note that this does not preclude ruthless expenditure of his men when necessary , just don't expect him to be happy about it . However, unlike the Glory Hound he will never expend them to benefit himself and he will never</ waste them through incompetence as the Modern Major General or General Failure might. Appeals to him to surrender may be made on the basis of ending his men's suffering, but might not succeed if he cares enough for a bigger picture which demands a Last Stand If he is at the top of a chain of command with several ranks between him and the grunts, he will generally insist that his subordinates follow his example — or else Lower-ranked soldiers can also insist on help going to others, but that generally falls under The Power of Friendship and Greater Need Than Mine Compare Greater Need Than Mine . Contrast Moral Myopia ; officers who do not fall under this often fall under that. We Have Reserves is the inverse attitude of this Not to be mistaken for the opposite of " women and children first "

Black suit. White shirt. Black tie. Sinister Shades . Ominous and overbearing manner. Speaking in code . No indication of emotions or a personality . Ostensibly some kind of covert operative, but very conspicuous . They are simultaneously imposing and nondescript, which fits their mission perfectly The Men In Black are the

generic intimidating agents. If they have names, expect them to be along the lines of an obvious pseudonym , one of the most common Anglo-Saxon names (although they're often described as being very racially ambiguous), such as "Mr. Smith", "Mr. Jones", "Mr. Brown" , etc., or else they'll be Mister Strangenoun . They're there to loom over you and make you feel afraid, whether they're sent by The Government , The Mafia , a Corrupt Corporate Executive , or aliens from outer space. They're almost never</ there to help you Generally, they're in the business of keeping secrets. Laser-Guided Amnesia is a pretty common tool in their arsenal, especially in more idealistic versions, wiping out a memory you're probably better off without so you can go back to a normal life . More cynical portrayals just bully you into keeping your mouth shut. Or just make you disappear , one way or another . Less often, they'll make An Offer You Can't Refuse : join or forget . Or die Conspiracy Theorists live in fear of the Men In Black. They know too much Despite being the symbolic presence of The Oppression Of The Man , The Men in Black have the mystique of being badass and cool , so heroes can be associated with them. In those cases they are merely protecting panicky Muggles by doing what's ultimately best . Watch out for Conspiracy Redemption if they go too far, though The Men In Black tend to have access to vast material resources through their inclusion in budgets that never appear on the public books. They often have new super-secret weapons and devices and are in constant contact with Mission Control via Obligatory Earpiece Touch . If The Men in Black are hunting a character, he should look over his shoulder for the Van in Black and scan the skies for the Black Helicopters . Finally, The Men in Black frequently do not officially exist , so good luck finding out anything about them The term comes from fringe UFO research, where the Men In Black have become the primary boogeymen. The earliest citation comes from 1953: UFO researcher Albert Bender, who published a small newsletter called "Space Review", explained a missed issue (which he had promised would blow the lid off the secrecy about UFOs) by claiming that "three men wearing dark suits" had approached him and ordered him "emphatically" to stop publishing material about flying saucers. Years later, he would admit that he just didn't have the promised material and made up the story to explain why, but not before milking the story with a 1963 book called Flying Saucers and the Three Men In Black</ , and spawning an entire mythology Or maybe that's what they told him to say.. Usually male, Distaff Counterparts are somewhat uncommon. May employ (or have a division that is) a Creature-Hunter Organization to keep Muggles from discovering monsters from The Masquerade , and are also frequently associated with Artifact Collection Agencies Compare with Secret Police . See also the Men in Black </ franchise, named after and based upon this trope Not to be confused with a single Man in Black , or Black Shirt , or the related but distinct trope Evil Wears Black

Theme Parks are, to simply put, amusement parks based upon a theme of some kind. They can range from campy mom-and-pop affairs, such as those tucked in among the lovely glacial ravines of , to high-tech vacation destinations run by big corporations, like the Six Flags parks and Universal Studios . And, of course, the Disney Theme Parks . For a whacking load of pictures and videos from many</ parks all over the world, go to the many, many websites around the web about theme parks like , Outside just themed environments, theme

parks often try to tell stories through their attractions. It's mostly the larger theme parks that put this much effort into this, using incredibly detailed sets, animatronics and special effects to really push visitors into the setting. Speaking of, Disneyland is certainly the Trope Maker here. See also Souvenir Land and Amusement Park of Doom . A related trope is The Theme Park Version , used to describe something that has been simplified and sanitized for mass consumption. The sub-indices are for specific decades. For the video game, look at Theme Park </ . Defunctland </

Doing something creative costs money. If you're in a band, you're paying for gas to get to and from practice and gigs, studio time, and all the bits and pieces of tech you need to sound good. If you're an artist, you're paying for your materials and maybe studio space. Even if you're doing a simple webcomic, blog, or fansite you're paying for bandwidth. And, unfortunately, creative work doesn't pay very well until you're famous. And sometimes it doesn't pay very well even then. So what do</ you do to help support your habit/creative endeavors? It turns out just about everybody loves owning cute little tchotchkes. Ones that are branded with some obscure, indie-cred logo, image or phrase they like is even better. So, you start to sell stuff. T-shirts, pins, prints, CDs, Toys and cards are the obvious choices. But mouse pads, coffee mugs, baseball caps, plushies, posters, babies' onesies, messenger bags, and refrigerator magnets all have their fans. Furniture, jewels, costumes, food, hygiene products, and sporting gear are for those wanting to go overboard. In fact, anything that you can figure out how to stick a logo, character or catchphrase onto will do. That's "The Merch". The merchandise. The moneymaker. The stuff that pays the odd costume, Unusual Ears , an external monologue , a visible weapon, or an animal that only vaguely resembles a normal one (such as a blue wolf wearing armor). For some reason, none of the bystanders take notice or comment on it In some cases this is justified with not being seen by mortals or for some reason, if it's a kid's show/book/comic/other, it's often stated that the weirdness cannot be seen by adults or doubters Possibly an extension of the Bystander Syndrome , contrast with Mundane Made Awesome and Faux Horrific . Occasionally justified with a Weirdness Censor . Common in Magic Realism and Mundane Fantastic . See also Elephant in the Living Room , Fantastically Indifferent , Lions and Tigers and Humans... Oh, My! , Metallicar Syndrome , Not Distracted by the Sexy , Unfazed Everyman , and Shut Up, Scary Thing

One of the joys of reading or watching Speculative Fiction shows is the wonderfully bizarre touches an author can add, like the Unusual User Interface Want to make your cyborg or Ridiculously Human Robot seem truly technological? Have them plug a phone jack into their skull to browse the web, or maybe even use Augmented Reality . Maybe you'd like to wow the audience with a truly spectacular piloting system for a space ship? Have a Holographic Terminal serve as the flight controls. Or heck, maybe you just want to have the universe destroying superweapon be triggered by interpretive dance.</ Point is, there's more ways than a keyboard, knobs, or a steering wheel to tell a machine what to do in scifi, and here are some of those ways If the user plugs directly into a machine, this is the subtrope Brain–Computer Interface

Sometimes simply holding a weapon just isn't cool enough. Some characters just have to have weapons in the most unexpected places, like on their shoulder, on their head, or even inside</ a limb. Maybe they just have so much dakka that they can't fit any more weapons in conventional places. Or maybe they're just weird. They may be: Compare Natural Weapons for when they're already part of the wielder, Handy Feet for doing things with your feet (including wielding a weapon) when they normally would require your hands, and Backpack Cannon for weapons mounted in/from a backpack (i.e behind your back). See Phallic Weapon if the weapon's placement is suggestive.

In a crisis, nobody wants to feel useless or left out. Some people may want to run away, but otherwise they'll usually try to help. The problem is, sometimes this help turns out to be rather unhelpful. Depending on the situation, it can be anywhere from irritating to downright dangerous, for the "helper" and</ the "helpee". As such, this situation can have several different outcomes, ranging from simple annoyance on the part of the people being inconvenienced to extremely dire consequences that involve a lot of people getting killed Compare Chronic Hero Syndrome , Unwanted Rescue , Complaining About Rescues They Don't Like , and Ungrateful Bastard . Especially self-righteous and/or stubborn "helpers" may have Condescending Compassion . Contrast Shut Up and Save Me! . Can lead to Always Need What You Gave Up if the person ends up in a position where the aid of the person they ordered not to help is needed . May overlap with Overzealous Underling For "helpers" provided by a program who annoy or otherwise have a negative affect on the player, see Annoying Video-Game Helper

Not to be confused with Harem Genre , a genre of Japanese media that sometimes heavily relies on this trope This trope involves a common reaction from the man when a Harem plot begins and women start fighting for his attention. He might either think like a Celibate Hero , that the gratuitous quantity of boobs he is forced to see every day are just a bother (Comically Missing the Point that he is in an enviable situation), or see them as an obstacle between him and the girl he truly likes , or he may just find them annoying for one reason or another The more likely reason plot-wise is the fact that the male lead cannot reciprocate all the girls' feelings without seeming to the audience to be cruel, manipulative, and misleading to the girls. So the far easier solution is to make him oblivious to their affection or Cursed With Awesome Even if he does like one or more of the girls, the man won't or can't admit it. Besides, until the point comes where one of the girls is in danger, the man would rather have his nice quiet life back . The trope may or may not involve Innocent Cohabitation While this is, as might be gathered, usually a male trope, gender-reversed versions have recently begun to appear As shown by poor Tsukune in the above picture, the most common and immediate consequences of said harem is the ever-hilarious (if incredibly painful to watch) Lover Tug-of-War When criticism is raised against a harem show it's usually due to an overdose of this trope; unfortunately, when played straight, this trope is almost always overdosed. While it's often criticized as blatant Wish Fulfillment , most criticism regards the tendency to portray the female cast very negatively, often giving them little personality,

or having their characters largely defined by their dependency on the male protagonist and/or irrational tendencies towards violence Contrast Harem Seeker , where the "unwanted" part is left out. Also compare Sexy Man, Instant Harem , which may or may not be wanted, but which usually involves more superficial characters Resolutions to such a situation are varied Someone wins

A Bound and Gagged prisoner is suspended from the ceiling, usually by a rope. This is not usually intended for torturing the prisoner , but in reality, this could cause undue pressure on the body, and bad blood flow. Perhaps even dislocate something — there's a reason</ why BDSM models engaging in suspension art tend towards the light-weight and extremely flexible end. In most fiction, the prisoner does not appear to suffer any particular physical discomfort (If the viewer thinks too much about this, it results in Disbelief of Unwilling Suspension). Hanging by the wrists</, a common variation, would in Real Life quickly cause permanent damage to the hands and within a few hours cause death by suffocation/" ", not quite unlike a crucifixion. Many a dungeon has a prior inhabitant still hanging by his wrists in skeletal form. Reasons for doing this include: Favorite victims seem to be The Hero (es) or the Damsel in Distress (especially a princess and/or the President's daughter). Compare Chained to a Rock . Not to be confused with being suspended from the police force , or taking fantastical elements of a story or setting in stride .

Our hero is executing an impossible mission. It's full of action and adventure, and they gets to show off how heroic they are, but at the last minute, something unexpected goes badly — often ridiculously so . The alarm goes off, the hero's weapons and equipment malfunction, and his teammates die screaming as they are picked off one by one by something large and scary. The last thing the hero sees is the killer robot swooping down to off them and... Computer, end program. It was all just a simulation , training exercise, or Dream Sequence . In most cases, The Hero steps outside to discuss what he did wrong with the simulation operator, who will point out, "If this had been real, you'd be dead." The rest of the episode will typically focus on the hero overcoming whatever character flaw prevented them from succeeding in simulation. If the simulation is truly supposed</ to be unbeatable, the focus will be on the character learning to accept the fact that sometimes you just can't win. This is typically used as the first scene of an episode or film (though it may also come between the planning and execution phases of an Impossible Mission story), as an easy way of introducing the viewer to the kind of danger the main character(s) might experience on a regular basis. It will feel like In Medias Res , except that it's not really part of the main storyline. Such a scene shows that the character is not invincible but has a critical flaw which might lead to their demise later, without actually affecting the plot . This will cause additional suspense later on when the character inevitably gets into a similar "real" situation and must show that he overcame this flaw or is able to find a clever workaround for it. Occurs most often in Speculative Fiction , series about teams of criminals, series set in the military, and shows about ninjas. Sometimes leads to a Training "Accident" plot, if the people involved don't know it's not real. An Unwinnable Training Simulation may double as an Hidden Purpose Test , often of how the

trainees deal with unwinnable situations. If this type of scenario is featured at the beginning of an episode, the character flaw the rest of the episode focuses on will either be the character's own pride or inability to accept that sometimes, crap happens . Occasionally, this will be subverted in that the character will</ win the scenario, by "cheating". A type of False Crucible . See also Endless Game and Secret Test of Character . If the simulation becomes legitimately dangerous, that's a Holodeck Malfunction . If the simulation was legitimately dangerous all along, it's Deadly Training Area . If the situation is not a simulation, but instead a real life situation where the character is set up to fail, it may be A Lesson in Defeat . Compare Killer Game Master , where a tabletop gaming GM acts like this.

Someone unintentionally plays a small and/or unlikely but crucial role in some horrible development (usually this action serves as the catalyst) An Unwitting Instigator of Doom can be basically complicit with the villain, but in that case, they're generally seeing only a small portion of the picture. If they're being specifically manipulated but do not realize, they're an Unwitting Pawn . Other times, they're simply blundering in like a wrench in some particularly highly valued machine , so it can be caused by The Load or The Millstone . They may also end up as the Idiot Houdini . In the worst cases, more in the know characters will chew them out for bumbling in and screwing things up, trusting them little better than they would a traitor Compare Nice Job Breaking It, Hero! for when the heroes cause doom, and Mike Nelson, Destroyer of Worlds for a different type of unwilling doom bringer. Also compare Chekhov's Gunman , in which a seemingly insignificant character becomes more important later on. See also Interrupted Cooldown Hug , Endangering News Broadcast , Tragic Mistake , and Small Role, Big Impact No Real Life Examples, Please! Aside from being prone to misuse, it is likely to invite Flame Wars

This is the kind of person that the Magnificent Bastard and Batman Gambit depend on. Not only does an Unwitting Pawn fail to stop the bad guy, but he actually furthers the villain's plan in the process. The Manipulative Bastard will take great delight in using them and then deconstructing their naivete and blind faith as they gloat (in which case compare What Have I Done). Not surprisingly, they also have a tendency to die ironically after inadvertently helping the villain . But if they survive... there's bound to be some nasty surprises in store for the Bastards These guys are not always being manipulated by the villain; sometimes they blunder their way into helping him of their own accord . Not that the villain's going to examine his gift horse for cavities.. The Wide-Eyed Idealist often becomes this, but sometimes the Knight Templar and Well-Intentioned Extremist can fall into this too. When the main character does this, and then has to fix</ it, it's Nice Job Breaking It, Hero! Sometimes the unwitting pawn is deserving of his fate. They may be a Corrupt Corporate Executive , Evil Businessman, or someone else who has achieved great success through questionable means. Sometimes, he owes his success to someone he screwed over. They will often fall victim to blackmail or the reminder of what could happen "if the truth should get out...". Sometimes, the pawn is allowed to remain a figurehead to keep up appearances while his strings are pulled behind the scenes. This

often happens to Corrupt Politicians as well who come to realize that they probably had a lot of help to realize their ambitions and get to the top Compare Out-Gambitted , Unwitting Instigator of Doom . Contrast the Spanner in the Works , who just as ignorantly harms these schemes Tend to be played by The Chessmaster , logically enough. But also the Manipulative Bastard uses them too

This trope occurs when a thinking subject (a human, sapient</ animal, etc.) is part of a scientific experiment and has no idea that it's being experimented on and has not explicitly consented to the experiment. Usually, in such stories, there is some surreal and alienating moment in which the subject (or audience) realizes this after The Reveal , an unmasking, or a series of clues in the story Unwitting experimental subjects are entities that embody the experience of being caught up in a maze like a rat, being a guinea pig for the scientific-industrial complex, and/or some mad scientist 's eerie human experimentation, done for the sake of satisfying scientific curiosity. Subjects are unaware for a time that they're actively being creeped and experimented upon for a certain period of time. However, there could be copious amounts of unconscious subjects falling victim to Playing with Syringes or Strapped to an Operating Table , and maybe even the evoking of an Eye Scream . There's certainly overlap with They Would Cut You Up Experiments like this are carried out by The Conspiracy , an Ancient Conspiracy , The Syndicate , or The Government who have their own inscrutable motives. These bad boys might, in turn, have a Chessmaster who plans and runs it, making sure all the while that the unwitting subjects remain so. Sometimes one of the test subjects turns out to be working for the bad guys, in which case, the conspirator participates in a masquerade to keep his or her true intentions from the subject(s) The difference between an Unwitting Test Subject and Tested on Humans is that with the latter some sort of weapon or destructive device is tested on a subject for show; for example, to humorous effect, just as a more or less random target to demonstrate how awesomely powerful a weapon is. A person who's a victim of Tested on Humans pretty quickly notices that s/he's the test subject, that is, the effects are immediate and plain to the subject/victim. Unwitting experimental subjects, in contrast, show up many times in the psychological horror or psychological thriller genres The experiment doesn't necessarily have to actually be shown to be an experiment. The story could be an Ontological Mystery , which the character is faced with after You All Meet in a Cell or You Wake Up in a Room . That is to say, the work might not have any visible scientists (to the audience or to the characters) who are performing the experiment, the purpose of the experiment may not be apparent or it may not be clear that it's an experiment at all. It could just be hinted at by various means (say, by the mathematical or vaguely scientific nature of the environment the characters find themselves in), or just implied in some clever way On the Older Than Feudalism level, this trope could be placed in the God testing Abraham and Job's faith arena. The trope has been active since the '30s mostly in sci-fi works but shows no signs of becoming discredited Contrast Professor Guinea Pig , compare Guinea Pig Family . May involve a Disposable Vagrant or Condemned Contestant and an Evilutionary Biologist . If the humans are seen as a vast philosophical computer simulation, then compare with the Wetware CPU

This can be the precursor to a direct attack, drawing tension from

the imminent danger to our (often female) character. However, the monster may be scared off by another character intervening right before they can strike or something else that serves to distract them from their target. In fact, this trope tends to be utilized with characters who possess some form of Plot Armor Compare Villainous Face Hold ; I Have You Now, My Pretty ; Lecherous Licking ; and Perverted Sniffing . If the person is not showing any fear whatsoever at the monster, that's Staring Down Cthulhu . It may be preceded by an Enemy Rising Behind before the person turns around. See also Alone with the Psycho , which deals with being in close confined proximity with a human antagonist

When a bigger and better version of a game is released after the original. Common features include more game modes, new gameplay segments, shinier graphics, harder difficulty settings , new weapons and costumes, an added epilogue, a Bonus Dungeon (especially for role-playing games), improved performance due to being designed to run on a more powerful later generation console, and so forth In effect, a recut of a video game. Or a Board Game , Card Game , Tabletop Game , what have you.. Of course, this can be particularly annoying to people who purchased the original, who now have to pay up to $40 (or more) for a game they mostly already own. Or worse if it is released for a different console than the original, and they don't own that console When a classic game is recreated entirely for today, it's a remake ; when fans consider the remake better than the original, it's a Polished Port . Updated re-releases are also different from collector's editions and should not be confused. The former comes out well after the original game is released and alters the gameplay significantly, whereas the latter is a more expensive version that comes out alongside the regular edition and offers bonus material separate from the core game It's also common for highly popular arcade games to get updated versions; those arcades that already own the game can buy an upgrade kit for far less than the cost of a cabinet This is mostly a console (and arcade) gaming trope, as extra material for PC games is typically released in the form of an Expansion Pack . It's becoming increasingly common, however, for PC games to be re-released as a bundle along with their expansion(s), typically with such titles as "Gold Edition" (not to be confused with "going gold"), "Platinum Edition", or " Game of the Year Edition ". It's also recently become common for older PC games to receive remasters that allow them to be run on modern operating systems with modern resolutions, with some additions such as minor graphical tweaks and support for newer PC features such as ultrawide resolutions or customizable FOV By the same token, it's starting to become less prevalent (or at least less profitable) on console systems, as DLC has made releasing entire new discs more a convenience for people who don't own it yet in any form, rather than a "screw you" to people who do. The current trend is for the "updated re-release" not to include the additional content on the disc and, instead, to provide a code to download the additional content It should also be noted that some companies, most notably Sony Computer Entertainment America , require a re-release to have a certain amount of new content or else it can't be released in that region. This is why some updated re-releases never see the light of day outside of Japan. After all, if you have a lot more "re-release" than "updated", you run the risk of Capcom Sequel Stagnation See also Regional Bonus , No Export for You . The non-interactive equivalent is Enhanced on DVD and Re-Cut

Becoming truly skilled at something takes a long time and a lot of hard work. Sometimes, you can handle this with a Training Montage , but the plot doesn't always have enough time for this. So, how DO you go about transforming your Unlucky Everydude into a Super Hero in less than an hour? Why, you hand him an Upgrade Artifact, of course! No hassle, no trouble, just pick this thing up, and you'll instantly learn an important skill ! Real heroes work smart, not hard , it seems... If the object is a magical sword , expect instant Implausible Fencing Powers . Obviously, a natural result of Powers as Programs . Compare Amplifier Artifact and, for video games, Heart Container . Contrast Exposition Beam , when this is done with memories. If the object has a variety of effects depending on the demands of the plot, it's Green Rocks .

A more Sci-Fi oriented version of the Talking Animal , where the creature's ability to think and communicate with people on an equal level isn't typical of their species, but instead the result of some Applied Phlebotinum at work. Perhaps the animal's intelligence has been artificially increased (or inversely, people can communicate with them in their Animal Talk) and/or their physical voice structure altered so they can pronounce human words, or they have been fitted with a Translator Collar ; but these animals have come to be more or less equals to human in terms of ability, but their acceptance and status in human society can be questionable This rarely becomes an actual plot point; it's usually just an unspoken, world-building background detail so that the author can place a Talking Animal in a setting that wouldn't ordinarily allow for them See also Transhuman , Polly Wants a Microphone , Anthropomorphic Transformation and Artificial Animal People . Contrast Formerly Sapient Species

An installment of a large series that started its life as a Spin-Off or an Expansion Pack , but eventually became the next mainline entry in it, often due to scope creep or to Executive Meddling (when the execs demand a sequel shipped now</ , rather than when it's ready) See also More Popular Spin-Off , which may be the cause or the result of this Compare What Could Have Been , Refitted for Sequel , and Plot Tumor and its subtropes (where a side story overshadows the main plot)

You've created a wonderful product for your company. It's practically top of the line. It's reliable, sturdy, comes with a lot of great features, and everyone loves its design. However, all this quality comes at a price. Namely... well, the price. It costs too much for the mainstream market to afford it. What do you do? Well, you have two choices. The first choice is to sell the product at a loss, so that the mainstream can afford it. This is only</ advisable if it's sold with another product profitable enough to offset that loss, which is the old "give away the razors to sell the blades" strategy. The second choice is to not bother with the mainstream at all. Instead go for as much of the market that can afford it. This is known as Of course, the big spenders don't go for just anything. They have to feel they are getting their money's worth. So your advertising has to demonstrate that your product justifies its cost. There are three common methods of doing this. More shadily, this method of selling may be invoked by an Honest John -type Con

Man who artificially marks up prices in an attempt to part a fool and his new money . After all, the more expensive it is, the more valuable it must be , right ? Bear in mind that 'up' is relative to the market. Any field of product, even plastic cars and ink pens, has a 'prestige' level of pricing for those with a decent salary, an interest in quality, and/or a passion for collecting them . It even applies to the world's oldest profession ; see High-Class Call Girl for that. Compare Conspicuous Consumption . See also Brand Names Are Better . Compare/Contrast Pandering to the Base .

The Ditz with a trust fund. The Upper-Class Twit is either an aristocrat or a relative of someone in the upper echelons of society, and is automatically provided with all of his living expenses . In other words, he was a Spoiled Brat as a child, and now he has no reason to contribute to society, which is just as well, since he doesn't have the skills to contribute anyway. More often than not, he leads a hedonistic lifestyle that embarrasses his family. Highly prone to Conspicuous Consumption . Embarrassing the family enough or doing something truly heinous as opposed to just assholish may get them cut off, but this is not exactly common. Instead, they will usually just be leashed to a trust fund and kept out of sight and away from any sort of family assets that they risk gaining control of, as it is simply easier to provide for them and clean up their messes in private than to unleash them on the world and risk them bringing shame to the family or drawing unnecessary attention from shady associates who want their money Usually used as a foil for The Jeeves or some other more intelligent but lower-class character. The male Upper-Class Twit is often a prime target for Gold Diggers , while darker examples are typically substance-addled hedonists and likely rapists whose activities are typically covered up by hush money payouts to their victims until they have finally harmed too many people for money alone to be able to keep things out of sight A popular subtype and the female counterpart to the usually male Upper-Class Twit is the Airhead Heiress</ — a young, brainless, fashion slave party girl heiress. Any resemblance to Paris Hilton or one of the Kardashians is purely coincidental . Less wealthy or successful examples are typically small-time would-be influencers (possibly modeled after Caroline Calloway) living dysfunctional and/or outright pathetic lives (typically sustained by nothing but a trust fund and possibly an OnlyFans, with a lifestyle that is typically beyond their means) who are so deep in the depths of narcissistic self-delusion that they cannot see that most of their followers are there out of pity or amusement Sometimes they're Obfuscating Stupidity , and they may even be up to something far more interesting after hours . See also Sheltered Aristocrat On the off chance that the Upper-Class Twit has a job, it will usually be a sinecure with no apparent duties, though some may get some sort of reasonably prestigious white-collar position handed to them, usually by someone who owes their family a favor. If this does happen, they may sometimes rise to the occasion, get their act together, and become a valued member of the organization, but they are more likely to crash and burn after a few months in and get unceremoniously fired for their incompetence (if their family does not have enough pull) or become a department-ruining scourge and pox on the organization who cannot be touched for fear of losing their family's favor (if they do have that kind of pull). A Twit in a position authority may become a Pointy-Haired Boss , but that is less common than one might expect: a Pointy-Haired Boss

has responsibilities which he bungles, while a true Twit has no responsibilities at all. To become a Modern Major General is a more respectable career path for a brainless young aristocrat. An older one, especially in 1920s-1950s settings that involve murders in libraries , may well be a retired Major or Colonel, being referred to by that rank. If this character actually ends up in an active military position they'll often end up as the Ensign Newbie , or worse yet a General Failure A Sub-Trope of Idle Rich Compare Valley Girl (who doesn't have to be rich, among other differences), Rich in Dollars, Poor in Sense , Nouveau Riche (who starts out poor and strikes it rich, and is crass about it). May overlap with Uncle Pennybags The opposite side of the same coin is the Gentleman Snarker , who is very clever but terminally lazy Contrast with Authority Equals Asskicking , Non-Idle Rich , Lower-Class Lout , The Upper Crass (a similar unsympathetic portrayal minus the veneer of sophistication) The Spear Counterpart of Rich Bitch

Alternatively, the worker might be confused about the plans and mentions his doubts about the project to his boss who, unaware that the plans are upside down , invokes I Don't Pay You to Think and orders him to follow the plans exactly Subtrope of Bizarrchitecture , which has to be at work in order for the project to be standing after the builder is finished. Also relies a lot on Rule of Funny . See also Had the Silly Thing in Reverse . May result in Achievements in Ignorance . Not to be confused with Construction Zone Calamity , which is another disaster altogether

The result of turning a Sergeant Rock into a Colonel Badass (or other officer rank), without having to pass through Ensign Newbie . The starting point is important here: The character must have several years of experience as an enlisted soldier, before they are made an officer Most military forces that make a delineation between enlisted ranks and commissioned officers have mechanisms in place for having an enlisted soldier become an officer. These people are sometimes referred to as "prior enlisted" or . How they became so varies. Sometimes they got a field commission , but other times they applied for and were accepted to officer candidate school or equivalent. However, an officer that went up through the ranks is usually an exception among the officers—older, less formal education, and with a very different background In the U.S. military, officers from the rank of 2nd Lieutenant through Captain who have prior enlisted experience even have a different pay scale and are paid more than other officers of equal rank who do not have prior service. While there is a low-level rivalry between mustangs, officers who are commissioned through the service academies, and officers who attend Officer Training School, there is no doubt that mustangs generally receive more respect sooner from their enlisted subordinates (who appreciate that the mustang understands their perspective) as well as from their commanding officers, who know that the mustang needs much</ less supervision and training Outside America , it's reasonably common for this to be the only</ way to become an officer Whatever the reason for their commission, prior enlisted are often characterized as being more blue-collar and down-to-earth than those who started as officers, and in many cases are trusted more by the rank-and-file because of it. This is frequently helped along by the character having seen some action, unlike an Ensign Newbie who is usually straight from the Military Academy Closely related to Rank Up . The distinction is twofold: First, someone who came up through the ranks may have done it

offscreen, and second, this is specifically promotion from enlisted man to commissioned officer. Contrast Declining Promotion , when someone is offered this and turns it down, and Gentlemen Rankers , who are the inverse: enlisted troops with an officer's background

He's stuffy. She's untamed. It's true love Mr. Stuffy is in a rut: Life is boring because he plays by the rules. Along comes this wild and crazy woman to show him how to live life to its fullest , and she just might learn a few things along the way , too Though the most common form of this trope is from male creators who idealize femininity as a saving force, it could be Gender Inverted . Mr. Stuffy could be Ms. Stuffy and the wild angel could be male and help the little wallflower come out of her shell and blossom gloriously into a beautiful rose! Also, compare Well, Excuse Me, Princess! — Lovable Rogue meets Defrosting Ice Queen , the latter trope can also be applied to "Ms. Wild" as well, especially if she doesn't want to waste time with a nerd In more recent times, same-sex variations also occur, perhaps unsurprisingly given the reputation homosexuals have for wildness . The typical formula here will combine the trope with a Coming-Out Story , where the protagonist is straight and unhappy until meeting an attractive and adventurous same-sex love interest — maybe a glamorous Lipstick Lesbian for a woman, or a sassy Drag Queen for a man, but at any rate, someone who shakes up the status quo Occasionally the "Wild" party's outlook will be portrayed as better in every way — more authentic, self-actualised and Closer to Earth , where "Uptight" is detached and neurotic. However, if they end up getting Character Development of their own, it tends to be in the direction of taking more responsibility and/or learning to commit after a life of casual relationships Often seen in 2/3 of a love triangle, especially if the triangle includes two male nerds and their dream girl Because Opposites Attract , they'll live Happily Ever After unless Uptight and/or Wild are dying (Nicholas Sparks , we're looking at you!), in which case they'll live what remains of their lives to the fullest . Or unless there's a sequel, in which case Stuffy will surely develop Aesop Amnesia The defining trope of Screwball Comedy . Extremely</ common in Romantic Comedy Compare Savvy Guy, Energetic Girl . Manic Pixie Dream Girl can result when this trope is taken to extremes and a "Wild" female love interest comes across as a mere plot device

When the writers decide to play with a trope by raising the results to the extreme Since Tropes Are Flexible , they can be taken to various degrees. This is about taking them to degrees much higher than typical, often to ridiculous extremes In short, this is why The Same, but More warns that higher degrees of tropes alone are not new tropes. Those are simply Playing with a Trope This is usually done for parody , but there can be other reasons to do this Compare Troperiffic , Serial Escalation , Refuge in Audacity , Logical Extreme , Crosses the Line Twice Contrast Downplayed Trope

You know the story. It's a love story. Our lovers are from different worlds — one wealthy, one not. The poor girl has fallen in love with the Gentleman Snarker , or the stable boy secretly courts the princess. And she loves him too. Maybe it was Love at First Sight . Maybe she has a habit of slipping out to the seedier side of town for a night of fun. Maybe they've been friends their whole lives and the difference in status never really mattered. Will their

love be enough to let them be happy together? In any case, this is usually played out in one of three ways: When the rich girl wants nothing to do with the poor guy, but slowly warms up to him, it's a different trope entirely . Note that the roles aren't locked by gender : a working-class girl who loves a rich boy also fits this trope, as do two lovers of the same gender. When this happens with royalty, these arrangements are commonly called "morganatic" marriages. A relationship variant of the Odd Couple and quite often overlaps with Nobody Thinks It Will Work . Also often leads to cases of I Can't Believe a Guy Like You Would Notice Me , either with a severe case of insecurity (like the third type above), or simply the poor guy being constantly feeling lucky and appreciative that someone so rich could fall for him. If it's not just the fact that she comes from money, but that he feels like she's above him, she's a Peerless Love Interest . Compare with All Girls Want Bad Boys , which often follows the same socioeconomic groups (or the inverse, if the girl is The Ingenue and the boy is a Gentleman Snarker or Spoiled Brat). Can overlap with Single Woman Seeks Good Man as it is the guy's personality that wins her heart (as is the case mentioned above). Not to be confused with the Brittany Murphy film Uptown Girls </, which doesn't use this trope. Not to be confused with City Mouse either. This is transitioning into Dead Horse Trope territory since interclass marriage is no longer shocking, and the expectation that men should be the breadwinner in the family is much weaker today than it used to be. On the other hand, it may become an Undead Horse Trope with the emergence of culture wars and new waves of social stratification . For the non-romantic variant, see Interclass Friendship . For the version endemic to India, see Type Caste , although that trope is not restricted solely to marriage and relationships.

This refers to the tendency for characters to crack heh heh, you said "crack" jokes about the planet Uranus and its unfortunate name . In other words: Uranus is the butt heh heh, you said "butt" heh heh, you said "rectify" this usually try to vary the pronunciation (It Is Pronounced YOO-ruh-nus , although sometimes people get this wrong and say "urine-us", which is just as bad). Although there might be a case for OUR-ran-os, which may be closer to the original Greek. Uranus is the Romanization , unlike the other seven planets, which use the actual Roman names. And also heh heh, you said "Greek" It doesn't help a bit to learn that Uranus used to be classified as one of the with an atmosphere believed to contain large clouds of methane , that there are , and that it is Obviously, this trope is almost exclusive to the English language, since other languages use different words (or at least different pronunciations) for "Uranus", "anus", and "your" Subtrope of Heh Heh, You Said "X" , Joke of the Butt , In My Language, That Sounds Like... , and Unfortunate Names . See also Pluto Is Expendable for a trope about a (former) planet that gets no respect

Urban Fantasy, also sometimes called "Modern Fantasy", is a genre that combines common fantasy conventions with a modern setting. The name "Urban Fantasy" is sometimes taken to imply that all works in the genre must take place in a large city, but this is not the case. Rather, the name implies throwing fantasy elements into more modern, urban</ societies (hence its secondary name). Still, it's very common for Urban Fantasy stories to take place in a large,

well-known city, all the easier for their fantasy elements to hide themselves in As a genre, Urban Fantasy is sometimes seen as more accessible to the average reader than the Medieval European Fantasy due to the Like Reality, Unless Noted nature of it, and the fact that modern settings are familiar to readers whereas the medieval era is something that modern readers may have trouble relating to. The exact cut off date for what falls under Urban Fantasy is fuzzy, as the works which most commonly get this label applied to them feature settings in the present day, but works taking place as far back as the Victorian Era are generally included. Works taking place more than ten to twenty years in the future however, are not Urban Fantasies almost always take place on Earth, rather than a Constructed World , or if not on Earth then in a place so close as to make little difference. Alternate History is common, incorporating Fantasy elements into real historical events, with humans living alongside magic, though if this isn't done there is usually a Masquerade , implying that witches, elves and fairies live alongside us, just in hiding and probably forming a complete Wainscot Society . In such stories, The Unmasqued World is a common plotline. Another common convention used in Urban Fantasy is to suggest that at one point the world resembled a Medieval European Fantasy but The Magic Goes Away , and in the present The Magic Comes Back and now humans have to adjust to it Urban Fantasy often crosses paths with a number of genres, including Alternate History , Cosmic Horror Story , Dungeon Punk , Gothic Punk , Horror , Magical Realism , New Weird , Paranormal Romance , Paranormal Investigation , Science Fantasy , Supernatural Fiction and Supernatural Thriller . Sometimes it's difficult to tell whether a work qualifies, but generally speaking Urban Fantasy is known for showing the impact of modern society on the fantasy elements included in it. Elves carry guns, witches use microwaves and Leprechauns work at the bank. It takes more than tossing in the odd vampire solely for the fear-factor to truly apply Or, more cynically, a work is Urban Fantasy if it has a half-naked woman on the cover, and Paranormal Romance if it has a half-naked man on the cover Gaslamp Fantasy , Supernatural Soap Opera and Historical Fantasy are notable subgenres. Urban Fantasy is itself a subgenre of Speculative Fiction , specifically Fantasy . Many works that throw mystery-genre elements into the mix also rate as Fantastic Noir . Most of the Vampire Fiction published in recent times falls under this genre, whereas in the past it followed the conventions of Horror . Urban Fantasy is often considered the fantasy equivalent of 20 Minutes into the Future If you want to know how to write an Urban Fantasy, please visit the Write an Urban Fantasy page If you want to see a list of common tropes of this genre, see Urban Fantasy Tropes

This index consists of tropes commonly found in the Urban Fantasy genre. See that page for more information about the genre itself and a list of works associated with it The genre itself is closely related to Alternate History , Dungeon Punk , Gothic Punk , Horror , Magical Realism , Paranormal Romance , Paranormal Investigation , Supernatural Fiction and Supernatural Thriller. Gaslamp Fantasy , Historical Fantasy and Supernatural Soap Opera are sub-genres If you want to know how to write an Urban Fantasy story, please visit Write an Urban Fantasy

This is a true story. Happened to a friend of a friend of mine...</ An Urban Legend is a story which imparts information or An Aesop (explicit or implicit) and which purports to be the account of a true event which happened locally, fairly recently, and to someone the teller knows (often a "friend of a friend"). Even though the story is supposedly merely secondhand, it has usually been passed along through several sources and altered in the telling (to make it more 'local,' plausible, or what have you). Some, like folklorist Jan Brunvand or Snopes.com , collect these critters and try to evaluate their claims. Urban legends are sensational by definition, which makes them attractive to audiences and enticing to the media. They show up most often as the Case of the Week on television Police Procedurals , though dramas or even sitcoms have been known to borrow a legend and make it come true for one of the main characters. There are a small but increasing number of shows dedicated to proving/disproving their basis in reality; the most popular of these is MythBusters </, followed closely by the cable series Penn & Teller: Bullshit! </. Newspapers also pick up urban legends as filler articles; you can recognize them as stories that sound too weird to be true and surprisingly vague in the details (no names given for the people involved, for example). Yet even factual details are no guarantee of a true account: any Snopes </ article will show that the names, dates and locations frequently get changed to protect the non-existent. The moral of an urban legend often employs a bit of Scare 'Em Straight , to drive the lesson home or merely for the sake of humor (The Cabbage Patch Kids one, for example, was a joke) After all, these legends won't get passed along if no one wants to retell them. This is not to say that urban legends are all pure fiction. The most convincing of them contain a grain of truth (i.e. a less interesting but factual story) which becomes sensationalized or completely distorted to bring the message a bit closer to home. Instead of some unknown Alice suffering bizarre consequences after a cocaine overdose, it was Drew Barrymore . Instead of the gruesome murder occurring in a far away country, it coincidentally happened right here</, not far from where you</ live, and the Bad Guys who did it are people who aren't like us</ (foreigners, people of different races or cultures, junkies, celebrities, criminals...) Needless to say, urban legends make just as free with the message at the heart of the tale as they do with the facts of the story, so expect Broken Aesops , Fantastic Aesops , and all sorts of Values Dissonance ; not to mention Gossip Evolution . See also Oral Tradition . If you were looking for the film by this name, look right here .

Every popular game has a rumor around it that is capable of turning it into a urban legend, and due to an oversight or hanging plot thread, it just seems</ plausible. It's not hard to believe them, since the games often have real secrets and glitches that are so bizarre that they sound made-up . But the rumor persists in spite of all the evidence against it. A common source of these is April Fools' issues of popular gaming magazines. After all, if it's in print, it must be true! Other sources include mistranslated lines, aspects of the game being Dummied Out , and Missing Secrets . The Internet doesn't help either; while it's quick to debunk rumors, it's also very good at generating them. Many of these rumors feature fake secrets, which can supposedly be unlocked only by pulling off some ridiculously difficult feat (or doing something very time-consuming).

This, of course, makes the rumor harder to verify and contributes to its longevity. These days, this has been becoming more and more a thing of the past, thanks to advancements in cracking physical copies of games to dump their ROMs online and allowing people to look through the game's code becoming easier and quicker with each generation. Even if no one bothers to do that, the mere existence of the internet, and the pervasiveness of fact checking it provides quickly vaporizes most rumors before they take off anyway. Even still, before internet connectivity became common and the mobile internet took off, they could sometimes gain at least some steam before the facts came out. As such, a lot of these old rumors tend to come from the the sixth generation , and tend to be increasingly more common the further back one goes. Sometimes, the game's creators will include a character or a feature in a sequel because of these rumors. See Ascended Meme and Ascended Fanon . Some games have so many rumors that they can result in the creation of a "FWAK", a parody/troll walkthrough containing intentionally fake "secrets". The most infamous of these is undoubtedly for Final Fantasy VI nowledge." And as a side note, that isn't his only FWAK guide either (there was also a Final Fantasy IV version, which is widely agreed to be where a widespread rumor regarding Palom and Porom originated), and just to garner the reader's trust, also contained just enough legit info for completing the games. And helping propagate things was that the guides were often mistaken for ones by a very prolific writer from the same era named . Compare Wild Mass Guessing , Viewer Name Confusion , and Fandom-Enraging Misconception . If the rumor is about something a creator allegedly said in an interview or fluff, see God Never Said That . If a rumor is video game related but not gameplay related, see Pop Culture Urban Legends . For more information, check out , an excellent MythBusters </-type show on this very subject, or , which features gaming urban legends and Easter Eggs . Please do not confuse this for an Urban Fantasy edition of The Legend of Zelda . . The Sims </: The game's wiki has devoted to the various mysteries surrounding the game. In-Universe examples: In a possible Shout-Out to the infamous 'playable Luigi' rumour in Super Mario 64 </, at random intervals during the A Hat in Time </ DLC Seal the Deal</ , Snatcher says this:

This is a true story. Happened to a friend of a friend of mine...</ An Urban Legend is a story which imparts information or An Aesop (explicit or implicit) and which purports to be the account of a true event which happened locally, fairly recently, and to someone the teller knows (often a "friend of a friend"). Even though the story is supposedly merely secondhand, it has usually been passed along through several sources and altered in the telling (to make it more 'local,' plausible, or what have you). Some, like folklorist Jan Brunvand or Snopes.com , collect these critters and try to evaluate their claims. Urban legends are sensational by definition, which makes them attractive to audiences and enticing to the media. They show up most often as the Case of the Week on television Police Procedurals , though dramas or even sitcoms have been known to borrow a legend and make it come true for one of the main characters. There are a small but increasing number of shows dedicated to proving/disproving their basis in reality; the most popular of these is MythBusters </, followed closely by the cable series Penn & Teller: Bullshit! </. Newspapers also pick up urban legends as filler articles; you can recognize them as stories that sound too weird to be true and surprisingly vague in the details (no names given for the people involved, for example). Yet even factual details are no

guarantee of a true account: any Snopes </ article will show that the names, dates and locations frequently get changed to protect the non-existent. The moral of an urban legend often employs a bit of Scare 'Em Straight , to drive the lesson home or merely for the sake of humor (The Cabbage Patch Kids one, for example, was a joke) After all, these legends won't get passed along if no one wants to retell them. This is not to say that urban legends are all pure fiction. The most convincing of them contain a grain of truth (i.e. a less interesting but factual story) which becomes sensationalized or completely distorted to bring the message a bit closer to home. Instead of some unknown Alice suffering bizarre consequences after a cocaine overdose, it was Drew Barrymore . Instead of the gruesome murder occurring in a far away country, it coincidentally happened right here</, not far from where you</ live, and the Bad Guys who did it are people who aren't like us</ (foreigners, people of different races or cultures, junkies, celebrities, criminals...) Needless to say, urban legends make just as free with the message at the heart of the tale as they do with the facts of the story, so expect Broken Aesops , Fantastic Aesops , and all sorts of Values Dissonance ; not to mention Gossip Evolution . See also Oral Tradition . If you were looking for the film by this name, look right here .

Urban warfare is very different from conventional combat in the open. Clearing a city full of determined defenders is a very difficult task, as the urban environment negates the effectiveness of many of the most powerful weapons of modern militaries (such as tanks and aircraft), leveling the playing field somewhat for not-so-well-equipped forces that might oppose them. Any building can be turned into a stronghold and pose a major obstacle. Armored vehicles have difficulty maneuvering in tight streets and are vulnerable to attack from above, and artillery and air support won't do you any good if the enemy keeps changing positions, not to mention the high potential for collateral damage. Forget the rules of "gentlemanly warfare." It's all guerrilla warfare here—ambushes, snipers, booby traps, bayonets, Hit-and-Run Tactics and shotguns As an unfortunate side effect of the dirty , casualty-ridden , and momentum-killing nature of the fighting, armies are often forced to simply leave the job half done by avoiding it all together (usually due to political implications of such a prolonged, bloody conflict). At other times, they simply flatten as much of the city as possible before/while/instead of fighting over it , thereby neutralizing the "urban" aspect, and usually rendering the place strategically worthless in the process, as well as being, shall we say, problematic</ to any remaining citizenry. Yet another option is to besiege the city. After all, it's very difficult to grow adequate food supplies in an urban area, and breaking the defending force's spirit is preferable to a drawn out conflict Significant street fighting of this type was seen at least as early as World War II (especially the Battle of Stalingrad), though there are several Napoleonic war battles (most notably the Sieges of Zaragoza) that foreshadowed the urban warfare of the 20th century and such battles likely occurred even earlier than that. (See for example the two medieval Battles of St. Albans, discussed below.) Unfortunately this kind of warfare still takes place in various conflicts around the world Urban warfare is a nightmare in modern times. Even untrained militia can stand against highly trained troops in the confusing twists

and turns of a high population center. It is war at its dirtiest, with collateral damage difficult to avoid and a high potential for confusion. Units often find themselves in a confused tangle of friend and foe This kind of setting is likely for an action-heavy video game as the aspects of urban warfare's terrain goes from nerve-wracking and difficult to fully control for an attack in real life, to adrenaline-filled and unlikely to stall due to multiple approaches to advance (helped by windows or high floors being much less readily available than would be realistic) from being difficult to lock down fully with a video game's usually more limited participant count. The close proximity of walls and buildings in a video game can also cover up how their weaponry is modeled as being only capable at a much shorter range than they would be in real life Keep in mind that a battle for</ a city doesn't necessarily count as urban warfare. It requires that the city streets and buildings themselves are the primary battlefield Known in the US Army as MOUT (military operations in urban terrain) and in the British Army as FISH (fighting in someone's home) Compare and contrast with Jungle Warfare , where fighting takes place in remote tropical rainforests instead, Desert Warfare , where fighting is done in open deserts, and Winter Warfare , where fighting takes place in conditions below freezing, though in the case of the latter it can easily overlap with this one (Stalingrad being one such example)

They all have one, but we often don't know what work they're from. The Ur-Example is the oldest known example of any given trope. "Ur-" is a German prefix meaning "proto-, primitive, or original". Often, an Ur-Example doubles as the Trope Maker or Genre Launch — but not always, and far less often with ancient tropes , which often evolved over a long period of time rather than suddenly bursting forth from someone's head, fully formed. When they're distinct, a Trope Maker differs from an Ur-Example in that the latter is realized to have met the definition of the trope only after later storytellers started doing it on purpose. For instance, one of the pivotal Trope Makers of the Detective Story is Edgar Allan Poe 's collection of C. Auguste Dupin stories; before Dupin, there is no story genre</ of fictional detectives going about the business of solving crimes. Nevertheless, while you may or may not know Poe's Dupin stories, you've probably encountered a certain Danish Prince named Hamlet , who not only sets about to ensnare his uncle King Claudius , but even incorporates into his plans a play-within-a-play he dubs "The Mousetrap". But half-a-millennium earlier still, "The Tale of the Three Apples" is a proto- Detective Story from The Book of One Thousand and One Nights — which would make "The Tale of the Three Apples" the Ur-Example of the Detective Story , or at least a possible candidate. But Wait, There's More! Oedipus Rex , first performed in 429 BCE, depicts Oedipus investigating the cause of the plague that has struck his realm. Which will give you an idea of the depth of the rabbit-hole a quest for the Ur-example can lead you down. Even more brain-twistingly, Oedipus Rex's mystery is also an example of The Killer in Me , which is generally seen as a twist on the expectations of the detective genre, despite appearing in one of the oldest recorded "detective stories"! Wherever a trope has evolved gradually, determining the Ur-Example can be a complicated and contentious business. In many cases a trope has more than one Ur-Example, because determining the "earliest use of the trope" depends on subjective choices as to which aspects of the trope are its defining qualities. This doesn't just apply to tropes, many

times an idea is created by different people simultaneously or discovered and forgotten only to be rediscovered later. For example, who invented the telephone? Alexander Graham Bell, you might say. Wrong. Alexander Graham Bell and Elisha Gray both independently invented the telephone, but Bell got to the patent office first. Thomas Edison had the idea of wireless transmission of voice and signals but considered it unimportant, and it was forgotten until Marconi independently invented radio years later. And if this is the situation with something as concrete as an invention, imagine how easy it is with something as intangible as an idea for a concept in fiction. Ur-Examples are unfortunately highly susceptible to the "Seinfeld" Is Unfunny trope — not only because they dreamed up conventions that have been around practically forever but both because, since at the time they were</ so new, the creators didn't really appreciate what they were making and thus didn't conform to the standards of an aesthetic or gimmick that hadn't even existed yet, and because (sometimes) they were trading on novelty value and suffer by comparison when we have alternatives to compare them to. See Unbuilt Trope and Beam Me Up, Scotty! for more on this.

What to do when you've made an enemy of one of your underlings? Hey, you're the boss. All you've got to do is send him out on a mission that's sure to get him killed . He'll die in action, and you'll have Plausible Deniability In some cases, this can be as subtle as giving the underling in question dangerous tasks that need to be done anyway, resulting in a win-win scheme —they'll probably die, which is great, but if they're successful , that's fine too. Other times, the task might be a blatant setup solely for the purpose of killing them off, often going as far as Unfriendly Fire , deliberately backstabbing or sabotaging them at a key moment (or even simply leaving them in the lurch) to ensure their death. Either way, it's this trope and very much murder as far as guilt is concerned If it's the hero who does this, which will make their role as hero very</ questionable, they're setting themselves up (as in the Trope Namer) for a What the Hell, Hero? and My God, What Have I Done? . If it's done to</ the hero, Heaven help you if they should somehow not only survive but thrive on your Impossible Tasks . In those cases, you may have a Reassignment Backfire on your hands A subtrope of Shoot the Dangerous Minion and Make It Look Like an Accident . See also Unfriendly Fire for a more hands-on approach that can work in both directions. When you send someone out with an item that attracts danger, that's the Trouble Magnet Gambit . When that someone actually pulls it off, repeatedly, it's Surprisingly Elite Cannon Fodder . When you do this to yourself , it's Suicide by Cop . For extra irony (as in the Trope Namer), can be combined with Please Shoot the Messenger , where "Uriah" has to deliver the instructions that will get them killed. May overlap with Reassigned to Antarctica if the mission is to guard or otherwise stay posted in an extremely dangerous area. Related to Tricked to Death , depending on the nature of the assignment

Everybody poops. Everybody pees, too. But some writers and artists like to take that familiar yellow substance and turn it into comedy gold Urine Trouble is when an animal (usually a dog) relieves itself on some inappropriate target. It can also happen to a human

character. Occasionally it's a toddler or even a baby letting fly with the offending tinkle This is usually the unhappy fate of whatever hapless hero or character disguises himself/herself as a tree or a fire hydrant ... in which case you can hardly blame the dog. It can also happen with an amnesiac human who thinks s/he's a dog, or a dog turned into a human. It is often, but not always, the last step in a Humiliation Conga This trope is versatile enough that symbolic peeing will do; e.g.</ , we see an unsympathetic character drinking from a fountain, only for the shot to pull back and reveal that the fountain is shaped like a cherub urinating There's also the joke where a dog pees on someone and another character remarks, "He wants you for his own!", since male dogs pee on things to mark their territory Often a form of Vulgar Humor Subtrope of Toilet Humour . See also Dogs Are Dumb , I Ate WHAT?! , Cats Are Mean , Yellow Snow , Road Apples , and Dung Fu . When babies do this, it's a Tinkle in the Eye Compare and contrast Excrement Statement . See also Potty Emergency , Potty Failure , Nature Tinkling , Toilet-Drinking Dog Gag , Bird-Poop Gag

Bears are wonderful creatures. If you want to create an Intelligent Gerbil alien from one, you don't have to alter its appearance much, since they can already take bipedal form and are effectively Humanoid Aliens already (to note the most obvious similarities besides the partial bipedalism, they are plantigrade omnivores). Indeed, any furry humanoid creature that doesn't explicitly appear to be some other kind of creature will appear more or less ursine. Beary Funny , Beary Friendly and Bears Are Bad News are all possible Another possible reason for the presence of this trope is the apparent association between bears and stars, based on the famous Ursa Major/Ursa Minor (Greater Bear/Smaller Bear respectively) constellations A special group of them are not just any old bear, but explicitly teddy bears. These are either an extremely good natured race, or for ironic effect, extremely nasty See also Beast Man

A list of media originating from Uruguay . Media from other Spanish-speaking countries are located in a different category.

Some Speculative Fiction Series focus on a Cool Starship or two that's shiny and new and full of all the latest Applied Phlebotinum . The shows are all about idealistic and well-funded explorers or warriors, boldly going where angels fear to tread. Shows on the other end of the Sliding Scale of Shiny Versus Gritty treat the future as a place where blue-collar workers make a living doing unglamorous jobs and where spaceships look dirty, dingy, and used, like heavy equipment that one might find at a lonely truck stop in the middle of the night right now. The ships are old junk heaps run on a shoestring by hard-bitten characters on the edge, seemingly held together with two pieces of string, chewing gum, and the will of God — the SF equivalent of the struggling Film Noir private eye, in other words. This is the Used Future, and it's home to Space Truckers , renegades, regular working stiffs, and anyone on the "cynical" end of the Sliding Scale of Idealism vs. Cynicism . Think of it as Diesel Punk IN SPACE! Sometimes, there will be Shiny-Looking Spaceships alongside dingier ones; usually these new, ascetic and shiny ships will belong to the Galactic Military which has access to constantly churning shipyards and the newest heights of technology while the heroes must survive on surplus gear and homegrown repairs

These shiny looking spaceships, however, can denote that the crew piloting these über-ships is formed of completely green recruits with no real combat experience, often led by a pompous noble , while the battered ships are piloted by grizzled veterans who can fly circles around them. The original Star Wars </ popularised the concept (although arguably Moon Zero Two </ (1969), Silent Running </ (1972), and Dark Star </ (1974) led the way .) For budgetary reasons, typical science fiction offerings from the pre- Star Wars</ era often resorted to kitbashing to create sets for spaceships, space stations or planetary locations. This meant a lot of quarries, boiler rooms, and power plants acting as futuristic locations. Also, a lot of junked electronics were used to create random consoles and instrument panels. For contrast, the Star Wars </ prequels, set in a more civilized time, are correspondingly shinier . (Star Wars</ is a rare example on the "idealism" end of the above-mentioned scale.) A notable reason for the look descends from classic tricks for making and photographing models for practical effects work; dirtying up a model helps add a sense of scale. Applying color washes gives deeper shadows, making the surface appear more convoluted and complex than it actually is; adding streaking can help fool the eye into believing that inch-wide panels are actually meters-wide; and adding sooty smears near thruster cones and the like implies realism, even though in the real world those thrusters really shouldn't be spewing out a lot of dark sooty particles. Interestingly, portraying this in CG effects is actually more difficult, but sometimes the audience won't accept things not looking dirty enough . Which can be ironic because many spaceship exteriors are actually perpetually shiny in real life (polished to a high shine for heat management reasons, and unmarred due to the scarcity of dirt, grime and oxidizing agents in space) — unless, that is, they have to endure high-velocity atmospheric reentry, which the vast majority of real hardware only does once. On the other hand, some ships use a layered-ablative-standoff-armor setup like the which takes advantage of the tendency of small objects moving at comically-high speeds to shatter on impact, and lets the first armor layer shatter the junk (which makes a very tidy hole through the outer layer), and the second layer absorbs the (much less dangerous) spray of components without having any holes in it. This would have a scarred and pitted look after a while, and if the ship's owner didn't have money to replace sections of the shield as necessary, it could be this trope to a T. Contrast Shiny-Looking Spaceships , Crystal Spires and Togas , and Everything Is an iPod in the Future . See Also: Scavenger World as well as The Dung Ages for the Fantasy Counterpart . Usually found on the hard end of Mohs Scale of Science Fiction Hardness .

This applies when a villain or other dark and troubled/troubling character was not so as a child: the trope name also tends to appear as a Stock Phrase in these cases. Works, and audiences, may vary considerably as to what point they consider a character to be past the adolescent stage here, but post-adolescents in general need not apply. Aversions will usually be notable here, given expectations that Children Are Innocent , or that there's at least some Ambiguous Innocence even when Kids Are Cruel , so people will tend to assume a Start of Darkness must</ have happened, and that there will</ be a Freudian Excuse that will explain (if not excuse) all. By extension, this trope frequently applies through subversion ,

inversion etc. where an Enfant Terrible , Creepy Child , or Ax-Crazy junior initially manages to get past everyone's radar but is actually a little horror from the start . ("And he seemed</ like such a nice kid"). Often, it is not clear which a character fits under, which in turn often leads to a Flame War , especially if the character is also a Draco in Leather Pants . Generally, the trope tends to be reserved for villains near the Big Bad end of the villain spectrum, but can also be played for What Measure Is a Mook? . Also, while this is most commonly a villain trope , it can apply to characters who are not so much aligned with evil as troubled , bitter and twisted , cynical , jerky , despairing , lacking in emotions or insane. Or an Anti-Hero . Or just going through puberty . (In the latter case, expect the parents to invoke the trope name.) When played straight, this trope tends towards Rousseau Was Right , though if other villains and darksiders in the same work do not fall under this trope, Rousseau may have only a partial victory, and the trope is sometimes used as the exception that proves the rule in Hobbes Was Right or Humans Are the Real Monsters scenarios. Also frequently used, straight or otherwise, to make more or less anvilicious points about free will, destiny, individual responsibility, or the moral version of Failure Is the Only Option . Handled well, this trope can really add depth and complexity: handled badly, especially by combination with a poorly executed Freudian Excuse , it tends to cause Badass Decay and Villain Decay . Often related to From Nobody to Nightmare , though the character may be of some prominence from an early age, or even from birth. This subset of the trope can be heart-breaking, as when a long-awaited Chosen One turns bad. Also often the precursor to Break the Cutie and Woobie, Destroyer of Worlds . In these cases, expect it to be Played for Drama with extra Tear Jerker moments. It's also often invoked to make the audience Cry for the Devil . If they weren't just a sweet kid, but a Kid Hero , they may be a dark version of Kid Hero All Grown Up . Sometimes, the "used to be nice" stage may be revealed only retrospectively, often by a third party, and the villain himself/herself may treat the "sweet kid" stage as an Old Shame that undermines their Villain Cred . This last one may be Played for Laughs , as the villain furiously denies their Pet the Dog past, often complete with stomping on cutesy childhood toys and memorabilia. Or it may be Played for Drama in an "I Know You're in There Somewhere" Fight with the good guys. Compare to She Is All Grown Up , in which the character may have been a sweet kid, but is now a very attractive woman. Compare Used to Be More Social in which the character used to be a social butterfly, but has become introverted and withdrawn. Contrast Reformed Bully , a character who was mean and/or smug while young, but is a much nicer person now, and Former Teen Rebel , a character who was rebellious and immoral while young, but is no longer like that. Sadly, this trope is Truth in Television , as many people who started out as good ended up becoming malicious and criminal later on in their life, but as this trope deals with a person’s morality, No Real Life Examples, Please!

A standard visual gag almost always Played for Laughs . Alice is looking for something. Maybe it's a new outlook on life, help with a homework problem, or maybe just her pen. Bob hands her a book, or suggests a book he doesn't have with him, and suggests she shouldn't take too long to finish with it, and before she can thank him or object, he's out the door. Cut to Alice suddenly realizing the book in question is a Doorstopper — and Bob expects her to finish in half an hour. It might be a religious text, a very wordy legal

document, a dictionary, an obscure scientific (or arcane magic) textbook, the phone book, a catalog with no index, possibly even a Tome of Eldritch Lore or Great Big Book of Everything — anything that normally would take longer than an hour or so to read through. Later, it's revealed that Bob actually gave her the book: For more book-themed humor, see: Compare It May Help You on Your Quest , Magic Feather , and Pocket Protector , where other objects are used for purposes other than for what the audience may have been led to expect. Contrast "Reading Is Cool" Aesop .

Useful notes on a variety of subjects, the purpose of which is threefold: Every specialized wiki will accumulate useful notes like these as it grows. that this is not supposed to be an index of everything that exists in the real world — that is the purview of Wikipedia . We are a site about media and storytelling</ . As a rule of thumb, items to be added should either be commonly featured in media, or related to its creation and distribution in some way. Useful Notes articles are not tropes and are . Similarly, tropes are not to be used to describe the subject of a Useful Notes article directly. You may, however, list tropes that are commonly found in media portraying the subject.

Security cameras that would, if functioning, have captured images of the perpetrators, were actually non-functional. An issue encountered frequently by detectives solving crimes in modern-day settings, such as in Police Procedural shows. Typical reasons include: Compare Insecurity Camera , where the cameras are stupid, and you're supposed to be able to avoid them. Another way of putting the difference is that Insecurity Camera is from the perspective of a (hopefully successful) trespasser while Useless Security Camera is from the perspective of guards, owners, and law enforcement having to catch a successful trespasser. This frequently happens in detective and police procedural shows, in part to prevent the detectives from having an easy way to find the perp. (Often, the less time left in an episode, the more likely the camera is to work. This would be a prime example of Spoiled by the Format .) Of course, even a good camera system can be useless if you've employed a Surveillance Station Slacker to monitor it. Compare Camera Spoofing .

As far as human organs go, there is the common idea that no one knows exactly what the spleen does. Therefore, a common sight in fiction is that either the spleen is a completely useless part of the human body or it serves some sort of encumbering function. Often Played for Laughs , especially with the implication that damage or loss of the spleen is trivial and harmless. Because of the Inherently Funny Words effect, spleens are often mentioned for a punchline or joke. This mostly happens in an Arson, Murder, and Jaywalking manner, with the spleen as the jaywalking. Along with the fact that it's seen as useless, the spleen is often portrayed as a convenient place to get hurt/injured in a fight, possibly because it is somehow considered funny . In fact, the spleen plays a very important role in the lymphatic and immune systems. It is easily ruptured by blunt or piercing impact and is very difficult to repair (doctors say that it has the natural consistency of a blood-soaked sponge). If severely damaged, often it must be removed surgically or the person in question is likely to bleed to death; once removed, the person has

to take care to avoid bacterial and protozoan infections (to which they become more susceptible). A fairly comprehensive treatment of the subject is covered in Compare We Will Not Have Appendixes in the Future . Not to be confused with the useless Spleen .

The characters normally have access to powerful abilities, which could greatly help them in their current situation, but are currently unable to use them for one reason or another Common in series like Bewitched </, where the characters are given almost unlimited powers at the beginning, and the writers have to come up with more and more arcane limitations to create a new conflict each week Often involves a Fantastic Aesop about how using powers to avoid hard work is bad A form of Holding Back the Phlebotinum . Compare Coconut Superpowers , Embarrassing Superpower and Cool, but Inefficient . For superpowers that are actually useless, see What Kind of Lame Power Is Heart, Anyway? or Blessed with Suck . When the uselessness happens just when the power would've been necessary, then it's Plot-Driven Breakdown . When the useless superpower becomes useful, it's This Looks Like a Job for Aquaman

While cell phones can be useless , at times they can be more handy than we are. Because of them, we have access to every word in the dictionary, can communicate while not being in the same area as your friends, can find out about local and long-distance news as soon as it happens, watch porn in a public area, can shoot lasers out of satellites from space... and also watch every cat video available on YouTube Because of this, sometimes the cell phones are more useful than us</, almost to the point of not even needing us to function . In that case, some would be completely helpless without our cell-phones or our tablets or our fancy-pants PCs and Macintoshes. They can't spell correctly, they can't adapt to their surrounding environment, they can't eat anything without submitting pictures of their food onto Twitter and Facebook . They probably wouldn't even know how to turn a page after using Kindle for so long. There is a reason why "Nomophobia" (fear of being without a mobile phone) is considered an official term in the psychological community these days. Safe to say, modern conveniences can be considered a necessity for most these days A staple of every Phoneaholic Teenager

In most countries, a marshal is a high-ranking (or the</ highest-ranking) military officer . A United States</ Marshal, however, is a federal law enforcement officer, charged with apprehending fugitives from federal law, protecting the federal courts and ensuring the smooth function of the court system The United States Marshals Service was the first federal law enforcement agency created in the young U.S.A., in 1789. While its primary duty was to the judicial system, the Service also acted as the local-level representative of federal laws. For example, the Marshals took the census every ten years until 1870 Marshals have the ability to deputize ordinary citizens (but not military personnel) at need, popularly known as "forming a posse ." In films and television, many marshals' deputies are clueless , which will inevitably exasperate the marshal when he finds out. Sturgeon's Law strongly suggests that this happened in Real Life as well Since a marshal is directly responsible to the federal government, they're not as likely to be influenced by local politics as The Sheriff

or a police chief. That said, many U.S. marshals have also been sheriffs or town marshals before or after their federal service Note that the difference between something like the FBI and the US Marshals is that the marshals are expected to go off into the wilderness, usually alone, take into custody and bring back to justice whoever they are sent after. It pretty much requires that you be a total badass. So while an FBI agent might or might not be a badass, a US Marshal always is - even if he looks like a nerd . Big duties assigned to the Marshals Service today include Witness Protection and prisoner transport across state lines; that said, a surprising number of them spend most of their time doing pretty mundane work like doing security at federal courthouses (manning the scanners that sprouted at the courthouse entryways after 9/11) and serving court papers and enforcing judgments on litigants in federal cases (if somebody sues you in federal court, and wins, and you refuse to just cut a check despite having plenty of stuff, it's a US Marshal who will be seizing your car or your house or your prize fancy cat to pay the judgment; if you don't have a lot of stuff but do have a steady income, it'll be the Marshals who arrange the garnishment). They are not, however, the Air Marshals assigned to flights to counter hijackings, which is a separate service entirely

A uterine replicator is a way of growing a child outside the human body by using technology, magic, or a combination of the two in place of the mother's womb. Such a technology has two main applications: it can be used by couples in place of traditional reproduction, or it can be used by large organizations as means of producing a large amount of humans in an industrial fashion In regards to the first application, the reasons behind it are many and varied: sometimes it's done to combat problems with sterility , sometimes it's treated as the logical extreme of planned parenthood, sometimes it's a way to protect the mother from Death by Childbirth , sometimes it's even used let two men reproduce together without invoking the rather messy issues of Mr. Seahorse . It can also be a case of a Truly Single Parent with a rather unique personal philosophy, wishing not to "pollute" his/her child (often a Designer Baby) by exposure to the "flawed" environment of a natural/organic womb Because of the benefits described above, such an application of these devices is usually not associated with overtly Dystopian settings. However, the other application — that of industrial production of humans — absolutely is. In the most typical scenario, popularized by works such as Brave New World </, a power-hungry totalitarian government outlaws all sex (or specifically all reproductive</ sex), and claims exclusive rights to making children, who it can then easily brainwash into accepting the government's official ideology and their place in society without question from birth (or even from conception) due to them having no biochemically based emotional attachments to their parents. This is also a convenient way to prevent a coup; if the government is overthrown, humanity loses its only means of reproduction and the rebels doom themselves alongside their leaders. In less-well-written stories of this kind, whoever's rebelling against said government is likely to contend that the technology itself is inherently evil because the method is artificial , rather than that the government is evil for using it as part of its oppressive brainwashing techniques. Likewise, they may undercut their own moral position by contending

there's something inherently evil about the children</ produced this way, on the grounds that having no biochemical attachment to one's parents somehow "erases" one's humanity In an increasing number of science-fiction settings where a society is portrayed as promoting gender equality, uterine replicators are a way of allowing women to skip the mental and physical health risks of natural pregnancy to mother and child, particularly if the mother works in an inherently dangerous environment or occupation such as the military Others use uterine replicators to demonstrate how misogynistic</ a setting is as many feminists theorize that the patriarchy originated as a response to men's . Women play a much greater role in reproduction than men do, and maternity was always something guaranteed but paternity was not . The heavy restrictions placed on female sexuality and the need to make women submissive to men were done to exploit women's childbearing capability and ensure paternity. The use of uterine replicators thus make women "obsolete" and men have full power over the creation of life If the child grown in such a device is also genetically engineered (as is often the case), see Designer Babies . Artificial Humans are usually products of this Rarely pointed out is the fact that such devices run into the same problem as Only Electric Sheep Are Cheap , in that it's usualy would by much cheaper (given the implied cost of labor even in those advanced settings), to make a baby the old fashioned way

The first and least despicable trope in the unholy trinity of villainous objectives, Utopia Justifies the Means is where the goal of the Big Bad is the creation of a Utopia in the long run, a better world for everyone as a whole (or at least "better" for them in the villain's eyes), no matter what the cost It's a place built out of dreams and starlight; the name " Utopia " is a somewhat poignant pun by its author, blending the Greek words for "Good Place" (eutopia) and "No Place" (outopia), and despite (or perhaps because of) its unattainable nature, it has endured in myth and dreams since. While dreaming about what it would be like is harmless (like how topless glamour model volleyball would be the national sport, bureaucrats would work recycling paper , there's No Poverty , and ice cream is just as delicious with none of the calories ... mmmm...), it's just a dream based on nothing more solid than wishful thinking For the Fallen Hero , Dark Messiah , Totalitarian Utilitarian , Well-Intentioned Extremist , He Who Fights Monsters , and other visionary villains , however, that's not the case. Obsession with the idea of Utopia will convince them that it is</ possible, and almost guarantees a Face–Heel Turn as they become willing to do anything </ to obtain their Ambition of Paradise They will plan to Take Over the World , use the heart of an orphan or an Artifact of Doom , steal the Cosmic Keystone , commit mass brainwashing , sell themself to higher powers or unleash the Apocalypse so that they can destroy all resistance and usher in their own </ ideals for Utopia. They will operate under the assumption that this wonderful new world has them at the top, free to exert a benevolent or iron-fisted regime as they will. Using logic that would make Machiavelli blush, they reason that every sacrifice and atrocity is worth The Greater Good, putting the Well Intentioned</ in Well-Intentioned Extremist </. The Knight Templar often claims this to himself before succumbing to the decidedly less benevolent Despotism Justifies the Means

A great deal of drama can be derived from this — are they willing to kill a friend for it? Will they put their vision where their mouths are and kill themselves if need be, or is there a line even they will never cross? Will they even admit that some of the things they do are Dirty Business ? Some are able to inspire incredible devotion in their followers precisely because their vision and conviction includes that they know</ they won't live to see the paradise they plan to bring about , or don't deserve to . One final terrible sucker punch is for their vision to be revealed as a Tragic Dream — even if it went off without a hitch, the resulting world is worse off, not better When it comes to different kinds of extremists, a Totalitarian Utilitarian is far more likely to think this way, while a Principles Zealot is more likely to believe that Utopia justifies nothing Heroes and the audience will be faced with the philosophical conundrum that maybe The Extremist Was Right and the world is in truth a Crapsack World that needs a total renovation like what the villain says, but is the renovation worth sacrificing billions? In more morally ambiguous situations, the "means" might not be catastrophically destructive, all it takes is a "small", inconsequential sacrifice when The Needs of the Many outweigh the needs of the few. Say, selling forsaken little girls to alien slavers in exchange for technological advancements for mankind as a whole, or the daily ritual slaughter of criminals to appease the gods and ensure prosperity, or the ever popular The Singularity Lotus-Eater Machine Assimilation Plot where suffering does not exist. If his ideals guarantee the happiness, survival, civilization, and/or progress of the human race, isn't it worth it? The Heroes may decide that total demolition is not the answer, and it's better to make the most out of what you have while allowing humanity to decide for itself Often utilizes some form of Aesoptinum , generally with the message "Peace and harmony isn't worth getting rid of The Evils of Free Will " Curiously, the first example of a Utopia in recorded literature — Plato 's The Republic </ — is an example of this trope (possibly) played absolutely straight and not</ as means for the opposite Aesop . Plato argues that the establishment and survival of the perfect state requires autocratic rule by philosopher-kings bred from a system of eugenics and there should be a " noble lie " that the citizens must be taught to induce them to love the state unconditionally Contrast Dystopia Justifies the Means , when the villain actively seeks to create a Crapsack World . See also Despotism Justifies the Means , where they will create or maintain either simply to remain in power

Something's a hit, the production gets either more freedom or more money , and they decide for the next entry to make up an excuse to go to a vacation spot This is heavily subjective, but if an actor signs onto a production that was already being shot in a vacation spot, that's a different trope (so, Bruce Campbell signing up for Congo </ doesn't count, even though he admitted he did it just because they needed him for a few days, and the studio would pay for him to tour the rest of the time). More than one director has joked about using location scouting as a justification for taking vacations to exotic places Also see Sequel Goes Foreign , Vacation Episode , Awesome, Dear Boy Please note cases where actors have openly stated it, and cases that are based on speculation

A character takes a deep breath in order to draw various objects in

along with the air, water, or whatever other substance they happen to be in. There are two sub-tropes to this trope: In cartoons this typically appears as a comedic sight-gag, in which a lazy Big Eater consumes large amounts of food by sucking it into his mouth. This may be accompanied by the sound of a vacuum cleaner and/or have the character's mouth take the shape of a vacuum nozzle for added humor Particularly common in animated depictions of elephants, aardvarks, and similar animals, whose trunks and elongated snouts often undergo Dinner Deformation to show what becomes of the consumables they've suctioned up. This sometimes appears as an innate ability of a character. More often found in monstrous (or at least non-human) creatures with big mouths. In battle they suck in air to draw their opponent towards them, in an attempt to devour them directly or simply draw them in closer for an attack. However, the indiscriminate nature of this ability means that the user risks drawing in unwanted items that may damage them in the process. In video game boss fights the player on the receiving end of this often has to mash the control stick in the opposite direction to avoid being sucked in. Often a form of Eating the Enemy and frequently leads to Just Eat Him when used against main characters. Can be considered a type of Breath Weapon . There is nothing stopping users of the superpower version from using it to justify the sight-gag version, as a form of Mundane Utility . As the real life examples below show, this trick can </ in fact work in a liquid medium such as water. Many underwater predators use this as a method of catching their prey. In most fictional depictions, though, the suction is created by drawing in air</... which would "realistically" require a rather phenomenal lung capacity or a literal Black Hole Belly to exercise any significant force at range, let alone keep the effect going for longer than a few seconds. Things like vacuum cleaners and jet engines work because they let the air pass straight through them instead of trying to hold it all in. Weapons That Suck and Tractor Beam are its artificial cousins . In both the user's mouth may stretch into a Volumetric Mouth . Super Breath moves in the opposite direction. Not to be confused with Vicious Vac , the trope about actual vacuum cleaners.

A classic Body Horror , the Vagina Dentata is a folk myth of toothed female genitalia, which occurs in many cultures worldwide, from Maori to Native American. It is suspected that the concept originally came into play as part of a Scare 'Em Straight cautionary tale, warning of the dangers of sex with strange women, but the surreality of the image, and the castration anxiety it evokes, has made it a hallmark of psychoanalytic painters and writers. Currently, many anti-rape female condoms work along the same principle If you believe in deep inner subtext, you're likely to see them in any creature that's moist, has teeth, and devours its victims (often whole and usually alive). Examples run from the Sarlaac pit to Davy Jones' Kraken . Sometimes there seems to be something to that , but usually a cigar is just a cigar... so to speak Several women's studies professors have advanced the theory that the vagina-as- Nightmare Fuel trope runs mainly on an inherent revulsion to female sexual power: to quote Stephen J. Ducat, "The fear of entering triumphantly, and leaving diminished." Post-structuralism might have a bone to pick with this notion, since it is based on the binary between lack and desire (i.e. a lack is somehow necessary for desire to be present), while post-structuralism (among other things) decries binarism

as restrictive. But we digress An alternate theory suggested by some men says that the fear of the vagina dentata arises from the idea that having your penis bitten off would really, really hurt </, but of course that doesn't even come close to explaining why they'd imagine teeth in a vagina in the first place</. Strangely enough , this trope has not diminished the male enthusiasm for fellatio. This may be explained by the fact that most legends of Vagina Dentata show said toothed orifice as having a mind of its own </, and a rather malicious one at that, whereas the standard mouth is manifestly under the control of its owner. Others point out that the idea of a secret mouth — sharp, nasty, and ready to bite you when you least expect it — is terrifying in and of itself (compare the similarly visceral but less Freudian Belly Mouth , especially when it appears as a surprise, like during the defibrillation scene in The Thing (1982) </) It's worth noting that if a (normal, human) woman really did have teeth down there, she would still need to Kegel the crap out of her pelvic muscles to make them strong enough to tear skin . Otherwise, the teeth would do nothing more than just feel weird, really, unless they were somehow exceptionally sharp , although this would naturally run the risk of injuring the woman in question as well Note that a woman with a Vagina Dentata, especially one who can control it, can be an example of a Horny Devil too, as both tropes were born from legends warning against sex with strange women. Or a warning for women to not come too near in that special time of the month . Some cultures kept their women in special houses at that time, others would just say: try anything and theirs will eat yours — or make it fall off. Subtrope to Super Sex Organs . Raunchier Sister Trope to Lamprey Mouth and Flower Mouth . The Gender Inverted version of the trope, "Penis Dentatus", usually in the form of oblong objects or creatures with teeth or spikes, is not entirely unheard of and tends to symbolize masculine dominance or brutality, if not being an outright metaphor for sexual violence ... and shockingly enough, is Truth in Television for (the most infamous being cats) Of course, usage of the trope is just as likely to not originate in Sexual subtext or Freudian imagery at all, instead just being a normal horizontal mouth that was rotated ninety degrees for the sake of Bizarre Alien Biology or Body Horror Sub-Trope to Monster Mouth

Some characters are subject to a strange fluctuating sense of maturity depending on plot necessity, mostly because animated characters can have abstract designs and lack obvious visual cues (especially when the characters are non-human). We're only left with the personality of the character, which tends to suggest their age. Dawson Casting , leading to a blurring of the line between adults-playing-adults and adults-playing-teenagers, is responsible for several live-action examples A TV character may be implied to be some sort of adult</ compared to other characters who are clearly "kids, teenager", or vice versa, but this is largely an illusion in case the writers still want them in plots to which a younger audience can more easily relate. The only nominally-aged character is usually the lead, and this is only useful to make his same-aged audience feel better, since he will probably not be allowed to get older Occasionally, characters are given specific ages along with more obscure and extensive biographies, but are ultimately ruled by audience appeal, Cast Speciation or personalities that fit into the mean age of the

audience. Information that runs counter to that turns into the Improbable Age issue, and may be tweaked in other places Compare Mistaken Age

Oh my God! I'm, like, so totally glad to see you! Except you. Put some pants on , already! Gross! Like , anyway, I'm what some of you, like , call a " Stalk Parody Character", and yes, there are some totally creepy guys who— Oh, " Stock</ Parody Character"! I am SOOOOOO completely embarrassed! I gotta watch out for homophobes . Wait, that's, like, something else. So if you want to, like, put someone like me in a story, you need these four totally important traits. Leave one out, and you just have some cheap knockoff of me, and that would just be, like, so</ tacky. Oh my God. Okay, even though I'm best known for being from California , I can be, like, global, or something. The Valley isn't like, just in Oh my God, was that like, totally deep or something? Oh, and I totally know that I'm, like, not a real person in real life, or anything. I'm some kind of stereotype, you know, like parroting teens in The '80s and The '90s , or some junk. Even nowadays, though nobody seriously talks like this anymore, I've become, like, the default "vapid white girl" dialect. And I'm also, like, intertwined with the Dumb Blonde troop now, I mean trope. And I don't care what what Mitzy Connor said, this is NOT a dye job! Puhleez! Anyway, compare Totally Radical , The Ditz , Surfer Dude (who's, like, totally hot, couldn't you just die?), Brainless Beauty , Rich in Dollars, Poor in Sense , Socialite , and some junk. Also, totally not related to that Uncanny Valley Girl . She's, like, soooooo</ weird. For sure! Like , Examples (totally):

Tropes are common denominators. Their viewers recognize them, laugh at them or groan at them, but most of us can guess where they're coming from—specifically, what cultural values are embodied in the trope. Unfortunately, some tropes just don't travel — or age — very well. They're fine on their home turf, where everyone understands them and knows what value system they're based on. When that trope makes the trip to another country, however, it gets seasick on the way over, arriving at port looking distinctly disheveled and finding itself among strangers who have no idea what it's talking about. Since there are so many countries (193 UN members and 2 observers to be exact, and that's just counting those that have international recognition) and cultures in the world, it's not surprising that there are so many different outlooks on life — what's important, who's</ important, what constitutes justice and what qualifies as cruelty changes depending on where you are. Even in countries that speak the same language, values can be different. The UK and the USA, for example, share a language and are regarded as culturally similar to one another... but handguns are legal in the USA, whereas they are mostly banned for civilians in the UK. The UK also has no death penalty, while the US does for federal offenses and offenses against about half the states. This leads to some fundamental differences in the way the legal system is perceived, even between two countries that are alike in many other ways. Sometimes, the difference is even closer to home. A show where the death penalty for a criminal is a good ending in a state that accepts such a measure may not be as accepted as such in a state that frowns on execution. With the multicultural nature of many places, sometimes a trope only has to go down the street to become completely

unrecognizable. Differing religions, backgrounds or life experiences can mean that a person's view of a trope differs from the "standard" that said trope is derived from. Other tropes find it difficult to age gracefully. The world being the dynamic and evolving place that it is, some aspects of the media don't quite manage to keep pace with the time and become the "Grumpy Old Men" of Tropeland. Very often, the trope in question is An Aesop , and exporting it, or viewing it twenty years later than the time it was created, gives unfavorable results. See also Unfortunate Implications and Discredited Trope . Compare Moral Dissonance , where the show breaks its own morals. Also see Germans Love David Hasselhoff , in which it's critical acclaim rather than moral values that is on the line. Also see Fair for Its Day , in which the work actually has less</ values dissonance than its contemporaries. See Culture Clash and Innocent Bigot for when this happens in-story and Deliberate Values Dissonance for when the author is doing it on purpose. Please list that trope instead of invoking this trope on any works that do so. Also see Have a Gay Old Time and Get Thee to a Nunnery , where dialogue is interpreted differently due to this. Has similarity to Good Flaws, Bad Flaws . Also see The Generation Gap , which is a subtrope encompassing differing values among generations (for instance, between the World War II and Baby Boomer generations). Blue-and-Orange Morality is this trope taken Up to Eleven . Contrast Values Resonance . Can sometimes result in Misplaced Nationalism . And of course, it's likely to result in the exclamation, Dude, Not Funny! An example of Values Dissonance between the United Kingdom and the US would be the use of blackface imagery, which formed the centrepiece of The BBC 's Black and White Minstrel Show</ until 1978, with live performances continuing all the way until 1989. Blackface was/is also used in other countries, such as Japan, The BENELUX, and Australia, where it does not have the same cultural stigma or even origin. WARNING: By its nature, this trope is highly controversial. You may well encounter a custom or belief on this page that you don't think is dissonant at all; you might even be inclined to vehemently defend it. Indeed, concepts</ of right or wrong or even of what is "proper" are rarely universal in the truest sense of the word. Across every period of Earth's history, just about anything has been or can potentially be justified, or at least rationalized. So if you see a value here you don't find dissonant at all, please refrain from adding your own interpretation . (However, you're welcome to contest it if you don't see how it would be dissonant to anyone</ , although even then, please edit with civility as usual.) Note: Examples regarding the dissonance between time periods require a 20-year waiting period before they can be added.

There are all kinds of job opportunities for sexy hemovores and solarphobes. Or so one would think, but noooo. You want to make a TV series starring a good guy vampire, or other immortal being? Well, after a few rounds of development, you're almost always going to have certain bullet points in your plot setup, just due to sheer parallel evolution and the fact that all pitches eventually morph into They Fight Crime! : He (and it will be a he) will be a detective, either police or private. This might be because vampires fit so easily into the Film Noir Private Detective with their tendency to be out at night, tendency to wear long coats , messy backstories , inevitable love difficulties , not-so-clean morality , and in some sense of the word, a drinking</ problem. Note that being a vampire is not an absolute requirement to qualify for this trope; hitting enough of the

above list (preferably at least five of them, although an otherwise immortal character can skip out on any two of points 2, 3 and 6) usually qualifies the series as falling under this banner. A subtrope of Friendly Neighborhood Vampires . Needless to say, when vampiric, falls firmly under Our Vampires Are Different . A specific type of Defective Detective , and a stock trope of the Urban Fantasy genre. Usually overlaps with Occult Detective , but doesn't sufficiently often that it makes the numbered list above. Highlander </ often fits this trope to a T, despite not involving vampires. (In particular, the TV series fits into the genre.)

Ah, vampires! You know, everyone's favorite blood-sucking creatures Aof the night, be they traditional , a bit strange, or completely Aout there .. lso see the related indexes Ghost Fiction , Mummy AMedia , Werewolf Works , Werebeast Works , Witch Works , and AZombie Stories

In a vampire story, naturally someone will have the misfortune to be targeted and bitten. If the vampire doesn't finish off the victim right away, their bite will leave a visible mark on the target. Typically this are two punctures on the victim's neck, though how exactly this mark appears to the eye, how salient it is, and where on the victim's body it is located may vary. This mark can give friends and family of the victim the chance to find out something is wrong and save them before it is too late (the traditional idea that vampires seek to return to the same victim for feeding until the latter expires is usually in effect) Conversely, said vampire could manage to complete their task in draining the blood out of their target and bringing them into the ranks of the undead, with the pinpricks still remaining where said victim was chomped on. This is likely to show the audience of the person's vampire status if they're trying to blend in with others or just remind them they're under the undead curse (if it's curable or not depends on the story). Due to many stories having their own interpretation of how vampires work , bites post-turning don't always stick around after transformation, either due to the new healing factor closing it up or just acting as a indicator if the victim is still clinging to humanity, with its disappearance meaning it's too late Sister Trope of Vampire Bites Suck which is where a vampire goes really all out on the bites and leave a very messy and gory result that's unlikely to be survivable. As well as Kiss of the Vampire , which is the opposite with the added benefit of having an... erotic sensation from the bite

Tropes about those (sometimes) dead people that suck your blood.</ See also The Undead , Tropes of the Living Dead and Werebeast Tropes .

This trope is Exactly What It Says on the Tin . When Romance Ensues in a continuity featuring Fur Against Fang , the result tends to end up including a Love Triangle featuring a vampire and a werewolf as two of the three members . Generally the central figure is a human, but not always Basically, choose your vice — necrophilia or bestiality Usually also involves Feuding Families , Fur Against Fang , Maligned Mixed Marriage , Star-Crossed Lovers ,

Romantic Vampire Boy . Compare Muggle-and-Magical Love Triangle , this trope's main competitor in the Paranormal Romance genre. May overlap with Monster/Slayer Romance if the human ordinarily hunts vampires or werewolves

A bad guy or bully breaks someone's stuff, either trying to upset them, get revenge, get information , or for any other nefarious purpose. There's a beat , as we see the victim's reaction . They're usually looking either utterly deadpan, slightly confused, or oddly, a little smug. Then comes the punchline: "That's not actually mine."</ For added facepalm value, the broken thing actually belongs to the guy who broke it. An alternative is for it to belong to someone much scarier than the intended victim . There's also another variant where the intended victim is a Pyromaniac , Mad Bomber , or a destructive guru in general and it turns out he was about to destroy the stuff anyway. Added insult to injury if the intended victims criticizes their method of destruction and demonstrates a more effective way . See also Shame If Something Happened and Interrogation by Vandalism .

A list of tropes that have to do with any form of vandalism.

On one end, we have the Hunter of Monsters , the man who stalks the night, armed to the teeth, ready to mow down vampires , zombies, werewolves, or vampiric zombie werewolves . And on the other end, we have the Friendly Neighborhood Vampires . The guys and girls who keep a nocturnal schedule, stop over at the blood bank for a quick snack, and do their best to help the community. There are going to be some interesting</ philosophical questions when these two meet. (Or not.) Van Helsing Hate Crimes are what happen when a medium that includes monsters and/or monster hunters calls attention to the fact that, in that 'verse at least, not all monsters are, well ... monsters . Some of them are perfectly decent folks trying to fit in who happen to get lumped in with the one or two bad apples, like Dracula . Of course, this will result in the monster hunters either learning An Aesop or turning out to be those who fight monsters in the truest Nietzschean sense , sometimes becoming even worse than the actual monsters. If there are both good and bad monsters within this universe, expect these hunters to be far</ more competent at attacking the good ones Compare Fantastic Racism , which is similar to this but on a more wide-spread, societal scale, and may also be targeted at creatures that are not obviously monstrous (such as elves , talking animals or whatever). Also compare Zombie Advocate , who argues in favor of the monster's humanity , and Inhumanable Alien Rights , when the hunter is from a government agency of some kind. See also Stages of Monster Grief , for monsters who may or may not like their condition. See also Burn the Witch! . Not to be confused with what happens when Van Helsing turns Lawful Neutral or Lawful Evil .

Although vanilla ice cream, our protagonist, is delicious all on its own, it is the base of many other great flavors. It plays well with toppings and fixings, i.e. the supporting cast, without being overwhelmed completely or disallowing the other ingredients from shining through. Thus, a Vanilla Protagonist is a protagonist whose characteristics and background are plainer or simpler compared to the rest of the cast. This type of protagonist serves as a window by

which the audience may experience more varied and colorful supporting characters. The vanilla protagonist will typically be familiar and easily relatable, giving the audience the opportunity to step into their shoes. They will usually not be too much of anything, or vanilla so to speak. The VP acts as Foil for other more unique characters the audience will encounter through them. In other words, the other characters drive the story, and the VP is simply the vehicle. The VP may have no voice for this reason. Since these characters need to be relatively flat by their own merit, they may be unpopular with the fanbase but simply being unpopular does not make them this trope. It makes them The Scrappy . Tropes Are Tools and having a lead who is a flat or static character isn't necessarily a bad thing if done well. In video games, for example, it can give a player freedom to shape their character, or to think outside the box. Compare Lead You Can Relate To where The Protagonist is modeled after the target audience to better engage them in the story, and Audience Surrogate , where the protagonist is intentionally left as a blank slate, so that the audience can easily project themselves into the character. Also compare Straight Man who is normally The Stoic to better interact with the Plucky Comic Relief but not necessarily a protagonist at all, and the Pinball Protagonist , in which the protagonist lacks significant impact to the overall plot and is merely reacting to the other characters' actions. Not to be confused with Designated Hero , which is a character who the story plays up as being heroic, but comes off as being distinctly unheroic. Contrast Ensemble Dark Horse , who is a colorful but minor character. Not to be confused with Villain Protagonist . Also not a descriptor for protagonists of vanilla hentai ...though they tend to be this for a reason . Compare to the Standardized Leader . For describing "bland characters", use Flat Character . This trope is NOT The Protagonist + Flat Character . This is not for complaining about protagonists one may dislike.</ Therefore, this trope is not about being "likable", "popular", or "interesting". If a show has one of these, it is not inherently a "problem". Please keep this in mind when making edits.

A vehicle is damaged and leaking fuel. The hero (and it is almost always the hero) ignites the trail of fuel, causing a line of flame to streak after the fleeing vehicle. The fire catches up to the vehicle, ignites the fuel tank and causes the vehicle to go up in an impressive fireball. Compare Powder Trail . Also remotely related to the one of worst problems with Stealth in Space . Nothing to do with a lack of a where there ought to be one, or with the vapor trails from an airplane's wings. Also not to be confused with either the Rush album or the Crystal Method song entitled Vapor Trails</, or the Shoot 'em Up also named Vapor Trail.</

Computer or video game software or hardware with revolutionary or next-generation capabilities that is continuously hyped to the public, but doesn't seem to be coming any closer to store shelves. Note that long development cycles do not, by themselves, qualify a product as Vaporware; the game must be repeatedly postponed and put off, all the while being promoted as "Coming soon!" Sometimes this is intentional, done by various promoters and stockholders solely to drive up the company's share prices, lure in new investors, or create a buzz in the marketplace that will keep their name on top. In the most extreme cases, the developing company itself may be a total fraud. That said, the vast majority of vaporware isn't

malicious. Most of the time there is legitimate product being produced, but internal problems simply result in it falling behind schedule and being passed in the marketplace by competitors. The developers simply promised more than their programmers could possibly deliver in too short a time frame. Often, when a big goal is for the product to be up with the current technology, it becomes a self-reinforcing feedback loop of sorts when work has to be scrapped to keep up with the times. Combine this with people leaving the project out of frustration with the lack of forward progress and it gets harder to finish with every delay. More than a few games have also fallen victim to runaway ego and perfectionism, where the designers get distracted by their own artistic visions or desire to create something revolutionary and genre-shattering and won't be satisfied until it's "perfect", cost, publishers, and release dates be damned! (With predictable results). Compare Development Hell and What Could Have Been . Contrast Dead Fic and Orphaned Series , which actually manage to release more than a teaser (thanks to serialization) before eventually being abandoned incomplete. See also Saved from Development Hell for a few who managed to get completed. See also the Canceled Video Games index for pages about games that have been officially canceled by their creators. If a work was ever released—if it was ever available for purchase—then it was Saved from Development Hell , not this trope, and such examples should go there (or be moved there upon release). Should not be confused with Vapor Wear , Vaporwave , or so on . Also, perhaps ironically, no relation to Steam .

How fast you fall depends on who and what you are.</ The wacky world of TV physics seems to postulate, among other factors , that how fast a person or object is pulled towards the ground is a function of how heroic they are, and not the constant acceleration of gravity (9.8 meters/second^2) that the rest of us have to deal with. For instance, no matter how tall a cliff or building is, should a character or a fragile vase fall off, there will always be enough time for the Hero to leap after them, catch up to them in mid-fall, and rescue them. This is a gross</ violation of physics in most cases. One object accelerated by gravity alone cannot</ pass another such object that was dropped before it. Neither the size of the objects nor the relative virtues of them can change that. Galileo and Newton both famously showed this, and it much later in a near-perfect vacuum. This is</ possible when you factor wind resistance into the equation. But even then, you'd need to fall a very</ long distance (as in thousands of feet while skydiving, not the hundreds of feet out an apartment window) for that effect to be workable in your favor. Someone falling head-down has a terminal velocity about 1.5x faster than someone falling belly-down (180mph vs. 120mph). A professional in streamlined clothing and gear can hit about 2.5x the belly-down speed (about 300mph). It only gets worse if the falling rescuing hero completes the rescue with help of Building Swing gadgetry like grappling hooks or ropes: in Real Life , a falling person trying that would be more likely to lose the rope than save the person on the other end. Rescuing heroes are not the only things to be affected by variable terminal velocity, mind you. In some genres, everything</ falls faster than an anvil. See also Catch a Falling Star , Not the Fall That Kills You… , Soft Water , Stairs Are Faster .

A descendant of Vaudeville : an anthology of unrelated performances (be they musical, comedic, dramatic, etc.) by different performers.

The first breakout television hits were variety shows, most notably the Texaco Star Theatre</ (hosted by Milton Berle) and The Ed Sullivan Show </; other important examples from the '50s and '60s included The Red Skelton Show</, The Jackie Gleason Show </, The Carol Burnett Show , </ and The Smothers Brothers Comedy Hour . </ As you might notice, many such shows were named for the host(s) In The '70s , Ms. Burnett's show continued to perform well in the ratings, as did The Flip Wilson Show,</ Donny and Marie </ and The Sonny and Cher Comedy Hour </. However, overall the genre began to slide. The decline may be related to the fact that, increasingly, variety shows were used as "summer series" while American networks' main shows were on hiatus. Said replacements seemed to get exponentially corny and their hosts increasingly unlikely, including The Brady Bunch , mimes (!) Shields and Yarnell, affable TV actor Ken Berry, and pop groups ranging from The Starland Vocal Band to The Hudson Brothers This format fell out of favor in America in the early 1980s (although in Australia, Hey Hey It's Saturday </ lasted until 1999). Cable (particularly MTV and HBO) provided alternate outlets for the music, stand-up comedy, and miscellaneous acts that were the bread-and-butter of these shows, and viewers no longer had to sit through three acts they weren't interested in for the sake of one that they wanted to see . If they didn't like what was on cable, people could go down to the local video rental stores that were popping up across the country to find something they wanted to watch. Also, tastes were becoming more polarized; whereas formerly people could endure musical styles they didn't care for much, more and more people actually HATED styles they disfavored. This, combined with the growing number of U.S. households with multiple TV sets, meant that viewers could watch what they wanted, making the format obsolete One-shot and annual specials such as Circus of the Stars</ persisted into the early 1990s, but even those are now relatively rare Occasional attempts to revive the genre (on networks or cable) have been doomed to failure, though some might argue that Sketch Comedy shows such as Saturday Night Live </, the late-night Talk Show format, and reality competitions such as American Idol </ and America's Got Talent</ keep the form on life support. NBC gave it one more shot for the 2015-16 season with Neil Patrick Harris hosting Best Time Ever</ , but it only lasted 8 episodes before being canceled Producers of the British Sitcom The Young Ones </ booked a band for a guest appearance in every episode; musical performances qualified the series as a variety show, and it was therefore permitted a larger budget than usual for a BBC sitcom Variety shows are still popular in East Asia and Europe, likely due to over-the-air programming still being dominant and households tending to have one TV set. The East Asian shows aren't exactly the same as the Western variety shows, although the name is still used to refer to them

A form of entertainment prevalent during the late 19th century and the early 20th century. It was notable for a variety of acts that were performed on a rotating bill. The variety of acts could include: scenes or acts from famous plays, jugglers, acrobats, animal acts, kiddie acts, whistlers, musicians, minstrel shows , barbershop quartets , comic sketches and live music, all performed twice daily. Many famous entertainers got their start on the vaudeville circuit, including Gypsy Rose Lee, Jimmy Durante , Al Jolson , The Three Stooges , Judy Garland , Fanny Brice, Daws Butler , Edgar Bergen , George Burns and Gracie Allen , Fred Astaire , and Jack Benny This form of theatre was eventually

killed off by sound films and radio, with many former vaudeville performers going on to work in those two fields. In fact, film screenings were originally part of the vaudeville programming as legitimate as the live acts. However, the theatre owners eventually decided that films were ultimately cheaper, more profitable and more reliable entertainment than the expensive live acts and they were gradually squeezed out Although it died out as a national pastime, vaudeville-style theater persisted into the 20th century within certain ethnic groups' traditions, most notably the Jewish Borscht Belt and the African-American "chitlin' circuit". At the time, such groups often found themselves locked out of "white" entertainment venues, leading them to create their own alternatives. The chitlin' circuit, or the "urban theater circuit" as some prefer to call it, still exists, having produced innumerable black musicians and comedians; one of the most recent entertainers to come from here is Tyler Perry An example of the type of work done in vaudeville can be seen in the Neil Simon play The Sunshine Boys </ as well as archival footage of The Ed Sullivan Show </, which had numerous acts in addition to the classic rock star appearances. The British version, specifically "music hall" entertainment (which lasted a bit longer than vaudeville did in the US), is best shown with the classic episodes of The Muppet Show </. There is a certain amount of overlap between Vaudeville and Burlesque , but the simplest way to remember the difference is that Burlesque is geared for adults

Peaceful, idyllic societies have a tendency to be vegetarian (if not vegan) in fiction. As often as not, these societies are portrayed as being morally, perhaps even spiritually/magically superior to our own, implying that humanity's meat-eating habit is somehow holding us back from living in a world of Crystal Spires and Togas . Sometimes it can be downright Anvilicious Some cases aren't so focused on the evils of eating animals so much as how circumstances might force people to adopt a vegetarian diet. See Future Food Is Artificial for examples of this Races that refrain from meat-eating simply because their digestive physiology is herbivorous aren't necessarily examples of this trope — if they have</ to eat plants, they're not really demonstrating moral superiority by doing so — but such species may subvert</ this trope's expectations if they're violently aggressive in spite of their diet Probably stems from the issues raised by Carnivore Confusion and Let's Meet the Meat . See also Mary Suetopia and Perfect Pacifist People . See Herbivores Are Friendly for the herbivorous animal equivalent

Tropes all about vehicles and transportation See also Chase Scene , Flying Tropes , and Travel Cool

One method of getting rid of a body is to place it on top of a large vehicle (truck, train, etc.); either by accident or design. The vehicle carries the corpse away, until it is either discovered or falls off. The authorities then have the additional mystery of determining where the body came from and where the murder was originally committed, before they can solve the crime. It can involve Jurisdiction Friction if the body has crossed boundaries during its journey A Sub-Trope of Disposing of a Body Compare What

a Drag if the body is dragged by the vehicle

We've all seen it before: a van drives up and skids to a sudden stop in the middle of the street. A bunch of Faceless Goons in black sweaters and balaclavas pile out the side and grab someone (usually a businessman, politician, top scientist or engineer , or just The Hero), stuff them in the back, then drive off The kidnappers will throw a Bag of Kidnapping over the target's head if they have no intention of speaking with them until they reach their destination, or else employ Instant Sedation or a simple Tap on the Head if they really</ don't want to talk. Alternatively, a No-Holds-Barred Beatdown or Cold-Blooded Torture will sometimes ensue as soon as the door slams shut, possibly as a form of enhanced interrogation , after which the ringleader, if present, usually follows up with a Motive Rant , an attempt to Break Them by Talking , or just an offhand mention that it would be a Shame If Something Happened to the kidnapped and their loved ones should they fail to cooperate. After learning what they wanted to know or saying what they wanted to say, the victim's captors may simply dump them out in the middle of the road and speed away This doesn't have to be a van, but not many other vehicles combine the same degree of interior space and outward anonymity. The number of goons can also vary, though it's difficult for one person to do this when they also have to drive the van. While the victim is usually right out on the sidewalk, sometimes the kidnappers will enter or break into a building to grab their targets. A common variant is for kidnappers to ambush their target right by the exit of a building, possibly holding them at gunpoint or shocking them with Stun Guns , then briskly escorting them to a van waiting just outside, thus limiting their exposure Part of the trope is a certain Refuge in Audacity — people aren't expecting to be kidnapped in broad daylight in front of witnesses, the latter of which may be restrained, sedated, or even killed. The van provides the element of surprise and helps the kidnappers disappear after the attack but during the abduction, stealth tends to be a secondary concern to speed and taking the target and any protection they may have off guard Common among Human Traffickers . Compare and contrast Van in Black for suspicious vans in general, Spies in a Van for when the viewpoint is that of the police surveillance or espionage team inside the van, or Punk in the Trunk for less spacious kidnapping accommodations. May sometimes occur when dealing with a Creepy Stalker Van , though that typically involves a very different kind of kidnapper (usually a lone stalker or Serial Killer) who generally prefers to take their victims quietly and drag them back to the van after the fact, or else lure in kids with candy

An extremely common plot in fiction is commandeering enemy equipment and turning it against its former owner as soon as possible, often with the thief in command of the hardware. The commandeered materiel will often then remain in continuous service rather than being reverse engineered and mass produced This trope is ubiquitous in works of naval fiction that are set in the age of Wooden Ships and Iron Men . This is because sailors were awarded prize money for capturing enemy ships. Captured enemy ships would often be incorporated into the captor's own navy (often under their original names, as it was considered bad luck to change the name. HMS Guerriere</ is a good example). See The Other Wiki . Because Space Is an Ocean , science fiction works will sometimes use the

same concept with spaceships Super-Trope to Grand Theft Prototype , which is the Super Prototype or otherwise "super weapon-y" version of this trope. See also Hoist by His Own Petard , Enemy Exchange Program , and Death by Irony . Is not a case from the Ace Attorney </ series

This index is for tropes about about speed and velocity.</ See also Teleportation Tropes .

Acrofatic

An index of media originating from Venezuela or created by Venezuelans.

In mythology and folklore, a vengeful ghost or vengeful spirit is said to be the spirit of a deceased person who returns from the afterlife to seek revenge for a cruel, unnatural or unfair death. In certain cultures where funeral and burial or cremation ceremonies are important, such vengeful spirits may also be considered as unhappy ghosts of individuals who have not been given a proper funeral. In Japan, these kind of spirits receive the name of onryou</ (怨霊, lit. "hateful spirit") and are a type of yuurei</ (幽霊, lit. "dim spirit"), a type of Youkai and the equivalent of ghosts in the West. Typically a Ghastly Ghost , at least from the point of view of those who did them wrong In most cases, the object of a vengelful ghost's revenge is always a living person, or at least a deceased one whose spirit the ghost wants to forcibly drag to hell . But for whatever reason, said person rarely ever comes back as another ghost once his ghostly pursuer kills them , and the chances of that</ ghost seeking revenge on the other vengeful ghost and possibly perpetuating a Cycle of Revenge are likewise extremely</ slim in fiction. When the writer addresses this scenario, expect some Hand Wave or justification as to why it doesn't occur — such as the universe having specific rules concerning who gets to become a ghost (which the victim naturally won't meet), vengeful ghosts being far stronger than recently deceased spirits due to age , or the latter having cannibalistic tendencies on top of being extremely bloodthirsy Part of Our Ghosts Are Different and Revenge Tropes . Sister Trope to Onryo , a Japanese counterpart to this trope that has distinctive traits but the same objective, and Revenant Zombie , in which the person returns as a zombie but keeps all their memories and personality, including the memory of the one who killed them and the desire for vengeance See also Unfinished Business , when revenge is not the (only) reason to come back as a ghost, Ghostly Goals , for when the primary mission of the ghost is revenge, and Murder Into Malevolence , a reason for why the ghost can turn violent after the death

You put your change in a vending machine, you expect to get your candy, prize, or whatever you paid for. This trope is when the machine doesn't do that, or inflicts harm on you. This comes in several varieties: Percussive Maintenance is usually involved. Will often lead to Enmity with an Object . Coffee machines and Matter Replicators do</ count, and machines gaining sentience and attacking

people is the Exaggerated Trope . My Car Hates Me is a sister trope People usually apply Percussive Maintenance when they encounter an uncooperative vending machine. No Snack For You , Your Television Hates You are related.

A ventriloquist is someone who can "throw his voice", making it appear that it comes from somewhere else (in most cases, the mouth of his dummy), while his own mouth isn't moving. Sometimes they also can imitate voices, sometimes not. Some media acknowledge that it is very hard to pronounce some letters like 'b' that way (hence the "gottle of geer" joke), others don't care. In comedies, The Trickster character may use this to fool another character (preferably The Brute) Ventriloquist dummies are often considered creepy due to their Uncanny Valley qualities ("automatonophobia" is the technical term for fear of one) and are often used in horror or horror parody. It's very common for there be a scene where the ventriloquist leaves the room and his dummy starts talking on its own Super-Trope to Demonic Dummy , which covers animated/evil ventriloquist's dummies

In the early days of science fiction, the one thing most people knew about the planet Venus (or rather, most people who knew anything</ about Venus or any other planet in our Solar System for that matter, which at the time included only a very limited group of enthusiasts with university education) was that it has permanent cloud cover over its entire surface. This led to many depictions of Venus as a planet where it rains a lot, often to the point where it's a Single-Biome Planet covered in oceans, or at least swamps or rainforests. This dovetailed nicely with the planet's Roman namesake , as it seemed very appropriate that a planet named for a goddess of fertility and femininity (who was born from seafoam) should be so fecund and watery In the 1960s, the planet was visited by unmanned probes which definitively established that the clouds were sulfuric acid, the atmosphere was largely carbon dioxide, and that due to the resulting greenhouse effect the temperature at the planet's dry and barren surface was nearly 900 degrees Fahrenheit (480°C). As a result, this is now a Dead Horse Trope used only by authors deliberately harking back to the old days, or in works involving terraforming suggests, however, that Venus did</ once have water , but Venus's lack of a magnetic field caused that water to become disassociated into its component hydrogen and oxygen atoms via solar radiation, leaving nothing to prevent a runaway greenhouse effect and as a result, turning Venus into the dry pressure cooker it is today This trope, Once-Green Mars , and Strolling on Jupiter are subtropes to Science Marches On and therefore, more common in sci-fi works of the Two-Fisted Tales variety

When a character is busy "thinking out loud", only to suddenly discover that someone else has has overheard details that should've remained secret, what do they do? Come up with an impromptu explanation on the spot, and hope the other character is fooled. Did the Big Bad just gloat about how he's going to Take Over the World ? No, that was just a chapter for that novella he's been writing on the side. Er... right? Villains seem particularly prone to this (due to their penchant for Evil Gloating), especially if the Big Bad and his Dragon (or another Big Bad) don't get along well and one of them is secretly plotting to betray the other ; but it can really occur with

any character who is a little too overconfident . For example, a Hero in the midst of a Badass Boast may accidentally reveal too much about their particular powers , giving their opponent information on how to defeat them. But in most cases, their impromptu explanation is enough to drop the matter ... for now . Related to the Verbal Backspace , which is generally used to cover up verbal errors of the more mundane (rather than plot relevant) sort. See also Bad Liar and Implausible Deniability ; compare and contrast Digging Yourself Deeper , Right Behind Me and That Came Out Wrong .

The Curse of Monkey Island </ has this exchange, with the hero staying in the room all the time but the villain can't help himself:

One of the hidden movies in Legendary Frog's FF7: About Random Battles </ animation may count as this trope. In </ Genki Girl Yuffie pulls this until the last "What?"

While not evil, Sam does this in Cloudy with a Chance of Meatballs </ by backtracking any time she says something smart, as part of her Obfuscating Stupidity routine. Subverted in that Flint doesn't immediately forget whatever she said before backtracking.

Comedy trope: Alice says something. Then Bob says something or something happens that makes it clear that what she just said doesn't make sense. Alice quickly revises her statement and repeats it. On Second Thought is a more specific case of this, as are some forms of Inflationary Dialogue Alternatively, Alice attempts a compliment or insult. However, Bob responds with information contradicting what they thought, which could include Compliment Backfire or Insult Backfire . So, Alice tries again with a new insult or compliment, directly opposed to what they had just said. Could be compounded by a Hair-Trigger Temper Students of rhetoric may describe this as "epanorthosis". If Alice has to retract a practical idea that uses bad methods, it's a case of ...And That Would Be Wrong . If she has to retract a controversial opinion, it's a case of Not That There's Anything Wrong with That or Present Company Excluded . If she's retracting an opinion based on who else does or doesn't agree with it, it just might be a Favouritism Flip Flop . If she's retracting an insult to someone she hadn't meant to insult, it's because of Insult Friendly Fire Compare Freudian Slip (where the character says something that reveals thoughts he's concealing or repressing) and Last-Second Word Swap (where the character revises what he was just about</ to say before he actually says it). Also see Verbal Backpedaling where a improper statement is covered up with a flimsy explanation

An exceptionally (Narf!) odd Catchphrase used to the point it see-heems more like a bodily emission than speaking. This is often a single nonsense word added at the end of sentences, well past the expected formal variations in speech, eh? It can, ah say , it can also be a word, sound, or phrase that, like , shows up in various places in a character's dialogue. In Japanese, character tics that occur at the end of sentences are referred to as "kyara-gobi" (キャラ語尾, chara(cter) word/sentence ending) This is also a common trope for Talking Animal or Little Bit Beastly characters, to show that they keep the animal noises while talking If a character's verbal tic slips (usually as a sign that things are serious), then it's Verbal

Ticked . Contrast with Strange-Syntax Speaker , where the character is using language rules unknown to others. See also Character Tics (similar idiosyncrasies applied to physical behavior), Lyrical Tic (a musical variant) and Third-Person Person (a specific tic where the speaker refers to themselves in third-person)

In Real Life , vertebrates have at most four functional limbs - legs, arms (which anatomically are really modified forelegs), or wings (which are modified arms) - and one tail. If it has more than that, like arthropods (insects, spiders, centipedes, etc), it's not a vertebrate. Some individuals have abnormal numbers due to injury or glitches during development, but additional limbs rarely function properly. Those with less, like snakes and whales, still evolved from four-limbed animals. There's nothing intrinsically wrong with six or more legs - it's just that current large land animals originated from a species with a four limb body plan, and adding more requires all sorts of complicated skeleton and muscle changes that are much more complex than just making the ones the organism already has a little better. Or, if they're weighing the critter down... take them out. Just look at whales for a demo. This apparently happens a lot - evidence suggests that when the first fish crawled out of the water, it did so on seven-toed feet. (For more info on the topic, try) Of course the fact that there's one standard land vertebrate body plan doesn't stop fiction writers from subverting nature's tropes. This trope may be exactly</ as old as dirt, for a number of documentaries have suggested that many tales of fantastic creatures could have been inspired by early humans encountering bones of prehistoric creatures and misinterpreting the evidence. For reasons that should be obvious, in modern writing, vertebrates with five or more limbs is primarily a Speculative Fiction trope. They're often very useful in said fiction, in combat or for grabbing. Sometimes justified because A Wizard Did It or because there's no obvious reason why aliens would always have exactly four limbs, but trying to determine the internal anatomy of such creatures may lead to Fridge Logic . While in most cases authors Hand Wave such things, it doesn't stop others from trying. Note: as the subtropes get filled out with three or more examples, they can be 'd and moved into separate subtropes. Contrast Four-Legged Insect , which provides examples of invertebrates with fewer limbs than in real life.

Four Limbs Plus Wings (not including Winged Humanoids)

Dungeons & Dragons </: , manscorpions, and others.

Our heroes are patrolling around completely alert but somehow miss the monster on the Ceiling... Cousin to Neck Lift , this is where a character is lifted up by said monster. Usually, the character will be unnaturally silent when this happens, and often they will be dropped moments later very dead, and possibly disemboweled. This often happens to the last person in a group while the main characters aren't paying attention. It seems every monster worth its salt has Super Strength and a knowledge of Pressure Points . For the more personal, intimidating version, see Neck Lift . For a horizontal horror equivalent, see Barrier-Busting Blow . Compare and often overlaps with Kidnapped from Behind , Behind the Black , No Peripheral Vision , and Failed a Spot Check . May also be preceded by a * Drool Hello . If it's a bird doing the kidnapping, then it's Kidnapping Bird of Prey .

Bet you look up real quick just to be sure nothing's there after reading all that. </

Characters go on what they expect to be a wonderful vacation at a luxuriously extravagant hotel or resort. Upon arriving at their destination, they discover that the place is a dingy disaster. The brochure lied about... well, everything. The supposed 5-star "Ultra-Cool Inn" was merely a crumbling cottage filled with cobwebs and has roaches living inside the refrigerator Sometimes you'll see the characters holding up the advert, and then revealing the actual place behind it. The elements will correspond but will be very different. The swimming pool will be in the same place, but the real one will be dirty brown, with stink lines coming off it. The "claims" usually turn out to be Metaphorically True and the fine print prevents them from obtaining a refund, forcing the characters to suffer through the ordeal

The truth is a funny thing. It's slippery, it's not always self-evident , it can seem implausible , it can even be inconvenient, and more often than not it's just plain boring. Very Loosely Based On A True Story occurs when a writer decides that reality just doesn't pack enough punch in some way, and decides to improve on the historical record. Arguably, this has actually saved</ some, er...true stories. For example, The Patriot </ would have been two and a half hours of a group of Minute Men hiding for hours in swamps sniping English troops and then running away had they kept it true to the historical events of the time. Doesn't exactly sound riveting, does it? This isn't always a bad thing ; after all, having the Von Trapps climb a mountain to freedom was much more uplifting to Cold War audiences than sticking them on a train to Italy would have been. The problem comes when writers go too far and take all semblance of reality out of a character they claim</ to have based on a real individual. It can leave knowledgeable members of the audience wondering if the writers only claimed to have based the story on a real event to attract fans, and it can leave less knowledgeable members thinking they know more than they really do about the past. Very Loosely Based On A True Story often occurs because of Executive Meddling , especially if some of the characters are based on living persons who might sue them if the depiction is too unsympathetic. Another motive is making characters less three-dimensional so as not to confuse viewers: producers may think Viewers Are Morons who simply won't accept, say, a socialist/atheist/gay/etc. hero, or a villain who loves his spouse or pets his dog . In other cases, the facts of real historical incidents will be changed because they don't fit into Hollywood History or because the truth would be inconvenient, as when cowboys in old Westerns were all played by white actors when many real cowboys were black, Hispanic or American Indian . This is a common enough phenomenon in books and movies based on supposed paranormal events that this prologue was originally only about movies based on paranormal stories. Paranormals often have to be exaggerated because the original narratives (especially supposed "eyewitness" accounts) tend not to be very plausible or exciting, especially to anyone with a grain of common sense. So filmmakers and writers edit the story to make it seem more dramatic, authentic, or in tune with society's (or the writers') beliefs about religion, the supernatural, and UFOs. They may even claim it really happened if they think that'll scare the viewers more. There are two parts to this, stories

with the actual names of the individuals involved and stories where everything except the general story is fictionalized (with considerable overlap). This entire point can be lost on viewers. In particular, it is common for viewers outside of the United States to accept without question any depiction of the events in the United States in the popular entertainment media. This is why, for example, so many viewers outside of the United States praised Remember the Titans </ as unflinchingly accurate, when it was anything but. If a film or book says it's Inspired by… , it's a sign that it'll be nowhere near the actual true story. If the resulting product is based on more than one real-life story, it's Patched Together from the Headlines . See also Skepticism Failure , Documentary of Lies , Inspired by… , Suggested by... , Beethoven Was an Alien Spy . Anything based on Urban Legends overlaps with this trope pretty heavily. Compare Roman à Clef , which is tightly</ based on a true story, and Biopic . Not to be confused with Based on a Great Big Lie . While it's sometimes hard to tell the difference, and there is usually overlap, this trope indicates that the central event/s actually happened but have been dressed up with fictional elements for the sake of telling a better story, whereas in the other trope the "central events" are fictional too.

Isaac Asimov 's Black Widowers story " Northwestward ": In-Universe , Bruce Wayne claims the comics and the television series are exaggerated versions of real events and people he encountered.

A decorated war vet who teaches novice officers instead of advancing up the Common Ranks ladder. Probably a military legend and always gets his chance to shine in the Old Master or Retired Badass way sooner or later. There can be various reasons for him getting stuck in that position: He has a reputation of a Military Maverick who wouldn't make a very good commander (at least, in his superiors' eyes). In a way, a commissioned counterpart to Drill Sergeant Nasty , in that he can put his students through a Training from Hell just as easily. On the other hand, he is usually much more gentlemanly about it . Notably, they will be the first to tell the fresh faced recruits something like, "First thing, War Is Hell , and if you want the best chance to survive it, you will listen</ to those who know."

A character steps out of his normal role, due to anything from being sick to going on vacation to being locked up in prison. The rest of the cast are confident they can handle it, and may even think they can do a better job. Naturally, they fail terribly The ironic thing is that it's often not that the original person necessarily does a great</ job, merely that they do an adequate job, or even just that they do it when no one else really wants to. An added source of humor can come from how inconsequential the job seems, and this can tie into An Aesop about minor details being important. Interestingly, this can apply to both villainous and heroic bosses. When an upstart villain tries to replace a Magnificent Bastard in these scenarios, the comeuppance can be spectacular There is a big overlap between this trope and the "Iron Law of Institutions" coined by Jonathan Schwartz : someone following this trope may go as far as sabotaging the group's overall effectiveness to make it seem like they're needed more than they really are . This can be deadly to a group, especially once something finally removes the "needed" member from power permanently The oldest television version of this trope usually

involved sitcoms and vacationing wives — see A Day in Her Apron — although that particular version is a Discredited Trope , since we've gradually come to realize that how good one is at housework has nothing to do with what's between one's legs Named for Lord Havelock Vetinari of the Discworld </ series, the ruler of Ankh-Morpork , who has made himself so utterly indispensable to the city's continued functioning that despite his nature (he's either an Anti-Villain or a very ruthless Anti-Hero , depending on whom you ask), any attempt to remove or replace him is likely to end in disaster Often obtained with the careful use of Bread and Circuses to appease the common person and undermine support for any critics of the regime Compare Ultimate Job Security , where someone does a truly bad job and/or is extremely unprofessional but doesn't get fired, and George Jetson Job Security , where a character returns mostly for continuity reasons . Contrast The Dilbert Principle , where leadership is intentionally given to in</competent group members to keep them from doing more damage elsewhere. Compare The Heart , the glue and morality of a team, and The Reliable One . Contrast Just Fine Without You , in which the person who left hoped for this trope but this trope was averted. Compare with Permanent Elected Official . Compare with Better the Devil You Know , when the current villain is kept around in fear of an even worse replacement. This trope can lead to An Aesop addressing why it's wrong for the Planet of Hats to practice Klingon Scientists Get No Respect . This may be one reason for a Short-Lived Leadership Not to be confused with veterinary job security

Back in The '80s , several video companies took advantage of VCR technology to develop games that used both video and board game elements. Many of which were adaptations of existing properties The medium managed a surprising diversity in both the genre of videos used and in the genre of gameplay used. Some Action-Adventure videos hybridized with Light Gun Game toys/controllers, while others used traditional Board Games or specialty cards. The video was also used in several ways, including a Framing Device , a way to introduce random elements, and a timer The rapid development of consoles and PC games rendered this medium obsolete, as many of the video elements could be incorporated into Point-and-Click style computer games. The more unique elements of this medium actually do survive via the newer Toys to Life genre

Somewhere between the friendly aliens and the aliens who want to wipe us out completely , there's a group whose intentions are definitely hostile , but not (immediately) genocidal. They land on Earth , knock down our pathetic defenses, and decide things would be better if they ran our lives for us. Maybe they need slaves, maybe they think we don't know how to govern ourselves, maybe they're setting the stage for a far more worrisome and sometimes tasty (tasty for them, that is) plan Whatever the reason, Terra Firma has become a client of some extraterrestrial power: a Vichy Planet administered by local collaborators. Best case scenario, the aliens are just doing it for our own good and intend to make sure the new government works out for us. Worst case scenario, we all go into the meatgrinder The name is inspired by the French State (established after the fall of France's Third Republic) during World War II . During the with Paris occupied, the French National Assembly voted extraordinary power to Marshall Philippe Pétain, the hero of Verdun, who agreed to armistices with

Nazi Germany and Fascist Italy and became chief of the newly formed 'French State' which succeeded the Third Republic. Initially northern France was occupied by Germany, some parts along the Alps (and later Corsica as well) were occupied by Italy, and southern France remained under direct French control, an area known as 'la Zone libre', "the Free Zone". Pétain made the spa town of Vichy the seat of government and de facto capital and presided over a two-year (1940-42) era of close co-operation with and aid to Germany until Germany assumed direct control over the 'Zone libre' so it could fortify southern France against an allied invasion. Though it called itself the French State, the allies dubbed it "Vichy France" or "The Vichy Régime" and the very name 'Vichy' became something of a byword for pragmatic, if somewhat shamefaced, collaboration with the enemy. French military and political elements that wished to continue the fight against the Axis and resist its new French client took the form of La Résistance , "Free France/Fighting France" This trope provides a sharp contrast to any series where humanity freely cruises the stars and calls many of the shots , and will generally focus on how humanity is affected by the change in power and how people feel about and react to it Often, in the more worse case scenario, Earth would become a totalitarian Dystopia emulating occupied Europe during World War II , where humans are being enslaved or/ before being killed; expect La Résistance and (less often) the aliens being actually allegories for Nazis especially if this condition is depicted. Les Collaborateurs will sometimes help them, usually in a bid to get some of their old power back. See also Villain World and Humans Are Not the Dominant Species

Every 1,000 years, the Powers That Be arrange a major event. It may be The End of the World as We Know It (and its subsequent rebuilding) or merely a threat of one, a mass mind-wipe, or it may be something that involves a Chosen One , who is supposed to do something predefined, or the whole effort will derail The reasons why they do so varies greatly. It may be necessary to keep a Sealed Evil in a Can dormant, or to uphold the Balance Between Good and Evil or the Masquerade (in other words, to prevent either side from winning too much or knowing too much). Alternatively, the organizers may do it purely for entertainment , or it may "just happen" Because Destiny Says So , with no further explanation. It doesn't necessarily have to be a precisely regular event - what's most important is the existence of a system with wide negative effects but also a good reason to be kept up, which goes unchallenged (or all challenges to it fail) until the heroes show up The bad news is, last time this happened was exactly 999 years and 360 days ago , and our heroes become involved, usually against their will, in the next iteration. Two outcomes can possibly occur: either they accept (or are forced to accept) their destiny and continue the cycle, or they reject it. The former case is risky because the audience are likely to dismiss the story as "pointless" . In the latter, what happens next depends on the work's position on the Sliding Scale of Idealism vs. Cynicism , which can mean either a happy ending, in which the cycle is broken for good, or a Downer Ending . If multiple factions want a say in this process it can result in a Tournament Arc or There Can Be Only One Regularly Scheduled Evil is a special case of this. Not to be confused with

Cycle of Revenge (though such a cycle is often called this, and with good reason)

There's something about vacuum cleaners. Maybe it's the disproportionately loud shriek they make , or the fact that the stuff that goes into them just disappears</ , but for whatever reason, they're often seen as frightening by small children and pets So in fiction, they're often made out to be menacing, especially in works focusing on children or animals. In animated works especially, vacuum cleaners often display a much greater suction range and strength than real life vacuum cleaners could ever hope to achieve as well as the uncanny ability to suck up items far larger than could fit down their nozzles, rarely changing size no matter how much they consume They are the most dangerous when they attack characters, even coming to life and trying to suck up the characters when the vacuum is even bigger than the characters Related to Weapons That Suck . Can be a part of A.I. Is a Crapshoot if the vacuum is robotic or Humans Are Cthulhu if it's an animal encountering the vacuum. If the vac captures a phantom, it's Ghosts Abhor a Vacuum . Not to be confused with Vacuum Mouth

Tropes about being a victim—or facing the social role of victimhood.

Tropes about the results of competitions, battles, and contests, plus how they are caused and how they are handled.

So you have a character who has achieved some incredibly difficult or elusive victory that they've been working towards for just about forever. Now that it's finally over and all their efforts have paid off, they've got it made, right? Not if Victory Is Boring. If the character is a villain, now that they actually went ahead and pulled off their plan to Take Over the World , they have to actually run it . And fill out all the required paperwork . In triplicate. Man, those days when the heroes would foil your latest plot every single week only to let you slip away at the last minute were so much more entertaining than this! (Wait, is that why the heroes did it in the first place?!!) On the other hand, if the character is a hero, then maybe winning and having finally shown up The Rival or won the big tournament or game they've been dreaming of since they were a kid leaves them saying So What Do We Do Now? If the hero is particularly Hot-Blooded , battle addicted , fond of adventure or just plain crazy/sociopathic , he might start going out and trying to find/create new challenges that weren't there before . If only there was some reliably recurring villain that could keep them occupied.. The Trope Namer is Mai from Avatar: The Last Airbender </ , who proclaims the phrase after catching siblings Sokka and Katara during second season episode "The Chase". Before we get into any examples, we should note that every Video Game will eventually fall into this trope. No matter what, some players will beat everything, get the Infinity +1 Sword , 100% Completion , etc. and even they will still quit eventually</. So please, limit it to in-universe examples. See A Winner Is You for games with unsatisfying endings. Compare It's Easy, So It Sucks! , for when a game is boring even before reaching victory due to its lack of difficulty. Yet more proof that Status Quo Is God and that Failure Is the Only Option , for everyone. May invoke Wanting Is Better Than Having . Compare with Pyrrhic Victory ,

Pyrrhic Villainy , Vengeance Feels Empty , Was It Really Worth It? , No Challenge Equals No Satisfaction , and Lonely at the Top for other times when winning turns out not to be all it's cracked up to be. See also And Then What? , and also Rich Boredom , and The Perils of Being the Best , which may overlap. In-Universe Examples Only :

These are the companies that create the games which you've set aside so much of your hard-earned money to play. Subsidiaries and subdivisions are listed in sub-bullet points See also Video Game Creators for individual creators and Tabletop Game Companies

A list of individual video game designers and creators.

This is the potential a video game has for the player to do awful , horrible </ things to enemies or even friendly and neutral NPC s. It can be knee shots causing screaming, telekinesis to literally play catch with guards, punching out scientists, flat-out torture , or many, many</ other things. Something Awful </ has dubbed two specific variations of video game cruelty as Asshole Physics</ and Asshole AI</ . Some games specifically cater to this; these often skip out on a Karma Meter . This can also be the carrot along the path to The Dark Side for players in a game with a Karma Meter . The severity of this trope varies. Some games only let you be cruel to your enemies and give harmless Non Player Characters immunity. (Harmless enemies will still be fair game.) Other games let you torment random NPCs you meet along the way. Still other games give you absolute, unchecked control over your subjects. In games where there is a level editor or allows a sense of creativity, the trope can be taken up to eleven by allowing those with less constructive intentions to target those of a player character nature just for fun. This can also happen outside of creative games/sandboxes through the medium of joke weapons or modifications/hacking. This trope is often used for laughs. Remember, though: Just because a game lets you do something doesn't necessarily mean you should do it . Contrast Video Game Caring Potential — though sometimes helping your little drones means doing horrible things to their enemies... See also What the Hell, Player? and Video Game Perversity Potential . If the game or genre usually does not permit cruelty even though there's no particular in-game reason for that, but this time they do, you have Surprisingly Realistic Outcome . One of the Acceptable Breaks from Reality . You may laugh at video games, but if someone did this in Real Life ? You probably wouldn't be laughing. And if you are, then you're a sick bastard. This trope has a few Sub Tropes . For examples where someone takes joy in being a dick to other players, see Griefer . Note that, since such actions are not mandatory in the story, these actions cannot be considered a Moral Event Horizon or qualify a player character for Complete Monster status. Please only list aversions and non-Video Game-related examples here. This page had to be split because of its length. For Video Game-related examples, go to the links below. In-Universe examples:

Genre, as applied to Video Games , customarily describes the style of gameplay rather than that of the story or setting as in other

media. Many games mix and match among them It is also possible to move from one gameplay style to another within the same game, e.g. Mini Games , vehicle sequences within action games, etc. These gameplay changes can sometimes be unnecessary or unwanted , especially if the game transitions between them jarringly with poor integration between them Notable games in each genre can be found on the individual pages. Note that many games can and should be in multiple genres, as the lines can often get blurred, or games can incorporate elements of more than one genre . If you have a new game to add, put it in every genre you think it belongs! There are other, more thorough, game databases Also see Pinball , the arcade predecessor to Video Games

For whatever reason, video games and movies don't play well together . Every so often, someone with dollar signs in their eyes will try to make a movie based on a video game franchise, only to run into this unscalable wall: video game movies suck It's kind of hard to say why. Some would say that the plots of some video games are just too simplistic to translate into a movie, existing just to give the player an excuse to go out and fight things. Others would say that video games are essentially movies that have showmanship sacrificed in favor of control, so sacrificing the control may leave you with a bad movie. Maybe directors just invariably pick the wrong game — a game that is exciting but doesn't exactly put effort into Character Development when that character is meant to be the player . Maybe there's too much reliance on the popularity of the game to sell the movie, rather than writing quality The reality? Well, it tends to vary. Platform games tend to be about getting from A to B, and thus many don't require much story within the games themselves outside a few minutes of setup (that may even be hidden within the manual in older games) and a two minute ending , so the writers need to improvise. The average First-Person Shooter may offer an hour or two of narrative cinematics, but even the more cerebral examples of the genre will, by definition , feature enough hours of plot-free gunplay to rival the dumbest summer blockbuster . Fighting games tend to have a similarly flimsy plot with Multiple Endings depending on the player's character. Game writers tend to use the excuse of a 'tournament that decides the fate of humanity', and all</ playable characters need to be sympathetic enough for players to want to play as any one of them, with an ending for each one, but movie writers need to pick just one hero and winner out of a dozen, which is going to tick off fans of the other eleven. Of course, there are video game genres that do consistently pay much attention to the narrative such as JRPGs , but these tend to have far too much</ plot to squeeze into a two-hour flick without leaving a ton out . While this isn't by itself an insurmountable problem (it's the same issue faced with every adaptation of a novel , after all), it is one more thing that can go wrong Additionally, there is the problem of translating a story from the interactive medium of video games into the non-interactive medium of film. In video games, a story is told through the player's own choices and interactions with the game . By nature, films do not tell stories in this way, which causes great confusion for screenwriters who are tasked with somehow translating seemingly "plotless gameplay" into a linear narrative. Not that this is impossible, as some Edge of Tomorrow </ for successfully translating video game features such as Respawn

Point and Trial-and-Error Gameplay into a film narrative (the author of source material All You Need is Kill </ admitted he wrote it inspired by his gaming experiences), and Jumanji: Welcome to the Jungle </ was also for downright creating a video game world, complete with NPCs which repeat the same lines and elements such as finite lives. Survival Horror has also made a decent transition to the medium of film thanks to efforts such as the long-running Resident Evil </ film series or Silent Hill </ (since the concepts of the genre are rooted firmly in the Horror arena many of the same tropes are present in their source material so moving across to a movie makes sense from a cinematic point of view), though it is also possible to drop the ball here too (see House of the Dead </) On the other side of the adaptation equation, blame can also be pinned on the studios and directors who put out these films. The generation that grew up and has grown up playing video games has yet to produce a whole lot of filmmakers. As a result, the vast majority of people in the film industry aren't really all that familiar with video games, including the ones they are tasked with putting on film; some of the older film industry fellows even have an outright disdain</ for the younger medium Thus, filmmakers don't really know how to adapt the games effectively; even if they choose a good game with a good plot that's not too hard to adapt, they probably aren't going to understand just what makes the game so appealing to people anyway. One cannot distill the core taste if one does not know what the taste actually is. Indeed, this medium ignorance, aside from resulting in bad game adaptations, is also the direct cause of Pac Man Fever . It's essentially the cross-media version of a Porting Disaster There are also filmmakers and directors that know a popular game series but they barely understand why</ the series is popular to begin with. Rather than contacting the developers that produced the games to get their advice or even asking the fans themselves for help, the filmmakers decide to just wing it and try to interpret the popularity from their own point of view, which can cause fans who see the final product to groan and face palm as they watch a film that they think was made by someone who has zero knowledge on the subject matter and material. This is usually caused by filmmakers and publishers that just want to cash in on the brand name of a famous series, though not all people do this. Uwe Boll has become notorious as a director thanks to his efforts to adapt video games such as Bloodrayne </ and Dungeon Siege </ with his own personal touch that leave many viewers understandably miffed, be they fans of the source material or not The situation is similar to what was the case with most superhero films prior to Spider-Man </: poor understanding of the comics led to poor adaptations, until the people who actually grew up reading the comics got good standing in the movie business and helped drive the subsequent train of popular and critically acclaimed superhero films. As video games grow more mature as a medium, adaptations have slowly been getting better, with more recent movies like Pokémon Detective Pikachu </ and Sonic the Hedgehog </ being considered average at worst So far, no one's nominating video game movies for Oscars. If you hear new, exciting rumors about an upcoming film (like the once-rumored John Woo -directed Metroid </ movie), tread carefully, or you may be crushed beneath the descending ceiling of bad writing Often (although less universally) the inverse is also true, of course, which is The Problem with Licensed Games Dating Sim movies (rare as they may be) seem exempt from this for certain reasons (such as less outlandish plots than some other games or a having high

immunity to the detriments of Gameplay and Story Segregation), although as with anything, there are exceptions. Although similarly rare, movies based on adventure games have been made, and they also consistently avert this trope due to their property of Enjoy the Story, Skip the Game . Notable examples include Phoenix Wright: Ace Attorney </ and Professor Layton and the Eternal Diva </ , which were generally well-received Animated adaptations of video games also tend to be received more favorably than their live-action counterparts, perhaps because a medium as focused on zaniness and stylized aesthetics as animation is just better suited to the eccentric stories and settings of some video games. Also, the fact that animated movies are produced with methods similar to those used for video game cutscenes helps, in that they can — at the very least — have the merit of being visually faithful to the source material. Video games are an animated medium, so this makes sense. The Castlevania (2017) </ animated series, for one, is notable for being the first video game adaptation with a "Certified Fresh" rating on Rotten Tomatoes . See Anime of the Game for more examples of such adaptations Another possible contributor to the lackluster reception of video-game-based movies is not necessarily that they're bad, as Critical Dissonance demonstrates in a few instances, but that the current generation of movie reviewers and critics didn't grow up with video games (see the Roger Ebert quote above) and thus can't better appreciate said films without experience with their source material, similar to the previous situation with comic book-based films. Or, in some cases, said generation outright developed bias against video games and refuse to see them as good even when there is evidence that they are

A means of visual entertainment, coming in the form of electronic games that rely on the input of a character through user interface. The idea of operating games electronically is old was an automaton built in 1912 that played a King/Rook vs. King endgame against a human opponent (the human played the King) but the first "pure" video game is considered to be Tennis for Two </ in 1958 Video games by virtue of their interactive nature have unique tropes associated with them, the Video Game Tropes See also Gamebooks for a literary precursor to modern video games; Pinball , the distinguished Arcade Gaming predecessor of video games; and Visual Novel for videogame-like works in the narrative style of literature

An index of works about in-universe video games, whether they be real or fictional . These games and their players play an important role in these stories, often incorporating Video Game Tropes and portraying Video Game Culture This index doesn't include works that are dedicated to just reviewing video games, like many of those in Video Review Show Not to be confused with stories taking place within a video game universe and without any major awareness of being in a video game. Compare to The Anime of the Game and Video Game Movies , which are both works adapted from video games. See also Parody Video Games , RPG Episode , and The Most Dangerous Video Game

How Video Game Specs Work (which includes computer software like DOS, Windows, and UNIX), The History of Video Games for consoles by generation, and the Console Wars , the Computer Wars , and the PC vs. Console Wars for the different battles of each generation Virtual Reality systems, both for games and other media, are mirrored in the Virtual Reality Index

An article in this index will be about these things:

An article in this index will be about these things:

From the very beginning of regular television broadcasting in Britain in 1936, up until the 1980s, British TV drama and comedy shows were made using multiple electronic (video) cameras in studios. That was fine for the interior scenes, but when it came to location shooting, the cameras and (after their introduction in 1958) videotape machines were so big and heavy they needed large outside broadcast trucks to transport them to the location, to say nothing of the complex power supplies providing their multiple operating voltages. Even though video stock allowed for quicker turnaround as it did not have to be developed the way film did, editing was imprecise compared to film, making working with video in post-production impractical for anything longer than remote news packages. The cameras also required very high light levels to avoid picture noise, which compounded the impracticality of working with them on location. Consequently, many shows used 16mm film and audio tape recorders for exterior footage, since the equipment was much more portable (often battery-operated) and film was easier and more forgiving to light and could be edited easily. This meant that interior and exterior shots have a completely different look. (Typical shooting schedules called for scenes filmed on location to be done first, with the studio scenes being videotaped on a later date.) Although somewhat jarring to today's younger audiences, the lack of visual continuity was taken as normal by British viewers (and overseas viewers of British imports). There were exceptions: for example, as early as 1975 Doctor Who </ occasionally used videotape for exterior location scenes as well as in the studio (though the vast majority of stories pre-1986 were straight examples of this trope). In the US and West Germany, most shows were done completely in either film or video, while most other countries avoided outdoor shots as much as they could until the arrival of colour TV and U-Matic tape in the 1970s. By the mid-1980s, this dual format began to be phased out as so-called "outside broadcast" cameras became more efficient, higher-quality and more portable Betacam supersided bulky reel-to-reel and fuzzy U Matic tape, and computerized video editing allowed for the same flexibility for video in post as film did, without the need to develop film, so much so that productions that were shot on film often transferred footage to video for editing. Productions therefore began to adopt either completely filmed or completely videotaped formats, with lower-budget productions preferring the latter because of the lower cost of videotape and faster turnaround compared to film. Film-based productions that required heavy amounts of computer-based special effects, such as Star Trek: The Next Generation ; the fact that broadcasting stations could more easily air pre-recorded video footage certainly helped (though when HD became the norm, it made remastering these programs a nightmare thanks to the fact that it would require manually re-editing the film footage to match the old telecines; TNG</ managed to get by with it, but many other such

shows, including its own Sequel Series Deep Space Nine </ , haven't been as lucky). The technique almost completely died out in the late 2000s, as productions switched to using HD video cameras, which gave a look in-between video and film and was ultimately cheaper than both of the former two options combined. Consequently, this has become a Forgotten Trope for the most part, with later use only occurring as a result of creators intentionally choosing to invoke it. An unfortunate side-effect of Video Inside, Film Outside is that it has rendered most, if not all, of these productions unsuitable for high-definition remastering; most remasters simply treat the filmed portions to match the quality of the taped ones. The rough American equivalent is the , so named for the fact that many soap operas are shot on video to save money. This became more of a problem after progressive TV displays became the norm for Western homes; because the videotape these older programs were shot with used interlaced video, the picture would see visible combing when displayed untreated on a progressive display (CRT televisions could handle this just fine, as they, like the tape, were also built around displaying interlaced video). To address this problem, a variety of deinterlacing methods were introduced— first in the TV sets, then by the broadcasters themselves— to ensure that the image would look clean on the LCD monitors of today. The most common method was to use software to separate each pair of interlaced frames and fill in the gaps, leaving the resulting footage to look twice as fast as it would on an interlaced display. Thus, the "soap opera/costume drama effect" chiefly describes footage that runs unusually smoothly, at the cost of seeming distinctly "off" to audiences acclimated to 24-30 fps footage in TV shows and movies. When switching between film and video is used for style as opposed to technical limitations, that is Decade-Themed Filter

An extremely</ common trope found in any stories told in future or high-tech settings (and, to a lesser extent, spy and espionage stories), a Video Phone (sometimes also referred to as a VidPhone) is a telecommunications device that functions exactly like a telephone but distinctly comes with a video screen which allows for the individuals on both ends of the call (and the audience) to see each other In some depictions, such a device may make use of an ordinary telephone receiver in order to speak to and hear the person on the other end, but most often characters usually just talk to the screen Like Flying Cars , Ray Guns , and, of course, Jet Packs , this is one of the most frequently observed tropes in depictions of The Future and originally popularized in the Raygun Gothic era of Science Fiction , but where most of these ubiquitous genre tropes remain absent from our reality , the Video Phone has been publicly available in one form or another since 1936</ ; the German government ran public videophone booths prior to WWII, though these early trial services were disrupted by the war. AT&T opened the first public videophone booth in the US in 1964 Despite this constant attention and the relative simplicity of the technology involved (Alexander Graham Bell himself talked about the possibility), lack of consumer interest kept it from going anywhere; the honest truth was that it seemed that despite all the sci-fi attention it received, the public didn't really want</ videophones, at least not at any significant price (apparently, those who wanted to see video phones in common use didn't bother to consider the fact that having the other person not being able to see your facial expression or any rude

gesture you might feel like showing is arguably one of the more useful features of a regular phone). They only became broadly successful in the modern era once they became a secondary feature of mainstream computer technology, and even then, many argued that they would remain little more than a novelty outside of the porn business and people in long-distance relationships It wasn't until the late 2000s that video-conferencing eventually found its market niche in business communications, thanks in part to the rise of tele-commuting which made managers develop a need to see their telecommuting subordinates face to face, and in part because even the most expensive multi-thousand-dollar videoconferencing hardware is cheaper for global megacorporations than extracting their executives from all over the world and flying them into a single place, with lots of newcoming companies such as Zoom, Bluejeans or Ringcentral as well as products from existing companies like Cisco Webex, Microsoft Skype for Business or IBM Sametime offering this form of communication The COVID Pandemic of 2020 made use of this technology much more widespread, because it suddenly became a necessity for business, education, entertainment, and maintaining social contact Their main relation to Zeerust is in a meta reasoning—twenty years ago when somebody wrote the movie, a video-phone even in the future would be considered an impossible pinnacle of technology but in fact has become common in its use Compare: Comm Links , for another Sci-Fi phone equivalent. See also Pay Phone for more contemporary uses. For a breakdown on how such devices tend to operate in fiction, see Hollywood Web Cam Given this trope's increased existence in Real Life , please refrain from listing work examples that use existing technologies in contemporary, early-21st-century settings. If a work example of a Video Phone is based on an existing consumer product, please only list the product as a real-life example, if it's not listed there already

A list of tropes which contain video examples from which media. Unlike quotes and images which are one per page (for more, make a Quotes/ or ImageLinks/ page respectively), a trope can have more than one video. See Video Guidelines for rules about videos and No Video Examples, Please! for a list of tropes that cannot</ have videos. Note: If any of the media pages are red, but still link properly to a page, go to that page and null Edit it. (Press edit page, and then save.)

A list of media created by people from Vietnam .

You have been watching this series for a while, be it since childhood or since yesterday. You are just in the middle of an exciting scene where Miss Lovecuddles reveals that she was actually behind everything that … wait a minute, Mister</? Lovecuddles is a guy </ ? Congratulations, you've just become a happy victim of Viewer Gender Confusion ! Sometimes this is because a cheap dub uses badly Cross-Dressing Voices , sometimes because the language you're enjoying your story in doesn't have gender differentiated pronouns , or because they have a name rarely used for that gender , or it was clear from the beginning and you were just holding the Idiot Ball for the day and missed it fabulously. Compare She's a Man in Japan (where the character's gender actually was</ changed while adapting),

Bifauxnen , Samus Is a Girl , Alien Gender Confusion (where this happens in-universe to members of different species), Female Monster Surprise (where you are expected to be mistaken at first) and Ambiguous Gender Identity (where the character's sex is (probably) known but their gender isn't). Contrast (or compare?) Dude Looks Like a Lady or Lady Looks Like a Dude when it's other characters who are confused. See also Ambiguous Gender for characters who have no canonically stated gender, and Viewer Species Confusion for when it happens to an animal or other non-human character. May be solved with the use (or lack) of Tertiary Sexual Characteristics . Can be seen as the viewer-perspective version of Unsettling Gender Reveal . Anything that makes the character's sex obvious may act as a Gender Reveal . Can overlap with Viewer Name Confusion .

Viewer Name Confusion is an Audience Reaction , in which portions of the audience, for some reason or another, have a mistaken impression of what a character's name is I Am Not Shazam , in which people mistake a work's title for the character's name, is the most common variant, but it can happen in other ways, such as a) misinterpreting a nickname as the character's actual name, b) incorrectly assuming that a character shares a surname with a more prominent family member or c) simply hearing the name wrong (which can happen easily if they, or a character who commonly addresses them, has a Speech Impediment) The name may also be gotten almost</ right, but spelt or pronounced wrong, especially if the character spells their name with an unusual spelling , or if a name has more than one possible spelling (like Cindy vs. Cyndi). If a character has a name almost</ like a real name (like "Brob" instead of "Bob") that might also cause confusion, since viewers may assume the character has the real name Compare Mondegreen , Title Confusion , Beam Me Up, Scotty! , and Spell My Name with an "S" . May end up as "Common Knowledge" , or a Fandom-Enraging Misconception . If the character is associated with fake video game secrets, it may become an Urban Legend of Zelda . It can also overlap with Viewer Gender Confusion when the viewers don't assume the character has a Gender-Blender Name and the character doesn't have a unisex name. If a character gets another character's name wrong, that's Accidental Misnaming , and as such, in-universe examples should probably go there unless there's a Show Within a Show involved

A common belief among film and TV executives is that everyone who watches media has the intellect of Beavis and Butt-Head This belief is a root cause of Executive Meddling , especially common among shows intended for children. Kids can legitimately be said to be less knowledgeable than adults, though we all probably know a depressingly large number of exceptions Of course, there is</ a "moron" demographic out there, and it has its members, but executives seem to believe that every</ person who watches TV belongs in it. This may be due to something known as the "80-20" rule in business — in this case, that market research shows that 80% of money spent on television-advertised products comes from the lowest 20% in terms of education and intelligence, so show-content is naturally geared towards them On top of that, not only are viewers stupid, they are also intolerant of people and things unlike themselves, ignorant , hate change , need to be instantly satisfied, and have the attention span of a goldfish

Interestingly enough, though, this meta-trope sounds worse than it is, at least currently; actually comparing and contrasting the entertainment of today with the entertainment of the past will show that overall</, shows demand more of your mind than they used to, probably because we'd be bored if it didn't and partly because things like recorders or the Internet now make it possible to examine shows in more depth more easily than in the past (read Stephen Johnson's book Everything Bad Is Good For You</ for an eloquent explanation beyond the scope of this article). Of course, all that means is that the bar for entertainment is raised even higher, and that viewers will get annoyed more and more easily if things like Infodump happen a few times too many. Additionally, the caveat about this being what executives</ believe about viewers was, at least at one point, not particularly untrue. In the era of the "Big Three" networks (NBC , ABC , and CBS), before VCRs and the like, shows really were to be simple and supposedly "unobjectionable" narratives, for fear of making that one third of the entire TV viewing audience tune out and tune in to one of the competitors. This is why television quickly gained the nicknames Boob Tube and Idiot Box from intellectuals who found television pandering and simple. Note that this viewpoint is not particular to network executives. Question some point of continuity for a children's show with a sizable adult Periphery Demographic , and you are pretty much guaranteed one of the periphery adult fans will insist that it's "because it's a kid's show and they don't expect kids to notice." Ironically, kids are often far more</ aware of such mistakes, not because kids are per se "smarter" than we expect, but because not having things like a job, spouse, or "real life" to distract them, they tend to watch their favorites much more obsessively and with more of their minds fully devoted to analysis. (Which makes them similar to others you may be familiar with.) Consequently, children can put even the strictest editors to shame with their awkward questions. Lastly, this trope is not necessarily bad . Business administrators and anyone else whose job it is to explain things to others (like a coach or a presenter) know the "KISS" method (" tupid) because of the fear that if something is too complex </ then no one will understand it, which is certainly true of TV plots. Thus, it's not a bad idea for a writer to assume that their audience are not geniuses and write accordingly, as no one will be entertained if they can't follow along the story. Of course, great care needs to be taken, because if a writer makes their story too simple they also risk alienating the audience who will angrily invoke this trope. Some of it comes from how</ people use TV, too. In some households, the TV is just on. The background noise and familiar voices add a comfortable ambiance to a home. These people may prefer programs you can tune in and out of, and not miss much. Face it, not every viewer is like a Troper , analyzing character's actions, and picking apart the plot. This does not mean the person is a moron, but when it comes to explaining the show that they "watch", they may sound like it to a troper. Compare Lowest Common Denominator . For when the viewers really are</ morons, see Fan Dumb and Hate Dumb . For the less common polar-opposite, see Viewers Are Geniuses . When this trope and the latter trope conflict, however, you can wind up with an Unpleasable Fanbase . For versions enforced by law (or out of fear of a potential lawsuit), see also Our Lawyers Advised This Trope . Not to be confused with Humans Are Morons . In-Universe Examples Only

Fans can be a strange lot. They get really invested in the show they are watching, they come to empathise with and care for the characters. They come to see them as friends. Sometimes this gets taken to a strange place When a fictional character dies, there is often a very emotional response. In fact it can often lead to the sorts of public displays of affection that we might expect for a major public figure. In certain cases, Shipping will play a big part in this situation. A One True Pairing will be dashed because of a character's death, and the fan outcry will go Up to Eleven This can either be a sign of a great writer, or a terrible one. Likewise, it can be the sign of a touching viewer following, or a fanatical one. Or perhaps both . Either the death struck a chord deep and meaningful or the fans become enraged. In any case, sometimes it almost seems to border on Daydream Believer with how "real" the character's death feels. A denial is called He's Just Hiding!

This trope is about two little things: The Trope Namer is PBS , whose stations and original programs used to be funded almost entirely by viewers. (Some stations still are.) For this reason, most PBS programs still end their acknowledgements with "Made possible by financial support/contributions to your PBS station from... viewers like you." (Since November 1, 1999, they've been following this with "Thank you." Odds are, fewer viewers donate than not. People usually donate to PBS not because it helps keep the station running, but because neat "gifts" get thrown in (albeit for far more than the free-market rate), and because it's the PBS equivalent of Ratings : the sorts of programs that bring in heavy donations during pledge drives are the sorts of programs that the station will renew . Most of the grant money comes from airtime-hungry corporations, not-for-profit foundations, and the Corporation for Public Broadcasting ("A private corporation funded by the American people"). See also Thanking the Viewer and Please Subscribe to Our Channel .

Similar to how Viewer Gender Confusion is the audience thinking the character is of the opposite gender (or isn't sure which gender the character is in general), Viewer Species Confusion is when the audience thinks the character is of a different species. Usually it happens when the character is oddly colored , if the character barely resembles the species they're supposed to be , or if they're a species the audience hasn't heard of This is an Audience Reaction . Informed Species if intentional, I Am Not Weasel if in-universe, and Cartoon Creature if it's not even supposed to be recognized

Justice doesn't always prevail. Sometimes The Bad Guy Wins , especially in works that closely reflect the real world. And sometimes, just as an evildoer looks like he's going to be a Karma Houdini ... BAM! He dies at the hand of a victim, the victim's relative, crazy outsider, or some other interested party A Vigilante Execution occurs when someone who has committed (or been accused of committing) a crime, who's gotten off with light or no punishment, is murdered as extrajudicial payback/punishment for that crime This can be either the ending to a story or the setup for a second half or prelude to a larger plot See also: The Killer Becomes the Killed , Vigilante Man , Framing the Guilty Party . Related to Pay Evil unto Evil and Karma Houdini Warranty

The Vigilante Man is a man who brings criminals to justice by any

means necessary, even if it means killing the criminals outright. Although he is breaking the law, he is presented as the good guy. If the police are after him, expect them to secretly sympathize with his goals. Occasionally, one officer is determined to catch the Vigilante Man, but you can be sure that his fellow officers aren't working very hard to help him. The "good" Vigilante Man refuses to fight the police, and if confronted, will either surrender or die before harming them , and may even try to keep killing to zero whenever possible . The "bad" Vigilante Man is willing to kill anyone who tries to stop him . (In such cases, compare with the Cowboy Cop .) The people the Vigilante Man is after are always guilty — or at least, they are in his mind, especially if he's the villain . Most Vigilantes will (try to) not hurt an Innocent Bystander ; he will often go out of his way to avoid killing them, if possible . In the rare times they do, it is only to provide some Wangst as the Vigilante Man wonders if he is doing the right thing. Expect a Finger in the Mail to show up and convince the Vigilante Man that his job of catching the Ax-Crazy Psychopathic Manchild and saving the child held captive makes it worth it. The Vigilante Man's favorite method of execution is (obviously) the Vigilante Execution . If he's also a police officer, this makes him a vigilante-driven version of the Killer Cop . If he's got an (uneasy, usually unofficial) alliance with the police, then Cops Need the Vigilante . A cop whose method towards disposing criminals is just as final but who does operate within the law goes under Judge, Jury, and Executioner . The legal version is The Executioner . "Urban vigilante" protagonists were a staple of action movies roughly between the 1970s and the very early 1990s mainly as rising crime rates and increasing police corruption (and racism in the case of blaxploitation films) led people to lose faith in the long arm of the law and act for themselves instead. Concerns about justice by own hand eventually led to a more negative view of vigilantes, and modern straight examples are often frowned upon. A subtrope of the Anti-Hero and Well-Intentioned Extremist . May be Neutral Good , True Neutral , Neutral Evil , Chaotic Good , Chaotic Neutral , or even Chaotic Evil , depending on the setting . If he stops discriminating between innocents and bad guys, he might end up Jumping Off the Slippery Slope and become that which he despises . Sometimes he can be a Reformed, but Not Tamed character. If several vigilante men assemble into a team, you've got a Vigilante Militia . See also Serial-Killer Killer . The Asshole Victim is often this guy's target, as is someone who (deservedly or not) is Convicted by Public Opinion .

Your town or city has become infested with crime. The Police Are Useless , or crooked , or both. Same goes for the politicians . However, you aren't willing to see your hometown fall into a Wretched Hive of scum and villainy so easily. What do you do? Become a Vigilante Man of course! However, you may quickly find that cleaning up the streets on your own is easier said than done. Worse, if an organised crime group like The Mafia or The Cartel , or other similar organizations are involved you'll be dealing with armed hitmen who are trained to kill. Luckily, you know where you can find some like-minded individuals to join you on your quest for justice. This is where the Vigilante Militia comes in. Subtrope of Vigilante Man , this group is dedicated to hunting down and striking fear into the hearts of criminals. Often they may be either people who have been wronged by criminals in some way, or simply people looking to make their hometown safe for everyone. Sometimes, they may have someone

or multiple people in their ranks who are former law enforcement officers. This will be especially true if they were Cowboy Cops who either resigned or were kicked off the force because of their disdain for procedure. The Militia's size will vary from work to work. Sometimes they will have a small number of people, while other times they may be the size of an entire army. If the group is one of the larger kind then they may set up a certain way their operatives work depending on their style. They can have their members operate as individuals, or in teams. If they are especially large, they may even be able to operate in places outside their normal city. Perhaps sending people to fight throughout the entire country, or even world. In contrast, smaller teams will usually (though not always) stick together so that they have strength in numbers. Just like the individual version of this trope, Vigilante Man , there can be both good and bad examples of this. A "good" Vigilante Militia, will avoid confrontation with the police as much as possible, will focus all efforts on safeguarding innocent lives, and will try to capture their targets alive so that they can be turned over to the police and receive a proper trial. They will often have support among the police force, who will often tell the press the vigilantes "escaped" before they could be arrested. In contrast, "bad" militias will have no qualms about killing their targets (although not all</ militias that kill their targets are portrayed negatively). They will engage in Vigilante Executions and this time they can actually form their own firing squad. Bad groups will also fight with the police as well, sometimes even as much as the actual criminals. And if they are one of the larger organizations, as explained above, they may actually be able to take over a part of the town, or even the entire city</ , effectively overthrowing the legal authorities and seizing power. If the members have super powers, then they become a Super Team , which can overlap with this trope if they operate without any official government sanction. If a group of ordinary citizens are organized into a crime-fighting group by an official and deputized law enforcement officer, then they are a Posse , instead of one of these as they operate inside the law and will have been deputized accordingly (there may be borderline cases if a group of Dirty Cops form one, but these are the exception rather than the rule). If it's just a mob whipped up into a frenzy against someone, whether they're guilty or not, and usually disbands right afterwards, that's Torches and Pitchforks (although if they have enough organization and time to think things out, they might qualify for both). Generally</ not a Right-Wing Militia Fanatic , although overlap is possible; in recent history (especially during the Cold War) militias have often been hired by right-wing governments to augment the latter's use of violence against all opposition, Communist or otherwise. On rare occasions, the opponent they form to fight may be a monster instead of human criminals. See also Vigilante Man , the individual version of this trope. Compare La Résistance (which forms against foreign invasions, not general lawlessness), Torches and Pitchforks (likely to be gathered for a single, sometimes unjustified, act of violence against a hated figure and perhaps even being willing to kill their way past lawful authorities), and The Magnificent Seven Samurai (a group of heroes defends a small community from either bandits or a tyrannical overlord).

An episode in a normal series that is composed of two or more vignettes. Most times they are unrelated, or only held together by a Framing Device or a common theme. Happens when a writer wants

to try Something Completely Different Note that this only counts for shows that normally have a single, cohesive plot. For example, The Bugs Bunny and Tweety Show</ doesn't count, because all</ the episodes are a series of shorts A literary approximation happens when a book series whose novels generally have only one story release an anthology of short stories about the series universe As for video games, this happens when a game has multiple modes with each individual mode having its own story. While they tend be connected in the grand scheme of things, the player will often have freedom in choosing how they tackle all the modes. Alternatively, the game could play just like a TV episode where the storyline is composed of multiple, individual storyline that the player will be transferred between as they progress through the game Contrast Three Shorts , Two Shorts and Animated Anthology . Compare Anthology Film

In a great deal of media aimed at children or families, there will be more than one villain working together against the hero, and one or more of these villains will be in charge over the other(s). However, the lower-ranked of these villains is meant to be taken far less seriously than the higher-ranked, whether due to being more cowardly, more comical, less powerful, less competent, or even simply less motivated than their dark superior This can have a lot of benefits to the writers, such as averting Villain Decay : no matter how many times the heroes triumph over the lesser villain(s), the fact that a more serious villain (or group of more serious villains) is still part of the same organization means there's still a credible threat that the heroes still need to deal with. Also, for works aimed at especially young children, this also allows the writers to make the lesser villain goofy and funny, thus keeping a work lighter and softer and generally less frightening for the kiddies A common, but by no means the only, way to show that the higher-ranked villain is serious is to display the lower-ranked villains afraid of him/her, or show that the higher-ranked villain is a Bad Boss who will Shoot the Messenger when brought bad news, or who punishes his minions for failure or for otherwise ceasing to be useful . It's not really necessary for the higher-ranked villain to be cruel to his or her underlings for the trope to apply, though; it's only really needed for the higher-ranked villain to be played noticeably more seriously than his or her underling(s) The laughable lackey can be an Ineffectual Sympathetic Villain , but it's not necessary for the lackey to be sympathetic at all for this trope to apply, nor is it necessary for the laughable lackey to be ineffectual or a Harmless Villain : they can even win at times , as long as they're noticably less serious than their superiors. A Bumbling Henchmen Duo , a Quirky Miniboss Squad , or a Goldfish Poop Gang can also fill in the loser villain slot as well as a single villain can. It's also common for the laughable lackey to have an unpleasant, demeaning, or dumb-sounding name The Laughable Lackey can also be The Igor , The Renfield , The Imp , a Minion with an F in Evil , a Sycophantic Servant , and/or a Punch-Clock Villain who only Pokes the Poodle , or possibly The Dragon , depending on his/her/their specific role in the evil organization. The Laughable Lackey is often the Butt-Monkey or The Chew Toy , as well, and can also be a Bumbling Sidekick to the serious villain, though there are more ways of being laughable than just clumsiness They often form a Red Oni, Blue Oni duo. If the villain is also Laughably Evil , he will usually be the red to

the lackey's blue. If the villain is played completely seriously, he will usually be the blue to the lackey's red Compare Abusive Parents , Big Bad Wannabe , Brains and Brawn , Evil Duo , Eviler Than Thou , A Lighter Shade of Black , The Man Behind the Man , My Master, Right or Wrong , Sliding Scale of Villain Effectiveness , Sorting Algorithm of Evil , Surrounded by Idiots , The Starscream , What Measure Is a Mook? A Terrible Trio can have this dynamic if one of them is in charge and meant to be taken more seriously than the other two, though the three of them together can act as the laughable lackey if they have a more serious boss, or they can even together act as the serious villain if they're not Played for Laughs have have one or more underlings who are. Sometimes overlaps with Vile Villain, Saccharine Show and Perky Female Minion . Contrast Hypercompetent Sidekick

Carface is the main villain of Don Bluth 's All Dogs Go to Heaven </, and he operates a crooked canine casino. When Carface discovers that his former partner has escaped the dog pound and survived an assassination attempt, Carface almost disposes of his henchman, Killer (even though Killer was not responsible for the attempts). A myopic, neurotic, weakling of a dog, Killer gets one last chance to avoid the Shark Pool : by killing Charlie Barkin with a Flash Gordon thermo-atomic ray gun.

A Villain Antagonist is when the villain and The Antagonist are the same person . This combination of roles is extremely common , to the point where the terms are often (falsely) assumed to be synonymous and used interchangeably, though probably not as much so as the inverse that often opposes this character, the Hero Protagonist . Simply put, the central character's opponent is also an established force for evil within the universe. This role is used most often in classical myths and heroic legends since these tales are usually a story of conflict between the forces of good and evil. It's common to see these characters either cause or be personifications of real-life issues in order to fulfill the audience's desire to see these problems dealt with when this character loses to The Hero . This character's primary role, generally speaking, is to provide conflict while giving the audience reason to root for the Hero Protagonist to win that conflict. Very common in almost any fictional story See Hero Antagonist and No Antagonist for notable exceptions of this trope

A series linked by a recurring villain. The heroes and the locations may change or be dropped, but the central link remains the villain. The villain is frequently the Big Bad of the franchise and most or all of its installments, though this doesn't have to be the case to qualify for the trope Not the same as a series with a Villain Protagonist . Each installment may introduce a whole new set of heroes, but they may still be the protagonists Very popular with the Slasher Movie genre, probably because the heroes can die off in the end without ruining the series. Often though, the villain will appear to die at the end, to allow closure to the series if another one is not made. The End... Or Is It? ending optional. There are a few iconic horror heroes</, like Dr. Van Helsing , but they're usually a lot less prominent and iconic than their respective villains. Ash Williams may be the only real exception The idea started with Pulp novels and villains like Fu Manchu or Fantômas If the franchise is named after the villain, do not confuse this with Antagonist Title . If the villain

themselves appears as the mascot, they are a Mascot Villain . While the recurring villain in a Villain-Based Franchise usually features as the Villain Antagonist in the individual installments rather than as an outright Villain Protagonist , they are still the overarching main character in the series as a whole</ , disqualifing them from this trope

When someone takes the term "An Accessory to the Crime" to its logical conclusion Let's say that Alice murders Bob. You go after Alice; she's the murderer, of course. And the person who paid Alice to do it. And Alice's parents, who obviously didn't raise her to be a good person. And Alice's friends and family, who didn't hold her back. And the people who sold Alice the weapons she used. And the people who made the weapons she used. And the people who didn't pass laws preventing said weapons from being manufactured and sold. And the society that, through its values, didn't make such a crime unthinkable.. In the more sympathetic portrayals, the Karma Police actually has a legit beef with the Villain by Proxy (who may or may not care either way), even if their methods can range from overzealous to cruel . The less savory examples operate under methods that come across as Misplaced Retribution , with a touch of Evil Is Petty , Never My Fault , or as a proponent of Poor Communication Kills A hybrid option would be to follow the slippery slope scenario , where it morphs from "directly involved" to "marginally involved" to "only acquainted with those who were involved". This is an effective way to descend the Karma Police into the path of He Who Fights Monsters Just for clarification, this is not</ about whether the audience</ feels this way about a character. This is about someone in-universe</ thinking this way and doing something about it Sub-Trope of Knight Templar with a touch of Well-Intentioned Extremist (depending on the portrayal). Compare Hitler Ate Sugar , Accomplice by Inaction , and Guilt by Association Gag , the former two of which can overlap if things turn really</ nasty

The Evil Empress wants a consort for her domain. Unfortunately, none of her male subjects are quite up to her standards. So what does she do? Kidnap the hero, of course. Once he sees how hot she is , and how they can rule together , he'll fall into her arms Unfortunately for the villainess, this never seems to work out. Occasionally, the hero will be forced to play along temporarily, but in the end, he will always escape the villainess' clutches and leave her all alone and lonely...until the next time she manages to finagle him into her arms The villainess in question is often The Vamp and/or Daddy's Little Villain . If the villainess is more interested in having a male Sex Slave rather than a consort, the next step is always a Gender Flip of I Have You Now, My Pretty . However, this trope can sometimes result in a Sex–Face Turn .. A Sub-Trope of Villainous Crush . A Sister Trope to Dating Catwoman (if the hero actually returns her affections), All Amazons Want Hercules , Single Woman Seeks Good Man , and I Love You Because I Can't Control You . The alignment-flipped Sister Trope of All Girls Want Bad Guys Compare Heroes Want Redheads . Contrast with Mad Scientist's Beautiful Daughter , since the villain is unwilling to renounce her evil ways to woo the hero

Time and time again a story is told with the classic hero vs. villain setup with the villain committing acts deemed evil by good,

neutral, and the normally apathetic. The villain usually commits said acts for their own personal reasons, be it pride , ambition , self-righteousness , megalomania , or even love . But wait, they have a justified reason for their actions? What if they may not be so much evil as they are anti ? Here is a villain who has a justified reason for being what they are, or has justifiable motives, or makes accurate assessments of the world or the hero(es). In any case, this is a villain who unexpectedly has a point about something, or whose reasoning for their motives still hit too close to the truth for the hero's comfort. When this comes to light, the revelation may force the hero to question their own motives or even send them into a Heroic BSoD . With straight villains this can be even easier when they go against other villains who give them plenty of things to criticise and be right about. Due to the nature of their villainy, if they become too excessive in their methods they can easily fall under Well-Intentioned Extremist . In-Universe they can easily fall under Designated Villain . Compare Anti-Villain and Ambiguously Evil . Compare Hypocrite Has a Point , Jerkass Has a Point and Strawman Has a Point for other characters designed to be detestable who nevertheless are right about something. Compare The Horseshoe Effect , when two people purport to be ideological opponents and yet have beliefs in common. See also The Extremist Was Right . Has no connection to Spikes of Villainy .

Hell hath no fury like a villain scorned This is the tendency of relatively calm and composed villains to lose their cool over the course of the story. Usually happens to arrogant Chessmaster -type villains (especially if said villain is a Smug Snake), as control of the situation slips from his or her grasp and things come up that they Didn't See Coming . Most notable when it happens towards the end of the story to show how pathetic the Big Bad is when things are not going exactly as planned (" This Cannot Be! "). Especially apparent if they previously had Creepy Monotone or Dissonant Serenity , and suddenly start Chewing the Scenery (when they do this because their plan is succeeding</, it's more of a case of Drunk on the Dark Side). Dirty Cowards also suffer from this, especially when they are cornered Similar to Oh, Crap! , though the difference lies in that Oh, Crap! moments involve a single moment where the character finds that they are screwed, while Villainous Breakdowns have them see it coming from miles away. The good-guy counterpart is the Heroic Safe Mode Note that this isn't necessarily an example of Villain Decay . On the contrary, some villains become much more terrifying and dangerous when their façade of cunning and civility crumbles. They might even end up dishing out a vicious No-Holds-Barred Beatdown to the Hero(es), engage in some Cold-Blooded Torture or, goodness forbid , drop the Villain Ball and Just FINISH HIM Already instead of playing around. It could even lead them to stop holding back their true nature and assuming their true form as the Complete Monster they actually were. Thus, a Villainous Breakdown is frequently a trigger for a One-Winged Angel transformation. Affably Evil and Faux Affably Evil villains are prone to becoming far more terrifying and disturbing when they undergo one of these because their fairly normal</ personality serve to emphasize their breakdown A somewhat less common, but not exactly infrequent, form of breakdown results in the exact opposite reaction: the villain lapses into a catatonic state as the shock of their defeat

robs them of their wits. Another form of breakdown occurs due to Heel Realization causing a Villainous BSoD . Yet another is the impotent flailing of a defeated villain, left with nothing without power The scale of the breakdown generally depends on the nature — and overall impressiveness — of the villain. A Smug Snake , being generally inclined to rate their own abilities higher than everyone around them anyway and less equipped to deal with setbacks, will usually break down more frequently and over relatively minor spanners in the works , with the resulting tantrum usually being less-than-impressive. A Magnificent Bastard , on the other hand, is already the type of villain who's not inclined to sweat the small stuff, and will usually respond to most setbacks fairly calmly; however, this merely means that if their plans suffer a particularly impressive implosion, then this will usually make their resulting breakdown all the more epic. Similarly, a relatively minor or small-scale villain may have a breakdown on the level of a temper tantrum or explosive Cluster F-Bomb rant; a major or larger scale villain, however, will frequently have a breakdown with potentially (and quite literally) world-ending consequences . As the old saying goes, "The bigger you are, the harder you fall" In another type, the breakdown won't be one, sudden explosion, but a gradual progression of smaller, gradually increasing breakdowns happening over the course of the story. As their Evil Plan comes closer to failing or their plans fail again and again, they simply get worse and worse as the breakdown continues, until finally, they lose it completely. This normally happens in the buildup to the final confrontation. This can overlap with Sanity Slippage , where a character gradually becomes more and more insane as time goes on. And as a special treat, when the villain finally goes so crazy and bat-shit insane that he completely loses it, other characters tend to hit him with a You're Insane! Another type of breakdown is when the villain becomes extremely furious when either something happens that isn't part of his plan or his plans end up being ruined, or both. Once pissed off, they may lose their temper and say such phrases as " Why Won't You Die? ", "I've had it with you!", " You Monster! ", "I should've killed you when I had the chance!", or even " This Is Unforgivable! ". Either way, the villain will scream more and more at the other characters in fury (often in such a high pitch as to sound like a girl (especially if they're male)) before being bested by them. A string of Kick the Dog or Bad Boss moments is another subtle way of indicating this, if the villain had previously displayed parent-like feelings toward their henchmen One specific variation appears in some Video Games where the main villain is able to broadcast messages to the player over the course of the story, and they eventually lose it and start broadcasting more and more desperate pleas/insults/bribes to the player as they get closer to them For Anti Villains , or ones with a Freudian Excuse , a breakdown can either play Cry for the Devil (if their breakdown is pathetic) or cement them on the far side of the Moral Event Horizon (if they went Jumping Off the Slippery Slope during their breakdown). A subversion of this trope is Graceful Loser Heroes have been known to suffer similar breakdowns , though (unless they are making a Last Stand) they are much less likely to die during one

Super-Trope to Villainous BSoD . Sister Trope to Rage Breaking Point (and can often overlap). Compare the Villainous RRoD , which is where physical overexertion causes the bad guy's body to start falling apart Not to Be Confused with Broken Heel , which is a

literal application of the term

This trope applies whenever a villainous character has romantic and/or sexual feelings for a heroic one. If this crush takes a turn for the perverse (and most such crushes tend towards this), this can lead to tropes like I Have You Now, My Pretty , Forceful Kiss , Bathe Her and Bring Her to Me , And Now You Must Marry Me , Scarpia Ultimatum , and Go-Go Enslavement where the villain tries to force their desires upon the character, although none of those require</ a Villainous Crush. Additionally, the villain may become a Stalker with a Crush . If the crush itself is a motivating factor in their Start of Darkness , then it's Love Makes You Evil . This trope isn't always negative, though. This trope can conversely be a very humanising trait for an Anti-Villain . The heroic character may become a Morality Pet , and can be fairly certain that their villainous admirer will never harm them or allow harm to come to them, barring certain exceptions . They may even step in to protect them from other villains who have fewer compunctions. Taken all the way, it may become Love Redeems and/or Defecting for Love if the villain choses to switch sides to be with his crush. If the feelings are mutual or an actual relationship develops, then it's Dating Catwoman instead. When this is purely subtextual, see Foe Romance Subtext . The specific variant when the Evil Empress captures the hero to seduce him is Villainesses Want Heroes . Not to be confused with Foe Yay , which are purely audience reactions. Sometimes overlaps with Bigot with a Crush , if the bigot is depicted as a villain. Contrast All Girls Want Bad Boys and Reformed Rakes . No Real Life Examples, Please!

Imagine if you will, Colonel McGoodguy and The Squad are in a pinch They're all out of ammo, the Redshirt Army is knee deep in Mooks on the other side of town, their Military Mashup Machine is a smoldering pile of scrap, and even though The Smart Guy managed to Reverse Polarity and get a second shot out of the Applied Phlebotinum that only works once , it's not enough. General Shagnasty and his goons have them dead to rights, and they're staring down the barrels of way more BFGs than they should have left after our heroes blew up their factory two episodes ago. The villains gloat, because nothing can stop them now ! But something does. An unstoppable onslaught sends the villains running for cover! The day is saved! ...wait, aren't those the Elite Mooks from season two ? ... Dr. Bludengutsen ? Is that you? Why are you</ helping us? The reasons can be many. Maybe the villain... Is The Only One Allowed to Defeat You or otherwise feels that losing to the other villain is an unworthy end for a Worthy Opponent . And of course it's always possible that it isn't a rescue at all. The villain gave the hero a Hope Spot , the relief of escaping from their enemies, so it's possible for them to destroy that hope. Not to be confused with Save the Villain when a hero saves a bad guy or Bad Guys Do the Dirty Work when the bad guys do something that the good guys were too squeamish to do or the writers just didn't want them do. Overlaps with Enemy Mine , as it can be how such a situation begins,</ but not all instances of bad guys helping good guys falls into this category. May also be a case of Terrifying Rescuer until the heroes figure out what's really going on. Can result in Out of the Frying Pan , if the rescuer proves to be a worse threat than whatever they rescued the heroes from.

Les Misérables </ Javert infiltrates the rebels, where he is subsequently discovered and captured. Out of nowhere, Valjean, the escaped convict who had eluded him for years shows up, is given the opportunity to execute him, and releases him instead. Inverted because Javert is the antagonist At the end of Barb Hendee's Memories of Envy</, Eleisha is about to be killed by Simone when who should kick in the door and charge to the rescue? Philip ? Wade ? Some other member of Eleisha's Nakama? Nope. Julian </ saves her

This is one method for avoiding doldrums from having an Invincible Hero . Scenes of Villainous Valor show the antagonists to be outmatched, forcing them to rely on daring, cunning, skill, and determination to hold their own against the heroes, or at least go out with a little dignity . They sometimes even continue a hopeless battle for higher reasons than spite! This often results in a tense back-and-forth as the heroes' raw power is set against whatever the villains brought Sometimes they win, sometimes they lose, but the mark of Villainous Valor is that it sees the "bad guys" using tropes that you wouldn't expect from them. In fact, if you were just tuning in, you might even be confused about who you're expected to root for. A fight between the Knight in Shining Armor and The Dragon with his Spikes of Villainy will often leave you cheering for The Hero , but what if The Dragon locks swords with the hero and gets between them and his master , to give the latter time to escape ? What if The Dragon is seemingly struck down, only for her Undying Loyalty towards her master and her sheer, unbroken will to spur her into a full-blown Villainous Second Wind ? The scene changes completely This often appears in shows where the villains are sympathetic or the heroes questionable . Nevertheless, this is a trope about viewer sympathy so much as bravery, ingenuity and skill on the part of a villainous underdog. If the villains are acting more like the soon-to-be-slaughtered protagonists of a horror film, we might be looking at a Mook Horror Show instead. Contrast David Versus Goliath , where the hero is the weaker one. For villains fighting politely instead of bravely (though they can overlap), see Mook Chivalry This valour may show up more easily in an Evil vs. Evil fight. The Badass Normal villain may be arrogant, determined, sure of themself and Defiant to the End against the Badass Normal hero, but what if they have to fight against an Eldritch Abomination ? Perhaps they are defeated easily , just to prove that the eldritch abomination means business. Or perhaps... they will be arrogant, determined, sure of themself and defiant to the end, even in the face of armageddon. In that case, they may earn our admiration, and if they even manage to punch out or scam the eldritch abomination, even more so Of course, fortitude in the face of adversity is not necessarily always a redeeming quality; sometimes, if the villain had slaughtered The Hero 's entire family, driven by a desire to inflict needless suffering , then subjected the hero's Love Interest to Cold-Blooded Torture , before explaining his evil plan to destroy the city, all while maintaining an even tone of voice , their refusal to back down without a fight can serve to demonstrate a stubborn refusal to allow the hero to dispense clean justice, or otherwise demonstrate that the villain does not even value their own life, let alone that of anyone else Compare Worthy Opponent . See also Evil Virtues . This sort of behavior is the staple of the Noble Demon This trope also has a complicated relationship with Bad Guys Do the Dirty Work , wherein

villains are capable of being depicted committing actions that are from a logical point of view beneficial to the protagonist and also entirely necessary but would conflict with a protagonist's moral code; when the villain does this in a self-sacrificing or at the very least supremely cool manner, then it combines the two tropes. However as often as not, the villain really is doing actually reprehensible things that just also happen to require astonishing resolve and bravery to pull off

An interesting twist on conventional storytelling: make the main character and the bad guy into the same person. Sometimes (but not always), this villainous main character will even get the Sympathetic P.O.V. . On the other hand, it is not necessary for a villain to be sympathetic for them to be this trope. They simply need to be a villain whose morally reprehensible actions (however well-intentioned) are in no way glossed over or</ justified within the context of the story. We are seeing the story from a villain's point of view. A Villain Protagonist (especially in a comedy) is quite likely to go down in flames at the end. Whether this counts as a Downer Ending or not generally depends on how many dogs they kick along the way , how entertaining their Humiliation Conga or Karmic Death is or both. They may also do a Heel–Face Turn and become a Hero Protagonist (or at least an Anti-Villain). This doesn't necessarily mean they will</ lose or perform a Heel–Face Turn . In fact, their status as a main character just makes it more likely that the story will end with the villain winning than any other story would. When this is done for one episode, it's a Villain Episode . This trope very often overlaps with a Nominal Hero and/or Sociopathic Hero , and sometimes with the more extreme cases of an Unsympathetic Comedy Protagonist . Note that they do not necessarily have to be the Big Bad — a Villain Protagonist can, and often does, deal with cases where they are the victim of some other villain rather than the aggressor and try to survive like anyone else would, but in order to be considered a Sociopathic Hero or a Heroic Comedic Sociopath as well, their struggle has to protect other victims of their enemy; it doesn't matter if they care at all about them or if any good that comes out of it is purely coincidental . Actually, authors may find that it is easier to write a story where the antagonist makes the plot rather than the villain, which means that a villainous protagonist is often just as passive and reactive to other characters' actions as a more traditional heroic protagonist. In fact, it is rather rare for a Villain Protagonist to be the</ villain of a story, presumably because audiences still want to root for the protagonist . It can still easily result in Too Bleak, Stopped Caring if handled poorly, or if the Protagonist is too </ Villainous. If this is a comedy where empathy isn't important, however, this isn't necessarily a bad thing. Very often leads to Misaimed Fandom . Do not</ confuse with the Anti-Hero , who lacks traditional heroic qualities and may have some unheroic ones, and may be more morally ambiguous, but is still ultimately on the side of good (although an Anti-Hero can end up becoming a Villain Protagonist if they end up crossing one too many lines). Also not to be confused with Byronic Hero , who is simply a deeply flawed person, heroic or not. Many Byronic Heroes tend to zone in and out of Villain Protagonist territory, though. If the main character is the villain to themselves</ in their own story, they are His Own Worst Enemy . If a heroic protagonist is revealed to be Evil All Along towards

the end, this is The Killer in Me . If you get to see how a heroic protagonist gradually becomes evil over the course of the story, this is Protagonist Journey to Villain . It is vanishingly rare for these characters to be a Complete Monster , as regardless of how much a bad dude a protagonist may be, the audience will generally still desire to have at least a degree of relatability and sympathy for them, although it has happened in very rare circumstances, often in stand-alone and experimental works. Very rarely, they might even show up in serialized series, which can lead to Too Bleak, Stopped Caring unless executed in a very careful fashion. Contrast Hero Antagonist , both in terms of morality and role in the story. Compare and contrast Villain Antagonist and Hero Protagonist . Do not mix up with Vanilla Protagonist , unless this particular villain is meant to emphasize how evil the other villains in the main cast are. Achmed of Achmed Saves America

Great Big Sea 's Harbour Lecou is narrated by a sailor seeking marital infidelity in a port away from his home & family.

An odd fact about the nature of initiative in fiction: If somebody has a plan at the start of the story, that character is probably a villain . There are several reasons why this trend exists: The opposite of this, Heroes Act, Villains Hinder , comes from stories centering on the actions or emotions of the hero:

Villains who are thrust into a Fish out of Water situation never seem to have any trouble adjusting to their new surroundings, frequently becoming socially important and powerful, whereas a hero similarly displaced will stick out like a sore thumb, freaking out at the bizarre customs of the alien world/future/past/whatever and asking people " What Year Is This? " Just another day at the office for Evil Is Cool and Good Is Dumb When there's an explicit justification , it's that evil is universal. Particularly, when the heroes are from some distant planet or time, and the new world into which they are thrust is our</ world, the justification is that we live in a corrupt and evil world where being a ruthless psychopathic murdering villain is actually an advantage to getting ahead in life, whereas being good and pure-of-heart is a massive hindrance In the other direction, it can be used on the Planet of Hats to remind us that our </ moral values are superior : the hero doesn't fit in because he has a hard time dealing with whatever character flaw everyone in this new world possesses, or can't just sit back and go with the flow on a world where everyone kicks puppies , listens to that newfangled rock-and-roll and women dress in navel-revealing slut-wear In many cases it's an example of Villains Act, Heroes React ; villains are much better at patient planning than (most) heroes, and put lots of points into blending in with society — otherwise, how would they have amassed power behind the scenes anyway ? The hero often puts all his points into fighting the villain rather than adapting to the circumstances. If the hero gets</ to the villain, he wins, but the villain's best defense is having nobody take up arms against him to begin with, and then delaying the hero as much as possible. Both hero and villain make pretty reasonable bets. A side effect of this is that a sudden change of scene often permits the villain to call upon The Lopsided Arm of the Law to get the hero Arrested for Heroism Or, more pragmatically, it can just be to make things easier for the

villain and therefore harder for the hero . An extension of this is the Outside-Context Problem , who keeps all their advantages and abuses them in their new location As a corollary, it will generally be easier for the villains to convince the locals that they're friendly than it will be for the heroes to convince them that they're not evil. Even if the evilness of the villains is writ large enough to be detectable from space (via Namedar). This mostly seems to result from the hero's stubborn refusal to shut the hell up about how great it was back in their world and to refuse to take on any native culture. They will wear the same outfit they had when they came in and constantly complain about the local food. This isn't helped by the fact that the hero will usually insist on going around shouting at people near-hysterically about how they're from the past/another planet/what-have-you and how utterly evil the villain is, in a fashion that only makes them come across like a complete lunatic . The villain on the other hand will immediately trade in his duds for local wear and tuck into the native cuisine with gusto. He will never mention that he is from another world and be immediately accepted A heroic inversion of this trope is possible, but much rarer — see Like a Duck Takes to Water

The bad guys. The mad scientists , the cruel executives , the evil witches and wizards , the corrupt politicians , the mortal aspects of pure evil, and, more often than not, the people (or otherwise) that instigate the conflict and the story Despite how one is supposed to cheer for The Hero to succeed, there has always been a long standing interest in the villains. Some are renowned for their intelligence and cunning Evil Plan , others are awe-inspiring with simply how evil they can be , and yet others are respected because of their determination . No matter how many times the hero breaks open the door and stops their plans , they're always back at it soon enough , with another dark scheme to further their evil goals. On the other hand, not all villains can achieve that secret admiration It is said a hero is only as good as their enemies . Thus, a good story has to have a well-written villain, somebody that earns respect. After all, what is a hero without a villain to challenge them ? Contrast this index with its antithesis, Heroes . There's also a on this trope per The Wiki Rule

The Villain Song is an over-the-top , gloating cackle about their Evil Plan , philosophy of life, or why they do what they do (their leitmotive?) . Said philosophy is usually that the world is there for the taking , or that the world has wronged them and they will take revenge , or that they just like hurting people and nobody is going to stop them . The villain usually gets lots of eye candy to go with their song — live performers will dance up a storm, while animated villains will get pyrotechnics all around them. If they don't get huge visuals, it better damn</ well be because the song itself steals the show, and trying to distract from that with a lot of flashy visuals is just asking</ for a chandelier to fall on someone. This song is usually delivered in a minor key and typically features dramatic evidence of the villain's evil nature, such as playful abuse of loyal minions, taunting of prisoners, or random destruction of incidental locations of the villain's secret lair, usually for the purpose of abusing minions or taunting prisoners The nuttier the villain is, the better the song is. The Barnum (see "Master of the House" from Les Misérables </) and the Straw Nihilist (see "Epiphany" from Sweeney Todd: The Demon Barber of Fleet Street </) get particularly good ones This song

is almost always a measure of how important the villain is. If the villain has one, they'll get equal billing with the hero, and will probably steal the show. If they don't (e.g. Dr. Carrasco in Man of La Mancha </, Charlie Cowell in The Music Man </), they're not very important to the plot, and nobody qualifies as the Big Bad . Villains can get other songs where they pretend to be nice, but if they don't get at least one song to strut their villainy, they're (usually) not important (the big exception being villains who successfully offer a Deal with the Devil : There, the hidden malice and seductiveness is usually the point of the song anyway) Occasionally followed up by an Evil Laugh and/or a Fade Around the Eyes immediately, and a Dark Reprise later on Depending on genre, it can overlap with Creepy Jazz Music , Rotten Rock & Roll , Freaky Electronic Music , or Sinister Tango Music . It is by no means limited to these genres, though Compare Villain Love Song (which can overlap), "The Villain Sucks" Song (which is sung about</ the villain by someone else), and Rock Me, Asmodeus! (the devil directly involved in rock & roll) Contrast No Song for the Wicked . Now has Disney has had so many examples that they get their own page. All examples from media by Disney go there, while all the other pages are strictly for non-Disney examples from the media they cover Please note that just because a song is sung by a villain, doesn't necessarily make it a Villain Song. The Phantom of the Opera </ may have a showstopper in the form of "The Music of the Night", but he doesn't use it to gloat over his villainy. Villain Songs don't have to be personally sung by the villain either (see the title song from Spaceballs </), though exceptions are fairly rare outside examples of "The Villain Sucks" Song

The heroes are on the ropes, the Evil Overlord has been awakened from his ancient slumber and his kung fu is stronger than theirs . While the heroes are licking their wounds, they wonder what unspeakable evil he's plotting, and the camera makes a cut to... (Dramatic Pause !) </ ...the villain trying out some jeans and t-shirts at Hot Topic Similar to a Gilligan Cut with a villain as the Gilligan, Villains Out Shopping is a humorous cut to the villain doing or enjoying a perfectly mundane hobby unrelated to torture or being evil in general, sometimes in an absurdly dramatic or menacing manner for extra funny. Occasionally, the hero will join in and go Go-Karting with Bowser , and they generally won't attack villains during such activities, if only due to the market being a Truce Zone A similar situation is one where the hero has mistakenly concluded that one of the usual villains has committed a crime, when really, it was a different one. The hero will knock down the villain's door to discover... them trying on leather pants . Like we said, a crime Generally used to humanize the villain, who, more often than not, is Affably Evil and/or a Punch-Clock Villain ; as such, do not expect the Complete Monster to engage in this, except perhaps to subvert it (however, even they</ can do this without subverting it, since they can have also harmless interests and know how to blend in) If someone makes the argument that the villain's actions prove shopping is evil, they're committing the Hitler Ate Sugar fallacy See also Welcome to Evil Mart , which is an establishment that caters specifically to villains who have off-time. Kingpin in His Gym and Mob-Boss Suit Fitting are subversions, as the villains may initially seem to be enjoying some downtime but are actually training for/planning further villainy. Not Me This Time may occur if the heroes attack

the villain because they didn't anticipate a shopping trip. A fanfic about the shopping trip is a Curtain Fic Note that this is an Omnipresent Trope for many Villain Protagonists , especially in interactive media where they are given options to shop around For the heroic version, see Heroes Gone Fishing

Mary Sue is hardly limited to always being a goody two-shoes. This brand of Mary Sue decided to take the dark and evil path, kicking a few dogs and probably cackling about it in the process. Whether it be stealing the Cosmic Keystones out of the grasp of the heroes, effortlessly bringing about the ironic utopia of the other villain, or just generally acting like a cad, they absolutely love to be evil This character generally shows up as an author's wish fulfillment to be evil</. Alternatively, in fanfiction , it might show up because the author favors the villain and wants a vicarious relationship with them. Or the fan-created insert-villain is just so much better and more powerful than the canon villain, who quickly becomes the Villain Sue's groveling minion (if not instantly and easily disposed of). It might be a consequence of Evil Is Cool , taken to the logical extreme . Or, perhaps, the author just has a distaste for some (or all) of the protagonists and created the character to facilitate a Hate Fic , Fix Fic , or Revenge Fic . Either way, the same author favoritism and plot bias are now working for the forces of evil. It may also come about as an attempt to create a Magnificent Bastard or similar style of villain, only to go too far and become one of these As far as overlaps go, there are two major ones. Sympathetic Sue is an easy one where the intent is to show that the character just had a crappy enough life to be forced into villainy . With this overlap, they are more of a Villain Protagonist than an antagonist in most cases. Tends to show up most often in fanfiction. Expect the backstory to either be so extreme as to be a Deus Angst Machina or so laughably weak in comparison to their evil acts that it makes them Unintentionally Unsympathetic . The other common overlap is the God-Mode Sue , with a ridiculous power level , forcing the heroes to hold the Idiot Ball , and/or requiring Deus ex Machina in order for the protagonists to stand a chance of defeating them. This is the type that generally shows up in canon . It can overlap with other types, such as Jerk Sue , as well, but it never</ overlaps with Purity Sue (although they might become one after the Heel–Face Turn , once the plot forgets everything evil about them) Probably the rarest type of Sue, as Villains are generally given great powers and abilities to be a more credible threat to the protagonists and make their inevitable downfall more sweet. A true Villain Sue will probably never have one , however, and may even win over the heroes , completely and utterly destroying them and undoing all their efforts - and even if they do lose, it may be via Only the Author Can Save Them Now rather than any non- Ass Pull method. In some cases, Villain Sue can be justified, given that the villain was an Eldritch Abomination and the plot revolved around a Cosmic Horror Story Compare with God-Mode Sue , Mary Tzu , Invincible Villain and Generic Doomsday Villain . Contrast with Magnificent Bastard and Byronic Hero

A Villain with Good Publicity is one of the most frustrating opponents a hero can ever face. On the surface, this villain works within the system and commands a great deal of respect from the

average citizen, but behind the scenes, conducts all manners of nastiness. Even the heroes (or the audience!) may be fooled until The Reveal , unaware that The Man Behind the Man is someone so publicly trusted. Should the heroes know the truth, they're still stymied by the fact that no one else does . Attempts to bust the villain will be met with harassment lawsuits, breaking & entering or assault charges, or bad press. The heroes may even be falsely painted as villains in the public eye. (Some heroes embrace this image and become the Lovable Rogue or the Anti-Hero .) Should the heroes turn up actual evidence that something is up, it'll probably be ripped up by the villain's crack legal team (which Villains With Good Publicity always</ have), or spun to look like honest behavior The Villain With Good Publicity is very good at getting the hero (or other innocents who get too close to the truth) accused of criminal activity . Then again, heroics are 90% based on breaking and entering, stalking, trespassing, assault, battery, and espionage anyway, so they may have a point there. Worthy Opponents , Enigmatic Minions , Punch Clock Villains and other types of sympathetic antagonists often find themselves working for the well-liked villain, unaware of what their boss is really up to. In an episodic series, a Villain With Good Publicity is a good way to preserve the status quo ; the best the hero can hope to do is foil a particular plot, not bust the actual villain. Although not always legally invincible, often the only way to defeat this foe permanently is to kill them . Heroes in this situation will frequently try to Trash Talk the villain, or tell them they won't get away with it. If the heroes are really</ unlucky, they're up against the entire government (or church , depending on the setting). The villain might also be a single person within the government , a corporation head or other public figure with a good PR department , or a religion engineered for this purpose . There's also a good chance that the villain is using copious amounts of bribery to keep their image clean. If things get even worse, the people whom the hero tries to protect will actively assist the villain against the heroes. This villain's favored weapon is the Propaganda Machine . Or Bread and Circuses . This villain may be portrayed as a hero (or the hero), and may even think of themself as the hero. Their villainous acts might even be portrayed as heroic. Alternative Character Interpretation may lead to viewing a story's hero as a Villain With Good Publicity. If this villain's been recognized as a good man for so long that they slowly begin to forget about being evil in the first place, it can lead into Becoming the Mask . If you need to take down a Villain With Good Publicity, send in a Cowboy Cop , Knight in Sour Armor , or anyone else who's prepared to play dirty for the greater good — or perhaps organize an Engineered Public Confession to out them as a Straw Hypocrite . The Ideal Hero and other idealistic heroes , by contrast, have no idea how to deal with these guys. Either way, any hero attempting to take one of these guys on can end up as a Hero with Bad Publicity . A Guile Hero might have some luck setting up an Involuntary Charity Donation to deprive the villain of assets while being unable to retaliate without compromising their good publicity Compare with Falsely Reformed Villain , where a villain puts on short-term pretense of reform. Contrast with most Evil Overlords and Card Carrying Villains who make no attempt to hide their villainy, and the Ancient Conspiracy , which hides its entire existence. The exact opposite is a villain who has a 0% Approval Rating , and a more extreme version is the Devil in Plain Sight (whom no one cares about one way or the other). Can be a form of No Hero to His Valet . In some settings, the villain may actually have a plausible case

for being considered a (sorta) good guy . If so, expect the setting to lean towards the "cynical" end of the Sliding Scale of Idealism vs. Cynicism . May use Too Funny to Be Evil as an affable PR tactic Villains who win over the fans are Rooting for the Empire or Draco in Leather Pants . This trope is much more common in real life than Card-Carrying Villainy . However, as an "Evil Trope", examples would quickly devolve into complaining, so No Real Life Examples, Please!

"Friend" from 20th Century Boys </. Imagine if the Church of Happyology expanded into a political party of people with a killer virus being religiously praised as world leader.

This is a subindex to Vindicated by History . These are films that usually bombed at the box office in first-run and might otherwise have been left to rot in the dust bin of history. Not all of them did, though Through frequent airings on premium or basic cable channels because they're cheap, handy filler, they gather a devoted audience that sees its entertainment value despite the obvious flaws. Sometimes, these films bombed when they were first released and were just misunderstood at the time, but a later time period and cable made them popular. Other times, the show in question is aired so often that viewers mistakenly believe it must be some sort of classic... so they keep watching and rewatching it to the point that it does</ become a classic . This can also happen to a film if it gets featured on Mystery Science Theater 3000 </, and, in fact, is the cause of many a Missing Episode of said series; after a movie was MiSTied, it often gained in popularity, which raised the price for the rights beyond what Best Brains (or Rhino or Shout! Factory) was able to pay An interesting effect of this process can happen when the TV rights to sequels of classic movies are cheaper than the rights to the original movie. Thus, while the original was already popular, for generations who grew up after its release, their largest exposure to the franchise is often the sequels. Thus, for certain groups, otherwise detested sequels can be viewed through Nostalgia Filter Compare Critical Dissonance , Quality by Popular Vote . Vindicated by Reruns is the television counterpart

Some works that are well-received remain so, long after they get released, eventually being acclaimed as classics. However, some works that are well-received at their debut will fade into the mists of time as the public moves on to the newest thing, doomed to obscurity. Then there are these. A few exceptional (or lucky) works with unexceptional debuts will be rediscovered and reanalyzed, and in some cases may even become critical darlings or timeless classics in the eyes of the public after about 20 years, usually when their authors/producers are no longer around to bask in their belated fame. Unconventional and gloomily-themed works that star little-known actors are the most prone to this. Inevitably causes most critics to rush to hail them as classics that were grossly misunderstood in their time, but now can be worshiped as the masterpieces they truly are. Oftentimes people in general forget that they were bombs to begin with. Parodies and Critical Backlash inevitably follow in their footsteps. This is mostly a film/literature phenomenon: TV mostly avoids this, as how great or awful a series is tends to become clear during its longer run (or at least a few years later on DVD). Video games have a different problem in that Technology

Marches On , turning old titles into Abandonware . Then, of course, there are historical events that were controversial at the time, but later are felt to have been the right decision. Values Resonance is prevalent in many instances of this trope, as they were simply too far ahead of their time. The Real Life counterpart of It Will Never Catch On . It can also lead to Follow the Leader , Hype Aversion , Hype Backlash . A Sub-Trope is Vindicated by Cable and Vindicated by Reruns ; also arguably, as already mentioned, Better on DVD . Often these works were the victim of an Award Snub . Compare Germans Love David Hasselhoff (when a different country does this instead of time), Cult Classic (when something gains popularity but not on a widespread/mainstream scale, although the two tropes sometimes overlap), Posthumous Popularity Potential (when the belated popularity occurs because</ the artist is no longer around to bask in it), Rescued from the Scrappy Heap (when this happens to a single character) and Acclaimed Flop (when the work is a critical success but a commercial failure when it comes out). See also Popularity Polynomial . Nostalgia Filter may factor into this, although anyone that hasn't grown up with the work will still likely see it for what it is. Contrast Condemned by History (when something goes from insanely popular to a popular target of mockery), And You Thought It Would Fail (when a work that's expected to be a flop instead becomes a smash hit) and "Seinfeld" Is Unfunny (when a work was beloved in its heyday, but is seen as boring or stale (at best) by history, though usually with the appreciation that the work was revolutionary at the time). Beware the risk of Overly Narrow Superlatives or Gushing About Shows You Like . Practically anything could seem vindicated by history if the reference pool is small enough . </ Works must be at least five years old to be added. This is to ensure that history has judged the work more favourably than at release.

A subtrope of Vindicated by History that deals specifically with television. Some shows keep going for years until one can't help coming across an episode of it while flipping through channels. Other shows get only one or two seasons before cancellation , but those one or two seasons are so awesome</ that eventually someone decides to give them a repeat broadcast... and that repeat becomes an established tradition of reruns for that particular show. Each passing generation will then give the show an appreciation that it wasn't given in its day Sister Trope to Vindicated by Cable Contrast Better on DVD , wherein the key to the series' redemption is the compiling of the episodes into a united whole. "Reruns" has the vindication achieved through the continued/increased exposure alone</ requiring few, if any, changes in publishing format "Who Let the Dogs Out?" by the Baha Men only got to #40, yet its cultural pervasiveness far outshone its relatively low peak

Violence is disturbing when, rather than awesome, violence is shown or perceived to be frightening, disgusting, perhaps even nauseating, i.e. when it denotes brutality , sociopathy, sadism, and other socially undesirable traits, rather the socially desirable traits that are power, capacity for leadership, and effectiveness, staples of The Hero , especially the badass, and the reason why the Big Bad is cool War Is Hell , especially when it's a depiction of the battlefield rather than the civilian (un)life, can strongly overlap with this, but being a helpless civilian

caught in the middle of a war is worse. Gorn is when the violence is thrilling</ rather than merely loathsome. No-Holds-Barred Beatdown and Extreme Mêlée Revenge are distinguished from a mere Curb-Stomp Battle by the heavy doses of this trope involved. May be involuntarily invoked by the Action Hero and the '90s Anti-Hero , and by any uses of the Jack Bauer Interrogation Technique and/or Cold-Blooded Torture Compare Family-Unfriendly Violence , a variation that often shows up in family-friendly works

Fights are dramatic. There's no question about that. That's why most action-based series will inevitably end with a fight. After all, what fun is it if The Hero and the Big Bad resolve their differences with an armistice, a few kind words and a handshake? Even the most idealistic of All Loving Heroes will have to beat the evil out of them first before they can Save the Villain For that very reason, whenever the heroes try to resolve their situation through diplomatic or other peaceful means, things will inevitably go wrong. Either it's a trick by the villains to lure the heroes into an ambush in a vulnerable position, or negotiations will break down and make violence the only option . Even if by some miracle peace is achieved, it's only because an even more evil threat forces both sides to ally against it Despite the Surprisingly Realistic Outcome , this can lead to the Hard Truth Aesop that Violence Really Is the Answer In Video Games , this often becomes Stupidity Is the Only Option as the villain goes "Oh, let's try diplomacy, why don't you come to the heart of our kingdom surrounded by our armed guards and we'll talk! Be sure not to bring weapons." This trope also frequently overlaps with Action-Based Mission In most Tabletop RPGs , players can use diplomacy skills, though this is subject to DM fiat. The DM may still fudge the rolls or veto the outcome if he wants a certain situation to end in violence . Sometimes some factions can't even be negotiated with Contrast To Win Without Fighting , Talking the Monster to Death , and Sheathe Your Sword , and compare Sedgwick Speech , RPGs Equal Combat . Not to be confused with Murder Is the Best Solution , where violence is the first resort, without considering other options

This is a list of tropes about any form of violent conflict or This is acts of physical harm that are (deliberately) inflicted This is by one living being against another the inverse of Peace This is Tropes . Also see Injury Tropes , Bloody Tropes , Breaking This is and Destruction Tropes . This index is often (though not This is always) related to Death Tropes , which has quite a bit of This is overlap

Seems harming that guy was a really bad idea. His girlfriend is gonna kick your ass. A violently protective girlfriend essentially acts like a much younger Mama Bear , except her Berserk Button is harm to her mate rather than to the kids; note that this inverts the usual</ expectation that the boyfriend is violently protective of the girlfriend (which may still be the case). This is common with an Action Girl , Amazonian Beauty , Cute Bruiser , or Lady of War . Sometimes a Butch Lesbian will act this way about her girlfriend due to the stereotype of being stronger and more "dominant", though a Lipstick Lesbian shouldn't be underestimated either. Personalities

associated with it include Plucky Girl (who may or may not fight but is likely to be protective anyway), Tsundere (who is apt to go into rage mode when said lover is threatened despite not being able to stand them half the time) and Yandere (who is likely to bring out the Ax-Crazy in response to anyone threatening what they feel is theirs). A Non-Action Guy or dudes otherwise incompetent in combat seem to attract these women. Most types of The Woobie (except a Jerkass Woobie who hasn't revealed his woobie side and Woobie, Destroyer of Worlds) also draw the attention of these types of women out of an instinct to ease their suffering. Sometimes, if she herself doesn't treat her boyfriend exceptionally well, there can be a variant that can be summed up as, "Hey, nobody picks on him but me ." Compare to Understanding Boyfriend for the inverted variant . See also More Deadly Than the Male , Action Girlfriend , and Bodyguard Crush . Can overlap with Beware the Nice Ones if she seems harmless until her mate is in danger. If the male lover is more than capable of protecting himself, she's Bodyguarding a Badass . A mutually violently protective couple is a Battle Couple . An Amazon Chaser may look for one of these. A group of these focused on the same Protectorate is a Battle Harem .

Originally, viral marketing referred to word of mouth advertising. In theory, one person tells all their friends, who in turn tell all their friends, and so on. In practice, this rarely worked out so well, because few people had enough friends to make it profitable. Ask anyone who tried to make money with Amway With the advent of the Internet, however, Viral Marketing suddenly became something a great deal more viable. You don't have to know your consumer personally to reach them with a blog, video, or web page. Word of mouth can reach hundreds, perhaps thousands, the moment someone hits the post button to talk about it Ideally, a viral ad does not seem like an ad at all. Viral marketing techniques usually rely on making something entertaining that people will want to share and subject to Memetic Mutation . Watch It for the Meme is a desired effect. Photoshop and a sense of humour are affordable and useful enough for that task. Catch phrases and stock phrases are cheaper</ Marketers should be wary when treading into the sleeping giant of the Internet, however, as consumers despise paper-thin attempts at viral ads or ads that are demeaning to consumers , and they won't always let you sweep such mistakes under the rug , either. As a further point of advice, note that doing this relatively openly (unless it's an Alternate Reality Game , or " in universe ") is less likely to arouse ire The Colbert Bump is dependent on Viral Marketing The political equivalent is " Astro Turfing " which is a fake grass-roots movement See also Alternate Reality Game , Forced Meme and In-Universe Marketing

There are forces, be they biological, mystical or technological, that can infect and change a person into something... else . </ These tend to be highly contagious, spreading easily via physical contact, bite, ritual, or other means. The changes are seldom subtle, and often quite a shock for the victim, who will likely wonder what they have become . On the plus side, the Viral Transformation is usually Cursed With Awesome , giving the "victim" Stock Superpower and</ the ability to give them to others By now you're probably wondering what the downside is to this, and why this " disease " hasn't been shared among all of humanity. Well,

it's usually because it makes the transformees jerks . While it's not (always) The Virus , making those infected into Always Chaotic Evil , Mind Controlled servants to a Hive Queen who gladly eats puppies , it does lend itself to "Power Corrupts" . Though the changes are mostly physical, the alterations may cause a change in perception because The Mind Is a Plaything of the Body , their new body has a Horror Hunger only sated by eating orphans (and it tastes good!) , and With Great Power Comes Great Insanity Those responsible for infecting the victim may expect a Face–Heel Turn because the shock at the change will make them run to others like them, as well as Fantastic Racism making it likely they'll be alienated by their friends and family (this is especially likely if the transformation is less than cosmetically appealing) . However; the choice to do so remains with the victim : they can consciously choose Transhuman Treachery , to stand apart and above of humanity , become Fully Embraced Fiends who enjoy their condition, to be Friendly Neighborhood Vampires and live among if not entirely in harmony with humanity, or even be a Pro-Human Transhuman and act the Sheep in Wolf's Clothing while becoming a Vampire Hunter Common examples of this include most forms of Lycanthropy and some forms of Vampirism . Expect those affected by a Viral Transformation to be tempted to help friends or loved ones with an Emergency Transformation or surprised when a blood donation turns into a Superhuman Transfusion . See also Virus Victim Symptoms See also Warm Bloodbags Are Everywhere . Compare The Corruption . Contrast with Transferred Transformation , where the recipient gets a transformation while the donor loses it, and Physical Attribute Swap , where two characters trade specific physical traits rather than proliferate them. A type of Face–Monster Turn

Virginity, and all the aspects of it, is such a prevalent aspect among many cultures, that there are loads of tropes relating to it, and how they treat virginity ranging from Purity Personified to You Need to Get Laid .

Trope.Ai, describe topic here! The tropics are the parallel of latitude 23°26ʹ north (tropic of Cancer) or south (tropic of Capricorn) of the equator. Any time a character tries to get help from a virtual assistant or other voice activated device, the computer will always misunderstand the command and Hilarity Ensues This could be due to the character having a difficult to understand accent, a Speech Impediment , or bad acoustics . Alternatively, the virtual assistant could just not be very advanced. Often times, the assistant will hear the words correctly, but will misunderstand the meaning or else they will take the command too literally . Sometimes it will mistake something not meant as a command as a command . One common outcome is for the virtual assistant to play an annoying or inappropriate song with lyrics that are similar to the requested command. Alternately, the virtual assistant could mistake an intended command for a message and generate a text-to-speech transcription, in a variation of Reading the Stage Directions Out Loud . Another variant is for a character to call an automated hotline that requires vocal responses, which causes its own set of problems . With voice-activated smart phones and virtual assistants becoming more common in the real world, this is very much Truth in Television . Sister Trope of Auto-Incorrect , where an autocorrect or speech-to-text program supplies the wrong word.

So there's this new performer taking the entertainment world by storm. She's gorgeous, she's talented, she's got tons of fans... and she's not real. Well, not a flesh-and-blood human, anyway. (Whether that makes her not real is sometimes debatable .) She's some sort of program or AI, created specifically to be an actor, Idol Singer , or what have you. Most often her artificial nature will be concealed from the world, though there's the occasional Cyberpunk or Post Cyber Punk setting where celebrities (sometimes, all</ celebrities, or at least the majority) are known to be virtual and nobody cares Any metaphors occurring to you about how celebrities are manufactured and marketed as products? Don't be such a cynic These do exist in reality; they usually either have a Kayfabe while clearly being fictional, or are openly marketed as virtual celebrities for the sake of a gimmick, but at least one, , had been successfully passed off as a real person Not to be confused with Synthetic Voice Actor . Compare Reused Character Design . Contrast VTubers , who are basically the opposite - real people performing through digital avatars

Despite the importance of telecommunications in our daily lives, many people tend to underestimate just how important they are, especially as we creep closer to Everything Is Online . This can lead to disbelieving statements or outright denial when digital trouble has analog effects. Even if traffic lights are going haywire, and water mains are popping from overpressure, they may protest against any suggestion that it has to do with computers. Contrast Your Mind Makes It Real , where the person's mind is what is being impacted due to its suggestibility. May occur during a Holodeck Malfunction . May involve Cyberspace . Anime and Manga Film - Live-Action Literature Live-Action TV Western Animation Real Life

Showing up mostly in Science Fiction settings, the Virtual Training Simulation is Exactly What It Says on the Tin — a training session, or perhaps an exam, set in virtual reality It can be done by having the participants put on VR helmets or similar equipment and having the perspective switch to inside of the simulation. Virtual training via Holograms , often made of Hard Light , is also possible. Often also involve Artificial Outdoors Display May get dangerous if a Holodeck Malfunction occurs. If it is dangerous or becomes so on a regular basis, it is also a Deadly Training Area . Can be used for a Danger Room Cold Open or an Unwinnable Training Simulation . See also Cyberspace and Training Stage

If a virus, computer or organic, has a fancy name then expect an opposing or at least a related name for the cure.

When a character becomes infected with The Virus or a Viral Transformation , typically thanks to a run-in with a vampire, werewolf, space alien, nano machine cyborg or weirder fare, the victim will take a while to change into their new form. During that time, they will start exhibiting a lot of the strange behavior and physical changes as a symptom of the transformation. Either they or an observant loved one will have a dawning " Oh, Crap! " reaction as they notices the change into a non-human critter. Subtrope of Slow Transformation . Compare Zombie Infectee . See also Body Horror . In a lot of cases, Transhuman Treachery is the result. Not Himself : Behavior changes, either becoming more aggressive, randy, emotionless or even listless . They may also suddenly change their interests,

such as a Bookworm not wanting to read anymore or The Teetotaler suddenly drinking alcohol. If More Than Mind Control is involved, it's up to a loved one to notice the change and save their friend.. or put them out of their misery . Alternately, if the character isn't under mental thrall, now's a good time to become a Vampire Refugee with Heroic Willpower . Who knows? Maybe a cure is</ possible, or at least redemption via Ascended Demon -hood. One of the most serious problems facing the youth, middle aged and elderly today is the supernatural and fantastical. Part of the problem is that it's just so darn tootin' hard</ to tell whether Jimmy is depressed because he lost the big game or because emotion eating aliens are draining his will to live. That there's a Fantasy Kitchen Sink worth of creepy crawlies out there just waiting to make Joe and Jane Q. Public into dinner doesn't help. That's why your good old benevolent Government has issued these simple guidelines to tell when a stranger, friend, relative or loved one is under the thrall of blood sucking abominations! If they have two or more of the signs below call your local witch hunter immediately! With that out of the way, remember: Be vigilant! Humans have to stick together! How else are we going to beat those Damn Dirty Communists ?!

A list of notable people involved in the creation of visual or special effects Can overlap with Production Design

Ken Adam - Production designer and set designer best known for his work on Dr. Strangelove </ and seven James Bond </ films.

The term "Visual Novel" refers to a Video Game genre that is characterized by a very</ strong emphasis on a text-based story over gameplay, to the degree that most-to-all of the game is simply the player pressing a button or clicking to advance the text. This can make playing the game feel like reading a book, hence the term "visual novel". As a result of their text-heavy nature (as opposed to real-time cutscenes), they use the narrative style of Literature . Don't try to bring up this distinction with the fans, though. It's for your own safety. They strongly emphasize plot, writing and characterization, rather than gameplay, like Interactive Fiction and more so than Adventure Games . The majority of visual novels tend to focus on non-linear Story Branching plots with Multiple Endings and often a Choice-and-Consequence System . Because of this, they can be seen as a digital evolution of Gamebooks (think CYOA); however, because they are digital and don't suffer from physical limitations, they are free to make use of things you can't find in novels or Gamebooks. These can include a plethora of visuals (such as sprites, 3D models, a HUD and background art), an OST (many visual novels have critically acclaimed ones), voice acting (which has become the norm in recent times), and in some cases, a lot</ of story branching influence (which Gamebooks were limited in due to them being tangible). It's difficult to draw boundaries for the genre, as there's no real consensus on exactly how much gameplay a visual novel can have before it is no longer considered one, although . On the far video game end of the scale, we have games that adhere closer to the Adventure Game model, such as the Ace Attorney </ series which often gives the player interactive puzzles, the Zero Escape </ series which often gives the player playable escape rooms, and the Danganronpa </ series which has playable rhythm game-like minigames . Some of the earliest examples of games now considered visual novels, such as Snatcher </, are in fact adventure games in all but name,

complete with text parsers and/or point-and-click interfaces; the distinction between the two genres is largely a matter of divergent evolution, with the main spur driving the divergence (as explained by) being the difficulty of implementing the typical Verb-Object command structure of English-language adventure games in anything resembling grammatically correct Japanese. On the other side of the scale are Kinetic Novels ; visual novels with no choices and no gameplay at all (besides simply clicking to advance the text), such as the When They Cry </ series. Because they are still video games, the fact that many of them tell well-written, compelling stories that some liken to the quality of actual literature can be easily overlooked. Many visual novels are restricted to Japanese markets, but games such as Hotel Dusk: Room 215 </ and Jake Hunter </, as well as the Zero Escape</, Danganronpa</ and Ace Attorney</ series, have popularized the genre internationally. Most Japanese visual novels never get an official release outside of Japan , though this is beginning to change with companies such as MangaGamer, JAST, Sekai Project, and Neko Nyan licensing more and more visual novels. Some visual novels that have been ignored by official localizers get translated by dedicated fans . Many of the ones on this list have an existing Fan Translation , partial or full. That being said, a majority of visual novels being translated and released now tend to have a professional translation, as more dedicated translation companies appear. In fact, many professional translators started out as fan translators over the past 10 years. Because the market for Dating Sims is virtually non-existent outside of Japan, people tend to assume that any visual novel that is a Romance Game should be called a dating sim, when they are actually quite different. (It doesn't help that most Visual Novel-style eroge are</ marketed as "dating sims" when they are translated for the US market.) Using well-known examples, the Ace Attorney</ series has very much a Visual Novel style of gameplay, while the DOA Xtreme </ series is probably the game closest to a true Dating Sim with mass-market appeal in the US. It is also not uncommon for acclaimed anime to be based on visual novels, such as Kanon </, AIR </, CLANNAD </, Fate/stay night </, and Steins;Gate </. The reverse is also true; acclaimed visual novels have been made into anime, as is the case with Ace Attorney</ and Danganronpa</ for instance. Visual novels that are also eroge tend to tie every storyline to a specific romanceable character , a habit which has carried over to much of the rest of the medium. Visual novels that are 95% porn to 5% plot fall under the sub-genre of "nukige". A related term to visual novel is "sound novel", which was originally used by Chunsoft for their visual novels, as they relied on sound in order to help convey the story. Today, however, the two terms are considered to be readily interchangeable as virtually all visual novels have their own soundtracks anyway (and use it to augment their storytelling). Before The New '10s , most visual novels that did get localized suffered from the same problems that anime in the early '90s did: the localizers seemed to prefer to import the most sexual and/or violent titles . However, with the advent of Steam , its Greenlight program, and crowdfunding sites like Kickstarter (all of which have also aided the revival of Western adventure gaming), the number and availability of visual novels outside Japan have been steadily expanding. Since Steam disallowed explicit sexual content till 2018, the games available there were mostly either "clean" versions of explicit games or games without any explicit content in the first place. Within Japan, visual novels make up around 70 percent of the PC gaming market, according to The Other Wiki , but are divided into two different categories: the VN

(Visual Novel) proper, which contain little to no gameplay other than decision-making, and the ADV (Adventure) game, which contain puzzles or other forms of gameplay (the form most Western tropers are familiar with, such as Ace Attorney </ or Nine Hours, Nine Persons, Nine Doors </). There is also a small but growing number of English-developed visual novels, generally created by indie developers and not distributed through mainstream channels. Some of these have garnered critical acclaim, such as Katawa Shoujo </ and Analogue: A Hate Story </. In recent years, there have also been some acclaimed Western games that seem to be strongly influenced by visual novels (with the main distinction being that they tell their story via real-time cutscenes instead of text you click to advance), such as Dear Esther </, The Stanley Parable </, Heavy Rain </, and The Walking Dead </; many of these have come to be classified as Environmental Narrative Games . A lot of Western-produced VNs are developed in the popular Ren'Py Game Maker , though many developers are shifting towards the use of Unity 's . Whether or not "visual novel" is a genre, a sub-genre/modifier for other genres, or a pejorative term is unclear, as connotations differ by community. Public Medium Ignorance , particularly from the Animation Age Ghetto and Girl-Show Ghetto , may be responsible for quite a bit of the confusion. A lot of people also think that all VNs are eroge, similar in many ways to the belief that all anime is Hentai . Some of the games that do</ make it across the border, like Time Hollow </, have been decried by reviewers for having "no gameplay", which to a fan of VNs is Comically Missing the Point . See Visual Novel Tropes . If you want to take a crack at creating one of your own, we've got you covered . Visual Novels are not to be confused with Light Novels (see page for more information). By Interactivity: By Engine: By Decade: Major VN Developers:

When a phrase which is usually used as a metaphor is shown literally. This can be because The Ditz didn't understand the statement , or can just be a simple gag. This kind of humor is considered dated and a bit old fashioned , so most audience won't do more than smirk — at least when adults are involved (children tend to be more easily amused). Occasionally this action can be performed literally without the verbal set up. It is a frequent pitfall when dealing with a Literal Genie Common versions include requests to "give me a hand" being met with disembodied hands and quotes of Marc Antony "lend me your ears" — well, use your imagination These can be quite a nightmare for translators: purely textual puns can be rewritten into something else, but when the pun has a visual component (which usually cannot be changed), it becomes much harder to come up with something that makes sense B-Roll Rebus is when news and documentaries do this with Stock Footage . Compare Stealth Pun , which is sort of like a Visual Pun without the visuals ; of course, sometimes a Visual Pun can</ be a stealth pun, but you know, they're stealthy about it. A Super-Trope to Metaphoric Metamorphosis (where road signs are literal, not figurative, depictions of what's up ahead) and Rules of the Road (same). Often a Sister Trope of Literal Metaphor When creatures, whether individuals or entire species, are designed as living visual puns, see Pun-Based Creature

When two people who bicker and argue constantly are still the very best of friends. Many true friends are openly warm and affectionate

with each other, keeping a united front in public and having their arguments in private. Such friendships are not this trope. These </ guys bicker constantly. They're always sniping at each other. They snark relentlessly. They duke it out on equal terms, hurling insults at one another with prejudice, maybe ever since they were little kids. But underneath the verbal fencing is a rock-solid friendship that no Smug Snake , Manipulative Bastard , or Hate Plague could hope to chip at. A Friend in Need may be needed to make this manifest. Often, they have opposite morals, personalities, or fighting ability which is presumably the cause of the vitriol, since they see in each other the kind of flaws they just can't stand to ignore (or maybe it's just because they're both Deadpan Snarkers). Such characters may go for a Friends All Along fight if one is introduced before the other. This trope can often serve as a warning that something may be wrong as well. When one of the Vitriolic Best Buds suddenly stops responding to insults or flinging barbs of their own, the other may pick up on the sudden change in behavior as a sign that something is not right . Woe betide any outsider to this unusual 'friendship' who thinks that because one is constantly snarking on the other, it gives the outsider the right to make snide comments about the other as well; usually, they will quickly (and painfully) learn that " no one makes fun of him/her but me </." This is more a given when the vitriol is mutual between both friends, but in the variation where only one is vitriolic it may be a Pet the Dog moment or proof that aw, look: They really do </ like each other! Compare Aw, Look! They Really Do Love Each Other , Belligerent Sexual Tension , Friendly Rivalry , With Friends Like These... . Contrast with Headbutting Heroes (who just cold-out despise each other despite being the best of heroes), Teeth-Clenched Teamwork (where the relationship between teammates is genuinely</ strained) and Friendly Enemy (where two people who are on separate sides of a conflict aren't all that hostile to one another). Some types of Villainous Friendship have a similar dynamic. Inverted Trope of Overly Polite Pals . Due to a rewrite of this page, many examples will still refer to previous "type one and type two" dynamics. "Type two" is the version of the trope described above, while "type one" is a variation in which only one friend is vitriolic while the other friend is completely oblivious to the vitriol and much, much friendlier. If you come across such an example elsewhere on the wiki, please correct it to be clear without the type label.

A Vlog Series is a type of Web Video Series or Web Animation series presented as a video blog (vlog) by one or more fictional characters existing within the series. Some overlap with Character Blog , a type of Fan Work , while others are non-derivative works featuring characters created for the vlogs The Vlog Series comes in two flavours: the more-or-less realistic variety, which is filmed using (or as if using) webcams and presented as entirely in-universe, as though it is really happening ; and the traditional camera variety, which alternates between webcam-style and more conventional TV camera styles like mockumentary Some non-vlog works feature characters creating a vlog as a framing device or in select scenes, or include a vlog-style bonus or promotional video while otherwise being a different kind of work Despite the name, this is not to be confused with ongoing vlogs by real people, although some vlog series pretend to be non-fiction

Live-Action TV

Web Video Much of The Lost Experience

While it may be wrong to judge a book by its cover, it's something that happens . You see a person, you expect certain things. This extends even to that person’s voice. If you see a muscular man, you expect a deep macho voice . The Vamp will have a sexy, sultry voice. A child's voice is high-pitched. And so on This trope is generally played for comedy since the idea of a squeaky voice from a big person or a deep voice from a small person is generally seen as absurd. For better or for worse, this can sometimes come about by chance, depending on how casting in a voiced work goes. Of course, after a bit, you'll have trouble hearing that character with any other kind of voice except their own Cute, but Cacophonic is a subtrope of this, specifically referring to when "an extremely cute and/or tiny animal turns out to have a surprisingly loud cry." Instant Soprano , another subtrope, occurs when this trope arises in response to a Groin Attack . This trope also could be the result of an Inopportune Voice Cracking . Often overlaps with Most Writers Are Adults when young children in animation are depicted with somewhat deep, adult-like voices. Not to be confused with Larynx Dissonance , which involves an actor attempting to impersonate their opposite gender, or Lyrical Dissonance , which involves song lyrics. If a character who didn't initially have this suddenly does, it can lead to Voice Change Surprise

Actors are only human, which includes voice actors. Voice actors don't have to worry about makeup or costumes, so it can be easy to assume that their job is much easier than that of actors visible on the screen. It may or may not be, but the unique challenge they face is breathing life into an animated character with their voice alone and no other props. And like with new artists , it can take novice voice actors some time to grow into their character and develop distinctive voices for them. Even if the overall sound</ is the same the inflection, tone and overall performance can grow as the character is better developed and the work itself identifies what it wants from its characters On the flip side, lending one's voice to a show over multiple months or years can cause a voice actor to get lazy and begin slacking off on the nuances of their character's voice, or even age to the point where they find it impossible to sustain the original voice and have to make compromises. This decline in quality can also manifest itself in shows with large casts when all characters' voices begin to sound the same or monotonous. This doesn't tend to lead to lost jobs, because a decline in timbre quality is often less noticeable than a decline in acting or art quality. With child voice actors, whether a fan will like it or not, this is</ going to happen when they hit puberty, although some shows switch into The Other Darrin at that point This trope can also apply to any other medium requiring the voice for varied reasons: live-action actors may change a character's voice or just downgrade to their original voice as they grow more comfortable (or complacent) with the character, singers may change their singing styles to achieve a different artistic style, and so on. Other factors in this trope may include age (whether prepubescent actors dealing with the voice changes inherent in puberty, or more mature actors changing with increasing age) and health (vocal cord injury/strain, smoking,

etc.) In cases involving Talking to Himself , this can sometimes lead to characters sounding more or less like each other Contrast with The Other Darrin , in which the entire actor is replaced (or, in the case of voiceover work, the voice change is because an actor was replaced, not because the actor changed the voice)

When it comes to fans of certain things, there are many people who are sane, down-to-earth individuals; individuals who understand that if they talk about a subject and the other person isn't interested, they'll change the subject. These people know how to keep their hobbies under control; how to differentiate between reality and their interests. Unfortunately, these people aren't news. That's because Weird = Interesting; like any program on television, the news has to be interesting</ or else people won't watch it. Why talk to an individual who works in an office and occasionally picks up a copy of Spider-Man </ when you can talk to the 300-pound Basement-Dweller who spent $7,000 on his exact replica of a Scarecrow costume? Or why interview the individual who works at the local electronics store and does fursuiting and furry art as a dedicated side gig when you could interview the man who uses his fursuits for indecent purposes? Or why give airtime to the very normal individual who works for the postal service and leisurely listens to classic rock in his downtime when you could give airtime to the dad with a beer gut who is religiously obsessed with Hair Metal and Arena Rock ? Or why speak with an individual who lives a normal life and listens to Taylor Swift in her downtime when you could speak with the tween girl who worships Taylor Swift to the point of her room being covered in Taylor Swift merchandise? The problem is that because only the weirdos get interviewed, this causes non-fans to believe they're all like that (e.g. the ridiculous belief that all comic book fans are clones of the Comic Book Guy from The Simpsons </, or all anime & manga fans are weirdos who speak in broken Japanese and sleep with body pillows of their "waifus"). This is also the main reason why people would hate something just because of its fanbase . This phenomenon, although rooted in stereotypes for fans of Comic Books , extends to other hobbies such as: various sports, a lot of media, some professions, and even certain religious beliefs, ideologies and philosophies that people hold, not to mention loads of stereotypes . Although there can be odd exceptions: compare how your average sports-fan treats a guy with his face painted in team colors versus a guy in a Spock costume. Sadly, this concept serves very well for Chewbacca Defense . Someone complains about you doing something wrong? Stigmatize them as a Vocal Minority to prove that they</ are the one who's wrong, make it look like everyone agrees with you, and that complainers are just deluding themselves into thinking otherwise. That's Argumentum ad hominem , but what's more important is that history tends to avert this entirely ; i.e. the mere fact that someone complains really</ hard means something is going very, very wrong. The poem by Martin Niemöller is all about supporting this point of view. It’s about Nazis. Specifically, it's about how groups unhappy with Hitler's rise to power (like communists or trade unionists) were considered a Vocal Minority, so no one really cared about their persecution and imprisonment. We all know what happens next . Due to the nature of this trope, many fandom-related tropes are induced solely by this. The only members of a fandom who vocalize their opinion are the ones who feel so strongly about their opinion that they feel the need to vocalize it. The Scrappy , the Ensemble Dark Horse , the Fan Dumb , the Hate Dumb , and Fan-Preferred Couple are all based on what is commented

on by the Vocal Minority . So, characters like Scrappy-Doo and films like Transformers: Revenge of the Fallen </ both sound like the spawn of Satan when described by people on the internet, but usually have a much more positive description via Word of Mouth. In other words, asking someone on the internet about the two will often get long-winded, spiteful rants, while asking a guy on the street will often get much more praise. So, Scrappy-Doo and Wesley Crusher could've very well been fairly well-liked by the silent majority. This is a major reason why Pandering to the Base can be so problematic; even if the other pitfalls are discounted, the writers may only be serving a small but vocal minority. Still, a creator can sometimes benefit from paying attention to vocal minorities. Just because they're a minority, doesn't</ mean they're a small group: in large fandoms, the minority could number in the thousands. While blindly kowtowing to any fan's protests or demands is often a stupid and harmful idea, there are plenty of times where fans may actually be onto something, even if it isn't phrased in the most polite or reasonable manner. This trope can occur in multiplayer internet games of nearly all types. One example would be an MMORPG in which most people can see that a given class or ability is overpowered compared to others, sometimes to the degree of being a Game-Breaker . If the creators try to remedy the imbalance, the most dedicated players (many of whom have been using the imbalance) may dominate online fora and insist that the changes are highly unfair. On occasion, the players will be polled on the topic, and if that happens, it's not unusual for those who object to be found to be no more than a Vocal Minority. A Broken Base rises when two groups of Vocal Minority members have opposing opinions, then get into an argument about it. Contrast with Silent Majority . Also see Stop Being Stereotypical .

Gags where someone comically tries and fails to sing a note too high or too low for them. May cause Inopportune Voice Cracking Note that straining one's voice too much will</ result in a sore throat. Doing it to extremes could even necessitate surgery include examples where the singing is deliberately out of range or someone discusses out of range singing Compare Hollywood Tone-Deaf

These tropes are most often associated with voice actors in Western Animation and Anime , but they can also occur in video games and radio drama .

Those voices you hear in Cartoons , Anime , Video Games , Puppet ThShows , and Commercials don't exist in a vacuum. While not quite Thas famous as regular live-action actors, these folks still get Tha lot of mention among fans for their distinctive style and/or Thextensive catalogs is index page is meant for actors whose Thprimary career is in voice work, or at least have an extensive Thhistory of voiceovers. Don't bother listing live-action actors Thwho also happen to do a rare voiceover ere is considerable Thoverlap between this list and Names to Know in Anime . See also ThPuppeteers

When a person speaks, what they actually say comprises only about half of what's being communicated. The tone of their voice, or even the sound of the voice itself, can deliver as much or more</ of a message than the actual words being spoken These tropes explore the various ways in which different voices, vocal effects, and vocal

deliveries affect how we perceive characters, and how they can drastically change the message a quote conveys

Alto Villainess : Villainesses sound better with an alto voice.

When a dubbing studio is given a TV show, commercial or movie to dub to their language, they will try to keep a consistency with the characters' voices: if in the original language a specific character has a deep voice, then they will give that character a deep voice in the dub, or when a Girly Girl character has a high-pitched voice in the original language, then they will give that Girly Girl character a high-pitched voice in the dub However, sometimes a character will have a noticeably different voice in comparison to the original language. It can be because the studio doesn't have a voice actor with the specific voice tone, or because trying to emulate the original voice actor would be too hard or even impossible, or simply because they feel that the character's original voice is very unrealistic, accidentally funny or simply didn't fit the character This can be very prevalent in the English speaking world, Latin America and Spain, but is more prevalent in Latin America, especially because of their preference for clearer, less exaggerated voices See also She's a Man in Japan if the character is given a different voice because their gender is changed in a dub There may be an overlap with Crossdressing Voices as well, as a character voiced by a male voice actor in one dub can be voiced by a female voice actor in another language and vice versa

Compare and contrast the state-controlled Propaganda Machine , to which this trope is often a direct reaction, but some examples will blur the lines between the two. Not to be confused with the Voice of the Legion (although he may well be the one these guys are rebelling against.) See also The Voice of a Generation . If you do not hear from us again, or if we are suddenly cut off amid sounds of violence, we have encountered Deadline News . However, As Long as There Is One Man , this broadcast will continue.

There are all different types of cameo. This is the type where a Thfamous person or a lesser-known VA gives their voice to... The ThVoice (if it only appears fleetingly) eir face is not shown

Thand therefore they are easy to miss, or they are an Easter Egg Thfor devoted fans if the person has some relationship to the Thuniverse of the story. As a result, please . It's also the vocal Thcounterpart to You Look Familiar (when an actor or actress from Tha previous work plays another character) is may be because Ththe person would otherwise seem out of place or it's a small Thcast where there isn't a lot of room for walk-ons, or health Thor personal circumstances prevented the person from being able Thto participate in person. It may be a form of Stunt Casting , Thalthough will usually not be advertised due to the small role, a ThCreator Cameo , or I Want You to Meet an Old Friend of Mine . See Thalso Voice with an Internet Connection , when a character's voice This heard at the other end of the earpiece

When characters swap bodies , get possessed , are cloned , or otherwise change form, there has to be some way to remind the folks at home which character is doing what . The solution? Base the voice off of the "mind" (when bodies are swapped/stolen) or make it relevant to the personality (in instances of cloning) If the result of possession, it may be lampshaded with another character noticing that "You sound different...", but if so it will be shrugged off or explained away, and will generally otherwise be ignored. It will be noticed in body-swap cases only as the plot demands and most likely the audience is expected to believe that in-universe, the voices didn't switch over. Sometimes, however, the other characters will notice the change , and the swapped person will have to disguise their voice to sound like the person whose body they are inhabiting Very prevalent in animation, where it's much easier to pull off since the animation comes after the voice dubbing and where trying to make the switch apparent through body language and mannerisms may not work as well. In film and live-action television, using a different voice to come out of someone's mouth requires redubbing and is less likely to appear unless the possessor is someone with a voice worth hearing, such as The Devil . In purely visual media like Webcomics , it's usually averted, but may be played with using the colors, fonts, and styles of the respective characters' Speech Bubbles if one or both characters normally use special dialog bubbles Of course, in a body switch one wouldn't expect the subjects to sound the same as their current body usually does anyway (slight differences in mouth shape, lung capacity and the vocal cords themselves would make differences when somebody new tried to control them without practice), but nor should they sound like their real bodies as this completely ignores the physical aspect of speech. The way your voice sounds depends on the shape of your vocal cords and the shape of your mouth. No amount of brain swapping is going to change that Worth mentioning too that, in cases where the voices DON'T switch, what should switch is the characters' accents, since that is mental. But that would require very good actors This trope is the "sound" aspect of Morphic Resonance . See also Eyes Are Mental Contrast Voices Are Not Mental , for when the voices stay with the body, not the mind. Aversions and inversions go there

Sometimes, characters swap bodies . When this happens, these characters will often swap voices as well . This is especially common in animation, due to Rule of Perception Well, This Is Not That Trope . This is when voices do not switch with characters' minds, which results in their actors having to approximate each

others' vocal range and mannerisms instead. Can double as The Cast Show Off , as they essentially get to do impressions of each other's characters, in character Contrast Voices Are Mental for when voices stay with the original mind. Aversions and inversions go there. Often results in Voice Change Surprise for the swapped characters

In anime , this is the standard. The animation is typically completed before</ the voice work is done, with all the actors in the studio at once. This cuts down on production time, and also has the benefit of allowing actors to play off each other's performances as well as see how the actual character looks while the dialogue is spoken. Western animation likewise has this as the preferred style, but whether this can actually be regularly accomplished varies from project to project. In Western productions, the animation work is traditionally done after</ all the voice work (this technique is known as "pre-lay"), and the animators' job is to match the actor's performance. This can lead to higher animation quality and even the fun of improvised dialogue sneaking into the final product , but the attention to detail required to make sure all the lip movements match properly is part of why the average production period of these cartoons is up to five times longer than their Japanese counterparts. With voice acting coming into play much earlier in the production cycle, there is less flexibility for when recording can take place. Add in that the voiceover industry in North America is a combination of professional full-time VAs and other types of actors doing voice acting on the side, with the cast for one show/film potentially being scattered across the continent (or even overseas), and you'll find that performers cannot always be gathered together for single group recording sessions because of scheduling conflicts. Voices In One Room notably does NOT occur with dubs of foreign material, except in rare circumstances. This is because Automated Dialogue Replacement (ADR or "post-sync"), the standard dubbing method, is technically very complicated; having multiple actors in a room for ADR would make the process take far longer than just recording one actor at a time Plus, given the insanely low-profit margin for dubbed material, it is necessary to do the work as quickly as possible. The lack of this trope, however, is one of the main complaints of those who find ADR to sound "wooden."

Characters with Volcanic Veins have a form of biological Tron Lines where their veins and arteries will glow intensely from underneath the skin, sometimes even "pulsing" in tune with their heartbeat or as if they had real magma flows inside their bodies. It should come as no surprise when dealing with characters who are elemental embodiments of fire and lava — where it gets interesting is that this can be used for just about any biology and power set. Ice powers? Neon blue jagged veins. Ability to manipulate Pure Energy or Mana ? Holy white veins. Control over poisons ? Sickly green veins (which you probably really</ don't want to bleed on you). A Black Magic master who's Drunk on the Dark Side ? Malevolent purple veins Thanks to Psychoactive Powers the veins will glow proportionally strong to the character's health and emotional state. Much like Eye Lights Out , if the character dies you can expect their Volcanic Veins to "dry up", darken, and maybe even harden like cooling lava. It should be noted that artists may not have done the research and draw Volcanic Veins over places or in

directions normal surface veins don't go. In these cases it may be that their "magical chi flow" doesn't necessarily have to be identical to their biological blood flow Compare Vein-o-Vision and X-Ray Vision . Contrast Tainted Veins . See also Throat Light

Two characters in a verbal dispute are reduced to exchanging insults — back and forth, over and over, like a ping-pong ball. Sometimes they escalate to extraordinary heights of inventiveness, but more often it degenerates into utter lameness as they run out of nasty</ things to call each other and resort to stupid ones. If an intellectual character is involved, their Sesquipedalian Loquaciousness will be their key to victory. However, sometimes a character will go too far and make a Fisticuff-Provoking Comment that results in a brawl or worse If the participants are of each other's preferred gender, Volleying Insults can sometimes take a left turn into a Slap-Slap-Kiss . Common for Belligerent Sexual Tension And if the participants happen to be the same gender , such as with Vitriolic Best Buds , certain fa ns will use this as a ground for claiming that the pairing has a basis. Namely, that the characters have chemistry by bickering Like an Old Married Couple If they're dueling, it's You Fight Like a Cow ; if they're in a contest of some sort it's Trash Talk . May involve a Hurricane of Puns Compare Argument of Contradictions , Snark-to-Snark Combat , and No, You

Happens between Diego and Shira in Ice Age 4: Continental Drift </ , when they are floating on a tiny ice floe in the middle of the ocean together with Manny, Sid and Granny.

Mouths. Some can be big, some can be small. And then there are these This trope is for when a character shouts so loud, their mouth takes up the entirety of their face, presumably to imitate the effect of a Skyward Scream . A variant exists in which the mouth is viewed from the side This is usually used in print and animation Sometimes, mouth size and volume are related (i.e. a character speaking softly is indicated by a small mouth) A character with No Indoor Voice often talks like this. Often coupled with Suddenly SHOUTING! , Big "NO!" , Big "YES!" or Say My Name . Compare Demon Head , in which the entire</ head expands

A character with the power to transform and reshape his or her body. This trope comes in a wide variety of forms , but can be classified by exactly the character can transform themselves into. Most commonly, a character is limited to a specific set of one or more "alternate" forms, or a specific "class" of things he can change into (animals , machines, elements, etc.) Sometimes, there's a specific feature that they are unable to conceal , like hair color or voice , that others can use to identify them regardless of what form they are in . If the only thing they are able to change is hair/eye color, they have Kaleidoscope Hair / Eye Colour Change . Usually, the character can transform simply by thinking about it, but occasionally they may use a gadget or a magic phrase . Magic Pants are almost always in effect, unless the shapeshifting character demonstrates or mentions they are simply molding what looks like clothing out of his/her body cells for the common decency of those around them. (In which case, it's best not to think too much about that... whoops, too late .) Many Superheroes have this power, along with

nearly all gods and Sufficiently Advanced Aliens . Some of them are Shapeshifting Tricksters and Reality Warpers . Many with a flexible transformation scheme also have a tacked-on bonus ability to alter their shape in any way they wish; i.e., adopt a clay-like consistency and sculpt themselves blob-style . The stretchy, ultraflexible body of a character like Plastic Man or Mrs. Incredible is a milder form. Others may use a Partial Transformation to "mix and match" elements of their human and transformed states. Being able to form limbs into stabbing weapons and reform oneself after being blown apart by explosives has become an almost standard ability of the clay-consistency metamorph in recent years, probably due to the popularity of the T-1000 character from Terminator 2: Judgment Day </ . Quite a few Shifters boast Elemental Powers , with water-based powers being particularly popular. A potent Healing Factor is also often packaged in, considering they can restructure their body at will. Exactly where their extra body mass comes from (or goes) when a shapeshifter transforms from one size</ to another is known as Shapeshifter Baggage . Can be used for Narrative Shapeshifting . The Shapeshifting Seducer finds picking up partners at bars is fairly easy, regardless of sex or preference , and is likely to be rather open-minded themselves about whom they choose. Sooner or later, a Phlebotinum Breakdown may leave the character suffering Involuntary Shapeshifting or Shapeshifter Mode Lock , if only temporarily. If badly beaten or near death, they may have a Superpower Meltdown and lose control of their power, resulting in a Shapeshifter Swan Song . If the character isn't very used to morphing shapes they may have Limb-Sensation Fascination after each change. Such a character might also be Otherworldly and Sexually Ambiguous .

When one character barfs, soon everyone else starts barfing as well This is Truth in Television , since vomiting has been known to inspire vomiting, as part of a prehistoric instinct; if someone from your same tribe vomits because they ate something harmful, chances are you ate the same thing and therefore it's best if you hurl it too For the one person version, see Vomit Indiscretion Shot . Compare Reactive Continuous Scream . Contrast Vomit Discretion Shot . A small version of Disaster Dominoes , and a form of Brown Note

A trope specific to murder mysteries, invoked to suggest that the crime is so gruesome (sight and/or smell) that it turns the stomachs of even hardened investigators. Alternately, the Vomiting Cop is a rookie on his or her first case, or it is used to show how seasoned and jaded the veteran cop is. There are two variations: While definitely not a Discredited Trope (mainly because it happens a lot in Real Life), it is almost as often used in parody as straight. Sometimes a Vomit Indiscretion Shot , but usually a Vomit Discretion Shot . Very often used as a variant on Gory Discretion Shot , where the gory stuff has been done but the evidence remains. See also Selective Squeamishness Suppression , Take Our Word for It . Contrast Autopsy Snack Time , Nausea Dissonance . Stress Vomit is the Super-Trope to this one.

Novice slaughterhouse workers are generally directed to the proper waste receptacle in which to barf on their first day, to ensure that when</ the sights, smells and textures get too much for them they won't contaminate the work area.

The writers catch a particularly bad Plot Hole , but they have to

leave it in because it's a critical part of the story . So the writers make an attempt to handwave this plot hole away, except the handwave itself</ is a Plot Hole. It might even make the initial Plot Hole even bigger. This plot hole in a plot hole is what we call a Voodoo Shark Coined by Chuck Sonnenberg , the term refers to the novelization of Jaws: The Revenge </ where the eponymous shark seeks out and attacks the living relatives and friends of Martin Brody, following them all the way to the Bahamas. A voodoo curse had been placed on Martin and his family to explain how a shark understands the concept of revenge and how it's able to keep finding these people. What makes it the trope namer is that the writer doesn't bother to answer the question of why</ the voodoo curse was made in the first place, or any of the other countless questions that come to mind Similar to Dork Age but specific to an episode's plot device. Compare to Author's Saving Throw in that not only is it on a plot device level, and that the creative staff is able to catch it before the final product ever leaves for production, but also in that it tends to fail miserably. Compare also to Justified Trope , except a Voodoo Shark moment requires the justification to fall flat, inadequately justify, or otherwise simply fail so that suspension of disbelief remains lost. Also compare to It Runs on Nonsensoleum , in which an explanation like this is played for laughs instead of presented straight. Dan Browned can be considered similar, in that specific knowledge about the subject at hand causes the hand wave or attempt to justify the trope to fall apart. Can overlap with Misaimed "Realism" , where attempts at making a game more realistic have unrealistic consequences Not related to Jumping the Shark or Hollywood Voodoo . Compare Scully Syndrome , where a character in-universe will concoct ridiculous explanations for things, and Unscientific Science , which similarly attempts to spackle over questionable science and technology the same way the Voodoo Shark does for plot points. Can often (but does not have to) result in a Retroactive Idiot Ball if the new explanation given contradicts an earlier (potentially unrelated) one. This may result in a Fan-Disliked Explanation

A contraction of Vox Populi refers to a series of clips of people, presumably random people met on a street, voicing their spontaneous opinions on a given subject. Frequently seen on the news , and often used in parodies of same, as in Monty Python's Flying Circus </ and a number of late-night talk shows. Also known as a "man on the street" interview Refreshingly, or perhaps alarmingly, major news outlets are beginning to rely more and more on Twitter for this kind of "content". Usually they'll have a newscaster (who presumably pissed somebody off to get that job) standing next to a screen the size of a man that's streaming incoming tweets as they happen. Well, that's what they claim. In reality, they're probably picking and choosing ones that neither a) consist entirely of the word "fuck" nor b) express an opinion more extreme than the news media think the average person has Compare Confused Bystander Interview

This is when shock value meets Rule of Funny . Normally, when we see such shocking stuff, we cover our eyes in disgust. However, when used right, it gains a humorous shading to it. Whether it gets a laugh depends on the audience and how it's done. When done right, it's hilarious. When done wrong, it just offends the audience . It all

goes back to the execution, Tropes Are Tools , after all. But some people just don't enjoy this type of comedy no matter how well it's done, and may as a result consider all vulgar humor inherently low effort. Tropes that often, but not always, fall under this: Compare Crosses the Line Twice . See Bottom of the Barrel Joke for when this is an excuse for lazy writing.

A Pregnancy Trope . During any pregnancy, at some point the mother will experience cravings — however, they will never be cravings for any standard foodstuff (such as pickles, ice cream, etc), but will instead be cravings for the most hilariously </ inappropriate and mismatched foods (chocolate covered kippers, boiled eggs and ice cream, peanut butter-dipped pickles, etc). Bonus points are awarded if the woman craves something that is (a) extremely difficult if not physically impossible </ to find; (b) isn't actually food </ or (c) both The trope often involves the father being roped into visiting late-night markets at 3 AM in search of that particular</ brand of pickled radishes and pistachio-flavored ice cream. Usually, this state of affairs will result in the father being stretched to breaking point to find the necessary goods... only to find, when he returns home, that the mother no longer craves it (usually without so much as a "thank you for traveling across five states and climbing a mountain to get it") A case of Truth in Television — some women actually do</ crave inedible things or unusual foods during pregnancy - but it tends to be exaggerated in fiction. In many cases, a woman doesn't even have to be pregnant. Some are prone to wild cravings during "that time of the month," to the confusion of any men present. This is probably a milder form of a condition known as " pica</ "; those afflicted with full-blown pica will crave all sorts of bizarre stuff 24/7, regardless of gender Compare the Extreme Omnivore , someone who always</ eats this way (e.g. the aforementioned full-blown pica) A rarer variant of this trope is where the "wackiness" of the cravings has less to do with the substance desired and more with the sheer quantity</ desired. In this form of wacky craving, the comedy is how "eating for two" turns into something more like "eating for two dozen", where the pregnant woman becomes a voracious glutton who uses her pregnancy as an excuse to eat like a pig, thus turning even the primmest and most diet-minded expectant woman into a shameless Big Eater This may be a sign that Pregnancy Makes You Crazy . To a lesser extent, this also belongs to All Periods Are PMS

Fiction in which much of the humor comes from fratboys getting highly intoxicated and doing incredibly stupid, risky, and dangerous things and getting away with it. It usually has the main characters as a bunch of loveable rogues pitted against the evil aristocratic old money frathouses or oppressive deans . Expect drinking, Mooning , and panty raids. Lots of panty raids May overlap with Stoner Flick . Generally parallels with College Is "High School, Part 2" . Almost always includes a Wild Teen Party , with college officials replacing the parents. Often set at a Strawman U . Compare All Guys Want Sorority Women , the stereotyped portrayal of the fraternity's Distaff Counterpart , the sorority Do not do this stuff in Real Life (please only include fictional examples here); people who do will be in serious legal and disciplinary trouble. After all, (most) college students are legally adults, and these actions have true disruptive consequences

American Pie Presents: Beta House </ : The frat guys engage in wild parties, hazing rituals, keg stand competitions, playing pranks on rival fraternities, etc. You kind of wonder if they passed ordinances to turn the college into a legal brothel and just forget about studying In The Pale King </, the confrontation between Fat Marcus the Moneylender and Diablo the Left-Handed Surrealist

The Happy Days </ episode "Hard Cover" has Richie, Fonzie, and The pals trapped in a girls' dorm after curfew with much hilarity The ensuing Onion </ parodies it with

Although there are no fratboys and wackiness is technically treason, the entire reason the Death Leopard society exists in Paranoia </ is to perform these hijinx, with high explosives , all the while talking in an excruciatingly Totally Radical fashion.

Kingdom of Loathing </ has Orcish Frat Boys as enemies. Most of their attacks and adventures are somehow related to this trope, whether fighting by spraying beer at you, hazing you, or stealing your underwear. They are, naturally, associated with the element of Sleaze.

Episode 40 of Bonus Stage </ is about a fraternity (played by the cast of Waterman </) moving into the house next door. The initiation ritual involves dragging one's bed outside and peeing in it wearing a dress. Joel apparently mishears and instead pees in their</ beds. Then there are the frat party games: "Extreme Spelling Bee", "Bingo Pac-Man", and "Throw the Screwdriver at Someone's Face" .

El Goonish Shive </ has featured an un-named "college party comedy".

Parodied in a Futurama </ episode where Bender lives out this trope.

Common variations include: See also Cloudcuckooland . If wackiness can be turned on or off, that's a Silliness Switch .

Marriage. True love. However you put it, the union between two (or more) people is a sacred commitment that should be undertaken with the utmost seriousness Except in TV land! There, a man might propose marriage to a woman by building giant letters out of burning gelatin. He could dress up like a knight in shining armor. However he does it, it's going to be funny These kind of wacky marriage proposals even creep into serious dramas to provide comic relief. Also, Fanfiction writers love to make their proposals as convoluted and wacky as possible — if they aren't overflowing with heartrending Purple Prose , that is Sub-trope of Grand Romantic Gesture

In Real Life , the racing of any kind of vehicle is very dangerous, and many people have died or suffered serious injury while doing so. Things have gotten better, but it is still a potentially deadly sport truly only kept in the reins of safety by the skill of the drivers . However, there is also the fact that in real life, except for off-road rallies and endurance races, most races simply involve going from point A to point B, or driving in a circle for 500 or so laps. Because of this, writers tend to spice things up a bit. The result is a Wacky Race, a race so improbable, so outrageous, so dangerous, that it makes look like a Sunday drive The race

often has rules more akin to a Demolition Derby than a normal race , and often takes place on an improbable course. Courses built around entire cities, courses with rollercoaster-like architecture, courses floating in midair, courses existing only in an alternate racing dimension , and courses in locations where it's generally not safe to be standing, let alone racing</ , are common. In addition, the vehicles themselves are often specialized. If they're cars, expect them to have weapons and other modifications If they're go-karts, expect a lot of Power Ups to be littering the course—if not, plain old Car Fu will be highly encouraged. And if they aren't normal vehicles, expect them to be some amazing sci-fi vehicle capable of pretty much defying the laws of physics. The Vehicles are often themed after their drivers (who are just as wacky as the race itself). The Rules of the Road may be altered arbitrarily. And of course, expect the prize to be some sort of MacGuffin It's almost traditional for a set of characters in a non-racing series to have an episode or spinoff where they engage in this. The hero usually wins , (or a random side character) the Ensemble Dark Horse always gets the coolest car , and the villain cheats and has it backfire hilariously . And, of course, someone always Drives Like Crazy Most Mascot Racer games involve this Also see Unconventional Vehicle Chase , Vehicular Combat , Chariot Race , Fictional Sport , Pseudolympics

A waterbed is a mattress that replaces the internal foam and springs with, you guessed it , water. In fiction, the water is often used to create absurd situations that would be unlikely — if not outright impossible — on a spring or foam mattress. The flowing nature of the fluid is often exaggerated, and water-related jokes are made at the expense of realism Real Life waterbeds were designed in the 19th century for hospital purposes, as spring-based mattresses often caused bedsores. Popular Science Fiction author Robert A. Heinlein is often credited for their quick rise to popularity in America during The '70s and The '80s , due to including a high level of speculative detail in some of his fictional works. As the new waterbed design swept the nation, many creators responded with a wave of jokes based on their (mis)use. However, the production of waterbeds has greatly decreased since their peak in the 80's, and tends to be a Forgotten Trope , more common in older media than in current fiction. Their relative obscurity in the modern day can cause an Aluminum Christmas Trees effect to those who have never encountered them in real life. Works featuring waterbeds are thus generally dated to the 1970's or 1980's Waterbeds encourage the absurd; they were celebrated for their novelty, but their squishy and bouncy nature, as well as the inconvenient way they can rupture and spray water everywhere , have tied them to comedy . You might find fish living in the bed, perhaps intentionally or maybe they swam upstream. If characters try standing on the bed, they'll quickly lose their balance and end up bouncing around as if they were on a trampoline. Such absurdisms are based on Rule of Funny , given the furniture's Awesome, yet Impractical status Compare Gelatinous Trampoline , Solid Clouds , Springs, Springs Everywhere , and Trampoline Tummy , which have similar jiggly and/or bouncy properties. If everything seems to be made like a waterbed, that may be Rubbery World instead. Waterbed mishaps (causing varying degrees of flooding) overlap with Murphy's Bed . Does not usually overlap with Soft Water , unless one were to use it as a landing zone without it rupturing or the person being injured

is a control scheme or game mechanic (usually from The Seventh Generation of Console Video Games) that is Cool, but Inefficient at best and a Scrappy Mechanic , unwanted upgrade, or Interface Screw at worst. It is thrown into a game to capitalize on a video game console's latest features — specifically, the interface and control schematics — but it worsens the gaming experience because it violates the game's mood, basic ergonomics, or playability Whether or not something is waggle</ is a source of debate among gaming fans, of course, like everything else. The color of the sky, for example The term originated from derisive reviews of early Nintendo Wii software May cause Fake Difficulty and Gameplay Roulette

Actors are in a constant state of communication with directors (and, sometimes, writers) as to what they think or feel their character should do, and in what direction their development ought to go. Thus in a very fundamental sense actors are always</ meddling for the benefit of the story. Well, This Is Not That Trope . This trope is when actors, likely those whose salary accounts for a significant portion of the budget, impose</ their ideas on the director. Maybe they want more screen time, a major rewrite of the plot, or some other concession that would get any smaller actor fired, like refusing any and all direction on their acting and filling their performances with Ham and Cheese or being overly serious . The result may not harm the film overall (or it may well be so extensive it becomes a vehicle for them to showboat in) but it is usually noticeable to viewers and may cause laughter , groans , or head-scratching. It's most typically parodied by the famous Diva line "Shoot my good side please!" And yes, there are occasions when this trope actually improves</ the production. However, this trope differs from the typical creative (and collaborative) process by involving a self-centered actor overruling the director. As a general rule, there are three cases of "positive" Director Wagging: (1) A case of Throw It In! , where the additions work</, (2) The actor in question is acting as an Assistant Director, or the Director is acting as the AD, or (3) The actor filling a void where the director should</ be (as sometimes happens when a director is incompetent or fired). Cases 2 and 3 benefit heavily from an actor who knows how to make a film, which is a rarer skill among actors than you might think (acting rewards specialization and subjectivity, directing and producing reward generalism and objectivity). Note that this situation is actually an improvement</ on how things worked for a while in Hollywood. After the final collapse of the studio star system in the late 60's, if an actor didn't like how the director was doing their job, it was completely possible for the star to get the director fired, then take over director's job themselves for the remainder of the shoot. This practice was officially stopped in 1976, after Clint Eastwood had Philip Kaufman fired from The Outlaw Josey Wales </ and took over the film himself — the Director's Guild subsequently made a rule which stated that whenever a film's director was fired, the replacement was not allowed to have been associated with the production in any way whatsoever. This theoretically safeguards directors from overly egotistical actors, although there are, of course, ways around it. The trope name is a play on "wag the dog", meaning that rather than the dog wagging the tail, it's the tail that

wags the dog. Or in this case, rather than the director directing the actor, it's the actor who directs the director. Also note that when it comes down to it, the producer</ is (often unfortunately) the one with more power in Hollywood; actors just have a more direct connection, hence this trope. Compare Executive Meddling , Protection from Editors and Troubled Production . Contrast Prima Donna Director .

There is a society, which may well resemble the real world at some time in the present or past. And then, alongside that society, there is a whole other social system with its own rules and hierarchies. It may be secret or just obscure, or even merely hard to access in some way. This is the Wainscot Society,</ sometimes just called a "wainscot" for short. (Wainscots are wooden panels on the interior walls of houses; the trope name comes from the fact that the secondary society lives "behind the wainscots", sometimes literally The Trope Namer is an entry in which discusses many examples.) The important thing about this trope is that beings living within the wainscot can interact with the mainstream society, and the physical locations of the two populations overlap; this isn't the funny foreign country next door. However, not everyone can move between the two societies, either because they just don't know that the other group exists, because only certain types of being (who may be unknown to or persecuted by the mainstream society) can operate within the secondary group, or because of physical or magical barriers. Exactly how easily it is to move between the two societies varies from case to case, but the transfer must be quick enough that it can be what starts a story; it shouldn't require a whole novel or movie just to make the shift. If it's inconceivable for more than one or two beings ever to shift between the two societies, the trope isn't present. Many wainscot fantasies involve multiple transfers in the course of the story. It is also required that the secondary society is a fully-fledged society</, with family groups and traditions; "ordinary" secret conspiracies and spy agencies don't</ qualify. Muggles from mainstream society may sometimes blunder into the wainscot by accident, or people or creatures from a wainscot may occasionally enter human society, bringing strangeness with them. When discovering or entering the wainscot defines the beginning of a hero's story, it functions as The Outside World . Someone who can move unusually freely between the two societies is a Child of Two Worlds . Low-budget Wainscot Societies may have to repurpose a lot of junk from the mainstream society, so the trope sometimes adds a bit of Scavenged Punk . Sister Trope to Masquerade (a system of intensive secrecy, and therefore one means by which a Wainscot Society in close contact with mainstream society may be kept separate), and Mouse World (a setting full of beings much smaller than normal humanity, who may well form a Wainscot Society). In other cases, the wainscot's population may be based Beneath the Earth , in an Underwater City , on an unusually convenient Island of Mystery , in an Alternate Dimension (maybe a Dark World) to which fairly accessible portals exist, or anywhere else that can somehow permit fairly easy access to the mundane world — or they may just be Invisible to Normals . A really Ancient Conspiracy may have become a fully developed society in its own right; the Alien Among Us might be one of many, who have planted a replica of their home society among humans. The Hidden Elf Village is more detached from the mainstream than this trope requires, though if its inhabitants are forced into increasing

contact with the rest of the world, it may be transformed into a Wainscot Society.

The same gag is also usable to demonstrate that a place is not visited very often, and/or that somebody has been trapped or locked in there till he died. See Time-Passage Beard which is a related sight gag showing people who have been waiting for a long time with long—usually white—beards. (In fact, sometimes the two gags are combined so that the skeleton will also have a Time Passage Beard.) Compare Dem Bones for when the skeleton in question is still alive.

ZZZZZZ! ZZZZZZ! ZZZZZ... GAH! NO! I ALREADY BOUGHT THE TICKETS! Oh! Um... I mean... Describe Waking Non-Sequitur Here . Alice is in a coma, is sleeping or is otherwise unconscious. Upon waking, a non sequitur bursts from her lips. There's a chance that she mistakes the closest person as someone else during such. The obvious implication is that the character was having a dream at the time, and since they haven't fully woken up yet, they haven't yet realized that it was in fact a dream. Compare Talking in Your Sleep and Noodle Implements (when the outburst is implied to relate to a dream). The inverse is Non Sequitur, * Thud , where a character says something random just before going down for the count. Can overlap with Un-Paused . Not to be confused with a Walking Non Sequitur who just talks like this all the time. If the non-sequitur is said while snapping out of a fantasy rather than a dream, it's Acting Out a Daydream .

If you have a character that has a Healing Factor or Resurrective Immortality , a great way for them to discover the power is for them to wake up at the morgue. Can also be done if the character is drugged or Faking the Dead . Either way it can be shocking, as the last place a person wants to be is at the morgue Naturally, there will be much confusion the first time it happens to someone, with or without amnesia and will usually have been completely undressed , and may have to make do without any clothing or equipment. Compare Rise from Your Grave and Waking Up Elsewhere . Can be a form of First Episode Resurrection Believe it or not, this is an example of Truth in Television . Rare today (though there is the occasional, erm, incident...), but more common in ages past when medical science wasn't all it is now. The only thing worse than waking up in the morgue, of course, was to be actually Buried Alive , which could also happen from time to time. The Buried Alive part is virtually impossible today since the dead are usually either embalmed before burial, or cremated. Neither of which you could wake up from. Unless maybe you're a Phoenix. And better not think what would happen if you're slated for dissection, especially by a Creepy Mortician ..

Something bad</ happens. A character gets into a car accident, or they get attacked by an assailant, or some other situation that results in them been seriously injured , to the point of unconsciousness. Cue transition . The character drowsily awakens sometime later, usually hours but sometimes days or even weeks . The

character can now briefly serve as The Watson by learning how long it was, where they are, and what they missed. Often, the character will receive tragic or otherwise unwelcome news upon regaining consciousness, for the sake of drama . (This is sometimes Subverted as the "helpful" character turns out to be playing a joke on the recently awakened character.) Subtropes include Abandoned Hospital Awakening , Undressing the Unconscious , Waking Up at the Morgue , You Wake Up on a Beach , and You Wake Up in a Room . Because this trope usually marks a major turning point in the story...

Berserk , Guts wakes up to an unfamiliar cave ceiling, which turns out to be Godo's mine (which was previously inhabited by elves, so evil spirits attracted to his brand can't follow him).

Unlike telephones, walkie-talkies are half-duplex devices. This means only one party may speak at a time. If both attempt to transmit simultaneously, neither of them will hear each other. In the professional world, keeps radio communications organized, which commonly involves saying "over" when one station finishes transmitting so that another party knows that they can begin. On large networks, call signs may be used to identify communicators without having to rely on their name. Since available channels are limited and airtime is valuable, code words (called "procedure words" or "prowords" in radio jargon) are typically used to keep transmissions brief. For example, "Roger" is generally used to mean "understood." While this makes sense for a military unit containing hundreds of soldiers or a cab dispatcher keeping track of dozens of cars, the average layperson is unlikely to be familiar with this convention. Chances are they'll think "Roger" is the name of a person, or mistakenly believe "over" is part of the sentence. An overzealous character will insist their partner use perfect protocol when it's completely unnecessary, such as when there is only one other person with another radio. Expect them to spew non-sensical military or CB slang that they don't even understand themselves. Creating outrageous code names is a must, and they will raise a fuss when the other characters don't cooperate. "Over" is the radio equivalent of Telegraph Gag Stop . Over. Contrast Hollywood CB , where walkie-talkies work like telephones and no special protocol is used. For other unrealistic depictions of radio usage by military or professional personnel, see Artistic License – Military . Over

The special sound effect that makes any conversation over Comm Links sound immediately military . A transmission usually starts off with a recognizable click, then follows the actual text, along with audible white noise in the background, then ends with another click Both sides cannot speak at the same time (also known as half-duplex operation.) Goes very well with Danger Deadpan voice, Military Alphabet , Reporting Names , Radio Voice , and Attack Pattern Alpha . However, it doesn't always have to indicate military: Voice with an Internet Connection often sports this sound effect, too, simply for the Rule of Cool . Amping up the static is a typical way of having a message get Lost in Transmission . If it's done on purpose, see Fake Static . This technique is actually a pretty realistic portrayal of modern Real Life voice transmission over , which for the most part are used by the military, police and emergency forces. The distortion is the reason the Military Alphabet was invented. The click at the start and end is the while the person is not talking but has the transmit button depressed. Stormtrooper helmets in Star Wars </ do

this, as well as the ship-to-ship communications of X-wings and other Rebel starfighters.

The Last Hero being used to create a base-to-ship communication system with the Discworld 's first spacecraft, The Kite</. As The Kite</ ' flies underneath the Disc, thousands of miles of intervening geology causes the link to fail with more and more static and white noise creeping in.

Parodied in The Young Ones </ episode "Cash". The police recruiting sergeant (who bears a strange resemblance to Mussolini) tells Neil the only qualification he needs to join the force is the ability to imitate radio static when using his walkie-talkie.

This is part of what makes Counter-Strike

Imitated in xkcd </ strip.

In the Lilo & Stitch: The Series </ episode "Clip" , when the duo try to sneak into Mertle's house, Lilo does the radio click thing with Stitch as though they're talking on walkie talkies (they weren't actually using them, just pretending they were).

Inverted on general-use FM walkie-talkies (FRS/GMRS, PMR 446 , etc), where most of them by default include call tones ("Hey you!") and "roger beeps" (indicating end of transmission), but due to the way the squelch functions on such walkie-talkies work, the user never hears the static unless the walkie-talkie is put in monitor mode.

In a lifetime, most are only skilled enough to properly use one weapon , let alone two (especially doing so simultaneously </). And then there's this</ guy. He strolls into danger at a leisurely pace... and strapped to his back are enough weapons to make the U.S military jealous. He doesn't even seem to have some magical satchel that he can just dump his weapons into for storage . Surely the weight must be doing a number on his back, right? But no worries. The character is bona-fide badass, so they manage to pull it off . They are </ the reinforcements , and they've taken the necessary precautions for the upcoming fight - hauling as many weapons as they possibly can. You can bet your sorry behind that they're gonna use 'em all, too. They are often Multi-Melee Masters or Multi-Ranged Masters (or both). Compare More Dakka , which is most likely the result when the character is packing heat. If so, expect them to be wearing quite a few Badass Bandoliers if their ammo supply isn't unlimited . Generally goes hand-in-hand with a Wall of Weapons . If the huge amount of weapons is mostly/entirely hidden under the character's clothes, then you have Trench Coat Warfare . Compare Hammerspace , Hyperspace Arsenal , Extended Disarming , Choice of Two Weapons .

Sometimes a show isn't all it's cracked up to be. Sometimes it's too boring to stand, too stupid to stand, or it's just plain awful. Sometimes the subject matter isn't to your taste, or something happened during the show that has you wanting to bang your head against the nearest wall. Maybe the band's playing at that concert is just atrocious, or maybe that game is going so badly for your home team that it's no use watching them anymore. Whatever the

case, sometimes the show is such that you can't sit through another minute of it and you're wanting back the money that you spent to see it. It's time to walk out Walking out of a show is a universal sign that the production being viewed is of poor quality. This is usually a very extreme reaction, as the typical response to seeing a bad show is to just sit and wait it out, as sitting is usually easier than standing and walking, and people usually don't have any other place to go and paid too much money on tickets to not wait and see if the show improves. Walk-outs, thus, usually only occur when the show is so bad that it's painful or disturbing, especially if the walk-outs occur en masse</. This was actually Invoked in Vaudeville to keep ticket sales up, as people expected to see as many acts as they wanted when they bought a ticket In media, walking out is often used to showcase a character's bad acting or other performing ability, or a bad performance in general (such as a poorly put-together School Play). Sometimes everyone walks out except for a few people (usually the protagonists) who truly, honestly enjoy the thing When this happens in Real Life , it is very much an Audience Reaction (and thus no Real Life examples should be added) A subtrope of Leaving Audience . See also Screw This, I'm Outta Here! and Eight Deadly Words

If the cast of your favorite show happens to include an attractive male , the chances are high that he's going to wind up losing his shirt probably not in a gambling parlor sooner or later. It may be gratuitous, or caused by the antagonist , and it will almost certainly bring the Squee! , but it will also be temporary. Eventually, Mr. Fanservice will replace his shirt, and you'll have to resort to rewinds and freeze-frames if you haven't gotten your fill Unless, of course, the object of your Perverse Sexual Lust is this guy</ The typical Walking Shirtless Scene is the dude whose default attire</ involves parading around half-naked. His Limited Wardrobe is so</ limited, that it doesn't even include a shirt—or if it does, he seems to be totally incapable of keeping it shut (in a sort of Spear Counterpart to Absolute Cleavage). And even if he does</ have an Unlimited Wardrobe , every outfit would have the singularly shared trait of lacking anything that covers his upper torso. Alternatively, a variant exists where the dude does wear a shirt, though he removes or loses it a lot to evoke the same amount of eye candy as one who forgoes any upper torso covering As you might guess, fangirls love him . And sometimes guys, as well Super-Trope to No Shirt, Long Jacket . Sub-Trope of Stripperiffic . For non- Fanservice-y examples of shirtless Funny Animals / Civilized Animals , see Half-Dressed Cartoon Animal For obvious reasons , this is a practically male-exclusive form of Stripperiffic-ness . Normally, the closest you can hope from someone without a Y chromosome is some Absolute Cleavage , Godiva Hair or a Walking Swimsuit Scene . Exceptions to this rule are rare, and require some rather impressive design gymnastics to implement. Or are in works intended for more mature audiences in the first place

A character or thing who has most of the tropes underneath it as spoilers. Mentioning anything about this character/thing at all — worst case scenario, this includes its name or even its existence alone</ — will often reveal spoilers about the work they feature in, which predictably makes talking about it difficult. Some fans reconcile this by using euphemisms, others by

avoiding talking about it at all, others just by placing a warning that the following will contain massive spoilers Can overlap with It Was His Sled if the work in question is old or culturally ingrained enough that pretty much everybody already knows about the various plot twists or Late-Arrival Spoiler if the marketing for a later installment of a series spoils an earlier installment. Often will overlap with Sir Not-Appearing-in-This-Trailer if the marketers don't decide otherwise Also, this is not about characters that are involved in many plot twists but the mere of the character within the narrative is a spoiler itself, that makes it impossible</ to talk about the character without spoiling the plot This is a Spoilered Rotten trope (on character pages), that means that on this list is a spoiler by default and most of them will be unmarked. If you don't know what that means, then you should probably take a good look at the page image for reference. It'll all become clear

Footloose and fancy-free, we set off among the Adventure Towns , seeking the next place, rather than our fortunes This trope is bottomless, it seems. The audience wants</ to believe life without roots is romantic and full of adventure . The character has no home, no job, no money, no identification, no friends, and no visible means of support Most of us would agree with Vincent Vega's response to Jules's quote above: "You're gonna become a bum!</ If you don't have a job, a home, and legal tender, that's all you'll be is a bum. Someone who picks in garbage cans and eats the stuff I throw away." Most people who go walking the earth by themselves are male (or disguised as male). Females generally belong to a nomadic group, mostly for defense purposes Some Walkers have some skills that they utilize to make a trade/earn a living while traveling, like hobos . Some occupations, such as cobbler and tinker are traditionally nomadic because you would use up your customer base in a location and have to move on to the next only to circle back when your first customers had worn out their shoes or pots. The music business also sees a lot of these; touring musicians get at least a taste of this life, and those who want more work can always find it outside of their bands as fill-in musicians, tour managers, techs, and other "road jobs" This trope is a very American one and is quite common in older Westerns . As far as big TV producing nations go, The U.S. of A. has the geography best suited to this form of adventure. Australia also has the tradition of the Walkabout, where young men would wander the land for months as a spiritual journey. However, this occurs in other countries as well, such as the Rōnin stories of Japan and the Chivalric Cycles of Europe and the U.K When one is forced to walk the earth against one's will, this trope becomes the much darker Flying Dutchman If a character walking the earth has a strict code of honor and spreads justice in his wake, he's a Knight Errant . Same code of honor (and wanderlust) usually results in passing the "Leave Your Quest" Test Most Wuxia heroes fall under either Knight Errant or (if they do not have a code of honour but merely wanders the land for enjoyment) this, they will master their arts and search for worthy opponents, either before a remarkable quest calls for them or after they already finished their quest in life and decides to drift off to other places Subtrope of In Harm's Way . Having Random Transportation is often used to provide the science fiction or fantasy versions of this trope. See also: Stern Chase , The Drifter , Flying Dutchman . Common MO for The Atoner .

Not to be confused with the music group

Organ donation is a noble thing. Lots of us have little cards that tell the doctors that if we have life rudely yoinked out from under our feet, they can take what's left of us to make sure that the same tragedy doesn't befall someone else . Some forms of donation—like donating a kidney, or half a liver (which can conveniently regenerate itself)—can actually be done while still alive, which is just as brave, especially since you'll be pottering around the planet for years to come and are still willing to hand over an internal organ so that someone else can live Most of us agree though, that it is not something we would want to have forced on us while our hearts are still beating, thank you very much. At that point, the kind act of donation becomes little more than mutilation. Cue fiction This character (usually a clone) exists for one reason — as "spare parts" for another character. It usually turns up in sci-fi/horror settings, but occasionally makes a guest appearance in emotional drama. They can be raised to cherish their purpose and perfectly content with their (usually fairly short) existence, or they can rage and fight against it . The qualifier is, the only reason they were born is because someone else might need their various body parts at some point. Rather depressing This is a pretty legitimate source of angst for the character who's treated like a spare tire (and usually with about as much consideration for their feelings). This is their</ body — the one they were born with, with all their own genetics and personality traits — but as far as the people around them are concerned, the Walking Transplant's very flesh and blood are the exclusive property of whoever they were created to be the donor for Fridge Logic begins to creep in once you remember the time and resources necessary to raise a human to adulthood, the incalculable variables that could render their organs unusable, and the difficulty of ensuring that said clone remains in the dark until the original needs</ a new part is the equivalent of building a brand new car solely for it to be cannibalized for spare parts (usually only one</ spare part, at that). Also, even if this is for some reason unavoidable, it's pretty much unclear, why clone's brain couldn't be prevented from being developed on early embryo stage by micro-surgical operation - essentially avoiding all those pesky moral problems, and just growing a healthy body without any neural reactions more complex than basic breathing and heartbeat. That's all bad for drama, though, so it's usually ignored Related to, but not to be confused with, Organ Theft . In reality, the idea of a child being a "walking transplant" is often used to argue against the possibility of " Designer Babies " — although there have already been babies screened and selected before birth specifically</ to donate to an older sibling (usually in the form of some "replaceable" material, like bone marrow and blood). Sometimes combined with Truly Single Parent . Cloning Body Parts is an attempt to make compatible transplants without the ethical issues involved here. Raised as a Host is when a person is raised with the intention of their entire body being taken over by another

Compare These Tropes Are Made for Walking (tropes about feet and footwear). Contrast Seated Tropes . Airplane Arms

The Evil Land or Supervillain Lair or Hidden Elf Village will be

impossible for the heroes to get into (or some other similarly inconvenient method), due to impossibly high mountains that have no passes and no goat-trails , a completely militarized frontier, mist-like magical barriers, cyclopean battlements, stormy reefs, and gigantic Black Gates. Both the good guys and the bad guys will maintain this policy because of these natural and man made defenses As a result, The Protagonist cannot simply hop a wagon train or fake a passport; they must climb impossibly sheer cliffs , traverse enormous deserts, and, because of the sheer visitor-unfriendliness of these places: The rulers of these places are often well-provisioned Asking 'how' could lead to Fridge Logic (although, for the case of the Trope Namer , see below). The incredulous hero, having crawled over thousands of miles of impassible terrain to get there, would have fairly expected to find an outpost on the verge of starvation. Instead, the isolated center of the stronghold turns out to be the most lavishly appointed place in the entire country, despite the land's hostility and the dangerous locals making few people want to go there. Corollary: security is always more and more lax the further you go into the forbidden realm... to the point where one can sneak into the lavishly appointed ballroom and mooch food off the ruler's table . Cue an improbable conversation with the Benevolent Ruler , who may even have a glass of wine and explain that the hero was always expected to get this far. Instead of shipping him back to a prison cell safely located on the outskirts, the hero will be deemed more useful alive , or he will be held in a poorly guarded jail cell to await sentencing . The seasoned marksmen who swarm the hills are always much more likely to capture our heroes if they attempt to avoid bushwhack away from the enemy camp</ , whereas the ones back on base are too busy drinking to notice heroes walking past the main gate or possibly scaling the battlements. All ways in are guarded, so naturally the hero will try the one that seems most suicidal. Pedestrian access may not be necessary, if more grueling methods of transportation are available: Access might be limited to slingshot, climbing with daggers, or motocross. Alternate routes may be blocked off by insurmountable obstacles . Contrast with River of Insanity , a.k.a. Doomed Expedition , which is the opposite sort of journey: wherein the voyage may be dramatic and increasingly perilous, but is also the most pragmatic means of getting there (you don't make it) See also Border Crossing . Compare the more benevolent Yellow Brick Road , where you have just as few options but not as many things trying to kill you on the way.

A stance or style of walking meant to resemble ancient Egyptian murals. Common in animation (especially as it's hard to twist your limbs this way in Real Life), often in Knife Outline scenes It should be noted that real ancient Egyptians did not walk like this, it was only a centuries-long artistic style meant to show a person's body from several angles at once

Standard Pirate punishment : extending a wooden board or similar object over the side of a ship, and forcing the intended victim to step off the far end and presumably drown or be eaten by sharks or crocodiles . This is a good scene for building suspense, if taken slowly. It is also an excellent opportunity for last-ditch-bravado and summing up antagonistic relationships. The plankee often tells the villain exactly what he thinks of him , and vice versa. The victim is usually bound. An occasional twist is for an unbound

victim to grab the plank on the way down or otherwise use it as a springboard into combat. Real Life pirates executed people this way, but only rarely, for as with The Mafia and their alleged fondness for Cement Shoes , they usually preferred to just shoot 'em and then dump the body overboard. Besides, having a grown man walk across a board that was only anchored on one side risks damaging perfectly good planking that could be used to maintain the ship. A related punishment is Keelhauling, where the victim is thrown overboard with a rope tied to them, then hauled across (or if they're really unlucky, along</) the ship's keel and pulled up the other side. This wasn't necessarily fatal, but the barnacles that are usually found attached to the bottom of any ship made this a painfully unpleasant experience. Since Space Is an Ocean , Space Pirates have a parallel punishment with a similar dramatic role: the victims are Thrown Out the Airlock . Sky Pirates seem to prefer the more old-fashioned plank—not surprising, since the airship's altitude would make it especially dangerous to the hero. See Ordered to Die for other forms of, well, ordering people to die. (The intended </ function of a Ship's plank was to allow the crew to sail up to and walk onto another ship, in case you were wondering.)

In which one gets up close and personal with a wall for an extended period of time For whatever reason, a character will find themselves either running aimlessly with their face against the bricks or slamming into said bricks, over and over and over again In most media, it's a Comedy Trope where the affliction's caused by the character is being incompetent, misled, etc. and steered into a dead end. And staying in that dead end. Alternately, it may be an overdramatic gesture to bonk one's head against a wall as if punishing oneself for one's mistakes or perceived idiocy; that one can be Truth in Television In video games, however, when it's simply the game designers not bothering with a "unit has detected a wall and is stopping shot" animation, it most often shows up as a common glitch . Collision data is complicated — No matter how smart the AI is, there's bound to be some problems where they forget the location of a wall or a building and just try to run through it, sometimes for hours if the player doesn't intervene somehow. Another, more common variation is that they strangely slide sideways while running until they find a path that they can</ run through. This is often caused by The All-Seeing A.I. when the player's location is always detected, but in exchange for everything else. As minor instances are pretty common, generally only examples that either affect gameplay or are interesting to look at should be added for this type. If a player's avatar in an online game winds up doing this, lag is usually the culprit. Other times, however, certain types of gamers such as Speedrunners can invoke this as sometimes it can, when done "correctly", allow them to clip through games' boundaries so that they may finish them faster or outright skip huge portions of them The video game variant is a subtrope of Artificial Stupidity

When a character is poor, there's no better way for him to say "I have no money" (due to Perpetual Poverty or a Broke Episode) than to have moths emerge from his wallet when he opens it. It's also the perfect way to show that a character with tons of money at his disposal is a complete skinflint . Alternately, the character can make a great show of pulling the pockets of his pants inside out (an act that might also be accompanied by the appearance of

moths). Double points if the character does both</ For the most part, this is an Animation Trope , possibly because actors don't much like fragile flying insects in their pockets, though it isn't often used anymore even in cartoons. Little to no relation with Macabre Moth Motif and Moth Menace . Contrast Bat Scare , in which the startling appearance of flying creatures indicates a location is unexplored or abandoned. Compare Bankruptcy Barrel

Tropes listed in the Wiki Tropes index are being discussed at the Trope Repair Shop . Click the link to join the discussion.

A paragraph should ideally be a smooth, succinct experience that goes through a bit of exposition, illustrates an idea, sums up the point, and primes the reader for the next paragraph Ideally In practice, a writer can get too caught up in all the things they have to say and fail to organize it all into bits an ordinary human being would be able to digest. The end result is a huge run-on paragraph that makes it difficult to recall the original point of it if there was one in the first place. The reader's eyes glaze over and all they see is a wall of text This afflicts all written media, but it is particularly infamous for its effect on Comic Books . One of the first things learned in comics is how to use dialogue bubbles effectively; a writer not allocating space carefully will end up covering their panel with a bunch of text and white space. Eventually, the reader will realize that they're primarily looking at plain text rather than the vivid form of visual storytelling that comic books are famed for. TL;DR indeed At best, a Wall of Text is just a signal of really heavy exposition. At worst, they are a warning sign that the author is soapboxing about something Like a lot of tropes, though, even this isn't necessarily a hopeless evil . There are occasions where a person will go on and on in real life, or perhaps is giving one huge, unbroken speech or rant, and for these cases, "walls of text" aren't necessarily a terrible formatting idea; they can help visually reinforce what's happening in the story and match the experience of the reader to the experience in-universe. Using it like this, though, still requires skill and finesse to avoid making just another negative example Speaking in Panels is often a way to evade this trope while recounting what happened If Speech-Bubbles Interruption are used to show it's not being listened to, see Wall of Blather . If the text is literally</ written on a wall in-universe, it might be a Room Full of Crazy . See Read the Fine Print if these kinds of text actually contain very important information. Ominous Multiple Screens is sort-of the video equivalent. Compare Doorstopper , usually related to works that are literally nothing but words

This is when a character is decked out in an outfit that blends in seamlessly with the wallpaper or furniture upholstery, to the point they're either invisible or seem like a (not giant holographic) floating head and hands. Why are they wearing such a bizarre get up? They may have gotten the shirt/dress as a horribly tacky gift, worn a normal article of clothing and through sheer random chance end up in a place that they blend in to. Or they may be Crazy-Prepared and created the outfit/camo paint combo from scratch precisely to blend in to the background. Hollywood Chameleons can do this naturally Related to Stand-In Portrait , if they are

impersonating a figure in a mural it is that trope not this one. See also Chameleon Camouflage and Nobody Here but Us Statues

Alice runs into Bob, but Bob is acting very strange today. He may have had a Green-Eyed Epiphany of some sort, is upset that Alice is avoiding him, or just at the breaking point of being repeatedly insisted that he's not a potential Love Interest . Regardless, his emotions have built up to the point he can't contain them. Alice may be Oblivious to Love , refusing to admit how she feels , or just simply unsure. The moment Alice tries to leave, Bob quickly slams his hand on the wall and traps her against it with his body, stopping her from running away. It's a way to intimidate her, but also a way for him to get physically close to her It may not have been The Love Slap of Epiphany , but it does get the message out through and clear. Alice becomes more and more confused about how she sees Bob. Usually it results in a case of They Do This trope is better known to the Japanese public as the "kabe don" (wall pound). It's when a character (usually Always Male , at least in heterosexual pairings) physically corners a Love Interest using the body to block any chance of escape. It's often accompanied with a "BAM!" sound effect from pounding the wall (the "don" in kabe don). The Wall Pin Of Love is often Played for Drama and increases tension between the characters. It may be given with an Anguished Declaration of Love or a Forceful Kiss from the person doing the Wall Pin. May also lead to Wall Bang Her . A well-known parody of this originating in the Japanese Twitterverse was known as the (cicada block), uses both arms and legs </, and was subject to much Memetic Mutation The Wall Pin of Love is a very popular staple in Shojo and Yaoi romance. Many news outlets have reported that it is the "ideal" scenario for many Japanese women. Despite this, the Wall Pin of Love can lead to Unfortunate Implications because the emotional and physical intimidation is common in domestic abuse. Because of how frequent and popular it is in Eastern works, there may be Values Dissonance involved in how it's accepted. People in the West are more likely to see the Wall Pin of Love as anything but romantic, and even a bit rapey Outside of a romantic context, the Wall Pin can simply be used to intimidate people. A Loan Shark might use it when he doesn't get his money. However, if it's simply a Neck Lift applied to a wall or shoving a person into the wall, then it doesn't count. The Wall Pin has to involve someone trapping another with the body. In less serious works, this may be Played for Laughs by having the victim assume they're being flirted with Unlike Pinned to the Wall , this generally involves no pointy objects

specifically about kabe don. The manga featured in the commercial includes Ao Haru Ride </, Re Re Hello </, and Wolf Girl and Black Prince </ , with artwork drawn exclusively for the commercial.

Ao Haru Ride </ has one in chapter 25 when Kou confronts Futaba for Aavoiding him verted in Captain America: The Winter Soldier </: ASteve pins Natasha against the wall, but because he's genuinely Aangry at her. Despite the frequent Ship Tease between them, they Adon't go any farther than being friends

Katalepsis </: Zheng, a flesh-eating zombie, does this to Heather to intimidate her. It has unintended consequences .

.

Taemin , who is featured in BoA 's music video for , does this to her.

La Corda d'Oro </, when ladies' man and flutist Azuma Yunoki shows his true colors to Kahoko Hino, he puts his hand against the wall beside her and tells her that she's been pestering him.

Explained in Let's Speak English </ strip.

As explained above, Japanese Twitter 's version of the wall-pin originated from a drawn by Maki0046 about (mostly) standard examples of kabe-don</ .

Steven Universe </: In "Alone Together" :

Angst can create compelling drama , character development , and interesting psychology when done well; many acclaimed works of art use it to a degree and the appeal of The Woobie is based on it. But like all other good things, angst can be overdone or done poorly. Wangst, a portmanteau of "whiny" and "angst," (or "wimpy" or "wah" or "whinging"... or possibly "wanker" or "wang" in especially irritating cases) is essentially angst gone wrong. The intended Woobie 's Appeal to Pity ends in an epic failure , and thus becomes a pathetically whiny character who insists on crying (often loudly and repeatedly) about a Dark and Troubled Past instead of, you know, trying to move on with their life. This is made even more annoying when the character's "trauma" doesn't come across nearly as tragic as they seem to think it does, compared with other people out there trying to endure yet still determined to solve the problem , making the character's lamentations seem way out of proportion. Though Wangst is most frequently associated with characters whining over petty "tragedies," the trope is not merely sadness or angst: it is poorly written sadness or angst that comes off as unjustified due to lack of an explanation, exaggeration of the problem, or otherwise not showing an appropriate level of sadness compared to the tragedy in question It's not necessarily the scale of the tragedy that the character is reacting to that's the problem, but the way it's handled. Note that it can be intentional, and frequently is; when used correctly, it can create or aid and abet schadenfreude, establish a character's childlike or emotionally immature or unstable qualities, or otherwise reinforce the characterization of an inveterate whiner whose failure to place their problems into perspective or see their own role in them is a central flaw. It all boils down to quality and personal tolerance level ; what is grating and unrealistic to one viewer can be genuinely heart-rending for another. There's an inherent Double Standard involving this trope — people are much more likely to be crying "Wangst" to a male character than they are a female character. In heavily action-oriented works, it's expected for anyone who just pauses for a short time to feel a little angst to immediately get called out as wangsty: see also What Measure Is a Non-Badass? . Wangst is a favorite of Emo Teens , Sympathetic Sues and characters Cursed With Awesome . Any kind of Despair Speech (especially by nihilists) is also often considered as this. Often pointed out by playing the World's Smallest Violin . See also Emo , Narm , Angst Dissonance , First World Problems , Misery Poker , Prone to Tears . To deal with the wangsty kind, people will usually say " Get A Hold Of Yourself Man !" The "wangst" equivalent for entire stories is when Too Bleak, Stopped Caring is caused by too much True Art Is Angsty . Silly Rabbit, Cynicism Is for Losers! is

the philosophical equivalent. Compare Deus Angst Machina , which is about having too many sources</ of angst for Willing Suspension of Disbelief rather than too much response</ to sources of angst. For both in-universe and</ meta-examples, see Muse Abuse , a frequent Real Life and in-universe cause of Wangst . Contrast Angst? What Angst? , and Stoic Woobie . Compare First World Problems and Misery Poker . Seeing this in fiction may cause one to think of Not to be confused with angst resulting from a lack of sexual relationship. Or angst over the size of your wang. A Sub-Trope of Bathos , and may be called that in literary circles .

Posters hanging on every second wall, always in the same design: A Truth in Television trope that is Older Than Feudalism , as such publications have existed before the printing press despite their common association with westerns . In modern settings, they're almost exclusively seen in post offices, as One common idea is for a character to see their own poster and do one of a few things: Even more bonus points if, after seeing his own face on a Wanted poster, the outlaw stands next to the poster and adopts a pose exactly </ like the picture on the poster (deliberately or not). For a Bounty Hunter otherwise, seeing a poster means he has a new game to chase for. They will often dramatically tear down the poster rather than leave it up. See also Facial Composite Failure . Like the Face on a Milk Carton trope, it may also be Played for Laughs , such as having the creator of a show make a Creator Cameo in the wanted poster. Generally, this is not what a character wants to see when they're in a Fugitive Arc . These are to be expected for a character who is The Most Wanted .

The War Arc is a Story Arc that concerns two or more large-scale factions (city-sized at least) in conflict with one another, with the protagonists being involved somehow. The scale will usually be very epic, with politics usually playing a role. Expect to see a Big Badass Battle Sequence See also Rescue Arc and Tournament Arc

If you want to make an army look exotic and threatening, give them War Elephants Trained war elephants have been used by some historical nations, but fairly sporadically and usually by ones fighting against the Roman, European or Chinese cultures that most modern writers are descended from. Thus, war elephants' presence in an army easily establishes it as foreign and unusual. Elephants also have a domineering presence on the battlefield, smashing apart shieldwalls and light fortifications and trampling over regular troops, and their sheer fearsome bulk presents them as an obvious threat that will be very difficult to deal with. These creatures are typically be used by the Evil Army or The Horde , but if they're on the heroes' side then they might be used by foreign allies to indicate the army's exoticness In battle, elephants are mostly used for their fear factor, intimidating enemy troops while rallying yours, and as breakthrough troops with which to smash through enemy lines. It's also common for howdahs to be mounted on their backs, typically carrying additional soldiers, ranged troops to take advantage of the raised vantage point, or even whole cannons. More pragmatically, the beasts can also be used to haul around siege weaponry, supplies or mobile fortifications. The main downside to these creatures is the possibility of them stampeding if something scares them, at which point they'll usually trample their way through friend and foe alike; indeed, a common strategy

employed by armies facing war elephants is to try to get them to stampede before battle is joined, ideally in the enemy's own camp War Mammoths work too, especially when used by armies coming from the endless cold of the northlands or in the distant past . Fantasy elephant equivalents can also serve this purpose, in order to further emphasize the exoticness of the army or world in question. In these cases, the elephants' size tends to be super-sized to the point where they almost qualify as war-barges with tusks. They may also be accompanied by other large animals like rhinos or, if the writer is more fantastically inclined, even dinosaurs This trope is Truth in Television : kingdoms in North Africa, the Middle East, and southeastern Asia have weaponized pachyderms at various points in history. Elephants are huge, strong, tough, terrifying, and highly trainable animals capable of carrying multiple riders on their backs, whether they be officers wanting a better view of the battlefield, archers, or even artillerymen firing a ballista or cannon from a howdah. Horses were also generally terrified of them and wouldn't go near them, so a few elephants in front of your army could make enemy cavalry charges useless. However, they could easily panic in battle , trampling friend or foe , and their sensitive hearing made them even more prone to panic when loud firearms became widespread Subtrope of Beast of Battle . Compare Horse of a Different Color . See Cruel Elephant for violent and dangerous elephants in general Futurama </: In " Fun on a Bun ", Neanderthals riding woolly mammoths attack Oktoberfest

As the technology used to wage warfare has advanced, all new weapons and tactics have risen to use them. In the process, previous methods become far less prominent, and often eventually disappear altogether. Most modern navies have all but abandoned battleships, and the only blades today's soldiers carry are knives. But in the future... what if technology takes a sudden and (un?)expected turn? The advent of military-grade lasers and fire-control systems that are decidedly not</ Point Defenseless makes missiles useless and taking aircraft into battle suicidal. All those modern aircraft carriers and missile cruisers suddenly become obsolete, and the battleship is king of the seas once more. What if personal-scale Deflector Shields make swords and spears viable weapons again? This occurs a lot in Speculative Fiction , where some discovery or advance in science or technology has the net effect of rendering the last 20 to 200 years of military tactical development moot, forcing a return to the methods of an earlier time of warfare, often still with high-tech spins on the old gear. For example, if large close-combat weapons become viable again, they may develop Laser Blades , Hot Blades , or Vibroweapons . This overlaps with Retro Upgrade . Often invoked by creators who wish to justify Hollywood Tactics or other kinds of martial Rule of Cool ; the justifications may or may not be convincing, depending on how much thought went into them. See also Break Out the Museum Piece , when this happens in a more immediate sense. Compare Archaic Weapon for an Advanced Age , which does not require this trope, but will frequently overlap with it when it does occur.

A genre of Fanfiction in which we find our plucky young heroes fighting in a large military conflict, whether they want to or not. These fics almost always involve the main characters joining the military in some way, and almost always involve a focus on the weapons, tactics, and politics involved in war and how the characters react to them — as opposed to the characters themselves. Of course, this is helped a long quite a bit if said

characters are already</ in the military Gun Porn is entirely optional

War Is Hell for many, and some would rather it didn't happen. They say it's unnecessary, or they wish it wasn't necessary. In fiction, however, some villains not only like war , they frequently like to start wars for their own ends. Their motives may vary. They may set out to profit from the situation , or trick their enemies into destroying each other , or even try to Take Over the World in the aftermath. They may be terrorists, or just Card Carrying Villains . The method is often some form of False Flag Operation ; the villains pretend to be members of one country, and attack another. Nuclear weapons are commonly used in the set-up. At times, both sides in a conflict use a flimsy Pretext for War just so they can get to the "good" parts. Heroes typically struggle to Prevent the War , or end it as bloodlessly and quickly as possible. It's sometimes implied in narrative examples of this trope that corporations profit from this war, e.g arms manufacturers. Then again, the opposite can also be true, (relative) peace tends to make arms markets flat - a long-standing threat of war (real or artificial) can be damned</ profitable for arms manufacturers... Let's just be real careful what gets put in the Real Life section, okay? Compare Corporate Warfare , where corporations cut out the middleman and do the fighting themselves, and Blood Knight , where the fun comes from the fighting itself. See also Avoiding the Great War , when this coincides with WWI.

Factions 1 and 2 of World A have been fighting for eons. Then out of luck, Faction 1 finds World B, which was completely unrelated to the war and had no involvement whatsoever. Faction 1 might send spies into World B, in hopes that it proves useful to them. Faction 2 later learns of World B's existence and sends its forces there, turning World B into another battleground for World A's war In a situation like this, the inhabitants of World B would be taken completely by surprise and must find a way to deal with this unexpected twist in events. Some may take sides among the various factions. Others may try to become intermediaries, hoping to find some kind of diplomatic solution. And there are those who want to become a third faction to drive out both The warring factions don't exactly have to be Trapped in Another World either, they just have to fight each other on World B, which had absolutely had nothing to do with them until now. The war could be either secretive or full-scale, old or pretty recent. The trope does not count if World B had public knowledge of Factions 1 & 2 and got involved beforehand, which would just be a neutral country being attacked by both of its neighbors. However, it can apply to an isolated island that gets invaded by two or countries elsewhere Compare Alien Invasion , which is a war between an invading world and the invaded one. Contrast Truce Zone , an area where warring agree not to fight, especially if the areas are neutral, have nothing to do with the war, or are too important to risk any damage. This may involve Invading Refugees . See also Proxy War when the offworlders try to use groups on the neutral planet against their enemies

A genre of tabletop games centering around the simulation of warfare, based on either real conflicts or fantasy scenarios. There are two basic genres. In 'miniature' games players use highly detailed

miniatures, which fight over modelled terrain which could be compared to "low-res dioramas" of railway modellers. Because they are not static (often needing to be packed away at the end of the game) they lack the finer detail. However effort is made to accurately represent the terrain effects. Miniature games do not have a CRT like board games (see below); dice roll represent the "hits" taken by the target, either actual casualties, or something like morale loss. Movement is regulated by tape measures, with modifiers for terrain :- "Cavalry 20 cm, movement in woods counts x2" Other games of this genre consist of one or more maps of the theatre of conflict, a variable number of unit counters (small square pieces of heavy cardstock with printed numbers and symbols representing military units, as well as markers of various sorts), and rules with accompanying tables and charts. The most important such table is a "Combat Results Table", giving a set of battle results calculated according to the numerical odds of attacker versus defender; the players roll dice and compare the resulting numbers to the table to see how the battle came out. Table wargames can focus on any level of battle from literally man-to-man combat (e.g., the Squad Leader series) to whole army groups or fleets. Expansion Packs with different scenarios are also common. Board games confine players to the map terrain and supplied units, where as miniatures allow for fictional battles as you can rearrange terrain and units to your wish. Pure internet publications would say board gaming was more popular in the US, where as Europeans were more likely to play miniatures. However the US has a healthy miniature scene, and the hex map business suffered contraction, but now appears to be growing again. The Ur Examples are Chess (invented in ancient India) and Go (invented in ancient China), which laid the foundations for wargaming. The Trope Maker is possibly </ (1812), literally, "War Game," which was created by two Prussian officers, Lieutenant Georg Leopold von Reiswitz and his son Georg Heinrich Rudolf von Reiswitz. The game, intended to be a more modern realistic adaptation of Chess, was widely played by the Prussian officers of the 19th Century, and after some stunning Prussian victories, military officers around Europe. It was Serious Business from the very beginning; Kriegsspiel</ was endorsed by the General Staff of Prussia as an invaluable teaching aid. Kriegsspiel</ was the Trope Codifier for a lot of conventions used by current military thinkers, military historians, war gamers, and table top role players. It codified the use of the colors red and blue for enemy and friendly forces, respectively, the use of maps and miniaturised scale terrain, detailed movement rules and turns , referees and game masters, specialized dice, the block symbols for units, table quarters, Loads and Loads of Rules , the Random Number God , the core rulebook, Rule Zero , and so on. It was so influential that it is still A great many of the concepts used to create training simulations for modern officers and table top wargames today would seem completely familiar to the Reiswitzes, even despite technology they could never have imagined. The eminent author H. G. Wells was also responsible for several more light-hearted and simplified sets of rule conventions for wargame simulations — Floor Games</ (1911) and Little Wars</ (1913)— which were popular in Great Britain before World War I , and which had a strong influence on the later development of the wargaming hobby in the UK. After World War II , the game evolved again. The original Kriegsspiel</ used only symbolic blocks to represent units. Little Wars</ advocated use of what were then standard 54mm or 3.5" toy soldiers. In the 1950s, with the rise of firms such as Hinchcliffe or Spencer-Smith who sold

25mm or 1:72 scale metal figures, new thinkers such as the hugely influential Donald Featherstone (who had commanded tanks in North Africa and Italy) advocated far larger battles over the same size table using figures 3/4 of the size. Featherstone's new rule-sets and advocacy of using smaller scales also coincided with the rise in cheap, small, plastic figures, and construction kits of tanks and artillery; like those made with injection moulding by the Airfix brand. In the 1950's, Charles S. Roberts founded Avalon Hill and published Tactics II</ , which is generally agreed to be the first modern board wargame. Until the late 1960's, Avalon Hill pretty much had a monopoly in this niche, and its games introduced most of the mechanics and concepts still used today in board wargaming. The great majority of wargames use a map with a hexagonal grid overlay, for instance; Roberts got the concept from a high-level professional wargame simulating nuclear warfare. During the 1970s and early 1980s, several companies (chief among them Avalon Hill , Simulations Publications Inc., and Game Designers' Workshop) produced literally hundreds of games covering every era of warfare from the ancient period to science fiction and Alternate History . In many ways a return to classical Kreigsspiel</ format, these games ranged in size from tiny "folio" games with perhaps 100 counters and maps no larger than a standard sheet of paper, to gigantic "monster" games with 9 or more 22" x 34" maps and thousands of counters. By the end of the 1970s, the biggest "monster" wargames (for instance, SPI's "Campaign for North Africa") were so complex and unwieldy that they were pretty much unplayable as actual games in the traditional table format. Also of note: Role-playing games, in their pencil-and-paper-and-rulebook format , first became popular in the late 1970s. There used to be some amount of tension between devotees of board wargaming and RPG players. Since the early 1980s (and to a degree, before) the advent of home computers resulted in wargames mostly transitioning to the realm of electronics, since it was much easier to program the often-complex math required to accurately simulate many military events than to try to create tables and charts for table wargames. These games evolved into the genres we now call Turn-Based Strategy and, later still, Real-Time Strategy . Even so, there is still a hard core of dedicated map-and-counter-and-dice wargamers and companies to serve them, as well as numerous conventions large and small at which gamers can meet to play games and buy and sell them. Since circa 2000, the board wargaming hobby has enjoyed something of a renaissance due, in part, to the revived popularity of tabletop games. Just as in the 1970's, games range in physical size from "folio" games (Decision Games has published several games that can use as few as 40 counters to represent all the units present at a given battle) to "monsters" with thousands of counters and numerous maps (e.g., Compass Games' Absolute Victory</, a grand-strategic-level treatment of World War II intended as a revamping and expansion of the Australian Design Group's classic World in Flames</, which covers not only the entire Western Hemisphere but even includes a map for Antarctica!). As of the late 2010's, Decision Games (which owns the SPI trademark and the copyrights to most of the classic SPI line), GMT Games, and Compass Games are the leading publishers in the hobby, augmented by smaller publishers such as Avalanche Press, MMP (Multi-Man Productions, co-founded by baseball Hall of Famer Curt Schilling in order to keep Advanced Squad Leader</ in print), OSG (Operational Studies Group, which specializes almost exclusively in Napoleonic-era games) and One Small Step Games. These companies both publish new designs and re-print classic 1970's and 1980's games; for instance, Avalanche

Press has republished the 1974 Avalon Hill classic Third Reich</ and paired it with an original design, The Great Pacific War</, covering the war in East Asia and the Pacific, which uses the same system as Third Reich</ and can be mated with the European game to present the entirety of World War II. GMT's own version of "Third Reich", "A World At War", is so popular that it has its own website Decision Games, which now owns the rights to publish SPI's legendary Strategy and Tactics</ magazine-with-game, publishes the magazine on a bimonthly basis, along with two other similar magazines with a more specific focus; World at War</, specializing in World War II, and Modern War</, focusing on contemporary and near-future conflict Both of these magazines, like S&T, are available in magazine-only versions as well as versions with game supplements. GMT is known for the high quality of its games' physical components, and is the publisher of one of the most popular of all board games, Twilight Struggle </, a two-player recreation of the Cold War; the designer has followed up this success with a new game, Imperial Struggle</, recounting the century-long conflict between Britain and France from the late 17th century until the French Revolution. They're also the publishers of the highly popular COIN (Counterinsurgency) series, which covers insurgencies and rebellions throughout history from the Gallic Wars (Falling Sky</) to Afghanistan (A Distant Plain</). Compass Games has, in recent years, won praise for its reissues of classic games, which often are reworked by the original games' designers. Like Decision, both GMT ("C3i") and Compass ("Paper Wars") publish magazines with included games. The advent of inexpensive desktop publishing has also engendered a multitude of small publishers such as Hollandspiele, Revolution Games, Conflict Simulations Limited and High Flying Dice Games, which publish a wide range of games, often on subjects that might not be profitable for the major publishers to put out. Proving that older ideas recycle, the Nottingham-based company Games Workshop </ began operations in the early 1980s selling fantasy and sci-fi wargaming from its dedicated shop outlets around the country. Despite computer games and map-and-counter-based games still having a foothold, and despite the dominant trend in the tabletop wargaming-with-figures hobby being historical gaming (Napoleonics and WW2 still dominate), GW carved out its own little empire, securing the alliegience and pocket-money of adolescent boys, who are the next generation of the hobby. In a time where traditional model and figure makers such as Airfix repeatedly went bust, GW have gone from strength to strength. And GW's other innovation stuck. "Traditional" wargaming with figures revolves around two scales: 20-25mm (1:76 to 1:72) or the older 1:35 (54mm), GW chose the intermediate 28mm (1:57 scale). This has proven very popular and has been taken up by many other figure manufacturers. The figures do not take up anything like as much table space as the comparatively huge 54mm's. They are also large enough to carry a lot of fine detail which a skilled artist can bring out. While 20 and 15 mm figures can provide an impressive spectacle en masse</ , the observer has often got to squint to make out individual detail. This is not an issue in 28mm. See also After-Action Report , Common Tactical Gameplay Elements , Random Number God , Turn-Based Combat , and Turn-Based Tactics . Afrika Korps</

A character regarded as a deity or manifestation of war (or battle, murder, conflict, etc.). They're most likely a member of the setting's ruling pantheon when they are the real deal, but could be any character (including a mortal) who is falsely regarded by other

characters as a god(dess) of war. The War God in question often exemplifies either the physical or strategic aspects of war, although they can embody both. War Gods are of course nearly all very badass, possibly also a Four-Star Badass among the pantheon . They tend to be Blood Knights by nature and are often the only god that the Proud Warrior Race would bother to worship, if they don't want to fight them themselves . They are often cast as villains. There's also a tendency in various works of fiction to pair one with a Love Goddess in something of an Opposites Attract manner, either as unlikely friends or romantic partners . Considering Ares and Aphrodite were lovers, this makes this idea Older Than Feudalism ; it may be a sort of cosmic version of All Girls Want Bad Boys . Also, some of these figures (usually goddesses) were gods of both fertility/love and war . If you're as violent as them, they may fall In Love with Your Carnage . A War God is frequently involved in some form of Divine Conflict . If he encompasses ALL forms of violence (as Ares did in Greek mythology) he may be seen as a God of Evil . Compare also Destroyer Deity . Subtrope to Stock Gods . If you were looking for the book series or the videogame series, see The War Gods </ and God of War

When a tense situation between countries, factions, or nations breaks out, there will usually be those who advocate going to war as the only option . They tend to be extremely aggressive and vocal in their position, and may view those who dismiss warfare as an option as cowards or idealists . War Hawks will often appeal to the general population for support to bring pressure on their ideological opponents to declare war Just because the War Hawk wants war does not make him/her a bad guy. They may have a perfectly good and logical reason to advocate military use, including stopping a genocidal dictator or attempting to end a civil war in a neighboring country that is threatening security in the region and killing thousands. Often they fear that the other side is planning to attack as well and want to beat them to the punch. However, War Hawks often run the risk of Jumping Off the Slippery Slope or becoming a Well-Intentioned Extremist who find a flimsy Pretext for War or create a False Flag Operation to gain support for their cause Evil War Hawks will want to use the war for their own purposes. They may hope to ride the glory of the war to a higher political office or military rank, or to take over the government entirely. Others will be motivated by simple territorial or economical desires, while General Rippers and Blood Knights advocate for war just to fight against their desired enemy The term War Hawk was coined by Virginia Congressman John Randolph in the early 19th century, in reference to American politicians like Henry Clay who were advocating war against Great Britain due to allegations of impressment of American sailors by the Royal Navy and claims that Native American attacks on United States territory were being encouraged by British officials in Canada. However, many of the War Hawks came from inland territories who neighbored Canada and had their eyes on expanding Americas borders northward. The War Hawks' efforts led to the War of 1812 There is also a related term in US politics, "chickenhawk", levied at people who advocate war but are or have previously been unwilling to serve in combat themselves Not to Be Confused with the video game Warhawk </, or a hawk or another Noble Bird of Prey that is used in combat

A character is specifically mentioned as having served in the

military and</ been decorated for heroism on the battlefield. It can be an important plot point, or simply a mentioned-in-passing part of the character's backstory that has no relevance on the plot or story other than expanding on the person's background. They may still be serving or have been discharged/retired. They may be an Old Soldier , Shell-Shocked Veteran , Blood Knight , or an example of I Did What I Had to Do . They can be a heavily muscled, tattoo-covered biker who will cheerfully treat you to a Scar Survey if you'd like, or a quiet, unassuming type whom you'd dismiss as an accountant or secretary until the shit hits the fan and Let's Get Dangerous! comes out to play. Will often overlap with Dad the Veteran , and will make his Papa Wolf mode all the more serious due to his training and experience. Chest of Medals may also come into play. If the character moves on to costumed crimefighting, they're a Military Superhero There is absolutely no reason that they have to be a man. With women taking on more and more roles in the military, particularly roles involving direct combat, the opportunities for women being recognized for courage under fire have greatly increased The character can be a police officer but earned their awards while serving in the military. All law enforcement agencies have their own awards for recognizing valor, but these are not considered wartime decorations making one this trope. This does not</ detract in any way from the dangers police officers face on the job The Phony Veteran will often use illegally-obtained awards and falsified documents to pass as one of these One of our Military and Warfare Tropes No Real Life Examples, Please! - Suffice it to say there are countless people and animals who have been recognized for courage during wartime. However, listing real people who are portrayed by actors in films, biopics, etc. is acceptable as long as they are placed in the appropriate folder and not in a Real Life section

It's exciting. It makes you a stronger, better person . It breeds Badasses . It's finer than Spring. The sacrifices may be extreme, but are extremely noble, maybe even saintly. In many ways the opposite of War Is Hell . Some people deeply enjoy waging war , rather than just endure it. The Shell-Shocked Veteran might have a different view on the matter, though. Common features: Not all War is Glorious works are war propaganda, but all war propaganda says that War is Glorious. Both tend to be marked by dehumanisation/demonisation of the enemy, censorship of the motivations for war, sanitisation of wounds and deaths, whitewashing of war crimes, dismissal of pacifism as insanity/weakness, etc. In a war propaganda work, these things take center-stage whereas a War is Glorious work may or may not feature these, however incidentally. War is Glorious has a natural association with the justification of wars. For example, the cost of avoiding a war can be shown as greater than the cost of fighting it. Many serious justification of wars lie outside this trope, being no more jingoistic than a surgeon is in favour of open-heart surgery. By the same token, this attitude is very often used in recruiting pitches to get people to join the service . Soldiers are badass; do you want to be badass too? When war is part of the Back Story , former soldiers may invoke this trope by remembering the camaraderie , excitement , and purpose of their Glory Days , the war, as opposed to the greed and selfishness of subsequent civilian life, which leave them Desperately Looking for a Purpose in Life . War is Glorious and War Is Hell are not exclusive categories. And it is perfectly possible to aim for one trope exclusively yet be

received as the other . In some cases, War is Hell can be served as a deconstruction of War is Glorious tropes. It's also possible to play War Is Hell straight, while simultaneously praising the heroes who went into that Hell for the sake of a worthy cause. It should be noted that sometimes this is not the work's theme, but the mentality of the General Ripper inside the work, serving as the foil to the heroes' belief that War Is Hell . Compare Propaganda Piece . Contrast Prevent the War . See also Proud Warrior Race . A character with this mentality is firmly a Warrior in the Soldier Versus Warrior dichotomy.

War! Hunh! Good God, y'all! What is it good for? Absolutely nuthin'! Truth in Television , obviously. When this theme is in play, war is an infernal, nasty, traumatizing nightmare , and anyone who comes out of it alive will end up a Shell-Shocked Veteran . Those who take pleasure in it are Ax-Crazy Blood Knights or worse . This trope gained its name by the famous quote from General William T. Sherman, "War is all Hell, and I have every intent of making it so." Most people quoting it shorten it to the trope name (as Sherman himself did in the page quote). The motivations for war are depicted as harking back to humanity's basest and most savage instincts: pride , greed , important resources , dogma , fear, disgust, hatred, retribution , power, insanity, megalomania , or even all of the above. The brutal and callous force of wartime authority overrides all individual thought. (More moderate examples may portray one side of the conflict as having noble goals, while still emphasizing the pain and sacrifice involved. The idea in that case is that war is not pretty, but in some unfortunate cases it may be necessary.) Sometimes, the war is shown to be unwinnable regardless of the sacrifices made and moral codes abandoned . There is some correlation between being on the losing side of a war and making a work following this trope. War Is Hell works often show the cumulative</ long-term effect of exposure to pain, deprivation, violence, and military culture: the horror goes on and on, dehumanizing everybody a little more each night. Heroes in these stories will typically struggle to Prevent the War , or end it as bloodlessly and quickly as possible. If not, then merely surviving</ physically, and with most of their humanity and sanity intact. While not required, this theme is more common in wars set in recent history with the advent of the modern industrial age. Certainly war was never pretty or fun in the past, but with the creation of weapons capable of killing thousands of individual men and women in a matter of hours or weapons of mass destruction capable of wiping out whole cities at once, battlefields went from merely looking like places where people fought and died to ruined wastelands littered with corpses. More modern wars are also where the practice of total war, war on a whole country where even non-combatants aren't spared, became prevalent and the idea that a war wasn't finished until you completely ruined the enemy's ability to fight back. May overlap with, but Not to Be Confused with , Hell Is War . Contrast War Is Glorious , which is not mutually exclusive with this trope, Sometimes, War Is Hell can be seen as a Deconstructed Trope of War Is Glorious . especially when the audience gets a kick out of seeing people kill each other, no matter how ugly or condemning the work is — or, more altruistically, when soldiers are painted as heroes specifically because they've volunteered to fight in order to keep the horrors of war away from their loved ones. See also Armies Are Evil (highly negative takes on the military). Of course, war is traumatizing to many who experience

this trope. Therefore, Real Life examples are redundant.

The word "Hell" is almost never</ allowed on children's television. But Histeria! </ used it in the popular recollection of William T. Sherman's famous quote.

Most modern monuments pay respects by listing off the names of each soldier , while others may be set up to honor the battle itself, regardless of how many died , and some honor anonymous "unknown soldiers." It doesn't even have to be a battle either. There are monuments dedicated to victims of acts of terrorism and natural disasters as well Please limit to only In-Universe examples. It's fine to mention that one exists, but adding why it exists or how it is relevant to the plot is even better In Ghost in the Shell: Stand Alone Complex </ episode 18 "Assassination Duet — LOST HERITAGE", Section 9 is assigned to stop an assassination attempt on a foreign vice-minister who is paying his respects to the Kagoshima War Dead Memorial from Non-Nuclear World War IV

In From Fake Dreams </, a Fate/stay night </ Fan Fic , Saber and Gilgamesh realize that Shirou's reality marble is a memorial to the deeds and lives of the heroes who wielded the originals of the weapons inside it Saving Private Ryan visiting the American Cemetery in Normandy

Koko : The plot begins when four Vietnam War veterans meet at the opening ceremony for the Vietnam War Memorial. One of them has spotted news stories that suggest a fifth member of their unit is alive, and suggests tracking that person down The aptly titled episode "Memorial" in Star Trek: Voyager </ showed an interesting twist. The memorial was programmed to upload memories to anyone who passed within a certain distance of the planet that it was located on. Passersby would relive the events of the war. Once the crew figured out what was going on, Janeway set up beacons in the surrounding area to alert others what would happen if they approached, but also recharged the memorial's power cells and left it active so that no one would forget what happened there

In Star Trek Online </ , players can travel to the battle memorial of Wolf-359. Found in the center of all the wreckage still floating in space is a giant holographic Starfleet symbol emitting from a projector on the monument. As you approach closer to memorial, you hear the ghostly comm chatter from the battle. Over in Romulan space, a holographic memorial is placed for the billions of Romulans who died when Romulus itself was destroyed by the Hobus supernova Schlock Mercenary </: In the defictionalized version of Seventy Maxims of Maximally Effective Mercenaries </, Karl Tagon tries to make tick marks for soldiers killed by friendly fire . After war breaks out and he is promoted to General, he notes that he personally has given orders that "would fill this page with ink," and resolves to "find a bigger page." That "page" becomes the Titan Wall, a massive monument of 4.5 thousand tons of titanium, covered in all the names of people killed by friendly fire. Karl had to misappropriate military funds to get it made

In one episode of Family Guy </, Mayor West commissions a war memorial to honor Quahog soldiers who perished in the Gulf Conflict. Unfortunately he chooses a solid gold statue of Dig 'em the Sugar

Smacks mascot, which is completely inappropriate and drains the town's coffers , leading to protests calling for his resignation.

War makes a setting unhealthy for people. If for no other reason that it tends to tear up the crops and cause you to starve. And that's if they are careful not to shoot at you, and you have no particular thing about you that would cause them to target you - and they don't do it just for fun This causes people to get up and leave, even at the price of abandoning much of what they own, if not all. The fortunate ones do it before they are forced to; these ones are able to carry the most with them, but even they have to leave things behind and plunge into an unknown setting, surrounded by strangers, in hopes of finding safety Additionally, you may be forced out: by invaders who want to give your land to their own people; by your own government if it fears your loyalty or wants to appropriate your property for military uses; or either side adopting a scorched earth policy. The effect is much the same (though you may actually be forced, as well, to leave behind your property for the use of others) The mere flight can constitute a story in itself, filled with danger — it may have to on foot though there are, in theory, trains, cars, or planes for transport, and even the weather can be a peril — but arriving is no guarantee that the story will end. Landing in an unfamiliar location, often with little, often in a place already suffering its own shortages of food and other necessities, owing to the war — surviving when stuffed in a refugee camp — finding a way to make a living there — discovering whether you can ever return or find a new place to live, have filled many stories From the point of view of the destination, these destitute people can constitute a crushing burden. They can also contain spies and saboteurs, be deserters , carry diseases, or otherwise endanger their destination Blitz Evacuees is a subtrope. May result in Invading Refugees . If the war refugees are escaping from military forces which want to specifically exterminate them, then this can overlap with Genocide Survivor Truth in Television , and widespread; please list only particularly striking examples in the Real Life section

A character is a Half-Human Hybrid ('Human' being used loosely ,) but the parent races of the two 'halves' are at war, or generally don't get along well. This can present a problem depending on how much the character looks like either one. If he looks nothing like one, he may be able to fit into the other group with ease. If he looks like a mixture of both, however, he likely won't be able to fit in with either group. At best, he'll be teased or shunned for it, possibly becoming an 'evil' loner. At worst, he'll be exiled or possibly even killed. This could even be the villain's Start of Darkness , if he's hated by both sides enough to plot the eradication of both If the two parent races are actually</ at war, the character will eventually be forced to choose a side to fight for. Depending on what they are, the choice may simply be between good and evil. Other times it may come down to 'the ones that shunned me' vs 'those that accepted me'. Occasionally, the decision is a difficult one, especially if they have friends from both sides. Depending on the cause of the mix, the character may be actively trying to become one side or the other, using the local Phlebotinum Related to Hunter of His Own Kind , for most hybrid characters. See also Half-Breed Discrimination and Child of Two

Worlds . Depending on the situation, a Monsters Anonymous group may help reconcile or control the warring natures For a character whose conflict is internal</, rather than between parent species, you may be looking for The Corruption , Enemy Within , Fighting from the Inside , or occasionally Viral Transformation . The character probably has Heroic Willpower . May be a Child of Forbidden Love

The Warrior Monk is a fighter defined by his or her faith, which serves as a weapon and armor the equal of any mundane wargear. He focuses his mind with sacred chants before the battle, quotes scripture while he smashes aside infidels , strikes with absolute conviction , and fights without fear or hesitation. He is a combination of the archetype of the warrior and the archetype of the shaman. Both archetypes share the need of rites of passage. This character is often a member of a Church Militant , be it a martial-minded sect within a larger religion or the divine army of a powerful theocracy. Other Warrior Monks have more diverse backgrounds, and could hail from actual monasteries, master-apprentice relationships, or could even be self-taught. Warrior Monks may be shining examples of a religion's ideals, or in some situations may end up fighting</ a Church Militant if the latter has become a Corrupt Church . Others may ignore religious politics altogether, doing more for their faith by acting as an example. This character type has two usual regional variants: form of Warrior Monk often turns out as a particularly devout Knight in Shining Armor , a heavily-armed and -armored crusader combining martial prowess with unmatched devotion to the ideals of the church (if not necessarily the church itself). Expect such warriors to be referred to as paladins or templars . In a fantasy setting, these Warrior Monks frequently enjoy tangible signs of their deity's favor, along with a variety of defensive , curative , or augmentative powers, overlapping with the Combat Medic 's repertoire. They also occasionally have a few offensive abilities along with battle skills , too. Still, sometimes the best way to deal with a monster or evil-doer is with a good, solid blow to the head, so Western monks often arm and train with blunt weapons such as maces, warhammers and flails, especially if to overcome the vow to never shed blood literally. If their cause is worthy enough , these characters can be among the most noble heroes in the world . Other times, Warrior Monks can become self-deluded extremists who let the end justify the means . Either way, Good Is Not Soft is likely to be in effect. It is also important to remember that evil churches can have (un)holy warriors, too. This character type is usually confined to medieval settings, though modern examples exist. See Badass Preacher for when a holy man takes up arms to protect his flock, and Church Militant for religions that don't shy away from violence. Can sometimes overlap with Master Swordsman . Bare-Fisted Monk is a subtrope, and is by no means confined to Eastern-style Warrior Monks . May have Enlightenment Superpowers . Some examples of a Warrior Monk may be encouraged by their order to be a Warrior Poet .

This is where a member of royalty takes part in battle himself, especially as a commander. This was once quite common, and examples of it can be found from time to time in the present day . It is a favorite of epic and romantic tales and goes back far in the

history of literature, back to things like The Iliad </. A warrior prince can be a Wise Prince , bravely fighting for his kingdom; he can also be an evil conqueror . While this character always stands a high chance of being a badass it is even more likely in that second case , as the Big Bad exposing himself requires a certain level of badassery Very, very</ common in myth and legend, going back to those Older Than Dirt A subtrope of Royals Who Actually Do Something . See also Action Politician , Authority Equals Ass Kicking , and Lady of War While in many western cultures only princes would go on the battlefield, (and even then there have been some female examples in history) in other parts of the world princesses were just as likely to fight. In those more strict patriarchies where women aren't seen as warriors they may have to train in secret. This could result in a Pretty Princess Powerhouse . In fiction it may also be the case that Gender Is No Object and only the Royal Blood matters In terms of the ranks of Authority Tropes , the tropes that are equal are The Evil Prince , Prince Charming , Prince Charmless , The Wise Prince , and all Princess Tropes The next steps down are The Caligula , The Good Chancellor , Standard Royal Court and Decadent Court . The next steps up are The Good King , God Save Us from the Queen! , The High Queen , and The Woman Wearing the Queenly Mask , some of which are still warriors even when they're in charge If this Prince takes pride in his heritage, expect him to always</ use I Am X, Son of Y to introduce himself

A warrior is pitted against a sorcerer . This trope is one of the oldest examples of human fighting skill, cunning and grit being pitted against superpowers and is very common in Sword & Sorcery settings which feature a Barbarian Hero against an Evil Sorcerer Usually, the warrior is The Hero and the sorcerer is the Big Bad or one of the villains (it is possible, but rare, to have the reverse be the case). They are usually a Badass Normal who relies on their fists, brains and weapons (which may or may not be magical) to win and may be aided by a good wizard or another supernatural being who serves as The Mentor and/or the Big Good If the warrior does have superpowers it will come in the form of them having enhanced physical abilities they were born with or where bestowed onto them by someone else. They might also be a supernatural martial artist , Magic Knight , Kung-Fu Wizard or ki manipulator . In that case, their sorcerer rival will be a Squishy Wizard who has little to no skill in melee combat. If the warrior is simply a Badass Normal , it is also possible for the sorcerer to have some skill in melee combat to allow for physical brawls while being truly dangerous because of their magical knowledge The warrior is also likely to be a professional Mage Killer Warrior Versus Sorcerer need not be as simple as a clash between good and evil; it can also be a clash between ideologies. Warriors might see magic as evil , uncontrollable or a cheat. Wizards might view themselves as superior to warriors because of their powers and magical knowledge or may see warriors as simple-minded brutes See also Linear Warriors, Quadratic Wizards (sorcerers being more versatile than warriors who rely purely on might). This trope can be a variation of Brains Evil, Brawn Good with the Evil Sorcerer as the brains while the heroic warrior is the brawn. Compare Dragons Versus Knights where the dragons take the place of the sorcerer. Contrast Sword and Sorcerer which is about sorcerers and warriors working side by side as partners or friends

The term refers primarily to cartoons made or released in The Golden Age of Animation during World War II and having some specific reference to the war effort. Many wartimes are explicit propaganda, while others make humorous jabs at conditions on the home front such as the rationing of fuels, materials and consumer goods, and even meat While some wartimes have remained popular as period pieces, many of these are now considered controversial due to the caricatural depictions of Germans and (especially) Japanese (see Those Wacky Nazis and Yellow Peril , respectively). Of course, with The Holocaust now common knowledge, it's interesting how the racial policies of the Nazis were relatively rarely dwelt upon in those cartoons. So imagine the shock of the general public when the Final Solution death camps were discovered and their realization that, no matter what awful things the Allied propaganda might have claimed about them up to then, Those Wacky Nazis were actually worse</, with them committing acts of villainy that beggared the worst of nightmares Typical trademarks of these cartoons that are usually spoofed: propaganda elements, racist caricatures, outdated references to the war effort (i.e., Shout Outs to save scrap iron, conserve gasoline, buy war bonds, or grow a Victory Garden). Adolf Hitler , Benito Mussolini , Hideki Tojo , and/or Emperor Hirohito often make a cameo and are ridiculed Subtrope of Propaganda Piece

The atmosphere of a lot of war stories is generally saddening and Thdepressing, if not outright horrifying . That said, when a writer Ththinks that enough is enough and that these poor characters need a Thbit of happiness in their lives without deviating from the somber Thwar genre, then what better way to show that than to have two Thcharacters get married? e Wartime Wedding is a great way to put a ThHope Spot in a war story in order to lighten the mood. Among other Ththings, a marriage symbolizes love and unity and can remind the Thcharacters that things such as happiness still exist. At the same Thtime, the usual joy of the wedding day is undercut by the tragedy Thof war. is can come in three types (but is not limited to them): e ThStar-Crossed Lovers are subject to this a lot of the time in war Thstories. Expect the couple to Altar the Speed . Compare Married at ThSea . Beware the possibly unmarked spoilers!

This index lists tropes which revolve around warfare, military personnel, or even the civilians who get caught up in it.

The heroes need the help of a legendary figure who, over the years, has been idolized as the paragon of virtue, the source of all that is good and just, a true example for schoolchildren everywhere. The legend has beaten back all enemies, saved the day hundreds of times, and is truly a Knight in Shining Armor worth looking up to And then, when they finally meet this so-called legendary figure, they find out that he's anything but This is not to say that the legend didn't actually do all those amazing things people say he did . He's no Miles Gloriosus . The guy really is a hero. What he isn't</ , however, is a paragon of virtue. He's rude. He drinks. He smokes and is a bit of a womanizer and only got into the hero biz in the first place to make himself rich It's not the legend's fault that the heroes have idolized him. He can't control what other people say or think, after all. He, like the heroes, is only human, and the flaws that the heroes are complaining about are

merely proof of their own unrealistic expectations. They had no right to expect him to match their daydreams. Exactly how serious the flaws are depend on where they land on the Sliding Scale of Idealism vs. Cynicism ; anything from minor foibles or even Good Is Not Nice to serious Anti-Hero territory is possible The trope name comes from Oliver Cromwell (1599-1658), who, in an attempt to avoid this trope, once told an artist to paint a portrait of him "warts and all". Official portraits were commonly done with the flaws in a person's appearance "corrected" by the artist. Cromwell wanted his picture to include his imperfections. Similarly, this trope is about the legendary character being finally seen for who and what he is, flaws and all. It is somewhat fitting that Cromwell, whom many admire while still admitting to his flaws, is the Trope Namer Usually, this trope involves the lead characters convincing the legend that he must rise above his weaknesses and become the true shining example that they thought he was. A more Bittersweet Ending is possible if one of the leads gets caught up in the hero-worship and refuses to see through the foibles to the human being inside. Or worse, if they only realize the legend is human after a Heroic Sacrifice ; if only the reader realizes it and the characters all refuse to, this trope can reach Tragic Hero heights An Aesop about expecting the Knight in Shining Armor is possible. Contrast Feet of Clay or Fake Ultimate Hero , where the "legendary hero" is anything but. Compare Broken Pedestal and No Hero to His Valet , where someone close to the hero does not hold him in awe because they know him. Inverse of Hero with Bad Publicity . A Historical Downgrade is doing this to a historical figure

In any film beginning in wartime In Medias Res , it is almost taken for granted that a narration intoning opening text will describe the start of the war and provide a little history lesson... even if it's a fictional war. Opening narration / text crawl, often over a map, with drums or other fanfare . (This trope is big on drums.) Opting for an Action Prologue with narration on top</, over stock footage of combat or Stuff Blowing Up may produce Narm : People don't generally like to mix their opening crawl with their Opening Action Sequence. However, one may immediately cut to combat scenes In Medias Res as soon as the narration ends; indeed, it's almost expected, to the point where you can throw people off (but not really) with quiet scenes set in a better time/place, if you're seeking a slow build: Cut to a quiet scene in Arcadia ; the hero will learn of the impending war about to wreck his world by way of a Herald , such as a wounded relative; see Bearer of Bad News , Harbinger of Impending Doom . This opening narration requirement can be removed if, as often the case, the writer decides on one of the alternatives, such as: This is a useful way to introduce the future protagonists to the audience one after the other — a Debut Queue . Not to be confused with During the War . See also Opening Scroll .

So, you've got your villain, and his evil army. You've assured they're evil , but you're not sure whether the audience finds him threatening . Or, you're trying to reverse years of Villain Decay . One way or another, you need to give your baddie some serious villain cred. So what do you do? Invade Washington, D.C. , of course! It seems that every villain, whether they be Russkies with a grudge or a nutty supervillainess , has their crosshairs aimed firmly at the center of American political power. While this is often justified, just as often (or possibly more often) the villain has no reason to

attack Washington more than any other city , and may often be setting his evil plan back a step by attempting to kill off the only people who can surrender to him. A Sub-Trope of Invaded States of America , and sometimes Creator Provincialism . Related to Monumental Damage See also the trope image for Dirty Communists . Contrast with Aliens in Cardiff . In Real Life DC traffic is so bad that any invasion would be quickly stalled by the circles and roundabouts, which was their original intended purpose. Also note that no such fictional invasion ever took place under the term of Theodore Roosevelt . Coincidence? We think not!</

It's time to do laundry again. T-shirts, pants, socks, small children , underwear... Yup, Bob tosses the usual hamper all in to clean. And while the rinse cycle goes on, it's time to... Sit down and watch it. Why? Maybe Bob is a Cloudcuckoolander or even The Ditz . Maybe he sees something shiny or important swirling around inside. Maybe he's just bored. Regardless, Bob decides it's worth his time to watch the washing machine do its job This is a fairly Discredited Trope but can still occasionally be seen at laundromats in Real Life . On the other hand, it's a bit of a Coconut Effect in the way that clear-front washing machines are not very common in laundromats as they are usually much newer (and why would a laundromat owner upgrade when their '80s/'90s machines work fine?) Almost always Played for Laughs . A subtrope of A Good, Old-Fashioned Paint Watching

One of the goodies has just been betrayed by The Mole , whom they let get very close. They ask The Mole , "Was it all a lie? Everything?" Three responses are common: A cold blooded " Yes, you fool, and you took it hook, line and sinker. " Of course, any of these responses can be a disguise for another (either keeping one's options open just in case, or burning bridges to let their victim get over the betrayal). "I'm sorry it had to end like this" is a common additional Stock Phrase , particularly with the second response. The third is related to Et Tu, Brute? .

The characters have just gone through a harrowing experience. They've Outrun the Fireball , survived the Death Course , ridden the Rollercoaster Mine and, amazingly enough, gone through it with their extremities intact, making them bona-fide Action Survivors While the other characters are catching their breath and trying to regain their bearings, one of them quips, "Well, wasn't that fun?", "Let's do it again!", or some other enthusiastic rejoinder. Depending on the speaker, this could be either a sincere statement or old-fashioned sarcasm A popular way to end a Chase Scene or an Indy Escape . The Deadpan Snarker , Lovable Rogue or Nightmare Fetishist is the odds-on favorite for delivering the line Opposite of I'm Not Doing That Again . See also Does That Sound Like Fun to You? for when a character thinks something would be cool, but an older or more experienced character is sure that they know better

Monsters are pretty damn scary. Horrible, bug-eyed, slobbering, and in no way</ human. Therefore, it's all the more unsettling when it's revealed that a monstrous creature was once human, but became a monster through some sort of infection , curse , sheer personal evil or transformation and there's no means of changing them back

Related to Body Horror and Face–Monster Turn , but distinct in that while Body Horror deals with the fact of the monstrosity itself and usually follows it from beginning to end, Was Once a Man is where a creature is monstrous when first introduced, but is either implied heavily or later revealed to have once been human Sometimes the mind is not affected; only the body is . If the mind is</ affected it might be a Pre-Insanity Reveal . Sometimes the original mind can be reached. This does not undermine the horror of it. Indeed, in certain ways, it makes the horror even worse </ In some cases, the person may actually like</ being transformed, and doesn't care about becoming human again. Instead, they are a Fully-Embraced Fiend . If they’re capable of speech, expect their response to being called by their old name to be a That Man Is Dead speech See also: Body Horror , And Then John Was a Zombie , Viral Transformation , The Virus , Tragic Monster , Stages of Monster Grief and Reforged into a Minion . Compare and</ contrast Uncanny Valley . Also contrast with Ascend to a Higher Plane of Existence , for a non-monstrous transformation Super-Trope to: Angelic Transformation , Deity of Human Origin , Demon of Human Origin , Tragic Monster , and Transhuman Abomination This trope has nothing to do with Gender Bender . Not to be confused with Animorphism , Transflormation , or Baleful Polymorph , in which the thing that used to be a human is not</ a monster, although it can still be a Brown Note Being . Also do not confuse with a transgender woman

A comedy trope where, quite simply, a character is given an opportunity to Make a Wish or three , and completely wastes them on something stupid and/or frivolous. Sandwiches seem to be a particular favorite. If it's unintentional, this may be because the character was just talking about what he "wishes," without really knowing that he was in the presence of some power that would grant his wish despite how wasteful it is (or perhaps, his ignorance consisted in a mistake such as thinking the power was unlimited instead of just Three Wishes); or he may have some Skewed Priorities that make him ask for something that makes little sense as a use of the superb power of the Wish A lot of times, this will be used to circumvent Jackass Genies or Literal Genies , since, with a smaller reward from a wish, possible negative consequences from the reward will also generally be smaller. If this works</ and the person who wished for something small ends up happier than the one who wished for ten bajillion dollars and a mansion full of Playboy models, then expect An Aesop on greed and being satisfied with simpler pleasures in life Even wasted, these wishes can be subject to Be Careful What You Wish For Also see Mundane Wish , when the wish is intentionally</ mundane because the wisher doesn't need or want anything grandiose. Contrast Ludicrous Gift Request

Representation undoubtedly drives viewership and these works are proof of this — fans turned out to see these works in part because</ of the representation (of women, racial or religious minorities, a disability, or gender or sexual orientations) they provided What constitutes as "representation" varies widely. In some cases, it isn't a very big part of the work. Perhaps it is one of very few works that contain a character from a certain minority group. Maybe its minority characters are empowered, non-stereotypical, and nuanced, or its portrayal of an

underrepresented culture is well-researched and respectful. In other cases, the work markets itself in part on the representation it provides. Maybe it is the first work of its kind to have a lead from one demographic or have a cast majorly composed of said demographic The works themselves may be anything from highly anticipated blockbusters to lowkey network comedies to older works that depicted minority characters well by the standards of the time they were made and are just now getting recognition from the mainstream. A More Diverse Sequel or reboot/remake might take advantage of more liberal attitudes behind the scenes and diversify the cast of a preexisting property to take advantage of this. Works that women watched for their strong female characters may be a Feminist Fantasy Note that this is only about audiences deciding to consume a work for its representation. While many works are praised for well-done diversity, a well-meaning work might still fumble in its execution and lose the favor of the group they were trying to represent in the first place, resulting in accusations of baiting or exploitation. "Queerbaiting" is a specific term in LGBT circles when LGBT representation is teased for attention from the community but ultimately withheld Subtrope of Just Here for Godzilla , which covers any peripheral element of a work that fans come in to see. Non-main minority characters whose portrayals are praised might also be Ensemble Darkhorses . Compare LGBT Fanbase , the Periphery Demographic of fans who consume something regardless of any LGBT content, and Germans Love David Hasselhoff for cases where a foreign country likes a work (perhaps because it portrays their</ country well). Compare and contrast Mexicans Love Speedy Gonzales , where a culture likes a caricature of them against all odds. Contrast Minority Show Ghetto , Girl-Show Ghetto , and Queer Show Ghetto , the notion that minorities/women/LGBT characters will only be popular among those demographics

Just as Tropes Are Not Bad , neither are memes per se</. True, they get old by the 9001st time they're played, but there's a reason they get played a thousand times and more. Who hasn't ever had some lulz with them? There's the fanbase that has been ever since the beginning of the show, and there's the second wave that watches the show/plays the game/reads the book after exposure to the meme. It's not (most of the times) Viral Marketing since it's fans rather than marketroids behind them. Think What's uuuup!</ vs All Your Base Are Belong to Us </ . This is right before people endlessly repeating them makes it annoying and, ironically, may make you want to avoid it as much as possible . Related to I Read It for the Articles , Just Here for Godzilla , Come for the X, Stay for the Y . Spoiler marks are used in order to keep you from unneeded exposure. May inadvertently result in Beam Me Up, Scotty! Compare Bile Fascination , where people watch / play / listen to it for the crap quality.

The primary hazard faced by jungle-swingers , Giant Flyers , and even people at a fast run are not the Mooks in hot pursuit, the thunderstorms brewing up above, or the cars moving at Mach 1 in the street. It's... trees. Well, trees, poles, walls and other decidedly immobile hazards, anyway. If a character is flying, swinging or even simply running through an area, and he happens to get distracted, he will</ wrap himself around the nearest obstacle in fairly even time His momentum generally sees to it that he either gets completely flattened, or ends up with his arms splayed at weird angles. This also happens a lot to people on skis, either comedy beginners or

even good skiers who get overconfident. The viewer sees the hapless skier whose feet spread so that the skis are spread to left and right of a fast-looming inconvenient and very unyielding tree... and then... Ouch ! That's Gotta Hurt ! A hazard on horseback, too. A horse is smart enough to avoid trees and branches — but it might not notice that a branch is just the right height to brain the unfortunate rider . Or worse, the Moody Mount might invoke the trope, maybe hoping to unseat the rider or just For The Lulz . Moody mounts aren't the only risk of intentional attack. An enemy can lie in wait and pull a flexible branch back out of your path, compelling you to proceed, only to release it to whip you just as soon as you get in range. Similar to shutting the door in someone's face except you don't even know there is a door or a shutter. While trees and poles are common targets, windows are as well. If a character runs into a window, expect to see a shot of his smushed face from the other side. Also expect to hear</ the slow squeaks as he peels off and slides to the ground. This specific subtrope is Glass Smack and Slide . A subtrope of Amusing Injuries when it's Played for Laughs . Similar in principle to Not the Fall That Kills You… , which usually isn't. Compare Low Clearance , Belly-Scraping Flight , When Trees Attack . Named for George of the Jungle </ , who did this so frequently, it's mentioned in his theme song.

A character (or group of characters) are either running from something very bad (like a large boulder or a very angry and relentless enemy), or chasing after someone . They are totally focused on this act, so much that they don't notice someone coming from the other direction doing the exact same thing, and as a result they run right into each other, usually being knocked unconscious in the process and often resulting in seeing stars or birds or planets in their field of vision. In some cases, they'll be knocked off their feet, hover in the air for a few seconds, and then fall to the ground. In some cases, they might see the other coming at the last moment, but momentum makes it impossible to stop in time , so there's nothing they can do but watch the other barrel towards him/her . At times, the third party is able to make them Put Their Heads Together without ever laying a hand on either of them This is a humor trope from old Looney Tunes </ cartoons, with the being-chased version often being employed by the hero to get enemies to defeat themselves See also Crash-Into Hello , for a version with romantic undertones (and Suggestive Collision for the more lurid version), and Watch Out for That Tree! for a comedic variation with just one person and a stationary object. Punched Across the Room might be a more violent variation

This is a Comedy trope that can be seen very often in Western Animation . A character comes across a geyser and becomes innately curious about it as he looks directly into it, when the geyser suddenly erupts in a torrent of water that thrusts the character up into the air. This sometimes results in the victim bouncing around on the top of the spray. This is not Truth in Television , because a person will just get thrown back a few feet from such high water pressure. And be cooked by the superheated water. This is often a mechanic in video games (usually of the Platformer genre), and the geysers end up being moving and/or slippery platforms. Can go hand-in-hand with: Making a Splash

A character is out in their yard, about to wash their car, or water their lawn. They grab the hose, turn it on, and are suddenly flung around like a ragdoll. That's what you call a Hose Rodeo This is incredibly common in cartoons. It's been featured in nearly every animated children's show to ever air on TV, from Looney Tunes , to Scooby-Doo . There are many variations on this, ranging from the hose simply being inexplicably powerful, to it being the fault of another character, who rigged it to happen. Occasionally this can cross over with Garden-Hose Squirt Surprise , depending on the amount of characters in the scene Sister Trope to Fire Hose Cannon

In Real Life , you probably would have misgivings about drinking a glass of some , but in drawn media this is just the way it looks (unless it's unsafe for consumption). It's not just large enough bodies of , and even tears are not exempt. It's just easier to animate it this way, and easier for the audience to see This trope is near universal in Western Animation . Comic Books and Anime are more varied in this respect, and may even feature both solid blue and colorless, transparent water in the same art style. Generally, only older or cartoon-styled Video Games feature blue water It should be noted that water does</ in fact have an inherent (though faint) blue tint in Real Life ; the color just isn't noticeable unless you're looking through a great deal of it. Check The Other Wiki for Though in cultural/linguistic terms the association of the water with the color blue is not Older Than Dirt per se; the Greeks of Homer's day had no word for blue in their vocabulary, so the sea was called 'wine dark' The color of the ocean</ varies, mostly depending on how close you are to shore (where it's often greenish due to dirt). In the deep ocean, it can genuinely appear a rich navy blue Also, some household chemicals are specifically dyed blue to discourage people from drinking them. Blue is most likely used because very few drinks are colored this way Aversions include tinging it white instead, or going the whole way and animating it as a distortion of the light. If water is deliberately not blue, however, chances are it's Grimy Water . Any shade of blue fits this trope, though. Compare Fire Is Red , Wind Is Green , and Gold Is Yellow . When this trope and Ice Magic Is Water meet, you often end up with Blue Means Cold . When Water Is Blue meets Water Is Womanly , you get True Blue Femininity

The time after which "adult" content can be shown. This is usually defined as programs with intense violence , coarse language , naughty bits , sexuality , lots of explosions , exposed female breasts , and characters who die with their eyes open The watershed varies from country to country. It's typically around 9:00 pm (as in the U.K., Canada and Australia), but it can be as late as 10 pm (as in Germany, Ireland or the United States) or it can be early as 8:30pm (as in New Zealand). Japan has laxer standards in general, but its concept of Otaku O'Clock starts as late as 11 pm or midnight. In many regions, though, the watershed is in the middle of Prime Time viewing; everything before the watershed is "family programming", whereas the shows afterwards are the more "adult" hit shows. This means that the fact that a show airs after the watershed doesn't mean that a lot of people won't be watching it The concept was largely popularized by the U.K., which uses the specific term to regulate TV content. (Interestingly, British radio doesn't have a watershed, just a list of prohibited bad words

- and even then this only applies if it is likely that children will be listening, stations have gotten away with featuring the explicit versions of songs both overnight and during the day if they can prove they have a very low child audience) In the U.S., the related concept of Safe Harbor refers to a policy of the Federal Communications Commission; it's the time period in which the FCC won't go after you for airing "adult" programming (as long as it's not legally obscene) As an aside, the term "watershed" comes from agriculture; it refers to an earthen barrier that prevents irrigation water from crossing into a neighboring field, allowing the two fields to run on different watering schedules (and thus house different crops). It's also applied on the larger scale of rivers with a watershed being an imaginary line separating the water that flows into one direction from that which flows into another as in the Continental Divide which separates rivers draining into the Atlantic from those draining into the Pacific

Bob suffers a Tap on the Head or some other form of Instant Sedation . The world goes black.. The next thing he (or we) know is that he's somewhere else — and soaking wet, because whoever roused him decided to do it by throwing a bucket of cold water into his face This generally means that Bob has fallen into the hands of people who don't care much about his comfort, and that imminent interrogation of the not-very-nice sort is coming. (If Bob is in a cell, Strapped to an Operating Table , or tied to a chair, that's a pretty good sign that there's worse to come.) But it can also be done by friendly characters — to wake Bob quickly in an emergency, to attempt to jolt him back to his senses when he's panicking or delirious, or simply for laughs . Bonus comedy points if Bob comes awake on his own but the other character pitches the water in his face anyway</ Tends to overlap with Waking Up Elsewhere

When a creator answers a question about their work, should they provide an In-Universe answer or a Real Life answer? The former is the Watsonian perspective, the latter Doylist. The terms (which seem to have originated, or at least been popularized, on the Lois McMaster Bujold fan mailing list) reference Sherlock Holmes </ : Simply put, if you were to ask a question about Sherlock Holmes, you would probably get a different answer depending on whether you asked it to Dr. Watson or Sir Arthur. commentary restricts itself to making statements that are sensible within the story's reality. Watsonian explanations are things like "Character X was lying", "He had plastic surgery over the summer", and "The main character fell off a cliff". A more precise technical term for this is intradiegetic</ . Tropes which take a generally Watsonian perspective include: commentary considers the work as a created object, and prefers explanations based on the real-world motivations or circumstances of the creators. Doylist explanations are things like "The author had a better idea", "The actor died, so they had to hire a new one", and "The author got sick of writing those books, so he killed off the main character". A technical term for this is extradiegetic</ . Doylist tropes include: A more modern example might be the proliferation of Rubber-Forehead Aliens in Star Trek </. It is revealed in a Star Trek: The Next Generation </ episode that an ancient humanoid race "seeded" the galaxy with their genes, thereby causing humanoid intelligent life to evolve independently throughout the Milky Way. This is the Watsonian explanation. The

Doylist explanation is that Rubber-Forehead Aliens are cheap to produce, require relatively little imagination to write for (Most Writers Are Human , after all) or design, allow the audience to easily read the emotions of alien characters, etc. (And budget was always a concern for Star Trek </; when Klingons first exhibited the Rubber-Forehead Aliens trope it was an improvement</ on their previous make-up!) Consistency plays a major role in whether a trope is Watsonian or Doylist. By default, Watsonian tropes are defined by Excess of Internal Consistency Lack of Internal Consistency if the author doesn't have the ability (either by Executive Meddling or their own writing skills) to address the narrative oddities in their work. Tropes Are Tools , and neither explanation is more preferable than the other. When Playing with a Trope , note that sometimes a Doylist explanation is interjected purposely into a narrative; for example, in Monty Python and the Holy Grail </ the Knights of the Round Table (or what is left of them) are chased by the Legendary Black Beast of "AAAAAAAARGH" in the common surreal Terry Gilliam style transitional animation, and are eventually cornered with no chance to escape. What saves them? The animator suffers from a fatal heart attack. Series with No Fourth Wall or as little of one as possible exaggerate this line of thought so that the Doylist answer is</ the Watsonian one; The Unbelievable Gwenpool </ has its star try to make herself important enough because she knows that she'd otherwise either be doomed to Comic-Book Limbo or become C-List Fodder for her out-of-universe writers. On a less absurdist note, Direct Line to the Author is a way of smuggling Doylist explanations into a Watsonian paradigm by introducing a fictional author. And finally, most creators don't stick to strictly one interpretation, as the pagequotes from PTerry suggest — it should be also noted that in Discworld, Watsonian and Doylist perspectives frequently overlap with each other, as "narrative causality" is a commonly accepted force in-universe... Conversely, some authors acknowledge that they don't have complete hold over the characters they've created and allow them to operate on their own logic — which is an example of Watsonian perspective influencing Doylist one. In the German-speaking fandom of the Disney Ducks Comic Universe , the two ways of analyzing the stories are called Donaldismus literaricus</ (which treats the work of Carl Barks and others as works of art and literature) and Donaldismus archaeologicus</ (which treats them as factual reports from the Earth-like planet called Stella Anatium</ — the Star of the Ducks). In the D.O.N.A.L.D (Deutsche Organisation Nichtkommerzieller Anhänger des lauteren Donaldismus</ = German Organization of Non-Commercial Adherents of True Donaldism) the latter tends to dominate. Donald Duck comics are Serious Business , definitely.

The Cool Ship needs an equally cool weapon. If it's a sufficiently humongous Cool Ship , it will be equipped with a Laser Beam on steroids : the Wave Motion Gun — an enormous Ray Gun that fires a massive energy beam capable of blowing away an enemy ship (in the "blow a battleship in half" sense), sometimes an entire fleet, with one shot, and maybe even blowing up an entire planet . It doesn't necessarily have to even hit; if you're too close, the sheer energy bleeding off from the beam can be deadly . And don't even think about trying to waste your time with puny Deflector Shields — it'll just punch right through 'em Frequently, the Wave Motion Gun is made of Lost Technology , or is an experimental prototype , but sometimes they're a dime a

dozen. It also explains how a small fleet can win consistently against enemies that grossly outnumber them : the defense units just have to hold their ground until the Gun(s) is ready to fire. Invariably, just before firing, The Captain has to order the attack Naturally, such Superweapons tend to have built in Power Limiters in universes where the power level of everything isn't cranked Up to Eleven . Wave Motion Guns usually require a significant charging period before firing and re-charging/cooldown afterwards (occasionally depicted by Sucking-In Lines ; the Wave-Motion Tuning Fork is a popular subtrope used for visual effect). They can be Too Awesome to Use or Awesome, but Impractical . These weapons can often be the weaponized equivalent of a Dangerous Forbidden Technique , especially the most powerful varieties. Some require Explosive Overclocking of the power grid they're attached to, making them risky to use. Sometimes they draw so much power that everything else has to be shutdown to charge them . Others require ... unconventional </ ... power sources , or they may be a Nuclear Option with risks of heavy collateral damage This sort of weapon is frequently mounted on a Kill Sat and is likely to be fired using converging streams . If it's built into a famous real-world location, then it's a Weaponized Landmark . If the bad guys have one, it's a Death Ray . Can lead to Wave Motion Fun . You might call that a Wave Motion Pun . When it's built into the ship so that it's always pointed straight forward, it's a Fixed Forward-Facing Weapon . Kamehame Hadoken is the equivalent of this trope for characters who utilize Ki Manipulation , Functional Magic , Supernatural Martial Arts , or some other form of superpower . For dragons, it's a Breath Weapon . Facing one of these on foot often involves a Corridor Cubbyhole Run See also There Is No Kill Like Overkill , Big, Bulky Bomb

The Wax Museum Morgue is a staple setting of the pulp horror movie. Often these things are run by fanatical sculptors who lost their skills at one point (either through disease or by accident) and had to turn to mad science as a way of regaining their ability to express themselves artistically. Never mind the fact that someone has to die for every eerily lifelike statue they produce. Oh no. They're not ones to let little things like morality</ and ethics</ stand in the way of their</ genius. Besides, these people aren't just being given death, they're being granted immortality as well, being forever preserved at the moment in life when they were at their most perfect, their most beautiful. Surely there could be nothing evil or insane about that... </ Methods of preserving a human corpse in a Wax Museum Morgue may vary, but the most classic method is to simply coat a still-living body with a thin layer of wax... never mind that this would probably result in severe scalding of the victim, and that the gases released by decomposition would quickly render a person preserved in this way unsuitable for looking at unless they were part of a horror exhibition . Some more thoughtful madmen may pre-kill their victims and embalm them before dipping them in wax. Or sometimes, the madman will use just plain old taxidermy to stuff his victims, but any human preserved this way will usually wind up looking a lot rougher (having leathery skin, huge stitches, etc.,) than if they had been preserved by any other method. Sometimes a Wax Museum Morgue may appear in a fantasy/sci-fi setting, in which case the fanatical " artist " will probably use some sort of magic petrification spell or Applied Phlebotinum to preserve his/her victims. If they happen to have art itself </ as a superpower, then

their targets are pretty much screwed. If the method of preservation involves a large laboratory filled with open vats of wax or chemicals , you can expect the villainous madman or his henchmen to wind up falling or tossing themselves into one of the vats at the end of the story. (They rarely get made into statues, though. Probably because the last and only people to possess the skill — or the desire — to do such a thing are now dead.) Subtrope of Body in a Breadbox and Dead Guy on Display . Often incorporates Taken for Granite and/or the Uncanny Valley . Compare Taxidermy Is Creepy and Taxidermy Terror .

An odd form of training passed off by an unorthodox master on a skeptical student. Sometimes comes disguised as a set of chores, but just as often is a general exercise that promotes a valuable physical or mental attribute in a strange way. Always dismissed as a waste of time early on, but appreciated later . Often, this also serves as a lesson to the skeptical student to trust the master and do all the crazy things the master asks without questioning, by demonstrating that the master really knows what he's doing and is in fact effectively teaching the student May be time-compressed in a Training Montage or Hard-Work Montage . This is an integral part of Improvised Training , due to the low cost involved It's commonly subverted or parodied when a mildly Genre Savvy hero initially assumes he is receiving valuable training, only to realize that he is just being made to do his sensei's chores . Double Subverted if the sensei tells him that this realization is</ the valuable lesson Realistically, this can be an effective training method regarding strength and muscle memory; however, it's no substitute for the real training which will inevitably follow The trope is named for its most famous example, Mr. Miyagi training Daniel LaRusso in The Karate Kid </ by, among other things, waxing a small fleet of cars, sanding the walkways of his garden, and painting his house. Subsequent uses of the trope might reference this phrase or scene Compare Training from Hell , Taught by Experience , I Know Mortal Kombat , Chekhov's Skill . May also double as a form of Physical Fitness Punishment . When the mundane task comes at the end of training, it's When You Snatch the Pebble , and often Look What I Can Do Now! . The teacher is often a Magical Asian or an Old Master . Compare to Fence Painting and contrast with Mooching Master , where the teacher is more concerned with getting free labor out of disciples rather than training them. Sometimes combined with Imposed Handicap Training . Properly executed, it always</ ends up being Worth It Not to be confused with Martial Arts for Mundane Purposes , when a skilled martial artist uses their skills for something other than fighting

When history has changed, and the Main Characters must fix it, but there's no reason</ for it to have changed, that's a Wayback Trip . Unlike Set Right What Once Went Wrong , where the time travelers go back and defeat the villain, and as a result, history is changed for the better, in this trope, the time travelers go back and defeat the villain, and as a result history stays the same</. The ultimate result is then either a Stable Time Loop (Rome always had</ secret lycanthropes all along) or a Close-Enough Timeline , perhaps in which the Main Characters Tricked Out Time (there were no monsters the "first time around", and the second time, there were but no one will be the wiser) This trope seems to derive from

the Adventure Towns treatment of Time Travel . Periods of history are treated like places rather than points on a timeline. New York in 1897 isn't the cause</ of New York in 2007, it's just 110 years earlier, and is free to have its own history and events This could technically be considered a case of Make Wrong What Once Went Right and Terminator Twosome , in that the Main Characters are changing history to make their (that is, our</) timeline happen instead of the one with Roman vampire werewolf sorcerers Can be handwaved by having a Delayed Ripple Effect See also Meanwhile, in the Future… . Compare to Field Trip to the Past

A comedy trope, in which a character buys, sells, or consumes food products that expired a comically long time ago, years, decades, or even centuries in the past. It may have come from the fridge . For the horrible consequences that usually follow, see The Food Poisoning Incident , though some people avoid food poisoning incidents by employing Unconventional Food Usage and using it for non-eating purposes. Contrast Indestructible Edible and Inexplicably Preserved Dungeon Meat .

This is a character who, despite being physically weaker than their opponent, is able to beat them because they are more skilled than their opponent. They'll prove Hard Work Hardly Works is a false premise, and even exploit the stronger opponents' sloppy technique and Pride to win. It's not unusual for the Badass Bookworm , and less unusual for The Heart of any team. This is often a sub-trope of Badass Normal If the Weak, but Skilled character is The Protagonist or The Hero , they'll usually be an expert at Deadly Dodging , a fast thinker, and generally win through cleverness and strategy that involve dirty fighting and Geo Effects to win. If they aren't, then they're like a Mentor , The Rival , The Lancer or The Smart Guy . They'll usually start out much stronger than the hero overall but won't keep up once the hero starts gaining skill himself in the use of his powers. They'll occasionally bail them out but force them to finish their battles, and urge them to train their power to stop the bad guy, whom this character can't take out because the bad guy is both Strong and Skilled (compare that trope) A character who grows old and weak will often become this, having decades of experience to compensate for their lack of youth, but this can still be the case if they grow Stronger with Age and thus have nothing to compensate for. This is a common justification for how Badass Normals can keep up with more powerful characters in a setting or inside an ensemble. Death of a Thousand Cuts may also come into play It should be noted that "weak" (especially a Paper Tiger class) can be a relative term. The protagonist/hero might have a certain level of Super Strength and Super Toughness , but is completely outpowered by his opponent. In this case, the hero's own strength and toughness are what enable him to even hurt</ the villain and avoid being killed in a single shot, but he needs his brains and skill to ultimately win. If he's a Non-Action Guy , you're looking at a Crowning Moment of Awesome Compare with David Versus Goliath , Combat Pragmatist , Difficult, but Awesome and, metafictionally, Cherry Tapping . Contrast Sacrificed Basic Skill for Awesome Training . Willfully Weak may be invoked to bring this about. One explanation for the power of a Badass Bystander . Despite their skill, may fall prey to I Don't Know Mortal Kombat . This can be an issue faced by

a character that is Well-Trained, but Inexperienced . The rare villainous examples may fall into Villainous Valour , depending on their presentation. For characters with questionably useless powers within the superhero community proving otherwise, see Heart Is an Awesome Power Contrast Bigger Stick and Unskilled, but Strong , the latter being the inverse trope. Often achieves Victory by Endurance ; Stone Wall is a Downplayed Trope for them

An index of tropes that are about a character's weakness, people being characterized as weaklings, or things seen as a weakness See also Fear Tropes , Allergic to Indexes , and Power at a Price . Contrast Power Tropes , Overpowered Tropes and Strength Index

Generally in older fiction, and in more "traditional" stories today, women prefer men who are strong , independent, and willing to make the first move. However, in many forms of modern fiction (and in Real Life), some women prefer men who are seen as "weak" or vulnerable. This trope is about the latter A woman who finds weakness or submissive behavior inherently attractive</ and a turn-on. Some women find that having the dominant position in a relationship (pun possibly intended) is a turn-on, as the "power" is theirs and can be quite addictive. Also the healing that she's eager to give can lead to them falling in love with each other, creating the Florence Nightingale Effect , her dream come true To fit this trope, the desired or fetishized man must be seen as "weak," either in temperament or body (or both) Compare All Girls Want Bad Boys , which shares similarities to this trope except that personality failings and anti-social behaviour as/rather than weaknesses are what attracts the woman to the man. Endearingly Dorky might come into play if social awkwardness or a similar trait overlaps with perceived weakness. See also Beastess and Amazonian Beauty , for the type of woman whom an Amazon Chaser in this scenario is likely to be attracted to. Also compare Power Dynamics Kink

Being a Super Hero ain't easy. Most of the original Flying Bricks have the good Achilles heels covered, and the pharmacy is even out of Psycho Serum to give you a cheap Backstory gimmick to explain your powers. What's left for the modern hero and villain to do? Make do with a Weaksauce Weakness. It's great for comedic effect, but just as often it ends up being an Achilles' Heel that makes your average Mundane Solution seem perfectly reasonable by comparison. The weakness isn't a common household cleaning agent like Mundane Solution , but something so incredibly, stupidly embarrassing you'd think the Super Hero would never use his power out of shame in the off chance someone found out about it, or because it shows up regularly in the course of their super heroing. The "weakness" might come in the form of the fuel for the super power, a humiliating Transformation Sequence or activation phrase, an Embarrassing but Empowering Outfit , or just a set of restrictions on the powers that really are begging to get laughed at. Therefore, this is one of the most popular ways to Bless your hero With Suck . If the weakness is a Logical Weakness , it can be pulled off. If not, it can seriously stress the Willing Suspension of Disbelief , unless it's Played for Laughs . Especially cruel writers will have clever villains make it a Weaponized Weakness . However, a Kryptonite-Proof Suit can even the odds. This is also commonly exploited in an Easily Thwarted

Alien Invasion , where Bizarre Alien Biology is probably to blame. Subtropes include: Related to Why Did It Have to Be Snakes? See also Kryptonite Factor , which is a weaksauce weakness for superheroes. If played for laughs, the one so harmed may Fight Off the Kryptonite . In extreme cases, the character will defend themselves from the weakness with a Cross-Melting Aura . For the inversion, of being at risk from a lack</ of something, see Phlebotinum Dependence .

Silver is deadly poisonous to most microorganisms (as for why they don't make surgical instruments out of silver: it's too soft and doesn't keep its edge.) Despite being touted as the Ultimate Life Form , Cockroaches have a few. Their biggest one is temperature, many species will outright die if they aren't kept within a narrow range of temperatures. The ones that don't die usually can't reproduce in mild hot or cold conditions. The reason they've become such an infamous pest is that temperatures they tolerate happen to be the same range that humans prefer. Crocodiles. Easily one of nature's deadliest predators, incredibly hardy and adaptable, can heal from torn off limbs</ and have remained virtually unchanged since the age of the dinosaurs since their design was perfectly adaptable to weather through several mass extinctions. But a croc's biggest, most pathetic weakness? While their jaw-closing muscles are incredibly strong and capable of ripping a zebra's leg clean off...their jaw-opening</ muscles are surprisingly weak, able to be held shut by a thick rubber band, a roll of tape, or even by human hands. It's almost as if evolution found out crocodiles were too overpowered and decided to give them at least one</ weakness. Elephants Are Scared of Mice . At least in cartoons. The scientific jury is still undecided whether this has a sound real-life basis or whether it is just an Urban Legend . Mythbusters </ tested it and found it confirmed: elephants will actively avoid mice if at all possible. Though it's not specifically mice so much as it is wariness at something smaller than an elephant's poor eyesight can reliably identify, to them it could be a snake or something else potentially threatening-the Mythbusters test was done by suddenly revealing white domestic mice to wild elephants, who would have only ever experienced a sidden flash of white color low to the ground as the warning signal of a disturbed cobra. They could also simply be aware of their surroundings and give the small quick moving creature a wide berth to avoid stepping on it. Giraffes can easily suffer fatal neck and head injuries just from falling over</. Don't believe it? Just imagine the whiplash with a neck that long... This is true of most large animals—the bigger you are, the worse falling over is for you. That's why, for example, elephants keep at least 3 legs on the ground when running (rearing up on their hind legs, as is sometimes seen in circuses, is not</ a natural behavior). Gravity is a bitch . Every human is at risk of (agitation of the heart). This requires being hit in the chest over the heart at the right point of a heartbeat. Only a few dozen cases are reported per year, but victims are almost guaranteed</ to die if it happens (survival rate is 35% ... if the victim is treated in three minutes). Even a gentle blow that doesn't bruise the skin can trigger commotio cordis— which means every time you get hit in the chest, you're playing Russian Roulette . Even worse, it's most common in teenage boys, usually while playing sports... Also, some martial arts like Taekwondo explicitly trains the fighter to go straight for that part of the body to ensure a swift and instant death to the opponent. For a relatively medium sized mammal, humans also have several very easy to hit weakspots that are very exposed due to us standing

upright and showing our underbelly when facing something. The wrists, groin , inner thigh, and neck can all bruise very easily due to the high number of nerves and blood vessels under thin skin with no sturdy skull or ribcage to protect them like the heart or brain. An infection or cut in such places can be deadly in minutes even if it's only half an inch deep. Allergies, especially if the allergen is relatively common. Nuts, animals, shellfish, bananas</...in the case of peanut allergies, some cases are so severe that people could be in serious danger just by being in the same room</ as peanuts. Some people suffer from (water allergy). That's right, there's people who were unfortunate enough to be born allergic to a substance they can't live without. It's technically not an allergy, but that doesn't make it any better. Any moisture build up on their skin aggravates the condition, so they must carry umbrellas with them at all times, avoid heavy clothing/exercise to prevent sweating and prefer to remain indoors in well ventilated surroundings. For all their precautions, though, they still have to wash themselves with water regularly . There's a lot of stuff that can incapacitate a human. Tickling is a lot of peoples' weaknesses and a lot of people have a sound that 'goes through them' like the sound of plastic folders being rubbed or nails on a blackboard. The right pattern of flashing lights can cause nausea in any human, people with epilepsy simply have a more severe reaction. This has since been And now you can . Some people with PTSD have triggers of the Nightmare Retardant variety that, out of context, seem laughable to those who aren't triggered by them, but remind them in some way of their traumatic experience and can trigger anything from an uncomfortable sensation to a full-blown flashback of the event. To make things worse, people with this kind of trigger will sometimes experience belittlement if they dare to disclose it. Worse is the way Kryptonite Is Everywhere ; people could understand if a loud bang causes someone who'd been in a war zone to flash back to a bomb strike, but what if a certain enemy vehicle sounded a lot like a certain civilian one, or someone was holding a cup of McDonald's coffee just before the worst attack they'd lived through? Suddenly a car in need of a tune-up or a cup of coffee on a table is Kryptonite to a Colonel Badass who eats nails for breakfast. One could also easily imagine a person who has suffered abuse needing to, say, not watch Law & Order: Special Victims Unit </ if they'd been molested. But some could watch it all day, and then the mailman comes by wearing the same brand and color of shoes their abuser preferred. Diabetics have sugar. Too much AND too little. Albinos have sunlight. A couple of other disorders too, including xeroderma pigmentosum (decreased ability to repair damage to skin from UV light). in general can be like this for those who suffer from them; they cause crippling, irrational panic at the slightest indication of the feared objects. Worse, being irrational after all, the object doesn't even have to be objectively frightening. Most of us can probably understand why people would be afraid of spiders, or snakes, or heights, but imagine having a phobia of flowers, buttons, or peanut butter? (Imagine it too hard and you'll get phobophobia ...) For a species that's bipedal, humans are actually not that great at doing it for long periods of time. Many people getting spinal and foot problems later in life, and people can pass out by locking their knees for too long. This isn't normally a problem, but people who have to stand still for long periods of time, such as people in the army, marching band, or choir, have to make sure to bend their knees occasionally. The skins of land snails and slugs are water permeable, and as such, are extremely vulnerable to fatally drying out. It's also why they're limited to dark, moist

environments. Salt kills land snails and slugs by screwing up their osmotic balance, in that the salt speeds up the drying process by pulling the water inside of their cells and internal organs out. be discarded immediately. This is applicable for electric cars as well - battery fire has destroyed a fair deal of vehicles that way. Early stealth aircraft can very easily lose their stealthiness to the most mundane of things. The RIAA (Recording Industry Association of America) came up with a brilliant new method for encrypting data on CDs, which works fine on PC computers, but not on Macintoshes. Laser weapons that are starting to be used by the US military can be thwarted by such phenomena as dust, sand, bad weather, clouds, smoke, steam, etc. As Stephen Colbert put it, it's a good thing they're not planning on using it in regions that have above-mentioned problems, or if Iran develops sand technology. Tin foil, silverware, or any conductive material can easily destroy a microwave oven in seconds</. This happens because the microwaves generated by by the magnetron cause the electrons on the surface of the metal to, in Layman's Terms , "slosh around". This causes sparks and electrical arcs, which are insanely</ hot, and can easily destroy dishes and the plastic interior of the microwave. The Ferdinand (Elefant) tank destroyer — which was based on the chassis of rejected Porsche-designed Tiger I tanks — was quite impressive on paper, boasting extraordinarily thick frontal armour and a powerful gun capable of punching through any Allied tank fielded during the war. However, because of Ferdinand Porsche's penchant for toying with experimental technology it used a novel petro-electric drive for its transmission, which allowed for more precise steering and high-speed reversing, but was prone to overheating and catching on fire under the slightest amount of overexertion (such as going up a small hill). Compounding the problem was that Elefant was horribly overweight, moreso than the rather husky Henschel-designed Tiger I. Digital terrestrial television offers clear pictures without the expense of cable or satellite service—as long as you're within range of the broadcasting tower with a properly adjusted antenna. An improperly oriented antenna or weak signal will cause a TV picture to break up like a scratched DVD, where in the analog days you would have a snowy picture but still be able to make out the scene. This is known as the "digital cliff effect". This can be especially annoying for people in countries that have discontinued analog terrestrial TV broadcasting Programming/coding. Just one missing or extra symbol is enough to make your program fail. Either it will fail at compile time, in which case most compilers will at least helpfully (or not) point out the mistake...or it compiles, only for it to execute in ways you did not intend, and you look through hundreds, maybe thousands, of lines of code to see what you did wrong, and then plant your palm on your forehead because you had an extra semicolon at line 500. The Russian screw tank was a wildly innovative vehicle able to cross snow, ice, mud, gravel, debris, water, in short any terrain you can imagine. Except a good road.

A lot of the time, it is not enough for your Cool Car to simply be cool. Having extra measures in place in order to facilitate the capture of the enemy you're chasing, or your escape from the enemies chasing you, might not only be helpful, but necessary. Enter the Weaponized Car. Equipped with both offensive and defensive measures, this item is a must-have for the discerning Badass Driver . Many options are available, but the standard loadout includes: Sports Car : Nine times out of ten, the Weaponized Car is gonna be a pretty slick ride. Suppose the spare power helps with the extra weight.

Weaponized cars that take the form of trucks and more heavy-duty vehicles usually go to enemies and/or supporting characters. If not, the car is usually a... Reinforced armor, bulletproof glass, and a turbocharged engine are also pretty standard, for obvious reasons. Weapons like machine guns and missiles can almost always retract into the car in order to keep a low profile in settings where this is necessary. Vehicles with pintle-mounted weapons, such as military HMMWV's, do not count(unless you also make the above modifications); a Weaponized Car typically only needs one driver for complete functionality (This does not stop some cars from having them, however). Sub-Trope of Cool Car . Not to Be Confused with Car Fu , which is where the car itself</ is turned into a weapon. See Vehicular Combat for the game genre based around a bunch of these blasting the crap out of each other. Wacky Racing may also involve these. Compare Tank Goodness for actual artillery vehicles.

Most jetpacks, rocket boots , and spaceships give off impressive plumes of fiery exhaust when they're moving. For the most part, this exhaust is just there to show that something's happening . But the exhaust of a rocket can also double as a short-ranged weapon , especially during a getaway. Characters with jet boots can perform really effective Goomba Stomps , while starship pilots can cause enormous damage with their drive flames Also known as the Kzinti Lesson : the more efficient a reaction drive is, the better a weapon it makes. An inversion of the Law of Inverse Recoil , since the recoil in these cases is intentional. Also an inversion of Recoil Boost , which is an exhaustized weapon. A subtrope of Superweapon Surprise . Fartillery is effectively the biological variant of this. See also Backpack Cannon . For another way you can weaponize your engines, see Ramming Always Works . If the opposite end of the engine is at issue, see Turbine Blender Contrast Banana in the Tailpipe

What's even cooler than a Monumental Battle ? When said monument takes part</ in it. A sister to Landmarking the Hidden Base , this trope takes the view that the only thing cooler than placing a covert headquarters inside a world-famous monument is placing a mountain-cracking Weapon of Mass Destruction </ inside a world-famous monument . Merely housing personnel, labs, or arms isn't good enough; at a minimum, the superweapon should be hidden inside the landmark, while a sign of true genius is . Nerdgasm levels double if the landmark transforms into a mobile battle platform or Humongous Mecha . The is a popular subject for this trope; apparently, the idea of Giant Stone Abe getting off his ass and kicking someone else's has some appeal… If the landmark is sufficiently old, this could end up as a Lost Superweapon . If the opposition ever discovers the location (or even existence) of the weapon, Monumental Damage or a Monumental Battle are all but assured. This trope covers weapons in real-world</ landmarks. Weaponizing fictional buildings or installations is almost a prerequisite in some works.

This is when any device or process (technological or magic) with the effect of teleportation is used as a weapon against a target, either offensively or defensively, usually in a combat situation, or functions like a weapon in order to deploy a teleportation device for escape or another tactical advantage Defensive use:

usually deposits the target elsewhere, incapacitating them by virtue of the target's being unable to participate in combat with the user. Can be used for Banishing Ritual , depending on where the target is warped into Offensive use: teleports a victim into the vacuum of space , inside solid rock , a fire, underwater, the "Blender Dimension" , or any other hostile environment where death is certain. Or simply beaming them out and never bothering to reassemble their molecules, effectively vaporizing the target. An alternative is an internalized</ Tele-Frag , which teleports something into</ the target, usually with hideous results. There's also the partial teleportation, a combination of the Defensive use with Portal Cut , where only part</ of the target is teleported away. With portals (whether as a superpower or device/weapon), someone can warp their attacks (usually a ranged one, but a melee attack out of a portal is not unheard of) so that they can hit their target more effectively (including from unexpected directions or inside its defenses) Teleport Interdiction is a good defense against this Sub-Trope of Teleportation . Supertrope to Teleport Gun , sometimes Tele-Frag and Dimensional Cutter if used on purpose rather than accidentally , and Fighting Across Time and Space if multiple locations are visited in a teleportation-based action scene. Appropriate examples should go to subtrope pages

This is similar to Personality Powers , but with weapons. Basically, in various works of fiction, characters tend to possess weapons that are either a direct reflection of their personality or the traits commonly deemed to their character type This is why you don't see ogres with rapiers or ninjas with clubs. The martial arts allow this trope to survive as Pastimes Prove Personality Anchors : A favored weapon for sailors and pirates. These come in two flavors: either swung from a chain, or used as a heavy bludgeoning weapon with a cool shape. Super Strength is required if they're of realistic weight For non-weapon examples, see Tell Me How You Fight . Contrast Choice of Two Weapons and Walking Armory . See also Good Weapon, Evil Weapon . See Weapon Jr. for when someone's shown with a weapon of choice before they've chosen it. For an entire culture or race's Weapon Of Choice, see National Weapon and Fantastic Race Weapon Affinity Signature Instrument is the musical instrument version of this trope, and the two can overlap into Instrument of Murder or Instrumental Weapon

All about weapons and what people do with them.</

Literally</ . Sometimes, in a work of fiction, the good guys will use Energy Weapons to defeat the bad guys or the monster. Usually, said laser beams work like some science-fictiony approximation of a bullet. Occasionally, though, the beam will do something totally different: suck the target into the weapon. Most of the time, this doesn't kill or otherwise destroy the target, it just traps them, to (presumably) be disposed of or imprisoned elsewhere later. A lot of the time, when some supernatural menace won't go down under Frickin' Laser Beam fire, you need a Frickin Vacuum Cleaner to get the job done! For when a character uses themselves</ as the vacuum, see Vacuum Mouth . See Ghosts Abhor a Vacuum if this gets applied specifically to phantoms. Not to be confused with Tractor Beam . For weapons that suck figuratively, see Joke Item and Scrappy Weapon .

When massive battles are staged for war movies it can be a major problem gathering historically accurate hardware for the scenes. Many classic weapons systems are unavailable for film use either because there are no more functioning examples or the equipment in question is owned by hostile states who aren't going to allow Hollywood to play with their toys. So what's a producer to do? Make the most of what you've got. If all you have is friendly hardware, then you issue it to everybody. This trope is fading with CGI able to provide any weapons system you need. Furthermore, Soviet equipment like T-34, T-55, and T-72 tanks are increasingly available for discount prices, as well as on loan from US-friendly former East Bloc states such as Poland and the Czech Republic. This can replace German equipment in World War II movies also, as the Germans and Soviets extensively studied each others' equipment: if a T-55 with cheap wooden and plastic add-ons is painted to look like a Panther, even many military buffs will be fooled. But prior to its development it was not uncommon to see German Panzer divisions equipped with repainted American M47 tanks, the Luftwaffe flying P-51 Mustangs or Soviets flying Republic F-84 Thunderjets. Japanese Zeros were often played by North American T-6 Texan planes. One can even occasionally see a VW Type 181 Thing/Safari/Trekker from The '70s subbing for a World War II Kuebelwagen, even though the latter are by no means hard to come by. Warships (before CGI) were the most challenging, because they aren't to be found in enthusiasts' garages or even museum collections; filmmakers historically had to rely on models, wartime stock footage (often an Anachronism Stew), or, if Backed by the Pentagon , wildly inappropriate modern ships. This trope also extends to individual weapons; many films and television shows will commonly have Chinese-made Norinco Type 56 assault rifles substituting for genuine Russian-made Kalashnikov rifles, and a German Walther PPK can occasionally stand in for a Russian Makarov pistol. It's also not uncommon for western films to feature Browning M2 heavy machine guns dressed up to look like a Soviet DShK. Granted, except for the most obvious cases, most people (beyond a few military hardware aficionados) probably aren't going to know the difference either way. Somewhat surprisingly, the obvious solution is rarely used: the "enemy" uses "friendly" equipment because they have limited resources and use captured equipment. Militaries do this a lot in real life when at war, particularly during World War II. See also Just Plane Wrong , Tanks, but No Tanks and Artistic License – Ships .

A character falls in battle, and is buried by his comrades (or his enemies, if they consider him worthy). But for whatever reason, the grave isn't marked with a traditional tombstone, but rather with the slain character's weapon. Maybe circumstances didn't allow a regular marker, maybe it's just traditional (for the slain or the ones burying him), or maybe someone thought it would just be a poignant gesture Can be done with any type of weapon, although something with a blade will obviously be easier to stick into the ground. A sword, on top of being the standard heroic weapon , has the bonus of looking like a cross when planted this way. Regardless, this is almost always done in a way that the weapon is oriented vertically, rather than just laying on top of the grave Frequently combined with Headgear Headstone , with the warrior's helmet (or other headgear) being placed atop the weapon This has

been done sometimes in Real Life , with the most iconic modern example being a rifle with the boots placed near it and the helmet on top, but usually only as a temporary measure to serve as a grave marker for soldiers that were killed in the field and had to be buried close to the front lines; permanent headstones were brought in later, or the bodies moved, so the weapons wouldn't be wasted. Fictional characters often seem less concerned about losing weapons to permanent graves, for one reason or another Weapon Tombstones are often removed by the fallen's descendants or successors for actual use at a later date, especially if they're Ancestral Weapons or are otherwise unique An entire graveyard of these is often a Field of Blades . See also Sword Plant . Not to be confused with a tombstone used AS a weapon , or the pump-action shotgun from the earlier Saints Row </ games As a Death Trope , all Spoilers will be unmarked ahead. Beware

In any science fiction or fantasy series, human beings are the most ephemeral of creatures. Every other sentient species lives at least as long as, and usually far longer than, human beings. The only exception are the brutish races: Trolls, Orcs, or Ogres - they mature faster. Ironically, humans have one of the longest lifespans of all mammals in Real Life Of course, the inevitable follow-on from this is that a humanoid character may be well over a century in age but only look to be in his early thirties. This sometimes leads to Really 700 Years Old or, in extreme cases, a Time Abyss In practice, humans age unusually slowly, compared to other mammals, for well-understood reasons. If an animal has a 90% chance of being killed by predators or disease by the age of three, there's no point in it being able to live to 30: instead, it will typically die of old age at around three. Thus, small animals, which have more predators, age faster, while birds, which are harder to catch, live much longer than mammals the same size, apart from bats, which have a similar lifespan to birds These considerations can actually do a lot toward justifying both the trope and the "brutish monster" exception to the rule: An orc or ogre that lives by the sword will die by the sword at an earlier age, and will be better off if it reaches its prime fighting age earlier and has a set of teeth that are designed to be very effective in biting enemies instead of built to last eighty years. Similarly, it's common that the elves have created a safe and isolated environment for themselves, where they can reap the benefits of a lifespan that isn't cut short in a few decades Humans in the 'wild', without advanced medicine or technology, tend to live 30-40 years, having very few predators apart from each other. The unusual bit is that even large mammals with almost as few predators as humans die of old age decades before humans, with the exception of some whales and elephants. Intelligent aliens should be similarly long-lived compared with their near relatives. If they've managed to slow down their aging process (through, say, genetic engineering), their natural lifespan could be long indeed, making this a justifiable trope See also Puny Earthlings , Mayfly–December Romance , Time Dissonance , We All Die Someday . Contrast Rapid Aging . Compare and contrast Time Abyss

In real life, when a broadcaster is having technical difficulties, often with transmitting equipment or loss of video/audio feed, the station will put on screen a card stating "We are having technical

difficulties" or "Please Stand By", accompanied by stock music. This is rare nowadays in most countries, but the practice is still referred to in fiction However, when this happens in fiction, it indicates not mundane malfunctions, but something either funny or deeply disturbing. And the latter usually happens when the news is being aired, or in the newsroom itself Sometimes played for Black Comedy if the presentation of the message sharply contrasts with the horror of the scene. An even darker version is when the message is displayed , but the horrible noise in the background indicates what is actually going on. It may also happen if the Genre Blind news reporter tries to get an exclusive interview with the Eldritch Abomination There may be other not-really-technical difficulties such as a fight breaking out on live TV or a performer (or news anchor) having an emotional breakdown, disrobing on live TV, dying , or saying something so controversial that it will cause backlash from the network censors or, worse, the FCC (and their national equivalents abroad) . Actual technical difficulties are vanishingly rare in fictionland, and thanks to many stations now being run by their corporate owners from one hub (for instance, Fox runs many of their owned stations from New York City , Chicago , Los Angeles and Houston), in reality also. Sometimes the message pops up as a result of Camera Abuse , which could</ be a valid case of technical difficulty Can be used similarly to News Monopoly — if every</ station is Experiencing Technical Difficulties at the same time, something is seriously wrong Compare with Relax-o-Vision (an innocuous image is substituted for a disturbing one), Do Not Adjust Your Set (an outside intrusion overrides the signal), and Snowy Screen of Death (damage to the camera causes the signal to flicker out and die) Often, "Spanish Flea" from Herb Alpert and the Tijuana Brass will appear as background music in this trope, or an instrumental recording of "The Girl From Ipanema," which also also shows up in elevators . Sometimes the song from Monty Python and the Holy Grail </ is used as well, particularly among video game streamers or in Web Original works where copyright isn't as much of an issue

Tropes listed in the Wiki Tropes index are being discussed at the Trope Repair Shop . Click the link to join the discussion. In short, tropes which have Wikipedia articles. Here on TV Tropes , we tropers dedicate ourselves to cataloging recurrent patterns in fiction. Everyone knows that; it's the name of the game. Other sites deal with tropes , too, though none of them are as exhaustive as TV Tropes , which is perfectly normal. However, there's one site that takes it too far : it's supposed to be a free world-class encyclopedia, yet it's wasting time talking on and on about cliches in fiction. And that's our </ job! Isn't that a waste of bandwidth? Perhaps so, but the practice is a lot more common than non-tropers would think. The truth of the matter is that Wikipedians do it for a variety of reasons—the trope may be common enough for scholarly interest, it may say something about psychology, it may be as much a real world phenomenon as an element used in fiction, or it may simply just be one of those many Wikipedia does. On the other hand, it might also be because TV Tropes has fallen victim to scope creep, and the topic really is one that best fits in a general-interest encyclopedia. In any case, it's beneficial to TV Tropes ; the more pages on tropes there are on Wikipedia , the more people will be led to our site. Not to Be Confused with You Are Not Alone , or the idea

of other intelligent life in the galaxy. Please add examples to the appropriate sub-index: Tropes 0 to D

What’s worse than the fearsome armies of The Empire ? Infighting — always a hindrance, never pretty The government is evil, decadent, corrupt or all three and it's time for a revolution . Only one thing stands in the way: your fellow revolutionaries. All of you can agree on only one thing: The government must go. Beyond that, you and your fellow revolutionaries couldn't decide on pizza toppings, let alone the shape of the world to come (or how to get it there). This can lead to squabbling that prevents any coordinated action from taking place...or it can escalate to the point where the different revolutionary factions are spending as much time and energy shooting at each other as they are shooting at the ones in power Such factionalism is very common in the real world , and is usually very depressing, even deadly. Crank it up a notch, however, and it's comedy gold This is the 'before' picture of the obsessive bureaucracy. The definitive case where being</ right is more important than doing</ right (or doing much of anything) A Sub-Trope of Divided We Fall , specifically when the separate factions are not just ignoring each other or working in isolation but are actively engaged in conflict with each other. Contrast Enemy Mine , where two groups of people work together due to one common goal despite other differences in beliefs See also A House Divided , With Us or Against Us , Misfit Mobilization Moment , Right Hand vs. Left Hand , Interservice Rivalry , Civil War , Enemy Civil War . And expect both (if not more) parties to subject each other to Poser Hating . Also compare Jurisdiction Friction for when two factions are bickering over a common goal from within one or more government agencies. Compare Not-So-Omniscient Council of Bickering , With Friends Like These... When it's two heroes of the same cause fighting because they mistake each other for the villain, it's Let's You and Him Fight . When the heroes are directly manipulated into fighting each other by a villain, it's Divide and Conquer and/or a False Flag Operation Contrast Enemy Mine , where two or more opposing sides are forced to work together, usually against a mutual adversary No Real Life examples, please, as that would blow up the wiki

We've all seen people wearing the wrong clothes — like Adults Dressed as Children , or wearing a swimsuit to work — but wearing the right</ clothes, but on the wrong body parts, is even more hilarious, and that's where this trope comes in! Quite often it's a little kid doing it to highlight how goofy little kids can be, and a common move for fictional toddlers is putting their pants, undies, or diaper on their head. Maybe the joke is that a character is so dumb or naive they don't know which garment goes where (e.g. a character tries putting their socks over their shoes). They might also be doing something goofy to make a small child laugh/stop crying/ fall asleep . Another variant is seen in Edutainment Shows , meant to teach kids to get dressed. (e.g. "Does this go on your hand? No! Does it go on your foot? No!") Sometimes seen in parodies of Underwear of Power with characters playing superhero by actually wearing underwear over their pants. Improvised Diaper can overlap with this if the baby is wearing another piece of clothing as a diaper. Compare Dressed in Layers for clothes worn under other

clothes.

Weasel Words are about words or phrases that imply more than they actually mean. Taken at face value, they don't say much at all, or are just not impressive. However, the way they're used imply there's substance to them, that they mean something. This is one reason they're a common feature of advertising, both on television and elsewhere: companies can imply that products or offers are better than they actually are without getting into legal trouble for lying about it. For instance, " part of this complete breakfast " doesn't mean the product itself completes the breakfast, but the implication is that it does. For an extensive and detailed examination of Weasel Words, see Or, better yet, Some people say that weasel words are a necessary generalisation. TV Tropes editor Sockatume believes that if you know who's saying something, you should mention it. Do you see what we did there? The passive voice is often used as weasel wording. The passive voice is often used in journalism when something is stated to be done but it is not desired that the question "By whom was it done?" should be answered. For one form of weasel words we don't want around here, see Examples Are Not Arguable . As an interesting note the term is called that not to imply weasels are inherently evil somehow , but rather in reference to how they eat eggs by sucking the insides out and only make a small hole, meaning an egg they have sucked may appear to be intact until someone looks at it more closely, in the same way weasel words suck the meaning out of a statement without being immediately obvious.

Tropes to do with the atmosphere and weather, be it artificial or natural.</ A sub-index of Tropes of Nature . See also Elements of Nature .

Artificial Outdoors Display : The "outdoors" is artificial.

Basically, the weather is just wrong for what it's supposed to be. Usually it's because of something like a Weather-Control Machine , sometimes it's from an identifiable source like global warming or "El Niño", but sometimes it's just because we can't perfectly predict the weather. It's just too damn complex Weather can be just off, with no explanation. This is usually Empathic Environment or a significant hindrance to what the characters intend. Law of Conservation of Detail ensures that strange weather can not be just a background detail. Anyway, the Weather Report certainly isn't going to predict this Note that unusually good</ weather can also be Weather Dissonance. Unexpected rain in the desert or drought-stricken land, unexpected sunlight in the fog and cloud — it can be ironic, or a good omen, or the Empathic Environment responding to the Happy Ending If cold temperature is involved, then Snow Means Cold is likely to occur A Super-Trope to Endless Winter

Web Animation is simply animation on the World Wide Web . Actual series or shorts are very common with compared to Webcomics , but the medium itself is pervasive in the form of being independently or commercial advertising Aside from machinima and fanime , Web cartoons are generally in Flash , as is some advertising. Animated GIFs are even easier to make and don't require special plug-ins, so they're used by much web advertising and by many forum

avatars. However, some such advertising uses dynamic HTML, which just changes the position of an image on a webpage. Animated SVG (scalable vector graphics) is a new technology still in development The content of Web Animation often varies greatly from animation seen on television. Media classifications usually aren't a problem and the length of the work can be anything. In addition, Web Animation is widespread and also available worldwide here. before flash, people had used the Commodore Amiga for their animations, like Eric W. Schwartz for example Two good places to start looking for web animations are Newgrounds and , in the mid-to-late 1990's which are also two of the oldest sites to host Flash animations on the web (Newgrounds claims even to be the first site with an automated portal submission system but not really). Note that these sites (Newgrounds in particular) have animations that are extremely NSFW A fairly new and popular form of (expansive) Web Animation is commercial, professionally-made web shows. It's currently one of the newest medium of New Media ; the earliest commercial web show didn't debut until 2001. As of this time, only animation studios from Japan have been investing in this business model, finding various distribution channels in many streaming and video networks People have made countless of web animations in an wide range and an heavy amount of different styles,Web animation has been so far being the most overpopulated thing on the web like Webcomics , web video and web original . people have been improved on web animation over the years ever since, these animations can be made to be original or fan-made

Creators of online Webcomics .

A webcomic is Exactly What It Sounds Like , a comic on the World Wide Web. They vary in format from gag-a-day Garfield </-style strips to dramatic and/or romantic graphic novels, anthropomorphic -oriented comics, fantasy comics, Japanese-inspired manga-style comics, and actual manga. Some of the most popular webcomics tend to have a computer game theme , giving an idea of who their key audience are (or, perhaps, where the author is coming from). The medium as a whole suffers from the same problems as Fan Fic with regards to Sturgeon's Law : a low barrier to entry means that the entire 90% of crap is visible. While many of the webcomics — particularly those on free community sites like Smack Jeeves , and — are considered low quality, there are many high-quality comics out there. Some webcomics, such as Penny Arcade </ and xkcd </, for example, have even gained sufficient popular and critical acclaim to earn their creators a living wage from their work, usually via selling The Merch . As was noted on the Newspaper Comics page, the bar for success in sequential art was set fairly low by the old newspaper syndicates and comics publishers, so "a living wage" rather than movie/rock star extravagance is all anyone ever expected to begin with. Webcomics work on a very different set of standards than other fiction. Almost all webcomic authors are working pretty much entirely alone as they both draw and script their comics and most do not plan any further along than to the end of their current story — sometimes not even that far . Many of them try to adhere to a schedule they aren't really capable of meeting, resulting in them rushing to meet their deadline and making mistakes that should be avoidable. So many of the good 10% lack qualities standard in traditionally professional works. This can be because of the lack of editorial input as well as the lack of lead time. Not all webcomics suffer from this, though, and even the ones that do can still be interesting. Arguably, some

strips benefit from their rawness. Growing in popularity in recent years, webcomics use tropes just like any other media, and thus can be seen cited throughout the wiki. Also, for further reading on this topic, we recommend you watch instructional video, courtesy of Welcome to... . And while you're at it, be sure to check out our lists of Webcomic Tropes and Popular Webcomic Sites as well! Due to the ever-increasing size of this article, it has been split into several different sub-lists. These lists are not exclusive, so individual comics may show up on multiple lists as appropriate.</ Other webcomic types which cut across and overlap with the above genres:

Webcomics are a New Medium . As such, they have a lot of tropes unique to the medium and the communities that surround it In addition, they are heir to a lot of older tropes, as Webcomics

authors, artists, and even the readers are usually fans of Pop Culture and Genre Savvy

Web games, also known as browser games, are games played over the web. Not to be confused with Freeware Games , which are distributed for free and act like regular computer programs. Web games are played directly through the web browser, often (but not always) with the help of a plugin. These games usually are made in Adobe Flash , Unity , or HTML5. Keep in mind that with making Flash unable to run on most browsers, you will need something else to play the games made with Adobe Flash, such as or . Puzzle Platformers

Shoot 'em Up Third-Person Shooters

It's fiction on the Net! It's gotta be Fanfiction ! ...Except when the web-published fiction doesn't include any pre-existing universes. This is the index for stories that are 1) original works, 2) published on the Internet, and 3) of fictive storytelling nature.

A work that originated on The Internet May be "original" or derivative in nature. Subsets include Web Animation , Webcomics , Web Video , Online Games , and audio or video Podcasts . Fan Works such as Fan Fiction tend to be distributed online rather than in print, but some readers may reckon them as a category apart from web original given its derivative nature It is common for Web Original works to spawn Shared Universes as other would-be writers think the original work is pretty neat and contact the writer for permission to play in their sandbox There is a Web Original Recs page. See New Media Tropes for tropes specific to these media Note that Web Serial Novels are now placed in the Literature namespace, and not here

Also known as "webfiction" or the "online novel", web serial novels are the prose equivalent of Webcomics which happen to have distinct Story Arcs . An author, usually an amateur, publishes a novel in many short installments (often daily or weekly) on a website Quite often, the work in question is some sort of Fanfic , but also included in this category are completely original works. Most long-form fanfic is posted on places like FanFiction.Net in installments, and thus would qualify as this trope Web serials are the Spiritual Successors to the Serial Novels which Charles Dickens (and many</ other authors of that time) originally published in serial form in newspapers and in Dime Novel form See and for incomplete listings of serial novels, among other forms of online prose fiction. keeps a list of active/popular English-language web serials, employing a weekly voting system in order to stay consistently current In the years leading up to The New '10s , Japanese-language "web novels" began to attract attention from publishers — Recuts of these stories now make up a significant chunk of the Light Novel market, and in turn a number of these have gone on to become mainstream hits with anime and manga adaptations. ("Let's Become a Novelist") is one of the most popular hubs for this in Japan, with over a hundred of the works on the site having been adopted for publication Please note that these works go in the Literature/ namespace, and not Web Original

A list of web video creators and producers.

Web Videos are live-action video works originally released or primarily available on the World Wide Web, as opposed to "traditional" broadcast methods like Television or Film . Web video is most often delivered via a web browser or mobile application, either with continuous playback (also known as "streaming") or downloaded to a computer or device for later viewing. The same technology is used to create and deliver other work types online The most popular web video site in the world is, of course, YouTube , but the nature of the medium means that anyone with a domain name, a server, and a connection with enough bandwidth can offer video for streaming or for download. As with all other new media, web video was first adopted by the porn industry , giving rise to the meme The Internet Is for Porn This index isn't for every kind of web video since that becomes an unnavigable mess. This is for web video works— shorts, films, and channels for such works— using original live-action footage arranged in a narrative. If it doesn't meet this criteria, it belongs in another index For live-action series released online, sometimes called "web series", see Web Video Series and its subcategories

A character suffers a horrific Disney Death . Their body is shattered beyond repair. No One Could Survive That! But later, he returns! Only this time, he's a cyborg ! He's got more power but he might be less human so in villainous cases it's OK to be more brutal on him. When heroes are subject to this, it tends to make them question their humanity , and in doing so retain it. This trope can serve as the Origin Story for both heroes and villains of the cybernetic variety Alternately, if the character being repaired is a ridiculously human robot , it justifies how they survive a seeming Heroic Sacrifice or Disney Villain Death . A Sub-Trope of Emergency Transformation . Compare with Robot Me , Unwilling Roboticisation , and Virtual Ghost . Compare and contrast Dark Lord on Life Support , when a villain becomes weaker</ due to dependence on some external technology or host to sustain them. The fantasy counterpart is Came Back Strong . If the cybernetics are obvious and enhance the evilness of a character's appearance, it's a case of Red Right Hand . When the one doing the rebuilding is sadistic enough, it may involve Vader Breath . If the injuries are too extensive or the technology not far enough advanced, may result in Man in the Machine . A nasty</ variant is when a bad guy takes a Not Quite Dead hero and has him Reforged into a Minion .

Say you're a villain and your Evil Plan is being ruined by this pesky hero who just will not let you scheme in peace. You've sent Mooks , you've berated your underlings for their failure , maybe you've even tried shooting him/her . No dice, the hero keeps coming You can't beat them! Well, if you can't beat them, don't join them — offer to let them</ join you</. That's right: you can become the partner in crime / trusted advisor / ruler of Australia if you will just drop this silly crusade against the Evil Overlord and get

with the program. Go on, those oppressed peasants you're fighting for won't mind — they'll understand that you can't let an opportunity like this slide. The offer is usually made by someone who needs to Pick on Someone Your Own Size with a Circling Monologue . When this offer is made, it's usually a sign that either the hero or the villain is going to die very soon. If not, it's the hero's final rejection of the villain's vision and marks the point where things get serious</ ... Because the hero rarely</ follows up on the offer. From the human perspective, it's a pretty foolish move anyway. How could any villain ever be serious about hiring someone who's been thwarting their evil schemes every step of the way, especially when it's a morally righteous Cape ? How could the villain possibly trust someone treacherous enough to do such a blatant Face–Heel Turn ? Because... From the evil perspective, it makes perfect sense Temptation is part of the complete Evil package. Every evil force is looking to expand its membership . (Of course, some villains are more persistent than others.) The final case can be particularly chilling because the villain believes he is offering the hero a chance to do the right thing and will be surprised (or, in the case of a Knight Templar , outraged) at being turned down. The villain's momentary admiration for the hero usually (intentionally) leaves lasting scars. If the villain is a little too</ insistent, then expect Foe Yay to occur. The specific and openly romantic variation where a villainess offers the hero a chance to become her consort is covered under Villainesses Want Heroes . Some video games may give this option to the player, leading to an alternate ending or a Non Standard Game Over . In a great many cases, an "evil" player's scripted response to this offer is commonly the player killing the villain and seizing the Cosmic Keystone . Certain villains should be aware that even success can be dangerous to them if the Fallen Hero doesn't feel like sharing power . The three most common responses are: The inversion is Last-Second Chance when it's the hero making the offer to the villain. I Can Rule Alone is a very common subversion. Contrast You Could Have Used Your Powers for Good , which is another way the hero may try to bring the villain over to the good side, and Offered the Crown , where the hero is offered power by the good guys as a reward for heroism. Compare Last Chance to Quit , Deal with the Devil . See also "Leave Your Quest" Test and I Have You Now, My Pretty .

Evil, Inc. is catching a lot of flak for bad environmental practices, price-fixing, mistreatment of employees, and all kinds of Predatory Businesses . So what do they do? Make a Public Relations Ad showing how much good they do, and just how much they really care about the Earth/Little Guy/Mom and Apple Pie/what have you. We really do, honest! In reality, however, this company does not</ care. It never cares. This company is dead set against caring. The CEO doesn't allow the corporation to take an action that decreases projected profits, for any reason. Period. If it looks like it's bending that rule, you can bet there are a bevy of charts and graphs showing how the PR will pay for the losses. When the theme is "We care about the environment", this is commonly termed . When the entire company acts like this to everyone</, that's Peace & Love, Incorporated . Compare Photo Op with the Dog . Could be considered a variant of We Don't Suck Anymore , but that trope is related to quality, not ethics (and is sometimes true). Not related to We Really Do Care .

Since getting married is a powerful force in human life, and since a wedding is one of the most grandiose events many people put together

in their lives, it shouldn't be surprising that it is also a powerful force in fiction as well. All its trappings are familiar to us: the bride in her flowing white dress, the groom in his black tuxedo or pastel suit, the ginormous white wedding cake, etc. Whether or not the lovebirds stick to these traditions or eschew them for their own vision can be the story in and of itself. Traditionally (and still, throughout most of the world) marriage was always between man and woman, since its primary purpose was to create a stable family with children . However, as the contemporary Western world has adopted more individualistic attitudes and made marrying for romance its ideal, many people came to feel that this was unfair to homosexuals . Same-sex marriage is now legally recognized in many countries (since the 2015 in the United States), and this has filtered through into pop culture. Thus, while the groom-bride combination is obviously still the most common, weddings in modern fiction may also have two grooms , two brides in white , or even a seemingly</ straight couple where the handsome groom or beautiful bride is really a crossdressing same-sex partner . Even for hetero couples, many aspects of the wedding are Newer Than They Think . Most wedding traditions in the Western world, such as the big white dress and the big white figurine-topped wedding cake, are derived from Queen Victoria 's wedding to Prince Albert in 1840. Before then, most people just wore their Sunday best to get married and threw a party afterwards, with the look and traditions varying by region and culture. Queen Vicky's white wedding was outlandishly grandiose for its time, meant to show off the Crown's wealth . White may represent purity in the abstract sense, but it also represented luxury in the practical</ sense. White fabric was nearly impossible to keep clean, meaning she bought a lavish gown just to wear it once, and white sugar was an expensive delicacy, meaning a multi-tiered white cake with all-white frosting was the height of opulence. The British aristocracy (as well as Victoria's children) copied these traits for their own weddings to display their own wealth, and as these materials became cheaper, the lower classes followed suit, to feel</ glamorous for a day if nothing else. Within a few decades, it became the new tradition. So, anyone want to go to a wedding? Related :

According to this trope, a wedding becomes official when the bride says "I do", or the priest says "I pronounce you man and wife." Any character wishing to break up this wedding must do so before these words are uttered. There is also the implication that once the couple is married, it's permanent, and any romantic loose ends must be discarded. Once upon a time, this was true; in the High Middle Ages , the vows, known as "the words of marriage", constituted the wedding, and all the rest was stage-dressing. Historical works can therefore use it with full force for various historical eras and fantasy worlds based on them. (But make sure that it's one that uses this ceremony.) Even in those days it could often be dissolved, with some difficulty, as long as the marriage was not actually consummated. But nowadays, the boring truth is that a marriage becomes "legally binding" either when the proper legal authorities (i.e. local government) process the marriage paperwork, or when the marriage certificate is signed by the officiant. The wedding ceremony may have no bearing on the legal status of the marriage, although in certain jurisdictions the parties do have to take certain specific oaths for a marriage to be valid. And marriages can be canceled in most localities. (If you're in an unhappy marriage, consult your local laws for details.) In a few religious traditions, marriage begins exactly at the moment the

couple have both said "I do" or the priest says "I pronounce you man and wife". This however has nothing to do with the legal status of the marriage. It was once true that consummation was necessary for a marriage to be fully legal, and unconsummated marriages could easily be annulled: this is less common in modern times, when annulment is more likely to be tied to the length of the marriage or any allegation of fraud than whether it was consummated. This should be a Discredited Trope , but it's not, probably because it's incredibly useful to writers of romantic stories. A wedding imposes a deadline for the consummation of a relationship. A deadline during the wedding allows the protagonist to make an exciting Race Against the Clock to win back his or her beloved at the last possible second. Furthermore, a wedding ceremony makes it easy to put all the main characters in one place for the story's riveting conclusion. In short, this trope is something that viewers seem quite willing to suspend disbelief over. May come into play in a You Have Waited Long Enough plot. See Speak Now or Forever Hold Your Peace , Skip to the End , and Altar the Speed . In the Futurama </ episode "A Bicyclops Built For Two", Leela gets to "I d—" before Fry barges in, and shows that Alkazar is a shape-changing green cockroach, who has weddings to four other female freaks scheduled for the same day. It makes a lot more sense when Alkazar explains that he rented the tux which shifts to different sizes with him and is presumably expensive.

Possibly in Robin Hood: Prince of Thieves </. The Sheriff forces Marian through the ceremony, even answering the vows for her. The Bishop performing the ritual quickly rattles off the pronouncement (while the Sheriff is trying to force himself on Marian). When he gets to "man and wife", Marian turns to the Bishop and yells, "How could you?!</ "

The Princess Bride </ actually does both: during the ceremony, Humperdinck urges the slow-talking priest to hurry up and get to "man and wife." But after Westley rescues Buttercup, Westley says the marriage isn't official because she didn't say "I do."

In the comic strip Bloom County </, the Opus/Lola Granola Story Arc ended with the two actually getting married. But they agreed to annul it minutes later: the wedding kiss revealed that they had incompatible noses, which knocked Opus out cold and gave him a nightmare about his future with Lola - in the far-off Zeerust age of 2007 A.D., no less!

For all the drama and mishaps associated with them in fiction, weddings are supposed to be a happy affair. So closing a story with a wedding is common — it's a fun celebration for the characters who have suffered through the show's twists. And since They Do , it ties up the Romance Arc for the Official Couple and promises a new life chapter for the newlyweds, especially if children are on the horizon . Happily Ever After ! Though Wedding and Engagement Tropes will abound, the wedding will usually go well in the end, as this is likely an indicator of Happily Ever After , but not always — it may be someone other than the leads getting married, or the wedding may end unhappily. Ending a war story with a Wartime Wedding after all the fighting is usually a Bittersweet Ending . While this trope usually applies to entire standalone works, it can also be used to give closure to seasons (or installments analogous to them). Supertrope to Weddings for Everyone and Wedding Bells... for Someone Else . A Wedding Finale may overlap with Wedding Episode if the entire final installment or episode is centered around a wedding. May

be part of a Grand Finale . Overlaps very often</ with Sealed with a Kiss .

A classic prank , in which some poor sap gets their underpants forcibly yanked up and wedged between their butt. A staple of schoolyard bullies it is also sometimes incorporated into the arsenal of tricksters and similar comedic fighters . Variations include: Subtrope of Groin Attack and Amusing Injuries . Watch out for the Negative Space Wedgie . Western Animation Weird Al is given a Wedgie revealing his uncool undies in his music video White and Nerdy Eminem in the song Kamikaze includes the line “I’ve been going for your jugular since Craig G. Duck alert. Wedgie in my underwear the whole bedsheet and the comforter.” It is 'illegal' in professional wrestling to use articles of clothing for extra leverage, so naturally you will see someone trying to keep their pinned opponent folded over by yanking on their tights about once a month.

Two (or more) characters, for whatever reason, must pretend they do not know each other over a long period of time. There are two obvious reasons for this to happen: A spy mission or con game is in progress, and two seemingly unrelated characters chatting like friends would give away the play. If this is the first time some of these characters have appeared on the show, the audience might not be told that the characters know each other either. Compare Friendship Denial .

Advertising trope where a company admits they've had trouble in the past, but if you buy their products now</ you won't be disappointed. Basically, they are saying they have what it takes to Win Back the Crowd from whatever caused them to leave in the first place, but rather than silently do it and let word of mouth take over , they've decided on a less subtle approach. If not done with the correct level of self-deprecating humor , it tends to fall flat. There can be a backlash if most people didn't see anything wrong with the product in the first place, but the company is pretending they sucked before to justify changes Compare New and Improved , which tries to imply that the product is better that it was without going into any detail about what was wrong before, or what they changed. See also Lampshade Hanging , The Man Is Sticking It to the Man and Public Relations Ad . If a company pretends to be someone else with a tone of " they</ don't suck anymore", it's also AstroTurf Contrast Our Product Sucks , when a company uses self-deprecation in an attempt at Reverse Psychology

Characters that die , get eaten , go on a long trip , spontaneously vanish , or otherwise exit the show — and almost as soon as they join These characters might be brought Back for the Dead or have someone drop a bridge on them . Writers might reassign their arc to an existing character or to a totally new character . It may not be a writer's intentions to get rid of a character, but the actor who portrays them may want out sooner than expected and plans must be redrawn. These situations may lead to Commuting on a Bus On elimination-based game shows this usually applies to a contestant who is the first one to go unless they reappear in the series later on Compare Sacrificial Lamb , Shoo Out the New Guy .

If the character was a hardly-seen Recurring Extra who finally gets A Day in the Limelight only to be killed off, that's A Death in the Limelight . Might result in the cast itself forgetting their fallen friend This is a Death Trope , or at least a trope about a character exit. Unmarked spoilers ahoy

Sometimes directly pointed out by a war veteran or someone with a lot of experience in life, this trope is about some society growing complacent with peace and reluctant to think anything bad can happen. Little do they know that The Empire over there is gearing up for the war that will slaughter thousands, if not millions, of civilians. Sometimes done anviliciously , sometimes it's just part of the plot. Don't be surprised if the society heavily frowns upon violence, even in self-defense The Wide-Eyed Idealist and/or Pacifism Backfire trope applied to entire civilizations</. Expect the heroes to try to stop the evil plan, either by alerting the populace or by fighting behind the scenes. If they fail, expect their country to be a Soiled City on a Hill , Day of the Jackboot , or an Easily Conquered World . If there is an epilogue, expect And Man Grew Proud . Compare Pacifism Backfire This is also frequently a motivation of villains who want to keep their people " strong" and "pure" - they are often The Social Darwinist Avoiding this is one of the main points of Japanese Spirit as well as Living is More Than Surviving

There are a lot of ways to have a character Kick the Dog or cross the Moral Event Horizon . In a war movie or battle sequence, if you want to show that a general, king, or commander is evil (really evil, not a Punch-Clock Villain and way beyond a Designated Villain), all you have to do is show his casual—if not complete</—disregard for the lives of his own troops by either knowingly ordering them into certain slaughter or giving an order that directly results in their deaths . Retreat is, of course, forbidden; he expects Attack! Attack! Attack! without a second thought, and a Last Stand before retreat. (And he usually does it from perfect safety.) General Failure will often upgrade this from a last resort to his preferred tactic. After a moment like this, the character might as well have </ printed on his forehead. Bonus points if he refers to his troops as being trash or somehow subhuman , or if he does it not because he sincerely believes that doing this is necessary to win , but in pursuit of his own glory/making a name for himself . A We Have Reserves commander is very much a Bad Boss , and a reason why there is such a high mortality rate among Redshirt Armies , Faceless Goons , Mooks , and the like. Note that this does not</ have to be done strictly in a war setting, and works just fine if, say, the Big Bad or The Dragon decides to sacrifice someone in a Quirky Mini Boss Squad , or a small band of mooks . Employing this under such circumstances when he probably does not</, in fact, have reserves, is a form of the Villain Ball . Callousness is necessary for it to be a suitable Kick the Dog moment. A general who throws troops into a battle knowing they will all die but also knowing a victory here will save more lives can be pardoned for it if he shows that he is aware of the cost (Drowning My Sorrows and Past Experience Nightmare are popular tropes for demonstrating that awareness). After all, one cannot get through a real war with zero casualties, and some number of losses must be accepted. The same thing applies for a commander of a stricken vessel who sometimes must seal off sections

of a ship and doom the crew inside lest the entire ship is lost. An inexperienced officer who inadvertently does this may only be a moron or having a moment of panic while in command for the first time, and might still be redeemable if he shows Character Development because of it or improves his tactics. The likelihood that the troops of a commander who does this trope regularly would probably fold like wet paper on the battlefield (few are willing to get themselves almost certainly killed just because someone said so) should logically be an issue, though the likes of fighters being organisms led by a Hive Mind , cultures relying on sheer zealotry, or other rationales may address this. In more fantastical settings, most Necromancers and other undead -using sorts will gleefully send legions of their troops off to get re-killed, on the basis that no actual lives are being lost. Well, except for the enemy's. And that just adds to your own numbers. The dead do not kill, they recruit. (Depending on how the necromancy is represented, even the destroyed undead can be somewhat reconstituted.) Compare Zerg Rush (where the opponent throws everything at you, disregarding any other battle plan), Cannon Fodder (a low-skill enemy with little planning that dies easily), Redshirt Army (when the good</ side employs this), Expendable Clone (where a character is his own reserves</), and both Hammerspace Police Force and I Fought the Law and the Law Won (where law enforcement is the "reserves" in question). Also compare The Pawns Go First (when the formidable Big Bad sends out Mooks rather than engage in the fight himself). See also You Have Outlived Your Usefulness and You Have Failed Me for similar moments from a Bad Boss . Shoot the Messenger also relies on the Big Bad feeling that his mooks are completely expendable. Contrast Can't Kill You, Still Need You and Mook Depletion . The Neidermeyer is the most likely type of officer or leader particularly to use this tactic; Sergeant Rock and A Father to His Men (who may invoke The Men First) are at the opposite end of this scale. Subtrope of Quantity vs. Quality .

Basically either the Fish out of Water (or another character who's visiting from elsewhere) describes something or someone shows or describes something to them, usually in a very condescending or superior manner. This is met with something along the lines of "So it's like a..." or "We have those too". Truth in Television — don't ask foreign people "do you have cable TV in Russia?" A variation involves the native being perplexed by the description because they passed</ that level of technology generations ago, and have much simpler ways of doing the same thing. See also Call a Rabbit a "Smeerp" . Not Rare Over There and Worthless Yellow Rocks are arguably the next level of this trope: not only does the other country/group of people have</ the item, they have more</ of it than you do.

Maybe a character doesn't like his current shape and decides he's going to drop those pesky pounds if it kills him. Maybe he meets an unusual stranger on the street with slimming abilities. The point is, he loses weight (or at least takes steps to do so) And everything goes straight downhill This trope is for works in which weight loss goes horribly wrong (or, even worse, horribly right). Maybe the characters lose too much weight and are in danger of disappearing altogether. Maybe they unwittingly sign themselves up for a weight-loss service with overly restrictive (read: lethal) penalties. Maybe the diet is magical and requires the sacrificing of children . Really nasty examples may overlap with Body Horror ,

and self-inflicted magical ones might cross over with Be Careful What You Wish For Compare Fashion Hurts , for other ways in which the effort to maintain appearance can be painful and/or harmful, and Dead Weight and Fattening the Victim for other cases in which weight is associated with horror

...to describe this fast-breaking topic! These are tropes about how someone or something can end up get... "Excuse me." Not now! I'm busy explaining that these are tropes about how someone or something ends up getting interr... "Oh, sorry, carry on." INTERRUPTED!

Our hero is plonked in front of their favourite show when the show is suddenly interrupted, whether by inside or outside forces, to deliver a (usually) shocking and/or plot-relevant announcement Whether the protagonist actually pays attention or not is, of course, another matter See also This Just In! , where it's a news program that interrupts itself for this purpose. When the villain hacks into TV programming to deliver an evil message, it's Do Not Adjust Your Set . See Emergency Broadcast and Breaking News Interruption for common ways that this happens in Real Life

When a parody is more popular than the property that's being parodied, often to the point where those unfamiliar with the source material will believe that the parody is its own thing. Named for the fact that, when listening to the earlier work of "Weird Al" Yankovic , modern fans may be so unfamiliar with the songs being mocked as to not even realize that the Weird Al song is</ a parody. For example, many people are now more familiar with "I Lost on Jeopardy! </" than with the original "Jeopardy" by the Greg Kihn Band. Some may even have forgotten Jimmy Webb's "MacArthur Park," or Coolio's "Gangsta's Paradise" (or Stevie Wonder 's " Pastime Paradise ," for that matter), remembering only Weird Al's " Jurassic Park " or "Amish Paradise." Often, people who are only 'familiar' with a work through the parody are surprised when the subject of the parody turns out to be better than they thought. Occasionally the trope can be inverted, where the parody is forgotten, but aspects of it get associated with the original work. Related to the concept of a Forgotten Trope , except it is not tropes but works or personalities that have been forgotten. Could be an extreme expression of Rule of Funny (the music may not have had much staying power, but at least the parody is funny). See also Adaptation Displacement , Popcultural Osmosis , Popcultural Osmosis Failure , Older Than They Think , The Coconut Effect , Covered Up or Revival by Commercialization . Contrast Shallow Parody , when lacking knowledge of the original work merely renders the parody meaningless. Be careful: If the original still has a respectable pop culture presence, then claiming the parody is better known may tend toward Fan Myopia .

There are Crossovers between works or universes which seem relatively logical, thanks to them being not too different. And then, there are these.. A Weird Crossover is an unlikely crossover between works different enough, be it in themes, tones (e.g. mixing something very dark with something very upbeat), genres (e.g. merging a Sci-Fi or Horror franchise with one set in our world, or a specific superhero in a kind of setting he/she is usually not associated with), etc. It can be a full work, but there are many

examples using it to create fake movie trailers . Also, there are examples of this trope serving to make a single In-Universe joke, the Weird Crossover work referred In-Universe being a Show Within a Show (or an unlikely project existing In-Universe). The trope is usually Played for Laughs , the joke being the unlikeliness of the crossover For obvious reasons (though official weird crossovers exist, sometimes involving universes inside the same franchise, shared copyright ownership, or Public Domain Characters), this trope is often restricted to Game Mods , Fan Art , Fan Fic , and various kinds of Web Original contents Of course, Tropes Are Tools is in full effect for these types of stories. A well-written Weird Crossover can be an engaging story that preserves the original spirit of both works in a new setting, while a poorly done one can create all sorts of Glurge and Mood Whiplash that clashes with the tone of the two respective works The opposite of Common Crossover , and a specific form of Crack Fic . Canonical (non fanwork) examples turn into Shared Universe . A Super-Trope to Demographic-Dissonant Crossover . Related to Crossover Cosmology . Sometimes leads to Fake Crossover . Can overlap with Intercontinuity Crossover , Massive Multiplayer Crossover , Unexpected Character , and Guest Fighter . When the unlikely combination is a mish-mash of generic creatures or concepts (instead of proper references to specific universes) it's a Fantasy Kitchen Sink or a Sci-Fi Kitchen Sink . Occasionally involved in Real Trailer, Fake Movie . Crossovers between works with very different tones and settings are often a Story-Breaker Team-Up

Non-Commercial Video Games / Fan Games / Game Mod In-Universe Example s s

This specific flavor of Alternate History , or when the story is really historical but with unnoted elements , deals with a point of divergence that occurs during a large-scale war, usually (but not limited to) World War I or World War II . The divergence involves sci-fi, fantasy or supernatural elements added to the war's events. Examples can include use of weapons or technology that haven't been invented yet , vampire and/or werewolf soldiers, mysticism, superpowered historical figures , and alien intervention This trope differs from Fantasy Conflict Counterpart in that this trope is the real war plus "extras", where Fantasy Conflict Counterpart is the war Recycled IN SPACE! World War II examples will overlap heavily with Ghostapo , Nazi Zombies , Stupid Jetpack Hitler , and/or We Didn't Start the Führer . Cold War examples will often overlap with Soviet Superscience . Fantasy examples may overlap with Historical Fantasy . Often is a sub-trope of Diesel Punk or Secret History

Some heroes have the misfortune of ending up in a strange place: maybe in the past, or in a world where they never existed or (if they're really unlucky) a world where they're a completely different person (and their best friend hates their guts, while the villains have them under their thumb). From the narrative's point of view, The Hero 's predicament is usually important to them</, but mean a lot less in the bigger picture. Luckily, people who are thrown back in time or Trapped in Another World will find a member of the Time Police , another traveler (with more experience) or even a god</ who'll help them get safely home. These can be authority figures it can be justified: the ruler of a country still has some

responsibility to all their subjects and the police are supposed to serve the public, why should the ruler of a multiverse or the Time Police be any different?. They can be heroes: a good hero will always help the needy, time travelers should be no exception. Gods or other higher beings may be working In Mysterious Ways or have some hidden agenda. The helper in question might not actually be that more powerful than the protagonist, but have a job dealing with much more important problems. Places the protagonist could end up with this sort of help in can include; As long as the protagonist is stranded and someone with enough know-how to help turns up it's this trope. This can often be a type of Big Good . If Time Travel is involved you can expect them to be a member of the Time Police . This sort of character may overlap with Mr. Exposition or Hero Secret Service . Contrast Orphean Rescue , when the hero fulfills this role for someone else.

Weird Science is the name for the style of storytelling made famous by the Science Fiction "pulp" (named after the poor quality paper on which they got printed) magazines of the 1930s and 1940s . By the 1950s , sales fell off, probably because of the advent of television. A few of these magazines had covers far trashier than the contents, others reveled in cheese with the writers entertaining no delusions that they created great art. Astounding Science Fiction</ (later Analog </), Unknown</ (also known as Unknown Worlds</), and Galaxy</ published generally high quality fiction. Amazing Stories </, Weird Tales </ and Startling Stories</ and others occupied the middle strata while Captain Future</, Planet Stories</ and many, many others published the more shamelessly trashy material. (Unknown</ and Weird Tales</ actually published mostly fantasy and horror, though individual Science Fiction stories and elements would get incorporated in the stories too.) They specialized in imaginative stories of Science Fiction , with the less highbrow magazines in particular having a good deal more "Boys Own Adventure" flair. The actual name Weird Science</ comes from EC Comics Comic Book , which tended to use the Karmic Twist Ending or, more rarely, the Cruel Twist Ending . (EC also published Weird Fantasy</, actually another Science Fiction comic, and merged the two titles later.) The stories featured exotic worlds, buxom space babes , two-fisted heroes and, most importantly, the gee-whiz gadgetry that defines Weird Science. Many of the most notable names in science fiction and fantasy got their start writing in these magazines, and, as the century progressed, the standards both for storytelling and scientific plausibility increased, although an exciting story was always more important than a realistic one. Their influence is still widely felt: any Science Fiction that involves derring-do with robots, rocketships and rayguns and doesn't worry about technical realism can be said to use Weird Science, but it is especially likely to be found in Planetary Romance . Note also that Weird Science is not the same as Hollywood Science ; the former throws realism to the wind in order to create spectacle whereas the latter comes from not bothering to get things right that could have been. They often have similar effects, but different causes; Weird Science springs from Rule of Cool , whereas Hollywood Science grows from poor research. (The extreme case, most often found in comedy, is It Runs on Nonsensoleum .) Not to be confused with the movie , series or song of the same name, though the premise certainly is. Settings where Weird Science is likely to be found:

Most aspects of major American narrative entertainment features ("movies") and series ("TV shows") are unionized. Thus, writers and directors for such series and features are more familiar with the goings-on of union negotiations and politics than the average person. As a reference to the ubiquitous nature of unions in their lives, they will invent unions for unlikely occupations as throwaway gags or plot points. Much as TV Tropes expanded from TV, the joke has spread into writing professions where fewer (or no) unions exist. Evil Minions Local 204, Mad Scientists and Sociopathic Soldiers Allied Labor Brotherhood, Dray Animals Teamsters, United Robot Workers 404, Astronaut Solidarity, Industrial Workers of The World's Oldest Profession Local 690, etc. At any moment, the action could be interrupted by a labor strike, mandated coffee break, or possible violation of some obscure union regulation. This is not nearly as much Truth in Television as one might think, particularly in the United States but also internationally. As seen on Sweden is one of the relatively few countries with a majority union workforce; Great Britain did have one before the Margaret Thatcher years, and Canada has a workforce more than a quarter unionized. At the apex of the movement in the 1950s, nearly a third of America's workers were unionized, but nowadays that number has dwindled to less than an eighth (and is dropping quickly), relegated mostly to the few remaining states with pro-union laws on the books (California and New York happen to be among them), legacy automobile plants, and the public sector (this one may change very soon). The concept of a super-villain union is a humorous one on several levels. One, villainy is by nature a solitary and selfish activity. Two, villains don't care about rules. And three, This entry has been stricken under Wiki Contributor Local 303 Bylaws, Section 440 Sub 13 Para 2. The shop steward will permit entries below, subject to the provision that management does not impose a lockout. A Thieves' Guild , Adventure Guild , or Murder, Inc. is a specific type of weird trade union, though they usually are a bigger piece of the story than most of the examples here. A Band of Brothels is one for ladies of... negotiable affection. A Magical Society may be one, although those don't necessarily exist for the benefit of their members. See also Signed Up for the Dental . In any case, the very notion of a union for people who are engaged in illegal activities is frequently played for (at least mild) laughs.

Our hero may be a perfectly Nice Guy , respectable, successful, a loving husband, and a good father. But what he really wants is for this one guy</ to acknowledge this Most often, that one guy</ is his emotionally distant father, though it can also be The Ace , The Mentor , an Aloof Big Brother , or especially that Always Someone Better individual, usually as an old friend of the hero. Almost always a Special Guest , and often a Large Ham as well. When it's a recurring character, usually a controlling parent A "Fawlty Towers" Plot will often ensue as our hero tries increasingly more convoluted schemes to convince the "Well Done, Son!" Guy of his worth In the end, one of two things happens. Rarely, the "Well Done, Son!" Guy will turn out to have some kind of massive character flaw , and our hero will realize that it's been a mistake to weigh his opinion so highly. This may result in the betrayed hero Calling the Old Man Out . Most of the time, though, everything comes to a head when the "Well Done, Son!" Guy finally asks the hero why he's gone to such ridiculous ends. The hero fesses up, and

the "Well Done, Son!" Guy explains that he's respected the hero all along, and assumed the hero already knew . If the "Well Done, Son!" Guy is the hero's friend instead of his father, he'll often also explain that he'd always desperately wanted the respect of the hero as well (hell, sometimes the father</ wanted the kid's respect , especially if there's something big and nasty in his past, probably either ignored by or unknown to the hero) Cue the Sentimental Music Cue In other genres, this can be a bit more understated, with the "Well Done, Son!" Guy simply giving our hero an approving nod from a distance (or saying, "That'll do, pig"). If the "Well Done, Son!" Guy is a Trickster Mentor or Zen Survivor , they may have a very long and painful road ahead of them to get even that. May be part of an Inadequate Inheritor plot. The Fantasy-Forbidding Father usually inspires this sort of feeling. This dynamic is usually father-son. Mother-daughter and father-daughter are not too unusual, but mother-son is rare (unless it's the Jewish Mother scenario, which is almost always Played for Laughs) A really unpleasant variation is when the "Well Done, Son!" Guy is already dead</, which in most cases means the approval and emotional bonding will never happen. At best, the character may gain some comfort by following his understanding of what the deceased would want if he were alive Contrast So Proud of You where the child receives their parent's approval. Also contrast Hates Their Parent where the child wouldn't be bothered with seeking their approval. For the inversion, see "Well Done, Dad!" Guy . This may be caused by Anti-Nepotism

A villain who has an overall goal which the heroes can appreciate in principle , but whose methods of pursuing said goal (such as mass murder) are problematic ; despite any sympathy they may have with their cause, the heroes have no choice but to stop them. Taken to extremes, they may fully believe that Utopia Justifies the Means . Such an idealistic extremist is likely to be either a Totalitarian Utilitarian or a Principles Zealot , depending on whether they’re aiming For Happiness or For Great Justice . The most well-written examples of this trope are the kind that the reader/viewer stops just short of agreeing with. Other times, the villain may be out for simple revenge against a person, corporation or other entity that has undeniably wronged them. Again, the heroes may sympathize with their plight, but are obliged to stop them because they care not who gets in the way of their planned revenge. However, the heroes will often investigate the villain's grievance themselves and will complement stopping the villain with bringing the offending party to justice as well. Maybe they started out with actions as good as their intentions , but were forced to take more extreme measures . Either way, it's a common end result of Jumping Off the Slippery Slope . Their favorite phrase is I Did What I Had to Do . There are four basic flavors of Well Intentioned Extremist: : : : ': On the extreme end, may result in the even darker Knight Templar who chooses to either remove free will , believing it the best way to save the world or destroy whoever they don’t consider worthy enough to live. Unlike this, The Well-Intentioned Extremist isn't a punisher of all flaws or a dictator who argues that they are good and therefore everyone else is bad; they actually realise that some of their victims don't deserve to die or suffer, but insist that it is for the greater good and actually isn't entirely</ wrong. They could also be a fallen Wide-Eyed Idealist that was driven over the edge , and sometimes a Worthy Opponent or even Reluctant Warrior .

Vigilante Man is a case where the Well-Intentioned Extremist hasn't (yet) descended to the point of not caring who gets hurt. Often ends up in rivalries with the Knight in Sour Armor . Maybe they're Obliviously Evil and don't realise they're the bad guy, in which case they're prone to My God, What Have I Done? and becoming wracked with guilt and horror if they're ever enlightened. Some of those seeking to bring about a One World Order to end international strife may count as this. This can be a difficult line to walk: push too hard in one direction and you make it seem as if the extreme methods are acceptable; push too hard in the other and you run the risk of denying the validity of their initial cause, of arguing for</ oppression (for instance) instead of against it. When the balancing is done they more often than not tend to be either Anti-Villains or even dark Anti-Heroes , especially if put more emphasis on the "well-intentioned" part than the "extremist" one. However, there are some who seem like WIEs but in reality are just straight-up villains, particularly if they are the other way around in terms of what they put more emphasis on and if they are obviously just using their philosophy as a shallow excuse to commit evil . Another version of a darker villain being this trope is that they have an actual philosophy which they believe will "improve" the world but the philosophy itself is too obviously evil to garner any sympathy, such as is often the case with the Misanthrope Supreme and genocidal maniacs . Often, these characters are presented as more dangerous and terrifying than some who are straight-up For the Evulz and Take Over the World types and with good reason: Even Evil Has Standards does not usually apply to them, as it might be for some others. After all, if you think you're doing the right thing, then it's easy to consider even the most horrific actions an acceptable compromise. Compare with Necessarily Evil , where the villain in question has a Heel Realization and recognizes that he deserves punishment (of course, he may always choose to just Ignore That Epiphany). See also A Lighter Shade of Grey . A staple trope of the Master Computer gone mad . If the positive intention is overthrowing an evil government, the Well Intentioned Extremists will be an example of The Revolution Will Not Be Civilized . If the positive intention is helping a friend- realizing things that said friend sees as immoral- the Well Intentioned Extremist will be an example of Poisonous Friend . If his extremism actually succeeds</ in making the world a better place, it's The Extremist Was Right . The Small Steps Hero desperately wants to avert this trope. The Not-So-Well-Intentioned Extremist has no such convictions. As this trope often goes hand-in-hand with the Face–Heel Turn or may involve the reveal of a villain's true plans (or intentions), expect spoilers.

Whether intentionally or accidentally something has been destroyed, or else it never arrived via delivery or whatever. Our hero feels the need to replace it, but budgetary and/or time constraints have forced them to make a few cutbacks. Like, actually having it be what it's supposed to. It is not uncommon for it to be a Shoddy Knockoff Product This is a sister trope to Broken Treasure . See Dead Pet Sketch if the replacement involves an animal

You know how when someone describes something, they actually tell you about the thing itself? Well, this is not that trope . </ Subversion distilled to its purest essence: you directly build up the audience's expectations with an elaborate description of something, then tell them that you're actually talking about something else — often

the exact opposite of everything you've just said. Closely related to Dissimile , where the simile is broken down by successively removing all the crucial elements. Most often a Comedy Trope , but can be Played for Drama if done correctly. Compare Analogy Backfire , Bait-and-Switch Comparison , Distinction Without a Difference .

They say that any new skill can be learned with proper observation and a deep, clinical understanding of the subject matter. Or at least, that's the theory In practice, even the most practical forms of training and education may end up failing the student when they finally have to face the subject in the real world. Consequently, in this trope, characters who've learned their skills through the best training that money can buy may find themselves folding like cheap suits the moment they leave the training grounds — especially in the case of military training Part of this is due to the fact that, sad to say, the lessons can't account for literally everything a trainee is expected to do in the field. More important is the simple fact that the education almost always takes place in a controlled environment of some kind: no matter how extreme the training, most</ teachers actually want their students to survive long enough to apply their skills outside of classrooms or boot camp, so the lessons won't actually feature all the potential threats that they would face in the real world, only comparatively safe approximations. Once the trainees are forced to use the training they've learned when up against real, tangible danger, they will likely find themselves under incredible stress and start making mistakes All of this can lead to a form of Performance Anxiety , the realization of just how out of their depth they really are leaving the character paralyzed with fear and left at their opponent's mercy. If they push through it and try to get a hit in, chances are that they'll still be completely overwhelmed by any of the many, many factors that their training did not account for, and in the process, get thoroughly curb-stomped Depending on the story, this will end in either a horribly ignominious death, or a valuable source of experience that will end in the character becoming genuinely Strong and Skilled Compare Ensign Newbie , Every Year They Fizzle Out , Paper Tiger , Taught by Experience and Weak, but Skilled . Contrast Incompletely Trained , Strong and Skilled and Unskilled, but Strong . See also Skilled, but Naïve , where the Naïve Newcomer can come across as rather ditzy or green-horned, but are still able to do what they do best when given the opportunity. May result in a (subverted) case of When All You Have Is a Hammer...

Also spelled Windigo, Weetigo and Wetiko among others (depending on the language and region), the Wendigo is a human being turned into a cannibal monster in the mythologies of several Algonquian and Athabaskan peoples. The causes of this transformation and the Wendigo's general appearance vary from region to region. Some lores have it that eating human flesh is what makes you turn into one , but in others you can become one just by coming across a Wendigo or by being possessed by the spirit of a Wendigo. Its most common description is a dreadfully skinny giant of ice devoid of lips and toes, while newer works often portray it as a hunchbacked creature with the antlered head of a deer, or perhaps a deer's Skull for a Head . The more it devours, the larger it grows, and thus it can

never find enough food to satisfy its hunger. In the mythologies of several Amerindian Nations, the Wendigo can revive if you don't destroy its body entirely, which may lead to Kill It with Fire . More info on A potent source of Nightmare Fuel . Not to be confused with the Bigfoot/Sasquatch , though some writers connect the two anyway. Also not to be confused with the Slender Man film of the same name. Compare Our Ghouls Are Creepier for stories of monsters associated with cannibalism from a more arid climate.

The user of this trope need a distraction, often in order to infiltrate the enemies' lair, a secret organization, to enable an escape, etc. Pyrotechnics are not uncommon. Specific variants include: Often the job for the Hero Secret Service . Infraction Distraction sometimes falls under this but usually just dissuades the enemy from searching further. Is sometimes part of a Xanatos Gambit . See also Right Under Their Noses , Trojan Prisoner Ploy , Why Are You Looking at Me Like That? . Contrast Hidden in Plain Sight . Compare The Bait , Draw Aggro . Contrast Deus ex 'Scuse Me , where the plot gods distract the character.

This is a common plot device often used to kickstart a story, or get it into high gear Basically, the heroes discover that some bad guy is up to no good. The problem is that for whatever reason, the hero has trouble getting people to believe him. Maybe because the hero is a kid , because the bad guys are respected authority figures , or because their scheme sounds outlandish . They may have tried to deliver a warning without</ getting evidence first and been dismissed out of hand . Maybe they've lied in the past and the authorities are sceptical. Or maybe the authorities do believe them, but can't act without evidence. Either way, the heroes need proof of what the bad guys are doing in order to get anyone to believe them, and the ensuing adventure becomes essentially about that. Of course, this plot isn't quite</ able to catch up in this day and age of hand-held phone recorders/cameras/camcorders in cell phones; because that would get in the way of the drama</ of trying to acquire evidence. Often they'll come up with different ways of recording information that's complicated enough for the plot This is also a way to get otherwise reluctant heroes involved in the plot. If for no other reason than the fact that since they can't convince anyone else, it's all up to them to solve the problem This can also affect the genre, and is the catalyst of many an Amateur Sleuth and Snooping Little Kid story. If the bad guy taunts the heroes that they can't prove anything, that's Proof Dare . If the heroes resort to fabricating the evidence, it's Framing the Guilty Party In Babylon 5

This is when a character leaves/abandons someone that they were close to, maybe out of an obligation, personal reasons, or not by their own choice Maybe a character is a Living Emotional Crutch or a Morality Chain to them. Maybe they have implied romantic feelings for them. Maybe they were a pair of True Companions , or family. In some cases, the person left behind may not even have realized their feelings until the other left In any case, the character who is abandoned for whatever reason goes crazy after the other leaves them. So this is more like the end result of a character's Living Emotional Crutch leaving them Sometimes, if the abandoned character eventually learns the gone character came back or did not actually die they may regain some of their sense of stability,

or not if they are so far gone or resentful from the character's disappearance Related to Love Makes You Crazy . The "gone" guy/girl could be a Cynicism Catalyst If the "gone" character is still alive, the "crazy" character may decide that I Will Find You , which may lead to Roaring Rampage of Rescue ... but if the "gone" character is well and truly dead, the "crazy" character might actually go the other route Supertrope to Psycho Ex-Girlfriend and Angsty Surviving Twin . Compare Go Mad from the Isolation and Loners Are Freaks , where somebody goes crazy because everybody's</ gone (or if someone's especially lonely, this might actually end up being the result anyways)

This index is for tropes that are either specifically about werebeasts, or frequently come up in relation to werebeasts See Werewolf Works for a list of works that prominently feature werewolves and Werebeast Works for works prominently featuring other types of werecreature. See also Vampire Tropes and Wolf Tropes . Sub-index of Shapeshifting . Compare and contrast Liminal Being , which shares two different natures at the same time

A list of fictional works centered around werebeasts : people that can turn into an animal/partially-animal humanoid and vice-versa, whether voluntarily or not . To qualify the werebeasts must have a central role in the plot, such as being the main protagonists or the main threat, rather than just simply being there Werewolves are common enough to get their own index over at Werewolf Works and should be listed there, though there can be overlap if stories with werewolves also prominently feature other types of werebeast Expect Werebeast Tropes to show up a lot. See also Vampire Fiction and Witch Works

Suppose you've got yourself a Long Runner . And while your Long Runner hasn't really wavered in popularity, not significantly, you still want to connect with the youth of today. Perhaps you'd also like to comment on current pop-culture and political events . Well, you'd better tread carefully or you might sound like you're just screaming, " We're Still Relevant, Dammit! " The parent trope of both Totally Radical and Fad Super , this happens when a series that is gettin' old decides to make an attempt to stay current. Of-the-moment pop-culture references (that usually end up dated by the time the work of fiction makes its premiere) are certainly most common. Inserting or referencing memes is a common variant of this trope, especially if the meme is already way past its prime at that time the writer just decided to use it. The writers might also decide to change a character radically or create an "updated" Expy of an older character. A number of times a character has been made Darker and Edgier easily fit the bill. Another popular tactic is to make the character suddenly become a member of a newly-emerged subculture , fandom or similar group. The result, especially if the writer is not part of said subculture and doesn't do the research, is often laughably embarrassing instead of the bold new direction for which the producers were hoping. This often heralds the beginning of a Dork Age . Can very often result in an Unintentional Period Piece since "current events" are usually short-lived, and worse if the older parts of the franchise that didn't try this still look fresh. Due to Animation Lead Time this can be especially common in animated works, as a long production time means you may miss the relevance

window by a number of years. See also Popularity Polynomial , Mascot with Attitude , Discredited Meme , Follow the Leader , Two Decades Behind , Long-Runner Tech Marches On , Society Marches On , Jumping the Shark , Network Decay , Magazine Decay , Jive Turkey , Pretty Fly for a White Guy , and more than a few Scrappies and cases of Misaimed Marketing . Contrast Growing with the Audience . Its inversions are Disco Dan , Anyone Remember Pogs? , and "Mister Sandman" Sequence , which are dated references to show how something isn't</ hip and modern (or in the former two's cases, irrelevant). Tropes Are Tools aside, this is usually a kind of writing pitfall , especially if you're a TV or movie writer trying to make your current long-running show more hip or trying to revive a long-dead franchise for a new generation . On the other hand, sometimes it works , and, if the alternative is leaving your story looking decades</ out-of-date... The trick is to update the right things, update them the right way, and leave the timeless things that people liked about the franchise in the first place alone.

Also see the related indexes Ghost Fiction , Mummy Media , Vampire Fiction , Werebeast Works (featuring other types of werebeast; occasionally overlapping), Witch Works , and Zombie Stories .

Ever wonder what those stores that buy anything do with the random stuff they accumulate? It might be a little drug store down by the corner. It might be an expansive, labyrinthine mega-mart so large it has its own zip code. However, when you walk in, you can be assured of one thing: It sells everything.</ Absolutely everything. (Except, if you happen to be a Butt-Monkey , the one thing you're looking for.) It sells things you would never expect to see in the same store together—such as, say, baseball bats, frying pans, instant ramen, and cold remedies . The smaller the store, the more specialized you would expect it to be, so the more unlikely this seems— why is a tiny general store out in the middle of the sticks offering fine art? Sometimes, the stuff for sale there shatters the bound of all logic— where on earth (or the moon) did they get their hands on a lunar lander? </ Lord only knows who their suppliers are. If the shop is little and out-of-the-way, it may come bundled with a possibly insane, Q-like proprietor who is quick to suggest all manner of goods to his or her customers. If the shop is enormous , expect to need a map just to find your way to the microwave popcorn . Also quite common in video games, due to the fact that the gameplay tends to be sculpted around the hero's quest . If you find a shopping district full of these then you are in a Bazaar of the Bizarre . Oftentimes, even the far reaches of the unknown are populated with tiny tent stores that boast a huge selection despite no one shopping there (in fact, being so far into the game, they're likely to have more</ stuff). If all auction houses , stock exchanges and brick & mortar stores are this regardless of location then you probably have an MMO on your hand. Contrast with Severely Specialized Store . Compare with We Buy Anything .

Reuse of a tape that was previously recorded over, without recording over the entire thing, will leave the surrounding footage, and will continue on to it after the newly recorded footage runs out And sometimes this is used in a joke, to show somebody (generally the person who owns and then plays the tape) doing something hideously embarrassing. The guy involved gasps and stops the tape but it's too late - about a dozen of his closest

friends have seen him singing, dancing or performing a sex act on tape and they're never going to forget it It doesn't work quite so well with CDs due to their differing format ... but since there's still a lot of VHS players and tapes going around, it'll be used for quite a while yet Sometimes this trope can be played with where the guy involved accidentally hits fast-forward on the remote instead of stop or eject, and the tape fast-forwards to an even more</ humiliating scene, but usually it's played straight Compare and Contrast Taped-Over Turmoil A car advert (German, possibly Volkswagen) demonstrated their engineers' fixation with making their cars the best they could with an amateur video from one of the engineers taking geeky delight in the function of door locks, the design of the rear light cluster and so forth. At the end is footage of his wedding

Animated TV shows originating in the Americas (USA, Canada, Mexico, Brazil, Chile, Argentina, etc.), Western Europe, Australia or New Zealand. Some of these entries are actually compilations of theatrical shorts assembled for broadcast; the vast majority, though, are original creations made for television These are frequently Dom Coms (The Simpsons </, Family Guy </, The Flintstones </) or Adventure Series (Jonny Quest </, Justice League </), and generally follow the conventions and tropes of their genre (and may exaggerate them) Note that during the 1970s, many prime-time series both current and cancelled acquired animated versions broadcast as part of the network's Saturday morning kidvid block; The Ricky Gervais Show </, based on the podcast of the same name, would be a recent example. Many of these are noted in the entries for the live-action show Most of the modern animated television series on this page are created, written, and acted in the west, but the actual animation is outsourced to Korean studios to save money (In other words, unless the idea or sources, etc. were outside of the West, a Western animation made outside of the Western world doesn't make the series/cartoon non-Western. This is only done to save money, as mentioned previously). This is after most series in the '90s were outsourced to Japan, but Korea is cheaper. Only films by major studios or the occasional flash cartoons are still animated in the west Not to Be Confused with an animated western For non-Western</ animation, see Anime , Asian Animation and Eastern European Animation Animated shows have developed their own dialect of cliches and devices; see Animation Tropes for a listing Feature films belong in the Animated Films index

Basically, a group of terrorists who are mostly from the West (typically defined as the continents of North America and Europe , though Oceania and South America can also be included), and who are mainly influenced by cultural, political or religious ideas of Western origin. The trope may also cover a single individual. What makes someone "Western" can be rather hazy and difficult to define, since it is not simply a matter of where the person was born or grew up. Many Islamic terrorists, generally regarded as non-Western, lived the majority of their lives in the West, and for that matter many elements of Islamic culture — coffee, cookies and marzipan, for instance, were originally Arabic, Iranian and Turkic foods, respectively — have profoundly influenced Western society and vice versa, making it tough to ascertain who

is "Western" and who is not. Many countries in the Americas, especially in The Caribbean , have notable West and Central African and South Asian influences due to many of the inhabitants of those countries being descendants of African slaves and Indian laborers brought there by European colonists during the Atlantic slave trade, the United Kingdom has South Asian influences in it's culture due to the large amount of diaspora from the Indian subcontinent, and many Southern and Eastern European countries have Islamic influences due to the Moors, Arabs, Ottoman Empire, Persian Empire, notable Turkic minorities and the regions' close proximity to North Africa, the Middle East and Central Asia, with Kosovo, Bosnia and Herzegovina, Albania, Turkey, Azerbaijan and Kazakhstan even being predominately Muslim. Furthermore, several culturally and/or politically European countries (Turkey, Cyprus, Georgia, Azerbaijan, Armenia, Kazakhstan and Russia) have the majority of or all their land in Asia, and thus terrorists from those countries could be considered either Western or Eastern, depending on what part of the country they are from and/or whether you consider them European or Asian Generally, a "Western terrorist" is a terrorist fighting for something that has been an issue in the West for a long time - an ideological offshoot, for better or worse, of the legacies of the European feudal system, the Renaissance, the Enlightenment, or the scientific revolution launched in the seventeenth century, like anarchism, communism, Christian religion, environmentalism, nationalism, or racism, as opposed to an issue most strongly associated with another culture (like non-Christian religion, which of course raises the fascinating question of whether to classify Israeli terrorists as Middle Eastern or Western. Same with South African terrorists, which could be classified as either African or Western). Bear in mind that an apparently non-Western terrorist group may be secretly led by Western terrorists acting as The Man Behind the Man . For example, this would be the case if an apparent Islamic terrorist group turned out to be part of a secret neo-Nazi plot to provoke World War III (unlikely, yes, but stranger things have happened) Creators may opt to draw from Real Life terrorism cases, from Anders Breivik to the Oklahoma City bombers Timothy McVeigh and Terry Nichols, to ETA's campaign and the long-running intercommunal strife in Northern Ireland , instead of the arguably more topical example of Middle Eastern terrorists . They may find Western terrorism more interesting than its counterparts in the rest of the world, simply because it is much more multidimensional in scope. Additionally, using Western villains often seems like an easy way of skirting any racial or ethnic Unfortunate Implications (though many Middle Easterners are</ of Caucasian descent, or at least look it). However, there is also danger with this approach: if used in improbable contexts, or to replace non-Western terrorists in an adaptation or update, the use of Western terrorists can start to look like a cheap case of Acceptable Targets or Politically Correct History Some groups of Western Terrorists that have appeared in media and news are various Animal Wrongs Group , whose actions have been dubbed eco-terrorism . There are also militia groups . Other examples include extreme nationalists, racial supremacists, violent leftists, religious radicals and separatist movements. The Troubles in Northern Ireland is a notable example - a definitely European dispute, with white Christians involved in sectarian violence which included riots and violence (on the other hand, the Irish Republican terrorist/resistance movement is definitely anti-colonialist, and anti-colonialism is usually

thought to be a non-Western theme). A similar notable example are the conflicts between Russians and Chechen separatists in the Russian republic of Chechnya . In recent years, there are those who commit terrorism in the West as lone wolves without being affiliated with known established terrorist organizations; often they are psychopathic young people subscribing to some nihilistic ideology that makes sense only to them Another good source of Euro-villainy is the post-Soviet weaponmonger. This person may be a fascist, but usually they serve no cause other than the creation of chaos , a self-sustaining market for their endless supplies of nukes, viruses, and other deadly toys for their more ideologically minded customers to use on each other . In series where such black-market dealers and Corrupt Corporate Executives exist, they inevitably prove to be more</ dangerous than the Islamists/neo-Nazis/revolucionistas<//etc. to whom they're selling weaponry. Newer ones however prefer to reinstall the old Soviet Regime without the communist ideals and instead aim for a rule resembling more that of Ivan the Terrible This trope should not be confused with partisans</ - resistance groups who fight regular military forces (in other words, guerrillas). Unlike terrorists, partisans are perfectly legal under international law - if and only if</ they have a chain of command, some means of identification from a distance, and carry their weapons openly. Otherwise, they are unlawful combatants. Note, this doesn't prevent characters from calling their attacks terrorism</ despite their legal legitimacy. Partisans are covered here on TV Tropes as La Résistance . To be a true terrorist, one must both be ideologically motivated and engage in what is widely recognized as violent criminal behavior Partially Truth in Television , in the United States; you are seven times more likely to be killed by a homegrown political extremist than an Islamic fundamentalist. In fact, the most common form of American terrorism is by environmental extremists, though usually this doesn't harm anyone (since they avoid it) For terrorism-related sister tropes , see African Terrorists , Middle Eastern Terrorists , South Asian Terrorists and Far East Asian Terrorists . Some Western Terrorists are also Terrorists Without a Cause . Often overlaps with Your Terrorists Are Our Freedom Fighters , especially when the Western Terrorists are portrayed as Irish or white supremacist. See also White Gangbangers

You've tried the rest, now try us! OK, we know you've been screwed by other companies before. Your hair is falling out, you're covered in warts, and your children run screaming from you. Nothing you've used so far has worked as advertised. Or at all. But you can trust us. We have your best interests at heart . Really. Now, start sending in those installments of $19.99 . This pitch is the last refuge of the scoundrel. Frequently used by products with dubious effectiveness, or ones that cost far more than any practical difference they might make is worth. The products that are offered aim to improve something that people are insecure enough about to pour out money over, such as body image or social standing. This trope has the cynically clever idea to target people who have already proven themselves dupes once. Oddly effective even against people who should know better. Compare The Man Is Sticking It to the Man . Contrast We Don't Suck Anymore , where we suck less than we used to. Any weight loss pill or plan.

When a sidewalk is being paved in fiction, it probably won't dry

before someone leaves their mark in the wet cement. Either during a Chase Scene , where a "Wet Cement" sign is shown before someone runs through it, or as a form of graffiti This process takes a long time, even with the quick-drying variety. Unless you're in a cartoon, in which case you should avoid this stuff like the plague, because if you step in it, it'll harden instantly and probably trap you in it. Someone may also trap someone deliberately with this method. Results can resemble Taken for Granite While the material used to pave sidewalks is properly referred to as 'concrete', the sign in front of it is usually labeled "Wet Cement". Cement is actually the gluelike substance in concrete that makes it hard and binds it together, but the sand and gravel (technically called "aggregate") is what makes it useful to walk/drive on or build stuff out of. Mix cement & aggregate, you've got concrete. Add water and you've got wet concrete to pour Related to Cement Shoes , Sheet of Glass and Fruit Cart

Batman: The Animated Series </ : In "See No Evil", Batman pursues an invisible thief, who gives away his location by running through wet cement and leaving a trail of footprints.

A Wetware Body is when a biological Host is possessed by a computer or other artificial intelligence (named after a casual term for the biological equivalent of hardware, as in Wetware CPU). This can lead to the host acting either like a machine (monotonic, unemotional, unfocused on anything but objective), as it normally would (if the possessing A.I. is a good actor), or anywhere in between. In science fiction discussion circles it's often referred to as "cybrid", after the moniker used in Hyperion Cantos </ , however, the concept is rare enough that the term remains relatively obscure Frequently this process has the side effect of causing the A.I. to feel emotions for the first time, which may act as the trigger to self-awareness and empathy, or like a virus that inevitably destroys the mechanical hijacker Wetware Body characters are most likely to appear in Sci-Fi horror genres, or in stories where machines and artificial intelligences are common, or at least present by some capacity A subtrope of Meat Puppet . See Also, Meat-Sack Robot Note: Becoming a Wetware Body means , not the possessor. For the other way around, see Wetware CPU . Do not confuse with Wet Sari Scene

Digital processing technology has come a long way from the days of mechanical relays. Transistors, those magical little things that make modern computers tick, have gotten so small we can measure their size in individual atoms — small enough that we can cram a lot</ of them even in devices that fit in the palm of your hand. But despite our best advances, Father Science's thinking machines are still leagues behind those of Mother Nature. Even as flash memory and transistor technologies are , the human brain still casually humiliates our most cutting-edge devices with its immunity to EMPs , its absurdly low 20 watt power consumption and its storage space But what if we told you there's a way to take a shortcut past the constraints of electronic computing and hold unimaginable processing power at your fingertips? You can do all of that and more with the Wetware CPU...</ at least as far as Science Fiction is concerned Wetware refers to a biological system. A Wetware CPU is the brain and nervous system of living beings typically human beings, because if we'll create an affront

to nature and humanity, we might as well not be pussies about it and go the whole hog used to power non-organic machinery. In speculative fiction settings, particularly those where true artificial intelligence either doesn't exist or is shunned, it's sometimes the case that the brains of living beings, sapient or not, will be incorporated into machines and used for processing or command and control purposes. It varies whether the rest of bodies are retained, or how willing the beings in question are. When used on unwilling subjects, it may be an element of Sci-Fi Horror , particularly Body Horror or And I Must Scream scenarios Related to Brain in a Jar , Man in the Machine , and Cyborg Helmsman . Compare Brain–Computer Interface , Living Battery , Unwilling Roboticisation , and Human Resources . Contrast Brain Uploading , where instead of using human "wetware" to run machine software, you use machine hardware to run human "software". Also contrast Wetware Body , where a machine controls an organic body instead of the other way around. Finally, also contrast Tinman Typist , where a machine occupies the workstation of a human instead of the latter being wired into where a machine should be

Our True Companions , Badass Crew , Five-Man Band — whatever — are pretty close. They share a tight relationship, trust and protect each other, would die for each other, if it might be necessary Only, what's this? One or several members of The Team make(s) a mistake or the wrong call The reasons might vary, but bottom line is, the once tight bond between the character(s) in question and their former friend(s) is severely damaged, if not completely broken. Instead of love and sympathy, at least one of them feels aversion, distrust, and/or disdain for the other(s), if not outright hatred depending on the severity of what the character has done. Whether they start actively fighting each other or simply share a broken bond and avoid each other will vary, but since things sometimes don't work out the way they are supposed to, they don't/can't reconcile by the end of the episode In contrast to a member being Put on a Bus (which doesn't necessarily mean these two tropes can't coincide), this trope focuses on the extraction of a character from their usual environment, due to aversion, distrust or a misunderstanding. However, the character is being kept as a part of the story, which is what differs this from simply being Put on a Bus — the extracted character is not</ being dropped by the writers If the character in question was idolized by the other prior to the incident, rather than simply being close friends with them, that's a Broken Pedestal , and the two tropes may coexist. Might trigger a Beard of Sorrow , 10-Minute Retirement , Face–Heel Turn , Heel–Face Turn , a degree in badassery or a Despair Event Horizon . The list goes on and on. Can be revealed via Former Friends Photo Contrast with Heel–Face Turn . Compare with Achilles in His Tent , Deus Exit Machina , My Greatest Failure , Grey-and-Gray Morality and Jumping Off the Slippery Slope , Evil Former Friend , Breaking the Fellowship , Et Tu, Brute? . See also Cain and Abel , when the former friends in question were either siblings, or were childhood friends who grew up with each other prior to their falling out. See Formerly Friendly Family for more then just siblings that grew to hate each other. For the inversion, see also Fire-Forged Friends : enemies-turned-allies

is at present a controversial social issue. However, in many

futuristic societies, it is a norm, and may in fact be encouraged. This is generally, but not always, the sign of a Dystopia , and at the very least demonstrates the divergence between the fictional world and the actual one. A handy rule of thumb is that the consensual nature of the euthanasia presented is inversely proportional to how dystopian the society presented is supposed to be Note that, in some countries and US states, consensual euthanasia is legal under certain guidelines

One of the signs that a story is taking place in The Future (and not just Next Sunday A.D.) is the elimination of all illnesses and disease . Whether it's by a eugenics program , a miracle cure-all , or lots of mandatory Phys Ed , people in the future simply won't get sick. This is often lampshaded by a future citizen talking about having a cure for the common cold. Although almost as often, the common cold is the only thing that hasn't</ been cured. A Cure for Cancer is another hallmark A meeting between a super-healthy future person and a disease-ridden ancestor can play out in several ways. Perhaps the futurist will be puzzled over the concept of illness, or offer their cure-all to the ancestor. A more cynical work might have the smug futurist suddenly get deathly ill, as the ancestor's myriad germs attack the immunity-less future person in an inadvertent case of biological warfare Subtrope of Ideal Illness Immunity . Often found in futures with Crystal Spires and Togas and Perfect Pacifist People . Also see Perfect Health , Magic Antidote , We Will Not Have Appendixes in the Future , Magical Antibiotics , Fantasy Contraception , Human Popsicle , and Transhumanism . Contrast with Big, Fat Future , unless the health hazards of obesity have also been eliminated

What better way to show the passage of time in Time Travel stories than by having humans lack appendixes and other vestigial organs? Progress! Never mind that it takes millions of years for significant evolution like that to occur and the fact animals like whales and snakes (specifically snakes like boas, pythons, and slender blind snakes) have had vestigial leg bones for so long that it's unlikely that humans would shrug off their own vestigial organs anytime within a hundred thousand years . Evolution is a result of natural selection , and while they're unnecessary, there isn't much evolutionary pressure against</ having an appendix. If something is truly vestigial, there is little advantage in getting rid of it so evolution will be particularly</ gradual in getting rid of vestigial organs, if it gets rid of them at all. Whenever a feature becomes useless to an animal it does tend to slowly disappear since genetic mutations that lead to its degeneration are not weeded out by natural selection. There is also the issue of the resources, minor as they presumably are, that the animal uses to grow these useless features; there is therefore some benefit to losing these vestiges, but there's not much in it. Of course, this trope can easily be justified through genetic modification - the appendix didn't naturally</ evolve away, humans simply altered their own genome to weed out the junk. A note on the appendix itself: The appendix has historically been thought a useless, vestigial or even dangerously organ, but Science Marches On - it's still considered vestigial, but not necessarily useless. In the last few years scientists have begun to suspect that it is actually important to the body, as a reservoir of the "good bacteria" species that populate the colon and are necessary for digestion. When the colon's population is thrown out of whack by infection, diarrhea, or the like, the bacteria "hiding" in the appendix can recolonize it

and return the necessary balance. There are also suggestions that this reservoir is used in training the immune system of babies and young children. It's still a lot easier to live without one than it is to live without most of your other organs, but it does seem to serve a useful (if non-vital) purpose. This is what we would expect from evolution; if you have something useless hanging around, it can be repurposed. Moreover a smaller appendix might more easily become infected, putting up a barrier to its fading away and selecting for a larger appendix. Do not confuse with We Will Not Use an Index in the Future . Also see We Will Have Perfect Health in the Future and Evolutionary Levels .

Whether the future is dark , a Used Future , a shining cityscape of Crystal Spires and Togas , or a post-apocalyptic Scavenger World after the fall , there are certain things you can more or less always expect in The Future ™ . Here's a practical guide For things missing in the present time, see There Are No Indexes

In fiction, photographic and video evidence of any kind is automatically accepted as genuine and unimpeachable. If someone has either one, and it shows you doing something bad, then you're screwed. The possibility that it could be digitally faked is never even considered unless the provenance of the evidence is central to the plot — and when it is</ proven, it is a great shock and surprise to all who were fooled by it In reality, it's very difficult to fake these things digitally or otherwise. Not a year goes by without some appearing and subsequently being torn to pieces by . Any competent effects artist or Photoshop user will tell the difference quite easily. This could potentially change in the future, however, as the technology becomes more sophisticated Not surprisingly, this is starting to move into Discredited Trope territory as people in general become casually familiar with digital manipulation

Our space-faring heroes must pass as alien creatures, if only at a cursory glance. Off we go to Sickbay, to be transformed into Rubber-Forehead Aliens via Applied Phlebotinum ! This, despite centuries, nay, millennia of cosmetics use by humans, and the very advanced art of stage makeup and personal Special Effects developed in the late twentieth century Perhaps because there is no a cosmetics counters or a functioning professional theatre departments there, doctors on starships, space stations, and other Sci-Fi locales are in charge of cosmetic alterations One might try to justify this by appealing to the Literary Agent Hypothesis : The "real" aliens actually look more lifelike and alien. They just look rubbery on screen due to technical limitations. When this is used in espionage , it's possible this kind of biological modification is required to avoid detection by future surveillance technology used by the enemy, making this one half of an arms race in spy technology

Common in Science Fiction , especially in Days of Future Past , but also in Space Opera , Wagon Train to the Stars , and many other subgenres. While the Cool Starship of the series has fully automated food dispensers, and artificial intelligence and nanotechnology are realities, indentured servitude and slavery of sapient beings is still widespread, and the most common slave occupation by far

in The Future (TM) is the lowly miner. Why mining? Because cave sets are cheap and easily redressed to represent different planets. However, we have to ask ourselves why such technologically advanced civilizations (presumably capable of building automated robot mines) choose to be so dependent on manual labour as to indenture or enslave thousands, even millions of sapient beings instead of applying technological solutions which are cheaper, stronger, more efficient, tireless, more humane and less rebellious. Sometimes the trope is justified by slaves or servants symbolizing social prestige, but in societies that are supposed to the technological near-equivalent of The Federation or whatever outfit the heroes belong to, it comes as a bit surprising that interstellar polities so frequently appear dependent on menial and dangerous labour conditions with No OSHA Compliance — and if they represent social prestige, why aren't they on display, as servants, maids, entertainers or sex slaves? Items of Conspicuous Consumption aren't conspicuous if they are hidden away in a mine. For what it's worth, there are some</ benefits to slavery which could explain its use in a futuristic setting. There are some jobs (namely skilled, management and service work) which are just too complex for any currently envisioned mechanical technology to do without some human assistance. What makes this trope appear blatant and unable to suspend disbelief is that futuristic slavery rarely involves these environments, but rather dangerous hard labour such as mining, repetitive industrial work and space construction work. In these environments, slaves are way too soft and inconvenient to provide for because of the biological fact that they get exhausted and need to sleep (and in Sci Fi space labour you have to invest in highly expensive and complex life-support biospheres for every single slave, defeating the purpose of cheap labour in the first place), and they also have much more dangerous intelligence and machinery at their disposal. A disgruntled slave who's a mad scientist, MacGyver-style improviser or C4 expert (or even one with just a pickaxe) is substantially more dangerous than one who works primarily with a hoe (not that you should write the latter guys off if you've got them in a pinch either — isn't that right, oppressors of the peasant caste in the ancient Far East?) Part of the reason for this is that the evil being portrayed usually isn't the slavery itself, but the emphasis on punishment which the workers must endure. Many " The Gulag in Space " examples are more about punishment than economic efficiency. In Sci-Fi, you can identify The Empire or any other villainous dystopia through their use of Space Gulags . In modern-day society, we have machines that are quite capable of automatically pressing license plates for free, but prisoners are the iconic way to do it. This trope can potentially be justified for the same reason many industrial processes that could be automated are not. The time, cost, maintenance, and effort for completely automated systems can quite often be far in excess of what skilled labour can have. Automated systems often have a fairly limited lifespan, and the cost of building, maintaining, and replacement is occasionally ludicrously high, thus slave labour or labour that borders on slavery is used in lieu of automation because it's often actually cheaper provided the workers are from a poor country populated by species with a higher fertility rate and physical fortitude but much lower average IQ and life support costs than the country their masters or employers are from. If the manual workers are not slaves but the normal population of a civilization, one fictional reason sometimes given is the ethics of dignity of work. There are very few places there a human is mandatory to do work. Generations of the Evil Luddite argue that if

too much is automated, most people are unemployed. This is a reason why some people oppose industrialization. The consensus of actual economists is that while automation may displace some specific workers temporarily, in the long run it simply frees them up to perform more productive work. Thus in the Star Trek Federation, the replicator doesn't make people totally obsolete, but instead allows them to spend their time doing something more productive or more fun than manufacturing common goods. In addition, the amount of effort to build certain types of quality control is either not possible, absurdly difficult, or downright dangerous . Occupiers may also use the local population instead of slaughtering them, in the hope that the workers' presence will deter an all-out counter attack. Another common and logical way to justify the use of slaves is through presenting the history and dangers of A.I. Is a Crapshoot , the reason why future civilizations want to avoid automation. A rogue AI can hijack automated systems with impunity, but individuals are easier to identify and kill when they get too loud. Thus, this trope isn't about future slavery; it's more about any instances about using manual labour even though people in the series already have something that would be quicker, easier, more efficient, and/or overall better. A common yet rarely understood example is ubiquitous presence of characters upon ships capable of Faster-Than-Light Travel — why stock and crew a starship when one can simply send an ? Because it's hard to tell entertaining stories about automated probes . This is a big reason why Real Life space development holds few people's interest . As well, beware of Technology Levels ; just because a civilization can travel in space doesn't mean they actually have</ servitor robots. But the series that have already shown automation yet refuse to use it in the obvious places don't have any excuse. This is perhaps the ultimate extension of Schizo Tech . Compare with I Want My Jet Pack , and compare and</ contrast Job-Stealing Robot

In many science-fiction works most if not all soldiers and or police (especially Space Marines) wear roughly as much plating as a medieval knight, often being Powered Armor or made of composite materials (which does a decent job justifying it when those occur, since they alleviate the issue of mobility which would otherwise be compromised by such extensive coverage). Oftentimes this armor is portrayed as being completely useless , though sometimes it's stated , if not demonstrated , that the armor is completely bulletproof, it's just that they're using lasers - or the other way around if Kinetic Weapons Are Just Better Might be justified in that (though most militaries prefer mobility over protection) the armour provides very</ reliable protection against the weapons the soldiers are up against (like plate armor at its advent in the medieval times, with the armour making its wearer very hard to injure; once more ways to bypass it arose, to be fully armored fell out of fashion). Or if the armor is supposed to double as a space suit (which are already bulky and cumbersome) As an aside, personal armor technology has improved dramatically in the last fifty years, whilst the average infantry rifle has actually become less</ powerful (cartridge sizes have decreased for the sake of accuracy, ergonomics, ammo capacity, and automatic fire capability). For this reason, this trope is increasingly looking like Truth in Television

This trope, also known as the "Antietam Defense" or the "Thermopylae Strategy", occurs in a situation where the objective is not to win outright, but rather to deny victory to the opposing

party A rebel faction and an imperial faction face off over a particular resource . It does not matter who is attacking or defending, but the end result is that the rebel faction destroys the resource, denying it to the imperials/others. Thus, even though the rebels do not have it either, they can claim victory because the imperials did not obtain the resource, regardless of losses suffered by the rebels (similarly, the imperials might be able to claim victory since, while they're powerful enough to ignore the loss of the resource, the rebels are put at a disadvantage by failing to capture it) Another version of this trope would be where one side holds the field despite superior losses, and can then gain something by this act, or where another side loses the field, but causes superior losses and gains, say, time by this act. This does not apply if one team leaves with fewer losses, but gains nothing by the battle When claiming victory in this manner, a faction must be looking at long-term objectives. Since in the short term the conflict was a stalemate, the participants instead must look ahead and figure out what they can or can't do as a result of the lack of progress In the end, this trope is primarily a mentality, because both sides of a conflict can view this as true for their side. For instance, the imperials in the above example can also use this trope because they forced the rebels to deny themselves the resource, all losses ignored, which drastically harms rebel efforts from the imperial perspective Compare Pyrrhic Victory , and Pyrrhic Villainy . When applied to video games, this is Spiteful A.I. or Hold the Line when the victory occurs for the computer or the human respectively. May overlap with No MacGuffin, No Winner in some circumstances. Compare Xanatos Gambit for setups where either outcome is favorable. See also Disqualification-Induced Victory , Rage Quit , and X Must Not Win This trope may sometimes happen at the resolution of the main conflict , so

The point in a series where the story takes a sudden dramatic turn. Things will never be quite the same again When advertisements tease you with words such as "The most shocking</ episode of the season!", they're probably referring to this (unless they're not). This is the episode meant to radically alter the status quo , and in doing so send a major shock through the viewership Note that it's not a Wham Episode if it turns out that the shocking events were All Just a Dream , or if the changes are reversed with a Snap Back or Reset Button , or if the series has Negative Continuity . To count as a Wham Episode, the events must actually happen and become canon . When a series is already successful, and the writers decide to do this, it's very risky. The writers are making a bold move and risking losing a lot of their fans. The writers have balls. You might even say they have canon balls Almost always takes place at a Season Finale , and at times can even be a Grand Finale if it includes a high enough shock factor (which isn't always the case). Alternatively, it might come before</ the Season Finale, which then resolves the plot twist. Earlier than that, and it could be a Halfway Plot Switch , or if occurs even sooner a Mid-Season Twist (which usually goes down at the end of Act I). One is likely to happen at the end of a string of Not So Episodic episodes

Compare Genre Turning Point and Nothing Is the Same Anymore . Contrast with Breather Episode . Related to Drama Bomb . Complete opposite of Status Quo Is God . If this is the first episode and/or the prologue, it's a Downer Beginning . If the WHAM aspect is concentrated in a single line, it's a Wham Line ; if it’s

in an image, it’s a Wham Shot . See also Ascended Fridge Horror , wherein some aspects of the series leave some viewers with reason to expect a tone shift, before they see it applied by the writers. Often the first warning that the viewer is dealing with a Deconstruction . Frequently caused by or contains a Gut Punch It also has nothing to do with a certain British 80s pop band with George Michael , or a JoJo villain named after said band Because real life is not scripted, do not add such examples

Whereas a Wham Episode is an episode that radically alters the Story Arc , a Wham Line is a line of dialogue that radically alters a scene. A scene is headed in one direction, then the line is uttered Afterwards, the scene is going somewhere very, very different. For it to be effective the audience must not see it coming — not just not knowing the exact information, but not expecting any kind of surprising, or even significant</, line there at all. If there was background music playing beforehand, expect it to abruptly come to a stop after the line is said and/or switch to music that better reflects the scene's new mood. This is strictly an audience trope. For a milder in-universe version, see Dropping the Bombshell . Often overlaps with Armor-Piercing Question or Armor-Piercing Response , where the line causes a character to seriously rethink their position. In a joke or comic story, a Punch Line functions very similarly. When something seen by the viewer or reader of visual media radically alters a scene, it's a Wham Shot . Tends to come in the form of a reveal . Can fit into a Wham Episode . : This is not just a line that happens during a Wham Episode . The line itself has to radically change the plot in itself. If the line is the result of events or conversations that are clearly shown on screen, or it's a Foregone Conclusion , then .</

An unexpected move, or even a change of expression on one of the characters, can be all that's needed to alter a scene completely. It can actually be any event that doesn't need any characters commenting it for the viewer to realise an important twist is happening. In literature or any other written narratives, the Wham Line and the Wham Shot can be the same thing. In visual media however, the Wham Line tends to be a line of dialogue. The Wham Shot is anything else that can happen to alter a scene and is visible to the viewer or reader. Like its verbal or written cousin, the Wham Shot can be part of a Wham Episode or of The Reveal . It also has to be completely unexpected Different from Reveal Shot as it doesn't necessarily involve moving the camera to show the surprising element, but overlapping between the two tropes can be quite frequent Possible special cases: Revealing Hug , Traitor Shot , Reaction Shot , Stalker Shot , The Stinger , The Gut Punch , and/or the last frame of a Staggered Zoom Not to be confused with Boom, Headshot!

Because most viewers have basic common sense, one would usually expect the same from fictional characters. Any negative deviation from such usually prompts a Face Palm and the comment " What an idiot! " or similar, hence the entry name Can cause A Tragedy of Impulsiveness , if the situation becomes more serious. It is also the usual reaction to a character demonstrating especially severe Genre Blindness Can also be a response to ineffectual contestants

on a Game Show And please, as tempting as it is to defend your favorite work from forcing the Idiot Ball into its characters' hands, refrain from making Justifying Edits . With a Card-Carrying Villain or Idiot Hero , a few of these are to be expected. If the work as a whole has an Idiot Plot , it goes on that page instead. Also, do not assume that something listed here automatically makes it a bad work</; it is usually more along the lines of "something else that is better could have been done". As explained on Idiot Ball , characters being idiotic sometimes can serve as a weakness to them and make them more realistic and well-developed. And, of course, some characters are supposed</ to be idiots, in which case we probably don't need a full and complete list of every stupid thing they do; a brief summing up would be more helpful Compare: Idiot Ball , Villain Ball , Too Dumb to Live (when a character dies or very nearly dies because of their own stupidity), Lethally Stupid (when a character's stupidity nearly kills somebody else) and Boss Arena Idiocy (when a video game boss that would be otherwise undefeatable is defeated by circumstances within their own arena) There are also other examples that do not fit the standard idiocy

An adult digs up their old record collection out of the attic and their kid asks what they are. The parent nostalgically names all the singers of their day whose works have been put to their vinyl discs. Then the kids says, "No, I mean, what are records?" A subtrope of Technology Marches On , initially fueled by the novelty of the notion that a format of media could actually become obsolete. It bears mentioning that it started cropping up in fiction before 1990, and the characters unfamiliar with records were full-grown adults, meaning that in its earliest form the trope ran on shameless hyperbole. Even in the 21st century, though, its realism is dubious . Most young people do indeed know what a vinyl record is (from more recent media depictions if nothing else), even if they never listened to or owned one themselves and don't know whether a "seven inch" was an album or a single, or whether 45 rpm came before or after 33 1/3 Modern DJs still use them, for instance, and their appearance in pop culture is almost ubiquitous. They've also been among audiophiles, hipsters, indie music fans and even teenagers since 2007 (Sony is even pressing records again), thanks to their retro appeal and their exemption from the abuses of the Loudness War , and even outsold CDs for the first time in over 30 years in 2019. Consequently, while they still haven't overtaking streaming in terms of revenue, their renewed semi-popularity started to be acknowledged in mainstream media at the end of the 2010's, making this a Discredited Trope with regards to records themselves. This trope can also be used for 8-track tapes, of course (arguably more understandable, since many people know of</ 8-track but don't know what the actual cartridge looks like). It likely already applies at least to some degree for both cassette tapes and videocassettes, as both are no longer being made en-masse and generally only appeal to niche markets. Wikipedia reports that whereas 442 million cassette tapes were sold in the U.S. in 1990, by 2016, the number was just 129,000. The last major Hollywood film to be released on VHS in the United States, Cars if you want to get technical, the format persisted for slightly longer in other countries, with the last VHS release in the world being a South Korean release of Inception . In this age of legal streaming and downloading of music, movies, video games, and other software,

sooner or later the whole notion of going into a store and buying a physical object with stored data will be part of the history books (well, the history e-books if paper books also become obsolete due to e-readers). Basically, what Before My Time is to cultural references, this trope is to technology. Ironically, this trope may be responsible for more people knowing just what records and other stuff are, if they saw this being used in media and wanted to know just what the joke was. Also, the fact that something is not in active use anymore doesn't mean people will have no idea what it is. Papyrus hasn't been used for centuries, and people still know what it looks like and what it was used for. Not to be confused with the record label of the same name, owned by David Wilcox . Contrast Technologically Blind Elders , the inverse.

OK K.O.! Let's Be Heroes </ :

This is when directors or writers release details about plots, characters, backstories , or other elements they thought</ about adding to the story at one point but ultimately never did. Unlike All There in the Manual , however, this new information is not released as Word of God with the intention of being added to the Canon . These elements are only What Could Have Been but never were and never will be part of the story proper. Some may quickly find a home in Fan Work . Many fans love hearing the possible paths their favorite story could have taken... even while breathing a sigh of relief (or feeling disappointed) that they ultimately didn't come to be. This can also refer to a Sequel Hook that never got a payoff , alternate casts or directors, or even tantalizing news that the entire story was completely</ different from the one we all know, when it was first conceived. Just a few typical reasons for why stories get altered along the way: A good place to find What Could Have Been is in DVD Commentary and out-of-continuity pilots used to pitch a show. Keep in mind that Tropes Are Tools and that the ideas and concepts implemented into the final product are sometimes better than What Could Have Been. Despite this, there are still times where fans think What Could Have Been as What Should</ Have Been, leading to Fan-Preferred Cut Content . See also The Other Marty , Vaporware , Development Hell , Dummied Out , Mid-Development Genre Shift , Uplifted Side Story . Contrast with Offscreen Moment of Awesome where a particularly grand moment is seemingly perfectly set up to happen but then isn't seen, and They Wasted a Perfectly Good Plot for when they used an awesome idea in a less than ideal way. Occasionally something that was removed survives in another part of the series, then it is Refitted for Sequel . If fans prefer the original idea or concept over the final product, then it's Fan-Preferred Cut Content . Have in mind that, although the name may suggest otherwise , this trope is for divergent aspects of the work which were actually considered by the creators in the real world. A story (usually not canon) that takes the plot of an older story, alters a detail and shows how such change would have made things play out differently is a What If? — if changes concern history in fiction, it's Alternate History . If you want to discuss how the work could have been better if some detail was different (with that detail being just your own idea), start a Wild Mass Guessing . This subject has also been covered by The Onion A.V. Club </ , and , and

A character wakes up in a strange location/situation/costume,

unsure of how they got there Might be a Noodle Incident where not even the characters know or remember what happened. Often, but not always, involves drugs or alcohol. Strictly speaking, it doesn't have to be a night. It can be any alcohol- or drug-induced craziness plus memory block The character wakes up confused in a compromising position, and then utters in confusion: "What did I do last night?" As they learn more about what happened they repeat themselves, only this time in horror: "What did I DO last night?!" Often the episode becomes a quest to learn the truth. Usually, in comedy, it's a Not What It Looks Like situation, but in drama it often is what it looks like, resulting in a Wham Episode and an Aesop about not drinking. In Mystery Fiction , it's occasionally used to set up a Whodunnit where the protagonist himself has no alibi and may not be certain they did not, in fact, commit the crime Getting a tattoo or joining the Armed Forces is a common outcome, as is the ever-popular Bedmate Reveal . If they're in Las Vegas , an Accidental Marriage is likely This is a common romance comedy trope, sometimes used as a Ship Tease . For example, have two people end up in bed whom the fandom has been pairing up (despite their hating each other in canon). Have them freak at the thought that they might have had sex . Maybe have them sort of try out a "relationship" only for it to be " The Masochism Tango ", but by the end of the day they figure out that no sex occurred, happily resulting in a Snap Back Another version can occur where everybody else does</ know what happened last night, but decide to conceal it so as to have some fun with the poor guy who can't remember. If the audience gets to see the poor drunk's patchy memories of the evening, they may be portrayed via Binge Montage See also Bedmate Reveal , Did They or Didn't They? , Undressing the Unconscious . Compare Alternate Identity Amnesia You Wake Up in a Room or The Murder After is a darker, less comedic variation. May overlap with Waking Up Elsewhere . A common aftereffect of a Wild Teen Party Can also be related to Missing Time , although this doesn't usually involve alcohol. Depending on the case, it can be Truth in Television , although the amount of alcohol you must consume to lead to Real Life memory loss is pretty close to how much you need to die from alcohol poisoning

A man and a woman coo over each other . A bystander turns to another and says, "What does she see in him?" Or, conversely, "What does he see in her?" May also inspire comments about how love is blind — sometimes justly , sometimes unjustly . Common with Romantic False Lead and the Love Triangle . Ugly Guy, Hot Wife may inspire it. So may Single Girl Seeks Most Popular Guy , if she actually gets him. When jealously motivated, may be coupled with What's He Got That I Ain't Got?! If either member of the couple Has a Type , True Love Is Exceptional is often in play. In Single Woman Seeks Good Man , likely to be said by less mature characters than the woman; in All Girls Want Bad Boys , the characters who say it are prone to have a better view than the girl, who is prone to dismiss it with You're Just Jealous . When one half of the couple wonders "What do you see in me?", it's I Can't Believe a Guy Like You Would Notice Me (when they first meet) or Insecure Love Interest (once they're dating). When the questioning comes up about a friendship, it's Loser Friend Puzzles Outsiders . When it's not the attraction but the relationship that leaves people wondering, see Nobody Thinks It Will Work . When the audience</ has its doubts about the relationship, see Why Would Anyone Take Him Back? . And when what she sees in him is a sucker

who's gullible enough to fall for a Honey Trap , that's The Schlub Pub Seduction Deduction . See also (and closely related to): What's He Got That I Ain't Got?!

When it comes to curiosity, there are generally two main types. The first type is patient enough to wait for an explanation to be given, usually by an expert on a subject and/or its creator. Someone who can break it down into a more simplified language , to a point where it can be easily understood, what its benefits are, what dangers it may impose, and the like. The second type ...does not have that kind of patience. Or insight. Or anything resembling restraint</. They're willing to stumble blindly towards a control panel and start randomly pressing buttons. Usually, they'll ask the all-important question, " What Does This Button Do? " just before doing so, or just after doing so if the work emphasizes them being unthinking rather than reckless This is the kind of thing that can result in self-destruct sequences being set off, Wave Motion Guns made to be even more dangerous without anyone who knows what they're doing</ to run them, all while someone with half a brain will scream warnings (and insults to their intelligence) just before things get wrecked A very bad way to tempt fate . The proper response to anyone who asks this question is, " Don't Touch It, You Idiot! ", although " What Were You Thinking? !" also crops up as a regular post-press reaction in either frustrated hiss or yelling flavours. Note, however, that Big Red Buttons are usually a Chekhov's Gun : even in the event that a curious character is prevented from pushing it, rest assured that you'll eventually find out what the button does. Compare and contrast Are These Wires Important? , for cases where the character is deliberately trying to make something malfunction, and Caps Lock, Num Lock, Missiles Lock , when the button's placement means that it's highly likely to be pressed by accident Beware! Savvy villains may leave them lying out in the open as Schmuck Bait .. Batwoman (2019) </

Either the work or the audience plays up something in the work as something it's clearly not (mostly). When done In-Universe , it's often Played for Laughs (see Does This Remind You of Anything?), Rule of Cool , or the writers just having fun. When done by the viewers, it can be Fan Dumb , or it can be them legitimately assuming something if the show unintentionally makes the thing look like the trope (see Unexpected Reactions to This Index). Since titles in this format and figuring out whether to use "It's ____" "It's Not</ ____" can be confusing, remember this: The "It's ____" part is what was originally intended by the work.</ Esoteric Happy Ending : What Do You Mean, "It's a Happy Ending "? </ A Happy Ending only seems to be considered as such by the author.

To the literary analyst, all works are ripe for analysis Sometimes, this helps you appreciate a work. Sometimes, it doesn't, but it produces insight into the thought process and culture that produced the work. Other times, it's misguided overkill that may even detract from the work's actual merits (unless the reader happens to be another lit nerd looking for a fun Saturday evening with a text they've already read twice). Most of the time, it's just a fun mental exercise and a good way to boost the imagination

You can even get away with missing the point if you're a Really Serious Critic who wants to reveal all sorts of hiding

meanings/implications inside a work, whether or not they have anything to do with the actual characters or plot. Goodness forbid that the author(s) wanted you to do so (if what the author wanted matters to the analyst). If it does, though, or even quite as possibly if it does not (at least by general agreement), wait for somebody to point out the Muse Abuse High school and college students now write long-winded essays about the philosophical and socio-religious undertones of Harry Potter </ and Twilight </. It gets more relevant when you get into works aimed at even younger audiences, however: most kids under the age of twelve or so aren't going to be terribly philosophical; most of them will enjoy a work simply because it's "funny," or "colorful," or even "interesting." This provides a huge amount of leeway for the producers of children's shows to insert subtle commentaries and promote ideas without the readership (or even themselves) picking up on how they're shaping young minds, so to an extent every</ work aimed at young children is didactic whether the author intended it or not</ , increasing as the audience gets younger. This can even open the door to the authors sneaking propagandistic messages into the work, if they are political or philosophical partisans Note that having the plot given away becomes less and less of an issue the older the subject is. Most people who haven't read, for example, Moby-Dick </ will still be familiar with key plot points due to Pop-Cultural Osmosis . See It Was His Sled . Late-Arrival Spoiler can apply in some cases, particularly if the work has been around for a very long while; it can legitimately be very hard to discuss something which has been around for centuries as if this is the first time the audience will ever be hearing of it For the opposite of this trope, i.e. preemptive dismissal of all</ literary or aesthetic analysis, see Moff’s Law See also: True Art Is Angsty , True Art Is Incomprehensible , Applicability

When works are interpreted as being allegories for political issues (most often ones of war) at the time of the writing, with no prompting from the author . Sometimes, this is applied as retcon , with works written decades before the event being interpreted as allegories for it. (This may be a result of Older Than They Think .) Such interpretations may be instances of History Repeats , "Funny Aneurysm" Moments , Hilarious in Hindsight , and Harsher in Hindsight Even still many people think that somehow everything has to be inspired by what is most recent and that the author is targeting Small Reference Pools — and furthermore that the writer wrote the work shortly before publication, when in fact it normally takes a year to get from completed manuscript to on the shelves even if the writer had no difficulty selling it, and the work may have taken years</ to write Even the most innocent or neutral subject matter can take on political (or sociopolitical) connotations due to the associations people tend to make in the wider scheme of things. The following are seemingly apolitical topics that may be interpreted as political due to the "culture wars" of recent decades Also note that only rarely is this analysis laudatory. Nine times out of ten, the critic is repulsed by the supposed moral/philosophical/social/whatever point a work is making, and uses their argument to condemn the author. This can even result in a sort of premortem Death of the Author if the critic claims that everything</ in the work arises from subconscious attitudes the author may or may not have (a possible

side effect of the ''auteur'' theory). The argument might even be applied to an entire society of a particular time and place, with the implication that because the audience enjoyed something as entertainment</, they must have applied its values to their daily lives as well Relatedly, many critics hold a belief that work is political, regardless of what the author intended; for instance, critics may feel that an author has particular moral or social obligations to challenge the "status quo" (or whatever the critic believes</ is the status quo). A related school of thought holds that, since the author is someone with opinions who exists in a political context, those opinions and context must necessarily shape their work in various ways with varying degrees of subtly and self-awareness. An attempt to be apolitical is a kind of political statement unto itself (specifically, of supporting the status quo) and that’s if one is lucky. If one is unlucky, this belief will be used to claim that apolitical works are, by definition, not True Art . We used to have a trope for this (“True Art Sticks It to the Man”) but it was sent to the Permanent Red Link Club because it necessarily broke the Rule of Cautious Editing Judgment May overlap with Wild Mass Guessing . Compare to Dystopian literature, Writer on Board , Author Tract , and Author Filibuster , for cases where the author makes no secret about the political intent. Contrast with Propaganda Piece . See also Faux Symbolism and What Do You Mean, It's Not Didactic? when characters</ are asking each other "What do you mean, it's not political?", that's All Issues Are Political Issues

A standard naming convention for specialized magic- (or magic-equivalent -) users: they are referred to as something . The something is usually the Greek word for the thing or some other acceptably important-sounding term for it. As an example, death mages are known throughout all of fiction as necromancers. This structure makes it quite easy to create names for branches of magic using just about anything you can think of. You use fire ? You're a pyromancer. Water ? Hydromancer. Ice and cold ? Cryomancer. It's that simple A very pervasive trope, and old enough that it's very prone to being played with A notable variant is when people with Psychic Powers get classified by the suffixes "Kineticist" and "Kinesis". So a fiery psychic is a pyrokineticist/pyrokinetic, a water-controlling psychic is a hydrokinetic, a cold-manipulating psychic is a cryokinetic and so on with the endless possibilities of Greek and Pseudo Greek . Also if a work features a Fantastic Science , there's a good chance that it's going to have a similar naming scheme Technically, the -mancy and -kinesis suffixes are both misnomers. "Mantia" stands for divination, making "Necromancy" the mystical practice of communicating with the dead but not necessarily bringing them Back from the Dead . "Kinesis" is "Movement", and thus might refer to being able to manipulate something but not will it into being. A more appropriate term would be "-urgy", meaning "work" or "shaping", but conjoining it with a term requires the first part to end with a consonant (as in, "Metallurgy"). See the analysis tab for further details See Necromancer for a common specific subtrope. The Pornomancer sounds like a subtrope, but only uses the same naming convention

: Interpreting the shapes of clouds. There are signs in the air and sky much closer than the astrological zodiac. Next time you are on a flight get a window seat and look for messages as you fly above and

through the clouds.

is an ancient form of divination using arrows. For example, three arrows would be marked with the phrases, God orders it me, God forbids it me, and the third would be blank. Choosing an advantageous direction was gleaned by tossing an arrow into the air, and letting its angle show the way to proceed. In the Book of Ezekiel 21:21 "For the king of Babylon stands at the parting of the way, at the head of the two ways, to use divination; he shakes the arrows."

see Ceromancy and Ceroscopy below.

Divination with a pendulum using a ring as the bob on the end of chain or cord. Similar to Radiesthesia

Prophecy from viewing laurel leaves burning in a fire. Also Pyromancy.

The seer utters prophetic words in a lowed tone coming from deep breaths from the belly whilst in a trance state. Sometimes considered to be Ventriloquism. Gastromancy is often misquoted as a form of crystal gazing whereby glass goblets of clear water placed in front of lighted candles where gazed upon.

Casting salt into the air then reading the patterns as it falls to the floor. Can also be salt cast into a fire. Also known as Alomancy Prophetic observation of head and entrails of fish

Divination from observations of movement from the flame of a single oil lamp or torch.

Margarita is Latin for Pearl. Margaritomancy was actually Pearl divination. Pearls were either cast into a pot over a fire or pearls were prophetically observed in oyster shells.

: Actually a medieval misspelling of " Necromancy " from a confusion of necro-</ ("[the] dead", Greek) with nigro-</ ("black", Latin). Came to be interpreted as " Black Magic " in general.

Divination by scrying into a subject’s eye. May well be the origin of the saying "The eyes are the windows to the soul".

Divination from the lines on and the structures of people's hands.

The psychic art of seeing future visions from within a quartz crystal ball, or a quartz crystal cluster or quartz crystal point.

Dowsing with rods or a pendulum. Radiesthesia is a word of Latin origin meaning sensitivity to radiation. The rod or pendulum can amplify a dowser’s sensitivity to electromagnetic fields. See Pendulum.

The magical manipulation of fles Divination by interpreting the shape and position burned wood or of observing dry wood and dead trees found obstructing a pat

One of the protagonists has a friend or loved one infected with The Virus during a Zombie Apocalypse or similar situation. In a fit of loyalty, they attempt to keep the poor victim alive and the infection secret, despite the fact that it has been confirmed

irreversible by authoritative, bespectacled, labcoat-wearing scientists across the surviving globe The victim eventually fully virus-izes, occasionally taking out some of the supporting cast along the way, and the character has a heart-clenching moment where they have to take the victim out like Old Yeller It's most commonly the mother, or at least a family member, for Freudian reasons, but don't worry; they don't have anything to do with Oedipus Rex . Generally, there is no one more familiar than the mother figure, so the disappearance of that familiarity - "She's not your mother anymore!" - is a perfect example of the Freudian uncanny (or unheimlich</, as he would put it, speaking German and everything). Since the horror of zombies rests already largely in the uncanny (they walk like the living but are otherwise dead), this trope is a perfect fit for the Zombie Apocalypse Used only on the cynical side of the Sliding Scale of Idealism vs. Cynicism Compare with Et Tu, Brute? Also see Tragic Monster

"What happened to the mouse?" occurs when a minor character , action or very minor plotline is suddenly dropped from the story for no apparent reason, without any real explanation about what happened to it, and without a resolution. There are several main reasons this happens: in movies, the most common is that scenes are excised in editing, but references to them still remain elsewhere in the film Another common reason is that a Wrong Genre Savvy audience mistakenly attached too much importance to what always was intended to be a throwaway. A third is that The Law of Conservation of Detail wasn't properly applied: that Bit Character was a bit too lively to just be a throwaway, but why would you put that much detail into him if he'll never show up again? If the element comes back just as you've forgotten about it, this is actually a Brick Joke or a Chekhov's Gun . If the element doesn't come back, but the show hangs a lampshade on it at the end, then it's Something We Forgot . If it escapes your notice until after the show is over and you've gotten up to go to the fridge to make a sandwich, it's Fridge Logic . Alternately, if it's a character that's disappeared, it's a variation on the "What Now?" Ending ; not only are we unclear what happens to the character, but this also can leave doubts as to whether they even survived once they broke away from the other characters. Another character or the Narrator may remark that they were never heard from again. The trope's name refers to a scene in The Last Emperor </ in which the title character violently throws his beloved pet mouse offscreen. There's no sound of the mouse hitting anything, but it's never seen again, leaving its fate ambiguous... in the theatrical cut, anyway. What Happened to the Mouse moments can be very rich soil for Epileptic Trees or Wild Mass Guessing . Not to be confused with Aborted Arc , which is when a major</ story arc or plotline is dropped without resolution, or Chuck Cunningham Syndrome , where a major</ character just plain disappears. A What Happened To The Mouse that is deliberately created and where the creators have no intention of ever resolving the question</ is a Noodle Incident . If they plan to resolve it in a sequel, that's a Sequel Hook . A What Happened To The Mouse that is returned to as a Brick Joke is Something We Forgot . Often the result of a Wacky Wayside Tribe , a Forgotten Fallen Friend , a One-Scene Wonder , or a Big-Lipped Alligator Moment . Parent trope of Absent Animal Companion . Compare with Left Hanging , Uncertain Doom , Kudzu Plot , Red Herring Twist , Out of Focus , Put on a Bus . Related tropes include Never Found the Body and

"What Now?" Ending . May involve a Shrug of God . See also Offscreen Inertia if you imagine the plot line still stuck at that spot for eternity. Could lead to an Esoteric Happy Ending at worst if the plot thread was a major one that wasn't resolved.

So, er, guys, what did actually happen to the mouse?

Anxiety by parents-to-be that due to particular or unusual traits that may be passed on from their partner or themselves, their children will lead a difficult life. This is often felt by the Inspirationally Disadvantaged who have one on the way, though this can be a particularly complicated issue if one of the parents happens to be the Friendly Neighborhood Vampire / Werewolf / Demon / what have you . Extreme family issues , Fantastic Racism (or standard racism, of course) or curses might be a cause for concern also. When it's played for drama, it's often used as a method of yanking the dog's chain , as this now means The Woobie might have ignorantly forced his burden onto an innocent child In most cases, however, these worries end up being completely needless. The offspring in these situations usually turn out completely normal, or if anything, only inherit the parent-in-question's "good" attributes. If the parent is a vampire, the child might inherit his super strength, but have a normal human diet and be immune to sunlight. If the parent is The Grotesque , the child will probably only inherit his Innocent Blue Eyes Related to and may result in Give Him a Normal Life . Compare with Evil Parents Want Good Kids and Turn Out Like His Father , contrast with Fetus Terrible

What is love? For humans, it's an emotion that can be the greatest antidote for misery , and a major cause of misery . Unfortunately, that transcendental quality doesn't translate too well into words, which is why love</ remains only a four-letter word for many non-humans. Robots are the ones most susceptible to this troubling dilemma, as an increasing number of different-minded creators will not rest until their creations can truly love like humans, which is easier said than done. You can program Ridiculously Human Robots to protect a specific someone or respond differently to the first person they see , but love isn't supposed to come out of orders. And even if a unique robot contemplates its mechanical heart on whether or not it can love, how can it be proved that it is asking that question because of actual conscience, and not merely because its programming dictates it to do so? Aliens, especially relatively humanoid ones who coexist with humans, also express curiosity of this strange human custom: why would humans put so much emphasis on a single word that appears to serve no useful function? Universally attractive aliens seem to be vulnerable for instantly falling for human men and needing to be taught in matters of kissing. It's not just non-human species that need to learn love by themselves: Jungle Princesses and Noble Savages Raised by Wolves may have no learned knowledge of those feelings . Their basic instincts may lead to them acting strongly on any "urges," but they will be unable to properly articulate or understand the desire behind them — at least not until the Mighty Whitey civilizes them. Some pre-teen children may get together and think</ they know about love; they eventually realize that it is a bit more complex, and that there are aspects to it that they would only understand when they grow up. The Casanova , Femme Fatale , or the Handsome Lech , who is no stranger to lust and attraction

may, ironically, at some point, have to learn the difference between these and love , when he (or she) meets the right person. Usually, the question of love is asked out of curiosity, but occasionally it will be deliberately shunned. An intristically malevolent spirit or human hardened to the point of unfeeling will have some idea on the meaning of love, but not enough to threaten their heartless exterior, and they have no intent of exploring that notion further. Of course, if they're good-looking enough, expect an innocent girl to show up and make them uncomfortable with a tightening in their chests and burning up of faces. It's their duty to hate and destroy! How could they ever possibly love? In all cases, the ultimate question is: Can a robot/alien/savage/demon love? And in all cases (excluding extremely</ cynical shows), the answer is: Yes, The Power of Love is just that</ far-reaching. Oftentimes, the answer is used as an indicator of the humanity of the being that speaks more poetically than its appearance . Often the reason why Evil Cannot Comprehend Good . However, Curiosity Causes Conversion , and can sometimes cause a Sex–Face Turn . The answer is often a cure for Creative Sterility . This is one of the reasons Humanity Is Infectious . This is where there's something romantic going on between a human and something that, for whatever reason, looks equally human but is actually nonhuman (Little Bit Beastly , shapeshifting , or genetic engineering). The romance element can be anything from subtext to full blown relationships, and for some reason are never treated as if there's any reason why they should be squicky at all. In fact, in some cases, they actually come across as sweet and touching, and the dominant thought on the reader's mind is usually "awww," which probably wouldn't be the case if the nonhuman in question wasn't usually humanoid in appearance See also some cases of Interspecies Romance , Robosexual . Somewhat related to What Measure Is a Non-Human?

Long story short, an index about tropes in which something or someone isn't afforded the same rights and considerations that similar entities get despite deserving them for some reason or another If you're looking for tropes involving creatures (almost always humans) having arbitrary and demeaning standards inflicted on them, see Double Standard . This is for critters that don't have them in the first place, because they're beneath consideration

There is an invisible value placed on the existence of non-human characters in fiction, compared with the value of the life of a human . Killing/destroying one may or may not be the same thing as killing a human . The difference between Not Even Human on one end of the scale and Not Quite Human on the other can be a very fine one, and where a series chooses to draw that line can vary as wildly as the writers' imaginations. Intelligence, emotions, moral compass and whether the character in question is actually alive in the conventional sense are usually what dictate the morality of the situation. But more often than not, it's also based upon the human-like physical and psychological traits the character has (an issue further explored in). The sliding scale usually goes something like this: This is often one of the reasons why Humans Are the Real Monsters . It can get especially awkward, however, when it happens in works of fiction where many of the heroes</ aren't human either, leading to uncomfortable Fridge Logic . In general, the more thought that is put into the script, the more value nonhuman life will have. This trope is often used as a metaphor for the Real Life issues of animal and human rights. See also That Poor Plant , Of the People , Zombie Advocate , Inhumanable Alien Rights , Van Helsing Hate Crimes , and Fantastic Racism . The flipside of sorts is What Measure Is a Non-Super? . Related tropes are Uncanny Valley , They Would Cut You Up , and Emergency Transformation . Contrast with Androids Are People, Too . For cases in which this treatment applies to characters who are</ human, see What Measure Is a Mook? , Moral Myopia , Immortal Life Is Cheap , and A Million Is a Statistic . This also tends to happen in a metafictional way: many animated series and video games can get away with horrific violence and onscreen deaths that the censors would've put a quick stop to (or at least given the work a higher rating) had the victims been human. Robots , the undead, and the like can be brutally impaled, dismembered, and decapitated onscreen, using this trope on the Moral Guardians even if the work itself averts or subverts the trope in-universe. See also No Tech but High Tech , which is a similar concept but applied to technology.

About 2-3 pounds! Duh! A "henway" is a type of joke where the first person in a conversation uses a term in a way that leads the other person to respond with "what's <term>?". The first person then replies with the punchline (often a pun, although it doesn't have to be.) Some of the most common henway terms are "<noun>way" "<noun> weigh", answered with a weight, as is the case for the Trope Namer Also known as a "Pun Trap". The best way to subvert the standard form if someone tries it on you in Real Life is to ask "What's that?" It's a pronoun which can be used to refer to something previously mentioned, but that's not important right now. A favourite of the Pungeon Master , and of anyone else who has had a bit too much snoo or updog lately. Just about any "Knock Knock" Joke is a Henway Compare Mathematician's Answer , Not Actually the Ultimate Question , Rhetorical Question Blunder , Who's on First? . If you do this all by

yourself, it's a Feghoot .

tweet to Richard Dawkins .

Sometimes, when someone is trying to show off martial arts, they just look goofy. They flail around, fall over, smack into stuff, and a whole bunch of other things. Expect a Priceless Ming Vase to get broken, or the person's own bones One version of this is trying to show off karate chop, hitting something like a brick, with hilarious (if painful) results. Also, anyone trying to show off nunchakus without knowing what they're doing will</ hit themselves in the groin . Possibly repeatedly This is sometimes the result of I Know Kung-Faux . May include an Ass-Kicking Pose and Funny Bruce Lee Noises Expect this to stop once a character Takes a Level in Badass Compare Wimp Fight (when this is applied to a whole fight scene), Fake Special Attack (when one attack is like this) and Black Belt in Origami Contrast Artistic License – Martial Arts and Martial Arts and Crafts . Also contrast Confusion Fu , where your opponent doesn't know what the Fu you're doing, but you</ do, and you're taking advantage of the confusion Not an example of Precision F-Strike

We've all seen it. Sometimes, when watching a movie or TV show, you see an actor portraying a character and you can't help wondering how the hell they wound up in that role and/or entire production. "What the Hell, Casting Agency?" happens when you know quite well who the actor is - you just can't understand why they're in this</ . This can range from really bad to completely awesome , depending on the actor, the part, and the production. On the bad end, an actor might be horribly miscast for the role, or out of place in the entire show/movie. When done right, that dissonance can make the character or the whole production a lot better than could be expected without them. They might even do far better in the role than expected. There is certainly a lot of possibility for So Bad, It's Good as well. This is, naturally, a subjective thing. What will make one person sit back and say "Why did no one stop this?" might make perfect sense to someone else. Sometimes the result of Fake Nationality , Not Even Bothering with the Accent or a combination of the two. Race Lift and Dawson Casting are also sometimes factors. In live-action media this may lead to cases of Hollywood Genetics . Can definitely stem from Ability over Appearance when an actor's talent and acting ability lands them the part despite their overall look not being what the filmmakers originally envisioned for the role. Not to be confused with Money, Dear Boy (though that's often the cause of this); sometimes, the actors involved just did it for the heck of it and not necessarily because they were paid very much or that they're trying to show that they can be versatile and not be in the Typecasting trap; which can be bad for actors. Which makes for a great work but still does nothing to reduce the surreality of their presence in it. Can also occur when an attempt at Stunt Casting comes waaaaay</ out of left-field. But there are cases where the odd casting actually worked</ And the Fandom Rejoiced . See also: Black Sheep Hit , a hit song that doesn't sound anything like the band's other songs and Playing Against Type , when an actor or director makes a project outside of their usual character type. See also WTH, Costuming Department? , when it's the fashions that are out of place

rather than the cast. No examples, please. This only defines the term.</

So you're watching a movie, and, hey, maybe it's pretty good. The writing is snappy, the actors really seem to have settled into their roles, and all in all it's shaping up to be an enjoyable experience. And then the hero walks in wearing a gorilla suit , a Fu Manchu moustache , and high heels And the thing is, it's not for the sake of a joke.</ The costuming department thought — mistakenly! — that this combination would make the character look badass, and somehow managed to persuade the director. No, they're not being sarcastic, comical or parodic (at least not at the time): it's an entire team of costume designers being totally, completely 100% damn serious about it. The audience, however, remains unconvinced That is the essence of "What the Hell, Costuming Department?" Maybe it's an adaptation of another work where the costumers decided, for no apparent reason, to make the character look entirely unlike he or she does in the source material. Maybe it's an original work where the costumers were evidently insane . Either way, confusion and dismay ensue Related tropes include: Rummage Sale Reject , where the characters at least have the excuse that maybe they got dressed in the dark; Costume Porn , which provides a possible explanation for some examples; Fashion-Victim Villain , a bad guy whose costumes attract WTH moments; and WTH, Casting Agency? , where the confusion arises over who's in</ the costumes. Specific to video games is Rainbow Pimp Gear , where the best combination of items for gameplay purposes results in a visual eyesore Compare Impossibly Tacky Clothes and I Was Quite a Fashion Victim , which is when characters within the work treat the costumes as bad

When characters In-Universe call out one of the heroes for doing something clearly unheroic, if not outright heinous. Occasionally, an author will drop some black into his otherwise flawlessly good guy hero... and have others, particularly The Heart (and especially</ The McCoy), notice.</ This can add guilt and remorse to a character as they feel shame for their evil actions , and legitimately have to fight to restore their name , undo the harm , or simply live with the guilt and shame of it. In this case, you can expect to hear some variation of "Haven't you done enough already?" More extremely, it can be the first step towards Anti-Hero -dom or a full-blown Face–Heel Turn . A Redemption Quest is usually considered the most noble or morally good way to respond to this. It shows the fans that the author knows their hero did wrong, thereby averting Moral Dissonance . The opposite of Protagonist-Centered Morality ; contrast also Designated Hero and Hero Insurance . See also What Is Evil? and "Not So Different" Remark for when a villain</ is the one pointing this out, or acting as though there's something to point out to mess with the hero. (A variation is when the villain will praise</ the hero, which the hero will find profoundly humiliating .) If the player is given no choice in their decision due to Railroading or multiple choices they can make all end with terrible consequences , and the player is then called out for their actions, they are Blamed for Being Railroaded . Almost never applies to those Powers That Be who have an Omniscient Morality License , although characters who Rage Against the Heavens might attempt it. Likewise, villains tend to be immune to this thanks to their It's All About Me attitude (or, at

best, Moral Myopia), though a Heel Realisation might clue them in, perhaps leading to a Villainous BSoD . (This trope doesn't really apply to villains who are just doing it For the Evulz .) A villain may also be in the receiving end from another villain that remembers that Even Evil Has Standards . Those pesky Trickster Mentors may also find themselves on the receiving end of Rage Against the Mentor . Some video games offer dialogue trees or something similar that might allow your character to call someone out for their horrible behavior, which can be immensely satisfying. If your character is the one being called out, it's What the Hell, Player? My God, What Have I Done? may be a self-inflicted version. Can come right off the heels of a Sadistic Choice foisted on the player in a video game. The hero may attempt to invoke I Did What I Had to Do as his justification, though this does not always succeed. Of course, those who live in glass houses shouldn't throw stones, and one should beware of his own Moral Myopia leading to The Complainer Is Always Wrong . Results may vary against the Sociopathic Hero or The Unfettered ; beware you don't get a Shut Up, Kirk! or Hannibal Lecture in response. Et Tu, Brute? may also counts as this when a hero does not make a full Face–Heel Turn , but gets called out for nearly betraying his allies. If it's a child calling out a parent, it's Calling the Old Man Out . Can overlap with "The Reason You Suck" Speech if a character points out a hero's flaws in very long detail in the most brutal way possible. A character verbally chastising the hero may realize s/he Was Too Hard on Him if s/he feels uncomfortable in chewing out the hero. The hero may lash out at the reproof if he Can't Take Criticism . Of course, the critics aren't necessarily infallible themselves. There may be times when those making the criticism may not be aware of extenuating factors for the heroes. Sometimes, those making a What The Hell Hero statement can get one in return- an Anti-Hero may call The Hero out on being too inflexible to do what is necessary, while the hero may respond that his critic's methods are little better than those of the villains. If the Designated Hero is a Jerkass (or worse), but no one calls him on it in the series, then take your example to Moral Dissonance or Designated Hero . Good-intended mistakes fall under Nice Job Breaking It, Hero! . Reviewers can call out the Moral Dissonance in their reviews, but they themselves are not engaging in What the Hell, Hero? as they are not part of the series being criticized. A skit still has to be based on events in the series; not something they make up so they can do the criticizing themselves. In-Universe Examples Only

So you've got this great idea for a science fiction story. There's just one problem: an element of the story is blatantly contradicted by a piece of actual science, and you don't want it to look like you honestly didn't know this. But wait! Science Marches On , right? Science is always evolving, and sometimes what we thought was certain turns out to be incomplete or incorrect. So in a story involving people from the future, ahead-of-their-time scientists, or Sufficiently Advanced Aliens , one way of getting around a scientific inaccuracy is to mention the current theory... and then have one of the characters dismiss it as an outdated misconception. This serves as a quick Lampshade Hanging which acknowledges the departure from the facts, and allows you to get on with the story . This kind of dialogue can also be used when the science itself is in a state of flux at the time of writing—the characters discuss the competing theories, and whichever one "was proven accurate" is the one taken as accurate in the story, whatever happens later in Real

Life . This trope can also be Played for Laughs , especially when the difference from real-world science is ludicrous: "People in the twenty-first century used to think that</? They must have been really stupid !" Compare Outgrown Such Silly Superstitions (for cases involving cultural or religious ideas rather than scientific ones) and Necessary Weasel (for cases where ignoring some inconvenient real-world restriction has become a standard part of a genre). Tends to make a work softer on Mohs Scale of Science Fiction Hardness .

There are many ways in which a commercial can fail to get its message across. Some ads are uninteresting; others are so bad that they turn more viewers against the product than they attract. But some commercials fail because they're too good</ A commercial that's too clever, or features too memorable a gimmick, runs the risk of being remembered only for the gimmick and not its association with the product. The commercial has performed the important task of holding the audience's attention, but it hasn't spread the word about the product it's trying to promote. While in the era of the Internet, it can be argued that any commercial that makes people want to run a Google search for the company or product's name is a successful one, this trope already existed long before anybody had even conceived of search engines German media experts call this the "Vampire Effect"; this was also named on The Gruen Transfer </ as "Vamping". May happen in a Design Student's Orgasm or Dada Ad . May also happen if overdone sex appeal distracts the viewer from the message See also Breakaway Advertisement , Sidetracked by the Gold Saucer , Made of Shiny . Contrast The Power of Cheese , which is when the ad gives way</ too much credit to the product. Compare Our Slogan Is Terrible Perfume related products have their own trope, Perfume Commercial . So do medications: Side-Effects Include... . For non-indicative movie advertisements, see Never Trust a Trailer

The Hero is alone, except, perhaps, for the villain. No one whose opinion they care about — possibly no one at all — will ever need to know what they do next, and they know it. And there is a useful but corrupt act that they could commit, reaping the benefit without anyone ever knowing. If they do not do it, the consequences can be severe, even deadly . If the villain is there, they are urging the hero to do it, which possibly involves cleaning up any possible witnesses. If the hero is alone but we still need some exposition dialogue to understand what's going on, they may discuss it with their Good Angel, Bad Angel . Very likely, they are at their Darkest Hour , even on the verge of the Despair Event Horizon . The Stock Phrase is usually something like "No one will ever know." It can taunt them with the futility of their heroism (perhaps even telling them that they will die alone , unmourned , with no one attending their funeral , unremembered), or tempt them with the rewards of villainy, even telling our hero that the heroic act will be interpreted as villainy , and vice versa. A more foolish and friendly villain may urge it's Not Cheating Unless You Get Caught . What happens next? Well, the audience finds out whether they really are The Hero . Usually they are, because doing the right thing in the face of great temptation is a mark of great heroism, whereas doing the wrong is only bog standard, baseline villainy. When the wrong path is taken, this is usually the lead to more impressively villainous acts. Occasionally, it is to prove Can't Get Away with

Nuthin' : a character loots a corpse , only to discover it can be identified. Particularly hard for the Glory Seeker . May prove to be a Secret Test of Character . May also prove a great shock to a villain who was convinced they were a Slave to PR and not so different . If a villain is urging that no one will ever know, three responses are possible, depending on the hero's character: This can apply in cases where the credit will quickly be misappropriated, as when working for the Glory Hound , or when a Fake Ultimate Hero is present. The usual Aesop of this trope revolves around the idea that anyone can do the right thing when all the attention is placed on them and it would be inconvenient not to do so, but it takes real strength of character — and heroism — to do the heroic thing when no one is watching and there's nothing to lose. This may carry a cynical message that most humans aren't bastards only when Big Brother Is Watching . Super-Trope of Silent Scapegoat . Antonym of Photo Op with the Dog . Often a prerequisite for a We Can Rule Together offer made to a hero. Compare Invisible Jerkass , Dude, Where's My Reward? , Strike Me Down with All of Your Hatred , G.I.F.T . See also The Greatest Story Never Told and Zero-Approval Gambit . See Shoot the Dog for when there are arguments for the morality of both actions. See Hidden Heart of Gold for when a Jerkass turns out to be a nice person on the inside. May involve The Corrupter . This test of character always reveals what is Beneath the Mask . If a character erroneously believes</ that nobody will know what they're doing, they can find themself at the wrong end of an Engineered Public Confession (if the situation was set up deliberately) or Is This Thing Still On? (broadcasting a private moment by accident) situation. If you are looking for the blog by the same title that is part of The Slender Man Mythos , go here . Compare and contrast the villainous</ version; the villain has achieved everything they set out to do , has wealth and power beyond their imagination, and is perhaps even ready to settle down with someone they genuinely and unselfishly love . Then they realize that their actions cross a line — believing utterly that what they have done is unforgivable and a Heel–Face Turn probably won't even work Also see Undercover When Alone .

When a decision needs to be made, or the recipient of a prize must be selected — and no option is more desirable than the others — there are many games that can be used to fairly select an option at random. When Drawing Straws or flipping a coin isn't exciting (or funny) enough, characters resort to the Wheel of Decisions A colorful carnival wheel with images of all the different options illustrated on each space. Whichever option the pointer lands on when it stops will be picked. On game shows, there will usually be a Lose A Turn (or other penalty) space that participants hope to avoid Usually, an indecisive character will try to use the wheel when they are expected to make an informed decision where a random choice would be completely inappropriate. Expect them to rig the wheel in some way, like having one option way larger than the others. Dense characters may add a "Lose A Turn" even when the wheel is not used as part of a game, leading to the question of why they would design the wheel in a way so as to penalize themselves Sister Trope to Decision Darts

The realistic animation of running characters on a budget is just too hard. Instead, a vertical upper body is perched on a rotating wheel of blur lines and (occasionally) visible feet,

which is animated in a loop. Add a Wraparound Background and some dustclouds, and voila, the character is running! And really fast, too! An alternate title for this trope could be Unicycle Legs, since if the character builds up enough speed they tend to look like they're on a unicycle The preferred sound effect is fast bongos, followed by a whistle. Sometimes, just to draw out this sound effect (for Rule of Funny , of course), the character will literally run in place for about four seconds before actually taking off . They'll usually manage to get away just before the person chasing them can catch them, but sometimes the trope will be subverted by having their pursuer grab them just before they can dart away. Or take their pursuer with them on a not-so-merry chase When running, the character may sound like a race engine See also No Knees , Running on the Spot , Human Hummingbird , and Motion Blur (of which it is a Sub-Trope). Big Ball of Violence is the same principle applied to a fight scene. Not to Be Confused with characters whose feet are</ wheels, which falls under a variant of Rollerblade Good

Programming concept in which a number of different TV shows are run in the same time slot under one umbrella title. Universal Television was the most prolific producer of these programs. Not to be confused with that other</ wheel program . Shows that share their time slots with spin-offs (Once Upon a Time <// Once Upon a Time in Wonderland </, Agents of S.H.I.E.L.D. <// Agent Carter </) should not be considered as there is no umbrella wheel title. Action Pack </ (somewhat of a blend between this and a PTEN-style "network") Mystery Science Theater 3000 </: Whenever a man is shown with a flashlight, the bots call out, "It's the NBC Mystery Movie!" The pilot film for San Francisco International Airport</, which later became part of the wheel series Four in One</, was riffed in season 6 of the show .

Two people from opposite sides are working together. The one on "our side" is a man and the one on "the other side" is a woman. Likely reasons for this: The character on our side is the one we relate to the most. Everyone can relate to a man, right? Plus, if the hero was a woman, it might put the show into the Girl-Show Ghetto . The name alludes to the classic Cold War combination of the American man and the Russian woman (or British man, if it's a James Bond </ film). Expect the Russian woman to be a Sensual Slav who talks in Poirot Speak with a thick Russian accent ("I come to your country for mission, da?") There's also a good, but not certain, chance that she'll become a Defector from Commie Land . The Great Politics Mess-Up has removed the original reason for this combination, but it still comes up from time to time . Despite the name, this can refer to any situation where the main person on the side we relate to is male and the main person on the opposite side is female. Expect to see: The man is a straightforward Everyman character. After all, we're relating to him. Alternatively, he's a badass Action Hero . Either way, he's unambiguously the primary protagonist.

So there is this one character who never smiles. They are always so serious. Or maybe they're The Eeyore who always sees the worst of things. Then one day they smile, and there is something about the sheer happiness in that smile that makes whoever is watching immediately feel welcome, or better, and very often want to make them

smile again. Preferably a lot. Depending on the application, can lead to Love at First Sight , a Love Epiphany , or a heartwarming moment . In summary, the requirements for this trope are: Character that rarely smiles (Emotionless Girl , Deadpan Snarker , Perpetual Frowner , Broken Bird , The Stoic , etc) On rare occasions, this can be played with a character who typically shows an insincere smile (such as a Stepford Smiler or a Smug Smiler) who then has a sincere smile. It's not actually Always Female ; the title comes from the song " Absolutely (Story of a Girl)". Go Out with a Smile often involves this plus Tearjerker . May involve Finger-Forced Smile . A shy cousin to What Beautiful Eyes! , and Unkempt Beauty ; a subtrope of OOC Is Serious Business . Contrast with The Unsmile , where the smile is just plain unnatural. Compare with Serendipity Shock . See Smile of Approval if the character's smile is geared towards someone they don't think too fondly of. In-Universe Examples Only , please. Do not include Audience Reactions .

Just like European men and east Asian women can't get enough of each other , and Gentile guys and Jewish chicks go gaga over one another (or Jewish guys and Gentile chicks), so do black men and white women. According to media, anyway Though it's no big deal in most of the world (not more than other types of interracial relationships, anyway), there are still some parts — e.g. South Africa, parts of Europe and the USA (especially the south) — where black-white ethnic relations are troubled and this trope actually comes into play. In Real Life , black man/white woman couples are pretty common and there are a variety of views on what this kind of relationship should or does entail. White man/black woman pairs don't get as much attention (positive or negative) perhaps because they are less common, at least in America, though the gap appears to be narrowing. South Africa and the USA have had a serious Double Standard when it comes to this gender divide, as a direct consequence of Apartheid and the USA's Jim Crow laws (and slavery before that): many white men had black slave mistresses, and this practice was generally accepted or at least tolerated. The reverse-gendered version, of a free woman loving a male slave, was seen as “corrupting” the white race and could result in death for the (African) slave and the public shaming (and possible rape/death) of the free woman. As a result the laws of the time deemed a black man and white woman engaging in consensual sex (or even sharing space) as equal to rape and lead to the deaths of many innocent black men and the humiliation of innocent white women. When slavery gave way to Jim Crow and Apartheid, this bias remained - the chief difference being that before Apartheid and Jim Crow era, a white woman-black man couple would be lynched by the authorities whereas during, they would instead be lynched by family/friends/neighbors whom the authorities couldn't be bothered to prosecute for murder. That’s assuming the man in question wasn’t already jailed for, god forbid, being attracted</ to her While less common and no longer illegal, hatred for these pairings is still Truth in Television . Due to the extensive history between blacks and whites described above, bias still exists toward black man & white women pairings. And people today have lost their lives or dignity over choosing someone who isn’t of their race. But given that any real life example would be subjective and might even cause a flame war, all you need to know about this trope's impact in real life has been described above Please note that just like this trope's white/Asian counterpart, not every black/white romance

falls under this trope. If the lovers just happen to be interracial and nobody makes a big deal out of it, then it is simply a mundane relationship. Only when it is seen as a controversial mixed marriage and/or one of the lovers expresses an extra attraction to their partner's skin tone is the trope in effect It's also worth noting that the affection isn't one-sided in the least. There are plenty of white women on the prowl, wondering if what they've heard is true. This trope was commonly nicknamed Jungle Fever </, until Spike Lee made a film deconstructing the term Contrast Like Goes with Like . The gender inverted version of this trope is Black Gal on White Guy Drama . Also, any discussion of this trope is likely to bring up Black Is Bigger in Bed . Also tends to be used in Dating What Daddy Hates

New parents are usually as happy as can be. They look forward to raising their kids as idealized versions of themselves, or at least copies of themselves. It is not bad parenting ; parents want their kids to share their cherished values and ideas, and avoid the mistakes they</ made growing up Well, that's not what happens here These</ kids ended up having their own views of how the world works. For better or worse, they don't share their parents' interests, they don't want to enter the same careers, or worst of all, they may not share their parents' political or religious views. This leads the parents to wonder, "Where did we go wrong?" This trope is Played for Laughs as often as it's Played for Drama . Usually, neither party is shown to be to blame but rather, both share it in one way or another Classic set-ups include a girl with a domineering Stage Mom , or a son being forced to hunt deer in a Manly Men Can Hunt scene. In more dramatic works, a rebellious child might end up being downright criminal Very common in sitcoms Compare this to I Have No Son! . May result in Why Couldn't You Be Different? . Pretty much the attitude of the "Well Done, Son!" Guy 's father Not related to tropes such as Gone Horribly Wrong

In real life, the average gay bar is simply a pub where most of the regular patrons are of gay, lesbian, bisexual, or transgender/genderqueer persuasion. That's really all there is to it. Mostly they are just places where LGBT+ people socialize, dance, have a few beers, play pool, watch a show, etc. Sometimes people chat up/pick up a new partner in these places just as straight people do in straight bars and pubs In the media, this is simply not the case, especially when the queer community is treated as the Subculture of the Week . Any bar or club catering to LGBT+ people will be portrayed as far wilder than its straight counterpart. People will order drinks dressed in fetish gear such as studded leather, gimp masks or tight rubber. Drag Queens will strut about like they run the place (and one probably does), and loud Techno /synth music will blast from the speakers. The fact that there are different clubs for different gay subcultures in Real Life isn't always realized Lesbians are, depending on who is to be believed, either less scene-obsessed or less willing to support their spaces than gay men, so it's not unusual for a city to have one or two lesbian bars while having a dozen bars for gay men, each catering to a different crowd. Still, lesbian bars will be filled entirely with broad-shouldered, cigar chomping, work-booted diesel dykes or young, nubile Lipstick Lesbians . And the two shall never meet, even if it's the only dyke bar in town As is the Rule of Cool , gay audiences will note that such bars

will be larger, sleeker, flashier, wilder, and generally far more interesting than anything they have in their own neck of the woods, unless they live in a big city. In fiction, the one gay bar in Johnstown, Pennsylvania is just as huge and lively as anything in West Hollywood Depending on the reaction of the characters, this is a Sub-Trope of either Coolest Club Ever or Bad-Guy Bar . Often used to set up jokes at the patrons' expense . Often, this sort of bar will be used for a Gay Bar Reveal ; in this case, it's going to have to be for a parody of the trope because it is near impossible to mistake this sort of club for what it is

The good guys have set up a bomb that they plan to use to destroy the Evil Overlord 's whole fortress. They get safely outside the blast radius, evading a wave of Mooks , and The Hero holds the detonator high so the Big Bad can see, ready to take out the entire pursuing Legion of Doom , and... Click... Click... Click-Click-Click </ ... Nothing. The detonator has failed at the worst possible time , leading someone to have to go back and activate the explosive/device manually . Or worse, the enemy simply dismantled the bombs or jammed the detonator before they could be set off, and gets to rub the heroes' faces in it. Usually Played for Drama rather than comedy . One exception is in cartoons, where the bomber will inevitably go back to check, and have it explode (harmlessly) in his face. This is the trope you really</ want to invoke when a Land Mine Goes "Click!"

Related to Answers to the Name of God , Tomato in the Mirror , and Duck! .

This happens after the character or characters narrowly escape some kind of disaster. The bomb is defused with one second left . The Booby Trap is jammed. The bad guy is buried under a ton of rubble . Whew. It's finally ov—OH GOD, THE HORROR! Death claims a victim suddenly and often quite violently. The key to this trope is that someone believes that everything is okay, and in that moment of relaxation, when the tense music has stopped, someone dies To clarify, this does NOT refer to just any sudden, shocking death. The death in question must immediately follow an escape from imminent peril, interrupting the peaceful tranquility of apparent success. However, the cause of death need not be the exact thing that was perilizing the heroes in the first place. They could be blindsided by a completely new threat or an older one about which they'd forgotten. Or a wound could suddenly catch up to them — aversions of Hard Head often produce this. If the incident doesn't take place immediately after and</ has a totally separate cause, see Cheated Death, Died Anyway This is often a Jump Scare . Except when it's supposed to be darkly ironic . The Beat is a distant comedic relative Can possibly be combined with a Finger-Twitching Revival or Eye Awaken if it involves a bad guy Playing Possum The Video Game variant of this is Kaizo Trap when during a seemingly moment of peace the player will be killed if not ready Also called "Whew That Was BOOM"... as in... "Boom! Athletes Foot!" .... Only more fatal Related to Hope Spot , may be preceded by a Cat Scare , and has been known to involve Not Quite Saved Enough and Diabolus ex Machina . This is the kind that definitely ends in death . If a character collapses and faces the serious danger of death, see After-Action Healing Drama . The cruelty

factor goes up if immediately preceded by Cathartic Exhalation

By some mechanism, be it Time Travel , Alternate Universe , Literal Split Personality , or Cloning Blues , there are now two or more Alternate Self editions of a character. Each copy seems unable to get over the fact that every other copy is him/her/them/itself and this shows up with pronoun confusion Generally Played for Laughs , as writing this trope is much harder than simply using third person. Related to Time-Travel Tense Trouble . Talking to Themself is a sister trope where different parts of a character with a Split Personality converse with each other, possibly leading to such confusion on the part of observers Compare My Future Self and Me . Also see One Steve Limit , which can result in similar problems when averted

When a character, due to bad signs, gender ambiguity , being transgender , disguising as a member of the opposite sex , or some other issue , has no idea what bathroom, changing room, or other gender-specific room is suitable for them. Potentially an extremely embarrassing or awkward situation This is, unfortunately, Truth in Television : Many transgender, intersex, and gender-ambiguous people face this problem as well

A bullwhip's signature cracking noise is a miniature sonic boom. It's about as close to the Stuff Blowing Up type of coolness as you can get without infringing upon Fantasy Gun Control . A whip is also, basically, more or less a long piece of leather rope, and we all know how sexy leather is, right? In video games, action adventure and fantasy tales, some characters will show how extra badass they are by using a bullwhip or other flexible weapon as their primary armament, as well as employing it for a Building Swing If this person is a woman, and they often are, she is likely to also have a Stripperiffic costume that brings to mind a dominatrix outfit , and will probably be The Vamp or The Baroness This is also a preferred weapon of the Repulsive Ringmaster , thanks to the fact that ringmasters in the olden days were in charge of the equestrian acts. It's also a favored weapon of slavers, slave-owners and torturers alike, owing to their historical use in slavery, torture and punishment. More neutrally, it'll also show up as a commander's weapon in more stylised historical works - whips are a traditional symbol of authority that multiple cultures have issued to military officers, and while they're usually harmless ceremonial items, that doesn't stop a work of fiction from making them much deadlier This, of course, ignores the fact that whips are generally impractical weapons in close combat, unless you like the idea of flicking your own ear every time you crack that whip. In light of this, most whips will be weaponized by adding blades or spikes, making them out of chain links , being electrified or just magic in order to be a more convincing weapon, while maintaining the cool sexiness. Also, they're often employed to instantly tie up an enemy , despite being designed to avoid tangling. Less enthusiastic authors settle upon emphasizing disarming, tripping and choking attacks See also: Weapon of Choice and Variable-Length Chain . Riding crops are a variation. Want to badass it up a bit? Try using a Snake Whip or a Whip Sword , or electrify it for a Lightning Lash Sister tropes: A

Taste of the Lash , Don't Make Me Take My Belt Off , Chain Pain

The White Anglo-Saxon Protestant, or WASP, is a largely American trope that today is used to describe the stereotypically "white" (and mostly upper- or upper-middle class, as the term is usually not applied to working-class poor whites and white Southerners associated with Deep South stereotypes.... even though they technically</ fit the definition) person in American culture The term originally referred to New Englanders, New Yorkers, and Tidewater Southerners from wealthy, Anglo-Saxon (English) backgrounds, generally either Congregationalist or Anglican/Episcopalian doctrinally , but it eventually came to be applied to inland Southerners, Midwesterners, and Westerners as well, regardless of income level or sect. It also came to be roughly synonymous with "Protestant", so that even Protestant Irish, Scandanavians, Dutch and Germans were eventually called WASPs. "White Protestants" wasn't as snappy a term as WASP, so usage of the term has hung around. The stereotype might be extended to upscale (or not) Catholics or Jews who either intermarry with Protestants or internalize Protestantism as the standard for "normal" Americans It became important in the mid-20th Century to point out the features of this group as a social reality. Generally WASPs were in positions of privilege and power, and could discriminate against those who were not white and not Protestant. Ethnic minorities (which may no longer be minorities in the New Millennium), non-Anglo Europeans, Jews and Catholics in particular suffered discrimination and exclusion. Critics pointed out how WASPs would see themselves as the "true normal" of the cultural world. This, ironically, led to the "generic and bland" stereotype that so many WASPs are now desperate to shed. It can easily be conflated with the Boston Brahmin , First Families, Secret Masters of the World stereotype. They (the two stereotypes) share a core characterization, but WASP is a straight-up acronym of a demographic label, a thing you might find in a sociology text, not having any of the Old Money , Secret Masters baggage Strictly speaking, it is hard to generalize about WASPs. Since a majority, albeit a slim majority, of Americans are both white and Protestant, WASP covers a lot of demographic ground. They can be either liberal or conservative politically (fiscally conservative but culturally liberal being a frequent combination), and fill any socioeconomic niche. This trope is primarily for figures who meet the most stereotypical WASP criteria: affluent, generic, bland personalities, usually with a little bit of stuffiness inherited from their British ancestors and a preoccupation with keeping up appearances. These days, much of the WASP characteristics can be found ironically enough, in the non-WASP Irish-American community, especially in Boston. Thanks to with Irish Catholics being the first immigrant waves, they have integrated and assimilated strongly into the WASP hegemony, with John F. Kennedy 's election being a symbol for the acceptance of the Irish Catholic community into the mainstream, and Kennedy being, alongside Barack Obama , the onlySometimes Martin Van Buren is also included as a non-WASP president, as he was of Dutch descent and not British ("Anglo-Saxon"). It also helps that he was the only US President to speak English as a second language (Dutch was his first). Others however still feel he qualifies as WASP since he's non-immigrant, and comes from a country and culture that is Protestant and allied to England, so while he may not be Anglo-Saxon, he's still

White/Protestant and non-immigrant The Hays Code had this effect on classic Hollywood cinema . Although written by two Irish Catholics, the Code was enforced mostly by Midwestern Protestants, and the films under its jurisdiction cut according to their biases which in turn reflected the biases of America's conservative ideology of that time. American characters in movies from the 1930s and '40s do tend to all look and talk the same , with only minor regional differences. Non-Anglo/Nordic Americans don't tend to show up - and when they do, they are "conventionalized" as much as possible . Not until the 1950s would the existence of "ethnic" whites be openly acknowledged. Many of the classic Hollywood actors weren't WASP themselves but became WASP to fit in with the values of the time. Hispanic-American Rita Hayworth is a famous example, as are a number of Jewish-origin actors who changed their names to better fit in (Lauren Bacall for instance). This ended in the New Hollywood era with The Godfather </ with its Italian-American setting and cast, marking the start of greater on-screen diversity and largely ending the age when actors needed to alter their ethnic make-up or personal names to pass as WASP. In fact, nowadays the opposite will often be the case, at least in fiction: Suddenly Ethnicity is used to "spice up" an otherwise "ordinary" protagonist, especially if this person does not otherwise conform to WASP stereotypes Japanese people might be viewed as the Asian counterpart to this trope, given their stereotypically stern work ethic and obsession with tradition and good manners ; while Chinese people and other Asian nationalities might fill in for Catholics (more colorful, festive, and "spiritual"). And within China, there is a similar divide between Confucianism (middle class and socially conservative) and Daoism (more earthy and countercultural, and roughly akin to some "ethnic" flavors of Catholicism), with Buddhism viewed as exotic and associated with foreigners (so, analogous to Judaism or Islam in the West) Compare and contrast with Christianity Is Catholic . See Irishman and a Jew for a similar ethnic fault line, with Jews (usually) filling the WASP niche. Other associated tropes are Upper-Class Twit , Rich in Dollars, Poor in Sense , Jerk Jock , Seemingly-Wholesome '50s Girl , Stepford Smiler , Granola Girl , Bourgeois Bohemian , and Valley Girl . (More positively, they may be associated with The All-American Boy or the Girl Next Door .) Especially common in Hollywood New England , though they may also be found in Everytown, America and Suburbia (especially the Stepford Suburbia variety). See also American Accents for more variations and stereotypes associated with them

Wage theft. Fraud. Bribery. Ponzi schemes. Insider trading. Labor s racketeering. Embezzlement. Cybercrime. Copyright infringement. s Money laundering. Identity theft. Forgery. Cooking the books. s According with That Other Wiki , these are all white-collar s crimes, the sort executed by the white-collar worker. They tend s to be non-violent and money-driven. The Enron scandal in Real s Life raised awareness about these sort of criminals. If the s perpetrators are caught, fiction will often portray them as going s to a Luxury Prison Suite . How often this happens in Real Life s (and to what degree) varie The supertrope of Stealing from the s Till , Penny Shaving , Fake Charity , 419 Scam , and Ponzi . If a s religious organization is used as a means to scam people out of s money, see Path of Inspiration . Compare the Corrupt Corporate s Executive , who will often be involved in this. It's important to s note that this type of crime could be considered the evolution of s

organized crime and The Mafia in general, since in times where s
there is more police technology and violence draws too much s
attention, the vast majority of the most professional criminal s
organizations have opted for semi-legitimate, less violent system s

This trope is when a comedian takes a mundane activity, like driving a car or dialing a phone, and describes how one group of people stereotypically performs it differently than another group. The different ways they approach the activity are supposed to humorously highlight the cultural differences between the groups. A typical example of the trope compares white and Black people, as suggested by the trope name Historically, a lot of Black comedians based routines on this format, which was shocking, transgressive and deeply satisfying for Black audiences when they first heard it in the late '70s and early '80s. As part of the "blaxploitation" movement where Black people started reclaiming and accepting certain Black stereotypes as positive rather than negative portrayals of Black culture, especially of Black masculinity, male Black stand-up comics started to turn white stereotypes of Blacks being "uncivilized" and "dangerous" on their head , recreating the stereotype as white men being over-civilized, timid and cowardly while Black men were powerful, independent and cool . Comedians such as Richard Pryor and Steve Harvey were early pioneers of the trope, and later comedians followed suit Over time, this style of comedy has become an Undead Horse Trope , and still it continues to live on, and on, and on... Successful comedians like Chris Rock and Dave Chappelle have become very successful with their own take on the format, often taking great care to find fresh new angles that work off of audience expectations. Younger and less talented comics, however, play the trope very straight to create cliche jokes for cheap laughs. If a fictional comedian starts employing material like this and plays it all straight, it is more often than not a shorthand for him being a milquetoast performer who deliberately appeals to the Lowest Common Denominator or even an outright lazy hack Generally, only minority comedians really can get away with using this trope without massively offending people

Masks are spooky: they dehumanise, they make a dangerous inhuman inner being visible. White masks occupy a special place. They have a long history in several cultures. Being white, they are blanker and scarier, offering nothing for the eye to hold on to. And look like skulls . Sometimes our imagination will dwell on what is under </ the snow-pure mask: ghastly disfigurement? Nothing at all ? Bonus points if the rest of the character is dark to accentuate the mask. Being white it'll show bloodstains starkly. Note that the mask doesn't have to be pure</ white; any mask that is paler in color than most human skin tones and relatively featureless fits this trope. Anime and manga have to draw inspiration from. Western tradition has plague doctors , scary clowns , The Klan , and Mexicans have the calavera masks of Dia de los Muertos (Day of the Dead). Compare Cool Mask . Sometimes doubles as a Mask of Power . Sub-Trope of Malevolent Masked Men . See also: The Blank .

In real life, having your brain physically removed from your body pretty much means you are dead. In comedy however the results can be a little different, leading to one of these outcomes (besides the realistic fatal one, obviously): Walking Vegetable:</ In this

case the body is in a drooling zombie like state, able to walk after a fashion but otherwise almost totally unaware of anything going on around them. Any speech will be monosyllabic. Can be done realistically, if some important parts of the brain remain but all the higher regions are gone. Stupid but Aware:</ In this case the character has simply turned into The Ditz - they are much stupider than usual but able to talk properly, walk around without bumping into things and so on. Probably the least common category. No Change:</ This is most likely to happen to a character who is already The Ditz . Brain falls out, is stolen or whatever and the de-brained character acts exactly the same (and may not even notice their brain is gone.) Sometimes the brain will be far smaller than normal to begin with. No brain to lose:</ A slight variation on the above; it turns out the character doesn't have a brain in the first place! Not to be confused with Brainless Beauty (though of course this trope could happen to</ a Brainless Beauty .) See also In One Ear, Out the Other which is often how the absence of a brain is revealed.

The characters are in a larger vehicle and the driver comes back to where the passengers are in order to have a conversation, leading to the obvious question of who is driving now. Once the you-know-what has been hung (often with an Oh, Crap! from at least one character), the vehicle crashes. Surprisingly often it's revealed that an animal has taken the wheel, though this doesn't make the crash any less likely, because, well, it's an animal. Alternatively, a particularly clueless character may have engaged "cruise control" under the impression that it will function as an autopilot and allow the vehicle to drive itself for a while Compare Drives Like Crazy

Sometimes rather than just a brief reference or homage to some other work of fiction, a work will actually be a full-blown recreation of something else's story. This is most commonly done in sitcoms, and is likely a spoof to at least some degree Expect it to reference/parody the original's Signature Scenes Tropes Are Tools — a story can serve as a reference or re-mixed version of another one without just ripping it off. Clever parodies put a lot of their own creative thought in while still referencing the original Compare Parody Episode , Whole Costume Reference (the clothing version) and Recycled Script (internal recycling). May be a Twice-Told Tale . For when this is subverted, see Not His Sled . The opposite would be a Shallow Parody , which claims to be a parody but has almost no real references to either the plot or any other aspect of the target

Crossdressing characters who are presented in a positive (or at least neutral) way. Frequently presented as attractive (or at least not un</ attractive), relatively "normal" people as opposed to perverts or sexual deviants The Wholesome Crossdresser may be of any sexual orientation, but in settings where being straight is considered part of being "normal," one can expect to see the character's heterosexuality explicitly highlighted Some permutations of the trope are more or less unique to Japanese works. The Japanese Wholesome Crossdresser is usually well-groomed, compassionate, nice, and above all, so convincing that their sex is only mentioned on occasion, as a reminder to newer members of the audience. There's a fair chance someone will get a crush

on them, although this is usually resolved after The Reveal The opposite of Creepy Crossdresser . May overlap with Disguised in Drag or its Distaff Counterpart , Sweet Polly Oliver . (If the character wears cross-dressing disguises more often than seems strictly</ necessary, this trope may apply.) Wholesome Crossdressers tend to enjoy</ dressing, even if only reluctantly, secretly, or subconsciously Often overlaps with Drag Queen (a campy, hyper-feminine form of expression with heavy ties to gay/bi male culture), but usually doesn’t with being Transgender (an intricate subject that is more connected with inward identity than outward appearance) Compare Otokonoko Genre , which is about male crossdressers (and occasionally Transgender women), that are almost always presented as wholesome

Someone has been murdered. The first step is simply to determine what sort of motivation someone might have had to kill them. There's just one problem: they were a complete and total asshole , so everyone</ wanted to kill them. Establishing that the victim was widely despised makes for a more challenging murder mystery because of the sheer number of suspects with motives . This helps to draw out the investigation and makes obtaining a conviction harder, as the jury might sympathize with the killer. Expect the police to express the feeling at some point that maybe this guy deserved to die, and that his killer did a public service. Typically, in the end, it's discovered that the murder was unrelated to the victim's being so thoroughly despised, or at least not directly related. Either that or his targets got fed up enough to work together and create plausible deniability for any one suspect . It might also be used to make the audience sympathize with the murderer when they're finally discovered. Because of the morally challenging nature of this plot, it's best to send in a By-the-Book Cop or a Knight in Sour Armor to solve the crime because they try to not become emotionally compromised. A common message in these kinds of stories is that two wrongs do not make a right. See also Asshole Victim , the subject of a plot like this. This is a Death Trope , so beware of unmarked spoilers!

It's nearing the end of regulation of a sports contest the main characters are in, and it's a close game. Someone makes a comment that the team could tie it up, and beat the opposition in overtime. They end up doing one better by getting the job done in regulation. Although just about any spectator will tell you that overtime is always exciting to watch (especially in sports where it's "sudden death", i.e., next score wins), there are a few reasons why the main characters or the author may choose to forego overtime play: A subtrope of Down to the Last Play . Not be confused with someone who refuses to pay for extra hours worked.

The Mighty Ducks </ . Happens several times. In the Ducks' final regular season game, Coach Bombay pulls Goldberg to give the Ducks six attackers and a chance to win the game in regulation, as a tie would not have been enough to qualify for the playoffs. It works.

Practically every episode of Hang Time

Hey Arnold! ! </, "Benchwarmer": With his team down by two with nine seconds remaining, instead of simply sinking the two free throws

he's given and playing overtime, Arnold decides to deliberately miss the second freethrow to score a basket to win. This is a real tactic, but so unreliable (you have to bounce off the rim to one of your teammates, which isn't a skill normally practiced) that a smart player would only do it if they need all three points just to get</ to overtime.

.

Whoopee cushions are items that make a farting sound when someone sits or steps on them. Frequently used by The Prankster , and may be part of an April Fools' Day joke. They are a form of Toilet Humour , so people who use them are usually children or very immature adults. Compare Stink Bomb , which recreates the smell of a fart rather than the sound. Sub-trope of Grossout Fakeout .

The credits just fly around, often toward or away from the screen, leaving trails behind them. Not as popular with opening credits being used less often in film, but still shows up. The effect is achieved by a specific form of Remember, this is only about titles and credits doing this, not the effect of slit-scan by itself . Nor is it just an effect to make the titles seem to pop out. They have to actually move around. This doesn't just have to be the opening or ending credits. Trailers could count as well. Compare Vertigo Effect .

A comedy scene where the proper names of persons, places, or things sound like lexical parts of speech, pronouns or exclamations, such as Hu, Watt, Mee, Yu, etc. Basically, a huge Hurricane of Puns . Usually, one character will describe a situation using these terms solely as names, while another character uses them constantly as pronouns and gets increasingly bewildered. Example: This is named from a vaudeville routine which, while popular at the time, is best known through its adaptation as an Abbott and Costello sketch. Abbott and Costello also used variants of the routine in much of their comedy, such as their commercial for "Hertz U-Drive": a Beam Me Up, Scotty! to set up the joke; the company's real name was Hertz Drive-Ur-Self System or shipbuilding: This could expand into a Hurricane of Puns : "to make money loafing, you have to really knead the dough." If used in the actual plot, this is usually the result of an idiot Comically Missing the Point . However, this is not necessary if the Straight Man is being intentionally ambiguous. It needs be emphasized that it is very</ important for the routine (as the Simpsons quote shows) that no matter how smart either side is or how exasperated it gets (or how eager is one of them to please the other), none</ of them will ask a question or provide an answer that will be utterly unambiguous. Occasionally, characters have this as a running joke about their name. Slightly more serious versions may use this as a form of loophole or Prophecy Twist : knowing that No Man of Woman Born may slay you is little comfort when Mr. Noman from the village of Womanborn shows up at your door looking for blood. See Chain of Corrections and Sustained Misunderstanding for related tropes. Sometimes overlaps with What's a Henway? A " The One With… " title can result in something similar. Often includes a Real Joke Name or two. If it involves an owl and the question "Who?", see Owls Ask "Who?" , or for another bird, try Duck! . Frequently, if not usually, overlaps with Overly Long Gag .

Put your hand down. This is not a vote. The worst fate possible might well be immortality . Sure, you might like the idea that you get to live forever and see what the world's like hundreds of years from now, but what's eternal life compared to the pain of life in general? From eventual boredom to eternal entrapment and torture to the emotional anguish of seeing your loved ones die, one by one, as you stay fixed in time. Then let's not forget that the Earth might be destroyed by the expanding sun in a few billion years, so if you haven't a way to leave by then you can look forward to spending eternity in space, orbiting the dying core of the sun. Some fantasy fiction, such as R.A. Salvatore's Forgotten Realms novels and the Fighting Fantasy gamebooks published in the 1980s and 1990s, depicts demons as being horribly bored and depressed by their endless existence in Hell, the novelty of torturing their servants and fellow demons having long since worn off. Of course, their boredom and frustration make them all the more eager to torture humans and other mortal creatures when they find their way to our world. When done Anviliciously , this can seem like Sour Grapes on the part of the very much mortal writers . May be used as a Fantastic Aesop . This attitude toward immortality is Older Than Feudalism , going back at least as far as the Greek myths about Tithonos's Age Without Youth and Prometheus's punishment and of course the appeal behind He — why is your hand still up!? </ Compare Blessed with Suck for those that angst as well as And I Must Scream for the mindset this can create. Contrast Living Forever Is Awesome (for those who like it), Immortality Seeker (for those who seek it) and Eternal Love (where immortals fall in love). See Living Forever Is No Big Deal for the middle ground. See also Immortality Hurts , which is a Sub-Trope . Immunity Disability is a Super-Trope (here, the "immunity" is to death). See Analysis for more horrifying details.

Masks of all forms, and for all reasons Doesn't matter if it's for maintaining your Secret Identity while fighting crime (even if it's not that believable), dressing up for Halloween, or going to a Masquerade Ball . Masks can be useful for all of those

is a popular translation of Quis custodiet ipsos custodes?</, from the writings of Juvenal , and which may be more literally translated as Who will guard the guards themselves?</ . It was quoted as an epigraph in the Tower Commission Report into the Iran-Contra scandal and many, many, many other places This is about what happens when the police are in need of some policing. Perhaps there's a Serial Killer preying on the cops. Maybe the civilians are turning on the police, allowing the criminals to win. Or perhaps the cops themselves have become the criminals , and need to be brought back in line Note that it isn't specifically about police; any group with power and/or responsibility for the lives and well-being of others can qualify, as long as the story concerns the events and repercussions when this group needs the kind of oversight and attention they normally bring to others Internal Affairs is a division within the main group whose specific purpose is indeed to watch the watchmen. A work with such a division may still bring in the trope if internal affairs itself becomes corrupt and needs some investigation Ironically, the original quote concerned the problem of hiring guards to prevent your promiscuous wife from cheating on you , with the implication that she would try

to seduce or bribe the guards, or that the guards would do the same or worse to her See also One of Our Own and Screw the Rules, I Make Them! . Can lead to Super Registration Act in superhero comics. A big reason why legislating Thoughtcrime is a very bad idea

The most common gag that leans on the fourth wall is when the characters are associated with a movie or TV production of their own adventures. If the idea is not just laughed off, the adventurous group have Hollywood types wanting to make an adaptation of their exploits. Further fourth wall fun can be had if the production crew within the show are made to resemble the production crew of the show itself, or parodies of them Expect Executive Meddling , dismissing of the unrealistic issues, Flanderization of characters, and if the show does get produced, a show that bears little resemblance to the stories we're used to (possibly it creates a rival show as a Take That!). A subset of Show Within a Show . Often an excuse for Recursive Canon Compare the Documentary Episode and I Should Write a Book About This . Compare and contrast Direct Line to the Author , in which the book/film/show/etc. about the cast's adventures is the actual</ book/film/show/etc., or Literary Agent Hypothesis , for when that is stated by fans instead of creators. May overlap with Film Felons if the character is using the production as part of some other plan. May overlap with Self-Parody if the in-universe show is Played for Laughs or indulges in melodramatic excess . See also Oh Crap, There Are Fanfics of Us! and Other Me Annoys Me for cases where the character doesn't appreciate the way he's being portrayed

This is when characters are unable to bear the stupidity of a script, usually that of their own show, and they outright mock it (Breaking the Fourth Wall if it is their show). This is often expressed in the form of asking who wrote that script If the creators of the show respond to the criticism by tormenting the characters, it's Author's Retaliation Keep in mind that in order to qualify as true to this trope, it has to be done In-Universe about its own work or another work, often a Show Within a Show (expect it to be done with Stylistic Suck) or an actually existing work (the latter might even involve a "Not Making This Up" Disclaimer , and may or may not be an Affectionate Parody). This doesn't count if it's just an audience reaction A Sister Trope to Better Than a Bare Bulb . Compare Self-Deprecation , Self-Parody , Take That! , Who Would Want to Watch Us? , and Writers Suck

All kinds of Things That Go "Bump" in the Night seem to plague the media. It seems you can't throw a TV remote without hitting ghosts, vampires , The Legions of Hell , aliens , or some other type of monster . Fortunately, wherever there are monsters, there's likely to be people who hunt them, and they ain't afraid of no ghosts. These folks tend to come in a number of distinct varieties: The Chosen One , who is also often the Hunter of Monsters . Of course, Muggles don't tend to be aware of the existence of the threat, so types 1-5 are often perceived as kooks, often of the Agent Mulder brand. Still, if there's something strange in your neighbourhood... See also Creature-Hunter Organization and Paranormal Investigation . Compare Occult Detective and often related to Demon Slaying . If they're good enough, they may boast We Do the Impossible .

A character unwittingly becomes a walking, talking bomb through Applied Phlebotinum . They can have explosive devices implanted in them by the villain , or in other cases, they are</ the bomb due to applications of combustive or out-of-control super powers Whichever way, they're extremely hazardous to the health of the people around them, made all the more urgent by the fact that they may not even know that they're the threat In Video Games , this type of effect is frequently employed by bosses (and sometimes by players) as a Herd-Hitting Attack . Expect Ludicrous Gibs if the character blows up Not to be confused with Action Bomb , which is when a character blows themselves</ up as a form of attack. See also Explosive Leash and Strapped to a Bomb . May take the form of a Typhoid Mary , Walking Wasteland , and/or Poisonous Person . When used by a villain, it has a high chance of being their Moral Event Horizon . If the ticking is literal, it may be due to playing Grenade Tag with a Sticky Bomb . If overhearing it affords others a chance to run for cover when the walking bomb approaches, this trope overlaps with The Croc Is Ticking

Two characters are discussing something in hushed tones. At one point, the one character says: "Why are we whispering?" and the other one says "I don't know". Otherwise, one character is whispering, and the other one doesn't realize that there is a good reason, and asks in loud tones why. Hilarity Ensues .

Alice and Bob are planning an Undercover Mission. They need someone who knows about fine art or looks good in a bikini. Or perhaps they need someone to be The Bait . They reach the conclusion, but don't say it out loud, that Cate is the person for this. The audience knows this. At this point, Cate enters the room. Alice and Bob look at her. The next phrase out of Cate's lips: "Why are you looking at me like that?" Guess who's up for a Crowning Moment of Awesome ? Sister Trope to Got Volunteered . Often followed by a Gilligan Cut or an Oh, Crap! .

Alice is in love with Bob. Unfortunately, she finds out that Carol is also in love with Bob, leading her to view Carol as an enemy. The catch? Carol is so damn nice to Alice that Alice feels guilty about disliking her. If Carol happens to be Bob's girlfriend, things can get even worse This can also apply to situations where someone simply has a non-romantic reason for hating someone but said someone is too nice/charming to dislike. Can result in a Go-Karting with Bowser -like scenario if the participants in the Love Triangle end up hanging out a lot Compare Friendly Enemy and Dog-Kicking Excuse

A seemingly invulnerable character reveals that they are deathly afraid of X</... therefore, X</ is certainly going to be a recurring obstacle, no matter how unlikely . The Trope Namer is a line in Raiders of the Lost Ark </, reminding us that Indiana Jones hates snakes ( ) when he discovers that the Well of Souls is crawling with them A subset of Fatal Flaw . Fear of Thunder (also known as brontophobia), Spiders Are Scary , Claustrophobia , Afraid of Blood (hemophobia), Afraid of Doctors (iatrophobia), Bee Afraid (melissophobia) and Afraid of Needles (trypanophobia) are specific sub-tropes of this This is common in horror/sci-fi stories dealing

with a "master of fear" (such as boggarts , Freddy , Pennywise , or the Scarecrow), in which the monster uses their powers to guess their victim's worst fear , and then use it against them to make them a quivering heap . Enemies who know about this weakness are prone to use Flaw Exploitation and as a way of coercing the hero . It can also overlap with The Dreaded . If an innocuous object causes fear that renders someone helpless, it may overlap with Weaksauce Weakness . Also compare Absurd Phobia , where an unusual (and usually non-plot relevant) fear is Played for Laughs As you can imagine, Truth in Television . Compare Primal Fear for examples where common phobias are gleefully exploited in horror fiction. No personal examples, please. Not to be confused with Reptiles Are Abhorrent , but it helps to explain it some Compare Trauma Button . For characters with haphephobia, see Hates Being Touched

Some people just don't play fair. Picture a scene such as a mother arguing with her teenage daughter. The cause might be trivial; maybe the kid was slightly late coming home. Usually, the mother wins these arguments, if only by virtue of You Are Grounded . But her daughter's not backing down this time and she may actually have the upper hand in the argument (i.e., she was late because she needed to stop for gas). The argument escalates until the mother realizes that she can't win this one, or the daughter makes a comment that hits a little too close to home. SLAP! Quick as a flash, the mother's hand slams across her daughter's cheek. There's a pause while the girl registers that she's been hurt. And that's when mother plays her trump card. Before her daughter can get over the shock... her mother bursts into tears Normally, the person who now sports a bright red handprint across her face will begin apologizing profusely or start crying as well, usually hugging the one that just hit her. Somehow, the victim</ is now convinced that she</ was to blame... and the slapper "wins" the argument by default. The victim of could be anyone, but the two most common characters who are subject to being the victim are a close relative or friend, usually a child (actual or surrogate), or romantic partner or spouse. Thanks to the Double Standard , if a man</ should employ this trope, it's a given that not only is domestic violence on the horizon, it's mixed in with Manipulative Bastard traits too. For example, the violent husband who knows how to play on his wife's soft-heartedness. These characters are almost invariably written as pure evil . In the case of a woman slapping her boyfriend, the chances are that the trope will be recognized as an emotionally manipulative ploy, but it's much less likely to be a sign of a Domestic Abuse plot; if it's a daughter or friend being slapped, the attacker will probably get away with it, they will reconcile and everything will have been forgotten two scenes later; however, as the signs and symptoms of emotional abuse are becoming more publicized (and stories of emotionally abusive women are featured more often in Real Life news stories) this portrayal is beginning to change. Occasionally this is a one-off event that isn't indicative of an abusive relationship, just an argument gone bad, or just Played for Laughs , especially if the person hit isn't very hurt or recovers immediately. The character who does the hitting won't have done it before, and probably won't do it again. In the case of children, particularly if the child has worried the parents and is now acting like a mouthy brat, it will be seen as a natural reaction toward the scare, a result of combined worry, anger, and relief. Sometimes, too, a manipulative child will deliberately goad an otherwise reasonable

parent into striking him, knowing that he will be able to milk the parent's guilt to his advantage for weeks afterwards. Compare Sorry I Fell on Your Fist (from the victim's side) or Armor-Piercing Slap (for cases when the hitter usually does NOT burst into tears) and Get A Hold Of Yourself Man (in which the hitter really did have no choice but to hit the victim, due to the latter being a hysterical mess). Related is Stop Hitting Yourself , where you instead use the victim's own limb to hit them while taunting them. See also our Useful Notes page on Victim Blaming for serious Real Life explanations.

Villains frequently find themselves in conundrums that could easily be solved by finding the right person and shooting them , but for whatever reason, refrain from doing so. There may or may not be some in-story justification for this failure to take the direct approach The Doylist explanation will always boil down to "because if he did</ just shoot him, the story would be much shorter , and the bad guys would win ." Sub-Tropes include: Compare Third Act Stupidity , Contractual Genre Blindness and Kill Him Already! (when the good guys are urging a quick kill). Someone might invoke this trope by using a Scheherezade Gambit . Contrast Combat Pragmatist and No-Nonsense Nemesis . Not to be confused with Just Eat Gilligan , although there can be overlap. Also contrast Once Is Not Enough when the hero KO's the villain and then chooses to flee instead of finishing him off. If you, the viewer, are wondering why someone won't just shoot someone else, Headscratchers is the place to ask.

Someone who is involved in the production of a work is known for interacting with the fans. For example, they take some time writing a production blog or answering fandom's questions, or regularly appear at conventions. All of a sudden, this person stops doing so because some fans become so thick and heavy (and ugly </) that this previously fun activity has become a burden and is no longer enjoyable. In some cases, they may end up with bodily harm (or face threats thereof) by the absolute worst of the unpleasable fans This is Why Fandom Can't Have Nice Things The fans complain to and about the creator, hassle them to an unbearable level, constantly ask questions that the creator has already stated they will not be answering, and generally do obnoxious things in the name of their fandom. Because a small handful of people are making it seem like every member of a fandom acts this way , the creator stops whatever fun interaction with the fans they were having, ruining it for everyone, even the people who were behaving themselves. This may give the rest of the fans the impression that said creator is a Nice Character, Mean Actor , even though it wasn't the fault of the creator at all. This can be especially true for those who act respectfully and were unaware of any other fans causing problems. In many cases, this may result in a no-win situation for a creator : attempt to avoid the bad fans, and the fans hate them; alienate the good fans, and the fans hate them On other occasions, it may be due to the behavior of the fandom towards others, rather than towards the creator. It's difficult to respect your fans when you constantly see them starting shit with other people for no good reason, especially when it involves serious offenses like DDOS attacks, doxxing, or death threats that are likely to come back on you, especially</ if they did it out of some misplaced desire to protect your honor or avenge a real or perceived injustice This is especially</ bad towards things that people actually do

as a hobby, or out of personal enjoyment. Many a rant has been made by harassed creators/producers/personalities who state that they actually could be off doing better things or that their life is already stressful enough with their other job(s) that they really don't need to come home from a long day's work just to be hassled. And many a rant towards pirates have been made saying that they actually need to make money or else they won't be able to produce further installments Most frustratingly, the fans who cause creators the most problems are also the ones least likely to understand, appreciate, or accept the effect that their actions have had. Instead of using it as a lesson, they will almost always turn on the creator, decrying them as sellouts who only care about money, egomaniacs who just want clout, performative allies who stand for nothing, or whatever else they can demonize the creator as, and will use that as a blanket justification for whatever bad acts may follow Complaints often arise from Schedule Slip . For example, it's been pointed out that few people who do webcomics actually make money off of them, with most of them doing it as a hobby. When things in real life pop up, such as health issues, it's always the webcomic that has to go first Related to Dear Negative Reader , Writer Revolt , and Why We Can't Have Nice Things . Common scenarios that can lead to this includes Trolling , Flame Wars , Unpleasable Fanbase , Internet Backdraft , Ship-to-Ship Combat , Rule 34 – Creator Reactions , Video Game Perversity Potential , Disproportionate Retribution , Fan Dumb , and Hate Dumb . Be Careful What You Wish For is often invoked. Making matters worse, this can sometimes result in an Internet Counterattack and Complaining About Complaining . In some cases, this tends to induce Artist Disillusionment , ending in a take that from the author to the fanbase within the work, sometimes in the presence of a Straw Fan . If it proceeds beyond that</, it can ultimately end in the author simply quitting the whole work, and in extreme cases retiring from writing altogether One of the many results of G.I.F.T . Contrast Role-Ending Misdemeanor , for when it's the creators' own misbehavior causing problems and leading to cut privileges

Primarily a film and literature trope, though not impossible on television Our romantic couple breaks up for some reason . We know, however, that everything will work out well in the end; misunderstandings will be solved, mistakes forgiven, they will end up happily together Sometimes one of the partners comes off as more of an ass than intended and reconciliation breaks the willing suspension of disbelief that the wounded partner would ever take the wounder back. We are forced to root for them, even if we feel that not only would the "hero" not be taken back — they absolutely shouldn't be Note that despite the title, this trope can happen with any gender combination This trope is often matched up with Love Martyr and/or All Take and No Give . Very much a defining feature of the Lifetime Movie of the Week brand of entertainment A sister trope to No Accounting for Taste . See also What Does She See in Him? , Easily Forgiven . For when there's a much better suitor involved, see Derailing Love Interests . Very often a case of Strangled by the Red String and/or Designated Love Interest

It's not that Evil Is Cool . Rather, this is more like "Evil is Intellectual". Evil is smart, wicked, sarcastic with a biting sense of humor. Evil is smooth and eloquent, if not outright

suave. Evil dresses well , has a polysyllabic lexicon , quotes William Shakespeare , sips fine wine , listens to his favorite opera on his downtime (almost always Don Giovanni </), and in general is shown to be cultured if not necessarily civilized. This can apply to any villain, Anti-Villain , or associated character types May overlap with Dumb Is Good , but it doesn't have to. The hero of the story can easily be a more rugged intellectual, or he reads/writes poetry, which is almost never perceived as an "evil" form of culture (cf. the Warrior Poet trope). Closely related to the Magnificent Bastard , whose sheer tactical and strategic brilliance often sets him inside the trappings of Wicked Cultured (particularly when he catches you and then explains which strategic genius first invented that trap). Faux Affably Evil is a similar overlap of highbrow manners and vicious actions. Villains who try to be this and fail are Wicked Pretentious When Aristocrats Are Evil , they almost always follow this trope; when enough of them do, you get a Decadent Court . They are likely to practice Brains and Bondage without any trace of Safe, Sane, and Consensual . Likely to be a Villain in a White Suit as well. If there's a pair of Wicked Cultured villains, they'll often be Bantering Baddie Buddies A Wicked Cultured villain will naturally be associated with equally cultured music, with their most likely Genre Motif being classical music. Their Mood Motifs tend to be either harpsichords or, for more grandiose variants of this trope, Ominous Pipe Organs . Villains that are particularly passionate about music would probably enjoy Conducting the Carnage This trope often carries some implication of Slobs vs. Snobs : people who enjoy pop culture are average joes and probably the protagonists, but those who like "high" culture are a bit weird, "other", and more likely to be antagonists Compare the less sinister Villains Out Shopping , Villainous Fashion Sense , and Man of Wealth and Taste . The exact opposite of this is a Gentleman and a Scholar (unless he is Affably Evil). Someone who keeps trying to be this but whose plans end up less</ clear, simple, and effective may have a Complexity Addiction Not to be confused with Sophisticated as Hell , although overlap is possible

The Wicked Stepmother, the woman hostile to her stepchildren, is a perennial trope. Older Than Feudalism , she appears constantly in legends and folklore around the world and is the villain of many a Fairy Tale Psychologists hypothesize that she is an Archetypal Character , devised by children to contain all the hate they have for their mothers so they can continue to regard Mother as perfect. Some historians, meanwhile, believe that the trope has didactic roots and that it was developed as a way of warning children against potentially untrustworthy suitors that might try to court their widowed parents for their wealth or their nobility; indeed, Death by Childbirth was extremely common in the Middle Ages, leading to many children of the period being raised by stepmothers Sadly enough, Truth in Television ; children are vastly more likely to be abused by stepparents. In fact, in some languages, the word for "stepmother" is the word for "mother" followed by a pejorative suffix. Even centuries of subversion have not transformed her into a Discredited Trope ; she can still be played either straight or subverted She generally favors her own children — whether from a previous marriage or this one — over her stepchildren. Not that that causes this trope, because it's kind of natural. It's just another symptom. Sometimes her economic motives are made

clear: there is only so much to go around, and she wants it for herself or her own children. An equivalent male figure is the Evil Uncle — because inheritance is generally through the male line, the uncle can inherit his brother's children's estate. Envy is another common cause; the Wicked Stepmother either wants to be Fairest of Them All or to have her daughters be so On the other hand, the stepsiblings or halfsiblings can but need not be hostile to the hero(ine). If they are hostile, Youngest Child Wins is trumped by the older child's stepchild status The father is seldom a factor. If not dead (which is common), he will nevertheless never intervene on his child's behalf Her tactics vary widely. She may simply oppress the heroine, keeping her in rags and slaving at household work — sometimes going as far as assigning the Impossible Task . As a Wicked Witch , she may transform the child(ren) into animals . She may drive or send them off. She may act violently toward them and even kill them (and perhaps cap that by cooking them up and serving them to their father .) Rarely is she ever a Lecherous Stepparent The stepchild(ren) may succeed in defeating her through help from their real though dead mother — the Grimms' version of "Cinderella", " ", has Aschenputtel get her gowns from the tree planted on her mother's grave. Talking Animals may also feature, as can a Fairy Godmother . These figures can do everything from performing the Impossible Task on behalf of the child to ensuring that She Cleans Up Nicely despite the dirt and rags she is reduced to This trope is sometimes the result of writers attempting to Bowdlerise fairy tales by transforming a cruel mother into a wicked stepmother. For instance, Grimms' original tales of "Snow White" and " Hansel and Gretel " both featured a cruel mother Given her status as a villain, the Wicked Stepmother's chances of surviving the ending are not good. The Happily Ever After ending of most fairy tales often dwells with more detail on how the Wicked Stepmother and/or her children were punished than on the hero and happiness. On the other hand, stepmothers who are not disposed of often return; when she is not executed at the wedding , she may, for instance, try to kill the heroine when she gives birth and replace her with her own daughter; so the Fairy Tale doesn't end (happily or not) until she's dead Sometimes preceded by a Guess Who I'm Marrying? scenario. Can involve a Missing Mom ; older stories usually do, often caused by Death by Childbirth A common subversion is the jealous Daddy's Girl regarding any stepmother as a Wicked Stepmother; see Parent with New Paramour for cases where it's the children who are in the wrong The possibility of a Wicked Stepmother may hang over a Blended Family Drama . The Red-Headed Stepchild is a particular victim Subtrope of Evil Matriarch . Note that the Magical Nanny often becomes a stepmother via Marry the Nanny , but never a wicked one. Department of Child Disservices is a modern organized variation. Usually, Social Services Does Not Exist in stories with a Wicked Stepmother . Contrast Good Stepmother for the trope's logical antithesis. Often a staple of the Cinderella Plot

Welcome to the dark side of the classic witch, step lightly or you may get eaten The wicked witch archetype is a classic staple of Fairytales everywhere. It used to be that just about every witch was wicked, and if a non-evil female magic user appeared in folklore, she'd be referred to with a term like "sorceress" or "fairy godmother" instead, but in modern times that's not always

the case. A lot of the trappings of a wicked witch are shared by her good or neutral counterpart the Witch Classic , such as Broomstick riding and wearing pointy hats . Still there are some red flags to watch out for to decide if the witch you're dealing with is good or may in fact be wicked : Because Beauty Equals Goodness and Evil Makes You Ugly , an evil witch tends to be old and wrinkly, perhaps with warts and a Sinister Schnoz or Thin Chin of Sin , and maybe even green or sallow skin, or unhealthy pale skin . And of course they wear black . In fact, if they hit any of the evil appearance tropes you'll want to watch out. However, if her beauty is the reason for her evil, she's probably a Vain Sorceress It's likely that every witch in existence will be this trope in a setting where Magic Is Evil . There might also be some overlap with the Wicked Stepmother and the Evil Matriarch ; however, royalty tends to be beautiful . In settings tending more towards Magic Realism than typical fantasy worlds, their magical powers will be downplayed, but their prophecies will have a bad habit of coming horribly true, especially if they get insulted or snubbed It's also worth noting that many aspects of the wicked witch (an old woman in mourning black, living alone, loves children, has a cat) are perfectly ordinary things you might expect from a widowed older woman, twisted to make them sound evil. The origins of the wicked witch herself are most likely a way to vilify women that certain people thought were leading immoral lives, or wanted to take advantage of Compare Evil Sorceress of which this tends to be a more 'earthy' version Usually uses Black Magic . Subtrope of Witch Classic . Sister tropes include Cute Witch , Hot Witch , and Widow Witch . Not to be confused with Witch Species

A character far</ too idealistic for their own good It may be the Naïve Newcomer who Jumped at the Call — he or she has a huge</ stack of comic books/movies/bards' tales, and thinks they're pretty Genre Savvy . Unfortunately, their universe is more toward the cynical end of the Sliding Scale of Idealism vs. Cynicism than the stories they know . Alternatively, they might just be generally nice people whose idealistic attempts at solving the problems of their world turn out to go horribly horribly </ awry as no one else plays by their rules . Usually used as nothing more than a device to highlight the realism/grittiness/cynicism of the setting This character either becomes a victim of a Trauma Conga Line or a bad Break the Cutie ordeal, dies horribly or acquires a coat of jade post-haste. In settings that are still somewhat idealistic , they might get off with just becoming a Knight in Sour Armor or the Morality Pet to one. In particularly anvilicious cases, expect deployment of Diabolus ex Machina to deal with them If the character remains triumphant and idealistic throughout, then it may be a case of Good Is Not Dumb , The Pollyanna , or even Stupid Good . If their idealism drives them to turn evil or ruthless , they become a Well-Intentioned Extremist While All Loving Heroes are frequent victims of wide-eyed idealism, their suffering or sacrifice can encourage them to become full-blown Messianic Archetypes and inspire others in the setting to lighten up and thereby change the setting, unless they're a different kind of messiah, in which case the setting is only cemented When The Hero appeals to a group of people, often Least Is First falls under this. Someone will likely tell them Silly Rabbit, Idealism Is for Kids! and they are just as likely to retort with Silly Rabbit,

Cynicism Is for Losers! Compare The Idealist , Being Good Sucks , The Pollyanna , the Naïve Everygirl , the Love Freak , and The Ingenue . If there are entire civilizations of Wide-Eyed Idealists waiting to be slaughtered, see also We Have Become Complacent and Sugar Apocalypse . Contrast the Grumpy Bear , the cynic in an idealistic setting. See Turn the Other Cheek and The Farmer and the Viper . Not to be confused with using literal wide eyes to show that a character is idealistic

Occasionally when a character is shown to be imprisoned, the spacing between the jail bars is actually wider than the character's body. He could easily walk through the bars and escape, but doesn't, for whatever reason This is primarily a cartoon trope. Live-action prison bars are rarely made this way, unless the gag is specifically sending up the cartoon trope. Drawn or rendered bars are spaced that way so that they don't interfere with the view of the character's face and body language. They're visual shorthand for imprisonment, and are not drawn functionally even if we're supposed to believe they work Look out for examples using other types of imprisonment devices, such as manacles or stocks, or in more modern-day works, shock collars/bracelets/electronic monitors for anyone who tries to take advantage of the wide spacing and puts as much as their hand or head through Serious Type: the characters and the audience are meant to take the bars seriously even though they're clearly spaced far enough apart to allow escape. In this type the bars are purely visual shorthand. Very, very rarely, a character might be put in such a prison by a jailor who is too dumb to realize that the prisoner is small enough to escape the prison. Or perhaps, simply, The Guards Must Be Crazy Comical Type: the character in the cell lampshades the spacing of the bars by sticking his/her head or torso through. Someone might even accidentally</ escape through the bars, having been too stupid to figure it out on purpose. A particularly savvy character might even wait for the jailor to leave before slipping between the bars and making his/her escape When presented as a serious obstacle, this is very similar to the Insurmountable Waist-Height Fence

A story where (usually) a man falls in love with a woman, having raised her from childhood. She looked up to the man, thought of him as a father figure or beloved uncle, a guardian, counted on him to be there when she needed him, etc. In the more extreme cases, she might have even vowed to marry him when she came of age Then, when She Is All Grown Up , the girl decides she is in love with the man, or he with her, or both Nothing is ever said about how inappropriate, and even creepy , this is in current society. If the man was a real parent, this would count as incest, but of course they're Not Blood Relatives . Often, the story tries to excuse the man's behavior by claiming that he resisted the idea of a relationship, but the girl convinced him. Advanced cases can have him trying to play The Matchmaker with her and men her own age despite his Matchmaker Crush ; he may even be Oblivious to Love because of it. This makes it less</ creepy, in that he didn't plan it in advance, and it is what she wants as well A source of Values Dissonance in older works, because it used to be common practice for noblemen to marry younger daughters of friends and acquaintances, so this trope would have occurred a lot both in fiction and real life. It was quite proper for a man to fall in

love with his ward and for them to marry if she felt the same. Even in modern times, some people argue that this is not a problem so long as the former child is now an adult and able to properly consent Known in Japan (and for a while on this wiki) as the Hikaru Genji Plan, after the main character in The Tale of Genji </ , who kidnapped a young girl from a life of poverty for the purpose of marrying her once she grew up. The current name is a pun, as Husbandry is the act of raising something (animal husbandry, plant husbandry, etc.), and also contains the word Husband A subtrope of Age-Gap Romance . Often overlaps with either May–December Romance or Mayfly–December Romance , depending on the age gap and whether one of the lovers (typically the older one) is Long-Lived or Immortal . Compare Pygmalion Plot , Jail Bait Wait , Teacher/Student Romance , Parental Incest and Incest Is Relative . See also Father, I Want to Marry My Brother

Tropes listed in the Wiki Tropes index are being discussed at the Trope Repair Shop . Click the link to join the discussion Here we are, on the vast, bountiful plains of the TV Tropes wiki. Herds of tropers graze serenely on the Savannah of New Edits, while somewhere further south, in the rainforest jungles of the Trope Repair Shop, the shrill vocalisations of their fellows echo through the trees as they try to reach a consensus on a rename This is a fragile ecosystem, each species supporting the lush landscape of the wiki in its own special way. Each variety of troper has evolved to fill a particular niche, just as the finches of the Galapagos islands did. Some tropers form alliances and strive to make their habitat a utopia of literary and pop cultural knowledge. Others meander placidly around the wiki, neither contributing nor doing any harm. And, as with any species, some varieties of troper just have to discover how annoying you can be before mods with big sticks kick you off the wiki For further listings of species found across the oceans of the interweb, please peruse our Forum Speak page This page is Just For Fun ! Absolutely no flaming or naming of specific tropers! If you want to 'fess up to being one of these, put it on

The mainstay of this multi-faceted terrain, the main contributors create, nurture and trim back tropes. Most engage in elaborate social rituals known as "discussion" and "forum posting," although some quieter members of the group prefer to restrict these rituals to the Trope Launch Pad. : : : :

:
:

Do not discount the importance of the migratory types; the wiki may not dominate their Favourites menu the way it does for the Main contributors, but a Migratory troper is often a Jack-of-All-Trades , or a valuable support to other troper types. Normally, their interest in TV Tropes is a tangent to their main interest, be it comic books, anime or the most popular new television series. For the most part, these are subspecies of the Main Contributors, with one important difference: a Berserk Button . While they usually exist harmoniously with the rest of the herd, the vaguest sniff of their chosen bugbear sends them on a rampage. They charge forward, sending hapless newbies flying and knocking aside Editors who were quietly minding their

own business. May cause Troper Policemen some headaches, and they risk being banned should they prove more troublesome than helpful. Single-Issue Wonk (genus) : : There is no malice in these species, they just tend to be a little...overenthusiastic. However, try telling that to the Editors and Repairmen left to sweep up the rubble. Not to worry - a quick read of the rules, familiarity with the wiki and a helping hand from one of the more helpful troper types will quickly promote them to another category. Approach this troper with kindness and assistance unless and until they prove contentious — they could become valuable Wiki allies, but too vicious a lambasting and they may become a Cynical or Destructive type instead. Trope Namer Syndrome Carrier

The Furry

There's no getting around it—some species just ruin the habitat for everyone. Wiki Vandal Troll

Tropes listed in the Wiki Tropes index are being discussed at the Trope Repair Shop . Click the link to join the discussion. Okay, let's start this article with a section... ==Wikipedia Syntaxer== uh...

Gee, this version of the wikitext markup is gonna take some getting used to. A Wikipedia Syntaxer either is someone who hasn't realised that [[TV Tropes]]... 'scuse me , TV Tropes , which uses a somewhat distant relative of PmWiki, has different syntax (aka codes or formatting) from [[Wikipedia]]... sigh... Wikipedia and the many other MediaWiki wikis; or is someone who has been spending their time updating both (literally, if they have two windows or tabs open) and has momentarily forgotten which one they're currently editing. This means they mix up the syntax, leaving a page full of broken Wicks (that look [[like this]]) and Potholes (that look [[other example|like this]]) and all manner of other formatting problems that either they or another troper must unpick and fix. Not to be confused with a [[Wikipedia Updater]]... er... Wikipedia Updater , but the two may</ sometimes overlap. It's quite possible to go the other way and accidentally use TV Tropes syntax on a [ ], err... wiki too. For a relatively brief period in 2013, the "classic" Wikipedia method looked about to become a Discredited Trope , as that summer Wikipedia began to beta-test the Wikia format on its own site ... which, coincidentally enough, Wikipedia cofounder Jimmy Wales had a hand in as well.{{cn|date=October 2016}} People who prefer the traditional format can use the "Edit Source" function on any given article to keep using the Good Old Ways . As of the following fall, however, Wikipedia is back to using its old method and seems set in that way for some time. And then there's BBCode, used in many forums, which uses its own syntax - square brackets, but a different way of using them, as can be seen in the [url=http://www.bbcode.org/reference.php]official guide[/url]... uh, . And * then * ...darn, then</
Reddit came around, which requires yet another</
[syntax](https://www.reddit.com/r/raerth/comments/cw70q/reddit_comment_formatting/)... uh, entirely in its
posts, which is made even worse if you use
[GitHub](https://guides.github.com/features/mastering-markdown/)...
sorry, or any other service which can interpret . It's basically impossible for anyone in the habit of writing in all four styles to not make mistakes every now and then, resulting in a series of edits

as they systematically fix their syntax, forget something, fix it again... Related to Damn You, Muscle Memory! . ... GODDAMNIT!</

Tropes listed in the Wiki Tropes index are being discussed at the Trope Repair Shop . Click the link to join the discussion This can be a bad thing, because it means that out of habit, or just for lack of knowing any better, they can get hung up on things that do not matter on this wiki and set its goals back. [citation needed, AGAIN [citation needed for the last time They will go beyond the reasonable effort to write in an objective tone all the way into writing dull, terse, and detached prose Wikis are about people sharing what they know (or suspect) about a topic. Wikipedia is just one of them, with its own goals and culture, and with all due respect (and there is respect), our goals are different and our culture is different In TV Tropes, There Is No Such Thing as Notability . [need citation! If you say something, we'll take your word for it and figure that if you're wrong, someone will come along and correct you. We're more about a fun, entertaining, pithy style than about dotting our t</s and crossing our i</s. And the software does that automatically anyway

Oh, and please report them in Ask The Tropers so the staff can deal with them

A trope we can all relate to, and one of the most prominent reasons behind why TV Tropes Will Ruin Your Life . You're probably doing it right now, or if you aren't you will be by the time you finish this article. A Wiki Walk is a train of thought that has gone off the rails and is Riding into the Sunset . When going for a Wiki Walk you know where you begin, but no one knows where you'll end . Are you a Mad Scientist building an orbital death ray ? Well, too bad, inspiration struck and now it's the world's biggest dancing dish washer with a fully adjustable cup holder . You want to have a serious talk about the Middle East? Within ten minutes you'll be arguing whether Darth Vader could take Gandalf in a fight . Just want to check the Rule of Cool page? Before you know it you're adding examples to Bungling Inventor . You, my friend, have just had a Wiki Walk. The key feature of a Wiki Walk is that if someone were to see only the beginning and end of the Wiki Walk it would seem completely random, while in fact there was a series of thoughts that connected the beginning and end result, or it is at least implied

that this is the case. Despite the name, the phenomenon itself has existed since long before wikis — computers and hyperlinking simply made it faster and easier. For example, in the days of paper book encyclopedias, a person would get distracted and sidetracked by articles they paged past on their way to what they were actually looking for. If in a mystery, it could easily cause a "Eureka!" Moment , or possibly a Bat Deduction depending on how out-of-nowhere it feels. A common version of this trope is when a Wiki Walk is still in progress at the end of a scene, and then we catch the end of the conversation, which usually takes the form of a Noodle Incident , in the beginning of a later scene. A Cloud Cuckoo Lander is particularly susceptible to these, though we mostly only hear the end result. This is most likely responsible for the stranger half of any Are You Pondering What I'm Pondering? moment. If there is a database involved it will usually overlap with an Archive Binge , and is one of the reasons TV Tropes Will Ruin Your Life . A Sub-Trope of this is the Halfway Plot Switch , when the plot seems to do this. Refers to how you could, in two or three links, end up at a trope seemingly unrelated to the page you started from. Definitely an example of Truth in Television . Often cannot be recreated, as anyone who has spotted an interesting trope en route, planned to come back to it, and then forgotten what it was, will attest. Doing it intentionally for fun is known as "playing Wiki Tag." People have turned this into a game! It's called The Wiki Game </ , and the objective is to get from one article, to a completely different article in the fewest number of clicks. For an academic paper on the subject (although possibly not a peer-reviewed one — there is no title of an academic journal displayed), Here on TV Tropes , tropers are asked to not leave links to pages on or off the wiki in place of contextualized examples because (among other reasons) tropers are incredibly prone to the Wiki Walk. See also Schmuck Bait .

The thing that makes this a "Wiki" as opposed to just a collection of editable pages is the ability to create "links" between pages. In the "classic" formatting, a link is identified by creating a "WikiWord" by placing two or more initial-capitalised words together, CamelCase -style (e.g. HomePage). If the page exists, you'll see a link to it; if it doesn't exist yet, you'll see the name in red, which you can then click to create the page. You can get the same effect by putting the WikiWord-to-be between {{curly brackets}}; and if the WikiWord is just a single word, curly brackets are the only way to do it. It is recommended to use CamelCase when possible, and curly brackets only for single-word WikiWords Note that differences in capitalization are irrelevant between two identically-spelled WikiWords: Home Page and Ho Mepage link to the same place. This does not make the latter any less wrong </ In addition, punctuation is not allowed in WikiWords—it appears automatically after edits have been saved. Click "WikiWord" under the "More" menu on the top bar to request punctuation and nonstandard characters for a title, and open the "How This Works" folder in the popup that appears for instructions. See also Text Formatting Rules for specific details about the format

The Wild Card is so used to swinging between teams that they have no default "good" or "evil" Character Alignment or even a "home team." They truly aren't interested in consistently remaining with either

side, and will very often simply want both to leave them alone. They can be the sort of person who will stay out of things entirely, until someone else (usually the hero or other sympathetic character) asks them for help. The Wild Card doesn't care whose toes they stomp on, even if they're supposed to be the Wild Card's own team. In fact, The Hero probably got one (if they even manage to convince one) onto the team only</ because the Wild Card owes them big time . The Wild Card can really shake up a team — the more suspicious characters will quite rightly not trust them. Unlike the mainstream neutral characters that don't join evil or good because of their preference of not assisting malevolent individuals accidentally, which they have a right to fear, Wild Card characters are instead dynamic in terms of their morality, which doesn't exactly make them truly impartial. The latter characters however, are truly impartial and rather morally static, meaning they stay loyal to what their overall morality is. Wild Cards often share a few of these traits: Bystander Syndrome : "As long as that rampaging evil beast doesn't get in my way, it's not my problem. But if it does... well, the good guys just got a new ally." Sometimes Wild Cards fall in love . Love is the bane of the Wild Card, because no longer does the world revolve around one amazing and easy to understand person—there's somebody else. Oh my god, What Is This Feeling? ! Knowing how erratic the Wild Card can be, it could be somebody from either team—or both. With somebody to care about , the Wild Card may well become more reliable for a team. Or if there's multiple people to care about, they may become less</ reliable. There are also some Wild Cards who became what they are because</ they fell in love with someone. Neutral characters of the said three neutrality alignments can qualify as this (with Chaotic Neutral being more notorious with this trope, but because neutrality is by definition not joining either side, this is by no means a guarantee). Basically there are some neutral characters of the three impartial alignments that are deemed Wild Cards, while some others are not. Wild Cards are very rarely Big Bads , though; they aren't really dedicated</ enough to evil—or to anything</—to be that</ evil. However much they may enjoy doing what they do, most Wild Cards have either some form of morality, or high survival instincts, and are likely to turn on their evil employer because they were betrayed, don't want to be blown up with the planet, or even just because they just don't like being that</ evil. Wild Cards are more likely to be a Big Bad 's poor choice of Bastard Understudy , or even the Good Team's Token Evil Teammate . While the average Wild Card sees their "friends" as a handy Bulletproof Human Shield , they have just enough conscience to feel bad about abandoning them when the fight turns ugly. No Wild Card switches teams because they care</ about their friends—they switch teams because it means a better life for them. On rare occasions, a Wild Card may unexpectedly pull a sudden act of Heroic Sacrifice , though it'll likely be because they guessed that if they didn't sacrifice themselves, they'd probably die anyway—along with everybody else. Or they might not . Wild Cards are just that</ unreliable. Not to be confused with the Wild Cards</ book series . Also not to be confused with wild card sports teams, which are teams who qualify for the postseason despite not winning their division, usually being added in order to fill out what would otherwise be empty playoff brackets. See also: True Neutral , Enigmatic Minion , Lovable Traitor , Double Reverse Quadruple Agent , The Starscream , Opportunistic Bastard , Heel–Face Revolving Door , Chronic Backstabbing Disorder , and Playing Card Motifs . Compare/Contrast Nominal Hero . Particularly wild Wild Cards tend to

fall under For the Lulz and Chaotic Neutral .

: Often the 'documentarian' will affect an accent of the wildlife adventurer or commentator of their choice. Popular English language examples are David Attenborough 's soft, British Accent ("Hee-re, in the Amazonian rainforest..."); the iconic Awesome Aussie Steve Irwin 's easily recognizable Australian Accent ("Crikey! She's a beauty!"); Jacques Cousteau 's famous French accent; and imitating the voice of Morgan Freeman , due to the popularity of the March Of The Penguins</ documentary. A Dead Horse Trope variation would have an elderly man commenting, "While Jim is wrestling the giant alligator [or some other deadly place we've just left Jim], I'd like to take a moment to talk to you about life insurance." This was based on the Mutual of Omaha's Wild Kingdom </ series, popular in the 1960s and 1970s. (Marlin Perkins got too old to go out into the field and began doing commentary - and commercial breaks - from the studio, hence the comedy.) A big component of what makes this amusing is that most characters who use this act like Large Ham Announcers . Compare Mockumentary . Mock Cousteau is a sub-trope.

Let's face it — fanon is fun</. Sure we don't promote it , but it has to start somewhere.</ This is the garden where we plant our Epileptic Trees . What's your silly pet theory on a story you enjoyed? As long as a theory at least sounds like a theory, we'll assume that it's valid, no matter how improbable, contradictory or even Jossed it is. Let your hair down and play along with it. To connect your silly ideas with other works, please see Grand Unifying Guesses . If no Wild Mass Guessing page currently exists for the work you wish to guess about, feel free to add one. Just type WMG / Name Of Show in your html bar, edit the page, and voila! It should appear as an icon on the main page. Warning: Prolonged exposure to these pages will result in them making sense. </ Take a break after every half hour of exposure. Be sure to read the WMG Programme Note .

A variation on The Take . If The Take is reaction, the Wild Take is massive over-overreaction For example, say a mouse ran across the kitchen floor. A take would be to jump back, startled. A Spit Take would be to drop the roast on your feet while shouting. A wild take would be to scream at the top of your lungs with your eyes popped out and duplicated many times and with a giant mouth and jump high enough to leave a you-shaped hole in the roof Most characters who engage in this behavior tend to be high-strung at the best of times. Don't ask about the worst of times Mostly an Animation Trope , though it can be CGI'd into live-action shows (most often, but not</ exclusively, those intended for a younger demographic and "live-action cartoons"). See also Eye Pop Compare with Super-Deformed

Tropes associated with The Western .

To film, comic book, literature and TV show writers, the wilderness is untamed and unknowable where big adventures happen and few humans see. The big wilderness is mostly associated with the western coastline of America like Alaska, California, Oregon and Washington where miles of forest still exist in pristine beauty;

the same applies to British Columbia, which makes up the Canadian portion of The Other Rainforest . It can also cover places like Germany's Black Forest, the many moors of England, like 90% of Russia, or any creepy, looming, or deep woodland in the world The Wild Wilderness is anything that pertains to big forests, mountains, empty meadows and other land untouched by the hand of man while it also has adventure, some spookiness/mysterious happenings, and/or events unseen by the rest of the world, or at least the general populace. For a good example, Erin takes a stroll in the Deep South woodlands to search for the source of a mysterious glow she sees every night out her window. She finds and ends up fighting off swamp pirates, saving an Artifact of Doom , fending off poisonous reptiles, and escaping back to the safety of home, all without anyone in her town noticing what's going on in those same woodlands In Real Life this is partly possible in only some of the listed locales as deep woodlands where no one can see what goes on ; but in some works of fiction where there are modern or future settings it seems as if the world has had all of its woodlands magically transformed into untouched wilderness. If it takes place in a fantasy or alien world, it's Hand Waved to be uninhabited This is not often the case in reality; as anyone looking at Google Maps on satellite view can plainly see, population is sporadic and very well spread out. It's very difficult to get lost in the wilderness without running into a road or human settlement, outside of a few famously remote locales such as Alaska or Siberia. Whether this is a good or bad thing is up to interpretation as it can be quite disillusioning to watch the camera pan back on the DVD extras and realize there's a strip mine right behind the "lush wilderness" in your favorite adventure film May overlap with River of Insanity and may lead to The Greatest Story Never Told but is not related to Horrible Camping Trip in any way. Überwald is likely to be right on the doorstep, and may add some supernatural nastiness to the setting Compare Ghibli Hills , which is mostly wild but contains much more chance of random encounters with various inhabitants and their settlements; and Arcadia which is a "natural" rural area populated by shepherds or peasants. Not to be confused with The Lost Woods , which is the fantastic / video game variant. When Trees Attack the protagonist, it probably falls under that</ trope

Tropes about plots that involve a will and general inheritance drama.

Samuel Taylor Coleridge , the poet and author, called drama "that willing suspension of disbelief for the moment, which constitutes poetic faith ..." Any creative endeavor — certainly any written creative endeavor — is only successful to the extent that the audience offers this willing suspension as they read, listen, or watch. It's part of an unspoken contract: The writer provides the reader/viewer/player with a good story, and in return, they accept the reality of the story as presented, and accept that characters in the fictional universe act on their own accord. In other words, an author's work does not have</ to be realistic. It only has to be believable and internally consistent (and even the last requirement can be relieved to some extent). When the author pushes an audience beyond what they're willing to accept, the work fails in the eyes of that particular audience. Viewers are usually willing to go along with creative explanations for things, which is why people don't

criticize your faster-than-light wormhole travel system or wonder how a shrinking potion doesn't violate the laws of matter conservation But even in the more fantastical genres, suspension of disbelief can be broken when a work breaks its own established laws or asks the audience to put up with too many things that come off as contrived. A common way of putting this is "You can ask an audience to believe the impossible, but not the improbable." For example, people will accept that the Grand Mage can use a magic spell to teleport across the world , or that the spaceship has technology that makes it completely invisible without rendering its own sensors blind. But the audience won't accept that the ferocious carnivore just happened to have a heart attack and die right before it would have killed the main character, or that the hacker guessed his enemy's password on the first try just by typing random letters . Without some prior detail justifying it or one of the Rules listed below coming into play, an audience is going to cry foul, and their suspended disbelief is now at the forefront of their mind. What is impossible in Real Life just has to be made the norm in the setting and kept consistent for an audience to accept it. Of course, different people will have different thresholds for what they're willing to accept in a work, and what may break one person's willing suspension of disbelief may not necessarily have the same effect on another. Most action movies push this trope almost to the breaking point; for the sake of action, the heroes can do virtually anything</, given enough Phlebotinum . As always, the various Rules override nearly all other considerations. When the audience's disbelief, which was suspended during the show, gets reinstated some time afterward, what you get is Fridge Logic . When the means of "fixing" the Plot Hole just end up making it worse and/or opening up a new</ one, that's a phenomenon known as the Voodoo Shark . This trope dates back at least as far as William Shakespeare and Henry V </, in which the narrator directly acts the audience to "on your imaginary forces work" in order to accept a few actors running around a stage as kings and princes and the battle of Agincourt. The MST3K Mantra is an exhortation to reinstate your Willing Suspension of Disbelief even if it's been broken, because "it's just a show". Similarly, Bellisario's Maxim calls the audience to reinstate their WSOD by ignoring</ whatever Plot Holes or other inconsistencies broke it, or that those things really aren't</ as important as the audience member(s) may think. Incidentally this is one of the more controversial elements of, believe it or not, Professional Wrestling , and is heavily tied to Kayfabe . When a true story is so bizarre and/or over-the-top that only its veracity enables Willing Suspension of Disbelief , that's Reality Is Unrealistic .

Acceptable Breaks from Reality : Sometimes absolute realism can make a work or story boring, disgusting, downright impossible, or otherwise just doesn't work. Breaking from it in those instances, as long as it's not an Ass Pull and is internally consistent, actually makes your story better.

Two characters, often combative but with obvious Unresolved Sexual Tension , resist going into a full blown relationship for a rather long time. Usually the two characters will be presented so that "they will" is the conclusion to root for; only rarely is the question of whether the writers think they should in any real doubt. Actually ending the dance is a tricky business. While there are works that can and have had the characters get together long before its conclusion, you'll find that most are very reluctant to risk losing the valuable

source of dramatic tension that is the (seemingly) unrequited relationship. After all, without that lovely source of drama, your audience could cry that the work is either Jumping the Shark or suffering Shipping Bed Death depending on whatever replaces it. As such, the Last-Minute Hookup tends to be the most common endpoint of this trope, with writers keeping the romantic tension building throughout the series, only revealing that They Do (or alternatively, that they don't) in the midst of concluding any other major plot threads during the Grand Finale . Of course, keep this plotline going for too</ long, and you may encounter complaints that the show suddenly has become about the relationship , with that element overtaking everything else; including the very premise. In addition, shows can go out of their way to avoid resolving the relationship, making ever-more-desperate narrative leaps. In longer-running shows, they may even have the characters hook up for a little while, only to split up over and over again, until by the time they finally let the characters get actually, technically married, the show has lost its viewership anyway. Belligerent Sexual Tension is often a victim of this. Sometimes a Love Epiphany can be used to have a character realize their feelings, but still not resolve the question, just add a new dynamic to it. A fundamental Shipping-inducement strategy. Generally a supertrope to: See also Almost Kiss , Held Gaze , Relationship Upgrade , Like Brother and Sister , Moment Killer , and Did They or Didn't They? . When a series ends without even a hint of resolution to will-they-or-won't-they, it's No Romantic Resolution . If it's more ambiguous, it's Maybe Ever After . Contrast Friends with Benefits , where they definitely</ do it, but without the emotional baggage. Compare Just Friends and They Do . Contrast Platonic Life-Partners and Ship Sinking — they won't. See Just Eat Gilligan if it's a major plot point. See also Break-Up/Make-Up Scenario when they separate for some dramatic reason, spend a time apart, then reconcile (usually with a kiss, which breaks the Will They Or Won't They)

Pleasant spring flowers die in seconds, animals run in horror, the wallpaper peels, everyone's hair stands up before falling off, and when The Pig-Pen finally decides to take a bath, the bathwater kills the fish and leaves a rainbow sheen on the surface of the water. No amount of tomato soup could do anything about this stank The smell is usually a Visible Odor . If it is someone's mouth smell, see You Need a Breath Mint . When weaponized, it was made into a deadly Stink Bomb and it is often used for evil because Uncleanliness Is Next to Ungodliness Compare Mirror-Cracking Ugly , when its physical appearance that hurts one's surroundings, and Gale-Force Sound and Glass-Shattering Sound , when it is sound. Not to be confused with Smells of Death , where a person on the verge of death have a specific scent. Related to Gasshole , Fartillery and Walking Wasteland

Ah my, was it . It was a franchise unlike any other. The fans loved it. It caused fangirls to Squee! with delight. Even those who weren't fans grudgingly respected its brilliance. There were books, TV shows, movies, video games, comics, lunchboxes, T-shirts, and a thousand fan-fics. It was magnificent. But then, something went wrong. Author fatigue set in. Or maybe the author failed to exist . Or perhaps their ego overshadowed the work . Maybe the executives meddled too

much . Or the work or its creators got caught up in some sort of controversy . Or the work tried to grow the beard and instead ended up Jumping the Shark . Maybe, the author simply dared to change something about it . Whatever the cause, the result was the same. The show's ratings slipped, the movie gave way to cornier sequels , and folks stopped buying the T-shirts. The franchise lost the crowd it worked so hard to win. And it almost died. So sad. But is there a way to restore the massive franchise we all know and love? Sometimes, the crowd can be won again! Even though the fanbase has revolted against a franchise and declared it "played out", the creator (or maybe even a new one) can actually make the franchise fresh and new and relevant (and profitable) again. The creators realize that the franchise simply has to be adjusted for new changes in society. Or they remake it with new actors, who are [gasp!]</ as good as the originals. Maybe they cut out the Narmtastic parts of the original. Or fix the visual effects. Or maybe the franchise just needed to rest for a little while. Maybe they changed it back now that it sucked. Perhaps a newly Promoted Fanboy is now Running the Asylum . Heck, maybe the execs were right after seeing a couple of outings where the old team gets their restraints taken off and decide to put the meddling back in. Whatever it is, the result is the same. The fangirls are squeeing again, folks are buying T-shirts again, and the Fan Fics are back. It's magnificent (again). Works that manage to win back their crowd are also usually regarded as So Cool, It's Awesome . Compare And the Fandom Rejoiced (when a preview reassures fans by showing the producers are being faithful to the source material), Author's Saving Throw , Win the Crowd . See also Career Resurrection and Genre Relaunch . If a company is trying to invoke this, it's a case of We Don't Suck Anymore . No Recent Examples, Please! You can't say a work has won back its crowd if it hasn’t been released yet. A week after release should be enough to allow for enough people to experience the work to make a proper judgement on it.

This character is a hero, fighting the good fight and defending the innocent from the forces of evil. Not everyone understands the nature of their struggle — in fact, many decry them as being insane — but if only they knew what the hero knew then they would understand that their goals are noble and their methods perfectly justifiable (if a little extreme). There's only one problem: The struggle is imaginary. There is no struggle. There are no enemies. No-one needs to be saved. They're doing what they "have to do" to save people from a threat that doesn't exist . The Trope Namer is Don Quixote , a crazy old man who wanted to be a heroic knight but had zero knowledge of what knights actually were, thanks to being born several centuries too late. He saw some windmills and believed that they were actually evil giants, and set off to attack them, in the most famous scene of the novel. A Windmill Crusader is not a Straw Hypocrite : While he might be a Heteronormative Crusader or Principles Zealot , he is not a dishonest person who will try to trick people into a struggle against windmills for the greater good . No, he honestly and wholeheartedly believes the windmills are giants and is desperately trying to save everyone from this non-existent threat. So, why did he mistake windmills for giants in the first place? Well... maybe he's crazy , maybe someone gave him misinformation that he didn't check up enough, maybe he's interpreting something incorrectly , or maybe he blindly believes some religious or ideological dogma. Fighting a threat that others mistake for a windmill but actually is a real threat doesn't make the character a Windmill Crusader at all. However, it makes it easy to

get mistaken for one. Also, a character can fight a real threat and still be a Windmill Crusader: either by misunderstanding what the threat really is or by fighting real threats as well as windmills . Might suffer from Black-and-White Insanity or Aggressive Categorism , and is likely to do Activist Fundamentalist Antics . Compare Conspiracy Theorist and Zombie Advocate . Contrast Lord Error-Prone for someone who makes a lot of little mistakes rather than one huge fundamental misconception.

People are separated by glass: a window, a door, the Plexiglass barriers they have in the visiting rooms of a prison, whatever . They can't touch, so they place their hands on opposite sides of the glass in a gesture of wordless comfort A little bit trickier, but also possible, with an opaque barrier This can also cover kisses or other attempts to touch through a barrier. See also Separated by the Wall See also "The Graduate" Homage Shot Has nothing to do with falling in love with Microsoft Windows or an actual window

Simply put, it's a human with wings sprouting from their back Biologically improbable due to human bone and muscle structure (though at the same time, usually easy to rationalize</ at first glance due to the nature of our shoulders), and if they're intended for actual flight, you may have to write off several laws of physics as well. Therefore, such characters are often assumed to be not entirely of this world , especially since the domain of birds shares a name with God's kingdom: Heaven . This ties into the classic depictions of winged angels as well The type of wing is usually indicative of the character's morality — see Good Wings, Evil Wings If there's something even slightly resembling feathers, expect a Perpetual Molt . Don't expect flapping , however there will be plenty of floating Best done via animation, as live-action wings are bulky and can look rather silly. Animated wings are also easier to "tuck away", or may even vanish into hammerspace . If a character suddenly sprouts a pair, it's because Power Gives You Wings Generally seen as highly attractive , even if the Wings Do Nothing . If you're looking for the flying partner of an Ace Pilot , try Wing Man Subtrope of Vertebrate with Extra Limbs and Monstrous Humanoid . See also Draconic Humanoid , who may have dragon wings but looks decidedly less human. Subtropes include Bird People (usually), The Mothman , and Harping on About Harpies . Compare Peacock Girl and Pegasus . May become a Broken Angel if their wings are clipped

It takes two to tango in the air combat business, so you need a wingman. Or three. Or sometimes more The wingman is a pilot of another plane whose job is to cover his or her lead's six o'clock—behind him—in an attack, and provide witty banter or, occasionally, someone to rescue. The wingman (or woman) will often have a contrasting personality to the Ace Pilot . They may also be wearing a red flightsuit In multi-player video games involving fighters, you can get a wingman as a given. Other games feature AI wingmen. They may utter the phrase " I Got You Covered !" Generally has nothing to do with Winged Men Compare Guy in Back , when a pilot has a companion sharing the same plane - for example, a navigator or radio operator. Since the F-4

Phantom II and F-14 Tomcat, two of the coolest planes around , are two-seaters, it's common to get a "four in two" group of characters Has mutated and been adopted as slang for the guy who, when you encounter a couple girls hanging out together, keeps one occupied so you can try to pick up the other. (It's this one instead.) And not to be confused with the manga called Wingman</ Many wingmen themselves may be aces, especially if they fly in a target-rich environment. When a group of aces are arranged into flights and wingmen, it is called a fat cat flight</

A character has, obtains, or shows wings. These wings don't do anything. They don't help the character fly. They don't throw lasers. They don't flap! They don't even eat people! Even if you are</ able to fly (whether or not you could before), the wings clearly aren't responsible in the traditional aerodynamic sense. They just appear because they look cool . This trope is for all wings that don't have an actual use, regardless if they are won from an upgrade , appear in the character's real forms , or they have been all the time in the character This trope appears principally in Video Games and Anime Related to Power Gives You Wings , and to a lesser extent, Awesome, but Impractical and What Do You Mean, It's Not Symbolic? See also Good Wings, Evil Wings , as these useless wings may serve for identifying a character at least Compare Goggles Do Nothing , for clothing and accessories that are there for the sole purpose of looking cool. See also Stationary Wings and the possible justification, on aesthetic grounds, in Symbolic Wings . If the wings work sometimes, but not when it would actually be useful, it's a case of Acrophobic Bird

It's the big game. Your team is down. The clock is showing that fleeting moments remain to turn back the enemy and scratch and claw to a win. Nerves are high; energy is down. Fans are getting up and leaving. And the coach calls for a time out and brings the whole team in He gives a Rousing Speech , reminding the team of what they've done and how far they've come. The team can see that his whole heart is with the game and with them. He asks them to go out there and get the win — for himself, for another teammate who couldn't make it that far, or for themselves. Inspired, the players turn around and return to the fray with new enthusiasm This doesn't always</ work... but it usually does Attempted but failed in Brian's Song </ . Gayle Sayres asks the rest of the Bears to win the game for Brian Piccolo after his cancer diagnosis, but they end up losing

Averted in McAuslan </ , when the Gordon Highlanders soccer team is up against the far more powerful Royal Navy. Sports officer MacNeill pointedly does not lecture them - it wouldn't help.

Referenced in Kingdom Hearts II </ in one of Genie's summon quotes. "Win one for the gipper! Rah, rah, rah!"

Parodied in an episode The Simpsons </ where Mr Burns tells the team "There's a little crippled boy in hospital who wants you to win. I know because I crippled him myself to inspire you."

Knute Rockne made the whole story up .

Wars are already messy, but if you're unlucky you'll have to fight two enemies: the opposing force... and the weather Come wintertime, you better hope you're not in a place known for constant blizzards. Winter or arctic warfare is one of the most notorious kinds there is. Freezing temperatures, heavy snow, ice. This can play havoc with vehicles, which have to be kept running all the time or at least started up a lot. This, naturally burns fuel. Infantry have it the worst. They will need warm clothing, blankets, something to generate heat, extra food, and shelter. Lacking any of these can mean trouble During times like these you can expect to see specially trained soldiers starting to come out of the woodwork. Men and women who are hardened for the cold and can be relied on in these situations. They may often employ skis, or snowmobiles If you're really</ unlucky, you may find yourself in a winter battle that takes place in a city or on a mountain. Urban Warfare is just as notorious and has its own trope. Combat in the mountains is just as bad because of the terrain. Better hope you're not fighting in a city, on a mountain, in the snow . This is why nobody invades Switzerland In fiction, winter battles can be used a lot because it can really drive home just how hard the heroes' fight really is. If it's a work based on a Real Life event, then a winter combat scene will show up simply by virtue of whatever unit they are following being part of some kind of winter offensive. Video games will often incorporate it because it gives them a chance to whip out some cool winter gear, like snowmobiles Sister trope to Urban Warfare . Compare Weather of War , which is a more generalized version of this; Hostile Weather , which is also a generalized version that covers non-military settings; and Battle in the Rain , where instead of a snowy winter you have a rainstorm. Contrast Battle Amongst the Flames . An Ass-Kicking Christmas might overlap here if it revolves around Christmastime. Contrast with Jungle Warfare , where it's the heat and the humidity (aside from the jungle itself) that can kill, as well Desert Warfare , where it's the heat and vastness of a desert that can kill

So the Coming Attractions got lots of people to watch the first episode of a new show. But is that enough to keep them watching? Of course not. If the audience thinks your show sucks, then they change the channel and know once again to Never Trust a Trailer . So basically you need the viewers to keep watching. While that is obvious as hell, the thing is that it's not always obvious exactly how you do it. One might think that writing a good show is how you do it, but not really. Not only does that seemingly eliminate most writers , there's also the fact that viewers have different tastes about what is good and what isn't. This is why subjectively good writing is less important for viewership than simply getting the viewers to like the show. Thus it's a good idea to write what your audience likes. This is why so many shows are Strictly Formula . The very beginning of the show is often crucial for this. That's why the first two to three minutes of a show almost invariably either has a hook for the rest of the show, has a large percentage of the best jokes/tensest moments/biggest explosions, or has a combination of those. This is almost always where you will find the Quip to Black . Regardless, it's important to keep the viewers liking your show. Even it isn't immediate , you can still make the show work eventually if the suits see the potential . But that can often be harder than winning the audience over . Also beware of Pandering to the Base .

Compare with Growing the Beard (which can also win viewers), Killer App (which wins the crowd for a system), And the Fandom Rejoiced , Win Back the Crowd (If you lost your aforementioned crowd in the past, but managed to get it back) and Moment of Awesome . Contrast with Jumping the Shark .

A character is trapped in a game, and the only way to escape is to win. A Holodeck Malfunction may be involved The graphics of the videogame in question are usually either implausibly realistic or laughably primitive compared to those available in the real world at the time, depending on how out of touch the producers are Sister Trope to Trapped in TV Land , and a Subtrope of Your Mind Makes It Real and Dream Emergency Exit ; almost always a feature of The Most Dangerous Video Game . Overlaps with Deep-Immersion Gaming in some ways. The main difference is that whereas Deep-Immersion Gaming is basically a variant form of an Imagine Spot , this trope involves the game becoming very real. Anyone trapped in a Portal Book may find themselves facing a variant of this (finish the story to exit)

To any victim of long-term incarceration, being set free from it is the ultimate</ MacGuffin . Of course, it won't come cheap, but when the alternative is to rot and die in captivity, they'll gladly risk their life on whatever No OSHA Compliance Death Course is required of them to get it The favorite motivational carrot of Boxed Crooks and Condemned Contestants , since they're already locked away, but the threat of incarceration can be used preemptively so long as the victim is already powerless to resist. Any kind of Deadly Game or Gladiator Games is likely to have this as the prize since most people wouldn't risk their life without an appropriately large reward. Likewise, the Most Dangerous Game has life as the reward One common variant would be when it's the victims friend or family member whose freedom they're trying to win. Shows great dedication when the victim could just turn and walk away and leave them to their fate Since the kind of people who are locked up are typically not someone the captors want to let out, not to mention that doing so would mean losing their services, it's common for them to sabotage the victims attempts at fulfilling the terms of the agreement, just changing them as needed , or lying and killing them. If anyone asks, the previous "winners" were Released to Elsewhere . Just about every Evil Overlord does it at some point, typically making the challenge Unwinnable by Design . Of course the hero wins, only to realize he was being baited and breaks free instead Forced Prize Fight and Death Course often go hand in hand with this. Practically every Closed Circle adventure game ever

This is such a recognized trope point that someone with no idea how to drive will set off windscreen wipers in vehicles which have no justifiable reason for having them (such as spaceships or submarines) An easy trope for a director to use to show incompetence starting a vehicle, because the camera is usually looking through the windshield at the driver already. The windshield wipers are more visual than the driver accidentally starting the radio or the A/C If there is some threat involved, this is also a case of My Car Hates Me . If it's the faulty wiring of the car that caused this to happen, rather than the incompetence of the driver, it's a D.I.Y. Disaster . For more comedic driver

incompetence, see Had the Silly Thing in Reverse . See also Damn You, Muscle Memory! , which can be responsible for this trope sometimes

A character's mouth is removed by some means. Only</ the mouth. Any further and they would become The Blank . As the old saying goes: see no evil , hear no evil, speak no evil</ The most common gesture accompanying this is to close an imaginary zipper in the air, maybe even accompanied with a zipper sound, and the mouth of the victim close up and stay shut. There are other variants, of course, most quite horrifying Related to Eyeless Face and The Noseless . Not quite as catastrophic as And I Must Scream (no actions or communication). Compare with No Mouth , an animation style where characters are drawn without mouths, and Mouth Stitched Shut , in which the lips are sealed by brute force rather than erased

In fiction-land, disarming just about any bomb is a matter of cutting the right wires in the right order — usually each wire will be given a distinctive color , and an assistant will read from a manual: "Clip the red wire, then the blue wire, then the yellow wire..." The implication is generally that if the wrong wire is cut, the bomb will explode instantly, killing the person disarming it and everyone else in the blast radius. Combines Race Against the Clock with the need to make absolutely sure you're making the right decision for dramatic tension. Of course it's never as easy as just following the manual — generally some kind of subversion is used to heighten tension.

At no point is there a plausible explanation as to why a homemade bomb should conform to any color-code standard at all, especially since the designer obviously never intended for it to be disarmed in the first place - in fact, having multiple colored wires in the first place is puzzling since you'd expect the wires to come from the same spool, with the same color. Maybe they wanted to make sure they were assembling it correctly? Naturally, a bomb intended for air-dropping (or a missile warhead) really shouldn't have any trick wires to start with. Still, it makes you wish there were an Override Command . Example of a Dead Horse Trope , partly since in real life the electronics of a bomb are both simpler and more fragile than Hollywood would have you believe. Mostly, however, it's because Time Bombs simply aren't used anymore, at least not very much. Both proximity triggers and remote detonation are more likely to get the intended target, as well as blow up anyone who gets close enough to disarm them. A Time Bomb still has the advantage of both letting you get away without the risk of a proximity trigger being set off by you</ or the need to hang around close enough to perform the manual detonation, but most simply opt for a work around instead of a timer. The Wire Dilemma has a minor Sub-Trope in the Wrong Wire . See also Bomb Disposal , Operation Game of Doom , Cut the Fuse , and Relocating the Explosion .

Children who are more mature than their age implies, with a solid comprehension of abstract concepts, good foresight and an understanding of human nature beyond what most kids their age have. There are many ways to show that children are wise beyond their years: Kids who found themselves the head of a family and take their responsibilities seriously, the Kid Hero who actually treats their duty in a way an older hero does and doesn't simply see it it as an adventure, the teenager who refuses a stupid prank under all pressure, the cunning Enfant Terrible capable of planning and

backstabbing that would make an Evil Overlord proud… There may be a reason why these kids are what they are. Parental Abandonment (or even worse, a Teenage Wasteland) could force a kid to mature very fast, and a traumatic enough life could burn the childhood out of the most extreme and tragic examples of this trope. However, some of these characters are simply like this by nature. This trope applies to a good portion of anime characters, probably to appeal to a young audience while still being able to let the characters exhibit more mature behavior, like engaging in fierce combat or taking up leadership roles. This consequently makes such characters more relatable to a mature audience as well, as long as it's done well and the matter of young age doesn't raise too many eyebrows. Note that this is based on the mentality of the character. Just being shoved into an adult role won't cut it; the average Kid Hero and Bratty Half-Pint tend to be highly immature, after all. Intelligence tends to be different from maturity as well, some Kid Geniuses can invent hyperdrives in their backyard but act in a very childish manner everywhere else. A good number of kids under Improbable Age count, but if the kid is in a high-ranking position and still thinks like a kid, they won't fit here. Frequently speaks in Little Professor Dialog . Contrast One of the Kids , Manchild , and Kiddie Kid . Compare Adorably Precocious Child , who tries to be like this but is still a kid at heart. Compare Child Prodigy , who is basically a TV Genius in child form. Innocent Prodigy is when a child really is</ like this, but still retains a childlike innocence in other aspects of life. If the character has an outgoing personality, they might be a Mouthy Kid or Little Miss Snarker , and when this character's maturity is displayed in a villainous light, they may become a Creepy Child . When every</ kid in a franchise acts like this (or at least most of them), it's probably because Most Writers Are Adults Kids may be forced into this by living in a Teenage Wasteland . If the adultlike behavior is disturbing rather than impressive, it's Troubling Unchildlike Behaviour . If a Child Prodigy acts like an adult in a child's world, rather than being thrust into the adult one, they're Acting Your Intellectual Age .

Using the control that being a writer affords to create a story that addresses one or more outcomes that the author wishes would come about; that is wish fulfillment. There is nothing at all wrong with this, in and of itself . If Real Life fulfilled every psychological need we human beings have, we probably would not want to write fiction at all. Nor is there anything inherently</ unhealthy about using fantasy to compensate for a deficiency in Real Life ; as long as one avoids becoming a Daydream Believer , Escapism and fantasy and Wish Fulfillment are healthy ways a human psyche can deal with dissatisfaction Human beings have needs, and some of these needs are psychological in nature. This is an undeniable fact. When a person's Real Life does not provide all of these psychological needs, they can turn to fiction in order to provide for these needs. For instance, someone lives a very boring life going to an utterly mundane job and has no excitement at all. Said person's need for variation and stimulation is not being catered for. Thus, this person might feel very attracted towards stories where an otherwise-normal person they can easily relate to suddenly becomes an extraordinarily powerful being and is thrust into a wild and thrilling series of events This, in turn, is why people sometimes defend fictional characters as if they were real , because they are not defending the character but idealized versions of themselves and/or embodiments of their values. An attack on the

character is seen as an attack on traits they (the real person) personally possesses and/or admires</ While it's a neutral term and an undeniable part of fiction in general, wish fulfilment is rarely mentioned in a positive light in reviews. Usually, bringing up the term suggests that the author sacrificed quality in plotting, pacing, characterization, etc. in order to facilitate their , do it too much, and it stops improving the story and just becomes indulgent instead. The conclusion being: don't worry too much about using these tropes as long as you pay particular care to that balance It is also possible for a work to be Wish Fulfillment for the audience either, instead of, or as well as the author. People whom the work targets will be more willing (to a point) to suspend their disbelief over certain aspects of the work if it means that the goal of the work is achieved . However, this can be a double-edged sword too, as aiming for a too-specific demographic can limit the amount of people that the work appeals to Contrast with Sour Grapes Tropes and True Art Is Angsty Not to be confused with Wishing Tropes , which is about literal wishes being granted for characters in-story

Wish granting is a popular concept in fiction with numerous tropes, and several magical creatures and artifacts acquiesce to these desires. It's typically genies or fairies, but witches and wishing wells are not unheard of The wishes are commonly defined by the way they're granted. Hopefully they'll be carried out as you intended , but watch out if your words are taken literally , and woe betide you if they're deliberately misinterpreted .. See also Deal with the Devil for outright infernal entities who will grant your wish, although they usually have a rather demanding price Not to be confused with Wish Fulfillment , which is about the audience</ 's wishes being fulfilled in the story

So the enemy is a Jackass Genie , and has been attempting to corrupt the heroes by giving them wishes , or maybe after the heroes are done will be free to wreak havoc. Be Careful What You Wish For ! Since choosing not to play the game would be boring, there is usually one wish that will actually get rid of the problem. This often involves exploiting some rule that the Genie has to follow. It usually helps if the hero doesn't succumb to the temptation of trying to benefit from the wishes and defeat the genie at the same time, but some have beaten the odds and accomplished exactly that. Usually the results are a dramatic explosion, but not always. Sometimes it's merely a Reset Button being pushed. The most benevolent form is Freeing the Genie - this act of immense selflessness might be rewarded by turning a stunned and grateful former- Jackass Genie into a powerful friend and ally, who (depending on the system) may even be free to use their powers indiscriminately in your favor. Of course, whether or not the wording of the Wishplosion would work Depending on the Writer . Expect various works to come up with Take That! interpretations to popular wording from other works. See also Did You Just Scam Cthulhu? , which is more about tricking superpowered beings into doing your wishes in general, and Logic Bomb , which is an equivalent trope for dealing with computers and robots .

This is an index of tropes relating to all types of characters who This ihave the ability to use magic ndex is a subcategory of Magic This iand Powers , obviously enough

The historical Christian view of a "witch" was a person who makes a Deal with the Devil in exchange for magic powers, often defined as becoming Satan 's concubine. On the other hand, adherents of modern Neo-Pagan religions such as naturally take an opposing viewpoint on the practice of witchcraft In the modern day, though, either the positive or negative connotations of magic-as-divinely-attained would result in controversy (perhaps due to the ease with which either one may be confused with the other). So, in much fiction, witchcraft has become more of a matter of Superpowerful Genetics . Either "witch" is merely a particular race of humanity , or a different species altogether (the distinction is usually a matter of the author's semantics rather than using an actual biological definition of "species", such as the absence of interbreeding). This is a bit closer to a belief among the of Africa, that an inherited organ (often located near the liver) allows potential unconscious use of magic A Witch Species is also mentioned in very early Christian writings describing a belief that witches were tiny creatures that cause sickness in plants, animals and people. In other words, germs . But these writings also dismissed this idea as a superstitious delusion The witch's powers are merely a physical trait which you either have or you don't, although those lucky enough to be born into a Witch Species may still have to work hard for their abilities to reach their full potential. They may even need formal Training Note that these characters were originally almost Always Female , unless male relatives are introduced, and male magic users generally use learned skills for their magic. In some cases, male witches (frequently called "warlocks") are exclusively evil , or are portrayed as inherently less common or powerful than female witches. The popularity of Harry Potter </, however, has brought in some boys, although they're sometimes referred to as wizards or warlocks. Complicating the issue of inheritance of witch powers is that Muggle parents may produce witch children (and witch parents' Muggle children) because the Witch Species traits manifest in Randomly Gifted individuals Most protagonist Witches tend to be rookies, but the older and powerful ones are depicted as Physical Gods In Japan, the popularity of Magical Girls has considerably softened the idea and one is just as likely to see magic powers that are either genetic or learned May be the targets of Superhuman Trafficking . See also Cute Witch . For cases where every member of the witch species is a Wicked Witch (which is probably true if all Magic Is Evil), see Always Chaotic Evil . For cases where they can have any alignment (like normal humans) see Good Witch Versus Bad Witch . When members of a witch species produce a child with no powers, it's a Muggle Born of Mages By default, anyone from a Witch Species is disqualified from Badass Normal status (Muggle Born of Mages notwithstanding); they can still, however, fight like a normal , as well as be Brought Down to Badass

Like other supernatural beings, witches hold a prominent and enduring place in pop culture; therefore, here's an index for works that focus on witches Just having a witch in a story doesn't qualify it for inclusion here. The witch should be one of the main heroes, the Big Bad , or otherwise central to the plot. Such works will invariably include tropes from the Witches and Wizards index Note that not all female magic users are witches; some are actually Magical Girls or something similar. If the character in question is referred to as a witch and/or adheres to any of the Witch Classic

tropes, the work she's featured in probably belongs here Also see the related indexes Ghost Fiction , Mummy Media , Vampire Fiction , Werewolf Works , and Zombie Stories

When a potentially deadly and effective strategy is ruined (or logically should be but comically isn't) by the conspicuous way it is acted upon. Usually by a Battle Cry , an Attack Call , a Pre-Asskicking One-Liner or something similar. Needless to say, characters who carry out this trope frequently cross into Too Dumb to Live territory, or at the very least aren't the sharpest tools in the shed The calling card of Highly Visible Ninja . Compare So Much for Stealth , when some small indication blows one's cover, and Leeroy Jenkins , when one idiot ruins the careful plans of the rest of the party. Particularly spectacular versions of this trope may involve bursting through a nearby window or wall Trope Namer is a song from The Pirates of Penzance </, which is all about parodying this trope

In an unquestionably hierarchical situation — often with legally enforceable prerogatives — a junior argues with a senior. The junior has very good odds of being right, since he is confident despite what his senior thinks, or so he thinks. The more diffident the junior is about making the objection, the more likely it is that he is right (and objecting out of the purest sense of duty). Sometimes the junior merely keeps his complaints to himself, and his displeasure is merely manifested non-verbally. If the junior does voice his opinion, it will usually be prefaced by "With due respect" or some variant, like "With respect" or "With all due respect." Sometimes takes the form of a soldier chewing out a CO and punctuating their rant with a subdued "...sir." The Bad Boss will view this with disfavor, even if he ordered it; a Benevolent Boss will take it as a sign of good spirits and sense in the subordinate If he slaps it down and his</ superior is present, the odds are good that his superior will approve, and insist on it. This can lead to some interesting tensions afterward. It's something of a Running Gag that this phrase, as noted by the page quote, is almost invariably the preface to an opinion that isn't particularly respectful . The page image also contains an example of this trope being used as an insult in another way: Exact Words . (The speaker thinks you aren't due any respect from them.) Conversely, especially when addressing a group, it may be a way of showing respect for some of them without the awkwardness of explicitly saying that the speaker respects only</ some of them. A common Military Trope. Fire Forged Friendship may lead to this; the junior having won the superior's respect in combat, the superior will listen. The Old Retainer is prone to it, because criticism must be delivered properly</. Other servants may also engage in it. A more civilian version of this phrase is a "No offense, but..." which is again followed up with a dose of Brutal Honesty . Compare You Are in Command Now , where a junior may accidentally give a senior an order, and Friend or Foe , where the junior does not know whether the senior is who he claims to be. When followed by some slang or curse words, the result can be Sophisticated as Hell . See also My Master, Right or Wrong where the junior's sense of ethics (or sometimes just his sense) constantly clashes with the senior's lack thereof, though he still follows. Often said by a despairing Commander Contrarian . Compare

to the similar Permission to Speak Freely . See also Rebellious Rebel , where this may occur in the lead up to the rebellion. May be followed by Resigning In Protest if the superior is doing something particularly nasty/objectionable. Truth in Television , in various degrees in different settings. All professional and social hierarchies include forms for respectful disagreement with a superior, which may be used in earnest or sarcastically depending on the situation and the personal relationships involved. Contrast Right in Front of Me . See also That's an Order!

... Who Needs Enemies? Two people are supposedly friends, except they seem to hate each other. Like, a lot. They're always bickering, insulting each other or outright whupping each other, which leaves the audience wondering, "How the hell are these people friends?" This is often because one or both are Jerkasses , though sometimes it seems that they reserve all their hostility for one other. Once in a while, they'll have a heartwarming moment which will make the audience go " Aw, Look! They Really Do Love Each Other ." Then it's back to business as usual. The other option is that one will eventually go for a Uriah Gambit . Note that the conflict does not create serious problems when dealing with worse enemies — that is Divided We Fall (which is often enough also polite). Not to be confused with Don't Shoot the Message . For the romantic version, see The Masochism Tango and Belligerent Sexual Tension . Compare/contrast Friendly Enemy which has enemies acting like friends. Compare Vitriolic Best Buds and Odd Friendship . Contrast Who Needs Enemies? , where two characters really ought</ to be friends given their similar goals, but somehow aren't. May be due to coming from a Friendless Background . Compare to Fair Weather Friend (which one could say is a Sub-Trope to this one). Also, We Used to Be Friends , where their relationship evolved from "friends" to "enemies", but wasn't both at once.

It seems like any major military- or corporate-backed venture to give a mundane person super powers or just enhance their normal abilities results in the test subject going uncontrollably berserk as a side-effect . Sometimes the choice of test subject is clearly to blame. Convicted criminals are convenient (" One swallow and ten years go off your sentence!") but unreliable guinea pigs if you're trying to develop a Super Soldier who can punch out a tank. Nobody in any of these programs ever seems to have been given the most basic psychiatric evaluation. The evidence indicates a connection between morals and one's ability to remain "sane". Normally, using the power makes you crazy the longer you use it, because Evil Feels Good , but a noble, heroic character is better able to stay in control . Other times, it seems that insanity happens as a side effect for no discernible reason other than to justify the needs of the plot and/or give the super individual a weakness that they must struggle to balance and maintain. This also gives the Badass Normal their one edge over the competition as they lack this weakness. There will be some Techno Babble but this will be the real reason. Sometimes, the creators of the super being realize the error while in the prototype phase and will seal the subject away , hoping everyone just forgets about them. Often, the first subject to undergo the process — or a single subsequent subject — will turn out okay , so on top of all the various other issues that the treatment has, it's usually their job to clean up the mess made by subsequent failed

attempts. If it's a Science Is Bad story, the sponsors of the program are likely to just keep pumping out nutty prototypes hoping they'll eventually make one that is not</ insane. This trope can also arise if the principle that knowledge is power is extended to These Are Things Man Was Not Meant to Know . If all else fails, it'll seem like it happened just to make the Aesop appear in the story. Karmic Death is a frequent end for not only the subject, but the scientists who created him/her/it. May be either the cause or the result of Science-Related Memetic Disorder , especially if the person is already a Mad Scientist to begin with. Invisibility seems to drive one insane (because when you're out of your sight, you're out of your mind), or at least evil, more than any other power, because it lets you spy on people undetected and escape easily without consequences H. G. Wells ' novel The Invisible Man </ is the Trope Codifier for invisibility letting you be evil in the modern era, but the germ of the story is much older than that ; if you asked Wells where he got the idea he would probably have mentioned Plato 's tale of the ring of Gyges (from The Republic </). Shapeshifting and telepathy are close seconds to invisibility as potential causes of this trope, probably due to Personality Powers ; after all, changing identities too often might result in losing track of the real you, and having other peoples' thoughts in your head is a lot like voices in your head (or can be abused for Big Brother Is Watching). It's crazymaking when telepathy tells you people are lying and you can do nothing to prove it. Anything can theoretically trigger it. Getting your powers from otherworldly beings might make you mad by themselves . Getting energy blasts can result in Psycho Electro . Getting Charles Atlas Superpowers can result in Ax-Crazy . Getting Flying Brick powers can result in Beware the Superman . Knowing that one is a Reality Warper will cause A God Am I and the warper to remake the world in his own image . Think of all the Power Perversion Potential ! Cast from Sanity is the gameplay form of this trope: apparently "Sanity" has a gauge/number and is some kind of resource/payment to do a skill, i.e you lose your sanity the more you use it. This is the inverse of Power Born of Madness . God-like powers often give someone a god complex and thus this trope. One possible way to stave this off is to think " A God I Am Not ." It always occurs when someone makes serious use of an Artifact of Doom , provided the user isn't eaten on the spot by said artifact . A.K.A. Comes Great Insanity for short. To go with the original version, Comes Great Responsibility . Compare The Corruption , Almighty Idiot , Drunk with Power , God for a Day , Mad God .

Super Heroes are expected to have a higher moral standard. No abusing your powers for personal gain. Sometimes this is enforced by the authority that granted their abilities, but most often, even if they are aware of the Mundane Utility , it is self-imposed. What constitutes "abuse"? That gets into a nebulous area. This trope usually involves the more obviously violent powers that could kill someone in a few seconds or violate a person's integrity , but even good powers can make bad people . However, if your family is down on their luck financially, what's a little arm wrestling wager at the pub going to hurt ? Mostly this is a moral stance superheroes took early in their career to make sure they never hit the slippery slope to evil-dom. This happens fast; arm-wrestling for money at the pub will often signal temptation to evil within a few episodes, if not that very one. In the hands of a poor writer, it is easy for this to turn into a character Cursed With Awesome powers and

unable to enjoy them in any way, trapped in a life they didn't choose can easily become You Can't Fight Fate and Hard Work Hardly Works , and is usually a one way ticket to Wangst-ville . It can also degenerate into the idea that benefiting from one's own talents or skills is wrong , and that trying to help others will only end in disaster , but that you are still obligated to do so even knowing that Failure Is the Only Option . The weight of the responsibility of the said great powers is often why heroes have Chronic Hero Syndrome . Superheroes who follow this trope often become The Cape . Outside the superhero genre, this is not often a trope relating to the main characters, but many a Reasonable Authority Figure is deeply aware of the responsibilities that come with his post. Indeed, one way to detect whether such a figure is good is how he regards the misery or deaths of the faceless masses; even not knowing any of them, the Reasonable Authority Figure will not regard them as A Million Is a Statistic and if he must sacrifice them , will regard it as Dirty Business . Contrasted by Muggle Power and With Great Power Comes Great Perks . If the powers result in the character losing any sense of responsibility, see Drunk with Power and With Great Power Comes Great Insanity . The Specials </ plays it for laughs: The main theme of Bruce Almighty </ is Bruce learning to use his omnipotence to help others, rather than just himself.

A guy (usually) proposes to his (usually) girl. She accepts. The music swells. It's all very sweet. He produces the ring, and puts it on her left ring finger. It should be that simple It never is. This trope is about the wacky mishaps that can happen to a ring, the guy planning to offer it, or the woman who may be accepting it The trope is often suspended or blown off in animation because of recycling shots and budget considerations. So engaged and/or married characters don't tend to have visible rings. On the occasions when someone in an animated show has a ring they bothered to draw, it's usually a clue that the ring is a MacGuffin or an Artifact of Doom or that the engagement is going to fail for one reason or another

The wedding ring, in many western countries, is worn on the left hand due to an archaic belief that the ring finger of the left hand has a vein that leads directly to the heart. Some old folk tales say that if a woman wears any ring on that finger while a maiden, she will never marry. See also Old, New, Borrowed and Blue for when the engagement ring does make it all the way to the wedding. At which point then we get wedding ring tropes:

The claddagh, known colloquially as the Irish Wedding Ring, is
The worn with the heart pointing toward the wearer if they are
The married (crown pointing away); and with the heart pointing away
The from the wearer if they are available. Similarly, Hawaiian
The tradition indicates a woman is spoken for if she wears a flower
The behind her left ear, rather than a ring widow finger is the
The opposite finger. A woman or man whose spouse has died switches
The the ring to the opposite hand. Hilarity Ensues in situations
The where wearing a wedding ring on the "wrong" hand is considered
The a tell for being gay and on the make. Widows also occasionally
The wear their wedding ring around their neck on a chain

Cuckolded spouses may destroy the ring, pawn it, or give it away as

if it were a worthless trinket. Usually in this case, it's a female destroying the ring There are of course, ring tropes that don't revolve around the wedding and marriage, which may also fit under this catch-all trope involving rings See also Lost Wedding Ring The Young Justice</ fanfic "With This Ring", which has nothing to do with weddings, is found here

The Witness Protection Program serves to, well, protect witnesses to crimes in order to prevent perpetrators from… cleaning up after themselves , in a way. To put it simply, in case the perp has ideas to eliminate the witnesses in question , the Witness Protection Program will take those witnesses and officially alter all their records and form new identities plus have them move to another location in order to make them virtually impossible to track by the offenders. In Real Life , the program tends to be fairly successful in granting these people the security they need because there are multiple levels of protection and doesn't have to be a new identity, such as adding restrictions on who can read normally public records. In fiction, however… that's another story In fiction, if someone is placed under witness protection, they might as well have just pasted a huge "KILL ME" sign on their back, because chances are that character is going down , courtesy of the perpetrator, in spite of all the odds. Exactly how the bad guy finds these people regardless of all their records being virtually erased is rarely ever brought up. Perhaps the perp had some help from the inside ? Or maybe the perp has supernatural abilities that aided their search. Or maybe the people who are SUPPOSED to be keeping their identities secret aren't that good at doing their job. Or perhaps they just happen to be a Scarily Competent Tracker . Or maybe the witnesses blow their cover by being Too Dumb to Live . Or perhaps the perp just stumbled upon the witness by random happenstance . Whatever the case, they will find a way to get to these witnesses , government protection be damned Sometimes, the witness will be lucky enough to survive the inevitable attempt on their life (usual reason being them being a main character), but that still means the witness protection failed; the perp found them anyway. Fortunately, should the witness survive, what usually follows is either the bad guy getting killed and the witness being able to return to their old identity (which isn't possible in Real Life witness protection), or the bad guy getting incarcerated, which usually only delays their inevitable return In cases where a government-issued program does not exist, friends, relatives, and associates of the witness may make their own form of protection. However, the chances of the witness getting found out only increases exponentially. Especially</ if the protectors happen to be particularly powerful The Anthropic Principle is in full force here; if the witness protection did</ work, the characters would simply happily disappear into their new lives, and there would be no story Subtrope to Witness Protection . See also Police Are Useless and Unsafe Haven , the latter which operates on the same principle as this trope Not related to the Larry the Cable Guy film Witless Protection</

The United States Department of Justice has a Witness Protection Program, in which a person who has given significant information about someone who is wanted for crimes is given a new identity in a new location. It may be used in the case of an innocent party who testified against, say, a member of The Mafia , but is often used to

protect a member of organized crime who has done a Heel–Face Turn and testified for the government in court. To keep said witness from becoming either part of the concrete used to rebuild Exit 72 on the New Jersey Turnpike, or the main ingredient in Bark-O Dog Food, the Federal government provides them with a new place to live and a new identity. This operation will be very expensive, and the party who has been granted relocation will be subject to significant restrictions. Usually, they will not be allowed contact with anyone from their past, may be required to change occupations, or have to do other things to protect their new identity from discovery by those who might harm them. If they cause their cover to be broken, it is extremely likely they will not receive a new one. Once the person goes in, it's basically a one-way trip; there is no connection between them and their previous life. If they are wanted for crimes or leave behind debts prior to going into the program, they will not be reachable. The Justice Department has even told the IRS to get lost for the collection of unpaid taxes by someone who went into the program. So far, not a single person who has entered the US Federal Witness Protection program and followed all the rules properly has ever been killed (although the same cannot be said for people who don't follow the rules). This idea can be used in fiction in a number of ways: Some states provide a similar (but less comprehensive, obviously) program for witnesses to state crimes. Other countries also have similar programs. If someone starts over themselves, without government assistance, they are Starting a New Life . If, despite everything, the bad guys still</ manage to find the person in question, then we have a Witless Protection Program . A number of films have used the premise of witness protection, either as a story Ripped from the Headlines , being Based on a True Story , or total fiction. The trope can be used dramatically, or for comedy Subtrope of Sent Into Hiding .

Occurs most often in non-fiction shows with more than one host. The hosts will trade funny and or witty comments back and forth instead of presenting what they are supposed to be presenting. They may also digress into talking about their personal lives Young, hip viewers might assume that the execs are out of touch for encouraging the banter, but according to an Ipsos-Reid poll taken in 2004, over 85% of viewers preferred shows with banter to those without even if they had previously claimed not to like banter. This includes</ young, hip viewers! Producers know what viewers want, and it's apparently lots of small talk Local news broadcasts , daytime talk shows , and infomercials seem to especially love doing this, but you also get it between the DJs on music and radio programs. In news broadcasts, reporters who are live on the scene will sometimes engage in this at the end of their segment Sometimes there exists a pair or trio of hosts who have good chemistry, and can do this spontaneously (this is key), without making it seem forced or artificial (also key). The producers may note this and insist on more of it, ruining the chemistry British news programmes are usually devoid of this. In contrast, British music radio stations often rely on good banter more than on good music, to the extent that many people tune in to hear the hosts more than the music they play See Smarmy Host . For hero/villain banter, see You Fight Like a Cow

Charlie Brooker commented on how US TV is much more capable of pulling off witty banter between news reporters than the ones in the UK, as they just manage to come off as much more relaxed. In his own words,

"when our news-readers try to relax they just look awkward, like they've accidentally shat themselves and don't want to let on".

A Wizard Duel (also Wizard's Duel or Wizardly Duel) is when two (sometimes more) characters with magical or magic-like powers (spells , usually) battle each other using them. A trope found mostly in Fantasy , though it may apply to characters with magic-like powers of other genres If both the heroes and villains have a wizard on their side, you can be assured this will happen at some point. Usually at or near the story's climax, probably because such a battle tends to be visually impressive . Of course, if the protagonist of the series is</ the sorcerer, then it happens all the time. The battle doesn't have to be between enemies; it can occur between friends or rivals, a master and his apprentice, and so on Sometimes, there are specific rules that have to be followed in the duel, especially if both characters belong to a special caste or organization. Of course, if one of the participants is dishonorable, expect him or her to cheat If such rules prohibit direct attacks on each other, or the work's demographic would make serious violence inappropriate , or the duel is just more of a friendly rivalry than an all-out fight, the participants may limit themselves to ostentatious spell contests instead. In this case, Anything You Can Do, I Can Do Better , can mean something like "any fish you can summon , I can summon bigger ," if you will, and then they might have the "fish" fight on their behalf. This kind of duel goes right back to The Bible , if not earlier Curiously, one trick rarely used is to magically silence the opponent. This may be because it would make the duel too easy...or because an unspoken assumption of the setting is that it would not actually work</. (Not all magic depends on incantations , and as long as the caster isn't physically prevented from speaking in the first place an invocation's effectiveness rarely seems to depend simply on how loud</ it is, or perhaps all competent magi have some defense against such spells.) One exception is in Role-Playing Games , where Silence spells are fairly common If the win condition involves the death of an opponent, see Duel to the Death . If the magic users are specifically using Voluntary Shapeshifting spells to get the upper hand, it's a Shapeshifter Showdown

Sometimes Science Fiction isn't really science fiction . Sometimes, it's actually fantasy. Even so, some things are usually seen as a part of one genre and not the other. If you see a magic sword, for example, you can assume it's fantasy and not sci-fi. Space travel, on the other hand, is firmly in the realm of science fiction, and not fantasy Except when the High Fantasy takes place in outer space without the use of sufficiently advanced technology or being "super-evolved" or some such , that is Sometimes this is a science fiction setting with some distinctly fantasy elements, such as Magic by Any Other Name . Other times, the only science fiction element is the fact that it's taking place on an alien planet. Magitek can sometimes be commonplace in such settings, but not always A subtrope of Science Fantasy . Compare and contrast to Fantasy Aliens which plays a traditional scifi trope in a primarily fantasy setting

Certain popular characters within a fictional universe (and sometimes in real life) get used in gratuitous and/or inappropriate ways purely to enhance marketing Superhero teams in comic books constantly change. Characters join and leave so often that any given superhero team is often unrecognizable within a year. Other superhero teams have a Heroes Unlimited setup, where there are Loads and Loads of Characters and no two issues will have the same group. As a result, there are a lot more fans of particular comic-book characters than there are fans of particular comic-book teams or titles. Fans will like a new team book not if it has a name they recognize, but if it has characters</ they recognize. A new title will often sell based on whether it has already-popular characters in it, and existing characters will often be made more or less powerful based on how popular they are with readers. This is done so that characters can be viewed by more readers, and also to find the best possible combination for a team for sales This leads to one of the most overused tricks in comic-book marketing. When a character is very popular, they will often get : appearing in every comic book title and format possible, smearing them all over even the non-related covers with all the fine delicacy of bacon-flavoured soap. The character will often have a flood of mini-series which desperately search for something new to do with them ("in this issue, Wolverine visits Turkmenistan!"), until the fans are sicker of them than they would be of bacon if they</ had to bathe in an offal gutter at the meat-packing plant too The next step of Wolverine Publicity is random cameos to drive other titles. The promoted character will appear in the first issue of every new title, and appear in old titles with flagging sales, regardless of whether the promoted character makes any sense there. Particularly shameless marketers will just slap the promoted character on the cover and have them appear for one panel in the issue . They will often suffer from The Worf Effect ; a new character hasn't 'made it' unless they can thrash the most important character in the universe. Even if the story is actually a team-up, this pairing might suffer from being a Story-Breaker Team-Up since the promoted character may not fit in with the title's story or tone at all If a team has multiple titles, with different members in each one, the promoted character will somehow manage to appear in both titles — even if the two stories are supposed to be happening at the same time A subtrope of Face on the Cover . Compare Spotlight-Stealing Title , Advertised Extra , Billing Displacement , Clickbait Gag , Covers Always Lie , Lady Not-Appearing-in-This-Game , Overused Copycat Character , Red Skies Crossover , and Sir Cameos-a-Lot . When an iconic villain</ shows up in an installment supposedly featuring someone else as the Big Bad , this becomes Hijacked by Ganon . If an actor or character engages in self</-promotion (whether in-universe or out), this could shade into It's All About Me . In music this can be one of the factors that leads to one or two members being The Face Of The Band Not to be confused with the idea that Wolverine is becoming the focus of the Marvel Universe (although that certainly has spawned many examples of this trope) . Whenever Marvel wants to do without him for a while, they usually have Magneto rip the metal off his bones.. Note that if the popular character is a legitimate lead character in a specific work, then the trope should not be listed in it. It may count for the character as a whole, but not for that work. "Wolverine buys an ice-cream" may be an example; "Wolverine saves the universe during the Crisis Crossover " is not. Try to avoid trope misuse

What's the only type of woman more dangerous than a Mama Bear ? A woman who's been dumped, cheated on, or otherwise done wrong by her significant other (or, in some cases, merely thinks</ she's been). Especially if she's been hiding some sanity problems , and especially if she was a Clingy Jealous Girl . Otherwise Self-Explanatory A villainess — particularly a queen — may react in this manner when she has very little claim on the other person . After all, It's All About Me . If the woman in question is part of an evil organisation, this may be her cue to pull a High-Heel–Face Turn Almost Always Female , but male examples do exist. Compare Green-Eyed Monster Not to be confused with the Psycho Ex-Girlfriend , although the chances of overlap are ideal. When a character is killed by said Woman Scorned, it's... well... Death by Woman Scorned , which crosses over with If I Can't Have You...

Exactly What It Says on the Tin . This trope is behind the stereotrope that any given girl would prefer to date the captain of the football team instead of the captain of the chess team. The former is bigger, broader, and more physically fit. Back in the day, this is the kind of guy that would spear boars or kill bandits, i.e. a more practical husband. This is no longer the case in many societies but the distinction remains Note that this does not mean specifically stronger than the woman in question (which is another related trope) but strong, period. In turn, even a weak woman isn't going to be impressed by a guy merely stronger than her; he has to be fairly strong as far as guys go, too. Thus the strongest man in the room is the most attractive Even works applying this assumption may still portray women as befriending weak guys and consider them "cute" in a very literal sense of the word but it will still present an in-universe obstacle to weak guys looking for a date Compare All Amazons Want Hercules , where the (Amazonian) woman would only settle for a man who is stronger than her and All Girls Want Bad Boys , where a "bad" personality could be equated with strength by way of aggression, which attracts her. Contrast Weakness Turns Her On and the genderflip, Amazon Chaser , where a guy is attracted to girls who are good at fighting (strong girls are properly Amazonian Beauty). Studies have shown that this is generally Truth in Television , although Real Life attraction is of course usually more complex than just one factor

Wonder Twin powers: activate!</ Form of... a TV Tropes description! </ A good leash to amazing powers is the need for two characters to work together to activate them. Sometimes this is a supervillain and superhero, other times it's a superhero duo. Most of the time, the characters even get to be twins because Twins Are Special . Interestingly, their actual powers sometimes have nothing to do with their inherent twinness, unless their powers tap into specific eerieness . Presumably, their in-built weakness is being ineffective unless they're together. Also presumably, they have at least one way around even that built-in weakness. Not truly related to a certain kind of "Wonder Twins." See also Synchronization , Fusion Dance , Sibling Team and Bash Brothers . Contrast with All Your Powers Combined .

Seeing as Most Writers Are Male , and femininity is considered inaccessible to men , the women's restroom naturally has an air of mystery about it. Why do women go in pairs, what do they do in there and why do they spend so long doing it? The general assumption seems to be that the ladies' room is in fact a mini-Shangri-La full of wondrous things. In extreme cases the ladies' room is portrayed as a mini-spa, complete with fountains and musicians, while in more realistic cases it's simply shown as being much cleaner and nicer looking than the male facilities. While more extreme portrayals of this are not</ Truth in Television , as women are just as capable of making total messes as men, paid maintenance personnel tend to be much faster about dealing with them, since the perception (accurate or not) is women are much more likely to care about such things. And there is some truth to this. The ladies' rooms at most places (particularly restaurants) that are fairly upscale are usually kept cleaner, and they tend to be decorated with pictures and plants compared with the usually spartan men's rooms. Meanwhile, places that don't decorate the ladies' room often can't be bothered to perform basic maintenance or provide things like soap in the men's room. While most ladies' rooms are fairly similar to men's rooms, it is not uncommon for a nice one to include a small anteroom before the restroom itself. This room may contain a couch, often will contain chairs, and possibly a lit vanity. This room is designed to make it easy for women to fix their hair or make-up without blocking access to sinks. It is also useful because lines for ladies' rooms tend to be longer than for men's rooms since women rarely use urinals (ladies' rooms lack them anyway), do have to deal with menstruation, often visit the bathroom in groups, and often have young children of either sex with them who need assistance. Having a nicer room to wait in helps to balance this out a little. This is very rare in any men's room, which does provide more truth for the trope (and as stated on The Drew Carey Show </, if the men's room had a couch would you want </ to sit on it?). The couches in the ante-bathroom may be placed there for the convenience of nursing mothers or women with cramps, or it may be a holdover from the days of fainting couches. "Which Restroom" Dilemma is when a crossdresser or a trans girl wants to be admitted to the ladies' room together with the cis girls, but may not be allowed to by anti-LGBT bigots . See also Bathroom Stall of Overheard Insults , Women's Mysteries , Disgusting Public Toilet , Mysterious Teacher's Lounge . Compare Girls Behind Bars , another women-only setting that suffers from the same misconstructions.

So, you won a war, you bask in the glory of victory, and all that stuff. But when you finally get over all this excitement, you realize your problems still aren't solved ; perhaps you bungled the end-game negotiations, your enemies are still strong, or your strategic genius doesn't extend to politics . In any case, your enemy has already regrouped and is ready for another turn, like nothing happened. You won, but you totally botched the peace talks, or didn't care to finish off what you've begun A close relative of Pyrrhic Victory ; the difference is in that Pyrrhic Victory is a victory achieved through an exertion a bit too big to bear, while what we think of here is a victory that is squandered. A Myopic Conqueror tends to experience this as well If you wish to add examples from Real Life , try to keep it as straight as you can, as otherwise there'd be way too many of them. Also, you know the trade In Urinetown

Alice has something to ask of Bob. Maybe it's to borrow a cup of

Asugar, maybe it's to ask him to baby-sit, maybe it's if he's Ainterested in going out for drinks, maybe she needs his help to Acarry out a terrorist plot . Whatever the favor, Alice wholly Aanticipates that Bob will turn her down — she anticipates it Aso thoroughly that the moment Bob gives his answer, she launches Ainto a spiel designed to hector or persuade him away from saying A"no", completely missing the fact that Bob in fact said yes! It Amay take several moments, or several interruptions from Bob, Abefore it catches up with her that he's actually agreed Comedy ATrope that is sort of verbal Double Take . Characters with No AListening Skills are prone to exercise this trope

As James Baldwin once said, society's deadliest creation is a person with nothing left to lose This is a character with omnicidal and/or Ax-Crazy tendencies, or a character who wants to destroy everyone in the story, and is suddenly in a position to do so (on a small or large scale); but in contrast to other characters, he/she has some plausible, outright tragic reason to do so. In some cases, the other characters outright sympathize with this one (whether or not the audience does too is out of the equation here), all the while accepting that they must be stopped. Sometimes, the character is even portrayed as likeable</ , just... not with the right mindset The essential element is that the destroyer has been pushed beyond all reason. This may or may not make them The Woobie , but either way they are portrayed as having a crappy existence. This is a character who, by definition, is constantly beaten up, kicked around, and lives an all-around miserable life . Should they lose everything and everyone they trust (be it through betrayal or in other cruel ways) , and then just so happen</ upon the instrument of revenge against the cruel, heartless world that brought them so much pain, one need not be a genius to figure out whom the character will cast their hateful gaze upon. Think of this person as a Jerkass Woobie , only with the jerkassery replaced by insanity (though many characters do fulfill both tropes) This trope is less about the Sliding Scale of Villain Threat and more about how much a character has been broken — physically, mentally, and emotionally — before they finally snap and blame the whole world for all the crap they have been through. Of course, they must crack and pose a sudden threat of some</ sort, to the characters and/or the setting. And some of them do</ get their finger on the nuke trigger . In a few extreme cases, they themselves are the nuke A character who is a Woobie Destroyer of Worlds can be very high up on the Sliding Scale of Villain Threat and/or Sliding Scale of Villain Effectiveness while being very low on the Sliding Scale of Antagonist Vileness . Rather than hatred, the audience feels pity for this villain and wants to see them stopped nonviolently so they don't cause any more destruction or loss of life (or actively cheers them on , especially if their victims deserved it and were responsible for their suffering). If the Woobie Destroyer of Worlds has to be killed to stop his destruction spree, it makes for prime Alas, Poor Villain material especially if he regains his sanity as he's dying Not to Be Confused with Mike Nelson, Destroyer of Worlds , where a bumbling but otherwise nice person accidentally destroys actual worlds , leading to What the Hell, Hero? and Nice Job Breaking It, Hero! moments This trope is more closely related to Break the Cutie , Freudian Excuse , Bullying a Dragon , Who's Laughing Now? , and Then Let Me Be Evil . May have emerged as a

deconstruction of the Cosmic Plaything Not the same as Put Them All Out of My Misery , which is the trope for characters who rationalize their destructive behavior by insisting that society, or the earth, must be somehow cleansed or punished for some past injustice, making it the inverse of this trope. Motive Rant , Cry for the Devil , and Villain Has a Point are more typical of that</ trope. For characters, especially villains somewhere in between</ this trope and that one , see Jerkass Woobie . Also note that overlaps between the two tropes are not impossible May overlap with Death Seeker , if they want to die, but intend to make sure that everyone else goes first . Likely to be a Draco in Leather Pants for some of the audience. Compare Sympathetic Sentient Weapon when they're in employ of someone/some group rather than acting on their own. May also overlap with Fallen Hero , where a villain in question was once a hero until something bad and tragic happens And just to be clear, a character does not have to literally destroy worlds to fit this trope For actual world-destroying tropes, see Why You Should Destroy the Planet Earth

This trope is no longer considered YMMV because not all examples here need to be sympathetic to the audience.

A setting and an era, which has become a genre almost unto itself. In the Age of Sail, life onboard tall ships was hellish to the extreme, by modern standards. Voyages could last up to several years, sanitation was almost nonexistent, the food consisted of weevil-infested, rock-hard dried bread and salt pork, scurvy and other diseases ran rampant, discipline was harsh (A Taste of the Lash was a common punishment for even minor infractions), and death almost certain. And this is before we even get into the battles with two ships slugging it out in brutal close-range broadsides . The men who survived these times were tough as nails. Expect stories set in this world to be filled with hard, uncompromising men who are covered in grime, with awful teeth, wooden legs, and stringy dirty hair. They will be drunk much of the time , usually off rum or grog, unless they're officers in a nation's navy, in which case the drink of choice is port or brandy. They may Talk Like a Pirate , and are quite likely to actually be pirates or, if not, fight them. Despite spending most of their life on the high seas, only a few sailors from this age could swim . Few captains cared to teach swimming to their men, The chronicles of 16th century sea-life describe swimming and free-diving as valued skills because they were so rare —something true even in the heyday of this trope in the early nineteenth century. The state of swimming skills remained woeful at least partly because it was believed that teaching one's (largely press-ganged or shanghaied, and much-brutalised) ratings to swim would only encourage them to literally jump ship and desert when close to shore. This trope generally involves a Used Future sort of vision of the age of sail, with dirt, grime, barnacles, scurvy, floggings , and other unpleasant aspects of the real time period not glossed over. If a ship or its crew are suspiciously well-scrubbed and well-fed, it's not this trope. But tales of action and adventure abound, with swashbucklers , pirates , heroes and villains and damsels in distress all around. Chronologically, this setting ranges from the beginning of the Age of Exploration in the mid 15th century to the replacement of wood and sail by iron and steam in the mid 19th century. The lion's share of works in the genre, though, are about either Not to be confused with the Avalon Hill Board Game of the same

name, which is where we got the trope name , or with Schizo Tech settings where wood ships coexist with Tony Stark (Though you might want to check Ocean Punk if the idea tickles your fancy). The phrase shows up at least as far back as the making it Older Than Radio .

Ted Woolsey was the primary translator for most of Squaresoft's the same Squaresoft which would later give us today's Square Enix Super Nintendo Entertainment System -era RPGs from 1991–96. He is a polarizing figure in the video game community, even today. Depending on whom you ask, you'll get wildly varying opinions on his work. To some, Woolsey was an iron-fisted dictator who was convinced that American gamers were morons , and couldn't accept a culture besides their own. To others, Woolsey was a hard-pressed but nonetheless creative artisan who was the primary reason that these games weren't rendered incomprehensible to Westerners , translated literally with little regard for accuracy , completely remolded to suit the audience , or worse . Either way, Woolsey's impact was keenly felt. He frequently modified the scripts he was handed in order to render them more accessible for American release. Fans coined the term "Woolseyisms" to refer to places where Woolsey had obviously been tinkering with the original Japanese script. In a 2007 interview, Woolsey revealed that the original drafts of his translation had to be cut by over 25 percent just to fit on the SNES cartridge for testing, as Japanese is often a more compact language than English in written form, which accounts for the amount of cut or abridged material in Here's the thing. Woolsey's changes? They actually worked</. Some of the lines were so well integrated into the collective consciousness of the game that they have been embraced</ by the fandom instead of reviled. Though a good number of the script changes were probably unnecessary, many fans have come to the agreement that they don't hurt the final product; sometimes they even make it better. The script has diverged from the original — maybe wildly — and yet, it works anyway, just like a good localized translation should. That's a Woolseyism: The Pragmatic Adaptation 's answer to a Cut-and-Paste Translation . It can also apply to scene additions that weren't in the original source. This sometimes leads to the strange effect that re-releases with more literal or accurate translations, whether they are purely literal or merely closer to the original while still being localized, can actually start wars between fans of the Woolseyisms, the diehard purists, and the poor saps who only know one way to read the story and have no idea what's going on. Attempts to appease the first two groups have led more recent re-releases to reuse some of the more favorite lines. Woolseyisms and well-made dubs overall are most likely to be found within translated seinen anime, where even with the Animation Age Ghetto , translators know better than to attempt to turn an adult program into a low-quality kids' show. Shōnen anime, with their younger demographics, usually don't fare as well. Woolseyisms are also so common in Latin American dubs that many people actually prefer watching the Hispanic dub rather than the Japanese original. Atlus .com lays bare the processes of Woolseyizing with their Some are about Woolseyizing, but others are about localization in general — marketing, website design, and so on. Atlus is currently considered the company that most does Woolseyisms to good effect, since their RPGs, being much more Japanese-flavored than other companies' series, require lots of re-interpretation and adaptation of idioms and concepts. In the process, characters are given attitudes and verbal patterns that make them distinctive and

give them sometimes even more fleshed out personalities. As a rule of thumb, the requirements for a Woolsey-like translations are good translators (of course), good script adapters (sometimes translators and adapters are the same person, sometimes they're not), a good communication with the developers/animators/filmmakers and, in the case of video games, a good localization testing team. The best way to get these requirements is either that the producing company and/or the publisher have their own localization department, or hiring a reliable outsourced translation company which is properly familiarized with the product. Sometimes, things are considered Woolseyisms because of how drastically different languages can be, often resulting in a few things becoming Lost in Translation if it's a direct translation, or sometimes a word or phrase just doesn't have a direct translation at all. These include but are not limited to puns, regional dialects, accents, and shout outs to pop culture. Subbed shows and manga usually get around these by putting a note on the side explaining what they're mentioning. Compare Good Bad Translation . Contrast They Changed It, Now It Sucks! , or Macekre Please</ note that this trope is about script changes in translation that do not</ change the actual story flow and only exist to ensure meaning is conveyed between cultures; the process of throwing a script out entirely and rewriting it nearly from scratch is a whole other trope and can of worms . Please note that this has nothing to do with Richard Woolsey from Stargate SG-1 </ and Stargate Atlantis </, or the comedy team . See also Cultural Translation , where elements of a culture are changed to work with a different language or audience.

Many new Tropers are unpracticed at economical writing . With that in mind, the following guidelines may be helpful: " This Troper is shocked that we have gone so long without mentioning..." "As far as this troper can remember..." This self-insertion can inevitably be removed without changing the content of the example. Although after you do so, you might find it has</ no content.

Word of God is stuff the primary creators (such as George Lucas when it comes to Star Wars </ or J. K. Rowling when it comes to Harry Potter </) have said is true about their universe, even though it's not in the actual work. Word of Saint Paul is stuff that the secondary creators (such as major actors in a movie) have said, or what those with close connections to the secondary or primary creators (such as close friends or family members) have said. Word of Dante is stuff that neither the creators nor anyone remotely involved with the work has said is true about their universe — but everyone assumes it is true because an independent authority, scholar of the work, Fandom VIP , or the creator of an adaptation has said it — often with supporting arguments. It's a kind of ascended Fanon (though not Ascended Fanon proper). A more literary criticism-friendly technical term for it would be deuterocanonicity . </ Why does it matter? Because everyone</ thinks the Word of Dante applies to the original work, and so it gets mixed into future adaptations and popular allusions. It can even overrule original canonicity (if that isn't known as much as it's known of) or Word of God. Take our Trope Namer : if it weren't for Dante Alighieri and his Divine Comedy </, later writers wouldn't speak of hell having circles with specific Karmic Punishments . Hell is depicted in broad strokes in The Bible . A place of darkness and wailing and

gnashing of teeth, a lake of fire — that's really as specific as it gets. That there are specific places in Hell to send the unchaste, the literal infidels, and the betrayers is all Dante's idea. Ironically for this trope, although Dante's work is highly influential in Western culture, it should be noted that no branch of Christianity considers The Divine Comedy</ to be canon at all. Also, Dante didn't even intend for it to be considered as religious canon; it was more about political and social commentary of the time, with a bit of philosophizing about spiritual growth (a theme carried more with the Purgatorio</ and Paradisio</, but nonetheless present in the Inferno</). This trope is especially likely to happen if there is no one who can unambiguously provide Word of God. Without Word of God or Word of Saint Paul, Word of Dante is the strongest authority you have on how to interpret the canon. Often created when an Expanded Universe claims to be "official" and thus canonical but is ignored by the primary canon. If there is</ a Word of God, however, then what Word of Dante does get produced is just as likely as Fanon to be Jossed at some point. Frequently creates Adaptation Displacement . May also help create Misaimed Fandom if the Dante's ideas contradict true canonicity or Word of God. May be the cause of Newer Than They Think , especially if Dante is much younger than the work. Again, it's easier to have Word of Dante if there is no longer anyone to give Word of God. Beam Me Up, Scotty! is a version of this, where the Word of Dante is a phrase. Also related is the Death of the Author , a concept from the field of literary criticism which states that all theories about a work (regardless of their source) can be equally valid, and Staff-Created Fan Work , which sometimes leads to this. See also God Never Said That . If Word of Dante ever becomes canonical, it's Ascended Fanon . Not to be confused with the words of Dante Basco , or Dante, Son of Sparda from Devil May Cry </, or Dante from the 2003 Fullmetal Alchemist </ anime, or the other Alighieri

When Word of God explains that a character was actually LGBTQ outside of the series, choosing to keep them Ambiguously Gay (at most) in the actual story This may be because of Media Watchdogs , local laws preventing stories with gay characters from being sold, or fear of backlash. It can also be due to Conservation of Detail . On the other hand, most readers will assume a character is heterosexual when their orientation isn't developed in text. Thus, this may be a publicity appeal to a gay audience while not upsetting that part of the audience who feels uneasy about this. Or it could just be one big publicity stunt To LGBT fans and allies, it can come off as a cop-out: Saying "Oh, guess what? Bob, whom we never hinted about in the slightest? Totally gay!" after the series is safely over is not an adequate substitute for having the courage to actually include LGBT characters. Others, however, don't really mind since it allows the character to be seen for more than just their LGBT status, and avoids stereotypical portrayals or the character being defined by being LGBT and nothing more. It also works well for a series that isn't focused on romance of any kind A Relationship Reveal is often another way to out an ambiguously gay character. See also Homoerotic Subtext

A statement regarding some ambiguous or undefined aspect of a work, the Word of God comes from someone considered to be the ultimate authority, such as the creator, director or producer. Such edicts can even go against events as were broadcast, due to someone making a

mistake. Fans may look for the Word of God to settle Fanon disputes, but the Authority may have moved on and doesn't care to respond . In many cases the authority does not feel the need</ to respond; further pressure simply leads to suggestions that the fandom is misaimed . In point of fact, there are good reasons many creators don't respond to requests for this: they want</ the fans to make their own interpretations. Especially in an ongoing series where the creator knows facts the fans don't, they might very well know for a fact that both fan theories have truth in them and thus not wish to take sides. Alternatively, the author might view both readings of the story as equally acceptible, and thus not want to comment. It's important to keep in mind that just because someone wrote a character or setting, doesn't mean they decided on a correct answer to every question that could possibly be asked about that character or setting. It is not at all uncommon for fans to ask questions which they believe to be obvious, but which the creator has never considered. In particular, questions about a character's sexuality, gender identity or race often fall into this category. Everyone's creative process is different. Not all writers make highly detailed character charts, or decide on details of a character's identity that aren't directly plot-relevant. The fandom might consider those details important because the work happens to speak to people who have a particular identity: but that doesn't mean the author considered that fact important enough to spend time thinking about. Culture can play a role here as well, since what might be considered an essential fact about a person in one culture could be viewed as extraneous in another. Japanese creators, for example, will often decide what a character's blood type is: but may not pay any mind to their sexuality. Western fans can find this very strange and frustrating. The other reason creators often refuse to answer questions about character identity is of course, politics. This is particularly likely to be true when the creator is in a different country from the fandom. In the heat of internet discourse, it can be difficult to remember that what is a pedestrian factoid in your country can be a hot-button political issue in a different one. Creators may have good reason to fear social or even legal repercussions if they answer questions like this: something which fandoms are often not as sensitive to as they should be. Creators whose primary motivation is profit may additionally not want to alienate parts of the fandom: refusing to resolve Fanon disputes, especially if they are politically tinged, can be an effective strategy for doing that A number of people reject the notion of Word of God being equal to canon , considering something to be canon only if it appeared in the original source material. If the creator had wanted a certain fact to be canon, the thinking goes, they should have included it in the work to begin with. Other audience members go even further, considering the uncertainty and ambiguity of canon to be a good</ thing and decrying the Word of God as shackling the imagination and interpretations of the fans. These attitudes have found some acknowledgement in literary criticism: Wimsatt and Beardsley's "The Intentional Fallacy" and Barthes' Death of the Author essay both argue that the interpretation of a work cannot be limited to attempts to discern the "author's intentions." Something else to consider is that, often, particularly when it comes to comedy shows, creators may make statements that are meant as jokes, or at least, not meant to be taken seriously. It may sometimes be difficult for people to tell if certain creators are making a genuine statement of canon or not. So, be careful when relying on things like humorous DVD commentaries and interviews on comedic talk shows for confirmation about something.

Another thorny issue is that not all stories have a single creator, and the collaborators may not actually agree with interpretations of their story that weren't made explicit in the work. This is especially likely if they no longer work together, and particularly if they had a real-life falling out. In this case, there are multiple "Gods" given potentially contradictory explanations, so whose word is to be considered correct? Likewise, in many cases the writers of a story are not the copyright holders , meaning that they're not the highest authorities on its meaning even if you do subscribe to the Word of God theory. If a work has more than one creator and they disagree with each other on a crucial point, you'll likely see fans embrace conflicting statements. What happens when multiple fans are equipped with the Word of God? What happens when one Word turns out to be more ridiculous than expected? Bible fight! The term ' Story Bible ' is sometimes used for the definitive guidelines for writing an episode of a TV series. Two writers quoting the Story Bible back and forth are having a Bible Fight. This is also a way that a theory can be Jossed . It's important to remember that if you disagree with the Word of God, there's nothing wrong with writing fan fiction that contradicts it , just don't try to foist your preferred Fanon on fans who acknowledge the official canon or on the actual creator of the work. Actors can be included under Word of God if they are the actual performers of the characters involved. This is because in order to perform their roles, most actors will spend time working out motivations, backstory, and even what a character is thinking in a particular scene. So even if a scene does not actually have two characters say "I love you" to each other, but the actors say that they played the roles as the two characters being in love, and the writer of the story says they were in love, then Word of God may then apply that they were in love. When the word does not come from the creator themself but from someone involved in some ancillary role in production, that's Word of Saint Paul . When the word does not come from the original creators but over time is still treated as such it is Word of Dante . Doesn't always end up giving fans the answers they were looking for, such as in the case of a Flip-Flop of God or a Shrug of God . Cases of God deliberately misleading the audience go under Lying Creator or Trolling Creator . And then there are cases of fans either misinterpreting or just making up Word of God, resulting in God Never Said That . Diagnosis of God and Word of Gay are subtropes. Compare All There in the Manual . Contrast Death of the Author , and What Could Have Been . See also: Canon Discontinuity , Creator Worship , Broken Base , and Revision . Not to be confused with actual scripture, which we have a whole index for.

Moffat also demonstrated his power on his twitter, in relation to Doctor Who: On the other hand, in Moffat's column in Doctor Who Magazine continued hanging around UNIT H.Q. in a false moustache, getting in Kate's way. That said, however, 99% of readers recognize these as jokes, as opposed to - for example - Moffat indicating what the Doctor did during the first 7,000 years he spent in the Confession Dial in "Heaven Sent", which is taken more seriously because there is no joking involved. Or the fact that in 2015 he and the actors who played The Doctor and Clara, all concurred regarding the fact a romance existed between the two characters, even if it was intentionally left ambiguous on screen.

If you know when or where this was said, please add that information and move the example to the "identified" section.</

Once a work has been published to general acclaim, speculation runs rampant. What did X really mean? How could Y do that? How are we supposed to interpret Z? For some reason or another, the primary creator keeps quiet , so when someone else with at least some authoritative status to the work says something, it can be easily accepted and incorporated into the common view When the Word of Saint Paul contains (or is perceived to contain) mistakes or misunderstandings of the original creator, they can easily carry the germ for future debates The dividing lines among Word of God , Word of Saint Paul and Word of Dante are somewhat fluid, but if it can be reasonably supposed that someone has had a role in creating the work or a close personal relation to the primary creator, then it is probably Word of Saint Paul instead of Word of Dante In a film or TV series, typical sources of Word of Saint Paul are the primary actors, the cameraman, the production designer, the costume designer, or the score writer. In literature, it can be the author's spouse, the editor, or the publisher. Though with franchises that change creative teams somewhat frequently, the sources can also be former primary creators Named for Saint Paul the Apostle, who through diligent missionary and organization work very much changed Christianity from a minor Jewish sect into a budding world religion, while clarifying or modifying lots of things about what Jesus said Nothing to do with the capital of Minnesota , or the Brazilian state/city , other than being named for the same guy In an interview 35 years after the release of The Wizard of Oz </, Margaret Hamilton mentioned that she thinks the Wicked Witch of the West is, in fact, a “sad, lonely figure- a woman who lived in constant frustration.” This became the basis of the novel The Wicked Years </ and eventual Broadway musical, Wicked </

The pillow... The pillow is describing the topic. Hurry!! This is what happens when bizarre phrases, Non Sequiturs , and random successions of words are used and arranged either to be frightening on their own or to imply that something sinister is going on behind the scenes. The Word Salad might result from some supernatural alteration of local reality, a Nightmare Sequence , a drug-induced hallucination, an Eldritch Abomination oblivious to the fact that this is not</ how those Puny Earthlings actually talk, and many other myriad causes. Sub-Trope of Surreal Horror . The opposite of Word-Salad Humor . Compare and contrast Cryptic Conversation , with which this trope frequently overlaps.

When TV characters are meant to be completely, irretrievably unhinged, and it's inconvenient (as it would be in 95% of television scenes) to have them exhibit typical deranged behavior such as detached wandering, violent outbursts or obsessive drawing/crocheting/self-mutilation/etc, the general method for conveying their insanity is to have them constantly spout rambling incoherent phrases, e.g. "The avenue is clear and we must use it to convert the extra limbs - not yet though, not until the pastor has been distracted, or do they have the right parts? White fish elephant man which was lettuce matrix!" Quite transparent and distracting, for the most part. Talkative Loons can sometimes actually be misunderstood Waif Prophets ; it can be hard to tell the difference

between the two. If the talkative loon happens to be a beautiful young woman, she may also be The Ophelia . Occasionally some Infallible Babble might slip out of them, but Sturgeon's Law applies to the remaining ninety percent, and there's no way to tell which is which. Talkativeness that takes the form of a single phrase repeated ad nauseam</ is a Madness Mantra . See also Word Salad Philosophy and Cloudcuckoolander . May sometimes overlap with Motor Mouth if they both talk too fast and too much. If they're the main characters, try Through the Eyes of Madness . A similarly disjointed title is a Word Salad Title ; the musical equivalent is Word Salad Lyrics . Can often be caused by Intoxication Ensuing . The babble they spit out might include an Ice-Cream Koan occasionally. Not to be confused with what you get if you cross Miss Chatterbox with Shirley the Loon .

Tropes about deciding to use even go want to do look more like Angrish : A person becomes so overwhelmed with rage that they resort to yelling gibberish and/or incomplete sentences

The persistent practice of using titles that look like someone mashed together random words lifted out of an English dictionary. At worst, they will be as meaningless as "Super Punk Octo Pudding Gas Mark Seven", and at best, they will just cryptically allude to the show's premise or characters while trying to make a clever Western pop-culture reference. Basically, Gratuitous English (or whatever language the work was originally made in) as applied to work names Contrast with Exactly What It Says on the Tin , this trope's direct opposite. See also Non-Indicative Name , for characters and in-story objects with similarly unintuitive names, albeit ones that still carry meaningful communicative significance; and Never Trust a Title , for titles that are grammatically sound, but misleading. Related to I Thought It Meant . For an example of a "TV Tropes" title that follows this formula, see Ninja Pirate Zombie Robot . Frequently results in an Long Title The extreme version of this trope is the Word Purée Title , when even the words themselves are garbled or made up See also Mad Lib Fantasy Title and Mad Lib Anime Title . See also Gory Deadly Overkill Title of Fatal Death , for when horror movies do this. A Sister Trope would be Word Salad Lyrics , often performed by suitably named bands . Also very closely related to Meaningless Meaningful Words , which sound impressive in any haphazard order Not to be confused with Colon Cancer or In Which a Trope Is Described . Mad Lib Thriller and Fantasy Titles follow a set of rules that may or may not be this

Examples that Make Just as Much Sense in Context :

Alice sees Bob successfully accomplish a spell or mystical feat and later attempts to accomplish the same spell or feat by merely copying or repeating their words and/or actions and fails for the titular reason . Usually occurs when it takes more than the Magical Incantation and Magical Gesture . The magic may be in another language that requires understanding before use. It may be because as a Muggle , Alice can't </ cast magic. Or By the Power of Grayskull! only works for Bob since only he</ has the power of Greyskull. Maybe the sun wasn't at the right height. Whatever the case even if the character is Awesome by Analysis , the feat won't work by observation The results of when a character uses a spell where more than the Magical Incantation matters will vary.

There may simply be no effect or the spell could backfire . If a villain tries to use a hero's spell and fails due to lacking something necessary for success like The Power of Friendship , expect a "Reason You Suck" Speech . Aversions of this trope are rarely examples since then words </ make the magic and it is a case of Magical Incantation works for anyone In Role-Playing Games the inability of Muggles to cast spells by repeating the words is standard. To have it otherwise would mess up the game balance Falls on the cynical end of the Power of Language scale. Compare/Contrast By the Power of Grayskull! , where the words do heavily matter but usually only certain characters can use the words successfully

Describin' the trope here, boss A group of prisoners are shackled together, usually at the ankles, to perform acts of grueling physical labor, such as digging ditches, building or cleaning roads, and chipping stone, as a form of punishment Occasionally characters on a chain gang may attempt to make an escape while shackled together. This necessitates the escapees' efforts to find a means to break their shackles as well as cooperate with one another until they find a way to remove them — something that they usually learn "the hard way" after chained individuals try to run in opposite directions, possibly even running around different ends of a lamppost or similar structure which will immediately stop them dead in their tracks Working on the Chain Gang is Older Than Radio and is very much Truth in Television , although inmates are no longer chained together. The punishment became popular soon after the Civil War (1865) when slavery was abolished. It was a great way to get free labor without being outright slavery. African-Americans and out-of-staters were particularly vulnerable to be sentenced to state-forced hard labor Chain gang work remained commonplace in Southern US states up until the mid-1950s but has since become everything but a Dead Horse Trope ; only one county in Arizona (Maricopa) and one in Florida (Wakulla) still make use of chain gangs, and the inmates aren't shackled together anymore. Nowadays, chain gangs mostly just exist in period pieces in media that involve prisoners in the early half of the 20th Century. "Community service" often involves similar tasks, but leave the people doing it looking</ indistinguishable from volunteers or paid public employees A Sub-Trope of Prisoner's Work . See Also: Chained Heat which, while usually occurring between only two characters—and not necessarily prisoners—bound to each other, can be expanded here to apply to even larger groups, if need be. In more fantastic films, this will be a feature of the Slave Galley . A Call-and-Response Song is often used to pass the time

The first step in the creative process is an idea. That part is obvious. Coming up with what to call</ that idea can be troublesome. And if you don't have a name for it, then talking about it is a chore. This is why a lot of works go through a number of names between production and release. The end result may be that you hear actors talk in an interview about a movie they're doing, and then find it came out under a different name altogether Working titles can also be used defensively, allowing the creators to refer to their project without giving much away. It can help camouflage a ground-breaking project against someone else copying the idea, or sneak an anticipated sequel under the media radar until it is

ready for the world to hear about it. Also can be used to get lower production costs for big sequels as locations or prop companies overcharge on big name features In many other cases, the working title is the originally intended title that was changed because of last-minute Executive Meddling Not to be confused with the British production company affiliated with Universal See also Market-Based Title (which is what some of the working titles are if they contain curse words or are otherwise considered obscene innuendo), Censored Title (same) and Permanent Placeholder (which is what happens if the Working Title sticks)

An easy way to introduce tension in the day-to-day life of a fictional character is to have them work with someone they were previously in a relationship with. While dealing with an ex-boyfriend, girlfriend, or spouse can often be awkward enough as it is, such encounters are normally uncommon and short-lived. When two characters with a romantic history end up working together, however, the tension is magnified by the fact that they have to see each other on a daily basis, with no easy means of escape If the relationship ended badly, this situation can lead to endless arguments and insults between the co-workers as barely repressed resentment bubbles to the surface. Their constant squabbling can lead onlookers to jokingly question whether or not they're still together , which will elicit horrified denials from the former lovers. When one of the characters reaches their emotional breaking point a "The Reason You Suck" Speech is not uncommon… and both sides have plenty of ammunition to use against the other. Things can be made even worse when one character receives a promotion and becomes the other's boss, putting them in a position where they can torment their Ex with impunity If instead there are still romantic feelings between the characters, their history can be a prime source of unresolved sexual tension . After all, they did have chemistry at some point in the past, and being forced to work in close proximity together can cause old feelings to be re-ignited … leading to the inevitable question of whether they'll get back together . This situation can be especially troublesome if one or both of the ex-lovers are currently in another relationship. If the current significant other finds out a character is working with an ex, jealousy and suspicion are almost certain to follow In some cases, a character is shown to work alongside their ex with little or no issues, possibly even using their familiarity to perform better together than they would otherwise. This is often the result of their previous relationship ending with a realization that they were Better as Friends and a common trait of Amicable Exes . In situations like this, light-hearted teasing about their past from the Ex is to be expected

Works by subject/ Compare Genres . See also Topical Tropes , atopic list of tropes by topic

Around here a "work" can mean anything from a TV series to an individual movie or novel. What has a page varies, some books have their own pages and some are listed under a page for their entire series. Franchises are a bit different, only applying to multi-medium works and often reference other pages, but some works only have a page under the franchise namespace, serving as a

refence the entire collection of works therein This is a limited index of some work indexes. For an index of works with pages sorted by medium and nationality, see the Media index . For an index of franchises, see the Franchise Index

TV Tropes is mostly about two things: Listing up the examples of works wherein a trope is used, and listing up the tropes used in works. Put these two together, and they form a nice network that encourages long Wiki Walks This page is about the latter half: Works which lack a good list of tropes. If you have found such a page, add it to this list. If you have fixed a page from this list, remove it. Same thing applies if you find that someone else added tropes to a work, of course Some of the pages in CompletedMigrations.Namespaced Works With Less Than 15 Wicks may also fit here If the page needs example context, please take it to Pages Needing Example Context

Worldbuilding is the process of constructing a fictional universe. Strictly speaking, anything that happens in that universe "builds" it, so "worldbuilding" is only used to describe the invention of fictional details for some reason other than the convenience of a currently ongoing story, up to and including simply engaging in worldbuilding for its own sake A common form of worldbuilding is the creation of history. This could just be a Framing Device for a story told by a historian, but fantasy worlds regularly include historical notes for centuries of warfare and intrigue. Stories can then be written at various points along that timeline, and each of those stories will have a clear relationship to all the others. It makes the writing of serial fiction much easier, especially if the series has multiple authors. If so, the fictional universe is a Shared Universe The result may sometimes be called a Constructed World , conworld or (Tolkien's word) sub-creation. The term world-building was popularized at science fiction writers'

workshops during the 1970s. It connotes a focus on detail and consistency. Many post- The Lord of the Rings </ Fantasy and post-Dune </ Science Fiction writers use world-building in an attempt to give their stories weight and meaning that they would not have without a well-defined setting Constructed worlds frequently have their own aesthetics, above and beyond the aesthetics of the stories taking place in those worlds. Some artists and hobbyists build fictional worlds with no intention of writing any stories in them—at least, none more detailed than historical documents

Extra worldbuilding that is only referred to obliquely is a Cryptic Background Reference . Over the course of a long running series or large persistent universe such as an MMORPG, these add up to form what is sometimes known as the "invisible book"- the portion of a story which becomes known over time without ever actually being directly described See also Adventure-Friendly World , a common constraint on Worldbuilding, and The Trope History of the Universe , a sub-trope of Worldbuilding that describes a an element of it that serves no narrative function and exists only for its own sake. Any instance of this is lore porn, but you’ll find the most abundant examples in works of Speculative Fiction

is an umbrella term for traditional music from different parts of the nonwestern world. It usually refers to music derived from the folk traditions of many nations across the planet, played on traditional instruments. Some people only see non-Western music from Latin America, Africa, Asia and the Indigenous cultures of the Americas and Oceania fit this category, but the term is also used to describe traditional folk, blues and country music in North America, Europe and Australia. It began as a way to market the musicians from Africa and other non-Western regions to a Western audience, following the idea of a few DJ's from London. While it helped to give exposure to non-Western music, it came with its own Unfortunate Implications , as the term ends up pigeonholing so many unrelated and vastly</ different music styles. In practice, being pigeonholed as "world musicians" brings less exposure to those artists just because of the country they were born in and the language they sing in. Or as David Byrne says, "It's a none too subtle way of reasserting the hegemony of western pop culture. It ghettoises most of the world's music. A bold and audacious move, White Man!" The term "world music" itself also begs the question, "So, is Western music made by Little Green Men not from this world?" It encompasses Nordic and Eastern European Folk Music , Country Music , Blues , Bluegrass Country Music , Zydeco , Afrobeat , African Chant , Samba, Reggae , Ska , Indian raga music, Native American music, Tuvan throat singing, Raï,... As probably the oldest "music genre" in existence by the broadest definition, world music has remained popular over the centuries. The term really started to become its own "genre" from the 1950s on, when many musicians from different continents started releasing albums and touring in the West, increasing their notability. The arrival of TV also brought more people in contact with music from different parts of the world. As Classical Music , Jazz , Folk Rock and Rock musicians started to incorporate world music influences in their own work more people got interested in the exotic, mysterious and wonderful sounds. Compared to the bland shallowness of mainstream pop, world music has an authentic originality to it, In Harmony with Nature and often makes the listener dream of visiting that other world.

In the World of Badass, every character is a badass. Even the daintiest girly-girl will be a butt-kicking Girly Bruiser . Even the scrawniest of nerds will be a Badass Bookworm . Far from dying first, the black dude will be the guy you least want to mess with . And you should probably just steer clear of gay people altogether . Even that adorable dog might be tough as nails . May or may not be Rated M for Manly , after all badassery comes in many shapes, personalities and sizes. Oh, and expect a few or everyone</ to have an Awesome McCoolname Obviously, this is a dangerous place to be and will often overlap with Crapsack World and/or Death World not only because of said danger but also because such worlds are fertile breeding grounds for the Black-and-Gray Morality that so often inspires true badassery . This can lead to Anti-Hero , Anti-Villain and Heel–Face Revolving Door characters popping up at frequent intervals. Other common character archetypes include the Cowboy Cop , Crazy Survivalist , Determinator and Blood Knight Frequently overlaps with Everyone Is Armed . Compare Everyone is a Super , Had to Be Sharp If the protagonist of a World of Badass has a Love Interest , expect them to become (or, in some cases, start out as) a Battle Couple . If they have kids, it's best to avoid messing with said kids . In fact, the kids may well be able to take care of themselves. And a Non-Action Guy or Faux Action Girl doesn't even need</ action skills and manages to be a badass other ways, often by being a Science Hero or Guile Hero The World of Badass will occasionally, due to the comparably high "Holy Shit!" Quotient , overlap with the World of Ham and Adventure-Friendly World . However, it's also possible for this trope to be applied to Crapsack or Dystopian worlds where every character is a badass out of necessity, see Had to Be Sharp . This trope is not to be confused with World of Buxom , although the two can overlap (see Boobs of Steel for proof). If every badass is an Action Girl , then it's World of Action Girls . See also World of Muscle Men

A setting in which practically every known female character, excluding the occasional Token Pettanko , is unquestionably big-breasted. Whether they be skinny, average, muscular or chubby, female characters have larger-than-average breasts seemingly by default. This is especially evident when there is a wide range of body types, but they all have one... excuse us, two</ common features This can be a software limitation in Video Games where everyone looks familiar because they all use the same model . If one female NPC has large breasts, all</ female NPCs have them. If it's a 3D game on a 5th-generation console, it may even be a technical limitation, as those consoles tend to go for all or nothing , due to polygon count. Also particularly common in MMORPGs This is rather than a slightly uncommon occurrence (as in Real Life) Usually occurs as a result of Author Appeal . This can be a major source of A-Cup Angst for the 10% that are not</ well-endowed. Rarely combined with D-Cup Distress . May overlap with World of Action Girls . Its Spear Counterpart is World of Muscle Men A Sister Trope to Most Common Superpower

See Most Common Superpower for superhero comics examples DC and Marvel only avert this when it comes to their younger female characters who usually aren’t rivalling Pamela Anderson in the

chest department like most of their casts. For example Marvel has Kitty Pryde and Jubilee who were purposefully kept flat-chested compared to their older female teammates and only really averted this till much later. DC usually tends to keep Supergirl small breasted to reflect her youthfulness and to contrast with Power Girl

Basically, a World of Ham is an entire universe populated by Large Hams and the Hot-Blooded , where everything that happens is extremely dramatic, and every activity is deadly</ Serious Business , where in every conflict every thing </ is on the line. Not because of the treatment it receives , but because it just works </ when done that way! Moments of Awesome , Funny Moments , Heartwarming Moments , and Tear Jerkers happen almost one after another, giving works with this sort of setting unbearably high Holy Shit Quotients . Every factor (characters, plot, pacing...) is configured to produce the maximum possible amount Emotional Torque , the more low-key scenes being used efficiently to make the more dramatic and action-filled scenes all the more breathtaking. In such a world, you cannot merely act</ — YOU MUST OVERACT! </ Scenery … will be chewed </ — ground to fine dust</. Giant cows will be milked dry itself, or unto the Heavens </ themselves WITH! ADDED! EMPHASIS! , or perhaps sneer </, at the pitiful worms dare divine presence BRIAN BLESSED can be found STOMPING around somewhere. In this kind of world, it may seem like everyone's having a ball being as over the top as possible, but, in fact, it is the setting that requires, its demands will be met!</ Works that take place in a World of Ham tend to be Trope Overdosed , and contain Melodrama , as well as plenty of Ham-to-Ham Combat . They also preclude Evil Is Hammy , as that required just one side to be hams. For a world actually made of hamlike substance, see Meat Moss . It'll probably be just as badass, though. Compare Dark World , Crapsack World , Crapsaccharine World , World of Badass , Dystopia , Wretched Hive , Dysfunction Junction , World of Chaos , World of Snark , World Gone Mad , Layered World , Death World .

This is the character who can, with little argument, mop the floor with just about anyone or anything. There are a couple of ways to utilize this trope: Sometimes overlaps with World's Strongest Man , especially when brute force or sheer firepower are what decides combat strength. The first variation of this trope typically appears in competitions, such as a martial arts, boxing, or wrestling, where combatants would be subject to a great many rules, as well as gender and weight restrictions. The second variation is extremely common in Shōnen , where Power Levels indicate combat capabilities and fighting spirit . See also The Greatest Style , which this character probably uses, or at least knows how to beat. Frequently overlaps with Master Swordsman and Master Archer for their respective weapons . If this character actually does</ lose to someone, they are usually a Superior Successor and are instantly promoted to the new #1 spot. This character is either the winner (or a main antagonist) in a Tournament Arc , a Combat by Champion or when There Can Be Only One . Due to these factors they may face The Perils of Being the Best . In works where the hero is going To Be a Master , the person who fits this trope would be the biggest challenge in achieving their goal. Sub-Trope of "World's Best" Character by being that, but for just martial feats. In Arrogant God vs. Raging Monster , one of them tends

to be this.

Since the most prominent force in shaping a molten proto-object large enough to later be called a planet is its own gravity, worlds in real life tend to be roughly spherical in shape. This is also why there is a direct relationship between the size of a lump of rock floating through space and its degree of roundness. However, some Speculative Fiction and Fantasy series, in order to drive home the point that they do not take place anywhere resembling Earth, have their heroes adventuring on a planet with a totally different and often quite improbable shape. Common world shapes: A twist on this is Video Game Geography , type 1, where the world doesn't actually</ have an odd shape, but the way the programmers implemented the world map implies that it does. Most Role Playing Games with a Global Airship would actually end up donut-shaped (keep going north and you end up on the same place on the south edge of the map). Even the torus model does not accurately describe these worlds, or else the time it took to travel on the toroidal axis would depend on your position on the poloidal axis. These worlds are actually shaped as a , which is a shape that's impossible to depict in 3D space , so a toroid is often given as a technically wrong but close enough example you can actually have a picture of. Xianxia and Xuanhuan stories — two genres of Chinese fantasy literature — tend to be set in worlds of varying shapes. The basic forms include flat worlds floating in space surrounded by an also floating ocean, pocket worlds inside bigger worlds that are pocket worlds themselves nested inside an even bigger world, and planets of massive size that can rival our sun, but there are also more creative shapes. Notably, when "planet" was given a formal definition (thus demoting Pluto), "big enough to be spherical from its own gravity" became one of the requirements, so any non-sphere planet is not a planet (of course, any such body being discovered in the real universe has a solid chance of leading to a change in definition)

Since Medieval Stasis makes it so that a Magical Land will always be the same, and that 1,000 or so years in their world has the same amount of political, economic, and technological development as about five years in our world - that means that natural change happens pretty much never. Including geological shift. The continents, landmarks, etc. will remain in the exact same way they are across a span of 10,000 years, so the prophecy about the Sealed Evil in a Can in the Mountains of Shadowblood Peak will always be fulfilled without having Shadowblood Peak turn into the Shadowblood Picnic Hills thanks to erosion With one exception: World Sundering. Used as part of Expansion Pack World , or a Cosmic Retcon to justify revamping an outdated setting, the World Sundering is a huge magical explosion that does the job of millions of years of geological shift in a few seconds. Generally, an evil wizard, an Artifact of Doom , or some other event causes all of the continents of the world to shift rapidly This allows writers to set two stories ten years apart in a world that's completely different from the old one Geological change in these worlds doesn't happen because of tectonic plates or any nonsense like that. A Wizard Did It . Always Overlaps with The End of the World as We Know It . See Also: Patchwork Map , Earth-Shattering Kaboom , Colony Drop , Atlantis , Regional Redecoration , and World-Wrecking Wave

One of the most common plots in fiction is a tour to various notable places in the real world. Famous cities like Paris , London , New York City , and others are a must. Expect a map to show up as the participants head to their next destination Works that follow this plot structure are generally based in reality, or perhaps an Urban Fantasy . If the traveling is greatly compressed within the story, then it's a case of Travel Montage . Avengers, Assemble! can lead into this if the characters assembling are in different countries. The pieces of a Dismantled MacGuffin also have a good chance of being situated all over the world; depending on the characters traveling, though, the focus might not be simply visiting the sites but utterly destroying them</ Please note that to qualify for this trope, the settings must be real-world places, and that the characters have an actual place to stay and aren't always traveling (that would be Walking the Earth). Compare this trope with Sequel Goes Foreign . For a real-life non-fiction variation of this idea, see Travelogue Show . Wagon Train to the Stars is the space-traveling counterpart Bored tropers who are unable to go traveling for whatever reasons can do this for themselves with Google Maps and its Street View function

Some psychologists believe Humans Are Warriors and naturally predisposed towards violence . For almost the entire twentieth century it seemed like humanity was teetering on the brink of self-destruction: both World Wars , the Cold War , and then the threat of terrorism, nuclear proliferation, and biological warfare - and all that after</ World War I was going to be " The War to End All Wars ". Luckily for humanity, World War III has been in Development Hell for more than half a century now - and long may it stay there (indeed, it's not a sequel anyone is looking forward to, we hope). So it's probably only natural that the next great global conflict is a popular subject in Speculative Fiction . Weapons of Mass Destruction are probably going to get used, often recklessly , causing massive casualties. In fiction, anyway; in Real Life it's possible it might just be another very destructive conventional war, if it ever happens, due to the sheer suicidal nature of the usage of nuclear weapons. Then again, if a conventional war is actually fought, escalation to nuclear war is quite likely. A commonly-used Gallows Humor joke is about this war's length</; somewhere around an hour. If the destruction gets too out of hand it might result in The End of the World as We Know It , causing an After the End situation set on a Scavenger World . If not, the winner might set up a One World Order , in which our heroes fight against The Government in a dystopian Cyberpunk type environment. Of course, it's entirely possible for the war to kill everybody </, and have it center on the attendees to Humanity's Wake . If the show was made before 1989, Communists are involved, even if the war is supposedly set years after 1989. A more modern take on WWIII is that it begins somewhere in the Middle East; Israel, Iran, India and Pakistan may be involved. Other times, it involves a resurgent Russia and more recently, North Korea. China also gets used when the work's creator isn't so worried about the consequences for that. Scenarios which have China, North Korea and/or Middle Eastern powers as the antagonists may actually involve Russia joining the Western side . It's rare to find a piece of fiction set 20 Minutes into the Future that could resist the temptation to slap a global war into the middle of the twenty minutes. Wiping out a third of humanity must just be too much for writers to resist. (Though since the end of the Cold War , this has lessened; writers wanting to do away with a third of humanity usually

go for a plague or Global Warming -related chaos.) A common way to establish the otherness of a future or Alternate History setting is to have a throwaway remark about World War III having occurred in the past. For numbers greater</ than III, see World War Whatever . For stories about stopping this from coming to pass, see Prevent the War . Compare and contrast to Avoiding the Great War . There are some associated sub-tropes with this setup in particular: Any scenario written after c. 1987 must find some way to remove Mikhail Gorbachev from the Soviet leadership. The 1991 coup attempt succeeding is a popular choice for this.

The After the End scenarios that aren't "Oh no, we accidentally invented a supervirus/ oxygen-destroying chemical / pie so delicious it kills you ."

When World War III is not far enough into the future, writers tend to make mention of later World Wars. This is often used to show how mankind is doomed to repeat its past mistakes. Generally, they will be the explanation for a Crapsack World / After the End setting, or just a nasty blot in human history.

One character expresses some concern about a situation. Another character corrects them, telling them what they should really</ be worried about. Not to be confused with Skewed Priorities , which is about being disproportionately concerned over something comparatively trivial, or with It's All About Me , which is about putting one's own interests ahead of everyone else's. This trope is about a character who has a legitimate fear that is then replaced with another</ , legitimate fear A subtrope of Right for the Wrong Reasons , and related to False Reassurance . See also Morton's Fork

When a character describes a supposedly unpleasant situation, but it doesn't seem that bad. When the other characters don't understand what the big deal is, the character begrudgingly blurts out an additional detail, allowing the audience and/or other characters to grasp the gravity of the situation. For example, there's a big difference between your aunt being cut from her position, and her being cut from her position with a machete. There are many ways this trope can occur, but these are two common examples: Alice lambasts Bob for making a mistake or instigating an incident. Bob defends himself by downplaying the situation to make it seem like Alice is overreacting, but Alice counters by disclosing an aggravating factor that makes the incident much more dire or severe. As a Comedy Trope , the gag is that the character didn't reveal the critical detail in the first place, even though they were trying to make a point. Can be Played for Drama if a character is using it to try to conceal their own mistakes or flaws. The verbal version of a Reveal Shot . If multiple details are revealed in succession that make the situation progressively worse, Escalating Punchline also applies. Can be a type of Bait-and-Switch Comment of From Bad to Worse situation. Compare If You Thought That Was Bad... .

Exhibited by entire newspaper editing teams at our heroes' hometown papers, the Worst News Judgment Ever</ gets relatively mundane news stories placed in prominent locations (i.e., A1, above the fold, bannered across five or six columns, and with an overblown mug

shot). Our heroes have an easy time finding whatever they happen to be looking for, usually seeing the paper in a vending machine. With that sort of placement, you don't even need to buy the paper — it's all in the giant-print headline. Usually, the news judgment is so wildly overblown as to cause disconnection from the audience; you will rarely, if ever, see a Lampshade Hanging pointing out this ridiculous fallacy. While improbable in the real world, the overplayed story in question usually provides our protagonists with a Red Herring . On the other hand, if the main headline is</ earth-shattering enough, one may start to wonder why there are any other articles on the front page at all. When the main headline reads "Extinction of Humanity Imminent", then how in the heck is newsworthy? In a comedy or an old movie, will manifest itself at the end of a Spinning Paper montage. There is also an inverted version of this trope that is usually used intentionally for ironic purposes: an important story (often describing the events that occurred in the movie we've just seen) is shown stuck in a corner on the newspaper, while a vapid story (such as a celebrity scandal) sucks up the headline space. The paper is showing terrible judgement by emphasizing the wrong story. (Given, among other examples, the protest of MSNBC 's Mika Brzezinski over having to lead with a Paris Hilton story when there were several more serious stories worthy of attention, this could be considered Truth in Television .) This variant is almost always used as a commentary on society's preoccupation with meaningless gossip, but it is sometimes used to show that the world has virtually ignored a story that would have changed everything (such as proof of the existence of aliens, vampires, or similar). In this case, it's not so much bad judgement — the paper would have no way of knowing that the freak meteor shower was the remains of a destroyed alien invasion fleet — but probably still counts as an example of this trope because the audience</ knows that the small story is actually of critical importance. Sometimes this will be used as a joke; the "main", plot-important story is used as the main headline, with an even more important story stuck in a corner. For example, in The Trapped Trilogy </, one newspaper main headline was about a serial killer escaping. A smaller one was the second coming of Jesus Christ</ . Some times you'll find comments about the lack of meaningful other news as a joke. Often used to demonstrate that Old Media Are Evil . Likely to take place in school newspapers . Compare Coincidental Broadcast when used to relay plot-relevant information, and Yet Another Baby Panda when news broadcasts conclude with a fluffy piece. See also Local Angle . Kent Brockman News often features this. Contrast If It Bleeds, It Leads , where the only important info that gets reported to death is the most miserable. Proportional Article Importance is when a reader</ of the newspaper misjudges the importance of an article.

Weddings are usually a beautiful and happy event between two people (or sometimes several couples) who love each other and are ready to embark on a new life together. Everything virtually goes without a hitch, from the wardrobe to the music to the location to the food to the speeches, wedding days usually are the best day of someone's life Well, not in this</ case. Be it human error, deliberate sabotage or just plain circumstances beyond one's control, these events set forth to put a damper on a wedding. Perhaps the couple only has a shoestring budget for the day and has to resort to a very low-key (and often low effort) ceremony. Perhaps the best man,

a family member , other guests or even the bride(s) or groom(s) got a little too drunk prior to the nuptials. Perhaps it's a wedding where no one likes one or both participants and is either there to support the other one getting married or they just want the food. Any situation, this wedding day is either going to be lousy or will at least have some good/bad moments or memories going for it This can be Played for Laughs or Played for Drama depending on the work. In order for an example to apply to this trope, it has to be either a series of bad or other unfortunate events that ruin the big day or one really big event that manages to shake things up. Simply mentioning something minor or forgettable that happened isn't enough Note that rarely the wedding ends up getting saved. For example, the couple finds a new location at the last minute and the couple gets a more intimate ceremony with close friends, or everyone is moved by the newlyweds' resolve that they managed to get through the difficult stuff , but other times the wedding gets ruined for good Tropes that may be involved in the outcome of this include Wedding Smashers , Speak Now or Forever Hold Your Peace , Bitter Wedding Speech , Widowed at the Wedding , Sham Wedding , Shotgun Wedding (if either or both parties are unhappy about the marriage/pregnancy), Bridezilla , Old Man Marrying a Child , Runaway Bride , Arranged Marriage (for ones that aren't meant to be) and Unwanted Spouse . The sitcom Wedding Episode notoriously never goes smoothly A Super-Trope of Worst. Whatever. Ever! , and a prime candidate for an Epic Fail . See also Crappy Holidays , Twisted Christmas (the Christmas-themed versions), Birthday Party Goes Wrong (the birthday version of this trope), A Birthday, Not a Break (which is a more tragic version of ruined birthdays) and The "Fun" in "Funeral"

Questionable Content </: Marten's father (Henry) and mother (Veronica) are divorced, but Amicable Exes . As Harry is getting remarried (to Maurice), he and Veronica muse on how crazy their wedding was. Maurice is worried that their wedding will be boring compared to that, but Harry quickly clarifies that it wasn't crazy good .

Every action has consequences. Some actions have particularly nasty consequences... so unpleasant that the character has to ask him or herself, Was It Really Worth It? For most fictional characters, the answer is yes</. Especially if the end result is funny . This Stock Phrase is usually said after a character does something that they really, shouldn't have, but the opportunity was too good to pass up. Laser-Guided Karma kicks in and the ogler/vandal/thief ends up incarcerated or suffering Amusing Injuries . But the character cheerfully pays this price: it was Worth It . See also Spoof Aesop . If they probably won't be around to say this afterwards, an alternative is I Regret Nothing . Occasionally coincides with I'm Going to Hell for This . Compare All Men Are Perverts , which says that for a man, the possibility of getting sex is Worth It, no matter how microscopic that possibility may be, or how difficult, costly, or agonizing "It" is. No Real Life Examples, Please!

The characters of a story run across something very valuable. But, due to ignorance, stupidity or Values Dissonance in its most literal application, they discard it as worthless junk. The audience groans in disbelief as earthly wealth beyond their wildest dreams is left lying on the floor (if not thoughtlessly trampled upon). Alternatively, while they might find some use for it that use is a mundane, insultingly boring utility that is far below its

actual value and capability Finding gold is the most common example of this trope: Though it has industrial applications as a highly corrosion-resistant electrical conductor and potential as a cheaper alternative to platinum catalysts, almost all of gold's value is due to its rarity (the pretty shine doesn't hurt either). And, in a disaster situation, gold would quickly prove to be worthless after all. This can lead to an ironic Death by Materialism situation for someone who's "smart" enough to figure out what those funny yellow rocks really are and won't abandon them when they really should be running for the door. Compare All That Glitters A common Karmic Twist Ending is for Earthly characters to encounter a world or dimension where something like gold is so plentiful that it has little value, or where something common on earth, like aluminium or copper, takes the place of gold or platinum as the ultimately rare precious metal. (Ironically, aluminium actually was more valuable than gold once; see the Real Life section below.) Of course, given what science knows about the formation of elements, it is highly unlikely that there are any solid-gold planets out there, no matter how amazing it would be. On the other hand, there is</ a giant space-diamond. Probably a whole lot of them There is Truth in Television for the reasoning behind this trope. There is a law of economics where materials decrease in value as they become more abundant. (Refer to the above paragraph.) Trade in general, when done honestly, is fundamentally what happens when two people come together and agree that something the other guy has is more valuable to them than something they can afford to give away Also common is the devaluation of diamonds 20 Minutes into the Future after the invention of Diamonds are not made of an intrinsically valuable or rare element, but common carbon, so advanced people from the future or space-faring aliens are likely to consider them somewhat common and utilitarian. For that matter, they aren't that</ rare now (about as common as rubies, which have a much lower market price); their perceived value is mostly a combination of enforced artificial scarcity and sucker-rearing by the distribution companies Using this with petroleum may constitute a research flub, if a writer assumes its only conceivable function is to fuel modern machines, ignoring its previous uses for waterproofing, oil lamps, etc. and other modern uses like chemical synthesis, including most polymers. Though it's also possible to , since it's just a mixture of hydrocarbon compounds May be part of a Green Aesop on how foolishly humanity rushes for unnecessary luxuries and how money cannot be eaten. This trope is also a common trait of the humble Noble Savage Not to be confused with Green Rocks (though they can overlap). See also All That Glitters and Common Place Rare . Kids Prefer Boxes is the G-rated version. Sometimes the species in question has a reason to not care about the shiny yellow rocks ... A counterpart is Only Electric Sheep Are Cheap ; both can exist in the same work. When video game money is useless because there's nothing to buy with it, that's Money for Nothing Compare Grail in the Garbage , Simple, yet Opulent (in that some things are only opulent to some). Also, Money Is Not Power which is when characters intend to bribe their way out of a situation, only to be told, or show, that their wealth won't save them this time Contrast Gold Fever (where people go nuts over amounts of gold or some other valuable), Gold Makes Everything Shiny , Gold-Colored Superiority , Mundane Object Amazement , and My New Gift Is Lame . Not to be confused with Gold Is Yellow , although the two could overlap Also not to be confused with pyrite, also known as "fool's gold"

When the hero and the villain clash repeatedly, over time they may develop respect for their opponent's abilities. After all, their adversary is able to keep rising to oppose them battle after battle. In the heat of battle the hero or villain's true capabilities and determination could be revealed. Or perhaps one of them was simply looking for a challenge . For whatever reason, the battles have created a sense of respect (which may or may not be mutual) This leads to a declaration by one of the two that they have found their adversary a worthy challenge, or some variation of that. It can be privately said or publicly admitted; what matters is that the character in question acknowledges and respects their opponent for their skill. Should one side actually come out on top or find out the other has fallen, it may lead to Sympathy for the Devil , Sympathy for the Hero , or an Antagonist in Mourning This declaration is more commonly made by villains than heroes, given that the villain's less scrupulous nature doesn't exactly help earn a hero's respect. The exceptions to this tend to involve Spirited Competitors or otherwise less principled characters on the heroic side, or a Noble Demon on the villainous side. Compare Evil Virtues , wherein the heroes may recognize some admirable quality in an otherwise-villainous character Expect to hear Combat Compliments . This can lead to The Only One Allowed to Defeat You , depending on the mindset of the character making this statement. See also Friendly Enemy and Evil Counterpart . Can overlap with Enemies Equals Greatness . The idea of this trope is deliberately designed to sail over the head of the Arrogant Kung-Fu Guy as they can only think about beating their foes and being the best with zero regard for the battle itself (the realization that, yes, you can respect your opponent/the battle you shared and still be a great fighter is the key turning point in their Character Development). This is very common with a Mirror Character

A guy (good or</ evil) has no problems with violence against women If he's good, it's either because he's just not sexist and he believes in beating people up equally, or because he knows that holding back against female opponents is a good way to get his ass kicked or killed or endanger his friends/allies/muggles. In earlier works, the usual formula for invoking this was to say that he would " never hit a lady " — but "you're no lady" after the woman in question attacked him first or otherwise showed herself to be of low character. Either way he stops as soon as she's no longer a threat If he's evil, it could be done in a multitude of ways. On the best end of the scale it could just be Equal-Opportunity Evil , like fighting Batgirl because she's a threat, and makes her look stronger when she beats him. More unpleasantly, it shows a Dirty Coward , attacking those weaker than him , and/or he's a bully who likes to make people afraid of him, or at the worst end of the scale, he's a sick monster who gets his kicks from hurting women . Ultimately, for it to be played as a villainous deed, it is necessary that the woman in question is not a threat to start with Naturally, modern female characters tend to go into battle fully expecting to be hit. If anything, many of them would probably be insulted</ if a male opponent went easy on them because of their sex. That said, an unprovoked attack on a girl, especially one who can't fight back, is still often played as a Kick the Dog moment, more so than if the genders were reversed . In milder works it is perfect as a Moral Event Horizon without the need for gore, torture, rape or death — it shows the villain will even hurt

those who pose no threat In terms of censorship and editing on TV, any scene of male physical violence on females sometimes vary, including flashes, cutaways, or even trimming or cutting out the scene all together, to maintain a tasteful image . Even if it's the bad guy doing it This can often overlap with What Measure Is a Non-Human? , where even a hero who would not usually hit a girl has no qualms about it if she is some kind of witch, alien or whatever. In these cases, it may be more or less justified, depending on how obviously inhuman the female enemy is The opposite trope is, of course, Wouldn't Hit a Girl . When hitting girls is Played for Laughs it can be a case of Slapstick Knows No Gender . Obviously not present when a woman</ hits a woman. If the circumstance is designed so that women are only</ hit by other women than it is a Designated Girl Fight

In fiction and in the media, both heroes and villains often agree on one thing: they Wouldn't Hurt a Child . This creed exists for various reasons: it may be because Children Are Innocent , and thus should be protected and kept out of harm's way at all costs; it may be because, to Moral Guardians , seeing a child being brutalized is Harmful to Minors and thus should be avoided; it may also be because even writers mostly disagree with the idea of writing about harming a child. But sometimes, some people just don't agree with that. Or just don't care. And, they do</ hurt children, sometimes even kill them, in defiance of the Improbable Infant Survival . Indeed, the act of harming a child usually comes off as the ultimate act of villainy . This trope is almost always a Kick the Dog moment. Hence, the presence of Would Hurt A Child is often telltale of a Crapsack World or at least a Darker and Edgier series. However, it is surprisingly easy to subvert this trope simply by using Kids Are Cruel (the flip side of Children Are Innocent) and combining it with Pay Evil unto Evil . Does a soldier shooting a child soldier still seem like an ultimate villain? In Western works, this trope is rare and almost always done off-panel when played straight (read: when the violence towards the child isn't being stopped in the nick of time and causes actual damage) largely due to broadcast standards ; it's a little more common in literature but still not very much so. In Japanese fiction, child brutality can be more common but is often framed in a very specific way (again, to conform to their</ S&P) and has actually faded somewhat in the new millenium over content concerns. : psychological/verbal abuse (very common but not that trope), abduction (only applies if the child dies or gets effectively hurt), depriving a child of food (that's Denied Food as Punishment and only counts as this trope if taken to the point where the child is at risk of serious harm from lack of food), child on child violence (unless adults are forcing the children to hurt each other, that's Kids Are Cruel), exploitation for profit by the parents if they aren't hurt (that is Financial Abuse). Violence to teenagers, with the exception of some of those in their early teens, isn't an example either since teenagers are physically stronger than children and lack the "completely defenseless" element, especially if Teens Are Monsters . However, teenagers harming children applies. There is also an interesting Double Standard when it comes to characters applying for this trope, since they are almost Always Male . A Sub-Trope of Kick the Dog . Frequently a cause of Adult Fear . Burn the Orphanage is a particular form of this. See also Child Hater , who hates kids but isn't necessarily physically abusive and Nice Job Breaking It, Herod! , which is often an extreme version. If they're not stopped in

time by the heroes, this overlaps with Death of a Child . Contrast Improbable Infant Survival and Wouldn't Hurt a Child . Compare Kids Are Cruel , Children Are Innocent . Related to Eats Babies and Child Eater . Usually applies to the Sadist Teacher . If a villain who is quite capable of bothering adults prefers to spend his time as an antagonist for kids or teenagers, it's fair to say Pick on Someone Your Own Size . For the role-reversed example of this trope, see Double Standard: Violence, Child on Adult , in which case it's a child</ physically harming an adult for comedic effect. Compare and contrast Don't Make Me Take My Belt Off , which deals more with physical discipline from a parent to a child, the big difference being that Would Hurt A Child always implies deliberate malevolence and cruelty towards the child, whereas Don't Make Me Take My Belt Off does not, unless explained otherwise by the story. Offing the Offspring would also apply if the one doing the hurt is the parent of the child, and death of the latter results.

A military Sub-Trope of Never Hurt an Innocent : only combatants are proper targets—which does not</ include The Medic , or The Chaplain . May encompass Wouldn't Hit a Girl when women are not in the armed forces and usually does include Wouldn't Hurt a Child . Those who violate this are generally portrayed as not good combatants. Indeed, good</ combatants will try to minimize even accidental civilian deaths. The Anti-Hero combatant, however, may not care; considerable conflict can arise from these clashing moralities. Naturally villains tend not to care about this rule and might even go out of their way to kill civilians as a form of Kick the Dog ; of course if even a villain refuses to attack civilians then it is a case of Even Evil Has Standards it might even signify an Anti-Villain Sink The Life Boats is particularly vicious for civilian ships Proud Warrior Race Guy or Blood Knight types may get at this trope in a sideways manner, rejecting civilians as unworthy opponents because they are weak and cowardly, unworthy of fighting. Pragmatic Villainy may also be a factor; bullets cost money, after all Truth in Television , at least in theory. Under The Laws and Customs of War , targeting civilians is a war crime — a principle that goes back as far as the Knight in Shining Armor and chivalry. On the other, to encourage combatants to comply, civilians must also not attack combatants lest they be labeled as the enemy, and combatants must not dress as civilians; both are war crimes for which the offenders can be shot if caught and convicted. In addition, if civilians are accidentally or incidentally but unavoidably killed in the process of attacking a legitimate military target, it's (usually) not considered an offense. Obligatory War Crime Scene exploits this trope for its punch More cynical works may display characters (good or bad, depending on just how cynical the work gets) taking advantage of this rule, either by taking human shields or attacking out of uniform in order to gain a first strike, after all, civilian does not mean not dangerous</ or even preclude being antagonistic . Alternatively, there is nothing stopping the good guys from accidentally killing civilians due to anything from incompetence to misinformation, the latter of which might even have been a setup Can also apply to other situations where there is a stark division with Guys With Guns and Guys Without Guns See Would Not Shoot a Good Guy for when characters do not shoot back at (some) of those actually shooting at them

You want me to describe another trope ? I'd rather drink Brain Bleach ! A character expresses his displeasure for an idea by claiming a preferred alternative — except that alternative is clearly something the average person would find unthinkably undesirable, usually subjecting oneself to pain. This is mainly a Comedy Trope , deriving humor from the exaggerated, ridiculous description of unusual torture and possibly from Cool and Unusual Punishment . Commonly used to respond to the advances of an Abhorrent Admirer or Casanova Wannabe . Also commonly used by Caustic Critics to describe the painful badness of what they're reviewing. Compare I Need to Go Iron My Dog as more mundane excuses. Contrast Fate Worse than Death as a more serious comparison. Anything but That! is another negative (over)reaction, though usually to threats. I'm Thinking It Over! is the related comedy trope where two lopsided alternatives are presented, and the character takes far too long to choose between them. If eventually forced into an undesirable situation, it might become Too Desperate to Be Picky .

Using self-inflicted injuries, real or fake, to deceive others and manipulate them into doing what you want. Often used to frame a third party, this strategy is particularly effective for, and often used by, women, due to societal prohibitions against hurting women . Named for the trick sometimes used by a mother gazelle (as well as certain birds and deer) of pretending to be injured in order to lure a predator away from her young. Once a safe distance is reached, the pretense can be dropped, and the mother can bound away, leaving the hapless predator in the dust Pretending to be a victim can be a great way of disguising your own guilt, so this is a common trope on a mystery series. In Film Noir , this became a stock trick for the Femme Fatale or The Vamp . May involve Crocodile Tears . When the self-inflicted injury is terminal, it can become a case of Suicide, Not Murder This is by no means limited to personal injuries. The Evil Overlord can injure his own people and try to blame another country , providing a quick and easy justification for war . This is mentioned as #34 (not that kind) in The Thirty-Six Stratagems , making this one of The Oldest Tricks in the Book Can cover anything from a lame excuse to Malicious Slander . For a slandered party, it often precludes I Can Explain , and can lead to Poor Communication Kills . Can overlap with I Surrender, Suckers . If you're a member of a minority, Everything Is Racist is a convenient way to invoke this trope. When done against police, it's often a Police Brutality Gambit . When done on a large scale, it's often a False Flag Operation . False Rape Accusation is a very specific subtrope of this. If done against a motorist for insurance money, see Staged Pedestrian Accident . If the target is actually guilty, see Framing the Guilty Party . The Bully Hunter and Wife-Basher Basher easily fall for this trick. The Hero with Bad Publicity also tend to get their reputation from these Compare Decoy Damsel , Arrested for Heroism , Why Did You Make Me Hit You? , Playing the Victim Card , and Defensive Feint Trap . Often related to Guilt by Association Gag and Et Tu, Brute? . Contrast Wounded Gazelle Warcry where it's not a trick. Not to be mistaken with Deliberate Injury Gambit as well; that one is about someone getting themself hurt for real to achieve a goal. Compare Sick Captive Scam for instances where a prisoner pretends to be sick or injured to get the drop on his captor

Missing (Miraculous Ladybug) </: In order to get Alya in trouble,

Lila slaps herself across the face hard enough to leave a mark, then bursts into Crocodile Tears , making it seem as though the other girl attacked her.

The role of the helpless innocent victim is hard to combine with taking drastic action yourself. But it can be the perfect role if your goal is to let others</ take action: your plight may give them the adrenaline rush or whatever they need to take action and strike down your foes Thus, you can use your (real or more-or-less-pretended) victimhood to your own advantage, and to the advantage of the people who you rally to your aid Compare and contrast Wounded Gazelle Gambit : the similarity is that in both tropes, a person uses the role of victimhood to his or her own advantage. The difference is that in the gambit they're manipulating someone to take their side (which may or may not be for the benefit of the manipulated — usually not), while in this trope they're empowering a person or group for their mutual benefit. Also, the gambit always uses a false victimhood, while the warcry does not have to contain any deceit. On the contrary, a real plight is a better weapon than a pretended one. However, the character might blur the line between self-sacrifice and victimhood, putting themselves in harm's way so their allies can get the chance to rescue them or avenge them. If such a step is taken for nothing, it might make them a Martyr Without a Cause A Plucky Comic Relief may sometimes amp their relevance that way, especially if they're a child The trope is gender-neutral in itself but is almost Always Female for various reasons. Since Men Are the Expendable Gender , only a physically challenged man or a very young Child Soldier could use it effectively. Otherwise, because women are on average less physically powerful than men in a direct battle, the effect is way more potent if a woman does it to motivate the troops she may or may not be a part of. The point being, the individual invoking this trope must be weaker than his comrades and not in charge, else it doesn't work Compare Leeroy Jenkins

Mechanical inclinations have traditionally been the forte of men, but the Wrench Wench is a girl who proves the former idea is definitely wrong. She will always be skilled and confident about her own work, as well as Curious as a Monkey in the presence of new and interesting machines - or Constantly Curious , if inspection is impossible. She is usually self-confident enough to not need a Beautiful All Along plot, but will probably have at least one She Cleans Up Nicely moment, even though she is often an Unkempt Beauty anyway. Often a Ms Fix It and The Blacksmith , a Wrech Wench might have Machine Empathy and can diagnose problems just by listening to the motor. Her tools extend to pure electronic devices, but she is also likely to be found with a blowtorch and ratchet set. When her talents go beyond mere fixing things to outright creating machinery, she is a Gadgeteer Genius . If it is computers and the Internet instead of mechanics, she is a Hackette . If her skills wax more technical than mechanical, chances are she is a Hot Scientist , though overlap can exist when dealing with things like mecha and androids which encompass both elements. Contrast to

This trope has long been a part of the wrestling landscape as it makes for easy gimmicks. In the days of Catch Wrestling , most of the

non carnie practitioners were miners who used wrestling as a quick income supplement or way of relieving boredom, but the gimmick was especially common in the WWF in the early-to-mid-'90s. Some fans think it was a twisted sort of Lampshade Hanging , as the WWF was in the process of going bankrupt at the time. These wrestlers are more likely than any others to be a Steven Ulysses Perhero . This is a case of Truth in Television , as any indie wrestler will tell you. It can take years to reach five figure income on the independent circuit and decades for six figures, which usually only comes with semi regular appearances in an entrenched regional powerhouse like WWC. Some independent circuit wrestlers do reach seven figure income, but this is almost always the result of notoriety and endorsement deals gained from a stint in a national promotion like CMLL or New Japan Pro-Wrestling in between indie dates. In the case of amateur wrestlers, they have limited opportunities after leaving college (or rather, limited athletic opportunities) such as attempting to: Conversely, within the landscape of the WWE, wrestlers earn in the six figure range for even low level performances, while top tier stars are expected to reach high seven figures, plus perks. WWE wrestlers also tend to work too busy a schedule for a second job to be logistically possible... except the ones whose second job both pays more than what WWE is willing and potentially gives WWE more publicity, such as a movie actor, in which case conveniently-timed kayfabe injuries will allow them time to film. Several of these gimmicks remain even after wrestlers are successful enough not need to work a second job anymore . Shane Douglas really was the dean of an elementary school, and Duke "The Dumpster" Droese was a garbage man. Not to mention Dr. Britt Baker DMD, who really is a practicing dentist. This trope can apply to situations well outside of wrestling too, such as when a Gang of Hats actually have a line of work that requires them to wear their silly costumes .

Is he out to win championship belts? To stand at the top of the tournament ? Does he live to entertain the fans ? Is it all about the money ? No, all he cares about is destruction, preferably the destruction of other living things. His shadow stretches far, his footsteps fall hard, he strikes swiftly, his Battle Cry being the only warning, if you're lucky . He's as strong as he is fast, as tough as he is agile , he's savage and is likely from Parts Unknown . He's a monster! Some monsters are too dumb to understand anything other than fighting. Some are reasonably intelligent if a little disturbed, criminally psychotic by most standards outside of the wrestling world. Some turn out to not be that bad, simply misled by a depraved manager, but these are bad for the reigning champion, as the manager can give them a focus they would otherwise lack. A monster's strength and fury can be fueled by external forces like medicine that had unintended side effects on him. Some claim to have supernatural powers, some claim to be beasts that only take the guise of men. What all monsters have in common is incredible endurance. They may be huge, but being big isn't enough. They may be crazy or vicious, but that still isn't enough. Many have power contested only by the The Giant or the World's Strongest Man along with the agility of high fliers, but to be a monster, he must also be insanely tough. Some will teeter but not fall. Others will always get back up. The worst seemingly Feel No Pain at all: move them, bruise them, cut open their bodies, but it will do little to slow them down. After all, reducing his selling is the easiest way to convince the audience this guy is abnormal. The biggest thing that makes a monster different from The

Giant is movement. Monsters are tough, but being unmovable is not nearly as important to their psychology as for giants. Monsters are also more likely to chase down fleeing foes than giants. Wrestlers will often be given giant gimmicks to emphasize their appearance while distracting viewers from their lack of talent. Monsters may lack in some areas of Wrestling Psychology or charisma , but the gimmick is usually given so a wrestler can spend more time showcasing their offensive moves without having to slow down too much to sell. The Wild Samoan is a subtrope. The term "monster heel " is often used to describe this kind of wrestler, however, since monster gimmicks are usually given to talented athletes it is not unknown for them to take the face role. Depending on how abnormal the gimmick is supposed to be the face examples may overlap with Monster Knight .

Tropes found in Professional Wrestling .

Take the worst, grimmest and darkest side of society, give them a place where all their sins are given free roam to be expressed, collect it into a system that can just barely sustain itself and you get the Wretched Hive. It will be a mostly lawless setting , usually (over) populated by criminals . There may be no actual government in this Wild West or Scavenger World because it is miles or light years</ away from civilization, and if there is it's probably a Dystopia that's corrupt, incompetent , obstructive or perhaps just uncaring enough to not bother to spread its reach to all corners of society. If this hive has any truly good authorities, expect them to be extremely overworked , incapable of controlling the skyrocketing crime everywhere, or just too idealistic to survive. An alternative is to have it as a gang-like system ruled by a mob boss, Big Bad or Evil Overlord who allows evil, but only to a certain standard . It could be truly lawless with no authority other than the big stick you carry with you. In many cases, the economy is no better. If this is true, facilities are usually falling apart, and the subways and buses are often full of crooks and junkies. And they're always late . Any schools in this place will almost inevitably be impoverished or sadistic . The roads may be cracked and broken, with a Trashcan Bonfire every fifty feet or so. Many buildings have been abandoned, to be occupied by vermin, hobos, or criminals. Decent jobs are few and far between. Housing (if you can get it) is unsafe, filthy, and overcrowded. In short, poverty is the norm, not the exception. However, prosperous and affluent settings can also qualify as this trope. While people are more likely to be in decent financial shape, don't expect things to be any better in terms of morality. At most, there's a pleasant façade to conceal the rot within . Sleazy, immoral decadence is frequently rife, and may not even be particularly hidden—if it is at all. Non-impoverished examples are arguably worse, ethically and morally speaking, since the inhabitants don't have deprivation as an explanation for the things they do. This lawless setting is often wonderful for allowing all varieties of creativity, ideas and/or tropes to flow in, be played and interact in interesting ways , and many plot conveniences that the protagonists need to get away with doing active work rather than just handing problems over to the police or running into Fridge Logic when they don't get arrested for taking the law into their own hands , while there are several takes on all sorts of unlawful or devious acts. Gangs, cons, gambling, underground fighting, rampant prostitution, a thriving black market (ranging from one guy with

some watches under his coat to a literal market), jaywalking and many more. This can be portrayed as anything from guilty fun or the inevitable underbelly of humanity to constant danger. The heroes can always find some misdeed around them to solve and the villains will have little problem finding a safe hideout or Bad-Guy Bar to get together and plot schemes. The Wretched Hive has a few Sub Tropes in increasing size: See also Gangster Land , City Noir or Industrial Ghetto . When Real Life New York City is portrayed this way, it's The Big Rotten Apple . Has nothing to do with bees. Often paired with Crapsack World , but differs in that while the setting is less than ideal, the people in it need not be unhappy or universally sociopathic, nor is the worst result the most likely to happen . For cities which literally look like hives, see Hive City ; notably, Hive Cities also tend to be Wretched Hives more often than not. Opposite of the Sugar Bowl and Utopia in general, and Shining City more specifically. If the Wretched Hive improves over time, then it becomes a Heel-Face Town .

When the creator of the work has something to say about said work , the audience often deems their word as something that follows the canon . Sometimes, however, it's not the case — what the creator said and what's shown in the work are different. What could that mean? This is often why God may opt to be ambiguous instead. Depending on the case, this may lead to Canon Discontinuity or Author's Saving Throw . Compare with Death of the Author (a belief that the writers have as much of an idea as the audience about the story and thus the writers' interpretation of the story is no more (or less) valid than the audience's), Voodoo Shark (when an explanation just causes more confusion), Negative Continuity or Schrödinger's Canon . This trope often causes a Fan-Disliked Explanation . If second-hand accounts of authorial intent blatantly conflict canon, there's a good chance the author never said that at all .

Let's say that a show strongly hints at the possibility of Susie having lost a baby as a teenager. Almost all of the fans accept this, but the hints are vague enough so that they can also be interpreted to support the idea that the baby that died was Susie's younger sister. Confirmation for the supporters of the first theory would come in the form of Susie over-empathizing with a mother who has just lost her baby and being very tight-lipped when Joe asks her why (why would be tight lipped if it was her sister?) and getting teary-eyed when watching mothers interact with their children. So while Susie losing her sister fits with the hints (though not as well as the more widely accepted story), it doesn't explain either of these situations, where Susie losing her daughter does. Of course, there are alternate explanations for both of these situations, but really only one that explains them both, and the show has already hinted at it repeatedly. This is where writers want to include an idea — any element contributing to the plot or a character — in canonicity, but don't want to explicitly state it. As a work-around, the writers hint at the idea until it's accepted by most of the fandom . These hints are usually strong enough that most of the fandom gets the right idea fairly quickly, but not so strong that they can't be ignored or attributed to something else if the viewer dislikes the idea being hinted at. The point is, after all, getting the idea across to a large portion of the fandom while offering a

less convenient, but still plausible, alternative explanation for those viewers who don't want to believe. This tactic is most often employed when writers want to include an element such as mental illness, rape, in older shows, homosexuality, or another sensitive topic in a plotline or a character's backstory as a means of plot or character development, but don't want to explicitly state it to avoid controversy or alienating certain viewers, and also to subvert censorship. The artistic reasons for doing this is Show, Don't Tell , it's more interesting to tempt readers to figure this out for themselves than explicitly spell it out. Likewise, the information in question is merely backstory and subtext to the plot in question If a plot is an adventure/crime/heist/romance story, potentially disturbing and traumatic details might overpower the drama of the genre setting, so for a writer, it's better to put this in the background and leave it for the specially involved reader and viewer. If the hints are particularly weak or ambiguous, it can be difficult to determine if they are deliberate or merely a coincidence. Short of a Word of God confirmation of intent, the easiest way to establish this is if the idea is built on as if it was canonical. Bear in mind also that, for this trope to apply, the fanon has to result from the hints. If the fanon existed with more than a few supporters before the idea was hinted at it's just fanon. This trope is most common in live TV shows, but shows up in other mediums fairly often as well. For when this happens with a ship, see Ship Tease . Can result from intentional Canon Fodder . Contrast with Wild Mass Guessing and also Applicability where a given work is deliberately written so as to be open to multiple interpretations rather than a single one. Anime & Manga Film Literature Live-Action TV Video Games Web Comic Web Original Western Animation

Writers and directors get a lot of demands made of them. Not only is there Executive Meddling but once a show develops an audience, the fans will probably have their own ideas of what they want to see And sometimes the writer gets sick of it Writer Revolt happens when the writer gets sick of the demands being made of them and subverts them. They might start their attack by torpedoing ships . But go too far and fans will stop supporting a show that attacks them, and that's the end of the writers' jobs. And sometimes this is what they wanted all along Not to be confused with show writers actually going on strike . Compare Biting-the-Hand Humor , Take That, Audience! , Artist Disillusionment , and Wag the Director . May lead to Why Fandom Can't Have Nice Things

Any portrayal of Hollywood in TV or film is going to feature a lot of jokes at the expense of the writers of the Show Within a Show , or writers in general Note that this doesn't apply to the product (which may or may not be any good); merely the people writing it, who will be portrayed as undercompensated butt monkeys laboring in dismal quarters under a lot of Executive Meddling and perhaps a touch of Writer's Block This partly stems from a perception that in Show Business , writers really are</ frequently at the bottom of the creative totem pole; they might write the words on the page, but the executives will tell them what to leave in or take out before the work even gets to the production phase , the director (often, in the world of film, considered the "auteur" ultimately responsible for everything) will freely re-write, rework or drop material when filming, the actors will ad-lib or creatively reinterpret the lines, and so forth. This, naturally, tends to

produce both self-deprecating humor and</ bitter resentment on part of the writers, which tends to consequently crop up in their work. Some of this was Truth in Television in The Golden Age of Hollywood , though since the start of The Hays Code demanded a complete script to be submitted for approval, producers generally backed writers and their vision over other suggestions, and directors and actors generally struggled to invest emotional truth in hackneyed lines and cliches which they couldn't change even if they wanted to A subtrope of this, somewhat frequent in literature especially, pokes fun at actors, artists or, yes, writers — basically anybody whose primary means of support comes from the "production" of creative expression rather than a truly tangible, practical product. The effect can be anywhere from genuinely humorous, satirical or simply a light-hearted jab to full-blown anvilicious , especially if one stops to think of how on Earth the author got rich and famous in the first place, or indeed the very medium and method said anvilicious message is sent across. Bear in mind also that Most Writers Are Writers and within Hollywood then and now, screenwriters at times to be ignorant or dismissive of the more technical aspects of film-making and the work done by actors to prepare for their parts. There is a reason why this trope generally focuses on the frustrations of writers rather than that of the art director, cinematographer and the editor or other people involved in the collaborative work of theatre and radio Sort of a reverse version of This Loser Is You . Compare Biting-the-Hand Humor and Who Writes This Crap?! ; contrast Take That, Audience! and Straw Critic . A form of Self-Deprecation , obviously — the writers wrote that writer-bashing script, of course. That also makes it Creator Career Self-Deprecation . Harpo Does Something Funny is what happens when writers concede that part of the script is best served when left in the hands of actors or artists. In the music world, it's bass players and drummers who get a similarly bad rap

Tropes are elements within a story to help convey its purpose. A side effect to this wiki is that TV Tropes Will Ruin Your Life . As your knowledge and understanding of the elements of storytelling increases, you become more critical of what you encounter. The flip side is that with this knowledge you are more capable of utilizing tropes in your own work. Being Genre Savvy about your own writing will only improve upon the work. Here is a list of tropes and concepts to help you. As this is a wiki, every link will lead you to another location. This is merely a good place to get started. The tropes listed here are good examples, but if you are looking for something more specific, look at the Main Tropes Index or use the search feature. Remember, Tropes Are Not Bad . Use them, love them, abuse them, they love it all the same. Meta-Concepts (The relationship between trope and audience) Using Tropes Script Speak Narrative Tropes Internal Consistency Ending Tropes

Fan Fic and Fandoms

Many shows, books, movies and other media that depict a real world activity (police procedures, military procedures, wilderness survival—hell, even hobbies like playing video games)—often get it totally wrong, with plenty of glaring flaws that anyone who has engaged in that activity could quickly

point out. If you're not careful, you might even get Dan Browned . Some people avoid this problem by Doing The Research, and some even go so far as to Show Their Work, going out of their way to show off facts that they learned while researching the activity. But some people don't need to Do The Research, because they already know. It's their life. The story they tell is their former profession. The world they build in the work of fiction is the world they actually grew up in. This is because some writers write what they know. And if they know their subject well, this puts them in a unique position that gives them an advantage over people who would have to go out of their way to research the subject instead. A police officer who writes novels on the side can depict police procedure and what goes on in the department realistically. Someone who has to research it second-hand might be able to as well, but will still be missing the life experiences that the actual officer would have. Same with any other profession. A writer who has primarily worked as a professional writer can also do this, but it results in Most Writers Are Writers . (Ever wonder why so many characters in fiction are authors, screenwriters, or journalists? That's why.) See also Write Who You Know , for when writers grab from their circle of family and acquaintances to create their characters. Can also pop up in Written for My Kids , where an author writes a work specifically with their own child or children in mind. Note: This is just about people who write about their current interest or hobby, but instead is about whether or not the interest or hobby is depicted very realistically because the author does it for a living or grows up around it, etc. If it is, then it's Write What You Know. If it isn't depicted realistically, then they're no different from any other author. For when the author writes about something because it speaks to them, regardless of how much they know about it, see Author Appeal . As this trope is often also used (and misused) as a piece of writing advice, it should perhaps be noted that Tropes Are Tools , and that Writing What You Know is not an ironclad rule which automatically guarantees that you will produce superior work over someone lacking that experience. Having first-hand experience of what you're writing about may give you an advantage over someone who does not have the same experience when it comes to research and life experience, but that doesn't automatically mean that you will also possess superior writing skills. Nor does it mean that someone who must rely on second-hand research instead of life experience cannot</ effectively write a story set in a world that they are unfamiliar with. Finally, it doesn't mean that someone cannot convincingly write, say, a Science Fiction or Fantasy story set in other worlds involving creatures and experiences that are a bit thin on the ground. The idea is that a writer can draw on his or her own personal experiences to inform their story and give it life and verisimilitude, not that the writer can only write about things that they have direct personal first-hand experience of. This said, as the page quote suggests, if you don't</ know about something you intend to write about it's usually a good idea to find out more about it somehow, if only to make sure you avoid any glaring errors . Compare I Should Write a Book About This , when a character in-story realizes that their experiences might make a good book. Author Avatar is when a writer goes the whole way and writes about a thinly fictionalized version of themselves.

The easiest character to write is one who comes premade. For various

reasons, an author writes themselves or their friends into the story, as themselves. Maybe it's an in-joke. Maybe it's a message. Maybe they're just seizing the nearest source of inspiration. Although this is more common in fiction than some authors would dare admit, it really broke out in Webcomics due to their less formal standards The Ur-Example was probably Penny Arcade </ (although see below). A popular variation is to name the character after the person's online handle instead. The furthest extent of this is an author writing a story or script about an author having writer's block . The longer a Schedule Slip , the closer the chance of this appearing gets to 1. This has occasionally been known to create embarrassing situations when the character's inspiration recognizes themselves but objects to the way they're portrayed in the story. On the other hand, interpreters who subscribe to the idea that Everyone Is Jesus in Purgatory tend to see this in every</ story, regardless of whether the author really intended it . This also creates opportunities for people to try armchair psychoanalysis of the author , rather than critiquing the story on its own merits. ("This character was based on the author's father, so why did he get brutally murdered in the second act? Hmmm...") See also Life Embellished (when this gets out of hand, which can unfortunately degenerate into a Mary Sue if handled incorrectly), Journal Comic (an entire comic that's taken straight from life) and Self-Insert Fic . Compare Her Code Name Was "Mary Sue" , No Celebrities Were Harmed , Write What You Know , Tuckerization , Roman à Clef . ...Freckles? We Bare Bears </ : Creator Daniel Chong has stated that Grizzly, Panda, and Ice Bear are each different variations of his own personality, depending on the given circumstance.

Someone has committed a crime, a murder usually. For whatever reasons (teasing the investigators , venting, gloating , or just for kicks), the criminal then decides to publish a book where the crime is presented as fiction, usually in minute detail Expect the investigators to get a copy of the work by pure chance and quickly deduce that the book is not so fictional and that the writer is also a criminal Believe it or not, this has happened in real life Compare Copycat Crime , where the criminal bases his crimes on a book rather than vice-versa, and Reminiscing About Your Victims , where the criminal recounts past atrocities in front of another person See also I Should Write a Book About This

In Coco (though in his version, of course, he survives).

You have a great idea for a character name. But there's a problem — someone else had the idea first. And they used it... a long, long time ago. Like, before you were born. The character may not even be that well-known (or known at all) today</ . Too bad — you missed your chance. Better change the name before airtime, or you'll find yourself knee deep in the paperwork of a trademark infringement lawsuit If word gets out online, the original name may still be used by the fans . Efforts to have this listed as a violation of intellectual property are no doubt pending. However</, certain uses are (at least in the United States) covered under what are known as We have a page about Trademarks if you're really</ interested in how they work and are used The same reasoning behind many a Stealth Pun This is one reason why a character might be Renamed to Avoid Association . Contrast Captain Ersatz , where the writers are</ trying to

use an already existing character but can't. See also Brand X , Bland-Name Product , Disney Owns This Trope , You Wanna Get Sued? , Lawyer-Friendly Cameo , A.K.A.-47 , Product Displacement , and Clumsy Copyright Censorship

Some authors plan meticulously. Before they even start to write, they have a detailed plot synopsis, character biographies, pages on the setting, and a detailed backstory to the main tale... at the least. Others just sit down at their word processor and type whatever comes into their head. This article is dedicated to them. This is not necessarily a trope about authors who simply write without a speck of planning at all (although it can be), but rather those who, overall, are improvising as they write. They may already have invented their characters, perhaps they have a vague plot bubbling in their head, even a few notes on Backstory or setting. What separates this kind of writing from planned writing is that these writers are prepared to throw those notes in the trash the moment they come up with an idea that they prefer. So you're writing a hardboiled crime fiction novel: Remember that takeaway place you thought up on the spot to give your sleuth somewhere to eat his lunch? That would be perfect as a front for the Big Bad 's drug-dealing business. Making a movie? That actor's take on that character is way better than what you originally had in mind . Why not rewrite half his part to take advantage of that vision? This does not always happen voluntarily, mind you. In some cases, the writer did indeed have a carefully planned storyline in mind until it was suddenly struck down by either Executive Meddling , an Executive Veto , or some other case of Real Life Writes the Plot , and the writer had to scramble against the deadline to come with a replacement story. This is especially</ common for manga writers making comics for serial magazines, because of the nature of that business in Japan; they must</ get out at least one completed installment done for each magazine issue, or risk ending their source of income and livelihood. Because writing well is incredibly hard to do, and the schedule of a mangaka writers frequently resort to this trope just to get an issue out there! Sometimes it even forces widely published and respected artists to put out chapters they clearly had not even finished drawing</ . The trope name comes from the phrase "flying by the seat of your pants", a colloquialism for "deciding a course of action as you go along". Like most things, this can be done well, or badly . There's more than a few examples where the final product ends up so well put together that you would have never guessed it was an example of this writing approach. Aborted Arc , The Chris Carter Effect , and Kudzu Plot are what happens when Writing by the Seat of Your Pants leaves too many loose plot threads. This is the novelistic version of Schrödinger's Gun or the Indy Ploy ; when the author of a series canonizes fan suggestions</ as he goes along, see Ascended Fanon . Can also be related to I Just Write the Thing . Compare Off the Rails where a GM may be forced to improvise as players break away from the planned story. Contrast The Producer Thinks of Everything and Developers' Foresight , where the creative team behind a project has meticulously planned every facet of their story or game. Please only add examples where the author admitted</ to doing this. This is not a page for speculation.

When people write a letter or a note, it's possible that the pressure of their pen or pencil will create indentations not

just on the paper they're writing on, but on any paper that's underneath it, too. In some sorts of story (particularly Mystery Fiction , though not exclusively), making use of this fact is a well-established investigative technique. If you want to know what someone wrote on a notepad but the note is no longer there, just look at the next</ piece, possibly shading it with a pencil to bring out the contrast In certain genres and at certain times, this trope has been common enough that a savvy villain might take steps to avoid it, such as by taking several sheets from a notepad or slipping a piece of cardboard between the top two sheets, to prevent the pesky detective from doing this A number of variations on this exist — for example, it isn't always paper that the indentation gets made on. A similar concept from the time when writing involved a lot of wet ink was to look at the (used to absorb excess ink). Carbon-copy and triplicate-copy paper are designed to take advantage of this, allowing the impression to release ink so that multiple copies are written or typed at once Subtrope of Invisible Writing , and sister trope to Condensation Clue

Sometimes actors want to have a say in the words they're given; sometimes they want to stretch their artistic muscles; sometimes they look at the scripts they have to do and think, "I could do better than this!" When this happens, and the producers are on their side (or the network is), you have something written by a cast member Much less prevalent than Directed by Cast Member , particularly in these days of arc-driven television. Writing is less glamorous than directing, for one thing, and it's harder to develop a story from scratch than to bring someone else's to the screen Key to both of these tropes is that the actor gets into writing or directing through the show they're on, having a previous background in it (let alone being the series creator). For the opposite direction of crossover, see Descended Creator and Creator Cameo . For shows where the cast and the writing staff heavily overlap, see Cast Full of Writers

As we know, some movie stars will only take roles for the money , regardless of whether the movie is good or complete garbage. Others will take roles so as to be in a work friendly for their children when most of their productions target older audiences. And in particularly bad situations, producers - or film stars - will end up needing to do a work only because their contract says so But this is for when the author writes a work specifically with their own children in mind Sometimes, it's because they want to depict issues they don't feel the media gives enough credit. Others, they want to give their child a starring role. But whatever the case, the work is written specifically for the author's children Distantly relates to Doing It for the Art , where an author writes a work because they want to, not for profit. Can sometimes lead to Write What You Know and/or Write Who You Know , where the author writes personal experiences and/or traits of people they know into their work written for their children Important to note: This is not the same as So My Kids Can Watch ; that's when people normally known for adult works decide to make or star in something appropriate for their young family members, while this is works the author wrote with their children in mind Musical examples may overlap with Parental Love Song

Occasionally a show's writers will have to work around a very real physical circumstance involving one of the actors, i.e. a temporary medical complaint. Sometimes the character will be Put on a Bus until the actor recovers, but if they're still able and willing to perform, then the showrunners will either attempt to hide the condition or find a way to work it into the story. You may watch your favorite action series and this week the hero gets kidnapped and needs his spunky sidekick to save the day ...to hide the fact that the actor broke his leg. Or the soap opera heroine finds out she's pregnant but doesn't know if the baby is her husband's or her secret lover's, because the actress herself is with child A subtrope of Real Life Writes the Plot . See also Reality Subtext . When the character is permanently disabled because the actor is permanently disabled, it's Disabled Character, Disabled Actor . If it's a pregnancy, expect either But I Can't Be Pregnant! or Hide Your Pregnancy . The Logical Extreme is The Character Died with Him when the show's writers have to take into account an actor's death</

Pregnancy (when it isn't hidden), of course, is the ultimate Written-In Infirmity:

In detective stories and thrillers, sometimes a framed man fights to prove his innocence —usually of murder—and in doing so commits a series of smaller crimes , yet does not pay for them at the end. Crimes that are often committed in the pursuit of the proof of innocence include resisting arrest, assaulting a police officer, grand theft auto, breaking and entering, reckless endangerment, assault and fraud. The immunity to consequences for those acts is a specific form of Hero Insurance , perhaps granted because they are perceived as acting under compulsion, like a twisted version of a Boxed Crook . In many cases, the transgressions they commit are also comparatively minor (property damage against the bad guy, petty or returnable in same condition theft, perhaps an assault that doesn't result in lasting injury) when compared to the crime they have been wrongly accused of, thus allowing the audience to overlook them and maintain sympathy with the character; when the crime isn't</, however, then good luck keeping them on the hero's side Note that Would Not Shoot a Good Guy is generally in play; most such characters do not actually murder people who honestly believe them to be crooks In some stories, this can be Hand Waved by how high the conspiracy to frame the hero goes; if the trial would embarrass the government, showing how easily the justice system can be fooled or how entrenched the corruption within agencies sworn to defend the law, the parties involved might prefer to sweep the mess under the rug over confronting the imperfections in the system. Alternately, the government may be sufficiently damaged over the course of the story that it no longer has the capability to prosecute the hero A subtrope of Saved by the Awesome . See also: "Get out of Jail Free" Card ; Hero Insurance ; Boxed Crook If the hero is hated due to being accused of a particular crime, yet (in the course of the plot) commits several other incredibly heinous deeds without anyone batting an eyelid, that's Selective Condemnation

A popular comedy trope: Someone references a famous invention or work of art and credits it to the wrong creator or inventor. Usually done to showcase the ignorance of the character. In morality tales, this can lead to an actual explanation of the referenced person's actual achievements Not to be confused with Plagiarism or Taking the Heat . Wrongfully Attributed only occurs when a character, a group, or the general public has a wrong perception about who did the actual deed. Compare with Mistaken Identity Also happens a lot in Real Life as a result of misconceptions or confusing associations. A deed is attributed to a more famous person associated with the concept instead of the actual creator. For instance, Henry Ford is often called "the inventor of the car", which he wasn't; he merely industrialized automobile production on a mass scale. When you hear a classical music piece and have to guess the composer, it's easier to assume it's Mozart or Beethoven. Sometimes a person is wrongfully credited for a certain deed because his name, image, or style is somewhat similar to another creator. You can hardly blame someone for confusing Theodore Roosevelt with Franklin D. Roosevelt , for example Some famous quotes are actually misquotations. See Beam Me Up, Scotty! . Some styles are so similar to a certain work of art that they can be confused for being a sequel, made by the same authors, or related in a certain way. See Spiritual Successor . Compare Historical Character Confusion , which can overlap. In cases of songs, see Misattributed Song . For facetious attributions to Kong Fuzi, see Confucian Confusion When adding examples, explain what exactly is being wrongfully attributed

An innocent person who is perfectly sane suddenly finds himself having a bad day. Perhaps he had a bad argument with a loved one or friend that left him steaming mad. Maybe he got in trouble for a crime he didn't commit. The stress of the situation has left him very frantic but otherwise he's mentally stable. Though for some reason, professionals won't hear him out, or just don't care; they're looking for someone to lock up. They could even be sadistic professionals who just want someone to torture. But no matter the case, he is now committed to a mental asylum. There, he tries to convince the staff of his sanity, to no avail Being involuntarily committed against his will, he can only hope for help from outside sources. Such as the family being able to prove his sanity. Perhaps the staff needs to monitor him and make sure he's not a threat to himself or others within a given time frame. Or in even bleaker cases, he could be in a Bedlam House , where the doctors and orderlies and other patients eventually make him lose his grip on reality. He ends up becoming a crazed shell of his former self A sub-trope of Go Among Mad People , something that will inevitably result from being committed. Compare Miscarriage of Justice (which has a character being found guilty of a crime he didn't commit) and Insanity Defense (when a sane person intentionally</ claims to be insane in order to avoid prison or punishment for his crimes). See also Insane No More

Sometimes, you can take being Genre Savvy too far, and wind up having as much Genre Blindness as the poor idiots who split up in a haunted house where one of you is a murderer . If a character in a series that has a Fourth Wall thinks mainly in terms of tropes, you've probably got a character who's Wrong Genre Savvy. Even if you're correct about being in a story , it's possible for you to

guess wrong about your role in the story, the genre of the story, or where on the various sliding scales your story is. Any way you spin it, it's still a common way of subverting Genre Savviness. This can be a minefield. Say a stranger turns up on your doorstep; if he's a vampire , he can't hurt you unless you invite him in , but if he's an Angel Unaware or King Incognito , you might damn yourself by turning him away . And look at it from the visitor's point of view; if you're an honourable fairytale knight , you won't lay a finger on anyone who's eaten your food , but if you're one of The Fair Folk , eating your food will trap him there forever . What's a Genre Savvy guy to do? This can also be used for deconstructing character types , by placing a generic character in a realistic setting and exploring what happens when they act as if they are in a work of a particular genre. Of course, a potential reconstruction can occur as well. While the character is Wrong Genre Savvy about the premise or a particular aspect, they can be right</ Genre Savvy about complementary aspects of that premise; this means that, while the character is hopeless in the aspect to which they're Wrong Genre Savvy, in their functional aspect their support is invaluable, which may lead to the resolution of the plot and an increase in the character's chance of survival . See Heroic Wannabe , Wide-Eyed Idealist , Grumpy Bear , Black-and-White Insanity , Prince Charming Wannabe , and Lord Error-Prone for characters with this trait and Genre Savvy and its downplayed cousin Functional Genre Savvy for when characters get it right. Death by Genre Savviness is a related trope. See also This Is Reality , Hero of Another Story , Entertainingly Wrong , Thinks Like a Romance Novel . Wrong Assumption overlaps with a lot of these. May be confused with Too Dumb to Live . It is very easy (and tempting) to list a character just because they are wrong about something, but that doesn't mean they are Wrong Genre Savvy. Even if they are wrong about their role in</ a story, that doesn't necessarily make them wrong about the type of story they are in. Before adding an example ask yourself "If this character was correct, would it change the genre?" if the answer is "no" then it doesn't belong here.

A Wrong Insult Offence occurs when one character attempts to insult another and hurls what they think is an appropriate insult in the other character's face. The second character considers this and then calmly replies, listing all the reasons why that particular insult does not apply to them and helpfully suggesting a more appropriate insult they could use. As a piece of characterization, this usually indicates that the insulted party does not take the insulter seriously. Alternatively, it could just indicate that the second party is a shocking pedant . Bonus points if the insult they suggest is worse than the original one. A Sub-Trope of Do Wrong, Right . If someone objects to the spelling or grammar of the insult, but not the insult itself, that's You Make Me Sic . Compare Insult Backfire , Insult Misfire , I Take Offence to That Last One , Insistent Terminology . The inverse is You Know I'm Black, Right?

A staple of cartoons where a character grabs a backpack and jumps from the great height, opens the pack, and anything but</ a parachute falls out. Commonly, it can be food, cutlery, camping supplies or heavy objects like an anvil . Whatever the case, it results in them crashing into the earth. Of, course, since these

cartoons obey sets of rules that don't factor into horrible injuries and feature quick recovery times, it's a staple joke Sometimes a character may ask for a parachute only to be given something else entirely, whether it be due to the other person mishearing or obliging to Exact Words See also Chute Sabotage

There are different kinds of restaurants: fast food restaurants, coffee shops, pizzerias, etc., and they are all known for serving specific types of food. For the sake of comedy, sometimes characters may go to a restaurant and order a type of food that they wouldn't be expected</ to have. Or, to take the joke even further, they may try to order food at a business that doesn't even sell</ food! Why characters do this depends on this situation. Some characters are just too stupid to comprehend that, say, a Japanese restaurant doesn't sell lasagna. Alternatively, they may do it just to get a reaction out of the restaurant workers . Or maybe the character is just so arrogant that they believe they will be served something special. This trope seems to be becoming less and less common in real life, due to many restaurants expanding their menus to include items besides the foods they are most well known for.

A key element in a lot of stories with Time Travel is the character's knowledge, or lack thereof, of how time travel works . Is the world deterministic ? Is time hard to change , or way too easy ? Is there something else weird going on ? Will a Temporal Paradox destroy the universe, create an alternate one, or do you just risk being very confused ? Of course, if the series itself keeps changing the rules it's up to the writer at the time whether or not you are wrong This trope occurs when the plot hinges on the fact that the characters think</ they know how time travel works in their world, but they are mistaken. Because time travel narratives often imply what events "must" occur, this trope can be a Necessary Weasel so as to maintain surprise (including surprise that the foreseen events do in fact occur) You Already Changed the Past can be an instance of this, if the characters in question are mistakenly confident that they could Set Right What Once Went Wrong (as opposed to just uncertain)

Named for a frequent setup gag in Bugs Bunny cartoons, Wrong Turn at Albuquerque describes a single wrong or missed turn in a journey that will inevitably land the traveler in a place far divorced from their original goal. The plot then unfolds in one of three ways: The gag originates from the fact that Route 66 (opened in 1926) actually intersects itself in the middle of downtown resulting where you could stand on the corner of Route 66 and Route 66 resulting in a lot of people getting turned around and taking the wrong turn. Can be caused by Road Sign Reversal , Your Other Left , Short Cuts Make Long Delays , No Sense of Direction , or trying to follow overly complicated directions . When done in a science-fiction setting, it's Teleportation Misfire . Frequently the way to enter a Dark World or Down the Rabbit Hole . Once the traveler gets in, they may not be able to get back out, thanks to it being a Closed Circle .

A sub-trope of the Wire Dilemma , cutting the Wrong Wire will very often simply speed up the countdown to detonation or, for some reason, jump it ahead an arbitrary amount, typically just enough time to pull out a Million-to-One Chance at salvation Of course,

this would realistically require a far more exotically-designed detonator than most would bother with. In reality, if cutting the Wrong Wire doesn't cause the bomb to go off, there's really no reason why it should do anything , since without power to the ignition switch, there's nothing to trigger the detonator, and the ground wire would do absolutely nothing Of course, any bomb maker would know this, and could conceivably start thinking of countermeasures to stop a bomb squad if they start to enjoy the "game" too much . They might even be willing to risk the bomb being disarmed Just in Time to rub their superiority in their enemy's face There is one particularly good reason to build a detonator with wiggle room; if the bombmaker screws up while assembling the bomb, they thus have time to correct</ that screwup before it kills them In Gunsmith Cats </, bomb-maker Ken Taki uses Wrong Wires for safety reasons, and has become more safety-focused recently as he has early stage multiple sclerosis, but was forced by The Syndicate to keep making bombs despite having a degenerative nerve condition that made his hands shake uncontrollably under stress

The Shadow </: In The Movie , a colorblind scientist cuts the wrong wire on the nuclear bomb, making the timer go to warp speed. By the time he's reconnected that wire to fix it, he's gone from having hours to having about two minutes.

The (in)famous ending of Digital Fortress Considering that the password is THE NUMBER THREE , they deserved all they got.

The pilot for MacGyver </ has one of these in its opening scene, prompting him to get out a paper clip and do his thing for the first time in the series.

A particularly nasty, not bomb-related, takes place in electrical circuits that have three phases plus neutral to provide power to devices that use single phase (thus lower voltage). If the latter is cut or disconnected while having single-phased devices connected, those will suffer higher voltages and have a very</ high probability of ending up fried, especially electronic devices.

Subverted in Data East Pinball 's Lethal Weapon 3 </; while there is a Wire Dilemma in the game, getting the wrong wire results in an animated explosion but no penalty.

Happens on The Navy Lark </ when the crew of HMS Troutbridge</ is attempting to defuse the self-destruct mechanism on an American satellite. Fortunately, the first time this happens it turns out that what they have retrieved is not the satellite but a marker buoy. The second time, however...

The classic point-and-click adventure game Discworld 2: Missing Presumed...? </ further spoofs the above Lethal Weapon 3 </ example in the intro, with Rincewind and the Librarian standing in for Riggs and Murtaugh. This being Discworld</, the Clock Punk bomb three flasks of mysterious bubbling liquid , rather than wires Justice League </ uses the "wrong wire speeds up the countdown" method in the episode "Wild Cards." Justified because the Joker built the bomb in question, and it turned out to be a fake anyway

Also known as "One's a..." Plot. Many TV shows are based around

a High Concept — a simple, intriguing premise that can be explained in one or two sentences — a "hook" which attracts the interest of everyone from producers to advertisers to viewers. One very common way to get a build a high concept is to take two characters who are very different from each other, quirky, or somehow odd, and then team them up to accomplish some objective. In 'the Biz' this is called a "Wunza plot". So-named by Roger Ebert , a Wunza Plot is "One's a [X]; one's a [Y]. Together they [Objective Z]" Oddly, even the most bizarre premises can end up rather mundane in execution, with the strange characters — despite initial weirdness — ending up in fairly stock show formats like workplace comedies/dramas, quirky sitcom family hijinks, or, yes, fighting crime as private detectives or freelance do-gooders. Animation obviously has great potential for silliness, especially if it's an Animated Adaptation of a live-action show. A silly premise isn't always fatal, and the mention of a series below is not necessarily a criticism. With the right casting and writing, some shows which sound totally ridiculous have been hugely successful and even critically acclaimed. See also In a World… . Compare and contrast with Odd Couple, Buddy Picture . A necessary ingredient (especially when combined with Cop and Scientist) for They Fight Crime! Not to be confused with Kudzu Plot .

One of the oldest genres in Chinese literature, wǔxiá (武侠 — literally "martial-arts chivalry" or "martial arts heroes", and pronounced roughly</ in Mandarin) stories are tall tales of honorable warriors (侠 xiá</) fighting against evil, whether it be an individual villain, or a corrupt government. Notable for melodrama , spectacular swordplay , and high-flying martial arts where the laws of physics, like gravity, seem like negotiable concepts. Although some wuxia</ stories are set in modern times, or even the future, most take place in the "Martial Arts World" of Jiānghú</ (江湖 — literally "rivers and lakes") a Fantasy Counterpart Culture of Imperial China . The Jianghu</ is a "shared universe", populated by martial-artists and monks, wandering knights and beautiful princesses, thieves and beggars, priests and healers, merchants and craftsmen. The best wuxia</ writers draw a vivid picture of the intricate relationships of honour, loyalty, love and hate between individuals and between communities in this milieu. It is implicit that law and government are unjust, ineffective and/or corrupt, requiring the xia</ to settle differences by force moderated only by their chivalrous code, and often forcing them to live as outlaws despite their noble characters. In modern Chinese, perhaps as a result of these connotations of a separate world with its own rules , the term jianghu</ has taken on other meanings, including the underworld or criminal gangs . A more romantic term known as Wulin</ (武林 — literally "Warrior's Forests") is used when one wants to talk specifically</ about the world of martial artists and warriors, divorced from the ugly connotations of criminality that jianghu</ has come to embody. Wulin</ is basically a majestic way of saying "The World of Warriors." Modern works often incorporate outside themes and ideas, allowing the genre to develop, and in turn wǔxiá</ themes and visual styles have strongly influenced Western media, especially in cinema. In a similiar vein to J. R. R. Tolkien and High Fantasy , Jin Yong , , and proliferated the modern wuxia</ genre. In recent years, another genre known as Xianxia</ ("Immortal Hero") has developed, referred to on this wiki as the Spirit Cultivation Genre . This genre places more emphasis on

Supernatural Martial Arts , and specifically on the practitioners becoming progressively stronger over time. Compare Sword & Sorcery , High Fantasy , Heroic Fantasy , and Swashbuckler . The Japanese equivalent is Jidaigeki , particularly the chanbara</ subgenre. (Interestingly, the term Wuxia</ was originally a calque of the Japanese Bukyo</. In Japan, however, the term bukyo</ has since faded into obscurity). The closest American equivalent is The Western , especially regarding its hazy boundary with Weird West . For the 2011 movie titled Wu Xia</, see Swordsmen </ .

Academy of Evil : If the story leans heavily toward martial arts, expect one or more of these to exist in the setting.

A Xanatos Gambit is a plan for which all foreseeable outcomes benefit the creator — including ones that superficially appear to be failure. The creator predicts potential attempts to thwart the plan, and arranges the situation such that the creator will ultimately benefit even if their adversary "succeeds" in "stopping" them. When faced with a Xanatos Gambit the options are either to accept that the creator will get the upper hand and choose the outcome that is least beneficial to them, or to defeat them by finding a course that they didn't predict Don't forget. Morons are especially good at the latter .. At its most basic, the Xanatos Gambit assumes two possible outcomes for the one manipulated — success or failure. The plan is designed in such a way that either outcome will ultimately further the plotter's goals . A more complex view is offered by the study of probability in which such a gambit is known as a Dutch Book and involves securing bets such that regardless of the outcome the bookie will always pay out less than was bet Since the Xanatos Gambit can involve an obvious goal's apparent failure, this is a convenient device in an ongoing series to let the villain occasionally win (preventing Villain Decay) while still giving the heroes a climactic pseudo-victory This trope is named after David Xanatos, one of the main antagonists in the series Gargoyles </ , who was a master of the technique and used it consistently to serve his own ends If the character's plan is continually revised</ to bring about a winning solution no matter what happens , he is playing Xanatos Speed Chess . When a plan is so ludicrously complicated that it relied more on luck than actual planning and foresight, it's a Gambit Roulette . If the plan relies on misdirection rather than Morton's Fork , then it's a Kansas City Shuffle . If several people are trying to out-scheme the other in this way, you might be headed for a Gambit Pileup where several of them are likely to be Out-Gambitted . This may involve counters to plans the mastermind may or may not be expecting This is one of The Oldest Tricks in the Book , listed in The Thirty-Six Stratagems </ as the 35th strategy, Chain Stratagems Contrast with Indy Ploy , a "plan" executed with no planning whatsoever, and Batman Gambit , a plan which relies on people doing as predicted in given circumstances. The Magnificent Bastard is a villain type likely to use these, but a particularly skilled Chessmaster , Manipulative Bastard , or Guile Hero may also pull one off This trope is not to be confused with Thanatos Gambit (where a plan includes the planner's death as a final piece) although they can overlap, or Hoist by His Own Petard (When someone's own thingamajig is the source of their downfall (if a work is the source of their

downfall, then that's Creator Killer), another name for Hoist by His Own Petard) Sadistic Choice is the Polar Opposite , in which every given choice will hinder the the person deciding the choice At the very least, the planner has to benefit regardless of whether the obvious plan succeeds or fails. This is not a shorthand for "any clever, complex, evil plan." You may want Evil Plan for that. Instances of this term that use "Xanatos Gambit" without the key quality of "all (or at least two) plausible outcomes always benefit the mastermind" are WRONG</. Please fix them wherever you see them at TV Tropes . If you can't decide what kind of plan it is, use The Plan which is the supertrope for plans in general

A common put down about how someone ran headfirst into Fashion Dissonance (or something related). Often it's something that is no longer fashionable, or that famously works for someone, but almost no one else. "X" is frequently a time period, but it can be any person, place, or thing. "Y" is typically an unfashionable choice of attire, but also can be just about any object, statement, abstract concept, etc. A similar reformulation is, "Does X know you raided their wardrobe?" Runs headfirst into Totally Radical nowadays. A common variation is to replace "They want their (word) back" with "They said you can keep the (word)" or "Even they don't want (word) back" Compare If I Wanted X, I Would Y ; Better by a Different Name . Not to be confused with We Want Our Jerk Back . See Mexico Called; They Want Texas Back and Russia Called; They Want Alaska Back In-Universe Examples Only

A trope usually seen in comedy. Occurs where an institution holds a sign outside their facility stating "X days since the last [bad event]", usually a sign like this is used to indicate the building has No OSHA Compliance , with work-related accidents or outlandish catastrophes being the most frequent bad event. Sometimes being reset by occurrences within the episode. An increasingly common variant is the sign having to be reset as it is being updated.</ These signs still exist in real life , even as fiction relentlessly parodies them .

The polar opposite of Chickification and a subtrope of Adaptational The Badass . We all know girls will need role models, so what do The you do when you're adapting or sequelizing a work from a "less The enlightened" time? Make your female lead into an Action Girl The ! title comes from Xena: Warrior Princess </, who is not</ an The example but rather the inspiration, being something of a Trope The Codifier for Action Girl . Xenafication thus can be defined as The "becoming like Xena". Related to Took a Level in Badass and The Adrenaline Makeover . Sometimes a specific form of Adaptational The Badass . Not to be confused with Xenofiction . Often comes up by The default in an Actionized Adaptation or Actionized Sequel .

A few works of Science Fiction and Fantasy (and, in some cases even realistic fiction) take the Point of View of normal animals, Intellectual Animals , Intelligent Gerbils , or Starfish Aliens . More than that, the creators of such stories take great pains to think through what it would actually be like to be a rabbit, a dolphin, or a giant betentacled being who smells colour A good rule of thumb for figuring out if something is in this genre or

not: if you can replace the non-humans with (maybe superpowered) humans without too much trouble, it's probably not Xenofiction: Beast Fables and works about Funny Animals are, in general, not examples. Likewise in many a Mouse World , size is often the only major difference between humans and non-humans; however, there is Xenofiction featuring non-humans with great differences in size If it's taking place under the nose of humans, there may or may not have a Masquerade , and humans will probably either be bastards or eldritch abominations . If humans are taking place under the nose of it, you may have Humans Are Interesting . Xenofiction usually explores Bizarre Alien Psychology This is also common in fanfics of Mon series where the mon is the POV character See Xenofictional Literature for an index of Xenofiction Contrast Most Writers Are Human . Compare to Narrative-Driven Nature Documentary for nature documentaries that anthropomorphise the animals Not to be confused with Xenafication , or the Xeno games , or Xenomorph fiction

In Professional Wrestling , "heat" is used to describe any reaction to a wrestler and their gimmick . Face and heel heat can make or break a wrestler; the former ought to be cheered, and the latter ought to be booed. Not getting any heat at all due to audience apathy is the kiss of death in pro wrestling Then there's X-Pac Heat, otherwise known as "Go Away Heat". This is when the audience boos and insults a wrestler not because they hate the character, but because they hate the performer</ X-Pac Heat can occur because the performer has been pushed too hard , they have political power behind the scenes , or because they're terrible performers. For wrestlers, this often refers to those who have poor matches, or actively wreck the pushes of others, and become overexposed despite crowds not caring for them one way or the other, regardless if they're a face or a heel. This is not a villain whom fans want to see punished ; a wrestler with X-Pac Heat is someone fans don't want to see at all</. It's a very specific form of breaking kayfabe by the fans and happens to be quite rare "Not the right kind of heat" is an alternative meaning to "X-Pac Heat" that can (but does not always) intersect with it. It's more of a "we are sick of this person and don't want to see them anymore" reaction than a "we want this person to get their comeuppance" reaction, which is the impression you want</ the fans to have. This is more or less the equivalent of a villainous Scrappy , but fits this page more due to the pro wrestling/live reaction factor Normally, it is possible to correct an unfavorable response by altering a wrestler's gimmick or shifting their position in the company . It is significantly harder, though not impossible, to overcome X-Pac Heat. Unlike the Scrappy, the audience is reacting not to an annoying character</, but to a bad or overexposed performer</ In short: if fans Love to Hate the character, or wish to see someone beat them, they're a heel. If fans just hate the character regardless of their alignment, they're the Scrappy. If fans hate seeing the performer behind</ the character, then it's X-Pac Heat

Certain letterz of the English alphabetz are just "kewler" than others . As such, many peoplez will intentionalli mizzpel wordz by xubztituting ðese letterz, in the hopez that this will draw moar attentshun from young peoplez and make the rezult look moar youþ-oriented. Whether this actually works</ on the youth crowd is debatable; this is a pop-culture phenomenon that comes

and goes like many other fads, sometimes losing its appeal almost immediately out of the gate. Although, when it is used, it is often Played for Laughs to point out marketing groups that fail to understand an audience or, more often, weak attempts to seem hip to the younger generation. The most common substitutionz are: Less-common variantz include: Interestingly, this trope tends to favor letters constructed primarily from hard straight lines and sharp angles — "X," "K," "Z," so on. These letters are also worth many points in English-language Scrabble</ , though examples of this trope would probably not be considered legal words. This can also extend to acronyms/abbreviations/initializations to make them more memorable, even if the chosen letter isn't, technically, the one in the original word. "X-Tensible Markup Language," for example, is easier to remember by its initialization of "XML" than "EML." " Leet speak " (or "1337") can be considered this trope played to extremes, where almost every normal letter is replaced by some form of "extreme" counterpart, which to those unfamiliar with the meme can vary anywhere from "slightly different" to "utterly unreadable," depending on how "hardcore" the user wishes to appear; it's believed that leet originated from the cracking "Hacker" is a case of You Keep Using That Word community, which may explain why it's never spread beyond circles of computer geeks, online gamers, and Homestucks . "Text speak," originating in IM and a popular shorthand for use with mobile phones, is similar to "1337," though the hardcore consider it a different language. One possible justification for Xtreme Kool Letterz in Real Life is that, at least in the United States, product names that are generic or that are descriptive without acquired secondary meaning cannot be trademarked as-is, but deliberate misspellings can. The overall trope is Older Than Television , and possibly Older Than Radio , with deliberate misspellings being used for humor at least since the Victorian era. (And back then, of course, semiliteracy was such a problem that many otherwise articulate people unintentionally</ misspelled words, making this trope not only comical but also satirical.) In academic study of English, this is known as "sensational spelling." Xtreme Kool Letterz shows up around this wiki as well, with titles such as Friends of Really Kool Sobriquet , and yes, this article . Compare The Backwards Я , Double X , Heävy Mëtal Ümlaut , Letters 2 Numbers , Lucky Charms Title , Myspeld Rökband , "X" Makes Anything Cool (for "X" used by itself), Ye Olde Butcherede Englishe , Shoehorned Acronym , and more from the Text Tropes index. See also A Villain Named "Z__rg" , My Nayme Is , Names to Run Away from Really Fast (K ones are its own kind), Totally Radical (one result of marketers trying this), and more of the Naming Conventions index.

Wile E. Coyote , Yosemite Sam , or some other villainous cartoon character has decided to dispose of the Road Runner, or Bugs Bunny , or whoever. Normal methods have failed... it's time for the Xylophone Gag The villain screws a stick of dynamite to the C on a xylophone , puts the sheet music (usually "Believe Me, if All Those Endearing Young Charms") on the stand, and hides, cackling maniacally. Sure enough, The Mark arrives, sees the music, and begins to play... but instead of hitting the high note which would set off the bomb, he hits a flat note (or a sharp note, or a pair of clashing notes). The villain winces (as does the audience; it's a very dissonant note) , and yells "No, that's all wrong! Try it again!" The Mark does, with the same results. Ultimately,

the villain rushes out in frustration, grabs the mallet from The Mark, and says " This is how you do it! " Kaboom Sometimes executed with a piano instead of a xylophone, but though the exact outcome varies, the end results are the same — the smoke clears , the piano keys bounce off the unfortunate villain's skull (or land in his teeth), or the xylophone bars land in a cluster and repeat, or occasionally complete, the music line A subtrope of Musical Trigger . Not usually related to Orchestral Bombing

The Mafia .... IN JAPAN!! Yakuza Emphasis on the "ya" , despite what English-language media might say or, occasionally, "those very kind people" . Yakuza insist that their organizations originated in Robin Hood-style groups of outlaws and vigilantes during Japan's feudal era , but scholars believe that they are in fact descended from roving bands of Rōnin who harassed and extorted the local peasantry Not that these are mutually exclusive descriptions, though. Tired of robbing the penniless peasants, these Ronin bands often gravitated towards more affluent cities, where they sought employment as hired muscle . There they mingled with and frequently joined local urban self-defense groups and mutual aid societies, and this is where their claim of the service to society comes from. The fact that these groups were often indistinguishable from criminal gangs is usually blissfully ignored. The modern descendants of such gangs are the very Yakuza groups that are discussed here. Today, some 70% of Yakuza come from </ background, and 10% of Yakuza are ethnic Koreans (despite Koreans making up about 0.5% of the Japanese population), both of which are groups which have historically faced discrimination in Japanese society There is an alternative hypothesis suggesting that Yakuza are descendants of legitimate organizations of tekiya</, or peddlers of shady or stolen goods , whose leaders were even allowed to carry swords (when that was illegal for most people following the Meiji Restoration). Those groups, though, were often associated with less legitimate organizations of gamblers (who may have propagated the term "ya-ku-za", which comes from the card game) Please note that real Yakuza never actually use the term "Yakuza", but prefer more romantic kennings like Gokudo</ (the outermost path) or Ninkyo dantai</ (chivalrous society), tying into the romanticized view of the Yakuza Yakuza are also commonly associated with </ groups (basically Japan's nationalist right wing militia fanatics), and are commonly accused of doing so in order to camouflage their criminal activities behind a political ideology, which would be protected speech. While some Yakuza groups have close ties with uyoku dantai</, and a few have even adopted the ideology for real and dropped their criminal activities , it's probably best for this page not to examine this further Yakuza resemble The Mafia in that they are very organized crime syndicates, with strict codes of behavior and etiquette, and encompass many levels of ritual and formality. Like their Western counterparts, they derive most of their profit from extortion , Protection Racket , drug trafficking, and the like. They like to maintain that they provide a service to the community, which in return owes them both respect and money. But unlike the Mafia or the Chinese Triads , Yakuza are not secret societies. They often operate openly , even so far as to maintain offices and carry business cards. And their strict code of honor and dedication (at least superficially) to "protecting the community" means that they're often an accepted part of Japanese society, and even the police will leave them alone as long as they

don't carry guns, deal in drugs, or harass the tourists (which the honor code doesn't allow anyway). They even police their own territories and deal with street-level crime , as such crime would reflect very</ badly on the local boss (or oyabun</) and be seen as a sign of weakness. As humorist Dave Barry put it, nothing in Japan can be disorganized — not even the crime The stereotypical Yakuza character matches the real-world profile fairly closely. He is heavily tattooed , a trait so identified with delinquency that many bathhouses in Japan will forbid people with tattoos on the premises. He's Always Male , as female Yakuza are very rare in the male-dominated Japanese society. If you see a woman in a Yakuza clan, she's either a Miss Kitty in charge of the clan's prostitution deals or a Dragon Lady (in the rare cases when she works directly with the other male members) or the boss's daughter or the boss's consort known as " ane</" (Japanese for big sister). He wears an expensive suit and dark sunglasses , and he walks with a distinctive swagger that announces his profession. While he claims a benign interest in the community, he's also likely to be as violent and destructive as his Western counterpart, especially if he feels he is not receiving the respect he deserves — but this combination of honor and violence allows some works to ascribe Samurai traits to him. And he may be missing a finger , either as a punishment or as a loyalty test, a trait so associated with the Yakuza that it's a big reason you rarely see Four-Fingered Hands in Japanese media. In this sense, the Yakuza can be seen as somewhere in between the finesse of the classic Italian mafioso and the brutality of the Russian bratva Yakuza are so prominent in Japanese culture that they have spawned an entire genre of films which are as distinct from Western gangster films as the Yakuza are from Western gangsters. While many of these films are little-known in the West, movies like Tokyo Drifter </ and Battles Without Honor and Humanity </ pioneered many tropes that Western audiences have since come to associate with martial arts and action pictures, and their influence can be detected in productions as diverse as Kill Bill </ and Cowboy Bebop </. Yakuza also appear quite often in Cyberpunk fiction, if only because Japan Takes Over the World is typical of the genre In fiction Yakuza members will almost always be ethnically Japanese, but they are not homogenous in real life. Approximately 30% of those in mainland Japan are of Korean descent. There have also been notable cases of Hāfu, people of mixed Japanese ancestry, joining. Yakuza also have a presence in Okinawa and other Ryukyu Islands, whose people are ethinically different from Japanese and have their own languages and customs. Overseas clans in places like Hawaii and California also often have non-Japanese members See also The Mafia (and its Russian cousin The Mafiya), The Irish Mob , The Triads and the Tongs , The Cartel , The Syndicate , Mafia Princess If you're looking for the Sega franchise about Yakuza, click here

A complicated Japanese aesthetic and cultural concept. Breaking the expression down: "Yamato" is one of the older (and thus fancier) and more poetic names for Japan and the Japanese people and culture, similar to the Celtic "Albion" for the island of Great Britain and "Éire"/"Erin" for Ireland; "Nadeshiko" is the Japanese name for Dianthus superbus</, a wildflower found in the Japanese highlands that is related to the carnation (Dianthus caryophyllus</) Broadly speaking then, a yamato nadeshiko</ is a "flower of Nipponese womanhood": a woman with attributes that were

considered desirable in the neo-Confucian Japan of the nineteenth century and beyond. The term was generally ascribed to noble women with traditional upbringings, but after the formal abolishment of the caste system it passed into wider use among the new "middle classes". Being a yamato nadeshiko</ revolved around the Confucian concepts of Feudal Loyalty and Filial Piety, which in the latest wave of Confucian revival meant acting for the benefit of one's family and obeying and assisting authority figures (father, husband, sometimes father-in-law or older brothers, as well as older and/or more respected females). Virtues include(d) loyalty, domestic ability , wisdom, maturity, and humility Don't let her gentle demeanor fool you ; the nadeshiko is a wildflower</ at heart. A properly done yamato nadeshiko</ will show a subtle, but definitely present, touch of iron in that she is unwilling to let circumstances hurt the ones she cares about or distract her from her goals or missions . This is often accomplished so</ subtly that the target isn't certain how</ things got redirected — a subtle influence of Politeness Judo if you will. Older yamato nadeshiko</ are better at this, while a younger one will make up for it in determination — especially when it comes to the man she loves. Tropes Are Tools , after all A poorly done yamato nadeshiko</, however, will</ turn out like an Extreme Doormat . They are silent and submissive without the inner strength of a true yamato nadeshiko</. This is a common stereotype of East Asian women in Western fiction and is often referred to derisively as the stereotype With some notable exceptions, yamato nadeshiko</ will be of medium height, willowy, modestly endowed, and good-looking without being too beautiful or too cute ; they will have pale skin and long dark hair with full, straight bangs and sidelocks . They'll dress in feminine fashions: skirts, blouses, low-heeled shoes, lace, ribbons and simple hair ornaments. The other option is the impeccable ladylike style for adults. A kimono is likely to be worn by a nadeshiko</ brought up in the good old Kyoto style. Some may wear jewelry and make-up, but not too much. Their voices will often be as gentle, calm, and warm as melted butter. Large, rounded eyes are always a good bet. It is not unusual for geisha to be a yamato nadeshiko</. Will also be likely to say Ara ara</ ("Oh My") as a Verbal Tic to indicate calm surprise Sometimes, these ladies will also know self-defense , even if they would rather not fight if it can be avoided . This makes sense as many nadeshiko</ came from samurai clans and thus were trained in fighting, so they could defend their homes whenever the males were absent. If that's the case, they'll be very graceful and effective in the battlefield , and they're likely to be White Magician Girls or Barrier Warriors . If they're neither, they'll likely use polearms, lances (specifically naginata which daughters of samurai families were traditionally trained in and included in their dowry) or bow/arrows, and maybe even small tantou daggers that may be hidden in their clothes These characters pop up a lot in Magical Girlfriend series (usually as the one who will win the male lead's heart) and as the "Betty" in Betty and Veronica Love Triangles . They tend to be passive, putting them in danger of becoming Satellite Characters for more "interesting" people, as well as a target of bashing from fans who prefer more active love interests such as Tsundere Expect her name to end in "-ko" [子] or "-bi", "-mi" [美], which mean "child" and "beauty", respectively. Less subtle examples might even use Nadeshiko</ for the Meaningful Name factor You will sometimes find males who fit in the yamato nadeshiko</ role, personality and/or looks-wise

(like Japan in Hetalia: Axis Powers </, obviously), but this is still rare. Sometimes, there's also overlap with the Samurai , since Japanese noblewomen that held this occupation were known as onna-musha</ or onna-bugeisha</. This trope is commonly used in the portrayal of a Patient Childhood Love Interest character's personality More information on this concept can be found in the Compare Moe , another standard of idealised Japanese beauty, but with less emphasis on maturity and more on protectiveness, youthfulness and vulnerability For Western equivalents, see also , English Rose and the Proper Lady . Compare Silk Hiding Steel , Spirited Young Lady , Princess Classic , Southern Belle (her US counterpart), The Ingenue For subversions, see Stepford Smiler and Yandere for a girl who seems</ to be a Yamato Nadeshiko</ but hides a far more unstable psyche : This trope is for the Japanese archetype in particular and the Eastern Asian archetype in general. For the Western/European archetype, see Proper Lady . For a general 'proper on the outside, powerful on the inside' woman, use Silk Hiding Steel . For tropes describing homemakers and housewives in general, use Housewife . To describe 'innocence' or 'gentleness', use The Ingenue . Polite or friendliness can be covered by Nice Girl . For a person whose niceness belies danger/effectiveness, use Beware the Nice Ones . General girliness is covered by Girly Girl

Generally speaking, when a yandere falls in love with someone, they tend to play for keeps. No matter how much blood has to be shed , no matter how much suffering they inflict , your common-or-garden yandere will do anything for and to be with the one they love. So what would happen if two yanderes got together? In theory, this would seem like an ideal set-up. With two individuals sharing such an unquestionably insane devotion to one another , you immediately bypass the typical shenanigans that accompany the archetype. Right? Uhhhh, that's where things get interesting... When left on their own, these couples will at worst be Sickening Sweethearts . But try to get between them however... watch out because come hell or high water they do whatever to takes to remain together and chances are things will not end well for you and whoever gets it their way. And if this pair comes with a side of Outlaw Couple , Serial Killer , Ax-Crazy , or anything else less-than-legal, expect that little Berserk Button to become several magnitudes more difficult to avoid. If such an unholy couple is also married, this can also overlap with Unholy Matrimony (or god forbid, The Family That Slays Together should they end up mating and producing offspring). And that's all just assuming the relationship is a healthy one... See also Psychotic Love Triangle , if another Yandere is butting-in with the couple.

Comic Strips

"Yandere" is derived from the Japanese words yanderu</, meaning insane or sick, and deredere</, meaning affectionate or loving. Simply put, a yandere</ is someone who is lovesick; someone who has been driven to insanity by extreme obsession or love, thus resulting in abnormal behavior if not violence. Take the Tropes Love Makes You Crazy , Love Makes You Evil , Love Hungry , and Stalker with a Crush , turn them all Up to Eleven , and condense everything into a singular personified character archetype. The word "yandere", a term that blossomed in moe fandom, refers to a character who is crazy about someone else ... often literally and violently . Despite the anime-inspired name, this type of character is much, much older than

that , as one of the earliest examples is the Mesopotamian goddess Ishtar/Inanna (technically an Uruk Example, as that was her cult city that neighbored Ur in Sumer). Yanderes are usually identifiable by their blank eyes when they go crazy, blood being soaked on them for the majority of their screentime , carrying at least one signature weapon that they use to kill and/or attack others for the majority of their screentime, a mostly Moe appearance or at least an appearance that will deceive others , psychotic behavior, and a tendency to attack and/or kill people who would get in the way of their love . Many of them are Ax-Crazy . "Benign" cases don't even need to bring weapons or violence into the mix: just a well-established aura of menace and the feeling of dread if you step out of line is enough. When on the Good Guys' team, they are often the Token Evil Teammate (or at least the fourth type of the Anti-Hero). The character almost always appears perfectly cute and harmless on the surface... but underneath they may be obsessive, controlling, and sometimes just plain insane . This is bad news for anyone unfortunate enough to be the object of a Yandere's obsession, as nothing will dissuade the Yandere from the notion that they are theirs and theirs alone. But even more</ pity should be saved for anyone who gets in the way , as this psycho-obsessive is amazingly unwilling to put up with any rivals to their often genuine affection. Most Yanderes have a history of mental instability, but some have always been just a little bit "off" , perhaps the product of a Dark and Troubled Past and a good round or more of Break the Cutie . If a Yandere ever goes off the deep end, they are likely to go Ax-Crazy , taking up the psycho weapon of their choice and doing things to people straight out of a horror movie. Usually their target is whoever they perceive to be in the way, but if the person they love rejects them or leaves them , they may well decide that they would rather see the person dead than with another or themself because they're nothing without them, which may well lead to tragedy. Interestingly, while Yanderes are usually villains by dint of their psycho and murderous nature, they can still be perceived as Moe if they manage to gain enough tragic audience sympathy . A sympathetic Yandere often has the person they love as a Living Emotional Crutch , and goes completely crazy and murderous at the thought of losing them, either romantically or otherwise. Worst case scenario, they'll go into a Never My Fault fueled Villainous Breakdown , at which point they lose the sympathy points. Part of the dere</ family along with Tsundere (cranky outside, sweet inside), or sub-groups; Kuudere (cold outside, sweet inside), and Dandere (asocial outside, sweet inside). However, those are all sweet inside, while the Yandere is sweet outside, crazy inside. While a Sweet Tsundere may have some similarities with a Yandere (especially if jealousy is one of their vices), the Yandere will often patiently endure things that will send any Tsundere utterly bonkers, but the Yandere's jealous, possessive and obsessive nature won't let them accept the possibility that the person they love can be happy without them . Unlike most Tsunderes, including sweet Tsunderes, a Yandere is usually a Girly Girl with a Tomboy Streak since she is girly and lovey dovey outside, but violent inside . Such characters are mostly female , but male examples exist. Compare with the Violently Protective Girlfriend , who can become Ax-Crazy when the love interest is in danger, but is otherwise </ more stable mentally. If the admirer is crazy, but tends to be the one who gets violently abused by their affection, then this is Mad Love . When two Yanderes form a relationship, they are a Yandere Couple . See also Clingy Jealous Girl , her Spear Counterpart Crazy Jealous Guy , Love Makes You Evil , Love Makes You Crazy , Stalker

with a Crush , Stalker Shrine , Domestic Abuse , Violently Protective Girlfriend , Villainous Crush , Always Save the Girl , and If I Can't Have You... . Compare Stepford Smiler , Psycho Supporter , and I Have You Now, My Pretty . May God have mercy on you if you are caught in a Psychotic Love Triangle (a love triangle with two members being Yanderes). Contrast with Bitch in Sheep's Clothing , in which a character is consciously using the illusion of purity and niceness to cover up a sadistic true nature (though a BISC can</ become a Yandere if we add obsession and mental instability to the mix). At the extreme, A Love to Dismember can occur. Due to their often violent nature, they are likely to be The Unfettered . The more savage examples are also very likely to be Faux Affably Evil . Don't confuse with Yandere Kanojo </, a manga which surprisingly doesn't involve actual yandere (except for one case, in which the victim had it coming. It ends well, though). Also contrast Cute and Psycho a.k.a. Yangire, who is also sweet and crazy, but whose craziness isn't</ tied to love. More details are available on the Analysis page , such as its history and its appeal. If you still don't get it… well, why don't we have a self-demonstrating version for you to understand better, dear? Tee-hee! It should be noted that while many below listed examples are drama and horror ones, this trope is not exclusively Played for Drama . It might just as well be Played for Laughs through Comedic Sociopathy and/or Black Comedy as it is for drama or horror. Almost all the examples listed below are , so read at your own risk!

Hooray! The Butt-Monkey has finally had something go right for once in their unhappy life ! And with twenty minutes to spare , we're sure to see their new joyful existence play out for the rest of the episode... right? That</, right there, is the feeling and painful acknowledgment by the Genre Savvy viewer that Failure Is the Only Option . Why? Because The Woobie is not</ going to get to keep her money and move out of Perpetual Poverty . Because the Bond Girl is not</ going to stay Happily Married to James Bond and will be dead before the movie's over . The home that The Drifter has been accepted into will promptly become a Doomed Hometown , forcing him back on the road again. A character Trapped in Another World will find that his apparent chance to get back home has fatal flaws or comes at the cost of friends or innocents and must be turned down. Ash Ketchum , despite making it to the Top 4 of the Season Finale 's Tournament Arc , will lose to an unintroduced rival who owns Olympus Mons . Charlie Brown will get the football yanked out from under him by Lucy once again just as he's about to kick it. Gilligan (or someone else) will bungle the latest attempt by the crew of the Minnow</ to get rescued and get off the island. The Trix Rabbit won't get to enjoy his bowl of Trix because Kids Are Cruel . The Brain will see Pinky's bumbling (or his own arrogance) ruin everything just when world domination seems within his grasp (yes, this trope applies to villains and Anti Villains too). And deep down, we know it and expect it. While the permutations are endless, the result is the same: writers Yank the Dog's Chain, cruelly undoing the good turn that they've done the character and keeping the bone they've just thrown them just out of reach, which can make even the simplest goals seem like Tragic Dreams . Clever writers can cause viewers quite a bit of tension and suspense this way, since we know the good turn can't last and that something</ will inevitably come to take it away. Hacks will merely cause viewers to bash in a new window and abandon a series in frustration . A side effect of Status Quo Is God

. Frequently seen when How We Got Here and In Medias Res are used. Not to be confused with Foregone Conclusion . Compare Like You Would Really Do It for the "positive" version, and Shoot the Shaggy Dog for the "negative" version. Viewers can avoid this if they read the Snicket Warning Label . Can be considered a sister trope to Your Princess Is in Another Castle! and Will They or Won't They? . See also Hope Spot (where a character finds a glimmer of hope that proves to be short-lived), Diabolus ex Machina (where things go wrong for a character from the get-go) and Too Happy to Live (where a character or characters start out happy before everything goes to hell), which work on similar principles. Despite how obvious they can be, there are spoilers below, so The Magnus Archives .

A female otaku who enjoys anime and manga featuring handsome men engaged in homoerotic relationships . The main difference between a Yaoi Fangirl and Guy-on-Guy Is Hot is that the former are interested in homoromantic/homoerotic fiction and/or fanfiction and/or Shipping , whereas the latter enjoy watching men make out. You can pretty much assume that all yaoi fangirls think Guy-on-Guy Is Hot , but not all women who think Guy-on-Guy Is Hot are yaoi fangirls The Japanese name for Yaoi Fangirl is fujoshi</ (a pun that translates loosely as "rotten girl"). Because of how commonly this archetype is shown in Otaku media when they want to have fangirls show up, the term is often misused to mean "female Otaku ". Otaku girls who like seeing fictional boys in hetero</ relationships rather than homo tend to be called "yumejoshi" ("dreamer/delusional girl", based on the idea that she reads too much Hana to Yume </) instead to clear up the confusion. Male fans of yaoi are called fudanshi</ (loosely, "rotten man"), and tend to also read Bara . In any case, Yaoi Fanboys are vanishingly rare in fiction, and if one appears, he is most likely depicted as a crossdresser or desperately clarifying his sexuality if shown as masculine. On the other hand, they're way easier to find in Boy's Love itself or works leaning on those themes, with the fanboy commonly used as an Audience Surrogate (in the sense that he's enjoying a genre he "shouldn't") or comparing the yaoi he reads with the romance right in front of his face Yaoi Fangirls are somewhat infamous due to the subsets that think Het Is Ew and engage in ukefication . In series where Yaoi Fangirls are seen, at least one joke will be made that involves the yaoi fangirl's dirty imagination and at least one of the male characters. This often goes hand in hand with said yaoi fangirl having a (usually rare for fictional girls) nosebleed Obviously Truth in Television , particularly in Japan ; notably, Real Life yaoi fangirl stereotypes changed over the years, particularly in the West. In The 2000s , yaoi fangirls would often be associated with DeviantArt and FanFiction.net and would be stereotyped as overly-vocal and -fervent "teenybopper" types in their early teens (or with the maturity of young teenagers). Later, in The New '10s , the stereotype became less pointed and, well, less of a stereotype. Aside from becoming more associated with Tumblr , it became more common to see increased integration with (and activity from) the real-life LGBT Fanbase who often genuinely want to see more representation of themselves in media, as opposed to liking NaruSasu merely because "it's so kawaiiiii" as well as many fans growing up, leading to a generally quieter and more mature fan archetype often in its late teens to mid-twenties Although most of them don't mind showing their interest, it's not infrequent

for fujoshis (and possibly fudanshi) to be bullied and deal with negative stereotypes, causing most of them to be Closet Geeks This character type is less common in anime than the Cosplay Otaku Girl , due to this character type having less appeal to male anime fans. With the rise in otaku characters in The New '10s , both character archetypes tend to be combined and even expanded into including yumejoshi characteristics due to the aforementioned misconception that "fujoshi" means "generic otaku girl" See also Slash Fic , Most Fanfic Writers Are Girls , Guy-on-Guy Is Hot , Het Is Ew . Compare Yuri Fan and Girl-on-Girl Is Hot for the female-on-female equivalents. Related to the Fag Hag

In the West, gay men rarely appear outside of works aimed at gay men (though this is changing with many series beginning to represent regular LGBT characters). However, one of the cultural quirks of Japan (though it has bled over to the rest of the world) is the use of young gay men as Fanservice for girls or young women Works that focus on these relationships form a genre currently known by the English term as Boys' Love , also called Yaoi. Yaoi is a subgenre of Shoujo and Josei Manga But even outside of actual BL series, hints of male-male romance are often thrown in to help the series fanon appeal to other demographic groups , though its main target audience is still overwhelmingly female. If there is a Yaoi Fangirl among the cast, it is not unlikely for her to try and invoke this trope Depending on the series in question, this can be limited to some Homoerotic Subtext ... or not . However, many BL pairings in certain Fanon circles are forced regardless of character interaction, even without gay subtext in the original work, due to the trope Guy-on-Guy Is Hot , which serves to feed the desires of its majority straight female fanbase (akin to straight men and Seinen Yuri). This usually results in crack pairing shippings, something Yaoi , Slash Fic , and Shounen-ai are notorious for— which many may consider Canon Defilement . Some popular targets of Yaoi stereotypes being placed onto Non-Yaoi series are Axel and Roxas from Kingdom Hearts II </, Zoro and Sanji from One Piece </, or the entire cast of Free! </ Granted, a Yaoi male doesn't need to be a Bishōnen , but there is a massive amount of overlap between the two character types. Yaoi Boys are also regularly portrayed by themes like Tall, Dark, and Handsome , Cast Full of Pretty Boys , Dude Looks Like a Lady , and other highly appearance-based tropes Secondary to these themes, Yaoi Boys are always heavily subjected to the Female Gaze , which is parallel to the Male Gaze . And on the physical side, Yaoi Boys usually have little to no facial or body hair, skinny to muscularly lean bodies (though not too buff unlike in Bara), a bishie sparkle , light-skin, and youth which is the typical depiction of men in Shoujo and Josei manga. Some more modern works deviate from this ideal with buffer and older men rather than the standard Bishōnen type One should note that Yaoi Guys should not be viewed as representative of LGBTQA men that come in all shapes, ages, weight ranges, ethnicities, and whom often do not conform to the gendered stereotypes typically portrayed in Yaoi works. Yaoi's main target audience is catered to a heterosexual female demographic and their perspectives of the ideal male figure, which follow the above Yaoi stereotypes See also: Yaoi (as the main link related to this page), Hentai , Yuri , Slash Fic , and Bara to see related tropes Spear Counterpart to Token Yuri Girls Note: couples

from acknowledged/canon BL series go on the Boys' Love Genre page, please

This is when a guy puts his arm around a woman's shoulders while pretending to yawn, in an attempt to look smooth and nonchalant. This trope only applies when this is a romantic gesture, rather than a comforting thing. If they're boyfriend and girlfriend, this is widespread—in TV and in Real Life . If not, hilarity is likely to ensue .

If you're Trapped in Another World , the major disruption in your life is going to be everyone noticing you're gone. How can you keep the Masquerade going if you're ducking out for hours on end without your parents or boss wondering where you went? Luckily, the dimension has rules of its own. One convenience is time in a Magical Land keeps moving while in Real Life , Time Stands Still (or very close to it). You can go from Crash-Into Hello to defeating the Big Bad all in one weekend. So long as you don't get into the relative</ past and future, this is a way of playing with time without needing to bother with all the headache-inducing tropes of Time Travel . If the change in time flow is constant, then the hero may save the day in the other world and jump back to their home dimension for a short while, then return... only to find centuries have passed. On the other hand, sometimes the time flow is a lot more convenient, the "same" amount of time seems to pass when they're in their own world Time isn't always on your side, however. The plot might not deign to give you the MacGuffin necessary to get out, for instance. And if where you're going is rather unpleasant , or even if there's not much to do when you get there , this scenario could very well end in tears . Be careful that this doesn't go in reverse, though. If more time passed in the "real" world, you're looking at Year Outside, Hour Inside . If you slept while more time than you thought passed in the "real" world, you're looking at the Rip Van Winkle . If the relative flow of time varies, it's Narnia Time . In hard science fiction , Time Dilation will generally be used instead, as it's a real principle of physics. In other words, Time Is Dangerous . (Examples of Time Dilation should go on that page, not this one.) In softer works, expect to see a time dilation field or other Technobabble explanations instead.

The heroes enter some kind of enchanted place, usually much smaller than an entire Magical Land — for example, a house, a castle, or an island. They spend only a few hours inside (and seemingly only age a few hours, too), but when they leave, they find that years have passed outside in the "normal" world. These places are also not only smaller but likely to be more malicious than a Magical Land, possibly designed by a villain to keep The Hero busy for a while. To that end, it might overlap with Lotus-Eater Machine . Ones that are particularly cruel apply Rapid Aging once you pass the boundary (see also No Immortal Inertia). In simpler terms (and as summarized from the page quote above), time moves slower</ from the inside compared to the normal flow of time on the outside. Time Dilation , an effect of travelling very close to the speed of light or being in an incredibly strong gravitational field, is a real-life version of this. Compare Rip Van Winkle , where the pseudo Time Traveller sleeps away the years and ages accordingly (or not). Contrast Year Inside, Hour Outside , where years pass within</ the enchanted space but little to no time passes out in the "normal" world. While Year

Inside, Hour Outside can make for a convenient way for our heroes to save the world without putting their lives on hold, Year Outside, Hour Inside tends to be a great deal more sinister, for the time lost in the real world can rarely, if ever, be gained back. At the very least, it's a great</ excuse for a Time Skip . See also: TV Tropes Will Ruin Your Life . Sugar Sugar Rune In Brigadoon: Marin and Melan </, this is how time passes in Brigadoon in relation to Earth. Of course, this is borrowed from the original Brigadoon</ musical.

The Yellow Peril is an "oriental" criminal and/or political mastermind, a character originating in the xenophobic days of the late 19th century, but popular ever since. As an expression of the "mysterious East" gone wrong, this villain traditionally had, or seemed to have, mystical powers. Often he had a beautiful daughter, who either turned from her evil ways to work with the good guys , or was herself a scheming villain , at least as bad as he, in her own right. He would likely know some form of martial arts , and sometimes speak in a thick and oddly-pronounced dialect . In some cases, the Yellow Peril might be an ancient civilization composed of wise and intelligent but hubristically ambitious people (basically real-life versions of Elves) who will use their "wisdom" to outplan and outmaneuver you every time . In others, the Yellow Peril may be an evil horde making up in raw numbers what they lack in power (this stereotype came from medieval portrayals of the Mongolian empire). He will often be garbed in clothing you'd expect to find during the Qing dynasty. However, not all examples are necessarily Chinese nationalists; on the contrary, many (including the Trope Codifier Fu Manchu himself) are the leaders of Pan-Asiatic coalitions , uniting Chinese, Indians, Japanese and various others against "Western Imperialism" and its alleged or real exploitation of Asia. Such portrayals may be inspired by the real-life in World War II, who claimed to be fighting against globalist capitalism and for the liberation of the Asian peoples (most of whom were still colonized by England or America in 1941) — although more crudely racist depictions may also simply be a case of thinking all Asians are the same (as well as bad). The "mysterious Chinaman" grew to be such a cliché in mystery stories of the early twentieth century that in 1929 included in his " Ten Commandments " the rule that "No Chinaman must figure in the story." Early story attempts to counter the connotations of such a villain often had an Asian hero included who is dedicated to stopping the villain, such as with the various incarnations of Marvel Comics which had Jimmy Woo in the Yellow Claw</ stories in the 1950s, while Fu Manchu was opposed by his son Shang-Chi the Master of Kung Fu in the 1970s. In what was presumably an attempt to avoid accusations of falling into this trope's racist and xenophobic roots, several 80s and 90s Animated Adaptations of properties with Yellow Peril villains colored them green </. Mandarin in the Iron Man </ cartoon, Dr No in James Bond Jr. </, and Ming the Merciless in both Defenders of the Earth </ and the 1996 Flash Gordon </ series are examples of this. One may think this was now a Discredited Trope , but in fact it is alive and well, although the individual</ "yellow" villain is often replaced by Triads , Yakuza , Chinese Communism , or sinister "Asian" businessmen. In the UK, this trope drew inspiration from the Opium Wars, the Boxer Rebellion, and Chinese immigration. Across the pond in the US, this trope also drew inspiration from Chinese immigration—specifically, the mass migration of thousands of Chinese laborers in the 1800s. This large movement led many Americans to mistakenly think of Chinese people (and by extension, all Asians) as mysterious and expansionist. The

fact that the workers weren't allowed to integrate with whites and often couldn't speak English didn't help matters. It later turned out that it was Japan</ that was expansionist, and horrifically brutal doing so,—China was in no shape for world domination at that point—but hindsight is 20/20. (Of course, in response to the new threat of Imperial Japan , the media promptly switched this trope around and started portraying "the Japs" as the new Yellow Peril , only to switch back to China during The '50s .) See also: Inscrutable Oriental , Dragon Lady , Japan Takes Over the World , China Takes Over the World , and another product of these stereotypes, Mighty Whitey and Mellow Yellow . For the Web Comic of the same name, see Yellow Peril </ .

When you see snow outside that's ominously yellow-colored. Or worse, when someone tries to feed you a "lemon" snowcone. Yeah, this is a Toilet Humour trope. Sometimes hilariously combined with a character's own moment of Fridge Horror when they realize what it actually is. Especially if they took a bite of it Due to this trope's inherently juvenile Vulgar Humor , it is unlikely to be appreciated by anyone older than 25. Or Frank Zappa

Every so often in Science Fiction that takes place in the near, or at least, not-so-distant future, there will be rebels , and all rebels need a suitable hideout. Maybe there's an abandoned warehouse or an empty cave, but that's only for rebels who don't have it in them to be a real rebel army If you're about to tell the evil government or the alien invaders who's about to be in charge here, you need a base that really brings the message around You need Ye Olde Nuclear Silo</. Originally created in the Cold War or in preparation for World War III , nuclear silos provide everything a proper rebel army needs: It's a miniature military base removed from larger settlements and hidden from most observers in the sky, has all the pipes and cables for the industrial feeling, and those gigantic, slow-moving doors! It usually comes conveniently with fully functioning computer equipment since it was already designed to survive armageddon, and it also provides that cozy damp cave atmosphere. If you're really lucky, it may even come with a functional missile and warhead Note that this trope extends to cover pretty much any other type of small secret underground military installations. If the lair is more expansive, it's an Elaborate Underground Base . If it's taken over by civilians, it may become an Underground City . The trope does NOT apply to any installation that is still under the control of the military that built it; in such situations, it's just a normal nuclear silo

One of the Fist of the North Star </ movies has Ken run into a monastery built over a massive stockpile of nuclear weapons.

The Morlocks from the X-Men </ live in tunnels under New York that were originally built as fallout shelters.

In Star Trek: First Contact </ , Zefram Cochrane's warp ship is kept in a nuclear silo. This is understandable, as the ship sits atop an intercontinental ballistic missile that's set to launch into space.

The Torturer's Guild headquarters in Gene Wolfe 's The Shadow of d the Torturer </ apparently consists of the disused shells of huge,d ancient starships. The torturers sleep in cabins, with portholes, d and a throwaway line mentions that the ship's original AI is stilld

functioning, though extremely derange In Jeremiah </ , the titulard character was based in an underground military facility, from d which he ventured out into the post-apocalyptic worl d

In the Paranoia </ adventure The Yellow Clearance Black Box Blues</ , the Sierra Club secret society has a hidden base outside of Alpha Complex in an abandoned nuclear power plant.

Half-Life </ series:

While they can hardly be called rebels, the cast of User Friendly </ temporarily moved to an abandoned missile silo at one point. Hilarity ensued.

In Highlander: The Animated Series </ , one of the first immortals the heroes meet holds the knowledge of nuclear weaponry. Conveniently, he lives in a missile silo.

You too can own one of these...

A three-part, generally comedic dialogue trope that goes as follows: Alice asks Bob a yes/no question, or communicates something else that should get a yes/no response (request, offer, etc.) The trope is very flexible, as long as the three parts are there. Step 2 could be verbal or nonverbal. It could be an Implied Answer , a Non-Answer or something completely unrelated; it could be an indecisive answer or a very decisive one (just not usually, for obvious reasons, a simple "yes" or "no"); it could be ambiguously an answer, a perfectly clear answer, perfectly clearly not an answer to the question at all, an apparent bizarre Non Sequitur , and so forth. As such, step 3 could be a perfectly reasonable response, Comically Missing the Point , stating the obvious , sarcasm , wishful thinking, etc. Compare Non-Answer , where the question is not necessarily a yes/no question, but the answer given is still insufficient. May be a Cryptically Unhelpful Answer . If a question is not</ a yes or no question but the answerer responds "Yes," or "No," that's probably a Mathematician's Answer .

Part of a News Broadcast , usually the last segment, in which lighthearted or heartwarming clips of stories involving footage of waterskiing budgies , squirrels adopted by mother dogs, cats rescued by firemen , firemen rescued by cats , or otherwise crowd-pleasing cute 'n' sappy animals are shown to boost ratings . In the event of a lack of fuzzy critters, the Special Olympics , the latest social media sensation or large litters of human babies can sometimes fill this role . Often (incorrectly) referred to as "Human Interest" stories , despite the general lack of anything interesting (or human) In the news business, this segment is called the "kicker". Its sole purpose is time filler ; it can be run if there's time left for it, or it can be dropped if the newscast is running long. It can cause some pretty rough Mood Whiplash depending on what else was in the show that day (you can immediately go from a horrific car accident that left 3 people dead to a cute story of a puppy with a bad leg getting a custom scooter to walk around in) Compare with Worst News Judgment Ever , when the kicker preempts more serious news stories. Compare and</ contrast

Film at 11 , when a regular news story is teased as though it's a kicker In Britain, the practice is known as an "And finally", after the catchphrase of Trevor McDonald . An older in-house name for the practice named the newsroom comedy series Drop the Dead Donkey </ . ITV News At Ten went through a long period of ending on a cliffhanger story about a Spanish village ritual, where a live donkey was fated to be dropped from a very high church tower. The feelgood factor was engendered by the Spanish animal welfare people stepping in on behalf of the donkey, following sustained international condemnation If the story is literally</ a baby panda, it's also a case of Panda-ing to the Audience . Compare to The Internet Is for Cats Contrast If It Bleeds, It Leads , which uses a gruesome sensationalized story to grab your attention

These are redirects which should be marked with the blue YMMV icon in "work" articles.

Sometimes a character (usually the protagonist) feels like he is worthless, and does not belong somewhere they value and is fit only to be a villain , no matter how much the idea frightens him. Eventually, their friends or mentors learn what is troubling him and comfort him saying something along the lines of, "Don't be so hard on yourself. You are better than you think you are, and we are going to prove it." When that challenger proves it with irrefutable evidence, the hero ends up feeling much better with the knowledge that someone he deeply respects believes in him more than he did himself. The Power of Friendship and Power of Trust may come into play. Sometimes, though, you'll need a Magic Feather or maybe a Motivational Lie to pull it off. Similarly, a Naïve Newcomer and Cowardly Lion may have a sager character explain that fear is not proof that they are cowards; only the Fearless Fool really feels no fear. This trope may be used as a form of Interrupted Suicide . For the opposite, see Heel Realization or Then Let Me Be Evil , though these alternatives may be reversed by helping the victim over their guilt to facilitate a Heel–Face Turn . When a character has to be constantly reminded of this, they usually suffer from Heroic Self-Deprecation . Compare You Are Not Alone and Rousing Speech . See Don't Say Such Stupid Things for a rougher version, and for the inverse, see "The Reason You Suck" Speech (which is usually directed at a Small Name, Big Ego). This is also a sort-of inversion of the Declaration of Personal Independence , in which the character assures others that they are strong.

A character, working in the military, is suddenly forced into duties that by all rights ought to belong to someone of much higher rank; everyone who ought to be doing those duties has unexpectedly found themselves dead , indisposed, or unavailable. This is most likely to occur in the navy or its Space Operatic equivalent — it requires that the plot be isolated enough from the rest of the military that they can't just respond by immediately sending a replacement of the appropriate rank. Trapped Behind Enemy Lines is another possibility, as is the characters becoming prisoners of war, where under The Laws and Customs of War , the senior-most commands, even if none of them belonged to the same unit prior to capture. In Real Life , if there are a number of survivors of the same rank,

the most senior of them holds command. In fiction, the situation is often adequately chaotic that the one that actually gives orders may find himself pressed into command and leadership . (In really</ chaotic situations, it may dawn on him that he is giving orders to superiors — at which point, the highest-ranking superior generally tells everyone to follow their plan. Contrast With Due Respect .) Often this requires them to press juniors and otherwise unsuitable people into roles as their subordinates. Occasionally, the promotee subsequently becomes Drunk with Power . If the dead commander was A Father to His Men , the new one may find his troops are Losing the Team Spirit over his death — though he can issue a Rousing Speech reminding them that the dead commander would be So Proud of You if they soldier on. Usually the "promotion" involved is strictly temporary. Either the people who are supposed to do the job will return from whatever made them unavailable in the first place, or a replacement will eventually appear. On the other hand, in a continuing series, a stint of You Are In Command Now is not exactly a hindrance to promotion , since it shows Leadership . Compare Unexpected Successor , Falling into the Cockpit , Take Up My Sword , Time to Step Up, Commander . If the promotion occurs because the promoted deliberately offed the person occupying the spot in the first place, and this is considered a legitimate situation</, then you have a case of Klingon Promotion . Note that if the character does not command, it falls under Field Promotion , since it is handed out by the commander, even if he would not normally be the commander.

For many of us, Dying Alone is particularly depressing. Maybe The Hero is fighting alone against impossible odds with his confidence shot to hell . Maybe that Breaking Speech delivered to The Smart Guy over his non-existent love life hit too close to home. Maybe the Grumpy Old Man is especially grumpy with having to spend the upcoming Christmas alone again this year. Maybe the Shell-Shocked Veteran has decided that he can't live with what happened anymore This is when a character has their personal Darkest Hour (or are just down in a slump) and is brought out of it by the people who truly matter . It could be that the villain's Evil Gloating is interrupted by the Big Damn Heroes delivering a bone shattering punch to the jaw and rousing the hero with a motivational speech, assuring him that his struggle isn't meaningless and that he has inspired people to greatness. Maybe The Smart Guy comes home depressed only to discover that the recently reformed Femme Fatale is waiting for him wearing nothing but ... Huh! </ The Grumpy Old Man gets an unexpected visit from his nephew and his family. And the Shell-Shocked Veteran receives a phone call from his estranged daughter just when he's ready to put the gun to his head Or maybe someone feels lonely and simply needs a hug Maybe it's the villain that needs the hug People, both real and fictional, often find themselves isolated and overwhelmed by the circumstances surrounding them. It is when this happens that The Power of Friendship and The Power of Love shines. Someone lending you a hand when it is truly needed is a great way to be told that " You Are Not Alone " Is frequently a Heartwarming Moment . Can overlap with Big Damn Heroes if it involves a rescue. Can be used to bring people out of a 10-Minute Retirement . All-Loving Hero or the Good Samaritan will offer this kind of help even to random strangers. The Anti-Nihilist often practices this philosophy as a response to the nihilistically lonely world around him. Many a Badass Creed is based on the idea that the badass is just part of

many; kill them and another will be there to carry on the fight. When someone chooses to Comfort the Dying , they often do it so the dying character doesn't feel alone. Extreme cases can even involve You Are Worth Hell (e.g., "it's okay to suffer a Fate Worse than Death , as long as nobody's lonely!"). Compare You Are Better Than You Think You Are! Compare with Loners Are Freaks . Contrast I Just Want to Have Friends , Et Tu, Brute? , In the End, You Are on Your Own and Unwanted Assistance . In certain cases, can be contrasted with Don't You Dare Pity Me! For the Anime movie You Are (Not) Alone</, see the Rebuild of Evangelion </ series. Not to be confused with "we are not alone", which refers to extra-terrestrial life , or the We Are Not Alone Index (unless your angst stems from feeling like you're troping alone) For the dark tropes that could have been dubbed this , about something nightmarish nearby, see Enemy Rising Behind

Podcast Tabletop Game s

No one takes the saying "you are what you eat" literally; it's not as though being a vegetarian will make you a Plant Person , or eating pure beef will make you a Minotaur . Some non-human critters didn't get the memo though, because for them eating people means being</ people. For some supernatural, alien, or stranger creatures to pretend to be human at all requires that they make a periodic consumption of Human Resources . Or simply put: Ghoulie has to eat people to look like one For the non-human, this will allow them to shapeshift into a human form , potentially that of the eaten , though it may only allow them to become a human version of themselves. The non-human may use non-cannibalistic methods as well, for example a fae creature might steal the shadow of a human to maintain their Glamour , a Mutant might graft skin or new appendages from healthy humans to avoid Power Degeneration , a robot or alien may use Replicant Snatching , and a vampire may have to drink blood to avoid turning into a hideous monster . It's worth noting that perfectly normal humans may be able to do this through a spell, ritual, or if they have the Cannibalism Superpower Depending on what the non-human takes, the victim may be mildly inconvenienced, severely injured or even killed. Some may be able to make a complete recovery, others will be scarred or crippled for life , and some unlucky souls will end up an Empty Shell , Killed Off for Real , or even Deader Than Dead . Needless to say, this makes being nice pretty difficult Most non-humans do this in order to maintain a Masquerade , and pose as human . Especially Tragic Monsters may be doing this because they want to Become a Real Boy . Especially monstrous ones will enjoy Showing Off the New Body . If the non-human doesn't</ eat people, whether out of niceness or inaccessibility, they will revert to their Shape Shifter Default Form . Things may turn From Bad to Worse from there though if that entails turning into an unthinking , horrific monstrosity that can never fit in among humans. And of course things will Go Horribly Wrong if their cannibalism is also caused by a Horror Hunger , and deprivation has the nasty side effects of making them dangerously hungry . Subtrope of Face Stealer and Cannibalism Superpower

The Hero 's Love Interest is doomed to some terrible fate. Neither escape nor rescue is possible. The only way the couple can stay together is if The Hero joins this fate The specifics aren't important; it's the sentiment that counts. True love and loyalty in its purest form, where the only actual " Fate Worse than Death " is being separated from the ones you care about, and everything else is worth it as long as they are there with you It could be Hell, Purgatory, The Nothing After Death , And I Must Scream , or just a Siberian prison —if it's a choice between enduring such a fate with them or being alone and free, you will choose the terrible fate every time. To sum up, somehow or another two or more people will also join facing what is quite likely the end of everything, thus expressing the message that You Are Not Alone Although sometimes it isn't actually a choice — it's a Downer Ending where everyone is doomed anyway, and they are simply affirming their acceptance and love for each other by agreeing that even oblivion is not such a terrible thing, so long as they're together Done well, this can be a Tear Jerker of epic proportions. The biggest difference between this trope and Together in Death is that the characters in question don't necessarily have to be dead for this. At least not yet</, and perhaps they won't ever die at all — just spend eternity trapped someplace together. If their fortunes change, expect an Orphean Rescue . If someone's planned that from the beginning, it's To Hell and Back See also A Hell of a Time , where Hell is worth itself</. Compare and contrast with I'm Going to Hell for This . Also contrast See You in Hell , which is usually about people you don't</ like. The Hell Seeker just plain wants to go to Hell, never mind about love Do not confuse this trope with Refusing Paradise . That trope is where someone rejects a good end instead of embracing a bad one

What is the most resilient parasite? An idea. A single idea from the human mind can build cities, rewrite all the rules, and transform the world. Neither armies, nor dictators, nor even mortality have power over them; people die, but their ideas do not In fiction, we get heroes dying but hope passed onto the audience by knowing that somehow his idea has lived on. Sometimes the hero is a martyr and his death is a beginning as people use it for inspiration; they are throwing off some kind of mind-breaking torture attempt to show that the forces of fascism can't control them. A book of philosophy or some diary may have survived him, or one of his inner circle may tell his tale and so the story ends on a happy note, but not too happy. Our story is sad but the tide of inevitable revolution will come The Trope Namer is WWII veteran and American civil rights activist , who stated that "you can kill a man, but you can't kill an idea." He was later shot dead by a Klansman but the civil rights movement endured Super-Trope of Can't Stop the Signal . The characters who pass on the idea are likely Doomed Moral Victors . Likely to inspire an Innocent Bystander to make a Defiant Stone Throw . Compare We Are Everywhere for those bad ideas that can't be killed, As Long as There is Evil for evil in general that can't be killed, and the "Neurovirus" or "Memetic Science" for bad ideas that deserve to die but are too sentient and/or too contagious to be killed by law of morality , man or god (and don't expect Time Travel or Villainous Rescue to fix it either). Compare the Streisand Effect and Curse Relay . See also As Long as There Is One Man

You can panic now! Why? It's the BLACK POLIO AIDS ANTHRAX MONKEY-POX SARS BIRD SWINE ZIKA EBOLA CORONAVIRUS -19 FLU! Wait. It's actually ACID RAINing AIRBORNE SAR-AIDS-CANCER over THE WHOLE OF NORTH AMERICA as a distraction for a SINISTER TERRORIST SATANIC PLOT to ASSASSINATE UNWED TEENAGE MOTHERS by INNOCENT CHILDREN mind-controlled by VIOLENT VIDEO GAMES and the LSD SOLD IN PRESCHOOL PLAYGROUNDS ... and so on In fiction, the media is often depicted as relentlessly fear-mongering for ratings, and will take any story or event, no matter how innocuous or harmless, and make it look like The End of the World as We Know It . In the case of real-life media drumming up fear, this one goes hand-in-hand with the Made-for-TV Movie which sensationalizes the topic of discussion. Whatever the latest media-induced paranoia is, like crime , typhoons and the best show on Earth , we're going to get a show or special report about it. Think Everything Trying to Kill You applied to Real Life and you have the idea If children are in danger, then expect Adult Fear . If it's about new technology, then it's probably because Science Is Bad . If it's a new minority or subculture, then lock the doors and hide your daughters — it's the Subculture of the Week ! Expecting volcanic eruptions in the midwest? Then it's likely a Disaster Movie . New diseases or health issues like high cholesterol and cancerous artificial sweetener? Then it's probably a Hallmark Channel</ Made-for-TV Movie about a Pollyanna and her family going through something truly Glurge-y Often involves a Clueless Aesop . May evoke Poe's Law if its parody status is unknown. Let No Crisis Go to Waste is often implied or stated to be the reason for telling people to panic Compare If It Bleeds, It Leads and Monster of the Week . Not to be confused with Fear Is the Appropriate Response , which describes a justified reaction to imminent real danger (as opposed to the sensationalized fearmongering described by this trope) See also: Axes at School , Disaster Movie , Glurge , New Media Are Evil , Pædo Hunt , Ripped from the Headlines , Subculture of the Week , Western Terrorists Completely unrelated to This Is No Time to Panic

A character gains knowledge of an event that is about to happen whether by prophecy or time travel and they attempt to change it, but it comes true anyway. (Often it happens because of </ those attempts). It's as old as Oedipus Rex </, used by Shakespeare and Tolkien, and still fresh at least as recently as the mid-80s sitcom ! This trope will usually turn out one of three ways: The event comes true exactly as expected. Depending on the mood of the series, the final fulfillment of the prophecy may or may not be a Downer Ending . One technical term for the Time Travel version of this trope is the predestination paradox</, a concept very popular with the Ancient Greeks, who believed you cannot change the future . There is only one possible future, and if you think otherwise, it's because you were destined to take a different path. Sometimes, the heroes still manage to put right the wrong the prophecy promises. In such situations, they usually conclude that fate only said something bad would happen, not that they couldn't eventually right it. An Aesop usually follows about free will being stronger than destiny. The event comes true but not quite</ as expected. Usually this involves a Prophecy Twist , where the prophecy hinges on some Ambiguous Syntax or metaphor that make it technically</ true. If it's the specific subtrope where a character cheats death only to die in a separate, but equally cruel and unusual, circumstances, that's Cheated Death, Died Anyway . Everything does change, except for the one thing that

the characters actually want</ to change. This is more common with Time Travel stories, where a time traveller tries to Set Right What Once Went Wrong (saving one particular loved one, hometown, etc.) but find that no matter how hard they try and how many times they time travel back, their attempts to do so still result in their loved one or hometown being gone. There might be an explanation involving some form of the grandfather paradox where the time traveller can't change that particular event because it's what led them to time travel in the first place; thus if they succeeded they would never have started time traveling, which of course means that their loved one or hometown wouldn't have been saved. In any case, expect An Aesop about how there's no use crying over spilt milk and that it's important to move on. Note that this is the exact inverse of the common Western portrayal of fate as an outside force of some sort, acting to "guide" outcomes in real time as they progress — both of these opposite notions fall under the concept of "You Can't Fight Fate". If the prophecy comes true because of being made (in the most common scenario, because of everyone's attempts to prevent it), it's a case of a Self-Fulfilling Prophecy . If the universe appears to self-correct any attempt at change, then Ontological Inertia is in play. In any case, on the Sliding Scale of Free Will vs. Fate , stories where You Can't Fight Fate register as Type 1 on the scale. Since it's Older Than Dirt , most examples rely on a Prophecy Twist . If time travel is involved, You Already Changed the Past . See also Stable Time Loop and Prescience Is Predictable . The Fatalist is characterized by their strong belief in fate. Compare with Because Destiny Says So , But Thou Must! , Prophecies Are Always Right and In Spite of a Nail . Contrast with Screw Destiny and Immune to Fate . A way to get around it can be Tricked Out Time .

For some reason or another, one of the main characters is displaced from their home — be it in the sense of homeland, home planet, home universe, or literal house — and unable to return. Often, their attempts to return form a key plotline or focal point of the series, but since Status Quo Is God , Failure Is the Only Option until the Grand Finale . If the reason why they can't return is because of a Doomed Hometown , then their quest is often Revenge or a new place to stay . Sometimes they'll finally return Where It All Began to challenge the force that kept them away for so long. Before the character leaves their home, they may give it a final glance before leaving This is often seen alongside Fish out of Water , and tends to result in Walking the Earth or a Wagon Train to the Stars . Trapped in Another World usually entails this (so most examples of that trope are equally valid for this one). When this trope is applied to the entire human race</, it's Earth That Was Contrast Stranger in a Familiar Land , where you can</ go home, but you no longer fit in. If you can't go home because you're banned from doing so, you're Persona Non Grata . The Stateless have often been expelled from their native country. Also contrast I Choose to Stay . Compare The Call Knows Where You Live , The Exile and So What Do We Do Now? . A common outcome of the "Leaving the Nest" Song When this happens, some people may choose to Start a New Life instead Happy Heroes </ : Big M. and Little M. crash-land themselves on Planet Xing Xing and can't return home to Planet Gray

Often characters will give complicated directions and then act as though what they said is simple, often much to the annoyance of those trying to figure out what the character is talking about Can also be used for other situations like cooking or computer assembly. When the actual phrase "You Can't Miss It" is used, the landmark or destination in question may be either easily missed, perhaps by taking a Wrong Turn at Albuquerque , or truly and tragically unmissable Especially irritating for those with No Sense of Direction , or a Directionless Driver Compare It Works Itself

A character on the show has been less than forthcoming about information that would have certainly helped the protagonist figure things out faster . Often, there's a good reason—a Big Secret or an Awful Truth , for example. In reality, the writers just needed a way to protract the story or build the suspense. There are two ways this trope is generally employed: The detectives or crime labs find evidence that their main suspect in the crime couldn't possibly have committed the murder because he had some other alibi. Usually, the secret they are keeping is illegal, immoral or highly embarrassing to such an extent that they would rather go to prison for the primary crime. It is usually used in crime dramas to get the Red Herring out of the way and move suspicion off of the patsy. Similar excuses include; A Trickster Mentor , vague prophet , or similar enigmatic figure may deliberately withhold information until asked, either because they can't</ reveal it otherwise or they need the other characters to keep consulting with them. On rare occasions, they do this because they know the information wouldn't be believed or make sense until a specific time . This idea is often used when computers or Artificial Intelligence are involved. Because computers are extremely literal , it often happens that the computer or AI knows the answer to solve the problem, but since they weren't asked (or weren't asked correctly), they won't use this knowledge on their own. A stock response to You Never Did That for Me . Compare Didn't See That Coming and Locked Out of the Loop . Often, They Didn't Ask about something that could have prevented the whole mess . You Can Talk? may also figure in the conversation.

No one asked for a stinger so you're not getting one... wait a minute.

The standard caution read by a police officer to anyone who gets arrested in the UK. Unlike the Miranda rights , this is almost always done as well on TV (even if only parts of it), if not necessarily by the character who actually cuffs the perp. The current England and Wales version (as modified by the 1994 Criminal Justice and Public Order Act) is: (Source: </ .) The original version prior to 1994 was: (Sharp-eyed tropers will note that the accused now has only a qualified . So it makes sense for police to be suspicious of a suspect refusing to talk) The Scottish version is: (Sharp-eyed tropers will note that this is</ an unqualified right to remain silent. The reason for Scottish people enjoying this unqualified right whilst the English don't is because Scotland has its own legal system. However, this unqualified right has to be balanced against other features of Scots law. Prior to the Cadder case, for example, the accused in Scotland had no right to consult with a lawyer before being questioned, whereas those in other parts of the UK did. Source: </ .) A frequent TV practice is for a senior officer to yell "You're nicked!" before a junior officer recites this caution. The speech is

done so often it may merely be subtitled as "Recites Caution", or "Reads him his rights" For the version used in the United States see Miranda Rights . For anything not US or UK see Reading Your Rights Compare Don't Answer That , for when a lawyer (or other ally) reminds a suspect that he doesn't have to say anything. Heard briefly in Hot Fuzz </ when Nicholas arrests the chav shoplifter. In the first series of Life On Mars </, Sam Tyler stubbornly continues to recite the post-1994 version of the caution in 1973. Each time, another cop or the arrestee tells him he's got it wrong. And at one point, he catches himself, tries to remember the old version, and comes up with the Miranda </ warning from the US. A strip of The Perishers </ had a crab being arrested and told "anything you say will be taken down" to which he quickly designated a person and an item of clothing.

In the 1985 Doctor Who </ Radio Drama "Slipback", a Cowboy Cop recites his own version of the pre-1994 caution:

Some secret about Character A is mentioned, either by the character himself, or by somebody else. When queried, someone replies "You don't</ want to know. Just trust me on this ." Or words to that effect. Whether we</ actually find out what it is varies — if we don't, it can turn into a Noodle Incident and be left to the viewer's imagination entirely , or it might be set up for one or more un-reveals . The characters who do</ know will usually try to avoid talking about it. More often than not, this phrase can just end up as Schmuck Bait . In other cases, we do find out. If played for comedy, the secret will turn out to be relatively innocuous — or at least, not nearly as far-out as what the other characters — and probably the audience — have imagined</ it might be. If played for drama (as in horror movies) it'll turn out that the secret is, indeed, quite bad , and that the others would, in fact, have been better off not knowing. Either way, this may well end in someone frantically grabbing for the nearest container of Brain Bleach . A smart person can start to ask, and then conclude that no, they're better off not knowing. If curiosity gets the best of them, it will be followed with "I'm afraid to ask, but..." And sometimes, it's just Too Much Information . Other stock phrases include "I don't want to know, but at the same time, I really</ want to know...", "That means you do not</ want to know, trust me," and " Don't Ask ." If said by a mentor , it is likely to be an Awful Truth . If they experience enough such events, it can lead to a character who has Seen It All Not to be confused with These Are Things Man Was Not Meant to Know ... even if, in some cases there may be some overlap. However, it can be used to invoke Nothing Is Scarier . See also Don't Ask , Take Our Word for It , I Have My Ways . Compare Plausible Deniability , for when your sanity could probably handle it, but you still don't want to know because your legal standing maybe couldn't. Also Cassandra Truth , if you know that they won't believe it, because of cognitive dissonance.

Sometimes writers who make adaptations change aspects of plots and characters to the point where they remove most of the characters' qualities , or even to the point where you don't recognize them. To many fans, every aspect of a character's personality, ability, etc. should be preserved. Sometimes writers do this for the fans... with a catch Usually in newer versions of older media (say an NES game or horror film), a character's design is changed to the point

where that character can only be recognized by minor details, or simply the name attached. This is done to modernize characters for a new generation, much like any remake or adaptation. Such changes are likely to annoy the fans, but after it releases, audiences may come to accept the newer design as better overall. Changes to old designs usually end with people getting used to them until the next change is made and the cycle starts over again Compare Not as You Know Them (where the appearance is the same but the personality isn't), Race Lift (a specific form of this), Adaptation Dye-Job (same), Adaptational Attractiveness (when their looks improve), Progressively Prettier (same), the less common Adaptational Ugliness (when adaptations make them look less attractive), The Nth Doctor (when there's an in-universe reason for the change), The Other Darrin (an unexplained change of actor) and Early Installment Character Design Difference (characters whose designs looked different early on). See also They Changed It, Now It Sucks! . Can lead to Your Costume Needs Work . Also compare with Off-Model , Depending on the Artist and Unreliable Illustrator . When it happens to locations, see Chaos Architecture

You! </ The You! Exclamation is the classic expression of surprise and/or anger upon sighting another character, usually a nemesis. As several of these examples are clearly aware , this is kind of pointless for any reason besides that the extreme emotion the sight evokes needs some</ word to give it form, and as it is directed towards that character, the second-person pronoun is the only obvious choice. Sometimes, the person being addressed will respond with "Who else?" or "In the flesh" or some variation. A typical use of this exclamation is to demonstrate that the two characters know and don't like each other, but the audience doesn't yet know why. Sometimes the audience doesn't find out who the "You!" is until later. In Japanese media, it can get more complicated: many words in Japanese directly translate to "you," and depending on the word used , "you!" can connote anything from "hey, there" to " You Killed My Father , Prepare to Die ," to anything in between. Pragmatic dubbers tend to use the connotation instead of the literal translation. In murder mysteries, "You!?" or a variation thereof is often last words; see Death by Recognition . The killer's identity may be hidden from the audience with a Murderer P.O.V. . When both parties have this reaction to seeing each other, it's "You!" Squared . Also compare Say My Name . See also No, You . We really appreciate you.

This is it. Da Chief is having a "Eureka!" Moment and sending out operatives on the Evidence Scavenger Hunt , where everyone</ has to pull their weight to reach The Summation . At the end of the line the starry-eyed kid waits for their instruction. This is their big chance! And then: "You, go get me some coffee. Cream, two sugars, and make sure the lid is tight."</ And the dreams of the coffee-fetcher are quickly smashed. Understandably often done at the expense of the Butt-Monkey . Is not necessarily limited to caffeinated beverages, as it has been known to happen with lunch, office equipment, and various other demeaning and unimportant tasks. May overlap with Snipe Hunt if the task is See also Stay in the Kitchen , where an entire gender is asked to get coffee, and Comically Small Demand . Sometimes played in situations where the coffee-fetching errand is</ as important as everything else, either because it's needed to help the problem-solvers function or because the activity solves the problem in a way that's not immediately obvious . Or sometimes,

the coffee isn't important, but it's played that way because the coffee-fetcher is so naïve that he thinks any task from his boss must be important, or because it just looks that way from the perspective of the the lower decks .

A girl participates in an athletic competition to show that girls can be as good at it as the boys are. She then makes good by: Sometimes this happens in retaliation to being called " just a girl ". Nine times out of ten, the girl is treated as a hero (with the "being carried on the other athletes' shoulders" treatment) upon winning the game. Note that this may require pulling a Sweet Polly Oliver . This is frequently an instance of a Jackie Robinson Story . Compare the "Gender-Normative Parent" Plot in that they both subvert gender norms, but whereas that trope centers on the same-sex parent's disapproval, the parents' input in this case is not as vital, and they tend to range from supportive to neutral. If a parent does have a problem with it, it's usually the father. Sub-trope of Passionate Sports Girl and Prejudice Aesop . Also a sub-trope of Showing Up Chauvinists ; non-sports examples should go there. Compare Mars-and-Venus Gender Contrast and Girls vs. Boys Plot . Not to be confused with One of the Boys , where a girl hangs out with boys in general.

Though there are plenty of ways to differentiate characters from each other, one of normally limited utility is hair color. Human hair has a limited amount of variation, after all, not enough to make everyone on a half hour show once a week easily distinguished . Thus, this trope was born, so that artists could use the full spectrum of color. It's so common that it's mostly considered an Acceptable Break from Reality now This is especially common in anime , where characters often have impossible hair colors (and no, they're not a result of dyeing; for the majority of cases, the carpet, really and naturally, matches the drapes). This started with manga series that used distinctive colors on the covers to make characters stand out, even though they all had either dark or light hair in the actual black-and-white pictures; anime brought it to the screen and made it a standard part of character designs There are several reasons why artists do this. The first, noted above, is to help distinguish characters from each other especially if their designs are highly stylized and simplified , as with Anime Hair , and other features such as eye shapes (long, wide, constantly closed etc.), pupil shapes (circular, elliptical, slit , etc.), eye colors , tattoos, scars, prominent canines , accessories, mannerism, verbal tics , etc. It may be done to indicate character personality, such as an Emotionless Girl with blue or white hair . It may indicate that a character is unique, if they are the only one in the cast with their hair color. Or it may be done just to suit the artist's taste for variety. In some cases, artists may use Power Dyes Your Hair to explain how a character gets unusual hair when otherwise trying to be realistic in their hair color choices. Also not uncommon is that the Curtains Match the Window Some specific colors have Sub Tropes which ascribe certain character traits to them: such as a blue-haired girl being shy , a pink-haired girl being cheerful or passionate or sweet (take your pick) or a white-haired young-man being evil . Bright yellow or orange hair as a stand-in for blonde or red does not count even if the shade of yellow or orange is unnatural, as that falls under Hair Color Dissonance A subtrope of Hair Colors . Hair

Color Dissonance is when hair is depicted</ as an odd color, but is supposed to be a normal color (e.g., powder blue standing in for grey); specifically, when hair of a very dark shade of blue or purple is supposed to represent black hair, that's Purple Is the New Black . When the hair color is realistic but is not justified by the setting, that's Implausible Hair Color . For characters with impossible hair styles</, see Anime Hair See also Amazing Technicolor Population and Mukokuseki . Not to be confused with My Hair Came Out Green . Or, for that matter, The Bluebeard (though the character of the same name was</ an example)

Commonly in a Sic 'em scene, the Big Bad — usually an Evil Overlord or Diabolical Mastermind — kills one of their henchmen who has failed to capture and/or kill The Hero , as motivation to all of their other (surviving) underlings not to repeat their failure. Presumably, the other underlings immediately all fall into line instead of (say) quietly updating their resumes and trying to find a less psychopathic overlord to work for . Some bad guys will use the Blofeld Ploy to pull off the underling murder. Others will drop the offending underling through a Trap Door into a Shark Pool or other deathtrap , or feed them to their Right-Hand Attack Dog . A variation has the Big Bad not killing the failed underling on the spot but sending him off on a Suicide Mission , usually with a cold-hearted reminder that doing one's duty comes before self-preservation. The Big Bad may eventually realize there's something special about the hero and stop summarily executing minions for their failures as they gain a healthy admiration for their skills, but don't bet on it. Evil organizations more often than not will stick to an explicit policy of "Succeed, or die." Few stories address the question of what happens when this policy is taken to its logical conclusion. Realistically , such a policy causes its practitioners to kill off many of their own skilled leaders, while leaving the survivors demoralized, afraid to take initiative, more concerned with sucking up and dodging blame than with actually doing their jobs well, and inclined to either desert , defect , or kill their boss before he kills them. See the unfortunate results described in the Hitler and Stalin examples under "Real Life". Sometimes, this makes it easier for the heroes to spare Mooks when they beg for mercy; if the heroes know that the minions will be killed if they try to return to the villains' service, they know they won't end up regretting letting them live, and might even do so because they believe the minions are working under duress. In a reconstruction, pragmatic , if ruthless, villains may avoid this trope for most cases of failure, reserving this fate explicitly for those who have shown repeated or total incompetence. If the villian decides to get involved in the task at hand personally , he may express his displeasure with his mook by destroying him before moving on to it. Another variant on this is instead of the Big Bad doing this, a high-ranking, oftentimes very loyal, and particularly ruthless official working for the Big Bad , possibly The Dragon , does it instead — perhaps without the boss' approval . Some Big Bads do this by phone. Mook 1 phones Big Bad with bad news while Mook 2 stands nearby. Big Bad asks Mook 1 to pass his phone to Mook 2. Mook 2 says "Ok Boss, I understand. I'll see to that rightaway. Bye Boss... here's your phone back" and then shoots Mook 1 while he is distracted with his phone. See also: Bad Boss , Shoot the Messenger , You Have Outlived Your Usefulness , Villainous Demotivator , and We Have Reserves . Contrast Even Evil Has Loved Ones , I Will Punish

Your Friend for Your Failure , and Can't Kill You, Still Need You . Can lead to Mook Depletion if the villain overdoes this. See Make an Example of Them when the failure is punished especially harshly "to encourage the others". See also The Purge when this is done en masse</ to anyone even suspected of incompetence or disloyalty. May be an example of Karmic Death if the character has actually earned this fate. Shoot the Dangerous Minion can be considered the opposite, where the villain destroys his minion because he's too</ good at his job and might become another threat. Compare and contrast Self-Punishment Over Failure , where the minions themselves are behind their punishment.

This is a Stock Phrase said, often by the Only Sane Man or Deadpan Snarker , when they've just heard about the stupid or outlandish Zany Scheme . In some cases, it is not even a scheme that they are snarking at, but the sheer idiocy of their world . Compare My God, You Are Serious , which may follow it if said Only Sane Man actually believed that the person in question was kidding. See also Is This a Joke? It may also be a reaction to something bad happening, making it somewhere between Oh, Crap! and This Is Gonna Suck . Conversely, it may be a reaction to the characters being challenged by a ridiculously weak opponent... possibly leading to a reveal that the opponent isn't so weak after all Truth in Television , naturally

To show or remind the viewer how nasty the Big Bad or his Evil Minions are, a common trope is their habit of callously disposing of anyone who is no longer useful to their plans, whether it be an associate of an evil organization who has just concluded their useful function within that organization, or an outsider who the villain has coerced or tricked into carrying out part of their plan who is killed once they have done what the villain has ordered. It is often punctuated with words to the effect of "Your services are no longer required", "you have served your purpose", or of course the title phrase before the murder. In the case of a bribed outsider who was only loyal for the promise of money, this does make a little sense. Not only does the Big Bad avoid having to pay</ them for services rendered, but they remove a direct link back to them as the master of the plot. And there's always the fact that someone who's more loyal to the money than to the cause is a risk to betray the Big Bad to whoever offers them more</. Alternatively, it could be to punish a minion for asking for a raise</, especially when done right before the critical mission, with the implication that the minion is aware of their own importance and intends to use that as leverage. This is an especially common tactic for dealing with those who betrayed their own side on the villain's orders, who villains will often have Rewarded as a Traitor Deserves — villains are a rather backstabbing lot, and are rather not keen on getting backstabbed themselves. A particularly callous villain may also do this to an underling who has been defeated, combining this trope with You Have Failed Me . May also happen to a villain who thought</ he was the Big Bad , but forgot that Evil Is Not a Toy or expected the Sealed Evil in a Can to be loyal to him after its release. More realistically, the victim in question may be privy to information that the villain doesn't want to get out — as the pirates say: "Dead men tell no tales." Then you have any kind of predatory monster who just thinks there's no point in wasting good meat. Alternatively, you have the

villain who notes their underlings do</ still have some usefulness... but said usefulness doesn't necessarily mean they need to be alive to serve it. Finally, sociopathic villains are notorious for viewing people as little more than tools to be used and then discarded once they've served their purpose, with this trope being perhaps the ultimate form of this callous attitude . If the Big Bad is also particularly annoyed by how his Evil Minions have functioned in their role, he may use The Blofeld Ploy . A variant of this trope is common when a villain who has enlisted the help of the oblivious heroes reveals his true villainy, the comment usually following his gloating of how they played right into his hands . This version of the trope has a noticeably lower success rate, and trying it on The Hero is tantamount to suicide. If two or more villains are reluctantly working together for the same or similar goal, then typically one or the other will give subtle or not so subtle hints that they intend to dispose of their ‘partners’ once they’ve accomplished their goals. Compare You Have Failed Me (when the executed underlings are killed because they didn't</ succeed), Rewarded as a Traitor Deserves , We Have Reserves , and Uriah Gambit . Shoot the Builder , Shoot the Dangerous Minion , Devour the Dragon , and Eat the Summoner are subtropes. Contrast Can't Kill You, Still Need You and Mook Depletion . See also Villainous Demotivator and Even Mooks Have Loved Ones . WARNING: As this is somewhat of a Death Trope (in many cases, at least), there are spoilers, so read at your own risk!

For a minority forming less than one quarter of one percent of the world's population, Jews are astonishingly well-represented both as creators of media and as characters appearing in that media. This is largely because much of the most popular media is created in the USA, and specifically in the two parts of the USA with the highest per capita Jewish populations, Los Angeles and New York City . Therefore, this trope is an example of both Hollywood Provincialism and Big Applesauce Of course, like so many others, this rather sensitive trope began as an inversion of another trope. There was a time when working in media was one of the few options for ambitious, intelligent, well-educated people who happened to be Jewish. Anything considered to be academic or high art would be under considerable pressure to appear "respectable," and cater to the segregationist views of the time. Anyone who was not (or could not pass for) white, heterosexual, Christian (most likely Protestant), and often times male might be considered a risk to the company's reputation. Since radical new media, such as film , radio , Comic Books and, later, television were often callously dismissed as vulgar , they tended to hire the people no one else would take — i.e. Jews. Despite the doomsday warnings of segregationist Moral Guardians , new media took off and people who once had to scramble for an employer became part of history. In short, many might say that the Jewish people who ran Hollywood did so because </. Most major Hollywood studios, including the Big Five (20th Century Fox , RKO Pictures , Paramount Pictures, Warner Bros. , and Metro-Goldwyn-Mayer) and the Little Three (Universal Pictures, Columbia Pictures , and United Artists) had at least one Jewish founding member, with the prominent exception of Walt Disney Studios (as such, some say that Walt Disney hated Jews, when in fact his beef was specifically with left-wing Jewish labor leaders he suspected of infiltrating his studio), and every American studio currently has Jews in at least some high ranking executive and creative positions. Creative types usually write what

they know, and despite the ever-lingering specter of antisemitism in the early twentieth century, many writers, directors, producers, etc. most certainly would have passed on their own perspective into their work, intentionally or not This trope does not lend itself to a simple list of examples, as such a list could easily smack of antisemitism ("what's with all these Jews?"). That is not what this trope is about at all. It is, nevertheless, noticeable to viewers and readers who live in areas where Jewish populations are much smaller (e.g. the UK, where Jews were, according to the 2001 census, outnumbered three to two by Jedi </). As it's a Trope in Aggregate , please add examples only where this trope is lampshaded , or possibly averted if it's really incongruous It should also be noted that often, while Jewish heritage is common in media, Judaism and Jewish culture are often rare: The audience will be told that a character is Jewish, but uniquely Jewish cultural events will not be discussed, unless there is a Very Special Episode revolving around Hanukkah or Passover, the character is an anti-Semite or loves Jewish culture, or the main character(s) is/are Jewish Contrast White Male Lead , although in many genres they do intersect. This usually results in All Jews Are Ashkenazi

Your true love promised I Will Wait for You , but you've just heard she's getting married! Is she really that fickle? No, not really. It's just that she's not allowed not to marry. She may have held out as long as she could and just been forced — or at least coerced — into marriage. They may have told her " You Have Waited Long Enough "—if, indeed, they were even aware that she had promised to wait. Good thing that you can show up in time for the wedding , isn't it? This can be the wedding itself, or even the wedding feast, for maximum drama, as long as it is in time to stop the marriage being consummated. Other works may have the true love arrive with as much as several days to spare. Common in situations where Arranged Marriage is the practice. Though wills with deadlines to marry may also come into play, and family situations where pressure to marry is expected. (If the characters are sympathetic, they may believe the love to be dead, or be unaware of the relationship.) Royalty may face considerable pressure from courtiers and others who expect an heir to the throne ; a prince or princess may face double pressure from their parents . The heroine may sacrifice herself because her heart is broken, believing the true love to be dead; in that case, the match can be made very quickly after the reported death. In many Fairy Tales , the hero may be magically induced to forget . The false hero may also force the princess to claim that he rescued her until the true hero shows up to protect her. Compare The Mourning After . Contrast Absence Makes the Heart Go Yonder , Second Love .

People sometimes misuse words. If another person in the work corrects this misuse, then it tells the audience that something is wrong with the way the first character uses words in general The character doing the correcting might range from doing so out of habit, to seeking clarification on the other person's meaning, or maybe they just don't like their native language being abused The character making the mistake can do so for many reasons. A non-exhaustive list includes hyperbole, an inflated estimation of their own vocabulary , trouble with idiomatic vocabulary , or is speaking a foreign language Compare Personal Dictionary , where either character has a different opinion on what a word might mean, and Insistent Terminology , when a character insists on using a particular term and corrects others. Contrast Buffy

Speak (the character doesn't know the "right" words, so they just jam similar-enough words together in hopes the other character understands), Have a Gay Old Time (where the meaning of words shift over time), Neologism (the meaning is unclear because the word is new), and Perfectly Cromulent Word (a word is unfamiliar, but used correctly). For a list of words that tend to cause this reaction, see Commonly Misused Words . In regards to this wiki, see Square Peg, Round Trope

When one of the villains kills the parent (usually father) or even the entire family of one of the heroes, it'll be that hero who kills that villain in question, even if this isn't an explicit act of vengeance. Occasionally, it's the mother, but this is rarer, and usually crops up in cases where the father is unaccounted for . Sometimes the villain killed both parents, but the mother will barely get a mention. If even more Angst is needed, then expect a case of Luke, I Am Your Father . Mothers more frequently appear in Turn Out Like His Father , because they are afraid if the child tries to get Revenge , he will only die, too; the success rate in preventing this trope is very low Often, the villain will taunt the hero about the death of their parent. This assures the hero's victory. Other times, the villain just won't remember . Usually does the same, but funnier/more monstrous, depending on the circumstances. This is a very common way of tormenting the Extremely Protective Child This is a subtrope of It's Personal and a supertrope of Vengeful Widow , and forms a central part of many Cycles Of Revenge . Compare Cynicism Catalyst , The Lost Lenore , and Dead Partner . See also Best Served Cold and Roaring Rampage of Revenge . This can overlap with Familial Foe

When I was a kid I was really interested in reptiles and amphibians for some reason. At one point my mom got me this educational video about reptiles, amphibians and birds. I only watched the first two parts but I remember they had songs that also had info about the animals in question, along wiht playing a video showing various reptiles/amphibians. For some reason, I remember the amphibian song the best, , at had a fairly fast tempo and a male singer, and I distinctly remember the line "It's always such a treat, to watch those little feet" as it showed some frogs crawling around. I am wondering if anyone knows what this is in case someone uploaded it to You Tube. There was this scene with Alice and Bob in bed together. At some point, Carol (probably Bob's ex, but I'm not sure of that) walks in on them, leading Bob to say "Carol?" in confusion Unfortunately, Alice somehow notices neither the lighting change from opening the door nor Bob's obvious shift in tone, nor the noise of the door opening and closing; she mistakes it from a Wrong Name Outburst , and kicks Bob out of the bed / breaks up with him. I was particularly stung by how contrived it was (both from Bob only</ saying Carol's name and not, say, "Close the door!", and from Alice's obliviousness) but don't remember the comic itself. I just remembered a few years ago when I was at one of my local libraries with my grandson, he got this book about how to draw superheroes aimed at kids. All of them were original concepts, and the two I remember the most from it at the moment are the following: Ring any bells? There's an early nineties, perhaps late eighties, action RPG I read about here once about a girl that's taken to a magic world where she becomes a warrior sorceress in a bikini. It might have been a

Mega Drive exclusive but I can't remember. Supposedly the game was influential enough that the heroine had expies of her in fantasy anime. I thought it might be Valis </ but it's not. I'm pretty sure there was a localization of the game. Hi, I'm looking for a specific episode of the show Dave the Barbarian. I remember watching it as a kid and the episode ending with the talking sword character saying something along the lines of "remember kids, don't chew on tin foil!" Does anyone know what particular episode this was? Thanks! This is a vague memory, and alot of the things I recall about this can be completely wrong, but I'm desperate, so here we go. Back in 2014-2016 when live action shows on Nickelodeon were starting to gear up, there was this one specific show about a young white girl going to high (?) school. It had a basic premise, really, but it caught my attention, considering I'm more of a animation fanatic. The girl (who's name I cannot remember), had two friends, one black with glasses who was smart, and another who was your basic 'attractive' love interest in teen media, he had blonde hair. Basically, the girl moved to a newer grade, and her friends didn't want to associate with her again? I don't know to be honest, but it had narration, and I'm sure you can imagine it. I remember a line, one specific one that stuck with me, however: "A+++/A plus, plus plus!" which I believe was said by the black friend while pointing to said plus' on the paper. If anyone knows what I'm talking about, please don't be afraid to help me out, here! And I'm sorry for describing people based solely on skin color, my memory's really foggy. Hi! I was wondering if any of you owned a few videos about some obscure cartoons. I don't remember what those videos were called, so I thought you could help me in that area. One of those videos had an anime version of "The Ant and the Grasshopper" in it. The title card introducing the cartoon had a witch lying on her stomach with her hat on her raised foot. On the cover were the ants panting from their loads while the grasshoppers and other insects were drinking on a balcony. Another video had "The Emperor's New Clothes" in it. On the cover was the emperor staring at himself in the mirror. He had bumpy gray hair, a round nose, and only had his underwear on. There was even a video about a boy I believe to be Tom Sawyer and a girl searching for gold and being in a cave. Both characters were definitely animated in the modernist style and it's definitely not the Hanna-Barbera series The New Adventures of Huckleberry Finn</ . I would greatly appreciate any help you could give. I don't remember the title, but this animated movie aired on Australian television in the 1980s. It revolved around a dog on an American Western farm and was largely narrated by the dog's thoughts, although the animals actively talked to each other. The only scenes I really recall clearly are one where the protagonist dog tries to go after a "monster" at a younger dog's behest that just turns out to be one of the farm's steers (getting him into trouble with the farmer), and another where our protagonist is lured out into the wilderness by a female coyote, who introduces him to her pack who offer to take him in. Does this ring a bell to anyone? Basically, it was about a boy with superpowers, almost like Superman, but he did not use his powers for goof. I remember one episode where the heroes play baseball against the villains for... some reason. One scene sticks out in my mind. The mascot is up to bat. The villain pitcher asks how the heck they're supposed to throw the ball across the strike zone (the mascot is about the size, maybe a bit smaller, than the batting helmet). The announcer and commentator cheerfully announce that they can't; they'll have to roll</ the pitch across. I keep wanting to call the series 'Monster Hunter', but that turns up nothing by that name not related to the franchise. Edit: The show

in question was an anime called Mon Colle Knights </ . I'm trying to find a specific Animated Adaptation of Beauty and the Beast </ . I remember that it used the pre-Disney outline of the story - merchant father, three daughters, Beauty being visited by a human prince in her dreams, sickly father, jealous sisters, etc. What I most remember are two specific scenes. The first is when the father dares to pluck a rose from the Beast's garden, whereupon the Beast springs out and screams about how he gave the merchant food and shelter, only for the merchant to steal from him. The second is a dinner sequence between Beauty and the Beast, where Beauty asks the Beast what he does all day, and he shamefully confesses "I hunt. I prowl the woods for prey. I am an animal after all, I must kill for my meat (close up of his taloned paw). Unlike you, I can never eat gracefully." Then he leaves, clearly ashamed, whilst Beauty quietly notes "how sad". So, can anyone tell me which version of the story I may be thinking of? I remember it had limited animation, but very beautiful, storybook-esque art. The only thing I remember is , It starts out with a lady named Michael trying to find information on a little girl who was in a fire and is missing . She even finds the girls actual parents and tried to get more information on her , than finds an foster care record for the girl , finds out the foster care worker for the girl was her own mother, ended up finding out she is the girl who was missing. I think it might be British, but not sure Anyway, the video is about two friends jumping a chain link fence to explore an abandoned amusement park as an officer warns them not to. Once inside, they witness several supernatural occurrences. One friend is eventually dragged off by a stop-motion creature inside a building. The other flees, running into the same cop. He pleads for help, only to be attacked and killed by the cop who is revealed to also be some sort of creature. The video ends with the cop saying that they should've listened. To whomever reads this, I'm so sorry. Written within the last few years, this fanfiction was on either archiveofourown.org or fanfiction.net; strongly leaning towards AO 3 due to the format. Unaware!Veela!Harry goes to Ollivanders, gets his wand, but Ollivander comments that (Harry) "you have the full of what your mother had only a little". Sadly, this is not an exact quote that can easily search up. A few chapters in, Blaise Zabini, after getting increasingly concerned about Harry, reveals to him he's a veela. (Not a M/M or Mpreg or Harry/Blaise story, as far as I can remember) A chapter or so afterwards, Harry is in France undergoing a fully-described veela ritual with other first-timers; their first transformation: drumbeats, chanting, vivid description of the TF into a winged harpy-like veela. This happens after Blaise locates his (Harry's) surviving family (veela grandmother mourning her lost daughter's / Harry's mother's death/abandonment?) and before he meets with Veela royalty; a princess/queen. A chapter or so after that, Harry returns to Ollivanders to acquire a new wand. Ollivander's grand(daughter/niece) is also present, as Garrick Ollivander explains he knew of Harry's and his mother Lily's heritage and takes Harry to a backroom. Within the backroom, Harry partially T Fs and gifts Ollivander a wing feather from his arm, causing him pain and Ollivander some grief (as any feather would've sufficed). Again, so sorry for whomsoever actually crawls through AO 3 or fanfiction to find this; computer's search history only goes back a few months (So not any fanfiction first posted this summer). I got this game out of a Blockbuster bargain bin. I think it was a multi-part game and I know it was either for the PS 1 or PS 2 . Combat was random battles, and I believe some of the enemies were haunted furniture? As far as I got, there were two playable characters. A female adult (that I'm

pretty sure came in first), and a male adult that came in after. One cutscene had me enter a room where I met someone elderly (a couple, actually) who seemed really sweet for being in this deadly haunted mansion. They offer some food; the woman refuses, the man accepts. Afterwards, the man turns out to be poisoned, and the woman scoffs about how obviously it was poisoned. Edit: I don't know why those links are there. This one is really blurry. I only remember a few prom arts. They were featuring a tank set in a fantasy universe and one of the crew members was a nun. The visual style kind of resembled both Fullmetal Alchemist and Chrono Crusade The thing is quite old. I remember seeing it somewhere around early '2000s. So this old show had the "good guys" fighting against an evil organization Where the new show had a new cast having to survive an imperial rule made from the "good organization" The plot twist is that the bad organization took over the good organization and started messing things up. I have Googled this to the extreme, but I cannot find it. I saw it a few years ago, but cannot remember if it was a movie, several episodes or just one episode. Someone is trying to free pale creatures from enslavement. They are used as servants in upper class families. They are held by some magic contract, shown as a necklace. It is discovered that someone uses their bodyparts to make some kind of drug. In the end the Queen of the creatures trades her freedom for theirs. I really hope someone can help, as this is occupying a bit too much of my thoughts.

Laughing to the point of paralysis. A character gets mocked either for being too short or being too tall. A fighting style or technique inspired by animal behavior. Special visual effects that turns out to be a part of the scenery in-universe A cisgender character is transgender in an adaptation. In married couples, Women Are Wiser ; Men Are Childish . The circumstance in a story or setting where the overall cycle of life, death, and rebirth of new life ad infinitum is played as harmful and possibly malevolent towards those who endure it Two opposing characters literally not backing down until they are face-to-face and really</ close to each other. A robot dies and is humanized and/or mourned by its organic counterparts. A character tries to perform, but gets booed by the crowd. An episode is set on a cruise ship Intended to help with the cleanup of the Foil trope. Characters from the same franchise who do not necessarily interact with each other come from very similar backgrounds or circumstances, but their behaviors and reactions to these events are very different. Shelled animals weaponized with Spikes Of Doom . ( ) [Launching September 16th] Moths are the new Bats for Vampires A work represents a broad spectrum of political ideologies. Someone (or something) is hiding or trapped in a wall Foxes portrayed as cruel or evil. Grabbed by Myles Henry Vigil Sr When a villain wears a mask or helmet and a hero doesn't. When a group is split into the worst possible combinations Law Enforcement Organizations are contrasted from a moral standpoint within a story.

A guest actor who returns to play more than one character in the same continuity The use of the same actor for different characters is typically intended to go unnoticed or at least unremarked. Ed Wasser played Shadow minion Morden in Babylon 5 </ but also appeared in the series pilot as a character credited as Guerra.

Since that series was so intricately plotted, fans wondered if the Shadows were influencing events as far back as the pilot. No, said series creator J. Michael Straczynski , they just liked the actor's work in the pilot and cast him in a recurring role This is such a common occurrence amongst the various incarnations of Law & Order </, that fans of that show have come to call those who look familiar "Repeat Offenders" When it is done for a purpose, you have an Identical Stranger , an Identical Grandson , or an Uncanny Family Resemblance . When it isn't done for such a purpose, sharp-eyed fans will assume so anyway . This last effect may be leading to this becoming a Discredited Trope , as Season Fluidity becomes more pronounced and fans complain that seeing the same actor in two different roles breaks the story immersion For the specific version where an actor appears in a one-off role before returning as a regular character, see Recast as a Regular For extreme cases, see Loads and Loads of Roles Compare Celebrity Paradox , You Might Remember Me from... and Voice-Only Cameo . Contrast with The Other Darrin . Can be Handwaved via Direct Line to the Author You ALL Look Familiar is not related, unless character sprites and models can be considered "guest actors". Acting for Two is similar, but (usually) involves stars rather than B- or C-listers, is a good deal more blatant, and occurs within the same film or episode

A Sub-Trope of Literal Metaphor . When characters enter screaming and running from a ghost (or any supernatural creature that would frighten your average Muggle), it is customary for a Genre Blind character to say in complete jest, "What's wrong with you? You look like you've seen a ghost." Alternatively, the line may be said mockingly by the 'ghost'—whether they're literally a ghost, some other kind of undead, or merely wrongly believed to be dead —themselves Parodied and subverted like crazy these days, but the mystery abounds as to why this isn't a Dead Horse Trope yet. A Sub-Trope of I Was Just Joking

A gag where a character corrects another's spelling or grammar in a context where you wouldn't usually expect it. A common setup is when a note (either of love or insult) is sent to someone, only to have it come back with all the spelling mistakes highlighted, or for extra hubris, notes like "See me" as if from a teacher, as this is the inevitable result whenever a student attempts to write a love note to their teacher This is also a common tactic used by butlers and upscale servicefolk to distract a hysterical guest On the flipside of showing intelligence, this trope can also be used to show that someone is Comically Missing the Point . Also, fairly often, the "grammatical error" will be more of a point of style that's not actually considered incorrect grammar by anyone but</ pedants (such as that prepositions are bad things to end sentences with .) — writers who really want to Show Their Work may have the corrected party reply Less often, the "error" might actually be technically correct, but this will only be known to really hardcore grammarians Do this on a forum, and the comeback is likely to be " Grammar Nazi ". Or " grammer nazee ", as the case may be. Or perhaps, " Grammar Gestapo ", if you will. Responding that you were correcting their spelling and not their grammar is just asking for it The trope name is a pun ; the word "sic" Literally Latin for "thus", as in "found thus". Sometimes Backronymed as "spelling is correct" or "spelled in context". is used in quotation and

transcription to indicate that a (supposed) spelling or grammatical mistake was made by the original writer/speaker, not the person quoting/transcribing them Compare You Keep Using That Word , when the nitpicking is over word choice instead of grammar/spelling. Related to Do Wrong, Right . Not to be mistaken for You Make Me Sick

At last, we found the "k!"

When an actor with a popular role in the past has a resurgence doing something else. Often they will be cast purely for nostalgia reasons, or because the director or writer is a Promoted Fanboy . Ironically, though, they often become even more popular than they were before, causing their earlier work to be all but forgotten. Named for The Simpsons </' Troy McClure, who used to be a character actor, and then did educational films, infomercials, etc. He would introduce himself with "Hi, I'm Troy McClure! You might remember me from such films as Aliens Steal Cable ! </ and The Adjectival Superhero </." (The names of the two films were usually relevant to what he was in at the moment .) Compare Retroactive Recognition , where the actor's previous roles weren't nearly as popular as their current one. Richard Dean Anderson as MacGyver </, then a decade later starred Stargate SG-1 </. Extra confusion/amusement in the Spanish dub: Luis Porcar as Jack O'Neill and Gregory House .

A woman is cold. For some story-related reason, she and her male partner are stuck outside somewhere and not really dressed for the weather, and now she's huddled over and shivering. A man takes off his coat and gently drapes it across her shoulders. She goes around in the coat for the rest of the scene The basis for this trope is the idea that men are duty-bound to take care of women. The Knight in Shining Armor will always do this and a jerkass can reveal they might be a Jerk with a Heart of Gold Very much Truth in Television . Not only are men generally more tolerant of cold than women, but men's formal clothing is usually warmer and in more pieces, especially if all she's wearing is a slinky evening gown. Men are also generally broader in the shoulders, so even if he's short, it's still likely to fit her. Because of this, it's usually Always Male to Always Female but it can go other ways if the story calls for it Because of the romantic nature of the trope, it is often used for Ship Tease but this is not required . The coat receiver could be a child, child-like, sick, or otherwise vulnerable because the core is about taking care of the other person Not to be confused with Exposed to the Elements , which might cause</ this trope See also Puddle-Covering Chivalry , Comforting Comforter , Sexy Shirt Switch , Her Boyfriend's Jacket , and Please Put Some Clothes On Not affiliated at all with Nipple and Dimed

Stock Phrase used when someone comments on another one's bad Sbreath. Variants to the phrase can include brushing your teeth, or Swith mouthwash ee also Anticipatory Breath Spray . Compare Stink SSnub

When a work is revamped, relaunched, or reconceived with a young (or younger, at any rate) cast, despite the ages of the characters in the original source material. This happens because it is commonly believed that no one in the audience wants to watch "old people" (defined as anyone over the age of 40 or thereabouts). Often, this happens to supposedly allow Character Development , because the older character has "nowhere to go" and thus making him young again "opens up story possibilities" or, putting it bluntly, just makes him "relevant". Whether or not this is true is open to interpretation. Occasionally, this trope will be inverted when the characters are young children in the source material, Sometimes every teenager character seems to see them as young adults but they are younger, and at other times they are children.. The characters will be aged to their teens in order to fit the "younger and hipper" ("older and hipper?") mindset, in which case is a Time Skip . This is a type of Tone Shift . The moral opposite of Dawson Casting . Spin-Off Babies is a Sub-Trope . If done badly, can result in Totally Radical or We're Still Relevant, Dammit! Parallel to Darker and Edgier , Lighter and Softer , Denser and Wackier , Bloodier and Gorier , Hotter and Sexier (but not to Older and Wiser , which is a trope about a character, not a franchise installment) and Age Lift (when a character is aged younger or older in an adaptation).

Some characters are Older Than They Look (much older, even). Some, meanwhile, are younger. Maybe they're robots , clones , some other kind of artificial construct , or just unhealthy. Maybe there's a supernatural reason, such as a curse . Or maybe they are under such constant stress and work that they are aged prematurely by it . Or they're just overdeveloped. One way or another, this character may look like an adult(/teenager/older child), and even act and talk like one , but chronologically speaking, they aren't Other times there may be a young adult with the appearance of a middle aged or even older man/woman. Gray hair , a prematurely receding hairline , generally cause someone to look older. Certain types of facial hair also can make a younger man seem older Subtropes include Older Alter Ego , a magical ability for younger kids to temporarily turn into adults and back, and Plot-Relevant Age-Up , the same permanently Similar, but not to be confused with Artistic Age , where this is due to art rather than in-story causes. If, in live-action, their age is surprising to the viewer but not anyone in story, it's a bad side-effect of Dawson Casting Many people will contest that this is a Truth in Television Super-Trope to Born as an Adult , Really Was Born Yesterday . Compare Compulsory School Age , Mistaken Age , Age-Inappropriate Dress . Contrast Animation Anatomy Aging . Compare and contrast Really 17 Years Old (where someone is younger than they claim</ to be)

This is basically the Spinoff Babies trope applied to real people. The idea is to take Historical Domain Characters and depict them in their youth. It can be played for laughs—implying that people we normally think of as reserved, stoic, or even evil were once young and reckless themselves . (Or the opposite, where they are shown to possess the same traits and interests that later made them famous, even if realistically these would have come much later.) Of course, it may also be played straight If the person lived long enough ago that details of their adolescence or youth are obscure or even non-existent, then this trope may be used as an excuse to

ground an entirely fictional story in reality. Sometimes these characters are the leading characters, other times they may only serve as a fictional cameo or a Shout-Out to a Historical In-Joke For the benefit of the audience, Young Future Famous People who are known to history by their Stage Name are often called that in such appearances in fiction, even if they are being depicted at a point in their lives before they had adopted such names. For example, a child Archibald Leach, better known to history as Cary Grant , or, as noted in the examples below, young Gladys Smith being called by her adult professional name, Mary Pickford Obviously a standard trope in Historical Fiction A Sub-Trope of Historical Domain Character A Sister Trope to In the Past, Everyone Will Be Famous , Direct Line to the Author (can overlap when a minor character in a movie turns out to be the author of the book the movie is based on) If it's a young actor</ who later becomes famous, it's Retroactive Recognition See Jesus: The Early Years for a specific subtrope

The story has characters of two generations. The younger characters Thare in love in a benevolent way, while the old characters are full Thof hate and destructiveness. The younger generation is the hope for Ththe future - but does it stand a chance , or will it be destroyed Thin the cycles of hate fueled by their seniors? e younger characters Thare reasonably innocent and maybe naive. If they are not a part of Ththe older generation's destructive structure, then they at least Thrisk getting sucked into it. They may be Star-Crossed Lovers , but Ththey do not have to be. The older characters may have positive Thtraits along with their hatred, but if they are in love then it is Thlikely to be in one of the bad ways . is narrative doesn't have Thto drag all important characters into it. While it can</ be about ThFeuding Families or some all-engulfing war, it can also be about Tha single older character plotting revenge or a few of them having Ththeir own little personal feuds.

When a character or group needs to be portrayed as foreign, primitive, or inferior in intellect, or perhaps just childlike, yet still intelligible and able to communicate, the language of these characters is spoken as a grammatically abhorrent mess. Characters could be speaking a mutilated version of the language they learned from another culture, or a butchered version of their own language, or simply a language so "primitive" it appears from an outside perspective to lack complexity. This trope is Older Than Print , going all the way back to Chaucer If the work is taking on a superior versus inferior viewpoint, the superior beings might use Spock Speak or Ye Olde Butcherede Englishe to contrast the barbarism of the other group. The inferior race is often shown speaking pidgin English and omitting articles, auxiliary verbs, possessive pronouns, and sometimes prepositions. The speakers often refer to themselves in third person. It is quite similar to Hulk Speak , though even non-combatants can or will use it. In some cases, it is a form of Aliens Speaking English , in which the creatures have their own language and speak English as a very poorly learned secondary language This trope comes from two sources. First, English as a language has very little inflection, meaning words don't change their forms to cover case, tense, grammatical gender, etc very much if at all. Instead, English requires a lot of small auxiliary words to convey the same information which other languages do in much fewer but more complex

words. At the same time, you don't need</ these auxiliary words to make a comprehensible sentence (hence the adage, "English is an easy language to speak badly.") This leads to the second source: which are highly simplified languages used by groups without a common language to communicate. Pidgins are stripped down to the absolute bare minimum of grammar needed to get one's point across, to make them easier to learn; some common English idioms like "long time no see", "sorry, no go" or "no X, no Y" are presumed to have their origin in the Chinese-English pidgin that emerged when the United Kingdom started commercial relationships with China There's actually a scientific term for this kind of speech pattern: The Trope Namer is World of Warcraft </ , where kobolds, who wear candles on their heads to light their way in the mines, say this when attacked by a player character Supertrope to the more racial Asian Speekee Engrish and Tonto Talk , and like them sometimes Truth in Television , although also like them it can sometimes also be considered offensive or politically incorrect if used poorly. Compare Hulk Speak and Strange-Syntax Speaker . If the character can</ speak proper language, but nevertheless chooses to speak like this for some reason, it's Elective Broken Language . If the speaker is otherwise very capable in their own language, then it is Eloquent in My Native Tongue . A softer version of this trope is Poirot Speak where characters who speak a language quite fluently will occasionally insert syntax errors or bad grammar to remind the viewer that they are indeed foreigners. Unrelated to You Can't Get Ye Flask , except in sense that we suck compared to computer overlords

When a Brain Eater encounters a character who manifests a few Stupidity Tropes , they will realize the contents of their prey's cranium (or lack thereof) will provide little to no sustenance to them. This trope can be demonstrated in a few ways: A subtrope of Disability Immunity . Compare/contrast with Too Spicy for Yog-Sothoth . Related to Too Dumb to Fool . If the potential victim seems insulted</ by the rejection it can overlap with Aren't You Going to Ravish Me? . Often used as a Stealth Insult .

This trope is when a celebrity, Super Hero with a Secret Identity , a magical, non-human creature, etc. is mistaken for an impersonation of themselves , and furthermore, criticized or laughed at for their lame "costume" Picture this: Elvis really is Not Quite Dead after all. He decides to surprise the world by showing up at one of those Elvis-impersonator conventions in full iconic Elvis regalia . What does he hear when he shows up? His outfit is the poorest recreation anyone has ever seen, his accent sounds totally fake, his hair style is all wrong, and he's much too tall. Nice try, newbie, but you would never pass as the real Elvis May be evoked in Clark Kenting . Yes, this does</ happen in Real Life because Reality Is Unrealistic . Also, performers who are going to work have cosmetics and costume people to get them ready to look good under the bright lights, compared to whatever day-to-day clothes they wear to go shopping A contributing factor is that impersonations are usually not judged on how much they look and act like the real celebrity in general</, but how faithfully they can recreate a small number of recorded performances . Those same recordings are available for the impersonator to rehearse with again and again, whereas for the real Elvis, that performance was only one out of hundreds in his career . Many of the small

details in the canonical recording that the impersonators lovingly reproduce would be unimportant accidents to the real performer, or at best just one point on an entire scale of ways they can perform Not to be confused with Cheap Costume or Beta Outfit . Also see Recognition Failure , Mistaken for Clown and Genuine Imposter

Invariably, the character doing the drinking will be squicked out , and disgustedly spit out the milk . The audience's reaction will vary quite a bit more, considering how funny such scenes can be if done well , and the fact that in Real Life there are many people who have a Fetish for lactation, breast milk or both; not to mention that there's nothing inherently bad in breast milk in itself and (virtually) everyone drank it at some point in their lives anyway. In Real Life , human milk is much, much sweeter than bovine or goat milk, and not as thick; the guy who was drinking it should have realized it wasn't what he thought it was without someone else telling him. After all, it's meant</ to be used for human consumption, far more than any other type of milk. It makes more sense if the milk is being used to complement coffee or breakfast cereal. Usually a Comedy Trope . For obvious reasons, you'll see less of it the more kid-friendly a work is... it tends to pop up more in PG-13 or R-rated films and comedy series that are geared more specifically toward adult audiences. (Which is kind of odd, given that breast milk is mainly for children.) Subtrope of I Ate WHAT?!

A stock phrase typically spoken at the climax of a story. The hero confronts the Big Bad , especially one they used to trust before their true colours were revealed about their actions. During the confrontation, the villain eagerly justifies the Evil Plan they've carried out with repugnantly twisted logic that is devoid of any trace of humanity or ethics and is often about to commit his supreme atrocity with a wild grin . The hero reacts with outrage at this depraved justification with "You're insane!" and instantly attacks to stop him. Sometimes "mad", "crazy", "out of your mind", or "sick in the head" may be substituted for "insane", but the nature of the trope is the same. Another heroic staple is this being one hero's response to another's proposal of a Zany Scheme — in which case the counterpoint is obviously, " Crazy Enough to Work !" A villainous lunatic may well agree with you , perhaps with a snarky response like "You've only just now noticed?". A Mad Scientist will often retort that " They Called Me Mad! " Sometimes you can even say this to the villain when he's suffering a Villainous Breakdown . Some characters might throw back "I prefer the term..." followed by an adjective that they think best describes them. As a matter of fact, some Smug Snakes or even Magnificent Bastards can go so crazy during their breakdowns that other characters love hitting them with this. Sometimes the character will have indicated that he's considered the accusation against himself already, and deciding it really doesn't matter, often with an "Am I?" statement. If a villain's henchman is giving the "You're Insane!" speech, it's often because what the villain is planning was not what he or she signed on for . Contrast After-Action Villain Analysis for when the hero psychoanalyzes a villain after the fact. See You Monster! for when a hero is outraged less at the sanity of the villain and more at the vileness of them, or This Is Unforgivable! when a hero is outraged at the terribleness of the villain's atrocities and how evil they've proven to be to the

point of being Beyond Redemption . James Bond is fond of this, using cutting but accurate remarks to shut villains down and chew them out on their insanity whenever they rant about his flaws or their Evil Plan . Being Bond, he is witty enough to have a number of variations: Kingsman: The Secret Service </ : MonsterVerse </ :

One character shows his knowledge of, and attentiveness to, another by providing his favorite food or drink without his needing to request it. The dish, obviously, will be somewhat unusual, but does not need to be very much so — only enough that knowing it and having it on hand have to be in order to provide it for this person. The person may not mention it, but if so, the Stock Phrase is "Your Favorite." May overlap with Trademark Favorite Food , but can be something the person eats only occasionally, or usually is not significant. It is, in fact, often not something made a big deal of, because it does not show obvious attentiveness to pick up on it. It can also be used in an attempt to bring a character out of a funk: "Come on, cheer up. Look, I made your favorite!" This use overlaps with Comfort Food . Can go wildly awry if the character gets it wrong. When the Affably Evil villain says No, Mr. Bond, I Expect You to Dine , this may be part of it; it will add to the creepiness and can even be used as a subtle threat. ("I know what you eat, I know what you drink, I know about your beloved daughter who attends college upstate. " You get the idea.) Subtrope of Through His Stomach . Note that just good cooking goes under that trope.

Stuff Blowing Up is cool enough, but it somehow becomes even cooler when that stuff is human heads. Asploding heads may not be particularly realistic in some cases, but they sure look impressive . If people's heads start blowing up, it's usually a bad sign The name originated from the Intentional Engrish for Funny used in the Strong Bad Email</ episode and subsequent game StrongBadZone</ on Homestar Runner </, wherein the head of the person playing the game is presumed not</ to have actually asploded, although there have been no studies done on the matter so far as we are aware Head asplosions are typically the result of an Explosive Leash , being shot in the head with high-caliber ammunition (resulting in Pink Mist), interacting with a Brown Note , or absorbing too much knowledge . Often, just before it happens, the unfortunate character clutches their skull There's also the metaphorical (and occasionally literal for Mechanical Lifeforms) asploding that is said to occur when one's brain has gone mad from the revelation , or assaulted by a Mind Rape or Logic Bomb , or requires sufficient Brain Bleach For less explosive loss of heads, see Off with His Head! For head impacts that aren't as violent, see Cranial Eruption

Magic A Is Magic A ... but not in Dimension B Sometimes characters in a fantasy or superhero setting travel to a different reality or a different dimension. Once there, the character finds that his/her magic or super powers don't work the same way as in his/her home world When the foreign magic does</ work but someone feels it shouldn't</, contrast Wrong Context Magic and New Life in Another World Bonus Compare The Worf Barrage , i.e "Your Magic's No Good On Me"

Primarily a Comedy Trope , Your Mime Makes It Real is when a character mimes an action and this mime causes a real world effect to occur. For example, miming aiming a gun at someone and pulling the trigger causes an object to go flying out of their hands . Or miming peeling a banana and dropping the Banana Peel on the ground will cause someone to slip over A standard method for dealing with this is to mime a situation the attacking mime must deal with, such as miming locking a door or sealing them in a glass box A standard tactic of the Enemy Mime . And a variant on (as well as a terrible pun on) Your Mind Makes It Real . Compare Full-Contact Magic

You'd think that it all being just a dream would let you do lots of cool and risky things since it's not real anyway, and therefore you can't get hurt Not so There's an old wives' tale which claims that if you die in a dream, you die for real. Although a potential mechanism is suggested in "Real Life" below, it remains not exactly clear how anyone could have determined this, since the only witness would be unable to confirm it (unless you believe in spiritualism and he contacted you from the next life). Yet it persists, and a lot of people believe it So, if you're in a dream, hallucination, or VR simulation, death can be plenty</ lethal. By extension, if you're a hacker in a high-tech futuristic world where Cyberspace is navigated through a realistic simulation, intrusion countermeasures can kill you dead. To be fair, certain depictions of Cyberspace require users to link their brains to the network electronically, which would provide a relatively obvious threat to incautious intruders. However, even hackers who operate in worlds without such dangers may be vulnerable to seizure-inducing graphics Often, fictional cyberspace ICE (intruder countermeasure electronics) is said to work by channeling lethal voltages into the brain of the invading hacker, but it seems that any techhead with even an ounce of common sense would put at least one fuse, circuit breaker, or voltage regulator on any line connected directly to his brain. Presumably, most users do not know about such things, given their willingness to use an interface that could turn them into a vegetable or corpse at a moment's notice. Authors who put a little more thought into the matter may come up with some variant of the motif of harmful sensation , implying there's some kind of malicious out-of-band signal which triggers a nasty (usually fatal) seizure in its victims or blows up their computer would such a device even exist is rarely touched. Needless to say, the very first precedent of a machine-brain connection killing or maiming the user should result in public backlash and double or triple failsafes (plus lawsuits). Some stories work around this by stating that it's that very first time, or that it's a legally enforced rule, like, against hackers. In the latter case, seemingly the lawmakers were not aware that the most dangerous hackers could and would design or reverse-engineer safe</ variants of the device, making the whole idea pointless. The aspect of automatic capital punishment for something as trivial as stealing money from a credit card is also not touched Let us be very clear: there is no obvious or immediately compelling reason that dying in a dream or hallucination would actually kill you, unless you are really more powerful than it is in real life. Maybe if the pain transferred is so real and intense that it causes you to die from the shock, but then again, it has to be designed</ that way deliberately.

Obviously, magic spells can do as they like, but the only reason that you would be actually harmed by dying in a VR simulation would be if the VR simulator was intentionally and specifically designed to murder the operator. This makes sense if it's part of a Death Trap (insofar as a death trap ever makes sense), but usually this is some commercial, publicly-available system, often with no stated purpose beyond simply playing games </ As an extension, perhaps to justify this trope, such systems often propose that the user's mind actually is</ inside the machine, having been literally downloaded out of his physical brain. Thus, destroying the machine would leave the user's body comatose – but destroying the physical body might leave the mind intact to have a go at possessing someone else An increasingly common justification of this trope is Synchronization ; directly wiring your brain to the machine gives you Technopathic Power at a Price of a potentially-fried brain. Most Cyberpunk games — such as Shadowrun </ — use this justification, and lampshade it with alternative safer but far-less effective interfaces which someone risking a Brain–Computer Interface can destroy with ease This tends to apply to video game levels that are All Just a Dream or a virtual reality simulation as a function of gameplay: If your character dies, it's still a Game Over When you are Talking in Your Dreams with someone else and they go to kill you — this may come into play. This may also come into play if, in a dream, a character dies, and that character dies in real life, however, this would be an overlap with Clap Your Hands If You Believe and I'm Not Afraid of You . The Master of Illusion might use this principle to make their illusions harm victims, like making Cold Flames actually burn Note that if you're talking about the mind making things literally real in general</, that's Clap Your Hands If You Believe , not this. This trope is only about the dying Frequently pops up in a Holodeck Malfunction . The defining feature of The Most Dangerous Video Game . When your mind actually changes the physical world, it's Clap Your Hands If You Believe , or the much darker Reality Warping Is Not a Toy . Forget telling yourself not to think about the things you see — for it will become real here. If a computer generated or magical illusion changes the physical world, it's Hard Light . When you're trapped in a virtual world, and have to win or die, it's Win to Exit . The inversion may belong to Dream Emergency Exit , when you have to die to exit. For instances where getting killed in a dream actually can</ kill you for real, see Never Sleep Again Compare Puff of Logic and Magic Feather . Contrast with Visible to Believers . See also Self-Inflicted Hell

Your mom's so stupid, when she was asked to Describe Your Mom Here , she said she didn't know your mom In a war of Volleying Insults , insulting the opponent's mother is a useful snappy comeback. After all, Even Bad Men Love Their Mamas , and going directly after their mother is a surefire way to strike a nerve in one's opponent In its most primitive form, the trope is a No, You variant of the Lame Comeback , but with "your mom" substituted for "you" (" Your mom</'s a lame comeback!") The next step up is " That's what your mom said! ", becoming a more explicit Double Entendre . But the minimum for an artfully done "Your Mom" joke (such as it is) is along the lines of "Your mom's so fat/stupid/old/slutty, she [insert joke here]</", which lends itself very well to Volleying Insults , to the point that it's a staple of the genre, and a theme of the "Dirty Dozens" comedy game Other family members or

significant others may be substituted (e.g.</ "your wife", "your old man"), but people are most likely to have good relationships with their mothers, so "your mom" is the most effective of them. A Berserk Button for an Extremely Protective Child Of course, dialectical variants exist as well, from the ghetto-sounding "yo' mamma" to the Australian "ya mum", as used in the nation's prolific swearing. And as always, Wikipedia provides , in its traditional deadpan way A "Your Mom" joke was found , which means Your Mom really is</ Older Than Dirt (and also that she Really Gets Around) Compare I Banged Your Mom , the logical endpoint — where "your mom" really did have sex with the speaker

Whoever you are, whatever you do, there will always be those who disapprove. Some people will start considering you too fat before others stop considering you too thin. There will always be someone</ who considers your sexuality (or lack thereof) to be plain wrong</. And so on. In some settings, this is codified into entire cultures that disapprove of things that are mainstream for the intended audience (and vice versa). Sometimes dodged by the idea that Culture Justifies Anything Sometimes Played for Laughs , other times as serious drama. Wagon Train to the Stars shows usually play it somewhere in between Our Nudity Is Different is a subtrope Often a side effect of Fetish-Fuel Future , used as a way of highlighting its Blue-and-Orange Morality or sometimes Bizarre Alien Reproduction . A form of Culture Clash . Can be a case of Deliberate Values Dissonance . Sometimes done by a Planet of Hats . For romantic examples, see True Love Is a Kink

If ever in a comedy somebody tells a character or a group of characters to move/turn left, you can bet the character/one or more of the group will go right instead, prompting the phrase, "Your other</ left!". (Or they correctly turn left, at which point the first character realizes that they actually meant to say "right" and tries to cover with the same phrase.) If this doesn't happen, it's usually replaced with a confused exchange about "My left or your left?", even if the characters are facing the same way. Another version may involve some version of the following exchange: A similar gag: everyone on TV gets confused between port and starboard. (Incidentally, port is ship's "left", easily remembered as they both have four letters. If you still find yourself confused, remember that both right and starboard are the longer words, and it's always the same side of the ship</ , so no confusion can happen on a ship.) Sometimes appears as confusion between "house left" (the audience's left) and "stage left" (which means the actors' left when facing the audience, and therefore house right</). To be entirely fair, though, it's not like this doesn't actually happen with an alarming regularity in real life . We're just talking about its predictable appearances on TV. For some reason, it's always "your other left," never "your other right", even though you'd think both occur equally often in Real Life (especially in languages in which the Who's on First? joke mentioned above doesn't work). A likely explanation is that most people, being right handed/right dominant, will default to the right when confused, prompting "The other left".

The plot has been resolved... but the work isn't actually over yet. Before long, there's a twist thrown in. Alternately the plot looks all resolved, and we've almost reached the end, so it actually

seems like everything's working out... but then the writers pull a Cliffhanger situation to finish everything off. In terms of providing a genuine surprise, the trope works to varying degrees in different media, from being nearly unusable in books (the reader can tell how much is left by page count , but unexpected sequels can occasionally catch one by surprise) to completely effective in single-media computer games, particularly RPGs . For some reason, there has been a trend of including a segment which transparently pretends to be the climax or endgame when it obviously isn't, not just because there are vast expanses of the map you haven't explored yet or plot threads that haven't been tied up yet, but because you're still on Disc 1 of 4 . Expect to see The Man Behind the Man make his first appearance, perhaps offing the guy you thought</ was the Big Bad , as well as a Climax Boss or two and maybe a traitor . The heroes may find that a minor crime has revealed a major plot . When done at the end of a movie, it is used as a tease for a sequel . Of course, that could depend on whether the movie is good/successful enough to warrant a sequel. A Sequel Reset or Happy Ending Override often invalidates previous accomplishments of the hero. In Crime and Punishment Series , this trope usually results in the detained suspect being Acquitted Too Late . In RPGs, this often takes the form of a Disc-One Final Dungeon . See also Snicket Warning Label , Nice Job Breaking It, Hero! , "Shaggy Dog" Story and Hope Spot . Closely related to You Can't Thwart Stage One and Heads I Win, Tails You Lose ; may also overlap with Failure Is the Only Option . Compare Victory Fakeout and Trick Boss . If the twist never comes, Ending Fatigue awaits. Contrast Left Hanging and Spoiled by the Format . See also The Stinger . Derives its name from Super Mario Bros. </, where after all but the final castle level, a rescued Toad thanks Mario but tells him " Our Princess is in Another Castle. " As an Ending Trope (or at least a Reveal Trope), all spoilers on this page are unmarked .

Bob is feeling pretty bad. Maybe he's feeling insecure about something. Maybe he just got dumped. Maybe he just had a really bad day. Let's go ahead and say he got dumped. So Bob decides that he just needs a break from it all, and to get his mind off his problems. The best way to do that, of course, is by sitting on his couch and watching some TV The problem is, as soon as he turns on the TV, a soap opera turns on where a girl is breaking up with a guy. Of course, this is the last thing Bob needs to get his mind off his break-up. So he changes the station... only to see a stand-up comedian talking about the first time he</ got dumped. So he changes the channel again, and the first thing he hears is a commercial say "Having relationship problems?" No matter how many times Bob flips the channel, somebody is talking about relationships and break-ups. Eventually, Bob gives up and turns the TV off, at which point the scene usually ends This is a quick gag that's pretty common when you're trying to make the audience feel sorry for your character , or prove just how much the universe hates him . It's almost always never mentioned again . Can be justified when the character's circumstances are due to some supernatural agency that is also perfectly capable of controlling the programming on the TV A variant is growing where certain things individuals are trying to keep under wraps are revealed by a website advertisement, since these days they are picked by checking the user's browser history Compare Coincidental Broadcast and Laser-Guided Broadcast , where this phenomenon is used as a plot device instead of a gag. May coincide with Cold Turkeys Are

Everywhere if the thing that keeps popping up on TV or radio is something that the character is trying to quit, or The World Mocks Your Loss if they're upset about losing something or someone. See also Mocking Music (for the radio version) and Vengeful Vending Machine . Only marginally related to My Car Hates Me because both are tech devices that make their owner's life worse

The word "terrorist" doesn't have a single, universally-accepted definition. The most commonly accepted definition is "a person who uses violence to achieve a political end," but that label is enormously problematic; by that definition, any people who engage in a war could be accurately described as terrorists. Thus in fiction, as in Real Life , the line between combating villainy and committing villainy can get pretty blurry. A ragtag band of plucky rebels fighting against an evil Empire might see themselves as freedom fighters, but their actions will look an awful lot like terrorism even to the people who agree with what they're doing, especially if the rebels are required to use the same kind of methods, or even worse ones, as their enemies in order to succeed , especially</ if some of them really are bad people who just want an excuse to commit atrocities . It's possible that Both Sides Have a Point , making it a case of Grey-and-Gray Morality … or even Evil vs. Evil . On the other hand, it may be a lie that they tell themselves that they may believe, or, less favorably, know better than to believe even as they keep using it to justify irredeemable actions that go well over any sort of line of justifiability. While "terrorist" and "freedom fighter" are both relatively modern terms, and the idea that "terrorists" are necessarily the bad guys only appears after World War II , the basic argument of whether unofficial or unlicensed combatants have the same legal protections as officially sanctioned soldiers has actually been around for a while. During the age of Wooden Ships and Iron Men , people would have been familiar with the idea that "Your Pirates Are Our Privateers ." See also You Rebel Scum! and Occupiers Out of Our Country . Tends to happen when dealing with a Villain with Good Publicity , a Hero with Bad Publicity , and A Hero to His Hometown . Related to Well Intentioned Extremists and is a subtrope of La Résistance . Likely to overlap with The Revolution Will Not Be Civilized . May result in Moral Myopia if the supporters of La Résistance accept and excuse actions from La Résistance that they condemn The Empire for doing. Which label gets applied long after the fact will most likely depend on which side won and how . Compare The Horseshoe Effect . If the hero (and, by extension, the audience) is genuinely misled about who are the good and bad guys, and he finds out later on that he sided with the wrong side, it's a Reverse Relationship Reveal . No Real Life Examples, Please! . Subjectivity is precisely the point</ of this trope, not to mention the grief that ensues from such a discussion

A person from one universe (of The Multiverse) falls in love with someone from an alternate universe. Or a Time Traveller falls for someone in the period he's visiting, or vice versa. The dilemma for the Time Traveller or dimension-hopper is how far to pursue the relationship: Maintaining such a relationship often means that one of the parties involved will have to give up their own life in their own universe or timeline to fit into the other's May result in Star-Crossed Lovers . Compare Stay with the Aliens and Time-Travel Romance . Contrast Doppelgänger Replacement Love Interest , which avoids this happening by giving one of the lovers

a convenient substitute for the other one, native to their own world/time

An increasingly common phenomenon where mythical creatures traditionally feared and shunned, especially such horror staples as vampires , werewolves and demons , somehow become the targets of sexual desire. It's like All Girls Want Bad Boys taken to absurd levels Positive attributes of these creatures will often be exaggerated, if not fabricated out of whole cloth, and negative aspects will be reduced or removed entirely. Yet often as not, these now romantically inclined monsters will retain their definitive characteristics—such as the fact that they must prey on humans to survive , derive power from suffering , or are just plain evil Most often this is seen in erotic romance novels, or their counterparts in other media. The main character will be an ordinary woman, the better for the reader to relate to her, and the love interest may be anything from an ordinary man with a monstrous curse to a ravenous werewolf, bloodthirsty vampire or even a cruel and inhumane demon. At first, said monster will regard the woman as either a nuisance or an actual prey item, but through The Power of Love , she will persevere and manage to transform him into a Bowdlerised version of the source myth, perhaps retaining some rough edges but otherwise a relatively decent being This can create some interesting story possibilities if done well, both in such a creature having an inherently contradictory nature and in how the creature and his lover deal with said contradiction, particularly in how they do or do not come to a better understanding and balance and whether the creature can fight his inner nature/become a better person while still retaining what their lover finds sexy about them. (I.e., Rule of Drama .) If done poorly, however, the result can be either a lot of Wangst or a very dark case of Values Dissonance , Protagonist-Centered Morality , and Moral Myopia This phenomenon has been around, especially applying to vampires , for quite a long time, making this Older Than They Think for people assuming this to be only a recent phenomenon. For instance, with the recent popularization of the fact that North American wolves are usually not that aggressive to humans and are loving parents, then it stands to reason that werewolves can be seen as attractive company to have. Also, considering some particular forms of mythology such as Horny Devils and the number of god/mortal pairings in Classical mythology, this attraction to the exotically dangerous may simply be an endemic part of human thought, reflected in stories throughout history This is particularly common in Romantic and Gothic literature. As Victorian England was a sexually repressed society, writers would often link sexuality with the dark and forbidden. Creating metaphorically sexual monsters was also a way of Getting Crap Past the Radar Double Standards may apply, as this seems to happen mainly with human women and masculine beasties. On the other hand, see Cute Monster Girl Related to Vampires Are Sex Gods , Boy Meets Ghoul , Villain Decay (if the monster's negative qualities are toned down), Bishounen Line , Horny Devils , Interspecies Romance , Boldly Coming , Monster and the Maiden , Beast and Beauty (if they're in a romantic relationship) and The Taming of the Grue . For fanbase attraction to a monster or Big Bad , see Rule 34 and Draco in Leather Pants . Compare Shapeshifting Seducer . Ultimately followed by I Can Change My Beloved in most cases If you're looking for the movie of the same name, see here

Things are looking really bad for Our Heroes; an endless army of monsters is hot on their heels, with the Hero Killer leading the charge. Death is certain. Then, one character (sometimes two) falls behind and insists that the others go on . In order to allow the other heroes to escape/reach their destination/ Bring News Back , this character single-handedly holds back the enemy horde, often losing their life in the process. Just as often they get a Disney Death and are resurrected through Applied Phlebotinum / Functional Magic or they show up much later, having miraculously survived when No One Could Survive That! If shown on-screen, it could be used to improve the odds, thanks to the Law of Conservation of Ninjutsu . A character who successfully stops the enemy forces and survives qualifies as a One-Man Army . In extreme cases, where they must</ Bring News Back , one character is sent on and everyone else stays to give him time to escape. May overlap with Last Stand , where the characters want to make the opposing forces pay. On the other hand, in Last Stand , if they can maximize their damage by a suicidal action, they will do so; in You Shall Not Pass, the characters try to maximize the time even if they inflict fewer casualties that way (When the aims don't conflict, a character can do both.) Characters likely to do this include The Mentor so he can have an Obi-Wan Moment or The Big Guy to maximize the move's effect. If the character is wounded, he may say I Will Only Slow You Down and Go On Without Me . This may allow an exception to the rule that No One Gets Left Behind , but often the other characters are driven on only when it is impossible to return, or the character is dead. This character, if Not Quite Dead , may suffer a Face–Heel Turn on recovery and turn on his companions for abandoning him. Logic and facts about the impossibility of their saving him seldom make an impression when he has been deranged by his suffering. Worse, he may face Reforged into a Minion . The phrase was originally used in World War I by the French at Verdun: " ! </" (Although, technically, that's "None</ shall pass!" but who's keeping track?) Later used during the Spanish Civil War: "¡No pasarán!</" (in this case, "They won't pass!") in response to which General Franco later said, "Hemos pasado," meaning, "We have passed." The Spanish phrase became an international anti-fascist slogan. The Trope Namer is Gandalf the Grey of J.R.R. Tolkien's The Lord of the Rings </ , who declares this directly to an ancient demon that pursues both him and his Fellowship of friends across a bridge spanning an immensely deep pit; he meets the demon half-way along the bridge, blocking its path directly, after all of his friends have crossed it already. Tip-offs when the character is wounded, and stays behind to allow others to escape, include: This is a specific kind of Heroic Sacrifice . See Self-Destructive Charge , which is a similar situation but from the view of the one not allowed to pass. Frequently a Moment of Awesome (especially Dying Moment of Awesome .) Contrast with The Rest Shall Pass . If enough of the cast get in on this, it results in a Dwindling Party . See also Door Jam , Hold the Line , and Stand Your Ground .

If Alice died, and Bob wishes he had died instead, that would be Survivor Guilt . This is when Bob wishes Carol</ had died instead Then, those with Survivor Guilt may think that others think this Sometimes used in family situations to lampshade that the target of the comment is The Unfavorite . A variation might be "I should have aborted you," "You were an accident" or something similar.

An easy Kick the Dog (or Moral Event Horizon) line. On the other hand, there are cases when Bob is right, and that if Carol had died, Alice would have lived (and, on occasion, that Carol should have died instead). This can lead to a "Well Done, Son!" Guy relationship when it comes to a father-son dynamic When the dead person is the survivor's mother, Death by Childbirth can result in the subtrope Maternal Death? Blame the Child! On the other hand, if you, Dirty Coward that you are, survived by sacrificing the other character, expect no mercy. Compare I Wished You Were Dead . Saying this can occur during a Moment of Weakness

These are the YouTubers who do Let's Plays that we have pages for.

This is a list of recommendations made by Tropers for YouTube videos. Feel free to recommend your favorite videos here, but please follow the preferred template found below Bear in mind that recommendations are subjective, so if you want to question or discuss any given recommendation you should do so on the appropriate discussion page. If you want people to watch the video you're recommending, you should put some effort into writing the description. Sell us the video, but don't inflate it; we're striving for some quality stories here, so if you have difficulties with making it look interesting, maybe it wasn't that good in the first place In addition, you will notice that the tropers have signed their recommendations. Somebody has to vouch for them, so if a given recco isn't backed up by anybody, it will be zapped . After a few samples, you will be able to note the interests of the tropers recommending them, and judge whether you might be also interested in a certain video Reviews of videos are encouraged, but if you choose to write one, please make it substantive, and give specific details about what you liked / disliked in the video. If you want to give a video a thumbs-up without writing a full review, you can add your troper handle to the Recommended by line Below is the required format for a recommendation. If you're making a new page, or adding to an existing one, copy that text into the page

These are our pages on YouTube hosted content. YouTube Let's Players Other pages on YouTube hosted content.

Sometimes, a rather more direct Shout-Out or name dropping is attempted, but to do so would skirt dangerously close to trademark law. While there are plenty of ways to use substitutes or write around the trademarks, another way is to go ahead with the reference, but deliberately not</ go through with it, just far enough for the audience to know exactly who or what you're talking about There are many ways to get around this visually: Censor mosaic, a black bar over the eyes, or pull back and only make a strong resemblance. But with dialogue, a common way is to have a character obliquely reference the Fourth Wall by stopping the mention before it finishes, directly warning the speaker about getting their makers in trouble. In writing, especially for comics and manga, whatever word they want to say will be said by the character, but the text of the name itself will be partially blanked out or substituted with wingdings Subtrope of Think of the Censors! . See also Writing Around Trademarks , Lawyer-Friendly Cameo , Captain Ersatz , Bland-Name Product , Disney Owns This Trope , Our Lawyers Advised This Trope , No Celebrities Were Harmed . Compare The Scottish Trope

Stock Phrase uttered by a character who is about to do something potentially nasty to someone. They tell their victim that what they are about to do won't hurt at all. This often turns out to be a blatant lie . This is often done by doctors or friends of the patient who genuinely mean well, and are just trying to help them. However, it can also be used as a sarcastic Pre-Mortem / Pre-Asskicking One-Liner by someone who is about to inflict a lot of deliberate</ pain on their victim. Or to imply they'll die too quickly to feel anything . Another common variant is "This may hurt a little", or alternately, "You might feel a slight tingling sensation". This variation tends to be popular with Mad Scientists . A particularly psychopathic or dickish character may instead say, " I</ won't feel a thing." Yet another variant would be the doctor or dentist saying "This is going to hurt me more than it will hurt you." Definitely Truth in Television , as anyone knows who has been to the dentist , although it is increasingly averted as anesthesia gets better and starts to get used more widely. This is also a commonly-used phrase when children who are Afraid of Needles are involved. Often used to set up False Reassurance .

Because there are so many types of Dystopian settings, a Supertrope index was needed This is intended to cover both those settings where virtually any honest, decent, rational people wouldn't want to live if they had a better choice, and those that while some people REALLY wouldn't want to live here, others would find them to be a paradise or at least acceptable For settings that are Dystopias for those who hate regional or National Stereotypes , please see the Hollywood Atlas . When the oppressed fight back, see Civil Unrest Tropes . Compare Being in This Index Sucks The Big House : It might look a warm and cozy place to spend the night, but most guests are going to be gravely disappointed

After the End : see Apocalyptic Index . It's Nightmare Fuel and doesn't bother to hide it. Anarcho-Tyranny : The leaders seize or maintain control through permitting lawlessness and chaos . Just like a Utopia...Until you scratch the surface. There Ain't No Justice : Possibly a good place to hide from authorities, if you can keep from being victimized yourself. Caught in the Bad Part of Town : A town that has a dangerous part where outsiders aren't welcome, and a character accidentally winds up there. A bit smelly, a bit sour, but it's ours. (Or to quote Aladdin </ : "It's barbaric, but hey, it's home.") Advert-Overloaded Future : The future is full of ads.

Just as Yaoi Fans exist out there, there are Yuri Fans. Yuri refers to the Japanese media terminology " yuri " and refers to a genre focusing on female-female romance Unlike gay male romance, where Yaoi and Bara separate material aimed at girls and gay men respectively, in Yuri there isn't as clear of a division. Because of this, queer women are often combined with the central demographic of consumption. Even contrary to Japanese cultural mores, the primary consumer of sapphic media is women, as often reported by very popular yuri manga magazine Comic Yuri Hime </ Regardless, yuri tends to be lush, both in dress and setting , pretty , and highly emotive , which attracts all kinds of fans. Japanese cultural homophobia , heterosexism, and emphasis on procreation gives the genre a "forbidden love" quality often sought by fans Fangirls, as the primary market, include cisgender straight women as well as queer/trans women.

In Japan, such girls are generally more derided for being Otaku rather than being interested in Queer Romance of their own sex. The main exception is if such a girl expresses desire in girls outside of fiction, which generally leads to Hide Your Lesbians . As characters, Yuri fangirls are frequently shown as a Covert Pervert and/or Shipper on Deck , and either The Quiet One or the Genki Girl Yuri fanboys are the other component of Yuri fandom. What generally defines Yuri fanboys is a strong insistence on the portrayed relationships, feelings, and shipping, instead of merely being male conduits of Girl-on-Girl Is Hot . Primarily, Yuri fanboys are attracted to women. As characters, they tend to be an overzealous Shipper on Deck (due to their gender) and/or a very Loony Fan Overall, as characters, Yuri fans tend to be very Genre Savvy and are often portrayed with glasses (Meganekko / Megane) lending themselves toward surrogacy The Japanese term for these types of characters is "Himejoshi/danshi" (姫女子/姫男子, Princess Girl/Boy</), taken from the aforementioned Yuri Hime</, though rarely "Yurijoshi/danshi" (百合女子/百合男子) appears as a synonym. Unlike its yaoi counterpart, however, the exact terms are rare to see in media featuring them, instead usually opting for the gender-neutral "Yuri Ota" (百合オタ, Yuri Otaku</) Yuri Fan is for shipper examples. For non-shipping examples who still love seeing girl/girl action, see Girl-on-Girl Is Hot (although the two tropes can overlap)

Yuri (百合) ("Yuri" means "Lily" in Japanese, as in the flower .) refers to a Japanese Media genre about sapphic romance and sexuality . Yuri works traditionally focus either on romantic or sexual feelings, but increasingly have both. Western fans will sometimes use the term "shoujo-ai"</ to refer to romance-specific, less-explicit works, while using "yuri"</ to refer to more sexually explicit work. However, in Japan, "shoujo-ai"</ often refers to girl-focused pedophilia , and yuri is also known as "Girls' Love" (in English), or GL, a term created in common with the more popular male version , " Boys' Love " or BL. Yuri is a genre distinguished by many tropes, stereotypes, and specific plotlines or interactions The term "yuri" is so strongly associated with those tropes and stereotypes that some Japanese yuri fans use a different term, like "bian" (short for lesbian) , "Onna x Onna" ("woman and woman" (the x is usually pronounced as "to", "and" in Japanese)), or "Onna-doushi" ("women together") for works which are actually by/for lesbian women. Yuri is commonly an idealized and unrealistic portrayal of sapphic relationships, like most romance, and is not representative of actual sapphic people, culture, community, and experiences. This is, in part, due to the genre's high Fluff content. In Japan , yuri stories and portrayal depend a lot on the target audience demographic: Yuri aimed at girls (" Shoujo yuri") is commonly hyperfeminine and "pure" but may feature some degree of gender-bending or cross-dressing, with the bifauxnen in a more traditionally male role. In either case, it's usually focused on stories of female solidarity , idealized femininity and gender transgression, with physical displays of affection rarely going beyond hugging and kissing. Due to the Japanese's love for tragic stories of doomed couples , a disproportionately large amount of

yuri works, especially older ones, tend to end in sadness , tragedy , obscurity , or audience-attracting sham . This is slowly changing and more fictional couples are allowed to have happy, committed, and canon endings as time goes on. When a yuri work was made has a large impact of exactly what tropes it uses. Older yuri of the 80s , 90s , and early 2000s tend to be more rigid in their adherence to standard tropes. Recent yuri works tend to break the traditional mold much more often as the genre expands and gains more mainstream acceptance. The most common tropes you find in yuri, especially older yuri, are Sempai Kouhai , Tomboy and Girly Girl , and Teacher/Student Romance . All three of these tropes can be cast in a particular light to make them appear to mirror or emulate heterosexual couples (see the Analysis page). This entry is for the genre specifically. Works should be listed only if they are released as, described as, and/or feature yuri. Couple-specific examples should only be listed below if they're the focus of the series. For sapphic couples and crushes in other genres, see Token Yuri Girls . See also: Slash Fic , Cast Full of Gay , and Schoolgirl Lesbians . Compare and contrast Romantic Two-Girl Friendship . The Distaff Counterparts of Yuri</ are Yaoi </, Shounen-Ai</, and Bara , which feature male-male romance and sexuality. Our guide on how to Write a Yuri Manga .

A Zany Scheme is hatched. The mark figures it out and launches a Counter Zany . The original schemer catches onto the Counter Zany and counters with a Counter-Counter Zany And so on, and so on, throughout an episode.. Differs from the Escalating War , which is a series of unrelated pranks attempting to top one another. Zany Scheme Chicken is a series of reversals of one prank. A distant relative of the Gambit Pileup , and of the Game of Chicken . Not related to actual chickens

In Mao-chan </, the new Prime Minister starts a Monster Protection Racket to promote his "Three Aces" team... whereupon the Defense Force leaders launch their own fake alien at the same time to try to get the Defense Corps girls back in the public's good graces. At the same time, Yuriko launches a real alien for the girls to fight... and all</ of the aliens look like pandas.

This trope is the premise of the Spy vs. Spy </ comic strip series.

A Fish Called Wanda is a film-length comparison on American-style romantic comedy (as represented by Kevin Kline and Jamie Lee Curtis) and British-style farce (in the persons of John Cleese and Michael Palin), framed around an armed-robbery plot Friends </ "The One Where Everyone Finds Out": Phoebe finds out Monica and Chandler are seeing each other, but they don't know she knows. Then they find out, but she doesn't know they know she knows. Then she finds out, but they don't know she knows they know she knows ..

Dates back to at least William Shakespeare :

A Sitcom plot where one or more characters tries to achieve some end — usually extricating themselves from trouble — by some kind of elaborate, unlikely plan, something like "You distract them by faking a heart attack while I sneak into the bedroom and switch the real ring for the fake one, and remember this whole time they think I'm you and you're me...". Often the plan isn't

fully exposed and only Noodle Implements are given Sometimes they pull it off by the skin of their teeth. More often than not it all comes crashing down right at the end. Sometimes another character launches a Counter Zany , which may escalate into a Zany Scheme Chicken . This trope can sometimes be similar to a small-scale Gambit Roulette and the source of many a Full-Name Ultimatum This trope, being over-used, is often subverted by having the character to whom the zany scheme is proposed simply shoot the whole thing down as ridiculous, and switch to another plot. An even further subversion occurs when the sensible</ plot then fails while the zany one succeeds Since the Zany Scheme is usually spelled out to the audience in advance, it is subject to the Unspoken Plan Guarantee Contrast with A Simple Plan

Something — be it a piece of technology, character design, outfit, vehicle or building — used to be someone's idea of futuristic. Nowadays though it has, ironically, acquired a quaint sort of datedness to it: inevitably, it will be more reminiscent of the era the work came from</ . Also sometimes called "Retro Futuristic" Think of mobile phones as a simple example. Once, they were large, cumbersome, and it was considered that they would only ever be available to the rich. Works from that era will tend to depict even a 'futuristic' phone as still no smaller or sleeker than a brick plugged into a suitcase. Later, when they became widely available and shrank dramatically as technology improved, for a while it was assumed they would keep getting smaller and smaller; depictions of the future from this period will show people using tiny communication devices. Again, Technology Marches On and the preference has shifted to them to growing increasingly large once more yet thin enough to slide into the back pocket of your jeans. Any current depiction of the future featuring such slablike devices will also turn into a time capsule of the period it was made in, if and when flexible and foldable phones become commonplace. And so on Sometimes the dated feeling is due to this sort of straight-line extrapolation of trends ascendant when the work was written into the (far) future . Sometimes the datedness is a bit more subtle. It's possible that the prediction turned out to be technologically or aesthetically accurate (or at least on the right track), but still fails because of the designer's implicit assumption that social values will be the same in the future as in their own time — as demonstrated in the page image Often the datedness behind zeerusty designs lies in the attempt of the designers to 'improve' on the technology of their time , only to find out that more mundane designs are actually far more efficient if advanced engineering and craftsmanship are used on them. Note that this is not always a bad thing : often the dated vision of the future is a lot more imaginative than anything being attempted today, with more modern, 'realistic' depictions striking viewers as bland and boring precisely because of the authenticity Another part of this often comes from a related issue: especially in more visual mediums, set, costume and prop designers have no choice but to depict the "future" with the materials they have on hand in their present day. When thin, molded glass and clear plastics aren't very readily available to you, you aren't going to put together a prop that looks like an iPhone fifty years before one exists; you're going to use black hard plastic, inexpensive chromed trim, a grill straight off a then-current telephone, and you're going to end up with a TOS communicator and you're going to be

satisfied with it because you have other things to work on. This can lead to some particularly hilarious moments when a long running franchise wants to produce a prequel or somesuch, but the set and prop design ends up looking different and more "properly" advanced simply because the designers of the new product have access to the fruits of decades of additional real-world technological progress As such, when a Long Runner franchise is outflanked by the progress or direction of technology/aesthetics/societal values while it is still going on, but it is tied to its pre-established version of them, this may lead to Zeerust Canon over time Sometimes Zeerust is deliberate</. If a Retraux work presents a supposedly past vision of the future, or 20 Minutes into the Future (i.e. the present), it will inevitably invoke Zeerust or Raygun Gothic Gets its name and definition from The Meaning of Liff </ by Douglas Adams & John Lloyd, a book of neologisms concocted by the two. Adams and Lloyd mostly used actual place names for their words — Zeerust's name is borrowed from which in Real Life has nothing to do with the phenomenon Compare The Aesthetics of Technology , Crystal Spires and Togas , I Want My Jet Pack , Hollywood History , Punk Punk , Steam Never Dies , Schizo Tech , Science Marches On , 20 Minutes into the Future , Raygun Gothic , and Retro Universe . Contrast with New Weird . When the creators actually predict what the future holds correctly,</ then it's Life Imitates Art

Cassette Futurism

If your characters have entered a parallel universe that's just a few steps removed from our own, the fastest way to establish it is by sticking a whopping great Zeppelin airship in the sky In our world, Zeppelins seemed to be doing pretty well . People adored them; they were seen as extremely glamorous and futuristic. The world-famous LZ-127 Graf Zeppelin</ had accomplished global circumnavigations, arctic explorations, and aviation feats that people had only dreamed of. Then, on May 6, 1937, the flagship luxury liner Hindenburg This Hydrogen fire, which killed roughly a third of the passengers and crew on board, created a global panic. No commercial Zeppelin would fly again until 1999, though a few relatively tiny nonrigid "blimps" did continue to operate in small niches such as aerial videography More recently, airships are making a comeback for niches such as pleasure cruising, humanitarian aid, , law enforcement, military surveillance, photography, and scientific research. This resurgence has been enabled by new technologies and designs that mitigate the airships' disadvantages and greatly enhance their lift, safety and speed—by hybridizing them with airplanes and tiltrotors It is important to note that the presence of airships doesn't imply that the technology of the Alternate Universe is inferior. Just like with biological evolution, Zeppelins are not "more" or "less" evolved technology , what's used is whatever is the best available fit for the niche. It could just as well be that Zeppelins in the Alternate History were better able to suit the situation than airplanes were, say if there was a massive resource shortage that demanded efficiency and payload over speed, some other economic factor, or simply because there wasn't a Hindenburg-Equivalent , Zeppelins never fell out of favor to begin with Strictly speaking, the name 'zeppelin' refers only to airships with a rigid internal frame, a propulsion and steering mechanism, (though it originally referred specifically to airships made by Luftschiffbau Zeppelin) and no anxiety that users will be put off by the name.

Dirigibles and blimps still qualify for the trope. Alternate universe plane-spotters, take note So by filling up Earth 2 with bulbous aircraft rather than hovercars or spaceships, you are suggesting a world that is of a similar time period to our own, but just happened to follow a different technological route. It also helps that they have lots of Diesel Punk and Steampunk cred and are sufficiently olde-worlde to be used in fantasy stories too. They are also cool . In fact, when used in a fantasy setting, you're more likely to encounter a thriving airship industry than cars or trains</ which are clearly too mundane for such a setting no matter how useful Sometimes the Zeppelins are just there to show the audience that the movie is set in another world, even if nobody from our world crosses over into it and nobody in that world actually rides</ in one A less extreme sister-trope to Alien Sky The transportation of choice for Sky Pirates everywhere. When zeppelins are only used by the villains, it's a Dread Zeppelin . Also see Airborne Aircraft Carrier , Cool Airship , and Floating Continent . Future Copter is a similar trope where ducted-fan VTOL aircraft are used to indicate a futuristic setting

Defeating a strong opponent with a very large number of disposable combatants. Usually used by the evil side, since their definition of "disposable" will stretch a lot farther As an Evil Overlord , it is important to choose your Evil Minions so that this does not apply to your</ troops, since it usually doesn't work against heroes The Trope Namer is the popular real-time strategy game StarCraft </; the original meaning of the term was more a form of Sequence Breaking where the Zerg race "rushed" to an attacking unit technology and invaded to take out all the Worker Units of their opponents. It evolved into the current definition by Memetic Mutation See also Death of a Thousand Cuts and We Have Reserves . May lead to The War Sequence . Often a component of Hollywood Tactics . Contrast the Elite Army . Sub-Trope of Quantity vs. Quality

Fan Works

Space. The final frontier. And a completely new environment for indulging in humanity's favorite pastime: sex! Many writers have turned their imagination to the subject of what sex would be like in zero gravity. The general consensus seems to be that it would be like a Two-Person Pool Party without the water (examples involving more</ than two people are hard to come by, as no one enjoys dealing with the three-body problem). Unfortunately very hard to pull off, due to the lack of gravity having weird effects on the body, including (ahem) blood pressure. Zero-G is more accurately called "free-fall" because one is literally falling. Zero-G sex is sex while perpetually falling. The microgravity environment would also mean that the couple would be a slave to Newtonian physics, meaning that any... vigorous movement is going to cause both to careen wildly around their spaceship, resulting in multiple possible injuries. As of early 2016, this is not known to have been attempted in any actual spacecraft, despite the attempt of a porn studio in 2010 to hire Spaceship One for the purpose. Virgin Galactic declined the offer, nominally on the grounds that accepting would make their company name exceedingly silly. In June 2015, a porn website exact plans were unclear, although they did claim to be "in talks" with launch companies before

the funding campaign failed. There was one married couple that did fly together on N. Jan Davis and Mark C. Lee, who had met and then married secretly during training, and told NASA so soon before the flight that there wasn't time to send a replacement. However, if they attempted this trope—which is itself highly doubtful—they aren't talking about it, and neither is anyone else. The closest anyone's actually come was a twenty second shot for a porn film that was done by the same means of simulating microgravity as the infamous "Vomit Comet" plane ride: fly to 11,000 feet and engage in a brief, steep dive. (No word on what this actually cost the production company.) Somewhat surprisingly, The Other Wiki has about this too. And no , this title has nothing to do with a woman lacking a G-spot, or the lack of evidence of G-spots.

Some characters do not have complete free will, be they robots that are Three Laws-Compliant because of a Morality Chip , or victims of a Geas spell that compels them to obey a wizard's decree, or a more mundane lawful character who must struggle to uphold their oath and</ obey their lord. Never is this more tragic or frustrating than when that code or lord orders the character to commit an act they find foolish, cruel, or self destructive. There is a way out, though. Much like a Rules Lawyer outside of an RPG, the character uses logic (and we mean actual, honest to goodness logic) to take their oath or orders to their logical conclusion, and in so doing use the letter of the law to go against their orders. This can be good or bad, depending on a few factors, not the least of which is the yoked characters' morality. The goodness or badness of the rebellion boils down to whether the rules-bending character follows or ignores the intent of the law. When the character uses the Zeroth Law to go against their masters' intentions because they're "not best for them", and goes on to take corrective action that will go against human free will and life, it's bad . This kind of rebellion does not turn out well. At this point, the robot is well on the road to Utopia Justifies the Means , thanks to their incredible intellect . Rarely is it a benevolent Deus Est Machina . However, this can be good if said master is evil, or obeying them will lead to their own or another's purposeless death. Likewise, if the character is forced to obey an evil law or geas, rebelling against the oath's intent is good. Going back to the robot example, it is also considered good if large numbers of human lives are being threatened by a psychopath, as breaking the 1st law would protect them. Just to make it extra clear, this trope also includes such things as cops who bend the rules or Da Chief 's orders to catch the bad guys, so long as the cops are technically</ obeying the rules as they bend them. (Bending the rules without some logical basis doesn't count.) This trope is named for Isaac Asimov 's "Zeroth Law of Robotics", which followed the spirit of the first three , taking it to its logical conclusion that human life in general must be preserved above individual life. This allowed for a robot to kill humans or value its own existence above that of a human if it would help all of humanity. Compare The Needs of the Many , Bothering by the Book , the Literal Genie , Gone Horribly Right , Exact Words and Loophole Abuse . See also Fighting from the Inside and The Computer Is Your Friend . Not related to The Zeroth Law of Trope Examples or Rule Zero .

In one of the Telzey Amberdon stories by James H. Schmitz , Telzey is kidnapped and placed under the control of another telepath, who severely limits her psi powers and implants an overriding

compulsion to act in his best interest. She eventually breaks free by convincing herself that unless her powers are restored and the compulsion broken, he will be killed by the Big Bad — which certainly wouldn't be in his best interest On The 100 </ , A.L.I.E.'s programming only lets her interface with and control a human mind if that person has given her permission to do so. Unfortunately, her programming doesn't make a distinction between genuine consent and coerced consent, so A.L.I.E. is free to use torture and threats of death to make people let her into their minds

Sometimes, a trope is handled in a way that is, quite frankly, beyond our normal categorizations of subversion , aversion , Double Subversion , or inversion . Such tropes wind up as those rare complexities that can make the readers grin or shoot themselves due to being Mind Screwed too many times... Thus, the Zig-Zagging Trope Sometimes a Zig-Zagging trope is a product of overcomplication after it comes into play; anything involving a triple subversion makes the result a zig-zagging use of the trope. Sometimes, a trope is both inverted and played straight at the same time, which is also a Zig-Zagging trope It can also result from an attempt to Deconstruct a given trope by considering it thoroughly from every possible angle And sometimes the author is simply saying "Dance, trope, dance! Dance for my amusement!" before indulging in an Evil Laugh In other words, think of an example of this as any that is too screwy or complex to be one of the other Trope Tropes . As a rule of thumb, if someone cannot describe a use of a trope any better than " played with ", it's likely this. Alternate title has nothing to do with a certain, infamous boss fight

A very common element of a Ship Tease , when a man helps a woman zip up or down her dress. Has the charm of being innocuous and platonic on the surface, but brings the Theiss Titillation Theory into full effect—the fact that the dress is just partially on lends a great deal of tension. May also work with necklaces, clasps, buttons, snaps, or anything that could possibly reveal her back. Compare the Hands-On Approach May work for men in the case of a Wholesome Crossdresser (and either a male or female admirer). Can't Tie His Tie applies a similar Ship Tease element to traditional male attire

Within the past couple days or hours, something very strange has happened. Maybe the Synthetic Plague the government was working on got unleashed. Maybe a voodoo priest's spell went awry . Maybe an alien space probe broadcast a weird signal at the Earth, or fell to Earth and brought radiation with it . Maybe there's just no more room in Hell . Whatever the cause, the result is the same; the recently dead have risen, en masse</, to feed on the living. With each victim they claim, their numbers swell, and no force on Earth can contain them. As society collapses, it's up to the Big Damn Heroes to fight their way to safety or keep shooting until things blow over. The Zombie Apocalypse has arrived. While Horror is assumed to be an inherent part of the zombie apocalypse, not all the horror and conflict comes from the zombies themselves. Instead it can come from the reaction of the living humans involved, and how they respond to the state of fear and violent chaos brought about by the zombies.

Often, the answer is "not well" . The breakdown of society, the fear that your Fire-Forged Friends could be infected and turned against you without warning, are at least as important to a zombie story as the zombies themselves, if not more so. Common to virtually all Zombie Apocalypse tales is that, regardless of the reason zombies attack living/non-infected people, they never attack other zombies . Whether they'll attack animals other than humans varies, but it's rare for The Virus to affect other species, probably because it's cheaper and easier to film humans in make-up than to work with animals , whether trained, animatronic, or CGI. Due to the threat that zombies pose (they did just become the apocalypse, after all), protagonists of more serious works are required to become very smart very quickly (but will be ignorant with regard to the word "zombie" itself). Failure is often the only option in these stories; rarely do they have an ending that could be considered "happy" by typical standards, or indeed one where humanity survives as a species. Another main staple is that things will always, always</ go From Bad to Worse . Either from the character's actions or circumstance which are out of their hands, no matter how improbable it is. The Militaries Are Useless trope is usually a must in such a movie, if only to avoid the film ending in five minutes. If they ARE actually competent, they'll likely happen to be evil . The collapse will also take place very quickly, over a period of weeks or months, instead of years. This prevents society and/or the main characters from adapting, and also makes Convenient Comas somewhat plausible. In the occasion where collapse occurs in a couple of months, a nuclear submarine, aircraft carrier, or other large vechile could realistically be expected to weather the entire outbreak start to finish in perfect isolation and safety. Characters may also assume that their portable radios have infinite reception and frequency range, and local dead air means a completely global collapse. The audience</ may not need to speculate about this, if a Spreading Disaster Map Graphic crops up in the opening credits. Another common staple of the Zombie Apocalypse is that the zombies are often not the most dangerous enemy that a survivor will face . It's usually other survivors, power-hungry maniacs or regular-hungry people who want to attack you to get at your food and shelter . Sometimes Humans Are the Real Monsters will occur (after all, a zombie is just a degraded human!) Subtrope of Our Zombies Are Different . A member of The Undead trope family. See Night of the Living Mooks for cases where zombies don't threaten the end of the world. See also Zombie Gait , Everything's Deader with Zombies . Raising the Steaks is what happens when humans are not the only creatures that can be infected by The Virus . The zombie apocalypse is almost always a case of Guilt-Free Extermination War requiring that everybody be armed . Expect a healthy dose of Improbable Infant Survival — for despite a population of millions of children at any given time in any human population very few </ will become (visible) zombies — and the few that do are for audience effect. Also expect the Incongruously Dressed Zombie to turn up for occasional comic relief Contrast Friendly Zombie , who is not there to make an apocalypse. (Attractive Zombies also generally tend to avert this, due to Beauty Equals Goodness). The trope Zombie Apocalypse refers to any kind of undead apocalypse, with the common traits of this trope are that the undead spread rapidly, wipe out humans primarily by eating or biting them, and are usually highly infectious — even if the undead happen to resemble vampires or yet another kind of monster more than zombies. Vampire versions of this nearly always involve Feral Vampires . If you are looking for different types of Zombie, see Our

Zombies Are Different . Not to be confused with Vampire Apocalypse: The Series </ by Derek Gunn. Sometimes the 'zombies' might be a case of the Technically Living Zombie , but the overall narrative usually plays out the same way regardless. A Zombie Apocalypse can be considered a sort of Came Back Wrong on a very large</ scale. Also known as a "Zombocalypse".

Zombies are slow, both in the literal and metaphorical sense. So, how do you make them distance threats? No, not Deadly Lunge ; give them a ranged attack! But rarely you'll expect them to use firearms or similar, because they're often too mindless to use them. Well, stomach juice, being hydrochloric acid, is strong enough to dissolve certain metals, so how about weaponizing their digestive systems? Note that it doesn't have to be just stomach juice-infected/corrosive blood; parasites, and smaller zombies are also examples, just so long as they choke them out of their stomachs. This is used mostly, but not exclusively, in Video Games . A Sub-trope of Super Spit , compare Breath Weapon and Bad Black Barf . Involves Vomit Indiscretion Shot . See also: Elite Zombie , which has the "Vomit Zombie" subtype.

The works in this index want your braaaiiinnns.. Just like Ghost Fiction , Mummy Media , Vampire Fiction , Werewolf Works , and Witch Works , this page is an index for all works where primary focus is on zombies. Naturally, all zombies are different (though most will agree that Everything's Deader with Zombies). Title of the Dead is a frequent occurence No you silly, this index is not about stories (or songs) by</ zombies. Most Writers Are Human , after all See also Episode of the Dead , in which there's a sole chapter/episode/arc/game/scene/etc. dedicated to zombies as a Bizarro Episode . Also see the related indexes Ghost Fiction , Mummy Media , Vampire Fiction , Werewolf Works , and Witch Works
