Some people are just born lucky. It's no surprise that this should extend to death as well Basically, this is when a character falls into a situation that should, by all accounts, be lethal , and survives through sheer luck or coincidence. This can be only a one time thing, or, more often, you have a character who constantly bumbles around, surviving things they shouldn't. Characters like this are often oblivious to the danger they find themselves in, or recognize that they are lucky and count their blessings, but, in the worst cases, they can get pretty arrogant about it, to the point where you wish they would </ die A staple of the bumbling investigator . Often found in conjunction with Not the Fall That Kills You… . Compare Normally, I Would Be Dead Now , in which a character survives a normally lethal situation by sheer force of will . An inverse of this would be a Death Seeker who, through sheer luck, finds himself unable</ to die. Often followed by an I'm Okay! If a character finally</ dies after surviving a string of normally lethal occurrences, that's a Rasputinian Death Frequently occurs in Youth Is Wasted on the Dumb Not to be confused with No One Could Survive That! , where the person in question is thought</ to have died. If someone survives a Mortal Wound Reveal , it is necessarily this trope. Compare Joker Immunity , where a character will survive things that should</ have killed him because they're too good or too popular to be Killed Off for Real

Many characters and plot elements lack backstories in fiction. It might be because the creator didn't consider giving them a backstory, or because they didn't think it was important. But then there are times where creators forbid</ origin stories from being revealed There are some reasons why backstories might be banned. The creator might want to keep a sense of mystery around a character or plot element, and they think solving that mystery would make the franchise less interesting. This can also occur because the creator intends to eventually write the backstories themselves, so they forbid everyone else from writing them first. Another reason for this is that the creators may want the fans to come up with their own backstories . In cases where this applies to characters, a Captain Ersatz may be created alongside the character whose origins aren't allowed Sub-Trope of Executive Veto . Sister Trope to Restricted Expanded Universe

Industrial complexes in which climactic battles are fought always seem to have been built with a callous disregard for the safety of workers. Inside, you're likely to find narrow catwalks with simple rope/cable (or no) handrails inevitably hung by what might as well be knitting yarn over open bubbling vats of green acid , massive exposed machinery flailing everywhere without protective covers, safety switches in awkward places far from the machinery they control (assuming that there are</ any safety switches or that they're even functional), blast furnaces glowing fiery red , and other hazardous conditions so terrifying that any sane person would probably insist on a six-figure danger bonus to even go near the place In short, if the Occupational Safety and Health Administration (or the local counterpart in non-American settings) ever saw the place, it would be condemned in seconds</. Sometimes, the story will Hand Wave this by referring to the factory as "abandoned." However, it will never be explained why it

hasn't been demolished yet, why it still receives electricity, or why all the machinery is present and operable as if it's itching to be the setting of a climactic showdown And oddly enough, for all the lack of safety compliance, the factory's door will be unlocked or easily entered, and there will be not a single night watchman Usually all the crushing, spiking, and burning machinery will be left to run unattended; but if this is not the case, they will all be activated by a single exposed switch placed on a bare stretch of wall Of course, this means the hero and the villain will immediately rush into the heart of such a complex to have their final battle, instead of just settling things in the parking lot. On the other hand, this does allow for the frequent accident of the villain falling to his doom . Any collateral damage in the battle will invariably hit a Big Red Button , cause Failsafe Failure , and No One Could Survive That! resulting explosion These environments still exist because they are visually interesting and allow the cowardly villain more opportunities to sneak around behind the hero, or the overmatched hero to find some way to even the scales against the seemingly omnipotent villain. Granted, it's always possible to put together a dramatic fight sequence in a perfectly balanced tournament-style environment (see the last segment of The Karate Kid (1984) </, or virtually any movie where martial arts is the foundation of the plot), but the ultimate authority on such matters in entertainment is, of course, the Rule of Cool These facilities are also often referred to as "Smoke and Fire Factories", in reference to the fact that the function of the building is rarely explained, with smoke and fire as its only discernible outputs. Incidentally, OSHA Compliance is not just about construction and design, but also about people in the facility following proper procedures, so the act of having a battle in a workplace is already</ non-compliance with OSHA, even without the smoke and flame Note that if a villain plants a few explosives in such a place, it transforms from a mundanely unsafe facility into an instant Death Course . See also Eternal Engine and Malevolent Architecture (the video game equivalents), Construction Zone Calamity (when this trope is Played for Laughs) and Homicide Machines (when a horror film does this with everyday household appliances). No Seatbelts and Railing Kill are subtropes Rule 87 of the Evil Overlord List gives advice on how to avoid this — and if you're plotting to rule the world, you should heed its advice This trope is always present in a Nightmarish Factory , or a Blood Sport This has nothing to do with the lack of approval without accompanying a certain Wildling to go beyond The Wall . Then again, their world is not a safe place either . It also has nothing to do with Oshawott 's Pokémon Speak

The future is full of data drives, backups, often made of Organic Technology or crystal , and holographic terminals . No paper though, even if we still have trees around. The danger of having no hard copies of information seems lost on folks. This vision of an entirely digital future hearkens back to the 70s and 80s, when the increasing popularity of the home computer and email led many to believe that soon paper would be made obsolete by the ability to transfer and access hundred-page documents instantly on portable computing devices. Ironically, as the years went on the growing use of fax machines and printers meant paper was in higher demand than ever before. However by the 2000s the growing trend was towards everything

being digital, and the rise of e-books threatens to make a No Paper Future a reality (despite the no hard copies risks). Another way to tell it's the future is to make money 'weird', if not get rid of it. This is a Justified Trope in the United States and a few other First World countries, since now many of us really do</ pay with cards any sizable amount of money when possible (and preferable). For now it's still more practical to bring money for smaller transactions, to save the 20 or 30 seconds to sign a receipt or key PIN; yet even now, swipe-and-go smart cards that can be much faster</ than handling messy physical change are spreading. This trope usually presumes the complete elimination of the Black Market or illegal transactions, as, obviously, drug dealers are not going to be interested in transactions that leave a paper data trail. Ditto for people arranging transactions to evade or avoid taxes or purchase something they'd rather not admit to ; cash has no trail, electronic money does. Bitcoin and other cryptocurrencies are a thing, of course, but keep in mind that for most works using this trope cryptocurrencies didn't exist when they were made. But then the government decides how money is done, so who cares about the criminals? (Let's not dwell on the obvious answer to that question which is shown every time a news paper</ presents news about political scandals involving large bribes...)

War Is Hell , so logically peace ought to be better Not in this case. For the professional soldier or sailor, peace means they're suddenly out of a job and have to find their way in a world that may have changed dramatically while they were away fighting. They may lack salable skills (that is, ones other than fighting) and struggle to keep food on the table, and may also be dealing with the aftereffects of their war experiences . Perhaps they will go looking for another war and become mercenaries or get involved in extremist politics. Or they will find a hardscrabble job or end up as beggars. They're likely to be found in the Legion of Lost Souls . Naturally they may be a Shell-Shocked Veteran . On the flip side, the civilians may find that the loved ones who come back from the war are not the same people as the ones who left One Internal Subtrope of this common in Wooden Ships and Iron Men works (and many Space Opera series inspired by them) is for officers serving in peacetime to be put in reserve on half-pay. This was Truth in Television for navies during the Age of Sail, the British Royal Navy being most often cited, and it tended to mean near-poverty for those without other sources of funds Closely related to Stranger in a Familiar Land and The War Just Before . Subtrope of No Place for Me There . Compare And Then What? , Born in the Wrong Century , Outdated Hero vs. Improved Society , So What Do We Do Now? , Victory Is Boring , Won the War, Lost the Peace , Prefers Rocks to Pillows , Former Regime Personnel , and of course Glory Days . Can lead to a soldier going From Camouflage to Criminal . May be experienced by the Returning War Vet or Colonel Kilgore . Compare Oppressed Minority Veteran , when the veteran is mistreated because of their identity status

A specialized version of the Reset Button : Any dangerous device or technology owned by a villain, particularly a supervillain of the James Bond </ mode, that is not off-the-shelf exists in a metaphorical vacuum. There is only one of it, there are no plans or schematics for it, and no earlier generations of development exist.

In the case of expensive and rushed projects, the final project might have been made by cannibalizing parts of the prototype, or might actually be</ the prototype after a whole lot of upgrades and patches. Either way, no backup copies exist at all</ of either the device's hardware or software. Thus the hero may safely blow it up, blast it with EMP or otherwise render it useless, confident that no one can recreate the technology — or worse, just take version 0.9 out of storage and use that</ the moment he leaves. This trope also applies to creations that, through some fluke of their creation, cannot be replicated for a variety of reasons. Maybe the first attempt was tainted during creation , or maybe a talented composer dies before they can record their techniques. Once the original is lost, it's gone forever. Note that in the real world, scientists and engineers make and keep very detailed notes — this is often what differentiates Science from Mad Science . Mad Science is magic-like in how it can inexplicably summon up something that its own creator doesn't quite understand. (Or, this trope is unnecessary if the creation could be replicated but only the original can be used in time</ to affect the story... the trope applies once that story stretches to weeks or years and needs some Rule of Drama to prevent replications.) This trope usually does not</ apply when the scientist who designed the technology is treated as a sympathetic character. In this case, the remorseful researcher does keep notes, which he will either attempt to burn or erase himself, or will ask the heroes to destroy for him. Nor does it apply when the experiment results in a Psycho Prototype ; in these cases, the researcher will make changes to the plans and build a second, "good" version, to fight the first, "bad" one (of course, the trope may kick in right after that...). Occasionally subverted after the customary celebration of the superweapon being destroyed, with one hero ominously pointing out, "yes... but there's nothing to stop them building another. " Or the superweapon hadn't actually been destroyed as they thought . A common cause of this is Shoot the Builder . Compare Reed Richards Is Useless , where the formula exists, but is only applied to fantastic problems. It may appear as a justification for Never Recycle Your Schemes . See Also: Black Box , for situations where the device in question has extraterrestrial or otherwise fantastic origins that would justify not being able to build another; The Spark of Genius , for devices that have the superficial trappings of science but are actually based on powers that don't follow the usual scientific rules of predictable cause and effect; It Only Works Once , for devices that can't effectively be reused even if you know how to make them work again; and This Page Will Self-Destruct , for cases where the plans and/or prototype are deliberately destroyed to prevent them from being used again.

Most media have some kind of setting. A world , a time, some characters, maybe some Backstory , or even just a bare-bones Excuse Plot ... but not in a large number of Video Games and some traditional games. No frill, no fluff, just an entire experience carried by the gameplay, maybe the sound and visuals in a supporting role. Story will likely get in the way of these games, at worst annoying the player with the interruption; given the chance to skip story, they will . Expect Rule of Fun to be invoked, and often In the days of Retro Gaming , limited processing power limited the amount of storytelling a game designer could employ so many games of the era were either this or an Excuse Plot by necessity. Today, much of the big money in video game production

is aimed at big blockbuster-style story experiences so this is more likely to be the aim of smaller productions Since this is used so often in video gaming, let's not list every single example, just genres, notable exceptions, or inversions. Or specific references to this in other media Not to be confused with </, a handbook guide to the very popular (Inter)National Novel Writing Month contest Compare High Concept , Play the Game, Skip the Story , Porn Without Plot , and Random Events Plot . Contrast with Excuse Plot , which is when a game does</ have a plot, if one that is just an excuse for the gameplay- these games don't even have that, focuing solely on the gameplay

Pinball Tabletop Games

Toys Driving Game First-Person Shooter .io Game Other Video Games

The Evil Twin of Multi-Platform and Port Overdosed , and a worse outcome than Porting Disaster Say you have this console or operating system which you are very much accustomed to. You more or less have everything made for the platform installed or on discs/cartridges, but there's this one game or application you wanted or needed so badly, but couldn't get as it was released on only a particular platform other than what you have. Sure enough, you can buy a new console or install an alternative OS, but that's a major barrier to entry for some who do not have the budget or just couldn't be bothered to get a certain device for the sole purpose of playing certain games As with No Export for You , No Port For You could be due to technical limitations, censorship, licensing or whatever complications that may arise with the release of a piece of software, or just limited resources, or for some inexplicable reason even if the platform the game wasn't released on has a significant market share. It could also apply to non-software pieces of digital media, like for example films not yet released on DVD or Blu-ray. However it could also be due to "exclusivity deals", in which a company pays a developer to make a game only exclusively for their platform Expect many modern Arcade Games to fall under this, as many of them use specialized controllers that would be too expensive if they were faithfully made for the consumer market; the more economic alternatives would be to adapt the controls to a gamepad or produce a lower-budget version of the gimmick controller, often with clunky results either way Naturally, there are workarounds for this, like emulation for example; emulating more recent systems are a long shot however, but progress has been made with seventh-generation console emulators, such as Xenia , RPCS3 , Citra , CEMU , and the most popular of them all; Dolphin . Even the Nintendo Switch is starting to have emulation projects being made too. Fan-made ports do exist as well, especially for games whose source codes have been released in public domain or under a permissive licence Despite communicating with the same hardware fundamentally underneath, the other two Operating systems for the PC Market; MacOS and Linux , also get afflicted with this, as most games released on PC are for Windows only. While the list of games that work on both of these OS's is increasing thanks to increased adoption and better understanding by the general consumer and big videogame companies alike about what these OS's can actually be like to use, it's a far cry from the hundreds of thousands of games the PC gaming space has to

offer natively. Much like how Emulation can help runs games from consoles on computers, MacOS and Linux both have Wine Bottler for the former, and plain old WINE for the latter. Linux also released onto Windows When it comes to smartphone games , originally the bulk of high-profile mobile games were released on iOS only, with Android routinely being left out in the cold. It wasn't until the mid- 2010s that more and more mobile games started getting ported to Android, with most games now being released on both at launch. You're still out of luck if you use any other mobile phone platform, however Contrast with Multi-Platform and Reformulated Game , where games get versions or ports for multiple platforms at the time of its release (especially with licensed games). The complete polar opposite is Port Overdosed , where the game gets released on every platform under the sun the developer can think off, even if the platform is not a good fit See also No Export for You and Bad Export for You for restrictions of a regional sort. For cases when the game is ported at all yet developers did a rather shoddy job at it, see Porting Disaster

For some reason, a statement can become a bit funnier if there isn't any punctuation at the end. Compare the following: Oh, my God! That is the most amazing thing I've ever seen!</ Whereas the first one is grammatically correct, with punctuation in all the right places, the second has no punctuation. The reason the one without punctuation could possibly be funnier to you is that punctuation implies inflection. Without punctuation, the statement gives off the feeling that it was said in an emotionally blank voice, akin to the Flat "What" . Alternately, it might come across as breathless, as if the speaker was so excited their comments came out too quickly for punctuation . And, in particular, without the pauses denoted by commas. The phenomenon is common on the internet, where people seem to often forget that a keyboard has keys for periods and commas. In that respect, people might also associate punctuation-bereft sentences with those inexperienced with computers, adding another possible source for amusement. It's also used to suggest a silly point of view in an enthusiastic-but-not-too-bright manner, often with All Caps (another sign of being unfamiliar with computers): HEY YOU GUYS THIS IS THE BEST PAGE ON THE WIKI Compare Wanton Cruelty to the Common Comma and The No Punctuation Period , where the poor grammar is a source of annoyance rather than amusement. Contrast Nothing Is Scarier , where the lack of something invokes fear rather than humour. See Motor Mouth for dialogue equivalents.

They often, but not always, take the form of a Police Procedural . The Hero is often an Anti-Hero ; typically a Defective Detective . Many of the series have been adapted to film, and then remade for other audiences. The genre arguably originated with Per Wahlöö and Maj Sjöwall's Martin Beck </ novels, which introduced many of the concepts and conventions, such as deconstructing the clean surface of the welfare state, dealing with older, down on their luck cops and social commentary and social realism, set in deserted sceneries in an an unforgiving climate . However, it truly took off in the English-speaking world with the English publication of Henning Mankell's novels, most of which feature the depressive Inspector Kurt Wallander Compare with Giallo and Heroic Bloodshed , for other region specific crime thrillers

No matter what Bob does, no matter how noble his intentions,

he just cannot get the respect of his peers. It's not that Bob deserves to be unhappy. He's a genuinely Nice Guy who in some other story would be loved and respected. But since he's in a comedy ensemble, his role is to suffer to keep the humor rolling, even if the audience finds him sympathetic While the "I don't get no respect" line is indelibly associated with Rodney Dangerfield , the characters he plays are not</ examples of No Respect Guy (those are the Unsympathetic Comedy Protagonist). Also note that the other characters have to treat Bob unfairly for him to be playing this trope. If he's as stupid as everyone else, he's just a Butt-Monkey Subtrope of Only Sane Man . If the character themselves complain about this, it's Dude, Where's My Respect? See also Memetic Loser , the Out-of-Universe version

Despite the prominence of Only a Flesh Wound in media, there are some things that even writers would concede as pretty fatal. For example, if a character gets shot in the head or stabbed in the chest, they're pretty much done for, hopefully with enough time to give a Final Speech before their death. Unless of course, they're a Determinator or just extremely tough . For them, that little hole where their heart was supposed to be is just another chance to show off how badass they are. Even that is Only a Flesh Wound , and the guy that injured them, likely to be pissing in his pants right now , is about to receive a world of hurt. When this occurs in a climactic battle, you often see a Heroic Second Wind sequence. Killing the character after their display of Heroic Willpower for extra dramatic effect, or to show that the wounds were fatal after all, just not right away , is optional. Note that this applies only to things that would have killed a normal character even by Hollywood rules. If it is "merely" something like severe bleeding from the shoulder or leg, that is Only a Flesh Wound . Surprisingly, this is actually a case of Truth in Television . There are many real-life examples of people who had things rammed through their chests and heads and still lived due to the foreign material miraculously missing vital organs. This means there is a fine line between this and mere aversion of Instant Death Bullet . However, it is far more common in fiction than in Real Life and all of them were left incapacitated or unable to move, so Don't Try This at Home . May overlap with I Can Still Fight! . Tends to go with Rasputinian Death if the character dies by the end of it. Compare Made of Iron , when the character should have been killed by what's been done to him but has only suffered superficial injuries. Contrast Not Too Dead to Save the Day , where the character actually is</ dead, but somehow still animate enough to kick ass. A frequent reason for villains to ask heroes Why Won't You Die?

It has always been a staple of stories to include a bit of romance. Stories are also generally fond of tying up the story so everything is neat at the end, except when they don't. Point A plus point B put together means that any romance set up in the story will generally be resolved one way or another with characters either hooking up, breaking apart, dying or just walking away from the situation entirely But sometimes it doesn't work out like that. Sometimes the story sets up a romantic arc that never quite seems to get wrapped up completely . There can be several reasons for this, of which the most well known is not wanting to upset the status quo . Sometimes the author just wants to leave things open ended, or the author feels that resolving the romance would in some fundamental way work against the moral of the story they're

trying to tell. Or perhaps, the author would prefer to merely hint that the relationship may be forming. The common point between all of these is that the romantic plot lines were temptingly laid out but never followed to their absolute confirmed conclusion Thus, there is No Romantic Resolution Super-Trope of Maybe Ever After , which is specifically for examples that don't completely ignore </ the romantic plot thread in the end, but instead give it a pseudo-resolution in the form of an ambiguous implication that they might</ get together. Contrast Marry Them All , where the romance is resolved but without choosing a single winner. Compare Did Not Get the Girl

It seems quite common in fantasy worlds to have an arctic or temperate climate in the northern hemisphere, and a tropical climate in the southern hemisphere, i.e., a cold north and a hot south In reality, it doesn't quite work this way. You have a cold north... and a cold south. The only "hot" part is in the middle. This representation probably comes from the fact that a majority of the world's population lives in the Northern Hemisphere, where this trope seems true This is Older Than Dirt : Aristotle knew the world was round, and assumed that the south pole was just as cold as the north pole, but he believed the lands near the equator were so hot that they were impassable</ . To be fair, his reference for "lands near the equator" was the Sahara Desert The idea of the Grim Up North and The Savage South are intimately linked to this trope See also: Fantasy World Map , Patchwork Map

A list with media originating in Norway .

So you have your Cool Plane and your Cool Ship , but somehow, they're still not cool</ enough, truly not worthy of such a badass Ace Pilot as yourself. You know what would help? Let's paint a freaking shark face </ on the nose. That</ will get the desired reaction from your enemies. Plus, it'll look great at airshows! The Plane Spotters love this kind of thing! Typically, you will see five varieties of this: If on the nose, expect something akin to the classic "Shark nose" made famous during World War II . If on the tail, expect distinctive (or even flashy) designs intended to easily identify the plane's unit. In Real Life , this trope has generally become much more subdued due to a combination of PR and practicality. Flashy artwork tended to clash with specially-designed camouflage patterns designed to help conceal the plane in combat, making such artwork Awesome, but Impractical . Even the traditionally applied roundel insignia, such as the RAF's bullseye had to be replaced with subdued monochrome variants. A typical workaround with those limitations is to put the artwork in a normally-concealed place, like the inside of the wheel wells, or to simply draw it in less contrasting colors. On the other hand, nose art can be an immense morale boost. The nose art personifies and antropomorphizes the aircraft, creating a bond between the inanimate airplane and its pilot (and ground crew). Even in air forces where strict discipline was stressed, some</ form of nose art was always tolerated. Since Tropes Are Flexible , this applies to other vehicles or equipment as well, as long as it fits the spirit of the trope. Compare Itasha , which involves flashy (and nerdy</) paintjobs applied to cars. If the ammunition</ has nose art on it, then it is a Marked Bullet . Can overlap with Ace Custom ,

which is when the vehicle's design</, rather than it's decoration, is unique, often to give a particularly important hero (or villain) particular advantages. Nose art may display the ship or plane's name . This is not </ for examples of face painting, tattoos, or artwork inspired by the human nose. Truth in Television .

There are No Seat Belts on the Cool Starship (when there are even seats</), particularly not on The Bridge . Whenever the ship is hit by Energy Weapons , even if the Deflector Shields hold, everyone on board will be flung about by the Screen Shake . Either the designers assumed that Space Is an Ocean , or everyone has a standing battle station Star Trek: The Motion Picture </ did a Lampshade Hanging on this, giving The Captain a chair whose arms folded down to function as a seat belt. Kirk wound up being tossed around anyway despite this. Star Trek III: The Search for Spock </ also had an impressive sequence of the bridge crew aboard the Excelsior buckling up in similar fashion before activating the transwarp drive — which instantly broke down The lack of seat belts is part of No OSHA Compliance (as well as no common sense)

For whatever reason, some characters can ignore another character's powers, be it offensive or defensive. They might be immune to every kind of magic , or their abilities are " too powerful " to be resisted but whatever the case, other characters' powers don't work on them and their own powers are not impeded in the least. If heroes attempt to use The Worf Barrage , they'll step out of the Smoke Shield and casually dust themselves off. When the Barrier Warrior tries to block their attacks with a Beehive Barrier , they'll break it into hexagons and knock them out. It can also take the form of a wrestler using their ultimate move and eliciting little more than a raised eyebrow from their opponent. They aren't canceling their opponent's powers (not activelyThe more passive/effortless it is, the better it would look), and they often aren't explicitly stated to be immune or resistant beforehand. They're just that good. It's almost as if it were a make believe children's game where one of the kids refuses to "play by the rules" and insists they're invincible and immune to their playmate's imaginary powers. That's impossible... Right? Depending on execution, this can be a terrifying reminder of exactly why they're called the BIG Bad , or a very groanworthy way of adding Fake Difficulty for a hero. If a villain has benefited from No Sell for the first four acts, by the time the hero masters his powers/confidence in the fifth, it's likely that he'll be the one using No Sell along with a Super Mode or Heroic Resolve . The trope's name is a term used in Professional Wrestling circles. In all types of acting, "selling" means an actor reacts as if he had been hit hard when the attack didn't make contact or was harmlessly light. Professional wrestling refers to it as a "no-sell" when the wrestler that was struck doesn't</ react to the hit (i.e. he just stands there, as if his opponent were punching a brick wall). Originally, this was usually a case of the wrestler taking the hit just being a dick, and was highly frowned upon because it was seen as undermining Kayfabe . But it also came to be used as a way to demonstrate that a wrestler is just that tough. Some wrestlers use no-selling as their main schtick. Immunities to specific attacks and/or Standard Status Effects are almost always present in Tabletop Games and are the main purpose of Damage Typing . As a game model grows, it's more and more likely to get into Lensman Arms Race of effects, immunities and immunity-breaching effects. See also The Law of Diminishing Defensive

Effort . A favorite of the Implacable Man and The Juggernaut . The inversion is No Saving Throw . When a video game boss can do this, it is often a Hopeless Boss Fight . An example where the boss can do this at first but a cutscene allows the hero to damage them is a Seemingly Hopeless Boss Fight . Attack Its Weak Point is where the boss no-sells everything except to one spot. Compare to:

A character who has no idea where he's going, and tends to get lost easily And not just the regular kind of lost either. They could get lost in a walk-in closet. This person simply has No Sense of Direction A little like the Flying Dutchman , except that this character wanders not because of a curse but because he can't find where he's trying to go. Often becomes one of those Achievements in Ignorance when the character somehow</ arrives at the right place despite their utter inability to get there Also see Directionless Driver , when the character actively refuses navigation assistance. Contrast with The Navigator , someone who's skilled with directions If the individual is lost because of the location itself being impossible to navigate, it may be a form of The Maze , Magical Mystery Doors , or an Eldritch Location

A character with No Sense of Humor is incapable of enjoying jokes, comedy, or humor of any sort. Maybe the character is The Stoic turned Up to Eleven , or an otherworldly being with no notion of comedy , or the victim of a traumatizing accident — whatever it is, this person is unwilling (or unable</) to respond to humor, tell jokes , or even recognize when something is funny at all Some characters with No Sense of Humor maintain their seriousness by sheer force of will. Others might have a conceptual understanding of humor, but simply treat it as an odd curiosity or with a clinical detachment. Oftentimes, such a character is placed in absurd situations to elicit laughs from the audience A common characteristic for The Stoic , The Spock , and the Grande Dame Arguably a Sub-Trope of No Social Skills depending on the culture. May overlap with Evil Has a Bad Sense of Humor and Sarcasm-Blind . Also see Late to the Punchline , Don't Explain the Joke and Cannot Tell a Joke . Dude, Not Funny! is a completely different trope, but in-universe, one can</ be confused for the other depending on the character

Children and those operating on a childlike mental level will often push objects into their own noses and ears, often resulting in a hospital trip. The favored item seems to be crayons, though anything small enough to enter the openings in question can be used. Alternately, shoving items into other people's facial orifices in anger or for experimental purposes also occurs commonly, and is often used as a child-friendly variation on the Ass Shove . Also related to Nose Nuggets , and Orifice Invasion It goes without saying, but this should not be done in real life . Inserting an object into your nose can cause a nosebleed, or worse, a rupture of the delicate nasal membrane. Seriously, don't shove anything into your nose

One of the most obvious ways for writers to create a Dystopian setting is to remove those things which are most pleasurable to us in Real Life . In the same vein, one of the most obvious ways to create a Utopian setting is to remove those things which cause

us the most pain and suffering. How do you really Mind Screw the audience? By removing that which is both our greatest pleasure and</ our greatest pain and suffering. In the design plans for both dystopias and false utopias , sex is the first thing to go This is a predominantly literary trope. The authors using the deconstructed utopia could be trying to show that achieving what at the first glance seems to be a perfect society necessarily leads to loss of humanity of its members In settings 20 Minutes into the Future , sex can be outlawed entirely, while chemical castration drugs already exist to abolish sexual desire; humans would reproduce by growing embryos in People Jars (see Uterine Replicator). Some Transhumanist dystopias can also use genetic engineering to modify humanity as incapable of sexual desire The hero, who decides that My Species Doth Protest Too Much , is most likely to discover both What Is This Thing You Call "Love"? and Death by Sex . This is the unstated reason why writers have these societies use drugs to suppress sexual urges in the populace, rather than surgery : drugs, unlike sterilization, can wear off Not to be confused with the horrible song of the same name from the audition round of American Idol </ Season 7 A type of Dystopian Edict . When this affects only a few individuals, it's Can't Have Sex, Ever . When this is merely an aspect of the show's writing, it's No Hugging, No Kissing . The opposite is Free-Love Future

Bob wants a soda/candy bar/whatever from a vending machine. He puts the dollar into the machine, it ejects the bill. He puts it back in, the machine ejects it again. Bob takes the bill out, smooths out the wrinkles, puts it back in. The machine makes a "Ka-ching!" noise, Bob is thrilled The machine ejects the bill again Eventually, Bob is ironing out the dollar on an ironing board he just pulled out of Hammerspace trying to get the machine to accept it And it still</ won't Maybe he'll try to use coins instead. They end up in the coin return. And don't even ask about what happens if he tries the credit card reader Commonly Played for Laughs Compare Vengeful Vending Machine Truth in Television , since vending machines do tend to be quite touchy at times Has nothing to do with No Export for You . Unless the snack you're trying to get is not officially sold in your country

For some reason, the character is mostly ignorant of and often confused by common social conventions and behaviors. They usually grasp enough to minimally function around other people most of the time, but any circumstances outside of their limited experience fluster, puzzle, or (at worst) upset or enrage them. Someone with no social skills is not necessarily stupid</ — just unfamiliar with how human beings act around each other. Consequently, they will tend to be blunt, straightforward, and Brutally Honest . They will expect everyone else to be totally honest, too. From a writing point of view they are an asset: they say things that everyone is thinking but no one would dare say out loud. One background that can lead to this trope is to be Raised by Wolves — growing up with animal parents. They may be an intellectual (from a nerd, up to an Absent-Minded Professor) who thinks more about their favorite subject than interacting with people. Alternatively, they may have had an isolated or abusive childhood or Sacrificed Basic Skill for Awesome Training . Or all three. They may be bamboozled by the opposite sex and ask What Is This Thing You Call "Love"? . Alternately, they may have had social skills in the past, but after being away

on The Quest or some other mission for an extended time, may find themselves unable to reintegrate due to being a Shell-Shocked Veteran or a Stranger in a Familiar Land . Quite often a point is made of stating that this character is very intelligent or "learns fast" to make sure the audience doesn't just write them off as dense and to justify characters trying to help them adjust, or as an excuse for why they've adjusted as well as they did. If done poorly, either of these versions of intelligence can become an Informed Ability . An extreme form of Fish out of Water , milder cases may result in Cloud Cuckoo Lander , Creepy Child , Innocent Fanservice Girl or No Sense of Humor . Homeschooled Kids are usually portrayed this way. If they stay this way, they may become The Hermit , The Shut-In , or Hikikomori . Related to: Friendless Background and I Just Want to Have Friends when the character isn't happy about this situation. In Real Life , people with and fit this trope. It's a symptom of certain forms of autism , including Asperger Syndrome ; a differently wired mind can make it hard to grasp neurotypical social cues, which can give the unfortunate perception that Loners Are Freaks Though it should be noted that this goes both ways - neurotypical individuals have difficulty interpreting autistic social cues as well, and . This is called . . Media is aware of this but tends to exaggerate its prevalence and intensity. A mild form is also common in people involved with academia. That said, No Real Life Examples, Please! Compare Not Good with People , where a character has more of an affinity for non-human lifeforms. Also compare Socially Awkward Hero . Contrast with The Social Expert .

Alice and Bob are friends, or Bob has a crush on Alice. They go on a date and kiss, and Alice finds that she does not feel anything for Bob, as much as she tries. He is a great guy, but that special something is just not there This tends to come up with Test Kiss but can happen in any situation where two people try out a relationship but find they have no chemistry. This is often the fate of the Dogged Nice Guy , and always the fate of the Unlucky Childhood Friend and the Romantic Runner-Up . It will also happen if they are Better as Friends or Platonic Life-Partners A more explicit version of this trope is when someone is unhappy in a current relationship, and we see them having unfulfilling sex or no sex. Kisses with the soon-to-be-dumped significant other are perfunctory and short It is only No Sparks if the character in question has never</ felt a true spark towards his or her attempted significant other. If there used to be chemistry but it's gone, that's Dead Sparks This trope sometimes occurs in Romantic Comedy during the sad period when the hero and heroine are estranged. One or both of them may try to date someone else, but it does not work because there are No Sparks. This is taken as an indication that the lost guy or girl is The One and should be won back at any cost Sometimes No Sparks happens when the wrong guy comes first . The lack of sparks discredits the bad relationship, often retrospectively This can be a method of Cleaning Up Romantic Loose Ends . Or creating them Related Tropes: Better as Friends , Electric Love , Platonic Life-Partners , Like Brother and Sister , Romantic Runner-Up . See also Couple Bomb , for a pairing in real life that's a dud on screen

There is a tendency for some adults and some teenagers to see

newer material in a medium (be it music, film, animation or comic books) as inferior to the older classics that they knew in their youth There are many causes for this. First, people's tastes are generally based on the art they knew as they grew up, and they continue to inform themselves on this basis. This is especially problematic when Values Dissonance comes into play: Modern day art (be it music, film, television, etc.) may positively depict contemporary societal norms and developments that would have been frowned on when you were growing up. Second, tastes can refine or limit as one ages; what may have seemed brilliant to a child or teen would seem crude or laughable to most adults, but the memories of how great something from one's youth seemed to linger long afterward, making the familiar examples seem better than more or less equivalent modern ones in comparison. Third, change in most art forms comes in waves, rather than developing continuously, and the transition from one wave to another can be jarring and unfamiliar — while the periods between waves tend to be uninspired across the board Another possible important cause of this nostalgia is a consequence of Sturgeon's Law combined with the passage of time: As new material is released, the vast majority will be of mediocre or worse quality, but over time, a powerful selection pressure causes all but the best material (and in some infamous cases, the worst) to be rapidly forgotten, leaving an increasingly inaccurate impression of the overall quality of the genre over time. This is known as "the nostalgia filter", and can be easily demonstrated by a careful review of the period works that are not</ remembered today. The distance of time also compresses the memories of past eras, causing the best work to seem more continuous than it was, whereas "new" is a continually moving frontier: between this memory compression and the selective memories of "the good stuff", the past of the genre is remembered as a time when "it all was good" The most impressionable time is during pre-adolescent, adolescent, and teenage years (with the absolute latest being the twentysomething years). These are the years where one is young and undistracted (or less distracted in the case of twentysomethings) by the full responsibilities of adulthood and the burdens of getting older. For boys, this may also be the time before they discovered girls or sex. Apart from schoolwork, they simply could afford time to absorb the pop culture or cult genre of the time, be it film, music, video games, or TV shows, and give it more attention, allowing it to ingrain itself on the senses, thus influencing one's tastes for the rest of their life One final possible reason: most developers/authors/artists/musicians/etc. create whatever is popular at that day and age. This means that what was popular last year isn't being produced in the same density. If a person's preference is for something that is out of fashion right now, they may have little choice besides 'hang onto the older version' or 'give up on it completely' Of course, this is certainly not to imply that newer is automatically better or that the Nostalgia Filter applies to every single case; just because a person prefers an older work to more modern things doesn't mean they only like it because of nostalgia. Sometimes the older work is</ better, or at least has its own appeal that the present things don't — even beyond "Charm", which is often thrown around to describe stuff mostly to just mean "It's nostalgic" Sam Viviano, art director of MAD </, has a saying which defines the Nostalgia Filter: "MAD</ was at its best whenever you first started reading it." A corollary to that is that, if you didn't like MAD</, it was at its best shortly

before</ you started reading it You'll notice that this trope sometimes overlaps with the Periphery Hatedom . Almost always, when people complain about how new stuff sucks, they bring up examples of things which were marketed towards the youth of their own generation as examples of "good" or even "classic" works in the genre. Never mind that 20 years ago, when it was being marketed towards them, many of the adults back then were saying the exact same thing</ we are today. It's a neverending cycle. This trope also frequently overlaps with Future Loser , where the individual (consciously or not) feels his own life</ was better in those days than it is now It most importantly must be mentioned that not every adult uncontrollably succumbs to this.</ While adults abusing the Nostalgia Filter has become a bit of a cliché (particularly in media aimed at teens and/or preteens), there are many</ Real Life adults (of various ages) who enjoy both old and new media in equal measures. This is especially true for those who are socially active and hang around a diverse group of people. How many real people subscribe to it is highly debatable. However, one thing is for certain: Those who abuse it or abuse the concept of it tend to be very vocal about it See also Nothing but Hits , They Don't Make Them Like They Used To , Nostalgia Ain't Like It Used to Be , and Appeal to Tradition . Another reason for this trope is that True Art Is Ancient . Contrast Condemned by History and They Changed It, Now It Sucks! . Disco Dan can be what happens when someone puts the Filter on and refuses to take it off to the extent that they act like they're still living in their favourite time period Please list examples of Nostalgia Filters worn in works . Pretty much any genre or form is subjected to this in Real Life , so such examples aren't really necessary. Plus, such examples are very prone to age stereotyping , which we don't want on this page

What do Charlie Chaplin , Buster Keaton , Harold Lloyd , and Jackie Chan all have in common? Answer: They performed all their own stunts. There are a few flavors to this. The actor is</ a stuntperson in their own right</ — in other words, they've got the training and the skill. Quite common in Silent Films , when stunt doubles were almost unknown and No OSHA Compliance was a Real Life fact. See also Stunt Double and Obvious Stunt Double . In-Universe Examples

The tendency for alien civilizations (and sometimes futuristic human civilizations) to be portrayed as having no native analog of contemporary popular culture, even when it would make sense for an advanced planetary or interplanetary civilization to have some kind of mass media. Sometimes this can be due to The Law of Conservation of Detail , but frequently these cultures are exquisitely detailed: the creator of The 'Verse has written a rich, deep, complex culture with its own religions and traditions...but what do people do for fun? In practice, this means that while Klingons have their own culture complete with Proud Warrior Race Space-Jesus and Vulcans have their Proud Scholar Race Space-Socrates , there's no alien equivalent of The Three Stooges </ or Dragon Ball Z </. These rich, detailed cultures, spread over dozens of planets and actively exploring the galaxy, seemingly have no literature that isn't ancient and part of their mythology. They have no television, films, novels, etc.; only epics, myths, legends, sacred scrolls, and ancient tomes. Frequently, the entirety of an alien culture is equated with its religious mythology and traditions, completely excluding the existence of a secular mass media (there being only one religion on the planet

is a problem in and of itself). This leads alien characters to interpret human popular culture along religious lines, for example when G'Kar in Babylon 5 </ asks if Daffy Duck is one of Garibaldi's household gods. If an alien culture is explicitly detailed as being rooted in its theology, extremely isolated, and/or controlled by an authoritarian government (and these are almost always examples of planetary monocultures , sometimes in cultural stasis), this may be justified . Indeed, this can be seen in Real Life in totalitarian states like North Korea and Khmer Rouge-era Cambodia , where the media is dedicated almost entirely to promoting national mythology and propaganda. Perhaps the biggest reason this trope exists is simple practicality. For a writer to explore alien pop culture, they would have to invent brand new genres of entertainment which could be unlike anything on Earth. Even the fiction mainstays—drama, romance, comedy, adventure, and horror—would still rely on social cues and cultural references that would be, well, alien to a viewer from Earth It's a safe bet, for example, that a race with Bizarre Alien Psychology would have a nearly unrecognizable version of Psychological Horror ; If they evolved a fight-or-flight response that makes them reflexively spew acid instead of scream like ours does, for example, then they'd likely have a trope called "Acid Jet Discretion Shot" instead of Scream Discretion Shot . Even here on Earth, what one culture considers entertaining might be seen as boring, trashy, or weird to another. Comedy in particular is extremely</ difficult to translate across cultural lines. Creating all this from scratch would be a daunting task for even the most seasoned showrunners. For this reason, it's much easier to vaguely state that yes, these aliens have their own Jay-Z and Beyoncé , then move on without lingering on the subject. When this trope is in effect, an alien Cultural Rebel may find that when Klingon scientists get no respect , Earth becomes the general direction of interstellar brain-drain . NOTE that this trope, common to Space Opera films and television, is usually remedied in Expanded Universe material like novels and comics which attempt to show more realistically diverse alien cultures. Also note that while this trope also covers futuristic human societies, it should not overlap with Outgrown Such Silly Superstitions , which is a separate trope. Please limit examples to aversions, subversions, and instances in which the trope is sufficiently played around with to warrant mention . Finally, note that instances in which aliens assimilate popular culture from Earth are not true aversions, but this trope being in effect is what makes Earth pop culture so irresistible to E.T. in those cases. Sub-Trope of Aliens Never Invented the Wheel .

As the saying goes, there's "no such thing as bad publicity". The reasoning is that even if people are trying to raise a big stink about how some work is immoral, incorrect, offensive, or corrupting the youth of the world, they're just giving it attention, increasing how well-known it is, arousing people's natural curiosity as to why this thing's so offensive, and making the work into Forbidden Fruit In real life, there is</ always such a thing as bad publicity: For example, if it turns out a car model or another product has a flaw that endangers the lives of everyone who uses them, and this is highly publicized, the amount of people buying it is going to steeply drop. A little Never Live It Down can devastate anyone's life forever. This trope refers to something that gains</ popularity because Moral Guardians draw attention to it. Strangely, the Moral Guardians never seem to learn from the

fact that they're doing a good job of making their objects of hate more popular , thus, free advertising </. On the Internet, it is usually those bad aspects of a product which the producer can never live down that undergo discussion and Memetic Mutation , and thus extra advertising , notoriety and more misconceptions spreading around Whether or not the author of the work purposely</ made it controversial in order to invoke this phenomenon is debatable. Edgy content always has a market, for example, pornography existed in the Victorian era but crossing the streams, i.e. bringing subversive elements into the mainstream was a huge taboo. Works are Rated M for Money when they target their expected audience and don't cross the line. However, this can backfire if you step on too many toes and often it doesn't mean that the work has more to recommend than the scandal. Sure offending some Moral Guardians draws attention to a work but thanks to Society Marches On and "Seinfeld" Is Unfunny , expect later people to scratch their heads and wonder what the fuss was about. Even Moral Guardians will eventually get bored attacking the same thing over and over. "Oh, look, [insert creator here</] has released another extremely offensive and totally controversial [insert media type here</]. How shocking </." This trope isn't just limited to Moral Guardians. Hatedoms have had this happen. As mentioned with the Control Alt Delete theorem later on the page, because people can be so</ obsessed with works they claim to hate, people often find out about it from the hatedom and either experience Critical Backlash or even if they don't like it... still</ gave it sales or views. Similar to how people find out about something from the Fandom Also, remember always that controversy can and does have consequences. No matter what your intentions were when you made a work, poor reception and bad publicity affect the context in which people see it, and your work will not be seen how you intend it but instead become a political or topical football. It can directly affect sales via smear campaign, boycotts and distributors not exhibiting your work because of Guilt by Association . In worst cases, controversy has killed careers by making it impossible for you to find people to see your next work, making you unemployable and so on. Also, don't expect critics to stand by you, they may see you as self-indulgent and arrogant and pan it, and the people who spend money on it are going to let others know that it's not worth it. Books, DVDs, or video games can still be returned, ticket refunds can still be given partway through a movie or show, radios can still be turned off, etc. Whether it's Worth It or not, depends on how much you believe Viewers Are Geniuses and your faith in Doing It for the Art Compare Attention Whore , Controversy-Proof Image , Fame Through Infamy , Forbidden Fruit , Rated M for Money , Sex Sells , Overshadowed by Controversy , The Man Is Sticking It to the Man . Content Warnings can be both a cause and effect</ of this. For when this happens but without the Moral Guardians, see Streisand Effect . See Bile Fascination for when the same thing happens due to rumors of the bad quality</ of a work. When there is an ostensible moral against something that looks appealing anyway, then it's Do Not Do This Cool Thing . When you have someone that thrives off this trope and act like they are better because of it, you got Small Name, Big Ego . Contrast with Audience-Alienating Premise . The Eight Deadly Words are what happens when even this trope can't be invoked A form of Insult Backfire . In some cases, it may also be a Sleeper Hit . Springtime for Hitler is when someone is trying</ to be hurt by bad publicity but fails for this reason Wikipedia has an article on this philosophy, going by the French

phrase </ (success from scandal)

Life can be hard sometimes. You get up early in the morning, trudge to work, deal with loads of people who have varying opinions about you, and finally go home at the end of the day. But if someone takes out their frustrations by, say, sending you flying over the cubicles with a Megaton Punch , at least you can always go to Human Resources, tell them what happened, and have the guilty party out the door, facing a lawsuit and maybe in police custody by the end of the day. Right? Right? If you're living in a television show, probably not, because in fiction there is no such thing as H.R. Whether it's the Cowboy Cop decking a paper-pushing Desk Jockey who orders him to turn in his badge , the crazy boss who's a firm believer in George Jetson Job Security , or the office's resident Psychopathic Manchild mail clerk, it seems that Violence Really Is the Answer . If the victim's a badass hero, the Jerkass co-worker who started the fight's probably going to quickly find himself taking a dive. If it's the Anti-Hero doing the punching, expect his target, probably an Obstructive Bureaucrat , to also be a Sissy Villain . Just don't expect the situation to escalate into meetings with managers and termination notices, and certainly don't expect anyone to get arrested on assault charges. This trope stems from a certain amount of Truth in Television , at least historically: a "Human Resources" department is a fairly recent concept, and there are plenty of historical periods when people did settle most of their disputes with fistfights or worse . It's also somewhat justifiable in settings where there's no legal system for people to turn to: fantasy heroes, hardened criminals and After the End survivors probably aren't in a position to file grievances. But if it's a modern, everyday setting, and otherwise respectable people are routinely pounding each other flat in Curb Stomp Battles , it's simply because there's no such thing as HR. In dramatic storylines, this is used primarily to keep the character conflict and development building without having to complicate things or slow down the plot by bringing in the outside world, while in action/adventure and comedies, it's more likely to simply be all-out Rule of Cool and Rule of Funny at work. If there is</ an HR Department, they will almost always be horrible, horrible people . See also Fiction Is Not Fair , George Jetson Job Security , and Ultimate Job Security . Compare with No OSHA Compliance and contrast with Can't Get Away with Nuthin' . Not to be confused with Human Resources in any way . See There Are No Therapists for another industry whose absence stops people solving their problems like grown-ups.

Sufficiently Advanced Aliens are very common in sci-fi, and they will often claim to be actual deities. In some cases, they'll be actual, historically worshipped deities like Apollo or Thor Unless under some sort of mind control or from a "primitive" culture, the heroes will never treat a Sufficiently Advanced Alien as a deity, or even consider the possibility that they might just be right. Some Earthlings might fall for the "alien", but they will be shown to be weak-minded to be taken in by these "gods" For something like the Puppeteer Parasite whose "miracles" are born from technological prowess , this is reasonable enough, but for beings like the Q or the Ori or various Eldritch Abominations in fiction, who have immense, unexplainable powers that genuinely seem god-like in nature, it stretches (dis)belief. The only reason

they should be considered "just" powerful aliens seems to be " they came from Outer Space ", which doesn't really make all that much sense if you think about it - if there is a deity who created everything, and you could physically meet them, why should a divine encounter only happen on Earth? Other views on why such entities are considered aliens instead is also due to the prevalence of Clarke's Third Law and its corollaries in science fiction and real life science, and because the words "god" and "magic" brings up connotations of worship and superstition An interesting irony in this is that Heaven is generally regarded as being in, or above, the sky, and that most cultures tend to look upward when thinking about their deity or deities There is a strong degree of Arbitrary Skepticism in many examples of the trope, particularly in cases where characters automatically disbelieve the self-proclaimed deity because it runs against their view of what God is or should be. Take, for example, Star Trek V</, where "God" tells our protagonists that He "needs a ship," and is met with skepticism on the grounds that God wouldn't need a starship. Sure, the Abrahamic God would have no need for a starship, but Helios had a chariot and Ra had a barge (and The Bible does</ describe God as possessing a chariot made of angels)... In short, the entity is disbelieved because it pretends to be specifically the Abrahamic (or at least Christian) God. one suspects our heroes' reaction would have been very different See also Sufficiently Advanced Alien , Arbitrary Skepticism , and Ancient Astronauts . Not to be confused with If Jesus, Then Aliens which in some ways is almost the reverse. No Such Thing as Wizard Jesus is how Jesus will continue to be worshiped and not suspected of being anything other than the son of God even if an alien superhero named Josys from the planet Beaven is running around doing everything he can do and more Has nothing to do with Space Jews Ironically, there technically is</ a however he is a musician and not exactly the Jesus you were probably thinking of

Another uncomfortable topic to bring up in a religious discussion is that modern humanity is already sufficiently advanced to do things that would have seemed miraculous in the past, or at least, we have rudimentary technologies that demonstrate the possibility of that with a certain amount of development. In the 1800s finding naturalistic explanations of miracles was actually regarded as an * affirmation of the Christian faith specifically, though the practice rapidly fell into disfavor again once churches realized that it sort of negated the need for a creator deity altogether.

Okay, so you have a setting where various people in the modern day have all these amazing powers. Whether they're born as mutants, mages, wizards, or something else, they're able to perform miraculous feats that warp reality itself. Hrm, weren't there some other historical people who performed miraculous feats? People who ended up being worshipped? If you have these wizards running around turning lead into gold, who is to say that in this universe, Jesus wasn't just a cultist wizard conning people over by turning water into wine? Nope, Jesus was never a wizard. This will </ be brought up. You might get some talk about how, oh, the Greek Gods were really aliens or something, but if a character ever brings up a modern faith that people still practice widely—Christianity, Judaism, Buddhism, or Islam — nobody will ever go, "Say, these people we're fighting can resurrect themselves. I wonder if that means

Jesus was..." While Beethoven may have been an alien spy , Jesus never was. Often one of the things that comes up during Fridge Logic , especially if say, there's a Christmas Episode or chapter during which the main characters, who have every ability Jesus ever displayed and more, still celebrate Christmas as if it's a big deal, when Larry has walked on water, can produce food from rocks, and has already come back from the dead several times. And despite the trope name, this refers to all religious figures and prophets, e.g. Krishna, Moses, and Mohammed. This trope is for when half of the reason you're part of a religion is because of records of miracles performed by gods, prophets, or messiahs—a world where everyone is running around with superpowers and constantly coming back from death should dilute that, or at least be addressed in some way. There is a pretty good reason why this trope is so prevalent. If you try to subvert it, and say that Jesus was, in fact, a wizard / mutant / shaman / psychic / alien , people WILL be offended (and if you say anything bad about L. Ron , you might get sued). It doesn't matter how perfect and kind and wonderful you might portray him as, there will be always the implication that he was either delusional, or a charlatan, because he went on to found a religion that portrays him as the son of God in a Verse where abilities such as his are rather common. It's pretty hard to Hand Wave that away without making him or the church look bad. Rather than take a side, many works will walk the line with a " Maybe Miracle, Maybe Magic " answer. It should also be noted that many religious figures used their powers not as justification, but as advertisement. "Yes, I just turned water into wine, but while I have your attention why don't you stay and listen to what you can do about your soul?" If the religions in the universe have decided to worship these figures for their teachings instead of supernatural claims or whatever powers or origins they might have had, that's fine. The problem is that it never plays out that way . It instead becomes a cosmic version of the Elephant in the Living Room . See also: No Such Thing as Space Jesus . That one is about how any powerful being that claims to be a god in Science Fiction clearly isn't and anyone who treats it as such is a gullible fool, whereas this one is that religious figures still get treated the same even if their magic powers are nothing special in the setting. Contrast Religion Is Magic . See also Jesus Was Way Cool .

In a Detective Drama , any time a piece of dialogue comes along which is off-the-cuff, not followed up and unrelated to everything, you can tell it's going to be very important. If a suspect turns up late and says "Sorry I'm late, my car was stolen yesterday", the alleged car theft will be significant (for example, the thief is the true culprit). If the detective remarks that the suspect has a nice keychain and the suspect says "Yeah, it's from my old fraternity," the insignia on the keychain will turn up later to reveal that the suspect and victim were in college together. Basically this happens whenever the writer can't find a neat way of dropping an important clue into an existing conversation See also Chekhov's Gun

Two characters who go out together, but, by insistence, aren't "going out". Comes in a few flavors: Both characters unconvincingly insist to everyone , including each other, it's not really a date. Regardless of whether or not it actually is a date, this is always a form of Ship Tease . Compare Will They or Won't They? , She Is Not My

Girlfriend , Like Brother and Sister .

A horror trope which has become something of a Dead Horse Trope , as it's now almost always played for comedy. It involves a character seeing an ugly face and begin pulling at it, on the assumption that it's a mask. Of course, it's actually someone's face and the puller will typically be Horror Struck . Sometimes a purely comedic variation will occur with wigs if the joke is that a woman looks like a man . Also closely related to "I'm not pregnant, I'm just obese" jokes. Compare with Your Costume Needs Work , For Halloween, I Am Going as Myself , Mistaken for Fake Hair and Not a Zombie . Can be a result of the monster being Mistaken for an Imposter .

Usually during infomercials, the salesperson will mention that their item is "Not Available in Stores!" The intended implication is that this product is too exclusive to be sold just anywhere, but it often makes the sellers look so cheap that no respectable retailer will ever deal with them. It can also fool the consumer (though this hardly works) into believing the product being sold will never</ appear in a store, pressuring them to call right now and buy the product This claim is usually incorrect. There is a chain of stores called "As Seen on TV!" that specializes in selling these exact items. Furthermore, most department stores have a small section devoted to them as well. You'll notice that the items are never placed in the department relevant to them, as if the store doesn't want shoppers to mistake a knife that " Never Needs Sharpening " for legitimate cutlery A common tactic in many infomercials or advertisements is to state instead that "this offer is not available in stores," (so call now, Operators Are Standing By) usually in combination with some form of But Wait, There's More! That way, the product itself can be found in any number of stores, but the statement is still technically true So why do they advertise this way? Because they get more money if you order directly from them, eliminating the middleman. The maker of a new product might even desperately need this money for seed capital to get the product into</ stores Compare and contrast Direct to Video

A common cop-out in anime, manga and soap operas when a series is based on Brother–Sister Incest , is to reveal towards the end, or explicitly state in the opening monologue, that they're Not Blood Siblings. Usually, for all intents and purposes, everyone acts like they are. Alternatively, it can be used to explain why everyone's okay with the relationship This can also be foreshadowing for such a relationship, as many shows usually won't make a big deal about adopted children unless there's a Changeling Fantasy involved Sometimes this is a result of Bowdlerization , Media Watchdogs , and Executive Meddling , in that in the original series they were blood relations. It also comes up in Moe , for fans who, while probably not having siblings, still feel a bit too squicky about it. First Girl Wins can sometimes explain the prevalence of this trope This trope is often related (but not by blood , of course) to Flirty Stepsiblings and Little Sister Heroine As for reality, it depends. These tropes tend to gross out anyone who has been raised alongside their stepsiblings. If they met as teens or later, though, it can seem unfair that their parents got together before they did In older works, when sex shouldn't even

be hinted at in family-friendly stories, main child characters are usually conveniently adopted orphans. That way, the main male and female character don't have to be accounted as their actual parents. This situation does lead to a lot of confusion with readers. A boy and a girl are adopted by a family, therefore appear to be brother and sister, but still have a romance thing going on and jealousy when one of them has success with another love interest. Since the situation isn't always explained, this often leads to disturbing, confusing ideas with the readers Therefore, in such cases, the story adaptations usually omitted the siblings relationship and the characters almost never treat each other as Like Brother and Sister , so as not to cause unpleasant associations in more conservative times. Not to mention the fact that thanks to the Values Dissonance in the Middle Ages and the Renaissance, even the relationship between non-native siblings or foster parents was considered a real incest for religious and moral reasons. In that case, this trope will be an anachronism within the story, if it takes place in a similar setting Quite often it's just a case of cultural misunderstanding. In Japanese the words for "big brother" (兄さん — nii-san</) and "big sister" (姉さん — nee-san</) are very commonly used in casual speech to address young people in general, too, and it's not rare that little kids and teenagers will use them to address older but still young friends (or love interests). However, sometimes clarification is needed if the context is not clear enough about it For when "siblings" are by choice, instead of blood, that's Family of Choice . Also, do not forget that the ever-growing number of imouto-titles has practically translated this trope into the category Like You Would Really Do It and Captain Obvious Reveal , so even its well-founded use can very quickly get into Cliché Storm . Not Blood Siblings is to Brother–Sister Incest as Faux Interracial Relationship is to Maligned Mixed Marriage

Rules are made to be broken, and that goes double for these</ rules. Basically, rules are given which are less instructions for keeping order and safety, and more a Secret Test of Sneakiness. It's understood by all parties that the rule is not to be followed, and the only question is whether you can break it without getting caught. It is thus a common way to "win" an Unwinnable Training Simulation (which may or may not be the point). Or maybe it's just one person who thinks that way. After all, even if the rules are</ supposed to be followed, you can't be penalized for breaking them if nobody knows you did, right? This sometimes takes the form of an admonishment not to cheat on an upcoming game/test/whatever, which comes so out-of-the-blue that it can only be interpreted as an encouragement</ to cheat. Compare Could Say It, But... . and Stepping Out for a Quick Cup of Coffee . Take it further and you realize Real Life history is Written by the Winners . Compare Can't You Read the Sign? and Do Wrong, Right . Sometimes the villain in What You Are in the Dark , or the foolhardly fellow teenager in Youth Is Wasted on the Dumb urges this trope to encourage something actually wrong. An invoked form of Screw the Rules, They're Not Real! , in that the rules are set up to encourage people to break them skillfully</ . Note that regardless of what The Casanova might say about the other kind of "cheating", it's nothing to do with this trope.

The character in question is disabled, sick , or otherwise prevented from living a normal life. They are however lucky enough to live in a world advanced enough to feature virtual reality games, where their limits are nullified . Moreover, such a person tends to fare even better than most players, since they usually spend way more time online May be a form of Dark Lord on Life Support . Sub-trope of Throwing Off the Disability . See also Disability-Negating Superpower when the problems of a disability are negated by new powers

The Oxford English dictionary defines technology as </ . Anything that we've created, be it as simple as a sharpened stick to hunt and kill more easily, counts as technology — in fact, a serious argument can be made that a chimp stripping a twig of leaves and using it to fish for termites is using technology, and that technology predates the human species by a very long time In fiction, however, the definition tends to get narrowed down to "inventions created within the last century" or even "anything digital". If you've got an episode where Alice mentions the presence of magic is making technology not work and they've have to do it old-school, don't worry — your slingshot would still work fine, and your clothes won't suddenly disintegrate into dust There is actually a rather large correlation between when</ something was invented and how much</ it'll be considered technology. As an example, consider the Amish : in fiction, they're usually depicted as a group of people who shun all technology and rely on old-fashioned things such as horse-drawn wagons (even though said wagons are technology of a form). Generally, the cut-off is whether it uses electricity: if yes, fictional Amish won't be seen dead using it. In real life , however, many Amish groups are happy using refrigerators and air conditioning; what the Amish use and don't use are more based on the perceived societal impact it has (generally, those that make it too easy to live far away are considered bad technology, as the Amish subscribe heavily to the "everyone under one roof" idea) At times, this trope is justified when the phlebotinum is stated to cause interference with electrical circuits as reason for why tech doesn't work, but then it's inconsistently applied: a car, for example, might or might not work depending on whether the writer knows that modern cars are increasingly drive-by-wire , so when a driver switches gears for example it sends a signal to a computer which then switches gears for you, instead of the gear shift being directly tied to the transmission. Firearms, too, might or might not work depending on whether the writer was using the phlebotinum as an excuse for why nobody is going in guns blazing on the enemies See also Enforced Technology Levels

Also called a "fleabag hotel" or more euphemistically as a "day-use hotel", it's the sleazy motel that rents rooms by the hour. The clerk doesn't ask what for and doesn't want</ to know The No Tell Motel is where philandering affairs and criminal deals take place. Human nature being what it is, that also makes it the site of gruesome unsolved murders. Long story short, if you have something you can drink, smoke, snort, shoot, or fuck but don't have a convenient/affordable place to carry out the activity in question at, you go here to do it Low-lifes on the run, prostitutes turning tricks, and the detectives who want to talk to them,

will all end up here sooner or later See also Smithical Marriage , and Love Hotels for Japan's more glamorous (or cleaner</, at least) equivalent. Detectives usually end up here by Going by the Matchbook . May also be a Hell Hotel

Dear self, I know you may find this hard to believe, but it was actually you who wrote this page. Upon learning of a Government Conspiracy (though it could have very easily been an Ancient Conspiracy), you decided to investigate. Unfortunately for us (remember, I am you from the past), the local Big Bad found out and decided to make you forget everything through Laser-Guided Amnesia , even implanting Fake Memories to throw you off. As he warmed up his Applied Phlebotinum , you quickly scribbled this page on the first piece of available medium you found. It could have been yourself , a piece of paper, the floor, a videotape, or the back of a DNA-tracking device . If you're wondering why you chose a wiki where anyone can get at this note and alter it , well... it was there. As proof that this isn't some sort of elaborate hoax, I'll mention that weird dream you had when you were ten involving the Care Bears , even though that only works if you still have at least some memories left . There, now you know that I am you . Without this piece of evidence, you can't continue your battle against the big unknowing evil. Waking up with this message could be the beginning of a series (if you lived in a TV show, which you don't) or a defining trait of your character. Knowing of the existence of this conspiracy could very well turn you into Agent Mulder , as you will immediately believe it was you that wrote this, even if some people say those who suffer from amnesia have trouble accepting they DID write something . It's like a Memory Gambit , except it's a last ditch effort rather than premeditated as part of a convoluted plan . While you may not even know your own name, this is, for all we care, a Call to Adventure ! Respectfully, Self.

If your show is set after 1930, then at some point a radio will be heard. It will only be playing well-known songs that, with hindsight, are seen as the coolest or most iconic of their era. Never any of the novelty singles, one-hit wonders or any form of teen pop that would have been on genuine radio stations of the period. If a movie marquee is seen, it will be showing a well-known classic of the period. Newspaper headlines will be the stories that everyone remembers, and televisions will always be showing either a famous opening sequence (M * A * S * H </, The Mary Tyler Moore Show </, etc.) or a famous scene (such as the chocolate factory scene from I Love Lucy </). As a corollary, the radio will almost always be playing current</ hits of the period in question, especially if the scene is a flashback set 10 years or more before the main action of the show. How would the audience know the flashback is taking place in 1982 if the people in it are inconsiderate enough to be listening to hits of the '60s or '70s on an oldies station, or of 1987 ? In addition to giving a clear indication as to the time period of a scene, this allows the audience to only be exposed to elements of pop culture that have aged relatively well. After all, if even the most iconic songs of a decade often seem rather dated and silly nowadays — due to changing tastes, Values Dissonance , etc. — then the throwaway hits of a given summer that were promptly forgotten would be rather painful for a modern audience to experience. Unless they are deliberately picked from the worst of the worst. Oldies radio stations in the

real world do the same thing: What you loved when you were 15 is different from what you want to hear on an oldies station when you are 40. To use one common example: many a love song written from a male perspective prior to The '90s now comes across as stalker-ish, if not outright sexist or misogynistic, in its attitude toward women when heard with modern ears. Of course, the above doesn't apply just to period pieces. Vintage films set in their contemporaneous times (especially</ if they're from The '80s or later) will more often than not have a soundtrack consisting of current pop songs for the tie-in merchandising, and in hindsight they will themselves come off as this trope. (Consider the embarrassing VHS description for the 1984 musical Purple Rain This is likely to occur in a "Mister Sandman" Sequence , though in that case the song would likely be playing on the film's soundtrack rather than within the scene itself. A sub-trope of Small Reference Pools . Related to Nostalgia Filter and Popular History . Can overlap with Politically Correct History if the vintage element being shown is popular now</, but was way too avant-garde</ or even offensive in its own era for most people to enjoy it.

Piles of bones composed of... well... nothing but skulls . The rest of the bones vanish without explanation. It doesn't matter whether the victims were killed by ancient death traps, man-eating monsters or barbarian hordes; nothing remains but the skull There are good narrative and practical reasons for this. A human skull is instantly recognizable, making it a powerful symbol of death. Other bones do not carry the same emotive weight; few people could identify a human kneecap on sight, let alone associate it with atrocities It helps too that skulls stack up so neatly. Or perhaps it's the fact that skulls represent a one-to-one ratio of bones to corpses, giving an instant clue on how many lives must have (been) ended to produce this. While a given human has multiple of the majority of other bones (and the most visible exception, the spine, takes up a lot more room per victim). It's also what you're left with when you take heads as trophies and leave the rest on the battlefield Whatever the case, when warlords and writers want to evoke terror, they create gargantuan piles of Nothing But Skulls. And stand on them. It's an old trope , but still effective Skeletons in the Coat Closet is for when skulls and other bones are used as accessories and on clothing. Beware the Skull Base refers to when skulls and skeletal aesthetics contribute to the design of a sinister location, whether it be a natural skull or an artificial one After reading this page, skull will no longer sound like a word

There's a lot to laugh about when a funny joke is told. It could be the wordplay, the delivery, the sheer amount of silly puns being thrown rapid-fire, or all manner of things. Jokes are funny, and are a great way to make people laugh. Sometimes, however, the best comedy is something only the viewer can imagine. For instance, let's say there exists a location called "Big Tit Creek". Sure, you could go into detail, about how the creek was actually named after a large bird of the tit family, but it would be funnier to just let the viewer wonder, "How DID the creek get that name?" As Nothing Is Scarier refers to the concept of leaving the object of fear to the viewer to think about, this is leaving things to the imagination of the viewer when it comes to comedy because nothing you could come up with could be funnier than whatever outlandish scenario they thought up. However, the two could still overlap in Black Comedy . In short, the writer leaves out details, because of Rule of Funny . Compare and contrast with Worse with Context . Related to Don't Explain the Joke

. See also, Take Our Word for It .

Silence isn't always golden . This is a Horror trope where fear isn't induced by a traumatic visual element or by a physical threat, but by the sole lack of event</ . When properly done, it can result in terrifying moments. It does so for one simple reason: the creator refuses to show us what's causing this horror, but we desperately wish to know, so imagination fills in the blanks and our minds provide the content, using what the individual considers scary. It often has to do with where</ the events are happening, generally because said place is inherently scary, but sometimes merely because of the way it is filmed or described. This trope comes in three flavors: Scare chords and cues may be used to reinforce the effect, but it seems to work best when there's no music at all . The camera might slowly close in on the "nothing", either as a character musters the courage to open the door, enter the dark depths, or cowers abjectly at the impenetrable darkness. This trope can be used in combination with several other tropes; Through the Eyes of Madness , Darkness Equals Death , Quieter Than Silence , Leave the Camera Running , Mind Screw , Kill the Lights , and Obscured Special Effects are some examples. Since the space is empty, it may also appear as a part of Space Madness , usually as the second variant. Anything will do as long as the result is scary . Paranoia Fuel is a near-must. In Real Life this trope is why it's terrifying to walk through a familiar dark room by yourself, through the woods or a secluded street at night. This is one horror trope everyone</ is familiar with. It's also a reason why the Silent Treatment can be an especially damaging punishment, both emotionally and sometimes even physically. can result in panic attacks or even visual/auditory hallucinations for some people, as the lack of stimuli makes the subconscious mind "hungry" for input, causing the brain to create its own to fill in the gap. Compare and contrast And I Must Scream , Cat Scare , Creepy Basement , Daylight Horror , Gory Discretion Shot , Jump Scare , Monster Delay , Ultimate Evil , and The Unreveal . One of the counterarguments against leaving nothing to the imagination, and sometimes an argument against Gorn as well. Dead Air can be this for radio. Interestingly, this is probably what makes people afraid of whatever The New Rock & Roll is. Not to be confused with Nothing Exciting Ever Happens Here , Empty Room Psych , or It's Quiet… Too Quiet . Contrast Nothing Is Funnier , where leaving details to the viewer's imagination is used for comedic effect.

One of the surest and swiftest ways to reveal something that you really didn't want to is to say it in front of a parrot or other talking bird. Especially a parrot that you've been trying and failing to teach some clever phrase. Birds have an innate sense of timing and can, when properly motivated , memorize a long and complicated phrase after only hearing it once. Yep, they're as sick as a parrot And don't let the fact that you've never spoken aloud about the issue in question reassure you. Any</ innocuous phrase that you might have said since the start of the episode can and will be used against you by the bird's selective memory quoting it out of context. A clever lawyer may use that to Make the Parrot Testify Naturally a subtrope of Talking Animal . Not to be confused with Parrot Exposition . See also Polly Wants a Microphone . Fowl-Mouthed Parrot is a sister trope for when what you said in

front of the parrot shouldn't be said in polite company

There are many things in life whose existence is desirable, or even essential to the society we live in, but that people generally don't want to live too</ close to. They might be noisy, smelly, polluting, dangerous, or just ugly. However as any SimCity </ player will tell you, not everything can be in the middle of nowhere - for people to have cheap and convenient access to them, they have to be near to civilization. Fair enough. Just... Not In My Backyard, OK? While it might be rather selfish to want the benefits of such amenities while declaring the downsides to not be their problem , it can be justified - there is little to no reward for living nearby, and often the decrease in property values actually punishes the neighbours on top of the lowered quality of life. It's not necessarily hypocritical except in Zero-sum situations where they want the good without the bad . The phenomenon is a major part of many Simulation Games , where the player must balance necessary or lucrative buildings against residents' quality of life. Also known as NIMBY . There is apparently a more extreme version that does believe that everything noisy, smelly, polluting, dangerous or ugly should be built in the middle of nowhere and will oppose projects even if they're built nowhere near them, dubbed "BANANAs" - "Build Absolutely Nothing Anywhere Near Anyone", which is a viable option... in some video games . An often overlooked aspect of NIMBYism is the fear of the unknown. Projects that are dissimilar to those already up and running in the same area have a harder time convincing people. Say for instance a new light rail line is planned. In Germany or France, most people are familiar with light rail lines and have either lived near one in the past or seen one on holidays. In the US, most people don't know the first thing about them and thus fears are naturally bigger and easier to exploit through political ads . Often people cannot possibly comprehend their own or other people's erstwhile opposition once the project is completed, as the benefits become apparent and the downsides turn out to have been exaggerated. Compare to Original Position Fallacy , in which people demand something while assuming they will benefit from it or not be subject to the downsides. For the webcomic of the same name, go here .

A character is on a quest that could potentially decide the fate of the universe... but they don't care about that at all or any of this good/evil stuff, they're only on this quest for a personal reason: revenge , money , repaying a life debt to someone, and so on. It's a common motive for an Anti-Hero , Punch-Clock Hero , Nominal Hero or the Dragon with an Agenda Not the same as It's Personal , where a character who is already in it out of duty or righteousness or whatever is given an additional personal motivation There will often be a moment where the character has an opportunity to leave with what they came for while the rest of their group continues the quest alone. They will either choose to stay for the sake of their comrades or the mission, or actually decide to leave. The latter typically leads to them returning later to reveal that they have grown a heart, often in the form of a conveniently timed last minute rescue See Only in It for the Money when wealth is the main motivation. Often overlaps with Enemy Mine . Contrast The Only Believer , where only a single person associated with a cause truly believes in it, while others are around for more cynical reasons

In a series with a recurring Big Bad , it is sometimes the case that a side-villain or Monster of the Week is introduced to cause havoc and shake things up Of course, since this is a series with a recurring Big Bad, our heroes may feel perfectly justified in going after the usual suspects. This trope refers to such scenes, in which our regular villain is forced to inform the heroes that this installment's Evil Plan is not their doing. This may or may not be believed at first, but after the villain's innocence is established, expect them to curtly dismiss the heroes Traditional Truce Zone requirements mandate that regardless of all the crimes they committed yesterday</, if caught for the wrong thing today, the heroes have to let them go. Either that or the Big Bad got Off on a Technicality for yesterday's</ crimes This trope can be chalked up to The Law of Conservation of Detail : if you're going to have your villain appear, it might as well be relevant to the plot at hand An occasional subversion is for the usual suspect to claim innocence, convince the hero that somebody else did it... and then have it turn out that the original suspect is guilty after all. In some cases, the Frame-Up inspires the villain to actually do it afterward This trope may also occur with any character who has a recurring habit. It may or may not lead to Evil vs. Evil or Enemy Mine , depending on the story. A villain might be upset that they were blamed and maybe even suffered a beatdown for something they didn't do. Or that a plan of their own got thwarted because of the false accusation that made the hero seek them out. Or that they were accused of a crime they consider beneath themselves or almost denied a triumph they seek for themselves . Any of these reasons is enough for them to be pissed at the person who really</ did it Also see Villains Out Shopping , which might explain the villain's innocence. Compare Guilty Until Someone Else Is Guilty . Compare Motive Misidentification , where the Big Bad is responsible, but for different reasons than the heroes initially suspect. Contrast Hijacked by Ganon , where it seems like a new villain is at fault but the Big Bad is revealed to be pulling the strings. May overlap with Card-Carrying Villain and/or Villains Never Lie if the heroes believe the story because it would be out of character for the villain to deny his crimes rather than boast about them

There are bad days, there are really</ bad days, and then there's this. The kind of day that should</ have been the luckiest one of your life, except for one little problem that makes all the good luck you should be having mean nothing at all. Maybe your usual numbers won on the week you agreed to stop throwing your money away on lottery tickets. Maybe the Publisher's Clearinghouse letter you threw away really was</ worth a million dollars. Maybe, on the first day of your new diet, the kid who was right behind you in the 7-11 finds a golden ticket in his candy bar In most cases, nobody actually gets hurt, but Lady Luck will</ rub your nose in all the good fortune you'd have had if something else had gone differently

The kind of thing useless adults will say to a Kid Hero or child who has some rather urgent news. This pint-sized Cassandra will be shooed away from grownup company or harangued for being " Just a Kid " before even getting one word out. This isn't necessarily limited to just children either; a pretentious character can silence a friend or underling in this manner, or a grown woman

when the men don't take women seriously. This can also be used as a put down to annoying characters when two more powerful/important characters are discussing something. The kid will get interrupted after the word "but" Exasperatingly, the quieter may even scold the quietee later for not speaking up! In some cases, the victim will point out that no one was allowing them to speak</, although most of the time, they don't even bother to point this out despite the fact that it would vindicate them. For even more frustration, the Very Important Grown-Up Things the grown-ups would much rather do or talk about might be completely asinine Usually, the very thing the child/friend/underling was trying to say turns out to be significant or important , and the hero will regret having brushed it off. In darker examples the brush-off leads the hero into greater danger by blundering directly into the situation he could've been aware of in advance; or worse, the person making the warning is put in grave danger (or killed) since he or she was asking for help See also Cassandra Truth , when the warning is heard but often sounds incredible and is subsequently dismissed until it's too late; Crying Wolf , when the warning is heard but dismissed because of the prankish messenger; and Evil-Detecting Dog , when the warning is made by an animal (and may be either recognized or dismissed). See also, Glad I Thought of It . A subtrope of Poor Communication Kills . Compare Poorly Timed Confession . If a character applies this to someone that seems like a victim (but isn't really), then it is The Victim Must Be Confused Contrast Kid Has a Point If the kid in question is mistakenly thought to be dead , that's the subtrope Not Now, We're Too Busy Crying over You

A character is presumed dead and the entire cast is crying over them . Next thing you know, the character is alive , wondering why everybody else is crying over them. The character tries to get the crying cast's attention, but they exclaim something along the lines of: "Not now X, we're too busy crying over X!" Then, the cast realizes that the character somehow came Back from the Dead , or never really died after all . Expect said character to be severely scolded for scaring the cast afterward If the "dead man" is particularly absent-minded , he might even join in on the mourning, with or without being aware of who's being mourned An extension of Not Now, Kiddo , and Reports of My Death Were Greatly Exaggerated . Often overlaps with Delayed Reaction . Sometimes the result of Faking the Dead , especially if the ones in mourning were unaware that the person being mourned over was faking. Often occurs at the "dead man's" own funeral , or during a Premature Eulogy . Also compare Stealth Hi/Bye , where the characters are simply unaware of the other character's presence whether or not they are (believed) dead As this is a death (or lack thereof) trope, spoilers may appear

When a Bouncer is controlling access to a high-end restaurant, the Coolest Club Ever , or private party, a person attempting to enter from the Wannabe Line will not be on the list of guests authorized for admittance. The doorman will deny them entry, and wacky antics usually ensue in an effort to convince the guard to let them in The Wannabe usually insists they are on the list and demands the bouncer check again. Often, they may attempt to invoke You Have No Idea Who You're Dealing With or Screw the Rules, I Have Money! in an effort to force their way into the venue with various levels of

success Common gags involve using this as an excuse to deny entry without even checking the list at all, or not bothering to ask the guest for their name at all. Can be Played for Laughs at places where there would obviously not be security nor an access list, like a fast-food restaurant or family party See also Uninvited to the Party for when one particular person is singled out for this treatment

The investigators put the evidence together, find out who did it, and then the perp gets off scot-free because the evidence isn't enough to convict them in court. This typically involves something being excluded from the trial, or seeing the crime happen on screen so that the audience is in no doubt about the suspect's guilt How this works out depends on where the story is set. In a American-based story, if the main protagonists are law enforcement officials and the like, you can usually expect them to find some new piece of evidence or get a confession that allows them to proceed with the conviction. If the story is more focused on the culprits or is bleaker in outlook, the verdict will effectively be found innocent, leading to a clear-cut case of Karma Houdini This trope takes on different meaning in a large number of non-U.S. countries (including Scotland, whose courtroom laws serve as the Trope Namer), where the principle of double jeopardy isn't observed. This means that the criminal could ostensibly be brought to trial again at a later point, if new evidence was found. Thus, it isn't quite as dramatic in works set in those regions of the world Compare Conviction by Contradiction , where the detectives appear to erroneously believe the evidence is enough for a conviction. See also Proof Dare , when the perp taunts the detectives for their lack of evidence

In the Gotham Central </ comics series, Dirty Cop and cop killer walks free because he was able to call in a favour from equally dirty colleagues so they'd swap the evidence; thus while the good cops could link him to the gun, they couldn't prove the gun was the murder weapon CSI </ quite a bit

In Roommates </ (for a lesser extent in its Spin-Off Girls Next Door

When Pepper first met Tony in Iron Man: Armored Adventures .

A character is unshackled from a Baleful Polymorph — changed back from a frog, cured of their lycanthropy , or just had a Gender Bender undone — but after sighing with relief, they slowly realize that they aren't 100% the same as they used to be. And it's not just because they've walked in another creature's shoes and improved as a person Maybe their tongue is a bit longer than they remember, and they have this inexplicable hunger for flies. Or they've still got a wolf tail (and all their friends burst into laughter whenever they turn around.) Or, psychologically , they've retained an uncontrollable fear of cats. At any rate, they've got leftovers Usually played for laughs (and often an Ending Trope) but it may be a plot point in a greater arc. Brainwash Residue has considerable overlap. See Close-Enough Timeline for the Time Travel equivalent. Some overlap with The Mind Is a Plaything of the Body , where a shapeshifter's mind is altered depending on the form they're in

Any situation where the bad guy has been dealt a mortal blow which they could not possibly have survived , and it looks as though The Hero has won — but a couple of scenes later comes the twist : they're Not Quite Dead. On the contrary, they're back, ready for more, and madder than hell Maybe they were rescued from certain death by their right-hand man . Maybe they were spared by a healing spell — or in more drastic cases, upgraded to One-Winged Angel status by way of Emergency Transformation , or a case of We Can Rebuild Him . Maybe they're just that hard to kill . Either way, the fight isn't over yet Compare Only Mostly Dead and Almost Dead Guy . Often happens after not finding the body . There may or may not be some overlap with Staying Alive . It can be shown by having their eyes open , hand poking out of rubble , or fingers twitch . Not to be confused with The Undead or Back from the Dead . If a villain does this a lot, it's probably because they have Joker Immunity . This can also be a character who's Made of Iron because they're just that strong. Often results in Who Needs Their Whole Body? Because of this trope, any Genre Savvy character will Make Sure He's Dead . Characters who cause Hydra Problems tend to also do this at least once before it's made clear that almost killing them helps</ them The Living Dead is when this happens unintentionally due to Special Effect Failure revealing the "corpse" is played by a live actor See I'm Alive for the stock phrase often accompaning this trope. See also Not So Extinct

When someone says that something is forever, but it turns out it's not. Sometimes it is lampshaded with "Forever is a long time." This is sometimes Played for Drama , and other times it's Fridge Logic . This can range from how long a Sealed Evil in a Can stays in a can to how long best friends stay friends. It can also be used when breaking an oath that was supposed to last forever. Usually, before people realize Who Wants to Live Forever? , this applies. There are many times this trope can be applied. Offscreen Inertia is almost the exact opposite of this trope. From Peter Pan </ :

Lampshaded or explained in Tim Burton 's version of Charlie and the Chocolate Factory </ ,

The whole plot of Isaac Asimov 's The Last Question</ starts with this trope :

From The X-Files </ episode "Tithonus", during the immortal Alfred Fellig's Who Wants to Live Forever? speech:

Meat Loaf 's "Paradise by the Dashboard Light:"

Every now and then, someone in the biz will become just the right kind of hot commodity. Kids are going crazy for 'em — slap their picture on a Trapper Keeper and it'll be gone from the shelf before you can say "cynical marketeering." What better way, then, to hype this piece of human merchandise than for them to star in their very own cartoon? Kids love cartoons, right? And here's the best part — they don't even have to be in</ it! After all, celebrities are busy people, right? They're going places, doing things, making

appearances. It would be downright rude</ of you to ask them to actually record their own voices for their cartoon show, wouldn't it? Especially when the draw of the celebrity name is expected to make up for lack of decent writing and animation. Plus you would have to pay them! Yes, all you need is a licensing fee, a barely reasonable voice impersonator , a dirt-cheap animator, and an option of IN SPACE and you've got a cash cow the whole family can enjoy! Alternately, this can happen if you've got the license to some aging or dead celebrity's likeness, and you're willing to squeeze every last drop of money out of it. Especially common with shows about musicians , since you can drop in a song by the musicians in each episode to up the appearance of celebrity-association. At least with the music segments you'll probably have to keep their singing voices, leaving your own Non-Singing Voice actors to play them for the rest of the show. Often, the characters are Flanderized versions of the celebrities' public personas, and can therefore veer into third-party Adam Westing . Compare and contrast Celebrity Toons , which may star the person in question.

In speculative fiction settings with very advanced technology, older Space Opera in particular, transhumans , meaning people who use cybernetic and/or genetic enhancements to give themselves capabilities far beyond those of ordinary humans, will often be either completely absent or much rarer than you would expect given the stated capabilities of the society they live in. In the older works this was more a case of No Transhumanism Existing As A Distinct Concept Yet, though they did have Evolutionary Levels , Mutants , and the odd Telepathic Spacemen which often served the same plot purpose. It's a primary contributor to Schizo Tech . In a Long Runner franchise that started before the concept existed, its absence may become an Elephant in the Living Room which the work may or may not eventually choose to address Oddly enough, 20 Minutes into the Future settings, particularly within the Cyberpunk genre, typically feature human capability enhancement prominently. This is probably caused by real-world technological advancements making it seem like this will become reality in the relatively near future, while older works hail from a period when this sort of thing still seemed entirely fantastic and authors therefore rarely included such themes in their stories Often caused by the fact that Most Writers Are Human : it's tricky to imagine what a fictional society where everyone or at least the majority are no longer recognisably human would be like. One misstep and your work will turn into a pile of Zeerust , or just be plain silly. It can make more sense to have everyone be regular humans wielding nifty supertools rather than transhumans with nifty superbodies and superminds, which also conveniently allows the humans in the audience to relate to the characters better by keeping their thoughts, behavior patterns and limitations familiar. Also done to sidestep What Measure Is a Non-Super? : the idea that humanity might be "superseded" by a more advanced version is repugnant to many , and the more radical the enhancements are, the more likely it will be seen as a kind of Body Horror Indeed, in older works, it was generally taken for granted that any</ kind of bionic modification, whether outwardly visible or not, constituted a type of Body Horror that was hard to live with, which is why The Six Million Dollar Man </ and his ilk only received their enhancements as part of medical treatment for injuries Naturally enough, Transhumans may take the form of Transhuman Aliens , who Turned Against Their Masters after Man Grew Proud Transhumans can

end up as default villains in Space Opera settings, as it's all too easy to classify someone nonhuman as less-than-human. In that sense it's a form of Fantastic Racism , sometimes called bioism (prejudice against non-biological consciousness or modified life). They may also succumb to an Übermensch mentality that drives them to either subjugate "lesser beings" or to forcibly convert them into beings like themselves "for their own good." In some cases, the villains use radical modifications while the heroes remain more Badass Normal and "pure", leading to What Measure Is a Non-Human? This is sometimes justified or at least Hand Waved in various fashions; it could be a form of Schizo Tech where genetics and cybernetics stagnated while other scientific fields advanced, it might be considered unethical or be illegal, there may be an unforeseen cost to the individual , or there could be strong taboos in place due to past problems with this sort of thing . Instances of replacing lost body parts with equivalent or improved versions are not really an aversion, as the people of the society still do not seek out these enhancements (and especially so if the replacements aren't even more effective than the originals). A very specific form of Misapplied Phlebotinum . The most common aversion of this trope is the Super Soldier Some settings literally</ do not allow transhumanism. That is to say, transhumanism is acknowledged as a real technological possibility by characters in the setting, but is explicitly forbidden by laws or customs. Taken too far, this can form the Back Story of a Feudal Future Compare with Enforced Technology Levels , Schizo Tech , Zeerust , Fantastic Racism , Ludd Was Right , We Can Rebuild Him , Emergency Transformation , Unwilling Roboticisation , Body Horror , Beware the Superman , Cybernetics Eat Your Soul , and Transhuman Treachery Contrast with The Singularity and Transhuman (which, given the existence of the previous two tropes, stop listing aversions in this one unless it is somehow notable, like if part of the work averts it, while other parts play it straight)

So you need something. Maybe you need your equipment repaired, maybe life will become so much easier if you have a certain piece of equipment, maybe you need the next item in a Chain of Deals or perhaps you're outright looking for the next Plot Coupon . After much effort you track down the only</ source of this rare good or service (or perhaps try and fail to procure it from other sources) ready for yet another quest or to pay through the nose in exchange...and they're astounded you're so desperate to get your hands on something so easy to get hold of. Occasionally the trope is downplayed, with the item in question being hard to obtain, but granting a high yield (for example a rare ore which you can dig up tonnes of after finding your way to an isolated mine) or something minor compared with the rest of what you get (for example, requiring just a single coin made of a particular alloy or a special magic item in a massive hoard) making just one a trivial reward This trope is a close relative of both We Have Those, Too and Worthless Yellow Rocks . Not only does the person you're addressing have what you're looking for, but they're amazed you had to expend so much effort to find it (or maybe they're aware it's not easy for most people to find, but they have the means to get it easily). In a Video Game this might be used to lampshade a Commonplace Rare . Contrast Bulk Buy Only for when the protagonists have more of something than they want Remember that someone simply giving away things they have a large amount of doesn't count; it

must also be what someone else is searching for. Also known as Shaggy Dog MacGuffin

A sub-trope of Does This Remind You of Anything? , this is a scene where someone (usually a man , though cases of Mr. Seahorse don't count) goes through all the motions of a Screaming Birth , complete with screams of "you did this to me" and someone on hand to give encouragement being common. But what's really going on is something much more mundane or ridiculous Occasionally the victim will simply be the Panicky Expectant Father himself, struggling to get through the agony of his wife crushing his hand to cope with her own pain

So it's Friday, and you're considering seeing this new movie that has just Opened In Theaters Everywhere. Before you do, you grab a copy of today's newspaper, and turn to the movie section, looking for a review. Or, in this day and age, you check a site like Rotten Tomatoes or Metacritic to get both their combined metascore and the reviews that come with it. With a newspaper, you read a notice stating that the film was "not screened for critics." Online, the review compilation sites have very few reviews, too few to compute a review score. This is almost always a big warning sign about the quality of the movie. For the vast majority of movies that do this, it's because the studio doesn't want critics to warn people away from the movie prior to opening day. Another tactic by studios is to allow critics to see a preview screening... with a bunch of contest winners, so that instead of being able to make notes and review a film in a quiet theater or purpose-built screening room, the critic has to do it in a crowded megaplex with people who probably wouldn't have seen the movie at all if they hadn't won free tickets and will probably like it only because they didn't have to pay to see it. Films aimed at kids and teenagers might get a rowdy and rambunctious audience throughout the entire film (worse if it features the Teen Idol of the moment). One of the actors or producers may even make a " surprise " personal appearance, taking away any sense of a neutral setting (are you going to tell them their film is awful in person?) Many critics thus will easily not take the bait and stay away in droves for their sanity. This tends to happen a lot during the months of January, February, and late August — the traditional Dump Months where all the movies in which the studio has no faith but which it is contractually obligated to release get dumped, leaving the good months for Summer Blockbusters and Oscar Bait . In the video game world, most prominent review outlets tend to get copies of games early, and it's telling what the publisher thinks of a game if a website like IGN or Gamespot have to purchase the game themselves on release day. Happens less with big budget games, since they are often cushioned by months of positive preview coverage that have convinced many to preorder the game before reviews are even a factor. Television is also an area where this occurs — preview DVDs (formerly tapes) are sent to reviewers so they can write their reviews. Where this does not occur, it is for three reasons: The number of preview DVDs being sent out is also slowly decreasing overall, as studios have finally realized where all those pre-theatrical-release DVD rips of blockbusters floating around the internet actually come from. However, this doesn't mean previews stop being sent altogether, just that fewer reviewers are trusted with copies. TV networks also screen their programs over the internet on password-protected sites for critics, although this can also be discouraging (any television critic can tell you that they'd rather

do anything else than watch a program on the infamously glitchy ABC MediaNet site). Of course, on the other hand, small press, indie and underground works usually</ don't send out review copies, as they tend to be much less concerned with promotion or mainstream opinion, and most big name news sources are uninterested in reviewing obscure works anyway. Compare It's Not Supposed to Win Oscars .

The Straight Man takes a fall. His usual position is far above the prevailing attitude of his crew, wackiness, pettiness or just general slacker - itis In a story where the wackiness level is really high, the straight man is still goofier and wackier than anyone you know, but he has his standards to maintain. Under no circumstances will he allow himself to be pulled down into the general chaos of those around him Until he does. You can only fight the tide for so long. As the age-old adage goes: "a chain is only as strong as its weakest link." If you can't beat 'em, join 'em Compare with Not So Stoic . May be implemented with an ...Or So I Heard . If he somehow brings it on himself , it might overlap with Break the Haughty , but not necessarily so. See also Hypocritical Humor , where often the Straight Man in question had just told someone off for doing something goofy and is now doing it themselves Sometimes related to an Idiot Ball moment. Contrast Smart Ball , when their dimmer co-star may have a moment of clarity or tact Rebecca Cunningham of TaleSpin </, though somewhat Women Are Wiser and more educated than Baloo, shared his ego and stubbornness as well as lacking the latter's streetwise aspects and thus fell into this trope a frequent amount of times. Sometimes even he could be surprised how out of her mind Rebecca acted at times

When a work or product is successful, the natural response by competitors is to imitate it . More often than not, these works are panned for that very reason . But then, there comes that one imitator that manages to exceed the expectations of the viewers. Not only are they considered good, but they actually manage to be more popular than the work they were imitating. Causes of this include: A Sub-Trope of Follow the Leader . Compare From Clones to Genre and Dueling Works . Contrast They Copied It, So It Sucks! . For In-Universe examples, see Effective Knockoff . For when a parody gets more popular than the original, see "Weird Al" Effect . It can sometimes cause cases of "Seinfeld" Is Unfunny . This is also the first step From Clones to Genre .

When an idea is originally presented in a work of fiction, the creators probably thought it was the most insane, off the wall suggestion possible. But due to the influence of Values Dissonance and Technology Marches On over time, the ideas presented, whether they be from a mental patient, a Strawman Political , or just a cultural trend of the future that shows how low we've sunk, seem outright reasonable. In any case, the original author certainly didn't think so See also: "Funny Aneurysm" Moment , Hilarious in Hindsight , Harsher in Hindsight , Science Marches On , Strawman Has a Point , It Will Never Catch On , Values Resonance , and The

Cuckoolander Was Right

When a pair or groups of characters — who'd otherwise be different and/or unrelated — discover that they actually have some things in common, after all This is usually the resolution of an Enemy Mine or Locked in a Freezer plot: two clashing individuals learn that there is more that unites them than divides them On the darker side, this trope can also be used to lampshade the fact that our hero is really just a hair's breadth away from villainy . In these specific cases, it's almost always the villain</ who is the first to notice: our hero has him cornered and even seems to relish </ the prospect of finally ridding himself of his nemesis, and the villain deftly points out, "We're not so different after all", commonly as a way to guilt-trip the hero . This may also be used to try to sway the hero to join his side. The hero realizes how close he is to crossing the line, and spares the villain (though every once in a great while, he'll decide that it's worth crossing the line, off the villain anyway, and then have several episodes of moral anguish over the darkness in his soul: see Shoot the Dog). Especially common when the villain is the hero's Evil Counterpart In lighter cases not involving a hero and villain situation, expect the other side to protest strongly with something like, "I'm not like you! I'll never be like you!" when the person they are feuding with points it out. Another common rebuttal is when one side acknowledges that they do share some similarities with the other, but are sufficiently different where it matters</ for this trope to apply the similarity between the two or more opposing characters needs to be acknowledged in-universe</ either by the characters realizing it themselves or by a third party. It isn't limited to only two characters and those involved don't necessarily have to be sworn enemies to qualify; any clashing characters count as long as their similarities are explicitly mentioned, hence the "remark</ " part. Mere implied, subtextual similarities, no matter how obvious they are, or observations made by the audience are NOT examples unless they are also lampshaded within the work itself Closely related to Foil , which is a literary term that describes a character who highlights and accentuates the traits of another character by contrast, and Mirror Character , which describes characters highlighted by similarities. However, in these cases, lampshading isn't required The Horseshoe Effect is when two people claim to be ideologically opposed to one another, but nevertheless have many beliefs in common Contrast with Not So Similar . Also compare Shared Family Quirks (when two seemingly different family members have something in common behavior-wise), Hitler Ate Sugar (when this trope is stretched to the point of becoming a fallacy) and Too Much Alike (when two characters don't get along because of their similarities). See also Mirroring Factions

A trick, usually used for jokes, with a similarity to the Trick Dialogue Several characters appear to have a slightly cryptic conversation about how troublesome and dire their circumstances are. The cameras remain close to their faces, so the viewer gets a full view of their agonization, and sees the sweat dripping down the face. However, once a decision has been painfully accomplished, it's revealed that the characters are in no significant danger, but are just taking something mundane far too seriously . Board games are possibly the most common example as they allow discussion of tactics or how to spend resources, but there are plenty of other

examples This can require some camera trickery to pull off, and the fact that a closeup of a character's faces is the only thing shown should be a major tip off, especially during The Teaser , where many of these take place See Trick Dialogue , where the participants of the conversation aren't who we think they are. See also Reveal Shot . Compare Anti-Climax Cut , Imagine Spot

Everyone knows that certain species — both real and fictional — have been extinct for thousands of years...but if they're all gone, why is this story taking such pains to mention them? It's a safe bet that they aren't extinct at all, and that you'll meet one by the end of the story (if not sooner) Also applies if the creature in question is thought to be a myth. A form of Chekhov's Gun . May involve an Egg MacGuffin Super-Trope to Fossil Revival and Living Dinosaurs . If they actually were</ extinct but are now coming back, see The Dragons Come Back

We've all been there: You're pulling off a cookie heist after your parents have gone to bed, you're making out with your grounded teenage significant other, you're sneaking into your boss's office to read that mean co-worker's personnel file.... and someone comes in the room! If you're discovered, you're sure to be in big trouble! How will you get out of this scrape? It's time to hide behind a well-placed counter, or bed or desk, and pray for the right moment when you can crawl or hop or lunge to safety. Let's hope the audience is finding your fear and discomfort hilarious! Often used in Animated Shows and lighter comedies. Sometimes the moment will pass with the interloper leaving before the exit is required, but that's usually reserved for more dramatic shows. More often, it's fifty/fifty if the escape attempt will succeed or fail. Beware especially of the Sneeze of Doom . If it succeeds, there's a high probability that exiting the danger area will be associated with some piece of physical comedy - falling out a window, tripping over a mop, falling down a garbage chute, etc. If this exit creates a large amount of noise, there's a possibility that the whole escape attempt could be blown... or the characters nearby could decide that it's only the cat . Compare Fake-Out Make-Out .

Okay, so you have a villain, and, for whatever reason, either because they're harmless , ineffectual or both, you do not take them seriously. You might not even think about them at all. They might have a lame gimmick or a weird name or maybe they just do not stand out among the Mooks . They are not exactly on your radar. Even if you do remember them, you think they are either a nobody or a total joke Then they go on to subvert your expectations. Some put themselves through Training from Hell . Others turn out to be the villainous kind of the Crouching Moron, Hidden Badass . And the rest may be Obfuscating Stupidity . Either way, the villain ends up as someone who is not only able to show the heroes exactly why they are called their enemy, but often even become the Big Bad or The Man Behind the Man . This is when a villain decides to become their own</ Sorting Algorithm of Evil , or at least be recognized as more dangerous Should they fail to do the former, they will become a Big Bad Wannabe . Often the result of a Darker and Edgier reinvention of a franchise The villain may become a Knight of Cerebus Compare Dead Serious , From Nobody to Nightmare , Beware the Silly Ones . Breakout Villains are prone to becoming Not So Harmless. Contrast Villain Decay and Boisterous Weakling . When applied to minor heroes instead of minor villains, it's Let's Get Dangerous! . See

also Team Rocket Wins . If it is later revealed that the villain always was that vile and/or dangerous, but the heroes or audience were misled into dismissing or liking them, see Bait the Dog Not to be confused with The Not-So-Harmless Punishment Possible spoilers ahead — read at your own risk

In media of all types, especially comics and cartoons, the "innocent" whistle is a main staple, often played for humor. Alice , feeling mischievous, decides to, say, throw a snowball at Bob. Bob is knocked off his feet. He pulls himself up and spins around to see no one around in the area but Alice, who puts her hands behind her back and lifts herself up onto her tiptoes and back down several times while whistling. Sometimes Alice would be also be twiddling her thumbs, point her eyes upward/away, putting her hands in her pockets, or a halo would appear above her head — or any combination thereof. In comics, usually only a single note symbolizing the whistle is written. The Not-So-Innocent Whistle can also happen after suppressing a traumatic moment, or any other instance of hiding something. Common ways the trope is applied: A Dead Horse Trope , given the large number of Genre Savvy characters who point out that whistling for no apparent reason is a surefire method to give yourself away. Not to be confused with the wolf whistle . An "Oh, Crap!" Smile is an alternative in this kind of situation. A staple subtrope of Acting Unnatural and Looking Busy .

Not So Stoic is what happens when the Stoic is pushed to the edge , and falls off. This is when the Stoic loses their façade and shows the world (or just their True Companions) that they aren't an emotionless automaton. They may be good at hiding it but they feel just as much as the rest of us. Likely to be very heartwrenching or extremely terrifying or both</ . In order to qualify, the show of emotion must be a significant one, not just a small smile or subtle frown. This emotion need not be a "negative" one: Manly Tears over the death of a teammate are certainly un-stoic, but so is unfettered joy over their return . These outpourings of emotion usually happen only a few times throughout the series — if the stoic is showing emotion every other episode in every season, then they aren't much of a stoic . However, these moments can also be used to illustrate a character's growth towards becoming more open to others , in which case displays of emotion — overt and subtle — would become more frequent over time. Compare with Not So Above It All , OOC Is Serious Business , Sugar-and-Ice Personality , and Did You Think I Can't Feel? . Contrast with Past Experience Nightmare (where The Stoic can keep it buttoned up — while awake), Rage Breaking Point . See also Corpsing , when a character (or actor) is trying to be serious but fails and breaks up into laughter. When Played for Laughs or poorly written , it's an Out-of-Character Moment . Always a Sub-Trope of The Stoic (non-stoic characters are expected to display emotion whereas a Stoic character displaying an emotional reaction demonstrates a crack in their normal personality). Sometimes overlaps with Alternate Catchphrase Inflection . Many Spoilers Ahead!

Sometimes justice is in the eye of the beholder And some people may think a unique crime called for a unique solution And sometimes someone might find themselves in a scenario they find scary or painful enough that they think they're being punished even if the

idea isn't on anyone else's mind Whether you're a delinquent taken to attend a reform school you think</ is going to be a Boarding School of Horrors when it's actually quite the opposite (which may be worse if you're actively trying to avoid getting reformed), or your friends make you tag along with them on vacation and you time here is unpleasant enough that you're convinced they purposefully brought you here to suffer Either way, people might get upset or confused that you think of a scenario they find benign as punishment, or angry someone put you through that same thing with the intent to punish you Compare For Your Own Good , which often may be the intention behind such unconventional punishment, if punishment was in mind at all. See also Mistaken for Imprisonment Contrast Unishment , when something actually is intended from the start to be a punishment, but the person being punished actually benefits from it, and Cool and Unusual Punishment , when something which is not normally seen as a punishment by others is used as a punishment against someone who doesn't like it. Also contrast Too Kinky to Torture , when the punishment doesn't work because the person likes it a bit too much

In the Gaunt's Ghosts </ novel Armor of Contempt,</ a tank driver is assigned to an older-model Leman Russ tank with a large weakpoint: a seam in the bow that makes it especially vulnerable to Anti-Armor weapons, which he thinks is a Uriah Gambit . However, this particular tank is known to be just as good as, if not better than the newer ones, faithfully serving the Tanith 1st for centuries, and it was given to him (or perhaps, he to it) for his exceptional skill in battle Played with in Harry Potter and the Chamber of Secrets </, where Harry is</ being punished with detention, but is spending it with Professor Lockhart, who is under the impression he's giving Harry a treat instead. Since Lockhart is a vain, obnoxious bore who's appointed himself Harry's mentor, this works out as four hours of torture as Harry helps him answer his fanmail while hearing bits of advice like, "fame's a fickle friend, Harry," and "celebrity is as celebrity does, remember that." At the end, Lockhart warns Harry he mustn't expect a treat like this every time he gets detention

There are some shows that make it apparent that "queers ain't welcome around these parts", while other shows that scream "Gay is okay!" And then there are shows with this trope. One is hard-pressed to find a show without at least some example of this trope, especially in comedy, because, after all, gay jokes are funny . Not That There's Anything Wrong With That is what happens when homosexuality is painted in a negative light by words or actions from characters just to be portrayed as completely normal. Usually invoked as a weak saving throw and an attempt to prevent losing fans and coming across as a bigot. The subtext tends to be "I'm a homophobe, but I don’t want to be one." Alternatively, "I don't want to deal with the stigma of homosexuality," or simply, "I want women to hit on me, not men." This can be played straight as in: "Dude, I always thought you were gay… not that there's anything wrong with that" or played for laughs when a rather effeminate character proclaims to an obviously straight character "That's kind of gay… not that there's anything wrong with that." This trope is used often for laughs by having a male character defend his sexuality while not coming off as homophobic. I.e. "I'm not gay! …not that there's anything wrong with that". Alternatively, it can result from someone

making a careless remark and clumsily trying to apologize . Often a way of asking Have I Mentioned I Am Heterosexual Today? This trope may not apply exclusively to homosexuality. It can be applied to any instance where People Group X are degraded only to have the writer or character make up for their intolerance with a weak defense, often immediately after the remark. Bonus points for also invoking Some of My Best Friends Are X . It is a frequent joke type found in Cringe Comedies , where a character digs himself into this situation over the course of a short conversation, usually very efficiently. Compare Not That Kind of Partner . Note: For this trope to be in effect the phrase "Not that there's anything wrong with that" doesn't necessarily have to be said. The opposite of this trope is ...And That Would Be Wrong , where a character proposes something bad as if it were good, leading to a hasty retraction.

It wasn't a lake monster at all, but a disguised submarine We don't see this trope much today, but a submarine masquerading as Nessie to scare people away is the solution offered in a number of older films that feature that world famous lake monster. Variations include robot Nessies, paper mache monsters, and other counterfeits but the most often encountered version is a submersible ship, with a gargoyle head attached to give that scary sea serpent effect In these instances, the writers and producers were sheepish about introducing a real</ Loch Ness Monster into the world of the film. A a sub with a monster head riveted onto it is the default answer to the enigma of Loch Ness might seem cheesy. It is a handy way to write off a Special Effects Failure , when it turns out it was SUPPOSED to be fake all along There are two sources of this trope: the most well-known fake Nessie photo in history was, in fact, a toy submarine with a monster head; the other that the Nautilus</ from 20,000 Leagues Under the Sea , </ was initially misidentified as a sea monster This is a sub-trope of the "Scooby-Doo" Hoax ; the specific solution of a strangely-decorated submarine sets it off as a variant peculiar to that highland lake monster Also expect the real Nessie to show up at the end, when nobody's looking

But... wait, it wasn't this</ one. It was that</ one, the crappy one right next to it See also Real Vehicle Reveal

A story has creatures that are obviously based on some sort of mythological monster, but goes out of its way not to call them that. The title comes from Shaun of the Dead </, which gave this a Lampshade Hanging , as seen in the page quote: Shaun doesn't like it because it makes him nervous, but the real reason they're not supposed to say it is that they're in a zombie movie . A subtrope of the Sci Fi Ghetto . Can be used to highlight how their monsters are different . Suppose your monsters are rotting shambling undead that want to drink your blood. Call them zombies and every casual reader's going to assume they're after "braaaaaiiinnss". Calling them vampires brings up images of old black-&-white horror movies , Anne Rice , and sparkles . When it's used to force a sense of "realism" (we don't call them "zombies" because zombies aren't real </), it smacks painfully of Genre Blindness . If you</ were confronted by what appears to be a member of the walking dead, how much effort would you spend coming up with an alternative name? (After all, we know that hobbits are a fictional creation of J. R. R. Tolkien , but people were quick to nickname the extinct species </ as "hobbits" due to

their short stature and human likeness.) Compare to Differently Powered Individual (for superheroes), Comic-Book Movies Don't Use Codenames (for superheroic individuals</) A Mech by Any Other Name (for Humongous Mecha), Magic by Any Other Name (for magic), and Call a Rabbit a "Smeerp" (for animals). If the reason why someone doesn't want to use the Z</-word is not for semantics but because saying the word will bring bad luck, it's The Scottish Trope or Speak of the Devil . If it's because the Z</-word is considered rude, it's Fantastic Slurs , or T-Word Euphemism . When used for non-fantastic things and attributes, it may be an attempt to show and not tell .

A stock dream where the subject finds themselves in a familiar social institution (usually school or the workplace) wearing only their underwear, or sometimes nothing at all . This is often coupled with a high-pressure task (such as an examination or a deadline), and the thought that you have somehow forgotten</ to get dressed this morning. In many cases no one else in the dream notices the dreamer isn't wearing enough clothes until the dreamer themselves notices at which point they typically react by pointing and laughing at the dreamer , who then notices their nudity and react with a Naked Freak-Out . Usually followed by a Skyward Scream followed by them waking up in a Catapult Nightmare Usually, this trope is invoked to simply indicate that the person is dreaming. When played straight, it is simply embarrassing, and not in the least bit erotic or terror-inducing. And it will never, ever be prophetic ... although in comedy, it's occasionally subverted by having the "bad dream" turn out to not be a dream at all This kind of dream is definitely Truth in Television and quite common in fact, though perhaps not as much as media shows it, nor always with the same structure and conclusion. After all, Real Dreams Are Weirder A Sub-Trope of Anxiety Dreams . See also Fully-Clothed Nudity See also Out-of-Clothes Experience , Comedic Underwear Exposure , and Naked Freak-Out . Not to be confused with Pants-Free (a specific sight gag where someone is revealed to be partly undressed Behind the Black); the everyday attire of a Half-Dressed Cartoon Animal ; a superhero who is Not Wearing Tights ; or situations where a character isn't wearing pants but doesn't care . Also not to be confused with Going Commando . Expect Goofy Print Underwear to make an appearance in most cases of this The inversion is Nude-Colored Clothes . To a British audience, this trope would be "only wearing pants" since in Britain "pants" are what Americans call "underpants". "Not wearing pants" in Britain would either be "going commando" or "completely nude" If someone finds themselves unexpectedly naked in public when they're awake</, see Naked People Trapped Outside and Gone Swimming, Clothes Stolen . See Sleeps in the Nude for characters who sleep in the buff and Undressing the Unconscious for characters that are stripped while they're unconscious Crashing Dreams may have this as Five-Second Foreshadowing the character is about to wake up naked and awkward. See also Cringe Comedy

These superheroes just aren't called</ superheroes. They often don't wear costumes or use code names , but they have abilities far beyond those of normal men, and are superheroes in all but name. Occasionally, such stories will lampshade the trope by having characters in off hand discussions about whether they'd look

good in a cape , or using Something Person -style nicknames, but discarding the ideas as being "silly." A " This Is Reality " remark can be thrown in, as well. Like many tropes this one has underlying practical considerations, such as: Aesthetics: Most classic comic book-style superhero costumes tend to look very silly in live action, which is why Movie Superheroes Wear Black . Plus, with a few relatively rare exceptions (such as Christopher Reeve as Superman , Lynda Carter as Wonder Woman , or Scarlett Johansson as Black Widow) it is very difficult to cast someone who physically resembles comic book interpretations (especially in cases where body shapes are exaggerated). Compare with Sci-Fi Ghetto , Not Using the "Z" Word , Animation Age Ghetto . See also Civvie Spandex and Spandex, Latex, or Leather . Series in which people are Not Wearing Tights typically use a Differently Powered Individual label. The Byronic Hero "V" in V for Vendetta </ wears a costume, mask, and cape . While he is a Well-Intentioned Extremist rather than a traditional superhero, it is kind of odd that no other characters think "superhero" when they see him.

A common trope in romantic comedies is the humorous misunderstanding, or the Not What It Looks Like A couple teetering between Will They or Won't They? has gradually started to slide toward "they will". But wait! The girl sees the guy's old crush/ex-girlfriend/other person who's previously expressed a romantic interest in him (or vice versa) go into his apartment, hotel room or whatever, and stay for a suspicious length of time The girl is convinced that he and the other woman have gotten together, and goes through intense doubt about her own relationship with the guy. However, she'll hardly ever confront him about it, instead preferring to stew in her own insecurity or make veiled mean comments to the guy , who's usually completely clueless as to what's going on because the other woman just wanted something completely banal, like someone to vent to after her latest boyfriend dumped her . The scales even out, the status quo (i.e., Unresolved Sexual Tension) is restored, and the fans tear their hair out and scream at the writers for some progress, dammit! Or laugh, because sometimes it's funny Often the other woman will catch on to what's happened after a while and tell the girl what really went on, clearing the way for a slide toward "they will" again. In most of these situations, the other woman is a relative , "proving" to the girl that nothing untoward was happening This can also apply to non-romantic situations, such as one person thinking another person has committed (or is planning to commit) some heinous act, or misinterpreting a harmless situation into something scandalous. Mistaken murderers involving accidents with sharp utensils and bottles of tomato sauce are surprisingly common The name of the trope comes from what is usually the first line the guy says afterward, often followed by, " I Can Explain !" This line is also the first line uttered by an Accidental Pervert Supertrope to Mistaken for Cheating which is this trope applied to perceived infidelity. Can provide the grounds for a Second-Act Breakup or Third-Act Misunderstanding . See Innocent Innuendo for a more sexual-related variant of this trope, and Abuse Mistake for a more violent variant. If the whole thing could be cleared up by one simple statement that nobody ever thinks to say, it's probably an Idiot Plot . Compare That Came Out Wrong and Grossout Fakeout . If the guy looks at the girl dead in the eye and says "This is exactly</ what it looks like", see Not Even Bothering with an

Excuse

You find yourself at the mercy of someone much more powerful than you. Whether you're too weak to keep fighting, hopelessly outclassed, or just plain out of luck, you know there's nothing you can do to stop them. And then... they do nothing. They leave you to your fate, whatever that may be, and go about their business like you were nothing but a bump in the road. What happened? They decided that you're "Not Worth Killing." If a hero engages in this behavior, it's usually because a hero has a code against killing , and simply won't stain their hands with the blood of a bad guy, because their morals are more important to them. Sometimes, the hero believes that the villain is already suffering a Fate Worse than Death , and killing them would be the easy way out . Sometimes the hero sees the villain is suffering and doesn't feel like they deserve a Mercy Kill . Sometimes the hero sees that the villain is no longer a physical threat and considers it beneath them to fight a weak opponent . Sometimes the hero decides that the villain is sufficiently punished by being defeated or having their crimes backfire on them . Sometimes the hero decides that avenging whatever wrong the villain did would just do nothing to solve their anger at them . And sometimes the hero simply doesn't care about the villain's fate and lets them off with a warning. In any case, the hero decides the bad guy, from the toughest Big Bad to the lowest of Mooks , simply isn't worth their time anymore. However, if the defeated bad guy is just the real villain's most powerful henchman , the hero may believe he/she still has a chance at redemption, so the latter is spared death to think about what they're doing with his/her life, resulting in a somewhat possible Heel–Face Turn . If a villain decides someone's not worth killing, it's usually either The Hero and their party or the averagely-skilled friends of the highly-skilled hero who survive their Final Boss Preview with the Big Bad or The Dragon because the bad guy couldn't be bothered finishing them off. Whether or not this makes any sense as an excuse to keep the secondary heroes alive varies. Sometimes it's an excuse from a Worthy Opponent or Noble Demon to not engage in wanton slaughter. Sometimes the villain is trying to maintain a respectable image and doesn't want to risk getting his hands dirty. Sometimes the villain doesn't kill because it wouldn't advance their goal . Sometimes the heroes fit into an Evil Plan of the villain that requires their survival (for the moment). Sometimes the villain figures that the would-be victim is actually a net liability to the heroes or a potential convert to the villain's cause . Some consider the would-be victim so pathetic or repulsive that being in their presence, even to kill them, disgusts them. In some cases, the villain just doesn't consider the victim any kind of threat that can interfere with their plans. Either way, expect this to backfire as the heroes eventually return and defeat the villain for real, raising the question of why the villain did not just kill them . The most literal examples of the trope refuse to kill their targets for the same reason a normal person doesn't hunt down and stomp on every cockroach they see; it's just not worth the time and effort unless they're making a nuisance of themselves. This usually applies to characters arrogant enough to believe</ that the opponents aren't a real threat, or powerful enough to know</ that they aren't a threat. Savvy characters should note that those who invoke this trope can and will change their stance if the target causes enough trouble for them later. Also sometimes used by the Anti-Hero as an excuse for not wiping out the Mooks . It can be parodied with words to the effect that, "I'd kill you, but the

paperwork would kill me</ ." May be related to Doesn't Like Guns . Compare Cruel Mercy , If I Wanted You Dead... , You Will Be Spared , and Villain's Dying Grace .

This is when a Novelization of a work (usually a film) arrives on store shelves before the work's own debut, resulting in Spoilers to those who read it. It can happen in any media, and is increasingly common in big-budget titles. This, obviously, does not apply to cases where the original work is a book series itself (e.g. Harry Potter </) and receives a re-release right before its film adaptation hits the box office. (Unless the novelization is specifically based on the adaptation , instead of the original source.) Subtrope of Adaptation First . See also: Sequel First .

Film Live-Action TV Video Games Western Animation

Faster-Than-Light Travel is often accompanied by certain regions of space where such travel is either impossible or extremely dangerous Narratively, limiting when and where FTL can be used is needed to make space-travelling FTL distinct from Teleportation with a very long range. If you could just warp from the surface of one world to that of another, where would all the Cool Starships , Space Battles , or chase scenes come into play? The most common variant is a region surrounding a massive object as big as a star system or as small as a ship. If Hyperspace Is a Scary Place , the scariest regions might be effective No Warping Zones. Might also be the matter that at hyperluminal velocity, return to sublight might have enormous drift from miniscule variations in timing. Such a zone can also be created through Teleport Interdiction . No relation to the Video Game equivalent of Warp Zones .

The real-life Alcubierre Drive proposal, which has attracted attention for being theoretically plausible, works by creating immense gravitational distortions probably greater than that of Earth's gravitational field. Creating the gravity well of Earth right next to another planet would cause catastrophic damage from tidal forces, meaning that if the concept proves workable, an Alcubierre Drive-equipped starship will need to travel to the outer solar system before folding space to avoid perturbing the bodies within.

Many countries, such as the United States , require police officers to gain permission from either the homeowner or the courts before they collect evidence or enter a residence to investigate, absent certain exceptions. Writers often completely ignore these in favor of an interesting narrative. Ignoring the rules for evidence collection and the limits (legal or otherwise) of hospitality is a line that both the Dirty Cop and Cowboy Cop will cross in service to their desires. Any time the By-the-Book Cop is willing to cross this line is a distinctive moment for that character , possibly Character Development into a different type of cop Cops who cross this line may try to justify their actions before or after the fact with a Blatant Lies excuse of hearing a call for help, finding the door open when they arrived, or telling the suspect that they will be asking a routine questionnaire (most probably confirmation of name, status, and minor questions about the case at hand). They can also justify Perp Sweating a suspect without their consent, using nonsense like Conviction by Contradiction (provided by, for example, the ire of the suspect upon the violation of his rights)

to continue their examination past what is legally allowed. In all cases, the cop breaking the rule and at least one other character is aware of the laws regarding evidence collection, but those laws are being disregarded for the sake of the story It is the duty of Internal Affairs to discover and administer consequences to cops who cross this line, but this rarely comes up, except when the story needs Padding , or a Halfway Plot Switch , when the second part of the episode is about this sort of misuse of authority Generally in democratic societies, there are only very limited where a warrantless entry can be done. One of these circumstances is "Hot Pursuit"; i.e. if a cop is chasing a suspect and the suspect runs into a house and slams the door closed, the cop does not have to stop and get a warrant to enter. The Other Wiki has an article on However</ , if you are a member of the Armed Forces, or on a military installation, your person, your car, your belongings, and your quarters can be searched at any time, for any reason, without a warrant. Military personnel give up this right when they join — or are drafted into — the military. Visitors to military installations should pay close attention to the signs at every gate which clearly state that all visitors are subject to search without warrant or warning. If you enter the base, you've agreed to those conditions. The same goes for prisoners, of course, and people entering or exiting the US at airports or border posts See Sus Law . Compare Empty Cop Threat

Apparently no-one ever designs any high technology (even sophisticated robots) with any kind of waterproofing. Any and all metals rust at ridiculously high speed when exposed to water, and any high-tech object that is splashed with water will immediately spark, usually explode , and either shut down permanently or perform some bizarre and unlikely action with a waterlogged device producing spectacular effects like time travel or a computer suddenly achieving sentience . Of course, the Real Life examples below seem to show that we don't do much of that sort of thing here in the present</ It is also worth noting the tendency of abandoned spacecraft and high technology to spring a leak, drizzling a never-ending stream of water on our characters' heads. This is much more likely to do damage in real life. Imagine all that black mold.. Seen primarily in science-fiction and superhero shows, but common in any show featuring high technology Directly related to Kill It with Water . See also Explosive Instrumentation

Come on in. Sit down. Aw, there's no need to be nervous. We all know how it is out there. Sometimes things get out of hand. Now, you just tell me all about it. I've heard it all before. Maybe you flew your spaceship through a wormhole while your engine was leaking, and you ended up in a parallel universe. Perhaps you are a gang of super heroes and you've had a bit of a whoopsie with some Applied Phlebotinum , some Green Rocks , and a liquid lunch . Maybe you fell back through time or ended up in an alternate dimension, or perhaps you just got zapped by some weird space anomaly Well, have no fear. We can help you. Whatever ill effects you've suffered, they can all be fixed by just doing the same thing that caused the problem, but in reverse</. Fly back through the wormhole without fixing your engines first. Stand in the same place as before and rub the Applied Phlebotinum on the Green Rocks again. Find the hole in spacetime that leads back to the future or

your home dimension, or go get zapped by the same anomaly (though you might want to Reverse Polarity first before you do that last one) It's a subtrope of the Reset Button . Sometimes you can even deal with magical or even memory issues this same way— by repeating the spell (or blow to the head) backwards, potentially overlapping with Injury Bookend in the latter case. See also Level in Reverse Now, about payment..

The product has just been described, almost every amazing feature has been described: now, how much would you pay for this little miracle? How this is handled depends on how the infomercial is structured. Normally the demonstrator will ask this question. The host, usually female and often blond, will guess a price that is on the steep side of reasonable. The demonstrator will then correct them, and name the true price and possible payment plans . There will often be Witty Banter between the two as the demonstrator keeps trying to get the host to guess the price and the host keeps guessing higher and higher amounts. The host will also be shocked, shocked I tell you, about how cheap the product actually is. Ron Popeil infomercials handle it in a different way. Popeil may be accompanied by a "host" (often his daughter) or he may act as both host and demonstrator, but he doesn't need anyone to suggest a price. He'll tell you that you're not about to pay $240 for this item, or $230, or $210 like one of those fancy department store products. (Which </ stores and products are conveniently not mentioned) Not $200, not $190, and not even $180 like many of you might have been thinking. Not $175, and not $170 either. No, this product is available for four easy monthly payments of just $39.99 each. But Wait, There's More ! Parodied in a Good Eats </ episode dedicated to knives where Alton, playing Chef Klaus in an infomercial muses, "Now how much are you willing to give Klaus? One hundred? Two hundred? Heh heh, I sink so but today Klaus is feeling generous."

So it looks like the villain has the hero on the ropes. The villain has just unleashed his superweapon - No One Could Survive That! , surely! But wait! The hero's just fine! In fact, that just gave him more confidence. Grinning, he says something like "Now it's my turn!" and proceeds to unleash an even more powerful attack and save the day. Might cue a " Why Won't You Die? " from the villain. May be said with bloodthirsty glee or visceral hatred. Can also be performed by villains against a group of Redshirts or in response to a Worf Barrage , with the retaliation being a No-Holds-Barred Beatdown . Essentially, this is Heroic Second Wind minus You Can Barely Stand See: Punch! Punch! Punch! Uh Oh...

The Last Kiss , except it's not the last . But the characters don't know that. Death appears imminent — the temperature is rising , the room is filling up with water , the plane is about to hit the ground, the rope they're dangling from is about to break and drop them off the cliff, the room is on fire and the door's locked, the world is coming to an end ... The point is, this is no place for UST . The Not-A-Couple don't want to go out without revealing how they really feel. It's now or never. They kiss This can also be Now or Maybe Never; one or both are heading into danger. Can result in a combination of Fridge Logic and Facepalm if the war is raging all around them and people need help right the hell now</ Then the Big Damn Heroes burst in, save the day, and they survive to either get a Relationship Upgrade (even Glad-to-Be-Alive Sex) or

insist That Didn't Happen . Often times, the revelation drives the pair to personally do something about their current situation, as they now have something to live for If one or both of the kissers don't survive, it's a Last Kiss . If they decide to take it a little further, it's Must Not Die a Virgin A sub-trope of Dying Declaration of Love

A comedy gag where a character gets a warning to not perform a certain act or a heads-up about something nasty coming his way, but just too late for it to be useful . Either disaster has already occurred or it's too late to take the action back, and the disaster is moments away. Sometimes, for extra silliness, the nature of the warning is obscured until the discouraged action is taken, such as a message on the screen that warns you not to read the screen. Alternatively, the warned character might refuse to listen to the message until they're done with what they're doing... which is exactly what the warning was to be about Can also be Played for Drama , often creating a very stinging sense of irony . It can also overlap with Remembered Too Late Compare Can't You Read the Sign? , Cue Card Pause and You Didn't Ask

Subtext can be all kinds of fun. It can hint that those Heterosexual Life-Partners might not be so Hetero . Or those Bitter Enemies might not hate each other after all . Or, even if they do legitimately hate each other, there may be hints that the hatred in question isn't exactly platonic. Unfortunately, sometimes subtext can be used for a very different effect That's No Yay. Implied sexual tension, intentional or otherwise, between two (or more) characters to make the average fan reach for the Brain Bleach , for reasons such as Pedophilic overtones, incest , Unequal Pairings , or Sexual Harassment and Rape Tropes . If one half of the pairing is a Memetic Molester , this is likely to occur. Essentially, the shipping version of Fan Disservice Remember to note that an implied relationship between two consenting adults is not No Yay, and the presence of another element is required. When adding examples, please be sure to explain why</ that potential ship is a No Yay and what separates it from just regular Ho Yay or Foe Yay . Of course, one person's Squick is another person's Fetish , and this is a highly subjective trope. And if you're just here to complain about a pairing you don't like, please keep it off the main page See also Squick , Fan Disservice , Not What It Looks Like , Nightmare Fuel , Brain Bleach , Sick and Wrong , "No. Just... No" Reaction , and This Is Wrong on So Many Levels . Also tends to crop up when I Have You Now, My Pretty and its sister tropes get played horrifyingly straight

A comedy bit where two characters, usually lovers, have to end their Atelephone conversation and they end up affectionately arguing over Awhich of them should hang up first. Usually only one half of the Aconversation is heard and it goes somewhat like this: nyone else Apresent, likely including someone wanting to actually use the phone, Awill be annoyed out of their minds, especially if this becomes an AOverly Long Gag . Eventually they will usually grab the phone off Athe person and hang it up themselves with a innocent "Oh sorry</. I Athought you were talking to me". Unfortunately, all too often Truth Ain Television . n example of how Love Makes You Crazy . Sickeningly ASweethearts are prone to this.

So called because if you are caught reading these pages while at work, you can get in a LOT of trouble. For the more graphic NSFW pages, simply having them in the hard drive or cache of a work computer can get you fired. Even showing up in the server log files could be unhealthy. Also applies to school, of course. Usually, even being caught visiting casual sites like YouTube , Facebook , or Dailybooth can get you in pretty big trouble there; being caught looking at anything deemed "pornographic" can result in suspension of technology access, a trip to the (vice) principal's office, detention, suspension, or even expulsion. When it comes to school, anything crude or distracting from the educational experience (though the latter may be relaxed during breaks and lunch) qualifies for this trope, in addition to the above. Also particularly helpful to parents who are at home - some people do have small children and still find time to netsurf. These same people like to have a warning to wait until the children are in another room before clicking a link. NSFW can be applied to vulgar, violent, crude pornographic content. Also applied as a near-synonym for Squick . It may also be applied if the link requires sound, as not everyone has headphones at work (or should be wearing headphones, depending on the job). Incidentally, get back to work before your Final Boss notices you slacking off by browsing this site ! See also, No Lewdness, No Prudishness for how this site handles the issue. Contrast Perfectly Safe For Work . Not to be confused with places that aren't safe to work in . NWS: Not Work Safe.

Mom, Dad, 2-3 kids, dog, house in the suburbs. Cat optional Basis for most Dom Com series. The name references that this is the minimal "core" family unit, a single generation of parents and kids, as opposed to an "extended" family with cohabiting aunts, uncles, cousins and grandparents. Or the fact that it is usually unstable, can cause hair loss, has a fifty-fifty chance of a spontaneous split, and may also lead to early death; either works. Generally avoided in dramas, as missing parents are a good source of teen angst If you want to break out of the 2-or-3-kids pattern, you could try going much, much larger . This can be justified via religious beliefs , but it doesn't have to be. However, if the big family is not the main</ family for the story, it's almost certainly a religious reason — and almost certainly, most or all of the kids are treated as a unit, not as individuals. They may even dress and look identical except for age and gender You may also choose to have a gaggle-o'-kids by using a blended family . The parents' exes are even more optional than the cat Then again, you could go for moderation and stick by the nuclear family, but have the extended family get way more involved than is typical . Instead of a grandparent or two and the occasional uncle or unruly cousin, try adding two to three siblings on each side and two to three kids per sibling (with the childless sibling constantly asked when he or she is going to start a family). Pretty soon you have the kind of setup needed for My Big Fat Greek Wedding </ Has nothing to do with people affected by radiation or a certain ending in Fallout 4 </ A Boy, a Girl, and a Baby Family is a subtrope, when there's a son and daughter around the same age, and also a much younger sibling Compare and contrast The Clan and Big, Screwed-Up Family

A sub-trope of I Love Nuclear Power , Nuclear Nasty is a monster (usually the Monster of the Week) created when a creature is

exposed to radiation. Very common in 1950s monster movies, as well as works trying to be throwbacks to that era for obvious reasons . Tends to be an Attack of the 50-Foot Whatever . These creatures are often common sights in a Standard Post-Apocalyptic Setting When played straight, this is a case of Artistic License – Biology . This becomes slightly</ more plausible if an organism is irradiated and its offspring</ are born as mutants, rather than some weird transformation happening to the irradiated organism itself. See also Toxic Waste Can Do Anything , Radiation-Immune Mutants , a Required Secondary Power for some of these nasties. However, in most cases, high exposure to nuclear radiation usually results in death of most animals and humans (which makes post-apocalyptic nuclear war scenarios of fighting mutated creatures highly unrealistic). That being said, there have been several species that are able to adapt to nuclear radiation, as evident with Chernobyl where, although radiation levels are still lethal for most humans without adequate protection, several animals manage to survive with minimum or no mutations. In fact, the only major mutations they suffered were adaptations to protect them against the ill effects of radiation , such as higher levels of antioxidants and better DNA repair mechanisms. They even live longer because of it

When faced with a Monster of the Week , military commanders show an unhealthy urge to move right up to the (current) Final Option (or the local equivalent) when the monster can't be killed with bullets . They never stop to consider using something else in their arsenal that's a bit more powerful than a rifle, but won't cause as much collateral damage as a tactical-yield nuclear bomb. It's all or nothing. If hand-held guns didn't do the trick , forget artillery, tanks , bunker-busters , fuel-air explosives, chemical or biological agents, just get the nukes</ . The heroes will probably object to this, only to be told that there's no time to "study the monster", it has to be taken out now (along with every other living thing inside a radius of five kilometers) before it gets bigger and destroys more things! From there, it becomes a race to see if the good-guy scientists can find the monster's Achilles' Heel or get the Forgotten Superweapon back online before the Army gets its approval to start lobbing warheads. Of course, if the Army wins the race, it's likely that the nukes will either do nothing, or make things much, much worse, making the heroes the last hope. As such, note that Nuke Em is only when using nukes is a bad idea, either because it's clearly overkill or it's likely to backfire . If it's a well-considered and reasonable choice given the situation , then it's the Nuclear Option . Sometimes exactly which trope the planned nuking falls under may be debated In-Universe . Very common in Science Is Bad stories and usually involves a General Ripper (in fact, the Trope Namer for General Ripper made this his signature). A popular way of ruining someone's day with Death from Above . Related to the Idiot Ball , depending on the size of the strike. Related to Deus ex Nukina if the nuking is being used in a situation where it should be obvious that it realistically wouldn't have any effect, fallout and massive collateral damage aside. For the biological weapon equivalent, see Biological Weapons Solve Everything . If you happen to be playing a video game, and you're directly responsible for launching it, it's a You Nuke 'Em situation. See also: Five Rounds Rapid , Immune to Bullets , Armies Are Evil , and Radiation-Immune Mutants . Not related to the incredibly egotistic alien-slaughterer of the same name .

In speculative fiction, inhabited planets will often lack a proper name, instead being designated by the name of the star they orbit and a number. It is almost never the case that the star is referred to by a catalogue number. Natural satellites will also often lack proper names and be identified as "the moon of planet X" or somesuch. In Real Life , notable celestial objects, like the other planets of the solar system, their moons and certain stars easily visible from Earth have had proper names for about as long they have been known to exist (although admittedly some are much better known than others). A large number of lesser objects, such as asteroids and extrasolar planets are assigned catalogue numbers. When extrasolar planets were first discovered in 1995, the astronomical community used lowercase letters instead of numbers (e.g. 51 Pegasi b, 70 Virginis b). While it is reasonable that an interstellar civilisation surveying a star system would initially assign numbers to the planets along the lines of "XLL325-1" for the first planet of the star XLL325, it would be strange if they failed to come up with proper names for the star and planets (eg. " Baltimore " instead of "XLL325") if they decide to colonise the star system. Even sillier is when a planet inhabited by an alien species is given such a label and said inhabitants begin to use that designation themselves. It's sillier still if the species has always</ called their own planet by a catalogue number. After all, how many humans in reality or fiction ever refer to our little world as Sol III? This trope is arguably justified when the catalogue number is used by The Empire to name planets occupied by another species. Starfish Aliens may call their planet Krzjdlwsk, but stormtroopers trying to pronounce the name may be tempted to just use the catalogue number or come up with a nickname for the planet, like "Krazy Dullwhisk." May sometimes be a case of Translation Convention . The trope can also be justified as a naming convention by a bureaucratic or military authority that wishes to come up with a neutral name that does not offend political sensibilities. This sort of thing is common on Earth, as anyone who's visited (London)derry in Northern Ireland or the Persian (Arabian) Gulf can attest. If two competing groups settle a planet, and one calls it Cleveland while the other calls it Cayuga, it might just be best for a visiting starship captain to call it "Rigel VI". See also: A Planet Named Zok and Naming Your Colony World .

Tropes about numbers, general or specific.

The right-hand man of The Leader , or second in command. Usually The Lancer and a Foil . The one who takes over the "ship" when The Captain wants to be off doing non-Captainy things Often called simply Number Two (or, confusingly, Number One), although terms like "first officer", "first mate", or "executive officer" (often shortened to "XO") frequently appear in military fiction especially involving the chain of command in a Command Roster . Compare The Lancer in the Five-Man Band , who is usually not too happy about that. Although sometimes the Number Two is also The Lancer to provide a contrast between authority figures. In-universe this is also a good idea: If The Leader is Hot-Blooded then he needs The Stoic to balance him, and vice versa Strictly, in the Royal Navy, at least, the captain would have an executive officer and a first lieutenant, both ranks being held by a single person on smaller

ships. Hence the XO (also known as Number One or sometimes "the Jimmy") would be the captain's Right Hand Man and Number Two would be his</ immediate junior. The position also goes by the title Executive Officer (XO), particularly in the American military If the creators did the research, the XO is much more likely to interact with the crew. On a ship, "Number One" is responsible for the crew: training, ordinary discipline (that is motivating the NCOs to motivate the others) setting watches for the officers etc. The captain's job is to decide what the ship should do, Number Two makes sure the ship and crew can do it. A Captain Smooth and Sergeant Rough situation can result from this If the Number Two is also the final obstacle before reaching the Big Bad , then they're The Dragon . Sometimes gets "promoted" to Commander Contrarian . The dimwit version is Number Two for Brains . If they double as the voice of reason, there's The Consigliere Not to be confused with the original script for Back to the Future Part II </. Or the euphemism for solid waste. Has nothing to do with You Are Number 6

A counterpart to Nuns Are Spooky , Nuns Are Mikos , and Nuns Are Sexy , this is when nuns are portrayed according to the Rule of Funny This could be because "nun" is an Inherently Funny Word , or that their outfits look silly. This trope mostly manifests as "normal" things being made inherently funny due to nuns doing them. Someone boarding a plane? Normal. A nun doing it in her religious habit? Hilarious! Of course, the majority of modern nuns do not</ wear habits anymore, preferring plain black or grey dresses instead, but... that's not as funny . Also, the convent </ional stereotype of them is that they are very stern, severe and disapproving, thus making them either foils for wackiness going on around them or upping the humor value when they</ do something wacky Monks, The Vicar (or occasionally a priest of another stripe) can become this trope, especially if for some reason he's in full robes doing something improbable (even less likely, as vicars and priests haven't worn robes on day to day activities for hundreds of years. Many do still wear cassocks</, though.) There's something about the way long billowy clothes move</ when the wearer is in action IE, nuns are The Comically Serious . The only thing more hilarious than nuns would be Bat man in a nun's habit. (You're picturing it right now aren't you? No doubt you're laughing your ass off) Yes, this is sometimes Truth in Television . Like all people, it depends on the nun

Chrono Crusade </ plays with this trope some in the first few episodes/volumes of the manga. Rosette is just not your typical nun and it makes it rather hilarious.

And what Young Justice </ fan can forget the immortal words of Robin on a runaway supercycle: "Oh no! Nuns in a station wagon loaded with high explosives!

Throughout the entirety of A Goofy Movie </, Goofy and Max keep on bumping into the same four nuns at various escalatingly unexpected times, including during an impromptu musical number on the highway , at a monster truck rally that they seem to be very excited about , and finally a huge rock concert which we must assume is the entire reason they were on the road in the first place.

A gag in Rush Hour 3 </ has Carter (and eventually Lee as well)

trading insults with a French-speaking triad through a nun. Lee (at first) reminds Carter to watch his mouth: "Sister, you tell this piece of S-Word that I will personally F-word him up."

One character tells a lewd joke about "dwarf nuns" in House of Leaves </. And we'll leave it at that.

The Flying Nun </ backglass for Hurricane </ shows two nuns riding The the rollercoaster; one's cheering excitedly while the other is The praying in fear.

Played straight and then subverted in Dragon Age: Origins : </ when a usurpers's knights try and arrest you one such nun tries to prevent violence before slaughtering them all, then depending on your responses she can act coy, insightful and...yes, funny. Reject her and she'll chase you up again later, and her...manner suggests she is maybe just a little...off.</ Say hello to Princess Stabbity, Stab Kill Kill, otherwise known as Leliana, not just one funny Naughty Nun , she subverts it in never actually being a nun and before being a vicious lesbian assassin, and meeting her sisters it's clear that some are Not So Above It All .

Part of the humor in The Sound of Music </ is Maria's antics compared to the other nuns when she's in the convent, and then Maria's complete Fish out of Water reaction to "normal" life in the Von Trapp household.

Discussed in The Nostalgia Chick 's review of the Sister Act </ movies (see above). She takes time to note that nuns are not only funny, but funnier than monks, though this doesn't make monks un</ funny.

This is a large part of the point of Sister Claire . </

The Dexter's Laboratory </ episode "Dee Dee and the Man" had a rather eccentric motor mouthed nun as one of the potential replacements for Dee Dee.

Nursery rhymes. Full of rhyme and rhythm and odd images. Not so full of sense. Nursery rhymes are a form of oral folklore and overlap with children's songs, lullabies and riddles. They may be connected to Parlor Games . Counting-out rhymes are a subgroup. The English nursery rhymes specifically are connected with the name of Mother Goose, whence they are also called 'Mother Goose rhymes'. is an old folklore figure or stereotype — an archetypal elderly country woman, who was originally interpreted as a teller , or mythical originator of fairy tales ; but her focus shifted to nursery rhymes in the late 18th century. She also figures in a nursery rhyme herself, and is the subject of a traditional pantomime . She is usually portrayed wearing a tall hat and shawl (the old Welsh peasant costume), except when she is an anthropomorphic goose . Characters from nursery rhymes, like Old King Cole, Humpty Dumpty, or Mother Goose herself are Public Domain Characters that may feature in all kinds of works. The writer may try to explain their rhymes — often enough, with a parody origin. Modern lore often attributes macabre and horrifying "origin stories" to nursery rhymes; the most widespread possibly being that "Ring Around the Rosy" is a song about the plague . While that particular example is most likely Urban Legend , debate continues for others. The origins of most nursery rhymes are simply not known, and many are in all likelyhood nonsense

rhymes that never made much sense. There are, however, more firmly rooted examples demonstrating that this can be Truth in Television "There was an Old Woman Who Lived in a Shoe", for instance: Not only is the rhyme itself openly dark, but its second printed appearance documents an additional, even darker and stranger couplet. Its wording hints at a Shakespearean-era origin, and bolsters a suspicion among folklorists that it has a lost political or allegorical meaning as well: Newer Than They Think also often applies to this, with people sometimes attributing much older meanings to nursery rhymes that are much more recent ("Pop Goes The Weasel" for example is thought to only be about 150 years old). Obviously, drawn upon for Ironic Nursery Tune . May also feature in a Fractured Fairy Tale or a Fairy Tale Free-for-All . Often features characters with Rhyming Names . Compare the Playground Song . In Black Butler , the main antagonist of the Noah's Ark Circus uses the name Tom the Piper's Son as his alias.

Several nursery rhyme characters appear in Fables </ and even more in the spinoff Jack Of Fables </ .

Also sometimes known as "playing dumb", a tactic whose effectiveness is predicated on characters convincing others they are complete oafs and therefore harmless. Acting like an ignorant hayseed, misinformed tourist, Handsome Lech , Dumb Muscle , or Funny Foreigner is popular. In many cases, a character pulling this off may play along until they're in a good position to drop the charade and get serious , usually catching anyone underestimating them badly </ off-guard. Another variant of this, primarily found in teen comedies, is the popular student (almost invariably a girl) who acts like The Ditz in order to avoid being stigmatized as a nerd ; in such cases, the character may be willfully ignorant, but inevitably faces a situation where she needs her native wits to escape a problem. This differs from the Genius Ditz in that the latter is brilliant in a single field (or multiple obscure fields) but genuinely ditzy otherwise. Another variant is of someone who is a genuine genius but who pretends to be The Fool in order to avoid responsibility, either because they are lazy or because of some trauma which has undermined their confidence. Perhaps they're a Genius Bruiser who prefers using their brawn over their brains enough that they look like a total Dumb Muscle at first glance. May appear to be The Fool until the viewer realizes he's just so good at making intentional actions seem like total coincidences that it appears to be blind luck. If done well, you may not be able to tell if the character is an Almighty Janitor , a Crouching Moron, Hidden Badass , a not-so-Inept Mage , or a Bunny-Ears Lawyer . Or, for that matter, Too Dumb to Fool , especially if the character is good at noticing what is too obvious to be seen. A favorite tactic of The Trickster . The opposite trope is Feigning Intelligence . See also the Old Master , to whom using this trope comes as natural as breathing; Covert Pervert , where the "stupidity" may be in reference to a particular subject; and Rich Idiot With No Day Job , a special case of this trope. See also Fauxreigner and Bilingual Backfire . Compare Obfuscating Insanity . Blondes may exploit the Dumb Blonde stereotype to help with the obfuscation. Another tactic characters doing this will use is pretending to be Easily Impressed to make it seem like they have no sense of judgment of quality. A Good Is Not Dumb character is often accused of using this trope. This can backfire in a big way if the person using Obfuscating Stupidity needs people to trust him

or her—only to realize that no one will believe the "idiot". And beware the possibility of Becoming the Mask if the stupidity is held up for so long, a character begins to forget they have brains in their head. Inversely, if other characters think</ the person is being obfuscating but he really is</ simple-minded, then he's a Seemingly Profound Fool . Occasional lapses might be dismissed with Too Dumb to Fool . This may lead to someone Underestimating Badassery . This is to be confused with Smarter Than You Look , where that trope has no intention of appearing to be unintelligent; the character simply can't help the appearance of stupidity they have. This is Older Than Feudalism , occurring in the Book of Genesis and in legends of the earliest days of Rome. It is also the core of the 27th stratagem. Contrast Feigning Intelligence . See also Beneath the Mask , Faking Amnesia , Obfuscating Disability , Obfuscating Insanity , Deliberate Under-Performance , Apparently Powerless Puppetmaster and Playing Sick . No Real Life Examples, Please!

Yes, we have to start Describing Obligatory Joke Here with a Describe Topic Here joke. It's a site tradition. </ In certain situations, characters (and writers , it seems) just have</ to make certain puns or references. And they're usually the same ones. But Tropes Are Tools , as in many cases the audience may feel disappointed or even slightly confused if the obligatory joke fails to come up. Often relies on If It Was Funny the First Time... . Nonetheless, many writers try to inject some freshness into the obligatory, by lampshading or overt and deliberate subversion. Anything involving a primate is going to involve lines like "monkeying around", "making a monkey('s uncle) out of someone", "going ape", and "monkey business". These days, Obligatory Jokes tend to be subverted in the vein of Anti-Humor or So Unfunny, It's Funny . One character could say "Aren't you going to say <X>?" and get a confused look or a deadpan "No.". Critics and reviewers tend to use them fairly regularly, Lampshade Hanging optional. See also Pun , Bond One-Liner , Quip to Black , and others, which have considerable overlap. You Look Like You've Seen a Ghost is one subtrope. A Punny Name or Unfortunate Name resulting in this may make someone a Phrase Catcher . Contrast Subverted Punchline . Common responses include Lame Pun Reaction , Collective Groan , " You Just Had to Say It ", " Never Heard That One Before ", or if you're really lucky "That's... Actually Pretty Funny ." Might be justified with " I Always Wanted to Say That ", or " Someone</ had to say it!", lampshading the obligation.

A form of Kick the Dog in war movies, where the heroes (or more often, someone else on the same side as the heroes) or villains commit a war crime of some sort, most often mistreatment of enemy prisoners of war or civilians . Done to illustrate that most wars aren't instances of Black-and-White Morality , as well as the mix of good and bad in most armies and how wartime can change a person's personality. Sometimes, these crimes will be reprisals for earlier ones against the heroes' side. May sometimes overlap with Token Evil Teammate if the one performing the crime is on the "heroic side" or Token Good Teammate if it's someone on the opposing side refusing to perform such a deed. In a heroic portrayal, these crimes are justified for the principles of Pay Evil unto Evil or a Roaring Rampage of Revenge In a villainous portrayal, it's often shown to establish just how vile the antagonist faction is. Usually, these are done as

reprisals against attacks by La Résistance , or civilians found to have been sympathizing with such groups. Sometimes, mooks witnessing but not partaking in these war crimes will speak out against such actions , and for good reasons. Often, this can result in higher-ranking soldiers or officers forcing their subordinates to commit questionable acts themselves , lest they be made an example of A fairly young trope that emerged from the previously-hidden Truth in Television of The Vietnam War . Often used to show that War Is Hell and/or to avert Do Not Do This Cool Thing . Compare Shoot the Medic First , Sink the Lifeboats , Leave No Survivors . Contrast The Women Are Safe with Us , Would Not Shoot a Civilian It is important to note that this scene, whether in real life or in a work, does not mean the entire</ army Rapes, Pillages, and Burns . Unless the work in question is an Author Tract about how Armies Are Evil , in which case it might be included for this purpose See also The Laws and Customs of War

A recurring gag in action or speculative fiction works where something absolutely incredible is happening outside, but then we cut to the inside of an office building and we see that the janitor is completely oblivious to what is going on around him, either because he has his headphones on , because his back is turned or because the cleaning equipment he is operating is too loud. Or possibly two or all three of the above scenarios combined A Sister Trope to Funny Background Event , with the twist that the "background" is now the main plot, and the funny event is brought to the foreground Not to be confused with The Almighty Janitor , who sees and knows all

A villain who is thoroughly convinced that their actions are mundane, acceptable or helpful, to the extent that the idea that their actions have negative consequences doesn't even occur to them. These villains aren't justifying their wrongdoings. They aren't compelled by unnatural forces. They just don't comprehend that they're doing anything wrong. This can be achieved in several ways: They might mistake morality for black and white extremes . There are two basic requirements for a character to be this trope: A horror trope (and occasionally a comedy trope in a Black Comedy), this can really freak people out if played right. It may place the heroes into a situation where they can't even try to reason with the villain. It can also be used to underscore that the villain is indeed a tragic figure, as he or she or it may never have actually intended to harm anyone. Alternately, this can be used to make a creature sympathetic. You give it a valid reason for doing the things it does, and once it has that reason, it won't see what it's doing as wrong. Some Kaiju are like this. They just wanted to build a nest and get some lunch, but they stumbled across countless strange structures and were suddenly under attack by tiny bipedal creatures. The principle is the same for many Eldritch Abominations and Humanoid Abominations , which are (usually) sentient, but their views on morality are vastly different from ours . Such a character may qualify as a case of Non-Malicious Monster or Humans Are Cthulhu . May eventually come to a Heel Realization / My God, What Have I Done? moment. On the other hand, any Curious Qualms of Conscience might wind up being dismissed as temptations away from their duty. Very much Truth in Television — humans tend to do what they think is right based on their beliefs, regardless of how wrong those beliefs may be to outsiders or

if those beliefs utilize Insane Troll Logic ; and while beliefs are malleable and subject to pressure and change, pretty much nobody in Real Life is a Card-Carrying Villain explicitly thinking things like "Hmm, what evil deeds should I commit today?" or "I love being evil! Mwahahaha! "

For obvious reasons, Obliviously Evil characters are also very likely to be Affably Evil . Not to Be Confused with Obviously Evil Inverted Trope of Ignorant of the Call , when someone is oblivious to the fact that they're the Hero

Sometimes, whether or not the universe is realistic, some actions are deemed either ridiculously dangerous, idiotic, or downright impossible to pull off . Nothing to be really proud of in any case. The characters talk about such actions and, soon enough, Alice will wonder out loud (probably sniggering) − " Who would be stupid enough to do that? " What she doesn't know is that Bob, to or in presence of whom she said it, actually did</ the stupid thing in question. Whether he succeeded or failed miserably, he will either not answer anything or pretend to agree with Alice with an embarrassed expression; he may even be personally proud of it. If the viewer</ knows it, A Smile Ensues : it's a form of Continuity Nod . What makes this trope funny is the fact that Alice says it totally innocently, without any clue she is mocking someone within hearing range. Hence the Oblivious Mockery. In some cases, Bob may reveal out loud that he did said action, and may or may not try to justify himself. Basically, this follows this kind of pattern: Can overlap with an in-universe Old Shame or be a type of Dramatic Irony . Compare Oblivious Guilt Slinging , Insult Friendly Fire , Innocently Insensitive , I Resemble That Remark! . Contrast Noodle Incident , where the characters vaguely talk about an event they know but the viewer doesn't. Contrast and compare Who Would Be Stupid Enough? , when Alice tempts fate and is proven right away that someone is</ stupid enough, and Schmuck Bait . See also It Will Never Catch On . The inverse trope is Right Behind Me , when Alice talks dirty about Bob without knowing he's, well, right behind her. Compare I'm Standing Right Here , where the person is still right there, but the mockery is less oblivious. See also More Insulting than Intended , where the mockery is intentional but to a greater degree than the mocker knows.

Love Hurts ; it's messy and a mathematical nightmare where only a few can come out happy, never mind unscathed. One of its worst injuries is perhaps the plainest one... pining away at someone because All Love Is Unrequited , and in the end never even holding them because I Want My Beloved to Be Happy . Then, there are times a deep-frozen love life is not because of Star-Crossed Lovers , the pursued Love Interest being the Master of the Mixed Message or any such thing. It's because the rules of plot and characterization dictate that they not notice the protagonist's overtures and Longing Looks . Bob likes Alice , and he makes several increasingly obvious hints that he's interested, he'd like to ask her out, and wants to be her boyfriend Alice (though gender reversals are common) will usually be oblivious enough that his stuttering overtures aren't heard or followed up on, and on top is usually blind to Bob as a love interest because she: Expect Alice to say things like "I wish there were someone out there for me" and Bob to respond with "He might be closer than you

think." Of course, she'll think he's being vaguely hopeful rather than literal. In the worst cases, Alice may be actively looking for someone (in general or particular) and just be completely blind to other people's feelings for her</ , or even already seeing someone (let's call him Charlie), Charlie may or may not be the right guy for her, but that's secondary to her being oblivious to Bob trying very hard to get her attention. If Charlie is the wrong guy, Bob will win Alice's heart in the end. This is a common consequence of Old Flame Fizzle . If he's the right</ guy, then expect Bob to either hook up with whoever he</ was ignoring or suddenly be revealed as a psycho slimeball . The Matchmaker is particularly prone to this, being used to thinking of love as something she arranges for others, and often tries to hook up Bob with Danielle or Eglantine as just perfect for him. If Alice really is attracted and doesn't realize it, Tsundere behavior may result, or she may treat Bob as her Protectorate , or ensure that he's fed , or blush furiously at the mention of him , prior to the Love Epiphany . Green-Eyed Epiphany is common. This is commonplace in the Love Dodecahedron , and is a type 5 in Triang Relations . It also overlaps with Everyone Can See It . It is also prevalent in Yaoi Genre and (especially) Yuri Genre works, where it is often mixed with confusion about one's feelings for someone of the same gender . Compare It Meant Something to Me , where Bob overtly says he loves Alice, but she denies having any feelings. See also Did You Think I Can't Feel? If the problem escalates, then this can lead to a case of Clueless Chick Magnet . Compare to Chaste Hero , where the character in question is completely clueless about the concept of romance; this one knows things about love and may even have a crush, just that he's just oblivious to certain other characters' advances . This is one cause of the Ignored Enamored Underling 's problems. The Japanese have a special term for this: Donkan</ (鈍感), which is basically the short-form word for this trope.

The opposite of a Painful Transformation , one that the recipient and/or victim doesn't feel. Usually done with the transformee transforming in their sleep to wake up to their new form , or the transformee gradually changing over time . Stock phrases include: " Why is everyone taller/smaller ?" and "Why are you looking at me like I've got the head of an [animal] ?" Always a result of a Baleful Polymorph or Involuntary Shapeshifting , as a Voluntary Shapeshifter would know when they're transforming themself (unless suffering from Power Incontinence). They may discover their transformation in a Mirror Reveal .

When a work has a large and active fan base, but seems to be virtually unknown by mainstream audiences, who are often surprised the work in question has a fanbase at all, much less such a large one Essentially an inverse of Mainstream Obscurity . Where a work suffering from Mainstream Obscurity has had a huge influence on popular culture and is often referenced by all kinds of people, but has a comparatively small fan base who have actually seen/read/played the work in question, works suffering from Obscure Popularity are almost never referenced in the mainstream, and don't seem to ring a bell for a lot of people not actively involved in the fandom, but said fandom actually has a lot of members Casual Video Games are prone to this in general. Series are played by

millions of people worldwide and are amongst the most popular series out there, but video game fans and websites almost never discuss these games Might overlap with First Installment Wins , when mainstream audiences know about the original incarnation of the work, but are unaware that there are newer incarnations of it. Related to Americans Hate Tingle and Pop-Culture Isolation

Some works are Strictly Formula : you've seen a hundred movies (or novels, or video games) just like it. But all that practice has paid off. Every scene is tight, every heartstring is pulled, every plot line pays off at just the right moment, and nothing stands between you and a triumphant emotional experience (except, of course, the feeling that you've seen it all before) Other works try for originality and much is gained. But something is also lost. The new bits, being untested, are also a bit buggy. Characters, scenes, plot points, and dialogue go too far, don't go far enough, or go off in unexpected directions . Perhaps the unfamiliar is pushed a little too far and becomes alienating. At any rate, you walk away wondering just what you saw and how you were supposed to react to it Which brings us to the lesson of this page: If you seek novelty, do not expect a polished production. If you seek a polished production, do not expect novelty This observation is a companion to Sturgeon's Law , the driving force behind Capcom Sequel Stagnation , the reason "Seinfeld" Is Unfunny , and why a bad work with a Dancing Bear might still be popular and ground-breaking. Please remember that Tropes Are Tools without inherent morality This trope sometimes brings an unexpected payoff; namely, the popularity of foreign media in many markets . Something well-worn and Strictly Formula in one context can seem new and original when exported to an audience not familiar with its conventions. For example, Anime (and to a lesser extent Bollywood) are popular in America at least in part because such works have the polished production of a long-established genre but the plot and character beats are still novel

So you've got things you want to do. Whether it's the laundry, the dishes, or your latest Evil Plan to dominate the universe , you have to keep track of them all. A checklist is a nice, handy, quick way... most of the time Some people take their listmaking just a little too seriously . They may plan every tiny part of the day on a list , right down to the things most people won't even bother with because they're just that obvious, such as "go to sleep". Or they may start to see completing the list as a goal in itself, have already completed all of the tasks except one, and spend extenuating effort trying to complete that last one. This tendency is obviously Truth in Television for many This is usually Played for Laughs in fiction, especially with comic villains The lists they make likely involve at least one trope of the Index of Lists

An index of Obsession Tropes. These tropes describe the varying ways a character cannot leave something alone. Whether it be spending too much time, money, effort, or patience; the character will not stop until they are either dead, imprisoned, or possibly even finished. And maybe not even then. Compare with Body Image Tropes , Prejudice Tropes , Selfishness Tropes & This Is Your Index on Drugs . Opposite of Apathy Index . 10-Minute Retirement

Love Letters generally range from sweet to awkward. But occasionally, they're downright creepy. This usually occurs when a character gets love letters from an obsessive admirer. Typically, there's one creepy letter to start with, but as the recipient doesn't respond, it's followed by dozens more, all written individually and personalized The creepiness of the letters can vary, from mild versions where the writer knows way</ too much about the recipient to extreme versions where the letters are filled with threats alongside the endearments to anything in between. The one constant is that the letter will always creep the recipient out Subtrope to Love Letter . See also Stalker with a Crush and Love Letter Lunacy

A standard ingredient of the Impossible Mission plot: after having outlined the goal for the episode, Mr. Exposition will describe a list of all the insurmountable obstacles that stand in the way of that goal It could be an elaborate security system, along the lines of "The medallion is sealed in a box of three-foot tempered steel, which is monitored by heat sensors and motion detectors, in a warehouse that's locked with a security code and voice recognition and retinal scan, and is surrounded by nine hundred armed guards..." This is often illustrated by the camera focusing on each obstacle in turn If the exposition is worked from the outside-in, the obstacles are sometimes each explained as they are overcome. What also often happens is one character mentions all the Description Porn they can of the castle they are going to storm and a second character explains the exact details of how they can get around all the traps and not be seen It's not always as blatant as you might think it is, and the purpose is not necessarily for exposition, but it is a method of making the audience and the characters on the same wavelength. When the plot is moving at high speed and the characters act in a certain way the audience is not narratively left behind If they don't</ explain it in full that wouldn't be this trope and would likely fall under the Unspoken Plan Guarantee . If, during the planning stage, someone mentions a back-up plan in case a certain portion goes sour, you can also expect them to have to resort to that backup plan. See also Mission Briefing A subtrope of Description Porn . See also the "I Know What We Can Do" Cut , where a plan and its obstacles are described to the audience while the characters are actually executing it. Puzzle Pan is roughly the video game equivalent

Advertising Fanfiction Film Literature Live-Action TV Podcasts Video Game Western Animation

You'd think characters would be more careful about where they practice dangerous sports, but that wouldn't be funny or, for Video Games , fun , so when a character goes skiing he'll inevitably have to dodge all sort of obstacles such as snow mounds, snowmen, boulders, trees, and likely other skiers For added Rule of Funny , the ski-tracks go on both</ sides of the trees, leading to people staring at that and wondering how it could be possible (a gag first used by Charles Addams in a 1940 New Yorker </ magazine cartoon). Martin Gardner published a riddle once, about how such a thing can be possible in real life. He himself had 6 answers ready. Someone sent him 23 A common way to set this up is to have a character accidentally (or not, if daring, boastful, ignorant or just not smart enough) starts descending while oblivious to anything you

need to know about skiing to not die horribly, and end up as a Human Snowball

This guy is the ultimate pencil pusher from a government agency or corporation, and he creates the red tape that normal citizens hate. He's an unlikeable Punch-Clock Villain with a bad temper and a sizable streak of callousness. Works for any and all bureaucracies, including Department of Child Disservices , banks and possibly even your own afterlife . His job, storywise, is to get in the way of whatever the heroes need to do, sometimes because what the heroes are doing is against some form of regulations, but other times because the character is a Jerkass who just doesn't like the heroes and is using "regulations" to make their lives difficult. In disaster movies and other works that lack a real villain (or whose villains are too cool to effectively hate), expect this guy to be the work's resident Hate Sink . Sometimes he can be restored to humanity by uncovering the secret dream buried deep beneath his efficient exterior. Failing that, you may be able to use his respect for Exact Words against him . On the other hand, sometimes he is obstructing a Matter of Life and Death . Threat of force, or actual force, may be needed to get by him, which could turn into a Kick the Son of a Bitch moment. A common cause of Divided We Fall . Many a surreptitious entry into, or exit from, a location, or requisition of supplies, is needed because it would take too long to get by him. Almost all this form-filling out serves no useful purpose; for the hero to put in a list that will allow him access to a facility, for instance, is a very rare subversion. Pournelle's Iron Law of Bureaucracy (see above) is always in effect. Rarely, in a Matter of Life and Death , a benevolent Obstructive Bureaucrat will go and obstruct the villain. He may actively devise regulations to impede and hinder him, and then, with the same mindless fervor as any other bureaucrat, insist on their being followed to the letter . The tropes: Beleaguered Bureaucrat , Department of Child Disservices , and Social Services Does Not Exist overlap since they all involve the same problems. The employees are often overworked, underpaid, lack resources, and suffer the public’s wrath. They then turn into the Obstructive Bureaucrat and use Bothering by the Book to slow down the workload or get revenge on the people who make unreasonable demands. This trope also has a darker version, where the character is still a government employee concerned with the bottom line, but what he does in daily work probably violates the Geneva Convention . He is likely to be a murderer and/or a torturer who defends himself by saying "I'm just doing my job" . In short, he is a Well-Intentioned Extremist whose overriding motivation is being Employee of the Month. Note that this is not the same as the Knight Templar , another type of Well-Intentioned Extremist . The Knight Templar does horrible things for some greater good , whereas the Obstructive Bureaucrat has no concept of "greater good", and cares only about following procedure, or rather believes that procedure is equivalent to the "greater good". He's not just prone</ to Just Following Orders : as long as the orders match the rules he thinks it's his job to enforce and follow, Just Following Orders is what he is all about. In another sense, where the Knight Templar is the extreme leader</, the Obstructive Bureaucrat is the extreme follower</ . If he has no idea that the job he's doing is evil, he may be a Clueless Deputy . This sort of Obstructive Bureaucrat can be drawn into a Heel–Face Turn or Freak Out more readily than one who does know and just feels

it's none of his business (a fella's gotta eat)... For a character who isn't so much obstructive as much as overworked, see Beleaguered Bureaucrat . For a bureaucrat who can actually get things done, see Badass Bureaucrat . For a civil servant who's outright crooked, see Corrupt Bureaucrat . In the US, this character can also be a member of Congress (usually a senator) who is investigating the heroes . This type of character is also known as a "jobsworth" in British slang, named for their tendency to deny a perfectly reasonable request with "That's more than my job's worth." This species might easily proliferate around a Vestigial Empire . See also The Barnum . These characters tend towards Lawful Neutral , usually Lawful Stupid and sometimes Lawful Evil . Usually tends to be a subtrope of Villainy-Free Villain .

This trope involves any code of conduct that artificially constrains the choices available to the protagonist. Often (as with Star Trek's Prime Directive), it restricts or prevents his use of phlebotinum that would wrap up the plot in two seconds otherwise. Conveniently forgotten (or hand waved) when the plot requires it, but some shows do try to use this as a point of plot drama as the protagonists try to find a way to twist the rules to fit the situation See also Geas ; Restraining Bolt ; Screw the Rules, I'm Doing What's Right! . Can result in Reed Richards Is Useless and Restricted Rescue Operation . If the party with the Obstructive Code Of Conduct is substantially more powerful than the others involved, it can result in Awakening the Sleeping Giant . See Alien Non-Interference Clause and Mind over Manners for two common versions of this

Everyone knows that the cops are on your side, and if you let theme handle things, then everything will work out, right ? Just tell e them what you witnessed to get them on the trail, and then the e perpetrator will be caught and sentenced. Well, some people think e differently. Sometimes, a character might go so far as to lie e about what he knows in order to take the law into his own hands. e Worse yet, the bad guys might do this, too, and want to settle a e scor When it comes to the alleged good guys, this is usually done e to prevent a character from being tied to any terrible accident e that the criminal encounters. Maybe there's been a crime. The e police go around asking people whether they have seen or heard e anything, but no one saw anything , no one heard anything, and e some people had no idea a crime took place. But after the police e finish their investigation and leave, someone goes and tells the e local Vigilante Man . Or maybe he is the local vigilante . Anothere version involves a cop, superhero, military officer or anyone elsee who is part of some sort of law-enforcement agency who decides e to lie to the other members of their group and pretend he knows e nothing, in order to kill the perpetrator, instead of having to e "do the right thing" and give the perpetrator a trial. He might e even be somewhat law-abiding, and is simply stalling to get more e evidenc e

An index depicting tropes about all that is blatant and obvious Contrast Stealth Tropes and The Secret Index . Compare to Rule of Perception . May overlap with Stupidity Tropes and Ignored Index

A Face–Heel Turn or Evil All Along reveal that was obviously coming. This character is supposedly one of the good guys, but they have a certain air about them. You just know that they'll eventually betray the group in some way or another, even though the writer has shown no evidence that they plan to actually do</ evil (rather than just look</ evil). So why suspect them? They express traits that seem Obviously Evil ; perhaps they speak in a Creepy Monotone and wear an Ominous Opera Cape , or they have white hair that makes them look a bit too much like Sephiroth , or they constantly go on monologues about how the world is imperfect and corrupt and needs to be cleansed of its impurity, or their name is " Mordred M. McTraitor ", or they have way too much of a resemblance to that mysterious masked villain who menaces the heroes and they are clearly the same person with a Paper-Thin Disguise that the heroes somehow don't see through, or they just look like a Dastardly Whiplash . When they finally betray the heroes, you say, " I Knew It! " This trope is an Audience Reaction , because the other protagonists suspect nothing . This trope can also happen in-universe if a character predicts a betrayal, but doesn't warn the good guys. This trope can become The Un-Twist , if the audience thinks (by mistake) that the character can't be/turn evil, because it would be too obvious. It can overlap with Narrowed It Down to the Guy I Recognize , if one protagonist's actor usually plays evil characters. Often can come across as rather insulting . However, Tropes Are Not Bad : occasionally this trope can intentionally be used as a Red Herring , such as when the obvious traitor turns out to be The Dragon to a not-so-obvious one . Subtrope of Captain Obvious Reveal . Related to Devil in Plain Sight , though this requires that a character is deliberately portrayed as obviously untrustworthy and that another character picks up on this. Contrast Never the Obvious Suspect and Red Herring Mole . Do not add an example until the work has the character commit the betrayal.</ The audience might see an Obvious Judas where the author did not intend one. It would be stupid to list someone as an Obvious Judas, only to reach the end of the story and find that the character never became a Judas, and Speculative Troping is not allowed. Examples for characters who aren't evil yet belong in Wild Mass Guessing . Also beware of hindsight: anyone can predict a Face–Heel Turn after it already happened. This trope only counts if the character seemed evil back when he or she was outwardly good Judas Iscariot doesn't fit this trope in The Bible (though he did betray Jesus), but Judas might fit this trope in newer works that retell biblical events, and other characters might fit this trope if the audience sees an allusion to Judas. Finally, but considering what the trope is about, they're pretty obvious ones .

A lot of fiction out there has a tendency to employ incredibly black and white perspectives to the characters and their actions. Due to the belief that its target demographic (usually children) can't understand subtler shades of evil, many works of fiction create a stark contrast between the heroes and villains. When this happens, the creators will bring in their Obviously Evil ® Design Team. (Of course, another reason obvious villains are used in some fiction is simply because everyone loves a badass villain .) If a work of fiction indulges in Obviously Evil ® , every villain will be a Card-Carrying Villain , usually Colour-Coded for Your Convenience in shades of black and red . There won't be any Well Intentioned Extremists , Knights Templar or pretty much anyone that doesn't accept and accentuate their evilness. If you see

anybody that might seem to be a shade of grey on the side of the villains, it will usually basically be a hero with a slight bit of behavior modification to work with the villains (and an inevitable Heel–Face Turn coming up during Sweeps). If the villainous group is a governing body, it will always be an Evil Empire with a 0% Approval Rating . There aren't any Punch Clock minions that just accepted the job because it's work, but instead Always Chaotic Evil Faceless Goons that act like miniature versions of the main villain and provide no guilt whatsoever when they get killed by the truckload. The Dragon will either be fully loyal to their master and their evilness, or be The Starscream and never have any ulterior motive beyond a lust for more power. There will never be any Worthy Opponents or Tragic Villains or any kind of antagonist presented sympathetically as this doesn't accentuate the author's need to make the bad guys bad. The goals of the villains and their organization are always incredibly eeeeeevil</, with one of five purposes : world domination , world destruction , corruption , genocide , or antagonizing the heroes . Nobody on the side of evil will ever Pet the Dog (except maybe the none-too-subtle Heel–Face Turn candidate). Even their imagery is blatantly made as a contrast to the heroes, with lots of skulls , Spikes of Villainy , and other assorted things. Imagine a villain whose entire body is made of Red Right Hands , stitched together with thread made from the skin of dead puppies and you're beginning to get the idea. Fiction that relies on this is almost always Anvilicious to a fault, being the most extreme example of Black-and-White Morality . If the writers don't like X, they can just have someone Obviously Evil doing X . Note that it's possible to have Obviously Evil figures in a normally more subtle setting; frequently, the justification is that the character is so far gone into his Card Carrying Villainy (or some brutal variation of Blue-and-Orange Morality) that he doesn't care what other people think of him, or that the character is intentionally playing up a menacing persona in order to intimidate others into compliance. This trope actually has two aspects: The first is Obviously Evil Behavior, where the villains act in extremely vicious and unnecessarily cruel fashion to heighten their evilness</ may overlap with Stupid Evil . Extremely common in fan fiction were authors use this as a shortcut to establish the "Bad Guy" of the fic and often happens to the author's least favorite character . Prone to Rape as Drama . See Kick the Dog . The second is Obviously Evil Appearance where the villain merely appears evil . Unlike behavior, the appearance tropes are just stereotypes that have been drilled into our head over the years and as such make for prime subversion fodder when they appear on heroes and anti-heroes . (After all, who would expect Skeletor's skull-faced mug up there to appear on a good guy ?) Even when they appear on certain types of villains they can still be used for the subversion aspect as people who have grown up on "Spikey-armor = Irredeemable" can still get thrown for a loop when it appears on a character presented sympathetically. If the villain of the series is a Knight Templar and/or Villain with Good Publicity then having a hero with an “obviously evil” appearance can create an interesting commentary on the nature of good and evil as the "Evil" looking hero battles the "Heroic" looking villain . See Dark Is Not Evil . Compare Black-and-White Morality , Black-and-Gray Morality , Evil vs. Evil , Dark Is Evil , and Villainous Fashion Sense . Not to Be Confused with Devil in Plain Sight or Obliviously Evil , though the former can overlap. Contrast Dark Is Not Evil , Grey-and-Gray Morality , White-and-Grey Morality , Morality Kitchen Sink , and Face of a Thug . If the revelation that this guy turns out to be evil is treated as

a shocking twist , that's Obvious Judas .

A character receives an unmarked present, usually a gift. Think back to X-Mas when you were a kid, and how with some basic shaking, weighing, and appraisal of shape, you could pretty much guess what the object was Now imagine a Cloudcuckoolander receiving a present. Current theories on what's inside: either a pony, an astronaut helmet or one of those roombas that's been covered in hair to look like a tribble This is a trope played for comedy in which characters are incapable of ascertaining facts that are pretty obvious to normal folk. Another variation is that a more intelligent character responds to the gift sarcastically invoking this trope. In this case, odds are good that the gift in question will turn out to be something completely different from the implied shape. Either way, Hilarity Ensues

One of the characters is pregnant. Right around the time she learns she's pregnant, she gets as big as a house - even if she learns almost immediately after conception. It's Rule of Perception - we can't be sure she's pregnant unless she's showing, can we? There are other signs as well, ways to tell us that her increased size is due to pregnancy and not simple weight gain. Strangely enough, this will probably include eating, if only the classic ice cream sundae with pickles. She may have morning sickness soon after she learns she's pregnant, depending on the stomachs of the creators, but this rarely lasts. She will</ get moody. Often accompanies But I Can't Be Pregnant! or But We Used a Condom! . Sometimes used to accompany an actress' real life pregnancy , which may account for some of the size so soon. The opposite is Hide Your Pregnancy or My Secret Pregnancy .

Also called: (by our good friends at RationalWiki) is an epistemological razor (a logical principle that is used in deductive reasoning to evaluate theories). It is named for the 14th-century Franciscan friar and scholastic philosopher William of Ockham, who was a particularly assiduous applier and proponent of the Law of Parsimony, although by no means the first to describe or postulate it. Occam's Razor is often paraphrased, "The simplest explanation is the best one." Unfortunately, this can lead to misunderstandings, at least so far as what is meant by "simplest." The actual principle is, "Entities must not be multiplied beyond necessity." The best explanation is the one which makes the fewest assumptions and explains all the data. This means a highly complex answer may actually be the correct one if the alternative, deceptively simpler answer fails on one or both counts (it may be easier to understand but it requires unproven assumptions, or it fails to explain all the data). Also important to remember is that an explanation that previously accounted for all the data may fail to do so in the future when new data appears, and so requires refinement or even replacement. Most theories have a foundation of underlying premises (the aforementioned "entities"), all of which need to be true for the theory itself to be true. Occam's Razor suggests, all else being equal, believing the theory with the fewest underlying premises. When one really starts looking under stones, one can find an apparently simple explanation is actually underpinned by a whole host of assumptions that at first glance had gone unnoticed. Example: There have been theories that Ancient Astronauts built the

Egyptian Pyramids instead of humans. For this to be true, we'd need the following givens: The more normal theory only requires that: You can probably guess which theory Occam would agree with, and why. In short, when trying to examine an incident to figure out why it happened, a simple answer involving the commonplace and reasonable is more likely to be correct. (Note: more</ likely, not always.</) In other words, when you hear hoofbeats, think horses, not zebras. Occam's Razor is the bane of Conspiracy Theorists everywhere since conspiracy theories usually rest on a lot of shaky assumptions. For example, take the Apollo Moon Landings, which many believe was a hoax. At its base, the conspiracy claims that the United States was not technologically able to send a man to the Moon, and so had to fake it. However, when you really get into what would be necessary for such a conspiracy to be accomplished, you realize it'd actually be simpler and easier to just send people to the Moon</. (That Mitchell and Webb Look </ has a brilliant series of sketches on this idea,). As mentioned above, the Razor requires that all the data is accounted for. Newtonian physics are simpler than modern theories and were sufficient to take a man to the Moon, but Sir Isaac simply could not explain all the new</ data collected after him— most of which was completely unknown when Principia Mathematica</ was published. This required another smart man—namely, Albert Einstein —to formulate more complex theories, particularly " Relativity ." Einstein explicitly made this point himself when he said that ideas should be kept as simple as possible, and not simpler.</ It should be noted that Newton's theories weren't simply thrown in the trash. While Einstein's theories are concerned mainly with the microscopic scale and objects traveling at relativistic speeds, Newton's theories sufficiently approximate the behavior of macroscopic bodies that scientists can still use them today. Another very common mistake is to summon up the Razor in a debate in order to add weight to a particular argument. Occam's Razor is a mental guide - nothing more - and cannot by itself be used to validate or invalidate any particular theory. This usage is entirely fallacious, as the Razor does nothing more than recommend searching for hypotheses that make the fewest new assumptions and explain all the data. It is not a magical baton that points to the right answer Applying it in this way inevitably leads to a frankly embarrassing race to the bottom over whose theory is "simplest." The inverse of this is Arkham's Razor , where the most bizarre solution is most likely to be the correct one. See also Hanlon's Razor , where events attributed to malicious intent are more easily explained as the result of someone's stupidity.

The Phenotype Stereotype -afflicted Westerner with beyond stereotypical Otaku interests sometimes seen in Anime. Their interests provide an excuse for their Anime Accent Absence (they learned Japanese from anime) and gives them a reason for interacting with native otaku. Non Anime/Manga fan versions are extremely rare in the modern age, but some Otakus otherwise are just way into Japanese culture, and early examples of this trope were obsessed with traditional Japanese dress and food, especially if the work takes place right after Japan opened itself to the world Often derisively called a "weeaboo" online, or "weeb" for short, which originated on 4chan when "Wapanese" was wordfiltered into the nonsense word from The Perry Bible Fellowship </. When female, frequently overlaps with Yaoi Fangirl and when male, frequently overlaps with Yuri Fan . A sub-trope of Foreign Culture Fetish . However, in recent times, calling oneself an otaku is

falling out of fashion, and often seen just as bad, or even worse than weeb. In fact, many anime fans now self-depricatingly and jokingly refer to themselves as "filthy weebs" more often than not

A detective who investigates paranormal mysteries and a staple of s Fantastic Noir . Like traditional fantasy genre, occult detective s fiction also contains magic and supernaturality, albeit in a s more contemporary time and setting, whether Urban Fantasy that's s Like Reality, Unless Noted or a setting where a standard fantasy s world evolved to become urbanized . The most common image of an s occult detective is that of a member of the Trenchcoat Brigade , s as long coats are the most popular and badass item in the occult s detective's arsenal. May or may not be a Blue-Collar Warlock or s a Muggle with a Degree in Magic . The protagonist of a Vampire s Detective Series or a Paranormal Investigation show tends to be s thi See also Hunter of Monsters , whose occupation is to hunt the s paranormal (though the two may overlap). Compare Police Psychic s , which is when a superpowered individual helps law enforcement s solve mundane crime s

Exactly What It Says on the Tin : lawyers that represent the occult and the bizarre creatures of the night. Caught taking a little crimson nip ? We'll get you out before sunrise! Attacked by the local band of angry villagers ? We'll get restraining orders against them all! Want revenge against your Mad Scientist creator ? We'll get you emancipated and</ sue him for child support! The government has confiscated your light interplanetary vehicle for not being flight-worthy ? We can help you sue them for not properly declaring an official tow-zone or providing means to contact a repair crew! Our rates are reasonable, our hours excellent. We accept credit card, check, or virgin sacrifice . Pro bono work is not a specialty of ours, but should we consider it, we most certainly do not have our own reasons beyond potential future, gainful employment . We frequently work closely with The Law Firm of Pun, Pun, and Wordplay to ensure our name is instantly recognizable to the savvy client. As a result, we don't often resort to ambulance-chasing ; hearses, morgues, and funeral parlors are more remunerative when it comes to our specific business model. If we aren't exactly what you are looking for, we recommend you check out the Amoral Attorney or Rules Lawyer , instead. Although a few on our retainer could easily count as those, too. See Fantastic Legal Weirdness for examples where the lawyers aren't necessarily occult but the cases they have to deal with definitely are.

An index of tropes dealing with a character's job or work environment Note: If a job is related to one of the listed sub-categories, list it on that index instead of here

Just as the human body contains gallons of highly pressurized blood and saliva , it also contains an equal amount of tears, at a similar pressure. Under the proper emotional stimulus, these tears can emerge as cascading sheets, actual waterfalls, or even firehose-like streams, all emitted from the eyes (of course) Some characters require less stimulus than others As a visual trope, this is Older Than Television ; older American animation had a number of minor characters (who were usually minor in the sense of age as well) who would begin high-pressure crying at

the drop of a hat (sometimes preceded by Puppy-Dog Eyes , though that was more typically a signal for a poignant single glistening teardrop). Often called the "Fire Hydrant Wail" in the case of the more extreme versions Compare Sparkling Stream of Tears , Manly Tears , Crying a River , Tender Tears . Drool Deluge is the saliva equivalent. Contrast Trying Not to Cry , Single Tear , Inelegant Blubbering (both of which involves rather fewer and rather more realistic tears), Fireball Eyeballs

At first, you'd think this character would be the long-lost twin of another character. But then you start to notice the differences. This character just seems off It could be due to having a completely opposite personality (can be of the same alignment though doesn't have to be an Evil Twin). It could be due to exaggerating the original character's foibles. This character may even appear to be an Off-Model or otherwise deformed version of the original Regardless, this character is like a funhouse reflection of the original - strange and distorted in possibly unimaginable ways, but still clearly patterned after the original Can overlap with Evil Knockoff and Evil Twin (which don't have to be oddball) and Send in the Clones (when multiple characters are introduced to cash in on the popularity of the original, some of which can be Oddball Doppelgangers). Can lead to Other Me Annoys Me . For the original German word, see Doppelgänger

A friendship which develops between two characters that would seem unlikely to be friends, whether it's because of them having diametrically opposed personalities, holding beliefs that would normally get one to try to demonize the other, or some other quirks of their beings that would lead to them clashing. Through their friendship, they learn more about each other and about themselves. The characters in an Odd Friendship may have little to do with each other initially — or even begin as bitter enemies — and their friendship grows over time. Distinguished from an Odd Couple in that these are usually two characters in an ensemble show, or a regular character and a Recurrer ; whereas an Odd Couple usually consists of the two main characters in a show. See also: Interspecies Friendship , Intergenerational Friendship , Interclass Friendship , Action Duo , Vitriolic Best Buds , Rude Hero, Nice Sidekick , School Forced Us Together , Loser Friend Puzzles Outsiders , Cool Kid-and-Loser Friendship , Monster and the Maiden and Predator-Prey Friendship which is a sub-trope Compare Friendly Enemy and Fire-Forged Friends .

It's always a sad affair when someone dies... unless you're in a comedy, of course. In comedies, there may be all sorts of unlikely reasons why it's really not convenient for someone to be dead. So rather than face reality in a mature, responsible fashion, why not launch a Zany Scheme where you pretend the corpse is still alive, or at least make sure nobody can check? Cue all sorts of wacky hijinks: the corpse is dragged around, impersonated (either bodily or through ventriloquism), made to move by strings , zombified and stored away in the most unlikely places . This goes on until such time as it's convenient to reveal that the victim is really dead and that they died in circumstances that may or may not involve the protagonist

(although the protagonist is usually the killer, whether on purpose or not), or when the corpse is accidentally discovered. A common variation involves a man who is unconscious or under a deep sleep rather than dead. Usually used when either the "corpse" is an already established character or in a show that refuses to acknowledge death . In real life, people have been mistakenly killed for real this way, such as being buried alive, or if an autopsy is mistakenly performed on a living person. A serious version of this is the El Cid Ploy . See also The "Fun" in "Funeral" . Compare Mummies at the Dinner Table (which is about someone trying to convince themselves</ dead people are still alive) and Dead Pet Sketch . The opposite situation — usually played seriously — is Faking the Dead . Dead Person Impersonation is when a living person assumes the dead one's ID and doesn't bother with the body. If someone has an audio recording instead of a corpse, they may employ Recorded Spliced Conversation in the same manner. This is common in mystery fiction.

A character comically dons a corset or a girdle, usually to conceal a gut . In some variations, the unfortunate garment will burst , after being put under far too much strain. There are two main ways this is used: The humor comes from the character trying to cram themselves into something that is clearly far too small and constricting for them. Bonus points if they manage it, but the end result makes their figure look absurd. Always Played for Laughs , but if the corset wearer is attractive it can loop back around to Fanservice. Similarly, if the owner of the corset is not attractive or very overweight it can become Fan Disservice . Unlike Of Corsets Sexy , this trope is fairly unisex, probably because the idea of a male wearing a girdle is funnier, and more indicative that the wearer is vain, pathetic and ridiculous. The exposure of a girdle is often used as part of a Humiliation Conga , especially if the character is unsympathetic. Most likely to happen to a Fat Bastard , a Narcissist , a Small Name, Big Ego , The Prima Donna , an Alpha Bitch , and a Nice Character, Mean Actor . If the character is sympathetic, it's often a device to show the character as insecure while picking up a cheap laugh along the way. A subtrope of Comedic Underwear Exposure . Compare Dodgy Toupee and Hairstyle Malfunction for a non-clothing equivalent, as well as Fat Flex . Sister to Of Corsets Sexy and Of Corset Hurts .

COUGH COUGH COUGH GAGGHHHH! This, of course, completely ruins the act. Most commonly done by teenagers trying to look cool , but sometimes done by adults in order to maintain The Masquerade . Compare Of Course I'm Not a Virgin .

Something is released to the public, and something in it offends a group of people; say, for instance, members of a certain religion. They might call in to complain and express their distaste, but there's a twist: the creator of the work is also part of that religion!</ Why would someone offend their own faith? Differences in opinion, most likely. Maybe this practitioner isn't offended by certain things that offend others, and didn't realize there would be a problem. Or maybe they did realize there would be a problem, and plowed ahead because they felt membership in the group gave them particular insight into airing uncomfortable observations. The point is, that while works must be judged on their own qualities, the personal background of an author can serve to make any accusation of

bias more complex to unravel. And in a world where the differences, both real and imaginary, make interaction all the more complicated, that's saying something. While this trope isn't limited to religious satire, it often finds a home here. Many critics will ask why the creator doesn't mock or criticize any other religion, and the reason is simple familiarity. The creator has intimate knowledge of his own faith from a lifetime of hearing its doctrines. Even if he currently identifies as atheist, this was still the culture of his upbringing, so he's naturally more comfortable taking apart its tenets rather than a religion where he lacks such familiarity. This is doubly true if the other religion is a stark minority in his country. For the record, it is just as condescending to presume all members of a group must share the same opinions about what is offensive, as to presume that anyone who offers a harsh depiction of a group must be an outsider: that's the same logic that leads people to argue that something isn't offensive to a group because they have a friend from that group who's okay with it. And that way lies madness. Note that intentionally mocking your own group, particularly for comedic reasons, is Self-Deprecation (sometimes overlapping with N-Word Privileges), a different trope. May result from Poe's Law . Compare Unwanted Assistance , Stop Being Stereotypical . Note that this may not stop those most offended from branding the creator in question as a Category Traitor and/or Boomerang Bigot , wrongfully or otherwise The inverse is Mexicans Love Speedy Gonzales , where a depiction of a group of people by an outsider that some might consider stereotypical or negative is nevertheless embraced by real members of that group. Compare My Country Tis of Thee That I Sting , where the creator is offending their own country.

Hey! We've got a marvelous, fantastic deal for you, one that will make your wallet heavier, your life better, your teeth whiter and your significant other want to have sex with you every night. And the price is so damn low, we're CRAZY! Except for you doofs in Nebraska. You're stuck out, and we're certainly not going to tell you why. Na na na-na na! Often summed up quite simply with "Void where prohibited," a phrase which shifts the onus of learning about obscure laws away from the seller and onto the consumer. Compare to No Export for You . If it's a limitation to something that is being exported, it's this trope crossing with Bad Export for You . For more information on why this trope happened, see the Analysis page.

These guys are considered the model military officers. Most forms of media will typically portray the Officer and a Gentleman as being a member of the upper-class in whatever society he originates, and almost undoubtedly attended a Military Academy . If this character is a British officer (or speaking with an English accent), you can often tell whether he is an officer and a gentleman because he will almost invariably speak with a Received Pronunciation (i.e., the Queen’s English). If he's American, he will either be a Southern Gentleman with a soft voice but pronounced Tidewater or Dixie accent (especially if in the Army), or a Northeastern gent with Mid-Atlantic tones (particularly in the Navy). If he is German or French, expect the preposition von </ or de</ on his surname. It is very likely</ he has generations of military traditions and an unbroken lineage of soldiers in his family, and his genetic ancestors may have been knights in shining armour . Besides typically being a member of the upper crust, an officer and gentleman is personified by his behavior:

No matter how savage the fighting, no matter how pitiless the combat, the officer almost never lets his base nature take over. He will remain polite, and even in the worst of situations will always retain his sense of propriety, often unfailingly displaying a Stiff Upper Lip . If a more clever sort, he may be a Gentleman Snarker . After all, a gentleman is not a mere label, but a way of life. For example, an officer and a gentleman will rarely if ever cuss , and never knowingly in the presence of a lady. He will rarely drink to the point of inebriation, unless it is used for comedic purposes or to tragically show how the war may be taking a toll on him . He would never, ever take advantage of a lady , and will be very protective of women, both of their persons and their sensibilities, even when it is not merited. Further, if you insult his honour, or worse, the honour of a lady he fancies, you may earn yourself a challenge to a duel , unless profuse apology is the next thing out of your mouth. Otherwise, expect a fair, gentlemanly duel in which he will proceed to carve you into cutlets. However, he would not think of fighting dirty , and most certainly Would Not Shoot a Civilian on purpose. On the other hand, if he is evil, he might have some of his less honourable henchmen do the Dirty Business for him. Further, whether good or bad, he will always keep his word… after all, he gave his word as a gentleman . Characters typifying this trope often have the habit, for better or worse, of displaying Honour Before Reason . Expect him to be A Father to His Men . Likely a Cultured Badass , especially when Authority Equals Asskicking is in play. Do not misunderstand—this fellow can be just as deadly as any other warrior; often more so, because one aspect that is often used with this trope is the fact that the more experienced officers are typically very composed and often have Nerves of Steel , making them less likely to act irrationally or misstep. However, while his training and experience may have forged him into a very skilled fighter, he will rarely be a Combat Pragmatist , and can often fall victim to more unsporting chaps. When it comes to actual leadership ability, the Officer and a Gentleman runs the gamut. If portrayed in a good light, the officer will be shown as being a Reasonable Authority Figure , like The Brigadier , and if he takes pains to look out for his soldier’s wellbeing, he is A Father to His Men . In a really positive light, they may be shown to be great front-line leaders and warriors as well, playing the role of Colonel or General Badass . If they are being portrayed in a negative light, they will be the Blood Knight , Nazi Nobleman , General Ripper , or The Neidermeyer . If they are cruel and/or incompetent, they will most likely be portrayed as a Colonel Kilgore or General Failure . While these more negative incarnations may be just as dedicated to politeness and etiquette as the good ones, their good behavior is reserved for their superiors and people of proper social rank, rather than the rabble of men they lead. Further, the evil officer would not hesitate saying " We Have Reserves ." After all, the only ones whose lives are at risk are the commoner soldiers, and who cares about them ? Remember, what separates this character from the Proud Warrior Race Guy or the Warrior Poet is not only the character’s devotion to honour but to a set of "gentlemanly" principles, which include good manners and etiquette. Most representations of the officer and gentleman are most certainly Lawful Good or at least Lawful Neutral . If on the side of the antagonists, or the major antagonist himself, he will often be Lawful Evil , or likewise Lawful Neutral if meant to be sympathetic, and is often portrayed as an Anti-Villain . Satirical versions of this trope are often represented as being Lawful Stupid . Compare with Knight Errant and Knight in Shining

Armor . Contrast Up Through the Ranks (for an officer who isn't a gentleman) and Gentlemen Rankers (when a gentleman isn't an officer). Compare and Contrast The Gunslinger , who is often considered a more pragmatic, if otherwise similar character. If during peacetime the Officer and a Gentleman was an academic , then he is a Gentleman and a Scholar . If there's focus on the gentleman part then he follows the code of Old-School Chivalry . The trope shares the same name with the 1982 film An Officer and a Gentleman </ (starring Richard Gere and Deborah Winger), but the phrase "an officer and a gentleman" actually predates the film. Despite being a rabble-rousing populist , General Nortier of The Count of Monte Cristo </ provides a good example of a gentleman soldier behaving honorably to those of the same class, even if on opposing sides. In the backstory which led to Dantes' imprisonment, Franz d'Epinay's father, a Royalist, was caught infiltrating the group of pro-Napoleon soldiers Nortier belonged to and seeing that d'Epinay was a fellow gentleman, Nortier allowed him to duel to the death instead of simply killing him outright.

Very often fiction that features characters in a work environment will have at least one instance of on the job romance. Sometimes it's within the rules, however, it may be against the policy. Characters can get called on it or even get fired. If the pairing fails, there can be a lot of awkwardness in the aftermath It can be Truth in Television , although the hot for supervisor version is often forbidden in job rules to avoid ethics problems. If this does occur, one character may wind up changing shifts or departments or quitting the job. Some companies allow dating between colleagues of equal standing, although Hollywood likes to push things further with jobs like police work, where a romantic pairing would likely be a problem unless one partner changes departments This trope may be played differently in different cultures. Sometimes it may be even expected to happen. Some companies are aware that people want to show their best and most efficient side in front of a love interest Compare with Forbidden Fruit . See also Inappropriately Close Comrades , for relationships where the "office" is service in the military. See Sleeping with the Boss for when the relationship involves a boss or supervisor and a lower-level employee under him/her

Characters in a Standard Office Setting (or equivalent) engage in some improvisational horseplay with the tools nearby. Sometimes this includes children's toys (like Nerf or wiffle balls), but usually they utilize some handy office supplies; stationary, paper, furniture, decor, old food from the fridge, job-specific tools, and more. They can make a ball out of crumpled paper or rubber bands. Notepads and small boards can be rackets. Brooms can become improvised hockey sticks. White boards or flip charts are used to keep score. Most people would get fired for these antics in Real Life , but in Fictionland, bosses tend to be more lenient Why do they do it? To kill time and avoid boredom. Also, it's fun</. Not everything has to be taken seriously, especially career or work in fiction. And it can be surprisingly good team-building. It develops improvization and creativity. It builds camaraderie, competitiveness, and/or rivalry among characters. It can serve as characterization device because it shows the characters as goofy,

silly or competitive. Some overachievers will be over-the-top</
competitive and people will very often treat it as Serious Business
. More prim and proper employees refuse to participate A Wacky
Startup Workplace might encourage this. This trope usually appears
in Work Coms and it's almost always Played for Laughs . Can very
well be Mundane Made Awesome

This is when the main characters in any given story are undeniably
a couple. (Thus, in heroic stories The Hero and The Chick are the
usual couple, though it isn't always them .) The important thing
to know about this trope is that the characters are overtly paired
off, so even if they never kiss on screen or even flirt with other
characters, it's understood by the cast (and hopefully the audience)
that the two are an item. Naturally, this does absolutely nothing to
offset Shipping . Sometimes, there's another couple that sometimes
serves as a Foil and/or companion to the "official" couple that
involves The Hero . This other couple usually involves The Lancer
and a minor female. This couple is called the Beta Couple . Expect:
She Is Not My Girlfriend , Just Friends , Everyone Can See It ,
Like Brother and Sister , and Lampshade Hanging . If this trope
breaks up a Fan-Preferred Couple , expect Ship-to-Ship Combat to
ensue. Side-Story Bonus Art often has the couple getting married.
Speaking of which, if this the path that the couple ends up taking,
it is very likely to fall under being Happily Married . See also
Love Chart . Contrast One True Pairing , Fan-Preferred Couple .
If the plot tortures the official couple, then that's Official
Couple Ordeal Syndrome . A couple is an official couple only if they
acknowledge their feelings and enter into a relationship in Canon .
Ship Teasing and Unresolved Sexual Tension do not count, nor does
your favorite Fan Fic or Doujinshi . Do not use this page as a proxy
for Ship-to-Ship Combat . </

Many stories have an Official Couple . In some genres, their
relationship will drive the plot. There will be lovers' tiffs
and Unresolved Sexual Tension . However, most official couples
have something that stops things from getting too bad Sometimes,
however, an Official Couple gets put through Hell. Fights,
breakups, infidelity and sometimes even people trying to kill them
will get in the way in an ordeal that can last anything from months
to years. If they're lucky, their relationship will make it out
intact but changed. Warning: in extreme cases this can lead to
mental breakdowns and even death This trope exists because people
tend to identify with an Official Couple . Therefore a good way
to keep up the suspense is to make their relationship dramatic.
This trope is the Up to Eleven Darker and Edgier version of that.
The writer creates an Official Couple knowing people will care
for it. The entire point of creating this couple and making it
official is to make the tragedy of its demise/near-demise all the
more obvious/painful to the reader. If the Official Couple stays
together despite being put through this trope it's an Earn Your
Happy Ending Happens a lot</ in Soap Opera . When it's a very long
arc, they are known as a " Supercouple "

Fans are asked to send in stuff that will be incorporated into the
show's Canon or Bonus Material (particularly Side-Story Bonus Art).
It could range from lines of dialogue, to costume /monster/vehicle

designs, to entire plot points A common form is to directly ask fans for stuff, and they send it in. Sometimes there is a contest for a major thing to incorporate. Credit is usually given to the senders, partly as a courtesy to the fans, and partly to avoid Plagiarism This may or may not be considered a good thing. If fan-created elements seem to take over the show, it can be seen as the writers going creatively bankrupt (like there is Running the Asylum). On the other hand, some elements help the fans feel like they are part of the show, helping old and new fans stay invested A Sub-Trope of Audience Participation (this trope requires a process to submit and apply, unlike the other forms) A Sister Trope to Ascended Fanon , Ascended Fanfic , Fandom Nod , Ascended Meme (neither one is directly asked for, but they're still incorporated into canon), and Fourth-Wall Mail Slot (which is</ directly asked for, but usually isn't</ canon) Compare Caption Contest , Contest Winner Cameo , Harpo Does Something Funny (having the actors submit stuff that wasn't in the script), Throw It In! , Promoted Fanboy , Approval of God

Show, Don't Tell is a main rule of all fiction, visual or not, and applies even more so in emotionally-charged moments of triumph and heartwarming that are seen as having a duty to be as vivid and narratively satisfying as possible to make the audience cheer with glee. Since the Relationship Upgrade in successful romance almost always qualifies for this, there's a strong tendency for characters to act out the moment of upgrade with a big, uncomplicated smooch. Often, especially in Unresolved Sexual Tension (and its cousins Belligerent Sexual Tension and Love Epiphany), this is a couple's very first time kissing each other, but this is not always the case It is, however, often portrayed as the couple's first "real" kiss, meaning it can be the first romantic kiss between two characters that have previously kissed due to other motives, the kiss that marks the moment when two exes reconcile, when a casual dating situation turns into true love, or when a couple that has made some motions towards romance in the past finally become a real</ couple. A major staple of TV shows. Compare Relationship Upgrade , They Do , Love Epiphany , Love Confession . Almost always a Hollywood Kiss , and when it's not, it's usually a subversion. Frequently The Big Damn Kiss . A common feature of a Cliffhanger or Season Finale . SPOILERS AHOY!

Some parents would go through Hell and back to protect their kids . Some even take it just a tad too far at times. Sometimes way too far . And then there are these parents. They don't love their children . Really. They don't even like them. Truth is, they'd really rather they didn't exist at all. Sometimes, they will actually go so far as to take a personal hand in this. The motto of this sort of parent is "I brought you into this world, and by God, I can take you out of it again." Talk about Parental Issues . Generally, only one parent of the pair feels this way (otherwise you probably wouldn't exist in the first place, or wouldn't have lived long enough to feel bad about the situation.) But the other parent may be dead, or vanished , or simply not strong enough to offer protection. If the other parent is actually protective , there will likely be major fireworks when he or she finds out what the spouse intends to do with the sprout. There are several subtropes into which a murderous parent may fall: : The child is blameless (or at least not guilty of anything deserving of death); the parent just wants to dispose of the child for some reason. Maybe there's a prophecy about the kid coming back and killing the parent and the parent figures "It's me or them";

maybe the parent has to keep a pact made with a dark power in which the child's life is the price; maybe the child is The Un-Favourite ; maybe the child was born as an unacceptable nonconformist ; Whatever the reason, the mother or father is ultimately just a murderer. In the worst case scenario, your entire species will be like this, in that case, you get Abusive Alien Parents . Sadly, there have been many cases of real-life parents — both mothers and fathers — who murder their own children. In case you are wondering, the technical term for this kind of murder is "filicide". For the inversion /opposite of this trope, see Self-Made Orphan , Patricide and Matricide . A subtrope of Murder in the Family . Usually also a case of Would Hurt a Child , as most examples have the offspring be younger than a teenager. Otherwise, it doesn't overlap. This trope goes back to Greek Mythology with Hesiod 's Theogony </, and even further to the Mesopotamian creation story Enûma Eliš </ Has nothing to do with The Offspring or Offing the Mouth . Outliving One's Offspring is when the child dies for reasons that are not the parent's fault.

Any character who is about to dash off on a high-speed run inevitably takes — just for a moment — a pose that looks like they're winding up for a pitch in a baseball game: one leg raised, the other bent slightly, the body twisted at the waist away from the direction of travel, with arms raised and bent at the elbows and often canted at an angle. Although their entire upper body is turned away from the direction they'll be running in, their head is always facing that way This posture is held for a moment, just long enough to be seen, and then the character is off and running, accompanied by a sound not unlike that of a ricocheting bullet. The "Charge" Fanfare would be a Standard Snippet Note that, depending on the level of "cartooniness," this can even be extended to vehicles, which will bend into an S-shape to mimic this behavior before taking off Compare Running on the Spot , Wheel o' Feet and Speed Echoes . Whoosh in Front of the Camera usually occurs after this

Animation is expensive. Really</ expensive. An average 30-minute episode of an anime costs around $171,500 and popular shows in America cost in USD (as of 2020) depending on how popular and how long the show was going on.

When a production company decides that the important episodes (i.e. pilots , whams , and finales) of a show get priority, other episodes (like filler) will, to conserve production costs, be drawn with only the bare minimum of framework that they absolutely must</ have In American cartoons of the mid-'70s to early '90s, it was the norm to send animation overseas to studios in Japan, Korea, Taiwan, the Philippines, Australia and other countries to cut costs even further. The quality problems caused by budget constraints were thus exacerbated by language and cultural barriers. Japanese studios came to be seen by American studios as the "top of the line" of overseas studios because of their consistent aversion of this trope Long running shows suffering from budget issues or a troubled production schedule will start resorting to thinly veiled camera tricks . The movement and even design of characters will start to slip, especially if the show is bothering to animate heavy action scenes. When they are</ animated, fight scenes will become

Fight Unscenes The prevalence of computer-inked animation merely assures that colors</ stay consistent. Off model refers to the character model (on a model sheet), which is what the animators are supposed</ to base their drawings on. This is another important step in animation checking, which may be skimped on when time or money (or even both) are short Fans are typically not pleased, and it is very common for companies to announce they're fixing up things for the inevitable DVD release Some artists willingly invoke this trope and do not follow model sheets, such as John Kricfalusi's Ren and Stimpy </. Following models too closely can lead to rigid and lifeless animation, whereas playing fast and loose with the designs can allow for more expressive and fluid animation. This does not mean that such creators "draw badly"; they still follow the basic rules of animation, and work to avoid outright errors. Similarly, animation principles such as smear frames and squash and stretch could be thought of as temporary and more subtle variations on that technique, where models are briefly disregarded in order to make a particular shot look more lively and less stiff — these moments often look perfectly on-model when played at normal speed, but look bizarre if the viewer pauses on one of the deliberately distorted frames See also Uncanny Valley , the result when it gets too</ far out of hand, and Special Effect Failure , which is a similar trope, but for live action and</ animation. Contrast Animation Bump , wherein the animation suddenly becomes much better</ than usual and Body Horror where an appearance similar to being off model is done intentionally and for horror. For animation studios who are notorious for this, see AKOM , Toei Animation , GONZO , Studio Shaft , Sunrise , Studio DEEN , Actas , Wang Film Productions , Diomedea , and Saerom . For a studio whose supporters and critics often argue about whether their animation is this, see Kennedy Cartoons If a show has constant instances of Off Model, then list notable examples of it. In addition, try to avoid typing Zero Context Examples Anime fans from Japan have their own phrase for this trope, 作画崩壊 (sakuga hōkai)</, literally "drawing collapse". On the internet, it is also known as QUALITY Below are examples in text form. For visual examples, you can visit , or

The criminal is caught, comes up for a trial — and then it turns out that he wasn't read his Miranda Warning , or the Cowboy Cop forgot to get a search warrant, or the confession was obtained via Jack Bauer Interrogation Technique . The judge is forced to throw the case out and the (alleged) crook walks free to offend again while their victims are left to suffer the ruling of a legal system more concerned about "procedure" than "justice" In stories where a Vigilante Man or Cowboy Cop is the protagonist, the bleeding heart judiciary will accept any half-baked excuse for letting criminals go free. This is often a case of artistic license as in Real Life technicalities frequently don't apply the way they are depicted or may not even exist</. If the accused person is the protagonist, then the "technicality" will actually be an albatross for them, because no-one will believe they're actually innocent until the end of the story/series when the actual criminal is found Most prevalent back in the 1960s and 1970s with the vigilante justice fad in fiction, after several court decisions seemed to tip the balance of the legal system far in favor of the accused. Since then, Real Life police and other law enforcement

personnel have had these changes included into their training to avoid screwing up their cases, and the fictional versions have become rarer. It still happens, but unlike in fiction, it's more often the excuse for the acquittal, rather than the reason. Such as when a judge or jury doesn't feel the person is guilty in spite of the evidence or does, but feels their actions were justified, and exploits the technicality as a legal grounds to dismiss the case. Multiple</ technicalities certainly can</ be the reason for someone being acquitted, but it wouldn't be this trope, as this is when a single</ technicality results in a "not guilty" ruling The Downplayed versions , on the other hand, are absolutely Truth in Television . One example is where the technicality doesn't acquit someone outright, but goes in the defendant's favor. Most court cases are not made or broken on one thing, for either side</. So a technicality can still reasonably be expected to influence</ the outcome of a case, but isn't likely to make or break it. Another example is the technicality resulting in a shaky case being dropped, or police falling just short of either reasonable suspicion or probable cause based on technicalities. If a case that's being built isn't particularly strong, it's not unheard of for prosecutors to either drop such cases or avoid putting too much energy into them if something, technicality or otherwise, gets in the way. So a technicality being just enough</ for an already iffy case not to end up in court is also Justified, as it happens in Real Life. If they get off completely when the case against them looked strong, it is almost always because the police or prosecution engaged in serious misconduct or completely dropped the ball on something extremely important. Even then, for them to get off completely instead of just getting a few charges thrown out, the judge has to really</ want to send a message, or the misconduct or bungling has to be so extreme that the entire conviction would have been overturned on appeal anyways In a Police Procedural , such as Law & Order </ , this will usually come in at the first quarter-hour mark, when the initial case falls through, and the DA tells the cops to find some non-tainted evidence or charges to rebuild a case from The Amoral Attorney with Rule Fu Stronger Than Yours loves taking advantage of this. The justice system may counteract it by Justice by Other Legal Means . The Insanity Defense is a version of this where the defendant (or their advocate) admits they did it but argues they aren't responsible for their actions because they were mentally incapable of determining right from wrong at the time

Last time we saw Alice and Bob, they were dating. Things seemed to be going fine, and they're happily in love. Now we see Bob flirting with Carol. Someone brings up the fact that he was dating Alice, and Bob will respond with "We broke up", or "Things didn't work out" This is more than a little jarring because it is just freeing up Bob to be in a new relationship (or to be single), without actually showing how the last one ended, or even to repeat the romantic subplot with Alice if she's in the sequel too. Often done to prevent Shipping Bed Death , or because the writers simply don't want to deal with writing out the mundaneness of an actual relationship Compare to Downtime Downgrade . Subtrope of Status Quo Is God . A direct inversion to Offscreen Romance

Ah, you're taking a Wiki Jog through TV Tropes ? That's ni- Oh, Crap! ! WATCH OUT FOR THE — * BANG

* CRASH

* RATTLE

MREEEOW — spambot junkpile. In television comedy, most major collisions/accidents are expressed through a loud crashing noise offscreen, usually accompanied by a cringing reaction shot. These crashes are Stock Sound Effects which tend to sound like a mixture of breaking glass, breaking crockery, and rattling metal objects - although in a lot of animated shows, particularly Hanna-Barbera cartoons, it sounds more like a bass drum/cymbal crash. In animated shows, the collision is often emphasised by having the screen shake rapidly up and down . And whatever else happens, That Poor Cat always seems to get the worst of it. Frequently preceded by the words "Look out for the" or "Be careful with the", e.g., "Look out for the—" CRASH!</ "...china hutch." Frequently followed by a piece of debris wandering onscreen, such as a hubcap rolling lazily into frame and spinning to a stop . Used because it's funny , sound effects are cheap , and no writer could come up with a more chaotic scene than your imagination can . May involve a Sound-Only Death or an "I Can't Look!" Gesture or a quip of " That's Gotta Hurt ".

Other things being equal, any given character is probably doing what he was last seen doing. Especially if you hope he isn't. </ Offscreen Inertia is that, if there are no strong indications otherwise, viewers can never really be sure that a character ever stops doing the last thing they were seen</ doing. Ignorable, except when what the character was doing was memorable, noteworthy, or disturbing. This is applied to narrative, and the forces that cause a change must appear onscreen. Often the reason children find Nightmare Fuel in "innocent" things, and if combined with Fridge Logic , can have the same result in adults. Also a prime source of What Happened to the Mouse? , which can be acknowledged with a Brick Joke , and may result in Something We Forgot . This can also be used by more skilled writers as a way to drive home the message of the story. For example, one of the reasons The Catcher in the Rye </ works so well is that Holden is always just</ on the cusp of adulthood whilst clinging onto his childhood. Why The Pigman </ (and other similar books) works well is that John & Lorraine are always just</ trying to deal with Mr. Pignati's death, and so on. Also, in traditional romances and vaguely erotic thrillers that don't want to earn an "R" rating, the story will end before the hero and heroine copulate (or might end afterward, but either way the copulation is skipped), with the result that more prudish viewers have the option of believing the lovers remained chaste forever. The classic ending has the couple kissing in the most erotic yet tasteful way possible - and often ends right after</ their lips meet, sometimes as part of a "YEAH!" Shot ... which, if the convention were accepted literally, would cause one to surmise that the lovers choked to death on each others' tongues . If deliberately invoked as a Fate Worse than Death , it's And I Must Scream . See also Tailor-Made Prison , Rule of Perception . May be a Bolivian Army Cliffhanger or Bolivian Army Ending (or, more optimistically, And the Adventure Continues). See also Black Screen of Death . The "YEAH!" Shot is a much more optimistic variant. See also No Endor Holocaust and There Are No Global Consequences , where the creators are relying on this to keep the audience from thinking about the potentially unsettling offscreen consequences of the

heroes' actions. Compare Take Your Time , a trope specific to video games where something that seems like it could or should change on its own doesn't</ until you, the player, come back to it. Contrast Offscreen Teleportation .

Something big is about to go down. Everyone knows it. The Big Bad is about to get schooled by the Old Master . A horde of mooks are about to be mowed down in an awesome fashion. Whatever it is, this will no doubt be one of the most awesome moments you will ever see Except you won't All you'll get (if you're lucky) is the characters talking about how awesome the scene was to behold Just like the expectation of something scary is more frightening than the actual scare , so is the expectation of an awesome scene. Except you never see the awesome scene, and are forced to imagine how it went down Compare Anti-Climax , Writer Cop Out , and Noodle Incident . If it is occurring just outside of the viewer's field of vision, it is a Battle Discretion Shot . Not to be confused with They Wasted a Perfectly Good Plot , where the awesome thing in question never actually happened at all This trope used to be called "Missed Moment of Awesome". If you want to find a trope for a time when a character's Awesome Moment fails to reach its expected level of epicness, try Negated Moment of Awesome . Stories or events that don't turn out as cool as you expected might belong in either They Wasted a Perfectly Good Plot (a YMMV trope) or What Could Have Been (a Trivia trope)

When the camera is looking at a certain scene, cuts (or pans) to another scene, but then cuts back to the original scene to show that things have inexplicably changed in the short amount of time that has passed, faster than would be possible Sometimes may manifest even if the camera does not move; instead, some object will obscure part of the scene, and when it moves, the scene will have been changed To give a hypothetical example: A character is dressed in certain clothing. The camera cuts away for a second then comes back to the character, showing him in completely different clothes, despite the fact that it would've been impossible for the character to have actually changed his clothes in such a short amount of time (sometimes this impossibility might be enhanced by showing the character in the same position</). Cue shock/disbelief from other characters This trope isn't about production goofs or continuity errors; rather, this is done intentionally. When played for laughs, the changes are often absurd or improbable. Occasionally is played straight to imply that something supernatural has happened, or a literal reality warp A related trope is Offscreen Teleportation , where a character can change position far too quickly while offscreen. Compare Instant Costume Change . See also Creepy Changing Painting . Related to Stealth Hi/Bye , where a character appears or disappears in the short time it takes the camera to swing away and back again. All these are made possible by Behind the Black and the Rule of Perception . This tends to be used by an Impossible Thief See also Gaslighting , when characters do this to each other while the other is sleeping

Two characters are, as far as the audience are concerned, not romantically involved with each other. Maybe they're Just Friends

, co-workers, or perhaps even strangers. Then those characters get Put on a Bus , or become Out of Focus , or the story gets a Time Skip . And when the audience see those the pair again, they're already a couple, maybe even married Basically, this is an inversion of an Offscreen Breakup , where the writers can justify pairing the two people together without having to dedicate a Romance Arc around them. It is commonly invoked to prevent a Romantic Plot Tumour (if the story is not centered around romance), or to avert Offscreen Inertia , but this could also lead to accusations of Strangled by the Red String if not handled carefully Compare Married in the Future , where characters who are already in a relationship consolidate their ties after a Time Skip or in an Alternate Universe , and Last-Minute Hookup , where characters are abruptly paired off in the finale, but the upgrade doesn't necessarily have to happen off-screen : This trope only counts when the couple has a Relationship Upgrade in mid-story. It doesn't qualify if they are introduced as a couple from the get-go Most pairings in Dragon Ball </ and its continuities (though Gohan/Videl actually averts it, since the two take a while to develop their feelings). A few characters marry and have kids during the series's frequent time skips with little on-screen development. To the author's credit, the reason for the lack of development is because he's stated in interviews that he doesn't care for romance, and most of the couples hook up during a Time Skip of several years, allowing the readers' imaginations to run wild

Beckett, Reversal's best friend in Roll to Breathe </ is suddenly seen with a date to the Spring Fling. Said date is Prism, known metahuman delinquent and a member of a rival group to the Final Hazard. The two are then referred to as boyfriend and girlfriend, with no explanation as to how or why they are dating.

Where a pie chart, line graph, or a bar graph has lines or bars shooting completely off the chart itself. Prevalent in cartoons and animation to imply either a severe rise in something or a severe drop in something (such as profits), that is severe enough that it goes through the ceiling or through the floor Refers specifically to when a chart runs out of space for data and the indicator for said data goes off the medium the chart is printed on, not the euphemism of the same name, although, depending on the context, it may count as well A sister trope of Readings Are Off the Scale

In works of fiction, the Intrepid Reporter character is often faced with sources that are less-than-willing to divulge their information. Unless they are an Anti-Hero wishing to resort to unconventional tactics , the character is typically at a loss for options. Until, that is, their source mutters three simple words: "off the record". After that, the journalist is typically given some crucial clue or piece of evidence that they can't outright publish but will typically lead them one step further in their hunt for the big story . The use of this trope is close to Truth in Television , but fiction works tend to treat these three words as a legally binding contract In Real Life , a journalist's code of ethics, and the code of the agency they work for, typically prevents them from revealing "off the record" sources and information, and any journalist that does reveal their confidential sources or information can easily find themselves without a job . However, those three words don't legally prevent the journalist from revealing anything, and "off the record" information

is still commonly published, especially when the information is especially revealing or damaging . In addition, a journalist is usually not considered to be under any obligation unless the "off the record" nature of the talk was agreed to beforehand. If someone says too much and then says "whoops, that was off the record" when he realizes his mistake, a good journalist may reply "I didn't agree to that." A variant of "Off The Record" is "On Background," where a source and reporter agree in advance that the information may be used provided the source isn't identified. This is why there are stories attributed only to a Senior Government Official or a Senior Official On The Secretary's Plane. There's also "Deep Background" and "Not For Attribution" - but all of these terms except for "On The Record" are not universally agreed on among news outlets, or even necessarily among reporters for the same outlet. As a general guide, the following definitions are from the : AP does not define "Not For Attribution", but that might typically be taken to mean, "Quote me exactly, but don't identify who said it." Expect this trope to pop up predominantly in crime dramas , but may make its appearances any time detectives and/or reporters are involved.

Alex makes an offer to Bob, but he rejects it. Later, Bob changes his mind and decides to take the offer after all, but Alex refuses to extend the offer a second time. It is Off the Table If Bob is the protagonist, Alex's refusal usually comes off as spiteful or wickedly cruel . If Alex is the protagonist, it is more likely to be portrayed as tough but fair and/or poetically just . Sometimes when the original offer is Off the Table, Alex will offer Bob a modified version with more conditions and/or a higher cost, to drive home the lesson that Bob should have accepted when he had the chance. And other times the offer is withdrawn without any good or ill intent: there was a time or a place where it could be accepted but now that moment has passed In any case, the lesson is this: If you refuse an offer, for whatever reason, there are no guarantees you can accept it later if you change your mind This occasionally occurs as an aversion of Sweet and Sour Grapes . Related to Last-Second Chance and Heel–Face Door-Slam , when the villain, offered one more chance to repent, initially refuses and/or accepts too late. Often the perfect setup for an Ironic Echo , where Alex denies Bob with the same words Bob used to initially deny him See Unrequited Love Switcheroo when this happens on the topic of love. Compare The Cake Is a Lie and I Lied where Alex never made the offer in good faith and intended to withhold it from Bob no matter what

You're a Card-Carrying Villain , about to marry a lovable, but chronically Genre Blind single parent. It's perfect! You can have endless sex with someone who is obviously a bombshell and you can spend their giant fortune any way you want! The only problem is their "bratty" kids who can tell you're a Devil in Plain Sight . What should you do about them? Hollywood always provides the same answer. Send them to boarding school! And for the extra-bratty boy, Military School ! Now you have to keep them from talking their parent out of marrying you just long enough to make it to the altar. After that, it's smooth sailing. Naturally, this always fails at the last minute. Typically, this trope is more prevalent in American media as opposed to countries where boarding schools are more normalized. This trope will usually go hand-in-hand with Guess Who I'm Marrying? , although either can occur without the other. Contrast the Boarding

School genre, in which going away to an Elaborate University High is portrayed as a good</ thing. If the school actually appears, rather than being kept as an offstage threat, expect a Boarding School of Horrors . This trope can be combined with Dustbin School and Military School . Not to be confused with "Not Important to This Episode" Camp in which the sending away is not for evil purposes, but merely as a plot convenience.

If you're dealing with any sword-oriented media, whether it be fantasy, medieval, kung fu, or something else, and it's more violent than a PG-13 rating, chances are, someone is going to get his head chopped off (and it may not even need the R rating if you're dealing with nonhuman enemies). One of the most common methods of execution back in the medieval era next to hanging, decapitation is usually one of the surest ways to ensure someone is Deader Than Dead barring some very potent magic or divine intervention. Indeed, in Real Life , it is one of the very few ways that death can be instantly diagnosed (since it's impossible for humans to live without a head.) Any Ridiculously Human Robot (even one with a Cranial Processing Unit) or other decidedly inhuman being will probably be capable of surviving decapitation , and will do so at some point either for a joke or as a plot point. In less serious series, the body will even continue to walk around bumping into things like a chicken or a cockroach with its head cut off. It is nearly always depicted as being surprisingly easy to cut through someone's whole neck and spinal column, even in one blow to a moving target. While Anne Boleyn did get beheaded with one stroke, most pre-guillotine beheadings took at least three strokes. Boleyn's executioner was — by request — a professional swordsman who would know how to cleanly behead someone And that's when the target is helpfully restrained; in an actual Sword Fight it would have been even harder to pull off and would also have been serious overkill. A direct cut through the skull into the brain — or a strike to the neck that would at least sever critical blood vessels or the windpipe if it didn't cut through the spine — was usually more expedient. This trope is named after the line Off with his head; — so much for Buckingham</ from Colley Cibber 's adaptation of Richard III </. The trope was also famously used by the Queen of Hearts in Lewis Carroll 's Alice's Adventures in Wonderland </. See also Your Head A-Splode for a much gorier version of this trope and Boom, Headshot! when it comes to firearms. May result in a Human Head on the Wall . Also see Alas, Poor Yorick , Decapitation Presentation and Severed Head Sports . When cutting off the head is the only </ way to kill something, it's Decapitation Required . If the severed head is somehow still alive after the fact for any notable length of time, that's Losing Your Head . Not to be confused with a Decapitation Strike , which is about decapitating a whole faction</ rather than just some person. As per being a death trope,

The Proud Warrior Race of Noble Savages has what the heroes perceive as a simple, possibly even backwards , culture. During their talks or negotiations (or heated battles), however, they'll run into one nearly incomprehensible linguistic and cultural custom: Their name for their tribe is translated "The People", but the name they have for the heroes? "Not-People". That's right. They don't consider

outsiders to be proper people. This might just be a curiosity mentioned in passing, but usually it indicates that their culture has a high degree of xenophobia, isolationism or both. It might just be a benign way of saying "part of this tribe, not a part of this tribe" At worst, it means they have a codified Moral Myopia that makes them view not-people as animals at best. To be put down when dangerous or annoying... or if they're too ugly and they're bored. A more moderate standpoint might just be that they consider "not-people" to be anyone who doesn't live their way of life, rather than as a biological imperative. In this case, other people or societies that share their values (be it honor, war or harmony with nature) will be considered "of the people". On that note, someone who is Going Native will become "of the people" after adapting to their culture and winning honor. For some reason, no one argues with their exclusionist views Alternately, heroes who share similar , unspoken sentiments and act in exactly the same ways may either be called out on it , or fail to notice their own hypocrisy when calling them out on their values. Speculative Fiction sometimes points out human/alien dichotomy as an example of this trope. Real-world tribal peoples, by contrast, are much more likely to call themselves "those who speak eloquently" and their neighbors "the people who don't know how to talk." Peoples who call themselves "the only real people" are few and far between; peoples who call their neighbors "not real people" are practically unknown. A rare exception may be the various European biologists of the nineteenth and early twentieth centuries who proposed that other ethnic groups were actually different species. Their theories have largely been discredited by The Holocaust , wherein Those Wacky Nazis acted upon their recommendations and tried to kill 40 million people and enslave a further 140 million (but "only" successfully knocked off 25 million). Today's true believers in the validity of Of the People in the real world overlap significantly with Holocaust deniers. The Germanic peoples called themselves Diutisc</ ("of the people"), whence "Deutsch," "Dutch," and this trope name; but they called their neighbors "Walhaz" (which originally meant a particular Celtic tribe, then broadened in scope to mean all foreigners, then narrowed to mean Latins), whence Wallonia , Wallachia , and Wales . The Diutisc</ didn't think very highly of the Walhaz</ (Martin Luther spoke of "Deutsche Treue, welsche Tücke," "German integrity, Latin faithlessness," and in modern English "welshing" is not a compliment), but they never denied that the Walhaz</ were human. "Slav" derives from slovenin</, "speaker", while the Slavs called their neighbors nemetsi</ ("mute" or "mumblers"): thus the names for Germany in most Slavic languages. (Not in Russian, though; the Russians know Germany as Germánija</, from Latin Germania</, but the German people are still Nemtsy</.) The Persians/Iranians and Arabs got their names for Austria, Nimsa</ and Nimse</, from nemetsi</ ; they got the name from the Ottoman Turks, who had conquered most of the South Slavs and picked up the Slavic name for the Hapsburgs to the north. The classical Greeks were similar to the Slavs, giving their neighbors a name that cast aspersions on their speaking skills: Greek "barbaros" meant "babbler," and it meant Persians and Middle Easterners, whose languages sounded like "bar bar bar" to the Greeks (their equivalent of " Blah, Blah, Blah "); it didn't refer to the sorts of peoples who we think of when we hear "barbarian", but highly advanced civilizations. It's widely believed that most northern Native Americans called themselves "the only real people" and their neighbors "the evil enemies," but this isn't true The vast majority of tribes knew themselves by a name related to their location (Wyandot, "dwellers in the peninsula", also known as

Hurons) or culture (Haudenosaunee, "people building a long house" in reference to their alliance, also known as Iroquois), and their neighbors by similar, if sometimes less complimentary, terms. There were a few tribes which called themselves things like "The Principal People" (Ani Yunwiya, also known as Cherokee, "Dwellers in the Mountains"), or even "The People" ("Inuit" in Inuktitut), and there were a few so warlike that their neighbors called them "the enemy" (Comanche</ in Ute; their name for themselves is "Buffalo-Eaters"); but there doesn't seem to have been any case of a tribe that did both. Most tribes that gave themselves names that expressed their superiority called themselves some variation of "The Best</ People", like the Cherokees (or the Chinese) — not "The Only</ People"; and the Inuit name for themselves is best explained by how there are so desperately few people that far north. Individual Inuit villages could, and sometimes did, end up so completely cut off from the world that they were apparently the only humans left alive; in a context like that, "the people" doesn't mean "our neighbors are subhuman," it means "we don't have any neighbors at all." If you do know of a case of a people calling themselves "The Only Real People" and their neighbors "The Evil Enemies", please vet it on the talk page before adding it here. Unless and until an example can be found and proven true, No Real Life Examples, Please! Compare The Chosen People , when this arises from the belief that one's group or species is favored by a higher power. No relation to People's Republic of Tyranny , where totalitarian regimes put "Of the People" and other similar, democratic-sounding phrases in their titles.

In Black Panther , Wakandans are somewhat xenophobic and racist. They tend to view foreigners as barbarians and avoid doing business with them. When one government official suggests giving Westerners the Cure for Cancer , T'Challa overrules him, fearing that they would somehow turn the cure into a weapon.

The Na'vi in Avatar us.

In many of the works of Zenna Henderson there's a group of humanoid In aliens living on Earth that refers to themselves as "The People" In in so many words. They arrived here around the turn of the 20th In century, when their home planet exploded. They look human enough In to pass for human, provided they're not flying at the time, or In doing one of the many other wondrous feats they're known and loved In for by generations of SF readers. While some isolated groups In on Earth attempt to suppress and deny their heritage, others In continue to use their powers discreetly. While continuing to call In themselves "The People", they refer to the inhabitants of Earth In as "Outsiders", and there's a distinct sense that they continue In to call themselves that as a way of reminding themselves that In they are not human. the Star Trek: The Original Series </ episode In "Return of the Archons", outsiders are said to be not of the In body.</

A specific type of Tag . The plot is resolved just before the last Act Break , but the characters come back after the commercial and deliver one last joke, usually tangentially related to the plot. Very often afterwards, everyone laughs The trope name comes from The Cisco Kid , </ where Cisco would deliver the punchline, and Pancho would always go, " Oh, Ceeesco! " Still used in many shows, comedy or not Compare to And Knowing Is Half the Battle and

End-of-Episode Silliness . Also compare with The Stinger , where this is after the credits. Usually a variation of Every Episode Ending Nothing to do with networking equipment . Or a certain bald federation captain. Or the superhero known as Vibe

VG Cats </: strip. Warning: May offend those who are offended by bloody baby fetuses. (Say that five times fast!)

A subversion of Oh, Crap! , where two characters are having some form of confrontation, and one of them pretends to lose his cool or be scared, giving a false feeling of victory to his opponent, only to immediately reveal he actually is fine. Maybe that character wasn't using his full power until now ; maybe the damage he just took isn't that important, or he can just heal easily . Maybe he anticipated what his opponent would do and prepared in consequence . Either way, he wasn't actually worried, and his opponent just didn't take the advantage. Unlike I Surrender, Suckers , Briar Patching or Wounded Gazelle Gambit , there usually isn't any practical reason to do this; the character is just doing it to mess with his opponent A Smug Super will frequently love to make use of this trope, as a way to show how much better he is than everybody else. Expect the character to deliver "Just kidding!" while revealing he is fine When this trope applies to villains, it often ends up being the subversion for a Villainous Breakdown . When a hero does it, on the other hand, it can frequently be a way to deliver an effective Shut Up, Hannibal! . From the reader's point of view, this can be used to invoke a Hope Spot , giving a false impression a fight finally is coming to its end. Often combined with Ominous Adversarial Amusement , when the fake panic ends with the person Corpsing In-Universe

The moment at which a character realizes that something really, REALLY</ bad is about to happen. Either that, or it already has</ and they are in big trouble because of it. They may not always say anything in particular when they do, but even if they don't, the look on their face clearly conveys to the audience their realization. This moment often features stronger language , and is when they truly realize that the solid organic waste is about to collide with the Rotational Air Circulation Device . Sometimes the first few notes of Fryderyk Chopin 's are used as background music to highlight how grim the situation is. They may feel that This Is Gonna Suck , and often exclaim, " You Have GOT to Be Kidding Me! " or perhaps " I Want My Mommy! " or sometimes even " This Cannot Be! " Other characters might emit a Loud Gulp instead. A few might say their Catchphrase but in an uncertain voice . Some might even freeze in fear completely . The effectiveness of this moment can be affected by the difference between their usual competence and confidence levels and how completely they are boned. Characters with low self-esteem or who are constantly crying out in terror are difficult (but not impossible) to make this trope work with. But that arrogant , so far unbeatable supervillain suddenly realizing they're about to have his or her ass royally kicked? Now we're talking! Can occur if one protagonist has been luring the other one into a trap , or if they just have some shiny new skill . Or they may simply be a lower-level villain who's just had the very bad luck to be confronted with a hero impossibly out of his or her league and is about to be on the wrong end of a Curb-Stomp Battle . On occasion, they will be discussing the

situation when they realize the full import of it. Can also occur if a character speaks ill of another in a language they think the latter won't understand, only to find out, much to their horror, that the latter also speaks it . Related to This Cannot Be! , and the polar opposite of Obi-Wan Moment , when despite the bad situation someone still manages to look composed. May result in a Heroic BSoD for a heroic character, or even a Villainous Breakdown for a villainous character. Nine times out of ten, this will immediately follow "What does this button do?" . The remaining tenth follow some other temptation of fate . Also a very common reaction when a villain, normally a Chess Master , Villain with Good Publicity , or Manipulative Bastard , realizes they've just been the victim of an Engineered Public Confession . Some characters react with less despair and more apathy ; others look to their equipment for a solution. And for some, it is the crowning moment of despair. When this trope becomes literal , that's Bring My Brown Pants —as Bill Cosby once said, "first you say it, then you do it!" May also be a Precision F-Strike for the person in question. When most of the cast available in the scene does this expression, it's a Mass "Oh, Crap!" moment. If someone tries to explain the situation to someone else, and realizes half-way through their own explanation</ they're in real trouble, it's Explain, Explain... Oh, Crap! . If the person making the realization try to explain and says nothing but "Run," it's time to Run or Die . If you realize you're in trouble after</ your explanation, or if someone tells you something really bad is about to happen and "Oh, Crap!" isn’t your first reaction, it's a Delayed "Oh, Crap!" . When you try to save some face by putting on a happy face, you make an "Oh, Crap!" Smile . When you pretend</ to realize you are in trouble only to mess with your opponent, it's an "Oh, Crap!" Fakeout . When your primary reaction is resigned acceptance of the situation, it's This Is Gonna Suck . See also Wide Eyes and Shrunken Irises . Say Your Prayers may be involved as part of this reaction. Contrast "Hell, Yes!" Moment , the exact inverse.

A phrase made popular by Jerry Lewis that was then exaggerated by characters based on him. The phrase is based on the syntax of Yiddish , and is heavily associated with Jewish and Borscht Belt humor. It's also consistent with the idea that Jews love to complain . Variations include: "Oh God, with the X!", "Stop, with the X!", "Please, not with the X!", etc. It's often topped off with "already!" The phrase is generally used to complain about an action, like "shouting," "stabbing" and so forth, but can also be used to complain about a subject, such as "Enough, with the radio! Turn it off!" Just about every Alter Kocker will indulge in the trope, but cultural saturation has also made it a part of general Buffy Speak . This can be considered part of the variant of stereotyped Jive Turkey specific to New York, and is particularly common among anybody who is trying to imply that they are from that city, whether or not they actually are. Compare [Verb] This! . Not to be confused with Oh, the Humanity! .

Oh, look. An index of tropes about sarcasm and sarcastic characters. Fantastic</. Because we totally needed one of those Compare Insult Tropes for the immature and uncreative version. As if checking them out will enlarge that little brain of yours

When a character presents a hypothetical scenario, then sarcastically says something like "Oh, wait!" and observes that

it's actually true. Usually used to present a Take That! . Different from That Came Out Wrong in that the character knows full well what he said. Has nothing to do with Hey, Wait! Many of the examples below are not actually "Hypothetical — oh wait — that's true!" Alternate forms include "Reasonable plan — oh wait — we can't because of something obvious." Or, "Blatant lie — oh wait — truth." All three are sometimes used as a real-life sarcasm tag , often overlapping with Don't Explain the Joke . Explain, Explain... Oh, Crap! is when someone, to their horror, does it to themselves

Old comedic trope that isn't used too much any more. Basically, somebody writes down a safe combination, a speech or poem, plans for the Death Star , etc. onto a piece of paper. So they reach into their pocket, pull out a list, and more or less go.... "Now that's done, let's see what else I must do. Butter, eggs, litre of milk... wait, no. That's my grocery list", puts it away, pulls out another list: "Okay, let's start again." A variation has a messenger handing at first a grocery list instead of the intended message to its recipient. Another variant involves someone taking out the wrong sheet of paper with a list of laundry items. Not to be confused with Bread, Eggs, Milk, Squick . Except in the most literal examples. A subtrope of Unfortunate Item Swap . See also Script Swap .

A constellation of two cops or detectives, an older one and a younger one. Inevitably, the older one becomes some kind of father figure to the other. In addition to that, they are often presented as very different from each other, which may or may not result in conflict between them. Maybe the older one is experienced while the younger one is new to the job. Maybe the younger one is emotional and short-tempered while the older one is more like The Stoic . Maybe the younger one is idealistic while the older one tends more towards cynicism . Maybe it's a case of Red Oni, Blue Oni . Maybe the older one is a rationalist while the younger one tends towards more intuitive methods of investigation - or maybe the other way round. If they appear in a crime or mystery setting (and they are very unlikely to be seen elsewhere), expect them to be the main characters. Also, expect at least one of them to be personally involved in the case in one way or the other Subtrope of Student and Master Team . If the junior partner grows up to train an apprentice of his own, it's a Master-Apprentice Chain

The idea, especially in Fantasy settings, that older things generally are better. The swords left behind by an old civilization are better than those made by their modern descendants. Same goes for armor, magic, or whatever. Anything that can be described as "ancient" is better than its modern counterpart, as if people are regressing rather than inventing new technologies and improving on old ideas. In fact, this technology is so superior that it continues to outperform modern ones despite spending a dozen centuries half buried in dirt in a cave . This can be explained by a setting with Medieval Stasis : if technology is not advancing, then older items made by legendary craftsmen will be better than modern gear made by run-of-the-mill craftsmen. Sometimes this can also be explained by the source of the items being the Precursors , with the "modern" civilization having

simply not caught up to them yet. Sometimes Science Fiction has Lost Technology after a dark age. In fantasy, it is often explained in the idea that magical beings and artifacts become more powerful with time . Subtropes of this include:

This idea has been popularly applied to at least one Real Life scenario: the story goes that Europe and Arabia emerged from The Dark Ages and into The Renaissance by rediscovering the works of Ancient Greece and Ancient Rome , re-learning technology that had been widely forgotten and disused for centuries. The romance of regaining superior wisdom of a bygone age has been a powerful driver behind this idea, even though there is much less truth in it than commonly thought. Especially in the late medieval age many areas of technology were ahead of anything the Romans ever did Today, it's definitely not a Justified Trope in Real Life , at least in terms of science. Modern science has surpassed the science of the ancients, meaning newly adopted technology has important advantages over older technologies. It does not have to be an improvement in all areas, but there is generally an overall improvement, which is why the technology could replace older versions. However, in pseudosciences like astrology and some alternative medicines (un-touched by the scientific method), the idea persists: this ancient knowledge and traditions have been around for so long, unchanged, so that must mean that they are better than modern science! It's the same logic as with the Old Master : if a tool has lasted for centuries and is still usable, then it must be damn good. Compare with Appeal to Tradition , the logical fallacy that believes Older is Better just by virtue of being older. has a page debunking the idea This trope follows a standard fantasy motif that everything has been grander and more perfect back in ancient times: gods roamed the Earth, heroes battled huge monsters with legendary weapons and armors that can survive centuries to be used again. If our modern heroes are doing the same thing, then it feels logical that in the older times, there were bigger heroes fighting bigger monsters with even more legendary weapons Do not confuse with the Real Life nostalgia due to They Don't Make Them Like They Used To and, its extreme form, True Art Is Ancient . Compare Stronger with Age when this applies to creatures. Also compare with Rock Beats Laser and Archaic Weapon for an Advanced Age . See also What a Piece of Junk in which an old, rusted technology turns out to be a superior item. Contrast with The Workhorse , which is a piece of equipment so solid it's still in use despite</ its age

Tropes first documented after the emergence of broadcast television as a mass medium of entertainment (1940) until the rise of cable television (1980) Television had the fastest adoption rate of any media technology until the iPod . In the 1940s TV sets in the USA numbered less than 10 thousand, by the 1970s there were over 140 million. The number of TV stations also went from 9 to in the same time-frame This rapid rise meant millions of viewers and millions of dollars in advertising revenue; which by 1950 were based on ratings generated from quarterly questionnaires, called " sweeps " for their staggered regional polling. Executive Meddling soon followed as Network Executives learned that only popular shows made money, with fiction being a big seller. Some networks like PBS and local news-stations are funded by donations from viewers instead, these tend to focus on non-fiction The limited number of over-the-air channels and (initially) TV sets meant that audiences

were not as niche and fractured as they are now. Any given show or episode could more easily become the talk of the country since more people were likely to have seen it. This in turn meant that there were limits on content "because children may be watching" — which was the source of late-night content restrictions , as that was when kids were supposed to be asleep. As didn't arrive until the 1990s, the Broadcast Standards and Practices (BS&P) during this time period was tougher than today and started the Editing [of Films] for Syndication For more technical information and tropes in general, see the Useful Notes for Television T.V. series also share many tropes with both radio and cinematic films , so be sure to check the Older Than Television index for tropes which TV may be famous for, but are Older Than They Think . See also The Golden Age of Video Games for video-games from this time period

Abbey Road Crossing — Abbey Road </ , 1969

The Oldest Ones in the Book recorded before the Greek alphabet was invented, around 800 BC. Mostly from mythology, and generally orally transmitted before being written down. If the work you're thinking of has a known author, and it's not ancient Egyptian, it's probably not from this era. Specific works from this period:

: Tropes originating in mythologies/religions that aren't Mesopotamian, Egyptian, Anatolian, Vedic, or Chinese are never indexed here, as we have no idea whether those stories even existed in 800 BC, or what form they had, centuries or millennia before they were first written down. Even The Bible and Classical Mythology are only Older Than Feudalism . Technically, some very old parts of the Books of Genesis, Exodus, and Numbers are probably</ this old. However, we aren't sure which parts exactly and in any case it's easier to treat the whole Bible as younger. Likewise, evidence from Mycenaean Greek tablets indicates that a few of the later Greek deities were worshipped in some form by 1200 BC, but we have no narratives about them until the classical era. Early folklorists often started with the assumption that folktales and myths were primordial; more research has shown that people can and do modify all sorts of tales for any purpose.

All of The Oldest Ones in the Book first recorded after the invention of the Greek alphabet (c. 800 BC) and before the fall of Ancient Rome in the 5th century (c. 476 AD), a period usually called . Works from this period include: All ancient Greek and Roman myths, literature, and theatre. Tropes originating in other mythologies/religions are not indexed here, as we have no idea whether those stories even existed by the 5th century AD, or what forms they took, centuries before they were first written down. Even Norse and Celtic mythology are only Older Than Print ; although they're derived at least in part from earlier (unwritten) stories, the details are fundamentally un-dateable. Early folklorists often started with the assumption that folktales and myths never changed; more research has shown that people can and do modify all sorts of tales for many purposes.

From the fall of Rome during the 5th century (c. 476 CE) to the invention of printing. The precise dates vary from region to region, but this was a time when literacy was low and books rare. Most western folklore originated here, often echoing earlier tropes.

Chivalric Romance developed in this era. Note: this is older than Johannes Gutenberg 's printing press </ (1439 CE), not metal movable-type characters (ca. 1230 CE, Korea), movable-type printing (1040 CE, China), and certainly not wood-block printing (220 CE or earlier, China again). In short, the Middle Ages — assuming you don't take Petrarch's definition for it, as he lived in the 1300s. Even all things Shakespeare , Don Quixote , and many late medieval and high Renaissance era books are only Older Than Steam . Specific works from this time period include: The Arabian Nights </, mostly (though " Aladdin " and " Ali Baba " have no known source before Galland's Older Than Radio French translation.)

This is Tale collections

From printing to the steam engine (1439-1698), a time also generally known as the Early Modern Era. The arrival of movable type printing in Europe made books plentiful, and helped standardize the languages that used it. Much more survives from this period than from earlier. Please note, that when we say steam engine we mean useful steam engine. Not Heron's first century toy, not the store , and definitely</ not the gaseous form of water (which predates mankind by hundreds of millions of years). Notable works and authors from this time period include: William Shakespeare (see The Zeroth Law of Trope Examples), Christopher Marlowe and other authors of Elizabethan/Jacobean drama.

Tropes first documented between the invention of radio (1890) and the emergence of television as a mass medium of entertainment (1939). Radio and Cinema provided two entirely new media, for the first time in millennia, and originated many tropes. This is also the time of the first Super Heroes , and the majority of Sherlock Holmes (though the first novel is Older Than Radio) . TV, as we generally know it, was invented in 1928, but regular broadcasts didn't start until 1936 in the U.K. and Nazi Germany and 1939 in the U.S. and U.S.S.R. Abandoned Mascot — Mickey Mouse replaced Oswald the Lucky Rabbit with Steamboat Willie </ , 1928

A common aspect of childhood is that children want to be seen as older than they really are. Be it a toddler hating being called a baby, a child wishing they were old enough to drive or a teenager craving the independence of college life, kids aren't fond of

being reminded of their age Many kids gravitate towards material made for older audiences as a result. This is most pronounced in pre-adolesence, between 9 and 12. Kids will begin to throw away their toys and get into things that are aimed at their elders. A budding interest in violence and sexuality often starts to occur in this age group Companies have taken note of this. In advertisements, it's thought that, in an attempt to seem mature and grown up, young kids will gravitate towards a product if they see adults or teenagers enjoying it. Many works are aimed at one demographic but feature characters slightly older than the demographic. For example, TV shows aimed at 11-year-olds feature 15-year-old protagonists. This is especially noticeable in Kid Coms . Very few feature protagonists under 12 despite the target demographics generally being between 8 and 13 years old Works that use this trope feature sanitized versions of being a teenager compared to works aimed at actual</ teenagers. The cool (and clean) parts are left in — the cars, the fashion, the romance, the parties, etc. — but they leave out the racy aspects of adolescence. Likewise, this occurs with teen-aimed works featuring adults: all the fun of being independent and having a job but without the bills and complications of being an adult. This, however, leads to the side effect of teenagers acting like overgrown 10-year-olds and adults acting as mature as 16-year-olds The use of this in anime and manga ends up creating a lot of Values Dissonance . Non-Japanese audiences begin to associate the series with older audiences than intended , and often the work will be aimed at an older audience in certain countries due to different criteria on what children should view. Many supposedly "adult-aimed" anime are actually aimed at preteen boys or preteen girls but contain a lot of Family-Unfriendly Violence and other material uncommon in children's works in other countries This trope is in large part why Kid Appeal Characters often end up being The Scrappy instead. Adults think that appealing to kids by having a kiddie character works, but many children would rather focus on a cool and mature Escapist Character instead. Kids tend to prefer characters they can admire and aspire to be when they're older rather than an Audience Surrogate their age. All they do is distract from the character they liked, and at worst it reminds them of how immature they still are Compare to College Is "High School, Part 2" . This trope can result in Avoid the Dreaded G Rating , as "G" and other equivalent ratings are seen as too kiddie compared to the slightly more mature rating

A good number of the RPG tropes can be found here, since these games trace their roots pretty much directly back to Tabletop RPGs such as Dungeons & Dragons </ , which were among the first commercial games to be adapted for a video game system. And to be clear: As long as it was an actual game, it counts for the purposes of this index, video or not; that being said, if a pre-1986 video game example exists, it should also be listed here Of note, the Nintendo company itself is Older Than Radio

Sometimes characters don't look their age. Whether it was a deliberate artistic choice on the behalf of the creator (usually to make the character more attractive or to legally fulfill a fetish) or something much deeper and linked to their characterization and the plot, this character will be older than they look. Although still within the normal range of the human lifespan (for that setting, anyway), this character will look noticeably younger than

their age. Sometimes even improbably younger; it's not unheard of for a seeming teenager to be over the hill chronologically This is an extremely common trope in Speculative Fiction , where Functional Magic or Applied Phlebotinum can be used to explain the characters appearance being at odds with their age When science fiction or fantasy takes this trope Up to Eleven , it leads to Really 700 Years Old , The Ageless , or a Time Abyss . See also Age Is Relative and Improbable Age . Not to be confused with Older Than They Think . Contrast with Younger Than They Look . If they're just drawn in a way that makes them seem older, it's Artistic Age . When a character is played by a much younger actor, it becomes Hollywood Old unless the difference is justified . When the actor</ is older than the character they portray, it's Dawson Casting (although the actor themselves may just fit this trope, justifying the Dawson Casting) This is a Super-Trope of Never Grew Up Compare Mistaken Age , Age-Inappropriate Dress . For characters that don't look younger than their age but are still good-looking, see Silver Fox . Contrast Animation Anatomy Aging Remember, this trope doesn't cover characters who are impossibly old, just much older than they look. For characters who are impossibly old, see Really 700 Years Old and Time Abyss

Simply defined, a fan thinks a trope, plot or line was invented by a show they watch, when in truth its origins lie farther back in history Tropes tend to be much older than they appear, even if they aren't one of The Oldest Ones in the Book , so it's increasingly likely that a viewer of a specific program won't be familiar with the original source of whatever is on display This can also be inverted by fans, who see a modern adaptation of some older classic they're unfamiliar with, and incorrectly assume some newly introduced trope was part of the original work. The ultimate expression of this is the Unbuilt Trope — someone did it previously, examined it, deconstructed it, zig-zagged it, all spectacularly, finished the story's run, but is now remembered mostly nostalgically, not for its trope See also the more extreme Fleeting Demographic Rule . Compare with classical music Covered Up , Name's the Same , Pop-Cultural Osmosis , "Seinfeld" Is Unfunny , Revival by Commercialization , Sequel Displacement , and the "Weird Al" Effect . Franchise Original Sin is this trope applied to a fan complaint. Somewhat related to Adaptation Displacement . Can be the result of Small Reference Pools making fans miss older works. Contrast with Newer Than They Think , which goes in the other</ direction. Do not confuse with Older Than They Look . There will be a short quiz at the end of class For examples of people referencing this in fiction, see It's Been Done . See also Fan Myopia for the same effect when it's over work knowledge rather than time knowledge

A lady and her suitor are having a romantic date on a rowboat, perhaps a swan boat . This was a popular dating image for the 19th and early 20th century upper classes, as it provided a chance for couples to be alone together, but still in plain sight to avoid accusations of anything sexual happening The typical image is the lady sitting under her Parasol of Prettiness in a Simple, yet Opulent dress since this usually wouldn't be an occasion to wear an outright Pimped-Out Dress , while the gentleman sits on the other side, wooing her in various ways. Bonus points if he's using a ukulele These days, "old-fashioned" means precisely that. This isn't quite a Dead Horse Trope , but spoofs of it far

outnumber straight uses these days, usually with at least one of the participants falling into the water if the boat doesn't sink. Also, the " Tunnel of Love " rides in amusement parks were sort of a play on this trope, using the dark to allow couples to have intimate contact with nobody actually seeing anything. Another popular variation is a date in a Venetian gondola (with the bonus that you can pay someone else to do the actual rowing) A Sister Trope to Serenade Your Lover , Courtly Love (another romance ideal), Married at Sea (taking this to another level) Compare The Gay '90s , Chaste Hero , Celibate Hero , The Ingenue , Purity Personified , Princess Classic , Coy, Girlish Flirt Pose , Umbrella of Togetherness

Sometimes absence makes the heart fonder than its object deserves...</ Alice is delighted to meet someone again. Perhaps it's Carol, her Best Friend in school; perhaps it's Bob, whom she was engaged to, and whom she has waited for . Within minutes of their meeting, she realizes this is a big mistake. One or both of them have changed too much, or she realizes things she had never seen before, or it becomes apparent that the reality does not live up to the fantasy . In an inversion of Oblivious to Love , Alice may realize that she has long fallen out</ of love, and quite often, that she was Oblivious to Love in a third character. Tends to be treated far more sympathetically than Absence Makes the Heart Go Yonder . But it can also a demonstration of fatuity on Alice's part—her dreams were overly romanticized, or forgot that time was passing for the other character. Inverse of New Old Flame . Compare Growing Up Sucks if the two met as children.

When something goes from one medium to another, it's because of two elements: Moving something to a new medium is a way of breathing new life into an existing product which generates two things. New revenue from the fans, and new revenue from potential fans who for one reason or another never were into it in its original medium, but might get into it here. This is where the problem arises. Take for instance a comic book being turned into a movie. Most comics have up to 70 years of Backstory , cool sequences, and ranging from a handful to an army of cool heroes and villains. All that has to be crammed into a two-hour presentation or the longtime, diehard fans are upset. Meanwhile, it has to be perfectly understandable, and — more importantly — easy to follow, or else the new blood won't like it . Ultimately this leads to a dangerous balancing act, one that is rarely done right, although producers appear to be getting better at it. You need to throw in enough of the classics and not change things too much or you alienate the fanbase, but at the same time you can't rely on in-jokes or backstory or you'll lose the new blood. While the fanbase may be more loyal, the new blood represents more money for the new genre, so as far as the scale goes it almost always tips to the new blood side. Before continuing, it's important to understand two things. First of all, any examples here are at best subjective. For this reason, an example could show up in more than one location under different arguments. This is allowed. Everything has an implied "arguably" in front of it. Secondly, an example being in any of the three categories does not necessarily indicate that it's bad. A movie that has nothing to do with the original premise can still be enjoyable, as can one that is very hard for newcomers to follow. One common way to balance the scales is to adapt the characters

and styles, while only representing the original story</ in broad strokes, sometimes only keeping parts of the origin story. Most Comic Book movies produced around the 2010s follow this method. See also: In Name Only for the more extreme New Blood cases, or They Changed It, Now It Sucks! and Pandering to the Base for the more extreme Old Guard cases. Also see Newbie Boom and It's Popular, Now It Sucks! .

Old Magic is a system of Functional Magic that has been mostly or entirely replaced by a newer system of magic, which might be refined from it or completely unrelated. This paradigm may be enforced by a Ban on Magic of the older kind. There are various reasons the old system may have fallen out of favor: Its secrets were kept by only a few, and are now mostly lost. Another take on Old Magic is that it's exceedingly simple, to the point that just about anyone can use it if they have basic knowledge. However, this also means that it's very easy to anticipate and counteract, so it's seldom actually useful in conflict. Because of the Chekhov's Gun principle, once Old Magic is mentioned in a setting it's bound to come into play at some point. Maybe the villain uses it because they are too desperate or sociopathic to care about the costs. Maybe the heroes use it because it's the only thing that can solve their specific problem, and they just have to deal with the extra problems it causes. Or maybe there's an Archaeological Arms Race underway to find the secrets of this old magic so that it can be rediscovered and exploited. Because of the link to antiquity, Old Magic is often associated with Precursors . It might be dependent on a forgotten Language of Magic or a Primordial Tongue , and it might work on different rules than the magic system everyone knows, making it a form of Wrong Context Magic .

Don't</ let his age (or his size) fool you; this guy is a force to be reckoned with. Despite being at least sixty years old, he (or she) is a formidable fighter who can take on several younger opponents at a time, clean the floor with all of them , and barely get winded. They may rely on years of training and deceptive strength, or cunning , but they get the job done. Obfuscating Stupidity comes as naturally to this guy as breathing. He might also have been a Badass Bookworm on the way there. Any physical decline he's suffered from advanced age simply won't matter, because he learned long ago how to defeat enemies who are physically stronger and faster than him. Often the Old Master will be more</ dangerous in his twilight years than he was at his physical prime because of this Break out the ^ sign on your calculator when this trope is applied to seasoned adventurers of any type; anyone who's managed to survive to a ripe old age while performing inherently dangerous work is obviously really damned good at it The Old Master is often the sensei to one of the main characters (often the name they give him), training them so they can pass on the torch to the new generation (and maybe earn themselves a break). To do so, the character typically prefers the Wax On, Wax Off approach to education and the When You Snatch the Pebble approach to final exams. Crueler or Good Is Not Soft classes of Old Masters, on the other hand, function as the Drill Sergeant Nasty , and those who study under him had better be prepared for Training from Hell . In short, this character can be of any moral alignment or ethnicity</ whatsoever Heavily overlaps with Hermit Guru and Stronger with Age . See also Old Soldier and When Elders Attack . They are likely to be Weak, but Skilled but that is an

age-less trope. Retired Gunfighter is the western, weaponized version of this. Contrast with Older Is Better . In martial arts movies, especially, the Old Master tends to be a Magical Asian . In the Caper Crew makeup, he is the Legendary Thief. Don't be surprised if he's The Patriarch in a Badass Family Oh, there is</ one lesson that always tends to escape him: if his charges get hit enough times with any given tactic, they’re going to return it in full force… innocently and instinctively, at the worst possible moment

The brilliant thing about the Internet — and the thing that separates it from any other medium or form of communication — is the speed at which information can be passed from person to person and group to group Put a link to something cool — a video, a game, anything — on a message board and it can be seen by dozens or even hundreds of people within the next hour. Chances are, many of them will regularly visit other message boards and put the link on there, and so on and so on. A link can go from you to someone else on a board you've never heard of within a matter of minutes, which means that popular internet memes can flare up and die away within days, or grow and grow over the course of months Of course, the Old Media are restricted to publication and broadcast dates, which means that (compared to the net, at least) most of the news it delivers is old stuff. But when it comes to the 'net, the issue is exacerbated — most papers and networks are run by older people for whom the Internet is a tool, rather than a pastime, meaning that Internet-related stories can be months (sometimes years) old before they actually make it to transmission So while you and your cyberpals may have known about Second Life </ since its launch in 2003, it wasn't until 2007 — a full four years later — that the UK broadcast and print media jumped onto the bandwagon As time goes on, those higher up the media food chain will be replaced by Internet-savvy types, which may destroy this trope completely. As of the mid-late 2000s, however, those who grew up with the Internet through their teenage years are only just getting onto the lower rungs of the Old Media ladder ... and that's assuming Old Media will even still be around</ by the time those people get the chance to be in charge of them Contrast New Media Are Evil , The New Rock & Roll , You Can Panic Now . Compare We're Still Relevant, Dammit!

An Old-School Dogfight is a type of close-combat battle between fighter craft where each attempts to maneuver behind the other in order to shoot them down. In essence, it's a three dimensional version of Chasing Your Tail , where both parties are armed with a Fixed Forward-Facing Weapon , making it necessary to be behind their target in order to attack. In Real Life , this form of combat is limited to fighter planes, but fiction is less restricted — it can show up not only with Cool Planes , but Space Fighters , submarines , and even tunneling vehicles like Drill Tanks . Any time a 3-D environment or 2-D Space is combined with Fixed Forward Facing Weapons , you can expect to run into old school dogfighting The reason it's called an "old school" dogfight is because it doesn't actually happen very often in real life anymore. While it was the standard form of air-to-air combat for decades, the introduction of reliable, long range guided missiles means that most modern air combat is now fought well beyond visual range. Old school dogfights can still involve the use of missiles, though

— they'll just be much shorter ranged than their real life equivalent, and have to be fired from behind in order to have a chance of hitting. This was</ Truth in Television for certain types of missiles, but isn't anymore However, dogfights are cool . More importantly, dogfights look</ cool, in a way "Shooting down something you can't even see" isn't. Hence this trope. The characters involved in an Old-School Dogfight will frequently be Ace Pilots with Improbable Piloting Skills , often have a Wingman and/or a Guy in Back , and will probably cover each other's six at some point. Old school dogfighting during an Airstrike Impossible is not out of the question. Overlaps with Space Is Air when done by Space Fighters Also see Standard Starship Scuffle , when it's the bigger spaceships duking it out

They say that you have to do bad work before you can do good work. Not just one piece of bad work, but tons </ of it, some so bad that it puts The Eye of Argon </ and Plan 9 from Outer Space </ to shame Whether it's fan fiction or original published work, some really bad stories have been written (this goes for other art forms too, sometimes just as badly). And even though you have to do bad work before you can do good work, the bad work still exists and the creator has to deal with it . Sometimes it's published to wither and die on its own; most of the time, it isn't Of course, this isn't limited to bad or mediocre stuff: sometimes the work is So Cool, It's Awesome or a Cult Classic , yet those who own the rights feel it should sit in a vault while pulling down any and all online copies. Sometimes, the shame happens because a work was Fair for Its Day but contains concepts, themes , or character archetypes that simply aren't considered acceptable in the present (that, or the work espouses values that were unacceptable even at the time the work was created because the author was in a REALLY bad mood that day). Another possible reason is that the work heavily promotes a viewpoint that its author no longer holds One of the leading causes of Dead Fic : authors express intent to finish their old work, read through it as a refresher, and can't get past the first chapter because of how bad they think it is. In fact, the vast majority of fan fiction in general becomes this after the author gains some age and perspective. This is commonplace at the start of someone's fan fic writing career; the author will want to write a really good fight scene or really interesting plot, but their inexperience in writing leads to plot holes and Mary Sues . Then, as the writer gets better and looks back on his old work, they'll cringe as they realize how bad it was; naturally, they may want to erase all memory of it It stands to reason that this trope is not all black and white : there are hundreds of ways someone can regret the work they did and much of it may not have anything to do with the final product. An Old Shame may come from having bad memories of the Troubled Production , loving the experience but perplexed at the direction it took or greatly disliking the Typecasting (or other attention) they received after the fact. It's actually rather common to make extremely close friends while working on an infamously bad TV show or movie Rule of Thumb: If the creator tries to erase any trace of its existence , shies away from it, moves on to the next question when it's brought up, issues a public apology, or otherwise just tells people not to care about it, it's an Old Shame Compare Creator Backlash (where the work in question gained popularity but earned the ire of its creators

anyway), Growing the Beard , I Was Young and Needed the Money (an extreme variant of this trope), Bleached Underpants (which this may overlap with) and Magnum Opus Dissonance (when a work the creator is ashamed of becames their biggest hit). Contrast Condemned by History , where it's the fans</ who don't ever want to remember they liked this work. See also Ham and Cheese , where an individual in a movie they know will at some point become Old Shame decides to have fun with it, and Took the Bad Film Seriously , where an individual doesn't even seem to realize the movie is awful and gives all they have. Generally the opposite of First Installment Wins , it can be the source of Never Live It Down . Art Evolution is a visual example of this: there's no faster way to embarrass a webcomic artist than pointing to something early in their archives that characters</ within a work of fiction can also see something in their past as an Old Shame. Such cases would be categorized under In-Universe , and thus should be linked as such on a work's trope when it applies within the work itself

The old soldier is the grizzled veteran who has been through and seen everything in war. He would more than qualify for being a Shell-Shocked Veteran , both in age and experience, but he's still going into battle and odds are that he's the backbone of whatever unit he or (more rarely) she is in. This character type is almost never an officer or a commander, and is instead usually a Sergeant Rock . If he is</ an officer, expect a Four-Star Badass . Generally you can expect them to be tough, to have a few badass scars , and to be eternally pissed off at (or at least exasperated by) the younger troops around him. Despite that, he may still turn out to be one of the best sources of mentoring or seasoning a young soldier can get. Some might be too much used to military life to effectively function in the civilian life Expect the Officer and a Gentleman to rely on him quite a bit in running the unit, a la Captain Smooth and Sergeant Rough . Ensign Newbie , on the other hand, will rarely know to do this or will actively tick off the old soldier in attempting to control a unit, a mistake he usually pays for. Despite the first page quote, old soldiers have about a 50-50 chance of dying in a work of fiction, but usually not until rather late in the story, generally in a Heroic Sacrifice of some kind or in a suitably impressive way. If this character dies early in a story, odds are you're dealing with a story on the cynical end of the scale , and that it's going to have a high mortality rate If the soldier is too</ old to fight, or too battered (or both</), but denies that fact, he may be a Perilous Old Fool

A character is in grave peril, perhaps running away from the Monster of the Week , or just happening to be in the wrong place at the wrong time when Phlebotinum Breakdown occurred He or she takes refuge in a vehicle or closed room of some sort and breathes a sigh of relief And that's when the Ominous Crack occurs. This indicates that the windshield or wall is about to give, cruelly destroying the character's false sense of security Cue suspense-filled sequence as the cracks slowly spread through the glass and/or oh-crap-I'm-screwed line. A similar fate can occur when a character is standing on ice or some other ground that cannot support the character's weight

Sometimes the Plot Device has a unique shape, carefully designed by

the work's artists to look like no other . Other times it's a box . A cube's inherently unnatural shape, combined with its general lack of visual cues, instantly makes it an Eerily Out-of-Place Object . The mere sight of it invites several questions. Is it mystical in nature or a piece of Sufficiently Advanced Technology ? So volatile that it'll explode if you poke it, or benign enough to move around if you're careful? Something that can be used for good or a tool for evil? Why is it glowing ? Does anyone else hear that humming noise ? In addition to the atmosphere, making plot devices cube-shaped can also bring to mind imagery of " Pandora's Box ". Some writers go the extra mile and even name their artifacts after it, even if the work in question doesn't have a lot in common with the classical myth . Almost exclusively happens in Science Fiction , Fantasy , and Horror , as more contemporary genres have no reason for their Plot Devices to have a foreboding atmosphere since they're usually just mundane objects. Sister Trope to Sinister Geometry , which evokes the same feeling of dread that this trope often does, but is significantly larger in scale, and can take any geometric shape, such as diamonds or pyramids.

Some aliens want to make a grand entrance. This trope marks the tendency for fleets of mile-long alien spaceships to ominously hover, several hundred feet over the world's cities without doing very much. It usually means the start of an Alien Invasion but it can be subverted. Expect shots of shadows washing over cities like a tide, awe-stricken people looking upwards and Jitter Cam footage of the ships over every major city. Five Rounds Rapid against them will be useless while their Wave-Motion Gun will be devastating when they decide to use it. Absolutely no Midair Bobbing ever. Quite inexplicable as not only would it expend vast amounts of power and present a big target but by Newton's Third Law, crush everything underneath it . Perhaps it's because Power Floats or because ships float in the sea and Space Is an Ocean , but it also adds to the menace: how can something that big hang in the sky without making a furious amount of engine noise and disruption? Clearly, they must be fearsomely advanced , and the Puny Humans defenses will be nothing to them It nearly always occurs Twenty Minutes In The Future by Higher-Tech Species and is never inverted. Probably because humans are too polite See also Floating Continent and Ominous Floating Castle

Fog can be part of the ominous mood or inseparably tied to a dangerous and ''creepy'' supernatural phenomenon . This is only about the ominous mood it creates Maybe it's the way you feel alone in the fog, even with your companion next to you. Maybe it's how the fog seems to swallow everything and makes noise and sight unfamiliar. Maybe it's the way it curls and sways around you as if it knows</ you are there. Maybe it's the fact that a monster could lurk a few meters from you and you wouldn't know it If the environment is empathic , it should be possible to read your situation from the weather. Anyone with even a whiff of genre-savviness knows that dense fog is about as bad a sign as a howling tornado on the horizon . Is sometimes accompanied by a blood-red sky May overlap with Mysterious Mist . For a fog that's actively trying to kill you, see Fog of Doom

Loud noises, especially unexpected ones, can be extremely jarring. Just as uncomfortable for many is the thought of dealing with uninvited guests, or accidentally letting someone untrustworthy into your house. When these two fears are combined, you can evoke fear from a situation as mundane as someone knocking on a door The noise won't stop for more than a few seconds at a time; if anything, it'll just get louder and faster, echoing through the house as the owner, rightfully, tries to avoid the confrontation on the other side. Sometimes the only way to get the knocking to stop is to open the door, which only leads to problems when the real</ fear comes from who is on the other side... However, even if they do go away, there's no promise they'll stay gone, or that they won't try and get in the house some other way. Sometimes, though, the knocking itself is the only issue, and it can even function as a Jump Scare Mood Whiplash follows if the person on the other side is innocent and trustworthy; more horror and mystery will ensue if it's discovered that there's nobody </ at the door. In most cases, though, the person at the door will be someone dangerous and untrustworthy, or at the very least, unwelcome Unrelated to The Last Man Heard a Knock... , but the story itself is an example of this

Need an imposing title for your legal thriller or Law Procedural , but can't come up with a good Mad Libs Thriller Title ? Try an Ominous Legal Phrase Title instead. Just browse through Black's Law Dictionary or the US Constitution and pick out a two-to-five word phrase you recognize from Courtroom Dramas or civics class. Ideally one of the words will be "guilt" or "malice" or "danger" or the like. The formal language imparts gravitas, the familiarity lets the reader or viewer recognize the genre at a glance, and the aforementioned negative-connotation words make the whole title seem properly ominous In short, the author must clearly have had scienter</ in using legal terms with malice aforethought</, such that we know they are culpable</ in having done so beyond a reasonable doubt</ and perhaps even to a moral certainty.</ Otherwise if the term is being used in a manner not related to legal terms, then this trope is acquitted</ of being applicable to the work Though most commonly found in legal and political thrillers, the format can sometimes be used for a straight drama (e.g., Crimes and Misdemeanors </). If the title is the name of a particular crime, then the work is probably a Criminal Procedural instead This title format seems to have been most popular from the late 80s through early 2000s, with Scott Turow , Richard North Patterson and Tom Clancy being among its most prominent users This trope is about titles with specific, technical meanings in the legal profession, not general-use expressions like Crime and Punishment or Law & Order (although Criminal Intent is</ a specific legal term) A subtrope of Terminology Title . Compare Sci-Fi Name Buzzwords , Literary Allusion Title , Stock Episode Titles

Going into the dark pit, all-concealing fog, or Negative Space Wedgie ? Good thing they clipped on this tether, wait, why's it going slack? Oh no where's the other end of the line!? This typically functions as Foreshadowing , allowing the (surviving) characters to get an idea of how dangerous the unknown is without giving them too much information. Contrast Cut the Safety Rope , which is when a tethered

person cuts the line themselves to save others (or themselves), and Ankle Drag for another way to foreshadow a threat. Often employed in a Monster Delay , might imply Nothing Is Scarier .

Western Animation

The good guys are having a hard time finding a lead for the current investigation. They find a possible culprit or a vital link in the investigation. The team gets an address and find the door slightly open Too bad whoever they find behind that door , be it a suspect, relative, or complete stranger, can't help them close the case See also Your Door Was Open , Trespassing to Talk , "Open!" Says Me ; contrast Locked Door This is a Death Trope so don't be surprised by spoilers behind the ominously open folders

So it seems that something really, really bad is going to go down in the future . How do we know? Because the future sent something or someone back into the past telling us it's going to Sometimes the message (or item, person, etc.) is intentionally sent, often as a plea for the people in the past to kindly do something to prevent the Bad Future or as a warning to prepare for it. In those cases it's more likely to be acted on and serve as the reason the rest of the story happens Other times it's accidentally sent, in which case it's more of a tossup as to whether or not it'll be seen by anyone other than the audience and whether or not anyone in the story will act upon it. If it isn't and/or they don't, it's used a form of creepy Foreshadowing by the writer The trope is distinguished from prophecies and precognitive visions of the future in that is usually clear—or at least intended</ to be—and is depicted as originating from the future using some form of Time Travel , rather than being glimpsed by someone in the present with mystical or psychic powers As with many Time Travel tropes, the classic Grandfather Paradox may be invoked with this one, since if any message or what-have-you is sent back to the past to prevent something from happening, and that something is precisely WHY said message was sent back to the past in the first place, then logically a successful prevention of the future events would mean that the future that the message came from never existed, and thus there was no message sent from the future, which would mean that the future events WOULD take place, so on and so forth When the Jacob Marley Warning involves Time Travel , it serves as a subtrope . See also Future Loser and Future Me Scares Me , who can serve as the message in question Fling a Light into the Future is the trope for any inversion with the past sending an ominous message into the future. Also see Conqueror from the Future if the "message" is someone from the future coming back to the past to take it over. For the reverse, see Write Back to the Future

For added atmosphere, play the music from while reading on A music box tune that sounds a bit off</. It may have an overly cheery or depressing sound to it or the tune just seems to be completely out of place. Either way, the effect is just creepy, and there is something not quite right about it. Something not quite right at all</ Compare Rousing Lullaby , a lullaby that is not meant to be relaxing, along with Ironic Nursery Tune , Creepy Circus Music , and Creepy Children Singing , where creepy songs and nursery rhymes are played in the background to add tension and fear to a scene. Similar to the Uncanny Valley , in that the tiny</ bit that's "off"

is what makes it feel very</ wrong. For Doom the Bell Tolls and Xylophones for Walking Bones are about similar instruments used for creepiness, but aren't necessarily associated with lullabies For a tune which has the general sound of a music box but isn't actually played on one, see Music Box Intervals . Contrast Nostalgic Music Box , which is meant to be sad instead of scary

In fiction, not all harmful substances take the form of a sickly green poison that eats through anything it touches : indeed, there's a growing tendency for harmful, deadly or just plain evil substances to be depicted as glistening black slime, often reminiscent of oil, tar or even ink An offshoot of Dark Is Evil , it's not uncommon for such substances to be associated with much more unpleasant effects than other Technicolor Toxins from across fiction, including agonizing pain, mutations, mind control, a Cruel and Unusual Death , or even a Fate Worse than Death . In some depictions, this substance can even be alive,</ resulting in many a horrific Blob Monster The exact reasoning behind depictions such as these remains unknown, though it's possible that they were inspired by the threat posed by oil spills or tar pits, both of which are well known for being serious hazards - not to mention environmental blights. With this in mind, it may lend itself to depictions of the Muck Monster Whatever the case, if an unidentified black liquid crops up in fiction, it'll probably mean something very, very bad May result in Bad Black Barf

Owls are, to put it bluntly, creepy . They just are. Perhaps it's because most of them are nocturnal or that they eat cute little mice or that they can spin their heads all the way around . It could be those (relatively) gigantic, piercing eyes. Or perhaps it's the sounds they make at night (except for the beating of their wings, which are so soft and fluffy you'll never hear a thing. Bad news for rodents), in the dark, when you're in The Lost Woods It doesn't really matter why</ they are creepy, they just are. Owls have long been viewed as harbingers of disease, death, destruction, and bad luck. To the Hopi, they were a symbol of evil sorcery; to the Romans, they were funerary birds, signaling ill will in the daytime (unless you were collecting their eggs, in which case they signaled a Hideous Hangover Cure); and the Aztec god of death , Mictlantecuhtli, was often portrayed with owls. Geoffrey Chaucer also had a thing for them So remember: if you ever see an owl, clutch your Tootsie Roll Pops tightly and run in the other direction See also Brutal Bird of Prey , Creepy Crows , Vile Vulture , and Circling Vultures for other types of scary, creepy birds, as well as Bat Out of Hell for another scary nocturnal flyer, and The Owl-Knowing One (for when the owl is an Evil Genius). Contrast Cute Owl (though there might be some overlap when Cute Is Evil)

For added atmosphere, play the music from while reading on. For some reason, organ music and villainy seem to go hand in hand. Perhaps this is because of the organ's powerful sound, which has led to it being dubbed "the king of instruments." Perhaps it just sounds sinister and scary. In any case, if a character has organ music for his or her Leitmotif , it's a sure sign said character isn't going to be petting any dogs . Combine this with Ominous Latin Chanting

and/or some For Doom the Bell Tolls , and he's got Big Bad written all over him. It can also combine with Dramatic Thunder to make it more dramatic as suggested. Sometimes this analogy goes so far to show the villain sitting at a big spooky pipe organ, playing ominous tunes, as the heroes walk in on him. This iconic scene was probably inspired by The Phantom of the Opera </, whose villain is often similarly shown with his sinister organ. The standard music for this scene is the Toccata and Fugue in D minor by Johann Sebastian Bach . Bonus points, however, if they are playing their own leitmotif . Even better if it contains lots of diminished 7 chords. The organ also tends to be the Signature Instrument of Count Dracula . The pipe organ is an incredibly difficult, complex, expensive, and loud instrument with long standing connections to The Church . It's the power of a full orchestra built into the architecture of a building, but played by a single person who has to have the privilege or gift to actually be able to do it well. The church in this situation not only stands for religious power, but also wealth and political power. The thought that it could just be one mad Rich Genius wielding all that power for selfish reasons, especially if they play in private quarters, makes it inherently sinister. The exception to the "organs = villainy" rule is if you're in a church. Think Sunday mass and weddings . But the existence of the Corrupt Church and God Is Evil help to blur that distinction. If the organ is accompanying a good </ religion, then the music is generally more subdued and ethereal rather than overtly "ominous", if not loud and joyful. Places where you might hear this type of music include: First and foremost, the villain's lair, whether it be a Supervillain Lair , an Evil Tower of Ominousness , or something else. See also Creepy Circus Music , Ominous Latin Chanting , For Doom the Bell Tolls , Orchestral Bombing , and Ominous Music Box Tune . Compare Holy Pipe Organ . The Holy Pipe Organ is generally used for the Saintly Church while the Ominous Pipe Organ is more closely associated with darkness and villainy. However, they are not mutually exclusive; there can certainly be overlap between the two tropes, especially when Holy Is Not Safe , the church is evil , or God Is Evil . While the trope name mainly refers to pipe</ organs, it has extended to include other (or newer) kinds of organ like pump and electric organs as long as they also sound scary.

You wander into a dark house. A clap of thunder and a flash of lighting cuts through the heavy rain outside. The house dark, as though the power was cut in the storm, but this can't be true because the TV is on, nothing but white noise with static on the screen. You don't remember turning the TV on, so why was it on?</ Televisions are a scientific marvel of sight, sound and ingenuity. They let you see and hear things recorded or in real time and they provide so much for you from the comfort of your own home. However, they say that they can rot your brains and make you less smart-brained, with Conspiracy Theorists believing that televisions can brainwash you into obedient sheeple for whatever Shadow Dictator or Satanic - Illuminati they happen to think is really</ in control. This gives us an uneasy feeling that whenever we're watching Saturday Morning Cartoons or The Price Is Right </ , we are being used. Are we watching the TV, or is the TV watching us? </ Perhaps there is an Ominous Visual Glitch , maybe it's showing footage that you wish you hadn't seen, or maybe you're looking at yourself and someone's recording you in real time</ They're also used in a variation of the old Mirror Scare ; a person can't watch TV right now, so they go to turn it off, only to see

someone standing behind them from their reflection in the screen. When there are multiple screens used to create a similar effect, then you're looking at Ominous Multiple Screens . Is often employed in Analog Horror and is the result of Electromagnetic Ghosts . Also see The Television Talks Back and Your Television Hates You .

Some works intentionally create special effects that resemble real-life glitches. The image can be distorted or it can look like it was shorted out. There can be stripes, lines, little squares, rectangles and other geometrical shapes, grains or pixellated images, often combined with freaky colours. It might be accompanied by sound effects like static sound These effects are used to show that something weird, unnatural, or paranormal is going on. It can be used to imply that there is something wrong with the character's mind (for example, they're hallucinating or they are influenced by Subliminal Seduction). It's also frequently used to show A Glitch in the Matrix . When the person trapped in a Lotus-Eater Machine realizes that what they see is not real, the image is distorted and torn down This trope is rapidly becoming a staple subgenre of horror movies as the technology it's based on becomes more deeply entrenched in modern society. Also a standard feature of Found Footage Films Subtrope of Painting the Medium , and very close to Camera Abuse . Related to False Camera Effects . In video games, it may overlap with Interface Screw . Spooky Photographs have glitches as well, but they are present on the paper as opposed to a screen (unless they're digital). Compare Hologram Projection Imperfection . See also Ominous Television

Did you really think you could defeat me? With that little peashooter? This farce ends here! This is where a villain, or Anti-Hero , will have an enemy at their mercy and instead of immediately shooting them, they'll slowly walk towards them. This is for no other reason other than to impress into the would-be victim that they are completely at their mercy. So much so that there is no reason to hurry since there is nothing their victim can do that would so much as hinder them. Another reason a villain or Anti-Hero will engage in this behavior is to savor the moment as long as they can. This is intended to increase their scare factor or evilness. Very rarely will the question of Why Don't You Just Shoot Him? cause this to backfire as this is intended to develop their character and establish them as a villain or anti-hero. It can also be combined with Smoke Shield or Out of the Inferno for maximum impact if they've been hit with something explosive. A common characteristic of Westerns and generally used to show who has the upper hand in a gunfight. If this trope is invoked (or worse, Unflinching Walk) it is very likely you have an Implacable Man on your hands. Compare The Slow Walk and Menacing Stroll .

An Omnibus (Latin for "with all" — the same root as the bus you ride on) is usually several novels/issues collected in a single volume. In most cases, each installment had been published in some form, either as a standalone work, or as a part of another collection. Omnibuses are often published as a way to earn more money, or to release out-of-print installments. Another occasion is for a milestone, like the anniversary of a work or for the release of the last installment in a series. The publishing industry

sometimes refers to these as "bind-ups" Similar to the omnibus release is the manga industry's Tankobon</, which is a recopilatory volume that collects a couple months' worth of weekly releases of one single manga, in contrast to the weekly releases published on periodic anthologies such as Shonen Jump </ They often end up being a Doorstopper Related to Anthology . Compare Compilation Movie , Patchwork Story , and Compilation Re-release . Contrast Multi-Volume Work

Who caused The End of the World as We Know It ? This guy</. Destroying continents, wiping out civilizations, exterminating whole planets : When this character turns up , entire galaxies </ or unive rses </ may die, or even reality </ itself — the Omnicidal Maniac has made his entrance and where he goes, the survival rate of everything nearby quickly drops towards zero Put simply, the Omnicidal Maniac is a villain whose main plan and motive is "destroy the world". He actively seeks the destruction of whatever world the setting is based in, does it as an end unto itself, has the ability to do so, and is both aware of what he's doing and fully motivated to do so. He can and he will, even if it logically means going down himself as well Most Omnicidal Maniacs will aim for at least Class 3 on the Apocalypse How scale, but it may vary from setting to setting — in a Medieval European Fantasy setting, the known world may just be a kingdom or two, while in a Space Opera , expect the whole known galaxy or the universe or even the Multiverse to be his goal. Despite the name, being completely insane is not a requirement, but having a Freudian Excuse doesn't make the Omnicidal Maniac any less of a menace Contrast the Person of Mass Destruction (who doesn't necessarily want</ to use their powers to destroy the world), Mike Nelson, Destroyer of Worlds (who causes damage of this scale largely by accident, through ignorance, or for comedic, non-serious reasons intended to elicit laughter), and Woobie, Destroyer of Worlds (whose tragic, crapsack lives made them see red and lay the blame on all their woes upon the world). Omnicidal Maniacs are not</ amusing and have clearly-defined reasons for wanting to destroy everything nearby , which they do with a great deal of malice The Omnicidal Maniac differs from the Suicidal Cosmic Temper Tantrum and Put Them All Out of My Misery in that the Maniac has "destroy world" as motive and "I go down with it" as an unfortunate side-effect (or isn't planning to go down with the world at all if they happen to have the power or means to survive the destruction they wrought), while the latter two have "I die/I am miserable" as motive and "world goes with me" as insurance The logical extreme of the less destructive Feeling Oppressed by Their Existence , Kill All Humans , Misanthrope Supreme , and Absolute Xenophobe . Compare Planet Eater , Planet Looters , and Horde of Alien Locusts , whose world-destroying is more of a side-effect of their own desire to stay alive. Fighting against this villain (or scores of them) means Evil Only Has to Win Once to destroy everything. The Generic Doomsday Villain is this without any good reason for destroying everything, not even sadism . These types often start by destroying their own particular people/clan/culture/race first, which is Genocide from the Inside The Straw Nihilist , the Psycho for Hire , or the A God Am I mentality are very popular amongst this character archetype

In real life, each specific area of the law has centuries' worth of traditions and precedents built up behind it. There are unique legal principles at work in all of these case areas. Law schools make their students take classes in a broad range of legal issues, but true understanding and expertise comes only through years of specialized training and experience In fiction, however, if you have a law degree, that means you can work on any legal issue, particularly trial law. Never mind that there are countless branches of law, such as tax law and copyright law, which are unrelated to trial law. Put simply, a tax lawyer is not the person you want handling your slip-and-fall case Now, in an emergency situation, it's not unreasonable to turn to the first lawyer available to you for basic advice while you search for an actual specialist. That tax lawyer isn't a criminal law specialist, but in a pinch (e.g. you just got arrested and they're literally the only lawyer you know), they certainly understand more about the mechanisms of the legal process than an elementary school teacher or taxidermist, which is why they have a law license. Likewise, and depending on the situation, a client of little means may gratefully accept any lawyer willing to take their case, since any sort of representation is likely to be better than nothing</ Still, when it comes to dealing with the important, nitty-gritty details of your case, you will want an attorney with specialized experience if you have any choice in the matter Part of Artistic License – Law . Often considered an Acceptable Break from Reality in Law Procedurals , since it gives the writers more flexibility in the kinds of cases they can write while keeping the price of the cast down. Sister Trope to Omnidisciplinary Scientist and Do-Anything Soldier

Most people find it hard work to achieve native-level fluency in just one foreign language, even when they're a full-time student of it, but characters in stories might speak thirty languages well enough to be mistaken for a native speaker in each. This character might learn the local language fluently just by chatting while playing cards each evening for a few weeks, or perhaps due to having taken evening classes for a month when they were twenty years younger, they are able to win debates on metaphysics in a particular language. At the very least, they read the Genius Book Club books in the original language, even if that language is a dead</ language. Sometimes there may be justification for this — perhaps it's a superpower, perhaps the character is immortal (and thus had the time to learn the languages the regular way) or perhaps they had an Upgrade Artifact . Sure, some people genuinely are good at languages, but sometimes it shows a lack of research — the author is not aware that learning a foreign language properly can be quite difficult and time-consuming (perhaps because the author has never properly attempted to learn a second language himself). This is sometimes introduced via Suddenly Always Knew That ; "Whoa, you speak Finnish? Mitä ihmettä?You never mentioned that!" " You Never Asked ." The fact that young children are better at learning languages than older children, adults, or teenagers makes this trope easier to justify if the character in question was either A) raised in a highly multilingual environment or B) a Child Prodigy who learned languages for fun when they were four years old. Such a character may be a Cunning Linguist , but that's a character role rather than a trait. A Mary Sue can easily have this feature. This may also be a trait of The Face : they know ten languages instead of fighting styles like The Hero . Not to be confused with the website

Has nothing to do with Extreme Omni-Goat either.

The kind of trope which you see all the time . ALL the time
Some of them are intrinsically vital to storytelling itself;
they're so ubiquitous, you don't even think of them as tropes
until they're pointed out to you. Some are Acceptable Breaks
from Reality —unrealistic tropes that are intrinsic to the
escapist appeal of fiction, and would seriously detract from
it if they were averted . Then you have the ones which are not
necessary by any means, but look like the most natural</ thing in
the world—timeless classics which for centuries have driven
stories forward, held audience breaths and become legends. You sit
through the work expecting them, even looking forward to them;
come the Establishing Shot , the first thing you ask yourself is
"Where's The Hero ?". If we were to list every single example of
these tropes, the pages would go on forever; as a result, several
of them only allow examples of the trope being played with and
not just used If anything, these</ are the proof that Tropes Are
Tools . If these</ are Cliché then so is nigh on every
single work in the history of fiction. Thus Omnipresent Tropes are
pretty much immune from becoming Discredited , Dead , Undead or
Forgotten Not to be confused with Universal Tropes , which are used
in all types</ of media, but need not be ubiquitous. If a trope is
omnipresent, but only within a specific genre, you may be looking
at a Necessary Weasel Contrast Not a Trope and People Sit on Chairs
. Compare No Trope Is Too Common . See also: Cut to the Index and
Laws And Formulas These tropes' listed examples are limited to
Aversions, and Inversions, as listing straight examples would be
overly numerous

No matter what sort of clue the Crime Scene lab has found (blood,
wire, rope, oil, perfume, etc), somebody the interface devices
to input the data in question and have acquired the expertise to
use this software (which has so far never been used in another
one of their cases) with 100% accuracy on the first attempt. It
should be noted that some of these "Omniscient Databases" actually
exist, and are</ in use by various agencies, though they aren't
quite as stunningly accurate or omniscient as the Police Procedural
suggests. In real life, "Data Mining" is a time-consuming task that
has to be practiced. Does each agency host a different server?
Which ones pull from each other? Are all servers identical? Are
there delays in updating the databases? These are all questions
the searcher needs to be aware of, and there is no single database
that stores 100% of the information. A key aspect of this trope
is that there must be a pre-existing compendium of all possible
samples of whatever is being identified. In Real Life , forensics
can indeed match samples of, say, paint or glass not only down to
manufacturer but even to a specific batch, but this requires two
samples: one sample from evidence, and another sample to compare
against. This also means that in real forensics, the implications of
this evidence are different; while crime dramas typically use the
Omniscient Database to find a new lead from trace evidence, real
forensics usually confirms identity after the police have already
gotten a lead (i.e. the police already suspect the glass came from
the suspect's house or workplace and can prove it by comparing

them, as opposed to identifying where the suspect lives with no prior knowledge just from the glass sample). Even in cases where there are well established databases, like criminal records, there are computer scientists who have dedicated entire careers just figuring out how to combine</ databases from various departments and institutions. When computers first started to be used for keeping criminal records, standardization was rarely considered, as they were for the use of that department alone, unless they were in a particularly forward-thinking county or large city where they shared records among local departments. It rapidly became apparent that this was a problem when departments began sharing records over the internet. One database may describe a criminal's eyes as "Light blue", another as "BL" and a third as "Lb". The same departments would describe another criminal's eyes as "Dark Brown", "BrD", and "B". This is after you manage to figure out which column denotes eye color, mind you. Even after the problem was discovered, change was slow because in some cases, such as New York City and London , the same basic forms had been used for over 100 years, and had simply been transferred from index card to hard drive. Forensics labs also have an out for many of these Omniscient Databases, since it's generally believable that they would have a database of common murder weapons or components of weapons. Narratively, there are two distinct (but related) uses of this trope: As a time-saving device. Real forensic work or database searches might take days or weeks, and involve dozens or hundreds of hours of mind-numbing desk work that makes for poor viewing. Judicious use of this trope can reduce that boring search to a perky geek girl pushing a button and giving you instant DNA results so your characters can get back to busting bad guys. As a work-saving device. Sometimes, writers just don't have time to come up with plausible ways to solve the convoluted plot they came up with this week. Maybe they're more interested in the detectives as characters than the police work itself, or maybe they just flat out didn't do the research and don't plan to start now. If you can't come up with a way for the protagonists to locate the bad guy realistically, the Omniscient Database is a cheap and easy way to gloss over that and advance the plot. Omniscient Databases almost always have a Viewer-Friendly Interface . If it's on paper or supernatural, it's a Great Big Book of Everything . See Akashic Records for a related but older trope. These are a special Applied Phlebotinum used primarily in Police Procedural dramas, sometimes ones with a supernatural element. Compare Expositron 9000 . Not to be confused with the Magical Database , which holds information on supernatural elements as well.

In Real Life, Mars is the lifeless, dusty red planet next door to the lush, blue planet we call home, Earth. The implication that barren Mars once was as bountiful and full of life as Earth and has become a wasteland entirely through the activities of today's threat gives a chilling demonstration of what kind of potential damage could happen to our world. Often this sort of damage starts with Mars first and goes from the outside of the solar system to the interior Stories where Mars had a thriving civilization are getting to be a Discredited Trope these days due to real-life Martian probing finding little or no archeological evidence. The theorized reasons why Mars isn't thriving like Earth now has a lot to do with its significantly lower gravity being unable to hold in an atmosphere with enough air pressure to keep liquid water from evaporating away, or any ozone layer to protect it from

deadly solar radiation; a slow environmental death of natural consequences. However, in the past before space probes, astronomers only had their telescopes and their imaginations pointed at Mars, giving plenty of room to think up entire alien civilizations living on it, or at the very least life If Earth is going to be next, then Mars is the Sacrificial Planet . Compare Pluto Is Expendable For other tropes relating to the changing view of our planetary neighbors, see Venus Is Wet and Strolling on Jupiter . Unlike the former trope, however, there is</ a hint of Truth in Television here. Astronomers really do believe that Mars may have, at the very least, possessed liquid water in the distant past, and this has in turn fueled discussion of whether the planet may have once had life

The killer is closing the distance to his cornered victim. With no place left to run the desperate victim grabs a nearby object, swings wildly and actually connects, dropping the killer to the floor. Instead of continuing to hammer the attacker, the victim drops the weapon and attempts to run even though the killer is already recovering and will easily recapture them Can be a Justified Trope when it's clear that the villain is of The Undead or they can recover even from continual abuse, or the victim just isn't emotionally capable of beating someone to death. Beware of being Wrong Genre Savvy ; whaling on a downed villain may seem to work, but he may get a sudden surge of energy or overcome his shock at being hit and catch whatever weapon is being used . The Crime of Self-Defense may also come into play if the victim is from a litigious society where there is a history of that happening and thus has irrational fear of it Contrast Kick Them While They Are Down , Curb-Stomp Battle , No-Holds-Barred Beatdown , and There Is No Kill Like Overkill , where the attacker doesn't let up, and the Double Tap , where someone shoots an apparently dead enemy again just to make sure

In Return to Wonderland </, The Mad Hatter tries to rape Calie Liddell, but she smashes a vase against his head. She says she will not repeat the mistakes girls usually make in horror films , so she breaks off a table leg and beats the shit out of him.

Zigzagged in Ultimate Video Rumble 3 </: After Lion Rafale downs the Executioner, the ever- Genre Savvy (and snarky) Yoshimitsu idly comments, "Well, he looks dead. I can't think of a better time to turn my back and put my guard down." Lion takes the hint and boots Ex in the head a few more times. Which still</ isn't enough, as the Executioner rises as they start to leave.

Friday the 13th </

In the first Star Wars EU Boba Fett novel, both Boba and Jango pull a Aerial Canyon Chase (involving missiles) on pursuing starfighters in canyons, and the narrator makes sure to point out that someone tried the same trick on Jango once but it only worked the first time.

Crime Dramas are pretty fond of it too.

The Bible </ : In 2 Kings 13, Elisha commands Joash to take arrows and strike the ground that he may have victory over Aram. Joash stops after three times. Elisha rebukes him, saying that if he had struck five or six times, he may have destroyed Aram. As it is, he will (and

does indeed) only have three victories.

During the pre-mid 1990s era, when wrestling operated as strict kayfabe and most wrestling programs consisted of several matches with established wrestlers taking on jobbers, promoters might turn an already imposing heel wrestler and turn him into an unstoppable monster by having him continue to physically punish a jobber long after scoring the victory. Often, this consisted of the heel using his finishing hold — always powerful, and used solely to inflict great injury — one or more times after the final bell. (Usually, the Heel would then take on the top babyface, who — sometimes after taking the finishing move several times — would fight back and defeat the heel.)

Done in Mass Effect </ with Krogans. When fighting Krogans, most of them, when "dead", will drop to the ground, then regenerate some health and get back up. Definitely hurts in the midst of a multi-foe firefight. Theodore Roosevelt once said that "The unforgivable crime is soft hitting. Do not hit at all if it can be avoided, but never</ hit softly."

Alice says something Betty finds shocking. "What?!" Betty asks indignantly. Alice, The Ditz , repeats word for word what she just said, mistaking the indignance for not having heard. If they're particularly unlucky, this might continue for some time. Compare Rhetorical Question Blunder . Another variant in Austin Powers </ ;

Friends </ : Phoebe Buffay does it all the time om RWBY </ :

From South Park: Bigger, Longer & Uncut </, where the show would normally use a Lame Rhyme Dodge :

It's happened in MSN conversations. As if, the other person in the convo thought the text was too quiet to read.

A relative of the Running Gag . This is an event that, instead of happening several times in one episode, happens one time in just about every episode of a show. There is an entire genre of jokes that exists to take advantage of this trope: "Remember that one episode of _____ where...". A common example: Remember that one episode of Gilligan's Island </ where they almost escape from the island, but Gilligan screws it up ? (Though that one is a clear case of Cowboy BeBop at His Computer , as the vast majority of episodes do not feature a potential chance to get off the island.) Compare Signature Style . If it happens at the end of an episode, it's Every Episode Ending . If everything</ is like this, it is Strictly Formula . Also compare Once a Season , where a certain plotline or character story gets a yearly invite. May also overlap with Different in Every Episode if the series follows a specific formula for its references and plots.

There is a certain tragedy known as the One-Book Author, when a person produces one work in a specific field that becomes extremely popular but never forays into said field again. In the world of literature, the author might have a couple additional short stories or poems that were published, but no other novels. Compare One-Hit

Wonder , where someone has produced several works but only one managed to become popular May overlap with Died During Production (where the author doesn't live long enough to compose another work, i.e. works published posthumously), Tough Act to Follow (where they're afraid they've peaked on their first attempt, and may also be a Reclusive Artist) or at times with Short-Lived, Big Impact . Compare One-Song Bard . Contrast Author Usurpation for when the author did</ make more works, but they're only known for one while the rest are forgotten

In real crime solving, a case can sometimes take months or years to wrap up. Yet in TV drama, a case is opened and closed within days — never more time than can be shown in a single a episode. Further — and this is what this trope is about — the protagonist is only ever investigating one case at a time. While real detectives likely have several concurrent cases, in TV drama detectives are rarely shown to investigate more than one crime at a time. The detectives will focus every waking moment/work hour on that one case until it gets solved, and will never shelve it — even for a few hours — to investigate some other crime in the meantime. If a detective character is shown or said to be working on a different case, it will nearly always be connected and hold a vital clue to the main case. Otherwise, in shows that have A plots and B plots, the B plots are usually something related to the detective character's personal life rather than the case-of-the-week One big reason for this is the Law of Conservation of Detail . In other words, we only see the detective on that particular case because that's what the story is about, so this apparent single-mindedness is only apparent</. We don't see every toilet break, meal, or sleep cycle (presumably the detective continues to meet their bodily needs unless otherwise specified). The audience will hear that the sleuth went to see someone later the same day or the next morning or whatever, and this may be visually indicated with editing cuts, a shot of the new location , and/or a music cue that suggests the passage of time It's also true that Cop Shows and detective fiction lend themselves to the Standalone Episode structure; each episode/novel/short story is about a particular case, and most of the participants are often never heard from again once the case is solved. This is supported by real-life methods of organization such as the case file (for an individual crime event or victim) and the courtroom trial (of a particular culprit for one or more discrete crimes) From the creators' point of view, it is easier to attract new viewers if those newcomers don't have to be up to speed on a multi-episode Story Arc . This desire to attract and grow an audience used to weigh more heavily than considerations of realism. Thus, a string of one-offs was standard for cop and detective dramas until the advent of Hill Street Blues </ in the 1980s. Since that show had success with audiences and critics, shows with multiple plot lines in each installment and multi-episode story arcs have become much more common, and shows with this structure somewhat less so As this is an Omnipresent Trope , No Examples, Please

Except when they're not. Because every now and then, a story stars a character who lives multiple lives, not serially , but alternating between them one day at a time. It's not that they leave one and travel to the other ; they physically exist continually in each world, but their consciousness alternates between them. These

separate lives may take place spread out across time or in Alternate Universes . The character will often have to gather information between their lives in order to advance the plot. Their unique circumstance makes it possible to talk to people that died in one universe before they could deliver important news or lets the main character save someone in one universe by figuring out who killed them in the other. Often, the switch between lives happens each time the character falls asleep, making this trope related to Dream Land with elements of All Just a Dream and Or Was It a Dream? Sister Trope to Non-Linear Character . Not to be confused with Alternate Self , where the two lives are lived by two similar but separate</ people who happen to look alike and have the same name. Compare with Reincarnation . Contrast with Living a Double Life and Split Personality where the "multiple lives" are discrete aspects of a single life kept apart by design or mental disorder. For the video game trope involving extra lives that allow the player character to survive otherwise fatal encounters, see 1-Up .

The plan is simple. It's an average night and the hero is settling in for a quiet, peaceful night. Maybe they want to go to a party, maybe they need to pick up their friend. Maybe they just want to make through the night Of course, it's not that simple. It never is. The powers that be keep putting roadblocks in their way. On their way to the mall, their car breaks down. The man they flag down for help steals the car. The first officer on the scene is a paranoid lunatic. The problems keep piling up and what started out as an ordinary day turns into...well, One Crazy Night Stories like this take a conflict that could be stretched out over several days and compress it into only a few hours One common element is this kind of plot is that the protagonists have to complete their mission and get back their home/headquarters/etc. (and possibly clean things up) before their parents/bosses/etc. get home/back and find out what's been going on Another is the nature of the event. They have to be extraordinary. For example, Who's Afraid of Virginia Woolf? </ takes place over one night, but the events of the story are fairly mundane. It's not this trope, it's Extremely Short Timespan Note: This trope is nearly always a comedy trope; it lends itself well to comedy. However, there are serious examples, such as A Christmas Carol </ If the events of the plot take place over more than 24 hours, it isn't this trope. Subtrope of both Extremely Short Timespan and A Simple Plan . The Wild Teen Party will often overlap with this. Compare and contrast with What Did I Do Last Night? , where the character pieces together a similar adventure the morning after. Compare It Was a Dark and Stormy Night

Logically, the fastest way to avoid something dangerous that's stuck on a straight course is to move a few steps aside of its path and let it pass by, but in fiction nobody ever seems to do this. At all. So like a flightless version of Acrophobic Bird , characters being chased by a car, falling rocks, or anything else that travels in one direction will inevitably run straight ahead and try to outrun the threat. They appear to only be able to think in one dimension—escaping that oncoming freight train by jumping off the track just doesn't occur to them. This looks very dramatic on camera, but Fridge Logic kicks in a little while later and you ask "Well, why didn't she enter one of the buildings instead of letting the car chase her down the freeway?" Note that this doesn't apply

when there's an actual reason</ that the character can't simply leap to the side: Maybe that car is cruising down a narrow alley where there is no "sideways" for the runner to go, that boulder is rolling down a tunnel with no sidepaths , or those railroad tracks are currently crossing a bridge over a hundred-foot canyon . (These highly specific examples are highly specific because they're some of the few times there's ever</ been a good justification for outrunning the danger.) Truth in Television : In nature, most threats coming towards you would be a predator of some sort, so simply leaping to the side would be of little help because the predator would take note and redirect their path - in fact, you might actually be worse</ off, since said predator is now able to cut a corner, traverse the shorter diagonal and gain distance on you. Savvy military conquerors have exploited this fact for centuries to herd panicked civilian crowds to where they want them, although they need to keep the crowd in a state of panic so that no-one has a chance to consider the tactical advantages of veering off to the side. See also 2-D Space , No Peripheral Vision and Blind Alley . Slower than a Speeding Bullet is a common subtrope of this. Can easily come off as Too Dumb to Live in especially egregious cases.

There are two types of shows that last for a single episode — the ones that are immediately canned, and those that never get picked up in the first place The former category should be easy to explain — if a show gets extremely negative reviews, poor ratings, or contains controversial content without enough redeeming value to be worth dealing with the media watchdogs, it's likely it'll die a quick death without anyone caring. The most it might get is a sense of confusion that anyone thought the idea would work in the first place However, the second is intriguing — television pilots that never got sold into a full series. Many of them are poor to middling in quality, and this is to be expected. Still, there are those that slip through the cracks with an awesome premise, superb casting, and overall excellent execution to the point where you're wondering why it didn't get picked up. They're Screwed by the Network before they even get a chance to shine Until the internet, occasional anthology series would be the only place for these quirky bits of production history to be showcased See also The Shelf of Movie Languishment , Poorly Disguised Pilot , Failed Pilot Episode and Audience-Alienating Premise ; compare to Orphaned Series . Not to be confused with One-Scene Wonder . For characters who appear in only one episode of a series, see One-Shot Character . Some series make it past the first episode but not much further; that goes under Short-Runners . The Other Wiki has a pair of articles on the subject (covering shows cancelled after one episode, and covering shows canceled before even having one airing) The podcast Canceled Too Soon </ specializes in covering these shows as well as other TV Short-Runners and curiosities

In most fiction, there is only one guy named Steve to avoid confusion. Similar to that, each state type seems to be unique in some works of fiction. There is only one federation , one republic , etc Sometimes an exception is made in the case of empires to allow more bad guys This Trope sometimes occurs when there are only very few countries covering the entire Planet Definitely not Truth in Television . Compare Generic Federation, Named Empire

What happens when creators do a project for money or to fulfill a contract so that they'll have the finances and creative freedom to do their artistic dream project This can be done indirectly by, for example, an actor or director doing a project for money and then turning around to put the money into an indie film they wanted to do. In this instance, however, the creators still have to deal with all the problems faced by indie film directors. The paycheck is rarely that huge, they have to find a distributor, and they have to hold casting calls The funding can also be done directly when, as part of a multi-film contract, a creator agrees to do a commercial project for a studio while the studio, in exchange, agrees to fund the creator's artistic project. This version ends up being far more convenient for the actor/director. First, the studio is frequently willing to fork over more money for this, as they stand to take a share of the box office cut, so even if the artistic film takes a minor loss they're not out that much. Second, with the power of a major studio behind them, the actor/director now has A-list stars on speed dial, and doesn't have to worry about finding a distributor Compare Paying Their Dues for when an artist needs to take smaller gigs before they hit the big time. Contrast with Only in It for the Money , in which the work made for making money clearly is not for personal projects. See also Auteur License . This trope is frequently used as a justification by non-American actors to travel across the Atlantic and/or Pacific, as they use the money from Hollywood to finance their ventures in theatre, independent films, and other lower budget yet artistically appealing projects in their native countries Can lead to Magnum Opus Dissonance if the project done only for the money is the one that takes flight while the project done for the art never gets off the ground

Men are generally half a head taller than women in Real Life ; in fiction, it's practically codified that every couple will have the man One Head Taller than the woman. If this is reversed, expect seeing Marshmallow Hells and Funbag Airbags . Taking this to extremes gives you Huge Guy, Tiny Girl and Tiny Guy, Huge Girl . As transplanting traditional gender roles into same-sex couples is popular in fanfiction, the character who could be considered "dominant" (often more serious or reserved) in the relationship is often similarly taller than their significant other. (A noticeable exception is the phenomenon of aggressive and dominant Tsunderes being shorter than their partners. On the other hand, the act of cuddling is</ designed to show off their cute side.) Either way, being One Head Taller naturally allows you to tuck someone under your chin when surprising them with a hug. This rarely works the other way around, although the "cutesy" partner being taller is usually a deliberate humorous device for the audience to notice. In that case, the grouchier counterpart is hugged the way one would a puppy. Usually, if the shorter partner is doing the hugging from behind, the arms will come around at about elbow-height, and the hugger will either rest their cheek against the huggee's back, or tuck their chin around an arm With some skill, this trope can give the illusion of characters being much older (or younger) than they actually are. On the other hand, if one wants to disguise a huge difference, expect a Scully Box to be used This is an extremely pervasive trope in Boys' Love works, to the point where shippers drawing doujinshi </ will occasionally modify the heights of characters to make the taller Seme /shorter Uke stereotype work.

An Onee-sama </ is also very likely to be taller than her relevant object of attention . Bara however, usually has the Seme "shorter and cute" while Uke "tall and handsome" instead Fun fact: On Tumblr , this trope is known as "tol and smol"

Often, the One-Hit Kill isn't humble enough to just kill, instead petrifying , permanently polymorphing , or banishing its victim to the Phantom Zone . At times, it's not even content with a single target, becoming a One-Hit Polykill Usually, the One-Hit Kill comes at a price. Sometimes it's a Dangerous Forbidden Technique which to use requires Casting From Hit Points or life span , other times it's just really hard to pull off , or leaves you wide open for a counterattack . One-Hit Kills are a common spell in RPGs . In video RPGs, it's frequently a Useless Useful Spell because of low hit rates , inability to affect bosses , or a prohibitive cost required to cast it, if not all three combined. Tabletop RPGs , by contrast, have a history of letting those pesky spellcasters make these spells insufficiently</ useless, turning many fights into a mere Quick Draw contest. In martial arts, it frequently takes the form of the Touch of Death . If it only works at the start of a fight, it's a Back Stab . If it only works at the end of a fight, it's a Finishing Move . If every</ enemy attack is a one-hit kill, the protagonist is a One-Hit-Point Wonder . If every</ attack by both you and the enemy is a one-hit kill, you get Rocket-Tag Gameplay There's also a non-lethal variant of this: The One-Hit Knockout. One-Hit KOs usually don't involve anything like forbidden techniques or rare technology, just an immense amount of force applied at once, usually in the form of a punch to the face. (Bonus points if a particularly fleshy or swift and satisfying sound effect accompanies the blow.) The drawback of this is somewhat self-explanatory: It's not a kill, only a knockout. Still, it gives the user at least a solid five-minute head-start, perhaps even longer, to make an escape or thwart some evil plans before the target can recover and figure out what hit him. In certain works, this is a common reprisal when someone (accidentally or intentionally) presses someone's Berserk Button With bladed weapons, cinematic representation of this trope often becomes a Single-Stroke Battle . When a character opens a fight with their most powerful attack in hope of a one-hit kill, the trope overlaps with Begin with a Finisher See also Chunky Salsa Rule . Often a Death-or-Glory Attack . Compare Coup de Grâce . Note that if the battle is laughably brief because the attacker is much more powerful, as opposed to simply using an instant-death weapon, it's a Curb-Stomp Battle . Compare/Contrast HP to 1 , where the attack is merciful enough to spare a single Hit Point . A Mook that can deliver this is an Instakill Mook

A one-hit wonder is a music artist primarily known for one "hit", typically defined as a song that charted in the Top 40 of the Billboard</ Hot 100 (the most widely-cited ranking of American music sales, radio play, and streaming) or an international equivalent. If they're lucky, the artist's next single may chart as well, but despite the ubiquitous fame of their first hit, they never really reach the same level of popular success and soon fade from existence. The strange mix required for an artist to release one song that has massive appeal but for none of the rest of their catalogue to match it make one-hit wonders a favorite piece of trivia among fans of music and pop culture Usually, the public

defines a "one-hit wonder" by cultural impact rather than chart placements (since relatively few people know such trivia off-hand). For example, if an artist has a massive #1 hit, getting a #40 will technically disqualify them as per Billboard</'s definition of a one-hit wonder, but it's highly unlikely that the #40 will continue to be remembered over time and they will likely become a textbook example of such an artist (well-known examples of this situation include the cases of Chamillionaire , Tommy Tutone , Rockwell, and Vanessa Carlton). Other artists were massive in their prime, and even though they still had clearly defined Signature Songs , nobody would ever consider labelling them as one-hit wonders. However, as time goes on, the artists fall so hard into obscurity (either becoming a Cult Classic , or worse, getting Condemned by History) or the signature song's memetic status and ubiquity so overshadows their other work that their discographies are almost completely forgotten outside of the signature song. Thus, they are erroneously looked back upon as a one-hit wonder—acts like Vanilla Ice , Sia , Soulja Boy , Meghan Trainor , Rick Astley , and even MC Hammer are commonly thought of as one-hit wonders for this very reason It is not uncommon for a group to be a one-hit wonder then break up, allowing one or more members to become (more) successful solo acts . It is also not uncommon for the one hit to be atypical of their oeuvre . Also compare Tough Act to Follow and One-Book Author . Of course, if sufficient backlash is applied, they will Never Live It Down . Note that a one-hit wonder on the American charts may be a different story in other countries; many popular European artists, like Gary Numan and Frankie Goes to Hollywood , charted only once in America. For that matter, many American artists like Queensrÿche have only charted once in their homeland but are popular in foreign markets such as Europe, Asia and Australia. Likewise, there are many artists, like Jimi Hendrix , Korn , The Grateful Dead and Rush , who only once reached the mainstream Top 40 but are respected figures and even trendsetting within their genre; several such examples are listed below. Some observers and music writers will dispute whether these artists count as "one-hit wonders", merely artists that had one Top 40 hit and more of a piece of chart trivia than a specific label For further reading, and a good definition of who may and may not be a one-hit wonder, check out for The Village Voice</. It largely focuses on the specific cases of Owl City and Carly Rae Jepsen , both of whom are generally considered one-hit wonders despite the fact that their collaboration "Good Time" became a top 10 hit, but also looks at the term "one-hit wonder" from a broader aspect (for example, Rick Springfield , who had five top 10 hits but is still primarily known for his only #1 hit, "Jessie's Girl") There are countless examples, so this article will only list a handful of representative samples. Compare No-Hit Wonder , wherein an artist manages long-term success without even so much as one</ big hit, and Two-Hit Wonder , where an artist is lucky enough to score a second hit. Also see Hitless Hit Album , where an artist has a hit album with no hit songs. Contrast Breakthrough Hit , where one hit leads to a string of later hits. Also compare Signature Song which is the biggest hit. May overlap with Small Reference Pools , especially non-music examples. Many of the artists listed here are mislabeled because they have a signature song but still had lesser hits. There have been rare instances where the band had a Top 40 hit, but it is not their most popular song and the signature song the band is known for didn't chart well or at all. Often, this is due to a chart technicality, as Arlo Guthrie, the

Rembrandts, and Fastball have seen. When the artist's best-known hit is in a markedly different style than the rest of their work, that's a Black Sheep Hit Subtrope of He Also Did , which is when an artist has a mixture of very famous work and not-at-all-famous work Has nothing</ to do with One-Hit-Point Wonder and usually has little to do with a One-Scene Wonder , which is a small but very memorable role in a large work that may actually be by an A-list star (possibly because</ he or she is one). Compare One-Song Bard , where a fictional musician only ever plays one piece in the story (because the creators didn't bother to record more than one) To qualify as a One-Hit Wonder, the hit must be at least 5 years old or the creator/artist must have retired or disbanded

In-Universe examples:

Like a bachelor party for fictional, not-yet-dating couples. The narrative often drives the Star-Crossed Lovers into a relationship or fling juuuuuust before they finally hook up for good. Perhaps so they can sow wild oats or learn important lessons about their partner, or on the opposite end of the scale, who to trust with an unattended drink. Sometimes these last minute hookups are used to get the other party to realize the error of their delays. Often, this is the very first relationship in a long time for the flinging party, since they've been so entrapped by the ongoing Will They or Won't They? nonsense. Live-Action TV Literature Comics

A seasoned criminal announces that he'll take on One Last Job before retirement to peaceful honest life. The possible reasons are many: they're tired of the risk and violence, they want to marry without dragging their sweetheart into their dangerous lifestyle, they want a big score so they can put their feet up in comfort, etc Usually, this leads to either a 10-Minute Retirement , or death by Retirony due to either a Plethora of Mistakes , his superiors deciding to show him there's only one way to leave their organization , or the universe deciding there is only one way back onto the straight and narrow. A frequently used variation with a more logical justification (and one that's probably more likely to stick in a non-fatal manner) is that this time, It's Personal In the case where the criminal actually manages to pull this off, they often go on to become a Retired Outlaw Compare That One Case for people on the opposite side of the law

Any line of dialogue which demonstrates remarkable wit and composure for someone in that particular situation. Whereas a normal person would freak out upon finding (for example) a pack of dogs mauling a dead lawyer, the main character gives a wry smirk and says, "Well, I always said the legal profession was going to the dogs," thereby proving that they're Just That Cool A good one-liner sums things up nicely by being hilarious or insightful. Insight can be provided by what can it imply, often ones with philosophical meanings or its ease to be manipulated to one’s usage, usually by being (too) simple Differs from a Catchphrase in that repetition is a key component of the Catchphrase . One of these, that is not also a Catchphrase , is typically used once and never again. Unless it memetically mutated , of course

Sometimes The Hero (or The Big Guy in their team) will face a large horde of Mooks and tell their leader they're going down. The leader will often say, " You and What Army? ", then discover that the hero doesn't need</ one. This one person is</ the army and can go around killing thousands</ of enemies The One-Man Army does far more than pull their own weight. Villains tend to underestimate this person at first, considering him Just One Man . They are quickly proven wrong. This is often justified by making the character a Super Soldier against mundanes, possessing far superior weaponry, or otherwise tremendously advantaged The damage to the psychological state of someone like this is not always considered. It is usually affected by taking so many lives away. The impact of this is lessened if the character is explicitly a Living Weapon and/or if the enemies are Faceless Goons or don't register as human beings and therefore exist solely to provide a Mook Horror Show . Alternatively, the character may inflict Non-Lethal KOs instead In a series aimed at younger audiences, they may simply defeat large masses of people rather than outright kill them. In playing this trope, it is useful to have The Evil Army try to Zerg Rush said character in The War Sequence . This trope caters to everyone's inner Munchkin ; 99% of First Person Shooters ever made fall under this Often goes hand-in-hand with It's Up to You and Walking Armory . When the One-Man Army is intentionally sent out to take care of the problem by himself, it's a case of One Riot, One Ranger . Compare and contrast Person of Mass Destruction , who's symbolically treated like a weapon by the setting, and Omnicidal Maniac , who is all too willing to push themselves into this territory. In the latter case, the Omnicidal Maniac often gains their kill-count through using WMDs on hapless civilians rather than personally fighting enemy combatants. Villains who are like this aren't bothered by Mook Depletion Being one of these qualifies you as a Crew of One (though not for a Big Badass Battle Sequence). However, very few people will respect your ability , or worse, seek to abuse it because " We Do the Impossible " is in effect. Contrast with the Badass Army where each individual could be considered this but are part of said army, as well as the Easily Conquered World where it's the severely, severely outnumbered enemies who are kicking ass and taking names. If one man makes</ the army, then you have The Minion Master . Likewise, if one man becomes</ the army, it's Me's a Crowd . May be a case of The Dreaded , where the hero is more of a Terror Hero and is single-handedly the most dangerous entity on the battlefield to the point where the enemy may begin focusing on him/her out of knowledge that if they can't defeat the hero, they're going to lose hard Compare Showy Invincible Hero and The Ace . See also Conservation of Ninjutsu , which postulates that being outnumbered is</ what gives the character the advantage. A subtrope of Quality over Quantity While Real Life examples do exist, this is generally not a good idea in Real Life

Closely related to All Myths Are True , but rather than every myth and legend being fact, they are mostly hokum—but with one common grain of truth in all of them. If the story is about vampires, then Rasputin was a vampire, Hitler was trying to breed an army of super suckheads , and Dracula was a wimp. If it's about wizards, Moses was an uber-powerful mage and there's evidence Jesus was, too (if he's not suspiciously absent). If the story is about aliens, everything</ can be explained by alien superpowers and Sufficiently Advanced Technology . Often results in a Take That! at history, Historical In Jokes , and Sadly Mythtaken moments. See also A

Mythology Is True for a similar concept, as well as Beethoven Was an Alien Spy (he might have been, in this universe). Ancient Astronauts are often involved when the myth is aliens. Is also related to Doing In the Wizard —it wasn't a wizard, it was aliens! (or what have you) Compare to Conspiracy Kitchen Sink , where All Myths Are True but not necessarily related. Not to be confused with the Monomyth, AKA The Hero's Journey .

So, the youngest child is now all grown up , and is no longer clueless to the phenomenon known as love, experiencing some of the associated symptoms like longing looks , a more bubbly personality, and long pauses between responses. The parents, and quite possibly siblings, who notice these changes will start to express some concern amongst themselves , before addressing the situation to the person in question, who, by that time, will tell the family that he/she is in love with someone, and is planning to introduce the significant other and their family to his/her own. But, there's a catch. Turns out he/she feels quite embarrassed with the current status that the family is in right now. So, before the significant other arrives, some ground rules have to be applied: Don't be a Doting Parent , don't drag out any Embarrassing Old Photo , father, whatever you do, try to resist the temptation of falling into your typical habits , do not tell stories like "I Used To Change Your Diapers", keep those tacky, moth-ridden sweaters you used to make me out of sight, and especially don't reveal my full name. Just, for the love of God, give me one normal night. May overlap with Give Him a Normal Life . May also involve Bad "Bad Acting" if the people involved are not used to behaving to the normal standards of society. Expect stock phrases such as " You're Not My Father ", " Where Did We Go Wrong? ?", and, the extreme " You Are Grounded ". Expect massive Facepalms from the child if they start to think the family isn't respecting his or her request, or are acting even worse than they normally do. As a last-ditch effort, the child in question might use Stand-In Parents to make the illusion a reality. Film Live-Action Television Theater Western Animation

Subtrope of Hollywood Law . You've been arrested. You might be entirely innocent, you might be guilty as hell, but there are certain things you can count on. Someone will be Reading Your Rights , perhaps with some modifications for the purposes of humour. You'll get cuffed, taken down to the station and questioned. And you have the right to one phone call, no more, no less; even if the call doesn't go through due to some technical glitch (or is interrupted by a Corrupt Hick or the like), you don't get a second call You're expected to use this to call your lawyer, or your mother, or your sister, or whatever, and if you're in a drama, you probably will. If you're in a comedy, and the arrest was for harassing someone over the phone, you'll most likely ring them. If the arrest was for something else, you'll likely just order a pizza. If you're The Joker , everybody else better take cover Naturally, Real Life is not like this. You are not necessarily entitled to a phone call, although police are often perfectly happy to give them because people often incriminate themselves over the phone. In most jurisdictions, phone calls are privileges. The police can let you make many (if you're nice and cooperative) all the way down to none</ (if you're being a jerk). However, you do have the right to an attorney at any time—and the police more or less have to let you call that person enough times to get in touch and make sure that they're on their way. So if you can't get

a hold of anyone on the phone, it's not like you'll just have to wait until someone on the outside notices you're missing

In the Standard Sci Fi Setting , trade is common between star systems. Sometimes a planet becomes so specialized that it focuses on a certain commodity or service. Maybe it's building weapons or providing doctors. Whatever it is, the world trades this resource with other planets, becoming renowned for the export This trope isn't about a single Planetville ; It focuses on the big picture on how individual worlds interact with each other. Subtrope of Planet of Hats , though any location (an asteroid, small moon, space colony) can serve as this. Compare/Contrast Single-Biome Planet Most SF tales assume Casual Interstellar Travel ; it's possible for Slower Than Light ships to transport commodities, but the items being traded would have to be of extreme value to justify the high cost and long wait. It also often crops up if the setting is confined to a single solar system, which is slightly easier to justify as it only requires somewhat Casual Interplanetary Travel Well done versions of the trope will explain that a planet is widely known for its major export, while its other industries are neither profitable nor popular. It could also be used for comedic effect, by exaggerating it to the point of absurdity Economics aside, a planet has other values: political, cultural, religious, and military. The importance of the export directly influences the importance of the planet. For example, the Planet of Phlebotinum would have a lot of power and an armada protecting it. However, the Planet of Toasters would lack any economic influence and maybe warrants a corvette for protection. Meanwhile, the Planet of Judges, Robes, and Powdered Wigs would have political clout, but lack economic influence. The amount of protection depends on how much influence they have with their neighbors May correlate with Multipurpose Monocultured Crop , if the One Product is farmed instead of manufactured Political center of an interstellar government and a place of intrigue. The apex of culture and power , but also of decadence and corruption . Highly valued, expect the world to be well protected...unless no ships are available for whatever reason. Capitals of various space Empires tend to be highly urbanized . Also the center of the vast bureaucracies governing the stars

Offers scientific curiosities and unusual matter (monopoles, antimatter, mini black holes), or a site of strange astronomical happenings (such as wormholes or black holes). If extra-terrestrial life is rare, then worlds with alien biospheres would be of interest. Scientists and corporations would love samples of strange matter, or get a chance to observe such strange phenomenon . Factory Center of mass production. Presented as industrial nightmares , with polluted skies and large crowded cities . Its products can include technology, but it's often less than state-of-the-art. Focused more on production/engineering rather than research. Often ruled by tyrants or a corporatocracy .

Grows crops and raises animals. There are typically two types: Such worlds are usually peaceful, but could become unstable if the political situation changes. The local folk are religiously devout , originally settling such worlds to seek ascetic lives. The home of many a young adventurer and military / mercenary recruit - life on a farm world lacks excitement, and encourages wanderlust. Commonly metal poor , justifying why they don't have much industry. Forbidden

Location of dangerous nature that no one visits. Could be a colony destroyed by plague or infested by alien locusts . Whatever the reason, the planet is no longer of any value , covered in ruins or wasteland. Only adventurers would willingly travel to these worlds

Point or area where a wormhole / stargate / minimum hyperlimit exist that facilitates FTL transport . Vital for rapid transport (unless you want to slog decades across space), and in the cases of a Portal Network , a chokepoint.

Exports Mercenaries , coming in two varieties: Along with these, various settings have specialized forces: armour warfare, Special Ops, sapping, urban warfare, etc. Life on these worlds tend to be tough, and often produces prideful fighters . Could be ruled under the military or an authoritarian society. Oddly enough in fiction, there are plenty of Libertarian cultures that don't mind setting up such worlds.

Harvests natural resources, often rare metals, minerals, or gases needed for industry Influence of a Mining world is dependent on what it gathers. A world mining Tin isn't going to be much value. However, a planet collecting Helium-3 (which can be used for fusion reactors) are going to be richer and better protected. Such places can range from terrestrial planets to asteroids to gas giants As business concerns, they're run by whoever owns the mines . Governance varies, but life tends to be hard and people poor. Another good source for military recruits - many sign up to avoid the harsh environment or receive better pay

Planet that is newly discovered and open for grabs. Expect new settlers or folks fighting over the planet. Such worlds would have little to export and much to import, due to a lack of infrastructure. If settled, frontier towns are likely. Local government is minimal at best. Because of the lack of infrastructure, these new colonies tend to be easily conquered . Penal Dumping grounds for "discontents". Expect these worlds to be unpleasant at the very least. Can range from orderly communities to work camps to lawless wastelands. If these worlds export anything, it's products of slave labor. If governed, it would be by the prison administration (authoritarian by necessity). Pleasure Places for tourists to visit and relax, often paradise worlds or something akin to Las Vegas in space. Mostly, it is a place for the protagonists to relax , especially if there's beaches . Not likely to be a major target, unless it's a strategic location or attacked for symbolic reasons .

Known for its research and development , and its state-of-the-art technology. The natives value logic and ruled by technocrats. Home to a lot of cool gadgets , new technology , and various scientists (mad or otherwise). Places to build spacecraft. Since ships are vital to an interstellar empire, the yards are vital industries and military assets. Often military/government operated. Underworlds Planet notable for its black market products and services. With enough money, one can hire thieves, smugglers, and assassins . Otherwise, one can purchase slaves, illegal technology, and other contraband. The items provided by an Underworld need not be illegal, but merely taboo. Such locations are commonly seedy and ruled by those in the shadows . Artifact of Precursors , often a massive construct such as a Dyson Sphere or ringworld . Or recently made by a highly advanced civilization. Can be visited by intrepid explorers and researchers

to produce Lost Technology . There is a disturbing trend for BDO's to be abandoned , acting as prisons for alien viruses , which are accidentally released by said explorers.

Structure that houses a huge database of the knowledge of an entire civilization. Many researchers visit here to learn from the accumulated knowledge. Often left behind by Precursors, though such projects are undertaken by more recent societies as a prestigious project. Expect it to be very quiet and vast , and attracts seekers of truth .

When there's only one source of Immortality Drugs, Dilithium Crystals or Spice, and everybody needs it. Whoever controls this world can control the galaxy. Anticipate this world to warrant fleets or warships and armies to protect it, and many fights over it .

Where a Weapon of Really Mass Destruction is housed. Whoever controls the superweapon can decide the fate of the galaxy. In Space Opera , this is the site of a climactic battle .

Worlds or stations inhabited by Intelligent Extra-terrestrials. An important term for emerging space societies or where life is rare . Trade and travel depends on the temperament on the aliens.

Prohibited from trade, frequently with an enemy fleet enforcing the embargo. Smugglers and rebels would try to get pass the blockade for various reasons. Such embargoes continue until the political situation changes.

Trade hub, either acting as a key location on Hyperspace Lanes or housing the headquarters of one or more major corporations. Mercenaries and private security forces will maintain order. The destination of many Intrepid Merchants , but possibly plagued by piracy .

Major center of arts and learning, valued for its impact on society. Often focused on entertainment or academics, these tend to be ruled by open and free societies. The destination and home of artists, musicians, students, writers, and and other creative folks. Tourists are also common, which also means Street Performers are near.

Technology or infrastructure is lagging. Part of the Interstellar culture and trade, but often less advanced than the major powers. Except these planets to be impoverished, often new colonies or exploited conquests. Between the major powers, the Developing worlds would be caught between political struggles . Dying Has seen better days , and is now waning. They may have been over exploited and depleted of primary resources or undergoing a natural calamity. To escape their fate, refugees will flee to the stars. These planets tend to collect garbage, both physical artifacts and the seedier elements of society . If anything of worth remains, it's related to the planet's primary export.

Can support human life, or whatever species the protagonists are. Can range from Edens to barely habitable Death Worlds . In a setting were most planets are dead or uninhabitable (say Real Life), a planet with a breathable atmosphere is better than nothing.

Were a species originated from. A lot of historical and religious

importance, because of its mystique of being where a species is born. The dominant species of an Empire will have their homeworld as a Primary Capital, although there are exceptions. The destruction of a Homeworld is often a major mistake for space tyrants: it not only crosses the line, but ensures that a native of that world would eventually destroy said tyrant .

Location of past importance, such as a battle or discovery. Often archaeological sites or monuments are located here. Because of this status, these places are seen as important symbols. For example: a dead moon may have little or no value, but military commanders may make choose to fight there since it was the site of a previous victory. Holy Center Place of major importance to a religion, with many places of worship and pilgrims. If the religion is benign, attacking this center is a sign that you're an evil jackass. More fanatical sects would protect these centers. May be governed by a Theocracy, though it depends on the faith. Lost Location is no longer accessible or has disappeared. This could be due to a variety of reasons: The local Gate has been destroyed, the wormhole that connected the location is now unstable, or something</ happened to the settlers. In either case, no one knows were it is and may become myth. Explorers may find these places again.

Location that akes no sides in a conflict, either forbidding sides from entering with force or acting as a third-party mediator . Generally worlds or stations that have little interest in fighting, but plenty of services to offer (shipyards, underworlds, pleasure planets, etc.). Often well prepared to make sure they maintain their neutrality.

Little or no high technology or advancements. Any inhabitants are either aliens developing civilization or the remnants of a failed colony, often savage . Expect wilderness and perhaps alien ruins. Any interest to these worlds are either for Science or Strategic. Travel to such worlds may be restricted, as to avoid exploitation or culture shock.

Travel to and from location restricted due to a medical emergency. A temporary measure until a cure can be found for the ailment, if at all. Except for medical craft and warships, no sane being would risk going lest they too fall victim. If the plague is left unchecked, the quarantined world may become permanently Forbidden. If it gets really bad, the planet may be sterilized .

Location makes this world a vital military target. Expect military fleets and fortresses here. With changes in warfare, space travel, and the political environment, a location could cease being a military prize.

The local political situation is bad, and society is barely holding together. Order can fall apart at a moment's notice. Merchants and travelers will avoid going there if they can help it. It results in less trade, and could lose its status as a trade or culture hub. If it's really bad, it may become a War zone or worse.

Location is the center of an armed conflict, with military ships and troops fighting each other. Mercenaries and arms dealers would be attracted to this place. Lost of life and destruction of infrastructure will negatively impact its value. Refugees from this

world would be common. If this status lasts long enough, a planet may become Dying as well.

A huge threat has raised its evil head. This threat is a danger to the entire state/province/nation/planet/galactic empire, and has already done a lot of damage. However, the government doesn't do the obvious thing to fight this oncoming hazard (rally the troops, send out the Marines, and use its full resources to destroy the threat once and for all). Instead they send in one man Now, the man might be a highly trained operative but he is still only one man. No one questions the government's choice in sending out one special guy , either. This is not a desperation move, as in Halo </, where one guy is all the government has left ... no, in cases like this, the choice is usually "send the entire fleet" or "send Joe". If the group that requested help gets one guy, they may be upset they didn't get an army only to find out that their ranger is an army A common handwave/justification for this trope is that a full military assault would draw unwanted attention to the operation. As in, if we send an army to attack the secret base , the villain will use his superweapon, and game over. If we send Joe then villain won't react so intensely, and we can get past his guard. More realistically, the entire army may be needed to hold the villain's army at bay, or slow them down long enough to give Joe time to stop the villain If Joe makes a habit of succeeding at these missions he'll get a reputation for Doing the Impossible This trope is most often seen in First-Person Shooter s and other Action video games (and often, the number can rise up to two), although it's still regularly seen in movies and television shows This trope is an extreme application of The Main Characters Do Everything . It is related to It's Up to You and The Only One . It can involve Conservation of Ninjutsu . Contrast Surprisingly Elite Cannon Fodder , which is where a scrappy Ragtag Bunch of Misfits is sent out on an Impossible Task rather than an obvious badass

Effectively the opposite of Two Scenes, One Dialogue . Two characters — or more, if the writer is feeling particularly ambitious — talk to each other without actually listening, resulting in a conversation that sounds something like this: There are generally three ways to finish such a "conversation": One character will have a Delayed Reaction to what was said by the other, resulting in a "Eureka!" Moment Not to be confused with One Dialogue, Two Conversations , which is part of an Oops... I Did It Again plot.

A character that has limited screen time , and usually not much in the way of plot relevance, but is still one of the most memorable things in the movie. They may even be given top billing , or at least an " And Starring " credit, along with the more obvious stars. This is not the same principle as Ensemble Dark Horse , who's usually a secondary character that still makes regular appearances (while this one can range from primary to less than tertiary, so long as their screen time is relatively insignificant), nor is it the same as Dead Star Walking , because the intent is not to fool you into thinking that the actor will appear more often. The character just appears, gives a show-stealing performance, and then is gone. Like a Spear Carrier , only way more righteous. Like a Cameo , except you don't have to recognize the actor to appreciate the scene for all it's worth. You know you're dealing with this sort of character if you

start referring to "their scene." Many characters of this type will be clergymen of some kind, particularly in comedy. A good reason this works is because of The Vicar principle, and because clergymen are really only needed for wedding scenes anyway. The character type needn't be played for comedy, but frequently is. Often a Large Ham A one-scene wonder that's very weird and out of place results in a Big-Lipped Alligator Moment . Also see Kent Brockman News . Compare Ham and Cheese , Spotlight-Stealing Squad , One-Take Wonder , and Small Role, Big Impact . Fanfic authors are prone to make characters like this via O.C. Stand-in . If the character becomes so popular that the writers decide to come up with an excuse just so be able to use him again, he's an Ascended Extra . Don't confuse with Scene of Wonder . If the movie is particularly bad, the One Scene Wonder may be the only thing remembered about it , or indeed the only reason anyone watches it . When a minor character in a musical does this through the use of one fantastic song, it's Minor Character, Major Song .

Bob finds out he has the athletic talent to play for a sports team and becomes an overnight sensation, possibly helping his new team win the title. However, as per Status Quo Is God , his career only lasts one season and he immediately goes back to his original career after retiring Oftentimes, the One-Season Athlete serves as The Hopeless Replacement on a really bad team, and their ability is enough to elevate the team around them A Subtrope of Sports Stories . May occur because of a Career-Ending Injury . Single-game occurrences normally involve an Unlikely Hero or Accidental Athlete in a Save Our Team circumstance, participating in a Big Game that goes Down to the Last Play ; often a Desperate Object Catch or Calling Your Shots clinches victory. See Artistic License – Sports if the situation becomes improbable enough, such as involvement of a non-human player via an Animal Athlete Loophole This is a spoiler trope; all examples will be unmarked No Real Life Examples Please. Though there are many IRL examples known in sports nomenclature as a "Cup of Coffee", putting them all here would require a deep dive into every sports encyclopedia

Film

A term coined by Justin B. Rye in his essay " ", which points out various inconsistencies in Star Trek </ and ways of avoiding them for a hypothetical remake One-Shot Revisionism occurs when a writer notices an illogical trope or plot device and attempts to avert it. More often than not, the attempt only draws further attention to the lack of logic of the convention — "if X didn't happen here because of Y and Z, why does it happen every other time?" — and at the same time makes it harder for other writers to Hand Wave the whole thing away. Especially bad when the plot device in question has been used multiple times in the same Canon where the one-shot revision is set The important thing about One-Shot Revisionism is that it works</; generally the only problem with it is that it draws attention to all the other times it theoretically could and should have been used but wasn't. This distinguishes it from a Voodoo Shark , which doesn't even work on its own terms

A pretty rigid rule that no two characters in a work of fiction (novel, movie, play, TV series, comic book, etc.) should share the

same first name, or even similar-sounding</ names. If there's a Laura in the story, there will not be a Lyra; if there's an Ed, there will not be a Ted (this is sometimes discarded if the characters happen to be twins). If you wake up one morning and suddenly discover that you don't know any two people with the same first name and that your phone number begins with 555 , you can safely assume you've fallen into a work of fiction. The rationale behind this is that the audience, actors reading a script and even the writer will get confused by multiple characters with indistinguishable names: "Wait, was it good-guy Steve or bad-guy Steve who launched the missile?" It's even common for scripts to avoid names of similar length and/or first letter. A strong dramatic reason to duplicate names can override the rule, as, for example, in the Jack Nicholson movie The Two Jakes</, but it's so rarely done that audiences will pick up on it almost instantly. Unintentional duplication of first or last names also sometimes occurs when characters from previously distinct works of fiction meet one another, or when fiction is in any way using individuals from Real Life , or in sprawling, shared-continuity settings like the DC or Marvel Comics universes. It's probably more feasible to list the exceptions rather than examples. Usually when there are exceptions, there will be a storyline involving the characters being confused for each other. One could only wish this were Truth in Television , but as teachers know all too well, names go through cycles and depending on the era, a single class might have five Jasons, Michaels, Elsas or Claras. Hence, this trope is generally considered an Acceptable Break From Reality . This is also a problem in dubbing with "dubbed names". For example, Gomez Addams in Latin America is "Homero", just like Homer the Spider. Or a mobster named Bruno showing up in a Batman</ (who is known as "Bruno Díaz" instead of "Bruce Wayne") comic. The antithesis is Planet of Steves , wherein everybody </ is Steve. Compare One Mario Limit , where the "Steve" is too famous for anyone else to use a similar name. Contrast Inexplicably Identical Individuals , where there is a whole bunch of interchangeable characters that look the same and may share the same name—or have very similar names. Also contrast Name's the Same , where multiple series share one or more characters with the same name, and Same Surname Means Related , that removes the possibility that "Steve" and "Tom, Dick and Harry" having the same last name is just happenstance (even if/when they share one of the most common last names in whichever part of the world their franchise was produced). For moments where there's a one person limit for roles</ see Cast Speciation . See also Significant Name Overlap , We Named the Monkey "Jack" , Identically Named Group , and Dead Guy Junior , for other ways characters can share names. No Straight Examples, Please !:

When an actor's or a musician's performance is so phenomenal or so genuine (or, more simply, there are time and/or budget restraints), that a second or separate take could not possibly replicate the greatness of the first or the uncut take Compare All or Nothing , Throw It In! , and One-Scene Wonder . May overlap with The Oner if the take is sufficiently long Many, if not all, spoilers will be unmarked ahead. You Have Been Warned

The most indomitable of romantic ideals is the idea of one utter perfect specimen who is your ultimate match. Perhaps they will have everything in common with you and share your dreams. Perhaps

they will be your Foil because True Love Is Exceptional . A third possibility is Mindlink Mates leading the two of them to understand each other better than anyone else Often Love at First Sight occurs when someone spots or otherwise realizes that this person is their true love. Because Destiny Says So or The Power of Love are often invoked to explain why that person is the way they are or how you met them. If sex is involved, it may overlap with Sex Equals Love Not to be confused with One True Pairing , which is what the fans want to happen. This only applies to examples where it's made clear and deliberate in the work, regardless of what the editor happens to ship and regardless of how convinced you are. Also not to be mistaken for the Short Story by Isaac Asimov about a computer that falls in love, titled " True Love "

The) is the couple that a fan or group of fans prefers over all other ' ships . Canon and logic do not necessarily apply, and crossover OTPs are not uncommon The degrees to which this is taken varies wildly. It can mean anything from "I just like Drakken/Shego best" to "I won't read Fan Fic that pairs Anya and Xander with anyone but each other" to " Cloud always and still loves Aerith and they made love to each other in the flower field at the end of the movie ", to the extreme "All of the canonical evidence that Harry and Hermione are not going to get together is a lie spread by the Ron/Hermione 'shippers, who must be stopped before their evil destroys the universe ". All examples chosen at random, but the last group really are that scary sometimes. When one of the Ron/Hermione shippers turned out to be J. K. Rowling herself , some of the "Harmonians" abandoned the series in anger, lashing out at Rowling for "ruining the story." That's right, some think Rowling intentionally ruined her own story OTP shipping wars were second only to Subbing vs. Dubbing for heat and violence. The degree of fanaticism displayed for a particular OTP may be proportional to their distance from the Official Couple and/or the Word of God for the work in question In some cases, holding their preferred characters to completely different standards than the official pairing is an excellent mark of OTP shippers. If someone argues that you need to show that X and Y got married to prove they're in love, and the rings on their fingers don't count, but they know that X and Z love each other because of ' chemistry ', they're definitely defending their OTP It is technically possible for a person to have multiple OTPs, just with no overlap between them Some people refer to their favourite threesome ship by the similar term One True Threesome , or OT3 . Or really, "OT" appended with any number if they're even more ambitious with the number of people involved is used as a term for non - romantic OTPs, of the "these people are best friends and no one will tell me otherwise" variety (for instance, John Sheridan and Susan Ivanova of Babylon 5 </). Male/female and female/female BroTPs are sometimes also called FrOTPs Inversely, a is a ship that one opposes vehemently Often the term "OTP" is used sarcastically in parody of shipping, especially if it involves an unconventional pairing (such as the ever-popular Chad x Floor OTP), or a character and their favorite food (" Hiro/Waffles OTP "), etc etc

The good guys and the bad guys are both pursuing a set of MacGuffins or Plot Coupons that are hidden or distributed in what appears to be a random manner. In order for either side to achieve their aims, it is necessary that they get to these objects before the other side

does. However, the objects are difficult to locate or reveal — research must be done, or inspiration must strike, before one of the hidden objects can be found. Strangely, regardless of the differences between their resources and their methods, the good guys and the bad guys always find the same object at the same time and have to fight over it. There's never a case where the heroes get one while the villains head off in a completely different direction and get another, with no problems for either side. It's almost as if they're not</ random and have to be approached in a predetermined sequence that forces both sides into conflict. But that's ridiculous , isn't it ? A common trope in videogames, where, even though the bad guys seem to be everywhere at once, and even though the player can Take His Time , they'll always close in on a particular MacGuffin just as you do. A common video game variant is discovering the bad guys have had the final MacGuffin in their possession the whole time, forcing you to storm their stronghold and have a climactic battle against their leader . Another has the villains trading a convenient hostage for the items the heroes collected and then storming their castle. Yet another reveals that the villains were just letting the heroes collect the treasures so they could steal them later .

A comic trope in which either the two last panels of a strip each contain a punchline , or the last panel contains double the punchlines for double the fun This sometimes takes the form of crossing the line twice . The penultimate panel is often a sight gag or take , and if this is true, then the last panel may add a spoken punchline to this. Conversely, the spoken punchline may be in the penultimate panel with a Wild Take or Gross-Up Close-Up added as the second punchline Related to Escalating Punchline . For webcomics, Alt Text is frequently used as a way to convey the second punchline

Classic Big Bads have the tendency, when push comes to shove, to turn into big honking monsters. A Mad Scientist in a fit of urgency might down his own Psycho Serum , or a practitioner of Black Magic might mutate himself into an Eldritch Abomination , or... you get the idea. Bets are good they'll become way more bloated, ugly, or plain disfigured . And with this new form, their power grows immensely. This indicates that the villain means business and it's time for the heroes to get cracking. Named in honor of Sephiroth , Final Boss of the video game Final Fantasy VII </ (okay, named in honor of his Battle Theme Music — he actually has seven</ wings, but just one in place of an arm). Video games in general absolutely adore</ having their final boss do this, even when their original form is scary enough anyway. In fact, it's gotten to be somewhat of an arms race: thanks to the popularity of Frieza in 1991, three-form bosses are now somewhat common, and those games going for "epic" will sometimes go for even more. In JRPGs, particularly, it is rather common to see two stages of One-Winged Angel: the "bizarro" form, that is huge and scary, and the "angel" form, that is winged, eerily beautiful and accompanied by Ominous Latin Chanting . Once beaten, or on becoming even more powerful, the villain may cross the Bishōnen Line and into safer territory for an Evil Makeover to work its magic (though it's a case of Tropes Are Not Bad ; as much as it's used, you'd be hard pressed to complain when they turn into something completely awesome</). Usually accompanied by the stock phrases "No one who's witnessed this form has lived

to tell the tale!" form!"</ Sometimes you never even fight their human form at all and they immediately turn into a monster. Can count as The Unfought if they showed fighting ability in their human form. This is more popular among minor video game villains who will often transform into tougher versions of earlier monsters like in the Breath of Fire </ and early Final Fantasy </ games, as a unique battle sprite for them would take up extra development time and storage space on the cartridge (one unique boss could take the space of several mooks, more with the use of a Palette Swap). Interestingly, heroes, particularly transforming characters , have been known to occasionally use this "turn into a big scary monster" tactic for their Super Modes as well. It's extremely rare for it not to cross into Superpowered Evil Side territory. And for those with firmer morals, this qualifies the villain as a monster, making it fine to kill him . One way to defeat a villain who became giant is to become one yourself . A fight of giants can be even worse than a single giant, but it may be done anyway if there are no other options left . Scaled Up and Make My Monster Grow are major subtropes. Super Mode is a sister trope. See also Power-Upgrading Deformation , I Am Not Left-Handed . Compare Emergency Transformation , Lovecraftian Superpower , Came Back Wrong , and Not Even Human . Some subversions are to make it a Clipped-Wing Angel or Power Up Letdown . When the transformation is caused by the character's pain or anger it's Hulking Out . For when the transformation is the villain dropping their humanoid disguise and assuming their true, more powerful form, see This Was His True Form . Not to Be Confused with Broken Angel . For those looking for actual winged people, see Winged Humanoid , Our Angels Are Different , and (most relevant to this trope), Power Gives You Wings . Before adding examples, please be aware that this trope is not about just</ transforming into a monster. It's not even about villains who can</ transform into a monster. It's a plot trope for climactic</ final battles with villains.

Greetings, fellow troper. I can feel your presence for I am at one with this web page. I am on a quest to find others who have extended their perceptions beyond their original body. We meet every other Friday for tea and crumpets and discuss our unique experiences. We apologize for any inconvenience this may cause to those of you who have transcended time but are not yet quite sure how to reverse the process. For assistance, please call 9+1i.

According to a good deal of Speculative Fiction set in The Future ™ , it is the natural order of things that all governments will merge together to create a central authority to govern the entire species. It's not necessarily the human species, however Sapient aliens also almost always have a single government to whom every law-abiding sophont in their race answers. Any conflict between members of the same species will be called a civil war. Especially true if The 'Verse of the show contains boatloads of sapient species The examples can cover a range of extremes: the government is benevolent, efficient, enlightened and out for your well - being ; just downright evil ; or plain realistic , or anything in between It may be true that in order to expand to the stars, a species would have to pull together as a team and overcome the tremendous challenges involved. Though it can also be seen as corner-cutting on the part of writers, to avoid having to keep track of more than one government per alien Every species in

the increasingly crowded galaxy will also have a single unified culture</. It can be detailed, as for an alien in the main cast, or it can be a one-note quirk if the creature in question hails from this week's Planet of Hats . Either way, it is rare for any species to have more than one language, artistic tradition, religion, or culinary style This trope is not necessarily unjustified . There are a number of conceivable differences in the way an alien race's history played out versus our own that could result in their world being more unified than ours. For example, if their starter population and/or landmass was smaller, or if one tribe conquered the others If the species in question is humanity, there may be more diversity involved, if only because the writers don't need to invent</ it all. The aliens may also look the same. See Ditto Aliens . See also Planetville and Planetary Nation when this applies to non-human species Note: If you happen to be in a Christian "End Times" story, and a single government controls the planet, watch out for the dude with the goatee . Alternately, watch out for the guy standing BEHIND the dude with the goatee . If the "villains" are seeking a One World Order to remove the political divisions that enable international war, they may be Well-Intentioned Extremists . If the villains go even further than that, it could be an Assimilation Plot . Earth examples often overlap with United Nations Is a Superpower

So you have a character who's famous in-universe, or a popular show-within-a-show. For sake of example: The Alice and Bob Show</. What better way to show off that fame and popularity? Alice and Bob on Ice</ ! When you've got your own ice show, you've officially made it to the big time Like many Shows within Shows , an in-universe Ice Show may be rife with Adaptation Decay and Stylistic Suck . There also tends to be a high level of camp Not related to metamphetamine , and Yuri!!! on Ice </ is not an example. Sub-Trope of Live on Stage! . Sometimes overlaps with Screen-to-Stage Adaptation , though that trope is usually used to refer to "legit" theater — i.e. The Musical adaptation of a hit property on the West End or Broadway

Games that can only be played while connected to a like the internet. All online games have two necessary components: a server and a client computer, with larger games having multiples of each, though usually the number of client computers is far greater than servers Many games throughout the history of gaming have been exclusively online. The earliest form of online games are arguably the Play-by-Post Games , originally referring to snail-mail and covering games such as Chess ; they moved online with the advent of email and forum servers, the quicker response times and computer automation let to text-based muliti-player games like the Multi-User Dungeon (M.U.D.), related to the single-player Interactive Fiction . As computer graphics expanded into 2D and 3D rendering, video-games had wildly varying limits on the maximum amount of players in a single virtual-space, with newer games trending towards smaller groups as hardware development was focused on graphics-quality This changed with the development of or M.M.O.s for short, showcasing large numbers of players beyond typical multi-player gaming for One way this is accomplished is by having multiple servers, each hosting a different section of the in-game world. MMOs started with the Role-Playing Game genre and have since branched out to others, including First-Person Shooters and Real-Time Strategy genres

In crime dramas, when someone is arrested, they are read their Miranda Rights , "You have the right to remain silent," "You have the right to an attorney," etc. It seems, however, that all good, law-abiding citizens are willing to waive their rights and talk to the police without any qualms at all. But as soon as someone demands a lawyer, or refuses to talk without one, you know instantly that they are a sleazeball. Maybe not the one the police are actually seeking, but they are definitely someone of ill repute The dramatic explanation , of course, is that if every suspect would call in a lawyer, the wait for the professional would both kill the flow of the scene and the lawyer reading out a carefully crafted and Teflon-smooth statement would be far less interesting to watch than a little Perp Sweating to reveal the suspect has an entirely different reason to lie and Be as Unhelpful as Possible that has nothing to do with the Mystery of the Week but gives the detectives a new piece of the overall puzzle This has no bearing on Real Life . Any law school professor can tell you that if you're arrested or the police think you committed a crime, you shouldn't talk to them except to say that you won't be answering questions and to ask for a lawyer (note that this doesn't mean that they're obligated to get</ you a lawyer — just that they can't interrogate you without one). In TV Land, only one or two crimes ever happen at the same time, while in reality, there are a lot more. You may want to help the police catch a crook, but in doing so, you may accidentally implicate yourself in another crime, or the same crime</ Keep in mind, this may be especially true of someone who has committed no crime — a reasonable, innocent person tends to think that he or she can explain the situation logically and reason it out with the police, but this can get you in a lot of trouble. Police officers are human beings, which means they're susceptible to all the cognitive biases of human beings. If they already have a narrative in their heads as to how a crime went down, it's very easy for them to fit an innocent person's comments into that narrative — not out of maliciousness, but a simple desire to solve a case. Most suspects never call their lawyers, regardless of whether they're guilty or innocent. Most suspects are also stupid This bears repeating because of how serious it is in Real Life . If you are ever Get. A. Lawyer. Do not talk to the cops. Do not write down anything or sign anything the cops give you. Ask for a lawyer and until you get one, keep your mouth shut. The only words that should be coming out of your mouth are that you demand a lawyer. Nothing else. </ Also, the police have no power to take you to the station without arresting you; if they ask you nicely to come to the station, you can politely refuse and leave at any time, unless they decide subsequently to arrest you (i.e. they must expressly state</ that you are under arrest, opening themselves to a false-arrest complaint if they have no legitimate justification for doing so). If you are talking to police for any reason such as if you're a witness to a crime, or if your lawyer has advised you to answer a question, do not ever lie (just say nothing) as that will not only make you look guilty, and if you are speaking to a US Federal agent, lying is actually a crime in itself This is a subtrope of Artistic License – Law . See also Be as Unhelpful as Possible , Don't Answer That

Some shows are lucky to still be around — or were, before

the axe finally fell. Their ratings were middling or poor or even awful , but the critics liked it , or it had been starting to show signs of a cult following, or it was supposed</ to be huge and they're reluctant to give up on it just yet, or the show is nearing an episode count needed for syndication , or everything else that premiered that year did even worse, or somebody at the network just liked</ the darn old thing; at any rate, it just barely got renewed by the skin of its teeth. In industry-speak, these shows are referred to as being "on the bubble," and if it's a show that seems to be on the bubble every single season, will sometimes garner the name "bubble series," taken from the fact that a soap bubble can pop at any second This generally means the network won't value the show too much, so expect the next season to have fewer episodes, budget cuts, conspicuously missing characters to save on salaries, or be shuffled around on the network's schedule Usually this marks the final season of a show — even the final partial season. Better plan on only running thirteen episodes instead of the usual 22-26. In the best-case scenarios, it leads to a massive hit and a very good career move for the network execs responsible The opposite of Screwed by the Network : here, the network tries in vain to sustain a show that the audience just can't get into, instead of the other way around. Compare Adored by the Network

In many near-future dystopian science fiction settings, prices on some items, particularly natural things created by natural processes, are quite high, as opposed to mass-produced via synthetic processes This is particularly the case if the setting is specifically shown to be one of severe environmental degradation , where agriculture is difficult, natural foodstuffs are unsafe, most natural-born animals are extinct , and resources are stretched so thin that raising something as superfluous as a live animal in your house is madness. Either way, people just take it for granted that certain things are not to be had for regular folks, or that if they are, they're grown in batches in laboratories or, in the case of animals, may be machines designed to look like the real thing. This trope typically occurs when one character encounters an object, usually food or an animal, and questions the owner about it. They may ask "Is this real?" to which the owner of a synthetic item/cloned animal replies "Of course not." That, or, if the character is meant to be fabulously wealthy and a wee bit eccentric, they'll say "Of course." Normally, this can be written off as Artistic License – Biology . Making more of themselves is something that living things tend to be pretty good at, so supply isn't an issue. Moreover, you'd be surprised at how little energy animals need to survive. The human body, assuming one does not engage in constant strenuous activity, burns up an average 100 watts of power. You have appliances in your home that consume several times that amount of power. And keep in mind, most animals — paricularly reptiles such as in the page quote — run on even less than that. One of the reasons for this is cellular respiration being able to convert 40% of glucose's chemical energy into ATP. It doesn't sound like much, but keep in mind most top-of-the-line internal combustion engines struggle to convert just 30% of octane's chemical energy into motion. Animals are very efficient. However, this trope can be justified if pollution or disease have directly attacked the remaining real organisms' fertility. For agricultural products, it may be further explained by an economy of scale — once most people switch to the cheaper

synthetic product, the real thing becomes even more</ expensive because it's made in smaller quantities. Moreover, plants are one of the few instances where life is quite inefficient. . See also Extinct in the Future , Future Food Is Artificial , Common Place Rare , Black Market Produce , Mundane Luxury . A counterpart is Worthless Yellow Rocks ; both can exist in the same work.

So the Depopulation Bomb has dropped, usually in the form of a highly selective virus or bacteria that is only fatal for adults, leaving the kids to inherit the world. Frequently seen in After the End fictions, Only Fatal to Adults has two variations: In the first, death strikes at the onset of puberty, killing only the sexually mature. In the second, the highly selective agent of the Depopulation Bomb kills in the late teens or in early adulthood, killing only the socially mature Another important distinction is whether the Depopulation Bomb is only a concern that one time, or if it will begin to affect the kids when they grow up Due to the difficulty in convincingly presenting a hypothetical weapon with such specific depopulation capabilities (especially if in the second form, where the bomb seems able to detect a set of legal and social traditions that are only very loosely connected to biological changes), a popular form of this is to have a non-discriminating apocalypse wipe out mankind in general, then re-populate the planet, say, sixteen years later, with a bunch of infants who were locked away in a survival shelter at the time If the Depopulation Bomb is Only Fatal to Adults, then this trope justifies Parental Abandonment . It also justifies storylines in which children and teens have to take on the responsibilities of adults , or form extended families of their own in order to survive. Can also justify Teens Are Monsters if teens survive and are left to fend for themselves . In some variations, due to the ages of the characters and the intended audience, guns are rare and the Nerf Arm is ubiquitous. Sometimes, there are even lasers . Will eventually lead to There Are No Adults This will pretty much always lead to a Teenage Wasteland . Compare Gendercide . Also see Improbable Infant Survival and World of No Grandparents While this is great escapist fiction for young adults, for parents it's an Adult Fear

In cases where a character is so good looking, kind, muscular, badass, etc. they may suffer the misfortune (or not) of being found attractive by members of their own sex, and only</ by their own sex A character can only qualify for this if people of the opposite sex show up in the series and clearly show no romantic or sexual interest in them. So if there are only members of the same sex that show up , they don't count. Could develop into Chick Magnet or Dude Magnet later on if members of the opposite gender do eventually show interest. If the male character is a Bishōnen it could be a case of So Beautiful, It's a Curse or of only men wanting to go for him because he looks like a beautiful girl and the men may justify still being straight by pointing this out . A reason they may not attract characters of the opposite sex is they look at them as not being good looking, too macho, too tomboyish, too rude , too feminine looking, too tempermental , too spineless or even too nice. If the character is a big enough same sex magnet this could be another reason they don't attract people of the opposite sex because the opposite sex characters are jealous of the magnetic pull the character has on their</ crushes. (For example, a guy may attract numerous guys some of who are chick magnets and their female admirers see the pheromone

releasing male to be in the way of them being with their crushes to the point of jealousy and this can go both ways if a female character attracts all the female characters in the vicinity that the guys are crushing on.) If the female character is a Bifauxnen , girls could be wanting to go for her instead of guys because she's the next best thing. Another reason she may not attract guys is because No Guy Wants an Amazon . Bara, Yaoi or Yuri genre can still appear here when other gender characters appear in those shows. Compare Unwanted Harem and Abhorrent Admirer . Compare/contrast Even the Guys Want Him and Even the Girls Want Her .

The protagonists of any given story are, of course, larger than life. Expecting the various extras and Red Shirts to actually accomplish something noteworthy would probably come off as anticlimactic. But even among the various named characters, there's clearly a hierarchy involved. That hierarchy, among other things, mandates that only the protagonist can achieve certain things. Nowhere is this more clear than when battling the Big Bad , often Because Destiny Says So Anyone</ other than the main character will almost inevitably fail to defeat the Big Bad . It's a rule of drama. Any poor schmuck who tries, be he The Lancer , the hero's closest friend, the hero's Love Interest , or a random soldier , will almost certainly be cut down without the Big Bad breaking much of a sweat. There will be gloating. There may be slow-motion footage of their fall, and dramatic music Camera pans to the hero. Cue the Unstoppable Rage The reason writers came up with the Hero Secret Service , which gives the rest of the Five-Man Band something important to do without directly taking part in The Hero 's mission Often overlaps with the Chosen One or The Only One , as well as This Is Something He's Got to Do Himself . Differs from The Only One Allowed to Defeat You in that it's a matter of raw ability, not personal preference

A lot of weird news stories seem to take place in the United States of America , giving a misleading impression that the country has more weirdness than average. Social scientists have proposed that it makes Americans a rather for drawing broader conclusions about humanity from Often used negatively as a No True Scotsman fallacy, in which someone says a specific negative thing can happen "only in America", regardless of if any other part of the world can or has been subjected to it Compare with Vocal Minority , Mis-blamed . See Only in Florida and Only in Miami as a subset. See Eagleland for the unfortunate image that results Changing with time as an increasingly large number of "and finally..." stories derive from China and India. Most of these stories are invented by the media. The two nations, not coincidentally, have the first and second largest populations in the world, respectively This trope name does not refer to works that are only available in the US. That would be No Export for You . Only an American could make that mistake Nor does it refer to Larry the Cable Guy 's television series of the same name

When reading a " News of the Weird " site, it has been noticed that Florida has more than its fair share of weird stories. Some of them even hang one with a "Florida" tag, as seen below Woman in an argument with town council over a goose? Florida Now try and figure out which of those four we made up

And that's just from one day's worth</ of news in the Persistent Vegetative State. Quite literally one day's worth of news: All of the above (except the aforementioned fictional one) are summaries of Fark items from March 12, 2008. Don't get us started on the 2000 Presidential election either . Of course, Florida doesn't actually</ have more weirdos per capita than any other state with a similarly large and diverse population. They're just more willing to talk about it. In most other states, the details of crimes and legal proceedings are either classified or not available right away, whereas Florida is quite proud of its , also known as "sunshine laws", which give reporters easier access to police reports and court documents. So whereas an Ohio headline would read "Maple Heights woman arrested after assaulting sister," a Florida punched sister during fight over vibrator." Of course, the manner in which these laws are enforced can themselves create some weird "only in Florida" stories, sometimes even creating A Rare Sentence in the process; see, for instance, the time when a father and son who were both Miami-Dade County commissioners had to just to have a private chat because they'd be discussing public transit issues, or when the governor was legally required to invite journalists to . It's perhaps for these reasons that Florida has developed a number of excellent newspapers, and several famous journalists like Dave Barry and Carl Hiaasen got their start here, which is perhaps why so much is known about the state's quirks. Also, the now-defunct tabloid Weekly World News </, known for its extremely</ bizarre cover stories, was based here as well, doubtlessly drawing inspiration from the local headlines. One newspaper, the Sarasota Herald-Tribune</, has even used Florida's reputation as , calling Florida "arguably the best news state in the country". Given the fact that such headlines are usually worded in the manner of "Florida Man does X," Memetic Mutation has opted to interpret this to mean that all of these bizarre acts are the work of a single specific individual</, a " superhero "/supervillain named Florida Man, who is considered to be the Anthropomorphic Personification of Chaotic Stupid and the Avatar of Meth. Also check out Only in Miami , which is about the city, rather than the state. Note: there is little relation between this and the Bermuda Triangle , as the Bermuda Triangle is more about the paranormal than the weird and wacky. Compare Cloud Cuckoo Land . See also Poe's Law . And despite this trope being very closely intertwined with Reality Is Unrealistic , No Real Life Examples, Please!

Some heroes do what they do for honor , some for glory , some For Great Justice . Others are only looking for the cash. This attitude is held by people who are honestly greedy , just need a living, or don't want to act like they care. Characters fitting this attitude are often Hired Guns and the Bounty Hunter . In fact, the Evil Overlord List states that bounty hunters should only be hired for money; those that love the thrill of the chase are too likely to give the prey a chance to get away. Of course even this can backfire if The Hero is Genre Savvy and has access to the funds to pay said Hired Guns more</ to turn on the villain This is a sub-trope of Not in This for Your Revolution . Money, Dear Boy is when it happens in Real Life . Villains who say this are likely to be Punch Clock Villains who work for the bad guys because Evil Pays Better , and might show that Even Evil Has Standards . On the other hand it might show they're a Greedy creep who doesn't care about anyone . Contrast the Psycho for Hire , who while equally villainous, has other motivations. Compare to Signed Up for the

Dental This may also provide an Evil vs. Oblivion motive if the Big Bad proposes either to destroy everything, or even simply to destroy the economy. A character following this trope but on the heroes' side may, if asked for further help, claim that said help is Not in My Contract

This is a character who is primarily, or even only, known by their In-Series Nickname Related to Everyone Calls Him "Barkeep" , but that is about people being referred to exclusively by their jobs or what they're best known for doing. Also related to Stage Names . Does not include Fan Nicknames , secret identities or explicit pseudonyms. Also doesn't include people who give themselves new names following an act of self-reinvention , and stop responding to their old name (e.g. Voldemort). Exceptionally badass examples of this trope fall into the Red Baron . Obvious and common contractions, i.e. someone's full name being William but introducing themselves as Bill, don't really count either Usually, Dramatis Personae will give the full name of such a character first, though the actual script will use the nickname almost exclusively even in the unspoken directions If the character insists</ on the nickname, it's Do Not Call Me "Paul" . If the nickname is actually his real</ name, it's His Name Really Is "Barkeep"

They say that you can't please everyone, but this trope is for when something meant to please a whole group of people only pleases one of them The thing could be some food, a drink, a joke, a story, a trip, basically anything, but it has to be designed to be enjoyed, however, only one person enjoys it This is nearly always Played for Laughs and usually</ says something about the sole enjoyer in question. Maybe they're very optimistic, weird or both. They may also be stupid, or at least considered as such by the rest of the cast. If it's a joke, maybe they're easily amused or have a peculiar sense of humour. If it's food, they might be an alien or a pet or whatever with a different palate from the average human, or possibly just a human who eats weird stuff (it might also serve to demonstrate how bad a chef the cook is or that the cook likes to experiment). If it's an outdoor activity, maybe they're a Nature Lover When it doesn't say something about the character, it's often because everyone else is having very bad luck and the one person who enjoys it is just lucky. For instance, there might be a camping trip that's a Horrible Camping Trip to all but one It might also be because the character is the friend/lover/family member of the person who brought the thing into existence (told the joke, made the cookies, etc) A common variation is having something meant to entertain kids that doesn't entertain them at all and the one being entertained is an adult. This usually, but not always, means they're a Manchild . It could also mean that the entertainment was too complicated for kids to understand (something too complicated for kids to understand may also have the sole enjoy-er be a Child Prodigy) Can overlap with Stock "Yuck!" , Incredibly Lame Fun , Stylistic Suck , Epic Fail , Low Count Gag , and Lame Pun Reaction , and can also overlap with Museum of Boredom , Tough Room , and Nature Is Boring (although those tropes are downplayed as they at least please one</ person). Compare and contrast the YMMV page Fun for Some , which is for when a few people find something fun that was never</ meant to be fun and Slow Clap for when only one

person claps at first, but then gradually, everyone does. Also compare Abilene Paradox for when no one</ wants to take the course of action, but everyone agrees because they mistakenly think each other wants it. Contrast Somebody Doesn't Love Raymond , for when only one person dis</likes someone</. Can sometimes invert Even the Rats Won't Touch It by having only</ a rat or whatever want it

In most time travel/cloning/alternate reality stories, one character can have multiple copies of him- or herself running around in the same time period. Some might have problems if those copies meet each other . Then there are these cases.. Only One Me Allowed Right Now is a case where either the Universe flat out denies multiple copies of a character to exist in a same time period, the character and the copies go crazy, the Universe starts to break down , or something else bad happens Note that this is NOT Never the Selves Shall Meet . In that one, you can have millions of copies of a same character running around in the same universe without that much trouble, only they must not meet each other. In this case, even though there are only two copies and they are at opposite ends of the Universe, the problem still happens. Not as tightly related to the One Steve Limit as you might think

The character or characters go by a single name, with no family/clan/whatever identifier. Unlike No Name Given , it's not that their full name is never made known to the viewer. The full name simply does not exist. Cher is an oft-cited example Truth in Television for most of history . Bynames , epithets, and family names were used only when necessary to distinguish between people with the same name. In much of the world, having multiple names is a relatively recent invention Sometimes appears in translations involving a Dub Name Change when it didn't in the original, such as Beetle Bailey being called just "Masi" in Finnish. This could be seen as going under Only Known by Their Nickname , but not when the character is addressed both on a First-Name Basis and Last-Name Basis in the original and the translation uses the one name for both Contrast I Have Many Names , Repetitive Name (when someone's first name and last name are the same) and compare Everyone Calls Him "Barkeep" for an extreme example Not to be confused with the similar-sounding First-Name Basis or Only Known by Their Nickname

The story involves a mystery where someone has committed a crime or misdemeanor of some sort, and neither the protagonists nor the audience are supposed to know who the guilty party is. However, The Law of Conservation of Detail and the rules of Fair-Play Whodunnit state that the culprit must be a character who appears in the story before The Reveal . It can't be someone the audience has never seen before, and if the mystery is a big part of the plot, it can't really be a minor background character either. It has to be someone important In Fair Play Whodunnits and many other types of Mystery Fiction , the writers usually introduce several potential suspects to the crime, and in the end one of them is found to be guilty, while the others turn out to be mere red herrings . However, in some pieces of fiction (typically ones where the mystery isn't the main driving force of the plot), there are no red herrings, and the audience can rather easily deduce the culprit, since they're

the only possible major character who could have done it. Either there are no other significant characters among the suspects, or all the other major characters can be ruled out because they're the protagonists, series regulars (in the case of serial media), or other types of characters that aren't typically used as a culprit, such as kids or animals Of course, even if the audience can guess who did it, it isn't as easy for the protagonists to solve the mystery, since for them the guilty party could be any minor character, or even someone who doesn't appear in the story at all. It's only the audience who can rule these people out If the writers don't care about the rules mentioned above, they can make the culprit turn out to be some completely unexpected minor character , or even someone we've never met before , but these kind of mysteries tend to be much rarer (and more unsatisfying) than the ones that follow the rules This trope can overlap with Chekhov's Gunman , if the guilty character doesn't seem to have any proper function in the story before The Reveal . Contrast this trope with Narrowed It Down to the Guy I Recognize , where the viewers can guess the culprit not because he's the only suspicious major character</, but because he's the only one played by a major actor</ Warning: the examples below contain ... Though, perhaps, rather obvious ones

When there is a group of characters who are all just totally weird, either in general or in a particular scenario, the Only Sane Man is the only one who, well, isn't Picture this: Alice is a Psycho for Hire , Bob is a Cloudcuckoolander , Henry is an Empty Shell , Charlotte is a Chaotic Stupid prankster , Daniel is the Annoying Younger Sibling , Emily is a Jerk with a Heart of Jerk , Maria Rhymes on a Dime , Franklin is a Mad Scientist , and Gardenia is a Holier Than Thou Lawful Stupid . Looks like your standard Dysfunction Junction . But then you have Isaac. Isaac is actually a very well-adjusted individual. He reacts with appropriate horror to things like Alice's finger collection or Franklin's experiments to revive the dead with science, and the crimes against nature that Gardenia calls pets. Isaac is the Only sane Man and The Only Voice Of Reason in the room The other variant is where the other characters aren't always</ that weird, but everyone save one character is acting weird in a particular situation. For example, they might regard something absurd as Serious Business , with the Only Sane Man the only one who notices how crazy that is This latter variant also includes a standard comedy piece: something absolutely insane is going on , but only one person notices (or cares). There are usually three stages, with a rough correspondence to the Five Stages of Grief : Bewilderment (Shock and Anger), trying to get others to see or admit the weirdness (Bargaining and Denial), and bitter sarcasm (Acceptance) In the more extreme cases, the poor soul may be trapped in a World Gone Mad and/or wind up Giving Up on Logic in frustration. Sometimes, though, they are Not So Above It All . A character may also think</ of themselves as the Only Sane Man without proper justification A Too Dumb to Fool character may be the Only Sane Man, although he is likely to be less worked up about the failures of others to see than in most cases The Only Sane Man is often relied upon as the Only Sane Employee . This character often ends up a Knight in Sour Armor . For a more horrific version, see Through the Eyes of Madness . For the sci-fi version, the Ignored Expert is your go-to guy. The comedy version will often end up being either a Butt-Monkey or a Chew Toy . If all the other characters are otherwise sane,

and really should see something, but only one guy does, he's an Einstein Sue . See also Cassandra Truth , Surrounded by Idiots , and Surrounded by Smart People ; contrast with the Unfazed Everyman . May temporarily overlap with What the Hell, Hero? If several characters take turns being the Only Sane Man, they're playing with a Sanity Ball . If it's a two-person show, with one person playing the Only Sane Man to the other's wackiness, it's a Straight Man and Wise Guy scenario. This trope is the savvy half of a Savvy Guy, Energetic Girl duo, one third of a Comic Trio , and part of the Four-Man Band Usually, but not always, a Cast Full of Crazy contains an Only Sane Man. Usually, he's prone to Sanity Slippage The Wonka may well feel like this (or be this!) in a world that doesn't follow his thinking. Insanity is, after all, in the eye of the beholder, and The Wonka often has quite valid points No Real Life Examples, Please! - Real Life does not have only one sane person

To the outside viewer (usually American), after you start watching a few Canadian-made shows, you start to notice something. Something weird</. It starts getting odd when you're watching Canadian TV, and you start shouting "Hey! It's that Guy!"... every five minutes, at every actor</ . That's where this trope comes in. You see, in Canada, the government offers significant tax breaks and direct subsidies to Canadian-made TV shows, in exchange enforcing a "Canadian actors only" policy for the majority of roles. But there are only so many actors in Canada, especially young actors. The country already has a relatively small population to begin with (about 35 million, roughly a ninth of the US population), and when you narrow the actors down to a specific age group (between 15 and 30, like most of the ones below), and then combine that</ with the fact that Canada has become a very popular shooting location for American producers on a tight budget, you're only left with a tiny handful of actors. Additionally, most of these actors stay in Canada for the rest of their careers (though not always by choice). That said, some have managed to break out of it , notably Elliot Page , Aubrey "Drake" Graham , Michael Cera , Tara Strong , Jay Baruchel and Cree Summer This isn't necessarily a bad</ thing — if anything, it becomes enjoyable to the viewer, and because of the frequent recurrence of these actors, there often isn't much Role Association. We only picked Canada as an example because Canada, along with Malaysia and the United Kingdom, is home to a lot of tropers. But this trope can be found in any country with a small enough dramatic community where actors either prefer to stay in their home country or are forced to stay because of linguistic incompatibility with countries around them. You can also notice this in the some of the more niche branches (relative to film and TV anyways) of dramatic arts, there are only so many Mummers dancers, martial arts practitioners, puppeteers or Peking opera singers to go around. On the other hand, the specific Family Channel Kid Com —> Degrassi </ path has become so well-trodden it's almost a subtrope of both this and Tom Hanks Syndrome . (Life with Derek </ was an unusual case in that many actors came from</ Degrassi </ to appear on the show in recurring roles - but sure enough, the reverse inevitably happened as well.) Oddly enough, Canada's animation producers, such as The Ocean Group , 9 Story Media Group , Fresh TV , WildBrain (formerly DHX Media) and its assets, Nelvana , CinéGroupe , and Cookie Jar Entertainment (formerly Cinar) are also guilty of this trope, using many of the same voice actors in their shows, and some of the actors

listed here have appeared in their shows as well. indicate that the actor has appeared on Degrassi </ indicate that the actor has appeared in a R. L. Stine series.

Australian soaps Neighbours </ and Home and Away </ have at some point featured pretty much every well-known actor the country produces. Neighbours </ is particularly notable for having starred Kylie Minogue , Jesse Spencer , Dichen Lachman , Guy Pearce , Holly Valance and Delta Goodrem before they got famous. lists numerous examples of "Canadian Shakespearian Actors in Space."

Making your villains a credible threat to your heroes is what makes any conflict interesting. In some series, most notably Science Fiction and High Fantasy , it may even be necessary for your villain to be a threat to the entire world . A powerful villain and flawed heroes will make for a good story, so it stands to reason that in a lot of stories, the villain is more powerful than the heroes in some capacity. But there is</ a balance to it. Eventually, the villain is so many orders of magnitude above the heroes that there's absolutely no chance for them to win with any of the capabilities we know them to have. We all know what's coming: a Deus ex Machina . The heroes aren't going to save themselves; the author</ is going to save them This Audience Reaction describes a situation in which, when you should be thinking, "How are the heroes going to get themselves out of this one?" you're instead thinking, "What contrived plot device is going to arise at the last minute and rescue them?"

See also The Plot Reaper , Like You Would Really Do It and Strong as They Need to Be . Not to be confused with the literal Post Modernist case where the Author Avatar is forced to save the characters .

Then, this can mean they want to be rid of you, or exploit you, and there is the little matter of figuring out who would understand if you say it. Heaven help you if you accidentally</ learned it; you will find yourself knee-deep in trouble before you can blink In The Infiltration , it is a frequent point of failure — but if you do have the knowledge, it lets you in entirely. The Ancient Tradition , Ancient Conspiracy , and Ancient Order of Protectors take it very seriously Unlike Only Smart People May Pass , you can not figure this one out from the clues; you have to have learned it. (Occasionally, the Genius can manage to figure it out, but it will always take them serious time and effort.) This is, if they did it right. Sometimes they were clumsy. Conversely, an Only Smart People May Pass riddle may turn into this if the answer is too insane or difficult Compare Trust Password , Only the Worthy May Pass , Only the Pure of Heart , Only Good People May Pass

The story ends on a happy, upbeat note, with all the problems resolved and everyone getting back to leading happy, fulfilling lives ... but only if they're main characters. The characters the audience know and care about get their happy ending, but it comes at the expense of minor characters who get stuck with a Downer Ending Note that the term "minor characters" does not include villains, even of the Mook variety, since we expect them to wind up worse off in the end (and it is considered more shocking if they get away , are Easily Forgiven or win) Related

to Protagonist-Centered Morality , Inferred Holocaust , Esoteric Happy Ending , Everybody's Dead, Dave , and Dwindling Party . If an Adam and Eve Plot is both apocalyptic and presented as having an upbeat ending, it's also this See also: What Happened to the Mouse? , where minor characters are forgotten about entirely </ This is a Spoilered Rotten trope, that means that on this list is a spoiler by default and most of them will be unmarked. This is your last warning , only proceed if you really believe you can handle this list

Oh, boy. Normally, this would be a fantasy come true for some men out there. The fantasy of a beautiful girl actually wanting to have unprotected sex with you, with the explicit goal of becoming the mother of your child as a result. Be Careful What You Wish For , 'cause here's the catch: neither of you actually wants it, especially you, the bloke. Due to circumstances running the gamut of prophecies, genetics, curses, or just plain old writer viciousness, you, the bloke, are blessed (or, rather, cursed) to be the only man who can father the child of the female protagonist. But wait! It gets worse: she is amongst the last, if not the last, of her species/people (or at least the last who can bear children), and the whole race will die if you refuse. Therefore, she often has an " Entitled to Have You " attitude. And considering that the unfortunate aspiring young mother is more often than not a vampire, goddess, alien or equally super-powered being known for their short-tempers, politely saying "no" alone would drastically shorten your lifespan... or maybe just your limbs. You don't need</ those, right? Of course, there is also a reasonable chance that said being's mating rituals might not conform to the human way of doing things . Even if she is reasonable enough to not get offended by refusal, there is always the good old guilt factor, especially if she is a True Companion or equally dear friend, making acceptance and</ refusal all the more awkward. Hilarity Ensues . Of course, a lot of these situations could be fixed using artificial insemination, not that that ever happens . (Please note that repopulating the human race is not Truth in Television . Repopulation with one man and one woman would involve too much incest to work; scientists estimate that you need a base population of at least 500 people to maintain proper genetic diversity.) If this trope is utilized in Fanfic , expect coitus to ensue . See also Gendercide ; in these situations, the race in question is the human</ race, and it's never pretty for the last man or woman. Compare Endangered Species , Last of His Kind , Stalker with a Test Tube , What Measure Is a Non-Unique? . Sister Trope of Adam and Eve Plot .

A popular subset of Hollywood Tactics . Opposing armies will not engage in tactics or maneuvers of any kind. Instead, they simply form up into two opposing masses and charge straight at each other across a flat field. Afterwards, even this rudimentary formation will be lost as soldiers break up into a series of individual duels If there are any cavalry, they will not work as a separate unit or form up together; rather they will just be scattered in amongst the infantry. If one side doesn't charge, they will hold their fire until the very last moment. Or they will fire exactly one</ volley of arrows before charging themselves. Before firearms this tactic was rare, the "Shield Wall" being a much more common tactic. Even ancient barbarians generally knew better than to just gang up and run toward the enemy. Actually the advent of firearms temporarily increased</

the use of this tactic, the goal being to close within melee range before the enemy could fire a second volley (this tactic being used by Scottish Highlanders). However even then soldiers still maintained formation rather than charging in a formless mass. However ever increasing range, accuracy, and speed of firearms finally rendered this tactic suicidal in the First World War. A casual glance at the mortality figures of World War I (~9 million) will show you how well it worked against advanced firearms. Realism aside, this trope makes for a useful and iconic image for filmmakers, and is popular in an introductory scene as a way to quickly tell the audience that these two large groups of people really, really</ don't like each other. Compare Animal Stampede , where the charging troop consists of mindless animals rather than soldiers. A subtrope of Call That a Formation?

The inhabitants of a certain Gallic village in Asterix (as well as the eponymous hero and his buddy Obelix by themselves when abroad) do this regularly to the Roman army, the unfortunate recurring crew of pirates, and whomever else they may end up fighting in the given album. Justified in this case by Panoramix's magic potion giving them superhuman strength (plus of course the Rule of Funny).

The Lord of the Rings </

On the Discworld </, this is the policy of the D'regs. As their wise man said in Jingo </ , "It is always wise to charge."

A trailer for War Craft III </ shows this, with a battle between e Orcs and Humans which quickly goes in a different direction when e demons unexpectedly rain from the sky and kill everyon In The e Napoleonic Wars the British had a variation of this. They would e wait. Occasionally chant. But mostly wait like a silent inhuman e wall. This would push the soldiers' tension to its absolute limit e which often came at the same time as the French were worn out. e Then in a moment they would give a shout, fire their muskets, and e charge. The French would almost inevitably collaps e

Someone is given an option he doesn't like, and promptly rejects it The person who made the suggestion returns with something far worse (or at least far less likeable), and On Second Thought, the first suggestion was just fine . Summed up well by the following joke: A subtrope of Immediate Self-Contradiction . Often the former request will end up Off the Table . Compare Would Rather Suffer , So You Were Saying...? and Anything but That! .

Any time precise timing is called for, you're likely to hear the phrase "On three: One, two, THREE!" Since this has been heard countless times before, variations are common. A common parody is: "WAIT! Do we go on three, or do we say 'One, two, three' and then go?" This usually results in an awkward conversation about how best to count or the characters becoming even more confused and going at the wrong time or missing their opportunity entirely. (Genre Savvy characters may avoid this by counting down from three instead: "Three, two, one, GO!") Another common joke is to have someone simply go "Three" without counting to one or two first. If the action which the count builds up to is a painful</ one (e.g. ripping duct tape off a bound captive's mouth), then the action may be taken before</ reaching the promised "three", to get it over and done with before

the subject of said action realizes it's started. The reason why "three" is the usual number is because it's the smallest number of points you can use to establish a regular time interval. If you only count to one, nobody can react fast enough to the person saying "one". If you only count to two, you don't know how long the time is supposed to be between numbers, so nobody knows when to listen for the "two" either. Counting to three establishes both the point in time and interval between numbers, so everyone can figure out when the "three" will happen. Sub-Trope of Rule of Three . Not to be confused with Counting to Three , which is when you don't want</ the person counting to get to three, or with One, Two, Three, Four, Go! (in which the "go" is the Japanese word for "five"). Not to be confused with the film On The Count Of Three </ , although this trope is mentioned and parodied in there.

The long form of the trope title is " Out of Character Is Serious Business ." Now, then. Some characters have strong traits that they are known by . This is for when characters momentarily break away from their normal habits to make a point about the seriousness of the situation. Often causes the other characters to do a Double Take and mention why this event is Serious Business . When most or all of these OoC moments happen at once, you can be sure that the world is ending , or at least the Darkest Hour , leading characters to behave in ways they normally wouldn't, because they know they might not have another chance to do so. It's also a pretty good indication the Godzilla Threshold has been crossed. This is a trope for when a somewhat- Out of Character action is used to draw extra attention to the scene (similar to a Title Drop). It isn't Hidden Depths because it isn't telling us something about the character we didn't already know; it's similar to an Out-of-Character Moment in that this is specifically the usage of such a moment to draw attention to a scene. If they're doing this deliberately to make another character think something is amiss, see Out-of-Character Alert . Compare Let's Get Dangerous! and Weirder Than Usual . A Super-Trope of: Alternate Catchphrase Inflection : Someone says their Catchphrase in a different voice than usual. Often overlaps with:

"It seems like an open-and-shut case... or is it?" A line heard far too often in episode descriptions. There's many variations of this ubiquitous Crime and Punishment trope, so we'll just give one: We've got a defense lawyer with blonde highlights. She's a hot, young version of Perry Mason . One day, she gets a call from her friends in the Deep South . A black guy is only a few weeks away from the ultimate vaccination, which will stop him from getting any illnesses ever again by virtue of being dead. It seemed like (here's those dreaded words again) an "open-and-shut case": Mr. Smith's wife and three children were found horribly murdered. Mr. Smith was arrested by the police, his shirt covered in his daughter's blood. He confessed, was tried and was sentenced to a permanent cure to his problems. The lawyer investigates the case. She finds out that the Corrupt Hick sheriff was responsible, the confession was obtained under duress and the blood was from him cradling his dying daughter This one still gets going because forensic evidence, even today, is subject to interpretation.

This trope will mostly happen in comedies to male characters (sometimes to females as well), or when serious moments need to be lightened up a bit Very</ Truth in Television . It can happen

to anybody. Compare Wardrobe Malfunction and Comedic Underwear Exposure

Shout-Outs can reference pretty much anything — another e person, another work of fiction, even another episode of the samee show . One very popular target is to call back to the show's own e opening sequence. Because a show's opening is well-known to the e viewers, the joke requires zero setup. It's an instant punchline.e For another thing, it nods towards the fact that the show is, e in fact, a show , and that certain things are always the same, e without fully breaking strid When done with the show's theme songe (or other music from its soundtrack), it's Diegetic Soundtrack e Usag e

In a wacky comedy, the water level's rising inside a locked room, and usually, somebody is trapped in there . An unsuspecting person opens the door, and gets the unwelcome surprise of a massive flood pouring out, knocking them right over In Real Life , the water would usually just leak out at the crack at the bottom of the door, though it could be blocked up. Often the volume of water is so great that the weight should rip it off the hinges, or cause the floor to collapse, both of which would also cause the water to leak out as well Compare Exploding Closet , where there's a pile of solid objects on the other side of the door. Exploding Fish Tanks is another variant. May involve a Man-Made House Flood

There's a door the heroes have to clear. But there's also a lock (often involving a complex computer combination lock) in the way. Our heroes have to get past it, to get the weapon, the suspect or hostage, or the artifact or whatever MacGuffin is important to the plot right now. They may or may not have a brilliant hacker kid like young John Connor or mutant kid like Micah . Somebody tries to pick the lock , or to blow powder on it to see what the most used key combinations may be, or find some other way to get the lock open before time runs out. But it's still not going fast enough. Then comes The Big Guy , the Boisterous Bruiser , the Pint-Size Powerhouse (etc.) who just punches it in, smashes it with a rock, kicks it, blasts it with a weapon, or runs into it either head first or with a Battering Ram . Master of Unlocking or not, the lock is broken, sputters feebly, and the door obligingly opens, if it doesn't fall down first. Occasionally you have a speedster or a robot picking the lock by blazing through all combinations faster than the human eye can follow. One of the more common variants is the hero putting his (or her) shoulder to the door, which obligingly opens, if only a little bit. This has led to the common subversion: hero applies shoulder, Newton's third law tells the hero to lie down on the ground and whimper. The "subversion" is what would actually happen. If you really want to open a door, kick it near the door knob . Otherwise you'll have a closed door and an injured shoulder. This trope is responsible for Evil Overlord List entry #96: "My door mechanisms will be designed so that blasting the control panel on the outside seals the door and blasting the control panel on the inside opens the door, not vice versa ." It's also a subtrope of Cutting the Knot . When the magic phrase Open Sesame fails, you still have this as an alternative; sometimes the party using force to open the door will even say</ "Open, says me!" See also Dungeon Bypass , Myopic

Architecture and Steal the Surroundings . Related to Axe Before Entering , Battering Ram , and Shoot Out the Lock . The Subverted Trope , where they do</ bust down the door, and an ally notes they didn't need to, is We Have the Keys . And the trope wherein they could've used the door but smash through the wall</ instead is There Was a Door .

This trope is when a particular piece of information is officiallye declared to be secret... but it is widely known by everyone e anyway</. The characters might as well not even attempt The e Masquerade , because all the civilians around them know who they e are and what they are up to. And that super-secret bit of gossip e that no one can ever know? Hate to tell you this, but everyone e knows it already</. But at the core of the trope, is the fact thate even though everyone is fully aware everyone else knows about the e secret, it will still be treated as a secret; no one will ever e openly admit to knowing it, and it is a common understanding that e it should remain unspoken. Sometimes the occasional knowingly winke and nod will be shared, at most vague allusions or euphemisms e might be used, but any and all open discussion and acknowledgment e of the secret is completely out of the question. To do so will be e viewed a mild faux pas at best, and an outright cardinal sin at e worst. As a result, the Naïve Newcomer or the Fish out of e Water will often mistake it for an actual secret, as they don't e know that most people already know. In smaller social circles, a e common variant is "everyone knows, but they don't know how many e other people know until they start comparing notes one day", at e which point the real secret is that it isn't on Overt Operative e is a Sub-Trope . Related to Not Cheating Unless You Get Caught , e and commonly paired with Could Say It, But... Compare Everybody e Knew Already , where someone genuinely believes their "secret" is e actually secret right up until they tell everyone. The Transparente Closet is when the secret relates to sexuality. See also Everyone e Can See It . Not to be confused with Public Secret Message , whiche is out in the open but not obvious in its existenc e

Opera Gloves is not a trope. It has been converted into a Useful Notes page, available here . If you came here from an internal wick, please remove it or change it to High-Class Gloves or some other Opulent Outfits trope.

Opera has been around since the end of the 16th century and is still going strong. Major opera composers include Mozart , George Frederic Handel , Giuseppe Verdi , Gioachino Rossini , Richard Wagner , Giacomo Puccini and Richard Strauss, though there are, of course, many more. The public perception of the difference between opera and The Musical is that musical theatre has breaks for spoken dialogue, whereas opera is "sung through", alternating between " " (which is when the plot happens and is typically sung in a less-formal style) and "arias" (big numbers where). While not a bad approximation, it's not always true. Because opera tended to be the theatrical equivalent of a Doorstopper , someone asked why it couldn't just be abridged by turning the recitative into dialogue; this form was typically called "operetta" (to oversimplify the matter), and the only thing you have to add to that</ to get a modern musical is a greater inclusion of dance. This means there are in fact operas that have spoken dialogue, like The Magic Flute </ and Carmen </. Likewise, there are musicals

that have "regressed" back to including recitative; among these Sung Through Musicals are Les Misérables </ and Joseph and the Amazing Technicolor Dreamcoat </, and others are nearly so like The Phantom of the Opera </ and RENT </ (which in fact has more Wham Lines spoken than sung!). The actual</ line between musicals and opera is blurry and kind of technical, but the short of it is that opera doesn't use electronic sound equipment and musicals typically need better actors than singers. Stephen Sondheim was heard to claim, "I really think that when something plays Broadway it's a musical, and when it plays in an opera house it's opera. That's it." "Common Knowledge" also insists that opera is always a tragedy . This is also not true; the opera genre is as varied as any other. Many operas are comedies — The Barber of Seville </ and The Marriage of Figaro </ are basically RomComs , just to give two examples — and even the serious ones tend to have at least some humorous parts. In fact, during the Baroque and Classical periods, operas were generally expected to have happy endings; the concept of tragic operas only became popular during the Romantic period. And while some operas have incredibly well-crafted lyrics and story lines that are true works of art, others are... not quite as brilliant . That said, the opera genre is known for featuring many a work with extremely</ drawn-out texts focusing on a single (often trivial) theme. As a result, opera texts (libretti) are often mocked, and in many cases it's mainly the quality of the music that makes an opera work, along with the same thing you need for any theatrical production: committed performers bringing the art form to life on stage. Movies have car chases, rock songs have guitar solos, and operas have death-arias (the soprano frequently dies). In fact, both Anna Russell and (in her one-woman show, Stand-Up Opera</) have made entire comedy routines of poking fun at opera tropes. Nowadays we tend to think of operas as high-falutin' fare for the nobs and snobs. Back in the 18th, 19th, and early 20th centuries, though, opera was popular music</, to the point that the opening night audience was chock-full of transcriptionists. And it didn't take long for them to produce a saleable product: Rossini once said that by the time he left the opera house for home at the end of opening night, hawkers would be lined up on the street selling copies of the music and lyrics of his arias to those who couldn't afford a ticket. (Yes, this means that media piracy and its critics are Older Than Radio .) Several modern films and other works have been created as operas (that is, entirely consisting of sung dialogue). The most famous "serious" opera film is probably The Umbrellas of Cherbourg </, starring Catherine Deneuve. A very modern example is Repo! The Genetic Opera </, which transplants the style into industrial sci-fi horror. The term Rock Opera is thrown around at times for a sub-genre of the themed Concept Album , but most "rock operas" are not produced for the stage (with an exception or two). The nearest thing to a modern successor to opera is Broadway-style Musical Theater . Indeed, musicals can trace their origins to opera through the operatic subgenre of operetta or light opera, which, as its name implies, is light in terms of subject matter (i.e. it's funny) and music, and often feature a good deal more plain dialogue than ordinary operas. The works of Gilbert and Sullivan are generally considered transitional, as while they considered their works to be comic operas, they would probably be called musicals if produced today; many would argue that musicals are basically the genre of theatre launched by G&S. Used in movies and TV shows to add a touch of class . Or just something artsy. Or for the cast to get bored and fall asleep, which is something that can't be done (too loud). Not to be confused with the Cantata ,

though at least one cantata, Johann Sebastian Bach 's Coffee Cantata , can be considered a miniature comic opera according to The Other Wiki . The Oratorio is an intermediate form between the cantata and an opera, being a sung musical work that is long, generally divided into acts, and has recognizable characters interacting to tell a story, but not involving any acting of any significance; they were historically written for circumstances in which opera was infeasible or inappropriate (for being too vulgar), typically religious venues, or when the composer couldn't convince a patron to let him write an opera (which is much more expensive; this cost factor drove George Frederic Handel 's prodigious output of oratorios late in his career, as he had previously focused on opera, but the English public's tastes had shifted away from that form). See also Classical Music , of which most opera is a subgenre . Actor Shipping : When two singers perform together frequently enough, this can happen, especially if they have wonderful chemistry together. Some examples include: Amadeus </ : Several works by Mozart, of course. Ludwig van Beethoven Vincenzo Bellini Georges Bizet Alexandr Borodin Benjamin Britten Francesco Cilea John Corigliano Gaetano Donizetti Antonin Dvorak George Gershwin Umberto Giordano Philip Glass Mikhail Glinka Osvalo Golijov Charles Gounod George Frederic Handel Leoš Janáček Franz Lehár Ruggero Leoncavallo Heinrich August Marschner Pietro Mascagni Jules Massenet Gian Carlo Menotti Claudio Monteverdi Wolfgang Amadeus Mozart Modest Mussorgsky Jacques Offenbach Johann Christoph Pepusch Giacomo Puccini Nikolay Rimsky-Korsakov Gioachino Rossini Camille Saint-Saëns Johann Strauss, Jr. Richard Strauss Peter Ilych Tchaikovsky Giuseppe Verdi Richard Wagner Carl Maria von Weber Kurt Weill

When a character has to remove something from a container very</ carefully, or nasty things will happen. Typically speaking, simply touching the item against the side of the container is enough to set off the "nasty things", because it's either Made of Explodium or a Death Trap Named for the board game "Operation", which greeted every failure with an earsplitting buzz. Can overlap with Nitro Express or Wire Dilemma . Should not be confused with In Iron Man </ , Pepper helps Tony replace his mini-arc reactor with an upgraded version and he warns her not to touch the sides of the casing. When she does, there's a loud "bzzzt" sound and the heart monitor behind them immediately starts displaying a page-full of red text. Tony even compares what she's doing to the game Operation by name

Crowley using tongs and thick rubber gloves to handle his holy water in Good Omens </. Being a demon, the tiniest</ drop on him can mean his doom.

The Black Rock dynamite in Lost </ qualifies. And a guy gets blown up to show it's really serious. Not that that stops Locke fooling about and lampshading the trope.

This is a common occupational hazard for adventurers in Dungeons & Dragons </. Especially if the DM is feeling sadistic .

Bomb-defusing sequences in Dead to Rights </ required the player to pull bombs out of cylinders in this way. Each bomb had a small pin which ran inside a channel on the inside of the cylinder. Touching the pin to the side of the channel had a predictable effect.

A specific type of Zany Scheme : Two characters, Alice and Bob , are an Official Couple ... or they would be, if Bob wasn't so mired in the river of denial that he insists that the water flowing all around him is solid ground. Alice, who is not in denial and very</ aware of Bob's feelings, gets fed up with his refusal to spit them out and takes matters into her own hands. Confronting him directly with the evidence might cause him to run for the hills, so Alice decides to invoke Green-Eyed Epiphany : She gets into a faked or temporary relationship with Convenient Charlie , to make Bob insanely jealous enough to come clean first Hopefully, the operation succeeds. Hopefully, Charlie isn't too</ insufferable or bland and doesn't drive Alice insane first. Hopefully, he won't be heartbroken and furious when he finds out Alice was just using him. Hopefully, Bob doesn't take this as a sign that he doesn't have a chance with Alice. Hopefully, Bob doesn't just want his beloved to be happy . Hopefully, Bob doesn't fail to notice because he has the awareness of a brick . Hopefully, Bob doesn't fall for it so thoroughly that he pulls a Counter Zany that Alice thoroughly falls for! And hopefully, Alice doesn't actually fall for Charlie.. Yeah, right.. Subtrope to Fake Relationship . Compare with The Schlub Pub Seduction Deduction , Intentional Heartbreaker or Be a Whore to Get Your Man

In Speculative Fiction , as in Real Life , technology is designed with certain unquestioned assumptions : The user has the normal number of appendages, is within a certain generous range of sizes, can withstand so many G's of acceleration. The user can shoot lightning from her hands, or commune telepathically with computers... just like everyone else in the builder's species. But not everyone is</ a member of the builder's species, and that's where this trope comes in In certain settings, Finagle's Law ensures these assumptions will cause disaster. Sure, sometimes it's a bonus, or even a built-in feature, that the alien saboteurs can't use the Artifact of Doom properly, but usually it's just a pain If a piece of technology only works for one specific</ user, that's Loyal Phlebotinum . This trope may involve Phlebotinum-Handling Requirements Sister trope to Human Furniture Is a Pain in the Tail Since he's a robot with non-human fingers, Atomic Robo can't operate a touch screen at all. In one scene, he's actually seen complaining to Steve Jobs about how useless the iPad is to him. Later, when Robo has to answer a call on a smartphone, he literally can't, for the same reason. Why he doesn't just use a capacitive stylus is unknown

In The Colors of Space</, by Marion Zimmer Bradley , humans need to be in stasis to use the FTL drive A lot of tech in Stargate </ can only be operated by someone with the ATA (Ancient Technology Activation) gene. Luckily a procedure is developed that can give most people this trait, though those blessed by the plot are still inexplicably better at it

Call of Cthulhu </ supplement Terror from the Stars</. The Mi-Go Chave a Lightning Gun which they fire by grasping it and altering Cits electrical resistance. Humans who want to fire it have to clip Cone of its wires elia's ill-conceived magic artifact in The Order Cof the Stick </ requires a jolt of electricity to activate. Not Call humans can shoot magic out of their fingertips? How was she Cto know</ that? Humans don't even have an entry in the Monster CManual anymore! A particularly justified case, as Celia has very

Clittle contact with humans and regularly pals around with dryads, Cmermaids, fire spirits, etc. - she's used to racial</ abilities, Cand humans having such a wild array of abilities confuses the hell Cout of her

CAPTCHAs, those things where you have to prove that you're a human and not a bot by entering the text from an image, have quite a difficult time distinguishing between bots and blind humans— because speech synthesizers and Braille displays can't render images. For this reason, an increasing number of CAPTCHA-protected sites include an option to have the characters spoken at you (which would benefit the hearing blind but not bots or the deaf-blind, though it's somewhat unlikely a person who is both deaf and blind would be operating a standard computer).

Yet another phrase heard in direct sale advertisements. If they're flashing a phone number on the screen, then you can bet you will be told that the operators are standing by, waiting for you to give their drab, dull lives meaning. It implies (without ever actually saying it) that the offer is only for a limited time, and that those operators may stop</ standing by at any moment, so you'd better get your order in right now</ . In fact, some of these advertisements actually include a ticking clock, suggesting that once the ad or paid program is over, nobody will be there to take your call. There will be, of course; since commercials can be seen these days at any time of the day or night, order desks are generally staffed continuously Actual research determined that the phrase had the opposite effect. If operators are "standing by", that must be because they don't spend very much time actually answering the phones and taking orders, because not many people are ordering the product. The phrase "If lines are busy, please keep trying" was found to work much better. If lines are busy, then the company must be swamped with orders because the product is so great. (This allows the vendor to theoretically hire fewer agents, which not only reduces the seller's overhead costs, but also their apparent "supply", which — when coupled with the lack of contradictions at the customer's end of the phone line — make the product seem more valuable .) Technically these commercials are usually incorrectly phrased. In telephone terms, an "operator" is a person who takes a call to redirect it to someone else. A person who actually takes a call to process it themselves is an "agent," and thus, they should be saying that "agents are standing by" rather than operators. However, the term "agent" is relatively modern, at least in this definition, and the average infomercial customer is over forty and is more likely to associate the word "agent" with "KGB" or " Maxwell Smart " than with "order clerk". Time-Life Music and any other sales pitch for music compilations, subscription or stand-alone.

There are many ways to fight and win. Some folks think that offense is the best defense; if you kill the other guy, defense is irrelevant. On the other hand, if you plan to fight tomorrow, or the day after that, you'd better have some contingency plans in place to protect your attackers, heal the wounded, and prepare for a possible retreat or invasion. Which do you go with? Some folks think that small numbers can overcome greater numbers with superior firepower, teamwork and training ; others think that even the greatest can be overwhelmed if you just throw enough at them , and if you do lose, there's more where that came from . Which do you prefer? Some folks

prefer stealth and deception, some folks prefer open battle. Which one is best? When you've got two or more groups with two or more ways of winning the battle, you've got Opposing Combat Philosophies. One general prefers to obliterate the enemy with long range bombardment, while the other prefers to send in the infantry to really silence the other side. Or, in a fantasy setting, the choice between magic, which is astoundingly powerful but takes decades to perfect, or melee combat, which is easier and faster to master. These differing philosophies can be found between the heroes and the villains, or between opposing factions on the same side. See also Ace Pilot , which includes a section on various piloting styles, as well as Force and Finesse and Soldier vs. Warrior . Faction Calculus and A Commander Is You are both about ways that video games often quantify Opposing Combat Philosophies in terms of game mechanics. It's also a key element of Rival Dojos or Elves vs. Dwarves . Watch for a Red Oni, Blue Oni contrast.

The villains of any sports series or movie, the Opposing Sports Team is the number one team before the main hero's eventual victory. They seem to be made up of Designated Villains and Villainy Free Villains , but they are not: they got to this point not because of Team Spirit , but because of either cheating and/or bullying and abusive behaviour or at the best of times a grueling, soulless regimen that goes against whatever the Aesop of the show is. They almost always wear a uniform that is mostly black. These may be to sports what the "Stop Having Fun" Guys are to video games; the types who play the game solely to win, and will resort to any means to do so Also seen in commercials as the side that doesn't endorse the main product, whom the hero defeats through Cereal-Induced Superpowers In 1980s and 1990s vintage sports movies, this team is the posse of bullying, snobbish, white private school rich kids, while the hero's team comprises ethnically diverse middle- to lower-class public schoolers - making it overlap with Slobs vs. Snobs . Watch for a dirty scheme to close the neighborhood rec center, and lots of northeastern-accented trash-talk If the competition is international, expect the Opposing Sports Team to be either Soviet (Red Commies trained from birth in athlete factories and pumped on steroids) or German (hyper-efficient , arrogant , and we'll never forgive them for the war). For bonus points, they could be East German , combining both. Nowadays the reputation of the from birth athlete factory has largely shifted towards the Chinese, as Russia radically downscaled old Soviet youth sports programs , while China took this tactic and ran with it See also Technician vs. Performer . Jerk Jock is about individual athletes who are jerks, but there is some overlap, in that they have similar attitudes of cruelty, aggression, the acceptability of kicking dogs and abuse of all the privileges of being a winning athlete

A Motor Mouth just isn't as funny if he doesn't have the Straight Man to torment. Similarly, only when a sweet, shy person is paired up with an equally jerkish one is their kindness and shyness made all the more noticeable . It is all but guaranteed that the characters' differences will cause more friction than harmony between them. That's what gives the Odd Couple its fuel for Slap-Slap-Kiss , Will They or Won't They? , and Aw, Look! They Really Do Love Each Other situations. Bickering and mushiness in one package. What's not to like? The Odd Friendship also has elements of this, but tends to

focus on how the differences make them see each other, and maybe the world, through new eyes. Perhaps the serious one is Not So Above It All , or the Shrinking Violet has an inner strength they never knew they had. A Moe Couplet also does something similar to this, focusing on how each half of the couplet brings out the other's endearing or nurturing traits. Opposites attract has become so widespread in buddy cop shows , in the form of Serious White Guy meets Loud Black Guy, that it branched off into its own subtrope . About the biggest challenge in creating a day-and-night dynamic is to keep the attract</ and repel</ cases relatively balanced. When the pendulum swings too far toward the repel</ side and the characters seem more interested in torturing each other than helping out, it's no longer cute to watch; it's just masochistic . The key (both in fiction and in Real Life) is to watch the pair's goals. If they want the same thing but use completely different methods to achieve it, it's this trope. If they want different</ things entirely, it's a divorce waiting to happen. If you add a third-party mediator for balance, you get a Power Trio . Contrast Birds of a Feather . Compare Too Much Alike . : Please, no ships , just Canon portrayal of attraction. If you see an example that hasn't been portrayed in canon as this type of attraction (or hasn't been portrayed in canon at all</), please delete it. This also means examples will tend to be spoilery, so read on at your own risk. That '70s Show </ has the geeky Eric with tomboy Donna, the rich girl Jackie with rebel Hyde, and the short-tempered Red with cheerful Kitty.

While clones and most other sorts of sci-fi duplicates are identical to the original character and, by definition, the same sex, exceptions do exist. The idea dates at least from Nine Lives</ by Ursula K. Le Guin (1969), where recognized geniuses are routinely cloned in large mixed-sex groups and Time Enough for Love </ by Robert Heinlein (1973), where the opposite sex clones become sexual partners of the original. Nowadays the trope is more often used as a quick way of producing a Distaff Counterpart rather than for titillation. Merely being of the opposite sex of his or her original greatly increases the chance of the clone surviving the denouement and showing up in a future story. This way writers can invoke the First Law of Gender-Bending without sacrificing an original-sex character they've grown fond of Biologically, this is somewhat plausible for male-to-female cloning, because a male has an X-chromosome that can be doubled to produce a female clone, as in Garrett's poem and Heinlein's novel. Strictly speaking, you don't even need the second X chromosome, though omitting it is a good way to kill 99% of your fetuses and give the surviving 1% Alternatively, the SRY gene, which causes maleness, can be removed from the Y chromosome. For female-to-male cloning, the Y chromosome would have to come from another subject, preferably a paternal relative and most ideally the father, as if the original subject were a male, she would have had a Y chromosome virtually identical to her father's. Nevertheless, this would technically not be a pure clone . A Y chromosome could be formed from one of the X-chromosomes, which would require absurd amounts of genetic engineering and amount to simple fiat anyway. Alternatively, the to create a sterile clone that appears male. Somewhat fittingly when given the above, the majority of these characters are female If the Opposite-Sex Clone retains the memories and personality of the original this is effectively a Gender Bender , at least from the perspective of the clone See Cloning Blues . Subtrope of Modified

Clone . Compare Distaff Counterpart , Half-Identical Twins and Screw Yourself

Here is a place to note the tropes which are opposites of one another See also the Canonical List of Subtle Trope Distinctions , and Trope Grid (which covers when there's more than one possible Opposite Trope) and Evil Counterpart for a list of tropes with moral counterparts (good vs evil) Sub-Trope of Inverted Trope

Bob, a member of a minority group, joins the military. He acquits himself well, and may even gain a reputation as a war hero. After returning to civilian life, however, Bob's minority status relegates him to second-class citizenship in his homeland, despite the risks he has taken on his country's behalf Truth in Television , as in the cases of German-Jewish veterans in Nazi Germany and African-American servicemen in the pre-Civil Rights Movement United States Compare No Place for a Warrior , for the general mistreatment of veterans in civilian life, not necessarily tied to their minority status. See also Dude, Where's My Respect?

20 Minutes into the Future , or perhaps an Alternate History gone wrong, the United States is no longer the shining beacon of democracy that it once was . Perhaps civil war and/or an invasion has turned the country into The Dictatorship , corporate influence has undermined the democratic ideals the nation once held, a theocratic religious movement has taken control of the government, or democracy has been suspended in order to fight off external or internal threats, real and/or imagined. Whatever the reason, the nation is only a democracy in name , or sometimes, not even that if the regime is painfully honest . Expect to see FEMA, DHS agents, cops that are always clad in riot gear, or even the military patrolling the streets, harassing innocent citizens for arbitrary crimes or by virtue of simply "being there." Civil rights have been suspended for the "greater good," and political dissidents are shipped off to concentration camps or made to "quietly disappear", never to be seen again . A La Résistance of sorts will be featured usually, made up of fed-up citizens, and sometimes former or dissenting military or police personnel that are following their oath to defend the Constitution against all enemies, foreign . Regardless, they'll be dismissed as terrorists by the American government, and will usually be used to justify the oppression. How they are portrayed depends on the work. Some may have them as plucky heroes that still believe in idealistic American beliefs and are willing to die to restore them, whereas if the scale goes further towards cynicism, may have them portrayed as well meaning rebels that commit some atrocities to fight against the system , or even Right Wing Militia Fanatics (who turned out to be Properly Paranoid after all) who are little better than the system they are fighting, and often become much worse . In a political work that is left-leaning, expect to see this trope overlap with The Boorish version of Eagleland , an America where separation of church and state no longer exists and in which the government is in the pockets of crooked businessmen and warmongers - or a combination of both , all sponsored by the brutal and crooked president . Right-leaning works will favor a Commie Land America, with shades of either old-style Stalinism or '60s radicalism depending on the period the work came from; or since the end of the Cold War , radical Islamists imposing Sharia law , in which the

separation of church and state no longer exists. Libertarian and centrist works will often take elements of both of these portrayals Can overlap with Fallen States of America , if the nation has become a dictatorship as a result of the fallen status, or is one of the reasons behind it, although it is possible for the US to still be a superpower, or at least still be a "first-world nation". Divided States of America or a Second American Civil War is also a possible trope as well, as the remaining US government may be trying to keep what is left of the nation together by any means possible, if the oppressive was not the cause of the Civil War to begin with, (Of course, The revolution may not be civilized as well.) Invaded States of America can count too when the nation goes dictatorial to protect against the enemy, or if the invaded sections are under a restrictive foreign government. Also see Evil States of America , which is where the United States are the badguys, oppressive or not. Basically Day of the Jackboot with a specifically American focus. Sub-Trope of Different States of America . No Real Life Examples past the Civil Rights Movement of the 1960s. Needless to say, many ideologues and conspiracy theorists on all extremes of the political spectrum believe this trope to be Truth in Television , some tropers and readers could probably write an essay complete with citations about how there are at least some elements that are truthful, let's just leave it at that.

This is it. The end of the line. The final confrontation with the Big Bad awaits and every one of the Good Guys is rarin' to go. All but one. One person has decided he isn't going to take part in the upcoming finale. Whether he's merely choosing not to cross the Line in the Sand or simply declaring " Screw This, I'm Outta Here! ." He's stepping down and leaving it to the rest of the group. The reasons for this can range from acknowledging that he Can't Catch Up and would only be a hindrance, to personal feelings interfering with their ability to do battle against the Big Bad . It could also be a mentor Passing the Torch . Or perhaps things have simply gone too far and he just can't take it anymore. On the more selfish /pragmatic end of the scale, this character could just want to be normal and use a chance to get away from the craziness once it's presented. Or realize that his goals no longer line up with those of the heroes and thus decide he has no reason to remain with them. Maybe he was badly wounded previously, or his idealism was broken , or someone he loved is dead and he needs time to recover. There might also be a falling out or conflict of ideals with the rest of the group that convinces the person he's better off out of it. Perhaps he doesn't think his chances of surviving this particular battle are high and wants to live. They could also just be a Dirty Coward . Opting Out typically means the end of this character's role in the story and will usually result in their being Put on a Bus . It can be used to show how serious a situation has become, if the reasons for the character leaving are in the " Can't Catch Up " or "Can't Take It Anymore" range. The specific reasons can also determine whether the character's decision is right, wrong, wise, selfish, or anyplace in between. As often as not, an Opting Out character is allowed to leave and go as he pleases. His teammates may not necessarily be happy about this turn of events, and they may or may not hold this choice against him. On the flip side, an evil character may Kick the Dog and kill a character on his side attempting to Opt Out, showing just how evil that character is because his Mooks remain where they are out of fear of what will happen to them if they leave. See also Shoo Out the Clowns , which this trope may overlap with, depending

on the character. Both tropes can serve to show how serious the situation has become; though a character who Opts Out is usually making the decision of their own accord. On rare occasions, the character is opting out because he thinks he'll be better able to help his companions from outside</ the battle. Sometimes they go to muster reinforcements , or to Bring News Back of an impending Last Stand . (The former often causes a Big Damn Heroes moment.) Also compare Changed My Mind, Kid , which many characters who appear</ to Opt Out ultimately pull. However, this trope is specific to when a character Opts Out and means</ it. Also compare I Want My Beloved to Be Happy , which can be a romantic version of opting out. Crossing a Line in the Sand is the version where the leader gives their people the option to opt out without dishonor before engaging on a deadly mission. See also You Can Turn Back , when the hero tries to convince his companions to opt out. See also Not What I Signed on For , where the character refuses to continue participating in something he finds distasteful or unethical. Finally, see Screw This, I'm Outta Here! for a generally negative take on Opting Out, usually because it occurs at the worst possible moment or in an act of pure cowardice.

Once, before film , before printing, before even writing , all stories were spread by word of mouth alone. If you wanted a story, you had to get some old fart to actually sit down at a fire and tell you</, and you usually had to put up with a lot of tangential rambling, too . Most of the oldest stories have their roots in this ancient storytelling medium. Oral storytelling has distinctive features, shaping the tropes it uses. Speech is not nearly as fast as reading, so an evening's worth of story is shorter. It is not possible to page back through an oral story to make sure it's internally consistent, and the story itself needs the kind of repetitive features that aid memorization. Even with</ memorization, stories usually change over long periods as the details of the original telling are altered by different storytellers, by innovation, to suit various audiences and circumstances, and by cultural and linguistic changes. Nowadays, you kids with your new-fangled "writing" and "movies" tend to think of Oral Tradition as a medium of the past. But even in the most literate and high-tech cultures, stories, beliefs, ideas, and jokes continue to circulate orally as long as people continue talking to each other face-to-face or via telephone. Online social networking will have to become even more omnipresent before Oral Tradition really dies as a medium. The genres most often associated with Oral Tradition are Myth, Legend , and Folklore (folktales, fairy tales , folk ballads, folk songs, etc.), or just Mythology . These genres are not just oral — many mythological works have passed into or originated from other media such as writing and theatre. But these genres originated with oral storytelling, and are frequently referred to collectively as "oral tradition." An oral work, once written down, isn't Oral Tradition anymore. The oral versions can still wander around, and often do. But the written version is now Literature , and will change independently from the oral versions . This is an important distinction for this wiki, because the two media are subject to different types of adaptation, circulate by different channels, and often employ different tropes. It also comes up in the style of the wording, for example the repetition in oral works vs. the richer description, more detailed narration, and illustration that usually only shows up in writing. Once a work is written, it's much easier for the author to look back over the whole thing, removing

contradictions and inconsistencies , before presenting it to an audience. This is not to say that tropes from the oral tradition do not show up in written media at all: usually, there is a transition period when a story moves from oral to written form. This can be seen best in early literature, which still rely on repetition, formulaic storytelling, and rhyme schemes in some form or another (consider that poetry used to be the MAIN form of storytelling because of this). Nor to say that oral tradition is independent of literary versions: the Brothers Grimm correctly deduced that some of the oral tales they collected were in fact derived from Charles Perrault's literary tales, and a Japanese folklorist established that the publication of their works produced noticeable changes in the fairy tales told in Japan; the fairy tale Beauty and the Beast , originating as a literary tale using fairy tale motifs, has reappeared in many variants in oral tales; and folklorists talking with storytellers are often told of their actively seeking out literary sources to increase their repertoires of stories and motifs. Since oral works by definition aren't written down, it's almost impossible to trope them. The works troped on This Very Wiki, even those that originated in Oral Tradition, are almost all adaptations in other media. See also Language Tropes .

In some science fiction, it's impractical to transport enough ground troops to invade a planet or natural satellite, or The Empire simply wants to make a statement. So they bombard it with a bunch of nukes or large kinetics , or Energy Weapons of some sort. This bombardment may be limited to a small geographical area but more often it is a general assault that wipes out most civilization if not all life on the planet A term frequently used in relation to this trope is "glassing," which originally referred to the bombardment being intense enough to cause the soil to vitrify, or melt into volcanic glass. Such as what happened at the Trinity nuclear test site Subtrope of Death from Above , supertrope to Colony Drop , usually less powerful than an Earth-Shattering Kaboom . Kill Sat is a specific example where the bombardment is carried out by a satellite instead of a ship (the primary distinction is that the Kill Sat can't leave orbit under its own power). This can overlap with a Meteor Summoning Attack . May involve Nuking 'em , and could be required because It's the Only Way to Be Sure . Has no relation to an Orbital Shot Mahu </ : In "Second Chance", the Galactic Commonwealth never performs a planetary invasion without previously bombarding the world they want to conquer for a few weeks. Once the planet's fortifications are all reduced to rubble, the fleet in orbit continues to give fire support to the troops on the ground

An Orbital Kiss is a phenomenon in Film , Western Animation , Live-Action TV and visual media, where two characters kiss, and the camera rotates a full 360 degrees around them as this happens. This may or may not be accompanied by Slow Motion . Look for one of the two to lift a foot Subtrope of Orbital Shot . Not to be confused by a kiss on the orbitals. Or in near Earth space . A symptom of The Big Damn Kiss . Compare Twirl of Love

Nothing quite beats an orchestra for a battle, especially an aerial one It may involve Ominous Latin Chanting or Autobots, Rock Out! .

Or both Compare Music to Invade Poland To , Fanfare , and Classical Music Is Cool . Contrast with Classical Music Is Boring . If the music is too</ loud, better hope you have Steel Ear Drums See Xylophone Gag for when someone makes an actual</ bomb out of a musical instrument. Has no relation to Explosive Instrumentation . This trope does not refer to the idea of attacking an orchestra with explosive ordnance

This is when a character who wants to compete fairly and honestly is told not to do so by someone else. Sometimes, the character will be told to cheat in order to win. Other times, they will be told to deliberately lose. Both heroes and their antagonists can be in this position — all that's required is that their superiors or colleagues want the competition to be rigged for some reason. This reason is often just greed or pride, but doesn't have to be — there may be something genuinely important riding on the contest If the character is being asked to win dishonestly, it implies that their ability is being questioned (or else they'd be able to win fairly). Whether or not this lack of confidence is justified is variable - sometimes, it will be plain that cheating is the only way to win, but other times, the character will genuinely believe in their abilities, and may well say "I know I can do this!" before getting overruled by someone who disagrees or who wants to play it safe. Sometimes, one side thinks they have no choice but to cheat because the other side will When it's a hero who is ordered to win by whatever means necessary, they're quite likely to refuse. They'll often go ahead and win without</ cheating, demonstrating skill and honesty like the proper hero they are. This sometimes plays out with the hero initially appearing</ to lose, only for the bad guys to be exposed as cheats and stripped of their win . Less commonly, the hero will refuse to cheat and will really</ lose, preferring to keep their integrity intact even at the cost of their goal If a hero is ordered not to win , for some reason, their decision to comply will probably be based on whether it really is for a good cause. In some cases, especially ones where the hero is being tempted with bribes or threatened with retaliation, refusing to throw the game will be presented as honourable and courageous. Other times, though, deliberately losing may actually be presented as the morally correct choice, as the hero may be sacrificing their pride for a greater goal When it's a bad guy who is ordered to play dirty, their reluctance to do so may help build them up as a Worthy Opponent — they have genuine skill, and might even get along with the hero if they weren't on opposite sides. If ordered to cheat to win, they might perform at least a partial Heel–Face Turn by defying their orders at the last minute and giving the hero a fair shot The competition involved is often a sports event of some kind, so this often turns up as the main moral dilemma in a sports story . See also Unnecessary Roughness Compare Secret Test of Character

Long ago, there existed an order of people who battled evil valiantly but have since fallen into disarray and were ultimately forgotten. But as the ancient evil rises its head again, a new group of heroes will take up the fallen banner of their ancestors and defend the world that they passed down to them in their name. The Order Reborn is a reincarnation of an extinct heroic organization that has been forgotten over time but resurrected by the distant successors to

combat evil, new or old. It is probably based on the old principles but (ideally) with adjustments made to prevent it from meeting the same end. Usually precipitated by the Last of His Kind , who will become The Mentor . The "order" being rebuilt is often The Chosen Many . A subtrope of The Order . Compare with Putting the Band Back Together and Split and Reunion . For this trope on nation-wide scale, see Resurgent Empire . Record of Lodoss War

The Green Lantern Corps in The DCU in the arcs ending with "The Road Back. It also happened after the Arcs Green Lantern: Rebirth</ and Green Lantern: Recharge</ .

The New Jedi Order established by Luke Skywalker from the no-longer-canon Star Wars Legends </ Expanded Universe is the archetypal example. They used to be a major force in the galaxy, then they diminished into Obi-Wan Kenobi and Yoda. Both of them lived in exile. Then they took turns training Luke Skywalker, who ushers in a new era for the Jedi. Luke tries it in the new canon too, but after Kylo Ren rebels and kills his other padawans, he basically gives up After gathering the Lorestones, Lone Wolf is able to re-establish the Kai Lords twenty years after their destruction

Inheritance Cycle </ is going this route with the Dragon Rider organization. Eragon was a big deal because he was the first such rider in decades, and could lead to many more.

High Guard from Gene Roddenberry's Andromeda </. Granted, the High Guard are more of a Space Navy that an Order, but when stuck between the Nietzcheans and the Magog, anyone could put on the white hat.

The Fayvana from Fading Suns </ are a psychic coven that claim to be a descendant organization of the Phavian Institute, which was destroyed during the end of the Second Republic. The actual link is extremely tenuous; most people in the know think that they're an unrelated group claiming a legacy for themselves. Regardless, they are</ devoted to the ideals of the Institute.

Drakan </: The dragon-riding Order of the Flame.

The protagonists in Angel Moxie Practitioners of Woo Foo in Yin Yang Yo! </ have had this happen constantly; in the back story, it's established that each time, part of the reason was that the fighters couldn't work together and lost because of it.

The Olympic Games —first recorded in 776 BC in honor of Zeus. They went on every four years (stopping wars in the process, at least temporarily) until Emperor Theodosius I of Rome suppressed them in 394 AD. The concept was revived on and off starting in the 17th Century until an explicit International Olympic Committee was formed in 1890 (though no longer in honor of Greek mythological gods, the more general idea of different nations competing in competitions less brutal than war stuck). The first modern Olympics were held in 1896 and have occurred every four years since (save for some very major distractions .)

The most common protagonist of a show targeted at teenagers Whether or not they discover their Powers in the First Episode or merely

receive a Call to Adventure that sends them on a quest for their true nature , it usually quickly becomes apparent they are anything but ordinary. Or even if they really are as ordinary as they seem, they won't stay</ ordinary for much longer They're revealed to be reincarnated ancient heroes or alien princesses Raised by Humans . They suddenly find a use for the obscure skill or art they've been practicing since they could walk, or they discover their entire life has been a Secret Test of Character to prepare them for a great responsibility . They find out their Secret Legacy as heirs to a Badass Family of demon hunters, wizards, or Yakuza . They find an ancient mystical MacGuffin in their attic, buy one for a few coins from a junk dealer, or are given one by a mysterious stranger on their Dangerous 16th Birthday . They suddenly gain a Trickster Mentor or a Magical Girlfriend . They establish secret identities as a Henshin Hero or a Magical Girl Warrior , find a way to channel Ki Manipulation , summon a powerful Guardian Entity or fall into the cockpit of a Humongous Mecha Sometimes, instead of gaining superpowers or Taking a Level in Badass , they merely become a Weirdness Magnet : for example, they gain something</ that makes the opposite sex flock to them , and possibly the odd member of their own , whether they want the attention or not . Or they are a Cosmic Plaything who frequently find themselves in the unenviable position of having to Save the World without any special powers Sometimes they're actually gods . And sometimes they are truly average joes who simply lead truly ordinary lives Protagonists based on this trope are typically invoked to provide an Audience Surrogate . Considering the demographic works with these protagonists are generally aimed at, the Ordinary High School Student is someone every young person can easily relate to and place themselves into . By extension, such a character also appeals to older viewers for a similar reason. The character may additionally be The Everyman or a Ridiculously Average Guy Look for the kid in the fully open button shirt over a T-shirt, jeans and Converse sneakers . If Japanese, an open blazer with slacks or a sailor fuku/gakuran will do

This trope is for when parts of the body have "minds of their own" and will control or influence the brain of whomever they're attached to. Typically happens when said limbs aren't normally a part of the body, as happens to a Frankenstein's Monster or Shape Shifter Mashup . Quite a few times they can be considered part of the same person</ who can just move them from a distance. Possible reasons include when the body is mechanical or undead or another supernatural explanation. Depending on what the body does it can become Personal Horror . A supertrope of Evil Hand Any time this trope is present, expect it to either be a case of Anthropomorphized Anatomy or Animate Body Parts , depending on how the body part is depicted When a physical part other than the brain (usually the heart or liver) is the source of a person's emotions, see Cardiovascular Love If this is taken to extremes, it can drift into Body Horror territory

If a society in Science Fiction isn't either following Technology Levels or magic , then you can rest assured that they're making use of organic technology. Cars, planes, phones, computers, buildings , space ships , weapons (including artillery and war vehicles) and everything else required for a proper Sci-Fi story will be provided in the form of something that is warm, moist, skooshy and

drips goo everywhere. Often, this will go so far as to include a convenient thought-based interface. Manipulation of organic matter may be part of the technology as a whole, or even what enabled the tech in the first place. Advanced nanotechnology , when not depicted as the classic blobs of liquid metal , will often be depicted in a similar but decidedly more synthetic fashion. think androids made of milky-white artificial flesh and the like instead of something more overtly meaty This type of tech is a common feature of sea-dwelling sapients . Not only are cities entirely made out of cool-looking coral, it's a technological evolutionary path that does not start with the step "set something on fire" or "throw wheels on it", which for a species that lives entirely underwater would be, respectively, impossible and generally useless. Likewise, excessive humidity wouldn't cause important stuff to short out. Civilizations who use this technology are also frequently users of Sufficiently Advanced Bamboo Technology . Depending on the aesthetic choices of the depiction, the organic technology may seem Ambiguously Robotic as well. If the organic technology is a staple of the setting or theme, compare Bio Punk . Often crosses over with LEGO Genetics and is depicted as a Sculpted Physique . Often used by a Horde of Alien Locusts . See Living Ship for one specific example. Compare Bio-Augmentation , which could be Organic Technology applied to the human body in new and fun ways. Contrast Mechanical Lifeforms , which are organisms that happen to be mechanical in nature. Often creates the Womb Level in games. A Hive Caste System is based on using naturally evolved biology rather than technology made from biology. Applied to agriculture, the end result of this trope is often a Multipurpose Monocultured Crop . This is becoming Interestingly, Real Life synthetic biology seems</ to be going the reverse direction of this trope: making biology look more like chemistry and nanotechnology, rather than making technology more like biology. Whether we'll get our meaty jetpacks remains to be seen.

An index page for all organization tropes. Forms of government are also included. Not to Be Confused with any specific Organization.

Nice wiki you got here, it'd be a real shame if something bad happened to it. </ We represent all sorts of legitimate businesses , from youth clubs to international interests, if you know what I mean . </ What? You want in on The Con ? How do you know about that? Have you been comparing with Terrorism Tropes or contrasting with Cops and Detectives ? </ Useful Notes :

Organ Theft, as the name would imply, is the practice of stealing people's organs via surgery, which can then be used for further purposes such as transplants or sold on the black market. Yes, there's a black market for organs, because legitimate doctors (and, for that matter, lawyers) are way too Squicked out by the idea of selling organs to even consider One particularly common variant of this trope is the Urban Legend , in which the victim is conned somehow and drugged into unconsciousness, and then wakes up kidney-less in a bathtub full of ice, often with a message attached telling them to go to a hospital. In case you're wondering, this fails the logic test for a few reasons: This trope was popularized by, and originated with, Larry Niven's Known Space stories, in which Organ Theft is called "organlegging", a portmanteau of "organ" and "bootlegging." (The Niven variant makes more sense, though, since in

those stories they do </ take everything useful and kill the donor during the procedure .) Needless to say, this trope is a potent source of Nightmare Fuel , Rule of Scary and Fridge Logic (why not steal multiple organs and kill the victim instead of leaving a witness?) Subtrope of Human Resources . Super-trope of Brain Theft Please take a moment to fill out your organ donor cards.

A variation of Body Horror , where a creature is inside someone else, and then leaves through an established opening of the body (as in naturally, not a cut or piercing), even if it's not really an opening (like the navel). It could be the mouth, the nostrils, the ear, or through orifices below the belt. Pores could even count. The point is that the orifice is pretty much intact when the creature leaves Sometimes this can kill the "host", sometimes the host lives, or sometimes the host can already be dead Sometimes this can be horrific, but sometimes not. It depends on the nature of the evacuation. As the picture shows, it can even be Played for Laughs Compare Chest Burster (when the creature makes its own orifice to leave, or mutilates an orifice to get out), Giving Up the Ghost Contrast Orifice Invasion , Face Full of Alien Wing-Wong

A creature basically forces all of</ itself into someone else, but through an established opening of the body (as in naturally, not a cut or piercing), even if it's not really an opening (like the navel). It could be the mouth (do not confuse with Force Feeding , but it can overlap with Attack the Mouth), the nostrils, the ear, or through orifices below the belt. Pores could even count Effects on the victim can range from mind control to transformation , and even death Can be very strong Nightmare Fuel due to this being a pretty potent Primal Fear , even and especially when it's used in some really odd Hentai (remember Rule 34 , boys and girls). Still, do not read the examples unless you want to be really squicked Sometimes an orifice evacuation implies that is how it came in, even if that isn't stated A Super-Trope to Kill It Through Its Stomach (in that the invaded thinks it's just eating the invader) Compare Personal Space Invader , Face Full of Alien Wing-Wong , Anal Probing , Ass Shove , Nose Shove , Groin Attack (if it enters the urethra), and Body Horror . Combat Tentacles sometimes enter this Contrast Orifice Evacuation (where something leaves a body through an orifice), Chest Burster Not to be confused with Alien Invasion (although these can overlap)

An is, in the simplest terms, a new character created in a Fan Fic or other work that does not come from an existing copyright work. Any and all Characterization Tropes can apply, along with employing any and all tropes in general. The only real distinction between original and regular characters is that the former are synthesized specifically to unofficially integrate with the canon for the purposes of the story. The vast majority of fanfiction makes use of these, ranging in importance from being background extras to stealing the spotlight of the canonical characters This isn't necessarily a bad thing . After all, all characters were new once. Series that are structured around new characters every week such as Monster of the Week , Victim of the Week , or Girl of the Week actually require that the author create original characters in order to maintain the Original Flavor of the series. Rarely, these can become a Recurring Fanon Character , one popular enough to be widely used in fanworks throughout the fandom Attempting

to list every instance (or even every "notable" instance) is rather pointless—they are almost as numerous as fan fics themselves. Indeed, In some places (such as DeviantArt) the term "Fan Character" is used instead, and the distinction "Original Character" refers to a character that exists in a canon of the author's own creation, or the canon of an " Original Character Tournament " (where artists compete by pitting their original character against other people's in fights, or pizza eating contests , or whatever the creator of the tournament has decided is the proper form of conflict); in other words, an "Original Character" is a truly original character without ties to another creative work's canon The commercial side of this, adding new or re-imagined characters to a non-copyright work, is Serious Business thanks to international laws that consider original adaptations of long-standing public domain works to be copyrightable; but considers further derived works an infringement of intellectual property. This is why companies like Disney can freely adapt The Snow Queen </ by Hans Christian Andersen into Frozen (2013) </ , while at the same time suing those who make derivatives of the latter Compare Original Generation . Sister Trope : O.C. Stand-in . Sub Tropes include Sailor Earth (a stock scenario for OCs created by openings in the setting) and Fan-Created Offspring (giving canon characters kids or further descendants) A Canon Foreigner or Canon Immigrant is what happens when an Original Character is created for an official</ adaptation of an existing work, and sometimes the term is used as a derogatory one. Mary Sue is what happens when any character (original or otherwise) goes wrong.. Not to be confused with OOC , although a certain type of OC may cause OOCness in canon characters. Also don't confuse with The O.C. , though O.C. original characters might be out there

When you have a Crisis Crossover or a Massive Multiplayer Crossover , you'll need something to motivate the heroes into action. While having the Big Bads of the series team up can work, sometimes you want a new, even Greater-Scope Villain . One that requires such a massive team-up of heroism And then, why stop there? Why not go the full way and make a new Hero for this crossover? That way you can have a central conflict for the entire story. Plus, since you'll have an original character tied to this story instead of the differing canons of the other series, you'll be able to have more character development for the main character all in all The Greater-Scope Villain variety is somewhat more common than the new Hero variety. Crossovers with new Heroes, however, have a tendency to become a series in their own right, a Spin-Off that just happens to have crossover origins Oddly enough, rare</ in Fan Fic , likely due to the fear of them becoming Mary Sues — but see Original Character If a completely original villain is created just for a Crossover, that's a Crossover-Exclusive Villain . Compare and contrast Crossover Villain-in-Chief , where an already established</ villain somehow becomes the leader of a Villain Team-Up of the crossed-over criminals. No relation to First Installment Wins

Animated shows produced for the Direct to Video market, almost universally abbreviated "OVA", or more rarely "OAV" (for "original(ly) animated (for) video"), and even more rarely OAD (same for DVD). The term is almost always associated with anime ; however, this form of storytelling is beginning to become popular

in the anglosphere with recent animation based on comic characters and TV shows. Unfortunately, these still labour under the shadow of the term "direct-to-video" While the terms "direct-to-video" and "direct-to-DVD" have negative overtones, essentially being synonyms for Shovelware in the United States, "OVA" has almost exactly the opposite connotation. This partially arises from the view that Western "direct-to-video" releases are not good enough (or too explicit) for theaters; OVAs, on the other hand, are seen as a step up from regular television production. Because the production house need not adhere to the rapid-fire schedule or constrained budget of a TV series or feature-length film, more effort and care can be applied to an OVA, resulting in a much higher level of quality. Additionally, since OVAs aren't aired to the public, censorship is a moot point, which allows shows for older audiences to avoid ducking more mature subject matter. On the flip side, the vast majority of hentai series are produced and released as OVAs, just like much live-action pornography is released directly to home media or online. Given the general lack of a clear-cut production schedule, the time duration of an OVA is rather varied— some are 26 minutes long, while others are 60-80 minutes, but the idea of an OVA being up to two hours long is uncommon There are some caveats to the increased freedom, though. OVAs are often produced "on speculation", with no guarantee that the story they tell will ever be completed— and many are not. At least one OVA series ends with a plaintive plea for more money so the creators can continue making the show. However, even this is not always a guarantee— the Hellsing </ OVA series managed to adapt the entire ten volume manga it was based on One trend which has become evident recently is the continuation of broadcast television series in OVA form after they complete their initial run; the aforementioned lack of broadcast standards also allows writers to work in anything they couldn't put into the original TV show. Inversely, the exposure of a broadcast initial run may be a lure for viewer interest in the less censored, more serious story continuing on home media. Due to the heavy market decline of physical media in the west during the late 2000's and early 2010's, both the broadcast and OVA-exclusive material are typically carried over via streaming services, thus removing the physical distinction between them (said decline was also responsible for the heavy downturn in the animated hentai industry during the 2010's, which previously used the western DVD boom to accrue more money and support more technically ambitious projects) A common thread of discussion online happens whenever a manga which received an OVA as its first adaptation goes on to have a full anime series produced for television later down the line. Fans will often debate for quite some time as to which one is better, and which one is the definitive</ adaptation OVAs were most common in the 1980s and 1990s, particularly during (which, up until its bursting the following year, resulted in studios having a lot more money to back up the prospect of huge creative freedom), during which many well-known series were released in this fashion. The idea of this era as "the Golden Age of Anime" stems in part from the OVA boom, which led to a large number of unique stories being produced unrestricted and without a specific target audience and brought a level of creative freedom comparable to New Hollywood 's effects on the American film industry With the recent rise of 12-Episode Anime series as an alternate short format, as well as streaming video over the Internet, OVAs have come to be less frequently released, though by no means extinct; the aforementioned Hellsing</, Code

Geass: Akito the Exiled </ and Ghost in the Shell: Arise </ are a sampling of recent OVA releases. Anime made for release on the Internet are called Original Net Animation, or ONA for short, and act as a Spiritual Successor of sorts to the OVA format (with some works, like the 2002 Azumanga Daioh </ anime adaptation, using the ONA format to gauge audience interest with a pilot). The model would also inform direct-to-streaming animation in the west, with those works carrying over the OVA format's association with higher-quality production values and less rigid content standards compared to cable television

The term "origin story" can refer to following tropes: "Just So" Story : A myth about how something originated. See also Backstory Index .

When you get into space, you're going to need some kind of drive to make moving around easier. If you can't get Artificial Gravity to work your Reactionless Drive , perhaps you need to look at something simpler. Preferably with lots of explosions . You might consider implementing an an old project that was thought up during the Cold War . Explosive Propulsion meets nuclear weapons, you've got the potential to move much larger ships than normal. The researchers working on this project tended to include things like barber's chairs in their ship designs just to emphasize how much mass they could move A basic Orion Drive is composed of a Cool Ship , a large armor plate, and enough high yield weapons to set it in motion. They don't necessarily have to be nuclear,</ but they need to have the equivalent explosive power. A common variant is to have the explosive material be smaller pellets of frozen deuterium-tritium mix, which would then be induced into nuclear fusion by a laser; this is essentially an H-bomb without having to use an A-bomb to set it off. Note that such inertial confinement fusion propulsion systems are not properly termed Orion drives While this may all sound like madness, scale-model tests with conventional explosives have established that the design is perfectly workable. The main obstacle to actually building</ one of these is the logistics of lifting the components into orbit, since for reasons that probably need little elaboration, nuclear detonations inside the planet's atmosphere are deprecated these days A common form of harder scifi propulsion systems. See also Explosion Propulsion

Losing your parents is no fun. Depending on your circumstances (and the relative benevolence of your creator), you may end up with some clueless but good-natured Muggle Foster Parents , or you could be Raised by Wolves . If you're really</ unlucky, though — or if you need an appropriately tragic backstory — you'll end up in an Orphanage of Fear No one cares for you a smidge when you're living in an Orphanage of Fear. You will usually be presided over by gaunt, dour women — often brutal nuns — with nasty sneers. Your chores are long, grueling, and mandatory; toys and other amusements are strictly forbidden. You can expect to be spanked, smacked, and otherwise "punished" frequently; no matter what you do, you can't please the Evil Orphanage Lady in charge. The food is usually unidentifiable, mushy, and foul-smelling if it's solid at all; you may have nothing to eat but thin, probably cold vegetable broth. You will be in bed by 8 and up by 5, and you will never, ever, ever</ be allowed to have any</ fun. Your only

hope of escaping is either to get adopted, find your real parents (after all, they're probably only hiding) or simply run away. Or kill everyone/destroy the place In darker and more adult-oriented versions, the people directing the orphanage will be downright criminal or insane; sometimes secretly enslaving the children as unpaid labor and punishing them harshly or even tortuously if they fail, refuse or for no reason at all. Other times, the directors are using the orphanage as a cover for their evil cult , using the children as Human Sacrifices to appease their subject of worship . And those are if you're lucky</. Sometimes, the orphanage directors like to do the unthinkable .. The opposite of an Orphanage of Fear is the Orphanage of Love — a place where you will be cuddled, given plenty of toys, read to before bed, and have all your boo-boos kissed, even if you never get adopted. Although you will rarely find the series' Kid Hero thrust into one of these — right off the bat, anyway — a good way to make a character seem kind or loving is to put them in charge of an Orphanage of Love Orphanages have been largely phased out in the western world, but they are still in use in parts of Latin America, Africa, Eastern Europe, and Asia, and parts of North America have them if there are no foster homes. Compare Boarding School of Horrors . Sadly, both institutions are still Truth in Television . Read up on conditions in Victorian orphanages some time; current group homes are not always significantly better. Modern orphanages are usually in disrepair. Also compare Department of Child Disservices

When characters are seen telling jokes to one another, we rarely get to hear the entire joke: usually we will just hear the setup or the punchline . Punchlines are often more common, as it allows us to cut to the end and see other people's reaction to the joke, whether it be rip-roaring hilarity, monocle-popping disgust or a deathly quiet . An advantage of this over actually telling the joke is that the writer's sense of humor may not match with the viewers, leading to a different reading of the joke, when it's easier to just suggest it. It can also be a form of Getting Crap Past the Radar , hinting at filth in works that would never allow it. The punchlines or setups are often from actual jokes (usually dirty or obscure ones), so there are several stock punchlines you hear; " The Aristocrats " is a popular one. Alternatively they're intended to be as weird as possible , leaving the audience wondering what the setup/punchline could possibly be — in most of these cases, the setup/punchline never existed in the first place. Another alternative is a dirty Limerick which is cut off before the end. People from Nantucket are common, as well as something akin to: A subtrope of Nothing Is Funnier , as the setup is left entirely for the listener to imagine. See also Orphaned Setup , Subverted Punchline , Late to the Punchline , Lost in Transmission , Noodle Implements , Faux Final Line , Forgotten Trope , And Then I Said .

An Orphaned Reference is a scene or line that refers to something that has been cut from the final version. In milder cases, this only means that what was supposed to be a Meaningful Echo loses its additional meaning; in more severe cases, the lost background information can cause apparent Noodle Incidents , Plot Holes

or Ass Pulls Compare The Artifact , The Other Marty . See also Dub-Induced Plot Hole and Adaptation-Induced Plot Hole ; all adaptation and dub examples go there. When the reference is found in licensed material, it's Early Draft Tie-In . Some video game examples may overlap with Dummied Out and Missing Secret . Development Gag is when this is done deliberately as a meta joke

When characters tell jokes, the whole joke is rarely told. We hear either the punchline or setup. In this case, only the setup Most commonly a limerick ("There once was a man from Nantucket"), a "Knock Knock" Joke , something involving Noodle Implements , or a combination of the above The Inverted Trope of Orphaned Punchline A subtrope of Nothing Is Funnier , as the punchline is left entirely for the listener to imagine. Compare and contrast Brick Joke , when the punchline is revealed a long time later. Often overlaps with Riddle for the Ages . See also Stealth Pun , when the missing punchline is meant to be discerned on its own if you stop and think about it . And when the lack of a payoff after a lengthy setup is</ the punchline, that's "Shaggy Dog" Story

So you want to have a secret. You may not even be sure what the secret is. You are pretty sure, though, that you want everyone to know that there is a secret. That you have. That everyone else doesn't have. Because it is yours. And you have it Sometimes ostentatious secrets are eventually revealed , and sometimes they stay that way forever . This can be just a Running Gag , or it can be source of dramatic tension as a MacGuffin . In fact, their primary use is as a MacGuffin, reserved for use in a B-Story , or possibly even a "C"-story, a narrative thread that is around just to build continuity One problem is that secrets tend to build up to a Secret Critical Mass. After this point, the obsession of others to discover the secret far outweighs any potential dramatic payoff from The Reveal , and it requires some extremely deft Playing with a Trope to avoid an Anti-Climax The Ancient Tradition and the Ancient Conspiracy are often ostentatious secrets: their existence can be widely known, and membership may also be, though it's less common Contrast the Open Secret and Everybody Knew Already , both where not only is the existence of the secret well-known, but everybody knows the secret itself

Otaku</ come in many flavors, but one thing can be said for each and every one of them. They've each staked out their own favorite thing, and they obsess over it relentlessly. Regardless of other intelligence, an otaku</ will have an obsessive, unhealthy, and almost encyclopedic knowledge of their chosen topic. There are almost as many flavors of this type of character as there are things under the sun, but a few of the major ones are: Essentially, someone could be an otaku</ about just about anything: politics, sports, history, etc. When otaku</ is used by itself by a Westerner, 99% of the time it will mean "anime/manga otaku". Neither geek </ nor nerd </ is an adequate translation. However, in modern use, both words may carry a shadow of the right connotations of obsessive interest and/or social ineptitude; see the geek and nerd pages for details. Think of the older, more pejorative senses of geek </ and you're on the right track. The British term anorak</ and the Internet term neckbeard</ are also close translations. Speaking of The Internet , in more

dickish online communities, autism-related terms get slung around in a similar manner. The closest troper-speak cognate would be " Loony Fan ." In Japan, the term doesn't carry a positive meaning at all. One of the first things most Japanese language classes often have to teach people is that calling yourself an otaku in Japan is a very</ bad thing. (Although it must be said that in more recent years this sense is mellowing out, to the extent that more Japanese are self-identifying as otaku . See The Other Wiki 's page on this for more info.) A related term is hikikomori </ , which refers to a teenager or young adult who withdraws completely from society for an extended period, typically isolating themselves within their parents' house and becoming psychologically fixated on particular hobbies; hikikomori in media are usually otaku of some sort. Hikikomori are also critically viewed as lazy and outright creepy, which doesn't help the perception of otaku much - especially after 1989, when serial killer Tsutomu Miyazaki was shown to be both an otaku and hikikomori, leading to a moral panic. Otakuism is associated with men, with the notable exceptions of the Fangirls , Wrench Wench , the Cosplay Otaku Girl , and creators of a certain kind of comic . However, females seem to be either getting more common lately or becoming more relaxed about showing it. The term itself comes from the very polite form of " you ", which can come off as socially awkward. The best guess as to how the term became associated with obsessive fandom is that the word was an inside joke among the production staff of the anime series Super Dimension Fortress Macross </ in 1982, and that they would have characters (notably Lynn Minmay) use the over-polite form of address, even when inappropriate. Fans picked it up and used it in conversation between each other even well past the point when they would use other forms of "you", such as "kimi" or "Anata" or "omae". A writer for a Japanese magazine noted the meme and wrote an article that cemented the term as being used for obsessive fans. See also: Occidental Otaku , Chuunibyou . Compare: Loony Fan (who are more weird than obsessive) and The Movie Buff (a similar type of obsession over movies.)

Anime aired from around 11 p.m. until the wee hours of the morning, occasionally indicated by the odd-looking "22:00-27:00" notation. They are almost universally watched by older teens and young adults This is common in Japan for several reasons, even if it seems like a weird time to broadcast a show that's trying to make money The trope name refers to the odd way of noting when the shows start airing; it's common to see a show aired at 1:00 am listed at "25:00". This is largely done to align the schedule with that of the previous day; many Japanese TV networks still sign off in the middle of the night, and those who don't will only switch to "the next day"'s programming at 4 am or so See also Watershed , Safe Harbor

All about how to construct otherness and personhood in a setting, Asuch as aliens, fantasy races, robots and other sentient Acreatures.</ bsolute Xenophobe

Legend has it that there are other internet sites besides This Very Wiki . This page lists the details of this absurd idea. to discuss on a case-by-case basis. Sub-categories include: Blogs , Image Boards , Image Boorus , Journal Roleplay , Webcomics , Web Games , Web Original Fiction , Web Serial Novels , Web Videos , Wikis & some Fora . The Oatmeal

The Codeless Code

New Media under discussion and under way: — Marvellously written blog entry, from someone who actually gets</ us.

Tropes and settings that are not of our Earth</ For tropes about Earth, see This Index Earth

Lots of works include angels, but not always the same kind of angels. Often, a creator will try to put a unique spin on his or her angels. Angels in fiction tend, by default, to be of a vaguely Abrahamic nature and may or may not have big fluffy feathery wings or Holy Halos . They generally are found doing God 's will as part of some sort of grand plan, helping mortals (sometimes incognito), or otherwise staying aligned with Good. Angelic names, by the way, traditionally end in "-el" (meaning "of God"), such as in the Archangels Michael , Gabriel , Raphael , and Uriel . The prospective angel has many options available for customization: Sub Tropes include: Shinigami ("death angels"), Fallen Angel , Guardian Angel , Celestial Paragons and Archangels (the ones in charge), and Angelic Abomination . Not to be confused with Lovely Angels (which are just adventuresome women), or One-Winged Angel (which is a completely different trope). See also Winged Humanoid . Compare Our Fairies Are Different and Pegasus . Contrast Our Demons Are Different . For angel feathers or wings used for symbolism, see Feather Motif .

Sable's Grimoire </: Raphael, Amadronia Academy 's nurse, claims to be an angel. She certainly looks and acts the part, being a blonde-haired, blue-eyed Winged Humanoid who dresses all in white, but several characters are skeptical of her claims. In Eris's route, Sable learns the truth: .

An index of tropes having to do with clones and cloning. Not to be confused with tropes about twins . Nor are these about characters who are merely similar to other characters. This index is about duplicate people. Also closely related to the Doppelgänger index.

Demons. Devils. Fiends. They're all over the place in storyland, but no two authors portray them in exactly the same way. Demons in western fiction tend, by default, to be of a vaguely Abrahamic nature, most often red or black with horns, hooves, and maybe a tail . They're generally found torturing the souls of those that wind up in Hell , making deals with mortals in order to claim their souls for the pit , and are usually on the side of Evil, often opposing Angels. Demonic names are quite a bit looser than those for Angels, though in the west, they often take inspiration from Hebrew, biblical or mythological sources, as well as the Ars Goetia </ . The prospective demon has many options available for customization:

Physical demons are quite common in any work that features The Legions of Hell invading the mortal realm, and make it quite easier for a prospective Demon Slayer to either slay them or send them back to Hell or their native realm. It is also quite common in Paranormal Romance and in any work where people make a Deal with the Devil . Spiritual demons, on the other hand, lend themselves more toward works of a supernatural or horror bent, engaging in Demonic Possession . How does Demonic Possession work? If you decide to go the possession route, you also have to determine how this possession manifests:

There's no doubt about it. No matter what you choose, Your Demons Are Different If the source is Japanese, and the demons are really</ different, the reason may be simply that, in translation, the word "demon" is being substituted for , youkai </, which really doesn't have</ a correlating concept in English. "Faerie creature" is probably closer when it comes to traditional function in folklore (in fact, on the occasions where "fae," etc. is</ translated into Japanese, the term will probably contain the same "you</" as "youkai</"), but "demon" sounds more likely to kick ass , despite faeries being pretty damn scary

Series which have protagonists up to Demon Slaying especially rely on this trope, as the various ways a demon can be different can often determine how a demon hunter actually operates.

The creators of a show or movie really want to demonstrate that we are in a highly advanced future setting. This usually involves some futuristic furniture, holographic displays and, surprisingly often, really weird door designs. Doors and hatches tend to be pretty boring objects in Real Life . They are usually rectangular, flat and have only one or two moving parts, mostly because this is the most simple and efficient design. In the minds of many set designers, future doors are different. This may include: Note that while the first two traits are justifiable in most cases, the others are often a consequence of Rule of Cool , with essentially no advantage over simpler designs. This trope is mainly intended for high-tech door designs that are needlessly complicated and impractical. It usually does not apply when magic is involved, after all, wizards can do anything . Subtropes :

Nearly every culture has myths about something called a "dragon", despite the fact none of them can agree on exactly what</ dragons are. How big are they? What do they look like? How many heads do they have? Do they breathe fire ? Or ice ? Do they fly (and if so, with or without wings)? How many legs do they have? Are they dumb as planks, or superintelligent ? Are they low scaly pests, or ultra-rare Uber-serpents ancient and powerful as the Earth itself ? Are they benevolent? Malevolent or even outright demonic ? Are they divine entities or spirits , or just really cool animals? They could even be aliens in some works of fiction The answers to these questions generally fall within two traditions, "Western" and "Eastern". Even then, in addition to cultural differences, dragons fall into a very wide range of types even in one local mythology Eastern dragons, such as in the Eastern Zodiac , come from different traditions and as such aren't technically the same monster as their Western counterparts; Westerners who encountered stories and images of Chinese lóng</ and Japanese tatsu<//ryuu</ sprung on the similarities to the European

dragon and couldn't think of anything better to call them Western dragons or European dragons are derived from Greek and Roman mythology and may have been influenced by the cultures of the Ancient Near East. Eastern dragons or more specifically Chinese dragons, derive from ancient Chinese mythology dating back 7000 years ago and these depictions spread throughout Eastern Asia. The reason for Chinese dragon worship is likely because the region of Northern China where Chinese civilization first began was filled with dinosaur fossils which led to the development of dragon myths. Northern China is still considered a huge "dinosaur hot spot" in palaeontology today. There are many other dragons in the East such as Makara deriving from Indian mythology but the Chinese dragon and its variants spreading from Japan to Bhutan is by far the most well-known Even within these traditions, however, there is much variability. This has increased in modern times, as Western and Eastern authors have blurred the traditions by mixing and matching attributes from both (benign Western dragons are quite popular these days, for instance). Some authors invent completely new attributes to set their dragons apart from the crowd or just make them cooler . And some authors put dragons in their stories just for the sole reason of making a story look cool It is interesting to note that the conflation of these two types of beings under a single term is in large part a Western trend. Eastern languages tend to refer to them using different names (Japanese, for instance, refers to Western dragons as doragon</ and to Eastern ones as ryu</ or tatsu</) and they are generally less interchangeable The western dragon . Some appear in mythology and folklore, others are a more recent invention Further, it's also become fairly common for dragons to come in different flavors of Elemental Powers , especially in settings where Elemental Rock–Paper–Scissors are enforced. This may simply manifest in their Breath Weapon , or it may affect all properties of the dragon. Elemental rainbows of dragons are most common in video games and tabletop games where diversity of creatures and gameplay balance are considerations. While fire remains the most common breath weapon among fictional dragons, ice or freezing air is a common alternate — ice dragons tend to show up as one-off variants, often in contrast to "regular" fire dragons, even when other types of elemental dragons do not. When multiple types of breath weapons are possible, poison , acid and lightning are common choices. Undead dragons are also not unheard of, usually breathing ice or poison As mentioned above, a recent trend has been to try and make dragons that could actually exist in the real world. Naturally, these tend to either use Science Fiction concepts or be very different from traditional dragons. Also common in later works is a tendency for dragons to form a life-long bond with any human or humanoid who is present when they hatch (probably inspired by the 'imprinting' which occurs with most birds in Real Life , which is why birds raised in captivity with the intent to be released must be cared for by puppets). This gives writers a way to give dragons unique psychology without having to come up with unique motivations for them. It also explains why humanoid Dragon Riders can boss them around. Yet another trend appearing here and there is for dragons to be depicted as looking similar to dinosaurs</, usually the bigger theropods (like Tyrannosaurus rex</), but occasionally sauropods (such as Brachiosaurus</) as well. The two are often outright confused with each other . Another common trend in modern fantasy is the miniature pet dragon , suitable for perching on one's shoulder Compare Giant Flyer ,

Kirin and other Dragon Tropes . Supertrope to Cat-like Dragons , Delightful Dragon , Dracolich , Draconic Abomination , Draconic Humanoid , Dragon Ancestry , Dinosaurs Are Dragons , Dragons Are Demonic , Dragons Are Divine , Fairy Dragons , Feathered Dragons , Lazy Dragon , Seahorses Are Dragons , Shoulder-Sized Dragon and Weredragon Not to be confused with The Dragon , a position only sometimes held by a real dragon (while dragons themselves can just as easily be Big Bads)

'Dwarves': you know what they are. Gruff, practical, industrious, stout , gold-loving , blunt-speaking , Scottish-accented , Viking-helmed , booze-swilling , Elf-hating , ax-swinging , long-bearded , stolid and unimaginative, boastful of their battle prowess and their vast echoing underground halls and mainly just the fact that they are dwarves </ Ever since J. R. R. Tolkien raided the Norse myths for good stuff, dozens of fantasy worlds have included them as one of the Standard Fantasy Races ... and most of them have stuck closely to the original. Tolkien's importance to this can be gauged by the fact that the plural form dwarvesIt was originally a recurring mistake during the writing of The Hobbit </ (or rather "a private piece of bad grammar" that sneaked into the text), but it quickly became an Ascended Glitch . is now regarded by many as the standard plural (at least regarding fantasy — "dwarfs" is still the accepted plural for humans with dwarfism). Fantasy writers who use "dwarfs", like Terry Pratchett , are now the unusual ones. (Many "Tolkienesque" dwarves, however, are more like the Theme Park Version .) Since The Film of the Book (s), they now even all talk the same. A lot of dwarves are Scottish or have some other accent that reads as “rustic” to English speakers — Northern or south-western English, Welsh, Irish, or Russian accents are common. Oddly, despite the strong Norse influence, dwarves with any sort of Scandinavian accent are extremely rare. An entire race of miners and blacksmiths , with names like Dwarfaxe Dwarfbeard and Grimli Stonesack , who are overly sensitive about any perceived slight , always spoiling for a fight , unable to speak two sentences in a row without calling someone "lad" or "lass," and possessed of a love of gold and jewels that drives them to live in Underground Cities where they dig deep and greedily (often with catastrophic results) In the decades following Tolkien, they will often be depicted as more technologically minded than other fantasy races, verging on (and sometimes overtaking) Steampunk , but this is in keeping with their engineering and crafting skills both from the classic Fantasy depictions and from actual mythology. Their societies tend strongly toward a Reasonable Authority Figure (usually a warrior king) ruling over a socially conservative but rather egalitarian society of soldiers, miners, and craftsmen. In most settings, dwarves and humans have enough in common to treat each other with respect. They are frequently allies against outside threats The dwarf will often serve as The Big Guy (ironic, considering their stature) of a fantasy Five-Man Band , especially since his Weapon of Choice tends to be either an axe or a hammer . Ranged combat is not their preference, but if they aren't able to force enemies into close quarters, you can expect guns (Fantasy Gun Control permitting), throwing axes, or crossbows — in about that order. Dwarf rogues are rather uncommon in fiction, as their stocky frames make sneaking around look unconvincing, and their culture

values honesty and openness; however dwarfs will usually know a thing or two about brawling and fighting dirty, which overlaps with the rogue archetype. Likewise, dwarven mages are vanishingly rare . In fact, it's not uncommon for the entire race to be at least somewhat magic-resistant . If a dwarf wants to use magic, he'll infuse it into a sword or an axe so he can physically beat the enemy with it instead. If legends speak of an Ultimate Blacksmith from a bygone age who once forged all manner of powerful enchanted weapons and equipment, then he was probably a dwarf. If you happen to come across any of this legendary equipment and discover that the centuries haven't been very kind to it , then the only guy in the world who can help you get it back into fighting shape is probably a dwarf too. Might even be the same one, depending on how long-lived they are in the setting Often they get treated as a functional One-Gender Race ; one of the only widespread (but not universal) novelties is what the women look like. Even then, the most common ones seem to veer somewhere around " Grandmother from the Old Country "/" adorable " (depending on age) or " you're looking at one now " (with the Girls with Moustaches that implies). And in contrast to elves (which are generally treated as universally androgynous and bisexual), dwarves are almost always portrayed as heterosexual, uninterested in sex with non-dwarves (there's a reason that half-elves are a stock fantasy race and half-dwarves are not), and possibly even uninterested in sex for non-reproductive purposes. Female dwarves might occassionally be portrayed as being Butch Lesbian , and the few homosexual male dwarves in fiction are typically Manly Gay An exception to this rule is the fantasy setting's Cutesy Dwarf , who is often based on Snow White and the Seven Dwarfs </ ; this variety shares traits with our kind of Dwarves, but will be less of a tough guy and more of a charming man-child, and will scrap the ale-drinking and ax-wielding to focus on craft and mining For another fantasy race derived from subterranean fairy spirits and often associated with underground places and metalwork, see Our Kobolds Are Different . Not to be confused with Little People Are Surreal or Depraved Dwarf — once again, dwar </s are short humans (except in Discworld </ and Warhammer </), and nowadays the polite term for the latter is "little people"

Pathfinder </ has a somewhat complex relationship with this trope.

A universal trope, spotted as often in reality as it is in fiction.
A Our Founder is a statue of the founder of something, possibly a
A Founder of the Kingdom , be they a brave pioneer who established
A a colony in the New World, a missionary traveling the land
A building communities for his faith, a conqueror on his way to
A fame and riches, or a big-shot mogul who struck Big Business and
A got a nice-size stone replica of himself for his efforts. These
A are often to be spotted at crossroads, communal plazas downtown,
A or at parks, with some nice benches with old ladies feeding
A pigeons on them favorite of megalomaniacal despots with imperial
A aspirations and a very common decorative feature in places with
A villains that put their face on everything

In Middle Eastern folklore and Islam , genies (jinn</, Arabic for "hidden") were created out of the Four Elements by God before he created the First Man out of all</ of the elements. They are

(usually) invisible beings that are actually more like humans than we realize — they are born, grow up, marry, have children and eventually die. They are said to be made of "smokeless fire", perhaps something along the lines of energy beings . They are also extremely long-lived and highly skilled in magic. However, they can be killed by mundane means, if the Arabian Nights </ is any indication. (At least a couple of genies have been done in by a rock to the head). They were sometimes trapped in a bottle. They might grant you a wish if you let them go. Or they might have been bound to something like a ring or a lamp and forced to obey the orders of anyone who summoned them. Genies are creatures of free will; they can be good or evil and may even be religious. There are even various types of djinn, not unlike how The Fair Folk comprises many different creatures. Belief in genies is still common in the Middle East today. In Islamic theology, God told the Djinn that they should bow to man's superiority, but their leader, Iblis, refused to do so; thus, a good chunk of them ended up imprisoned by Suleiman and other holy men in lamps and such and forced to grant wishes. Genies in Islam can also possess humans for a variety of reasons — they might have a crush on the human, or they might just be a jerkwad. During exorcisms, the genie is given the option to convert to Islam, leave the body of the human or die. Iblis, by the way, never repented, and in fact swore that he would corrupt mankind... in other words, he's their version of Satan (and in fact is sometimes called Shayṭān or Shaitan). In popular Western media, genies are immortal beings almost invariably trapped inside a lamp or a bottle , often materializing through a puff of smoke . (Originally, at least part of those items only acted as a means to summon the genie and didn't actually contain it). They must grant you three wishes, which they may or may not screw up horribly. (In the Arabian Nights</ , this number ranged from one to infinity). Their precise spelling varies, but "djinn", "jinn" and "genie" are the most common; generally, depictions based more closely on the original folklore are called djinni or jinni, while the more modern three-wishes kind are more likely to be called genies. Also, Genies are extremely likely to be an Amazing Technicolor Population and to have Fog Feet . Female genies in modern media typically wear Bedlah Babe outfits. A few specific types of genies also tend to crop up. The most common are (also spelled ifrit, afrit, and afreet). In Arabic folklore, these are generally understood as a particularly dangerous and chthonic, but not necessarily inherently evil, type of spirits; they usually have some link to "regular" jinni, and may be seen as a specific kind of the broader group, but this is somewhat vague and not always constant. In modern fiction, efreet/ifrits are usually a specific type of genie, and are often depicted as closely linked to fire; they are usually either evil or simply more powerful and less predictable than other or true genies. The correct Arabic grammar is "one djinni</", "two djinn</" (also spelled jinn(i)</). The English word "genie", used to translate "djinni", derives from the Roman "genius", which is the spirit inherent to any person or object, such as in the term genius loci . The same concept in Hebrew is called a shed ("one shed</", "two shedim</ ") and shida in Aramaic. See also Genie in a Bottle , Benevolent Genie , Literal Genie , and Jackass Genie . Not to mention Our Ghouls Are Creepier ; ghouls have their origins as a class of djinn, although modern Western works rarely depict them as such. Kazaam </: A genie's bottle falls into a stereo and produces a rapping genie. Also, the main character says that all genies are naturally slaves, and "djinn" — or free spirits — are nothing more than fairy tales. We find out that Kazaam

became a genie as a punishment</ long ago when he was human</. Also, a genie can only create or manipulate objects,</ which is a lot of power but far less than the feats of reality-warping seen in some other genie stories, and not much use to someone whose true desire is something non-shiny. "Make or summon something</ for the holder of the radio, three times ," is what a genie can do, period — and this means even a nice holder can't say "I wish you were free." ("I wish for more wishes" wouldn't work either, probably.)

Ghosts in fiction are usually people who have died, but their spirits are still lingering around. Some are friendly , some are neutral, and some are scary and vengeful . It all depends on what kind of story is being told. Reasons include: Avenge me ! The ghost was killed through foul play, knows it, and wants the murder avenged. Sometimes, this also comes with a Clear My Name sidebar. This one can also lead to ghosts becoming violent and angry if not avenged. They may explicitly say that they cannot rest easy in the graves until they are avenged

Some good ghosts get to Ascend to a Higher Plane of Existence (either literally heaven , or something else) once they've sorted out their issues or unfinished business. Bad ones can get the express elevator all the way down . Some of them have problems with Ghost Amnesia . Every ghost has different Ghostly Goals , again depending on what they want Shows and movies will usually address these baseline rules, whether or not they're enforced See also Our Souls Are Different . Compare Living Memory . Despite the name, The Ghost is not usually an example Compare The Disembodied , for when they lost their corporeal form without being "dead". The Ghost King is a sub-trope

Legendary creatures that resemble human beings , but super-sized and often incredibly strong. Giants have been around since the times of ancient mythology, and are still around as one of the Standard Fantasy Races . These creatures may range in size from around 7 feet (the average size of the tallest Real Life humans), to truly colossal proportions . In various mythologies , including Classical , Norse and Celtic myth, alongside Biblical scripture, gigantic peoples often feature as primeval creatures associated with chaos and the wild, and frequently in conflict with the gods . They also tend to appear as apocalyptic beings, who will arise at the end of days to bring about the world's downfall. Less ominously, giants often feature in legend and folklore as hugely powerful and dangerous but often dim-witted beings whom wily heroes to trick and outwit. Their prodigious strength is also a commonly emphasized trait, and it wasn't uncommon for cultures to describe the imposing ruins of older civilizations as having been built by bygone giants — surely no one else would have been strong enough and large enough to shift such huge blocks of stone in place? The stereotypical giant is a big , dumb brute who grinds people's bones to make his bread and may serve as the Dumb Muscle for a more intelligent Evil Overlord . However, literal Gentle Giants are also featured in both legends and modern stories, and some giants, both good and evil, may be smarter than they are initially perceived. In Real Life , the profusion of Giants in mythology is usually attributed to memories of childhood, when adults tower over you, and also the rivalry between young men and old men. It may also be partially related to people finding the bones of massive animals (especially elephants or extinct animals

like sauropod dinosaurs and giant ground sloths) and mistaking them for the bones of giant humanoids. Giants don't usually have a lot variation besides their actual size, which can go from just unusual but theoretically achievable statures to absurdly exaggerated heights. However, works taking inspiration from Norse sources may include distinct fire and frost giants of varying levels of elemental affinity. Other types include the one-eyed, monstrous cyclopes and the two-headed ettin; occasionally, trolls and ogres are also linked to giants in some manner. This is Older Than Feudalism . Not to be confused with The Giant , who may be a big wrestler, but isn't nearly that</ big. See also Smash Mook , Giant Mook , Attack of the 50-Foot Whatever , Giant Woman (where the giant is specifically a giantess), and Our Titans Are Different . Really huge giants, in any real-world context, would fall victim to the Square-Cube Law in short order, but the vast majority of such beings tend to exist in fantasy universes that cheerfully disregard such things as the laws of physics in favor of creating a good story.

A person is dealing with someone who they know has uncanny powers of charm. These can be normal features of The Casanova , or special Mind Control abilities. So, knowing this, a person will be on their guard and be ready to ask " Am I Just a Toy to You? ", right? Well, not exactly. Because while this guy might be a selfish manipulator of women most of the time</, when it's with me, he's different. He's sweet and kind and caring, and everything that other people say about him is because they're just jealous and don't really know him. Cynical sounding write-up aside, when this trope happens to the protagonist in a story, they'll almost always be right, simply out of the genre convention that The Hero is rarely ever allowed to be wrong. Of course, misunderstandings implying that The Casanova was really a Jerkass all along are still quite common in order for the couple to earn their happy ending . This trope can also be played from a completely tragic angle, where it's obvious to everyone that one half of this "relationship" is being played like a fiddle, but she refuses to listen to anyone about it because true love is the best thing ever. Changing status quo in this situation usually requires a Batman Gambit by a third party, a What an Idiot! moment by the seducer, or a completely random coincidence exposing him for what he really is. (Alternately, it can played as tragic for the seducer: the former Casanova really has changed their ways, but no one believes them and no one finds out - at least, not until after it's too late...) Use of this trope is necessary in most stories with a central focus on All Girls Want Bad Boys . Not to be confused with an Our Tropes Are Different page about love. If you really were looking for such a page, you want The Four Loves .

The creator of a fantastic fiction universe gets to set the rules for how the stock fictional creatures and peoples work. There are a bunch of mythological creatures that are, as a whole, vaguely defined, and even though their recognizable traits (blood-sucking, flying, fiery breath etc.) are widely known, they need to be cleared up and re-defined to be able to appear as actual characters in a particular work. However, the audience is going to want said creator to stick pretty close to the rules they pick A writer uses this trope any time they want to use a famous critter or race without having to deal with the all of the various baggage said critter has accumulated in folklore and pop culture over the years, allowing them to leverage existing tropes and characteristics only

as much as they want to. So in the end, when they use a term like "elf" or "vampire", we have a pretty good idea what to expect, but at the same time we know that there may be something off about it compared to somebody else's book Fantasy RPG creators often engage in this while populating their worlds, rulebooks and monster manuals. As well as getting the various creatures to fit properly in their particular fantasy scenario and play nice with their game mechanic, they often want to produce as big and varied a bestiary as they can. So, for example, if two folkloric creatures are so similar as to be interchangeable, one or both may end up being altered just to make them distinct and justify separate entries. A similar thing can happen if a creature is known by more than one traditional name. In some cases, a single creature will be spun off into several varieties, often distinguished by colour or habitat A violation of Genre Consistency , but (usually) not of Internal Consistency For an index of all fictional creatures see the imaginatively named Index of Fictional Creatures (including Angelic Tropes , Dragon Tropes , the Undead Index , et cetera). See also Stock Monster Symbolism

You want two of your characters to have a child, but going through a normal pregnancy isn't an option. If the story is Speculative Fiction , the universe's Phlebotinum may be sensitive to the Power of Love or able to generate a new life form by using some kind of contribution from two different people, thus bringing their Phlebotinum child into existence. Often, the couple can get their child in a much shorter timespan, it can age much faster , or be born mostly grown . As an extra bonus, the child's nature can explain Plot-Relevant Age-Up , Absurdly Youthful Mother , Supernaturally Young Parent , the female variant of Luke, You Are My Father and Homosexual Reproduction . It can also bypass one of the obvious side effects of Can't Have Sex, Ever . An essential element of this trope is that the Phlebotinum child wouldn't have existed without something from each of its parents combining. The nature of what got combined can include anything that is not</ the natural conception means of the parents' species. If more than two people are involved in the child's conception, this trope can be the supernatural counterpart to Extra Parent Conception . Pregnancy will be either absent from the child's generation process or shorter than what would be normal for the mother . In the absence of pregnancy, the parents may have Doorstop Baby -like scenario with the child before finding out the truth. In the latter case, the child may or may not have been generated in a Uterine Replicator or something similar. These children tend to have a death rate much higher than that of naturally-born children for reasons including Fantastic Racism , being a Living MacGuffin , unable to exist for very long in the first place , or some dangerous form of Sentient Phlebotinum . This makes them a choice character to use in a Parents for a Day scenario. If they live, they will often become an important plot element. Specific cases can fall into: Kid from the Future : You haven't had the child... yet, but they're around anyways. Not to be confused with Bizarre Alien Reproduction , where the reproduction means is strange from a human point of view but normal for fictional beings. Compare Convenient Miscarriage that is the closest non- Speculative Fiction seems to be able to get if the child dies. Beware of unmarked spoilers.

Don't buy our product. No really, don't. It costs a lot, looks like the back end of a geriatric warthog, guzzles fuel by the gallon, tastes of stale cardboard and will make you look like a fool in

front of the ladies. This might well be the worst product ever. At least, that's what these</ people say. Do you agree? Perhaps you should try it for yourself and see what the controversy is about ! Yes, while most commercials are based around making it look like the product is the best thing under the sun, a rare few accept that the thing they advertise is not universally loved. This can be done as a Take That! against their detractors, or to give the product that "lovable underdog" image, or the impression of genuine honesty - at least they're not lying about how good they are, right? May function as Schmuck Bait or Reverse Psychology . Compare with Commercial Switcheroo (where the crappiness of the product is only in contrast to the real</ thing being advertised), Never Needs Sharpening (where the flaw is spun into a supposed asset) and Our Slogan Is Terrible (fictional slogans that do little to advertise their product). If the product or service really is as bad as this trope is claiming , they may be trying to invoke No Such Thing as Bad Publicity . Contrast with We Don't Suck Anymore , where the advertiser admits that its product used</ to suck. Not to be confused with Reverse Psycho . Also contrast Strawman Product and Self-Deprecation . Inverted Trope of Abusive Advertising , where the marketer claims the product is so good that you</ suck if you don't use it.

A trope of science fiction, if aliens (or humans in the future) bathe at all, you can bet that they will use something completely different from soap and water. This is usually not because of any Bizarre Alien Biology , but rather just something to show more advanced technology and/or how different the aliens or future humans are. It can also, depending on how sensitive the Moral Guardians are being, have the secondary advantage of letting characters have a shower without showing skin Note that this can be Fridge Logic when you realize that since water is recycled on spaceships and stations, there is no reason they can't spend the additional energy and equipment to have as much pure water as they want. If they don't clean the dirty water (and urine, etc.), they still have to store it (or throw it into space). It makes more sense to clean it and reuse it. Humans actually "make" water (oxygen plus glucose equals carbon dioxide and water). Although if you do allow water showers you probably have to provide more water storage space. Of course, depending on the level of technology (or how grimy your setting is), you can justify this by having the recycling process be time consuming compare to how quickly you would use the water by washing everything with it

In Transmetropolitan </, it takes less than a second for a "Voice-Keyed Physical Cleaning Unit" to turn Spider Jerusalem from hairy mountainman into a full-body Bald of Awesome . Given that he Screams Like a Little Girl while it emits a blinding flash of light, it apparently does so with lasers</. It also appears to have been permanent, as he is never again shown with a single strand of hair anywhere on his body. Not as crazy as it sounds — was developed in The '90s Star Trek: The Motion Picture </ . The Enterprise has sonic showers (Lieutenant Ilia's robot form appears in one)

Robert A. Heinlein 's article "Where To" mentions a futuristic shower which not only pours water on you but can also do the following: "warm air drying, a short massage, spraying with scent, and dusting with powder". He mentions "freshers" (AKA "refreshers") similar to this one in several of his other stories, including "Coventry", " Methuselah's

Children ", Farmer in the Sky </, Friday </, The Cat Who Walks Through Walls </, The Number of the Beast </ and Time Enough for Love </ .

Star Trek: The Next Generation </ and the series that follow it chronologically usually the Federation using sonic showers.

The Eastern RPG Opoona </ for the Wii has the Air Shower, which seem to be sprays of energy bubbles. In addition to appearing the world's many bathrooms , they're also a battle item that can be used to heal allies or damage enemies.

In Alien Dice </ Lexx is used to sonic showers and synthetic foods, having lived in space most of his life. He allows himself to indulge in a real shower at Chel's house.

Current spaceships and stations either offer no bathing (for ships) or limited bathing (stations).

Sub-Trope of Our Monsters Are Different . This one deals with the Near-indestructible Serial Killers stalking teenagers, college students, or the people around a Final Girl . Even ridiculously cute critters arent't immune! This is further elaborated on in the Slasher Movie trope Slashers are not traditionally thought of as a kind of monster, though many of them display supernatural powers. Most of them are motivated by some sort of Revenge based motivation, are Made of Iron , and stalk the young. If there's a sequel, they usually possess some form of Resurrective Immortality The majority of slashers never receive any sort of explanation for the source of their powers . While Freddy Krueger is a ghost, Jason Voorhees is simply a deformed serial killer living in the woods before he suddenly becomes an unkillable zombie. The origins of their powers are less important than what they do with these powers, which is kill. However, slasher franchises that run long enough often do Retcon an explanation to the source of the killer's powers if there wasn't one before (Halloween</, Nightmare on Elm Street</, Friday the 13th</) Despite this, some works of fiction have actually made it so slashers are their own distinct type of monster. They apply rules, a commonality of origin, or a category to their activities that does not normally apply to fiction. It also implies that there are many slashers in existence and not just a single unpleasant monster stalking the teenagers of whatever city they're in. Some of them expand on the supernatural elements while others do away with them entirely, revealing them to just be a "Scooby-Doo" Hoax This trope is about works that take time to get into the worldbuilding of their slasher villains and how they might or might not be dealt with. This is primarily a nostalgia-based look back onto the original slasher movies and attempting to apply some logic to something that didn't previously possess it (or need to)

Slogans used by fictional businesses tend to be bad. By that we mean, of course , very, very bad.</ They come in many flavors, including: Compare and contrast What Were They Selling Again? , when a slogan or ad is so good that it fails by detracting from the more important message "Buy our product." See also Our Product Sucks , when this is invoked intentionally for Reverse Psychology .

...Although you wouldn't know it from reading the titles . </ Not to be confused with Playing with a Trope .

A Sub-Trope of Our Monsters Are Different . This one deals with everyone's favorite undead bloodsuckers The purpose of vampires in the story varies quite widely. They serve as the Big Bad or as a metaphor for something, be it addiction or denial of aging, or even communicable diseases like the plague or an STD. There is some danger of the vampire character being too on-the-nose for the metaphor The "baseline rules" below are strongly influenced by Hollywood tradition, and not "real" vampire folklore, or even classic vampire fiction. For instance, as (properly) shown in the 1992 Dracula</ with Gary Oldman and Winona Ryder, and in 2003's The League of Extraordinary Gentlemen </, Dracula and other "folkloric" vampires were at the most inconvenienced by sunlight , not killed instantly. More to the point, sunlight didn't cause vampires to go up like flash paper in the original novel, nor in earlier vampire lore. Sunlight causing a vampire to suffer pain and damage, burst out in glitter, smolder, or go up like a one-man pyrotechnic show was created by the movies, from Nosferatu</ (1922) and onward Modern vampire treatment in popular culture is usually divided into cycles. The Malignant cycle (1931 -1948), the Erotic cycle (1950 -1985), the Sympathetic cycle (1987 -2001), the Individualist cycle (2003- present day). Malignant, meaning vampires are treated as creatures of pure horror, as popular in the early films like Nosferatu, and Universal films. Erotic, meaning they were considered evil but alluring, such as the Hammer films. Sympathetic, meaning they were seen as tragic monsters that were to be pitied, but still feared, although they could sometimes be redeemed usually by becoming human once more. And Individualist meaning that they could be bad, good, or in between, much like humans, and their transformation to vampirism did not imply a change in morality The sheer number of different and contradictory myths that have built up around vampires over the years have made it difficult to explore all of them in great detail. To deal with this, writers have started putting multiple types of vampire into their setting, with the explanation that different myths describe different types of vampire . These are often referred to as "bloodlines", although any term suggesting shared descent or culture may also be used. Particularly common types include a more refined and high-class one with little beyond tasteful fangs to mark them outwardly, sometimes embodying the more recent view of vampires as seductive predators; a more bestial, highly monstrous one, typically called "strigoi" or " nosferatu ", which may be visibly batlike even in human form ; and an especially corpse-like one that puts particular weight on vampires' undead nature Differences may be reinforced by spelling it "Vampyre" , or using a clever synonym like "nosferatu", "sanguinarian" or "strigoi". The term comes from Serbian vampir</ (вампир). If the differences are emphasized by overt mocking of other authors and unused vampire tropes it becomes Your Vampires Suck A work will usually address these baseline rules even if they're not enforced. Sometimes an unused rule will be explained away as a Fake Weakness propagated

by the vampires themselves "Blood mages" may also qualify for this trope if they extract blood and are generally portrayed as similar to vampires, or if they are</ vampires who have access to sorcery by way of their blood See also Chinese Vampire , Classical Movie Vampire , Feral Vampires , Looks Like Orlok , Vampires Are Sex Gods and Dhampyr

Werebeasts are creatures that can transform between a human (or at least humanoid) form and an animal or animal-like form. They are also known as "werecreatures" or "were-animals". The prefix "were" comes from the Old English word "wer", meaning "man". The technical term for this is therianthropy</, from the Greek words for "beast" and "man". The better known lycanthropy</ comes from the Greek words for "wolf" and "man", and should only be used for werewolves. Such creatures can be found in the mythology of many cultures , and the myths have inspired the frequent use of werecreatures in modern Speculative Fiction , particularly Fantasy and Horror By far the most common form of werebeast depicted in fiction inspired by European folklore is the Werewolf , but many stories use other animals as the basis of their werebeasts. Some of these are inspired by pre-existing mythologies and others are purely the invention of the authors. Other than wolves, potentially dangerous predatory mammals such as big cats, hyenas and bears are the most frequently depicted werebeasts, but many other types of creature has been used as the basis of a werebeast — wereboars and wererats, for instance, are far from unheard of. Sometimes authors use normally harmless creatures as the basis of a werecreature for the sake of Rule of Cute or Rule of Funny . Some works will even use extremely unconventional ideas such as were cars</. It should also be noted that while werebeasts normally have humanoid shapes as their default form, sometimes a work will reverse the order and make a werebeast an animal that transforms into a human . The wolf version of this is sometimes called a "wolfwere". Taking this to it's logical conclusion and featuring something like, say, an ant that turns into a spider or a mushroom that turns into a mold is however, unheard of Werebeasts often have variations and characteristics similar to those listed on the Werewolf Analysis Page . For more information see The Other Wiki This is a Sub-Trope to Our Monsters Are Different and Animorphism Super-Trope for therianthrope tropes, like Our Werewolves Are Different and Weredragon . The preference for examples on this trope is for creatures explicity called "were", however very similar cases of human-animal transformation can also be listed, if the nature of the character or creature is strongly linked to a specific animal species. Creatures that can turn into any sort of creature or multiple types of creatures should not be listed here, but on the pages for Voluntary Shapeshifting or Animorphism

A Sub-Trope of Our Werebeasts Are Different , dealing with variations of lycanthropy (i.e. werewolves). As with vampires , the exact parameters of lycanthropy vary, but to meet the definition, a werewolf must be like an Animorph who takes the form of a wolf every month (okay, the exact details do vary — see the Werewolf Analysis Page for a listing of common characteristics and customization options). Far and away the most popular conceit is that a werewolf is a human who has somehow become able to

temporarily transform (usually unwillingly) into a wolf that goes on to run wild (rarely remembering their romp). Usual methods include a Viral Transformation spread by being bitten, but a lot of depictions show lycanthropy as solely hereditary. Other popular causes include curses and typical Mad Scientist experiments. Like most werewolves, the classic wolf-man only transforms on the full moon, or, failing that, at night, though none of this is a given</ in modern works Together with Count Dracula , the Mummy , and Frankenstein's Monster , this is generally considered to complete the set of "classic" horror monsters . Unlike the other three, however, there is no single specific source of popular werewolf lore. The closest claim to such a source in literature might be Guy Endore 's classic novel The Werewolf Of Paris </, but cinema seems to have been more definitive in terms of shaping the concept. Hence, Lon Chaney Jr. 's character (Lawrence Talbot) from the 1941 film The Wolf Man </, as something closer to an ape with vaguely canine features is usually regarded as providing the template that others have followed. In 1981, with dramatic improvements in visual effects and makeup now available, the classic film, The Howling </ , established the modern image of a werewolf as essentially a far more convincing humanoid canine creature, especially with the head now typically having a more convincing muzzle for the face Werewolves did not receive the same revisionist</ treatment as vampires did during the '90s, partly due to the high probability of Special Effect Failure in visual media, but also because the concept is much</ more difficult to rehabilitate. While having your neck bitten by beautiful people is erotic, being torn into bloody chunks and eaten is not. And in most common depictions, werewolves aren't exactly sapient in wolf form. Hence, they're often relegated to supporting roles in Fur Against Fang storylines and Fantasy Kitchen Sink settings. Surprisingly, such an earlier revisionist treatment happened in medieval times for fictitious werewolves; in the Chivalric Romance , a werewolf could be a perfectly gentle and noble beast . Then again, with the growing knowledge that North American wolves have been seriously misunderstood and are not that aggressive to humans while being devoted parents thanks to classic works like Never Cry Wolf </, that lends itself to a serious image makeover as potentially heroic monsters. In fact, one can take it further considering with the proper circumstances and disposition with the being in sufficiently rational control, werewolves can be sexy or even cuddly As such, the werewolf's cachet has been rising. Recent works of note include the Wolves of Mercy Falls </ trilogy, Jennifer Lynn Barnes' Raised by Wolves</ trilogy, and the Mercy Thompson </ and Kitty Norville </ books. 2010 also saw a highly-publicized remake of The Wolfman </, although this depiction is much more traditional than the above. And they are very popular within the Furry Fandom , usually of the more-in-control-while-transformed variety, and their depictions therein can range from the innocent to outright Yiff The word "werewolf" is a compound with the archaic English word wer</. Etymologically, "man" was once genderless, and wer</ referred to a male adult; compare this to the Latin vir</, where we get the words "virile" and "virtue". Hence, the not-uncommon female lycanthrope should more strictly be a "wifwolf" (or "woman-wolf"), a term that has not seen much actual use. Generally, werewolves are Older Than Feudalism , going back to the European Middle Ages and to the Ancient Greek myth of a king cursed by Zeus to become one. Werewolves are very popular because of qualities of opposing forces of man versus animal nature A common mistake is to

use the word lycanthropy to describe any</ case of a being able to shift between human and animal forms, as the root word "lyc" specifically means "wolf" (the proper term for other animal types is therianthropyCuriously, is a term used to describe a psychiatric condition in which a person believes that they are transforming into an animal of any kind See also Werebeast Tropes and Wolf Tropes for related tropes; Shapeshifting for other tropes related to changing form; Youkai for Japanese supernatural creatures that are sometimes depicted as having features similar to werebeasts; and sister trope Wolf Man , on sci-fi/fantasy characters that bear resemblance to wolves See Werewolf Works for an index of works that prominently feature werewolves

In reality, wormholes are purely a scientific conjecture, a consequence of the same equations that describe black holes. There's no way that we can conceive of to get to one or use it for anything. In fiction, however, wormholes are a Swirly Energy Thingy that can be used as a convenient means of travel from one place to another The most common use is for FTL Travel . By extension, if they show up often enough and consistently enough, they can become nodes in an interstellar Portal Network . They can also enable Time Travel , provide a mechanism for FTL Radio , act as doorways to Alternate Universes , or any/all of the above. No matter what Technobabble is thrown around, rarely will any two authors treat them in precisely the same manner, which is why Our Wormholes Are Different Related to Negative Space Wedgie . Compare: Our Time Travel Is Different , which this may sometimes overlap. See also Swirly Energy Thingy . Compare Unrealistic Black Hole . Often explained in Layman's Terms via Fold the Page, Fold the Space . See Powered by a Black Hole for a relatively more realistic way a black hole can be used

The word "zombie" originated in the voudon beliefs of the Caribbean and West Africa, referring to a body "revived" and enslaved by a sorcerer. (Some of the oldest aspects of zombie appearance are actually symptoms of poisoning, a neurotoxin that may have been used in certain voudon rituals, though the Other Wiki dismisses the possibility on the grounds of not enough similarities between the two.) In this form, it has been known in America since the late 19th century. However, it wasn't until the 1960s that George A. Romero 's Night of the Living Dead (1968) </ attached the word to the living dead who eat the flesh of the living. (Note, however, that the flesh-eaters in that movie are never referred to as "zombies," and Romero himself didn't consider them zombies, preferring " ghouls .") As Night</ was accidentally entered into the public domain due to an error in the end credits, it quickly became the object of imitation and emulation by many other directors. Most zombie invasion stories, even those not explicitly based on Romero's films, follow the same conventions, though there are major points of contention. While Romero is responsible for most of the "general" zombie conventions, the more specific and visible zombie tropes are more often inspired by the later works of John Russo, Night</'s co-writer. Most zombie movies mix-and-match conventions from the Romero and Russo canons. The Russo canon in particular (Return of the Living Dead </) is the reason most people will respond with " Braaaiinnnns " when zombies come up in conversation, and most depictions along those lines are

references to it. Zombie canon was turned on its head with the release of the video game House of the Dead </ in 1996 and the film 28 Days Later </ in 2002, which heavily influenced and popularized the modern trend of super-fast, super-angry zombies (usually infected sort-of-alive humans as opposed to the reanimated dead) that has carried over to numerous works of fiction and entertainment. The most common zombie archetypes are as follows: Skin color of zombies can also vary widely, ranging from normal skin tones to green, blue, or gray. Their gait can also vary, from limping, sliding their feet along the ground, having the "arms forward" stance, and the more modern variant-the running zombie. See also Everything's Deader with Zombies , Zombie Apocalypse , Not a Zombie . Not Using the "Z" Word happens when creatures that otherwise fit the profile perfectly are not called</ zombies (although the trope applies to other creatures as well). Elite Zombie is this trope combined with Elite Mook . Most zombies are Night of the Living Mooks , and Slave Mooks . Necromancer is a common source of magical zombies. Contrast the Incongruously Dressed Zombie , who only looks</ different. Subtrope of The Undead .

"Who was the mother of Bob?" </ The realm of fanfiction is an interesting place. Where canon may be scant with details, fans of a work can take up the task of filling in perceived holes in a story. This may include creating their own characters to flesh out a character's lineage or coming up with reasons why certain ones behave as they do. After all, what if the story never bothers to tell us who the parents of the protagonist were? Or the deal behind that guy with the cool name who's always mentioned but never shown ? If one of these fan works becomes popular enough, it will spread across the community and its ideas become an accepted fact of the show/book/movie's lore. Or mocked, if the fic is lacking in quality. Either way, these questions raised by the canon work which the fans latched onto haven't been answered and never will be, so fans are free to continue playing with them... right ? Outdated by Canon is when fan works (and the theories backing them) are Jossed by revelations or events in the canon product; most often in regards to characterization. For example, a fanfic writer might decide that Bob's unseen mother is a Retired Badass who instilled and promoted Bob's own thirst for adventure. This fanfic becomes popular and soon the entire fandom chooses this as their fanon , with other fanfics following suit. Various stories are made about Bob's mom teaching him how to fight, or giving him hero advice, or even coming out of retirement to help Bob and his friends stop the Big Bad . Then several installments later, when the creators of the canon work finally take us to Bob's childhood home to meet his mom, it turns out she's an overprotective woman who's terrified of even leaving her house. These fan works are now outdated pieces of media that have been entirely discredited, leaving future fans who find them wondering why an old fic they just stumbled upon has Bob's mom threatening to punch out an eldritch abomination instead of fainting at the sight of one. The earlier the fanwork was made in the life of the work that inspired it, the more likely it will be hit by this trope: after all, the beginning of a work is when the audience has the least understanding of the world they've been presented with, increasing the chance of early theories being jossed. Also a specific form of Canon Foreigner , O.C. Stand-in , and potentially Hilarious in Hindsight . Some fans may invoke Better Than Canon and Fanon Discontinuity , especially if one specific character interpretation was popular with the community because that version was well-written or served as great eye-candy. Often the result of

an Unknown Character finally getting revealed. This is only a trope applicable to fan works, as any licensed examples fall into the Canon Discontinuity , Canon Marches On or What If? scenarios. Part of Time Marches On . See also Resolved Noodle Incident . Contrast Ascended Fanon or I Knew It! , where the popular fanfic interpretation ends up being part of canon either because of its popularity with fans or because that was always the plan.

One way to show how "advanced" a society is in Science Fiction or certain kinds of fantasy works is to show that it's given up religion. A society may consider religion backward and primitive, consider it a dangerous tool for controlling the populace , or have discovered it was a Scam Religion . Such societies are often contrasted in the same work with more "primitive" societies which are still religious to some degree; these are usually portrayed as harmless fanatics, often of a Fantasy Counterpart Religion This is a difficult trope to write about well, and many who use it fall into Author Tracts . Part of this is because of the demographics of science fiction writers; especially in the "Golden Age" of sci-fi, empiricists and secular humanists were particularly attracted to the genre. A common variation of this trope sees the "advanced" society show the "primitive" society the error of its ways and prove that The Presents Were Never from Santa . Since then, sci-fi has become more mainstream (and the militant atheist a more annoying character), so this trope's usage has become more nuanced. Nowadays, you might find a society that discovered it was worshipping advanced technology or Sufficiently Advanced Aliens . You might even see the inverse , where an atheistic society discovers for whatever reason that it kind of needed</ silly superstition to function, or even the God or gods they worshiped being proven true Yet other works might keep the future society's atheism, but treat it less sympathetically as part of a dystopian tyrannical regime's oppressive ideology. In such cases, it's not the people who have actually stopped believing — although this is the version you'll get from the government's shills among the academics and in the controlled media — but the Secret Police who harass anyone who isn't a good atheist. Such a society is probably based at least in part on the State Atheism of the real-life Communist states, and may be as Anvilicious as the original version of the trope in its own way Very often paired with an Alternative Calendar , since the one we use today is strongly influenced by Christianity. Societies will then choose a new "year zero", which will often coincide with a major scientific breakthrough — the moon landing is among the most popular Compare What We Now Know to Be True and No Such Thing as Space Jesus . Contrast Gravity Is Only a Theory , Maybe Magic, Maybe Mundane , and Science Is Wrong . See also Religion Rant Song . For a particular type of aversion, see Religious Robot and Robot Religion . The individual-scale version of this trope is the Hollywood Atheist

In Hamilton's Commonwealth Saga Alien in a Small Town </ claims that many humans had naturally assumed that First Contact with aliens would settle the matter, with the aliens being so much more advanced that they would have a final answer for us. On the contrary, it turns out that the aliens themselves have a wide variety of religious and philosophical schools, including agnostics and atheists.

Two lovers who team up to commit crime, usually violent crime and especially robbery, and are usually on the run from the law. Such couples are almost always inspired by "Bonnie & Clyde." Which one is the brains of the outfit tends to vary from couple to couple. Sometimes one is a calm and collected criminal who charms the other into a life of crime. Other times, one is a loose cannon while the other is a cool-headed professional. Many Bonnie and Clyde stories end in tragedy, as did the original couple This one is Truth in Television , though it should be noted that most fiction tends to romanticize the life of crime that such characters tend to lead Compare/contrast Minion Shipping . See Unholy Matrimony for a more over-the-top, super-powered version of this team-up Expect some Back-to-Back Badasses moments, as well as a suicide if one partner dies. May result in sympathetic villains or even Sympathetic Murderers , especially if their affection for each other is given the spotlight

If a series becomes popular enough, not even the creator's death can stop it. If a series keeps going after its original creator has died, then it has Outlived Its Creator Series that continue on after the creator's death are the ultimate Franchise Zombies . A deceased creator cannot complain about any changes to the casting, style or creative direction of the series A series that has outlived its creator can (and often is) put through retcons , Character Derailment , Executive Meddling , etc. Sometimes this is simply for financial reasons ; other times, it's because the current series-runner is also Running the Asylum . Or the creator passed on the torch before death. It can even be accidental When a series outlives its creator, the fans usually watch whoever's continuing it like vultures, waiting to swoop down and proclaim, " They Changed It, Now It Sucks! " On the other hand , if the original creator had Protection from Editors and was driving the series into the floor, this may be good for the franchise: there's a chance for the series to be turned around. If the creator is still alive, but the work continues to be made without his or her involvement, it becomes God Does Not Own This World

Public Domain examples

The inversion of Something Only They Would Say : When a character is pretending to be someone else, they may unwittingly reveal this by saying something that would be out-of-character for who they're impersonating. Variations include not responding to a well-known Berserk Button , doing things they're normally afraid of (or have a similar excuse for never doing), expressing hatred for a nickname they insist to be called by , or otherwise invoking OOC Is Serious Business . A common variation in Japanese media is using the wrong pronoun Often Invoked in kidnapping and I Have Your Wife scenarios, to let the heroes know that something is amiss. If the Big Bad is demanding a ransom, this is to alert them to the fact that it's a trap; if he wants the kidnapped to "assure" The Hero that the kidnapped is "in fact" okay, this is to secretly convey that they're not. Sometimes serves as a Quiet Cry for Help . If they've pre-arranged such an alert, this is a Covert Distress Code Real-life military personnel sometimes use hand signals when being taped to communicate in another way with their 'home base'.

There are a few documented cases of soldiers giving hand signals (and one case of them just flipping the bird to the camera) to alert the people receiving it that no, they weren't being treated very politely at all . And some have done it just for fun, giving the for instance Compare with Spotting the Thread , Lying Finger Cross (a common gesture used in this trope), Not Himself , Ooh, Me Accent's Slipping , and Trust Password (a pre-arranged alert to confirm one's identity and freedom of action). Contrast with Something Only They Would Say (in which a character is identified by a characteristic) and Bluff the Impostor . Sister Trope to You Called Me "X"; It Must Be Serious and Batman Grabs a Gun . See also OOC Is Serious Business

A Sub-Trope of Canon Defilement . In Derivative Works (especially Fanfiction), this term means that somebody is acting largely against his or her established personality. How and why this occurs has a pretty wide range: Generally viewed as a very negative trait (if a fanfic gets tagged as "OOC", it's usually not a good sign, though writers will often be honest enough to slap the tag on themselves up front). Compare Character Derailment , which is this applied to canon, and OOC Is Serious Business in situations where characters are noted as acting out of the ordinary in particularly stressful circumstances. See also Out-of-Character Moment . Draco in Leather Pants , Ron the Death Eater and Ukefication can be considered subtropes. Not to be confused with In and Out of Character . In Role Playing Games , it is sometimes necessary to make a distinction between when a player is In Character</ and Out Of Character</, to know if the person is speaking as the character or as the player. A player who uses Out of Character information (such as the presence of goblins in a room ahead) to make an in-character choice is said to be MetaGaming , which most dungeon-masters severely frown upon. Also not to be confused with the acronym for "Original Canon Character", another term for an O.C. Stand-in . An Adaptational Skill in a fanfic might be out-of-character if it's highly unlikely that the character would have it (e.g. The Ditz being able to do surgery).

A little information is a dangerous thing. If a character overhears an acquaintance saying about them, "I'm gonna slaughter that bastard tomorrow..." and walks away before they finish, "...at basketball," well, they've missed a pretty important bit of context that drastically affects the meaning of that statement. And if they assume that this acquaintance literally means to murder them and start taking precautions as if that were the case, they're going to wind up looking very foolish at the absolute least This trope is a Narrative Device in which an eavesdropper hears part of a statement or conversation out of context and leaps to the wrong conclusion. It is a very specific aversion of Exact Eavesdropping which was popularized, on television at least, by Three's Company </, but is Older Than Dirt . Often Lampshaded or Subverted , but just as often played straight, making it a bit of an Undead Horse Trope Often a form of Contrived Coincidence . A common source of Third-Act Misunderstanding . Compare One Dialogue, Two Conversations , a similar trope without the eavesdropping, and Poor Communication Kills , where the speaker and not the listener is at fault for the misunderstanding. See also: Bathroom Stall of Overheard Insults , One Side of the Story , Funny Phone Misunderstanding , Not What It Looks Like . Can result in half or more of the entries on the

Mistaken for Index . The Moving Experience can often happen because of this. Compare Twisting the Words

Mmmmmmm... popcorn . It's delicious, it's buttery and salty (or another flavor, if you wish) and it's fun to see and hear it pop as you prepare it But be careful! Don't leave it unattended, make sure the cover is on whatever you're using to pop with, and don't use too many kernels. Failure to do so would leave you with a huge, popcorn-y mess Writers like to take popcorn popping to the extreme since, Truth in Television , popcorn does expand once it's popped. And hey, it doesn't even matter what kind of corn is getting heated up (or the condition of the corn or even if it's still on the cob); it's going to pop either way Expect a a big explosion if the popcorn is contained inside something as it's popping. Compare Impossible Leavening which is also about food going all over the place; and Pass the Popcorn , where a character is seen eating popcorn as they watch something happen. May even overlap if the popcorn they're eating is part of the mess

The spotlight highlights and shines brightly on one particular character, or on a select group of a particularly large cast getting the most screen time. They take center stage, right wrongs, find stuff out, do a bit of rescuing and learn all about themselves in the process. Which is all well and good for those characters and their fans... but what about everyone else? Come to think of it, we haven't seen Bert in three months. Where did he go? Out of Focus is the flip side of Character Focus . When they show less and less of a character, seen in the background flying under the radar in obscurity with extremely little screen time, living in the shadows of other prominent standouts. While someone's hogging the limelight with a lot of screen time in abundance, other members of the cast fly under the radar with a serious decrease in screen time Particularly luckless characters may vanish for extended periods of time without any particular explanation, only to be brought back as if nothing's happened. A consequence of Creator's Pet . Sometimes Out of Focus is a necessary evil for the medium, as in webcomics. Sometimes, however, it's creator favoritism—they've got a brand new shiny character they want to flesh out, and everyone else is put on hold until they do so, or the comic has just changed writers and they prefer characters X, Y and Z to characters A, B and C. Occasionally though, it's just forgetfulness—the writer gets wrapped up in a Story Arc , and forgets that just because they know when someone is due to reappear, their readers don't. Deciding if a character is Out of Focus tends to be relative to the media in which they appear. In a daily webcomic, for example, two weeks may be a long time for an absence. In a three-days-a-week webcomic, it may be over a month before it's noticed that someone's missing. In television, however, a member of the main cast who goes vanishes without explanation for a single episode had better have a damn good reason for their vacation when they get back, unless the show has Loads and Loads of Characters . Likewise, audience acceptance is proportional as well. Webcomics are free, and therefore fans are generally more accepting if their favourite hero disappears for a bit. Too long, though, and the creator risks alienating a particular protagonist's fans. When someone has to hand over money to follow a story, however, as with comic books, they may get a little annoyed when fan favourite Mr. Terrific doesn't even make a cameo appearance

for twenty issues. Another good example for when this is a necessary evil is for Strategy games, in which Anyone Can Die and usually they're gone for good depending on the game. A good way to keep special characters in focus is to more or less program and write a lot of event data into the game, in the event that the player recruited the character and then still has them. But sometimes, the player may just dismiss them or let them die and they wind up Deader Than Dead , so in order to save time, the games are programmed under the assumption that they could be dead and that the only non-player characters that are still around are plot-crucial ones. A Real-Time Strategy game would often avert this by making it crucial (They die, you fail the mission and Game Over) or they die but are resurrectable. It's also possible to get around this where if they die in battle, they're merely knocked out and come back if needed. If a character is absent for too long, that character risks suffering from Chuck Cunningham Syndrome , dropping off the face of the Earth, never to be seen again. Alternatively, these characters may be Put on a Bus or Killed Off for Real when the creator decides (s)he has no further use for them. If they return after the nature of the story has changed in their absence — for example, the plot has come down with a nasty case of Cerebus Syndrome — and they don't seem to fit in with the tone any more, they may become The Artifact . Out of Focus can be averted, or compensated for, by using Rotating Arcs or by the creator reassuring the fans that Captain Superhero hasn't died and will be back as soon as he's relevant to the story. This also often happens for optional characters, but as you'll notice, they're...well, optional, so the events are written without them. When a sequel or adaptation shoves characters out of focus and removes their plot importance, it's Demoted to Extra . If a major character is out of focus from the start, then you got an Advertised Extra . Contrast Character Focus , Spotlight-Stealing Squad .

Writing drama is hard. Sticking to a popular formula is easy . That's why sometimes you can create a temporary</ Genre Shift in a series to fill up time in your story. For example, many television shows are general drama, but... with a character who is a doctor. You know that soon enough , there's going to be a central episode for that character , complete with a medical plot . This trope can be glaringly obvious or just a subtle genre that doesn't fit into the rest of the series. Medical Drama is used as an example because it is difficult to hide. A good test to see whether something fits this trope: If you turned on the television or opened the book at a particular point, would you be able to ? This trope is often paired with Mood Whiplash , and an Art Shift may kick in to better fit the brief genre change. Episodes that have these experiences usually get a Bizarro Episode reputation and may have either Fanon Discontinuity or Canon Discontinuity . For a permanent genre change, see Genre Shift ; when the plot starts out as something unrelated leading up to the switch it's a Halfway Plot Switch ; and when a work has a chronic case of this trope it's a Genre Roulette . When a non-romance story goes out of focus (either temporarily or permanently) due to a Romance Arc , that's a Romantic Plot Tumor . See Courtroom Episode , Noir Episode , Superhero Episode , Cowboy Episode , and the rest of the Episodes page for common sub-tropes. For the same principle applied to video game genres, see Unexpected Gameplay Change .

Seasons happen at different times per year in different parts of

the world. Add in the various different Time Zones, and chances are episodes of various different shows can come out at different times per year This occurs when the episode that airs at a time that is different than the time of year in Real Life A seasonal variant on (but not entirely related to) Out of Order , and occasionally causes/is caused by Short Run in Peru

A truly strange tendency that some broadcasters have is to air episodes of a television show in an order that disregards the order in which they were written. For some shows, particularly those of the episodic variety, this will make little difference. For a series with continuity, this can confuse the heck out of viewers Often executives do this to make an Action Prologue , using it draw in an audience for better ratings, while ignoring how many people desert the series later. Occasionally this trope is justified , or at least understandable, if a recent event or tragedy might make airing the episode so close to it need to be Distanced from Current Events . As often as not, it's just because they didn't really care - this was especially the case for local stations airing syndicated shows back when they were stored on physical media This trope is often a symptom of being Screwed by the Network . When the writers intend</ for a series to be this way, it's Anachronic Order Not to be confused with the "functional" variety of "out of order" ; for examples of that, see Phlebotinum Breakdown , Holodeck Malfunction , Plot-Driven Breakdown or Failsafe Failure . Also not to be confused with the common plot device for a Potty Emergency or justification for a Forgotten Superweapon NOTE: TV Tropes executives have decided that this article should not be presented in its proper order, and instead have shuffled around the example folders

So the heroes have finally defeated the villain and stripped him of the source of his power. All that is left is to make sure its power can never again be used for evil purposes. So obviously, at least to the heroes, the most effective means to accomplish this is by chucking the object off into the distance. ...Instead of just, ya'know, destroying it right then and there, keeping it with them or, if either proves hazardous, hiding it somewhere only the heroes could find it In many cases, especially within children's cartoons, the villain himself is disposed of this way . By doing this, the heroes ignore the glaring fact that the Made of Iron villain can and inevitably will just land somewhere, dust himself off, and try yet again another day. Might as well though, because if the show takes place in North America, the probably underage heroes aren't even allowed to kill their enemies, and if they somehow do, the foe will no doubt find some way to come back . As for jail, please, it won't hold him for five minutes All in all, the action deliberately leaves a wide open window for the villain to return , and thus, the status quo is maintained Not to be confused with "Blind Idiot" Translation

Ah, the ghettos of fiction. We're all familiar with them : cartoons are for kids (and comic books are for slightly </ older kids), SpecFic is for nerds , romance novels (and soaps) are for single women and housewives , black shows are for black people , rap is for gangstas, classical music is for snobs, new media, especially</ video games , are for unproductive deviants , printed works are for people with one foot in the grave , etc In short, the

medium, and to a lesser extent the genre, define the target audience. Entire classes of works are "pigeonholed" into "target" demographics, and woe unto any fan who happens to fall one day, dollar, chromosome, or lateral inch outside of these appointed bounds. Some works surrender and even embrace these holes, falling into unoriginality and Flanderization , so long as the money keeps rolling in . Then, you get something which blows away the conventional notions. A work that dares to challenge a genre's or medium's natural order , or even, dare we say it, threatens to expand its demographic ! </ (Even if it's to retain viewers it already had .) If it changes perceptions of the genre as a whole, then it could even be a Genre Turning Point Often a work that breaks out of the ghetto (and its fans) will attract its own hatedom due to outsiders rigidly holding the ghetto lines while upholding their personal "definitions" of " True Art "; along with the genre's/medium's "normal" target audience saying that the work makes their (ghetto-compliant/sustaining) favorites "look bad" and/or employing No True Scotsman . In the case of a deviation to a long-running franchise , They Changed It, Now It Sucks! often comes into play Remember ghettos are created by society, convention, advertisers and critics and have no bearing on how artists actually work. Artists actually draw influences from a wide variety of references and don't see their work in the way categories are created. Thanks to changes in society, evolving trends and growing sophistication (and vice versa) of audiences, this is very much a Cyclical Trope and subject to Popularity Polynomial . Contrast It's Popular, Now It Sucks! , wherein a work/creator who previously challenged established conventions accepts them to grow its fanbase or pocketbook

A strange situation where a character experiences a great deal of time relative to everyone else yet does not act any different Bob's particular Quest has driven him to use Time Travel , or perhaps travel to a world where time runs Year Inside, Hour Outside . After a long and arduous quest — and we mean long</ and arduous, as in months, years, perhaps even decades or centuries , he returns home. And... goes right back to being Bob. He might not have visibly aged; his friends, just as he left them, are still talking about their everyday concerns instead of the fate of the universe; his house may still be there where in the future was a barren ruin, he should experience some shock. Even if he doesn't have memories of a Bad Future , living for a few extra decades, regardless of whether the world is different, should lead to a very noticeable change in personality. But Bob's personality just about never does, except in the most trivial way A case of Status Quo Is God . Contrast Ripple Effect-Proof Memory . See Year Inside, Hour Outside , "Groundhog Day" Loop , and The Slow Path for causes of the extra time

A subtrope of Artistic License – Military (or Artistic License – Law , for police settings) in which officers are shown performing tasks well below their pay grade. A high ranking officer may be shown commanding a much smaller unit than their Real Life counterparts, personally leading small unit patrols, or even acting in the role of an enlisted man. In extreme cases, everyone</ in a unit will be an officer, regardless of their actual duties. This trope may also be seen in works involving law enforcement, which may depict lieutenants, captains, or even

Da Chief personally conducting investigations and making arrests There are a number of reasons this trope may be invoked. It may be done to establish a high ranking officer as a Colonel Badass who isn't afraid to lead from the front. In works that feature Do Anything Soldiers (or if the main characters simply do everything) if one or more of their battlefield roles would be performed by an officer in Real Life , the characters will frequently be officers even if this is completely inappropriate for their other roles. If a character is of appropriate rank initially but is later promoted into this trope, the creator may be trying to avoid Limited Advancement Opportunities while otherwise maintaining the status quo. It's also likely in works featuring a Suspiciously Small Army Contrast You Are in Command Now , the direct inverse of this trope, where someone of lower</ rank is forced to take charge. Compare and contrast the Overranked Soldier , who may be in a position befitting his or her rank, but is unqualified (or simply too young) to realistically hold either. Contrast Armchair Military , when high ranking officers are a little too</ far behind the lines. Can be related to Dude, Where's My Respect? , if the officer in question keeps being assigned menial tasks by his superiors, despite having been promoted. For "Outjobbing your Rank" see Almighty Janitor . When royalty</ are on the front lines, see Royals Who Actually Do Something See Common Military Units for an idea of the sizes of units Real Life officers typically command, though this trope may also sometimes be Truth in Television — see below Gaunt's Ghosts </ has Colonel-Commissar Gaunt leading large-scale operations from the front (a Commissar's job), given the rank of colonel to facilitate the paperwork In the Honor Harrington </ stories, the Solarian League Navy has ridiculous rank inflation. One eight-ship squadron is commanded by a full admiral, with a staff comprising a vice admiral, two rear admirals, and a captain. The marine major taking their surrender thinks, "At last, someone who isn't</ an admiral!" Later, Fleet Admiral Filareta notes that his staff astrogator is an admiral; it's a responsible job, but no way does it need flag rank Schlock Mercenary </: While the comic is usually good about correctly utilizing officers and ranks, the rather loose nature of Tagon's Toughs, and the fact that the vast majority of the officers were promoted from infantry , means that it's not uncommon to see captains and commanders leading individual squads. This leads to a small bit of friction in the "Mandatory Failure" story, where Kevyn tells Elf that she shouldn't have been the first one on an enemy ship, since that's what her grunts are for

A Time Bomb , superweapon, crashed car, etc. is about to explode. The heroes run as fast as they can and try to leap behind shelter, just as it explodes. Often features a cool shot of the heroes diving towards the camera Virtually every action series has had its share of these moments. In fact, it is easy to imagine that some remote civilization studying Earth through its television transmissions might conclude that Earthlings running causes</ Stuff Blowing Up , not the other way around Can also be done with cars, airplanes, spaceships, snowmobiles, mine carts... anything that moves, or doesn't, for that matter Though all are related to Non-Fatal Explosions , there are also two more directly related tropes . One is the Rocket Jump : an extremely hard-ass character may exploit the power of the blast as it propels them through the air to reach places they wouldn't normally have been able to. The

second is combining this with Out of the Inferno : for a moment it seems that the characters won't make it as the flames from the explosion reach and engulf them... then they come bursting through the flames, slightly charred but unharmed On a rare occasion, the characters will be made to look like fools by there being no explosion after diving into the dust (toward the camera). This will be followed by a four-count beat, to share an embarrassed moment, which will be punctuated by an explosion The badass often showcases just how cool he is by always calmly walking away from the building or car, and perhaps casually putting on his Cool Shades or lighting up a cigarette just as the explosion goes off. Badass characters don't have to run unless it's darned</ important Examined exhaustively at the website If this is performed by jumping into a body of water, see Dive Under the Explosion . For when a character doesn't outrun the fireball and walks calmly out of and away from the fire anyway , see Out of the Inferno . See also Convection Schmonvection . For when a character gets a head-start on the fireball, see Don't Ask, Just Run . In Real Life , the accepted reaction to an approaching fireball is to either jump down a deep hole and pull it in after you, or bend over and kiss your posterior goodbye. See also Bomb Disposal when this is done intentionally The fireball is often depicted in Slow Motion Contrast Riding into the Sunset . See also Advancing Wall of Doom for a slower-paced version of this trope

Alice makes a humorous observation, and waits for Bob to laugh. Instead, Bob offers a simple explanation. If Alice is present, she immediately realizes that the joke is ruined. She may be crestfallen, or angry, or simply say "Huh, I never thought of that." If not (for example, if Bob is watching Alice on TV) his friends may laugh harder at his response than the initial joke. If Alice (or Bob's friends) don't agree that the joke is ruined, it's not this trope. Bob may be a Straw Vulcan , have been Sidetracked by the Analogy , think the joke is Dude, Not Funny! (possibly because they've heard it way too often), or just not get it. If Alice was already well aware of Bob's explanation but was Comically Missing the Point , she may respond with " Don't Explain the Joke ". This is the opposite of an inside joke, where all participants have knowledge that the general public doesn't. In an outside joke (to be funny), none of the participants have knowledge that the general public does. Overlaps with Rhetorical Question Blunder if the joke was phrased as a question. Alice can do this to herself, in a strange form of Oh, Wait! — this is often an example of Anti-Humor . When a work causes this reaction from the audience, it's a Shallow Parody or Redundant Parody . Compare So Was X . Contrast In-Joke . No Real Life Examples, Please! . This trope is about Bob's reaction to the joke, not the audience's. If you want to complain about jokes you don't like , Take It to the Forums or a review. Literature Live-Action TV

Webcomics b Original stern Animation

Just because the car's locked doesn't mean you can't go along for the ride. Just hop on top or side of the car, and hold on. This is popular in many cop shows; our hero can be counted on to leap to the roof of a speeding getaway car at least once per season. Alternatively, he can jump onto the hood and glare at the driver while said driver tries to shake him off. Larger vehicles can also be used (particularly popular version is jumping onto a tall vehicle from an overhead bridge) — if it's a truck, for example, our

Hero will often need to climb forward to the cab somehow. (You can also climb about on trains , but they're a bit different since they don't swerve about.) Busted by the MythBusters , who found it much less safe in reality than on the screen. For example, in Real Life it is incredibly difficult to hold on to a car even at low speeds, and at high speeds it is impossible to do so. It may be slightly easier to hold on to a train, but all of your effort has to be spent in just</ holding on and</ you have to be on top of a car that isn't rounded or containing hot liquids — plus, tunnels can cut too close to the roof for a standing person to survive passing through one. Aircraft — at least when we're talking jets, spacecraft, or anything that is flying at a sufficiently high speed and altitude — are literally impossible to stand on the outside of, and doing so is certain death. Two variant forms have become outdated with modern car designs, but may be seen in older media. For a stealth Outside Ride, jump onto the back bumper and hold on tight (the technical term is Skitching). This is often a convenient way for the hero to get to the villain's hideout. A more obvious method would be to stand on the running board, though if the driver's not paying attention you might be able to crouch underneath the window before he sees you. See also: Hood Hopping , Traintop Battle , Underside Ride . Punk in the Trunk (the second option) is a more modern version of riding on the back bumper, which isn't to say characters in older works can't do it. May precede a High Speed Hijacking .

Whenever someone is strapped for time and needs to cook something, they will assume that the time and temperature listed in the recipe are inversely proportional; logic a Straw Vulcan would be proud of. For example, they'll assume a cake that needs 30 minutes at 200° Celsius (or 392° Fahrenheit) to bake can be baked just as well in 15 minutes at 400° Celsius (or 752° Fahrenheit), never mind that a normal kitchen oven won't go that high. Expect there to be flames, plenty of smoke, and for the Lethal Chef to pull out something resembling a forest fire from the oven. Or occasionally, a fireball that destroys the entire house, with a perfectly baked pie in the middle of the debris. Various examples show the oven dial go up to thousands of degrees. One has to wonder why the oven had a dial that could go up that high if it wasn't meant to be used that way . Hilarity Ensues . A subset of the horrible cooking skills of a Lethal Chef . This has probably been Truth in Television for some of us at one point in our lives . Also, notice that some processes do</ behave according to Oven Logic; milk pasteurization, for example, can be done in 5 minutes at 70°C, or in less than 3 seconds at 150°C — though again, the reduction in time is disproportionate to the increase in temperature (and doing it faster changes the taste by caramelizing the milk sugar). The biggest mistake most people make is believing that degrees is proportional to temperature, ie going from 100 to 200 degrees results in twice as much heat. This is not true because neither 0 degrees Celsius nor Fahrenheit indicates zero energy, or absolute zero. To find out how much you have to increase temperature by to actually get double thermal energy, you need to use Kelvin or Rankine. That said, the rules in cooking (and chemistry) are still a bit more complicated than heat x time That's not even counting the effect on chemical kinetics, which will greatly increase the rate of reactions such as oxidation (burning) at high temperatures. (The general rule of thumb is that every 10°C increase around room temperature roughly doubles the rate.) This trope is also a type of Logical Fallacy . Not (directly) related to Fridge Logic . The more extreme cases will require our chef to use

Tim Taylor Technology . See also Mismeasurement , contrast Instant Roast .

A popular strategy to destroy the Big Bad 's big doomsday device is to overwork it until it blows up. Overclocking any Applied Phlebotinum , especially the evil kind, won't just shut it down but will cause it to explode beyond repair. But in this case, the "explosive" part of Explosive Overclocking is not the risk but the goal. Then your job is done, since, of course, there are No Plans, No Prototype, No Backup A common way to achieve this seems to be to hit every button and pull every lever within reach as fast as you can The idea could be connected to how a computer will "crash" (that is to say, shut down or freeze) if you try to run too many applications at once. Of course, in the real world, a computer crash</ is very different from a car crash, and a computer - or any machine, really - is very unlikely to explode when it crashes . A closer analogy might be how a fuse will blow from using too much electricity on one circuit, but we have precautions to take for that in the real world. You'd think the Big Bad would be smart enough to take the same precautions for his weapons, but then destroying them wouldn't look half as cool Sometimes given a Hand Wave involving some Technobabble about "overriding the safety protocols " (which will usually entail typing the word 'override' into a nearby console , and if that doesn't work, typing it harder</) The opposite of Tim Taylor Technology . Goes hand-in-hand with Destruction Equals Off-Switch . Compare Logic Bomb and Going to Give It More Energy . Compare and contrast Pent-Up Power Peril when the lack</ of usage creates similar results. Next step up from Self-Destruct Mechanism Not to be confused with Overcranking an Attack Shot , a.k.a. " Snyder-vision " Somewhat similar to real life which increases processing speed at the cost of lifespan (although too much overclocking can achieve the same result as this trope)

A character makes an order in a restaurant or cafe that is so ludicrously complicated it'll be a wonder if the waiter/barista/cashier can remember half of it. This is frequently used to show pretentiousness on the part of the one making the order, though Rule of Funny is often just as likely an explanation This is done particularly often with espresso beverages, custom cocktails, and food with overly-precise details, although incidents of the character ordering off the menu also count. It frequently involves Hash House Lingo and/or Sommelier Speak for extra convolution See also Must Have Caffeine , Drink-Based Characterization , and Real Men Take It Black . May be a trait of an Unsatisfiable Customer . Compare Complexity Addiction which has a similar theme, but with plans instead of food/drink. Compare and contrast Cordon Bleugh Chef when it's the chef that likes to be overcomplicated (and with often disastrous results)

Trope Overdosed is when a series uses many tropes. The inverse, when a trope applies to many different series, is an Overdosed Trope. If you want a real challenge, look for a work page that doesn't use a single one of these tropes Many of these tropes are

popular because they are used as a verbal shorthand (Squick , Oh, Crap! , etc.), and others are popular because they're more ways of discussing works than they are part of the work themselves (Nightmare Fuel , moments of awesome and funny). In any event, the only requirement to be included on this page is that a trope is referenced by at least 2,500 other pages, as listed in the "related" page The numbers given here are for rough estimation purposes only, since the pages will inevitably have changed since the trope was added or updated See Also: Omnipresent Tropes , Tropes Of Legend , Trope Overdosed . For tropes that attract a lot of potholes , see Pothole Magnet

In fiction, one character will dictate something to be written to another. However, something silly might happen, making the first say something not meant to be written, which the second will obliviously write The inverse of Reading the Stage Directions Out Loud Compare Repeat After Me , Literal-Minded , Realistic Diction Is Unrealistic

Getting someone's attention in this day and age is hard. One way to do it big, though, is with an airplane banner - a banner attached to an airplane that shows a message Named after Overly Long Gag , this is where the "gag" is that the "airplane banner" is "overly long" , such that they need a second airplane to complete the thought. The second banner is sometimes only one or two words long It's also possible to use this trope with paragraphs of skywriting This can overlap with Cue Card Pause

Described in a GEICO radio ad — the GEICO Gecko and the Boss read the banners as they go by. The Gecko thinks it's a bit much.

The Brothers Solomon</ has this gag, and wins for having the longest one ever. It goes beyond ridiculous, beyond Narm , and on into stupefied "I can't believe how long this is going on and on with redundant crap in an airline banner. This is stupid!". But, of course, the protagonists are clueless, and it is a comedy. It's an important part of plot twists before the finale.

The Night Court </ episode "Constitution" actually does it without an airplane. Bull puts up a "Welcome Home Roz" banner that runs the entire length to the courtroom: 18 floors</ .

Red and Rover</ comic.

Done in Wondermark </ strip, using a bird rather than an airplane.

Family Guy </ : Neil sends a message to Meg via airplane banner.

A gag that goes excessively far and beyond a tolerable length. The concept is that something happens repeatedly, to the point of boredom. Then it keeps going</, to the point where it, in theory, actually becomes funny again. Essentially, the sheer length of the gag becomes</ the gag. This is very difficult to pull off well — there has to be the sense that the characters are themselves helpless to end the gag, and as exasperated as the audience Most uses of Broken Record might end up becoming this It's sort of like Crosses the Line Twice , only boring instead of offensive Compare

Overly Long Name . Not to be confused with Overused Running Gag . May invoke the Repeat Cut . May be invoked by Rhyming List Contrast with Rapid-Fire Comedy , which is built on multiple jokes and gags with very short span and little or no setup Not to be confused with Overly long gag The serious version is Leave the Camera Running (or Ending Fatigue , if the prolongated section is the closure). An overly long gag with a lot of tension built up as an actual story is a "Shaggy Dog" Story . When Incredibly Long Note is played for laughs, it might reach this If the gag itself</ isn't overly long, but the distance between the setup and the payoff</ is, it's an Overly Preprepared Gag or Brick Joke for Democratic Alaska Senator Mike Gravel's 2008 presidential campaign consists of him staring into the camera for seventy seconds, dropping a rock into a pond, and then walking away for the last eighty seconds. has him lighting a campfire, followed by seven consecutive minutes of footage of the fire

A.k.a. Incredibly Long Name to Have to Try and Say . In the broadest sense, whenever a character has more than the usual (in the Anglosphere) first, middle, and last name, they are in possession of an Overly Long Name . Also included are people who have the right number of names, but one or more of them is absurdly long, for example Ulla Inga Hansen-Bensen-Janson-Tallen-Hallen-Svaden-Swanson in the remake of The Producers </. (This is actually just</ her first name. They " don't have the time " to hear her last name.) Can be used simply as a humor device, getting cheap laughs out of an absurd name; played to the extreme this would be a type of Overly Long Gag , being so long as to be tedious and thus deriving its humor; or it can be a non-joke to the audience because characters with strange names are expected in the type of show/book/planet/whatever, but cause the characters involved trouble as they try not to react to, or at least comment on, the oddity of the person's name. And if someone wanted to go after the said person, it would be a nightmare for them to recite their full name and jot it down, which makes murdering a person with a notebook not always a good idea. If the character is not from around here, it might be an example of As Long as It Sounds Foreign . If there is one normal name when all the others are are ridiculous, or vice versa, it can be Aerith and Bob . In all cases, one of these makes for a good Unpronounceable Alias . A variation exists with Hispanic characters, for whom having at least four names is the norm. For these characters, the long name may be brandished as a funny part of the culture. Truth in Television : There are too many actual people, places and things with absurdly long names - it's really better if you just go to the , where there is a whole article dedicated to this. Doesn't that just simplify everything? Compare Embarrassing Middle Name , Overly Long Gag , Some Call Me "Tim" , The Unpronounceable , Sesquipedalian Smith , and Try to Fit THAT on a Business Card! . Often results in Fun with Acronyms and its sub-trope Shoehorned Acronym . Related to Long Title . Contrast One-Letter Name . A Name That Unfolds Like Lotus Blossom will almost always be overly long.

A character freaks out about something, and screams . And screams. And screams</, to the point where it becomes hilarious. (Although, sometimes it goes even longer than that.) Sometimes, the character takes a deep breath to continue screaming, and even comments something like " Why do they make buildings this tall? Everyone knows

you should be able to fall to your death in the same scream !" This is almost always intentionally Played for Laughs ; unintentionally hilarious long screams qualify as Narm . May result in an Inopportune Voice Cracking if the tone can't be sustained. May overlap with The Scream , Big "NO!" , Heroic BSoD or Faux Horrific . Reactive Continuous Scream is a subtrope.

This trope covers situations where something seems to be highly praised, and it's relative to an extremely small — or intrinsically awful — group (often a group of one), rendering the praise meaningless. Sometimes the intent is for the praise to be taken seriously (in which case it becomes a version of the Sharpshooter Fallacy), but the more frequent implication is that there isn't any larger category relative to which it can apply, making it a Stealth Insult (if the backhandedness of the compliment is not immediately obvious) or a form of Damned by Faint Praise (if it is). Sometimes the joke is that, even in such an incredibly narrow category, the thing being discussed still</ isn't first. Creators may describe their own works this way as a form of humorous Self-Deprecation ; it can also be a way to imply that a work, while bad, at least has a unique premise — it's better than any other of its type because there is</ no other. Sometimes it derives additional humor from the recipient taking it as a genuine compliment, either because they're dumb or because we the audience know something they do not . The stock piece of dialogue that fits this trope goes something like: Contrast Mathematician's Answer , which is equally meaningless because it's too broad, and Suspiciously Specific Denial , where the specificity is worrisome because of everything it doesn't cover. Compare Everything Except Most Things , Trivially Obvious , Damned by Faint Praise . Also compare the Low Count Gag ("Wow Alice, all your fans are out there!...All two of them.") See also Medal of Dishonor , which may be given out in cases like these. May figure in the plot of a Guinness Episode . The tagline of Ace Ventura: Pet Detective </ is "He's the best there is! (Actually, he's the only one there is.)."

Commonly referred to as "Flop sweat", this is when a character will break out into an excessive sweat when either nervous or scared. Another term for it is "sweating bullets". Can be associated with a character who is a Nervous Wreck or a Butt-Monkey . May sometimes be accompanied with a Loud Gulp , or as part of an Oh, Crap! moment. Truth in Television , especially for people with anxiety disorders. Might be caused by Perp Sweating . Contrast: Sweat Drop See also: Briffits and Squeans (where sweat is referred to as "Plewds")

Known in the entertainment industry as the Alphonse and Gaston Routine (named after the "Alphonse and Gaston" comic strip by Frederick Burr Opper), this is a comedy trope from the days of vaudeville . It's when two characters are overly polite to each other, often in a bumbling way and almost always done comically. Often these two will be of a lower class but wish to dress and act in an upper-class manner and therefore take things to extremes. Often one will offer the other his arm if they are walking somewhere together, especially someplace fancy. Almost Always Male , occasionally with Homoerotic Subtext Often this routine involves a door or gate the pair will need to walk through, each of them insisting the other goes first (and eventually they both do

simultaneously, and collide). The resulting deadlock is sometimes called a Canadian Standoff. This can also often lead to long lines of increasingly impatient and irritable people forming behind both characters who start urging them to get on with it. Occasionally the intent will be that neither really wants</ to proceed first, or at all, wanting his partner to endure whatever horrors might lie beyond the door first Since the comic strip originated in 1901 and was quickly also picked up in vaudeville routines, this trope is Older Than Television . In modern times, however, this has become a bit of a Forgotten Trope , though it still occasionally crops up Compare Politeness Judo , where this is being done as part of a passive-aggressive fight. May involve Outhumbling Each Other . Bantering Baddie Buddies often combine this with being Faux Affably Evil . See also Japanese Politeness . Inverted Trope of Vitriolic Best Buds

These are jokes that require so much setup and work behind the scenes that you would wonder why the effort was made, but you don't because it's just that funny Compare Friendly Scheming . Also compare "Shaggy Dog" Story , which is a long story or joke that seems like it will lead somewhere but doesn't; Brick Joke , which is a gag or plot element that simply comes back much later; and Henway , which is a joke specifically set up to "trap" the listener. The end result may get a Lame Pun Reaction . If the joke is specifically a short story with a pun at the end, it's a feghoot . If the punchline never comes or isn't necessarily humorous , see Anti-Humor See also Disaster Dominoes , which when Played for Laughs is a slapstick gag which needs a lot of events occurring in succession

In Real Life , wars are a messy and tiresome affair. Hostilities can escalate for months long before the sides even exchange the first shots. Even the best war machine in the world will still take its time securing the enemy lands, trench by trench, if not because of fierce resistance on both sides of the frontlines , then because marching in too fast will stretch the lines of communications and supply too thin for normal operations. In fiction, however, the dramatic rules require the invaders to appear larger than life, to establish them as a credible threat unbeatable by normal means. The simplest way to emphasize the superiority of the invader's military might and technology is to establish that they completed their takeover before the invaded state even knew they were there . The survivors will later refer to the invasion as the " One Week War ", or the like. Alien Invasions often receive this treatment but it is not limited to them; for instance, rogue AIs usually take nanoseconds of processing time to peg humans as the enemy and launch a Robot War . However, it is almost always some fantastic element that allows for this trope to occur and bypass the standard logistical problems . A large-scale subtrope of Curb-Stomp Battle . Often involves Easy Logistics . A common setup for Back from the Brink scenario. Home by Christmas would be when someone is expecting</ this kind of war, only for things to turn out much less than expected. Compare also Easily Conquered World , wherein the defenders fail to offer any resistance to much weaker invaders. Note that the title shouldn't be understood literally: to qualify, conquests don't have to take place within a single night; any improbably quick conquest (relative to the size of captured territory) qualifies.</ Anime & Manga Comic Books Fanworks Film Literature Live-Action TV Video Games Web Video Western

Animation Real Life

You know this guy. You might even be</ this guy if you're a father. Well aware of the sex-obsessed horndogs that teenage guys can be —probably because he used to be </ one—the Overprotective Dad wants to protect his daughter from being exploited. Unfortunately, he tends to take it all too far, holding the Eight Simple Rules For Dating My Teenaged Daughter as his personal bible. Once he gets over his denial that his baby is all grown up, the Overprotective Dad becomes convinced that her smiling at a boy, let alone kissing or dating, is half a step away from her having sex and getting pregnant. Parties are always an orgy if she is going. The Overprotective Dad tends to object to his daughter's fashion choices for similar reasons. It's not just a matter of a father/daughter variation on My Girl Is Not a Slut ; it's that he doesn't trust guys</ around her, and he's probably also displacing some angst about "losing" his little girl . Unfortunately for the poor young man who eventually attracts her interest, the Overprotective Dad isn't going to be inclined to give him an inch—he will receive No Sympathy for any chaos that results from their courtship, and even the slightest or most obvious misunderstanding or misconception about the man will have the Overprotective Dad warning him to "stay away from her!" On some occasions, it's obvious to everyone that the Overprotective Dad is merely using that as a (fairly weak) excuse to keep the suitor away from his baby girl. In the rare event that he finds a suitor he can tolerate, he will still threaten the boy with dire consequences If You Ever Do Anything to Hurt Her... . Oddly, we never seem to hear from the boys' parents, who, one assumes, might object to their sons being threatened with violence. This trope is especially common in stereotypes of the Deep South , where every sweet Georgia Peach has a very large (usually fat, hairy, and drunk) father in a white tank top that usually keeps a rifle or shotgun with him at all times. If Adults Are Useless , then he'll probably just be comic relief as he huffs and puffs ineffectually . Otherwise, he may serve as a Parent ex Machina to deliver the message that you Can't Get Away with Nuthin' and ground his daughter at some point. Somewhere between those two is the Overprotective Dad who ends up enforcing a Shotgun Wedding after the condom breaks . See also Twerp Sweating . Compare My Sister Is Off-Limits! . Spear Counterpart of My Beloved Smother . Contrast Fantasy-Forbidding Father . Also see Meddling Parents . Depending on how this is played and how much you want to dissect it, this trope can carry all of the same problems as My Girl Is Not a Slut and may imply that the woman in question is less an agent of her own destiny than her male relatives or, worse yet, that she's somehow their property. The concept can also easily become even Squickier with a Pervert Dad . Ironically, if the father has a son, he may applaud or encourage him if he treats girls in the exact way he doesn't want other guys to treat his own daughter. Gender Flips are less common, i.e. fathers more concerned about the girls/women their sons date. This is due to several double standards , such as Men Are Tough , All Men Are Perverts , and A Man Is Always Eager . Cougars are usually jokes instead of threats; men are subjected to pedo hunts . Overprotective moms</ are also very rare, typically not being all that concerned with who their kid of either sex dates. At worst they'll be My Beloved Smother , who's more likely to nag and nitpick the significant other, usually a woman, to death for not being good enough for her son/kid which isn't the same as threatening to kill

somebody for talking to your daughter. They're also just as, if not more likely, to wait until after </ the wedding before they start antagonizing their child's significant other. This character may or may not think he's being a Papa Wolf , but this is a different trope. If it belongs in the latter then don't put it here. The same person can be both at different times but those times are different</. However, this trope might overlap with Knight Templar Parent if the dad goes to dangerous extremes in their overprotectiveness.

However, writers can take this too far. WAY too far. Over-ranked Soldier refers to a character whose rank is, quite simply, impossible for him to possess. The character's rank is so high, it breaks the audience's suspension of disbelief . While the creator might just mean to use the character's rank to show his importance to the work, it shows the creator did not research the plausibility of the character possessing said rank. This trope manifests in certain ways: One thing to note: this trope does not refer to rank outside of the traditional structure followed by most of the world's armed forces. Honorary ranks, ranks based on privilege, or self-granted ranks do not count. A nobleman given a high military rank because of his high status, as unfortunate as it might be, is completely plausible, as are the extremely young appointments made during revolutions, such as Napoleon Bonaparte, promoted from major to général de brigade</ (major-general) at age 25, or to the inflationary handing-out of ranks such as by the Confederate government during The American Civil War (before 1860, the highest rank carried by an American soldier was lieutenant-general (three stars). Jefferson Davis started appointing full generals (four stars) shortly after the first major battle of the war). This trope is specifically about characters in fiction, within traditional military structure, that have a rank way beyond the realm of logic and possibility. Generally speaking, senior members of the British Royal Family hold military rank and Regimental commands, but these are strictly honorary - the real business of command is done by trained professionals and the royals are figureheads. Junior royals are expected to serve as junior officers in the Armed forces, and here their responsibilities and duties are consistent with rank. Prince Charles, for instance, commanded a Royal Navy inshore ship, HMS Hunstanton. (His father commanded a destroyer, with some distinction, in World War II , but that was before he married into the Royal Family. He died a Lord High Admiral, but that was an honorary rank.) Prince Andrew was a helicopter pilot in the Falklands War and was a full-time military officer for over 20 years; their brother Prince Edward wimped out of Royal Marines officer training (indicating that some standards apply to Royals as to ordinary joes); the current Duke of Kent served for 20 years on active duty. But older royals are ceremonial figureheads, not active soldiers and sailors. For instance, King George VI had generals' rank, but no generals' duties, in World War II (though he had served as a junior naval officer in World War I). Contrast Almighty Janitor , who is Underranked. Typically leads to The Main Characters Do Everything .

On Star Wars Dark Times, a reddit based Star Wars roleplay, the bridge crew supervisor (and effective 3IC) of the ISD Evictus is a 6”4’, one eyed, one armed, 24 year old Lieutenant Commander named Calvin Tiberiusolis who can’t remember anything before 14 BBY.

So you're off to see the Honorary Uncle in New Jersey , and your flight leaves in 15 minutes. As you get to the terminal, you bend down to tie your shoe which has come undone. To your left, you hear someone scream something about a shoe bomb, and instants later, 20 security guards have dogpiled on you NFL style. Minutes later, you've been strip-searched and have to justify the fact that you have a pair of scissors in your carry-on bag. You have encountered the Overreacting Airport Security Depending on the media, you can pretty much guarantee that any instance of this will have someone show up with a handheld scanner, complete with the iconic chirping noise playing when in use In the wake of 9/11, airport security in the United States has been ramped up significantly, and while random luggage checks, X-ray machines, and Metal Detector Checkpoints have been routine for a while, some feel that it reached ridiculous levels when water bottles and nail clippers were banned from flights. Many feel security is too paranoid in the modern day, and as a result, tend to drive or take Amtrak instead. This trope combined with the arrival of High Speed Rail has also spelled the end of "commute" flights on many corridors in Europe and Asia This phenomenon has become infamous, and in fiction, it's almost always Played for Laughs and Exaggerated . May involve He's Got a Weapon! or Police Are Useless (see also Suicide by Cop), as well as the security having Skewed Priorities in particularly extreme cases Not to be confused with Overacting Airport Security

Where in a show or game that features ludicrously powerful people, a certain character or group of characters are overshadowed by their superior fellows and end up looking like plain crap, even though they are still very competent in comparison to your average Innocent Bystander Similar to Badass Normal , except they rarely get a chance to actually be badass and they are not always considered "normal" in the first place. If the creator is cognizant of this, expect a few rounds of Training from Hell to remedy this Can't Catch Up . Occasionally, they'll get their own storyline among 'real' normals, just to show how objectively badass they actually are. Unfortunately, Hard Work Hardly Works , so you can expect them to remain overshadowed throughout the show.. Of course, this makes sense for human characters playing second fiddle to someone superhuman, or even a god. Unless.. See also Muggle Power , Tough Act to Follow , and In the End, You Are on Your Own . Can cause Always Second Best , Always Someone Better , Stuck in Their Shadow , Sympathetic Inspector Antagonist . Normal Fish in a Tiny Pond may result if they end up somewhere where their ability is actually potent. Videogame gameplay version of this would be Sorting Algorithm of Weapon Effectiveness and Power Creep

There are some well-known works that gathered controversy over the years, and there are also famously controversial works in which the controversy, justified or not, would overshadow most other aspects. Which isn't to say that works in the latter category have no other redeeming factor, just that most people would know little else aside from the controversial aspects. Bad reviews alone do not make a controversial moment, and in fact some works can be well-regarded by critics and those who watched, read or played the work, and not all of the works listed here are either laughably bad or straight-up abominable . Plot-related twists are generally not what makes up the category either, even if such cases are subjective—if a plot twist qualifies, it is usually an extremely major twist that dramatically changes the story and</ greatly polarizes or

alienates the fanbase. The major qualifier is that the works would be known beyond the fans of a particular genre that there's little knowledge of some other parts of a work to the general public. See also Never Live It Down , Colbert Bump , Dancing Bear , Just Here for Godzilla , Even Nerds Have Standards , Mainstream Obscurity , Complaining About Shows You Don't Watch , Watch It for the Meme , Ruined Forever , Contractual Purity , Music Is Politics , Yoko Oh No , Cowboy BeBop at His Computer , Audience-Alienating Premise , Why Fandom Can't Have Nice Things , Misaimed Fandom , Serious Business , Poe's Law , Jumping the Shark , Tainted by the Preview , Role-Ending Misdemeanor , and Best Known for the Fanservice . Compare and contrast No Such Thing as Bad Publicity (when a certain work remains popular despite the protests from Moral Guardians and other controversies), Controversy-Proof Image (when a person is popular and still has a positive reputation despite their controversy), Vindicated by History (when a work which wasn't popular in the past/since the release becomes more liked over time), Condemned by History (when a work which was very popular in the past/since the release becomes more disliked over time), The New Rock & Roll (when a whole genre gets held under controversy), Bile Fascination (when an audience is drawn towards a work specifically because of their curiosity about the uproar surrounding it , which may overlap with this trope), Undermined by Reality (when a creator's Real Life behaviour alienates their fanbase because it directly contradicts their own work's Aesops , which is closely related to this trope), and Walking Spoiler (an In-Universe form of this trope, when a specific character or object is deeply associated with an important plot point within a work that makes it very difficult to talk about them without mentioning their contribution to the plot). Keep in mind that, despite how it is usually used , "controversial" is not the same thing as "offensive." You can have a completely family-friendly and non-political work that still provokes dissent, especially if the work is aiming for realism. Additionally, since most scandals and controversies tend to </not overshadow a work in the long run, only add examples if the controversy in question is still the main point of discussion about a work after at least a few months (six months to be absolutely safe). Finally, please be cautious when editing this page , and don't to use this page for complaining about shows or creators you don't like . </

The heroes are looking for something suspicious. Possibly a murderer They find him busy at work on his grisly deed, but he perks up and notices our heroes Bonus points if the murderer is having lunch in the process This is pretty much always shot from behind the murderer for dramatic reasons—it partially obscures the victim, lending ambiguity and tension to the scene and helping the audience's imagination to fill in the grisly details . May involve a Face-Revealing Turn Magic: The Gathering </ has the of Shadowmoor

Many anime are based on manga , or Japanese comics . While simply making the anime into a completely Alternate Continuity is common (especially if the manga has No Ending), more often the anime at least tries to follow the major plot points of the original manga. However, if a series is especially popular (and/or marketable), its anime version will begin before the manga even ends. Because of medium conventions, it takes longer for events to unfold in manga

than it does in anime — the average conversion being roughly 2 (weekly) manga chapters to make 1 anime episode — and this often means that before long an anime will simply run out of source material. While some manga series are published weekly (e.g., Shonen Magazine<//Sunday<//Jump</, etc), others are published on a monthly schedule (e.g., Magazine/Nakayoshi</, Shonen Ace</). However, most anime are aired weekly, which only makes it worse, especially for manga that have just started recently. The producers of the anime are then in a fix: they can't just wait for the creator to produce more material because they have a broadcast schedule to meet. Japanese shows are almost always broadcast solely as original episodes without re-runs, so no new episodes is akin to being cancelled. This is something that is frequently lost in translation outside of Japan, with the result being that, unlike Western shows, television shows aren't really made in the form of "seasons", with breaks written into the production schedule. They just keep going and going and going until they finish/get cancelled, or stop at a predesignated point. This is also why lots of anime are only 12/13 or 24/26 episodes long, because that's all they were scheduled for, regardless of popularity. However, there are shows that are starting to break this tradition by adopting the "seasons" model, such as My Hero Academia </ . Unless they work in close tandem with the writer of the original manga – which is very rare since those writers are usually busy with the manga as is – the people in charge of the anime will have to come up with their own solution for this problem. The most common being that they just start making things up on their own, and create a unique plotline continuing from the point they caught up with the manga to base things on. Unfortunately, unpopular or unwelcome filler arcs and episodes may often be Misblamed as being the fault of the original creators, when in reality the creators almost always have nothing to do with the filler plot. Some fillers that were better received by fans are often cited as being opportunities to develop lesser characters (this helps a lot with anime that have a cast size near the size of the production staff). Another popular option is to just pad the episodes out and slow the story down . This was common in the Dragon Ball </ series, which unfortunately meant that many people thought the manga was exactly the same or that Akira Toriyama's writing was at fault, when in reality the pace of the anime was out of his hands . Finally, the writers can choose to just diverge from the manga entirely and do a Gecko Ending instead. An example of this is the 2003 adaptation of Fullmetal Alchemist </ , which was actually produced with this in mind due to the mangaka knowing that this trope was inevitable and feeling the other two options would ruin the story See also Wacky Wayside Tribe , Adaptation Expansion .

When the writers openly acknowledge that a Running Gag has run its due course, even as they are hauling it out again— gain— gain— gain— * WHACK

There we go. Anyhow, the use of a Running Gag is generally constrained over the course of one episode. But there are some jokes that the writers thought are just so funny that they should be used in another episode , and another, and another</ and another</. Even if it isn't Once per Episode , it's still squeezed into the series wherever they see fit— fit— fit— fit— fit— Okay. After a while, though, the writers will come to realize that the bit has started to peter out. Then one can be sure to start

seeing plenty of Lampshade Hanging and heavy subversion in the effort to keep the joke fresh, or tolerated. Once that</ wears thin, one can expect the bit to be dropped like a Christmas ham— ham— ham— ham— ham— Okay, that joke's really</ wearing thin. Before we continue, let's get that audio equipment fixed. One hour later....</ There, fixed. Anyhow, for this to be a trope, examples should not</ be subjective. They should be based on whether the writers have reacted to its overuse (lampshaded or used it less), rather than just a feeling that the gag has been used too much. The inevitable fate of many a comedy Catchphrase . Commonly confused with Overly Long Gag , which is when a single gag is stretched out for an irritatingly long time. That said, for any joke, good or bad, enough repetition can make people decide it's an Overused Running Gag. The next step after this is Running Gagged , where the joke is terminated with extreme prejudice, once and for all. Or until they bring it back. Compare Discredited Meme , which this often leads to— to— to— to— to— Okay, if it does that again, that audio equipment is gonna get a dose of C-4 . Note: This is for In-Universe Examples Only . Do not use this trope to Complain About Running Gags You Don't Like .

Animals, for the most part, don't typically talk. Despite this, one of the animals that comes closest to participating in a coherent conversation (not counting parrots) is the owl, its call of "hoo" being often mistaken for the owl asking "Who?" in English The confusion can also happen in French-language works and translations, except the "hoo" sounds like " Où ?</" ("Where?") instead. Dutch-language works and translations understand the "hoo" as "Hoe?</ " ("How?") A subtrope of Who's on First? . Compare Animal Species Accent and Pokémon Speak

Common Stock Phrases when someone suffers Amusing Injuries . Sometimes invokes Inherently Funny Words for added funny, a common one being " spleen ". There's also something amusingly askew about people's surprising level of biological accuracy when they're in pain. This can happen during fight scenes when someone targets a specific body part or even if the person bangs his head on something by accident . When this happens to someone's hand, expect some version of "Ow! That's my X'ing hand !", where X is some Overly Narrow Activity — ideally, one only that character engages in. See also Not in the Face! and * Crack! "Oh, My Back!"

It's a tiebreaker in the game that is being played, and it's up to the main character to score the winning point to win. He shoots, he scores!... Into his own goal A trope that sometimes occurs in any kind of sports genre where a character is given a chance to be a superstar for their own team, only for them to blow it so hard that they score in their own team's goal. It usually happens if the character is a Butt-Monkey , The Ditz , or an Idiot Hero within their own series that they accidentally do this This trope actually does happen in real life in many sports. It is what's known as an "Own Goal" and may occur near goals in melees where a player will accidentally score on their own goal from the ball ricocheting into it. Other factors may be from disorientation where it messes with the character's observational skills Usually Played for Laughs .

Subtrope of Nice Job Breaking It, Hero! . An example of Epic Fail . Related to Yank the Dog's Chain and may lead to a Downer Ending

When a character waits for someone or thinks about something really important to them, they will normally pace around the room while doing so. Maybe they will walk back and forth in a straight line, or maybe they will walk in a circle. That's normal But some characters tend to really</ like doing it. They walk along the same path so much that they actually wear down the floor, and if left to pace long enough, you might find them in a literal trench made by their own feet. Hopefully the plot might call them before they end up in China This is normally a comedy trope to show that the character has been thinking about their problem so much and concentrating so hard that they haven't noticed they have dug themselves into a hole

Pacing is critical to a good story. The writers' decisions not only on what happens, but when</ it happens and how quickly events transpire can determine whether your reader or viewer is going to make it to the end of the tale or give up in frustration. An even pace throughout the whole story is rarely effective, unless you're writing a Slice of Life , where the steadiness and ambling nature of the pacing is an asset. In most other genres, though, that same steadiness kills any dramatic tension, so the writer will make decisions on when they speed up the action to further the plot, and when they slow down to give their audience a breather. It can be tricky to get those choices right, however. Often, the audience will be faced with a glut of action (where they can't easily keep track of what's happening) or long stretches of time where it seems as though nothing's</ happening. The results are Pacing Problems, where the general feeling is that more sentences here and fewer there could have improved the whole book. However, Pacing Problems are generally one of the more forgivable issues a story can have. Very few of them will render a work automatically unwatchable or unreadable, unless the writer has really</ screwed up their timing. Exposition is closely tied to pacing. The audience needs to know what's going on and why, but explaining all this can make them bored or confused Show, Don't Tell might help get more exposition across while avoiding pacing problems, but if everything</ is shown through Flash Backs , that can be just as tiresome as hearing it all from Mr. Exposition . Most people recommend at least getting through the beginning of a story before you give up on it, since perhaps the writer themselves was just getting into the swing of things...but a clumsy ending is much harder to stomach. Thus, Pacing Problems are split up into the points they occur in the timeline:

Intro Dump : Altogether too much information thrown at the reader at once in a big, ugly blob. : Arc Fatigue : When there's just that one subplot, arc, or story that just. won't</, while all you want to do is get it over with and get back to the real plot. Often a case involving a Romantic Plot Tumor (characters would rather develop a romantic subplot than help save the world or stop the villain).

Cosmic Deadline : When the reader is hit with a glut of action (usually with a helping of Deus ex Machina) right at the end of the tale. Any dangling plot threads are solved here or totally forgotten about.

Our lovable protagonist flies right into the machine! The machine

shakes violently and makes strange sounds, but doesn't break from the strange input. Instead the packing machine now packs the hero into a package of Protagonist Cereal! Usually, the package's design will change through the power of Rule of Funny to reflect the unexpected contents. Compare Human Mail , where the character is (usually) voluntarily boxed up to be shipped to another location.

Alternatively, they do try their best to say what needs to be said, but the assignment or whatever requires more words/paper to be used What's their solution? Padding the Paper, of course! This is any tactic used to make a short document longer. It could involve writing or typing in a very large font, drawing pictures (sometimes to exploit the saying "a picture is worth a thousand words"), or adding extra words , like adjectives, adverbs, and "very"s (if they repeat "very" many times, it overlaps with Department of Redundancy Department). Sometimes, they will even add the words "The End" to the end of their paper to up the word count to 100 (or whatever the target count is) Usually, whoever receives the paper will be none too pleased, and if it's a teacher, they'll tend to give the student a C, D or even an F or an F-- . Usually Played for Laughs . See also Loophole Abuse and Exact Words which this can cover, and In-Universe Factoid Failure for another way to fail at an essay. The paper in question might be a Last Minute Project . Can overlap with Laborious Laziness if it takes so much time to pad it out that they could've actually studied, and it might be a Completely Off-Topic Report , and believe it or not, this is, in fact, Truth in Television , especially in college. Sometimes it works out surprisingly well. Other times...not so much

Nothing better to whip up some outrage in your story than making the bad guy a child molester. More cynical works about this trope will often note that getting people whipped up into a mob-frenzy — over any subject, but particularly one as emotive and genuinely shocking as this — can be a very good way to distract and manipulate them.

When a trope launches without a lot of examples, it may not get sorted right away. However, tropes grow , and when they do, a previously not-all-that-problematic block of examples can turn into an enormous thread mush of video games, TV shows, movies, commercials, Earthbound </ sprite comics that tanked after 7 strips , and what have you. These articles have reached that state. If you have some spare time and feel like doing a good deed, please go to these pages and sort their examples. There are 4 ways this is usually done. You can enter the media categories using the small caps font [[AC: (text)]], use !!Headings, make a new subpage, or you can create folders for the categories. Simply cut and paste examples into their proper categories, and then cut out those category links with no examples. It keeps things looking tidy. If you can't do them all, even partial sorting is a start. A note on headers: Folder titles no longer produce Wiki Words , even if they're used. Wiki Words in small caps headers are OK. And, of course, if you find a completely or partially unsorted page, add it </

Useful Notes pages without examples:

The gross over-simplification of the intricate network of biochemical systems that make up the human body in the interests of proving that one's product is the best at relieving some bodily discomfort Usually seen as an animation depicting the sole source of said discomfort as a throbbing or jiggling shape in the head or some other region of the body. This is accompanied by an animation of the product being administered, heading straight for the discomfort — and only there — and promptly eliminating it within seconds Related to the advertising use of Ghost in the Machine , but without the anthropomorphism. Pain Centers are impersonal components of humans rather than miniature individuals of malign purpose

Pain is funny. A lot of pain is funnier. Humiliating pain is the best of all So nothing can be funnier than watching a man getting his body hair waxed, especially if he screams, yells, or swears while the strips are pulled off. Though this trope can still work and be funny with both genders (say, a woman tolerating a leg waxing when she's not used to it), it's generally funnier with a man, especially if he Screams Like a Little Girl . For one, waxing Bob's bare chest or back can invoke Naked People Are Funny and</ be shown entirely on screen (can't exactly do the same with Alice's bikini wax), plus it's amusing to think of a man going into hysterics over something that women endure without complaint

In order to shapeshift , every part of your body would have to twist and contort. Typically, it’s not acknowledged that would hurt...a lot. In most media, Shapeshifting is done quickly and without undue pain for the shifter. But that isn't always the case. Sometimes, those who take on another form are really</ going to feel it. As the name implies, a Painful Transformation tends to be agonizing. While it probably won't leave permanent (physical) injuries, it's still not very pleasant. There are generally two ways transforming can be painful: Physical</ - The body is tortured during the transformation process. This is rather understandable, as one would imagine the bones and organs shifting around as having some sort of impact on the nerves. Expect a lot of Anatomy Agony tropes to come into play here. I.e. the character transforming might have their teeth fall out , their fingers convulsing violently , their feet stretching out , etc. If "painful" doesn't begin</ to describe the transformation, see Transformation Horror . Usually not associated with Voluntary Shapeshifting , where the user generally knows enough to pick a quick and painless method of transformation. It's much more common with Involuntary Shapeshifters and Baleful Polymorphs . That said, it can be great drama to have a shapeshifter know a transformation will be painful but chooses to do it anyway. Done properly, it is always Worth It .

A common Amusing Injury in cartoons is for a character who receives an injury to the posterior to jump impossibly high into the air, usually accompanied by a drawn-out YEEEEEOOOOOWWWWW! Occasionally happens in live-action wacky comedy as well Though it was used in other cartoons, Looney Tunes </ is the one that most people recognize as the source of the popularity of this trope, as well as the reason that perhaps its most common method of execution is needle pricks to the hindquarters A character just jumping away from the source of pain is not this trope - the leap has to be something he or she never could have achieved if not for the

painful experience. Also, it doesn't have to involve needles or cactus spines or that sort of thing - it also often coincides with a Rump Roast or a Literal Ass-Kicking , or perhaps a Butt Biter . May cause secondary effects such as Right Out of My Clothes Contrast with Surprise Jump and Death Throws

One difficulty for training soldiers is to try recreating the conditions of a battlefield, because you don't want people to go into shock once they hear things whizzing past their head. You also don't want to be using live ammo to get them used to that sensation. So playing paintball is one of the few ways to recreate a battlefield scenario without all the messy carnage involved. In fiction this scenario is often used for those same purposes, creating a battlefield situation without the genuine worry of a character being killed. There are many different stories this situation can create: As with many things, those who are familiar with the game will likely be frustrated by the inaccuracies done, sometimes just in the name of Rule of Cool . Among these include: Mistakes are more excusable when it's not a regulation game (i.e. a bunch of dudes just throwing everything together for shits and giggles). While not as widely known in fiction much of the same format can be applied to airsoft , which is the use of small plastic BB's as ammo with both gun and ammunition being generally cheaper for an avid player. In even more extreme cases, typically played for laughs entirely, laser tag may also be used for the same purpose. This is Truth in Television , as military and law enforcement use special "Simunition" rounds for training that are fired from an actual gun, while still being relatively safe to use. A number of paintball guns are designed to look, feel and have the same heft as a regular firearm. In any case, skills and tactics used in paintball (regardless of equipment including the gun and headgear) translate rather well to an actual combat engagement.

If you're looking for something comfortable, sexy , aerodynamic, sexy , chic, and sexy for your characters to fight in, party in or just walk around in, look no further than skin-tight pants, preferably spandex or leather so that they can be shiny too Unless</ they're spandex, the "fight" part doesn't really work. Seriously. Female characters with nice legs and buttocks almost always feature a fanservice-heavy fighting style with lots of high kicks . Ask your local taekwondo coach to teach you some high kicks. Now put on some skin-tight leather or denim pants. Now do your high kicks. See the problem? That problem arises only if we're assuming our superwoman hasn't broken an ankle running about in stiletto heels or thrown herself to the ground from her own forward momentum , of course These are gold mines for having fanservice without looking too blatant and seeming hip at the same time: they're tight and shiny, which means that they show off every curve and contour of the wearer's body, and, in games, allow for heavy Jiggle Physics . Extra points if the wearer is wearing a top made out of the same material, covering all the fanservice bases These really became popular in the Seventies and Eighties . See also Most Common Superpower , as clothes like this are used to emphasize that See also Superheroes Wear Tights Full skintight bodysuits are a different trope altogether , as are cases when the outfit really is painted on . Form-Fitting Wardrobe is for when clothing clings like this but is made of materials that shouldn't Not to be confused with clothing that is literally painted onto the body like and

Artists who use traditional paint media in their work. This includes users of oils, watercolors, opaque, acrylics and other mediums See also Album Cover Designers , Cartoonists , Comic Book Creators , Illustrators , Mangaka , Photographers , Production Design , Sculptors and Webcomic Creators

Painting the Medium is modifying the presentation of a story in order to convey information about the story. A comic book might give a character special-looking Speech Bubbles that reflect on their personality. A TV show might change to black-and-white or sepia-tone during flashbacks. A video game might change its GUI to show a change in the player character or the setting By Painting the Medium, a creator turns a transparent tool—meant to show the work behind it—into a part of the work

Some of the most popular variants have become so conventional that we stop noticing them completely—for example, dialogue written in ALL CAPITAL LETTERS is shouted. Heck, even we do it (check the entries in Self-Demonstrating Article why not?) See also Rule of Perception . Unless the characters themselves remark or interact with the audio or visual effects, then it can't be concluded they occur within the setting, so they must only be presented to the audience's side of the fourth wall. The characters who do remark on these tropes may be uncommonly Medium Aware , or they may know that their particular universe is governed by metafictional laws, in which case the 'paint' isn't just on the medium, it's integrated into the text. Please note: This trope is 'Character interacts with the pages of the book/panels of the comic/film camera/suitable alternative for their story'—that trope is Medium Awareness . This trope is 'The setup, layout or presentation of the book/comic/film/whatever is changed to reflect a change in the characters' situation'. Please don't put incorrect examples on pages they shouldn't be on, thank you. Splatter on the camera lens may be acceptable as a way of showing just how much rain/blood/liquid is flying around the scene at that point.

In the course of a Cruel and Unusual Death or even when it's just that Everybody Was Kung-Fu Fighting , things get messy. And the things that suffer most are the buildings (inside and out) in town that get covered in everyone's blood. It's usually also the sign of a particularly violent person walking around just doing what they do best . Someone may help the job along by leaving a Bloody Handprint . High-Pressure Blood could also do the trick, as well as a victim dealing with a gaping head wound . Particularly shown when a director takes creative liberties on death scenes If a hero comes running back home only to find their family and friends used this way, it may lead to a Heroic BSoD Usually goes well with Gorn with a side of Ludicrous Gibs for in-your-face action. Contrast Bloodless Carnage Not to be confused with Paint the Index Red

If a show features two dumb or ditzy characters, there are high chances they will be paired together in a romantic relationship, often for comedic reasons or because Strange Minds Think Alike Sometimes it happens because the token dumb character needs a love interest, so why not introduce a possible love interest who is just as dumb or even dumber than him? Hilarity Ensues . Very

often, the two token idiots are minor characters who are just there to form a funny Beta Couple . Sometimes it may happen that they break up very soon because they are Too Much Alike Sub-Trope of Birds of a Feather . The obvious inversion is Pair the Smart Ones

If a show features two highly intelligent characters of similar age and compatible sexual orientation, chances are they'll end up together. Works particularly well if they're Teen Geniuses . An in-universe invocation of the Geeky Turn-On It's common for such relationships to start cleanly and quickly, avoiding Will They or Won't They? altogether, and proceed somewhat more smoothly than whatever other characters may be in a relationship, thus often turning them into a Beta Couple . Apparently, love doesn't</ make you dumb if you're a genius . There's some Truth in Television in this - Commonality Connection often makes relationships run more smoothly If the writers don't do it, the shippers will Subtrope of Birds of a Feather . Contrast Pair the Dumb Ones . See also Genius Breeding Act , which is where a government tries to force or motivate this

Charlie has an unrequited crush on Alice; meanwhile, Doris has been desperately trying to win over Bob's affections. However, Alice and Bob are the ones who ultimately end up getting together When Alice and Bob finally go from Unresolved Sexual Tension to Official Couple , Charlie and Doris are left in the cold. Still, both of them have experienced the pain of heartbreak and unrequited love — so why not hook them up together? They may not have any initial attraction to each other, but they can always hang out and reminisce about their similar failed romances, and somewhere along the way, they might just find mutual love with each other like their former partners have While it's nice to see Charlie and Doris get a happy ending of their own, this device can very easily reek of red string puppetry and make viewers suspect that the creator just paired them off to permanently get them out of the main couple's way Differs from No Loves Intersect in that the leftover pairings are not immediately obvious and the involved people are initially just part of the Love Dodecahedron . Results from Conservation of Detail , since many viewers (and some writers) simply wouldn't "buy" the spares getting over it by, say, dating outside the closed social circle of the cast to get away from the drama See Ship Mates for when the fandom does this in Fan Fic . Compare Sexual Karma , Lonely Together , Beta Couple , Everyone Must Be Paired (where the majority of the cast ends up with a love interest, whether or not they had been involved in the Love Dodecahedron). If the 'spares' were originally after the same love interest, see Pair the Suitors

In which a Love Triangle results in the two suitors, who had previously been competing over the same person, developing romantic feelings for each other instead. Might happen in a Harem Genre romance, if two of the leftover suitors end up together At least one character in the love triangle needs to be gay or bisexual for this to work. For that reason, it's most commonly seen in works with lots of LGBT characters, such as Fanfiction , New Media , and the yaoi / yuri genre

In 2D game development, the creation of sprites is labor-intensive. One cost-effective method for increasing the variety of game characters is to reuse the same sprite, but using a different color palette This is seen in some platformers, but it most often appears in Role Playing Games and Fighting Games . In fighting games, this is commonly used to differentiate players using the same character, but it is also employed to create "new" characters. In the 8- and 16-bit era RPGs, it was pervasive: because of console limitations, disk and screen space were serious concerns. Palette Swapping was used to create a large variety of different enemies , often using different colors for various power levels . The most famous group of these are probably the Slimes, topped by the powerful Metal Slime , of Dragon Quest </ fame A more elaborate variation found in 3D games is the Texture Swap, where the textures on the character's uniform are changed, but the actual model used remains the same. While the concept is a little different, these are often called Palette Swaps anyway as they're still easier for developers to make than a full-fledged alternate costume or character. The Head Swap is another tried-and-true technique for making more out of less Massively Multiplayer Online Roleplaying Games (MMORPGs) are often set in a very large world that must be populated by monsters. Palette Swap to the rescue! By changing the size and textures used on the same model, the designers can make many types of monsters from only a few basic meshes. Sometimes even bosses are simply re-textured and are huge versions of weaker monsters Some fans of fighting games use the term to refer to characters that use the same animations and move sets, even if the characters look very different. Such characters are also known as "clones". Individual characters may also have a choice of several different colors or costumes (or both) Caution: Tropes Are Tools . Palette swapping may be a shortcut, but it does allow designers to create enemies that keep pace with the player's progress while still hinting that the enemies will follow a familiar pattern. This is especially important when a given area is intended to be fast-paced or lead up to a climax, and the designers don't want the player stopping constantly to study "new" enemies. Also, can be used for worldbuilding: using palette-swapped monsters can hint at connections between otherwise disparate locations. In the case of bosses it can be used to hint at relationships between creatures that might not otherwise be apparent to the player One of the best ways developers found to make this trope smarter and loved by the audience, is use it as references , usually to other aspects of a franchise , when videogames have sequels, characters can have their original clothes from previous games back, superheroes in videogames can have multiple uniforms from their history in comics, TV shows and movies, characters who were completely redesigned over the years or with reboots can get reverted to their original designs, characters who appeared or debuted in the early days of 3D graphics like the PlayStation 1 or the Nintendo 64 can get turned into their low-poly models from those times, and even pallete swaps that are just alternate colors can work as references, this trope can also be used to reference other unrelated works Palette Swaps are also used in Sprite Comics , where they're known as recolors. They are frequently looked down upon. Outside of videogames, nearly all toylines will reuse parts with some colors changed, as much of the cost of a new toy comes from making the steel injection mold used to create parts. This can sometimes result in most of

the line effectively being the same character with a different head and accessories, and is a major reason for the prevalence of the Environment-Specific Action Figure For a similar time-saving technique, see Ambidextrous Sprite . See also Colour-Coded for Your Convenience . Often associated with Moveset Clone in fighting games. For the level/world equivalent, see Remixed Level and Hard Mode Filler Palette swaps can be used to make Underground Monkeys , different colors to show different elemental affinities with Color-Coded Elements , Palette-Swapped Alien Food , or just a different variant

Maybe you live in a Fantasy Kitchen Sink . Perhaps you're the proud resident of a world with a Crossover Cosmology . Whatever the case, you need to put the kettle on the boil and biscuits on the tray because your pal Jesus , or your old buddy Krishna, is coming over for tea in twenty minutes This trope is about the tendency of fantastic fiction and ancient myth to have completely</ mundane mortals (often of the heroic variety) be on a First-Name Basis with the movers and shakers of the universe. The reasons vary: maybe the Physical God , Anthropomorphic Personification , or (surprisingly personable) Eldritch Abomination have taken a liking to the character for their own reasons. Maybe their portfolios coincide a great deal, so they share the same interests. Or maybe the god just wants to chill out with someone who's not depressed due to Time Dissonance , or because they don't identify with their vainglorious "equals" . Then again, if your hero is actively fighting Dracula and his minion The Grim Reaper across several games , it's only natural they get to get friendly after a while Whatever the case, the character has a direct line to the Powers That Be Though not limited exclusively to these types of characters, the following tend to attract deific attention most often: The Unfazed Everyman and Weirdness Magnet Compare God Was My Copilot , where this is used as The Reveal , and Reasoning with God , where higher powers can be talked to but only on extraordinary occasions. See also Did We Just Have Tea with Cthulhu? , Olympus Mons , and Enemies with Death . If they get involved in the characters life, may become a Sidekick Ex Machina or Monster Roommate . If the relationship involves more than just friendship, may lead to a Divine Date . Contrast Egocentrically Religious for conceited characters who believe themselves to be pals with Jesus. The situation can get even more</ interesting if Jesus' Pal happens to be a Flat-Earth Atheist . For a more mundane example, see Interclass Friendship

One of the oddities of creating art is the nebulous relationship between the fans of the media and the creators of that media. In theory, the creators, producers, and distributors are the ones calling the shots; they decide what's happening in the work, and the fans follow as they will. But that's a bit naive; it's the fans who keep the ratings up, the sales high, and the money flowing in. And if you displease the fans, they can just go elsewhere and take their money with them. The existence of things like Fanon Discontinuity , Dork Age , Author's Saving Throw , and Fanon means that any property successful enough to cultivate a group of intensely devoted fans is going to be at least partially concerned with satisfying their wishes; to some degree, you have to give the people what they want. So, just give the fans exactly what they want, and everything will work out. Right? Wrong. Generally speaking, the more intensely devoted fans in a fandom are usually outnumbered by the casual fans

But the more devoted a fan becomes, the more active (and louder) they become in the fandom. So while a few million casual fans might enjoy an episode of a show without ever making that fact widely known, a handful of devoted and occasionally unhinged fans are screaming about how the show is Ruined FOREVER , which can be seen and heard by everyone... including the people making the show. The creators may then start pandering to these voices exclusively, believing them to be the voice of everyone watching (which these fans will often claim to be) — but "everyone" in this case may in fact consist only of a handful of people, and what this minority wants and what the less-noisy fans want can differ drastically. This presents a major problem. The property can end up becoming a private club, accessible only to a select few. Excluding the casual fans means they'll simply drift away to find something else to spend their time on, and raising the entry bar too high means you run the risk of locking out new fans who may have been interested in the property, but now find it too difficult to access . While the vocal minority might now be satisfied (and you can't even count on that), they rarely translate to enough ratings and/or sales to justify the property's continued existence — and to make matters worse, even this hardcore minority that you catered to may begin to drift away for numerous reasons (changing tastes, burnout, lessened interest , etc). This results in diminishing returns, ending in eventual cancellation if unchecked. Furthermore, the overall quality of the property can begin to suffer if you just listen to the vocal minority; just because someone is intensely committed to a particular work of fiction doesn't necessarily mean they know what makes good fiction work</. The hardcore fans are generally fascinated by the backstory, mythos, trivia, and continuity which can build up around a franchise, but this doesn't necessarily make riveting entertainment to anyone less interested in all of this stuff . And if you somehow get the story's continuity tangled up or make any mistakes in your established lore , this makes things worse</ ; not only have you lost the interest of the people who don't care about this stuff, you've annoyed the people who do, and it's now guaranteed they won't be shy about saying so. In many cases, pandering to the base rarely succeeds in making anyone happy, not even the fans it's supposed to win over. This is because what most devoted fans ultimately want is the same as the casual ones: interesting and engaging stories, not just constant pandering There's a certain kind of irony here: by trying to give the fans what they say they want, you fail to give them what they actually want. A wise producer understands a simple rule that helps them avoid all of this; generally speaking, you've got the hardcore minority regardless — they'll usually keep following the story, even if they're dragged in kicking and screaming. You need to win over the undecided. A good producer understands that for every one fan who writes a frothing invective on the Internet or a rabid email, there's probably ten fans who are perfectly content with what's happening. On the flip side, tropes are not bad ; pandering to the base can and indeed in many cases does work out just fine. Sometimes giving the fans what they want is the same as giving the wider audience what they want as well. And while they can at times be annoying , the fans are still part of your audience, and if you're deliberately pissing them off, you're still pissing off a potentially significant segment of your own audience, who will desert you if you go too far; make them angry enough, and they may become so loud that they scare away more casual fans or potential new fans. Furthermore, relying on the approval of the silent majority over the noisy fans presents its own pitfalls — in particular, you might not actually have that approval</

The fan criticism you're receiving may have a point. Compare Vocal Minority , which usually is the bases being pandered to. Sometimes the base in question is the Lowest Common Denominator . Can result in The Chris Carter Effect , Better on DVD , Continuity Lock-Out , Continuity Porn . Compare/contrast Running the Asylum , which is sometimes the writers pandering to the fans, and sometimes pandering to themselves . Can also result in fans screaming Ruined Forever as well as an Unpleasable Fanbase . When the pandering actually does work, it's And the Fandom Rejoiced . This phenomenon is sometimes called "fanservice", but don't confuse this with our definition of said trope (although the two can often be related, depending on what exactly the fanbase being pandered to is demanding). Not to be confused with Panda-ing to the Audience ; this trope has nothing to do with pandas.

A Panel Game or Panel Show is a variation on the Game Show in which celebrities and comedians compete in teams to win points. Panel games are a mainstay of British television, perhaps due to the continued UK popularity of radio entertainment, from which the format was adapted; or to accommodate lower UK production budgets . The games are a useful way for up-and-coming — or fast-descending — comedians to pay the bills The celebrity contestants are usually paid an appearance fee, but there is rarely a prize as an incentive to win, although the contestants may still be highly competitive. The focus is on comedy ; The Points Mean Nothing , and some shows feature a joke prize that is mundane (Have I Got News for You </), bizarre (Shooting Stars </), or non-existent (I'm Sorry I Haven't a Clue </) Panel games feature a host who asks the questions and adjudicates, and often some of the panelists are regulars who appear every week. The host makes jokes between the rounds, of which there are up to six, some more gimmicky than others, including video clips and minigames Not to be confused with Celebrity Specials of a Game Show , where the celeb accrues prize money and donates it to a charity of their choosing The one that is most familiar to American viewers is Whose Line Is It Anyway? </ , which had four comedians who would perform improv comedy to win points from host Clive Anderson (later replaced by Drew Carey for the somewhat-louder American version)

I'm Sorry I Haven't a Clue </ is a parody of the panel show genre (featuring many intentionally surreal rounds where scoring points would be completely impossible even if they tried) and has been broadcast with most of the original panelists since 1972 David Firth of Fat-Pie.com doesn't appear to much like panel shows, as displayed in a cartoon he made for Charlie Brooker's show Screenwipe</ that mocks the pre-written jokes many of them use. It also makes a few jabs at internet videos

Guest starring on a Panel Quiz Show is a way for your up-and-coming star/starlet to earn money (and fame) in Star Dream .

When the Delivery Guy is</ the father of the baby, and has been preparing for this for the last nine months, he's often every bit as badly prepared when the time comes as some random guy would be, and usually a lot less calm. Sometimes he's over</-prepared, so that he's still reading his checklist while his wife is having a Screaming Birth , sometimes his mind just goes blank at the thought he's going to be a father. On being told by his partner that the baby is coming, he will often charge off immediately to

the hospital only to return a few seconds later to collect said pregnant partner. (It's a comedy trope.) When they finally get to the hospital, expect the wife to have to push said husband in to the building in the wheelchair, instead of the other way around, since by this point he's likely fainted, hit his head, or possibly fallen downstairs in a panic A fairly modern trope , as older works generally assume that the father will have as little as possible to do with the birth— possibly because if he was there, he'd only be flapping around like a headless chicken . In fact, in olden times, it was strongly frowned upon for men to be present when their wives (or female partners) are in labor, and pretty much anything with pregnancy and childbirth was left largely to the women in society. Until doctors (who were mostly men in olden times) started becoming more involved with pregnancy and childbirth, much of that was handled by midwives (who, even in modern times, are predominantly women) . Having a doctor present would probably be the one exception to the general "no men allowed" mentality of the childbirth process—and even then, a doctor would usually only be present in the case of an emergency In the United States, it actually wasn't until around the 1970s that it was considered "okay" for men (including the pregnant woman's male partner) to be present during the time a woman was in labor; men, with the exception of medical professionals, were basically all but flat-out banned from most delivery rooms Frequently, a father may be given something ostensibly helpful to do by someone more competent, with boiling water and finding clean sheets being fairly common tasks (which may actually be useful). Or, if he's been kept out for whatever reason, he's shown pacing outside the delivery room (quite possibly wearing a groove into the floor); in older stories, he may well be smoking like a chimney — an increasing number of cigarette stubs may be a way to indicate the progress without having to actually show the woman in labor. In either traditional or modern childbirth scenes, once the baby is born, expect various celebratory traditions, including handing out cigars and/or buying A Round of Drinks for the House

Lots of people wonder about the origins of life on Earth. Were we placed here by a benevolent god? Did we arise out of a primeval soup of microbes? If the former is the case—well, why? And who? And how? And if it's the latter, how exactly did the vast chemical stew of hydrocarbons and proteins somehow get together and become self-replicating? And then how did those cute little squirmy germs grow and change and evolve enough to become, well, us? Some stories attempt to answer these questions. But others decide to skirt this touchy ontological issue entirely, by bringing into it a different element: Outer space. In other words, they propose that life on</ Earth is not of</ this earth. Panspermia</ (get your mind out of the gutter) is a scientific idea which proposes that life on Earth came to it from outer space, as aliens. This is a real scientific hypothesis, mind you. It's considered very unlikely, but not so much so that supporting it necessarily makes you a crackpot. (That Other Wiki , of course,) This isn't the " Little Green Men "-style of alien, either. We're talking more along the lines of "cosmic pond scum hitching a ride in some water vapor in a comet." In fiction,</ panspermia (or exogenesis, which is similar but not identical) tends to gravitate toward the former, though—that aliens of some kind were actually the origin for life on Earth, or some other planet. In fiction, this idea tends to pop up in one of two forms: Microbes from space landed on Earth (or another planet,

in more sci-fi oriented settings), and evolved into the lifeforms that now populate that planet. This can be used both to get around the idea of having to answer how life arises in the first place, or as a justification for the similarities between life forms on very different planets. Frequently, this as used as part of a Reveal , and can lead to navel-gazing. Occasionally leads to Mars Needs Women , in cases of literal</ panspermia. See also Transplanted Humans , which is this trope in reverse (alien life coming from Earth); and Humanity Came From Space , which is only about the human species being extraterrestrial in origin. It may be worth noting that while this theory may offer an explanation for how life got its start on Earth</ (and/or other relevant planets), it ultimately does not in and of itself answer the question how life arose wherever and whenever it did so for the first</ time. Due to its nature as part of The Reveal , examples for this trope are frequently full of spoilers. Be warned.

They're godlike, they're (usually) all related, and they're stuck together. Since they're so powerful that none of them can significantly hurt the others (most of the time</), the plot is mostly about their sibling squabbles and Big, Screwed-Up Family moments.

Pantomime ("panto") is a slapstick comedic stage play aimed at children (though it is not unusual for the material to be laced with subtle adult humour and double entendres) and performed in Britain and Ireland mostly around Christmas time. See Theatre/Pantomime for details. This is a staple of A Very British Christmas , and is therefore referenced throughout British culture; hence, it qualifies as a genre and a trope Not to be confused with miming things (as in Enemy Mime or Mime and Music-Only Cartoon), which is what "pantomime" means in America. Also see Mummers , another British theatrical tradition

A specific variety of Fanservice , the Panty Shot is exactly what it sounds like : a gratuitous exposure of a female character's panties This form of Fanservice tends to be uncomfortable (and incomprehensible) to the poor souls accustomed to underwear exposition of the Comedic Underwear Exposure variety. Often averted by using a Magic Skirt or Modesty Shorts No examples, please. This only defines the term

This is a staple of any work of fiction dealing with celebrities - especially those aiming to show Celebrity Is Overrated . The characters will inevitably have to deal with media-folk who are looking for a story to sell at some point, no matter how it affects the lives of the story's subjects, or what laws the paparazzi break in the process of getting the story. This can be considered the Jerkass flipside or Evil Counterpart to the Intrepid Reporter . Particularly bad ones fall under Immoral Journalist Rich source of Paranoia Fuel The paparazzi are Acceptable Targets and may well be victims of a Take That! . Typically they are working for a Strawman News Media outlet "Papped" has become a verb for being photographed by these people Compare Tabloid Melodrama , which often overlaps, and Groupie Brigade when the invasion comes from fans. Also compare Media Scrum . For some reason, most people who do this wear a Press

Hat Grammatical note: technically "paparazzi" is the plural and the singular is "paparazzo", but in English "paparazzi" is often used as a singular

Paternal instinct can transform a Bumbling Dad into an Action Dad . If someone threatens his kids they will soon wish they'd never come within a mile of them. This is because fathers are expected to take care of their family and this naturally extends to keeping them safe. Such occasions serve as a way for a father to prove his worthiness—see A Real Man Is a Killer . Expect his children to have a newfound respect for their father and for them to brag that My Dad Can Beat Up Your Dad . If their relationship was previously strained expect it to improve Often Papa Wolf incidents serve as a way to reveal that a Non-Action Guy is really a Retired Badass or a Crouching Moron, Hidden Badass (or even a Retired Monster). In contrast to an Overprotective Dad (who sometimes thinks</ he's this; there is no overlap between them), a Papa Wolf is always portrayed heroically because the latter is defending their kids from genuine threats instead of imagined ones A Team Dad may display a streak of this, but the Papa is more likely to be related to his children by blood or through formal adoption, and the children tend to be younger, which may be part of why the Papa Wolf is more oriented toward protecting them rather than training them to defend themselves . However even completely grown children can summon this response in the face of crisis because they are still</ his children no matter how old or strong they get This is the Spear Counterpart to Mama Bear . When Mama Bear and Papa Wolf team up </ , no force on earth can stop them Subtrope of Beware the Nice Ones . See also A Father to His Men and Family Man . Combining this with Disproportionate Retribution can lead to a Knight Templar Parent . If the guy is a teacher instead, he's a Badass Teacher . If the guy doing this is a sibling/cousin, you get Big Brother Instinct . Inversely, see Parents in Distress for the kids rescuing the dad. Evil characters can use this too; after all, Even Evil Has Loved Ones . A subtrope of the Papa Wolf is the Badass and Child Duo , where an adult male badass takes it upon himself to protect an orphaned, unrelated young child. See also Cub Cues Protective Parent for examples from the animal kingdom, which might include a literal</ wolf Remember when adding examples that this is a male only trope. The female equivalent is " Mama Bear " so all Distaff Counterparts should be placed there. When Mama Bear and Papa Wolf team up, it's a Battle Couple and all pairs should be placed there. Parents in Distress is the inversion, when Papa needs to be bailed out by the kids, and Extremely Protective Child is when the child exhibits this kind of general protectiveness over one or both of their parents Also, note that this is not</ the trope for being protective of one's friends, unless of course it is something like an Intergenerational Friendship . In that case, it is okay. Otherwise, don't do it. Tropes about helping friends should go to A Friend in Need , The Power of Friendship etc

One character finds that his friend is asleep, so he tries various ways to wake him up, but nothing works. Finally, he gets the idea to blow up a paper bag then pop it while standing by his sleeping friend. POP! The paper bag is popped and the sleeping character is wide awake. A common gag on cartoons is for one character to set up

explosives to destroy another character and hide at a safe distance, then for the second character to sneak up from behind and pop a paper bag so the first character will think the explosives went off and run out, just in time for the explosives to go off in their face. Put more simply, this is a method to either wake up a sleeping character or to surprise another character, which may culminate in Surprise Jump . There are also some cases where instead of just using a paper bag, a character will blow up a balloon and pop it with a needle, but it still has the same effect. Compare Banging Pots and Pans

A character that the other characters should</ recognize (or at least recognize as out of place) dons a disguise and is treated as neither recognizable nor conspicuous. This disguise is so completely transparent that the audience wants to shout "For the love of God, it's him!</ " The external reason for the flimsy disguise may be that the creators want to signal the presence of a disguise to the audience before the other characters catch on (a sort of Reverse Whodunnit). Sometimes, the character may also be a Special Guest the director wants to get their money out of. All the same, you often get The Reveal staged in such a way to make it clear that the director really thought you wouldn't have worked it out by now . For the more perceptive viewers, it's a case of The Un-Twist . While not a Dead Horse Trope , these days Paper Thin Disguises are parodied as often as they are used seriously . Many Stock Parody Jokes involve a person appearing who coincidentally looks just like the person wearing a bad disguise, usually seen in cartoons. The trope is still an important dramatic convention in live theater and opera productions — where a really good disguise would render the character unidentifiable from the cheap seats, and be beyond the scope of the prop budget to boot — but is usually employed along with some kind of nod to audience acknowledging the absurdity This can sometimes be exaggerated for comedic effect, for example wearing bunny ears and becoming indistinguishable from a real rabbit, or pretending to be an ancient statue by simply standing still in a specific pose . Children's shows still employ this trope regularly without any parody element. This trope differs from the general case of Wig, Dress, Accent in that a Wig, Dress, Accent disguise is always plausible. Paper Thin Disguise also includes the element of being staged as if the disguise really is convincing, which is not generally present in Wig, Dress, Accent . Common selections include hooded coats or cloaks thrown on over the character's standard outfit , which can be played seriously, or the classical Groucho Marx glasses-and-mustache prop, which never is. Some consider a pair of glasses or sunglasses Paper Thin Disguise, but research showed that it is rather useful to mess with people who don't really know you well. (Research is done by showing pictures of people with and without glasses and asking others to recognize them, and people got a pretty bad score in glasses while worse with sunglasses.) Sometimes, the trope is present when someone is mistaken for someone else, but it isn't an intentional disguise, it's just someone that appeared for no reason and is not trying a disguise, but has slight similarities that are enough to fool someone unintentionally. It's becoming a bit common nowadays to subvert this trope by fooling the viewers instead, showing what seems to be a terrible disguise, but then it's revealed that it isn't, you thought that Bob was badly disguised as an old man, but then Bob in regular clothes appears next to that old man that looks like him. Compare with Clark Kenting and Newspaper-Thin Disguise . Contrast with Full-Body Disguise , Suddenly Obvious Fakery

, and Latex Perfection . Also see Charlie Brown from Outta Town , Conspicuous Trenchcoat , Holding Both Sides of the Conversation , Hugh Mann , Most Definitely Not a Villain , Mr. Smith , Easy Impersonation and Not a Zombie .

Index for paper stuff: letters, documents, contracts, reports, homework, notes, messages, notebooks, posters, newspapers, toilet paper and so on, and various related plots Compare Bookish Tropes , Box Tropes , Mail and Delivery Tropes and Photography and Illustration Badass on Paper , Paper Cutting , Paper People and Paper Tiger are unrelated

It's the final quarter. The game is still too close to call. The clock is counting down. There are seconds to go. You have the ball. It's all up to you. And you stand there. Think back to your training. Analyze the best response. And do absolutely nothing in the meantime. Friend, you just choked. Any time you're doing something you're accustomed to, something you're good at. Hell, you can be a recognized master in your field, but as soon as the pressure is on, you can choke. It can happen in sports. It can happen on game shows It can happen in bed. Expert athletes often talk about getting in "the zone", when they stop thinking about what they're doing it and just do it</ . This usually leads to perfect performances that crush the other team easily. Choking occurs when, instead of getting in the zone and shutting off the thinking, the expert starts thinking about what he's doing. He starts trying to control everything</, trying to account for every last variable. He gets in his head and because there's just too much to think about, he can't do anything. He's got the yips or, as The Other Wiki calls it, Compare with the Centipede's Dilemma . Contrast Awesomeness by Analysis .

Film Literature Live-Action TV Tabletop Games Video Games Web Comics Web Original Western Animation Real Life

Alice is celibate and might even come across as if she was Asexual . However, her sexuality is actually very strong, it's just that she can't express it because she is too burdened by shame, fear, and/or guilt. Thus, she might be unable to take initiative herself or to consent to things she actually does want. Even if she does</ manage to take initiative or give consent, it might still backfire horribly as the shame, etc reasserts itself. This is a subtrope of Internalized Categorism : Alice really can't stand the thought of being one of those</ people—the "perverts" , the "sinners" , maybe even including anyone who actually likes</ sex instead of doing the proper thing . However</, the character does not</ necessarily think that Sex Is Evil . Instead, she might simply doubt her own ability to handle it There are many reasons why this might be, whether it's treated as funny or not. One of the most common is virginity, where a character who has never had sex before is nervous about it for one reason or another—sometimes because they don't know how; are worried about finishing too early or not at all (especially with teenagers); or they're just nervous about having sex for the first time in general. Other examples may be a fear of intimacy, leading to them fearing the inherent physical and emotional vulnerability involved in sexual situations, or low self-esteem. Another frequently used explanation for this is a character having been raped/sexually assaulted and developing

a fear of sexuality as a result of the trauma. Note that in Real Life and in fiction alike, not everyone reacts this way, but both are reactions seen in survivors of rape and sexual assault and will vary from person to person When a character struggling with this overcomes it, the problem might be resolved by entering a simple stable relationship . However, this could turn sour if the character hasn't really dealt with the underlying issues, or it could result in a counter-reaction, where the character turns overtly sexual. This can be a good thing or a bad thing , depending on how the character handles it. In a balanced story, both paths are possible. There also might also be some zig-zagging as the character learns to cope with their sexuality. However, in an Anvilicious work, only one of the two paths are possible, since the author has already decided either that Sex Is Good or that Sex Is Evil Note that while this trope and Sex Is Evil, and I Am Horny are sometimes caused</ by the same social and psychological mechanisms, they have two very different ways of handling it: Sex Is Evil And I Am Horny is about acting out</ in a way that is self-destructive and/or abusive, while Paralyzing Fear Of Sexuality is about avoiding expressing one's sexuality at all. See also Celibate Hero and Windmill Political . Compare Heteronormative Crusader . Contrast Does Not Like Men and He-Man Woman Hater This trope is much more frequently applied to women than men , and when it is applied to men, it’s often considered funny . In Real Life , it’s widely believed to be far more common among women than among men , along with a perception that if a man suffers from it, it's often partially built on a fear of being abusive . Another common belief is that all gay people are promiscuous (though Armoured Closet Gay characters have been known to overlap with this trope — whether they're repulsed by the idea of sex with The Beard , afraid that acting on their true</ orientation would corrupt them, or both). However, it’s important to note that there is a vast range of reasons someone might feel this way, and anyone can be nervous about sex, regardless of gender or sexuality. When a kid is too shy to express their (usually nonsexual) Puppy Love , they may appear to be an Affection-Hating Kid on the surface

When things that should be harmless, or on the viewer's side, turn nasty, stripping away all sense of safety. How can a viewer sleep easy in their bed, when they've seen how toys can come alive when all is dark and wreak unspeakable vengeance? What trust can they have that anyone will protect them, when they've just seen some cheerful kid's program where a kid just like them was bloodily slaughtered by his own possessed mother as she sang a sweet lullaby? This is perhaps the main reason why the Monster Clown , and especially Bad Santa , are Tropes unto themselves. He sees you when you're sleeping...</ Paranoia, by definition, requires a level of suspicion and distrust. A monster chasing after you in broad daylight is probably not Paranoia Fuel, but a shape shifting murderer targeting you who may</ be hiding among your friends or family or the clothes in your closet most likely is. A good rule of thumb is if a show or commercial makes you double check the people or objects around you (or triple check, or quadruple check, or...) then it fits here. One of the most psychologically devastating forms of Nightmare Fuel , because of its mental persistence and perception of inescapable omnipresence . He knows where you live...</ Other paranoia-inducing concepts include: Invasion of privacy (from Big Brother Is Watching to literal Telepathy): One of the most pervasive forms of Paranoia

Fuel, since we basically know they can use our secrets against us (Black Mail , Room 101 , etc). Fear of the dark is related, but falls under Primal Fears . Not directly related to the game Paranoia </. Or, at least, that's what they want you to think. See also The Paranoiac , for whom </ is Paranoia Fuel (and whose paranoia tends to be a Self-Fulfilling Prophecy by virtue of making them evil jerks who anybody with any sense will want to slaughter ASAP), and Improperly Paranoid , which is when paranoia drives a person to do something stupid and/or reprehensible without necessarily being a recurring occurrence.

BEHIND YOU </ ... Sleep tight.

Alice tells Bob that she will "get him". Bob freaks out and goes to great lengths to avoid falling victim to her plans. In the end, it turns out that Alice wasn't going to do anything to him and that her whole plan was to just sit back and let his paranoia make him do stupid things to himself. A variation commonly occurs where the gambit is not intentional, and Alice admits that she actually was</ going to do something to him, but everything Bob did to himself was much better than what she had planned This is usually a case of Restrained Revenge , although it can also be a practical joke with no prior provocation. It may overlap with Self-Fulfilling Prophecy when paranoia of a specific event (even if it's unlikely) causes said event to occur. The nastier versions may overlap with Fright Deathtrap Since it relies on the mark's paranoia, it resembles a Batman Gambit . Compare Confound Them with Kindness , where Alice acts nicely towards Bob after the fact to confuse him. Often this relies on making something innocent look like Shmuck Bait

By definition, gambling is an uncertain enterprise. There are odds you can calculate and factors you can consider in the outcome, to be sure. But assuming you don't have insider intel on a rigged event, there's no guarantee that you'll be a winner in betting or gambling. Meaning that it's an unreliable way to make money If you have Psychic Powers or some other way of telling the future, however, the equation changes. In theory, then, you can increase your winnings to your heart's desire. Alternately, you might have a magical gift, superpower, or arcane bit of technology that can bring the same result. Winds of Destiny, Change! may come into play as a talent of the character. The ability to sense deception or emotional states may come into play in games where bluffing is a key component In practice, things are more complicated, especially if the author wants to deliver An Aesop about how cheaters never prosper . A character who uses their abilities to make just enough money to get by might do better in the long run A sub-trope of Mundane Utility , in that gambling in itself is a common activity in Real Life . Compare to Muggle Sports, Super Athletes , where people use superpowers in games of physical skill rather than luck and probability. Related to Compound Interest Time Travel Gambit , which uses similar inside knowledge for savings and investments. Compare Born Lucky , in which a character always wins at gambling because they were, well, born lucky

Items with mystical properties are commonly assumed to look antiquated, bearing associations with ancient civilizations, the Middle Ages or some other time period no later than late 19th-early 20th century . Common examples are magical staffs, manuscripts, mirrors, potions, etc. This trope instead is about paranormal

items that look like they were bought in a shop nearby. They are usually labeled with either an unfamiliar trademark or a familiar trademark with a strangely altered label. For example, it may be a chocolate bar which would transform you into a monster if you eat it or a video game cartridge that would teleport you into the game's realm as soon as you put it into your console Such items can often be found in Urban Fantasy . They may be used by a Blue-Collar Warlock , and are frequently sold in a Little Shop That Wasnt There Yesterday . Often overlaps with May Contain Evil , in which case they may be a Cursed Item ; also compare Haunted Technology and What Do You Mean, It's Phlebotinum?

Paranormal Romance is the subgenre of romance where, instead of being a Fantasy or Science Fiction story with a romantic subplot, the relationship is brought to the front and the heroine finds her true love when supernatural forces or sci-fi Applied Phlebotinum are involved. (For this genre, what's "paranormal" is defined as broadly as possible .) So instead of the motley cast of misfits heading out on a journey to slay the Evil Overlord with two characters suffering from UST , the heroine gets zapped back in time. She's lost, lonely and confused with no known way of getting back. To add to her worries, she doesn't realize she has romantic feelings toward that man standing over there with the top hat and monocle . Using sci-fi and fantasy to create an exotic location for your romance story is fine, provided that the budding romance between the two lovers is the main focus, rather than the magical or scientific Applied Phlebotinum . The story can even take place in the Standard Fantasy Setting . Setting it in any established fantasy or science fiction universe is also fine, provided it's just Fan Fiction , or you have permission from that franchise's copyright holders. (With permission from Paramount, for instance, you could set a paranormal romance in a Star Trek </ Extended Universe novel.) That being said, Paranormal Romance can be combined with almost any other genre out there. These stories can sometimes blur the line between focusing on the relationship and focusing on the setting, plot, and action. Common plots include: Compare Urban Fantasy , which is a (very) similar genre but without the focus on romance. (A common joke holds that the difference between the two genres is that Urban Fantasy has a half-naked woman on the cover, where Paranormal Romance has a half-naked man on the cover.) Compare Fantastic Romance .

Tropes for the paranormal: those things that are spooky but not outright magical. May require investigation . Frequent in the horror genre . </

Parasites are organisms which depend on feeding off living hosts for their survival. For sapient creatures such as humans, this is an inherently horrific concept as it violates all our ideas about bodily autonomy and how we interact with other creatures. While "normal" predation is at least intelligible to a species of former hunter-gatherers, parasitism seems to us both pestilential and insidious, not an acceptable part of the circle of life but some abberant perversion of nature In fiction, this often takes on far more extreme forms, being infected by parasites the size of your fist , ones that take over all of your motor functions , or horribly mutate your body . It may be the offspring of some other lifeform implanted into you against your will , based off the

similar behavior of parasitic wasps. Sometimes they will get inside your body through Orifice Invasion , otherwise they'll just burrow into your skin. In some cases the parasite might even be both intelligent and malevolent Sub-Trope of Body Horror Super-Trope to Puppeteer Parasite , Chest Burster , Parasite Zombie , Parasites Are Evil , and Womb Horror

Everything that is an element of the whole package immediately encompassing the text and not part of the text itself. </ In other words, all that stuff that isn't a part of the show/movie/story itself, but still comes with it. The stuff on the box, the stuff that comes before the show/movie, etc. See also Text Tropes .

About the Author

The Science Fiction cousin of the Unusual Euphemism . Much like the frelling Foreign Cuss Word , even though everything else aliens say is translated perfectly, krutzing profanity will remain in the speaker's native language. Silflay hraka ! If this results from the Translation Convention , it's purely a smegging transparent attempt to appear edgy without bringing down the wrath of the zarking censors. Lalabalele talala ! If Translator Microbes are at work, we're left with the sense that there are gorram Media Watchdogs even in the future. Blitznak! Then again, would you</ want your Belgium translator-microbes to tell the alien precisely what the zentraidon you've just slipped up and called its flurking mother? D'Arvit! Alternately, the alien swear words might not translate cleanly into the audience's kriffing language, much the same as with actual flarf-narblin' swear words and insults in many languages in Real Life . Kogec mjaaš ! One common literary use of the splitten flitten trope involves common words from Earth languages misheard by aliens as swear words in their own languages — oh, shef'th ! — much as the English "foot" resembles a . What in yaolin ? Or the French word for "seal" is pronounced exactly the same as the F-Word . Siripat sulat ! Or , how the Russian word for "book" sounds like an English racial slur. Go ghuhg yourself! Curiously, Aliens Speaking English seems to be the least intrusive mechanism for this trope, as we can easily imagine a non-native speaker lapsing back into his native frakking tongue for an expletive. E chu ta ! You bosh'tet ! Shazbot ! See also: Translation Convention , Translator Microbes , Aliens Speaking English , Informed Obscenity , These Tropes Should Watch Their Language , sæælyulát ! Did you get all that, petaQ' ?

A stunningly large number of heroes and their coteries are lacking in the parent department, either through death or in that they just aren't talked about. Even if both parents are alive, they may well be emotionally or physically distant (although that's just Parental Neglect). Everyone is, for the sake of the plot, Conveniently an Orphan , whether they actually are or not This is a very convenient way for characters to be able to run off in the middle of the night to fight Evil, get sucked into another world, etc. without having anyone responsible for them making a fuss. In fact, one of the first things a creator of stories about children or teens having adventures needs to do is explain a lack of parental involvement It also allows for the Ordinary High-School Student to be revealed as a super-powered demon fighter, or intergalactic being without

the need for a messy Retcon answering the question an alert viewer would ask about why the parents didn't know about this. It's simply a case of the child following in their parents' Secret Legacy Of course, if you go back far enough, you'll reach a time when most young adults in Real Life actually were orphaned or abandoned. Adults died younger than they do now, and people with chronic diseases like schizophrenia or tuberculosis were often sent away from the family to recover or die. It was also easier to abandon a family member, given the poor communications of the times, sparse documentation, and the lack of a police force. Because of all this, it's quite common for a fictional character from the 19th century or earlier to mention being orphaned with no more emotional reaction than a shrug, since the experience was considered a normal part of real life. A good example is Jane Austen's Emma </ , where the title character's mother died years earlier, but is barely mentioned Note that the parents in question don't actually have to die for this Trope to be in effect. Note also that in a few cases listed below, parents are hardly even mentioned — which makes things incredibly awkward If only one parent is missing or dead, then it's a case of Missing Mom or Disappeared Dad . If the specifics of their absence aren't explained, they're an Ambiguously Absent Parent . When several siblings lack their original parents, the first born will receive a Promotion to Parent . Parental Abandonment is also a leading cause of Dark Magical Girls . One standard method for achieving it is to make your characters Blitz Evacuees In families with servants, this can lead to the Old Retainer acting as a Parental Substitute . If they were traveling abroad when both parents died, the child may be Raised by Natives . If the parents die in the wilds, their surviving child may be Raised by Wolves . It is also possible the parents left them out there to die, expecting them to be a meal, not an adoptee When the parents had to separate from the child in order to protect it, this results in Moses in the Bulrushes . When the parents had to leave the child in order to give it "a better life", then it leads to Give Him a Normal Life In animation, cases of parentis absentia</ can be caused by budgeting; it's cheaper to animate one character (usually Dad) than to have two characters basically doing the same thing Parental Abandonment is a common feature of a Dark and Troubled Past (though children lucky enough to find a Parental Substitute generally avoid such a fate). It is a common feature of a Tear Jerker It should be noted that parental abandonment does not always mean either or both parent(s) leaving, but also the child being ignored by the parent, knowingly or unknowingly May entail Tell Me About My Father . Or rarely , mother. For reasons of economy , the child is seldom interested in both parents. See also Parental Neglect , Hands-Off Parenting , When You Coming Home, Dad? , Missing Mom , and Disappeared Dad . Parental Abandonment en masse may create a Teenage Wasteland Compare Free-Range Children when it's the children who voluntarily go out on their own accord. The reverse form is the Missing Child , but there can be interesting crossover: the child may seem to go missing because of the abandonment of/distance created by their parents, and the parents either don't notice or get concerned and finally realize they love their offspring For the opposing extreme, contrast Meddling Parents , My Beloved Smother , Overprotective Dad and Fantasy-Forbidding Father

A joke in a work marketed toward children that kids of the appropriate age would likely never get, but which their parents

would. Serves as a way to keep the adults and older kids entertained and usually takes the form of a Homage to a movie or TV show that children would not normally be familiar with. This is the master trope to other "subliminal" tropes like a Double Entendre , Does This Remind You of Anything? , No Celebrities Were Harmed , or Getting Crap Past the Radar . It could also count as a Genius Bonus since most children would have to be educated above their general age level to understand these Popularized by Sesame Street with characters like Sherlock Hemlock and the Count , and thus most common on educational shows. Surprisingly, the barely intelligible Cookie Monster seems to get the most Parental Bonus lines, at least in recent history: "Me undergo sea-change," etc Of course, a badly done Parental Bonus will entertain neither the kids nor the adults and may terrify the latter that the former actually will "get" it.. Golden Age animated shorts , especially those from Fleischer Studios and Warner Bros. , often had material which would be considered Parental Bonus today (if people still got the references), as they were intended for all audiences (see Animation Age Ghetto). As a result, many cartoons had numerous double entendres and pseudo-cameos which were expected to go over the younger viewers' heads These jokes also give the shows rerun value years later when the original viewers are old enough to get the jokes that once went over their heads: see Late to the Punchline . Might be Fridge Horror for some if they think the joke is disturbing and that supposedly lewd joke might just be Accidental Innuendo A Super-Trope to Parent Service , Demographic-Dissonant Crossover and Demographically Inappropriate Humour

It's tough being a kid in Fiction Land. Bad enough when you're an only child, but if you're among a pack of siblings, this particular trope is nearly guaranteed to raise its head at some point in order to make life even more difficult. Parental Favoritism is just what it sounds like — one child is given preference over their siblings. In order to qualify, this has to be consistent. One child being asked to do the other's chores because their sibling is sick is not favoritism, although that won't stop the kid lumbered with the extra work from grumbling. But one child having to do all the chores on a daily basis, while their sibling sits and plays video games, is definitely</ favoritism. It may show itself in a variety of ways. If there is an argument or fight, the parent(s) will always take the side of one particular sibling, and the other(s) will be the ones being scolded/punished. The parents may brag about one child in particular and be admonishing or dismissive of the others for their faults, regardless of the achievements of the brothers and sisters. A regular line that may be entailed with this is a variant of, "Honestly, (insert name), why can't you be more like (insert favorite's name)?" There may always be one particular kid who gets out of doing their chores, even if the other kids get pulled up for forgetting to tidy their room. Sometimes, there may be more than one "favorite," or the mother and father will have different "favorites", making life even more of a headache for their siblings There are a few different versions of the trope and a few different "explanations" as to why one child is preferred over the other. These divisions can be by: Birth Order Any of these criteria can backfire For example, one child might be the favorite because they look and act just like their saintly, deceased mother. Another might be just the opposite — The Un-Favourite — because of their</ resemblance to the mother that walked out on the father — or

even because they remind the father of the saintly mother. If the saintly mother died in childbirth, then the poor kid who was birthed this way usually has a hell of a lot of resentment to get over, no matter what the physical similarities, often due to the father, consciously or unconsciously, blaming them for the mother's death. Occasionally, parents have a child that naturally requires more care and attention than the others, because they're very young, disabled, or psychologically damaged. This will still seem unfair to the other kids who get less of their parents' time, but it's a necessity rather than favoritism... usually. This is a favorite plot for children's books and television, where the lead character is jealous of a new baby sister or brother only to be reassured that "we love you just as much." On the other hand, if the favorite is Too Good for This Sinful Earth , the parents may never learn to appreciate their living children. Sometimes, the parents are reasonably handing out the privileges and responsibilities with age. When the older child looks only at the responsibilities and the younger at the privileges, both can come to the view that they are The Un-Favourite . Or they may responsibly differentiate, but the musically untalented child may resent the lessons as favoritism, and the talented one, the other's free time as favoritism; or the child who must do all the chores resents the sickly child's confinement to his bedroom and inability to play. Cue Sibling Rivalry . Of course, it is common that the parents are not aware of their favoritism and may be appalled at themselves upon realizing it. Very few parents would actually pursue favoritism with the knowledge of the other children's hurt feelings In fact, the obligatory "talk with the parents" is normally part of a Parental Favoritism plot...but that does not guarantee it will solve anything. If the writer is trying to Hand Wave the glaring bias of the parents, there will be a scene where mum and dad will give a long speech on how they value all their kids equally and will tell The Un-Favourite child that making them live in the basement and forcing them to bow whenever their sibling enters a room is really a mark of their esteem. The words "you're the responsible one" will be mentioned in some form. A more realistic version is where the big talk is honest, and the parent doesn't bother trying to justify their actions but do realise they were wrong and attempt to make amends. This is regularly done to "humanise" the hitherto parents — but it's too late. By the time of the talk, most of the audience will already be set against the parents, and it'll take a hell of a lot of good writing to redeem them. If the parents have clearly realized their foolishness and have shown to be really sorry, then this MAY take a lot of weight off them. Parental Favoritism can have a huge impact on characters even when they become adults. The Favorite will either be spoiled and throw a tantrum if (s)he doesn't get his/her own way, feel that they were a sort of "experimental" child and develop insecurities, or be a Nervous Wreck who permanently fears that he or she won't meet the parents' expectations; kids at the bottom of the pecking order will usually be bitter and cynical about relationships and family life (and often blame the favorite children alongside the parents), or have serious self-esteem issues, leading to self-deprecation or clinginess as ways to compensate. This is all too often Truth in Television . The friendship version of this trope is Friendship Favoritism and the grandparent equivalent is Grandparent Favoritism (though it's not unheard of for the two tropes to overlap).

You've probably heard that old saying, "Do as I say, not as I do." Mom just doesn't understand! She tells our heroine off for going out

with the wrong boy or having a secret life, etc. Then, we find out in a dramatic twist that she did the same thing when she was her age! </ What a hypocrite! But, of course, having seen her hypocritical ways, we love her again or she sees her wrong-doing and allows the act to continue. Or doesn't. The other case is when the parent has forgotten what it's like to be a teenager. In this case, some other adult their age will remind them, "you were a teenager once, don't you remember?" prompting the parent to guiltily admit they remember, and that's why they're being so overprotective. Note that this trope isn't necessarily a bad thing: the parents went through the same thing their children are facing, learned from it, and now they want to keep their kids out of the same situations. The parents look upon the situation with regret and want better for their children. Not stopping to remember how much they'd heed such advice in their time, of course. This trope only focuses on the fact that the parent did the same as the child and it is considered a "twist" in the story. On the other hand, the unsympathetic side of this is when the parent disciplines the child for doing something that they still do</ as a parent, rather than something they did</ as a kid, learned a lesson from, and don't do anymore. No Real Life Examples, Please! While this trope is indeed Truth in Television , it would be filed with natter and complaining about parents who engage in hypocrisy. This can be a subtrope of Generation Xerox , as the parent or guardian involved is often a Former Teen Rebel . It can also be a subtrope of Hypocrite Has a Point , where someone is still shown to be right in spite of their hypocrisy. Compare Evil Parents Want Good Kids . Naturally, this can make it harder to Honor Thy Parent . The classic 1987 PSA where the teen son is being blasted by his dad for taking drugs, asks him where he learned to do that from, and the son starts screaming "It was from YOU, alright?! I learned it from watching YOU!"

One Piece </: Garp is about to beat on his grandson Luffy when they both fall asleep. When Garp wakes up later, he then wails on Luffy for falling asleep</ despite having done so himself.

Something often depicted in media as much squickier than Brother–Sister Incest , Twincest or Kissing Cousins is incest between a parent and their child. Sigmund Freud had a lot to say about the Oedipus and Electra complexes, and could find subtext in quite a lot of places. But in Big Screwed Up Families , Deadly Decadent Courts , particularly abusive households and elsewhere, one is likely to find examples of this trope When this trope shows up in media, it's usually used to highlight the specific psychological issues that a character has, particularly if it features in the Backstory of a Serial Killer or other psychopath, or to give an already nasty villain that extra bit of shudder factor . When the parent is the aggressor in the relationship, it is usually quite predatory in nature, and in many cases (particularly in the case of fathers and daughters), it's a crossing of the Moral Event Horizon when it's revealed. If the child is the aggressor in the relationship, it usually means he or she is seriously twisted in some way or in the very least has serious issues. Sometimes this is played for Black Comedy , particularly in the case of mothers and sons, with the son understandably freaked out due to the mother's advances This trope appears with step, foster, or adoptive parents as well as biological ones, sometimes to Bowdlerise it somewhat, although the power dynamics are still much the same as in parent/child incest.

Wife Husbandry is one way to Bowdlerise it still further — though not out of Squick range This is a type of Unequal Pairing , since the parent is almost always at least psychologically if not always physically in a much more powerful position than the child. See also Rape as Backstory and Abusive Parents Also see Surprise Incest , where the couple involved do not know they're related, as well as Brother–Sister Incest , Creepy Uncle , and Kissing Cousins . When children innocently suggest this, it's Father, I Want to Marry My Brother . See Pervert Dad for parents who don't quite</ go this far, but still have an (un)healthy dose of weirdness, and Lecherous Stepparent . See I Love You, Vampire Son , when the "parent" is the vampire that sired his "son"

You are a grown adult. You've found your true love, and they love you back. You want to get married. Everything's great, right? Wrong! Your parents are convinced that you've picked the wrong person, and will do almost anything to prevent the marriage. This is different from an Arranged Marriage . Your parents don't want the right to pick your spouse. They just want to veto your choice. In some societies, your parents may have a legal right to such a veto. Maybe your true love is penniless (or Unable to Support a Wife), or is in a lower social class. Maybe your true love is of the "wrong" race, religion, ethnicity, or gender. Or maybe their family is somehow disreputable Or maybe your parents just don't like your true love. (Especially if they have a Betty they prefer to your chosen Veronica.) But all is not lost. If you and your true love can stay true to each other, and be persistent, your parents will eventually notice your true love's good qualities, and will change their minds. Alternatively, you may hear the words " I Have No Son! " (or daughter, depending) addressed to you in no uncertain terms. Sometimes, it will turn out that your parents are attempting to see whether or not your feelings are genuine. If you cannot overcome the obstacles put up by your parents, then they were wise to delay things. If you and your true love find a way around the obstacles, then that's becomes proof that it really is true love. In rare cases, your parents are right. You really have picked the wrong person to marry. If you are in a Fairy Tale or a Fantasy story, your parents may give your true love an Engagement Challenge . In extreme cases, your parents will be not be above Offing the Offspring . In appropriate settings, they may instead take the slightly less drastic step of packing you off for Taking the Veil . You may have to fight in order to be together. Even though most people in the western world choose their own spouses, this isn't</ a Dead Horse Trope . It can still appear in historical fiction, fantasy, in stories not set in the western world, or in any story where parents believe that they have a right to meddle in their grown children's lives. Contrast Child Marriage Veto . See also Love-Obstructing Parents , Dating What Daddy Hates and Meet the In-Laws .

In fiction, we have parents who are nice and kindly to their kids. Then we have those who are downright bastards to the kids. Sometimes, they're not there at all . Or they have no clue what their little ones are up to . Other times they try to be there but it doesn't always work. And, finally, we have the parents who are there, but for the most part, don't seem at all interested in their child Parental Neglect happens when the parents are shown not to pay a lot, if any, attention or care to their children for

some reason. Maybe they're just busy with work. Maybe they and their children aren't particularly emotionally close, or perhaps they're just obsessed with their own attempts to save the world. Nevertheless, for some reason, their children are not the highest on their agenda This can be set up for a Freudian Excuse . Also an excuse for kids who go off to save the world not worry too much about their parents, seeing as they don't give two cents about what they're doing anyway. It should be noted that neglect is in no way a less extreme form of abuse than the forms on the Abusive Parents page; extreme neglect in the care of infants has been known to put dampers on mental and cognitive development, and in children it can induce severe psychological damage In regards to the parents themselves, Parental Neglect does not necessarily mean they are terrible or unpleasant people, they may in fact just fall into the category of Parents as People Obviously can be Truth in Television , though it's usually</ not as extreme as fiction portrays it A Super-Trope to When You Coming Home, Dad? and Daddy Didn't Show Compare and contrast with Abusive Parents , Adults Are Useless , Parents as People , and Parental Abandonment

Parental Obliviousness would be best described as a subtrope of Adults Are Useless . The kid is either trying to tell the parent something or trying to hide something, but the parent misses this completely, as well as other significant cues about their child's state of mind or personality. Sometimes the parents are oblivious because there's something going on and the parent is a Muggle who can't know because s/he isn't Secret Keeper . Or perhaps the Extra-Strength Masquerade seems to be hitting them especially hard. Sometimes it's just a mundane reason for the cluelessness, like work causing mom or dad to be absent too much. Occasionally, it's a case of the parent thinking too much and not being able to see the forest for the trees; or the parent not wanting to see and going deep into denial . And sometimes the parent is actively contriving to not know something they consider brain breaking . Denial is handy to maintain obliviousness. Usually the trope is played for comedic effect, and often in animation to allow child or teenage characters to go off adventuring without their parents knowing and freaking out about it (The alternative being the parents not being there.) There's often a scene where the kids are in trouble and the parents finally find out and ask why did the kids not come to them about it. To that, the parents are always</ stunned to hear that their own children fear their reaction more than the trouble itself and cannot understand how their role in family discipline made them an object of fear that helped allow the problem to escalate into a crisis. The flip side is Open-Minded Parent , where they figure out what their kid is up to... And seem strangely untroubled by it. Compare and contrast with Mama Bear , who knows what's happening in her child's life, and nothing will hurt her child. Then there's the Reasonable Authority Figure , who may not believe everything they hear, but will invariably hear them out and humor them. Parental Obliviousness is often required for a Don't Tell Mama situation to work, or at least helps it along This trope has an older, more senile relative in Grandparental Obliviousness .

An amazingly large number of children in the media suffer from Parental Abandonment . Other children are "lucky enough" to have both parents, but unfortunately live in worlds where there are no Happily Married families. For most such children, life is an

endless series of disappointments and let-downs. A lucky few, though, manage to find a Parental Substitute A Parental Substitute is an adult friend who fills the children's lonely life with guidance and (often) love . They guide the child and teach them how to stand on their own feet, how to have fun, and how to not be so bothered by the fact that Mommy or Daddy are never around (or ignore them). If the parents in question are dead , they may have known them and are able to answer when the child says Tell Me About My Father . They often tell the kid they are So Proud of You . Usually, by the end of the story, the Parental Substitute leaves as well, but at that point the kid is able to stand on their own two feet This trope is often a feature of Tear Jerkers , especially if it follows Take Care of the Kids . If it's an older sibling who's taken over the parental role, that's Promotion to Parent . The Old Retainer may take over this role in event that his employer's children are suffering from Parental Abandonment . If an entire society has teens become parental substitutes, that's a Teenage Wasteland . If the child gets into a big argument with the substitute, expect to hear " You're Not My Father " by the time things get really heated Imaginary Friend is often involved. If the Parental Substitute decides to make their status official, as it were, the kid becomes Happily Adopted Compare and closely related to Promotion to Parent (when it's a sibling), Nephewism , and Adoptive Peer Parent (for non-relatives), Like a Son to Me , Team Mom , and Team Dad

Regard the classic Love Triangle , where someone has to choose between two prospective suitors. This is a difficult decision to make under the best of circumstances... but it gets a lot trickier when the parents take a vested interest in who their offspring ends up with In these situations, the character's parents will want them to get together with one suitor over the other. This could be because of the parent personally liking one more than the other, or because they genuinely believe their offspring will be better off with them. And as for the suitor they don't like? They usually hate that one with a passion, regardless of what their offspring thinks of them In some instances, the parent will actually grow to accept the other suitor, and grant the pairing their blessing Contrast Dating What Daddy Hates . Compare with Love-Obstructing Parents , Overprotective Dad and Parental Marriage Veto . See also The Matchmaker , Shipper on Deck and Shipper with an Agenda . If the parents have complete control over their offspring's decision, this could lead to an Arranged Marriage . Often a case of Rich Suitor, Poor Suitor with the parents pushing for the rich suitor. A stereotypical trait of the Jewish Mother , especially if her preferred suitor has better social standing/is better off

Some youngster over the age of understanding takes a friend to whom they might be sexually attracted to their room. At some point, one parent or both will inevitably find some reason to barge in and will do so. This tends to play out in a couple of different ways: Related to Moment Killer , Amazingly Embarrassing Parents , Caught with Your Pants Down . A subtrope of Interrupted Intimacy . For children walking in on their parents , see Primal Scene .

According to US government regulations, certain products are

considered commodity items (in technical jargon, parity products</), with no noticeable variation in quality from manufacturer to manufacturer. As far as the government is concerned, there is no functional difference between one product and another in a given parity class. Aspirin, toothpaste, toilet paper and a host of other consumer goods fall into this category. Economists call these items homogeneous products. This presents an issue for the manufacturers, since they have to differentiate their product from competitors to sell their brand. Paradoxically, this allows a manufacturer of any of these items to legitimately and legally claim in advertisements that their product is "the best". The logic behind this is that if all varieties of aspirin on the market are equally good, then they are all the best by definition. The really counterintuitive part is that the makers of these products are not allowed to claim that theirs is "better" without substantial proof that it is somehow an improvement upon the commodity level. The result is, in American advertising at least, that "better = best" and "best = mediocre". In German television, this problem is often solved by claiming a product of some category is better than "ordinary" products from the same category, which is basically a way of saying "better than crud". A similar phenomenon is the extinction of moderate adjectives. No longer are drinks available in small, medium and large; now you have a choice of large, huge, gargantuan and colossal! Compare Absolute Comparative — when "better" is liberally spread, without saying what it's supposed to be better than</. See also, Damned by Faint Praise . Please do not add examples to work pages, this merely defines the term .

In Real Life , seeing someone park where they shouldn't (like a disabled parking spot) or stealing the parking spot you've been patiently waiting for is incredibly frustrating . In fiction, a character might choose to take immediate revenge on the parking infringer, often in a humorous fashion (giving the audience vicarious satisfaction) A subtrope of Disproportionate Retribution Note that these actions are often things that could get you arrested in Real Life

Before Board Games , Card Games , Tabletop Games , Video Games , and Web Games came along, people just had their own persons to play games with guests. These are known as Parlor Games. In the past, these were used in fiction for the same purpose as Board Games are these days. Nowadays, it's either a Discredited Trope used to show how boring or geeky the people playing are, or it's used as an actual Plot Device , a children's game where someone gives orders (usually silly things like "clap your hands" or "jump up and down"). Everyone playing has to follow the commands as long as they're preceded by "Simon says". So if "Simon says clap your hands" you have to clap, but just "clap your hands", you don't. You're out if you either follow the command without the "Simon says" or don't follow it when they do say it. One variation has Simon do an action in addition to saying one, but you must do what "Simon says". Usually, Simon will do and say the same thing, but it could lead to situations where "Simon says clap your hands" but he physically jumps up and down as a trick; the proper action is to clap your hands. Last of the group still in usually gets to be the next one to call out the orders. This game can be challenging enough that it can still be used legitimately in fiction

The periodic table of the elements is one of those mysterious things that everyone sees in science class and almost nobody actually understands, so parodies of it are common. These generally break down into these categories: Puts non-elements into locations in the actual Periodic Table, so that their names reference the names of the original elements. Generally, this ignores the actual point of the Periodic Table (namely, the fact that elements are not arbitrarily</ placed, but placed based on their common characteristics). This may overlap with Artistic License - Chemistry , and sometimes E = MC Hammer . Tables that put new "elements" in columns based on common characteristics. You know, like the real thing. More often than not, these will have a shape unlike the real Periodic Table. For a similarly irreverent take on the classical elements , see Bizarro Elements .

Sometimes it's just fun to make fun of a trope. It's fun to screw around with it or find the humor in those tropes. Thus we have the Parodied Trope Writers can even spoof their own tropes as a form of Self-Deprecation Sometimes this comes in the form of an Exaggerated Trope , or even a Downplayed Trope . Sometimes it overlaps with Zig-Zagging Trope , Inverted Trope , Averted Trope , or Subverted Trope (if the context makes it clear the aversion or subversion is a joke). If the trope is called on by the author, but still used, it's a Lampshade Hanging Compare other kinds of Playing with a Trope , Satire/Parody/Pastiche , Parody , Played for Laughs , Spoof Aesop Not to be confused with Parody Tropes (a list of tropes that are parodies themselves)

This comedy trope is a kissing cousin of both the Show Within a Show and the Commercial Switcheroo . Typically placed immediately at the end of a segment, it seems like the show you're watching has just cut to the mid-show commercial break. However, it quickly becomes evident (ideally in about the time it takes most folks to start getting out of their La-Z-Boy) that the commercial is actually a fake-out, for an absurd or grotesque product. It may also figure into the plot, especially in shows about people in Show Business who would do anything for a break When done as part of a Sketch Comedy show, the product can be pretty much anything. When done as part of a more typical comedy, the mock product usually ties into the plot of the show in some fashion. In any case, the commercial itself is a practical field guide to various Advertising Tropes , although this tends to be more pronounced in the case of a Sketch Comedy Compare/contrast with Show Within a Show , Commercial Switcheroo , Trailer Spoof . Real Trailer, Fake Movie is a subtrope For more parodic content, see what The Other Wiki has to say about

A parody is a twisted imitation of another artistic work. An intentional mockery, though often a loving one , it imitates the style of the original in order to puncture its mistakes and point out its flaws. Some aspects may be exaggerated, and others downplayed. Usually comedic, but occasionally dark and deconstructive . Can be sublime, or worse than the original. Sometimes a Homage or Shout-Out doubles as a parody. And sometimes the entire work gets parodied Lack of respect for the source material is the most common danger of parody. Not all parody is satire . As satire is usually pursuing an intellectual point , we

expect it to be critical. On the other hand, most parodies are watched by people who liked the original stories, so pointing out too loudly that something is stupid (or that it broadly seems to defy the premise) can subconsciously insult the viewer. In fact, many successful parodies still use the situation or design that they mock. They simply point out that it doesn't make sense , but let the appeal be in the eye of the beholder Another danger is the assumption that the audience is familiar with the subject matter being parodied; extensive parodies have multiple layers of comic gold. This can be shaky ground, depending on the age of your audience, and writers sometimes resign themselves to broad, widely known characters and situations . The problem is that such things have probably already been parodied to death. Enough parodies can cause a shift to that version of the character becoming the archetype, leading to later subversions of subversions The most basic idea is, of course, that a parody is essentially something you've seen before in a different form. Your audience hopes you bring something new to the table, and will not be impressed if all you do is regurgitate tropes The nature of parody can lead to unfortunate Misaimed Fandom See also Satire , Pastiche , Farce , Meta Trope Intro , Parodied Trope (spoofing a trope) For a list of tropes used in</ parodies, see Parody Tropes

Product Placement is a fixture in media, for good or ill. Like any pervasive concept, especially one that is criticized so often, writers love to play with it . The result is Parody Product Placement, which can take several forms: A work promotes a made-up product, which sometimes exists In-Universe , using over-the-top or absurd claims that would never pass modern advertising standards. "Drink Boka Bola ! It cures hangovers, takes off weight, and cleans your teeth!" Obviously, these aren't the only ways to accomplish the trope, but all share an essential aspect: poking fun at product placement. See also Bland-Name Product , Product Displacement , Shoddy Knockoff Product , and Trade Snark .

A parody retcon is when a creator, in response to negative critical reaction to his or her work, handwaves the work's failings by claiming that it was supposed to be a parody all along , and that in fact the critic is wrong for taking it seriously . It's a subtrope of the Deliberate Flaw Retcon In general, people won't believe a creator who says this. However, with Poe's Law being what it is, sometimes this will happen even if the creator really did</ intend the work to be a parody but was too subtle with it or didn't go far enough with it . Bottom line — if you have to explain to people that they shouldn't take it seriously, you'd better have solid evidence that this is the case See also I Meant to Do That , "Just Joking" Justification , External Retcon , and Author's Saving Throw . The direct opposite of a Denied Parody , which is when people think it's a parody when the creator intended it to be taken seriously

Parodies, also called spoofs, imitate the mannerisms, style or appearance of a work in a silly way for comic effect Of course, there's more than "pun" type of comedy .. See also Meta Trope Intro for a comparison with many other ways that a trope can be used

An index of tropes either about parties, or that often take place in one. The kind of party could range from a birthday party , to a house

party, to a school dance, to a nightclub, to a royal ball.

Cue the rolling of a bus full of moral types (nuns, children, etc) past the character and the resulting mouth gapes and bulging stares from the formerly unblemished people of judgment. It truly becomes Comedic Sociopathy for the unlucky character when said bus is a tour bus</ . Complete with flashing cameras and narration from the guide. Should the bystanders choose to mock and jeer, congratulations—The victims might have picked up their very own Freelance Shame Squad . Lucky them!

The Hero wishes to leave the business. Perhaps the thrill is gone. Perhaps he wants to settle down and marry more than he wants to adventure. Perhaps he knows that age or injury has slowed him down too much; he can not do the job anymore But the job has to be done. It's time to pick a successor The Hero , therefore, formally hands the work over to someone else who can do the job. Perhaps a sidekick promotion or a former apprentice . A Legacy Character may involve this Usually, the immediate</ problem is gone, and the hero is leaving on a high note, but both he and his successor are aware that the problem or that type of problem will happen again; he has not fixed the world. Therefore, the Master-Apprentice Chain is about to take effect If the hero wants to leave, this can form a Happy Ending . The less he wants it, the more a Bitter Sweet Ending it is Differs from Take Up My Sword in that the hero is still around and may be up to the role of Old Master . If the hero dies very quickly afterward, it can overlap with Take Up My Sword . However, it usually happens in the beginning or middle of a story; Passing The Torch is usually an Ending Trope . The only time it can happen at the beginning is if he were the hero in the backstory (or prior installment) and in the main story is already the Mentor Archetype May be physically embodied in an object that the retiring hero gives the new one Opposite of 10-Minute Retirement and He's Back Subtrope to Changing of the Guard , where the role of main character changes for any reason or by any procedure. Passing The Torch requires either the Hero to be part of the succession planning and/or handing off the office either personally or by explicit proxy See also Spinoff Sendoff ‎, a way of "passing the baton" from one series to another

In fiction, male athletes are usually either dumb or mean, whereas female athletes are usually portrayed sympathetically The passionate sports girl can put the Jerk Jock in his place by beating him at his own sport, and also protects the Non-Action Guy from the Jerk Jock as well. She can vary from being a sweet and shy yet diligent player, to being a dark personality who just wants to play football. The specific sport she pursues is often dependent on personality; tomboys generally prefer soccer, basketball, swimming, martial arts, baseball and softball, whereas girly girls generally prefer tennis, ice skating, gymnastics, cheerleading and volleyball You can tell that she is passionate because this girl lives for one sport at which she excels, or perhaps for any opportunity to show her strength, despite what anyone else thinks. In the first case, if it's a traditionally male sport, her desire to prove herself could lead to Sweet Polly Oliver as she attempts to get

on an all boy team. If she plays a variety of sports then she's more likely to be the Girl Next Door . If it's a boys' team then it's You Go, Girl! She is also a more accessible Love Interest for the hero, since he can get to know her better by playing sports with her. There is a bit of Wish Fulfillment here for both the guys (who want a girlfriend they can talk about sports with) and the girls (who want to associate themselves easier with sporty guys). Making sports her priority can be intimidating or relatable and/or attractive depending on the setting and the characters within it In works focused on female characters, she is sometimes subjected to Even the Girls Want Her since her sports heroics impresses the girls, but without being as intimidating as a boy. This is particularly common in Anime. When taken to the logical extreme this can turn her into a Lesbian Jock . She can also form a Masculine Girl, Feminine Boy pairing with a Non-Action Guy who is more artistically cultured than athletic, and in some cases, the passionate sports girl may also have some artistic talents herself as well, and she will also protect the non-sports guy from the (usually male) Jerk Jock as well Unlike male athletes who are usually not depicted as stellar at academics (unless it involves natural sciences or mathematics), female athletes are more likely to be an Academic Athlete who has excellent grades as well Compare Gamer Chick , another example of a female in a traditionally male-dominated form of entertainment. May cross over with Action Girl , especially if her chosen sport is a combat sport

In Speculative Fiction , whenever there are two innate forces at work (usually Black-and-White Morality or Order Versus Chaos), the "Light" side (that is, the heroic side) will be transcendent, calm, and rational; the "Dark" side (the antagonistic side) will be passionate, impulsive and chaotic. Rarely are the two inversed, with the good side being the emotional one and the evil side being the enlightened Related to Villains Act, Heroes React , although that particular trope is more about how the events of the story are motivated by the villain's actions. Also, do not confuse with Ambition Is Evil , in which you can tell the good guys from the bad guys because the bad guys are the ones who want to change the Status Quo. This trope is specifically about when there are two metaphysical forces in opposition and one of them motivates through passion and emotion and the other through peace and enlightenment This trope is more common in Eastern works than Western ones thanks to the influence of Buddhism, where passion is linked to obsession and therefore, a temptation to be avoided. Meanwhile in Western works, a lack of passion tends to be linked to a lack of value for life and as such, a villainous trait Tends to be a common trait for a Strawman Emotional . May invoke a Superpowered Evil Side and, inversely, a Helpless Good Side . This trope can also be considered the opposite of Order Is Not Good because order (as in, discipline and self-restraint) is important for keeping passion in check and prevent going to The Dark Side Compare Emotions vs. Stoicism and Harmony Vs Discipline Contrast Straw Vulcan , Japanese Spirit

When a character is treating a certain scene as pure entertainment, they will often be shown eating popcorn or other stereotypical movie-theater food. Where they get it is a mystery. Usually, the scene will be something like a fight or a private conversation between lovers, that generally isn't intended for anyone's amusement (at least not in-universe). Almost inevitably, the character will be too fixated on the entertainment to actually look

at what they’re eating This is always used for humor; it often indicates that the character in question, rather than offering to help , is callous enough that they are deriving amusement from someone's anguish or anger . It may also indicate that the character in question has no stake in the outcome. Alternatively, perhaps they do</ have a stake in the outcome and are confident that somebody they don't like is about to receive a well-deserved comeuppance, or that their side is winning in the case of a fight, or that their Evil Plan is about to come to fruition if it's a villain doing it. Sometimes the character becomes an Audience Surrogate , giving an in-universe voice to the audience's feelings towards the scene This is ubiquitous enough that " " and similar remarks are a common response to Internet flame wars Compare and contrast Long Speech Tea Time (where the audience has a Spot of Tea or something because they're bored) and The Snack Is More Interesting (where someone is</ involved, but acts strangely unconcerned). Come to Gawk and Bile Fascination are often contributing elements. For more catastrophic occurrences, there is While Rome Burns . If the situation is in really </ bad taste, the spectator is probably a Nightmare Fetishist . A variation on the trope is "Pass the Joint", in which a situation is so strange that the only way to cope is Sure, Let's Go with That and pass around a joint to mellow out

Rather than animating a critical moment in a battle, and perhaps giving away a plot point too soon, some animators cut to or dissolve into a still image designed to look like an action shot, often blurry with motion, that shows the important hit, or dodge, or other action, without revealing anything crucial. The most attractive of these are made to look like they were done in pastel chalks, although simple black line-drawings are also used. The Ken Burns Effect is frequently employed. These are also frequently used to emphasize especially dramatic moments, especially during cliffhangers This technique was invented by the late, great, and highly influential anime director Osamu Dezaki The term of art for this type of frame is "Harmony Cel." Other common terms include "Postcard Memory" or just "a Dezaki". The color is usually painted with gouache like a background would be. (Although any media could potentially be used, chalk pastels or charcoal are messy and tend to cling to paper very loosely, increasing the likelihood of smearing during handling or photography. No matter what it looks like, they were almost certainly not used.) The lines might be done as they would on a normal cel, or they might be painted in as well See also Picture-Perfect Presentation

A pastiche</ is a work done In the Style of... another artist. It may reflect a single work by a single artist, or a body of work by one or more artists, or even an entire genre. The difference between a Fan Fic , which reuses characters or settings from another work, and a pastiche, is that the pastiche copies the tone</ and flavor</ of its original. A work can, of course, be both a fanfic and</ a pastiche, but pastiche is all about the style</ . A pastiche may be created as an homage to the original artist, or it may be intended as a gentle parody . The distinction is not important—although an exaggerated parody that did not actually reflect the style of the original would not</ be a pastiche. A pastiche which doesn't show some</ respect for the original would be a very difficult thing to pull off. Most pastiches are created in a spirit of fun, which can often make it hard to determine whether the creator intended

parody or homage—or even, possibly, both. (An exception to the just-for-fun rule is in Academia, where a pastiche may be created as a Deconstruction of the original, but such works rarely reach—or are intended for—a broad audience.) A good pastiche can be a hard thing to pull off, and many an excellent artist has crashed and burned in the attempt. Using someone else's style is simply not an easy thing, especially without avoiding accusations of They Copied It, So It Sucks! . In fact, it's often inevitable that good pastiches will still get this accusation. Nevertheless, a decent pastiche is enjoyable enough for both artist and audience that there is no shortage of artists willing to give it a try. See also Musical Pastiche . Compare Fan Fic , Original Flavor , Parody , Satire , Whole Plot Reference and In the Style of... .

This is a relatively long work which started its life as a bunch of shorter works in the same continuity, which were then edited together to form a single more-or-less coherent narrative. Sometimes this occurs through the addition of a Framing Device or Encyclopedia Exposita to tie the different narrative threads together; sometimes it just means the stories themselves are edited to increase continuity and remove redundant exposition; sometimes they are just put in chronological order (or left in Anachronic Order for artistic purposes) This is very common in literary science fiction, especially from The '50s and The '60s when there was a shift in the genre from publishing in short-story-dominated magazines to publishing novels. In those circles it's generally referred to as a "fix-up", a name coined by science fiction writer A. E. van Vogt Compare Adaptation Expansion , Arc Welding , Clip Show , Compilation Re-release , and especially Compilation Movie . For the inverse, see Divided for Publication Not to related to Patchwork Fic , which is when a fanfic combines characters and/or other elements from different adaptations of the same single story; or to Patchwork Kids , which is when a child's personality and appearance are essentially just a mashup of their parents' own

These are tropes that have to do with paternity. If you get past the questionable paternity to actual parenthood, see The Parent Trope Chocolate Baby : A supposed father is obviously not the biological father, because the baby looks very</ different

The villain, or The Great Gazoo , or just a misguided member of an advanced race comments on how weak, pathetic, cowardly, worthless (or just un-powered) humans are. "Why do you care about them?" Or, the villain will be more direct and point out that Humans Are the Real Monsters and thus not worth saving. This will lead into the hero responding with the Patrick Stewart Speech, in which he may concede that humans are weak (at least for the moment), but there is much that is noble about humanity, as well. He notes that they have much potential, and he admires humans' capacity for love / friendship / loyalty / courage / persistence /whatever virtue it is the writers want to Aesop . If you hear the sentences "There is much that we could learn from them," or "We were not so different , once," you're likely in the midst of a Patrick Stewart Speech. Note this is not just defending humans out of a general respect for life, or even for sentient life : the Patrick Stewart Speech notes specific qualities of humanity itself which make it worth saving, above and beyond</ simply being a sentient lifeform. In short, Humans Are Special and Rousseau Was Right . One variant of

this speech will praise our flaws </ instead, pointing out how in overcoming/fighting them we grow better and create beautiful things. When done well, can give the viewer a sense of pride . When done poorly, comes off as overly preachy , pretentious , or even ridiculous . For a lighter-hearted version , end the Patrick Stewart Speech with some relatively minor accomplishment of humanity : "And they came up with jelly-filled donuts! How can you hate a species that invented jelly donuts? Have you tried these things? " So named because Patrick Stewart has delivered such speeches many times, both as Captain Jean-Luc Picard from Star Trek: The Next Generation </ and as Professor Xavier from the X-Men Film Series </. (He was trained as a Shakespearean actor, after all.) Do note, however, that although the Patrick Stewart Speech is always superb, with a perfectly balanced combination of precise logic and emotional appeal, a five-minute Patrick Stewart Speech barely holds a candle to a twenty-second Whoopi Epiphany Speech , just in terms of pure wise clarity. See also Kirk Summation , "No More Holding Back" Speech , Heroism Motive Speech , and Intrigued by Humanity . Contrast Shut Up, Kirk! and Shaming the Mob .

The dark, logical corollary to The Golden Rule So the character descends upon the settlement, burns their buildings, kills the inhabitants, takes their money and resources, and leaves, pleased that now he'll be able to buy that shiny new whatever-he-was-wanting Is this the new Big Bad ? No! It's The Hero ! ... oh wait, did you know that it was a settlement of demon worshipping cultists that supports their activities with banditry ? A more Wretched Hive of arsonists, murderers, and jaywalkers never blemished a countryside Welcome to a special kind of morality where otherwise evil actions are considered okay because the victims deserved it . Like all tropes, this can be played with any number of ways. It can be played straight , defied , deconstructed , or left disquietingly gray depending on the author. This one's very common with Revenge stories in general, since revenge at its core is a viciously personal case of Paying Evil Unto Evil, and when one is broken to the core by the suffering brought by the evil, even a desperate Revenge by Proxy becomes justifiable (or at least it will seem that way to the one taking revenge). Alternatively, the hero may use such tactics as part of a deliberate and calculated strategy to break the villains' morale Expect an extra heavy Villain Ball complete with kicking dogs by the Asshole Victim if the author especially wants you to know it's okay. The plot often uses this with a "people whom the law let get away" Karma Houdini combination. The villain may call out a "Not So Different" Remark to the "hero" as a final insult This sort of character often gains an Inspector Javert opponent, whose rightness depends from case to case It is also a common and effective way to give a Sympathetic P.O.V. to an Anti-Hero in works with Black-and-Gray Morality . In darker Crime and Punishment Series , this is often the reaction of the police department to Cop Killers (to the point of becoming Police Brutality) And should a person have trouble doing this on their own, they can always ask for a helping hand If a victim of evil, or a Badass Pacifist , chooses not to Pay Evil Unto Evil, they may decide to Turn the Other Cheek . How effective either response is will depend on where the work falls on the Sliding Scale of Idealism vs. Cynicism Compare with Strike Me Down with All of Your Hatred , in which the villain deliberately</ goads the hero into doing the same terrible things he did to him. Usually as a plot to get them to sink to their level Contrast with If You

Kill Him, You Will Be Just Like Him , The Farmer and the Viper , and Kick the Son of a Bitch (when the victim in question isn't recognized by the person victimizing them for the bad things they've done; the lines may be blurred in cases where the person inflicting harm was, at the core, just looking for someone to hurt and decided to use the victim's scumminess as an excuse to harm them). Depending on the depiction, Hell may also serve as an extreme example, where those who do evil are punished forever with various torments you certainly wouldn't call good</. May overlap with Disproportionate Retribution . See Revenge Is Not Justice which is a possible deconstruction of this trope in which the hero is held accountable for victimizing the wrongdoer See also Bully Hunter , Good Is Not Soft , He Who Fights Monsters , Just Like Robin Hood , Karmic Thief , Screw the Rules, They Broke Them First! , Serial-Killer Killer , Unscrupulous Hero , Vigilante Man , and Wife-Basher Basher In real life, the sort of thinking behind this trope is called " "

A hero or Anti-Hero gets in a scuffle in a bar , a restaurant , a banquet hall , or another establishment not fit for battle and, after the chaos is over, decides to pay for the destruction left behind. Hero Insurance would typically still be in effect but the hero decides to give the owner a little bit of money in order to pay for the mess. More often than not, this is to make the character look like a total badass, or perhaps a gentleman . Not only did they just beat up or kill an enemy in a typically awesome manner but they decided to toss in a few extra bucks to pay for collateral damage. This can often be an Establishing Character Moment since the audience can tell the person is not to be trifled with, but is also generous enough to take responsibility for the damages. There might also be the possibility that the payment is too small to cover the charges. A Bond One-Liner is optional Sister trope to Action Insurance Gag

A term used in show business to describe the minor roles and drudge work one usually needs to do before hitting it big The name comes from paying dues to a union one belongs to, but even big successes need to pay dues if they are part of a union Naturally applies as much, if not more so, to Real Life as well as fiction Compare Money, Dear Boy , because even big stars have to pay their bills. If this work is exceedingly terrible and the artist does make it big, these often become their Old Shame , often with the excuse, " I Was Young and Needed the Money ." Fuel for the eventual Retroactive Recognition reaction. See also Waiting for a Break and Fallen-on-Hard-Times Job . Can also be necessary to achieve Career Resurrection if fame/high profile work was earned and then lost beforehand

A Spear Counterpart to Gainaxing , where a male character's pectoral muscles jiggle and bounce, except that they flex them to make it happen. However, generally it is used not so much for Fanservice as it is used as an often comedic demonstration of "manliness". Other names for it are the "Pec Bounce", the "Pec Dance" (usually this name is used if people flex their pecs in time to music), and the "Pec Pop". A character with a Bodybuilding background would probably do this while hitting some variation of either a "side chest" or a "most muscular" pose (Armstrong pictured hitting the MM), since those are

the ones which most emphasize the pecs. Another variant is the "Ab Wave", where a character with a well defined six pack will flex their stomach muscles like a wave. Generally, this isn't so much saying "look how strong I am" as it is "aren't I sexy?" For cases of Pec Flex when the flexer has less-than-impressive pecs, see Flexing Those Non-Biceps .

Very simply , this is when a priest is depicted as or accused of being a pedophile or child molester — in short, a holy man with an entirely unholy</ interest in children. Given the implicit trust associated with the profession, this is typically portrayed as the ultimate betrayal of innocence and a Moral Event Horizon for everyone involved. Due to the cultural impact of the late-twentieth to early 21st-century child molestation scandals in the Catholic Church, Catholic priests are by far the most likely to be involved in a molestation accusation in modern media, although neither Protestant ministers nor the clergy of other religions are by any means immune, and, of course, in real life a pedophile also can be a parent or other relative, a a babysitter, a neighbor, a family friend, or even a random person online, although for this to happen, a meeting must be arranged first</, and personal information given that any parent worth his/her salt teaches their children to never</ give to strangers, making the terrible internet Death Trap not nearly as much of one as those who fear it believe simply because — as with murderers, rapists, muggers, or any other type of violent criminal — pedophiles exist in all professions and at all levels of society. Hell, they can even be a children's TV presenter protected by having friends in high places . The main reason why abuse cases in the Catholic Churches drew far more media attention than, for example, cases in schools was because the Catholic Church cases were systematically covered up. This cover-up was exacerbated because, when clergy abuse accusations started to become more common in the mid-to-late 20th Century, it was believed pederasty could be cured with therapy, which is where offending priests were sent (instead of informing the authorities). Depending on the tone of the work and whether it regards the church as inherently good or evil, the initial accusation may be treated as the aberration of a single sick individual, or may lead to the uncovering of a corrupt or actively malevolent church hierarchy. Taken to the extreme, the church is nothing more than a Wretched Hive of child abusers using their religion as a shield. By contrast, in a comedic work, the trope may be Played for Laughs as a stock joke without exploring the Unfortunate Implications . The accused need not even be guilty; the simple accusation of pedophilia/molestation is usually enough to set off a Pædo Hunt , which a villain may take full advantage of as a Red Herring to cover up or distract from their crimes (or to justify a crusade against the priest's entire religion). Another way this trope can be used on a non-villainous character is that he has joined the church not only to get an excuse to remain a bachelor, but also as a way to fight against his urges and remain chaste . Needless to say, the subject is extremely </ controversial in Real Life . Therefore, No Real Life Examples, Please! Just let The Other Wiki See also Dirty Old Monk , Corrupt Church , Religion of Evil , Sinister Minister , Pædo Hunt , and Rape as Drama .

Common in modelling as well as fiction, this is when a person's

hair intentionally covers one of their eyes. Sometimes it's just for style, while other times it might function as an Eyepatch of Power , or cover a disfigurement such as horrible scarring or a blind eye (in which case its removal may serve as The Reveal). It frequently serves as some kind of symbol: In real life, the style is called "peek-a-boo", or, more recently, " emo bang", and was popularized by actress in the 1940s (who was asked to change it when it proved impractical for women working in factories during the war). It may only happen for one scene, or it may be a permanent feature of a character. May be a consequence of Slipknot Ponytail . If the style sticks through all sorts of action, it veers into Improbable Hair Style territory. A person with this hairstyle may also be victim to some of the same jokes as characters who actually have only one eye, such as lacking depth perception. A common emo hairstyle for males also features this and calls it emo fringe</ . Contrast Hidden Eyes , where a character's eyes are temporarily in shadow to indicate a change in emotional state — this is usually a more permanent effect and can mean many things. If both</ eyes are covered by the locks, then those are Blinding Bangs . For the real use of hair in a Scenery Censor situation, see Godiva Hair . Compare Oddly Visible Eyebrows . Played for Laughs in Vandread </ The resident Bishōnen Duero wears long hair covering his right eye at all times. In the second season finale, Parfeit sneaks up on him and briefly brushes his hair aside, exclaiming "I knew it!" with a content smile. Too bad the audience only sees him from behind in that shot . In Yu-Gi-Oh! </ , Pegasus's hairdo hides the Millennium Eye that allows him to steal souls and read minds. He still has it that way after losing the eye; it fills in for an eyepatch.

Freya in Final Fantasy IX Lumine and Layer in Mega Man X8 </ . Layer has them over both eyes, but her eyes are visible during certain reaction shots. Sialeeds from Suikoden V Leon S. Kennedy from the Resident Evil

The heroine has just escaped from the Serial Killer or the gruesome corporeal manifestation of the Cosmic Horror and is running through the Haunted House , desperately trying to find a means of escape. She's managed to avoid tripping over her own feet and falling like an idiot, and if she can just make it through this next upcoming door, she may</ just be able to make it to the outside world and sweet, sweet freedom!</ She opens the door... only to find herself standing nose to nose with a decayed, maggoty, slack-jawed corpse... Cue Scare Chord . Cue also a huge scream from the heroine and from any traumatized 8-year olds who may have the misfortune to be watching this show. Yes. Once again, the Peek-a-Boo Corpse — the bane of squeamish horror movie watchers everywhere</ — has made an appearance, rearing its ugly, eyeless, wormy head and worming its way into the nightmares of kids and adults alike. If you're a naive moviewatcher (e.g., a child), there is</ no defense from the Peek-a-Boo Corpse, for there is no way to see it coming. Even if you've had some</ experience watching horror movies (and you can pretty much tell if a desperate Damsel in Distress is going to run into trouble), there are still times and places when the Peek-a-Boo Corpse will pop out unexpectedly, scaring the bejeezus out of even the most hardened of horror fans, especially if it's a particularly hideous one. Most Peek-a-Boo Corpses like to hang around haunted houses and cemeteries, but occasionally they'll turn up in clean and innocuous environments where you'd least expect them (and where

they'll have maximum shock value). A common way to find out if an ordinary, non-suspicious character is actually a villain is to have the heroine stumble upon a Peek-a-Boo Corpse hidden in their closet or basement. (Unfortunately, for the heroine, the villain is usually close by, watching this development, if they're not actively chasing her already.) You can expect the identity of the Peek-a-Boo Corpse to be: In order for a body to qualify as a Peek-a-Boo Corpse , its appearance must somehow jolt the viewer and the person finding it should either be (a) actively engaged in a search for something else or (b) running to escape some real or perceived danger. Note: In the event that the half-destroyed corpse-like body of the villain should pop out and scare the heroes after they had mistakenly thought that they had laid it to rest, it technically doesn't qualify as a Peek-a-Boo Corpse moment (the main reason being that... well... the villain isn't entirely a corpse</ yet...) Compare Cat Scare and Spring-Loaded Corpse . If the corpse playing peek-a-boo was hidden in an extremely odd location, that's Body in a Breadbox . If they were found on the ceiling, that's Ceiling Corpse .

It has many names. Kitchen Patrol (aka KP). Spud Bashing. Whatever your detail calls it, it seems you Can't Get Away with Nuthin' , and once you're caught it's a Smash Cut to sitting on the floor of a drab kitchen somewhere next to a sack of potatoes, peeling them one at a time The</ stock Punishment Detail in the military in fiction, presumably for its instant-recognizability factor as opposed to, say, digging holes in the ground (read: latrines) No longer Truth in Television , at least in the U.S. military, due to heavy use of third-party contractors who employ civilians to do this kind of stuff. Well, that and there are machines that peel potatoes these days

What to do with criminals is a problem for societies real and fictional. One common solution in times past and perhaps future is the Penal Colony. This is a self-contained society consisting mostly of prisoners and those who guard them, usually separated from the civilized world by natural barriers in addition to (or instead of) prison walls; this can often be a remote island far out in the ocean, or some piece of land in the middle of nowhere, but in science fiction it may be a whole Prison Planet whose Hat is an orange jumpsuit Typically the prisoners will be required to do some sort of hard and dangerous labor; mining is a favorite in science fiction. If the colony is isolated, loosely controlled, or has no guards at all, it will resemble a Wretched Hive , with the prisoners more or less running the place The Penal Colony can be a rich source of story ideas; if you're recruiting for a Ragtag Bunch of Misfits , you might do it here. If a Rebel Leader is captured by The Empire and sent here they may have to fight their way to the top of the prison hierarchy, then arrange an escape. Need a source of people you can dispose of without anyone caring ? Have your Xenomorph invade the Penal Colony . Is the place too loosely supervised? If so, it may become a base of operations for a crime lord These jails are often a type of Hellhole Prison . Compare Wretched Hive and Death World (which may be what separates the Penal Colony from civilization). Particularly inescapable ones can overlap with The Alcatraz or Phantom Zone . Often related to Settling the Frontier . See also Reassigned to Antarctica . The Super-Trope to Sentenced to Down Under , which is specifically the old British practice of sending their convicts to Australia between the late eighteenth and mid-nineteenth centuries

A classic Death Trap , tracing its origins to Edgar Allan Poe 's " The Pit and the Pendulum ". The hero is strapped to a table beneath a blade mounted on a pendulum. When activated, the pendulum descends slightly with each swing, gradually getting closer to the hero Compare Smashing Hallway Traps of Doom

During The War Sequence , well, there's a war</ going on. This means that a lot of people are eagerly going at it at once — something that is extraordinarily difficult to film in any satisfactory manner. There's just so much going on at any given moment, and the reader or viewer or player can only see a small part of the action. There's also the fact that many stories with such a sequence are essentially heroic stories — the dehumanization and intermittent back-and-forth of a battle doesn't really fit so well into the theme of such a tale. Because of this, many battle sequences in works of fiction seem to go in one of two directions with the Advantage Ball being passed around — either the Redshirt Army is getting clobbered, or the Evil Minions are. It almost seems like armies in television, movies, or games can only be in one of these two extremes — there are never intermittent stalemates or indecisive exchanges. The actions of the heroes, furthermore, are often disproportionate to their actual effect in the battle. No random extra achieves anything in the battle; only named characters can be militarily useful . Of course, given the power of many heroic or villainous characters, this is somewhat more believable — especially if the series is Fantasy or Science Fiction, where a single individual may just have the power to destroy entire cities with a thought. In any case, this effect will swing this pendulum back and forth; usually, until The Cavalry arrives, scenes of carnage and tragedy will dominate, until they crest the hill and suddenly the Evil Minions who just moments ago were rampaging unchecked are now fleeing in disorder. This trope has some basis in fact — many real-life battles are decided on morale and momentum — but it still sometimes feels vaguely manipulative to base the fates of so many on the actions of so few, in such a literal sense. One-sided encounters are perfectly reasonable when those involved have radically disparate technology levels, resources, and/or training. Not to be confused with the backstory war of the Gears of War game series. See also: Redshirt Army , Evil Minions , Conservation of Ninjutsu , Only I Can Kill Him !

A Pen Name (also known as a pseudonym or "nom de plume" if you want to sound fancy) is a made-up name a writer or artist (in the case of performers, this is called a Stage Name) produces works under for whatever reason. Often due to Rule of Cool , but other reasons also abound. In the case of famous actors / people, it's sometimes a way to find out whether or not they'd be successful even without their star power attached to it. Many writers have used a fictional name in order to avoid the typecasting associated with their name and particular genres, allowing them to write outside the expected genre that they've become well known for. Some manga creators use a pen name to avoid legal difficulties due to rules of their regular employment (school teachers and civil servants in Japan are often forbidden from pursuing other sources of income and it could be scandalous if a high school teacher was also a mangaka). A pseudonym may be used to protect the writer for exposé books

about espionage or crime. Many female writers have used male pen names when writing in a male-dominated genre, and male writers have used female-sounding pen names when writing in a female-dominated genre, due to public expectations or the avoidance of potential scandal Supertrope of Moustache de Plume and Same Face, Different Name , so please don't repeat those examples here. See also House Pseudonym

"One more outburst like that and I'll clear this courtroom!" Device used to indicate shock at the events of a trial. Note that the courtroom is never actually cleared. Therefore, once the Penultimate Outburst is heard, it's a signal that the trial's drama has reached its climax. Also the punchline of a joke about a flatulent judge. See also: Courtroom Antic

A character has just encountered something so surprising, shocking, or hilarious that he falls off the chair on which he was sitting. Occasionally, the entire chair may tip over with him. The character may have just been told not to lean back in his chair May be a consequence of Swivel-Chair Antics . Compare Face Fault , Breaking Bad News Gently (when it involves saying "You better sit down"), and Dramatic Drop , though in this case the thing being dropped is yourself. Sister Trope of Spit Take , Forgot to Mind Their Head and Dramatic Sit-Down . It's named after the non-trope People Sit on Chairs

Want to show that the bad guys (or possibly the Alien Invasion) are really, truly evil?</ Want them to cross the Moral Event Horizon without having to do much work? Want them to just terrify everybody into oblivion? Easy! Just state — or really heavily imply — that they breed humans like livestock, or keep them like animals in vast People Farms. Their purpose needn't be specified. Eating us? Harvesting our souls? Being bred for our skills in magic? Human Resources ? Because they like to watch or more sinister reasons ? Doesn't matter. Just the implication is enough to squick people While it's true that humans are just another species of animal on this Insignificant Little Blue Planet , we tend to think ourselves above mere animals</ — among other things, we believe that all of us have an inherent right to freedom, safety from imprisonment without due cause, or abuse both physical and emotional. People Farms play to lots of Primal Fears and Squicks at once — fear of imprisonment, enslavement, death (if we get treated to a culling of unfit stock), rape (if there's a "breeding program" going on, which participants have no choice in), mutilation (branding/tattooing/tagging with a number or Mark of Shame , neutering on occasion, and so on) and the general sense of being controlled. If it's our fellow humans doing this, you can be certain that their contempt for their fellow men is absolute. If it's an alien race, you know they obviously didn't get the memo that Humans Are Special . Of course, other sapient species can be substituted for humans, provided that they're sympathetic In reality, though, humans do not make a good farming animal for anything</, even if you somehow manage to keep them from trying to escape or fight back every now and then. Humans are slow to mature and reproduce, while economically an animal that requires over 3 years of growing is largely inefficient. We cannot convert inedible</ biomass such as grass, as human body needs a complex

diet to develop properly. A huge part of our energy is wasted on the brain, and it cannot be just shut down and prevented from growing. Unless humans are literally the only available source of a given product, it makes no sense whatsoever; and the price of any human cultivated product would be obscene</ for any mass production What really is scary about the idea of wide-scale human imprisonment and abuse puts people in mind of historical setups resembling this trope, including The Holocaust , The Gulag , and many other infamous instances of slavery , Hellhole Prisons , and Final Solutions , where the goal was not to farm</ people but to methodically exterminate them A major example of Industrialized Evil

There is something creepy about people in jars. Jarring , even So just like most everything else people find creepy for various reasons, writers like putting people in jars. Experimentation, containment, study, incubation , medical reasons or just plain old sucking out their Life Force . Some writers just love putting people in jars and especially love comparing them to insects or pickled specimens The people themselves are almost always alive, but unconscious, usually in some form of suspended animation If these are being used to make better soldiers , it's often easy to tell when they're at full power, as it's quite common for the specimen to break out and start killing everyone Oh, call them pods, tanks, containment units or chambers all you like. These are people in jars If the goal is specifically to extract some resource from the people, it's a form of Human Resources This is often how cryonics is depicted in fiction , but is absolutely nothing</ like any Real Life equivalents Compare Brain in a Jar , Soul Jar , Crystal Prison and Girl in a Box , a gender-specific form of this trope. Contrast to Man in the Machine , in which the subject (while still physically constrained by a container of some sort) is typically conscious, mobile, and/or able to express autonomy. See Our Homunculi Are Different for a common application of this trope See Uncanny Valley for the audience's reaction

A Heroic Fantasy trope. Also found in Hollywood History In fiction hair colors are often used to easily identify a character. They're usually meant to identify personality traits, such as the Fiery Redhead or Brainy Brunette . However, hair colors being used to distinguish a character's ethnic background are not uncommon As in many historical eras, many fantasy writers divide their humans up into finer ethnic categories than are common nowadays. One of the most common is 'races' that would in the USA, South Africa, and other places all be called 'white' (after their pale-ish skin and the legal names for prior ranks of citizenship) but, in the work, are categorized by their hair color, of which blond and dark are the most common. These hair colors are often depicted as remarkably uniform throughout the different populations There is a certain amount of Truth in Television here. Before widespread genetic diversity, with people meeting and mixing between different countries or continents, the traits of a single tribe or village or other group of people were often common across the entire population. One group of people, who haven't been mixing with outsiders, will generally share the same general appearance. It's part of why, for instance, there are two main stereotypical depictions of Irish people, the 'black' Irish, like

Colin Farrell, and the 'red' Irish, like Colm Meaney (Miles O'Brien from Star Trek </). Of course, with black hair and brown eyes being dominant genetic traits a focus on these (admittedly very visible) characteristics isn't very helpful for differentiating between ethnic groups outside of Europe and the Middle East In all too many works, however, the races are absolutely uniform, living in an ethnic Patchwork Map . Even at the borders, half-breeds are unusual and physically distinctive. Phenotype Stereotype usually prevails: blue eyes for blonds, green eyes for redheads, gray eyes or brown eyes for dark-haired people. Furthermore, the physical appearances are also used as a short hand for Planet of Hats traits. Sometimes two characters sharing a hair color may be a Hair Color Spoiler , especially if their connection is supposed to be revealed later The prevalence of Medieval European Fantasy makes the subdivisions of European ethnic groups somewhat plausible, but other ethnic subdivisions are known, and, sometimes, a blond race will contrast with a dark-haired race with darker skin. Often, the mere presence of whites and blacks in the same area will not preclude their regarding themselves as more finely divided than that — which is also Truth in Television And, of course, racism follows the racial divides the cultures use. Compare Fantastic Racism Phenotype Stereotype applies to Japanese media where European or North American characters are blondes, while Latino Is Brown usually goes hand-in-hand with latinos having dark hair colors Not to be confused with You Gotta Have Blue Hair . Compare to Facial Profiling . Sub-trope of Group-Identifying Feature

Exactly What It Says on the Tin , a zoo created by some alien race or just a plain crazy person that puts live specimens of humans or other intelligent life on display. This is one of the more likely places you'll go if the Egomaniac Hunter doesn't kill you after Hunting the Most Dangerous Game Could be called the slightly more civil version of People Farms . Super-Trope of Human Pet . If it's humans exhibiting unusual specimens of their own species, then that's The Freakshow (though the "exhibits" in a circus sideshow may in fact be there of their own volition, simply because it's the only way they can make a living among All of the Other Reindeer). See also Living Museum Exhibit

Bob is about to do something that Charlie considers stupid — attempting a Heroic Sacrifice , becoming The Bait , or otherwise putting himself in danger. Charlie could try to reason with Bob and persuade him not to go, but he takes a much faster and more direct option. He punches Bob in the jaw. (The gut and/or solar plexus are also popular areas.) Nine times out of ten, this will put Bob out like a light , but even when it doesn't it still subdues him long enough for Charlie to take his place or forcibly remove him from danger. Bob may be cursing and raging (or even attempting to return the punch), but Charlie will brush him off and insist that he only did what he had to do . A subtrope of Cruel to Be Kind , since this sort of treatment hurts</, even if it saves Bob from worse. Since one hero attacking another looks really</ bad out of context, this is a common source of Superdickery . See Kind Restraints for a softer version of this. Compare Percussive Shutdown when this tactic is used against an object rather than a character. Can result in Percussive Therapy if the recipient of the hit has been a source of frustration for the person doing the hitting. A common reason for this is that

the character punching you out is More Expendable Than You . Compare Get a Hold of Yourself, Man! , Dope Slap and Don't Say Such Stupid Things .

Characters never sneeze, cough, belch, blow their noses, or in any way display less than perfect health unless it is central to the plot (as in Annoying Patient or Nurse with Good Intentions). A simple cough might warrant a subplot to handle the ramifications if it is not itself a symptom of terminal disease . If ever such symptoms have no plot significance, it's probably because the actor is actually sick . However, they'll usually try to work around that Occasionally either justified or subverted when it turns out that the fact the character has perfect health is significant — it may be due to a superpower (often a Healing Factor), or they may be a robot One of the few exceptions is Catch Your Death of Cold , where temporary illness is a harmless effect of going out in cold weather. This is a fairly modern development, however; the same situation was once a popular way for fragile young ladies to catch an Incurable Cough of Death Sort of a medical incarnation of The Law of Conservation of Detail . Compare: Soap Opera Disease See also Ideal Illness Immunity , where never getting sick is justified with fantastic means, and We Will Have Perfect Health in the Future , where it's justified by Science Marching On

A character quotes a seemingly made-up word that no one has ever heard of before then. This is usually a word the writer just made up but is occasionally a real obscure, archaic or obsolete word; for instance, 400 years before we had computers, we had email</, which is a raised or embossed image pressed into metal (and pronounced EM-eye, because it's French), and "unfriend", which meant exactly what it does today (just at the tavern, rather than on Facebook) A type of Neologism (for the many cases where the word is</ new), of which Scrabble Babble is a subtrope. Some examples are another form of Malaproper . See also Delusions of Eloquence and Informed Obscenity . Characters who primarily talk in these are known as a Neologizer . Not to be confused with Buffy Speak which is a lack of nuance and sometimes making new compound words, not entirely new words. For words that are actually not</ new, it may be a case of either Accidentally Correct Writing or Shown Their Work Named for an exchange from an episode of The Simpsons </. Incidentally, the word embiggen</ was later used in a completely cromulent paper on string theory. It has also been added to Webster's dictionary and Dictionary.com

This trope describes one of the most common forms of Utopia : a society, nation, or world that has ascended so far beyond petty divisiveness that everyone is a pacifist living in peace and harmony This is generally a starting point for stories; either someone's bored of the Sugar Bowl life and would rather live In Harm's Way , or invaders think it's ripe for conquest, or someone discovers an Awful Truth about it. Needless to say, such a setting is easy pickings for Author Tracts and Strawman Political characters This trope can be either played straight or subverted. When played straight, the Perfect Pacifist People will be Actual Pacifists , shunning all physical violence even when their society is threatened . In these cases, a common plot point is for a character to learn the ways of war (so he can teach it to his people), or find others to do the fighting for them. On rare

occasions, they'll break out the Superweapon Surprise to justify why they're able to live as pacifists Subversions happen when the perfect pacifist utopia isn't actually perfect. Perhaps they're pacifists in name only who have no qualms fighting outsiders , or it's a façade for the elites, with lesser citizens relegated to a Dystopia Beneath the Earth . Or perhaps they preach and (non-violently) enforce pacifism at the price of any individuality whatsoever . Or, if they aren't planning on blaming human nature and ending free will, they might condemn emotion as a weakness , refusing to acknowledge any meaning in others' lives It's worth noting that the utopian society described in Plato's The Republic </ both subverts this trope and plays it straight. The Republic has a general pacifist attitude, but its citizens are ready to fight if necessary; on the other hand, it's not above hiring mercenaries from its neighbours as well, both to defend the Republic and to weed out their most violent members Also see Rousseau Was Right (which believes that such a future is inevitable), Crystal Spires and Togas , No Poverty , and Mary Suetopia . May overlap with Veganopia . Crapsaccharine World is the trope for utopias that aren't what they seem See also City in a Bottle , Space Elves , and more specifically Proud Scholar Race Guy (Type I), which is a sister trope. Contrast Proud Warrior Race Guy

When murder by poison is depicted in fiction, it never takes more than a drop of liquid or a pinch of powder for the victim grip their throat, cough a bit, and keel over. Quick, clean, and quiet. The reality is not so simple. To kill someone with poison, either quickly or without arousing suspicion, can be a surprisingly complex process Outside of highly controlled chemical munitions, there are very few substances available to the average murderer that can kill a human being as quickly and easily as the poisons of fiction. Famous poisons like arsenic, strychnine, cyanide, etc. require small, repeated doses to build up enough concentrations to kill without arousing the suspicion of the victim. In significant quantities, such poisons can taste extremely bitter, hence why many historical rulers had food tasters. The mechanisms by which these poisons kill can also cause dramatic physical reactions in the victim. While it is true that they were once very hard to detect, these old standby poisons are easily and routinely detected by modern forensic pathology The sort of poisons that can</ kill very rapidly at small doses tend to be staggeringly dangerous to the poisoner himself, not to mention exceptionally hard to come by and hazardous to manufacture There's also the matter of "getaway time" — a fast-killing poison is more dramatic, but a slow-killing one is harder to link to its source This is generally assumed to be the kind of poison used in a case of Finger-Licking Poison . Frequently has an Improbable Antidote . May or may not be purple or green . Naturally, part of its perfectness is usually that it works on everything. If ingested, expect to see the spilled drink to dissolve the table

He's an Old Soldier , all right—a very</ old soldier who is adamant he's Made of Iron and good for another battle, even though it's woefully clear that said iron is showing a lot of wear and tear and his fighting days are behind him To fit this trope, the subject must be far too old and feeble to do battle anymore,

or perhaps seriously disabled (either from previous battles or illness), or both. The subject must also</ be in denial and insist they're good for another round . Remember: Perilous Old Fool</ Quite often, did have a well-earned badass reputation way back when, but has suffered some very literal Badass Decay . Very often ends up with a bad case of dead, and Curb Stomp Battles are pretty much the norm If the soldier is willing to sacrifice himself because</ he's old and infirm and the others have their lives ahead of them, or knows he's too old for a fight but wants to go out in a blaze of glory, that's Death Seeker — or More Hero Than Thou — not this trope. If they're going to die anyways and decide to fight to the last breath, that's Face Death with Dignity and possibly Taking You with Me . If someone's old as dirt but still has the chops, that's an Old Soldier , Old Master or whatever and should only be listed here as a subversion if they're believed</ to be this. Definitely related to (and possible Sub-Trope of) Too Dumb to Live and Fearless Fool . If what they know is past its prime instead, they're an Obsolete Mentor

You know those things. Takes place in the past. Invites lavish production values like art direction and costumes — and usually cinematography while you're at it. It's kind of hard to define what defines "period" films per se</ — something that took place a decade ago could count, technically, but period pieces set in the very recent past are rare unless it's to poke fun at the era in question. Big budget period pieces are often dramas, frequently big epic ones, and take place at least thirty years ago - because any period of time greater than 25 years tends to shade into "when your parents were kids", which would obviously be pretty unrecognizable to you Very often Oscar Bait . Sometimes it's based on literature that was contemporary when published, but feels like a purposeful attempt to recapture that era for new audiences. (Adaptations of the Brontë sisters, Jane Austen , or Charles Dickens are especially common.) Useful if the period predates a Trope Breaker The BBC makes a lot of these, and PBS imports them wholesale. The BBC have sometimes even been accused of "falling back" on costume dramas when they've gotten into trouble for something or when the licence renewal is coming up and they need to show they can do some "proper" drama. That said, they're very good</ at making them: they usually garner a lot of praise, and the end result is packaged into box sets for sale during PBS pledge drives. As a side effect of their decades of Period Piece production, The BBC has accumulated a vast stockpile of costumes and expertise, which is occasionally raided by sister shows such as Doctor Who </ when they decide to do a historical episode Expect to see lots of Gorgeous Period Dress and if it's a 20th century setting an Improbably Cool Car or two More specific genres include Sword & Sandal , Wuxia , Jidaigeki and The Western Compare Historical Fiction . Closely related to the Costume Drama . Contrast Unintentional Period Piece There's no real need for examples. Just about any show set in the past counts. You'd know one if you saw one. Some Tropers restrict this trope to "any show set in the past that could have been set in the present", but that ignores the fact that it's impossible for most period pieces to be set in the present day because the plot and the characters' motivations would be nonsensical due to Values Dissonance . For example, setting Pride and Prejudice </ in the present day as is would make the crisis (Wickham's eloping with Lydia) seem inconsequential and the reaction silly, since the entire point</

of the crisis is that if Lydia doesn't marry Wickham and clear the family name, the rest of the sisters will end up as impoverished old maids because no gentleman will marry them. That's the way life was in 1812. (Even further proved that, in The Lizzie Bennet Diaries, they had to change Lydia's scandal to make the plotline work). Tech Marches On can also lead to a period setting; in Super 8 </ the titular media's three-day minimum turnaround time was a load-bearing Plot Point that meant the characters working in instantly-viewable digital video simply wouldn't serve the narrative On the other end of the scale, if the story would make more</ sense set in the present because the characters exhibit modern values that's Purely Aesthetic Era ; if it's set around a specific event in the recent past, enough that the lack of distance from the era leads to sloppy set mistakes it's Present-Day Past Extra credit if they use the studio logo from the era the work is set in Not to be confused with a piece about having</ a period . Or a period . And the song "Period Piece" by Lloyd Cole is only vaguely this trope

A notable bunch of audience members outside of the intended (i.e., marketed) demographic . Western Animation has arguably been interwoven with this idea for most of its existence, and for a lot of reasons. First, the vast majority of what is produced is aimed at children and families . Second, despite more and more animation for older audiences being created, the only genre really represented is comedy (and usually of a darker, raunchier nature). And third, there's still a severe lack of cartoons specifically directed towards teenagers. As a result of all this, unless they only want to partake in the occasional independent film here and there, fans of the medium are guaranteed to find themselves watching a lot of content that isn't geared towards them (but probably has enough Parental Bonuses and good writing to make up for that). Another very noticeable instance of this occurs in the anime fansub community. Digital recorders/encoders, which effectively remove the timeslot and language constraints to a program, make it accessible to anyone, and the series audience is largely drawn only by the perceived quality of the show itself as opposed to any marketing. Divorced from judgement-affecting advertising, a show packed with girls may be enough like " a show packed with girls " that the same fan will find themselves watching both, barely aware that said shows have wildly different target audiences. This likewise holds with male characters, who are often deliberately drawn as pretty boys in order to attract fangirls who were reading similar stories anyway (e.g., Bishōnen Jump Syndrome </, because Shonen Jump </ was infamous for it). Sometimes this is taken a step further and you get a cleansed rough adaptation of the premise marketed directly to them</ . It is also common for a popular franchise that is marketed towards children to gain an older fanbase if it's been around for a while ; many of these older fans enjoyed it when they were young and simply never outgrew it. The companies making such shows may give little nods to the older fans (and sometimes even make new installments that cater exclusively to older fans). Some fans, perhaps because of these nods, seem not to realize that these popular kids' series are still made mainly for kids, and that doesn't change just because the older viewers are not kids anymore. Unfortunately, fans like these may cause negative stereotypes about nerd fanbases. In another example that is similar to the above one, while the show might be targeted towards young boys or girls, those who are older and/or of the opposite sex may enjoy it instead and it may generate a large fandom (* AHEM!

</), just to give one right off the bat as one of the more recent exaggerated examples of this occurring with a kids show. Going in the opposite direction, a periphery demographic that is younger</ than the target demographic may arise from the fact that children and teenagers are liable to view media classifications as more a challenge than the warnings/suggestions they are. After all, engaging in media intended for mature audiences (like First-Person Shooter and Wide-Open Sandbox games) means that they can be considered mature themselves, right? Can also be due to many demographics simply having wider ranges of interest than they're given credit for. Series with strong marketing sense usually profit from being at least slightly aware of these fans, if not outright cultivating the work's newfound Multiple Demographic Appeal . Unfortunately, this creates the danger of an annoying Periphery Demographic being viewed as a Misaimed Fandom , if not outright Fan Dumb . Also, some fans within a show's main demographic may consider the work in question a Guilty Pleasure . When the Periphery Demographic is in another country, then you've got Germans Love David Hasselhoff . For a specific type of Periphery Demographic, see Estrogen Brigade , Testosterone Brigade , LGBT Fanbase or Popular with Furries . If a fandom forms around media that was not intended for entertainment purposes in the first place, it's Fun for Some . Compare Misaimed Fandom and Just Here for Godzilla . Contrast Periphery Hatedom . Not to be confused with fans of Periphery </ .

Periphery Hatedom is when a character or show receives scorn and hatred from groups to which it was never meant to appeal in the first place. It inspires an anti- Periphery Demographic , who respond to them in such a way that you'd think they had committed some unspeakable atrocity . This stems from some specific trait that draws ire in these groups: a Necessary Weasel they don't understand or appreciate, a trope that's designed exclusively for its Target Audience (e.g. the Kid-Appeal Character), or a notorious Fan Dumb that ruins the work's reputation. This is not to say that the dislike is always undeserved. We live in a mass-media world now, and any major pop-culture phenomenon is going to make at least some in-roads into the mainstream and show up on our radar whether it's aimed at us or not. When a work's popularity reaches far beyond its Target Audience , it becomes susceptible to Hype Backlash as it draws in audiences it was never intended for. The hatedom is likely to be amplified if the work leaves a bad first impression upon first being announced, as they wouldn't have been as forgiving as the Target Audience in the first place. In the worst case scenario, it may become inescapable, or prove so popular in its demographic that those attempting to Follow the Leader choke out any innovation in other programming for a period. Of course, a Periphery Hatedom can help make things even more inescapable , even well after the pop-culture phenomenon's popularity has died down. Given enough time, even an otherwise benign Periphery Hatedom can look fanatical to disinterested third parties, who are as likely to direct their pleas of "Will you just shut up</ about it already?!" to the haters as to the fans. Keep in mind that some of the stuff that was marketed towards you when you</ were a kid had a Periphery Hatedom at the time, and the kids who love a kid-oriented work with a Periphery Hatedom may grow up to become the adults who hate some new kid-oriented work, while still viewing the stuff they themselves enjoyed as kids as pure quality . Also, keep in mind that just because something is intended for a specific audience that won't

recognize the flaws of the work, that doesn't mean the creators have an excuse to be lazy . If the Periphery Hatedom proves that the work relies too heavily on on Public Medium Ignorance and isn't good even for its intended audience, then they can have a point ("Just because something is made for kids, that doesn't mean they are free to treat them like idiots"). A work that isn't good enough to develop a Nostalgia Filter risks having its Fleeting Demographic join the Periphery Hatedom once they become of age, if they didn't already hate the work by then. Compare Bile Fascination , a primary reason for people outside the target demographic to investigate. Contrast Hype Backlash , where a backlash occurs against something people have been told they'd like. Many music examples overlap with Dead Horse Genre . Can lead to Condemned by History when a work's target demographic stops liking it and joins in on the bashing. See also Americans Hate Tingle for regional examples. Can be caused by What Do You Mean, It's for Kids? Moral Guardians are a specific type of Periphery Hatedom, who sometimes subvert the trope by directing their complaints at how they think the work will affect its intended</ audience. However, they often play it straight by getting the target audience wrong , typically by assuming that everything of a particular genre must be kid-appropriate. Tangentially related are Straw Hypocrite (hating someone for not sincerely holding beliefs that the hater never admired in the first place) and Straw Affiliation (criticizing someone for not being a "true" exemplar of a group to which the critic does not belong). There's also the targeted race in cases of Acceptable Ethnic Targets and National Stereotypes , who all</ hate said subject matter, which is always justifiable. Remember, this trope is specifically for examples where the hate comes from not pleasing a group that it never planned to reach in the first place. Complaining About Shows You Don't Watch when you're within</ its intended audience is not this trope. And cases of former fans rejecting newer versions of their preferred work/genre almost never</ fall here unless the work has a Fleeting Demographic (such as a lot of kids' shows, teen pop music, etc.) and the fan has grown out of it. Otherwise, move it to They Changed It, Now It Sucks! . Also, don't confuse this with the haters of a certain progressive metal band. Please do not use this page as a place for Complaining About Shows You Don't Like or Complaining About People Not Liking the Show . You have to explain which demographic hates it and why. </

My Little Pony </ has such a colorful history of hatedom that it has its own section:

When a TV show, video game, or movie is being created, sometimes temporary content is created to fill in as a placeholder. Less often, the placeholder content ends up becoming permanent, either because the creators decided they liked it, or they simply couldn't do anything better Often overlaps with Descended Creator , particularly in Western animated productions. When preparing an animatic from the storyboard , the staff records a "scratch track" to be replaced by the final voice track later in production. Sometimes, however, the scratch track for one character comes out so well that they decide to have the artist who recorded it do the actual voice Similarly, a songwriter might string together a "guide lyric" or "dummy lyric" consisting of arbitrary words that happen to fit the tune, and then decide to keep some or all of it as the actual lyric of the song Not to be confused with Left It In - that , with the intent of replacing them later A subtrope of Throw It

In! . See also Working Title , "Untitled" Title and Regent for Life . Compare and contrast with Glitch Entity , which can possibly result from a placeholder that wasn't</ permanent per se, but stayed in the code anyway . Compare Fake–Real Turn , which is when something that was started as a deception grows into what it was pretending to be

A Stock Phrase In the military, due to the chain of command, there is rarely a time where a rank and file soldier can speak his mind without disrespecting his superior. Cue this phrase. If the commander grants the request, it is understood that the soldier will not be disciplined for anything he says. This is often adapted to "Permission to do X," if used for comedic effect. A similar phrase, " Off the Record ," can be used for similar purposes (usually in non-military situations) Another related Real Life phrase is, "With all due respect, sir…" After which an NCO tends to say something nasty about the addressee officer Compare The Consigliere , who is employed to always speak with Brutal Honesty Note of caution: using it in Real Life is not a good idea . Neither is granting it , really. If subordinates are not speaking freely anyway, it is a pretty serious failure of leadership. Subordinates on the other hand need to know how to get the point across respectfully and unambiguously

The cops have found the perpetrator of the crime they're investigating. The thing is, he's got a gun—perhaps one whose magazine is dripping with ammo. Or he's got a bomb. Or he's poured petrol (gasoline if you're American) all over the place and has a lighter. The sequence goes like this: A Cowboy Cop will probably do worse than slamming perps against the wall.

A character whose default or most frequent appearance/model is him/her with a serious upside-down smile, even in the most pleasant of situations. Though it can be compared to The Stoic , Perpetual Frowner differs in the simple fact that rather than wearing a face of indifference, the character perpetually expresses the biggest, ugliest frown he or she can make on their face Usually comes in three varieties: mopey and listless, angry and angsty, or focused and serious. In many cases, the look of extreme tension continues even when they're asleep. For series where character background and development is allotted, it may later be revealed that the person expresses the demeanor as a result of living or having lived a harsh or tragic life Extra points if the character also displays a habit of keeping his arms crossed along with the constant frowning for that extra pouty look If the Perpetual Frowner actually does</ smile, it either signifies that the character has found a reason to be happy and enjoy life again , or it is one of the most potent sources of Nightmare Fuel you will ever come across . The smile may also be forced upon another by someone If the expression is not voluntary but the result of damage to nerves or the like, it falls under Frozen Face Compare the Aloof Big Brother , the Deadpan Snarker , and The Eeyore . Contrast Perpetual Smiler . See also the Death Glare and the Clint Squint

In the Fifties, a desk lamp in an interrogation room would be turned so that a perp would have the light in his eyes and stern questions would come out of the dark as sweat poured down his face. Sometimes, there might be a nice, cool glass of water just out of the perp's reach to "aid" his concentration. This was Perp Sweating There has been some escalation since the Fifties. Now the perp has to withstand any number of mind games from Good Cop/Bad Cop to False Roulette Two character types on whom Perp Sweating almost never works include The Sociopath and people with Asperger's Syndrome : two totally different types of people, both on different levels of communication than you. The Sociopath will be two steps ahead of you and retaliate with a Hannibal Lecture . An autistic person will be seven or eight steps behind (or ahead, depending on how they function), and get confused by subtle questions, annoyed by a Good Cop/Bad Cop routine, and clam up if you start lying to them. The savvy ones will Be as Unhelpful as Possible to get back at you. Either way you're going to have to rethink your techniques with them One major problem with Perp Sweating is that it is often done in an effort to elicit a confession in the absence of evidence actually proving the person's guilt. In other words, the interrogator is assuming the questioned individual's guilt even without a concrete reason. At best, this can be called poor investigative technique and at worst, it can be called a violation of the principle that everyone is presumed innocent until proven guilty See also Perry Mason </, Columbo </. But beware any attempt to try this on the Psycho for Hire , lest you be reduced to tears by a Hannibal Lecture . Also, just 'cuz it happens on teevee doesn't mean it's legal — depictions in media often skip the suspect's Miranda Rights or similar warnings (though this can be excused if the setting is in jurisdictions that lack these rights)

All of the threads have been pulled , The Summation has been made, the suspect has given his Motive Rant , and the lead detective has given the order to make the arrest, homages/shout-outs to Hawaii Five-O </ ("Book 'em, Danno!") optional Cue the walk of shame , i.e. the Perp Walk, to the police car, past a group of onlookers that may include family, friends, enemies, or the media . In Fiction Land, this is often done in Slo Mo , and poses a much more significant risk for a Vigilante Execution than in Real Life . In some places (like Japan, for instance), the suspect is often offered the "dignity" of a cloth covering their cuffed hands and underaged suspects' faces are blacked out; in America, only shows like COPS </ will blur suspects' faces (to avoid any possible jury pool poisoning), but any objects covering hands and/or faces are generally self-provided In Great Teacher Onizuka

In Kingdom Come </, the superhero Magog kills the Joker as he is escorted to court—a subversion of Joker Immunity .

Parodied in Lady and the Tramp </ when dogs at the pound pause as "poor Nutsy's taking the long walk" (i.e., being led away to be euthanized), with the oblivious Nutsy skipping all the way.

In S.W.A.T. </ , the bad guy yells out a reward of one hundred million dollars to the person that frees him as he walks to the police station, setting up the story in the rest of the film.

Just about Once per Episode in CSI </ and its spinoffs In The

Simpsons </ episode "Bull-E", Homer is arrested and walked for being a bully. However, Homer had just set up a Slip 'N Slide in the front yard, and so he slips and slides straight into a police car

Lee Harvey Oswald was shot during his Perp Walk.

When most writers want to write about discrimination and oppression, they stick to real-world examples — after all, there are plenty of those. Some writers, however, wonder: " What if it were the other way around ?" What if Black Africans had enslaved Europeans? What if India had colonised Britain , or the Aztecs had colonised Spain (perhaps giving rise to a Modern Mayincatec Empire)? What if women had all the power and men had to Stay in the Kitchen ? And so on and so forth. There may be a semi-plausible Alternate History explanation for the switch, but just as often it simply is that way Often this is not just an interesting what-if, but a way of making a point, saying to the privileged group "well, how would you</ like it if...?" This tends to be Anvilicious , though not always in a bad way. The message may also be that power corrupts, and no matter who's on top, things will always suck for the group on the bottom, and discrimination of any kind is wrong On the other hand, in certain cases the barbarism of the now-powerful group can be played up too much and the whole thing can seem as though it came out of some dislike or distrust of the group in question ("Look how much worse things would be if they</ were in charge"). Or, alternatively, the work may be disparaging towards the now-oppressed group (which is usually an Acceptable Target due to being in power in the real world), and suggest that they deserve to be treated badly Compare Just the Introduction to the Opposites , Turned Against Their Masters , Black Like Me , and Color Me Black The Other Wiki has on this concept, particularly in real life

A list of works originating in Persia or modern Iran or</ by Persian creators.

Indexes about appearance, fashion, and cosmetics Many of these aren't even possible, but still work thanks to Rule of Cool , Rule of Glamorous , Rule of Scary , etc On the other hand, some of the tropes that occur in real life just seem to be in stories for the heck of it , but just as often as not these tropes will convey a Meaningful Appearance (especially if they only show things that way in fiction, such as ways you can visibly identify a villain) Please note that appearance-based tropes are often ZCE magnets and need to have significance beyond the physical trait they represent

This trope is when a painful betrayal of one's self image, self-loathing, internal conflict, personal failing/flaw or guilt is Played for Drama . It can be because of what someone did , didn't do , tried and failed to do , or they were just unlucky and got caught up in a bad situation. The key part of this trope is that something goes against the character's personal moral code , leading to the alienation of self. Can lead to Heel–Face Turn or the character becoming The Atoner . Sometimes results in Past Experience Nightmares or the character crossing the Despair Event Horizon . Some characters have an overlap with You Are What You Hate . Often results in Heroic BSoD , sometimes after running Heroic Safe Mode . Because this trope

is personal , examples will be of a different kind for different characters. When editing, keep in mind to explain why an example is this trope for that character. Related to Psychological Horror . Very much Truth in Television , but please remember the Rule of Cautious Editing Judgment if adding examples. Not</ related to I Know What You Fear or Author Phobia . Compare Primal Fear , Death of Personality , and Cessation of Existence . Can cover:

Computers. They're wonderful machines and valuable assets to any Sci-Fi mission. They can perform calculations and operations with pinpoint accuracy at the speed of light and never forget anything they learn. There's just one problem: a computer doesn't make a very good friend. Try to get one to empathize with you, and they'll probably just rattle off Techno Babble , tell you why you're wrong , and explain their theories on the pointlessness of human emotion , all in a hollow, monotone voice. Hmm, could there possibly be any way to make an AI entity seem more... human ? Why, yes, there is: just give it a personality chip. Soon, your robot will be emulating happiness, anger, depression, sexual attraction, and any other multitude of feelings it's programmed for. However, be warned: when a robot has a personality chip installed, they will make a point of excessively referring to it . Also, feelings aren't always emulated very well and can result in very odd behavior . Personality chips also have various bits that fail or overheat or turn off easily, leading to robots blowing their anger circuits or engaging sarcasm mode at you. They can't say " That Makes Me Feel Angry " or phrases useful in human form; this is a feature, not a bug. Compare Morality Chip , Heart Drive .

A cartoon and comic trope. A character having a bad day , or who is particularly depressed, will have their own small dark cloud following them, often raining and occasionally hitting them with lightning The more depressed they are, the more it will be just rain; lightning, particularly a lot of it, often indicates an angry mood Compare to Fisher King for this trope on a much grander scale

"Banned from Argo" redirects here. For the Filk Song , see Banned from Argo You, possibly along with your merry band of travelers , have found a nice place to hang out. Maybe it's a nice bar, seaside town or resort planet. But then ... things happened. You may not have meant</ for bad stuff to go down, but sometimes events are beyond your control. There might have been nudity , violence , Stuff Blowing Up , certain substances imbibed or smoked . You might've just been extremely rude or insufferable to be around. You might have started a revolution, or unwittingly destroyed the place . Whatever the case, the locals aren't happy As a result, you're not allowed to come back there. Ever.</ Not you, nor your crew, nor any of your family, nor anyone connected with you in any way, shape, or form. You pissed them off that much Essentially, this is the "AND STAY OUT!" follow up to Get Out! The trope name is Latin for "unwelcome person". In Real Life , it is a legal term referring to a person who is not permitted to enter another person's domain, often a country. It's most often applied to diplomats — since they enjoy diplomatic immunity, they often cannot be charged with a crime, but they can be kicked out of the country (and get their immunity revoked if they come back). A

civilian can also be declared persona non grata</ at a specific establishment; these people may face trespassing charges if they return In fiction, this label is often Played for Laughs and the result of a Noodle Incident — if it was bad enough (and funny enough) to lead to this result, it would be most outrageous in the reader's imagination. The related tropes You Can't Go Home Again and The Exile tend to be played more seriously, since the people being banned are originally from the place they are banned from (personae non gratae</ are for outsiders). See also Hollywood Restraining Order . When this is used to ban people from a party, social function, etc, see Uninvited to the Party and Not on the List . Not to be confused with Un-person , in which an individual is treated as if they never even existed, with all records of such being wiped clean

Sometimes creators themselves get banned from certain venues, or even entire countries, whether for expressing certain political views, or just causing general mayhem and destruction. Conventions are often hit with such bans, as some conventions tend to go overboard. In general, any convention or expo without a permanent location runs the risk of getting banned from certain venues, and all it takes is one or two idiots associated with them to do something stupid. Sometimes, the convention will go to great lengths to tell their guests to stop; other times, they wear getting banned as a badge of honor (or at least sufficient quirkiness). Wonder Why?</

A Person of Mass Destruction is a character with powers, abilities, or skills capable of causing damage on the level of a Weapon of Mass Destruction . As a Speculative Fiction trope, it is frequently used as a metaphor for real-world technology — often nuclear weapons . The source of their destructive powers varies; they may have won the Superpower Lottery , have knowledge of Things Man Was Not Meant to Know or be a Physical God . What gives them their destructive potential is less important than the fact that they have it The reaction to a PoMD is often fear, anger, and hate , which may cross over into outright abuse . Despite this, their chances of being either a Hero or a Villain are about the same, and depend on whether they believe With Great Power Comes Great Responsibility or Might Makes Right . A person of mass destruction is more likely than normal to undergo Superpower Meltdown at some point, channeling the fear of losing control of a conventional weapon of mass destruction, as with an Empty Quiver situation They will almost always score at least as a Class 4 on the Super Weight scale or higher Compare with Human Weapon , for when someone is literally treated as a weapon. See also Destructive Saviour and Walking Disaster Area . A person like this is almost always a One-Man Army , which is usually a downplayed</ version of this trope

A Sub-Trope of External Retcon , in which somebody takes a known — often classic — story, and retells it , turning it on its head. What you thought was the villain is now taken as a protagonist, and is portrayed with a greater degree of sympathy. The heroes of the story as best known might not come across so well in this telling Usually, the villain is presented as a smart, insightful, dedicated but tragically flawed character who may lack the charisma, empathy or social standing required to get support from other people and society in general, while the heroes are too

naive, shortsighted or selfish to see the ultimate consequences of their "heroic" deeds. They may mean well, but as they say about the road to hell.. The complete inversion/reinterpretation (where the villain is the real hero and vice versa</) is rarer, but in both cases, the impact of the story derives from the fact that we know who's supposed to be good and who's supposed to be bad, and this story upsets this. This is not the same as original stories on the extreme end of the Sliding Scale of Idealism vs. Cynicism , where everything is morally ambiguous and no characters can be said to be good or bad per se</ ; here the writer is deliberately playing with our expectations Can overlap with Grimmification , but it doesn't have to be a fairy tale, and Grimmification doesn't always feature a hero-villain flip. Doing this to a whole cosmology can lead to Satan is Good Expect a story like this to be Darker and Edgier in proportion to the original's simplicity as well as elements of deconstruction which kinda helps the whole story be told. Do keep in mind the possibility of an Unreliable Narrator , if this is done from the first person POV. Compare (and/or contrast) with "Rashomon"-Style , Villain Episode , Sympathetic P.O.V. , Humans Are Cthulhu , Lower-Deck Episode , Monster Adventurers , Another Side, Another Story , P.O.V. Sequel , and Adaptational Sympathy May contain , both for the Perspective Flipped and original versions of a story. Not to be confused with Perspective Reversal

A list of media originating from Peru . Media from other Spanish-speaking countries are a different category.

A Sister Trope of Creepy Doll , Killer Teddy Bear , Demonic Dummy , Murderous Mannequin , and the evil version of Living Toy Dolls, marionettes and puppets that are either possessed by a bigger evil like demons or ghosts, or alive with a murderous streak, mindlessly attacking anything in sight In Video Games , they usually appear as the Big Bad 's basic Cannon Fodder army or just lesser enemies that just get into the heroes' path and are dispatched without much effort. In other media, they may be featured as the main antagonist Though to be clear, not all puppets are perverse. There are pleasant puppets that are nice or just try to go about their day See Evil Puppeteer for cases where the one controlling</ the puppets is evil. Not to be confused with Bro Strider's lucrative puppet pornography business

Perverse Sexual Lust is a term for a real person's attraction to a fictional character. It originated in a reader poll during the early days of the Webcomic It's Walky! </ . The author wished to know the reason behind the slightly loopy church-girl character Joyce Brown's popularity, and saw this option achieve an overwhelming win. It's somewhat justifiable in live action, especially if the character is played by a hot person, although it does raise the question of what is actually being fancied. Is a viewer fancying CSI: NY </'s Lindsay Monroe because of Anna Belknap , the character herself, or a combination of the two?. It gets into the seriously weird when you're dealing with animated characters, although putting purely fictional characters into ahem</ situations has less creepy spillover to any real life people. Of course, many animated characters are intended </ to be attractive to the viewer , in which case it could be argued that this is the response the character designers intended in the first place . As with many things, Japan

has a specific term for Perverse Sexual Lust: "Nijigen no fechi" (二次元のフェチ)—literally, "two-dimensional fetish". More than a few otaku suffer from this syndrome, developing crushes on popular anime, manga, and even videogame characters, in some cases to the point where they prefer the objects of their crushes to "real" girls/women. In fact, according to , some fans even go so far as to attempt to marry the objects of their desire. The related terms "waifu" and "husbando" , which became subject to Memetic Mutation , are broader in scope and can also apply to real people. When a fictional character lusts after a Real Life person, then it may be a Celeb Crush . If a creator falls in love with their own</ character, who then comes to life, see Pygmalion Plot . In-Universe Examples Only :

Oh no! You've just had an Accidental Pervert moment and now a girl is after you! And not in a good way! You may have seen her naked, grabbed somewhere she doesn't like, or anything on a similar line. And now you are really</ in for it! Can result in an instant smack-down, or possibly a game of hide and seek where the hider is you and the seeker has a Hyperspace Mallet , Frying Pan of Doom , or some other implement. Not to be confused with the Unprovoked Pervert Payback , where a girl gets set to Pervert Revenge Mode for no apparent reason. Can be subverted if the man is known to be gay by the attacker, or is a girl in disguise, etc. Generally the result of Accidental Pervert , or the Covert Pervert (Who may actually deserve his comeuppance!). Even the Chivalrous Pervert may get battered occasionally. See also: Double Standard: Abuse, Female on Male . A common tactic of the Tsundere .

When you think of Attack Animal , you'll probably think of something big and/or badass, such as wolves, or tigers, or even dragons. Some people, however, have a kick with using... a certain creepier kind of creature This trope is a Stock Superpower of manipulating pest animals like insects, arachnids , and rodents . The pest in question could be from little tiny life-eating bugs to more gigantic ones the size of buildings. Those who have this ability will often be portrayed as creepy themselves — they may be wicked, but they may just as often be just a decent, if quirky, fellow. Expect The Swarm and Zerg Rush to be their standard tactic Sometimes the controller doesn't only control insects but is also made of them</, in which case this overlaps with The Worm That Walks . They may also be Friend to Bugs (especially for the insects version), but not always. It can also overlap with Speaks Fluent Animal , if the controller is capable of not only commanding the animals but also communicating with them in their own language. If the pest controller is a pest itself, Nice Mice is the most-common variation Subtrope of The Minion Master and Attack Animal . Super-Trope to Bee Bee Gun ; bees are indeed among the most popular choice of insect, for many good reasons

There's an old gag about little girls (and it's almost always Thlittle girls, rarely ever little boys) dressing up their dogs, Thcats, and anything else pet-like they can find as if they're Thdolls. They put them in cute little clothes and act as if their Thpet is a living doll. All the animal can do is begrudgingly deal Thwith it (and if they're a Talking Animal , snark about it) is may Thoverlap with The Dreaded Pretend Tea Party , another childish Thgame that is considered annoying by those outside the target

Thdemographic. Also likely to overlap with And Call Him "George"! Th. If the kid doing the dress-up is doing it out of love, they're Thboth Innocently Insensitive and (usually) an Animal Lover

When the appearance of an animal in a work of media leads to a sudden spike in demand for it as a pet. Basically, an animal version of The Red Stapler . This is quite common with dog breeds that become popular due to a TV show, as many dogs on TV are purebred , and anthropomorphized animal superheroes such as the Teenage Mutant Ninja Turtles This should</ go without saying, but buying an animal on impulse is a bad idea , and can lead to undue stress on both pet and owner. When a movie featuring a certain animal comes out, advocacy groups often put out messages to discourage people from suddenly buying it , and for good reason: when the hype dies down, people—especially children—often grow bored of the pet, especially when it turned out to be more work than they expected. This has led to a lot of animals being killed, abandoned, released into the wild regardless of the effect it may have on the local ecosystem, or worst yet, living a short, miserable life due to inadequate care. It doesn't help that high demand can lead to breeders churning out the animals as fast as possible and passing off creatures prone to various health problems, like inbred dogs or wild-caught reptiles, onto unwitting buyers. On top of all that, oftentimes, media will skate over the messy parts of pet ownership, like a given species or breed being aggressive, high-maintenance, difficult to train, bad with kids, hard to house, or unsuitable as a pet altogether—resulting in clueless first-time owners picking up a pet that they really should not be trying to take care of, even if it's one in good condition and they're willing to tough it out Fortunately, this trope is not as rampant as it used to be , since social media has the power to put any species in the spotlight. Nowadays, any creature that can be kept as a pet (one way or another) will have a slew of websites and forums dedicated to its captive care, allowing would-be owners to do plenty of research before</ making a purchase. In the past, people had to trust the word of their local pet store, whose biggest concern was obviously making the sale, and whose clerks might not be the most knowledgeable about specific breeds/species. While the internet doesn't eliminate this trope completely, it does reduce the number of turtles ending up in sewers for real Sub-trope to The Red Stapler

Some rich people give their fortune to their relatives, often On One Condition , and some leave their fortune to charity. Then there are the eccentric types who leave their money to their beloved dog, cat, fancy rat, or whatever other critter it might be that they treated like a pet That's the concept behind the Pet Heir plot. Hilarity Ensues as the new caretakers of the pet struggle to keep the pet alive despite the efforts of unscrupulous sorts, that is, Inadequate Inheritors who are next in line to inherit should "anything unfortunate" happen to the pet in question There are cases of Truth in Television for this trope, oddly enough. Or not so oddly, if the pet in question is long-lived, like a parrot Comparable to Caligula's Horse , where the person not only gives their inheritance to their pets, they even give them senior positions in jobs

Not an index, but a Trope Trope : When a trope is either so played out, so stupid, so inaccurate, or so racist/sexist/whatever, that seeing it makes some portion of the audience go berserk </ Part of the death cycle for a trope; any trope that qualifies is already at least close to becoming a Discredited Trope Sometimes this is due to Values Dissonance making a trope obsolete . Continuing to use such a trope when the underlying morality behind it has been discredited is sure to get some annoyed reactions Note that subversions and deconstructions are probably already playing too close to the line, and playing them with even a hint that they're being played straight will get certain people up in arms See also Trope Enjoyment Loophole for possible reasons why a trope that's normally a pet peeve is, in one particular case, not pressing your Berserk Button See also Tropes Are Tools . Contrast Favorite Trope . Often overlaps with Opinion Myopia and Bias Steamroller - it is frequently baffling to a person that anyone could possibly like</ their pet peeve trope, and seeing a pet peeve trope in a work can be grounds for pulling the Ruined FOREVER alarm. Read Trigger Warnings to understand how to warn audiences of pet peeve tropes and how to utilize them effectively in writing No examples, please. This article defines the term

Showing the villain (or Anti-Hero) engaging in a moment of kindness, especially towards someone who can't repay them, as a way to humanize or soften them. May or may not involve an actual dog This is a screenwriting term: put in a scene where the nasty old crank pets a dog and the audience will think, "Aw shucks, he's not so bad. " Often used to demonstrate that a Jerkass is really a Jerk with a Heart of Gold , or, if more limited, that the character is goal-oriented rather than sadistic and/or evil for evil's sake . If used as an Establishing Character Moment , it marks the character as "not too evil" right off the bat, whatever they might do later Sub Tropes include Even Bad Men Love Their Mamas , Morality Pet (a villain's entire relationship with a particular character is one long dog-petting session), and Androcles' Lion (the dog later aids the villain as a reward for their kindness). Compare Licked by the Dog , where the innocent character shows kindness to the villain If you want to pet dogs while keeping your villain credentials intact, try doing it anonymously , doing it but denying any benevolent intention , or doing it because you only kick PEOPLE, not dogs . Demonstrating Moral Myopia could also work (if the people you favor aren't evil) Contrast Kick the Dog (doing something evil to establish an evil personality, with many, many villains having both), Photo Op with the Dog (where it's all an act for the good publicity) Must Make Amends (when a character tries to undo or atone for having Shot The Dog), Bait the Dog (when a moment like this is set up and then darkly subverted). May overlap with Out-of-Character Moment if the villain shows kindness for no apparent reason In modern Hollywood circles, this is also referred to as "save the cat", with the idea being that if you show your hero stopping to save a cat stuck in a tree as his Establishing Character Moment , you're putting the audience on his side forever

Everybody loves explosions. Trailers are packed full of them, and just about everything will explode, even things that really shouldn't . This is because, at least in the minds of the general

population , Explosions = Fire, and fire is very exciting . The thing about Real Life explosions, though, is that they also have a tendency to create excessive amounts of gore Adventure shows tend to be catering to a PG/PG-13 style audience, and it's only possible to get a certain amount of stuff past S&P, so although the violence itself</ remains, all of the gore is removed. When explosives are involved (even when people are constantly being killed by them), the bodies of the recently deceased will be either completely unharmed or slightly bruised/have a bit of dirt on them. Bodies will frequently be thrown around by the force of the explosions, but bodies will otherwise be completely intact. On the opposite extreme, they may be entirely consumed by the explosion, leaving no trace behind Can sometimes be Truth in Television , as explosions can cause fatal internal damage by creating a huge difference in air pressure, without much external damage. Those are called thermobaric weapons. The nasty thing is, they sometimes cause Eye Scream , as well as Ear Ache and lung damage. It's also horribly painful Subtrope of Bloodless Carnage . See Also: Non-Fatal Explosions , Ash Face

The tendency for common words describing fantasy concepts to be deliberately misspelled, typically: As a way of distinguishing the "real" concept from the fake version, such as " Magick " versus stage magic. Common words spelled this way are "magic", "vampire", "fairy", and "fantasy", among others. See also My Nayme Is , Xtreme Kool Letterz , Heävy Mëtal Ümlaut , The Backwards Я , Pūnct'uatìon Sh'akër , A Villain Named "Z__rg" and Law of Alien Names . Depending on the word, the author may instead decide that Capital Letters Are Magic . A Super-Trope to Magick . Also known as phantassie spælling, pfant'see pspaëllynnge, or fantaſy ſpelling.</

Got a prisoner neither bars nor chains can hold? Flatten them down to two dimensions, and stick them in a picture. From such a prison there can be no escaping , theoretically . As an added bonus, these pictures also make great Soul Jars Life inside the picture can vary in many ways, starting with how much freedom the prisoner has Generally, in the first two cases the prisoner does not age. With portal pictures they usually do, but in the third case both alternatives are reasonably common Methods of releasing the prisoner also vary. With cursed pictures, simply looking at them can release the captive, who gets replaced by the viewer. Pictures holding villains are a form of Sealed Evil in a Can , and the prisoners usually can only be freed by sinister rituals. Those holding heroes are more likely to respond to such things as the tears of a true love, or to require epic deeds to be done in the world within the painting While oil paintings are traditional, any kind of picture can be used. Another common variant is to use a mirror. With these, people looking in the mirror may see the prisoner in place of their reflection, or dimly superimposed on it Sub-Trope to Anomalous Art . If the person is forced to immobility, may become a case of And I Must Scream . This sort of trap has a strong possibility of being the work of a Mad Artist . Compare Crystal Prison

In some works of fiction, characters might be able to communicate by pheromones too. Those with a superhuman sense of smell may

be able to sense these, even to the point of sensing sexual attraction . In many cases they are even portrayed as a means of Brainwashing Super-Trope to Smells Sexy . May lead to Living Aphrodisiac , Love Is in the Air , Supernatural Fear Inducer , or Hate Plague

A list of philosophers and other great thinkers with their own TV Tropes page.

Tropes that relate to a philosophical characters, theory, principle, concept, conundrum, thought-experiment, or similar. : Only list tropes that frequently show up in philosophical discourse or only exist because of philosophical schools of thought, not just because they could be philosophical under some circumstances and in no case any random character tropes. Also check the sub-indexes and see Useful Notes on Philosophers . The Anti-Nihilist May lead to a

Agree to Disagree

This is when a character's powers are charged by some outside source, such as sunlight or electricity or exposure to Phlebotinium . If the hero's powers are ever taken away or are weakened somehow, all the hero needs to do to get them back is regain access to this source of power and they are rejuvenated The exact opposite of Kryptonite Factor A Sub-Trope of Power Source , and Super-Trope to Background Magic Field . Compare Energy Absorption (which can occur for reasons other than replenishing energy), Amulet of Concentrated Awesome , and Phlebotinum Muncher for when they feed on the phlebotinum itself. If the phlebotinum is commonplace and must be ingested, it's Power-Up Food

Not all our heroes have perfect health . A few don't even have normal health. And a few might need regular or continuous doses of some specific Applied Phlebotinum to live. No, he isn't simply Brought Down to Normal until he can recharge. He will die, often slowly and painfully, without it In theory, anyway. Realistically, we'll probably get to see a few Redshirts with a similar handicap kick the bucket in order to emphasize just how agonizingly awful it would be to skip a dose. But fortunately our protagonists have Heroic Willpower , so expect them to keep being awesome right to the end (with much panting, grimacing, and comments of " You Can Barely Stand ", to let us know how much pain they're in) See also Man in the Machine , Phlebotinum Muncher , Bottled Heroic Resolve , Toxic Phlebotinum , and Withholding the Cure . Compare Junkie Prophet and Terminally Dependent Society , where an entire community is dependent on a particular thing. May overlap with the Poison-and-Cure Gambit

An item, MacGuffin , or other such that can only be used by someone who is, for example, pure of heart , a certain age, part of a certain family/bloodline, or has some rare property that only certain people have. This does not include needing a password, key, or other such item. In other words, the requirement to use it has to have more to do with the actual plot, although the actual importance of said requirement does not matter. Sometimes the requirement is a background detail, other times it has a major effect on the story.

Supertrope to: Sister Trope to Operator Incompatibility . Contrast Self-Guarding Phlebotinum , which is when the item protects itself against</ people with a certain quality. If a character is the only one in the cast who meets the requirements, they might also be The Team Benefactor .

Steampunk is cool, of course, but when you're creating your own setting you might feel that steam power alone isn't enough to justify such advanced technology. After all, the historical Industrial Revolution failed to produce airship armadas , Humongous Mecha , or legions of steam-powered war robots You could just give it a Hand Wave and say it runs on the Rule of Cool , or you could apply some phlebotinum to it. Whether it's an Alternate Universe of our Earth or a Constructed World the alternatives are plentiful, from rare minerals and other substances to something a bit more magical (in which case Gaslight Fantasy and/or Dungeon Punk possibly overlap to some degree). Either way, Single Phlebotinum Limit is likely to apply

A device or effect that makes people less intelligent. (Usually temporarily.) Generally played for comedy, with the afflicted people talking in exaggerated "stupid" dialect and making decisions that are a Take That! against whatever the writers oppose. In almost all cases, the effect hits both "book smarts" and "common sense", even though they're different kinds of intelligence. For extra fun, one character will be functionally immune to the effect due to already being stupid . Can be used to justify the Idiot Ball , as opposed to Plot-Induced Stupidity , which does not bother with an explanation. When someone's using this as a weapon, it's a type of Stupidity-Inducing Attack . Contrast Genius Serum .

While writing a story, an author needs a way to show how bad things would get if the Big Bad took control or the Applied Phlebotinum blew up . So the author attributes some historical disaster to their plot. And what's the biggest disaster one can imagine? Why, none other than the extinction that wiped out the dinosaurs . Despite to be some kind of asteroid or comet impact, the debate has made the Cretaceous–Paleogene extinction ideal due to the sheer number of theories flying about, making it a Stock Unsolved Mystery to rival even Who Shot JFK? What's one more crazy theory going to hurt? Other works go along with the mainstream hypothesis, but say that their factor caused the impactor to fall to earth , or was the impactor itself. Often ignored in fictional portrayals is that the dinosaurs were the top of a food chain–wide extinction event; the "direct" victims of the event (whatever it was) probably would have been plants, algae, and plankton, and it was their</ disappearance that killed the animals which ate them, killing the animals which ate them</ , etc. Similarly fantastic theories have sometimes been suggested to explain why other species went extinct, though due to Small Reference Pools , most writers tend to ignore the , which was the biggest mass extinction ever. The , which was almost as widespread as the Cretaceous–Paleogene and directly led to dinosaurs becoming the dominant forms of life for the next 135 million years, is even more obscure. Apparently, it's only the fall of the dinosaurs, and not their rise to prominence, that's deemed interesting enough for fiction. Despite the fact that both of these

events have considerably more uncertainty about their causes (and thus more room to invent a Phlebotinum-based explanation) than the by this point rather well-understood Cretaceous–Paleogene. A subtrope of Historical In-Joke and Real Event, Fictional Cause . See The Dinosaurs Had It Coming when the dinosaurs' extinction is blamed on themselves. Compare Artistic License – Paleontology , which this trope can fall into if not done well. Contrast with Lost World , where the dinosaurs manage to duck and cover in a cave/valley/jungle before the big event. See also The Cretaceous Is Always Doomed , which is about the tendency of time-travelers to arrive at dates of historical significance — especially</ the end of the dinosaurs — by complete coincidence; that trope can overlap with this one if the reason they're present for the extinction is that they caused</ it.

In comic books and animated works, one way to demonstrate that a character is a no-nonsense badass, creepy or just plain pissed is to show them with strands of saliva, phlegm, drool, or some other mucus dangling between their teeth. Popularized by the various Rob Liefeld clones during The Dark Age of Comic Books , but examples predate that period. This occurs because drooling and oral messiness tends to invoke a Squick response in many people, making phlegmings a convenient visual shortcut for invoking Primal Fear . For instance, it may show anticipation of a good meal (e.g., the heroes/villains) in predator characters. Or, it may be a sign of disease, like rabies. In comic book images like the one shown, a saliva trail between upper and lower jaws works as a visual shorthand, indicating that the mouth has just now</ been opened (since such trails would be expected to disappear after a moment). Thus their use helps create a feeling of immediacy, that what you're seeing is a "snapshot" rather than a posed image. A common trope for characters with More Teeth than the Osmond Family . Contrast with Gonk , the blatant uglification of a character. See also * Drool Hello . Cookie for you if you thought this was a trope about snot-based videogame enemies . Or to do with a language spoken in Belgium . Trope originally identified by

You have an Amateur Sleuth or an exotic detective . And to prove just how smart he is, not only can he solve any case just by scanning the crime scene, he can also solve crimes without ever having to visit the scene. The Phone-In Detective is the detective who is able to do some of his sleuthing over the phone due to being away for some reason. Full time Phone-In Detectives are rare, often the detectives will only have to phone in very few of their cases their whole life and will only do so for special cases. It is not completely necessary for any phones to be involved, however, the detective might get the information from telegrams, newspapers, e-mail, or regular reports from The Watson or the police Will sometimes be the only interaction the lead has in a Lower-Deck Episode Not to be confused with detectives who are "phoning it in", i.e. doing an incredibly lazy half-assed job

This may also be combined with a Spelling Song . Sub-trope to Telephone Song .

A horror and police procedural trope where the police set up a

phone trace to catch a criminal but they need them to stay on the line for a certain amount of time. The amount of time will vary, yet somehow the criminal will know the exact amount of time and purposely hang up just before the police can get a trace. If it's a particularly high-tech setup, expect to see a computer generated map showing the tracing process Even if the person on the other line is encouraged to keep the other person talking, it never seems to work. The criminal will say everything they want and still always hang up a few seconds shy of the minimum time to trace the number. In some cases, the criminal will say they're aware of the phone trace or say how many seconds the call took. This trope is often used by serial killers or any particularly clever character. A common subversion is to stay on the line just long enough for a trace, but the purpose is to lead the police somewhere else as part of the criminal's elaborate plan Up until perhaps the late 1970s and early 1980s this was somewhat accurate. Telephone switches were racks of mechanical switches in which, when you dialed a number - using a rotary phone, a line selector used the clicks to determine which frame in the next digit to connect your call to. You dialed a 3, and the relay went to the 3xx-xxxx rack, then the next digit of 7 would connect to 7 rack in the 3 series, and so on, until you got to the last digit of the subscriber's number. If it was in use, you got dumped to the busy generator. Otherwise, you got to hear the ring tone as the line was rung. All these connections were created to make a physical connection between your phone and the destination phone. That means, to trace a call on a mechanical switch, they had to see where the wire ran to, then trace what that one was connected back to. This also meant, if the trace wasn't finished before the call was, the "sickening sound" of a call collapsing as the circuit was released for another call to go through If the call was long distance, they'd have to send someone to the central office that connected the call to the city, then trace it back to wherever it was connected from, and so on. This is why if someone was making obscene phone calls long distance, it would require many repeated calls to trace back the caller because of the time involved to trace, say, a call over mechanical switches from Pasadena, California to Ellicott City, Maryland. However, traces from major cities (say, Los Angeles to Baltimore or Chicago) even over mechanical circuits would be much faster, because the calls didn't have to go through intermediate cities As digital computers became more powerful, a switch basically was a mainframe computer with a bunch of phone lines plugged into it instead of a bunch of racks connected by mechanical relays. As a result, tracing a call means nothing more than going to the console, entering the phone number and asking who is connected to it. Eventually with the development of SS7 switches, it got to be sophisticated enough you could get it yourself in real time for a few dollars extra through Caller ID An essential part of The Calls Are Coming from Inside the House As technology marches on, this trope has morphed into tracing the computer connection, but the essence remains the same. Is often a source of artistic license, since (unless the work is set in the 1960s or earlier) the phone company can use their computer records to tell the cops what numbers called a given phone, and when, even months after the call. The rise of phone spoofing (making the phone company think that you're calling from a different phone number entirely) could see a revival of this trope in a different form, however Not counting Caller ID, which landline phones can get at a fee, and which is included on cell phones as part of the service, giving you the caller's number (and possibly name) before you even

answer the phone In order to justify this trope in a modern day setting, the call is often bounced through a bunch of alternate locations, and the back-tracing of the call to its actual source will take time

Hello, you've reached the index for tropes about telephones and their uses. To see the list of tropes in English, press "1". Para continuar en español...

Occurs in four varieties: Regardless of variety, all four attempts can fail if: Do not confuse with a Prank Call . Compare Escape Call , where Bob deliberately arranges earlier for Charlie to call him so that he can get out of talking to Alice. Subtrope of Looking Busy . The Phony Newscast has two particular uses. One is when a fictional program wants to appear to be an actual News Broadcast . The other is when a commercial for something is pretending to run a newscast related to the product. Orson Welles did this on the radio (see below), but this trope is mostly used for television dramas. Often a controversial format if the story being told is one that might be expected to (or, in the case of Welles' production, does</) inspire panic, such as end-of-the-world or warfare scenarios If real reporters and anchors are recruited for the sake of a familiar face, it's a Newscaster Cameo . See also Mockumentary , a similar format in which a story is presented in fictional documentary form

The Phony Veteran is a character who either lies outright about having any military service or, in the case they have actually served, greatly exaggerates their rank or achievements. Often, they will at best act as a Hero of Another Story , but are liable to being more of The Neidermeyer or a Drill Sergeant Nasty , ordering others around based upon their (fake) expertise and credentials. Others try to excuse their vicious or self-centered behavior with the claim that they are the Shell-Shocked Veteran . Phony Veterans are known in the British Army as "walts" or "Walter Mittys", after the title character of " The Secret Life of Walter Mitty ", while in the US this is referred to as "Stolen Valor". Serially impersonating veterans is known as "walting" and grounds for a royal Humiliation Conga , often following an Impostor Exposing Test It's worth noting, that in the United States at least, laws have been passed making this behaviour illegal, though at least one has been struck down by the Supreme Court as infringing on the

First Amendment. Falsely claiming to be a veteran is protected as free speech, but using these claims for the purpose of obtaining tangible benefit isn't. In Europe, it is flat out illegal in many circumstances. That said, it is surprisingly easy to acquire the uniforms and even the medals for the bluff, given the ready availability of replica and genuine medals and decorations via eBay . However, given this modern age of the twitpic, YouTube , Facebook, the Internet footprint, and the message board, those attempting to walt often find themselves not only exposed but widely ridiculed, as there are plenty of genuine soldiers, not to mention medal experts, who will notice their bullshit, call them on it, and very often post their antics all over the web. Many veterans organizations do not</ take kindly to walts, and (or, in the case of the British ARmy Rumour SErvice - ARRSE -) In other words, Truth in Television . See also Miles Gloriosus and Fake Ultimate Hero Do note: As with all things, not everyone accused</ of being a phony veteran actually is</ one. There have been cases of actual vets being or even due to people not believing their claims

A creative option for people who can't draw (or who just want to 'draw' with a camera?) the Photo Comic involves taking pictures of things — either posed inanimate objects, or actual people — and making a comic out of them. In the Webcomics world, toys are popular for this. Also became popular in British comics (particularly girls' comics) in the late 1970s and early 1980s; however, it proved unpopular and the ones that didn't shut down (as many were at the time) reverted to drawn strips. Nowadays the best-remembered photo strips seem to be the parodies of photo strips from Viz </. Arguably, Photocomics can be done cheaper and with less time consumption than the other popular choice: Machinomics . This is because photos lend themselves well to settings where realistic lighting is in high demand, requiring a lot fewer tweaks than would screenshots from a video game. A variation is the fumetti</, which takes the frames of a film or TV show and puts them into comic-book form: See Film Comic . Another variant involves creating scenes in Poser or DAZ Studio and importing them into . Not to be confused with GIS Syndrome , where photographs are incorporated into the background. Comic Books

Webcomics

Video Games

Creators of photographs, be it artistic pictures, journalistic photographs or just illustration work.

Since humans first discovered they could smear things on walls to represent things, we have had visual images. From cave paintings, to Renaissance paintings, to pencil drawings, to photography in 1827 with the very first photograph, to pixel art, these are the oldest two forms of visual works These tropes apply to anything related to creating still images, whether it be family photos, magazines, comics, etc Compare Camera Tricks , since photography lead to motion pictures

Photoshop Filter of Evil is a trope about when a news program

and/or documentary shows a photo of a criminal/victim in color, then shows a eerie black and white/negative of the photo to emphasize something malevolent about the person. Often combined with a slow zoom on the subject's now-black eyes, just to spotlight the creepiness You'll also hear a sound effect as the photo switches filters, like someone is throwing the giant "make negative" lever. Usually something like a giant clunk, followed by the sound of rusty nails on a blackboard Something very close to this actually happens in real life , as anyone who has had the lights suddenly go out on them can attest; the latent image on the retina tends to be chroma-inverted due to "bleaching" of the rod cells See also Deliberately Monochrome , Red Filter of Doom

One step below being one of the Powers That Be . Occasionally shares space with The Great Gazoo . Mythology often depicted gods as "human, but bigger." Similar emotions, virtues, vices, etc. but with more power. Special effects and global story-telling exposure has expanded the concept. Gods are often humanoid (easier for actors to portray them) and have a number of powers. The difference between them and non-divine characters is they don't have to be " balanced " in terms of other characters. However, there are sometimes higher beings that the gods are no match for. Typical god powers and traits can include: Attunement to Concept: e.g. Aphrodite the Love Goddess is attuned to love, naturally. If she's hurt or weakened due to some plot reason, fewer people love, and sometimes the reverse is also true. This attunement may be so strong that the concept defines their very being; a War God will be perpetually warlike, while a God of Evil can only do evil things, etc. Not all gods have attunements, and the level of attunement depends on the writer. Which may overlap with... Interestingly, Superman and some of the more powerful Flying Bricks fulfill most of these requirements, except possibly the worship bit. This depends on how strictly you define worship, of course, since subscribing isn't usually considered the same as tithing. (For rabid fans, subscriptions can total a lot more than 10% of your income!). Then again, Superman does share a setting with actual</ Physical Gods, some of whom are even stronger still than he is (Depending on the Writer , of course). In other fiction, characters who may not strictly be gods may get powers like these simply because, in a place where Everyone is a Super , then the only way you can really mount a truly serious threat to a world with millions of super-powered civilians is to give the baddies even more absurdly powerful abilities . Sometimes, a human can become a Physical God, especially if it's possible for said gods to die. These newly minted gods may choose to take up the mantle with solemnity, cackle madly that " A God Am I !", or steadfastly say " A God I Am Not " from lingering sympathy to their human origins. The existence of a Physical God presents a superficial difficulty to a Flat-Earth Atheist ; however, the problem can be overcome by distinguishing a Physical God from whatever Powers That Be might or might not exist in the universe (considering the former to be "merely" ultra-powerful beings not different in principle</ from anybody else who happens to have similar levels of power, and applying the label "god" only to the latter. The non-trivial difficulty in determining the difference when such beings can only be viewed from a limited human scale is often brushed under the rug). Smarter Flat Earth Atheists will turn into Nay Theists instead...or welcome the new divine overlord... . Compare Reality Warper , Eldritch Abomination , Anthropomorphic Personification , Abstract Apotheosis , Deity of Human Origin ,

Ultimate Life Form , and Sufficiently Advanced Alien . See also Our Gods Are Different for a more general trope. God in Human Form for a humanoid deity rather than vice-verca, and Humans Are Cthulhu , for when Puny Earthlings are seen as this by other creatures. They're usually the center of a Physical Religion . When all that power amounts to nothing, see God's Hands Are Tied . God Job is when a mortal gets to become this. If these characters get defeated by a weaker one, it's Did You Just Punch Out Cthulhu? .

Basically, a piano which is being lifted via pulley to be moved into or out of someone's high-rise apartment will always fall, almost always on someone/something, often with a resounding "BONG". Hilarity usually ensues , thanks to Amusing Injuries . A common gag more often seen in cartoons includes the character rising up from within the wreckage with a mouthful of piano keys like teeth. Bonus points if they start playing by themselves Here is a with a lot of examples Anvil on Head is a similar gag using an anvil Not to Be Confused with Colony Drop , Organ Drops , or Odd Organ Up Top . Closely related to Precision Crash

A character plays the piano energetically (or even not so energetically), and the keys bounce up off the piano, move in one direction or the other in a wave, or otherwise violating the laws of piano physics. The keys may move individually, or might move as a single, flexible unit. Regardless, they always land back where they are supposed to be at the end Justified by the Rule of Funny Victor Borge had a comedy bit where his piano sounds wrong... so he takes the row of keys out, flips them, and it sounds perfect

The Other Father does this in Coraline </. Possibly justified since it's a magic piano .

This occurs as a special effect in the video for the Go-Gos' song "Head Over Heels".

The Beethoven level in Dragon's Lair </ .

The Bugs Bunny </ cartoon " Rhapsody Rabbit " has quite a few of these, including the piano keyboard acting like a typewriter carriage and, at one point, Bugs literally picking up the keys and letting them fall back down.</

Yamaha's Disklavier piano, which is similar to a player piano, creates waves at parts of Animusic 's . What's more interesting that the piano is real, rather than animated.

Picaresque is a genre of usually satiric prose fiction originating in Spain and depicting in realistic, often humorous detail the adventures of a roguish hero of low social degree living by his or her wits in a corrupt society A traditional picaresque is often a "Shaggy Dog" Story and/or has a Random Events Plot . Elements of the picaresque frequently show up in Cyberpunk stories. The plots are often episodic, and there's very little in the vein of a main quest narrative, and as such most picaresque narratives usually have a few stock characters who weave in and weave out All of the Dollars Trilogy , especially The Good, the Bad and the Ugly </

Lazarillo De Tormes </ is generally considered the first of this genre The Code Geass </ OST song (which could) is probably named for this genre, considering the kind of world that Lelouch lives in, and his own way of fighting it

Mother Courage and Her Children </ by Bertolt Brecht , set in the Thirty Years' War , based on Landstörtzerin Courasche</, another novel by the author of Simplicissimus </ .

Half-Life 2 </ and its episodes (particularly 2) features a fairly episodic plot as Gordon drives around the eastern European coast, encountering a variety of self-contained side stories and vignettes. Episode 2 in particular features a wider variety of social commentary thanks to its greater cross section of characters of differing social standing.

Deeper Up the Tower </ uses this episodic, chaotic, somewhat whimsical style to tell a story of Florian, a knight wandering through the trippy, magical Tower, having dream-like adventures on the way.

The Simpsons </ has many elements of the picaresque genre: Both Homer and Bart are notorious underperformers who avoid hard work and shirk their duties whenever possible, are generally irresponsible, treat their fellow men shabbily and take refuge to lies when it suits them, all the while being not especially bright. Yet they somehow always manage to avoid all serious consequences of their foolishness or egoism and are likable characters despite their many flaws.

A common phenomenon in gym class Whenever two captains are elected from a group of kids to pick teammates from the remaining kids (be it for dodgeball, basketball, baseball or any other team sport), the ones who are the least talented, most nerdy or simply staggeringly unpopular are always the ones left to pick from last, but a special type of humiliation is always reserved for the very</ last kid remaining. "Picked Last" isn't even a fitting term for what this really entails as the kid isn't actually "picked" by a team but rather is forced to be taken by one because there's no one else left to pick from This almost always happens to any Geek characters when the story focuses on a recreational activity. If this is supposed to be observed as a comedic event, it may be the fate of a Ridiculously Average Guy who is somehow less preferable to the geek , or, even more humiliating, that bit of Fridge Logic in the above paragraph is disregarded with the captains choosing players that aren't even supposed to be choices when only one kid is left; this may include adults or inanimate objects . Sometimes this character gets relegated to doing some trivial task , like water boy or scorekeeper, so they don't even get to play Usually, this character may be The Woobie , especially if it's clear that he really likes</ the sport even though he may lack any real talent , effectively taking the fun out of the game for him when he's left to be Picked Last. In these cases, the character may be given a moment to shine in the spotlight by the end of the story by becoming a team captain for a day and getting to do the actual picking, by making a great play in the game, or even both. Sadly, this may be the one aspect of the trope's overall use in fiction that isn't Truth in Television Compare The Benchwarmer In Cubix: Robots for Everyone </ , Dr. K spitefully notes how he was picked "dead last" for every tri-ball game he ever played in

In the Avatar: The Last Airbender </ comic "Gym Time", the last two people to be picked are Mai and Zuko, and Azula chooses Mai. However, since all the teams are filled, Zuko becomes the ball .

In the second Beethoven </ film, Ted goes through this for a baseball game. Neither of the team captains want to pick him, so one of them asks a girl who happens to be there if she wants to play (and to add insult to injury, the girl borrows Ted's glove).

While he attended Muggle primary school, Harry Potter </ was always picked last, but not because he wasn't any good. Nobody wanted Dudley's gang to think they liked him and end up getting beaten up for it. A bit ironic because had anyone had the guts to try picking him, it's very possible he would have been quite good, given how he ends up a natural at Quidditch.

The Big Bang Theory </ : In Magical Diary </, if you tell Ellen that she doesn't have</ to sign up for the Sports Club, she gets annoyed and mentions that people were never eager to pick her for their team, even when she was really good at the sport in question. However, it doesn't seem to have been quite as bad as "always last".

in Achewood </ :

In a Red vs. Blue </ Special, where teams are picked new to match the new location, Sarge's first pick is Simmons who blurts out, in the most happy way imaginable, "First! I've never been picked first!"

On Fairly OddParents </ Timmy Turner was picked last for everything</ in Dimmsdale (even a rock</ was picked before him) to the point where he got Cosmo and Wanda to make him the most wanted kid in the world. Unfortunately, "most wanted" has another meaning.. Physical education teachers — most often at the elementary school level — often will take steps to discourage favoritism and eliminate the stigma that sometimes comes with an athletically untalented student being picked last. These range from "numbering off" students ("1," "2," "1," "2," "1," "2" ...) to arbitrarily determine teams, to having the perpetual "end of the bench kid" have his/her turn at choosing members of a team. As stated in the introduction, strange things have happened ... with the "untalented" kid sometimes making the game-winning play (or playing a key role therein), and the teacher pointing it out to teach a lesson

A situation where an adult villain fixates on a teenager or an even younger kid as his Arch-Enemy because of some twisted logic that only makes sense to them. It's not a smart reason, but it's there, and it's convincing. It's not because of some past personal grudge, not Because Destiny Says So , not because he wants the hero's MacGuffin , and definitely not because Luke, I Am Your Father (Fan Fiction notwithstanding). Somehow, someone half their age (or less) has really gotten under the villain's skin, so the only thing they can do is return the favor. And if the heroes have a habit of resisting and defeating this villain, expect them to become even more fixated on them as they struggle to comprehend their defeats . This trope may exist to ensure that the audience takes the villain seriously , rather than laughing it off as merely two kids fighting. For the protagonists, it's also very</ intimidating to be pitted against a

grown-up who would have far more power, resources and experience than they do. If this trope is said by another character, said villain may turn their attention to them and retort with a simple "Like you?", leading said character to realize they were in over their heads with their remark . This phrase is often used in the context of the strong picking on the weak, but that isn't exactly this trope : this is specifically about adult villains fixated on kids and teenagers. Prone to persuade the impressionable hero " We Can Rule Together !" Expect "Not So Different" Remark and If You Kill Him, You Will Be Just Like Him . Although most villains tend to focus on teen heroes of their own sex, intergender examples are more common than you might think, as many of the examples below show. Often a sub-trope of Driven by Envy . The Dean Bitterman or Sadist Teacher can cross into this territory if they have it in for a specific student in particular. Naturally, if a series focuses a lot on the Get Up, Go to School, Save the World and/or Recruit Teenagers with Attitude Trope, bad guys like this will likely appear. See Intergenerational Rivalry and Animal Nemesis . Contrast Older Hero vs. Younger Villain , where the age relationship is reversed.

If a major robotic character looks human (is an "android" in the looser sense of the term), there is a very good chance that they will act robotic , being unemotional and uncreative , and given to Robo Speak . On the other hand, if a major robotic character looks completely mechanical, there is a very good chance that they think and act quite human , exhibiting plenty of emotion and saying quite human things even if they say them in a Robo Speak accent Apparently, major robotic characters can look human and act mechanical, or vice versa, but seldom show the same nature both inside and outside. This makes dramatic sense: an android that both looks and acts human is hardly different enough to be any fun; a robot that looks and acts mechanical is really more of a prop than a character, unless you put a lot of effort into inserting some interesting behavior, usually human but less obviously so, into the character The Spaceship Girl trope is a counter-trope, since she usually both looks and acts human; the audience is only reminded that she's not human when she refers or reacts to her status as a ship

Humans, like most living things, are composed of many different organs and tissue types. Some people-eating monsters out there will not find all of those parts appetizing enough to eat A monster can be made more horrifying if instead of simply eating people, it eats only certain parts of people. The vampire is the best known example of this type of monster with its interest in blood. But for every organ or tissue type composing the human body, there will be some critter that finds it a delicacy. This makes some amount of sense, since humans themselves often favour certain parts of their livestock as food, instead of just eating the whole hog The horror quotient can really be ramped up if the part the monster is interested in can be extracted without immediately killing the victim. The victim can then suffer a slow, screaming death in front of their companions and the audience as the monster painfully extracts its chosen food. Also a partially consumed corpse can be stumbled over announcing to the audience and the characters that something is rotten in Denmark . If someone is telling a Ghost Story about one of these brutes, they'll often make it a Scarily Specific Story and have them target people in a

group the listener belongs to I'm a Humanitarian is the supertrope if</ feeder and victim are both human. If they're not, then see To Serve Man for human-eaters, or Monstrous Cannibalism for non-humans eating fellow non-humans. Brain Food is a subtrope, as is vampirism (blood drinking) in most cases. Those who are unfit for eating are usually Too Spicy for Yog-Sothoth . Only distantly related to Picky Eater , which is rejecting normal foods

Books which combine pictures and text into a work that wouldn't be complete with either of these parts missing Often, but not necessarily, the illustrator is also the author of the text. Picture Books are often aimed at young children, because they are supposed to help children learn words and reading. Not all picture books are intended for children, though As a genre of Children's Literature , picture books established themselves in the 19th century The origin of Comic Books can be traced back to Picture Books. Books where pictures are essential but not pervasive (e.g. author-illustrated books) are covered in Canon Illustrations

Oh no! Picture day is coming and, unfortunately for you, you're in a sitcom. You'll probably have to duck through a Food Fight to stay clean , or go to drastic measures to fix the unholy mess your hair has become, or find a way to change out of the lame outfit your mom made you wear. Either that or you are simply faced with the pimple OF DOOM Either way, you are screwed Many shows about kids or set in school will eventually have a plot based around Picture Day and a character's best efforts to not have an embarrassing photo of himself or herself taken for publication, because not only will the photographer never</ take more than one photo, but the Yearbook editor is always your nemesis who will make sure that your picture will be as humiliatingly noticeable in the book as possible May result in a character being Forced into Their Sunday Best

Picture Dramas are a variation of animated shows, with the difference that there is not much animation to behold. They generally consist of a series of still drawings, with voice actors performing the various roles, often having the "camera" move over the picture from character to character. In this, they could be seen as a form between anime and drama CDs . The emphasis is generally on the voice performances, with the pictures functioning as visual aids Sometimes picture dramas still contain a slight amount of animation, mostly by supposedly moving the on-screen characters around like puppets. They also tend to be produced in a different style, with Super-Deformed characters being the norm Nowadays most popular anime are accompanied by a picture dramas and often find their way as omake on DVD-releases. They are clearly cheaper to make, but still offer the involved artists, writers and and voice actors an outlet for showcasing their talents—and of course generating extra revenue. Whether the stories told are part of the official canon differs from show to show, very much in line with the status of most audio adaptations Also known as

The Girl Who Leapt Through Space </

A classic gag, tossing a pie into another person's face. Usually, this is a cream pie to get the proper Covered in Gunge effect. For extra comedy value, the victim might take a taste of the pie and

note it's not bad This Practical Joke was a staple of silent movie comedies, which came up with most of the variants. Often, a missed throw would result in an Escalating War pie fight. The all-out pie fight is a Forgotten Trope in movies, but still shows up elsewhere. A popular gag with this trope is where someone tempts fate by yelling "Let me have it!" Real Life celebrities and politicians sometimes have this happen to them as a protest. For example, Anita Bryant and Bill Gates have been pied in public On TV, the pie is often just whipped cream or shaving cream sprayed into a pie pan, which gives a similar effect while being much cheaper than baking up a whole pie just to throw it. Shaving cream is often considered better aesthetically than whipped cream, as unlike whipped cream, shaving foam does not melt under hot studio lights The trope is also one of the most common and ancient forms of Slapstick Knows No Gender and has been applied universally almost ever since its inception See also Edible Ammunition , Food Fight , Food Slap , Food Shove Gag , Produce Pelting , as well as Carrying a Cake (this is one possible, but not inevitable, result of performing that trope badly)

A villain joins the Nazis during World War II , impresses Adolf Hitler enough to get his own squadron/unit, then uses these resources for his own gain. This villain often sees Hitler as just another obstacle to overcome later. This trope also works if you substitute Hitler/Nazis with any other historical dictators (Joseph Stalin , Kim Jong-Il, Pol Pot, etc.) or Evil Colonialists (such as Hernán Cortés , Francisco Pizarro , etc.), but those examples are less prevalent without Historical Villain Upgrade Expect Stupid Jetpack Hitler or Ghostapo if the villain in question comes from the future or has access to mystical powers Compare/contrast with Dragon with an Agenda ; here you don't need to be The Dragon , and with this trope you get an instantly recognizable yardstick of evil for the villain to compare himself to and to rob of funds. Contrast with We Didn't Start the Führer , which is when Hitler himself was some sort of eldritch or alien creature

A pilot is a "test run" of a series concept, filmed and assembled to give the network an idea of what it will look like, how it will play and, via viewer testing, what kind of demographic it will appeal to Usually the network will turn down the pilot. Sometimes it will throw it back to the producers and say, "try again". There are probably ten pilots made for every one series that actually makes it on the air, at least in American TV - some insiders have snidely claimed that Hollywood is more about making pilots than actually making shows. (The term "pilot" is used in this sense outside the entertainment industry; a "pilot plant", for example, may be a smaller-scale power plant that's used to test some new generation technology.) Even when a show is picked up and given a timeslot, there is no guarantee that a pilot will ever reach the air. Granted, they usually do air, and as the premiere episode (for obvious reasons). But sometimes, usually with those shows whose producers were told "try again", the original pilot is so different from what reached the air that they don't try to use it (as is the case with Gilligan's Island </), or they recycle the plot in an innovative manner later in the series. (A good example of the latter would be "The Cage", the first pilot episode of Star Trek: The Original Series </ , which was recycled into the two-part episode "The Menagerie".) Live-action pilots often

have somewhat larger budgets than a typical episode of the series, but fewer purpose-built sets. A hospital or school or graveyard in a pilot is likely to be the real thing - no sense building an elaborate set for a pilot that probably won't be picked up. As such, if the series is picked up and purpose-built sets are built to replace these locations, then eagle-eyed viewers might be able to spot differences between the characters' base of operations from the first week to the second. The writing in a pilot can be significantly worse than in regular episodes. Introducing all the characters and setting up the situation in a limited time can be difficult to do in a natural way, and even the best pilots can be privy to clunky exposition . In addition, pilots often are slightly differently-shaped than the series that coalesce if the show gets picked up; for example: in the pilot of Gilmore Girls </ Sookie is a Cute Clumsy Girl (this trait fades away by the fourth or so episode), Lorelai drives a different car, and many of the sets are not the ones used later in the show, as a real street in Toronto was used rather than the "Main Street" set at Warner Bros. Studios which was used as Stars Hollow for the rest of the series. Pilots may also be filmed on a different stock than the rest of the series; the pilot may look more 'cinematic' in film story and cinematography than other episodes in the series. If it's the length</ of a film and presented as such, then it's a Pilot Movie . The same rules roughly apply to animation, except that pilots in that industry usually never exceed eleven minutes unless it is the aforementioned pilot movie. Should a pilot be integrated into another series, it's a Poorly Disguised Pilot . Most pilots fall into the category of the Welcome Episode or Everyone Meets Everyone . It'd make more sense to list the exceptions than the examples. They may also contain a First-Episode Twist . See Failed Pilot Episode for an index of pilots that have pages but not full shows. Many, many pilot episodes are simply named "Pilot", making "Pilot" the most common episode title among all series .

Card Sharks </ filmed two pilots in 1978 with the same set, which pretty much resembled the show's final product. The only difference was that #1 depicted a Money Cards loss and #2 depicted the highest possible win in the Money Cards (which also happened once in the series). Two revivals (one on CBS , one syndicated) aired in the late 1980s, apparently without pilots.

A Pilot Movie is a TV movie that, while purporting to be a coherent story on its own, is obviously an attempt to get the higher-ups to turn it into a series. Think of it as a proactive version of The Movie The advantage of a Pilot Movie over an ordinary pilot is that the bigger budget of a TV movie translates directly into better sets, cinematography and effects, not to mention the occasional "big-name" actor. Speculative Fiction series which must build their entire "world" for the viewer in particular do better with a Pilot Movie In addition, by advertising it as a movie, a network can hype up the pilot and gauge the reaction without having to commit to showing any additional episodes. Quite often an ordinary pilot that was not picked up first time round is repackaged as a Made-for-TV Movie in an attempt to recoup costs, and a good audience reaction can lead to a series after all There are both successful examples (Babylon 5: The Gathering </ gave birth to, of course, Babylon 5 </), and unsuccessful ones (USA Network 's 2004 debacle Frankenstein</). An unsuccessful Pilot Movie can become an Amelia Earhart — "the pilot that was never seen again" Sometimes the studio will be so impressed by the movie that

it will be released theatrically — while still serving as a pilot for a series. This is especially common with anime , where the pilot may be designed from the start to be shown in theaters Contrast: Poorly Disguised Pilot (a redirect of this trope name, Backdoor Pilot, to describe pilot movies). Compare and contrast with Five-Episode Pilot (a Multi-Part Episode at the beginning of a series that is frequently repackaged as a Pilot Movie . Sometimes, a straight example of a Pilot Movie can be re-cut into several episodes to be aired alongside the rest of its series) as well as Finale Movie (which is when a full-length film is made to serve as the ending</ of a television series)

This item is available in the Trope Co. catalog </ . In a nutshell, a dress made with a whole bunch of fancy trimmings, and/or materials, just to make it look pretty . This has long been Truth in Television . Wearing such a dress in Real Life serves two simultaneous purposes. In fiction, there are also two simultaneous purposes. Now the exact form of the dress doesn't matter. It can apply to grand, sweeping gowns, or mini dresses. What matters is the heavy use of fancy materials or decorations (which can be expensive, even today). Some of the most common gown pimping options include: Now there is no real objective line between this and a regular evening dress, so it's more a manner of how obvious it is the dress is pimped out. Say a lady has an evening dress with a fancy design embroidered onto a small part of the skirt. Fancy and stylish, but it's not that obvious, even when you see the skirt. So it wouldn't be this kind of dress. If most or all of the dress was instead almost covered in embroidered designs, it would be this trope. Sometimes a character with a Clothes Make the Legend dress uses this trope to make her dress fancier, while still keeping its iconic look. This trope might conceivably apply to men's clothes, but in fiction, this type of outfit is usually reserved for either known historical uses, based off those uses, or else characters who are outright fops . Of course, a guy who is any sort of Crossdresser may play the trope completely straight simply by copying female fashion—for the most obvious, the Drag Queen almost always loves this kind of glamorous and ultra-feminine dress, and indeed is likely to wear clothes like this much more</ often than most women in modern times. This will show up more often when combined with princesses, especially Princess Classic . In any setting where elves are present, and clothes are described, about every other outfit is likely to be given loads of details. It's highly likely that all</ clothes female dark elves wear will be this, including when they are a Sharp Dressed Woman . There are also quite a few games on the web which involve using sprites to make Virtual Paper Dolls , which allow mixing and matching to make pimped out dresses. Real Life Fashion designers still love to make these, whether they are the impractical dresses on runways, or the slightly more practical dresses on red carpet events. A Sub-Trope of Costume Porn and Impractically Fancy Outfit . A Super-Trope to: There are a lot of Sister Tropes , as this can overlap with them all: Compare Pimped-Out Car . Compare/Contrast Simple, yet Opulent . Contrast Modest Royalty , Real Women Don't Wear Dresses .

A list of designers, programmers, artists, and other important people in the world of pinball For a list of prominent companies, see the Pinball page

Most frequently seen in Looney Tunes cartoons, this is a visual gag which reproduces the look and action of a Pinball game. A ball or other spherical object (sometimes a character forced to curl into a ball) careens wildly about, rebounding off of numerous objects and/or persons, producing glowing "scores" over each one. The gag ends when either it leaves the "playing field" (often by dropping into a hole), ends up hitting one thing so hard it stops them from moving or one specific target lights up with a "TILT!" indicator "TILT!" — the indication that an attempt to cheat at pinball by lifting or shaking the machine has been detected — is a subtrope in its own right. Tilted machines shut down immediately, ignoring player input and ending the current game, sort of an early-to-mid-20th century BSOD, with the added element of "you brought this on yourself, cheater!" In a similar manner, a character subject to "TILT!" is usually stunned or unconscious, although whether this is because of or simply indicated by the "TILT!" varies from instance to instance Bonus points if Pinball-related sounds are included, such as target bells and flippers striking the moving object Also see Be the Ball and Bouncing Battler

Pinball is a type of Arcade Game where players score points by manipulating one or more steel balls on a playfield inside a glass-covered cabinet. Points are scored by striking certain targets and completing various objectives, and a player's turn ends when the ball drains off the bottom of the playfield. Skilled players can extend their playtime by keeping the ball in play as long as possible and earning extra balls; bumping, nudging, and slapping the table to affect the ball's behavior are legitimate gameplay techniques, but excessive force will invoke a TILT and cause the player to lose the current ball. Free games, called "Specials", can be earned either by very skilled playing or by random award at the end of a game Thousands of pinball tables have been created in the lifetime of the genre. Most tables have a theme, often with a license of some kind . Although their popularity in arcades have been diminished by the rise of Video Games , pinball continues to live on, whether it's via Pinball Spinoffs of popular video games, digital emulation of Physical Pinball Tables , or original tables made for both commercial establishments and private collectors. Even today, fans continue to collect tables as a hobby, and a vintage table in excellent condition can cost tens of thousands of dollars. Truly devoted players have created their own games, either by retheming an existing pin or by building original tables from scratch While it was not the first game of its type, David Gottlieb's Baffle Ball </ is considered the first commercially-successful "pin game". It was affordable for most drugstore and tavern owners to purchase, and quickly recouped its costs with people seeking cheap entertainment during The Great Depression . Other imitators quickly followed, with the term "pin ball" used to describe them after the release of Mill's 1932 Official</ game. Attempts by manufacturers to differentiate their games caused rapid evolution in the field, leading to elements like electric bumpers and flippers, which increased the amount of chance and level of player control to the game The notion that pinball was entirely based on luck reached its peak in the middle of the 20th century, when the city of New York banned pinball on claims that they were a form of gambling that led to delinquency. There was some truth to this; unsavory places

offered rewards or cash prizes for high scores, and The Mafia ran some pinball arcades, just as they did to other businesses. or ignored the bans, it remained on the books for over thirty years; it ended in 1976 when writer Roger Sharpe testified before a committee that pinball was not a game of chance, but required skill and finesse. Sharpe demonstrated this with a courtroom pinball game, capped when he announced that he would launch his next ball through the center lane at the top of the playfield, then proceeded to do so. The committee immediately removed the ban, though Sharpe later admits his courtroom success was by sheer luck

Atari Physical Pinball Tables

Tropes related to, named after, or used predominantly in Pinball games For a list of tropes commonly appearing in pinballs, see Tropes in Pinball Games

There's just something about heroes' mothers: They seems to be Dude Magnets . This is doubly true if they're a Missing Mom or Posthumous Character now This trope is about someone who loved the protagonist's mother once—often an Unlucky Childhood Friend who knew her as a child—but who didn't wind up with her. Maybe All Love Is Unrequited . Maybe she did have feelings for him once, but it just didn't work out. Either way, she moved on, and went on meet the protagonist's father and have the protagonist. He... didn't. Because of the nature of unrequited love, it's often quite long-lasting . This nicely sets up a scenario for Unbalanced by Rival's Kid , or even Love Father, Love Son in some cases Why? Protagonists' mothers are generally portrayed in a positive way, especially if they're dead by the time the story starts . As thus, they're usually pretty lovable This is useful in a narrative sense, as not only does it lend characterization and backstory to both the mother and the person in question, but it also affects the way they treat her child, the protagonist. Nicer ones or those whose relationship with the mother ended amicably will be kinder to the kid. More mean-spirited examples may take it out on the child. Additionally, if the mother's suitor is a rather ambiguous character—which they not uncommonly are— love for a good woman can often be a humanizing trait for them This trope can</ be fulfilled by a father's suitor as well, but there is a definite slant toward it being mothers. Thus a father example is a Gender-Inverted Trope

In fiction, and sometimes in Real Life , we tend to differentiate between "girly" colors and "boyish" ones . It is clearer with babies, when we are prone to see girls dressed in pink and boys in light blue. Prior to the industrial revolution and the development of synthetic dyes, colors were limited and the high costs rarely spent on children's clothing outside the upper classes. The main colors closer to natural hues. However, by the 1880s it was established that pink was generally for girls, while blue was for boys . Prior to WWII, a family's economic status was likely to affect color choice more than actual preference. However, at the same time, the Germanic countries tended to view the opposite: pink was associated with baby boys, because it's derived from red, which is considered a good masculine color. Blue can be feminine (and True Blue Femininity often still applies), as it was associated with the Virgin Mary. On the

flip side, the French were happy with a girl in pink and boy in blue by 1823, as childbirth should be "announced in this manner, and when the pincushion is pink background, this is a sign of the coming into this world a little girl, while the blue background pelotte announces that it is a boy" (La Cour de Hollande sous le règne de Louis Bonaparte, by Athanase Garnier, 1823) Note that lots of female characters have had a pink motif that they wear with pride and sheer badassery . Male characters as well, because Real Men Wear Pink . However, pink is sometimes considered too childish and disrespectful, especially to an adult woman, so red may be substituted. If there are Two Girls to a Team and one is represented by pink, the other girl will usually be represented by purple . A purple girl can be a goth , tomboy , or Proper Lady , while the pink girl is usually The Chick and/or a Genki Girl . Purple has a variety of associations, not limited to Purple Is Powerful and Graceful Ladies Like Purple — it's indicative of nobility and, by extension, nobility of character. Can crop up in many Boys' Love and Girls' Love stories; the active partner (Seme </ in BL, tachi</ or Onee-sama </ in GL) is unlikely to wear "girly" colors such as pink, but the passive partner (Uke </, neko</) frequently does, and (especially in GL but sometimes in BL) may even have pink hair . A Sub-Trope of Pink Means Feminine , Tertiary Sexual Characteristics , Color-Coded Characters . Compare Tertiary Sexual Characteristics , Red Oni, Blue Oni , Colour-Coded for Your Convenience , Pink Is for Sissies , Group-Identifying Feature , Princesses Prefer Pink . Not to be confused with Blue Boy .

Inverted in Castlevania: Portrait of Ruin </ : Jonathan's outfit is red, while his menu items are red or pink. Charlotte's outfit (including underwear!) are blue, as are her menu items On the Fanfiction website Archive of Our Own , one of the colored boxes next to the story's title specifies the genders of the main pairing: Blue for Slash , red for femslash, purple for Het

A situation where a character or party is pinned down by enemy fire and can't fight back, or sometimes even move, without getting their heads shot/burned/ripped off. This can prevent them from getting to an injured ally the character or group needs to help, stop a shorter-ranged character from getting within range of fighting back, or simply keeping the heroes from moving forward, buying a villain time A variant is "cover fire", which means pinning down an enemy when an ally moves forward (usually to the next safe spot, before firing in turn so you</ can move) It's often used in video games as well. Ever wondered why enemy soldiers keep shooting at where you last emerged from cover? They're keeping you pinned, probably while they recharge their shields or move into a position where they can kill you If it's being used to keep allies from helping a character who is</ able to fight back, the allies are Locked Out of the Fight

The extreme of I Just Want to Be Normal . The characters either aren’t human to begin with, or Was Once a Man before being the subject of a Baleful Polymorph curse or transformed via The Virus into monsters or otherwise made into something else that is decidedly not</ human. Often involving an artificial being such as a robot wanting to be a flesh-and-blood creature — or at least closer to one in ways it feels are important, like becoming creative Whatever the reason, the nonhuman beings want to become human, or in the case of formerly-human beings, they want to be

human again. Despite Applied Phlebotinum and magic being able to do everything else, it seems the power to turn someone into a mortal human being is incredibly rare. In those cases where those who do</ get the instant magical cure, they'll often throw it away, saying they want to earn it, or "it's the path, not the destination" (whatever that means), or it will come at a horrendous moral cost. In other words, Failure Is the Only Option , at least until the Grand Finale This is often a goal of robots , vampires , werewolves , and so on. In these circumstances, sometimes a wiser character will be taken in by this trope, but instead make some important logical deductions. Namely, that if you're a robot, you probably already act like a normal human, to the point of being able to pass the Turing Test . If you're a vampire or werewolf, you're substantially stronger and hardier than a typical human . Or maybe, in the most extreme cases, you'll become convinced that Humans Are Bastards , and you're better off being what you are. As a result, as cool as these "emotion" things may be, it may not be worth being Brought Down to Normal just to enjoy them. In these cases, the character in question can often be found looking for a third option that will allow for the best of both worlds Named, of course, for the puppet who wanted to Become a Real Boy , but much older than that. Likewise, the Shapeshifting Lover or the Talking Animal who is really a victim of a Baleful Polymorph Curse are figures of long standing in Oral Tradition Very often overlaps with What Measure Is a Non-Human? and often suggests that Humans Are Special . Contrast Humanity Ensues , and the exact opposite attitude that Being Human Sucks . See also Humanity Is Infectious , where a human mindset is catchy Not related to Pinocchio Nose . For the sister trope Become a Real Boy , see The Adventures of Pinocchio </

In reality, grenade pins are designed to be hard to pull so they won't be pulled accidentally. Attempting to pull them with your teeth will likely result in some painful dental damage Straightening the pin in advance to make it easier to pull is certainly possible (and easily accomplished one-handed) but it greatly increases the risk of mass casualty I Just Shot Marvin in the Face -style accidents so it isn't recommended outside of a dire emergency

In cartoons, kids are portrayed as being way shorter than adults, even kids who are 7 to 12 years in age. In real life, 7-year-olds are on average 4 feet tall, but in cartoons, 8- to 11-year-olds are often drawn to be only half adult height. Although children are rather small before they talk, it doesn't stay this way for long in real life (unless, e.g., they have dwarfism, but that's another story entirely), especially when puberty sets in and they outgrow clothes faster than they get new ones. In some cartoons, however, it's much more exaggerated. Even 10- and 11-year-olds only appear 2 feet tall Usually, this is done as an exaggeration and to play around for fun with. Because children often feel overpowered by their parents and other adults, they're drawn much shorter. Especially when it's told from their point of view. Sometimes, all that's visible of their parents are their legs. Bully and jock characters tend to be shown at heights that are more realistic for their age, however This trope is not quite omnipresent ; sometimes children are scaled to a more realistic size. Still, it's prevalent enough</ that averting the trope may lead to the audience being confused about how old a child character is actually supposed

to be. And sometimes it's even justified by the Super-Deformed art style of a work Teens Are Short refers to simply having most teens be identified by being shorter than adults, especially in Dawson Casting . This applies to 4- to 12-year-old children being ridiculously</ small for their age, to the point that they are only as tall as toddlers. Classic cartoons often invert this trope and Teens Are Short for laughs This is seen to a much smaller degree in live-action, where smaller actors may be chosen instead of a taller actor Related to Animation Anatomy Aging . Teens Are Short is the teenage version. Compare Miniature Senior Citizens . Also see Tiny Schoolboy which shows the types of preteen/teenage boys that suffer through this trope

When a small person is accosted by a larger opponent, most people expect the latter to win, but in fiction, the smaller a combatant, the more ass they can kick Like the Square-Cube Law going down, a combatant gets cooler and more badass the smaller they are. Short guys trounce giant bruisers, children routinely trounce goons, little people will be amazing wrestlers (if not literal ankle biters), and mice, rats or other small creatures (especially of the Talking Animal variety) will swarm and overwhelm , if not individually disable enemies with rapier precision Much like Muscles Are Meaningless and Crouching Moron, Hidden Badass , these characters are formidable fighters despite (or sometimes because of) their size There is some basis in science for larger proportional strength for smaller creatures : the Square-Cube Law works in the other direction. Although the volume, mass, and inertia of a half-sized humanoid such as a Hobbit is one-eighth a standard-sized human's, the strength of muscles is based on their cross sectional area, making Hobbits proportionally twice as strong as a human, and much more agile. This is also why ants are so strong compared to their mass. However, for this trope, Rule of Cool is in play whenever the Pint-Sized Powerhouse is as strong as, or stronger than, an average-sized human See also Apron Matron , for when small old ladies do this, and Mini Mook . Cute Bruiser , for when they're young, or at least very young-looking . It's also a common trait of the Mentor in Sour Armor . Killer Rabbit covers "harmless" animals. See Weak, but Skilled for a common explanation behind this. Waif-Fu and Glacier Waif are subtropes. This Trope is often - but not always - associated with a David Versus Goliath fight One of the commercials for McDonalds Happy Meal featured an anthropomorphic ant named Ant who exercises a lot, is extremely fast and had once been stated to have lifted up an entire elephant without getting crushed by it

An entertainer who is idolized by teenagers. People have been declared teen idols for as long as being a teenager has been recognized which, by the way, is Newer Than They Think - until the '50s, anybody under the age of 18 was simply a "child" . Many, but not all, have been specifically groomed for this purpose. They generally have several things in common: The most basic way to tell if a celebrity is truly a Teen Idol is by whether they wind up in magazines aimed at the teenage market (like Sassy</, Tiger Beat</, YM</, Seventeen</, and Teen People</) and by whether they become a poster celebrity. It should be emphasized that Tropes Are Not Bad and many idols, particularly musicians that legitimately wrote their own material, gain critical defenders as time goes on . Often, if the teens of the era have a social conscience, a Teen Idol will be the way The Man Is Sticking It to the Man . This trope commonly overlaps with the Idol Singer , although not all teen idols are singers. See also Boy Band , Girl Group , and Teen Pop . Not to be confused with the Meg Cabot novel, Teen Idol , or Marina Diamandis ' song "Teen Idle" (though Marina is given to playing with the trope).

An index of fictional works that star, or revolve around, Pirates (or, less frequently, Ruthless Modern Pirates) Can overlap with Sea Stories , which are works set across the seas, especially if the pirate story in question is set during The Golden Age of Piracy or a facsimile thereof

Whether they're sailing the high seas, soaring the wild blue yonder, or charting the depths of outer space, whenever there are ships and commerce, there's Pirates . Compare with Seaborne and Submersible Vehicles . Contrast with Ninja Tropes . Useful Notes :

A very common pose for movie posters and game cover art is to feature the main character posing with a firearm, often a pistol. A pistol is usually used to convey that the character is armed and dangerous and has intent to shoot, but not as overpowering as an assault rifle would be. Sometimes this is done for marketing reasons: a character may be known for their martial arts or other character traits, but if they hold a pistol anywhere in the story

it'll be presented in promotional art to make the work look more action-focused and appeal to a broader audience. But since a pistol is small, it's also easier to downplay it visually by holding it to the side This isn't exclusive to pistols: assault rifles and shotguns are also used for more aggressive characters, but they're more limited in how they can pose and express with them. It is also common to spoof this by having something else being held, like a banana or finger-guns, but still pose with the same serious reverence as with a real firearm See also: Sean Connery Is About to Shoot You , the more audience-aggressive variant

So, you've got a protagonist who's a bit abrasive, a bit rough around the edges. If you wanted to make a love interest for that character (assuming the character is the type that has the human capacity for love), you could</ either make the love interest just like the protagonist, make them single, or Take a Third Option : you could make their love interest completely passive. The inversion of All Girls Want Bad Boys and All Amazons Want Hercules , Pitbull Dates Puppy is when someone who's tough and Not Good with People enters a relationship with The Woobie , Non-Action Guy , The Heart , or the Extreme Doormat — often by force, though it is possible for one or the other to naturally fall in love with each other. Often done in historical romance novels where a badass decides to marry some fresh young innocent thing as a change from his usual Vamp or Femme Fatale choices. May be a Romantic False Lead if done deliberately to screw with a more suitable ex. Contrast Best Her to Bed Her . Also see True Love Is Exceptional for when a similar Opposites Attract dynamic actually works out, and Aggressive Submissive when the relationship works like this most of the time, until the time they actually have sex when suddenly their roles get inverted. Compare Beast and Beauty , Masculine Girl, Feminine Boy , and Brooding Boy, Gentle Girl . In psychology, this is known as the Has nothing to do with the rapper Pitbull .

Actually, the pitch generator is .

A hole in the ground that's somehow covered up so as to blend in with the surrounding terrain. Sometimes it's hidden beneath a Trap Door . Related to but not to be confused with Bottomless Pit . If it's not hidden, it's not a pit trap A standard subversion is where character A sets up a pitfall for character B, B walks straight over the covered pit and doesn't fall in, and then character A tries to cross (possibly preceded by tentative testing first) and does</ fall in, Wile E. Coyote-style Platform Hell titles will</ have these, usually with no indication at all that it's a trap Oftentimes it is a Conspicuously Light Patch . If there's an angry creature waiting at the bottom, you may have run into an Antlion Monster May have something nasty at the bottom to do additional damage on impact, such as Spikes of Doom (possibly poisoned) or snakes

The single most powerful deterrent to kidnapping in all fiction, (and certainly in the mundane category), is to be so annoying that the kidnapper requires an active force of will to keep their sanity. What makes them annoying isn't important. In truly bizarre cases, the kidnappers can be annoyed because their victim insists on being kind, upbeat, and forgiving even through torture. The

point is, nobody wants to be around them and that ransom note looks increasingly unimportant as compared to the promise of not having to deal with the Anthropomorphic Personification of "damned pest" day in and day out This can lead to an especially awkward situation when it turns out that the extortee doesn't want the hostage back . Expect much comedy to abound in this scenario, in part because a sufficiently vicious kidnapper would not get in this situation in the first place. Foiled by niceness once again, it seems This trope is a fairly old one. O. Henry's famous example "The Ransom of Red Chief" executes this trope using a pair of kidnappers (and a particularly bratty kid as the "victim") back in 1910, and there are stories, jokes, and folk tales going back to the Middle Ages and beyond of someone who escapes damnation because the Devil Himself doesn't want to deal with her (and it was almost always</ a her , because the Middle Ages were like that) It's fairly common for this trope to be invoked if the captive is particularly Genre Savvy or cunning . Subversions, aversions, and defiances of this Trope usually (although not universally) involve the kidnapper hitting a Rage Breaking Point and demonstrating how much of a bad idea this was, being unrelentingly evil in the face of said annoyance, or the hostage finding out the hard way that whatever is the final objective of the kidnapper they don't need to be alive (or at least conscious) for it to be achieved Compare Too Spicy for Yog-Sothoth , where the captive is intolerable even to the most hardened captor, Prefer Jail to the Protagonist , where the villain is forced to flee from the hero's presence even if it means being re-incarcerated, and Talking the Monster to Death , where the captive directly challenges the captor's beliefs and motivations. Contrast Poisonous Captive , who insidiously subverts and undermines the captors. If you pity the kidnappers because they're about to get their asses kicked by the kidnappee, then that's Mugging the Monster . Also compare Defiant Captive , who is more 'uncooperative' than simply 'annoying'. See also Sick Captive Scam , which is another trope that works better when the captors don't want any harm to come to the captive Not to be confused with Stockholm Syndrome , in which the kidnappee develops pity/amicability with the kidnapper; Contrast Lima Syndrome , in which the kidnapper actually starts to like</ or feel sympathy for the victim

If pornography is to be believed, no profession results in higher rates of sexual promiscuity than being a pizza delivery boy. Any mention of pizza in a pornographic movie will result in a pizza boy having sex. You'd be surprised that there aren't people clamoring to sign up with Pizza Hut or Domino's just for the tips</ alone. Expect to hear some really cheesy dialogue about "sausage" This trope doesn't apply to just pizza boys, but to any profession which provides services at the house of a client. It gives viewers the thrill of supposedly watching anonymous</, spur-of-the-moment sex without a production team having to use any other sets than a living room or bedroom where the "total strangers" meet. Plumbers are frequent candidates, complete with bad "cleaning out your pipes" jokes. Cable television installers are also portrayed as being sex-crazed, as their job will invariably require some screwing, and drills with unusually large bits It is never explained how the delivery person avoids getting into trouble with their boss back at the office for taking so long to make a delivery, or how they will explain the lack of

tangible payment they collected for the goods they dropped off Incidentally, in actual pornography, pizza delivery (and cable repair, etc.) girls</ are starting to become popular, possibly due to overexposure (as it were) of the male sex for this If the client is married, see Cheating with the Milkman . For the video game equivalent, see Excuse Plot . Not to be confused with a Delivery Guy Infiltration (though it can easily happen in the work)

Some places are so holy or magical that they have the property of protecting those inside the location from harm, either by keeping out ghosts, demons, or other supernatural beings, or by preventing any sort of violence or evil from occurring there This might be because a spell was placed on the location or simply because the place is inherently sacred . In mythology, many places that are considered holy ground, such as churches and graveyards, have the ability to keep out undead or evil spirits If a character is merely trying to invoke the symbolism of a place, most likely a church, they are Seeking Sanctuary

In Berserk </ , Schierke is able to set up a massive defensive spell over a church... because the church had been built over a sanctuary to one of the elemental spirits.

Some variations of Tag - you know, that game where you run around until whoever is "it" tags you - have safe areas or similar.

DC Comics' Blue Devil is a devout Catholic, who had the misfortune to be turned into a demon. The result is a blue guy being immolated by holy fire every time he goes to church. You'd think either he'd take this as a sign or God would arrange some kind of waiver after a while.

Any 'sacred ground' in the Highlander </ 'verse might fit, though it is unclear whether it's an actual place of protection or they won't fight there because of their rules.

Tolkien has a few examples:

One episode of Doctor Who </ sees the gang take refuge in a church...magically shielded not by any holy powers, but simply because the monsters of the day were agents of time. Older things have more history and thus take more time for the creatures to penetrate, and the centuries-old church was the oldest thing around.

Dungeons & Dragons </

In the Quest for Glory </ series of games, places where Erana has been are protected by her magic, and are safe havens for the hero to sleep at night. The town in the first game also has her spell cast over it, preventing any violence from occurring there, except for in the back of the alley and the graveyard.

In the Whateley Universe , just off the campus of Superhero School Whateley Academy, is 'The Grove', a Genius Loci forest which physically keeps out the unwanted and attacks undesired visitors, while protecting beings it wants (like Fey). Students and security forces are warned not to try to go in there, at their own peril.

In The Smurfs: The Legend Of Smurfy Hollow </, the covered bridge serves as one from the Headless Horseman for the Smurfs as well as for

Gargamel and Azrael — that is, until Gargamel decides to taunt the Headless Horseman . The Headless Horseman cannot cross the bridge, but he can still throw a flaming pumpkin into it.

Huge explosions in space turn into fireballs surrounded by unexplained rings of fire/plasma that expand usually on the relative horizontal or vertical plane, often racing just past the camera. Used to make big kabooms (especially those that blow up whole planets) appear more powerful, and when spheroid shockwaves just won't do Perhaps this is done because the expected near-spherical explosions don't feel as big, or because a two-dimensional shockwave resembles that of powerful explosions on earth. In theory, it could</ be Hand Waved by being an effect of the method of Artificial Gravity , or some kind of rotating generator exploding, or plasma trapped by some great magnetic field... but it usually just gets a pass due to being an awesome visual Very commonly used in space-based video games, as it is a relatively "cheap" and easily produced effect Count on the hero's Cool Starship to be directly in its path by apparent coincidence , allowing him to Outrun the Fireball Note: a spherical shockwave that is relatively transparent would look like a planar shockwave viewed from a perpendicular angle; done that way it is not this trope See also Explosions in Space for other ways media gets explosions in vacuum wrong

Ah, airplanes. What could be better than flying through turbulent winds, with a Screaming Plane Baby down the aisle, a kid who won't stop kicking your seat, and getting stuck sitting with annoying strangers? Not to mention the food sucks, and the flight itself could take several hours — worse if there's a delay. Any of these factors can make a ride horrible, and it's even worse if there's a combination. Worse still</ if someone has a flight phobia So it's no wonder that airplane rides in fiction have a tendency to be portrayed as uncomfortable at best and absolutely miserable at worst. Whilst this can be Truth in Television , the problems with flight travel tend to be comically exaggerated for the sake of making the protagonist suffer. First-time fliers will never want to go back, those with a phobia will be given confirmation that airplanes are awful, and everyone will just be happy when the plane finally lands Common problems include being stuck with annoying passengers, a lack of space, bad food , and flight sickness. In the worst case scenario, the plane may crash, in addition to everything else, just to underscore how bad the flight is Compare Subways Suck and Buses Are for Freaks

Airports, train stations and bus stops can cause anyone to become frustrated, especially if you've been delayed or you're trying to change your booking. In this trope, protagonists are faced up against dutiful travel employees who seem to revel in their wickedness. Examples of this trope typically involves our exhausted main character, travelling across the country to get home or to see their family. Often, there's a ticking clock element, where it's crucial they arrive somewhere at a certain time. In other instances of the trope, a character may be booking a trip via the phone or consulting with a travel agent. However, just as they thought they were on their way, they face the mean old transport company employee. They may dress nicely, they may be smiling so hard their cheeks might

tear, but boy are they passive-aggressive. Perhaps years of facing embittered customers has made the employee more than a bit embittered themselves, or maybe, they picked the career purely so they could dictate other people's lives. Our protagonist usually makes a big scene, calling the worker out for their behaviour. But I mean, only one person is getting paid for being there, right? Why does the protagonist's goal matter more than any of the other impatient customers' goals? Scenes with this trope can sometimes end with the worker calling security, or may even lead to a "Stuck at the Airport" Plot . Compare with Unsatisfiable Customer , Obstructive Bureaucrat , Overreacting Airport Security , Plane Awful Flight No Real Life Examples, Please!

Someone's digging towards the center of the Earth. They aren't Digging to China , though. They're interested in the magma core itself. If they're evil, expect them to use the core as a potential power source or a way to end the world . If they're a hero, they might stabilize the core to prevent the planet from being destroyed. The latter is generally far rarer, because messing with the core of a planet is usually a bad thing Might have something to do with Hollywood Magnetism , specifically the idea that magnetism is a power akin to Green Rocks , so disrupting a planet's magnetic field can have crazy consequences Usually involves copious amounts of Artistic License – Geology . Compare Hollow World and Dug Too Deep

Most parasites use a single living being as their host, which they use to grow, develop their bodies, and finally create many new parasites that will invade another host These guys, however, will employ a whole planet</ as their host . Just as our parasites feed on our nutrients to grow, these guys will deplete the planet of its natural resources or its very life force (this is likely to bring bad consequences for the planet's inhabitants), and use them to complete its reproductive cycle, spawning more of its race. Once the cycle has been completed, the newborn will somehow leave the planet to find another one, where they will start a new cycle. Destroying the planet when leaving it is optional Compare Planet Eater , where the parasite consumes the planet just to obtain nutrients and does not require it to reproduce, and Planet Looters , which are more similar to thieves than to parasites

Stories, nominally Science Fiction , set on an alien world described in lush detail. The world can be Earth in the far distant future, or an alien planet, but it is reached by science-fictional means, not magic. However, the science is largely handwaving . Visitors may arrive on the world by spaceship, and there might be items of Lost Technology present, but overall the world will feel like Low Fantasy — a feudal society with small-scale magic but no Big Bad — and it will share most of the same tropes. Sometimes the genre is even called "Sword and Planet", in reference to Sword & Sorcery , although other authors have this as a different if often overlapping genre. Because the "romance" in the title stems from Chivalric Romance , a Love Interest is not in fact required. May involve Weird Science . Schizo Tech may occur. Even if the planet has futuristic transportation, expect, however irrationally, large parts of it to be unexplored, and it to be easy to be out of contact

with one's home (and government). Prone to use Medieval European Fantasy tropes, or feature a Feudal Future . Overlaps heavily with the Dying Earth subgenre pioneered by Jack Vance 's eponymous novel . Examples set in our solar system tend to involve now-discarded hypotheses about the environments and histories of other planets, such as Venus Is Wet and Once-Green Mars . Space Opera is a closely related genre, but the action and adventure tend to take place more in space and on differing planets. Usually it is set within the context of a galaxy-spanning civilization and involves at least some travel between planets . One distinction is that Planetary Romances are essentially Jungle Operas in space whereas Space Operas are essentially Sea Stories in space. Contrast with Single-Biome Planet . See also Pulp Magazine , Swashbuckler , Two-Fisted Tales . Not to be confused with Mars Needs Women

This is the way the world ends , not with a bang , but a nom</ (all apologies to T. S. Eliot) A character that not just destroys but eats</ planets for nourishment. They may suck the life-force from the biosphere, feed off its gravitic potential or magnetic field, or just start taking big bites out of the crust and mantle Planet Looters and Alien Locusts taken to the Nth degree. May overlap with Grey Goo . Taking this</ trope to the Nth degree, is Spacetime Eater . Compare Omnicidal Maniac and Planetary Parasite . This is an X-1 class threat in Apocalypse How . When a character eats planet-sized portions (or eats so much they're the size of a planet) that's Big Eater Subtrope of Planet Destroyer (because a being who eats planets for breakfast would also have the necessary strength to destroy it) This would have been called " World Hunger ", but that's a real life problem with real life consequences . We guess

The infernal realm is often by definition unconquerable and inescapable. This doesn't sit well with videogame designers, who abhor not being able to shoot up things that look like they need shooting up. Consequently gamers are occasionally treated to going to Hell, killing everything, and coming back out. This is possibly the ultimate logical conclusion to the Rule of Cool , or the Sorting Algorithm of Evil going off the scale. The epic finality of Hell makes it a good location for The Very Definitely Final Dungeon or the Bonus Dungeon , but that's by no means universal. Compare Bonus Level of Heaven . Almost always leads towards a To Hell and Back scenario Also see Lethal Lava Land , an often similarly themed stage that usually doesn't actually take place in a Fire and Brimstone Hell . For a level that's a figurative hell, see Brutal Bonus Level . Not a Lighter and Softer version of " Planet Hell or of " Hell Planets ."

Planet looters are a race of aliens that have run out of something, and must steal it from others — frequently, from us here on Earth . This is peculiar in that their demonstrated level of technology makes one wonder why they'd target Earth when it would be far easier to find an uninhabited planet and strip-mine that. To Handwave that problem, they often need some particular resource which is supposedly rare: It's fairly popular to make humans</ fill this role (to the horror of the Space Elves), as a Green Aesop about the exploitation of natural resources. Usually results in an Alien Invasion . Compare Space Pirates , Horde of Alien Locusts , Planet Eater , Mars Needs Water , and Mars Needs Women .

There's big spaceships, there's gigantic </ spaceships, and then there's these: a space ship (or station) that's as big as a small planet or large moon. In space, you have no external gravity to contend with, so it's possible to build some truly humongous structures like this. Alternatively, you may just want to strap some engines onto an actual</ planet or moon and set off, although this may require Sufficiently Advanced Technology . If the ship's big enough, it may even have its natural gravity be big enough to keep things rooted to its surface, though usually not enough to make an earth-like atmosphere (like, say, our moon) Often used for Rule of Cool , in which case it will overlap with Cool Starship , the Planet Spaceship is a great way to intimidate your foe, or to pack your entire population off when your home world is in trouble. May evoke a " That's No Moon! " reaction when it first appears Technically, actual planets and moons are</ spacecraft in the sense that they are in orbit around something. Buckminster Fuller made this analogy when he referred to "Space Ship Earth." But to qualify for this trope, the super-colossal spacecraft must have some means of propulsion</ , or at the very least orbital correction Subtrope of Mile-Long Ship . May be used as a Big Dumb Object , The Battlestar , or a Generation Ship . Commonly, though not exclusively, found in Space Opera . Compare Dyson Sphere and Ring World Planet . See also: Unnecessarily Large Vessel , Unnecessarily Large Interior and Awesome, but Impractical

This is a fairly simple trope. It is simply the habit of calling Earth "Terra" in Sci Fi. The word is adopted from the Latin word for, well, earth It is used to make the planet Earth follow the Roman naming systems for the planets of the Solar System and also because "Terrans" is a more respectable description for the inhabitants of the planet than " Earthlings ". Another advantage is that it is language-neutral, since it is by far the most common word for the planet—four world languages call this planet Terra or some variant thereof, as do many of the other Romance (i.e. Latin-derived) languages with fewer speakers Also, “Terra” provides a convenient standardization in that Earth is otherwise one of the only two planets in the Solar System that are not named for Roman deities, with Uranus, named for a Greek one, as the other, and one of the few things in general in the Solar System that are not named for Roman or Greek mythology, along with a few others, such as the likely dwarf planet Makemake, named for the creator in Easter Island folklore, or the Uranian moon Puck, named for a character in Shakespeare’s A Midsummer Night’s Dream </ This is often accompanied by reference to Earth's sun as "Sol", and the moon as "Luna", to differentiate them from other suns or moons Calling Earth "Terra" may be a result of an Earth That Was scenario Due to the evolution of the pronunciation of Latin itself, the older form "Tella" also fits here. SF authors of the 1930s also applied an alternative version of the word, "Tellus," which means the same thing For whatever reason "Terran" is frequently used as an alternate name for humans even when the planet is still called Earth

A subtrope of Slapstick and Amusing Injuries , this is an old gag where Alice is carrying long items such as planks, logs, poles, or ladders, turns around and accidentally hits Bob, who was standing behind or next to her This happens either because Bob called Alice

from behind, and she instinctively turned around to greet him, or because she wasn't aware of his presence, or simply because Alice isn't careful of her surroundings One common variant is to have the carrying character unknowingly knock out an attacker that was furtively approaching from behind. Another is to have a sufficiently quick-witted character duck the first swing, only to be clocked in the head when Alice turns back</ around This gag find its origins in Vaudeville and Music Hall, leading to its use in the Silent Movie era. Virtually every silent movie, starting from Chaplin to Laurel and Hardy, used this gag at least once, even when talkies came along. The Plank Gag was also a favourite of the Three Stooges. It's still used on stage today in the UK with Pantomime In Real Life , safety rules are set up specifically to avoid this situation Characters likely (but not necessary) to be involved in the gag are The Klutz for the long item-wielder, and the Butt-Monkey and The Chew Toy for the person suffering the hit If you're thinking about a guy getting hit in the face by a board that he stepped on, that's actually a variation of the Rake Take . Also compare Nautical Knockout . A Plank Gag might be set up, but subverted by the Coincidental Dodge

A character is trying to outline a battle plan, a game plan or A Simple Plan . They will always use the first items that come to hand, and these will nearly always be salt and pepper shakers, a bottle of mustard or other condiments, and possibly tableware like spoons and napkins. Hilarity Ensues , resulting in: Can turn into a physical Metaphorgotten . See Exposition Diagram , The Big Board , Model Planning for when something more suited to the task at hand is used

Whenever Plant People show up, they are almost guaranteed to have Plant Hair Plant Hair is when a character, usually a plant, has leaves, vines, flowers, and other foliage-related paraphernalia instead of hair This can be a Justified Trope because having leaves on top of your head makes them less concealed from the sun, so photosynthesis is easier. Although most of the time it just looks good . That doesn't excuse Humans with Plant Hair, when the Plant People look exactly like humans, except for their Plant Hair Note that the character in question doesn't have to be a plant. They just have to have foliage-related stuff instead</ of hair Compare Robot Hair and Alien Hair . See also Plant Person , Plant Aliens , and Planimal , who probably have this. Sometimes occurs in Weird Beard form Is a Elemental Hair Composition as hair that isn't actually "hair"

In Sable's Grimoire </ , Eth the mandragora has leafy green vines and large pink flower petals for hair.

An index gathering plant-related tropes. And fungi too . </ A sub-index of Tropes of Nature . Do not add flower-only, tree-only, or fruit and vegetable-only tropes here: instead, put them in their respective sub-index. Compare and contrast Animal Tropes .

is one of the four traditional states of matter, a step up from

gas where the electrons become so energized that they break free of their orbits. Naturally some people have thought of weaponizing it. Unfortunately, in real life, plasma's properties make it more than a bit impractical. Even without atmosphere, it spreads out and becomes useless more than a fraction of an inch from the source, making it useful as a cutting tool but not a (ranged) weapon unless you can practically project a magnetic bottle to contain the plasma until it hits the target... which is very advanced technology in its own right (and subject to that very same technology being used to disrupt the magnetic bottle of the weapon). Even with</ atmosphere, the fact that gases are much denser than plasma means that plasma won't penetrate very far through air — think of shooting compressed air underwater. Needless to say, practical ranged plasma weapons are an indication of a highly advanced civilization. Those impracticalities may be why most fictional plasma weapons, almost always heavy guns or cannons, are at most Cool, but Inefficient . Common traits include: That being said, one of the major reasons why a civilization displaying practical ranged plasma weapons is so intimidating is because, if practically delivered, plasma has a devastating effect on target. It doesn't merely look cool ; it delivers enormous heat and electricity into the target, wreaking havoc on electrical systems (including organic ones, like the human body), outright melting what it hits, and setting everything near it on fire. A Sub-Trope of Ray Gun and Energy Weapon . When the Mohs Scale of Science Fiction Hardness demands the function of the weapon to be explained, however, it's nearly universally mentioned to be a high-powered relative of Magnetic Weapons instead, the implications being that the projectile's launch energy and/or air friction is sufficient to turn most of it into plasma.

No, Not That Kind of Partner This is when two characters have been friends for a long time, and share a closeness like that of a married couple. Occasionally, there are individuals who assume the duo are married or dating , or try to set them up as a couple. However</, the duo is perfectly happy just being friends and the lack of sexual attraction is mutual. The reasons behind this vary. Sometimes they're truly in love with someone else. Sometimes their sexual orientation makes them incompatible . Sometimes they even tried dating once a long time ago and realized that they just didn't think of each other like that. Whatever the case, the final result is entirely platonic on both sides In most cases, this is a Sub-Trope of Like Brother and Sister . The difference is that for Platonic Life Partners, their relationship with each other is the most important relationship, with even romantic relationships coming in second.(sometimes it's on the same level) The same-sex equivalent is Heterosexual Life-Partners Simply being friends doesn't make a pair an example, nor does just being True Companions —rather, in terms of The Four Loves , this is </ with overtones of Storge</ but a complete lack of </. Despite their tendency to inspire shipping , there's a good reason they're called Platonic</ Life Partners. However, there is precedent for Relationship Upgrades to occasionally happen if one or both partners realize their feelings run deeper. Occasionally, Better as Friends and Anchored Ship also will crossover into this trope if romantic pairing change their status, voluntarily or otherwise Before you add an example to this page, make sure it really fits the trope. Harry Potter and Hermione Granger are a good example of two characters who They're Like Brother and Sister This is common in shows targeted at young children, even if the characters

themselves are significantly older than the viewing audience, based on the assumption that little kids don't want to watch a bunch of "mushy stuff." Often also invoked by fans of science fiction series who similarly don't want the stories watered down with romance Sub-Trope of The Not-Love Interest . Compare Better as Friends . Contrast Just Friends for when this does actually blossom into romance. Not to be confused with Childhood Friend Romance , in which one side does have feelings for the other

Plausible deniability is a condition under which a person or persons' culpability might be denied, or at least mitigated, by pointing to a situation that either leads them to take the action they took, or to deny that they were responsible in the first place According to The Other Wiki , the term was "coined by the CIA in the early 1960s to describe the withholding of information from senior officials in order to protect them from repercussions in the event that illegal or unpopular activities by the CIA became public knowledge." The scope of the term has broadened since then While intended in the context of more serious affairs, the term can refer to any number of trivial matters. Speaking at San Diego Comic-Con, prolific comic book writer, Len Wein explained the lack of original films, and the large number of sequels, prequel and spin-offs as well as adaptations of novels, comics, TV shows, video games and older movies, is because Hollywood "runs on the principle of plausible deniability," and that if studio executives can point to a good reason why they green-lit a turkey, it would be more plausible</ to deny</ their bad judgement by pointing to the property's existing market Plausible deniability is often used to make it seem like fantastic events within a series could be taking place in the real world, by hiding the evidence so that most of the in-world population could deny that the events are happening — we call that a Secret History . Contrast Implausible Deniability , where you try</ to do this, but your statement can't be believed in the least

If something is played for drama, it is being used with the intention to be serious. Sometimes, a comedic trope is played completely serious (for example, a Three Is Company setup leads to tragedy), or maybe a drama-neutral trope is milked for all the drama it can provide. Can be used in a deconstruction of a particular trope Contrast Played for Laughs ; sometimes, the only difference between one trope and another is that one is played for laughs, while the other is played for drama

This can be done in several ways: This might even be inspired by one of the writers finding Accidental Nightmare Fuel in a trope and then applying it deliberately. Now it's very rare to see actual horror tropes done this way, since they are technically played for horror by default, but it's not unheard of. Perhaps the horror is exaggerated , or the work finds new horrific implications of the trope. Furthermore, this in no way</ excludes horror works from having examples. In fact they can get plenty of scares by finding the scary elements in things that usually aren't. Now keep in mind the absence of horrific elements doesn't count as Nothing Is Scarier , unless we're meant to be freaked out by something not happening. A Sub-Trope of Playing with a Trope . A Sister Trope to Played for Drama . Compare Fridge Horror , contrast Played for Laughs (though the two sometimes overlap).

If something is played for laughs, it means it is being used with the intention to be comedic. It is often a parody of the instances where said device or trope is used seriously. Sometimes involves Lampshade Hanging on a particular trope Contrast Played for Drama and Played for Horror ; sometimes, the only difference between one trope and another is that one is played for laughs, while the other is played for drama Can sometimes result in a "Funny Aneurysm" Moment down the line. And of course, can result more immediately in Dude, Not Funny! . Also compare Black Comedy . Not to be confused with Parodied Trope (when that trope isn't played straight)

Different people want different things out of games. For instance, one kind of player may have absolutely no use for Awesome, but Impractical abilities; they avoid even getting them, they write to publishers asking them not to put them in future games, and they deride players who do</ use them as ignorant newbies. On the other hand, other players go straight for them, and use them as often as possible, just because they like the impressive visual effects and the feel of doing the maximum possible amount of damage . And yet another</ player will acquire them, but not use them except as a Finishing Move , because it's more dramatic that way . A number of ad hoc</ terms have developed in various sorts of game for different types of player, such as the Rules Lawyer , </ who is compulsively attached to the rules as written, the impetuous and annoying Leeroy Jenkins , </ and the Griefer </, a common type of Troll in multiplayer computer games, who plays to piss people off and have fun at other players' expense. But some people have gone further, creating systems</ of terminology. This may be intended as an aide for Game Masters ; if the GM has a clear idea what the players want and how they’re likely to behave, it makes running a satisfactory game much easier. Alternatively, the system may be intended for the use of game designers and publishers; if you're making a game, it can be very important that you know who, exactly, you're trying to sell it to . Thus, a fair amount of work has been done on codifying the relevant psychographic profiles. All of them, to a greater or lesser degree, are about what the player thinks is fun. Several different categorizations have been proposed or created. Most of them were made for the purposes of one specific game or genre, but can be applied more widely with a bit of tweaking. in an article entitled in Different Worlds</ magazine in 1980. Although Blacow was identifying four different aspects of games</, each rather obviously mapped to a type of player</ , if only because players accustomed to a specific style of game will play to that style, and his article was soon followed up by other writers in the same magazine, picking up on this aspect of the topic. Blacow’s four aspects were: Note that, with most of these categorizations, blends are entirely possible, and indeed likely; for example, you can have someone who's part Timmy and part Spike, or someone who integrates beating up bad guys with socializing with their team. Indeed, most people will have at least a little</ of each category.

This concept represents the in-game character controlled by the player—as opposed to Non Player Characters who aren't. Typically the game puts you in charge of at least one entity, but the extent to which that entity is</ an actual character, as opposed to being a Featureless Protagonist or Non-Entity General , depends on the genre, the game, the game's developers, and even (if Character Customization is available) the player him- or herself. Our page on

Player and Protagonist Integration has more details on the different points along the scale that are possible here. Sometimes, the term PC only refers to The Protagonist , particularly if they are created by the player, while NPC is used even for other party members who the player still controls but are preexisting characters within the game world, rather than a personal avatar. For more information on possible PC/NPC party configurations, see Player Character Calculus . It's a curious thing, but most PCs in tabletop RPGs have a sort of personality archetype that applies regardless of the genre of the game the PCs are in or the personalities of the people playing them. They tend to be: This largely stems from the PCs being the main characters in their story and, more importantly, knowing it </ . Finally, a wise word to all tropers: don't conflate Player Characters with players. Ryu punches Ken, Ryu does not punch the player</. Unless something has gone horribly wrong . Or something has gone horribly right .

Anytime the Player Character is killed in a video game, Critical Existence Failure is sure to manifest. Sometimes, the player character just flops dead like a rag-doll or jumps out of the screen . Other times, they explode (normally if they're a robot, but in chunky salsa if they're not), or the enemies start Beating A Dead Player . And if you're particularly unlucky, the game will show in full detail the many creatively grizzly ways your character can be reduced to a pile of flesh and/or bones , and then make fun of you for dying We're not talking about those . We're talking about when the death of the player character is treated with some actual drama, as the player themselves would, and takes it completely seriously. It does so by conveying to the player that the player character is truly defeated, and that the game cannot go on without them . For many games designed for children, if done well, this can be a good source of Nightmare Fuel and/or a Tearjerker How this manifests itself varies, in some early video games, everything except the player would disappear and be replaced by a black void, removing all distractions from the character's corpse. In more modern games, all entities that are not the player (enemies, bosses, NPCs , etc.) would freeze in place as the player character dies. Dramatic Spotlight may be involved if the work is being showy. Due to the nature of this trope, it's very rare for The Many Deaths of You to apply, but if it does, expect all death scenes to have something in common, even if it's Yet Another Stupid Death The nice thing about this trope is that it avoids having to invoke Bloodless Carnage if a character should be reduced to paste, while simultaneously dodging having to give the player character a Family-Unfriendly Death . The death scene is always the same, but what would realistically happen to a character when they die like this is entirely left up to the player's imagination It's worth mentioning that the player character doesn't necessarily need to die for this trope to come into play, any type of failure can apply, as long as it's Played for Drama . If the rest of the game world keeps going on despite the player character dying, then it's not an example Permadeath is more or the less the ultimate version of this trope, since the dead character will remain dead. This isn't to be confused with It's a Wonderful Failure , as that is for dramatic failure in specific circumstances , while this encompasses dying in normal circumstances during game play. Contrast Have a Nice Death

As opposed to the malicious Cracker who uses his computer skills for profit and mayhem, the Playful Hacker normally wants nothing more than to explore new territory on the Net and learn new things. Sometimes, he plays harmless pranks which can cause clueless authority figures to confuse him with his dark counterpart. Even when his actions are not strictly legal, though, his intentions and presence are almost always benign—even heroic. When a Playful Hacker and a Cracker collide on the Net, it's always the Playful Hacker whom authorities pursue first, a plot complication which puts additional pressure on the Playful Hacker to track down the Cracker , the true culprit. When the final face-off comes, though, it's going to be the Playful Hacker versus the The Cracker at high noon at the 0K Corral with virtual six-guns . The Playful Hacker usually owns a Magical Computer , which allows him or her to do all manner of things impossible to normal computers and users, especially when engaging in Rapid-Fire Typing . (See Hollywood Hacking .) He may or may not be a Mad Scientist depending on who you ask. Chances are a more-benign Playful Hacker might turn out to be a Reluctant Mad Scientist , or a Stupid Scientist . Modern iterations may also be Tech Bros . See also: Everything Is Online , It's a Small Net After All , Omniscient Database .

The hiring of an actor to play a certain part which differs fundamentally from roles the actor is famous for or has played in the past. For instance, an actress who is known for playing kindly old grandma types suddenly cast as a scheming murderess. This is generally done when an actor wants to 'stretch his/her wings' or 'try something different'. In its highest form, this leads to an Oscar for the actor in question. Often, it can be very useful in The Reveal . Comedies will frequently use this trope for laughs; a wacky line will often sound much funnier coming out of the mouth of someone you'd never expect to say such a thing. If it works very well, it can even turn around a career. Occasionally, Playing Against Type is something that comes up in retrospect. An actor who becomes famous for a certain type of role may have played a character who is the complete opposite early in his or her career. At the time, the role may have not been a departure but, when viewed later, the difference will seem quite stark. The polar opposite of Typecasting , although it is possible to invoke both at once. A source of Hidden Depths . Really bizarre cases (or those which look bad in hindsight) can lead one to ask WTH, Casting Agency? For a specific form of Playing Against Type, see Tom Hanks Syndrome , Leslie Nielsen Syndrome , Playing with Character Type , New Sound Album or Creator's Oddball . May first require Typecasting to fall into this trope.

A character performs in a play as an inanimate object. It's often used to undermine a character, making them The Chew Toy of the moment. Sometimes they'll get One-Line Anxiety anyway, demonstrating them to be very strange or delusional. The need to have actors essentially playing props can be justified for school productions in which everyone in a class has to have something</ to do, and the adults in charge are forced to stretch the definitions of "actor" and "character" See also The Living Dead , when an actor gets the non-speaking role of a corpse. Actors' tendency to inopportunely get the giggles while playing such roles gave rise to the term Corpsing Not to Be Confused with actually becoming a tree

or disguising as one

When someone is too shy or inarticulate to pursue his dream girl, he has a friend (the Cyrano) supply his words for him. Like most Simple Plans , this naturally never works. In modern works, it's often done via Earpiece Conversation The plot generally plays out with the dream girl discovering the true author of the poetic courtship, and being more attracted to him than to the guy he was speaking through. Whether he's interested in her or not If there is a Cyrano on each side, hilarity may ensue . In such a double-Cyrano, Pair the Spares may be invoked Subtrope of Romantic Wingman , and a type of ghostwriter . The Trope Codifier is Edmond Rostand's classic play Cyrano de Bergerac </. The story may include a direct reference to the play, which will often make it very clear that the character making the reference (possibly the writer as well, possibly not) has only a very passing knowledge of the play. Could lead to a Funny Phone Misunderstanding

Many people tend to slack off at their jobs, at least occasionally. For people who spend their workday at a computer, this can take the form of secretly (or not so secretly) playing a video game The most common choice is Solitaire </, which was commonly found bundled with older Microsoft Windows systems. This is an indication that not only is the character bored out of their mind, they don't even have the means or the energy to download or install something cooler — they just play whatever comes pre-installed on their work machine. Later Windows machines require you to download games yourself, which might lead to something a bit more involved like Tetris </ or surreptitiously playing a phone game like Angry Birds </ The person playing may be a Surveillance Station Slacker . Often doubles as a Funny Background Event . Compare Pirates Who Don't Do Anything

This is the old idea that the best way to attract romantic interest is by "playing hard to get" because of course "the chase" is an important part of romance. Traditionally used by women to attract men, and "let them think they are in control" However, it can also be reversed, and probably is connected to why All Girls Want Bad Boys and Nice Guys Finish Last . Dogged Nice Guys in particular suffer from having violated this trope Often played for comedy when a person actually isn't playing hard to get, but their Stalker with a Crush assumes they are and are thus actually interested in them. It can result in an Unwanted Harem or even a Love Dodecahedron for maximum hilarity. Of course, the Abhorrent Admirer tends to operate on this assumption as well, and not just because an Abhorrent Admirer and a Stalker with a Crush tend to have a lot in common Another fun twist on this is when the Dogged Nice Guy or another unwanted Love Interest finally decides to give up, and suddenly their former target is shaken in their world view, and begins pursuing the former Stalker with a Crush , seeking to regain their affection. This leads to Unrequited Love Switcheroo Sometimes this results in an inversion of the previous situation, leading the former Stalker with a Crush to realize how annoying their romantic pursuit was (don't expect them to get much sympathy from the other characters). Other times this will lead to a Happily Ever After (or The Masochism Tango) relationship. More often the former Stalker with a Crush will excitedly return the romantic feelings at which

point the target will suddenly lose all interest resulting in a Snap Back . Occasionally it will turn out that the Stalker with a Crush was attempting to invoke this trope, in this case a Snap Back is almost certain once the target learns of it Connected to Love at First Punch . Might explain why the Tsundere is popular. See Belligerent Sexual Tension when both are playing hard to get, yet still seem to become inevitably romantically connected

This happens when someone with poor or minimalistic drawing skill has drawn something and another person misidentifies it. It does not necessarily mean the drawing sucks though, often the drawing is so simple that anyone could have mistaken it This isn't tied to drawings. Clay arts, handcrafted gifts, needlework or any handicrafts can also be classified into this trope Compare Terrible Artist

There are times when one person is played by a set of twins , and there are times when a set of twins are played by twins (or triplets, etc.). What's rarer is when a pair of twins are played by the same person Of course, there are more actors without twins than there are pairs of twins who are actors. Finding a pair that are identical enough and are both suitable for the part may be very hard and much more effort than just the one Reasons for casting this way include when on Long-Runners the twin reveal is a plot device thought up for an already developed character later on, and the actor hasn't got a twin. Other times, the production really wanted to hire a certain actor because of their marketability or skill massively outweighing pairs of twins that auditioned. Necessarily they are Always Identical Twins . The role in the story may take the form of the Backup Twin However, though it may seem as though you could save money by hiring one actor to play two parts, it may cost more</ . If the twins ever interact then you're going to need to hire at least one other person to be a stand-in (and spend a lot of time finding someone who looks like the twin actor) as well as spend twice as long filming these scenes. You're also going to be paying the actor for two roles, not one. Still, the availability of twin-less actors plus their appeal may start saving the production money and bring in more viewers, so earning the money back more. As well as that, some specialist acting agencies for twins ramp up the hiring cost because of the scarcity of genuine twin roles and/or actors A form of Acting for Two and usually achieved via Double Vision . The opposite of Making Use of the Twin There can also be In-Universe examples, for when there is a Show Within a Show . If a character pretends to have a twin that's the Fake Twin Gambit Note that only examples of twin/related characters should be listed: clones, doppelgängers, and other identical counterparts are more typically played by the same actor and not part of this trope. Voice Actors who voice both of a pair of twins go on Talking to Himself

Even with tropes about tropes (metatropes) that describe how tropes tend to be used, it can be hard to pin down the exact relationship between a trope and a particular work. This is a quick-reference guide of ways to play a trope, illustrated for clarity with two simple examples: The Butler Did It (a servant committed the murder in a mystery story)

: The trope is simply used. Tropes can also be played differently in terms of tone and style: Exaggerated : The trope is used to an extreme. Note that this does not necessarily have to be used humourously—a trope can be exaggerated and still played completely seriously. Specific characters (or the narrator) can also play with tropes: Lampshaded : A trope is Played Straight and explicitly pointed out by one or more characters.

Untwisted : Sometimes, a Subversion is expected</. In an Untwist, the audience expects a trope to be Subverted, but it is Played Straight instead. The Inversion of a standard Subversion. Highly subjective; any plot development can become The Un-Twist to a sufficiently paranoid reader.

Gender Inverted : This is specific to Always Female and Always Male tropes. A trope that is part of either category is used on the opposite gender anyway. This meta-trope doesn't apply to non-gendered tropes like The Butler Did It and Power Glows , but would to, say, a Little Old Man Investigates mystery story See our Playing With Wiki , an entire subwiki dedicated to doing this to every trope in The Catalogue , and in particular the Literal folder in PlayingWith.Trope Name , which is a reasonably concise version of this list

So we have Typecasting , which is cases in which an actor is known only for playing certain kinds of roles (in its most extreme form, I Am Not Spock , when the actor is only known for a particular role). Then we have Playing Against Type , which is when an actor deliberately plays a role extremely different from his or her established type. Then there's this trope, a sub-trope of Playing Against Type , in which an actor plays against type in such a way as to specifically play with, subvert or outright deconstruct his or her previously established character type. Supposing, for example, Bob is best known for playing charming, funny Nice Guys . In this trope, Bob takes on a role superficially quite similar to his established character type — only for the film to reveal that Bob's character is only capable of being charming and funny while drunk , and that he is driven to alcoholism by his history of social awkwardness and depression. (This trope can hence overlap with Deconstructed Character Archetype if Bob's character type is a recognizable archetype in its own right.) Note that this trope is not limited to comedic character types being Played for Drama ; it's entirely possible to do this by playing dramatic character types for laughs (e.g.</ : Bob is best-known for playing tough-as-nails gangsters, and then plays a wannabe gangster who acts tough but is in fact easily frightened and can barely hold a gun, let alone fire one), or exploring facets of a dramatic or comedic character type previously left unexamined. When successfully executed, this trope can cast an actor's earlier roles in an entirely new light and lead members of the audience to cry, " He Really Can Act !" When done poorly, it can seem jarring and awkward and may lead the audience to ask " WTH, Casting Agency? " (especially if the actor in question is insufficiently skilled to pull it off). Compare I Am Not Spock , I Am Not Leonard Nimoy , Adam Westing , Self-Parody , Meta Casting , Casting Gag , Tom Hanks Syndrome and Leslie Nielsen Syndrome . In-universe, compare with Hidden Depths , Character Development , Flat Character and Rounded Character . Do not list a different actor indented under another actor's example just because they appeared in

the same work. Indented examples should only be examples of when the same actor played with their character type in multiple different roles. See Example Indentation in Trope Lists for more information.

Fire is one of the basic classical elements and usually the starter element from the Fire, Ice, Lightning trinity that console role-playing games love so much. It's a very popular power to use, mainly because it comes from the prettiest of explosions . This seems to work best when used on the undead , arrows , swords , and, against all common sense , even people . It even works when rolled up into a tangible ball and thrown! People who are literally packing heat also tend to be fireproof and have a very high heat tolerance, as Required Secondary Powers . But sometimes, they aren't and are, in fact, just as vulnerable to their own flames as everybody else. Similarly, such characters may be Glass Cannons physically or emotionally owing to their element's reputation for extreme destruction and fragility. A person with fire power often possesses — get this — a fiery personality . You could say that they are Hot-Blooded , choleric , or that the flame of passion burns within them. And who knows, maybe their burning anger powers their burning hands ; it's certainly possible for it to make them literally burn from anger . They also tend to be redheads (or dye their hair). They may even give you due warning by being Fiery Redheads . If they're also a Pyromaniac , heaven help you . In jRPGs, this person is likely to be a Black Magician Girl . The fires they generate or control may be completely mundane, or in some way magical. If you're really</ unfortunate, the person will wield Hellfire . Contrast with the natural foil, An Ice Person , Making a Splash (with which it combines for boiling or steam), and Shock and Awe (which can be perceived as this trope plus Blow You Away). When it appears alongside Making a Splash and Blow You Away , that's Fire, Water, Wind . Compare Kill It with Fire , and Having a Blast . May overlap with Magma Man (which could be perceived as a combination of this trope and Dishing Out Dirt). If you're caught in a literal firefight with these people, you should probably Kill It with Water . Frequently shown (off) via Finger Snap Lighter and Blasting Time . Expect them to sneer at anyone using a Faux Flame . See Fiery Stoic for a Power Stereotype Flip and Sacred Flames for another twist. Now available in the Trope Co. catalog.

A Mad Scientist , Mad Doctor , or Evilutionary Biologist , possibly supported by The Syndicate and/or The Government , will run a series of classified experiments to create something — often without regard to the well-being of the often-living test subjects , and the words "moral", "ethical", or "safe" will not be in the head scientist's vocabulary . These experiments are often done to Disposable Vagrants and Condemned Contestants who are Strapped to an Operating Table , but occasionally you'll see a Professor Guinea Pig who uses himself and/or his family as the test subject(s) Super Soldiers and Super Serums are usually the goal of these experiments, but Mix-and-Match Critters , Phlebotinum Rebels , Psycho Serums , and Secret Project Refugee Families are often the result. They often become Disposable Superhero Makers with No Plans, No Prototype, No Backup , and have a great risk of With Great Power Comes Great Insanity or Power Degeneration . Expect a plot to spring up with one of these victims having Escaped from

the Lab See also They Would Cut You Up , for when people with superhuman powers live under the threat of having this happen to them. When animals are involved, this may be combined with Pounds Are Animal Prisons May overlap with Eye Scream and Cold-Blooded Torture A Super Breeding Program tends to be this on a grander scale A literal version may involve a Giant Medical Syringe

Welcome to the subwiki for Playing with a Trope . What is 'Playing With' a trope? Showing what the trope would look like under the usual transformations. The usual transformations are listed in detail on the Playing with a Trope page. They are things like Subverted , Inverted , Enforced , Exaggerated , and so on. In this subwiki, examples are generic, rather than specific to any given show or series. For example, for The Power of Love trope:

This refers to casting practice, and in the case of Trope Codifier Peter Stormare it has even achieved the status of Casting Gag . It refers to "international" or "ethnic" - at any rate not American or British - actors who are considered to somehow look or be able to act so vaguely but conspicuously foreign that they can be used for any nationality. It's As Long as It Sounds Foreign and Gratuitous Foreign Language applied to casting. However, But Not Too Foreign is often in effect because you'll want someone who speaks good English (even though intentionally accented) and rather panders to viewers' expectations than give an accurate portrayal of a specific ethnic identity which also means that the character's background might be very vague as long as it's foreign. Note that Plays Great Ethnics can have the same Unfortunate Implications as Mistaken Nationality and/or Mistaken Ethnicity . In many cases—particularly if the actor is British—these types don't even have to look</ a certain way. They study the accent and dress in ethnic clothing , and use theatrical makeup. In such cases, the hiring studio will often be criticized for effectively stealing the role from other performers who actually belong to the ethnic group and are offered acting roles less frequently than white actors; others state that this defeats the purpose of acting, where the goal is to portray someone other than yourself. Across the pond, however, this is expressly forbidden in modern American media. SAG-AFTRA now requires that an actor at least partially share the racial background of any character they're playing, to avoid blackface and the like. However, this can</ be creatively interpreted, such as the half-black Dwayne Johnson playing North African characters. Often these actors were originally successful abroad before they were discovered by Hollywood. Might result in Classically Trained Extra . May be played with by having the character himself be Compare Man of a Thousand Faces .

Very few attorneys can make a living solely representing innocent people who have been falsely accused of crimes. Perry Mason </ and Phoenix Wright </ , for example. But most defense attorneys don't have that luxury. Guilty people are legally entitled to representation too (at least in most modern democracies) and odds are a given lawyer will wind up with at least a few of them as clients. Now, if the prosecution's case is weak, or you've got a flair for the dramatic, Courtroom Antics and looking for technicalities might win the day . But sometimes the evidence is airtight, the prosecutor

is a pro, and the judge has no mercy. At that point, the client's best interest might lie in making a Plea Bargain. Essentially, the defendant agrees to plead "guilty" to one or more charges, in exchange for a lighter sentence. Often, a lesser charge is agreed to, avoiding a harsher penalty. For example, plea bargaining a felony down to misdemeanor, or an offense that would get the defendant on a "sex offenders" listing down to one that will not. The prosecutor may also recommend</ a lighter sentence to the judge, usually within the standard range. For instance, crime A is worth 6-9 months, crime B is worth 18-24 months. The accused was originally charged with crime B, but bargains and pleads guilty to crime A, and in exchange, the prosecutor recommends a sentence of 6 months. The judge may choose to give more, but only up to 9 months. Also note that the acceptance of the plea bargain is entirely dependent on the judge: if he or she feels the plea bargain is a gross Miscarriage of Justice (if a first-degree murder is pleaded down to manslaughter, for example), the plea bargain can be rejected</ . If this happens, expect the judge to rebuke the prosecution. The other side of the coin is the problem with District Attorneys "front loading" the charges and potential sentences against the defendant to encourage a plea bargain. Many defendants who are either innocent or at least believe they have a reasonable chance at being found not guilty at trial plea bargain out anyways — if crime B is worth 5-10 years jail but a plea bargain is available for crime A that allows for 6-9 months jail, many defendants would take the plea even if innocent to avoid the risk of spending 10 years inside. In some cases, the defendant will be required to testify against other criminals as part of the deal, or to provide other services . And it's a pretty good deal for the prosecution too, usually. Sure, they probably could have gotten a conviction, but full trials take time, and money, and tie up attorneys who could be working on the next case. It has been pointed out many times that if a sizable number of defendants suddenly refused to plea bargain, it would cause a collapse of the entire legal system, as the government would be unable to hold trials for them all (some have suggested they do this to protest). In the United States, as much as Note that on account of the US' peculiar drug laws, a lot of these are drug cases. Evidence tends to be particularly airtight with drug possession — after all, it's hard (though not impossible , and also not recommended) to say "No, I wasn't carrying any drugs" when the police have the drugs and you before the court — making trials a waste of everyone's time. Because the facts are usually undisputed, usually the defense might make a few motions to see if the drugs can be suppressed for some kind of police misconduct, but that almost inevitably fails, and then begins the bargaining. Weapons-possession charges follow much the same pattern: the prosecution just has to show that you had the weapon and weren't licensed. This can get a little complicated (for instance, when the weapon isn't a gun but something like a knife that could be used as a tool, or when there's a gun in a car with multiple people and nobody will cop to owning it), but it's fundamentally not a case that's really suitable for trial. Note also this can be subject to Eagleland Osmosis . In most civil law nations, it's simply not possible. Even if you plead guilty, they do a full trial to establish how much time you get. In the other common law nations, it's officially frowned on and officially doesn't happen. Unofficially, it happens all the time, but it's considered very impolite to suggest it. This has been a huge issue at international tribunals. Depending on conditions in the facility a suspect is held in prior to trial, it could also be seen as coercing a confession ;

criminal-justice reforms like those implemented in Washington, D.C. in the 1980s and New Jersey in 2017, which feature getting rid of pretrial detention in most cases, are partly aimed at fixing this problem. With the vastly overcrowded court system, any case which is NOT settled in a plea bargain is one where either the defense feels there is a very good chance to win or the prosecution feels the crime is so bad and has so much publicity they won't. Because a plea bargain is not nearly as dramatic as a case that goes to trial, the frequency of the two is inverted between Real Life and fiction. Some dramatic situations that might be seen with a plea bargain:

As seen in the page quote, Buck Wild from Milestone Comics ' Icon </ series benefited from one of these.

Garfield </:

Ruined With You </ : Gabriel Agreste made one with the government so they wouldn't seize his company and his son Adrien would be allowed to run it once he obtained the qualifications required by the company's bylaws.

In A Few Good Men </, Lt. Dan Kaffee (Tom Cruise 's character) has made a career out of skillful plea bargaining, but when he delivers the option to his clients, and instead gets an earful of I Won't Say I'm Guilty , he decides not to on this case once he sees the emotional damage it'd do to them. It's pretty heavily implied that the authorities assigned him to the case with the expectation that he'd plea his clients out, thus preventing the scandalous details of PFC Santiago's death from becoming public.

Averted in Darkness at Noon </ : whereas other prisoners are made Ato confess through torture, or to save their own lives or those Aof their relatives, Rubashov is promised no reward for willingly Adenouncing himself as a traitor ttempts at plea bargains are Acommon in the various Law & Order </ series, usually between Athe apprehension and trial phases

In the second case of Phoenix Wright: Ace Attorney - Justice for All </, the first thing Franziska von Karma tells Phoenix at the start of the trial is that he would be pleading "justified self-defense" within the first 10 minutes of the trial. Phoenix is later gave the choice of pleading or not, but the situation is a But Thou Must! and he ends up not pleading. Justified because entering a plea of "justified self-defense" would be the same as confessing to a murder, which would ruin the client's life.

Batman Beyond </ : District Attorney Sam Young's reelection campaign in "Eyewitness" had it mentioned that, during his tenure, the District Attorney's office had a decrease in the ratio of plea bargains for violent crimes.

During Prohibition, "bargain days" were the only way many courts could keep up with the alcohol-related workload. Everyone who agreed to plead guilty in exchange for the smallest penalty the judge could get away with would be scheduled for the same court date, and the formalities were zipped through to clear as many cases off the docket as possible.

A Stock Phrase said by one character desperate for another not to

leave. Often said by a very lonely character, or maybe a young character with no one else to look after them. Said by a love interest frequently as well May be accompanied by a Caught the Heart on His Sleeve moment. Many many variations exist, such as "Don't leave me alone again!" "Don't abandon me!" or "You can't go!" May be accompanied by Please, I Will Do Anything! If the person being addressed has to go on alone regardless for whatever reason, expect a Tear Jerker moment, especially when done coldly, such as with a Little "No" . This is also quite common when the person being addressed is dying, in which case this becomes How Dare You Die on Me! . Can also be a plea to prevent Dying Alone . Alternatively, to instantly turn this trope happy, just add one You Are Not Alone There's a third variant as well, which is less heartfelt or tragic (or more accurately, less tragic for the speaker, and even then there are exceptions) and more disturbing—this variant is generally meant to make the speaker of the phrase seem more abusive or possessive, as detailed a bit more in the Real Life section below. In these cases, expect a smidge more emphasis on the "me" part of the phrase Contrast with Please Dump Me . Compare Please Wake Up

Alice and Bob are in a relationship, but Bob knows something's wrong, to the point where he decides it's better to just end things. He could just sit Alice down and tell her, "You know, this isn't working out. I don't think we should be together anymore." But that would be too easy. So Bob tries to get Alice to break up with him first, usually by engaging in unattractive behavior. Reasons for this vary Bob might know the relationship has to end, but he doesn't want to be the bad guy, especially if what's turning him off could be seen as shallow or insignificant by others. He might genuinely want to spare Alice's feelings, and figures that she won't be heartbroken if she's the one who initiates the breakup. He might realize that he's not the one she belongs with , and does this to make her see that. He might be afraid of what her father or big brother might do to him if he dumps her. Hell, he might be afraid of what Alice </ will do to him if he dumps her. If they're married, they might have a prenup that makes it desirable for Bob not to be the one to request a divorce. Or perhaps they aren't in a relationship to begin with: Alice could be an Abhorrent Admirer who keeps chasing after Bob trying to get a date or a Self-Proclaimed Love Interest who insists they are already</ dating and refuses to accept any claims to the contrary, and Bob thinks this will get her to leave him alone for good. Almost always backfires , especially if played for comedy. Acting like a disgusting slob will only cause Alice to feel incredibly flattered that Bob feels like he can act so "comfortable" around her, at which point she will usually start behaving similarly. Acting like a Jerkass will only reveal that Alice secretly has a thing for bad boys . And so on and so on. In more serious works, discovering this trope in action will result in the wannabe dumpee labeled a Dirty Coward . Unless it turns out that he's Dating Catwoman in which case the fear is justified. In comedic works, expect Bob to either resign himself to being stuck with Alice or realize that he actually loves her and wants to be with her after all, only for her to then dump him for some other reason (bonus points if it's his normal behaviour that finally turns her off). Happens in real life , and let's leave it at that .

Two characters, typically a guy and a girl, end up in a heap on Tthe floor, either the result of a scuffle, one of them pushing

Tthe other one down to protect them, or just a chance landing due Tto one or the both of them becoming temporarily airborne. They Thave a few moments to trade words, maybe seeming to flirt a little Then the person on the bottom points out that the other is in fact Tsitting on them </. Please Get Off Me? For bonus points, the Tperson on bottom will start off by noting how heavy</ the person Ton top is, or that they landed on them hard enough to injure Tthem his trope is the logical conclusion of a Glomp , Suggestive TCollision or Living Crashpad . Often can result in one of the Tcharacters being an Accidental Pervert

A stock phrase and a sentiment. The usual response is, " Anything?</ " A character, usually a sympathetic one, is all out begging another, usually a villain, for a favor—or to be spared some cruelty If the other is ready to listen, expect to be doing</ anything. A particularly cruel villain will take the pleading character at their word, extort something out of them that they'd never agree to otherwise , and then gloat and commit the atrocity anyway. Hope against hope that it won't cross over into Scarpia Ultimatum or even worse territory. If the villain is the one doing the pleading, that can be even worse, as it can be the perfect strategy for tricking the other side into lowering their defenses so they can launch a surprise attack , especially if the other side turns their back Related to Ain't Too Proud to Beg , but this trope is more about paying any price, while the other is more about giving up pride and defiance. It shows up a lot in porn and slash fiction Compare Deal with the Devil , in which this is often Satan's cue. Anything but That! often follows this trope when the demand made of the character is the one thing they never want to do. May be followed by I'm Thinking It Over! . Compare Villains Want Mercy

Not to be confused with You Can Leave Your Hat On or Please Put Some Clothes On .

When a character sees another character while they're naked, a common reaction is to stare briefly, become flustered and turn around, followed by asking (and sometimes demanding) that the naked character... get dressed. They may even go so far as to give the naked person their own clothing or help them find or improvise something if they have no clothes. This is the usual reaction a unattractive naked person will get, but this may happen even if the naked person is a Head-Turning Beauty , with the request usually coming from a chaste or upstanding person, but it can even happen if they are generally of low morals , who you'd think would gleefully use the opportunity to closely inspect the ''au naturel'' specimen. Even a Lovable Sex Maniac can request this if they Can't Act Perverted Toward a Love Interest . This is common in stories where the naked character in question has: no idea about the nudity taboo and find themselves in real-life human culture , is simply indifferent to their nudity or might find be interacting with a culture or species that has an entirely different concept of nudity and modesty . It can also happen when the character is The Vamp or a Heroic Seductress who tries to work their wiles on someone who just isn't interested or has other priorities . In that case, attempts at a Striptease or Sexy Coat Flashing will end with them being rebuffed by being told to get dressed. The most common variation is a man walking in on a naked woman for some reason ,

but a woman may also walk in on a man , or the two characters may be of the same sex. If the gender-bent version is again reversed, as a man * walking around naked, he is more likely to be hit by the woman (which is usually portrayed as being a justifiable, even funny reaction for the woman). When the trope is used between two people of the same sex, the results may range from hilarity, awkwardness and more rarely disgust, usually in cases of Have I Mentioned I Am Heterosexual Today? or when the... position in which the naked person is seen is... er... not socially appropriate. Note that this also could be a survival reflex: walking in on a naked Megaton-Punch happy woman is very dangerous . Giving clothes (i.e.</ , making clear that perversion's not the goal) can dampen the danger. Usually used to ramp up the comedy , sexual tension or both. Sometimes the character, rather than being fully nude, is merely wearing something very Stripperific or provocative such as underwear , lingerie or swimwear . Truth in Television , to a degree; most men will agree that ogling a naked woman is hardly unpleasant, but it's bound to be immensely awkward when it's someone you know (and will have to interact with later) socially. As for women, the reasons are the same, just with the genders in reverse. Contrast with Shameful Strip for when a character forces another to strip, Take Off Your Clothes for when a character asks another to strip for non-sexual reasons, Underdressed for the Occasion for wearing inappropriately casual clothes for a social event, Undressing the Unconscious for when a character has a need to take off the clothes of someone who is unconscious and You Must Be Cold for when a character offers clothes for someone who is Exposed to the Elements . See Naked Freak-Out for when the person caught in the nude is the one who overreacts.

Tropes about literal mirrors or other reflective objects. Compare Eye Tropes . Not to be confused with Memory Tropes . Attack Reflector

You've heard it a thousand times. You're watching a video on YouTube and suddenly they ask you "and please subscribe to our channel", or maybe they tell you where their subscribe button is located since you could never hope to find it on your own. Typically, any "professional-ish" YouTube video closes with anywhere from 15 seconds to 2 minutes of screens full of flashing animated "Click Me! Click Me!" buttons trying to entice the viewer to subscribe and/or watch all the other videos in the channel, as well as exhortations to upvote and favorite the video. Apparently they expect you to favorite every single video in the series, which makes you wonder if they have a clue what the point of favoriting is This trope includes authors asking for you to vote for or donate to them, or any other time that authors are giving you free content, but then they expect something in return. This may take the form of wanting your promise to come back, your vote that their product is indeed awesome, or your hard-earned lucre This isn't limited to YouTube. Many magazines, for instance, have full-page ads near the front begging you to subscribe if you haven't already, or subscription cards that fall out as soon as you pick up the periodical. Premium TV channels tend to have ads asking the viewers to renew their subscription. Of course, the trope starter might be PBS and NPR , who both use appeals and special programming to get viewers and listeners to donate to their stations to continue to provide the programming Not to be confused with </, which is a documentary of various YouTube celebrities including David Choi, Daxflame, Happyslip, and Tay Zonday The Shameless Self-Promoter is usually the one who does this

Smoldep from Smoldeps Magickal Adventure </ tells you to remember to like and subscribe to her Youtube channel, and maybe even leave a comment. This leads to a But Thou Must! moment in which choosing not to do so will result in

Similar to A Simple Plan , but applied to crime dramas, thrillers, and the like, this is either a very simple plan or a very complicated plan where everything</ goes wrong for the sake of going wrong. Usually an unsubtle way of saying crime doesn't pay, or just making the characters dance for your amusement For example, a criminal (or a group of criminals) has an elaborate masterful plan to rob a bank, or perhaps murder someone, or whatever. But that's a lot easier said than done, isn't it? Soon cracks start to show after the plan goes through, or during the execution of said plans, likely in the form of loose ends. Everything starts to unravel when the Plethora of Mistakes are shown. Maybe someone went ahead in such a way it made the planning fall pathetically apart. Somebody forgot to disable the security camera, or someone left behind a crucial piece of damning evidence for Inspector Javert . Or maybe one of the group members was a loose cannon who lost his/her cool and killed someone, when the rules of the plan were "not to kill", as it would make things more complicated. Or maybe, during the bank heist, somebody got greedy and started to take more than what they could carry, thus going over the pre-established time limit. Or someone Failed a Spot Check for the guards, police, or people who would notify them. Or someone is starting to crack under pressure . Either way, the person or party involved has to fix the mistakes , which usually causes even more</ mistakes The bane of Stupid Crooks everywhere. Compare Crime After Crime . Sometimes overlaps with Diabolus ex Machina

Lucky Bob! He's The Protagonist of a story, The Hero whose predestined role is to oppose — maybe even defeat — The Villain . He's essential to the plot, which means he can't be removed from the story until the final confrontation. But it wouldn't make for a good story if Bob just strolled unchallenged to his encounter with destiny, so the author has to throw dangers in his way. A good</ author can keep it from being obvious that the orc he meets on page 56 can't possibly stop Bob — not if he's going to meet Fing the Fuming on page 237. But in less skilled hands, Bob's invincibility on pages 1-236 becomes obvious. He doesn't have talent or luck; he has a suit of divine armor which miraculously protects him from all lasting harm (until the plot calls for it). Even psychological trauma can be held at bay by Bob's Plot Armor. Sometimes referred to as "Script Immunity" or a "Character Shield", Plot Armor is when a main character's life and health are safeguarded by the fact that he's the one person who can't be removed from the story. Therefore, whenever Bob is in a situation where he could be killed (or at the least very seriously injured), he comes out unharmed with no logical, In-Universe explanation. A typical explanation is that Bob survived through sheer luck on the basis of the Anthropic Principle . If only one person is going to survive the story, that person has to be Bob for there to be Bear in mind that having Plot Armor is not the same as being Nigh Invulnerable . When Superman takes a bullet to the eye and survives, that's his superhuman nature — there's an

explanation, albeit a fantastic one, for how he comes out unharmed. When Indiana Jones survives the same thing, that's Plot Armor — the only explanation for his survival is that it's only halfway through the movie and you know he can't die yet. (Bonus points if he isn't even blinded.) The downside to all this, of course, is that when it is</ Bob's time to die , nothing can save him. And his inability to prevent his own death may seem just as illogical as his ability to avoid</ it was forty pages ago, but alas, the plot gods giveth and the plot gods taketh away... Typically absent in episodes involving an Expendable Alternate Universe , Time Travel , or any other guaranteed- Reset Button situation. It is suspended when the Hero Killer is present and it is the main reason the Imperial Stormtrooper Marksmanship Academy is still in business (along with a handful of other tropes). Sub Tropes of this include: Compare Contractual Immortality (a meta trope where a character cannot truly be dead since his or her actor hasn't left the show) and Rule of Empathy (which may give Plot Armor to sympathetic non-protagonist characters, including villains). For examples where important characters are just magnitudes stronger than the poor slobs who can't take even one hit, see Almost Lethal Weapons . For a variation of this trope present in video-games, where a character is invulnerable during gameplay for plot reasons, see You Call That a Wound? . Contrasts with Anyone Can Die , Characters Dropping Like Flies , Plotline Death , Red Shirt (which is someone wearing a plot target), and Decoy Protagonist (the first focus character does not</ have Plot Armor, to subvert the audience's expectations)

A term used mostly in Fanfic circles for a story idea. The term comes from the notion that the idea will constantly gnaw at your brain until you write it, or from the fact that these story ideas tend to breed like rabbits . Maybe both. (Yeah, that's the ticket , rabbits that gnaw while they breed! It could be a kind of horror thing... or maybe a romance... the tragic story of "Elmerus, the Bunny Who Could Not Gnaw", doomed to a life of loneliness, ridiculed by the lady bunnies...) Inspiration may come from Shipping , Crack Pairings (taking pleasure in just making it plausible), or any Ship Tease or Ho Yay left lying around. Even random phrases can spawn a plotbunny For instance, Lewis Carroll wrote the nonsense poem The Hunting of the Snark </ backwards from the line "For the Snark was</ a Boojum, you see.", which popped into his head. He started wondering what a Snark was and why it shouldn't have been a Boojum, and who was seeking it... Thus is fiction formed. Sometimes, a fandom will use the in-universe word for "bunny," such as "plot gizka" for Knights of the Old Republic </ or "plot Papay" in Tin Man . Other sources of these in the wider world are absences of Back Story , Sequel Hooks , Plot Holes , The End... Or Is It? and Left Hanging .

A plot device is an object or character in the story whose purpose is purely to drive the Plot , maintain its flow, or resolve situations within it. It could be something everybody wants to obtain, a device that must be destroyed, or an annoying teenager who must be protected at all costs It may also be an object or gadget introduced early in the story for the sole purpose of solving a sticky situation later on The term is commonly used in a derisory manner, on the grounds that the best stories are character-driven, and using an object to make things happen is thus seen as a sign of bad writing. However, there are plenty of good

stories which do indeed revolve around a plot device; equally, a plot device can very easily be used to generate conflict and thus spark a character-driven story Whenever someone uses the term derisively they often mean that something is being used as a gimmick (or worse, an Ass Pull) to Hand Wave resolutions to Plot Holes in a way that breaks the Willing Suspension of Disbelief

Lampshade Hangings and Other References: Almost by definition, stories have plot devices. Examples should be limited to lampshade hangings and references to the term.</ One Captain Mar-Vell </ comic, starring Genis-Vell, featured a very clever Kree fellow named "Plaht," whose "device" cleared away several plot inconveniences.

Mentioned in The Muppet Movie </ , when Dr. Teeth and the Electric Mayhem discuss how they can help Kermit and Fozzie avoid Doc Hopper:

In Redshirts </, there is a mysterious device resembling a present-day microwave oven on the Intrepid</ called simply "the Box". Putting a sample from a xenobiological problem inside it will cause it to produce a solution Just in Time to provide a dramatic resolution to the current problem. Essentially, it's a handwave to make the "real world" experienced by the characters work out consistently with the "Narrative" cranked out by some modestly-talented writers.

In The Dresden Files </ RPG, certain characters are noted as being "plot device level" characters. Most of them are considered Plot Devices because they're so ridiculously powerful that no Player Party would ever reasonably be able to take them on directly, making stats meaningless, and thus would have to outmanuever, work around, or run away from them; these include the Faerie Queens , Angels , and Dragons . A handful, however, are noted as being a Plot Device because they're so far down on the other side of the scale that they can only really provide one specific and specialized purpose, such as Elidee, a tiny pixie—even by pixie standards—who shows up briefly in one book to serve as a guide/flashlight for Dresden.

One of the various Mac Guffins that City of Heroes </ radio missions will occasionally ask you to retrieve is a "P.L.O.T. Device." Its description:

Mr. Mighty of Everyday Heroes </ realizes that he can subject Matt O'Morph to a bit of Harmless Freezing with a ... which has a label on the side that reads, "Warning, Plot Device!"

Dr. Bill Ernoehazy, an Orion's Arm </ contributor'', wrote another story with a Faster-Than-Light Travel system called the .

There is a character in Sheep in the Big City </ , literally called The Plot Device, which is a robot that can cause nearly anything to happen to advance the plot.

Plot Holes are those gaps in a story where things happen without a logical reason. When a Plot Hole involves something essential to a story's outcome, it can hurt the believability, for those who are bothered by such things. Hitting a Plot Hole at high speed can damage your Willing Suspension of Disbelief . Plot holes are thus contradictions in the fictional universe of a story. Even unrealistic, fantastical stories can suffer when plot holes arise,

as audiences are willing to suspend disbelief as long as the story makes sense within its own rules and consistency . It is also important to point out that plot holes aren't plot contrivances</, as the two terms are sometimes conflated. The difference between a plot hole and a plot contrivance is one of the impossible verses the improbable. A plot hole is something that happens in the narrative that's impossible due to the internal logic of the story's universe, or at least, the story have never established or even hinted at it as being possible. A plot contrivance is when something happens in the narrative that's certainly possible within the story's universe, but the chances of it happening are extremely, sometimes even infinitesimally slim, and only happens because the author needed it to happen. For such cases, the trope you would be looking for is Contrived Coincidence . Plot holes are sometimes plugged up or ignored with a Hand Wave , or occasionally dealt with by a Lampshade Hanging , and some writers think Plot Holes that only become apparent well after the story is over aren't worth sweating . Remember that Tropes Are Tools . Some stories contain plot holes as part of their basic nature . This includes many ludicrously comical works, and everything involving a Timey-Wimey Ball . Even when it isn't being deliberately played for laughs, the storytelling and explanations necessary to close a plot hole might serve as a distraction from the main plot; especially for more minor or obscure plot holes, it often makes more sense for a writer or director to invoke the MST3K Mantra and focus on their main story rather than getting bogged down in explaining minutiae. Can overlap with Retcon and Continuity Snarl . A Cliffhanger Copout can create</ a Plot Hole if a Hand Wave is handled poorly. An attempt to resolve or remove a Plot Hole that introduces another Plot Hole is a Voodoo Shark . Contrast What Happened to the Mouse? for potential plots that get dropped, then picked up . Also see Fridge Logic for cases where a Plot Hole isn't immediately obvious and only becomes visible in hindsight. Naruto </ : Fairy Tail </ Lampshade Hanging

Not what you're watching it for. ...In all seriousness, A plot is a fictional(ized) series of events that have some connection. The quality of a plot is often judged by how convincing that connection is established along the criteria of cause and effect</ (physics), Failure to meet those criteria results in a Plot Hole . If the first criterion is repeatedly violated, we have a Random Events Plot , the second criterion is not met if someone acts Out of Character , and a consistent failure to meet the third is called an Idiot Plot . Deus ex Machina is a desperate plot-advancing technique that does not quite link events in a story in a convincing manner but at least keeps it going. Plots are usually driven by Conflict , which has a strong tendency to make stuff happen. According to Aristotle , Plot, together with Character and Spectacle , is one of the six items present in any story. A Plot Point is an important event or state of affairs that the viewer or reader is required to be aware of in order to follow the plot. An object or character whose only purpose is to drive the plot (i. e. provide the connecting element between events) is called a Plot Device . Similarly, a Plot Coupon is an object that acts as a key to advance or resolve a plot. In contrast to the Plot Device , it is actively and purposefully used (and often also sought out in the first place) by the characters to reach a goal, while a Plot Device doesn't necessarily require a character's volition to advance the plot. See also MacGuffin and Magnetic Plot Device . A popular definition of how a plot as a whole should progress within the "running time" of a work is the succession of five acts

: exposition </, rising action </, climax </, falling action</ and resolution</. However, a work of fiction can contain more than one plot. This is called subplots or Plot Threads . In some formats, the plot can take a back seat to other aspects that are deemed more important. For these cases see No Plot? No Problem! and Excuse Plot . Also bear in mind the Sliding Scale of Plot Versus Characters , for when character development overtakes the overall plot. For a list of prefabricated plots, see Plots . For basic, archetypal plots, see The Seven Basic Plots , Ten Movie Plots and Master Plots . Compare Consistency . Please note: As one of the major Super Tropes , the concept of Plot is omnipresent . There's no need to list Plot as a trope on any work's page or to list works here. </

Essentially, the A-plot is repeated in miniature in the B-plot. By looking at the results of one, the main character or audience gains a greater understanding of the other. This is a fairly common variation on Two Lines, No Waiting , as it gives the story layers and depth while remaining concise. It allows you to more fully explore each story — they prop one another up For example, suppose the A-plot has the heroine trying to get a pair of rare birds to mate. The subplot is the heroine is in denial about being in love with her best friend. By getting the birds together, she realizes she is in love with her friend. Another example: A lawyer defends a client who is accused of incompetence because of his age. The B-plot shows the lawyer worried that he's too old for the job. In defending his client, the lawyer realizes he's not ready to retire yet Often results in a Double Aesop , but not always; not all examples have characters learning a lesson. For example, the main plot of King Lear </ (Lear banishing faithful Cordelia and being betrayed by his other daughters) is mirrored in the Gloucester subplot, where Gloucester disowns faithful Edgar and is betrayed by his illegitimate son Edmund. The two stories are obvious parallels, but nobody learns anything from them (except the audience, who learn to be horribly depressed) Sometimes this is the plot purpose of the Beta Couple . A Plot Parallel specifically in the form of a Show Within a Show is Crystal-Ball Scheduling For characters that reflect each other, see Mirror Character

A plot point is any event, appearance of characters or objects, or any kind of piece of information which is integral to driving the plot towards its conclusion. Often a plot point will be introduced at the beginning of a story, passed off by the characters as something obscure or insignificant, only to later be revealed to them as very important to, or indicative of, events that take place later. Writers can be very subtle in weaving their plot points into their stories, but if you are looking for them, The Law of Conservation of Detail will usually give them away, since the author must make such plot points — whatever form they may take — memorable enough that it doesn't feel like an Ass Pull when it comes time to resolve them. In contrast to Foreshadowing , which may be no more than a hint at things to come added for artistic fluff, plot points are crucial to following the plot . If you miss one, you'll likely be scratching your head later as events play out with no obvious impetus. Also compare Fridge Brilliance and Chekhov's Gun . Contrast The Reveal which is an important piece of information initially withheld from the audience (that can, once uncovered, become a plot point). Please don't list examples of this Omnipresent Trope and don't include it as a trope on a work's page! </

A character is aged, usually to adolescence, after being in another dimension, time travel, or other application of phlebotinum , often to get a main character's kid to "speaking age" or otherwise build them up to be able to take part in that world's adventures. Often done with clones (which would normally be born as infants), to age them up to fight the main cast. Done for the same functional reasons as the inexplicable age-up in sitcoms, and easily spotted in advance if the presence of a baby or little kid doesn't make sense in the long run Often the reason this happens, as opposed to simply bringing in an older character in the first place, is writers want to use some kind of girl-is-pregnant storyline, but aren't willing to wait the fifteen or so years before the baby becomes interesting. Common if the child is The Chosen One Occasionally, the writers will decide the age-up was a mistake (or won't be able to hold onto the age-up actor), and will revert the character back to where they started Differs from Soap Opera Rapid Aging Syndrome in that there is an actual in-story explanation, regardless of its believability, for the rapid maturation of the character. It should be noted that with clones it happens so frequently (mostly in order to bring them up to the same apparent age as the persons they were cloned from) that in many cases the writer does not even bother to explain how it is done . Also differs from Time-Shifted Actor , which is where two actors play the same character at different stages of their life - one which progresses at a normal pace Sometimes, especially for female characters, there may be some events similar to She's All Grown Up . This may result in an Age-Down Romance if the now grown-up character gets romantically involved with someone of their new age A Sub-Trope of Overnight Age-Up . See also Time Skip , where it's the show that jumps ahead, not a character, and Rapid Aging

</ organize the action of an entire script. Most plots occupy a single episode or Story Arc . See also Plot for a basic definition. </ See also Conflict , Master Plots , Plot Threads , The Seven Basic Plots , and Propp's Functions of Folktales . 15 Minutes of Fame : Someone becomes famous for a short amount of time.

A plot carefully constructed to use all the character-specific skills or abilities of the ensemble. Often referred to as "Eigen Plot", after a mathematical concept of mapping graphs around specific vectors. For example, if your team plays Elemental Rock–Paper–Scissors , they're going to have to face a water trap, a fire trap, an air trap, and an earth trap. As a plot, it's a double-edged sword; don't do it, and someone gets left out. Do it too often, and it looks like the bad guys are conspiring with the good guys to tailor their defenses to the heroes' strengths. Also, when one of the heroes has a lame power , there has to be a really bizarre obstacle in there to require their ability . Most often occurs in series with heavy Super Hero Speciation . Can be the result of a Thematic Rogues Gallery . A good hypothetical example is if the Justice League had to destroy a nuclear threat. Superman and other flying members would take out the strategic bombers, the not-launched missiles would go to the grounded members, such as Batman , and the sub-launched missiles would go to Aquaman . As a variation, this may apply to multiple abilities or items which a single character has; each item or ability will always find some contrived use . This "item-ized" version of this trope is applicable

to the gameplay environment design of metroidvania games; see Utility Weapon , Ability Required to Proceed , and New Weapon Target Range . Similarly, many games make use of this to subtly teach you how to use your new toy by making it necessary to use to escape the area you acquired it in: you learned to swim and now the only way out is underwater, you gained a grapple gun and the only way out is a sheer wall, etc. In Comic Books , often the most limiting when dealing with any character whose power is water (especially underwater) based. Compare This Looks Like a Job for Aquaman , which is when the plot improbably makes use of a single</ character's abilities . This frequently comes up in a Tournament Arc , where the heroes will have to pair off against their equal and opposite villains . It's also common in Tabletop RPGs , where it serves as a way to ensure that everybody's doing enough stuff to have fun. Contrast with one-off stories involving The Caper or an Impossible Mission , in which members of the team are usually chosen precisely because their abilities are suited to the obstacles the team is likely to face. In the various Lego Adaptation Games , the path used to complete the stage will only contain obstacles that your party can overcome, no matter who that party consists of. Obstacles within levels that require abilities that your current party doesn't have exist, but only ever lead to optional collectibles or easter eggs. Inverted during Free Play mode, where the earlier games gives you a team including least one of every type of character in the game, before later ones allowed access to the entire pool. In most but not all instances as well, only objects the player interact with are actually made of LEGO bricks, while environmental decorations can sometimes be semi-realistic props. (The LEGO Movie game received some praise for averting this.)

A single plot element that was once a minor part of The 'Verse swells in importance as the series progresses, growing more in focus and elaboration to the point that it becomes the focus of major arcs and plot development. As a result, the Plot Tumor's tentacles get wrapped around other elements of the work, either via retcons that connect the Plot Tumor to things it wasn't originally conceived for or just by crowding out other elements in the story Typically, this occurs when the creative reins pass on from one writer to the next, as writers forget the original quirks of the element or their creative juices enable them to actualize the untapped story potential of taking a small but notable aspect and expanding on it. However, it's most visible in Derivative Works , where a single element that was important in the source material's success becomes the major focus of the adaptation, especially if late-to-the-party fans or non-fans of the original don't realize the Plot Tumor was once a small part of the original storyline when the work was first being published and it can seem almost unnatural for it not to be part of the status quo of a derivative work Keep in mind, however, that Tropes Are Not Bad and fandoms expound on minor details just as much as canonical writers; sometimes with the latter ending up into the former Compare: Adaptation Decay , Flanderization , Romantic Plot Tumor , Never Live It Down , and Motive Decay . A Malignant Plot Tumor is the single-plot counterpart, where a minor plot at the beginning crowds out the other plots at the climax. Contrast Adaptation-Induced Plot Hole

A character whose primary role in the show is to relieve tension with oddball and/or hysterical, buffoonish antics . They have a

job to do, but don't get into the thick of things and can stay somewhat detached. Since their purpose is to relieve tension, they almost always have immunity to dying when compared to the other characters. A guaranteed sign that the series is suffering from Cerebus Syndrome or that things are just going to go to Hell from here is to see whether this character either dies, leaves/is left behind or has a complete and utter meltdown, no matter how deserved This trope is also known as the "comic relief" and in The Team trope it is known as the Funny Guy. Within The Team they serve the same purpose as in the cast ensemble but this is specifically for the in-universe team members instead of the show's audience. If they can fight, they're likely to be a Fighting Clown The term comes from Sam Rockwell's "Guy Fleegman" character in the movie Galaxy Quest </ (who, in a non- genre blind example of Lampshade Hanging , is afraid that he is only a Red Shirt , until another character suggests that maybe he is instead the "plucky comic relief"), which of course is spoofing the television show Star Trek </ In some cases, similar to Stupid Boss . Many sidekicks fit this description, as well. See Amusing Alien for otherworldly characters whose only</ purpose is comedy. See The Face for where they have a purpose greater than comedy. Compare Cloudcuckoolander (whereas the humor comes out of sheer eccentricities rather than just being comical, and it can sometimes</ go hand in hand with each other)

Plucky means "brave and optimistic" You might be able to pile life complications onto this young woman/girl, to the point where the audience would forgive her if she just refused to go on. She might even have an episode or so where she does</ throw in the towel , because human beings can only take so much of what the universe is handing out for her. But the Plucky Girl always comes back. That's the bravery part The optimistic part is the rest of it. This character leans toward the sane version of The Pollyanna , blending the agency of the Action Girl with the sweetness and wise charm of the Spirited Young Lady , while exhibiting a strong sense of optimism and an unassailable spirit that differentiates her from the grimness of a Determinator . You can beat her, but damned if she'll let you break</ her Male versions exist, but they tend to be closer to Determinator territory instead, because men always have to be MANLY Not to be confused with Plucky Office Girl , though they may overlap once in a while

During the days of " Wooden Ships and Iron Men ", midshipmen were apprentice officers. Most midshipmen started their naval careers at the age of 11 or 12, working on various ships while they learned seamanship, navigation, and the other skills an officer would need to lead a ship full of men. Most were the younger children of the landed gentry. In terms of authority, Midshipmen were considered the lowest ranking of all the officers on a ship, but regardless of age were treated as officers</ by the rest of the crew with all the responsibilities and authority that comes with it. (Ordinary seamen, on the other hand, might be as young as 7 or 9 depending on what sort of job they entered, such as The Cabin Boy —although not necessarily, as a man could enter the service as a seaman at any age.) The word "midshipman" derives from the term "amidships", referring to the portion of the ship in which they lived and slept. During the 19th century training of naval officers in both the Royal Navy and the U.S. Navy changed toward formal schooling in a

naval college as opposed to an apprenticeship aboard ships, and the term "midshipman" changed to indicate an officer cadet. The Plucky Middie is thus a special kind of Child Soldiers commonly seen in rousing tales of the sea. This character will be found serving on a tall-sailed Man-o-War alongside the stouthearted crew, sailing into adventure. His existence allows the creator to combine a coming-of-age story with a period naval adventure. Plucky Middies are always, well, plucky. They always show tremendous initiative, and braver than brave, and though they endure hardships like bullying and bad food, they always rise to the occasion and sometimes find themselves in charge . They seem to be quite prone to dying tragically, often to provide Collateral Angst for other characters over their untimely deaths. The trope is perhaps the result of exaggeration by Victorian authors, who knew of course that a large part of their audience would be teenage boys who sucked up naval adventure stories as quickly as they could. This is likely the reason for a lot of romanticized portrayals of Child Soldiers in general. This entire trope is Older Than Radio . Truth in Television : both Admirals Nelson and Farragut started out their naval careers as Plucky Middies. See Space Cadet Academy for a more modern variant of this trope, especially when Recycled IN SPACE! .

The Plumber Crack gag is a classic comedy staple. It is a situation in which a plumber or other blue-collar worker of similar ilk (in British English it is more often called a "builder's bum") bends to do some task and exposes their butt crack in the process to onlookers. Common stereotypes of the Blue-Collar worker are their apparent lack of hygiene and personal fitness. Keeping in mind the principle of Show, Don't Tell, the (usually) overweight and hirsute character bends down to take a look at something, and their pants fall or get pulled below their waistline. The Reaction Shot of the other characters is typically Played for Laughs . They might even use the opportunity to give a wedgie . Characters are often far more disgusted by the sight than similarly being "mooned". Compare Wardrobe Malfunction and Mooning . Liquid Plumr's

In Garfield: His 9 Lives </ "The Vikings", when the Vikings end up in Minnesota, Smitty gets a job as a plumber. The scene of him at work shows this. (In addition, his Viking outfit comprises a loincloth that slips down enough to show some crack even when he isn't</ bending over.) One of the bits in a Bob Rivers song "The Buttcracker Suite" (parodying music from The Nutcracker) is about a customer grossed out by the plumber showing his arse while hunched over the sink.

In Castle Hangnail </ , there's a plumber who comes to help with the castle repairs, and it's mentioned that his trousers have a tendency to ride down at the back and display more of him than most people would prefer.

The Complete History Of America Abridged </ brings this up in Benjamin Franklin 's proposed Bill of Wrongs:

Averted with Mario : he wears overalls!

Featured in parody of those infamous late-night Girls Gone Wild </ commercials. Rocko's Modern Life </ :

A character is standing on or near a ledge, or possibly hanging on it for dear life. An inconsequential object falls, and the camera moves into position to show it falling hundreds of feet. This is used to emphasize just how high the hero is, and how horrifying his fate will be if he isn't saved quickly. It's also the perfect time for somebody to reveal they're secretly afraid of heights . Or not. This often happens when the hero uses his feet or free hand in an attempt to regrip or otherwise gain leverage, but the force he creates causes a rock or a part of a cliff to break off. Other times, an item on the character's person will fall, such as a wallet or cell phone. If it's the Damsel in Distress , then her high heels are also likely to be lost this way (Particularly if she has a lot of running to do in subsequent scenes). Sometimes, we will see the object merely splash in the water or disappear into the abyss. If it hits solid ground, however, we'll likely see it break into a million tiny pieces. Sometimes the object isn't inconsequential. Sometimes it's the hero's gun. We watch it fall not only to indicate that a fall means certain death, but also to show that, even if he gets to the top, he'll have to tackle the villain unarmed. (We all know that after the unarmed struggle the villain's going to fall , don't we?) The alternate title should not be confused with Luke, I Am Your Father , for a more figurative interpretation of the phrase. Compare Climb, Slip, Hang, Climb , and The Precarious Ledge .

The Heroes may be saving a Damsel in Distress . They may be fighting against The Empire . Being a hero is a hard job. But it has its perks. And one of the biggest is... PLUNDER! Followed by Yes, indeed even our heroes need something to satisfy their sense of mischief and avarice. They need to take joy in depriving their foes. For our heroes make money the old-fashioned way: they steal — wait — plunder </ it. When done by soldiers in a war, this is sometimes called "Spoils of War". This is outlawed as a practice by many modern military forces, not that it doesn't still happen on some scale. However, the Geneva convention actually allows for soldiers taking anything necessary for warfare from the enemy. That is, you can plunder ammunition, guns and fuel (as it allows you to keep on fighting and prevents the enemy from doing so) but you can't steal someone's watch, food or valuables, for example. Within games, it is like Experience Points (and commonly both used, as well) — a reward from defeating your enemies. The difference may be generally more or less certainty in what you may get from your enemies where with Experience Points , it is generally clearly aligned by certain parameters. Related to this is Pirate Booty which is a treasure hoard gathered by pirates when they do this. Compare Kleptomaniac Hero and Rewarding Vandalism , which are the video game equivalents of this trope. The villainous equivalent is Rape, Pillage, and Burn , where stolen property is not the only offense. As well, the common gaming term of this trope is "loot, lewt, or 13\/\/7 ".

Pluto has become the Butt-Monkey of the solar system , and not just because it's named for the Butt-Monkey of the Greek-Roman pantheon of gods . Want to get someone's attention? Show that things are serious? That a villain can put his money where his mouth is? Screw the status quo ! This time, change is happening, and it's something big! Something cosmic! Something on a large-scale level that would shock the world if it happened in Real Life ! A change that will alter the universe! ...er, well, at least the galaxy... The solar

system? What do you mean Reed Richards Is Useless ? What can we alter about the universe that would be a big deal without being a big deal ? It's not like we can blow up a planet... Wait! What about one of those planets floating around the edge of the solar system? That insignificant , dark, icy one with one giant and four minuscule satellites — no one will miss that. It wasn't even important enough to be called a planet. What was its name again? Never mind. Let's blow it up! The reason Pluto was downgraded from a planet to a dwarf planet is based on the To qualify, an astronomical body has to have four characteristics: That might have changed when the first clear picture of Pluto taken by New Horizons</ named the after the discoverer of Pluto, Clyde Tombaugh making it an internet sensation and possibly the most adorable (dwarf) planet ever . Indeed have shown Pluto is far from being a dead world covered with craters, instead having large — for its size — mountains, what seem to be dunes, and complex surface features that show (at least past) geological activity. Not to mention both and its largest moon, , may become geek's paradises if the IAU has no problems with those names. See also Throwaway Country . Not to be confused with Mickey's dog . We hope. On the other hand, one might be inclined to wonder how it relates to the death of Meio Setsuna ... Compare Insignificant Little Blue Planet for the self-inflicted version, and Uranus Is Showing for another planet that's... a different kind of Butt-Monkey .

It's a very basic tool given a fashionable, swanky, yet nearly nonsensical name (which comes from playing them on iPods) to make it seem special and magical. Like pretty much everything else on the internet. On the other hand, it's a simple, catchy name for a common phenomenon, much like 'television' and 'radio', both of which earned howls and jeers when they were new (the names and the phenomena) Notable is that the art of podcasting was arguably started by and inalienably connected to a man named David H. Lawrence XVII, as a newsletter for a radio company that attached RealAudio files to the emails that they sent out. He also went into acting a little later in life, and became best known as The Puppetmaster, Eric Doyle. No seriously, same guy There is a term for a book done as a podcast: Podiobooks. When a Fan Fic is given this treatment, it's known as a Podfic. For a list of audio drama podcasts in the Science Fiction genre, see Science Fiction Podcasts See also: Audio Play

The core idea of Poe's Law is that a parody of something extreme can be mistaken for the real thing, and if a real thing sounds extreme enough, it can be mistaken for a parody (all because parodies are intrinsically extreme, in case you haven't noticed it). This can also happen to someone whose picture of the opposing position is such a grotesque caricature that it renders them unable to tell parody from reality. Reality and parody are further blended by the fact that something that started as a parody might turn into a Windmill Political that some people take as gospel and go to a very serious (if not literal) war. RationalWiki , Poe's Law was formulated by Nathan Poe, referring to the Flame Wars on Christian forums where Creationism vs. Evolution was discussed: Many users posted parody comments, which were followed by both angry and supportive replies. Poe phrased his law thus: "Without a winking smiley or other blatant

display of humor, it is utterly impossible to parody a Creationist in such a way that someone won't mistake it for the genuine article." As far as we know, nothing to do with Edgar Allan Poe . While Poe's Law referred originally to religious fundamentalists , it can also equally apply to rigid atheism , dogmatic socialism or communism , excessive capitalism , extreme environmentalism , crazy feminism , hypersensitive correctness , or indeed, absolutely any other debate where controversy runs high and at least one position is particularly extreme, such as the infamous North Korean Twitter feed that got mistaken for the real thing. A similar notion was named "The Rule" by Calvin Trillin: "The Harry Golden Rule, properly stated, is that in present-day America it's very difficult, when commenting on events of the day, to invent something so bizarre that it might not actually come to pass while your piece is still on the presses." See Stealth Parody , which this law tends to undermine. Don't Explain the Joke is one of the possible outcomes of this law. Parody Retcons attempt to appeal to this, as does the "Just Joking" Justification . If a work actually becomes popular as a result of this law, that's Misaimed Fandom . If you are trying to invoke this trope to get people to believe something you just made up to feign legitimacy, it's a Bavarian Fire Drill . Many a "Not Making This Up" Disclaimer is used to avoid this trope. The Horseshoe Effect is closely related, as it concerns statements which are so radical and extreme, it's difficult to tell whether they're coming from the far-left or the far-right. Compare Doublethink , Insult Backfire , Isn't It Ironic? , Propaganda Piece , Sarcasm-Blind , and Some of My Best Friends Are X . To really</ turn this trope into a brain-twister, compare it with Death of the Author . See also The Tyson Zone and Aluminum Christmas Trees . See Indecisive Parody for works that can't quite decide if they're parodies or sincere and so attempt to have it both ways. In-Universe Examples: Real Life Examples: assures that Dragon Ball is a work inspired by Satanism, with evidences such as that "Dragon Ball" means "The beast is coming" - instead of, you know, a Dragon Ball - or that all the names of the characters correspond to real demons. The website is clearly a parody of Christian fundamentalists, but that very article has been cited on Christian forums as real evidence that anime is demonic in nature.

Pretty words No, really. That's what poetry is. Sometimes it rhymes, sometimes there are more line breaks than usual. All you really need to make a poem, though, is to put it together so it sounds good, or at least sounds the way you want it to sound. It is the favored form of revolutionaries and queens , professors and angsty teens Poetry is one of the oldest forms of literature , and many of the earliest tales from civilizations across the world are in some sort of poetic form Often overlaps with Theatre and Music . For tropes associated with poetry, see Poetry Tropes . See also Poetry Forms

The Achilleid </

This index lists tropes having to do with the medium and content of poetry in all its forms Compare Literary Tropes , Music Tropes , and Theatre Tropes See also Language Tropes and Lit. Class Tropes

The Point of View of a book is the type of narration a writer uses to convey a story to the reader. There are several types:

Related tropes:

In many works, when poison comes into play, it is the villain who primarily uses it, and indeed, use of poison by a character is seen as very suspect at best, and a strong sign that the character is evil at worst. Very few heroes (apart from antiheroic Combat Pragmatists) will use poison, considering it dishonest and dishonorable, and if they do use it, it's likely to be something aimed to knock people out such as tranquilizer darts rather than something deadly like arsenic or cyanide, which ties into Thou Shalt Not Kill . A Poisonous Person will almost always be malevolent because of this trope It's not hard to see why poison is considered evil by many. The notion of normally life-giving food or water becoming something that can hurt or kill people , for example, terrifies us, and the use of it is quite sensibly banned in many cultures. Many rulers have fallen to poison, and just as many take precautions against it, such as employing food tasters. We often use the word "poison" figuratively to describe something destructive or corruptive, such as "poisoning someone's mind" or "poisoning the well" in a debate. Latin ("veneficus"), Greek ("pharmakeion"), Hebrew ("kashaph", "qesem") and Navajo ("’ánt’įįhnii") all derive their words for witch(craft) from roots that have to do with poison or poisoners Poison is seen as the most vile form of murder also because using it definitely shows mens rea</, mind to murder and both intention and determination to commit a murder. Clearly, someone who uses it to commit a murder is committing intentional and premeditated murder; it's hard to argue otherwise. Poison is also considered the weapon of Dirty Cowards everywhere: using it does not require physical prowess or mental courage There may also be the matter of Trial by Combat . The conceit, particularly in French chivalric romances and their ilk, is that in such a "trial", God will guide the hand and blade of whichever one of the two is in the right. Poisoned Weapons , therefore, could be interpreted as an attempt to usurp God's judgement and authority, and/or a lack of faith in that judgement and authority always being right The use of poison in combat, such as Poisoned Weapons , is widely seen as cheating and dirty fighting, primarily employed by cowardly villains or villainous Combat Pragmatists who care nothing about honor, only about results — usually the poison-using villain's aim is to either murder someone, gain an unfair advantage, or render someone helpless who would otherwise have wiped the floor with them in a stand-up fight. Depending on the effects of the poison in question, things can get awfully dissonant when other non-poisonous abilities exist (blinding flashes or holy power that weakens The Undead , for example) that do pretty much the same thing as what the poison does and are used quite freely by heroes to bring down their opposition. Because of this, poison's limitation to villains can sometimes take on the status of Designated Evil . The fact that poison can be used to take down a physically superior person is also why it is sometimes referred to as a "woman's weapon" Historically, this trope is most traditional in Western Europe and its descendants — others rarely cared unless there was a breach of Sacred Hospitality or fair duel. In tropical regions hunting with poisons was widespread; in Hindu tradition, poisonous critters are just another fact of life, and cobras even revered sometimes. China didn't see poisons as something special, nor did Steppe peoples for the authors of

Temujin 's biography the only dramatic point was in how his loyal follower did Suck Out the Poison even the author of "The Word of Igor's Campaign", a thinly veiled anti-Horde pamphlet, offhandedly mentioned poisoned arrows once without any judgement . Americans risk to run into The Savage Indian with it, but the choice of setting usually averts this By the same token, this trope is ubiquitous in Medieval European Fantasy but never applied in Hungry Jungle settings, for minimum of realism and Darker and Edgier tone See also Poisoned Weapons . This trope may contribute to Snakes Are Sinister , which frequently associates all</ snakes with both poison (though not all snakes are toxic, and their toxin is called "venom" because it's injected through the fangs instead of being absorbed through the skin or digestive system) and evil. Other toxic animals such as spiders , scorpions , jellyfish or toads are also often portrayed as evil, and they are often the Unpleasant Animal Counterpart to their non-toxic relatives : This is not just a villain who uses poison; this is where the use of poison is seen as a villainous trait

Whenever someone in film or on TV reports a murder , or a monster, or a stalker or whatever, the police come as close to ignoring them as procedure (and the local captain) will allow. And that's if the report is from a respected professional; if they're an Agent Mulder , or worse yet, a teenager , the cops might try to pin charges on them</ ! In addition to police, this trope also covers the security guards, watchmen, the coast guard (depending on whether they are given such powers under a civilian/military/paramilitary structure) and other people whose job is to protect others . In children's shows, it is related to Adults Are Useless . They might not even make it to the police station, but just (correctly) assume that no one would believe them . The usual reason for this trope is that the story would take a boring turn if the cops turned up within 10 minutes and solved the problem. Having an Amateur Sleuth story is only possible if the police can't quite get the job done. There wouldn't be anything left for the amateur to do if the police solved everything, otherwise. In such stories, the police the amateur has to deal with will be, at best, an Inspector Lestrade , and at worst an Obstructive Bureaucrat . Interestingly, the trope tends be averted in police comedies, because audiences may feel uncomfortable laughing at a police force that lets the bad guys get away. So police comedies may feature blundering cops, but they will still catch the bad guys in the end. Furthermore, a Cop Show or Police Procedural will avert this trope more often than not. A common interpretation of this trope is merely people not knowing how law enforcement actually works — this was part of why Police Quest </ was considered one of the most realistic games at the time it was made; because you actually couldn't</ just take what you thought was the obvious solution because it was either illegal, incredibly dangerous, or both. (Even law enforcement has to follow the law, despite some exceptions and what those games of cops and robbers may tell you .) Many times, the most obvious solution is actually a pretty good way to get yourself or others hurt or killed. The Awful Truth is this happens in real life. Police are more often than not just everyday people who want to get through their jobs, yet have to maintain very high standards when carrying out their work. See also The Only One and Bad Cop/Incompetent Cop , though they are not necessarily incompetent: it may just be that the "calls" are too nonsensical to be believed by someone who doesn't know they're in a show. You

Have to Believe Me! occurs when the police don't believe the person because the person is presenting their case in a fashion where no reasonable person would</ believe them. Lawful Pushover and Lemming Cops are other related tropes. Contrast I Fought the Law and the Law Won , as well as The Men in Black , who do</ believe your reports of ghosts/monsters/whatever and probably know more about them than you do, but are still bad news, and Militaries Are Useless when the authorities (from the military side) do</ try to help, but fail for dramatic tension, and The Lopsided Arm of the Law , where the police withholds its competency and firepower with little (if any) explained reason until someone tries to take the law into their own hands, and then</ they unleash said resources to hunt them (and only them</) down. For the complete opposite, see Police Brutality , though they can</ easily be combined — Bad Cop/Incompetent Cop being one example, where some cops are brutal and some are useless and some are both, and cops who are brutal but also useless — as in the people they beat up and kill are innocent, while real criminals escape because they know how to play by the rules. When it's police driving ability that's in question, see Hollywood Police Driving Academy .

A suspect has been arrested and is being interrogated by the police. Suddenly, they attack themselves or trick the officer into attacking them, and then falsely sue the officer of Police Brutality with the help of an Ambulance Chaser A subtrope of Wounded Gazelle Gambit which occurs in Police Procedurals Not to be confused with Good Cop/Bad Cop , where police use the threat of brutality as a gambit See also Arrested for Heroism . Not related to Suicide by Cop , where the individual concerned is trying to force a police officer to kill them

When police aren't useless , then they're vicious bullies Even though nobody likes being bossed around by the police, it's their job and they have to do it whether we (or they) like it or not. Some types of policemen, however, are thugs who take cruel pleasure in beating and tormenting people they don't like, for no reason at all Though this is Truth in Television , it is often exaggerated in fiction, whether for dramatic effect or perhaps to push political agendas . Sometimes this may be to make a statement about ethnic/racial relations (e.g., Do the Right Thing </), as part of a gloomy Film Noir -type Wretched Hive setting (e.g., Sin City </), or as part of a futuristic Dystopian State Sec setting (e.g., 1984 </) In movies, this was originally a portrayal only American films got away with. For example, the critics responsible for French New Wave Cinema famously complained about censorship that forbade French police being portrayed as anything but professional and competent A quick breakdown of police brutality trends in fiction: the LAPD beats your ass and then decides what crime you committed; the NYPD shoots you a few dozen times then pronounces you innocent ; 1930s cops are drunk Irishmen who beat you up for being Italian ; 1960s cops are sober Irishmen who beat you up for having long hair , or</ are old White evangelicals with a thick drawl who beat you up for being not-White ; 2010s cops may not themselves be entirely white , but are so trigger happy and paranoid they will shoot</ you if you're black; old-fashioned Bobbies beat you up for being a foreigner or minority suspected of loitering ; big town cops beat you up for being a foreigner or minority suspected of terrorism ; small town cops pull

you over, tell you that your tail light is busted , and then bust your tail light with a nightstick when you ask which one (and give you a ticket for it). Not to mention cops from developing countries that are often also incredibly corrupt to boot, and heaven help you if they mistake you for a drug user, or if you're a political activist protesting your country's problems—including them</! Of course, all might not be as it seems Now and again, American movies filmed in or set in the 1930s and '40s will show a cop shooting at an unarmed, running suspect . Though this would not be acceptable in an American context today , it was not considered brutal or excessive at the time If you are fortunate enough to live in a relatively free country and unfortunate enough to witness police brutality, surreptitiously filming it is a good way to back yourself up. In many jurisdictions nowadays, the police themselves often wear cameras to film arrests and make it easier to avoid misunderstandings, and/or abuse A common way to make a Rabid Cop character. Not to be confused with the Police Brutality Gambit , although its users hope you will. See Killer Cop for when the police officer goes a bit beyond brutality. A combined subtrope of this and Hellhole Prison is when correctional officers/law enforcement in a detention setting such as a jail or prison are just as bad, if not worse, than the other inmates for brutality. This is also pretty much certain to occur if The Bad Guys Are Cops The Inverted Trope is a Cop Killer , though the tables will be probably turned back around when the cops catch him , and not least because police camaraderie really is that strong . Compare Rage Against the Legal System If a type of animal is used for this trope, they will almost always be police dogs No Real Life Examples, Please! While sadly this does happen almost all of the time , mentioning any real case in particular would be a sure way to bring on a serious Flame War , and we're not here for that

We've got a 20-26, someone's trying to describe Police Code For Everything here! </ The Monster of the Week has grown to the size of a skyscraper , and is currently rampaging through New York , carrying a load of Noodle Implements . He's even kidnapped the Designated Victim . A police officer on scene calmly pulls out his radio and announces "We've got a 10-340". No matter how obscure, improbable, or downright weird</ an event is, the Crazy-Prepared department has a code for it. Furthermore, everyone will have the code memorized and are expected to know instantly what the code means - they might have even trained for its eventual use. (Although there's the frequent exception, or just a non-cop who happens to be involved, leading them to question what it is, and for the meaning to be revealed.) It may be that their beat is a Quirky Town or the City of Adventure , so they come to expect giant apes once again fighting among the stampeding warthogs. More often than not, this Trope can go hand-in-hand with the Police Are Useless Trope, because having the code just means they know what</ is happening, not that they know how (or are sufficiently equipped) to deal with it. Sub-Trope of Crazy-Prepared . Sister Trope to Code Emergency , where a pre-arranged code is used for clandestine communication. See also Hash House Lingo for another profession where everything has its own code which the employees have memorized.

Lining up suspects for witnesses to point out who did it A Truth

in Television trope, but fiction often plays with it. Police lineups in the real world are Serious Business , because the self-reinforcing nature of memory means that a witness who makes a mis-identification once becomes more and more certain the more times they repeat the mistake Shots along these lines are sometimes used to show the main cast of a series... and to imply that they're all</ unsavory characters or criminals, even though that isn't how lineups work. Bonus points if none of them look at all alike and there isn't even a common gender in the group See also Mugshot Montage

A Police Procedural is concerned with an accurate representation of the day to day realities and procedures of the police and law enforcement. It's a very specific sub-genre of crime fiction. The Police Procedural is almost the antithesis of the Cop Show . The Police Procedural is characterized by the lack of emphasis on the character's personal lives and the increased focus on the nuts-and-bolts of law enforcement This term is also sometimes used specifically to describe the " Reverse Whodunnit " style of crime drama made famous by Columbo </ , despite the fact that most examples have very little to do with actual police procedure Note that the focus on "realistic" police work doesn't mean the show has to be set in "reality". A show looking at the day-to-day routine of the Space Police is still a procedural Both the Police Procedural and the Cop Show are sometimes called "Precinct Shows" See also: Criminal Procedural , Forensic Drama , Buddy Cop Show , Cop Show

A collection of works created in Poland mostly for Polish audiences.

So you've got the job of producing, managing, or marketing something. It could be a consumer product, an album, a film, anything but whatever it is, it's bad, or at least mediocre. The concept is so fundamentally flawed , or the execution so rushed and so badly thought out, that no one in their right mind would buy it or watch it or read it or listen to it or enjoy it on its own merits. Fixing it would require a total overhaul, which you don't have the time or money for, and the higher-ups don't care how terrible it may be, as long as they get their money out of it . You can't just abandon it — too many resources have been sunk into it , or your marketing agency has been hired to manage promotion, and as lame as that product is, it's your job</ to make it look good. So what do you do? You try your best to make it look better than it is and hope that it's effective enough to sell a few million copies. Incidentally, the MythBusters have proven that you can indeed polish a literal turd to a high shine without resorting to additional coatings if you dry it, pulverize it, reconstitute it and pat it until very smooth. Bless those boys. There's also that giant shiny golden... thing in Tokyo. Officially it's named " Flamme d'Or</", or "Golden Flame" and should represent a "burning heart of Asahi Beer" (even corporate lickspittles can be creative), but who ever saw the thing has called it anything other than "Golden Turd". ThinkGeek also sells tiny golden turds as necklaces. We might need to change the expression to "You can polish a turd, but it's still a turd." Note that the special effects industry uses a similar term, "turd polishing", in reference to ensuring the high-quality appearance of something that is intended </ to look ugly. Therefore, it is not this trope. Do not confuse either with turds from Poland. Also has nothing inherently</

to do with Solid Gold Poop , although it may be subjected to this treatment. In-Universe examples

Human beings are social creatures and conditioned to respond in certain ways to social niceties. Oftentimes, these pre-programmed responses can slip by our conscious attention, resulting in us agreeing to something we hadn't intended to. Politeness Judo is the art of taking advantage of simple courtesy exchanges to get one's way Note that this will often fail if the target has No Social Skills and doesn't respond with the appropriate formula In comedy series and family sitcoms it's not uncommon for a parent, friend, or love interest to vehemently object to helping the protagonist with something she wants to know or do. The Straight Man is usually being contrary because he's looking out for his own interests; though he might rationalize it as him "knowing better" or to help the protagonist, it's only rarely because what's asked is a truly bad idea . He'll rail and boast that nothing</ will change his mind, and there's no way</ that the protagonist will get his permission, help, or the information she wants out of him The protagonist asks one simple question, cordially phrased and without shouting... and the Straight Man agrees nonchalantly. Usually he'll do a Double Take and realize he said yes offhand. He either forgot his original outrageously contrarian position, got thrown off by the polite tone, or was holding out for that "please" See also: Duck Season, Rabbit Season ; Passive-Aggressive Kombat , Minnesota Nice , Japanese Politeness , and Compliment Fishing . Not to be confused with Verbal Judo . Also not to be confused with Politeness Jiu-Jitsu Someone who is Silk Hiding Steel will likely be skilled in this

These are those little boxes on the editorial page of your local newspaper where cartoonists try to educate and entertain the masses via their snappy, illustrated political commentary, usually on current events . Done well, a political cartoon will creatively expose the social and political hot buttons of the day; in fact, one of the precursors of the Mexican Revolution was a bunch of perfect political cartoons</ . Done poorly... well, they're easy to avoid. The first political cartoons were drawn by William Hogarth in the 1720s, before newspapers as we know them. An early American example was Benjamin Franklin's drawing of a snake divided into 13 parts, which he captioned, . Some famous political cartoonists of the past: James Gillray, late 18th and early 19th century cartoonist who is still cruder and more vicious than any of his mainstream successors Some modern political cartoonists, such as Mike Peters and Jeff MacNelly, have also drawn daily comic strips. The Pulitzer Prize for Editorial Cartooning is the top prize for these kinds of cartoons in the United States. Although it is mostly awarded to political cartoons, it has also been given to editorial cartoons with no political content, as well as two daily comic strips : Doonesbury </ in 1975 and Bloom County </ in 1987, both of which feature topical political humor. With the age of the internet, political cartoons can be community driven projects such as Polandball The now-defunct UK magazine Punch </ was famous for its well-drawn cartoons for a long period, a number of them turning up in school history books. Most British newspapers still have political cartoonists on the strength A typical example would be Steve Bell, who draws both editorial cartoons and a long-running daily political strip called If </ for the Guardian </ . Cartoonists of other political hues are also

available.

Politically Correct History is when shows set in the past change that past to fit the cultural norms of the time in which the show is filmed, or the prejudices of those currently in power. Originally, this manifested itself through making the main characters surprisingly "enlightened" (and thus more sympathetic to a modern audience). An example of a more recent development is extras being cast without regard to race, even in historical situations where it doesn't make sense This trope can run both ways. Nowadays, movies and shows depicting the past are more likely to show society and individuals being far more tolerant than they actually were. On the other hand, sometimes what appears to be this trope might really be an accurate represention that only seems wrong because previous portrayals have entrenched wrong perceptions . For example, black cowboys in recent depictions of the Wild West are sometimes accused of this trope, when historically, black cowboys were quite common. The same can also be true of Action Girl characters in some pre-modern historical settings, as Stay in the Kitchen was averted or defied more often in real life than some seem to think. So it pays to do one's homework before assuming something has been made up to appeal to contemporary sensibilities A variation is when the "politically correct" phenomenon depicted (for example, racial diversity) did exist in real life, but was something extremely marginal and rare, while the medium implies it was commonplace. For example, there was always some</ limited trade with medieval China (Marco Polo being only the most famous example), so it's not necessarily unrealistic to feature a white man in a story set there. If this is handled realistically, however, there will probably also be many Chinese who are surprised at seeing one for the first time — at least as a general rule, he will definitely not be treated as "just one of the guys" while visiting It should also be mentioned that politicians invoking history and school books can often succumb to this trope as well, but which when and where is better discussed elsewhere, as is the question how deliberate these incarnations of this trope are See also Popular History , Fair for Its Day , Videogame Historical Revisionism , Eternal Sexual Freedom , Aluminum Christmas Trees , We All Live in America , America Won World War II , Black Vikings , Colorblind Casting , Historical Hero Upgrade , Historical Villain Upgrade , and Historical Villain Downgrade Contrast Deliberate Values Dissonance and, when applicable, No Equal-Opportunity Time Travel Compare Fractured Fairy Tale , where this is usually Played for Laughs For other uses of the term Politically Correct , see Political Correctness Gone Mad

Want to show that your Evil Overlord , or someone within The Empire is a genuine bad guy, regardless of their rank in The Empire or how minor a character they are? Simple, all you have to do is have them Kick the Dog , right? Well, what if there isn't a handy dog around? Have them kick whatever minority race/species or gender/sexuality or lower class scum is around instead to show that they're a really</ bad guy. Bonus points if either the heroes or some highly sympathetic character is a member of said minority Depending on how and with whom this is used, it can sometimes come across as just slightly odd. It generally works best with minor characters who have not had a lot of time in the attention of the audience, since you can easily reveal that their Hidden

Depths are really rather unpleasant, thus allowing you to cement them as unlikeable or have the character graduate from being an annoying obstacle to someone the fans will cheer to see put down It doesn't always work as well with the Magnificent Bastard Evil Overlord types, particularly if introduced late into their run as an antagonist. Because honestly, if the fandom hasn't turned against the Overlord after the character in question may have murdered thousands or even millions , enslaved people in The Empire wholesale, and so on and so forth, is having the character be a little sexist or racist really</ going to automatically turn people against them? (In particularly bad cases of Misaimed Fandom where the fans were already using every scrap of evidence and threadbare argument to argue that the bad guys weren't that bad, you may risk the character's fans declaring this to be a Fanon Discontinuity , and possibly even splitting the fanbase). In these cases, to make it work, you might have to do a purposeful Flanderization to your character and make them all about their bias. Of course, that will also mean you've gone and derailed your own plot if you need to do it to that extent.. A notable key to this is that the racism, sexism, Fantastic Racism , or whatever displayed by the character is often completely gratuitous or extraneous to the rest of their villainy. Usually, whatever their goal might be, they don't have to be a racist, speciesist, or sexist to accomplish it—but they are This is the reason why Those Wacky Nazis and The Klan are at the bottom of the villain food chain, and it's a good bet that the Politically Incorrect Villain will be the one going down in an Even Evil Has Standards team-up Also, people might sometimes see this trope where it doesn't exist. Some villains are simply bullying types who go after minorities without really caring whether people will find it politically incorrect or not—and it doesn't have to matter if their targets remind them of themselves in some way . Why do they do this? Minorities lack the numbers to fight back, and there's nothing to be gained from Bullying a Dragon Compare Evil Is Petty , Straw Misogynist , and Straw Feminist ; Contrast Equal-Opportunity Evil and Politically Correct Villain . Note however that they are not mutually exclusive; a villain can be progressive towards some groups but intolerant towards others. Compare and</ contrast the Politically Incorrect Hero . May lead to Felony Misdemeanor if this character type is thought to be more evil than outwardly flamboyant villains. Any and all instances of Those Wacky Nazis qualify automatically, and A Nazi by Any Other Name often does. A Bigot with a Badge is usually one by default. Fur and Loathing , a trope involving villains who are politically incorrect in a different sort of way, runs on a similar logic if it's done intentionally This is not when a villain is a minority who is portrayed in a politically incorrect manner. That's Unfortunate Implications , assuming it's unintentional. This should also not be confused with Values Dissonance , where the author</ apparently has these attitudes

For those politicians who did become national government leaders, see Heads of State . Japan Philippines United Kingdom United States

Tropes that are related to governmental systems, political ideologies, policies, and practices, and the way they shape historical/current events in both fiction and the real world Political facts and useful notes can be found on the Useful Notes index. Please be double-plus mindful of the Rule of Cautious

Editing Judgement

A character's coolness factor is often demonstrated by what music they prefer—whether it's the popular guy who likes popular bands, someone out of touch who still listens to disco (or older music) , or a complete dork who likes polka. This trope is about that dork He probably also plays the accordion. Since the accordion, and polka, are often associated with an aged demographic, it's certainly not going to be cool for a young person to admit to enjoying them Not to be confused with an Accordion Man . Compare to Quirky Ukulele . Contrast with French Accordion and Accordion to Most Sailors Note: In recent years, especially with the popularity of "Weird Al" Yankovic , who made this part of his comedic persona, and Mexican banda music, as well as the advent of Steampunk , there has been somewhat of a reversal of this trend (even Christina Hendricks proudly plays the accordion!) and it borders somewhat on the verge of becoming a Dead Horse Trope

Sometimes, cartoon characters will paint with one or two strokes in color combinations that simply cannot be done that way in the real world, such as stripes, checks, polka dots, or even more elaborate patterns Finding one of these might be assigned to a naive person as a Snipe Hunt

Rather than requiring someone to pick one person out of several potential love interests, or adultery, all parties involved agree to be together and share cooperatively. This typically lacks any drama of the decision itself, but has a different form of drama in how people make arrangements with each other, manage jealousy and households, and deal with the disapproval of society as a whole. Individuals who identify as polyamorous may consider themselves " Ethical Sluts ". Not all ethical sluts are polyamorous, and not all people in polyamorous relationships have the "ethical slut" attitude. The difference between a polyamorist and a swinger is that a polyamorous person has broad-spectrum involvement in their partners' lives, including love. Swingers are largely there for the sex, often for the novelty of an unfamiliar partner. Subtropes: If it's just hinted at, it's Threesome Subtext . If it's not canon but fans ship it, see One True Threesome . If it's just sex, not full-on relationships, see Three-Way Sex . If one partner receives preferential treatment over the others, then the former is Top Wife and the latter are a Supporting Harem . Not every case of Supporting Harem qualifies, though; it involve a Marry Them All resolution. Not to be confused with Poly armory </. Polygamy is a subtype of polyamory, as it means more than one spouse</, while with polyamory, marriage and dating both</ count. Though real life polyamorists try to disassociate these two as the word "polygamy" has some… messy implications. For more details and some Real Life tidbits, visit Useful Notes On Polyamory . Truth in Television , obviously, though how culturally accepted it is varies wildly depending on the place, time period, and social standing. Currently, polygamy is Banned in China (plus all Western countries), but still legal in some parts of Africa and Asia . The late New Tens has witnessed the growth of the Reverse-Harem (RH) genre in romance and urban-fantasy literature.

A loudmouthed political talking head whose views tend toward radical right-wing (or, less commonly, left-wing) political

positions often to the point of the Boorish style of Eagleland (even if he isn't actually American). A gadfly to any form of political compromise with what he sees as socialist or libertarian causes This is one of the newer political tropes, one which seems to have come to prominence in The '80s and The '90s after the was scrapped by the FCC, with a rise in prominence of right-wing punditry in American media. It's usually a parody or satire of these types, and the right-wing version is probably more common. Many examples are explicit parodies of specific figures, like Rush Limbaugh, Glenn Beck, or Alex Jones. The Trope Maker was ABC 's coverage of the 1968 US presidential elections, when ABC executives wanted a low-cost way to stand out from conventional election coverage — in this case, the hiring of political polar opposites Gore Vidal and William F. Buckley, Jr. to take part in a series of debates. The relationship between Vidal and Buckley was covered in-depth in the documentary Best of Enemies</ Sometimes part of Strawman News Media . Compare and contrast Malcolm Xerox , which is a similar Straw Character type whose cause du jour is black rights and racism. Also compare Blonde Republican Sex Kitten and Fox News Liberal

It probably goes without saying that the end product of most digestive systems is not exactly considered edible Sometimes, however, one can come across a creature or whole species that defies this common knowledge and instead, they poop perfectly edible and perfectly looking food. Whether it's because of Bizarre Alien Biology or just plain magic , you can expect this trope to usually be Played for Laughs and for the sake of Rule of Funny A subtrope of Toilet Humor . See also I Ate WHAT?! . Compare with Solid Gold Poop for less edible but still valuable waste products

According to many anthropologists, one of the turning points in human development was a growing ability to communicate . In fiction, one of the turning points in dramatic development is the inability</ (or, sometimes, downright refusal</) to communicate In many stories, particularly those that rely on Dramatic or Tragic Irony , miscommunication and misunderstanding can often play a role in setting off or allowing bad things to happen. This often happens in mystery stories, such as where a murderer kills an innocent victim due to a misunderstanding , as well as in Tragedies , where poor communication is often the result of the characters' own Fatal Flaws , which lead them to commit Tragic Mistakes that pave the way for everything to go pear-shaped. This is also an all-too-common occurrence in Real Life , where many real life tragedies could have been avoided had the right people shared information that could have prevented them, but didn't for all kinds of reasons In order for this trope to work, the misunderstanding or miscommunication needs to have a reason to occur, best borne out of the natural characterization of the characters involved. A character who has a hard time trusting someone, for example, is more likely to dismiss that someone's explanation of what's going on out of hand than to hear the person out. Someone who is naturally shy or has No Social Skills may also have trouble getting their point across. A Horrible Judge of Character may implicitly trust a villain who wants nothing but bad things for him, and tend not to believe those who tell him of the villain's evil intentions. A Ditherer may refuse to speak up on something because it would mean having to

make a choice one way or the other Basically, the miscommunication or misunderstanding should be borne out of flaws and behaviors that a character has had from the start rather than something that happened because the author needed a story to go a certain way and derailed the characters involved , making them hold the Idiot Ball . Alternately, if everyone</ in the story has unreasonably bad communication skills, it may be an Idiot Plot . Authors who pull this trope badly run the risk of straining the audience's Willing Suspension of Disbelief Though similar, this trope does not include things like Selective Obliviousness , You're Just Jealous , or Sarcastic Confession , as those are failures to listen</ rather than speak (though listening is also a vital part of good communication) NOTE: though the trope name includes "kills", . It's a pun: "poor communication skills" and "poor communication kills</" — death does</ sometimes happen as a result of poor communication Compare Dramatically Missing the Point ; Open Mouth, Insert Foot ; Impeded Messenger ; Doomed Appointment ; Funny Phone Misunderstanding ; Suspicious Missed Messages Contrast: Just Eat Gilligan , Amnesia Danger . See Facial Dialogue for those times in which a character seems</ unable to communicate, but actually can get entire encyclopedias of information across with just body language and a twist of the eyebrow. When communication is impeded not by character flaws but because of an outside force, see Impeded Communication Works using this trope will often discuss The Power of Language This is a trope rife with major plot points by necessity

An episode in which the show's primary characters take a back seat to brand new characters in order to test the waters for a separate show. Whereas the traditional Spinoff involves main/recurring characters becoming popular enough to break out on their own, the characters described here are clearly jammed in there just for the sake of the new show. Rarely do these pilots get picked up by the network, however. Another common term for this is "backdoor pilot"; however this can refer to other things as well, such as a traditional spin-off if the character(s) involved are given a send-off within the parent show, or a pilot broadcast as a special or Made-for-TV Movie that will be picked up as a series only if the ratings are good enough. Much like any pilot, the version of the series that makes it to air may have actors or settings changed. For instance, the version of Empty Nest</ that made it to TV was much different than the Poorly Disguised Pilot on The Golden Girls </, and the proposed Aquaman</ series would have starred a different actor than the one who guest-starred on Smallville </ . As a general rule, if you're watching a show and you find yourself asking questions like "Where did everybody go?", "What are we doing here?", "Who are these people?", or, above all, "What is going on here?", then you're watching a Poorly Disguised Pilot. Other symptoms of a Poorly Disguised Pilot include: Before the concept of the Season Finale took off, these were often aired as the last episode of a season. The Opposite Trope is Fully Absorbed Finale , when what is functionally the last</ episode of a show appears in another show. See also Pilot Movie . Do not confuse this trope with a pilot wearing an ineffective disguise.

Pareidolia is the human tendency to mistakenly interpret random visual stimuli as meaningful. More specifically, it entails seeing faces in inanimate objects. Does the door of that house look like

a mouth, those two windows above the door like eyes, and the keystone of the door like a nose? That's pareidolia. Combine this tendency with humans' tendency to be afraid of the dark — on the grounds that humans are vulnerable to predators in the dark — and you get this trope A character (most commonly a young child) is alone in their bedroom, or in a basement, or a forest, or a cave, or somewhere similar, at night (or otherwise in the dark). Increasingly frightened, they begin imagining threats in the form of inanimate objects appearing as monsters. Shadows are cast on surfaces in just such a way as to create scowling faces. Tree branches resemble scraggly claws. Stalactites and stalagmites appear as teeth and indents in the rock as eyes. And as the character's pulse and pace quicken, they'll start seeing more, and more</ , until they're completely surrounded by monstrous impressions and terrified... whereupon someone will turn the light on, and they'll realize that all those teeth and claws were just rakes and pitchforks hanging on the wall of the garage This only applies to everyday objects such as trees or rocks or furniture happening to resemble monsters. If it turns out there's an actual, literal monster stalking the character, it isn't an example. (Sometimes, a character might think something is a monster, verify that it's just an inanimate object, only for it to then turn out that, no, actually it really was</ a monster after all). This also doesn't encompass objects purposely-sculpted so as to resemble monsters, such as statues. Can overlap with Beware the Skull Base , if the base is in a natural formation (such as a cave) resembling a human skull rather than intentionally built or carved to look like one Most common in Western Animation . A rich source of Nightmare Fuel See also: Scary Shadow Fakeout and Things That Go "Bump" in the Night . Often overlaps with Cave Mouth , It Kind of Looks Like a Face and The Trees Have Faces

Popcorn shows up in many forms of media. Sometimes, in TV shows and movies, it is often seen as being popped directly off the cob , which doesn't happen often in Real Life This happens when you put an ear of corn over the fire. Once the fire gets hot enough, the corn becomes so hot that the kernels covering the cob immediately start popping, turning into instant popcorn In Real Life , "popcorn on the cob" is possible, but only if the right kind of corn is used and the ear of corn has been sufficiently dried out before cooking. Otherwise (such as with a freshly picked ear of corn), heating it over a fire only results in, well, roast corn on the cob (perfectly delicious, but not popcorn) Cousin Trope to Instant Roast . Not to be confused with Pass the Popcorn (which is where onlookers staring at something shocking and/or embarrassing have snacks handy for such an event)

Classics, almost by definition, are works that are considered to be of high quality, are influential on later works, and are widely known. However, one will often find that only scholars and enthusiasts have first-hand knowledge of the material in question, and that the masses know it either only by title or by homages, parodies, direct references and allusions found in more populist works. Essentially, various bits and pieces of high culture are most widely known through their use in pop culture (which also puts them on track to become standard snippets). Ill-informed people might even think these bits and pieces are original to the

popular work, And That's Terrible (nine times out of ten). Stock Shout-Outs such as Pietà Plagiarism exist because of this phenomenon. (Most artists would be copying some other usage than the sculpture.) Frequently results in Beam Me Up, Scotty! , It Was His Sled , and Covered Up . See also Half-Remembered Homage . See also these tropes: Aluminum Christmas Trees : People think something is made up because it sounds ridiculous when it's actually real. Compare/Contrast Pop-Cultural Osmosis Failure (when someone doesn't</ get the reference), Pop-Culture Isolation (in which the reference is well-known in one or a few major areas, but virtually unknown elsewhere).

Fans will seize any opportunity to celebrate their favorite work, so if there's a reason to associate the work with a certain date, they'll often try to make an unofficial (and sometimes official) holiday out of it. Common reasons a particular date may be significant to the fandom: Celebration can occur at several levels. Some fans may simply gush about the holiday on social media and enjoy the work on their own time, some will put out crafts and fanart, and others will wear themed cosplay and attend holiday meetups to party with other fans. Official marketing for the franchise will certainly celebrate as well, possibly by releasing new content on the day . If the holiday gets big enough, the holiday may become a nationwide or even worldwide celebration that even people not seriously familiar with the work may celebrate the holiday anyway. Some cities have even officiated certain pop culture holidays. When the same date holds significance for multiple works, expect crossovers between Friendly Fandoms celebrating together. For one example, if you've ever seen fanart of Fullmetal Alchemist </ characters re-enacting scenes from Mean Girls Unfortunately, this also means that some Pop Culture Holidays have shared dates with tragedies, such as September 11 , which may result in the said Pop Culture Holiday, taking place on the date of a tragedy, canceled permanently or moved to a different date relevant in the story. Compare Significant Reference Date and Milestone Celebration .

Pop-Culture Isolation is basically a case of pop-culture myopia of sorts, where celebrities, music genres, media or events are huge and significant in one subculture or ethnic group, but elsewhere nobody knows they exist or is indifferent to them altogether. We're not talking about separate countries here, but within</ the same country or region. A lot of this is especially prevalent in entertainment media, affecting music in particular (radio is usually fingered as being the main cause, as it was and still is very isolated in terms of programming and format, leading to accusations of segregation) Let's face it, there are cultural barriers, and people thrive in their own microcosm. Another likely reason for this is because mainstream media is so homogenized and is prone to favoring monochrome pop culture that other cultures start their own pop-culture media outlets. That fuels this trope even further for better or for worse. This isolation of pop culture can lead to such ignorance as Cowboy BeBop at His Computer . It's even possible for this trope to happen within the same culture. This, in turn, resulted in a pop cultural Broken Base or Fandom Rivalry . Hip-Hop is a good example of this (see Hip-Hop's Broken Base entry). This trope possibly could lead to Monochrome Casting

Expecting Pop-Culture Isolation not to be an issue is a sure way to incur Pop-Cultural Osmosis Failure For some people with a certain ideology , however, Pop Cultural Isolation may be seen as a good</ thing Contrast Small Reference Pools and Pop-Cultural Osmosis . May lead to Germans Love David Hasselhoff or Americans Hate Tingle . Could also overlap with Critical Dissonance . This trope along with Public Medium Ignorance goes together like peanut butter and jelly. This often is the cause of Minority Show Ghetto . Compare with Fan Myopia , which is when the fans of a particular form of pop culture believe it to be far more well-known amongst the general public than it actually is, and Obscure Popularity By the way, did you know there are people and places out there who discuss and list the tools of storytelling but have almost no knowledge of wiki editing or TV Tropes ? It's very true. Do you know about them? Probably not

It's not uncommon for false rumors to be spread about media The dawn of the internet has not done much to quell urban legends. If anything, they've become easier to spread. It's not uncommon to see "he said, she said" rumors of Missing Episodes that only aired once. God Never Said That often over time leads to this, as a rumored quote will be circulated so much that it becomes an urban legend Some say this is due to the " Mandela Effect ", a pseudo-scientific theory that false memories are due to parallel dimensions colliding Compare to Urban Legend of Zelda (which is about gameplay-related video game legends), God Never Said That (which is about things creators allegedly said about the work) and Urban Legends (which is about the entire genre of sensational but mostly untrue hearsay lore). For popular misconceptions about the contents</ of famous works, see "Common Knowledge" . For celebrities who get urban legends attached to them because they already</ have bizarre reputations, see The Tyson Zone When the creators deliberately play with the audence's expectations and make references to the installments that never existed, this is Un-Installment or Retroactive Legacy

A character is getting ready for a date with a beautiful girl or a party with his friends. He has just finished showering and has just put on some cologne, but when it comes time to put on his clothes, he puts on his pants, but when he puts on his tuxedo, he finds that he is having problems trying to button it. Just when he finally gets the suit all buttoned, the buttons suddenly pop off after a few seconds and fly in different directions. Apparently, the character has either gained weight, or the suit is not as big as he remembered it to be. This is a Comedy trope in which a character has trouble buttoning his shirt or pants, because he has either gotten too fat or the clothes are too small for him. Of course, there are also some cases where when the shirt is buttoned, the buttons don't pop off, but the shirt is completely stretched out at the buttons. It's also happened with belts as well as it also happening at the breasts. You can see this trope pop up in most forms of media. Can go hand in hand with Shapeshifting Excludes Clothing , Temporary Bulk Change , Breast Expansion , Hulking Out or Balloon Belly . While it's not quite this dramatic in real life, this is to some extent Truth in Television . Pregnant women do sometimes experience this, especially with the more form-fitting varieties of maternity wear. It also happens to teenagers, because hormonal changes can sometimes cause you to suddenly gain weight or muscle. A woman's pelvic bone needs to

grow during puberty, but not very much so sometimes this can happen over a single night. It's just enough growth to burst the buttons on your skinny jeans. Also, a woman's breasts actually get larger as she gains weight: so this can happen with dresses or shirts that might otherwise fit. Obviously this is more common with formal wear which tends to get stuffed into the back of your closet until you need it

This is when something which portrays itself as "cutting edge" becomes mainstream, but soon becomes overexposed , behind the times , old hat , or just plain uncool . However, given enough time, it suddenly begins to make a comeback, usually accompanied by words like "vintage," "nostalgic," and "classic." It's gone through the ups and downs of the popularity polynomial How often the item cycles back and forth between "cool" and "not cool" depends on many factors. If something reached a peak when you and your friends were kids, then when you become tweens or teens, it is a reminder of a childish time — and as the fear of childishness and the desire to be very grown up set in, you don't want to think about it. But when you reach your later teens or become adults, it is seen as harmless. And once your</ kids discover it, it may even become cool again (as long as they don't associate it with their uncool parents). Now apply that on a larger scale Given enough cycles, it becomes the equivalent of a Cyclic Trope The name comes from the fact that we like alliteration , and some of us are math geeks . Here's also a more detailed explanation about what a polynomial is and what it has to do with the ups and downs of popularity Of course, there are polynomials of a higher degree than that, like y=4x +42, which is of degree 5. Higher degree polynomials can create all sorts of curves when you plot them. Apart from the line and the parabola, you can get a lot of shapes, such as a lot of hairpin curves or a roller-coaster shape that goes on for a while before diving up or diving down So, in a polynomial in x of a high-degree you can expect y to go up and down as x grows. The trope name is about looking at the popularity of something as a polynomial in time: as time progresses, it becomes less popular, then more popular, then less popular again, and so on and so forth. Generally speaking, the higher degree the polynomial, the more times you switch from "cool" to "stupid" and back. The points where the popularity rises, flatlines, and then begins to decline are known as the polynomial's Jumping the Shark moments, and when it does the opposite- reverses a decline and starts to climb- rigorous mathematical notation is that it is Growing the Beard . Some fringe lunacy groups insist on an alternative terminology having to do with derivative signs and whatnot, but they can be safely ignored So if you were wondering what a polynomial was, now you know See also Colbert Bump (a resurgence triggered by a specific factor), Posthumous Popularity Potential (when a person's death rehabilitates their reputation), Cyclic Trope (when this happens to tropes) and Discredited Meme . Compare with Two Decades Behind , Career Resurrection , Nostalgia Filter , Genre Relaunch and Vindicated by History . Contrast with Condemned by History , for something that never</ comes back If it happens in-universe, that's Popularity Cycle

Have you ever gotten into an argument where you have to defend your beloved Local Sports Team's honor and superiority against the "merits" of that honorless and inept Opposing Sports Team ? Time consuming and pointless debates ensue (they really should just accept

that that Local Sports Team is better and move on with their lives) If things get really bad, you can always wait for both teams to play against each other to settle the issue. There's just one problem. Your team is in Major League Rugby, and theirs is a peewee soccer team. And they win. </ This isn't the Ragtag Bunch of Misfits beating an Evil Empire , they don't have The Ace or Mary Sue leading them to a last second win by exploiting a Weaksauce Weakness or using a Drama-Preserving Handicap , they're normal and otherwise mundane, or even notably horrible. They are however far more popular and sell merchandise far better than your team. And somehow, much like The Power of Friendship , their Popularity Power gives them that added boost to take on teams far, far, far</ above their league that should logically crush them like so many naive hopes and dreams under tax returns. Comic Books tend to fall to this a lot, much like an Ensemble Dark Horse but canonized in media. The super hero in question is usually the kind that stars in Wolverine Publicity or is a Badass Normal in a team of supers. Authors then give them Power Creep, Power Seep until they can take on anyone and win without flinching , or at least won't lose, to someone who should easily beat them. The means to this are usually liberal applications of Plot-Induced Stupidity or Forgot About His Powers to the opponent, a few Contrived Coincidences to help the hero (a fire extinguisher near a fire villain), or Joker Immunity to make a popular villain's outright defeat impossible. Note: when a character in their own title makes short work of a more popular or widely-known guest star , that is not a subversion of this trope. I'm looking at you, example section. Compare Pandering to the Base , Wolverine Publicity , Spotlight-Stealing Squad , Power Creep, Power Seep , Running the Asylum . Related to Joker Immunity and Contractual Immortality since some characters will never get caught/ Killed Off for Real because of their popularity. Contrast The Worf Effect . See also Story-Breaker Team-Up . For the out-of-universe version, where a work</ has power because it's popular, see Quality by Popular Vote .

You have a TV show, and it's not very popular. Maybe it's on a low-profile channel, maybe it's on at a bad time, maybe it's just not that accessible And suddenly all that changes You get a full season order on a better channel, or the powers that be have dusted the old thing off, but for whatever reason, suddenly your show has popularity potential Here's the thing, though—the old version has a lot of good material nobody saw. A scene you're proud of or a plotline you now have the resources to do better. So what do you do? Remake it for the new version, of course! Who's going to notice? No one. So you can see why this seems to be common practice Remaking the pilot or similar such things don't apply—the show had to have been an actual, watchable show during both versions for this to take effect

Contrary to what some would say, this is rarely due to Perverse Sexual Lust ; many people who are fond of a specific type of animal (dogs, foxes, turtles, etc.) are often drawn to characters of that type. That being said, the aforementioned lust is</ undoubtedly there otherwise, to the point that some furries — especially NSFW / Rule 34 artists and writers — will often indulge in heaps of Self-Fanservice over these types of characters. Expect characters who don't look plain or not that alluring in their source material to be turned into Mr. and Ms. Fanservice

Most furries got into the fandom through some sort of fiction , typically through ones set in a World of Funny Animals . Beast Man , Funny Animal and Talking Animal characters are most common in children's media, so many furries were drawn in from cartoons, video games, literature, or animated movies There are generally two types of furries: "feral" fans who like xenofiction , Nearly Normal Animals , Partially Civilized Animals , et cetera, and the more well-known "anthro" fans who like Funny Animals . The two do intersect, but it's more common for the two not to due to differences in interest; they're attracted to different series. This is a part of the reason you rarely see people make The Lion King </ characters into Funny Animals or make Sonic the Hedgehog </ characters into "normal" animals. There are even some furries who are attracted to a character or creature that don't resemble any animal in particular as long as they look "bestial" enough, such as demons, gargoyles, and even orcs Japan has its own furry fandom where the characters are called "kemono" (meaning "beast"). Basically, the designs tend to be rounder and softer looking than other furry characters, and the ones appealing to the bara fans even have a more "stocky" look to them more often than not. Kemono characters are often popular internationally and, obviously, kemono fans are drawn to certain series as well Sub-trope to Periphery Demographic . Often related to LGBT Fanbase . May overlap with Ensemble Dark Horse

To try to solve an Overpopulation Crisis , governments may limit the total number of children a person or couple can have There are a number of variations on this. Sometimes every couple is allowed a fixed number (frequently two); other times, the number allowed is tradable, luck-based, or determined by some kind of eugenic principle (parenting skills are less commonly judged). Enforcement methods may range from punitive taxes on extra children, through mandated birth control and sterilization upon the birth of the last child allowed, to outright killing of excess population) These dystopias always seem to assume stable long term marriages, they usually offer some number of children per couple. Second marriages are ignored Only very rarely does it actually work. Often it signals a descent into dystopia . It's also very common for the protagonist to be a child who exceeds the population cap Or it can work too well , ending up with a Childless Dystopia This trope is most common in literary science fiction from the '60s and '70s; it died out as a trope because while it had its heyday in fiction</, the post- World War II Baby Boom came to an end as living standards and opportunities for women in North America and Western Europe expanded and people chose</ to have fewer children starting later in life. Since then, the pattern has held and spread to other parts of the world, largely making this a Dead Horse Trope Because population growth is considered by some to be a problem in Real Life , fictional Population Control is seldom directed toward encouraging or mandating births , either among some groups or the entire population. Inversions occasionally do crop up in works in which a Depopulation Bomb , Robot War , mass infertility or other threat has made humans an Endangered Species The entries on this page mainly concern keeping the population down by preventing pregnancies (through birth control or sterilization) or preventing illegal children (through abortion or infanticide). In some works of fiction, the government attempts to prevent pregnancies and control the population through banning sex or promoting/enforcing homosexuality In some cases population laws are repealed or at

least slackened when the capacity for interstellar colonization is achieved See Also: Kill the Poor , for one instance where this trope is selectively applied, and Darwin Awards , for accidentally self-inflicted examples

In fiction, population signs tend to be updated in real time, whether to reflect new additions, or more often, to reflect a murder spree. A frequent means of establishing a "dangerous Wild West town" setting is a shot of the town sign, with several crossed-out population numbers, indicating frequent reductions due to violent deaths and/or people moving out . A ghost town may be shown with a sign that clocks all the way down to zero that way, presumably updated by the last resident to leave A specific sub-trope will have a killer be nice enough to perform a community service and adjust the population sign just before or after he offs someone For the industrial/workplace version of this trope, see X Days Since

Desc-desc-descri-Add information on Porky Pig Pronunciation here A character tries to use a big, impressive word or two. Unfortunately, he's having trouble pronunci-pronouncia ...er, saying it, whether due to unfamiliarity with the word, or a speech imp-p-p-p ... trouble talking. After a couple tries, he'll give up and substitute an easier word , or just clam up completely The Trope Nam-Nam-Name--Titler is, obviously, Porky Pig of Looney Tunes </ fame. Interestingly, Porky Pig manages to subvert it as, for comical purposes , he always</ finds himself to have an issue pronouncing a very easy word</ and eventually substitutes a much more complicated word which he says without a single mistake</ Compare Parrot Expo-WHAT? , which is when a character struggles to say a word that's new to them. Contrast Sesq-q-q-q-quipedalian Loquaci-louca-louqa-smart talk , and Spock Speak , this trope's exact opposite. Compare Buffy Speak , which similarly involves a character's conversational reach exceeding his verbal grasp. Also compare Delusions of Eloquence , where the character muddles the big words but ploughs onward anyway. If this doesn't happen ever, it's because Realistic Diction Is Unrealistic Not related to Cannot Spit It Out This page will deva-devasta-devasta-deva- ruin your life

Your Unlucky Everydude just got home and is settling into his place. It just has to be then that the girl across the street he's had his eye on walks in and looks around his room a little too</ closely. And unfortunately for him, she's discovered the one thing every guy wants to keep secret — his porn stash. We never see much beyond the covers of these magazines, but the girl will not be pleased with it. If she's an especially touchy girl, the collection may not even live beyond the next scene This one is sometimes</ Truth in Television . However, with the rise of Internet streaming/downloading and the decline of physical video and print media, Real Life porn stashes are more likely to be virtual caches hidden in obscure subdirectories and encrypted partitions on people's hard drives. Nonetheless, in-media uses of the trope are highly resistant to Time Marches On and Technology Marches On , preferring to stick with depictions of physical media stashes. The reasoning behind this is not hard to see; content creators and intellectual property-holders are not about to promote a pornography consumption model that goes against their business

interests. And, of course, there's also the fact that, however limited and unsatisfying dirty magazines can be, at least they don't carry viruses or malware. Plus Rule of Funny and the fact that it's easier to make jokes, especially visual jokes, about a stack of magazines or movies than computer subfolders Occasionally, a character will use his porn stash to hide something else he doesn't want people to find. The idea is that other people stop looking when they get to the porn stash because they think the porn stash is what the character meant to hide Related to Caught with Your Pants Down . Not to be confused with a Pornstache , which is something else entirely. See also Poor Man's Porn , for what people might turn to if their porn stash is insufficient. In works where the Internet is involved, this often goes hand-in-hand with Embarrassing Browser History Most often a Played for Laughs trope, very rarely explored seriously (except for porn addiction, which in itself may become a Compressed Vice or Very Special Episode). See also Filth

We've all heard the metaphor that books are a gateway to other worlds. Sometimes, this stops being a metaphor and becomes the literal truth . A book is an ideal object to turn into a Cool Gate to a Magical Land . Portal Books usually come in one of three varieties: As a literary version of Trapped in TV Land : The characters rapidly move from book to book, with the shelf or the library functioning as the Portal Network , creating a chain of shout outs and parodies of well-known genres and/or famous works along the way. Most of the books visited will be The Theme Park Version of public domain classics. Any of these three may or may not overlap with Refugee from TV Land , when literary characters come through a Portal Book into " the real world ." The best candidates for such reverse travel are villains. Chances are 10 to 1 that there will be An Aesop about the value of reading . Nobody is more likely to fall into a Portal Book than a video game or TV junkie who thinks books are boring. A Bookworm 's best hope of getting to experience this trope is if the Aesop is " Be Careful What You Wish For ," and he must learn to stop withdrawing into the fantasy world of his books and " live in the real world ." (Of course, either</ lesson runs the risk of being a Space Whale Aesop , given that books in the real world don't work like this.) Unless the reader has an addictive personality-that's when things can get messy. For help finding a Portal Book near you, see your local Magic Librarian . Compare Portal Door , for doors that lead someplace non-adjacent. Not to be confused for the behind-the-scenes digital book of Portal 2 </ .

Classically and simply, teleportation is done on an object basis. Distinct items are sent through in their entirety. However, it is more realistic, and easier to calculate, to just send through anything within a certain area, or use a portal through which anything on one side is in one place and anything through is in another However, these can lead to subversions of the classic teleportation concept: if only an area is teleported, it's possible for this area to not contain an object in its entirety. And if a portal that leads to one place suddenly collapses or deactivates , anything currently in the portal will need to be acted upon. One solution is to distinguish distinct objects and then handle where they stay or go on an individual basis. The most common result, however, is that only the portion of the object that was in the

teleport area will teleport, while the rest stays put, resulting in a portal cut. If the edges of a portal are not guarded, a similar effect can be reached if only part of the object goes through the portal The opposite of a Tele-Frag (but no less deadly). See also Teleporter Accident , for more general mishaps. A No Flow Portal may be designed to have this sort of effect on the unwary. For creating portals by physically cutting the fabric of space , see Dimensional Cutter

Simply put, there are lots of "islands of habitability", and conventional travel between them, if possible at all, is time-consuming, expensive, and generally not attempted unless there is absolutely</ no other choice. However, there is a set of gates or jump points connecting them together, allowing for near-instantaneous travel This results in what can be called a "graph universe": the connected islands/communities/planets are vertices and the portal links are edges, and the rationality of travel between them depends not on the distance, but on the existence of a known link between them In science-fiction versions, it is common for portal transits to induce disorientation, hallucinations, or nausea which make starship crews temporarily extra-vulnerable immediately after transit Considering that it would take thousands if not millions of years to set up an interstellar Portal Network without any other means of Faster-Than-Light Travel , it is not uncommon for such things to have been made by the Precursors , in which case the gates are usually (though not always) Lost Technology . Alternatively, it is sometimes hybridized with hyperdrive — in such settings, starships carry their own FTL equipment but</ can only use it at very specific naturally occurring " Jump Points " in space defined by gravitation intersections or some other mathy thing that's too complicated to explain. Sometimes ships FTL and portals co-exist, where the latter is a one-time investment to save everyone a lot of time and fuel to act as an express lane As these provide both a relatively plausible form of Casual Interstellar Travel and justifies the idea that Space Is an Ocean enough to permit choke point naval battles, Portal Networks are common throughout all but the hardest varieties of Science Fiction , which disallow faster-than-light travel altogether. They are a convenient means of providing simplified game mechanics and controlling where the player can go , and so are common in both video and tabletop games. In addition they allow writers to avoid making embarrassing scaling errors , if done right If the network has a radial structure — most or all linking pathways originate from the same point — this point is a Portal Crossroad World Sub-Trope of Teleportation with Drawbacks , since this is a specific drawback, by restricting destination and origins. Cool Gate , is the trope for structures that allow teleportation by travelling through them, which is used for most examples of this. Hyperspace Lanes , is for when Faster Than Light travel is restricted to certain paths. For a videogame sort-of-equivalent, see Warp Whistle . A Portal Door may be used as the medium of transport. If the portals themselves are limited in the range they can cover and that's why long trips require multiple jumps, you may be looking at a Multistage Teleport

Paintings are sometimes described as a 'window into another world'. Some series, especially in video games, take this all too literally. A magic painting will contain an entire world or dungeon

which the heroes must enter to defeat the enemies within. In some cases, the art style will shift to match that of the painting, emphasizing the otherness of the painting world If this gimmick is used more than once, a magic art gallery can be the basis for the Hub Level of a game In rare cases, some nefarious ill-doer or oblivious Muggle may attempt to destroy a Portal Picture while another character is inside the painting world. The results vary: if the painting was literally a portal to another world, then destroying the portal will leave the characters Trapped in Another World . The more common metaphysical position, though, is that the painting world is actually formed out of the paint and brushstrokes on the canvas, and by wiping away the painting, the world itself disintegrates Either way, the painting may be used as a prison Sub-Trope to Anomalous Art . Compare with Portal Book and Trapped in TV Land , for different mediums acting as a portal. See also Art Initiates Life . When this is done symbolically as a Scene Transition , that's Picture-Perfect Presentation

If you're a character in a fantasy setting, proceed with caution when approaching any large body of water. The most mundane-looking lake, spring, waterfall or well could secretly be a portal to a Magical Land . Your Breather at the local hot spring could turn dreadfully exciting without warning. In some, you just keep falling until the water disappears and you hit solid ground — always unharmed, of course. In others, you step or fall in, go down (what are those weird lights?), turn to head back up (wasn't this down</ a minute ago?), and find you're still in a body of water, but it's not in Kansas anymore. Such cases are not guaranteed to work both ways. Compare Portal Picture , its oil-and-canvas counterpart. Also compare Portal Door , when doors lead to someplace non-adjacent. When the portal is actually a swirling vortex, see Mega Maelstrom . Not to be confused with No Flow Portal , which can be about portals immersed in</ pools, nor with the pools in Portal </, which will cause an unsatisfactory mark on your official testing record, followed by death . Nor as long as we're talking about Portal.</

A character tries to enter a magic portal , often at high speed, only to discover that it is no longer there. Maybe the magic has been sealed or the portal cannot be opened in the presence of Muggles , i.e. the character can't show it to his family or friends. Maybe the portal is an Empathic Weapon that lets you through only when it's in the mood. Or maybe it technically does work, but the other end of the portal got moved right up against solid rock Whichever reason, the Portal Slam is normally a sign that the fantasy world the portal gave access to is irrevocably inaccessible. This is a common method employed at the end of a fantasy/science fiction series to bring things back down to normal . If the character manages to get back to the world by alternate means, he'll usually discover that the world has drastically changed for the worse with black magic brewing Less commonly, the Portal Slam is used near the beginning</ of the story, as the protagonists figure out how to work the portal by trial and error See also Teleporter Accident , Tele-Frag , and Portal Cut

Who needs a Steampunk Time Machine or alien police boxes ? Certainly not someone with a portal to the past. It might be the result of eddies in the time stream or a magic spell, or it might

remain unexplained in a Magic Realism style. However it happened, the portal is your two-way ticket to time travelling fun The portal is usually synched up with the modern day, so that an hour on this</ side is equivalent to an hour on that</ side, thus allowing relationships to develop and justifying the existence of San Dimas Time . However, if the story is a little more tragic then time might move faster on one side , making the character on that side age much faster If a melancholy ending or moment of tension is required, a Portal Slam may come into play See also Meanwhile, in the Future… , San Dimas Time , Portal Door , Our Time Travel Is Different : Please don't duplicate entries between this trope, Meanwhile, in the Future… , and San Dimas Time . This trope refers to a specific form of time travel, "Meanwhile, in the Future..." refers to when a story follows different plotlines across different time periods, and "San Dimas Time" is when the narrative of a time travel plot combines with Race Against the Clock

The writing on the wall. A mystical phenomenon that tells of a dire future for those who witness it. Specific types of portents include:

Compare with Foreshadowing , the out-of-universe equivalent. Compare with Magpies as Portents , which can involve both negative and positive outcomes Only place examples here that do not belong on one of the Sub-Tropes

Many anime , manga , and especially light novel series have fairly lengthy titles. Frequently, they wind up picking up a portmanteau series nickname, with a syllable or two of each word in the series name. Sometimes, the producers explicitly encourage this, and refer to the series using the nickname in the Post-Episode Trailer . Portmanteau words are the Japanese equivalent of acronyms. The Japanese language is syllabic — instead of single letters, Japanese is built from entire syllables; consonants (except "n") don't occur by themselves. So where a Western term would produce an acronym, the Japanese equivalent produces a pronounceable word. The Japanese use portmanteau terms in much the same way that English speakers use acronyms. Which is to say, frequently. More so recently thanks to the need to create short hashtags on Twitter, some of which have been officially endorsed by the author or publisher. Probably the most famous is Pocket Monsters</ becoming Pokémon </. The longer name is official for both the games and the show in Japan, but couldn't be used in America because an early-90s toyline/comic/cartoon had secured the trademark on the name " Monster in My Pocket ". This is actually slightly common; some of these are so ubiquitous that they get used as the official English titles. See also Officially Shortened Title Alphabetical order by official Japanese title, please.

Some games are ported. A few get to the point where they can be played on virtually anything with a screen. No matter what system you own, it probably has some of these games on it. This page lists those games which have reached an absurd level of ubiquity in the video game industry, to the point where a platform's library feels incomplete without it. All of the following games have been commercially released on . The easiest way to see if a game qualifies

for this page is to run it through the GameFAQs , or 's. Also, a game's Wikipedia page will often give an exhaustive list of its ports. 1942 </

Sometimes in works involving animals, an animal will be portrayed by a different species, subspecies, or breed than what it is supposed by in in-universe. A good reason for this may be that the intended species may not be available for acting, so the filmmakers instead use a similar species. This may be because the species is either very rare, extinct, or imaginary. (For example, a unicorn may be portrayed by a horse wearing a fake horn.) Another reason may be that the species meant to be portrayed is too dangerous so the filmmakers instead use a similar species which is easier to handle. Sometimes makeup or prosthetics may be applied to the animal to make it look more like the species meant to be portrayed This trope is frequently used for extinct and fictional species, especially if said species is similar enough to a real living species that it can be portrayed by such. (In this case, the trope would obviously be justified since, for obvious reasons, the producers could never find an actual living individual of the species meant to be portrayed.) Otherwise, they would most likely be CGI Related tropes include Adaptational Species Change and Slurpasaur . The former contrasts with this trope in that it is about a species formerly portrayed being changed in a later adaptation of said work. The latter mainly involves using lizards and similar ordinary modern reptiles to portray dinosaurs. See also Terrifying Pet Store Rat This trope would mostly be limited to live-action television and films as opposed to animated (unless you count in-universe examples), since cartoon animals are not actually "played" by real animals Could be considered a sister trope to Informed Species (where an animal looks nothing or little like the species it is supposed to be). Incorrect Animal Noise may be in effect if a recording of an animal sound is used for a different species. Compare Ass in a Lion Skin for in-universe examples where an animal is disguised as another species

A list of media originating in Portugal .

This is when an innocent person holds an item that makes them look guilty One common way this manifests is when a character commits an offense with a certain piece of evidence, usually a weapon, so they will encounter some poor sap and place the object in his hands so that an authority figure will believe he is to blame and have him take the fall. Other times, a character might scold the felon while swiping the object from his hand, only for the authority figure to arrive at the wrong time and assume the hero is to blame In some cases, the object isn't planted and the supposed guilty party just happens to pick it up Related to The Corpse Stops Here , Not What It Looks Like , Frame-Up , and He's Got a Weapon! Better Manhandle the Murder Weapon is a subtrope where an innocent person winds up getting the murder weapon in their possession. Compare Foreign Money Is Proof of Guilt , which is when the object making someone look guilty is foreign currency

In fanfiction , it's very common for favoritism to show up. After all, everybody has their preferences and regardless of their role in the story, it's never a uniform thing. However, one frequent thing is for the author of a particular fanfic to appropriate a character. Rather than creating an original character, this author will overhaul the role, importance and personality of a particular canon character they like in order to make the character "ideal" (i.e., a stereotypical Mary Sue) Every canon character in fanfiction represents the fan's re-interpretation of that character. They aren't the original author, so they don't have first-hand knowledge of the inner mechanics beyond what is shown in the released materials. The most they can do is try their best to emulate that character using the information they have, with varying levels of success. This trope refers to the more extreme situation, when a character's most basic, undeniable traits are flat out ignored in favor of the author's own views and/or desires. For example, a fanfic of a Harem Anime that takes the Shrinking Violet character and has her all of the sudden grow a backbone and force her way into being the official romantic interest of the hero would definitely be a case of this trope. In short, it's as if a spirit (the author) possessed their bodies and took over to create a Usually, it's secondary characters that get this treatment, but it's not unheard of for main characters as well. For example, if a fanfic of Inspector Gadget </ has the title character all of a sudden gain a near-omniscient level of detective expertise (hell, even just half-decent detective skills) and singlehandedly expose and arrest all of Dr. Claw's organization, without</ this being somehow subverted at the end and/or played for laughs, that would definitely be a case of this The traits that mark a Possession Sue are just as myriad as the ones that mark a regular old Mary Sue . As a general trend, authors that make these characters also tend to strip away much of the original characterization in the process of "idealizing" their favorite character. They might be made uber-competent , turn out to be extremely beautiful after all , outshine every other character , gain new and previously unknown powers , have a revelation of being someone's long-lost child and what have you from the Common Mary Sue Traits . Other times, they're rewritten to resemble the original author more closely, such as having a similar family situation, or having identical tastes in fashion and music. Most importantly, though, is that the character is favored by the author to such a point that the same Mary Sue favoritism present in other characters and the universe come up As far as the Mary Sue subtypes go, any of them can apply, but the single most common is Fixer Sue . After all, the author is pretty much applying their own viewpoint on how the canon should</ go and hijacking a character to "fix" it is probably the single biggest inspiration for rewriting a character. Otherwise, the author might just be trying to avoid the stigma of original characters while still wanting a mask to wear as they insert themselves within the story The term most often used for this is actually "Canon Sue," but there's a second, different (if related) trope also known as Canon Sue . Where a Canon Sue is a canonical character that has Mary Sue traits in the original work, a Possession Sue is a canonical character that is given</ Mary Sue traits in a fanwork. When canon writers forcibly turn their own characters into Mary Sues, Possession Sue-style, it's a form of Character Derailment . Often overlaps with Self-Insert Fic Compare with the O.C. Stand-in , which is not necessarily a Sue, but does share the characteristic of being a canon character—in

this case, an underdeveloped Flat Character —overhauled to an author's liking Contrast Copy Cat Sue , which, rather than stripping the characterization of a canon character to make them "more appealing", instead synthesizes a blatant clone of a canon character

A rather large sub-genre of military fiction and technothrillers, Possible War works are works dealing with a hypothetical, but semi-plausible conflict in the world at the time they were written. Accuracy may vary, as many of these tend to be works trying to increase defence spending . Can be split into the more plausible techno-thrillers and the more alarmist "invasion literature". There are a number of popular settings for this, depending on who the relevant "main enemy" was at the time of work. Alien Invasion is basically this IN SPACE!). See also Invaded States of America and Second American Civil War . Published between 1871 and 1914. Started with The Battle of Dorking</. Before 1903, the invader was France. With The Riddle of the Sands</ (not one of these, technically speaking), switched to Germany (the Entente Cordiale and all that). (The War of the Worlds </ was actually a case of this, with the Germans swapped out out for advanced aliens). Believe it or not Dracula has been classified by some literary critics (including Wikipedia) as an example of an "invasion novel". World War III in Europe, a very popular genre, especially in the 1980s. Nuclear weapons here will be rather restrained in their use, if used at all Red Storm Rising </

The "Second Korean War ". Very technically, it'd be the same Korean War as the one from 1950-53, as technically that war is still ongoing; the war stopping in 1953 was via an armistice that has never been formalized into an actual treaty. On the other hand, it's likely that in practice, it probably would be called the "Second Korean War": we call the armed conflicts between Israel and the Arab states in 1948, 1956, 1967, and 1973 different names (many Red Phoenix </ by Larry Bond . Just before The Great Politics Mess-Up , Harold Coyle (who also wrote Team Yankee </) published Sword Point</ , which featured a three-way war between the USSR, Iran, and the USA. USSR invades for the oil US opposes USSR, and Iran doesn't want either of them.

Now, some dogs will rise to the challenge and, say, singlehandedly defend their owners from a marauding gang , but sometimes the family pet will remember that, deep down, it's always been a wolf, and then turn into a Super-Persistent Predator or a Hellhound . Oftentimes, villains are a lot likelier to have dogs , since dogs are savage predators that are loyal to each other , as well as formidable scavengers against sane people , and dogs and villains are just fit, making a Post-Apocalyptic Dog a perfect Canine Companion for a Card-Carrying Villain . We fear Savage Wolves and Hellhounds , and, after the end of the world, our heroes will sometimes have to fight off a whole pack of Post-Apocalyptic Dogs that used to be friendly neighborhood mutts, a Diabolical Mastermind 's Right Hand Attack Dogs , or villainous dogs from hell Whatever the situation, the Post-Apocalyptic Dog is often a major touchstone of morality after the apocalypse, for the dogs and for ourselves. For example, let's just hope that their straitened circumstances never force our heroes to contemplate eating their trusty hound.. Not to be confused with Apocalyptic Log . See also A

Boy and His X , Evil-Detecting Dog , Heroes Love Dogs , Right-Hand Attack Dog and Hellhound

The Sore Loser (usually it's a sore loser, but not always) is not pleased that they lost the big game, got a bad call from a referee, or were humiliated in front of spectators. So what do they do? They decide to physically assault the offender after the game has ended and everyone's gone home. They usually intend to inflict a No-Holds-Barred Beatdown and/or Curb-Stomp Battle on the offender As the examples show, it usually does not go well for the instigator of this trope. Usually, it turns out to be the assailant that ends up on the receiving end, adding to their Humiliation Conga . This can serve as An Aesop about sportsmanship and accepting defeat Expect to see this trope in sports related media (bonus points if it's a combat sport like boxing, karate, MMA, etc). Note that this trope doesn't have to happen immediately after the contest. It can take place beforehand or in between events If the violence happens inside the playing area during the game, it's Unnecessary Roughness . If the violence happens outside the playing area during the game, it's Ring Out . If the fans are the violent ones, it's Football Hooligans . If the intent is to injure the opponents to hamper their skills & abilities, it's Crippling the Competition

A character, dead from the start or killed very early in a work, who is either depicted as The Ghost (not </ literally </) or developed entirely via flashbacks . May make heavy use of Posthumous Narration . Averts We Hardly Knew Ye . Video Wills , Apocalyptic Logs , Troubled Backstory Flashbacks , suicide notes, and mention by other characters on what he or she was like may help. Expect them to appear in a Happier Home Movie , which the protagonist will watch over and over until he realizes It's All Junk . The Afterlife may be used as a Framing Device . The Lost Lenore is often such a character. Undead characters and spirits don't count: the effect should be that, despite a character being dead and absent from the present, they still have as large a part in what's going on as the rest of the characters. At the very least, the viewer should getting to know the character surprisingly well despite not being physically present.</ Generally this character's demise is a Plot-Triggering Death . Compare with Dead Star Walking , Dead All Along , and Dead to Begin With . Contrast with Forgotten Fallen Friend . See also Death by Origin Story , which can sometimes overlap, if the origin story is a flashback. The Predecessor Villain is often a specific type of Posthumous Character. Greater-Scope Villain can be a villain version of this trope, depending on how it's used. Starts with Their Funeral can lead to this trope if the dead character is shown in flashbacks An Impersonation-Exclusive Character will often be one of these. Kanata Izumi in Lucky Star </ , who is deceased before the beginning of both the manga and the anime. She occasionally comes back as a ghost, checking up on how her family is doing.

An actor or someone who worked on a film or some other type of media has been dead for some time and the project they worked on has come out, but they will still get credit for their contributions This is pointing out those who died and contributed to a media project released after their death They often happen to

be dedicated to those who died

Some works get recognized long after they are released . Some shows become more popular after they are cancelled . But this is when a creator receives a boost in recognition when they have stopped creating... for good This may be caused by a number of reasons: people who enjoyed the creator during their initial popularity might feel nostalgic for their work once they have passed, or may want to pay respect to them by keeping their work in memory. In a few cases, creators who were only known in a few niche circles during their lives have become mainstream names after their deaths. Compare The Dead Rise to Advertise , when the likenesses of celebrities and historical figures are used to promote products, and the In-Universe equivalent to this reaction, Dead Artists Are Better . Is often a result of Never Speak Ill of the Dead To avoid knee-jerk reactions, wait six months after the creator's death to add an example . This is not a place to gush about creators you like , after all

You think True Love's Kiss is impressive? Hah, all that kiss can do is wake someone up , or change their species . The most powerful kiss does the opposite: sending a person into a stiff, rigid, frozen state of shock, unable to move, talk, comprehend their surroundings, or remember their own name (in which case, it's more of a family-friendly version of the Something Else Also Rises trope). Kiss-induced shock is severe enough that a Colony Drop cannot snap them out of it. The condition can last anywhere from 24 seconds to 24 hours after the kiss, during which time they can expect to see lots of imaginary fireworks. An Accidental Kiss or First Kiss will exacerbate the symptoms This affliction favors males. Something about this effect makes male characters look more dumbfounded, happy, and stupid than if it was applied to the opposite gender (though obviously, there are exceptions) Not to Be Confused with Kiss of Death . Compare Distracted by the Sexy

Postmodernism first emerged as a philosophical movement amid the ruins and tribulations of postwar Europe and stems from a general disillusionment with thirties-era modernism brought about by World War II . It was natural, and almost inevitable, that people who had suffered through the war (and the preceding Great Depression) would question the ideals of perpetual progress inherent in modernism, and that would lead to a philosophy of questioning everything in general. It has been pointed out that much post-modernist thinking originated in the countries (France, Germany) with a history of wartime devastation and in reaction to the threat of nuclear war which reared its head at the end of the war Post-modernism in books and movies was largely a questioning on the nature of narrative and plot and characterization. An epic story with The Hero orbited by Satellite Characters was succeeded by stories with Loads and Loads of Characters with The Hero , if it is used, openly presented and critiqued as an Audience Surrogate . Essentially, authors wanted readers to be more aware of how storytelling works and interact and question it so that they become active rather than passive audiences, leading to Viewers Are Geniuses , the aversion of Small Reference Pools , and all kinds of Genius Bonus . In Europe, this was related to a growing awareness that modern democracies

and totalitarian governments are too vast for any single heroic figure to resonate: WW2 wasn't won by a single great general's gambit or small heroic actions, but a Gambit Pileup so vast that the world is still trying to put it together, and ultimately the Allied Powers were too late to do anything to halt The Holocaust aside from counting the bodies and helping the survivors. After that, artists and philosophers felt that old forms of storytelling would no longer work in this new reality. The Frankfurt critic and philosopher, Theodor Adorno, famously stated that poetry was impossible after Auschwitz, which he did not mean as a literal statement but a general feeling, that was echoed and felt by many artists who felt that conventional storytelling no longer explained the tragedy and horror of the times and that any artist or philosopher who tries to come up with a "Grand Narrative" that ties everything together is either delusional or dangerous. Post-modernist narratives can be generally distinguished by their dearth of characters with large-scale agency. The actors in earth-shaking events are governments, institutions, and societies, and the story deals with the ways in which the characters do or do not fit into that broader picture This led to all kinds of Take a Third Option in storytelling, efforts that echoed conventional pre-war genres but with a more contemporary, darker twist, the Happy Ending was often shown with Stylistic Suck or a parody, and while Downer Ending never went out of style, we now had the Gainax Ending where the story goes beyond the fate of the characters and the confines of the story, sometimes directly addressing the viewer, other times leaving them with a sense of irresolution and uncertainty, sometimes yes veering to True Art Is Incomprehensible levels but with the intention that audiences should think and engage with the work, however difficult it may be, as per their own experience without the story telling them what to think and how to feel. Deconstruction was developed as an independent strain in this time and post-modernism generally features a strong deconstructive aspect. In general, postmodern writing involves a blurring of boundaries. An example of this is blurring the boundary between the reader or viewer and the fiction — for example, a TV show that acknowledges that it is not real (contrast This Is Reality). However, Postmodernism can also be applied to fiction that mixes different genres into something new, such as the way that Cowboy Bebop </ combines western tropes with science fiction and various movie pastiches . Here, Postmodernism describes a self-referential fiction, a fiction which references other fiction, or a fiction which displays some awareness that it is a fiction. The Subverted Trope , Discredited Trope , lack of Genre Blindness , Deconstruction of conventional boundaries, and Playing With the Fourth Wall (or lack thereof) are all hallmarks of Postmodernism. Expect Mind Screw Postmodernism is also a popular school of thought in the social sciences and humanities, largely revolving around the idea that a cogent argument doesn't necessarily have to make points that are actually true, while arguments that may " technically</" be true in some sense are not necessarily either convincing or valuable. In academic disciplines, the biggest impact that Postmodernism introduced was to sever the idea of history, society, or existence, being linear and progressive (i.e. the world is going to get better and better) and that led to the popularity of Alternate History and For Want of a Nail not only in speculative fiction but also in serious works of non-fiction where people showed that a lot of things people saw in history wasn't inevitable but in large part accidental or came down to

pure dumb luck. Postmodernist theorists by extended research also pointed out how the idea of society going somewhere was Newer Than They Think , based on Entertainingly Wrong assumptions that have become Dated History (a strain that is called Historicism or New Historicism). Contingency and agency became watchwords in post-modernist inspired works. Post-modernist inspired accounts insist that life is in large sense a Random Events Plot and much of what we consider the "pursuit of knowledge" is a narrative that distracts us from realizing that, drawing inspiration from Existentialism In general practice however, a lot of the serious and intellectual character of the movement tends to be too obscure or too bleak to register outside an impartial academic course. Postmodernism in certain works of fiction can often simply be about spoiling everything for everyone without having to adopt any unspoiled or easily spoilable ideas of your own, which contributes greatly to the "Huh?" factor in postmodern texts (books, films, shows, art, etc.) — they treat themselves as already didactic and spoiled, and instead attempt to generate enjoyment through the adroitness of their use of their own tropes and medium . World of Symbolism tends to come up, even when it's not necessarily obvious, so best try to have fun when Everyone Is Jesus in Purgatory . In the extremes of such instances, postmodernism becomes a posture, using irony as a defense , an attempt to dodge responsibility and more or less advocate preserving the status-quo from the comfort of learned and knowing distance. This is considered the conservative strain of postmodernism which allows it to be co-opted and adopted in a number of consumerist media. The contemporary definition of Postmodernism is extremely ambiguous, and some of the definitions are extremely metaphysical, so don't go out into the world thinking this article is all there is to the concept. That the very term "Post-modern" is inherently self-contradictory is freely acknowledged — indeed celebrated — within Postmodernism itself Because of all of the above, postmodernism has taken on a modern reputation as deliberately opaque and pretentious, with many trying to move away from it as a means of furthering media in a more accessible direction. However, as many postmodernists will gladly point out, this only ends up furthering the ethos of postmodernism: the idea that rejecting postmodernity is in and of itself postmodern is a popular one among this school of thought. Thus, the popular academic view on postmodernism is that it is, by its very nature, an ideological ouroboros, feeding off of itself and thriving especially on people's responses to it. Consequently, because of its self-fueling nature, it's highly unlikely that postmodernism will decline anytime soon Not to be confused with Irony , per se</, although both terms have been frequently misused as such since The '90s . Interestingly, the Death of the Author is a Criticism Trope that both groups can often agree on . Modernists can claim it's possible to come to a canonical conclusion about the text regardless of the author's changing opinions , whereas postmodernists can claim that "there is nothing outside the text" </ and that their opinion of what the author was trying to say</ is equally likely to be true as their opinion of what the work itself states. Confused? . A.K.A. PoMo. Compare Dada . See also Affectionate Parody and Surreal Humor . May sometimes border onto True Art Is Incomprehensible territory. Related heavily to Medium Awareness , Breaking the Fourth Wall , No Fourth Wall , Fiction Identity Postulate (which states that all fictions are equally fictional). So Last Season these days. We're up to Nuvo-Retro-Ex-Post-Modernism now

Most fantasy is based on ancient folklore, but why not set your fantasy in the industrial age or further? When you do this, you are forced to update some of the trappings of your fantasy. If vampires can't safely go out in daylight, does sunscreen help them ? What about just shining a flashlight at them with a UV bulb? What about the UV ray from moonlight</? Given that Christianity was regarded as the one true faith in medieval Europe, it made sense that only crosses would affect them, but in a different region and time , how well would that weakness carry over? Would a cross work on a Taoist vampire ? What could you use on a Muslim vampire when Islam is against the use of symbols for its faith? Would there even be</ any Muslim Vampires, considering that Islam forbids the drinking of blood? Is it the faith of the wielder that matters? Can a Jew fend off vampires with a Star of David? What about the fact that in addition to being haram, blood is also not kosher (i.e. treife)? Can Gordon Gekko fend them off with his wallet ? Funnily enough, a similar event happened with a banker and a vampire in Vampire: The Masquerade This is Post Modern Magik. It's what you get when you decide that magic shotguns make as much sense as magic swords, and vampires that don't show up in mirrors also don't show up on camera Even if a series tries to avoid modern day entirely, the tendency for magic to act like computer programs has bled into the "pure" magical genre. Can be common in Fantasy Kitchen Sink , where you have robots and fairies both running around. However, many of those authors try to separate the sci-fi and fantasy elements; the most common way around this is to make a rule that magic gives off an anti-technology field (or vice-versa) so that at any one place only magic or technology works. Note that this is not Magitek . Magitek is technology created with magic, like a camera which is really just a box with an Imp inside drawing really fast , or an "Internet" made from magic mirrors and living books. Post Modern Magik concerns itself with how non-magical technology interacts with magic, like when regular cameras aren't able to take pictures of vampires due to the use of silver halide photo-chemicals and mirrors , and demons are real, but can be beaten up by mutants or be fooled by realistic androids . Common in Urban Fantasy settings, and often seen where Our Monsters Are Different (especially vampires). Now to figure out where this fits in Harmony Versus Discipline . Compare Magic from Technology , Muggles Do It Better (when today's technology trumps magic), Modernized God and Sufficiently Analyzed Magic . See also Magick for post modern spellings</ of magick.

9/11 did a lot towards making the mere mention</ of terrorists in fiction an incredibly risky gambit in the eyes of Hollywood. Many executives even went so far as to remove the World Trade Center from their movies to avoid offending or saddening people in the years afterwards, for fear of it being too soon. For Films and Live-Action TV series, the time after September Eleventh can be classified into three periods: : Where a great, great</ many movies after 9/11 don't talk about it, mention it, or even imply</ it happened, stories set in the US, especially New York, after the attacks that should logically deal with terrorism never even talk about it passingly. In , as these fears subsided, writers and directors would dare to be brave and artsy by using incrementally larger references and even plots related to terrorism. Until eventually, brought the opposite reaction to the first: movies that go overboard in dealing

exclusively with terrorism. These movies (though Live-Action TV deals with this too) tend to fall flat for several reasons. In the First, because of the total absence of what should be logically there (lame excuses add to this). The second tend to be too self-congratulatory for the relatively minor mention; leading into the third turning Anvilicious in their focus on terrorism. Another aspect is that the armed forces tend to be given one of three treatments: puppy-kicking monsters, a helpless Red Shirt Army , or a near Mary Sue competence boost. This last usually happens in action movies that want to kick terrorist tail. This (for international viewers anyway) tends to have a bit too much America Saves the Day , considering the war is ongoing. Interestingly, shows that dealt with terrorism before 9/11 tend to fare better than those made after, albeit they reacted in different ways. As more and more time passes, these works are inevitably becoming Unintentional Period Pieces . A Sub-Trope of The War on Terror . See Western Terrorists .

Full Metal Panic! So except the actual act of hijacking an airplane there was ZERO parallel with 9/11.

The Transformers Film Series </ managed to capture all three periods: 24 </ is poster child for the hysteria of the post-9/11 era. A related trend during the 2000s was the Post-9/11 Military Game, which had you playing as a Western soldier or operative fighting terrorists in the Middle East or in other global hot zones. The First-Person Shooter genre especially was dominated by such games, with the more science fiction-inspired settings popular in The '90s falling by the wayside outside of a few standard-bearing franchises. At the genre's peak, they were often compared, by both their fans and their critics, to the gung-ho, Patriotic Fervor -driven war movies that Hollywood made during and after World War II .

After 9/11, G.I. Joe merchandise and programs took the "terrorist" out of Cobra's description as a "ruthless terrorist organization determined to rule the world."

Sometimes a work has a different name during production that ends up being different from the one it has once it's finally released. Sometimes, though, a work's title changes after</ it's been released This is often to coincide with a re-release, but it can happen at any time and for a variety of reasons. Sometimes the title ended up conflicting with a previously existing work, other times the new title is more indicative of what the work became, and other times still the creator simply didn't like the original name and opted to change it as soon as they could think of something better Sister Trope to Working Title : when a work has a different title during production, either because a title has not been finalized, or to help prevent leaks

When a sitcom protagonist has an encounter with crime they will become paranoid of everyone around them. They will take a self-defense class (you-know-what ensues) or buy a gun. In the latter case a trigger-happy random shootfest inevitably follows, and somebody gets shot in the foot. Not everyone needs to (or should) own a gun, and not everybody who owns one knows or cares how to use it responsibly. Some statistics show friends and relatives are shot more often than criminals, yet others also show that some areas with high gun ownership may have lower crime rates than areas with low gun

ownership. In short, a lot relies on your interpretation of Lies, Damned Lies, and Statistics . This plot may involve Living is More Than Surviving if the protagonist becomes so terrified they begin to close themselves off from the world to ensure their safety, messing up their quality of life. Live-Action TV Newspaper Comics Western Animation

The Singularity has arrived! Technology has advanced to the point that practically anyone can have practically anything for practically nothing. Often involves Nanomachines , 3D Printers, or other forms of Matter Replicator . In other words, A Wizard Did It — with SCIENCE! Expect a lot of Artistic License – Physics . Put more charitably, complete automation via advanced AI or similar contrivances Bonus points for those cases that deal with the fact that some things are still</ intrinsically scarce because of their very nature. The ability to effectively infinitely replicate any commodity does not mean everyone can have a house just like , the front row seat to a particular concert, or the authentic, original Honus Wagner tobacco card

To the Stars </ has this with Earth, with replicators being commonplace, although there are "allocs" for luxury items like non-synthesized restaurant food or berths on space-going vessels. Averted, however, on the other planets in humanity's empire, which still use a capitalist system. The main character, from Earth, is therefore quite confused when deployed to one of these planets and is bombarded by things called "advertisements". To the fanfic's credit, it's mentioned that the twenty-year-and-still going war is causing resources to be drained faster, resulting in an economic shift back towards a capitalist model. Professions which used to be performed for free pre-war are beginning to ask for donations, and students are re-thinking their career choices when they could previously chase whatever dream they wanted regardless of productivity. This is understandably troubling for many Earthborn who are unused to the idea of scarcity, especially for the basics.

The TNG era of Star Trek (depicted in Star Trek: The Next Generation </, Star Trek: Deep Space Nine </, and Star Trek: Voyager </) has the Federation as Post Scarcity. Captain Picard explains that humans now work to better themselves rather than to accumulate power and worldly possessions. This concept is played inconsistently, however, as the Federation still has restaurants and shops on Earth, still has family-run businesses and still conducts trade. It's also worth noting that some Federation citizens (most notably Vaush) do resort to crime, apparently in an effort to buy a standard of living outside the Federation superior to the one enjoyed within the Federation. The franchise never goes into specifics about how any of this works Warhammer 40,000 </ Hostile Waters: Antaeus Rising </ takes place in a world where Nano Machines can create anything from dirt, and created a post-scarcity world where money is no longer used. The villains consist of The Remnant of the old guard, seeking to tear down this system and reinstate scarcity so they can reclaim their old power and influence. Schlock Mercenary </ :

People who live in the civilized empires of Orion's Arm </ can easily go their entire lives without ever having to work, Archailects can provide anything they need and much of what they want for free. , though, with some common professions being raising the next generation

(either through parenting or by provolving non-sentient species) and Terraforming . The NoCoZo is the biggest exception, being dominated by a number of Mega Corps .

Well, they all said your show was too good to last. You fended off Executive Meddling , and stayed true to your original vision of the series . Of course, you got cancelled, but that's to be expected. Fortunately, you had plenty of warning and were able to do a Grand Finale . It was a huge spectacle, full of guest stars and special effects and you tied up all the loose ends so that everyone could go home happy with a sense of closure. Nothing left to do now but record the DVD commentary track and sell the props on eBay . Wait, what's that? The network just called. The fans, bless their hearts, launched the biggest letter-writing campaign ever, and the ratings on the finale were through the roof. They've decided to renew you for another season ! Oh no. What are you going to do now? You killed off Lord Voldemort , got Voyager back to the Alpha Quadrant , sank the Bismarck</, resolved all the sexual tension and/or saved the galaxy . There's nowhere else for the story to go</ . But, hey, don't let that stop you. After all, you got yourself another season. Other producers would kill for a chance like this, so why not just go ahead? The problem is, unless you're very</ careful with how you go about the new season, you might end up Jumping the Shark . The Post Script Season is what happens when a show is renewed after it has resolved its plot arc. You end up with a season, maybe two, where the show is forced to try out a whole new premise. This seldom goes well. In the first place, you've got to shoehorn these existing characters into a new premise that doesn't quite fit them. Expect Character Derailment . Secondly, you've already had a Grand Finale , and it's going to be hard to top that . You've already shot your dramatic wad. No wonder fans of other media get just a bit</ of dissonant feelings when they hear about how you threw away a perfectly good ending just because you wanted more. However, not all Post Script Seasons are unmitigated disasters . There have been a few creators who've handled their new seasons with care and presented material just as satisfying as (if not more than) the material that preceded. Also, if there are still lingering questions unanswered or plot points that have yet to be solved, this is the perfect place to fix that. A form of Retool . Sometimes results in Plot Leveling . Can suffer from Final Season Casting . Compare After Show , Sequelitis , and Trilogy Creep . See also Series Fauxnale . If handled poorly it might also cause the show to turn into a Franchise Zombie .

In academia, adding the prefix "post" to a movement, theory, genre, etc is quite common. The best way to describe the meaning of "post" in this context is to see that "post" is a synonym for "beyond", building on the innovations, theories, style, etc of the original in such a way as to take it beyond what the original was, creating a new theory, genre, whatever, in the process. See Also Evolving Trope Often subverted in popculture. Usually when someone is being called a "Post-something", it amounts to Strawman

So a character just woke up, they got out of bed still half asleep and start going about their morning routine , not noticing their bed is made out of frogs, or that there's a tiger in the bathroom , or that they gained 200 pounds over night, or that there's a homely stranger beside you after drinking a couple of rounds last night . Then suddenly the realization hits them in the face (some

times literally) and they freak out It may occur after the lights are turned on, they see themselves in the mirror and/or take a close look at their surroundings; it might be something else that snaps them out of their lethargic state, like hearing a loud noise, tripping on something or getting hurt somehow; other times they just have a delayed reaction It's practically mandatory for any stories involving a Gender Bender or "Freaky Friday" Flip (assuming the switch occurs overnight) Whatever the case they didn't see the changes right away because they hadn't fully woken up or couldn't see, and are shocked when they do. When they wake up to the fact, they might think they're still asleep, or drunk if they drank the night before. Usually done for humor, but can be done for horror as well Although actually getting out of bed is not necessary it adds to the humor when the audience sees something the character hasn't payed attention to yet. Bonus points if they treat something strange as if it was normal before the realization May overlap with Bedmate Reveal , You Wake Up in a Room , and That Was Not a Dream Subtrope of Delayed Reaction . May happen during a The Murder After realization Compare Unusually Uninteresting Sight , where something weird is ignored even when wide awake. Contrast Instant Waking Skills , where the character goes from asleep to awake immediately and is aware of everything. Somewhat related to Wham Line

The practice of using 'hidden' links rather than the page's actual title, so that words or phrases are highlighted. This makes it easy to insert links without disrupting the flow of the narrative, but causes viewers who compulsively click while reading to lose track of a long article. Blogs are notorious for this, rather than putting links at the end of an article. See Text Formatting Rules for how to make one If the linked article is completely irrelevant to the displayed text, then it's a Sink Hole . Sink Holes are discouraged Not to be confused with a Plot Hole , or those things in the road

Alice gets up in front of the class and starts her speech, but something's wrong. She looks distracted, and she can't seem to stand still. Her legs and hips gently sway from side to side and her knees turn inward. Soon Alice is drawing odd looks from her classmates as they start to realize what's wrong: Alice has gotta go ! The situation grows tense as she slowly becomes more and more restless, but at last her speech is finished and she can dash from the classroom in search of some badly needed relief It's a dance of the ages, that sometimes subtle and sometimes blatant collection of movements intended to resist the body's natural urges and avoid a

messy disaster . Sometimes, the trope might be parodied by framing it as an actual dance, complete with music, and it may lead to an Accidental Dance Craze . Most commonly observed with children or those experiencing a lengthy Potty Emergency that might just ultimately result in a Potty Failure . Like those two tropes, it is frequently Played for Laughs

A comedy routine which involves a character really</ having to go to the bathroom, and being prevented from doing so by various plot contrivances. This often climaxes in a frenetic scene where the character darts desperately from location to location, clutching their groin , searching for someplace, anyplace</ where they can empty their bladder. The search will usually prove unfruitful — and the visited places progressively more embarrassing — as the routine wears on. For example: the routine may start with the character finding some very obvious way of filling up his bladder, such as by chugging a Klatchian Coffee or a Gigantic Gulp . He makes a mad dash to the men's restroom, only to see a sign on the door: Closed for Cleaning. He tries to sneak into the women's restroom instead, and we hear screams coming from inside followed by a couple of irate women chasing him out . The character then runs outside and darts behind a nearby tree to relieve himself , only to find it occupied by a child playing hide-and-seek. The character then runs off and ducks into a side street, only to find a young, cardigan sweater-wearing couple strolling down it. The character quickly high-tails it out of there and hides behind a nearby school bus. No sooner has he started unfurling his pants, than he looks up and notices that the bus is filled with a group of gawking nuns who are staring slack-jawed down at him. After a few more failed attempts at hiding and peeing, the character finally ducks into a building, runs down a dark corridor and into a room filled with rows of folding chairs, a podium, and a waste-paper basket. Sighing happily, the character unzips his trousers and starts relieving himself into the waste-paper basket — at which point, the lights go on and a large group of burly police officers start filing into the room. Only now does the character notice the huge sign hanging on the wall at the back of the room which reads: "International Order Of Burly Police Officers Training Seminar #27: How to Spot And Subdue A Sexual Predator." As the scene fades to black, we hear the sound of a hundred nightsticks hitting the cranium of our hapless potty-goer. Note that the above scenario takes a Potty Emergency to its logical severe extreme; most Potty Emergencies won't end like this, but instead, end with the character fainting or just giving up and going in some random place, damn the consequences . Or, even more humiliatingly, it will end when the character just can't hold it any longer, resulting in Potty Failure (Embarrassing Damp Sheets if asleep), or, if they were frightened, Bring My Brown Pants . Very rarely does it end with him/her finding a suitable bathroom in the nick of time, but when it does, it ends with the character often enjoying that delicious euphoria that comes when such stress is relieved. A person trapped in a Potty Emergency can expect to be sadistically subjected to all sorts of "watery" imagery — flowing water, spraying water, splashing water, kids running through sprinklers, water fountains, and worst of all, lemonade</. All of which will remind him of the one thing</ he so desperately wants to do, but can't. Relatedly, a character who has to go to the bathroom while asleep will have dreams of such watery imagery. If they are currently in</ a body of water with an emergency, they may resolve this by just relieving themselves on the spot. This trope can also

happen on another end of the body, as the effect of food poisoning or a laxative or emetic prank . Sometimes a variant has the character(s) looking for a place to perform some non-potty-related but similarly private activity such as changing clothes, making out, or whatever . If this trope happens to a character who had been woken up and/or freed after an incredibly</ long time, it's Rip Van Tinkle . A video game that can potentially force players into one of these by denying them a chance to stop for a breather in the middle of some very long task expects them to have a Bladder of Steel . Commonly happens in a Toilet Training Plot . Sometimes this is punctuated with the character engaging in a little Calling Your Bathroom Breaks . Compare with Anti-Sneeze Finger , Inconvenient Itch , and Excrement Statement . See Jar Potty for one solution to this problem. While we can all attest to this in our own lives , we do not need to do it here. (Fictional ones can be unpleasant enough.)

When a Potty Emergency goes past critical, you get Potty Failure Essentially, Potty Failure is when a character wets him/herself, soils him/herself or both and the act is Played for Laughs . This is a common type of Toilet Humour May also happen if people hear a joke so funny that they have to pee themselves, or to anyone who's the victim of a Laxative Prank . Sometimes happens in a Toilet Training Plot Compare and contrast Excrement Statement . Compare Bring My Brown Pants , when this happens to a character whose loss of control is fright-induced. Also Compare Urine Trouble and Tinkle in the Eye , for non-house-broken pets and children. Also compare Embarrassing Damp Sheets , for when a character urinates or whatever else in their bed, and Warm Water Whiz for when a character urinates their bed because someone put their hand in warm water. Finally, see No Dead Body Poops for loss of control, or lack thereof, upon death

No Video Examples, Please! Video examples have been considered Not Safe for Work , and uploaded examples will be rejected. A demon from Angel </ to Fred: "My feelings for you are changing. I feel... warmth. Wait, no I don't. That's just me wetting myself because you wouldn't let me pee!"

Much like child-abuse , sexual harassment , AIDS , world-hunger and boy-bands , poverty is a universal societal ill that can bring out the best in us as much as it appeals to the worst. To be poor means that there is the establishment of a hierarchy that you are at the bottom of. Things that create a good quality of life like health-care and fresh produce are not as available to you than if you were born rich. You are constantly working terrible jobs with non-existent benefits for long hours with little pay and one slip-up can leave you likely to get arrested for the crime of being homeless, and like all other harsh realities, Black Comedy can help us cope with the injustice of it all Bankruptcy Barrel is often a prop used with this trope, showing that they are so poor that they lost their shirt in the repo, and they usually subsist on a Dog Food Diet when adequate Poverty Food is too pricey and they have no more shoes to boil Compare Actually Pretty Funny . Contrast Kill the Poor , where poverty is both serious and lethal. See also Dysfunction Junction and Hilariously Abusive Childhood

A tactic most commonly seen on TV, "poverty porn" is essentially when the condition of impoverished people is exploited in order to generate the necessary sympathy for selling a product (e.g. newspapers), or increasing charitable donations (or general support) for a given cause. This tactic can be in any type of media, whether it written, photographed, or filmed This is usually seen in commercials asking for donations in which images of abandoned dogs with bruises (implicitly caused by their former pet owner) fail to stand inside a cage, or of starving children in an undeveloped, war-ridden homeland that's under a dictatorship. Then the would-be-celebrity appears on the screen to guilt trip you into making a "small donation" (the "bare minimum" as they professionally call it) Your feelings at this point are supposed to be mixed feelings of pity and outrage. The tactic instills this response in you and then gives you an "opportunity" to act out your outrage while still showing your pity to these less fortunate people. Certain images are utilized in this way so often that they are practically "cash cows" for the well-meaning charity organization to show you Not to be confused with Poor Man's Porn , were it possible. Also see Appeal to Worse Problems and First World Problems , as well as Darkest Africa

Real Life

An index for tropes dealing with lower-class people living in squalor and/or struggling with debt, bankruptcy, unemployment, homelessness, or just an overall lack of wealth or fiscal standing. Almost never positive Contrast with Rich People and Luxury Tropes . See also Class Relations Index for how lower class people interact with other social classes

So the film was a massive success, and the studio wants you to make a sequel! Trouble is, you killed off all your main characters for real , blew up the Earth , destroyed the Time Machine and stopped the Big Bad from ever being born. So where do you go from here? Well, there was that one really cool side character - perhaps we could retell the story from his perspective! The P.O.V. Sequel, sometimes called a "Parallel", is a sequel or Spin-Off which, instead of putting your initial main characters in a new situation, simply retells a previous one from a different perspective (point-of-view) typically from another character or new protagonist. Done well, it can help you flesh out your side characters that the audience may have felt deserved more attention , and add new perspectives to the story up to and including making your Card-Carrying Villain into a sympathetic guy . Done badly, it reeks of laziness. Very similar to Simultaneous Arcs , which tell several different stories happening in the same storyline of a single work. Although, if it must be very rare to have a P.O.V Sequel telling no events simultaneous to the previous installment, strictly speaking, it's not impossible. The converse is more frequent however (simultaneous stories featuring unrelated characters). In some cases, it can be from the POV of the initial main character or characters somehow revisiting those events. Compare the Perspective Flip and the Elsewhere Fic , the non-canon equivalents (for canon or original characters, respectively); A Day in the Limelight , where the P.O.V. changes but tells an original story; Changing of the Guard , where the main character shifts to tell an original story; Been There, Shaped History , when the

sequel protagonist does something that retroactively affects the original's plotline; and "Rashomon"-Style , where the character's opinions can color what the audience sees. Gaiden Game can be a video game specific version. Another Side, Another Story is a video game specific subtrope where the P.O.V. Sequel is another game mode unlocked after you complete it the first time. Can also be an exploration of But for Me, It Was Tuesday . Not to be confused with Synchronous Episodes , where two episodes are set at the same time, but their plots don't overlap.

During major wars, armies will often capture numerous enemy soldiers. These enemies must be kept somewhere, preferably some place where they can not return to their fellows. This usually results in a Prisoner of War Camp. As soldiers on the battlefield, these two groups are enemies. For whatever reason, a group of soldiers has been captured by the very guys they were trying to kill just the day before. The camp guards will not like the prisoners because those same prisoners may have been responsible for the death and destruction visited upon their homeland. Typically, the guards will not be nice about the way they treat their prisoners. This can vary from country to country: during World War II , POW camps in Allied countries that were not directly attacked in their own territory, especially USA and Canada, were usually compliant with the Geneva Conventions and were surprisingly hospitable to the Axis soldiers to the point where they often considered them more comfortable than their own side's barracks. This had the benefits of prisoners less likely to cause trouble or escape and more willing to talk to interrogators and to cooperate supplementing labor needs like on local farms. Furthermore, those prisoners were allowed to write home through the International Red Cross organisation and they often mentioned how well they are doing as prisoners, which encouraged more Axis soldiers to surrender to Allied forces Since governments don't like having large numbers of 'potential enemies' running around loose in their back yard, something must be done about them. The answer to this problem is an internment camp. It's basically a PoW camp for civilians. Since they are almost always run by the military, we can consider them to be closely related, and therefore included. The concentration camp is the evil twin to the internment camp. Its main objective is to contain political prisoners for either extermination or to keep them handily available for slave labor. While detainees at an internment camp are generally not mistreated, detainees at a concentration camp can expect nothing but constant pain and hunger or instant death at any moment. Any way you look at it, you don't want to be a resident of any of these. Unless you're a guard As a Sub-Trope of Prison , most Prison Tropes will apply. This camp can readily turn into a Hell Hole Prison . If it is sufficiently escape-resistant, it can become The Alcatraz . You will always see plenty of heavily armed guards, unfriendly guard dogs, guard towers with machine guns and spotlights. Expect miles of barbed wire, often in tangled loops. Sometimes, the wire can be connected to high voltage for added deterrent to escape attempts. Frequently, you will see someone working on a Great Escape (indeed, in Real Life , trying to escape when the opportunity presents itself is often expected or required of military personnel). Many Military and Warfare Tropes will be seen as well Important to remember: the Geneva Conventions are treaties that set standards for how PoWs are supposed to be treated. They haven't always been honored — both in fiction and in Real Life . Camp guards have figured that

it's Not Cheating Unless You Get Caught — but if someone does get caught, it's Serious Business of the "kiss your military career goodbye" variety. Similarly, members of most militaries are taught that the first duty of any prisoner of war is to attempt to escape their captors and return to their unit. The more successful escape artists have figured that it's Not Cheating Unless You Get Caught — but if someone does get caught, it's Serious Business of the "kiss your freedom or even your life goodbye" variety The PoW Camp as a setting is a major fixture of many war films as well as many TV Series. In many FPS games, the PC must rescue a fellow soldier from a PoW Camp No Real Life Examples, Please! There's too many specific ones to count

When the dust clears and we see the characters again, they and their surroundings are completely, utterly covered in the stuff (compare Ash Face). They stand stiff and still, often trying to get the stuff off their eyes. Then one makes some sort of a joke before the scene cuts away. Hilarity Ensues if the character is confused for a ghost or some other monster. When liquids are involved (e.g. in a Bucket Booby-Trap), the result is usually Covered in Gunge . Film - Animated Film - Live Action Literature Live-Action TV

Western Animation

Similar to Vapor Trail but generally with a different intent A trail of gunpowder is laid as a makeshift fuse, leading to a pile of explosives (usually barrels of gunpowder). Once lit, the trail smokes and sparks impressively and the hero will have to race the burning powder to scuff out the line before it reaches the explosives. In a comedic variation, a character will unknowingly leave a trail of powder behind him as he is stockpiling explosives, allowing another character to casually light it, blowing the first character to kingdom come Tested and confirmed by the MythBusters </. This is one of the few explosive myths they've tested that worked in real life pretty much exactly</ the way it is portrayed in movies. And, just like the movies, it was also possible for a person to outrun it or just scatter the trail. And if you're carrying a leaky barrel of powder that is producing a trail in your wake, it is entirely possible that, should that trail be ignited, the fire will catch up to the barrel and light it off if you're traveling at a slow walk If the powder is too wet, the trail may prove to be a Hard-to-Light Fire May lead to a case of Explosive Stupidity

Power. The ability to influence, create, change, and even destroy. Things, places, people.</ It is by nature highly contentious: Some want it and would kill for it, others do not want it, or would gladly give away such a burden. Therein lies the rub. For all its force, blessings, or ability to change, power is not free... of responsibility , consequence, or cost. Some people think the exchange has to be "fair." Be Careful What You Wish For .. Drama derives vigor from the quandary of how power, seemingly free of any strings, has inherent costs. Whether they are hideous mutations, social alienation, or even death varies by story, genre, and kind of power. But the underlying basis is the same: Power at a Price See also Necessary Drawback and Weakness Tropes . For related tropes, see Price of Power Index Dracula Untold </ : Vlad's

supernatural powers that he needs to defeat his enemies comes at the cost of his humanity

The Jenkinsverse </ :

Alphas </: Inherent to all Alphas. Their atypical brains grant them superhuman abilities, but always</ have a downside. Bill has Super Strength , but as it's dependent on the human fight/flight response, he has a hair-trigger temper . Hicks has superhuman muscle memory, AKA Wire Fu in all</ its badass forms; but as it isn't</ tied to that response, stress causes him to become clumsy. Rachel has Super Senses , but is prone to Sensory Overload - in all its forms. Gary is a Technopath , but he's also an autistic savant because sensing the entire EM spectrum isn't of much use without a brain fast and obsessive enough to process the information .

The Binding of Isaac </ : A lot of items require this.

The Dreadful </: Burke's ring was enchanted to make him Immune to Bullets , but at the cost of his sanity.

Aladdin: The Series </ : Provides the page image. Mozenrath's gauntlet grants him great power, but wearing it causes him physical pain, and the gauntlet is also implied to have dissolved the flesh on his hand and arm until it's worn on down to the bone.

The industrial revolution, and the use of oil, coal and natural gas for energy, has brought tremendous scientific and economic progress for humanity, and unprecedented quantities of energy, but releasing carbon into the atmosphere is slowly but steadily warming up the Earth, and modifying the chemistry of the atmosphere and ocean, which isn't very good news.

Ordinarily, learning a new technique requires an instructor and long days of practice. However, some characters have the power to learn techniques just by watching someone else perform them a few times. Commonly, they can immediately do the copied techniques in the same amount of expertise/adeptness , but there are occasional times when they have to re-train what they just copied. Given the setting, this can even extend to magic spells and super powers. Characters with this power tend to be very versatile and difficult to predict , capable of easily catching opponents off guard and beating them at their own game . However, this power is seldom used to its full potential, as a character that can do anything is really difficult to balance and can quickly turn into a Story-Breaker Power if no limitations exist. So, in the name of balance, the power is often given one or more of the following limitations: Compare All Your Powers Combined , Adaptive Ability , The Assimilator , and Material Mimicry . This is a subtrope of Meta Power .

Since romantic relationships frequently have a playful or thrill-seeking edge, aspects that have to do with power, subjugation, punishments, etc. have often been sexualized. The most extreme manifestations of this formed a subculture on its own, known as BDSM, but milder elements have found their way into mainstream culture The most common way to introduce this is an Unequal Pairing , for example, between an Emperor and a

commoner, between a teacher and a student , or between a mortal and a powerful sorceress . For the trope to come into play, the inequality has to be lampshaded: for instance, the sorceress may jokingly tell her lover something like "If you upset me, I will put a curse on you". Formally equal pairings may also be subject to the trope, if, for example, a girl gives a Prank Punishment to her boyfriend or vice versa The trope only comes into play when non-sexual</ power dynamics are being sexualized; for kinky erotic games in bed, see Casual Kink and Safe, Sane, and Consensual . Besides, it only applies when both parties enjoy this sort of relationship, and it harms neither of them; otherwise, it's Romanticized Abuse . Compare Friendly Tickle Torture and Kinky Spanking . For the most extreme version of this, when one party is literally a slave to the other, see Property of Love If someone's fetish is powerful people in general (big bosses, politicians, etc.), it's Power Is Sexy This may be one of the results of Belligerent Sexual Tension . Also related to Weakness Turns Her On , Mischief for Punishment , Amazon Chaser , I Love You Because I Can't Control You , A Match Made in Stockholm , All Girls Want Bad Boys , and Aren't You Going to Ravish Me? . Milder versions of this may also overlap with Trickster Girlfriend

The Knight in Shining Armor 's fashionable protective wear does well enough against swords and arrows, but as the field of battle became increasingly dominated by technology, any reasonable amount of protection a soldier may carry becomes obviously inadequate to face bullets, missiles, Death Rays and autonomous war machines — not to mention all manner of Big Creepy-Crawlies prone to invading planets . The solution? Power it up , of course! Powered Armor is the Sci-Fi Counterpart of the iconic medieval plate armor, frequently used by Space Marines , Super Cops or futuristic Knights . The powered armor is built around an exoskeleton combined with a supplemental system that acts as artificial muscle, mimicking the wearer's own movements in a sort of purely mechanical Synchronization . As a result, it at the very least negates its own perceived weight and allows the wearer to carry thick, bulky armor plating without being encumbered. (In many cases, the wearer gains effective Super Strength). This is typically the most advanced form of personal protection available; it usually is at least Immune to Bullets or whatever else is used in Five Rounds Rapid in the local 'verse; superior models may mount Deflector Shields allowing the armor to No-Sell damage well above its apparent weight class. It also usually provides protection against environmental hazards that can't really be resisted or dodged by being a self-contained environment, allowing the user to exist comfortably in space, underwater, or in other areas that would kill unprotected humans, like a Hazmat Suit . In order to boost the wearer's mobility, certain armor versions also have built-in thrusters that allow them to fly, at least for short distances or via rocket-assisted jumps . If this gives them good mobility and speed without sacrificing protection, the users often join the Lightning Bruiser camp, with the disadvantage, if any, being bulk and low maneuverability. There might, however, be variants that are (comparative) Fragile Speedsters , which forego the thick plating in lieu of even more equipment made to amplify the movements of its wearer, providing a boost to agility and movement speed. As the powered armor allows for ample spare carrying capacity, it often comes equipped with many useful gadgets built in. If it does this with weapons</, then it's a wearable Swiss Army Weapon ;

expect at least one of these to be an Arm Cannon , or possibly a Power Fist . Shoulders of Doom (and in turn, Shoulder Cannons) are almost mandatory. It may also provide emergency medical support to the wearer, if they manage to get injured in spite of the armor's protection. A Man in the Machine may have such a suit doubling as a life support unit , likely unable to remove the suit without risking death . Some suits are also capable of taking over, being controlled remotely or autonomously if the wearer becomes incapacitated — or as a Restraining Bolt in case they refuse to follow orders. Often, the suit's computer is an Artificial Intelligence capable of acting as Mission Control , as well as controlling the systems the wearer can't pay attention to in the heat of combat. Some suits of Powered Armor are explicitly made to be Adaptive Armor capable of great versatility and effectively repairing and upgrading themselves. Too much of this can result in them becoming a sort of wearable Do-Anything Robot . With crystals. Powered Armor is distinct from Clothes Make the Superman in that it is specifically designed for combat and is clearly armour rather than clothing. Distinct from Humongous Mecha in that Powered Armor is a suit worn on the body, while Humongous Mecha are vehicles that are controlled, either from a cockpit or with some Unusual User Interface . There are, however, the occasional mecha that sit on the line between Humongous Mecha and Powered Armor. A really advanced set of powered armor will usually be made of Nano Machines that make the hero into a Chrome Champion . The change may even be Instant . While there are massive engineering challenges involved in solving such a suit's power supply and logistic requirements, as well as making it versatile and durable enough to participate in actual combat, powered armor is conceptually plausible. Unlike Humongous Mecha , it could actually be useful, especially in urban battles where tanks (or four-story robots) would be limited in movement. There would also be a number of different non-military uses for a suit that makes you strong enough to lift a car. The US military and many civilian R&D departments are currently conducting experiments with powered exoskeletons, perhaps making this a future Truth in Television . Compare Clothes Make the Superman , Humongous Mecha , Scary Impractical Armor , Battle Ballgown . Bio-Armor is a living creature that has a similar function. Not to be confused with Mini-Mecha , where despite the machine's size, the limbs are still fully mechanical (though the line can sometimes be a bit blurry). Nor with Meta Mecha which is Powered Armor for Mini / Humongous Mecha . Or The Power of Amore .

DC Comics :

While it is popularly believed that black holes are like giant vacuum-cleaners in space , it is not actually completely true that anything that falls into a black hole is lost forever. In reality , black holes are actually the most powerful sources of energy in the universe, even more so than stars themselves. Even though black holes are famous for not allowing even light to escape, this is only true if light enters the event horizon: their accretion disks are capable of producing light as long as there's a constant source of matter feeding them. When matter falls into a black hole, tidal forces stretch and heat up the material to extremely hot temperatures which gives off potent x-rays. Supermassive black holes in particular, when fed a lot</ of matter, have the potential to outshine entire galaxies. Even black holes themselves give off their own energy known as , which, in layman's terms, is the result of black holes slowly evaporating over inconceivably-long time scales of over 10^64 (that's

64 zeros) years on average due to quantum effects near the event horizon. A future space civilization is likely to take advantage of black holes around the tail end of the dying universe when there's no more stars to use. Harder science fiction will typically rely on one or more of the following real-world theories (softer sci-fi tends to handwave it or cite technobabble such as The Power of the Void): Of course, this is all dependent on a civilization having developed technology that can withstand the extreme conditions near the event horizon, which include massive gravitational and radiation effects and Time Dilation . Additionally, things typically will Go Horribly Wrong if the black hole breaks free of any confinement used (for example, if it's a microsingularity housed within a Space Station or Cool Starship), or the infrastructure that harvests energy is damaged and begins to fall in. In which case, this overlaps with Nature Is Not a Toy . Compare Our Wormholes Are Different , Spaceship Slingshot Stunt , and Gravity Master for other ways black holes could be put to use.

This character is the local winner of the Superpower Lottery — either the World's Strongest Man or damn close to it. They have enough power to be able to succeed or accomplish almost anything.. ...if they weren't a complete and utter moron Capable of using Flight to go anywhere they want? Doesn't matter, because they get lost easily . Can shrug off most attacks or weapons with their Super Toughness ? Irrelevant because any tiny injury will make them panic and cry. Able to chase anyone down with their Super Speed ? Too bad that they get distracted too easily. And this all assumes they even know</ what powers they have; Forgot About His Powers is the norm</ for this guy The best way to think of this trope is not as a character</ trope, but a narrative</ trope about failure . While it can overlap with Unskilled, but Strong or Dumb Muscle , it's not quite the same. Those archetypes can still win</ if they hit hard enough that their relative lack of skill or planning doesn't matter. At the very least, their allies or teammates can help use traps or strategies that enable them to unleash their massive power at the best time The character described by this</ trope, however, is so incompetent that people weaker than them are either more reliable teammates or regularly defeat these idiots with little trouble. Planning or help from others often won't work either, because this idiot will find some way to fail even the most basic role . They may also be Lethally Stupid , and thus almost as much of a danger to their allies as the enemy is. In anyone else's hands, their abilities would be a Story-Breaker Power ... but for better or worse, in this character's hands, they might as well be stage tricks Merely being Incompletely Trained , having an Weaksauce Weakness or losing ONE fight to someone better is not this trope. This character fails despite</ their amount of training, or their flaws make them impossible to train in the first place. Other characters with the same weaknesses have either overcome them or at the very least learned to work around them. Their losses and failures are total embarrassments that someone of their power or level should</ have been able to handle. Failure has to be the norm</ for this character, or so common that no matter how skilled or powerful they become, the outcome is never certain

Compare Idiot Hero . Also compare and contrast the Almighty Janitor . May overlap with Inept Mage , whose spells and abilities tend to backfire due to incompetence. Also see Power Incontinence

, when someone doesn't know how to turn their powers on or off. Contrast Heart Is an Awesome Power One way it's demonstrated that it's mere incompetence holding a character back is when an Alternate Self is just that much better Do not confuse with Powerful, but Inaccurate . The exact polar inverse is Invincible Incompetent

Power . The capacity to compel others Power is many things to many people, and almost everyone wants it This is an index about Power, items of Power, those with Power, and all of what Power entails. Contrast Weakness Tropes

A character's got an awesome power at their disposal, but there's a catch . Whatever this amazing power is, the character has little or no control over it. Their power seems to go off at random or they can't stop using their powers, even if they want to. This character suffers from Power Incontinence Sometimes, a character will just lose control for an episode or two, or have a few accidents while first learning how to use their powers . Extreme emotional situations may cause a loss of control, though, like a pyrokinetic literally Burning with Anger . Sometimes holding your powers for too long as it builds up in your body will also cause an unwanted burst of power. And if your powers somehow have a will of their own, then it may be possible that your powers can simply take over and use you Not everyone is so lucky. Many cases are incurable, becoming an integral part of the character. Not to worry, though; many cases can be treated by Training the Gift of Magic . Even if that doesn't work, chronic power incontinence is frequently treatable with some Applied Phlebotinum . You'll have to hold on to that phlebotinum, though, from now on; (try making a snazzy suit out of it). You'll have to depend on it if you want to avoid any accidents or a shorter lifespan Note that this is not always a bad thing for the character, since some powers are better when they don't need to be actively controlled. Having the ability to heal any wound , for example, is awesome when you don't have to consciously activate it — otherwise a severe injury might still kill you if you lost consciousness (from loss of blood, say) before switching it on. However, it is always a lack of the Required Secondary Powers that protects a character from their own powers Rarely, the inversed set-up of this trope is used; that is to say, rather than the power being hyper-active from lack of control, they can't get it to work in any way Can be one of the ways a character is Blessed with Suck . Compare Restraining Bolt or Power Limiter (common methods of averting this) and Does Not Know His Own Strength (a common result of this). If combined with Shapeshifting , this may result in becoming an Involuntary Shapeshifter , depending on what triggers it and how. Frequently results in Tragic Intangibility when applied to characters who normally have control over their Intangibility . A character with this may also have a case of I Just Want to Be Normal or Afraid of Their Own Strength . Sometimes terrifyingly applied with Reality Warping Is Not a Toy . Severe cases may develop into a Walking Wasteland This is the lowest tier of The Law of Power Proportionate to Effort . Conversely, Powers Do the Fighting (the highest tier, and the opposite of this trope) may fall back to this if the user loses control of their power, as said power may start fighting by itself

A major theme in all media. The villain or Ineffectual Loner mocks the idea of relying on others, insisting that friends make you weak and only fear brings servitude . Then he discovers to his extreme shock and dismay that the hero's friends really do stand up for him, and this really does enable the hero to kick the crap out of the bad guy. The Aesop : Having friends makes you strong, being alone makes you weak . Even What You Are in the Dark can depend on your memory of your friends The moment The Power of Friendship becomes clear is A Friend in Need , but beware the Apple of Discord . When the loner has been brought into the group, Remember That You Trust Me may be needed to keep him attached More often than not a hero who makes good use of this power is going to attract villains who try to prove that it doesn't work. (The biggest reason is such villains rarely have any friends, as heroes occasionally point out.) After slugging it out with the hero one or more times the villain in question may become a Friendly Enemy , a Worthy Opponent , or do a full on Heel–Face Turn A Combined Energy Attack is another perk of believing in said power. Taken more literally, the Power of Friendship may be used as a required element of some magical effect, such as a Care-Bear Stare or a Circle of Friendship . Heroes, especially the Magnetic Hero , usually spend the first few episodes building this group of loyal followers . Sometimes it can go too far; Heroes fall prey to becoming a Martyr Without a Cause and allies could be Poisonous Friends . Contrast In the End, You Are on Your Own , in which case Friendship becomes less helpful. This trope is a key element of buddy pictures The Power of Friendship can be just as strong for the bad guys as for the good guys, but they seldom have enough common sense to play it straight. When they do, expect a pretty wild ride, and a clash with The Remnant once the main conflict's over See also Team Spirit , True Companions , The Power of Love , The Power of Family , Power of Trust , Defeat Means Friendship , Fire-Forged Friends , Dying Alone , You Are Not Alone . The risk of Tastes Like Diabetes or even Narm is present if done poorly . The Good King should be wary of this trope, it can turn into Nepotism (well, technically cronyism). If your characters are entirely reliant on their friends for any characterization or motivation, they will rapidly become Flat Characters

The Power of Love is a curious thing . It makes one man weep , and another man sing . It can change a hawk to a little white dove . Bring inanimate objects to life . It might just save your life. It makes people want to give up personal freedom to belong to each other . Don't you dare mock it, it's more than a feeling, that's the Power of Love Even more than The Power of Friendship and The Power of Family , the Power of Love can be applied in dire situations to make things better. In fact, in many Disney movies it's the solution to everything. It's also an occasionally useful Deus ex Machina Common applications of the Power of Love include activating an Empathic Weapon , freeing a loved one from mind control , strengthening a loved one , and converting a Real Death into a Disney Death . Even when the power of love is not literally and directly responsible, the scene is often set such that the audience is left with the impression that it was "really responsible". Although, Love is more powerful than magic as it usually helps break spells Don't You Dare Pity Me! can sometimes be overcome by the Power Of Love; however, it may take time, and

the love itself must be purified of any pity it does contain The Green-Eyed Monster may come into play. In more idealistic shows, it is a sign of an immature love, where trust and faith is insufficient. However, more cynical shows may treat it as normal, and even let it overcome Cannot Spit It Out In cynical times, this can feel like a rip-off. It depends on where you, and the scene in question, fall on the Sliding Scale of Idealism vs. Cynicism Love Redeems evil but it can also turn you evil . Combining the two, it can support said baddies Sometimes, love for someone who's threatened can give someone a Heroic Second Wind , especially a Mama Bear / Papa Wolf A more passive but no less impressive display of the Power of Love is its ability to use the Red String of Fate to reunite the reincarnated lovers A Super-Trope to Heart Beat-Down , True Love's Kiss , The Love Slap of Epiphany . A Sister Trope to Light 'em Up (light based powers) and Holy Hand Grenade (holy powers) which are generally good . Compare Care-Bear Stare which includes all</ positive feelings (happiness, peace, love etc) Compare and contrast with The Power of Lust . Contrast with The Power of Apathy and The Power of Hate . Occasionally classified as one of the Elemental Powers

Superhuman powers are a great way to fight for truth, justice, and the American Way . For the more inventive, they're also a great way to add some extra fun to sexy times. It could give them an extra edge in pleasing their partners, improve their chances at romance, or provide different ways to explore their own pleasure, or even, for the morally lacking individuals, as a tool for rape . If any sort of superpowered or supernatural ability gets used for something sexual, it's this trope. Mind Control , Psychic Powers , invisibility , intangibility , sprouting tentacles , and the ability to stop (or otherwise manipulate) time are especially vulnerable to this. Shapeshifting Squick is a related sub-trope. Fantastic Arousal is when this trope meets unusual body parts. See Mundane Utility for less perverted applications of super powers and gadgets. See Video Game Perversity Potential for this trope applied to the creativity of Game Mods . If the use of powers during sex comes with risks to one or both partners, it is Man of Steel, Woman of Kleenex . Remember that this is the kind of perversion related to sexual matters, not</ the sort that would suggest such things as Superpowered Evil Side . Please, list examples shown or discussed in-universe only. There are other places on the web to put your erotic fanfic prompts. The DCU

In Larry Niven 's A Gift From Earth </ , there's a telepathic ability Niven calls "Plateau eyes". Throughout the novel the hero uses it (usually subconsciously, when stressed) to contract eye pupils of people looking at him, making himself invisible and forcing them to forget of him. When the ability is discovered, there's a suggestion that the opposite — dilating pupils — will attract attention and may make people fall in love. Near the end the hero tries that on the primary antagonist — in a non-sexual way. This results in a sort of crazy religious fixation.

There is always strength in numbers. Professional Wrestling is no different. Someone who wants to get to, or stay on, the top of the game is best served to seek allies. Some wrestlers can rely on their family ; others band together by virtue of similar

character or common interests . Still others band together for one purpose, and one purpose only — to watch each others' backs, and better their own positions in the company. These wrestling mutual-aid societies are called power stables. While a staple of wrestling, it can occur elsewhere. Like in all fictional groups, the members of a Power Stable have a tendency to fit certain archetypes Generally speaking, each stable will play host to at least three of the following core character types: : The leader of the gang. He considers himself the best in the world and will disagree violently with anybody who suggests otherwise. The stable's first and foremost priority is to keep the world championship belt around the waist of the Centerpiece; it is their crown jewel, serving as a powerful backstage bargaining platform as well as a display of the stable's power. In addition, the stable may include some of the following characters: : This guy is usually found only in larger stables, although it's not unheard of for a smaller stable to have one of these instead of an Heir Apparent. The Point Man is pretty much what his name would indicate - he's the guy "on point" , who the stable leader sends out to soften up the opponents. Frequently a charisma-deficient midcarder or a lower midcarder who's a good worker that just doesn't have what it takes to advance into the upper echelon of wrestling. Therefore, being associated with the stable and having some of its heat rub off on him is his best bet. Unlike the Heir Apparent, the Point Man is usually fairly loyal to the stable and its leader, although he can be goaded into a Heel–Face Turn if his stablemates lose respect for him and throw him into danger while they run away. Comparable to an Elite Mook . Note that most Power Stables are heels ; it's not impossible for faces to form a stable, of course, but generally faces don't seek power to the degree that heels do; thus most face stables tend to be either gimmick stables or families. If they do form a Power Stable, it's generally because the promotion is so heavily factionalized or an already-existing heel stable is so dominant at the moment that grouping together is the only way to level the playing field, or because the stable itself has existed for so long that it's actually built up a legacy of greatness, rather than backbiting or infighting (see: the later incarnations of the Four Horsemen). Compare Five-Man Band , Power Trio , Legion of Doom .

These unseen forces, usually unnamed or only known by a somewhat-vague epithet , are pulling the strings. They can be good, evil, or ambiguous Bad Powers that Be are mysterious and abstract; an Ultimate Evil that will exist As Long as There is Evil . They will also be too vague to engage the heroes directly and so a lesser villain will act as The Heavy and carry out the Powers' Evil Plan Good Powers That Be will also be mysterious and abstract; concerned with the Balance Between Good and Evil or the sanctity of The Lifestream and because of this, too distant to understand the heroes' concerns and protectorate . Nevertheless the heroes will be the Powers' champion against evil One variety of the Powers That Be is the Ancient Conspiracy , another is The Omniscient Council of Vagueness . Another one is God himself. If the powers are warring with each other, it could be Heaven Versus Hell or a "house divided against itself." Contrast Pals with Jesus , where the relationship is entirely personal and personable. See also Physical God and Sentient Cosmic Force Sometimes, this term is used by fans to refer to network executives or other forces behind a work's fate Not to be confused with Anne McCaffrey 's Petaybee </ series, which has this at the title of the first book and an alternate series title. Or, a short-lived sitcom produced by Norman Lear that starred John Forsythe from Dynasty (1981) </ and featured two pre-famous actors, David Hyde Pierce & Joseph Gordon-Levitt

The tendency for animals to outperform their human coworkers in comedies. Most often takes the form of a gorilla or chimpanzee in a business suit who quickly climbs the corporate ladder after being hired. This trope can come in a few flavors: Said monkey actually is competent, at least according to the other character's lampshading . Type one's competence is normally contrasted to another human character's incompetence for laughs. Type one never speaks, and other than being a part of the scenery, typically doesn't interact with the human characters physically unless their job requires it. This is when the monkey acts just like a typical monkey would, but the work environment is so atrocious to begin with this behavior actually lands the monkey promotions and praise from his coworkers. Unlike Type one monkeys, Type twos are free to interact with their coworkers, usually in the form of random tantrums, face-scratching, and the classic poo throwing. Type three monkeys are practically human in all but species. Type threes typically form rivalries with the Protagonist, but are otherwise portrayed as popular with the rest of the characters. While you are more likely to see a Type three courting the office hotty or chatting it up with the fellas at the water cooler, they do sometimes slip back into Type two territory, usually when tempted by a banana. Has nothing to do with monkeys in Powered Armor . Anime & Manga Comic Books Film Literature

Live-Action TV Music Newspaper Comics Theatre Webcomics Western Animation

Three is a common number in ensembles The most common pattern for this is for two members of the group to be each other's Foils , frequently coming into conflict with each other, with the third member of the group acting as the mediator, keeping The Team together and balancing their respective personalities (in which case, see Freudian Trio). This is the dynamic that makes the ensemble powerful. In fact on almost any metric of personality, appearance, or skill, you could break the trio down to two extremes and a medium Note the word 'ensemble'. These characters interact directly with each other. You can have three characters in a story that serve as foils of one another without it being a Power Trio Power Trios can be embedded in larger ensembles. Three Plus Two is a Power Trio within a Five-Man Band . The Five Temperament version of the Four-Temperament Ensemble sometimes manifests as two Power Trios with the same central member. The Magnificent Seven Samurai often have one, and sometimes two, Power Trios of their own Below, we list the many variations of a Power Trio. Freudian Trio is one of the more frequently found versions and is often the basis of the other trios. They can overlap

Index about pranks Compare Stock Jokes , Booby Trap Contrast Deadly Prank

A sequence needs explaining and the writer has chosen not to go to a voice-over, but has inserted good cause for someone to narrate the action. A television or radio reporter's voice is used, in some cases. This also serves to give the action some scope, making it clear that this is important stuff When played for laughs, this is Kent Brockman News . See also Mr. Exposition and Coincidental Broadcast

Whenever a story has an army, there's almost always some kind of elite group that serve as the guardians of the leader. The Big Bad is much</ more likely to have a dedicated group of elite bodyguards than the story's Big Good or other equivalent-ranking good guy. This might be because the good leader often has a Kirk-like tendency to lead his soldiers into battle , even if logically it seems like a bad idea to have your leader be the first person you send into every potentially dangerous situation. Then again Authority Equals Asskicking . The occasional exceptions form the Hero Secret Service . Another notable exception is any fictional representation of the real-life Secret Service (typically American, but also occasionally Her Majesty's). A princess may also have a solitary male bodyguard that she sometimes finds herself attracted to (and vice-versa) . In Real Life , the was a special force originally intended to serve as a Roman general's bodyguard in combat, but the term was later restricted to the elite personal guard of the Roman Emperors . As a bodyguard unit, they proved to be a miserable failure, as they soon became horribly</ corrupt and very frequently wound up playing kingmaker . separate emperors were killed by the guard itself , and others were deserted by the guard to be overthrown or killed by others. In some cases, the Guard literally sold the Imperial office to the highest bidder, then turned on their new master when he failed to deliver on his extravagant promises. Roman

Emperors began employing foreign bodyguards (mostly from Germania) to protect themselves. In other words, the early emperors of Rome had a unit of personal bodyguards whose job was to protect them from their official bodyguards. Tend to favor Scary Impractical Armor , Bling of War , and a Blade on a Stick . Despite their elite status, they have an unusual tendency to stand around not doing much fighting—of course, as long as their boss is keeping out of trouble, that's precisely their job. Sometimes overlaps with Elite Mooks , Superpowered Mooks , and Amazon Brigade when they are Bodyguard Babes . If they are generally recruited from another nation, they are a Cadre of Foreign Bodyguards . If they never actually go into a fight, then it's just palette swapped normal infantry (the real Praetorian Guard were</ palette-swapped standard legionaries; they wore nice purple tunics). May or may not be under the control of State Sec . If they have sufficiently developed individual appearances, abilities, or characterization, they will likely serve as a (if a contender for the</ strongest) Quirky Miniboss Squad . If the leader or subject being guarded doesn't really need</ protection, they may be Bodyguarding a Badass . This item is available in the Trope Co. catalogue. </

When you're doing a version of a story, sometimes the writers are smart enough to know that for whatever reason — budget, censors, pacing issues, et cetera — there are things that just aren't going to make it through. They make the best of a bad situation and explore other aspects of the story. Hopefully, this will put a new and interesting spin on the series. Time is often a factor in this. When you're adapting a 600-page book (or, for that matter, an eighty-year-old comic series) into a two-hour movie , something's gotta go. The reverse can also be true; stretching out a relatively short book into a much longer film, TV show or both often results in changes . As with the Roger Ebert quote above, what works on the printed page doesn't necessarily work on the screen, which is another major reason that things in the story get changed. Fan Dumb tends to be rabid about this kind of change, although the rise of DVDs and bonus production commentary often include rationalization (or guilt-passing) for this sort of thing. Video game adaptation can also fall into this, such as when one is adapting a PC game to a console game, or vice versa, due to any number of issues concerning the target machine that the game is being adapted to. In that case, gameplay elements as well as story elements would have to be adjusted to accommodate the translation. If done poorly, this can lead to a Porting Disaster . If a story is mishandled in its adaptation to a video game, it can lead to The Problem with Licensed Games . Various signs of this include: Contrast with Adaptation Distillation : in a distillation, a complex story is simplified, without much substantive change. In a Pragmatic Adaptation, the story is changed with the shift in medium.

" Even Evil Has Standards " has subversions. Pragmatic Villainy is when a villain either refuses to do something horrible or does something nice. It's not because the action is too evil even for them , nor is it a genuine Pet the Dog moment. No, it's because it's in their best interest to not act the maggot this time. Whatever this action might be, choosing the most evil option would be counter-productive to The Plan , and as such, it's better to

refrain from it. Sometimes, even a villain finds it furthers their aims to be nice from time to time, even if it's just for show or to ensure loyalty. Maybe there's dog-kicking in their past; even if there isn't, the Pragmatic Villain is the type to have studied those who have. No matter the combination of dogs and boots, they're sure to have investigated them all quite thoroughly and come to the conclusion that there just isn't anything to be gained by it . They may even note that one's proverbial toes get a little tender after too much of that kind of thing, since a dog kicked too often will bite back . Though a pragmatic villain is likely to be less destructive than their Card-Carrying Villain counterpart, they are made all the more dangerous by their focus on their ultimate goals and their reluctance to carry the Villain Ball . Oftentimes, their course of action is determined solely by discerning which would best serve their purposes . Being evil, to them, just keeps their options open when it comes to illegal and immoral acts, and doesn't stop them from using 'legitimate' (or at least socially respectable) strategies and tactics if that's what it takes. Heroes are sometimes surprised when said villains do something "unexpectedly" evil later when they were doing "good" things before. Should kicking the dog become a necessary step in their master plan, expect their kick to have the power and precision of a football player going for a game-winning field goal, usually while stating it's Nothing Personal . They will easily cross the finish line in a Moral Event Horizon , but only if and when it's useful to them, not a moment before. Virtually any Villain with Good Publicity tends to be a master of this trope. Villains With Good Publicity almost always have years of experience in earning the trust of their supporters and are well aware that angering dog-lovers (among others) will not advance their cause and may hinder it . Even for those who don't happen to be Affably Evil , if any dog-kicking is deemed necessary, they will keep these acts of cruelty out of the public eye, or when they can't do that, they'll do what they can to make it look like the victim deserved it ; how evil they truly are under cover of darkness must remain shrouded in darkness. They also tend to be masters of the Xanatos Gambit . The Noble Demon will probably attempt to justify his nobility this way, with varying degrees of believability. Whenever there's a Generic Doomsday Villain or an Omnicidal Maniac around, there's a good chance the other villains will form an Enemy Mine with the heroes to stop them, as they want to rule the world, destroy it . Or at least not steal their job of fighting the heroes . Even most Chaotic Evil Ax-Crazy villains who do things For the Evulz fall to this trope. There's no fun or challenge for them if everyone's dead — they'd be left forlorn with no idea what to do next . An Incidental Villain most often excels in this with his worldview generally being that of a Monopoly game where advancing towards their goals through the quickest and most efficient way is the only thing that matters to them and beating the rivals on their way is optional and hardly obligatory much of the time. This mindset is helpful in stories where the bad guys have a huge advantage over their antagonists, leading them to not so much beat them, as much as convince them that it will be more profitable not to commit the crimes that they intended to and instead choose a legit way as an alternative. An obvious foil to villains with Complexity Addiction (who will do the evil deed anyway), though some do manage to pair the two. A subtrope is Can't Kill You, Still Need You if applied to villains. Contrast Stupid Evil , where the villain hurts their own interests by preferring indiscriminate evil. Compare and contrast Shoot the Dog , where a hero or anti-hero does a morally questionable act for

pragmatic reasons. See also Cooperation Gambit , Cut Lex Luthor a Check , Dick Dastardly Stops to Cheat , Sanity Has Advantages , and Bread and Circuses . Compare Evil Virtues , where a villain has good traits; Straight Edge Evil , where a villain avoids personal vices; and Nominal Hero , where a character does heroic acts out of neutral-at-best motivations. For the less</ evil and more moderate version of this trope, see Jerk with a Heart of Jerk . Not to be confused with Do Wrong, Right , where an evil act is decried for being poorly executed, and in which the standards that the evil act fails to adhere to are not necessarily those held by a Pragmatic Villain: e.g. one villain could invoke Do Wrong, Right on another for lacking flair. : It is extremely rare for a Complete Monster to invoke this trope, as they are usually unrestrained and do not care if their evil will backfire. In the few examples that do exist, a CM's simplicity is often downplayed by the heinousness of their plans. Bullseye may be an Axe-Crazy Psycho for Hire , but during the Dark Reign </, he was lucid enough to realize that he was working for someone who was out of his gourd when Norman Osborn planned to attack Asgard. (And he wasn't the only villain working for Osborn who thought so.)

Here are the tropes which deal with characters doing whatever it takes to meet their goals, personal or otherwise See This Index Fights Dirty for the combat version. Compare Cynicism Tropes and A Dishonorable Index

The Prank Call trope is where a character decides to prank another by calling them on the telephone. These pranks are mostly just jokes and puns. The most popular joke used when prank calling someone is " Is your refrigerator running? You'd better catch it! " Punny Names are also popular, especially when calling a person who then has to ask for</ the punny-named person, leading to awkwardness such as " I'm looking for Amanda Huggenkiss ." For amateurs, at least, this has been made largely extinct in Real Life because of caller ID and call-blocking features that allow telephone users to block calls from "Private"/"Unavailable"/"Unknown"/"Restricted" phone numbers (and thus averting potential for a Prank Gone Too Far). Prank Calls are usually considered a form of Harassing Phone Call . Though the trope does</ live on for call-in talk shows and similar, where the caller doesn't care if their ID is known and often prank callers are seen as All Part of the Show . (The two most common prank calls, as implied above, are "Do you have Prince Albert in a Can?" and "Is your refrigerator running?") In some countries, making what are termed "nuisance calls" is illegal and can lead to either criminal or civil prosecution. Not to be confused with Phoney Call which is where a character pretends that they are talking on the phone when the phone is off. Contrast Mistaken for Prank Call (the Subverted Trope) when the character receiving the call thinks that they're being pranked.

This is a form of heartless Practical Joke in which Alice thinks she has a date with Bob, but in reality it's a trick by Bob (or even a third party) and the expected outcome is anything but a romantic interlude. In the Romantic Comedy genre, this will lead to Alice either temporarily breaking off with Bob (to make up later) or meeting Dan, who will be the actual romantic interest for the rest of the story. In other comedies, Hilarity Ensues . In the horror or

mystery genres, this will often result in a Deadly Prank , with the poor sap being set up either suffering an unexpectedly lethal fate, finding the prank less than amusing and coming back to take obsessive revenge, or both. Common types of the Prank Date: - Just not showing up, to see how long the poor sap will wait. Not the same thing as Stood Up , where Bob intended to show up and was late or otherwise unable (with Doomed Appointment as a special subtrope if Bob died before arriving). Compare the generally more serious Marrying the Mark , which is employed by a Con Man .

Prank items used in imitating horrifying injuries. Would getting your chest penetrated by an axe be too inconvenient? You could always use items which resemble an axe submerged in you, without actually entering your chest. Alternatively, items which resemble wounds could make you look under-the-weather. Another common version is for someone to bandage a body part or pretend to limp The character's reasons for doing this can vary: often, like most pranks, it's to make them or someone else laugh or to shock someone. It might also be to trick people into thinking they're injured (in a similar fashion to Playing Sick) to get attention or get access to something or as an excuse to be lazy or to get away with something (e.g. "What? How can I have done it? My leg's broken!") May result in Crying Wolf if they actually get injured afterwards (which can lead to An Aesop about deception being wrong) or Deadly Prank (if they actually injure themselves in an attempt at playing injured). See also A Bloody Mess regarding "injuries" involving fake blood. For a similar thing where characters pretend to lose consciousness, see the "Fake Faint" section under Fainting

A prank punishment is something that is both a punishment and a practical joke: it serves to amuse the one who does it as much as to teach a lesson to the one to whom it's done These sorts of punishments are usually non-malicious in nature, and often given by a mentor or a parental figure. Say, if you cheat during your magic exam, your wizard mentor would cast a spell on you... causing you to speak with a funny Verbal Tic . If you disobey your parents, they will not shout at you or ground you... but instead tell you that they've bought you one very cool thing today, but now that you've disobeyed them, this thing will remain secret till your birthday . If you quarrel with your girlfriend , she will not break up with you... but will orchestrate an elaborate prank to make you realize/think you were wrong A Trickster Mentor or a Trickster God would often specialize in those. When something like that is done not to a loved one or an apprentice, but to some random stranger for being an asshole, it's more of a Karmic Trickster . Often overlaps with Restrained Revenge , where someone dishes out a much less harsh punishment than expected. Also compare Cool and Unusual Punishment for when goofy methods are used as straight-up torture, and Friendly Tickle Torture . When this sort of punishment is seen as an erotic "turn-on", the trope overlaps with Power Dynamics Kink

It is almost an official duty of an Action Hero to deliver sardonic one-liners. And what better time to produce one than just before the execution of their other official duty — kicking ass.</

Chew Bubblegum is a particularly popular example. See also Badass Boast , Badass Creed , In the Name of the Moon , and My Name Is Inigo

Montoya . Contrast Pre-Mortem One-Liner , which is often used to end</ a fight (namely before killing someone), or Bond One-Liner , which is used once the fight is over.

A Precision F-Strike is when a character suddenly swears in an uncharacteristically strong manner , or when a swear is unexpectedly used in a work with mild language . It's usually intended to show that shit just got real serious. Another variant is when a movie limits its swearing-in order to keep from getting an R rating, and so is forced to place it very strategically. If a movie uses the F word more than two or three times or in a sexual or aggressive way, it can easily get an R rating. If it's used up to two or three times, each in a non-sexual context, it usually stays PG-13 so long as it lacks any other content that would warrant an R rating. (Similarly, on television, a single F word guarantees at least</ a TV-14 L rating, and multiple uses are very likely to bump the rating up to TV-MA L.) As such, the writers will only have the characters curse when it actually means something. Also, when Unusual Euphemism is normally in play in a work, having "real" oaths appear can have the same effect. Due to the nature of language , this trope is prone to Values Dissonance about what words are appropriate. "Bloody", "cunt", "ass" and "twat" , just to name a few words, have very</ different connotations on the two sides of the Atlantic— and that's just the differences within a single language. Although like many other English words, the word "fucking" exists with only a minor variation in German ("ficken"), it's only used as a verb and almost never as a curse word. The word "Scheiße" ("shit") and its variations are almost always used in exactly the same way as the word "fuck" in English. In many European countries, swearing is rarely considered an issue when it comes to film ratings—for example, Silver Linings Playbook </ , which has about seven dozen F words, was rated "tous publics" (equivalent to the MPAA's "G") in France, and children as young as six could watch it in the Netherlands. In some languages, however, expletives do not actually exist or are so uncommonly used and/or offensive that they are not allowed in the media. Seemingly equivalent words may be used similarly, but without the impact of an actual expletive (for example, although the Japanese word kuso</ is translated as "shit", its profanity level is more along the lines of "crud" and is often used in children's shows by child characters without raising alarm). These languages may have levels of politeness which serve the same purpose (again, Japanese), and translations often take advantage of the dub/sub language's expletives to give the same feeling. For subtitles, this crosses over into Spice Up the Subtitles , unless the expletive used by the translator actually is said in the original dialogue, as is known to happen. Note that when using this trope in the context of the quote, DON'T attach it to every single time said quote contains "fuck", "shit", etc. This trope IS applicable if it's for a case of unusually strong swearing or of the party that uttered the quote isn't exactly known to be dirty-mouthed. This trope is an intersection of Sophisticated as Hell and Conservation of Ninjutsu ; related to OOC Is Serious Business . May overlap with Atomic F-Bomb for extra emphasis. Compare Minor Insult Meltdown , Quote Swear Unquote , This Is for Emphasis, Bitch! . Contrast with the Cluster F-Bomb and Gosh Dang It to Heck! , although it can overlap with the latter if the work in question usually doesn't even contain mild profanity. Due to the nature of the trope , the following examples will contain swearing. Please don't be a fucking bowdlerizer . General phrases include:

Children having "crushes" on one another isn't uncommon. To most children, loving someone just means liking</ them a lot. They have no notions of sexual—and sometimes even romantic—love. For the most part, innocent. They may make a Childhood Marriage Promise with their best friend just because, and even pretend to get "married." Older kids generally have a basic idea of the birds and the bees , but still have to deal with raging hormones and lots of confusion. What happens when kids get crushes on adults?</ In some cases , Squick happens. In most instances, you have an ordinary kid who has to deal with the ordinary awkwardness of having a crush on someone way</ out of their league. The Precocious Crush is any instance of a child (usually pre-teen or younger, though young teenagers are sometimes susceptible) having a crush on someone considered at least one age level older than them. Teachers are common targets , as are other, non-related caretakers. While having this kind of crush is more often associated with girls, it is also common to portray boys as having this kind of crush. Usually, nothing ever comes of it—at least not until the character in question is much older , and even then, it still might seem a bit Squicky to some. In animation, the trope can be invoked without fully using it in the case of teenagers, where one character is only a few years younger than their crush, but differing rates of physical development makes the crush look a lot older than them. This trope is Truth in Television . Lots</ of kids get crushes on their teachers or on their older neighbors, or friends of their older siblings—and older siblings of their friends. (One resolution is for differences between the older and the same-age siblings to be mostly maturity; when the kid and the same-age sibling grow up, Settle for Sibling can be a happy ending.) See also Puppy Love , where two little kids crush on each other, and Father, I Want to Marry My Brother , which relies on an innocent inability to distinguish between different types of love. If the interest is clearly sexual, then it's Dirty Kid . If the object of the crush happens to be a hot single mom (commonly known as a MILF), see Stacy's Mom . Should anything actually happen</ in the relationship, see Wife Husbandry , Jail Bait Wait , Teacher/Student Romance , and May–December Romance . See also Likes Older Men , Likes Older Women , Fille Fatale and Kidanova . Possible ways this crush can work out is if the the kid becomes older or their crush becomes their age .

The general consensus of children is that they be kids . However, on more than a few occasions they exhibit intellect out of the norm, intentionally or not. This very index lists tropes that subvert the idea that all children are naive and innocent, rather being intelligent and mature before their time and knowing more than adults let on, for better or worse Contrast Immaturity Tropes , which is the opposite thing. Someone who is Really 700 Years Old may appear this way but doesn't technically count

One of the implications of Seers (and Time Travel) is that we can predict crimes, and so we can prevent the crimes from happening. This trope is about taking evidence from the future, either through time travel or a Police Psychic , and preventing the criminal from doing something they haven't done yet Without knowing the future, crime can only be minimized by punishing people for crimes

after the fact. Precrime Arrest is when a character who is known to be going to have committed a crime is punished in advance, in order to prevent their supposed future actions. If the offender is caught early enough, they may suffer from Bewildering Punishment because they haven't even thought</ of committing the crime yet Attempts to arrest/execute Hitler are popular enough to form their own trope: Hitler's Time Travel Exemption Act . Examples of Time Travel being used for Hitler specifically belong there Although in Real Life methods of justice exist that produce a similar result (such as preventative detention in Europe and Asia), a setting wherein world-wide acceptance of this trope as a law enforcement tool exists is a pretty heavy example of Hollywood Law and Artistic License – Law . To make a long story short, many laws that exist today have (theoretically) a heavy emphasis on "innocent until proven guilty" and "punishment after the crime". If the possibility—even if incredibly</ small—exists to Screw Destiny , then the usage of this Trope could probably be seen as unfair arrest or (in the most extreme examples when people do nothing but wait until the event happens and taking action Just in Time) entrapment. And this is without going into the mind-bending details of arguing how the Timey-Wimey Ball is in effect, too..

Precursor Killers are the reason why the Precursors aren't around anymore. Typically they are a much more powerful (and evil) group and/or a rogue member or faction of the precursors that managed to wipe out the precursors despite their advanced technology/magic . Either it is because the Killers' own technology/magic was more advanced than the precursors, or they were just so numerous that the precursors couldn't keep them at bay forever. If the Precursor Killers are still around, expect them to be a BIG DEAL and the threat of another attack to be a looming threat. After all, if a more technologically advanced people couldn't beat these guys what can WE do? Sometimes the precursors were able to Fling a Light into the Future in the form of some sort of Lost Superweapon that the Precursors weren't able to finish in time to stop their enemy. Often this the killers are a Sealed Evil in a Can that was somehow stopped with the last actions of their enemies. Compare Abusive Precursors , Turned Against Their Masters and The Old Gods

Precursors, a.k.a. "Ancients", "Elders" or "Old Ones", are a standard of Science Fiction (especially Space Opera), fantasy and occasionally Horror : an ancient race whose culture and knowledge rose to its pinnacle in ages long past but which is no longer present In Science Fiction , they may have visited Earth and/or other worlds but they would remain a mystery. They are considered the first</ species to have technology, making them godlike . In fantasy, they will usually be the forerunners created by gods/God, mighty in deeds and magic. At the height of their civilisation, Precursors might have created intelligent species or reworked entire worlds with a snap of a finger. Any strange and persistent mystery in the story's 'verse is usually laid at their feet Predecessors now leave behind nothing but tantalizing ruins and rare, sometimes incomprehensible artifacts and dangerous weapons . (Any of the aforementioned sorts of relics may be a Big Dumb Object .) Just why, no one knows. Perhaps they Ascended to a Higher Plane of Existence , succumbed to decadence or were wiped out by a disaster or war , or maybe they just relocated en masse</ to

somewhere else</ where they haven't been found yet Whatever the reason, they set the stage for the modern world, left behind a few MacGuffins and surprises for the heroes and villains to find, and then conveniently got out of the way . And then there are the times where they themselves are the reason everything's gone to hell, and they intend to keep it that way . If the Precursors implemented a plan that, whether they still exist or not, still influences outcomes, then they are also Powers That Be Sometimes the Precursors can be rediscovered; this is often regarded as a bad move, especially by the Precursors themselves. This also applies to the audience: the romance of Precursors can be easily shattered by giving too much away It may also happen that Earth humans are Precursors and their human or otherwise descendants try to rediscover their heritage . If humans are the Precursors, that's also Advanced Ancient Humans . If everyone's scared</ of them, that's Humans Are Cthulhu . If they pick on their descendants, that's Abusive Precursors ; if they couldn't care less about anyone else, it's Neglectful Precursors ; if they help their descendants, it's Benevolent Precursors . If there's one or more race that played Precursors to the Precursors, then they're Recursive Precursors . Any and all of these are susceptible to Awakening the Sleeping Giant . If they gave their tech or it's being used by another race, it's Low Culture, High Tech . Very often, their most powerful technology will appear deceptively primitive and/or ceremonial . If everyone gets into an argument over their leftover toys, you have an Archaeological Arms Race on your hands Very commonly used to justify Rubber-Forehead Aliens : everyone was made from a common template by the Precursors, so they look pretty similar Compare/contrast with Sufficiently Advanced Alien , Space Elves , The Fair Folk , Eldritch Abomination Not to be confused with the space flight sim, The Precursors </

In Larry Niven and Jerry Pournelle's novel Footfall </ , the aliens who invade Earth are actually at a caveman level of social development; the Forerunners left carved blocks on their planet which detail everything from simple metallurgy through advanced laser weapons and Bussard ramscoops. As a result, there are many technological paths they never even thought of.

So, an untold number of years ago a civilization with incredibly advanced technology arose, then for whatever reason vanished into thin air. But what happens when a younger race comes across their incredibly advanced technology or other signs of their presence? Often, religion If the adherents come across the name of one or more of the Precursors they will specifically invoke those names. And construct a pantheon if they discovered more than one Finding the ancient race is a frequent goal of these people, woe betide anyone who gets in their way It's not uncommon for such peoples to adopt the tech of their "gods" Bonus points if the Precursors actually did create the species that worships them If these ancient beings turn out to be still around, Abusive Precursors tend to use these cults as pawns, if they didn't set them up themselves. Neglectful Precursors are often somewhat annoyed by them if they even bother to take notice. While Benevolent Precursors sometimes set up cults before leaving, then are usually disgusted by what has become of their followers when they return. Often done with Ancient Astronauts

Stock Phrases that occur in wiki discussions ome of them have Smeanings exclusive to the TV Tropes wiki (see also the TV Tropes SGlossary), and are for use only</ in Trope Launch Pad , edit Sreasons, the forums (e.g. Trope Repair Shop), or other discussion Spages. They're little more than verbal chaff in the actual Sarticles, so refrain from using them there. Please don't have Smessage-slinging wars; use discretion for which applies where, Se.g. Works' Pages Are a Free Launch is fine when someone has Sa good work in TLP they think they need permission for, but Sshouldn't be thrown around when the page is a stub needing help

Alice tells Bob to shut up and he hasn't even said anything. However, she just knows that Bob's about to offer an opinion—or at least that he would be justified in doing so. This is often used to lampshade Hypocritical Humor or Blatant Lies , or to forestall the obvious answer when Alice has walked into a Double Entendre or Rhetorical Question Blunder Similar stock responses include " Don't Ask ," "Don't say it," "Don't say a word," and "Not one word." For extra humor, the person being told to shut up is occasionally He Who Must Not Be Heard . Compare Inner Monologue Conversation When it's a lawyer saying this to a client, it's Don't Answer That It can be an effective source of Rapid-Fire Interrupting . Contrast Shutting Up Now

A villain has plotted an Evil Plan , an evil plan so terrific he has no doubt in its completion. Nothing can stand in his way , not even that do-gooder coming down the street! But wait — suddenly he's stuck in the area with this guy for some time. Now the evil plan doesn't seem so important — all that's important is getting away from this nut, no matter how! Maybe the person is so loony he makes your head spin. Maybe he's so bratty he makes you pull your hair out (what hair he didn't pull out himself). In the worst cases, he may be so fearsome he makes your blood curdle and your hair stand up . Whatever the cause, nothing could be worse than being alone with him another minute. But where can you go? Back to jail! Note that this strategy does not always work. An extremely determined person may follow the villain back to the prison he's trying to go to escape from him. The point is, however, that prison isn't a concern for the bad guy anymore. All that matters is getting this annoyance/terror off his back. Can be the result of Pity the Kidnapper , Unintentionally Notorious Crime , or Mugging the Monster . Subtrope of Unishment . An interesting subversion is Cruel Mercy if the hero realizes that jail is too easy for the villain. Contrast The Mob Boss Is Scarier , where a criminal is so fearsome that no one will inform on them and will take jail time or other legal penalties rather than risk their wrath.

A character knows that they are in a false, constructed reality and that nothing around them is real. Once discovered, leaving is a matter of determination and willpower. The illusion is broken, they're free. Yet they choose to stay. There are many reasons for this. It may be because life is good in the Matrix or Lotus-Eater Machine , and the character realizes they are truly happy there. Maybe they prefer the safety of delusions to bleak reality. Or it could be that to them the false reality seems more real than the alternative, if it's impossible to tell the difference between what is real and what isn't. Who's to say that something isn't true, if

they choose to believe it is? In works where reality is treated as painful and complex, this may become a Downer Ending , especially if there is an Anti-Escapism Aesop . Characters may or may not be successful in their choice to stay. Other characters may try to "save" them from the false reality, or the truth of their fantasy may become too much to bear. In contrast to this trope, I Choose to Stay has a positive connotation for helping others or resolving ongoing conflicts in an equally real setting. However, the "fantasy" is usually another world rather than a false, constructed reality. Compare Longing for Fictionland when characters prefer to live by the rules and expectations of fictional stories rather than Real Life , without actually going to a false reality. See also Preferable Impersonator for a single fake personality than an entire reality, and Shattering the Illusion . Not to be confused with I Reject Your Reality , which is stubbornness rather than a deliberate choice. Please refrain from adding Real Life examples .

One of the lesser-known risks of pregnancy It seems to be a law of TV and film land, that any hostage situation will include at least one heavily pregnant woman . This can either be used to show how inhuman the hostage-takers are by having them use her as greater leverage or to show them in a better light by having them treat her with compassion . If she's more than eight months, she'll probably go into labor, and give birth to a healthy baby with the help of a nearby know-it-all kid, med-school dropout or, if they're really lucky, an off-duty nurse. Or maybe even one of the hostage takers . The Panicky Expectant Father will rarely be held hostage with her, and may even be with the police, constantly telling them, "My wife's in there!" Either way, expect her to be the first one let go if the authorities arrange the release of some hostages as a sign of good faith, and additionally most hostage-takers know it's usually not in their favor to have such a possibly high maintenance hostage Sub-Trope of Imperiled in Pregnancy

In works of fiction, it is generally assumed that characters with big muscles must be strong. In most media, this compels creators to depict strong characters as with hulking muscular builds, often disregarding what kind of build people in any given activity would be likely to have, for fear not doing so would risk forcing the audience out of the story This frequently carries the opposite meaning as well: small characters are usually elusive, quiet, agile, stealthy and quick, while large characters being such will not be believable In Professional Wrestling , this is taken to extremes. Few fans will accept a smaller or average sized wrestler as a main event contender without years of development, whereas larger wrestlers may be advanced to the main event scene almost immediately after debuting. Fans and promoters alike also tend to gravitate toward men with large biceps and pectorals over triceps and the core body because the former look better on camera, even though the latter are more useful for wrestling It should go without saying that this is Truth in Television . Combat sports have strict weight classes for a very</ good reason, after all. Even ten pounds of muscle is considered a huge advantage Related to Bishounen Line . Polar opposite of Muscles Are Meaningless . The Giant will always be portrayed this way, even if they're mostly fat

Ugh, Tropers! I can't stand 'em Here are tropes that deal with

biases, bigotry, discrimination, and prejudice involving different categories of people; including racism (realistic and fantastic), sexism, sexualism, sectarianism, etc. Or just any acts of (unfairly) judging others by some (arbitrary) physical attributes or mental behaviors Note: this index is not</ for tropes that you think have Unfortunate Implications . This is for tropes that are explicitly about</ in-universe prejudice

Alice and Bob are going to meet each other at some point, to negotiate something or just make amends with each other. While Alice's waiting for Bob to show up, various horrible cases of the What-Ifs start creeping into her mind, making her more and more angry. By the time Bob shows up, Alice's gotten herself so worked up that she blows up at the fictional events that have occurred in her mind. Usually before Bob even has a chance to open his mouth to say anything beyond "Hello."

What's better than killing your most hated enemy? Sending them into the afterlife with your voice in their ears and the knowledge of your badassery in their head, that's what Another common staple of the Action Hero , this finishing quote need not be a One-Liner , but the longer your little speech goes , the more likely the bad guy will find some way to evade your intended killing blow or worse, make you Talk to the Fist . Consequently, Genre Savvy heroes are advised to just Kill Him Already! and save the pithy quotes for immediately afterwards . Of course, sometimes (as in the Heroes</ and Matrix</ examples) it seems that a Pre-Mortem One-Liner somehow paralyzes your enemy while you deliver it, or maybe they're just courteous Alternatively, the quote can be said in that short window of time after</ the killing blow is struck, but before</ your enemy's consciousness fades, as a metaphorical way of adding salt to the wound. Be warned, however, that if your enemy still has motor control, the quote might be the proverbial nail that spurs them to pull off a Taking You with Me The monstrous equivalent is less articulate. Not to be confused with a Pre-Asskicking One-Liner , which is used at the beginning of a fight; these quotes are used to end</ the fight. Also related but different is a one-liner delivered when escaping from battle Give My Regards in the Next World and See You in Hell are subtropes. Compare Bond One-Liner (aka Post-Mortem One-Liner), which is said after</ the victim's consciousness has faded, and directed at the audience, to another character, or just to oneself. If the victim is the one speaking, it's Defiant to the End or "Facing the Bullets" One-Liner

So you've followed all the press about your favorite video game for months; watching every trailer, reading every interview, playing every demo, until you finally get a release date. You're anticipating this game so much that you head on over to your local Trope Co. game store to pre-order, because you have</ to be the first person to play this amazing game. But that's not the only reason you pre-order. Only the first shipment of 10,000 units is going to have the super ultra limited edition behind the scenes DVD and bonus cloth overworld map with limited-edition action figures not sold in stores! The game developers just lured you in with a pre-order bonus This is a limited bonus offered by retail chains or

publishers to incite you to pre-order an upcoming game. Is commonly the game's official soundtrack, a free Strategy Guide , "behind the scenes" featurette, a demo of another game, or the usual suspects. Occasionally, there will be different bonuses depending on the retailer; to get them all; there's a healthy trade on eBay for the codes of such things The really cool ones probably won't reach Europe, or be standard there . Though on the other hand, the really really</ cool ones will probably never leave Japan Many game retailers have different Pre Order Bonuses for the same game, meaning that if you're a completist you have to either buy the game several times or hope that some of it later becomes DLC Pre-orders are also common with music - digital downloads will often come with pre-order exclusive bonus tracks. Occasionally, independent record stores will provide something extra with a pre-order as well In these days where people buy stuff and receive only a download , pre-ordering something became kinda irrelevant since there isn't the problem of the product going out of stock, so pretty much all pre-orders have bonuses or discounts so people will still be tempted to buy the game before anyone from the public knows if it's going to be good or not Compare Demo Bonus , where playing the game's demo will unlock a bonus in the full game See also Limited Special Collector's Ultimate Edition The North American version of The Legend of Zelda: The Wind Waker </ gave a bonus that was a disc that contained an updated Nintendo GameCube port of Ocarina of Time </ and a version of the same game previously unreleased in the West that featured harder, alternate dungeons, dubbed "Master Quest." Of course, the European version of The Wind Waker</ had this as standard

A work that is produced after</ one installment in a series but, internally, is chronologically set prior</ to it. Maybe the last entry in the series left no room for a sequel. Maybe the writers just want to explore the Backstory , Origins Episode , Start of Darkness or what have you. Maybe they want to provide more context to certain elements of previous installments. As they might say, sometimes it's not about the destination...but the journey. Either way, it may be time for a Prequel (a portmanteau of "pre-" and " sequel "): a sequel that is set chronologically before</ the previous work. On one hand, this allows for excellent foreshadowing as well as an opportunity to further expand the universe of a work. On the other, the prequel often heavily retcons the backstory, it can have consequences that should have been mentioned in the original story, and it's difficult to keep up the tension when the audience knows how it ends . For example, in the Star Wars </ prequel trilogy, various characters interact with others they would meet again in the original Star Wars</ trilogy, but in that film they show no evidence of recognizing them. Because the second Indiana Jones </ film was a prequel, audiences knew he would survive, and that he wouldn't get to keep the girl. That, however, doesn't mean a prequel can't have big twists or major reveals of their own and may even cast some aspects, if not the entirety, of a previous work in a whole new light. TV Series usually wrap a prequel in a Whole Episode Flashback . A movie may get a prequel TV series. Sometimes writers will squeeze a story between existing entries in a series, making it both a sequel and a prequel. Prequels are also an easy way to make use of an Expansion Pack World and introduce new conflicts without undermining the resolution of the previous work by introducing an even more ultimate evil . Occasionally said ultimate evil can get their own prequel with a Start of Darkness . One issue with prequels in electronic

media is that if they come out years after the original, you have the problem of technology in Real Life advancing to the point that special effects, graphics, etc. make the prequel look more advanced than the original, which ends up with a Cosmetically Advanced Prequel . Depending on the series, and the circumstances surrounding it, this can be overlooked, or jarring. Remember that a work must be produced after</ its related installment to be considered a prequel; previous installments do not qualify for the definition. For example, Rocky </ is not a prequel to Rocky II Is often, but not always, an Origins Episode . Compare Backstory , Flashback and Interquel . Prequel in the Lost Age is a subtrope set in a bygone era mentioned in-universe. If a genuine sequel or interquel is released after the prequel, then its Anachronic Order .

This trope occurs when, while making a story set during the recent past, the contemporary culture of the production seeps in where it wouldn't have existed. It varies whether this becomes more obvious or less in the ensuing years. Many period works are Anachronism Stews anyway, but it's pretty noticeable when a fad shows up in the wrong time period. An extremely noticeable example is The '70s fashions and hairstyles on Happy Days </; a very minor one is Dudley Dursley having a PlayStation in a scene set in the summer of 1994, when the PS1 wasn't available until the following year The Bellisario's Maxim can sometimes be applied with regard to location shoots and incorrect background details. Sometimes there just isn't time or money to get everything</ right. It's also impossible to control everything when working in a public setting; you may have to put up with pedestrians and other people who aren't part of the film's crew (and therefore aren't in costume) appearing in the background if you don't have the money or clout to get exclusive use of a public area. And even if you do, changing the street signs, billboards, and skyline</ isn't an option for a film made on location. Still, it's fun to spot them.. Of course, much of this assumes that casual viewers will actually notice</ the discrepancies. There will always be someone who does, but assuming that every person watching will have an encyclopedic knowledge of every past era is a bit presumptuous. Most people think of only specific aspects of a given era when they think about one, be it technology, entertainment, fashion, businesses, social norms, historical events, or even personal experiences. In fact, this trope exists in part because (at least in visual media) getting every detail right is hellaciously, often prohibitively expensive; a production may simply not have the budget or time to assure the provenance of every single prop or to produce hundreds of meticulously researched, historically accurate costumes, especially when the local rental outfit can provide “good enough” for one-fiftieth the cost Similarly, this trope is very common in fanfiction — there's no reason that a hobbyist writer should go over every detail and make sure it is timely if the series is still acceptably "modern-day." Reality Is Unrealistic might result if the trope is invoked unintentionally, simply because something that is presumed to be contemporary has actually been around for quite a while A Sub-Trope of Anachronism Stew . Often overlaps with Hollywood Costuming and 20 Minutes into the Past . Next Sunday A.D. sometimes involves inversions of this, depending on how things turn out in the future (for example, it seems pretty safe to have people using YouTube two years from now, but who knows?) Compare Comic-Book Time and Retro Universe . We All Live in America would

be the equivalent trope geographically Contrast Popular History , Two Decades Behind and Unintentional Period Piece

the moment you begin reading this trope entry, the story in which this trope takes place is occurring. Earth at approximately the time the series was made. Most things are as they would be in real life . Most shows are set in this time. Some series take this further, constantly reminding the viewers that whatever is happening now , is happening now . Compare 20 Minutes into the Future (close enough to be just a few years away but noticeably futuristic), Next Sunday A.D. (just ahead of the present day — the Alien Invasion arrived next week) and Long-Runner Tech Marches On . When a work is set in the recent past, but treats it as if</ it were Present Day to the point of including anachronisms, it's a Present-Day Past . If a work tries a bit too hard to look hip and cool in the present day , it'll likely come across as an Unintentional Period Piece later on. 1920s Literature 1920s Western Animation

People who present (host) TV and radio programmes.

In fiction, if a brazen organization has a position they need filled, rather than putting out a want ad or interviewing potential candidates, they'll simply grab the first person they see and force</ them to help Though this is usually played for comedy, it was used seriously by Real Life navies; however the British practice of existed only in wartime, it was in theory actually limited to seamen either in British ports, by the Impressment Service "press-gangs" or from homebound British merchant vessels, by individual Royal Navy ships (as in, crewmen from merchant ships were conscripted into the Navy) and some categories of them were completely exempted, such as officers of the merchantmen. However in practice on occasion even were pressed. Sometimes in time of crisis the Admiralty resorted to "hot presses", disregarding any exemptions To a limited extent, the impressment was also used by the Continental Navy of the nascent United States The practice of "shanghaiing" by non-military vessels in need of able-bodied men closely resembles the concept of impressment, though it is completely illegal See also Got Volunteered

Ah, the Press. Without them, we would never have such convenience in the spread of information. Part of the spread of such information is to go to locations and find important stories to cover Back when hats were regularly fashionable, the way someone from the Press would have designated their status was to have their press pass in their hat, between the hat and the band around the hat's crown Because of Press details needing to be shown, it was typically a white placard with the word printed on it. The reporter might need both hands free to take notes This seems to be a little less common nowadays , especially with hats falling out of style in the last half-century. Still, they act as a reminder of the presence of a reporter and are more convenient than wearing a tag anywhere else Because Real Life examples are completely pointless , please refrain from adding any examples from reality . Check out Hat of Authority and Fedora of Asskicking

Logically, not every work can be a smash hit. Many will only see modest success, while others do poorly. Some do so poorly that they get nowhere close to breaking even financially, costing the people that made them a ton of money. However, sometimes a work actually did rather well (or at least managed to break even), but somehow got a reputation as being a failure by critics, journalists, and general audiences whenever it's mentioned: that's when you have yourself a Presumed Flop. In short, it's when "Common Knowledge" meets a Box Office Bomb . The reasons for this could be many: The work received scathing reviews from critics (or was Not Screened for Critics), and it's assumed that this scared people away. Note that a Presumed Flop is not necessarily that much of a success for the creator in the long run. For instance, a widely-derided work making you a bit of money can border on Pyrrhic Victory — sure, it sold, but your reputation has taken a hit, a sequel is likely to flop, or it might not have made enough</ money to justify a sequel. Keep in mind, this is not when people hate it today when it actually was popular at the time. That's Condemned by History . This is when we claim something was a failure in its time when it actually was not. For example, the movie The Birth of a Nation (1915) </ is regarded as extremely offensive today, but nobody would claim it was a failure when it came out. If it's presumed to flop before its premiere, then it's And You Thought It Would Fail . Can overlap with Critic-Proof , which is about works that sell despite being thrashed by critics. : The point of this Audience Reaction is that the work is incorrectly assumed to be a financial failure, a critical failure, or both, when any glance at box office sales or Metacritic can prove you wrong. Even if "people think it's bad" is the reason the work is believed to be a flop, please do not post a long rant about the work. Give a brief explanation of why the work was poorly received, and leave it at that.

When characters are facing the Zombie Apocalypse and need to get from point A to point B and the only way is through a mob of hungry undead, what is the proper thing to do? Act like a zombie! Shuffle and moan with your arms outstretched, and if you've got access to some cosmetics, give yourself a pasty makeover. After all, there are No Zombie Cannibals so you'll be safe, right? Just hope that the zombies don't see through your disguise by being able to detect your delicious living flesh in other ways! Typically, this is a sign that a work is closer to the "comedy" end of the Sliding Scale of Comedy and Horror , since most "serious" horror realizes this ploy is about as effective as putting a mustache on a hamburger . More horror-skewed variants do exist, but the method of disguise is usually far more grotesque and gory. The Trope Namer is the song by L7 , which was used in the trailer for Shaun of the Dead It's about Apathetic Citizens . Not to be confused with Faking the Dead . A Sub-Trope of Dressing as the Enemy . Compare with Pretend to Be Brainwashed in non-zombie-related contexts, such as situations where a group is surrounded by people who have been brainwashed , body snatched or assimilated into a Hive Mind . Compare with Mistaken for Undead , where it is unintentional.

The leaders of Viridia and Tyria want to go to war. Not for a silly reason , but due to anything from good old fashioned jingoism, greed, political/economic/religious differences, or a simple historical grudge. However, they can't just out and out declare war, that would be uncivilized! And more importantly, it would make them look bad to the international community, which isn't good politics. So

instead they will wait for or manufacture a Pretext for War out of whatever should come their way. Did a Tyrian pig farmer lose a pig when it wandered into Viridia? This Means War! Maybe a Viridian girl disappeared near the Tyrian border? Tyrian slavers must want to capture Viridian women since theirs are so ugly! A favorite is for Star-Crossed Lovers from both sides (preferably royalty) to elope, causing both sides to assume the other kidnapped their heir. One interesting and ironic variant is when hardline elements from both sides will collaborate to stage a high profile assassination or other incident to kickstart a war, proving just how well they work together to achieve their goals despite hating each other's guts. This one is especially common when one or both nations have a Reasonable Authority Figure as a head of state, since it can force their hand to war, or if they're the assassination target, get them out of the picture and</ make them an unwitting martyr. False Flag Operation is one of the classical moves too, and almost a Twentieth Century theme song. Point is, an incident any two sane heads of state would quietly defuse is treated as a Rant-Inducing Slight in order to start the war. In these cases, heroes typically have to uncover the plot in order to Prevent the War . A technical term for this is the Latin term Casus Belli</ , or case for war. Since have technically been banned, you'll find that these are a lot more common today than they were previously, since both sides are at pains to show that the other side started it. As a result, the history of many a 20th-century war reads like a really, really dark Idiot "Fawlty Towers" Plot . Mind you, "civilized" countries have more or less always deemed it improper to declare war on your neighbors "because we want your stuff" or "because we feel like it" With the exception of Sparta, which freely admitted that it would go to war " because we have nobody else to fight right now ." or even "because we're afraid of you"; even an aggressive war would have to have some kind of triggering incursion, insult, or violation behind it. (Look up how each of the three Punic Wars got started — the pretexts are hilariously flimsy.) See also War for Fun and Profit .

If you're not particularly xenophobic or ethnocentric, you might find parts of other cultures to be interesting or cool . So you might have the urge to at least once in a while try to imitate part of that culture, like the dialect, slang, or accent. Now the problem is that you don't have a deep understanding of the culture's origins and meanings, so you should at least pay close attention to what you are about to imitate, preferably with some practice beforehand. If you don't, you will look silly at the very least</ imitating shallow and superficial elements of a particular culture. Worse, in fiction (and on the Internet), wars have started that way. The most common form of this is likely just trying to imitate an accent. The most notorious form is middle class suburban white kids imitating the urban black culture. Note that it's the middle-class culture, not the race, that determines whether someone's a poser. You can be Asian, Native American, Ambiguously Brown , or even African American, and still not be able to imitate the urban culture. The end result of this usually sounds Totally Radical to natives of said culture. These people are sometimes called "wiggers", a portmanteau of combining the words "white" (or "wannabe" since the person in question may not be white) and a certain racial slur that white people generally avoid using (except for these guys, often with hilarious consequences). This version of the character, which was especially prevalent (and mocked)

in The '90s , is likely to become a Discredited Trope soon, as rap music , like rock 'n' roll decades before, has become mainstream enough so that white people who enjoy it aren't automatically labeled as posers. However, as long as there are subcultures associated with particular ethnic or socioeconomic groups, new versions of this trope will likely exist until the end of time. Another variation is white people, usually otaku, who are obsessed with Japanese culture. These people are often called "Wapanese" or, due to the efforts of 4chan , " weeaboos ." Contrast Mighty Whitey for when a white person enters a non-white culture and becomes its greatest member, and The Whitest Black Guy for when one has trouble fully-identifying with one's own group. In terms of gender, Camp Gay and Camp Straight can be described as Pretty Feminine for a Man (or Pretty Gay for a Straight Guy in the latter case), while the Butch Lesbian and The Lad-ette can be described as Pretty Masculine for a Woman. See also White Gangbangers .

In fiction, as in real life, many people wear fur garments just because it's luxurious and glamorous, whether worn for warmth or for style. If you see characters wear a stylish fur, it usually means they either have enough wealth to buy it (either on a whim or saving up for one), or they have found other ways to get one, because in many cultures these are status symbols. Even when those not in the upper classes wear furs this way, it still indicates that the aggregate wealth of a society is higher than normal. In Europe, certain furs were so prized that for a time there were about who could wear what kind of fur . Ermine was among the most prized, used to trim and line royal robes and capes (hence the reason the trope Ermine Cape Effect is named so). While the poor also wore furs, it was for utility instead of decoration, so their clothes were made with common pelts like sheepskin and rabbit, and weren't stylized and tailored. So this trope is also as old in fiction, but visual media like film is where it's clearly evident. It was used extensively in The Golden Age of Hollywood just for the visual splendor it brought. At one point furs were so common they didn't provide characterization the way they do today under the Hollywood Dress Code . The exceptions were very specific outfits, like the classic pimp coat . What fur was worn was generally chosen one of two ways. The first was reflecting whatever Conspicuous Consumption style trends were popular for a certain demographic. The second was whatever the designer felt like . Also, fur can be a dual purpose luxury. When worn in cold weather, it's a utility luxury (as in the picture), and when worn otherwise, it's a sybaritic luxury. These days furs are less common in media and now has competition from Fur and Loathing , where a woman in a fur coat is either the Rich Bitch , The Vamp or downright evil, although some savvy costumers can do both if the character is wearing real fur (and expect some commentary on either trope). Other characters who wear fur tend to do it for a single episode or two. Fashion Magazines , in at least one issue in (usually) an Autumn month, will have a spread about fur fashion. Any ads for furs would count as Up Marketing , as would ads for other luxury products that also feature models wearing fur. Even if a fur is worn for warmth, it also has to be an excuse to have a nice fur in the scene to count for this trope. Thus an Inuit parka usually doesn't count; it would have to be a designer</ parka (even if made in Inuit style). A Sub-Trope of Garnishing the Story . A Super-Trope to: A Sister Trope to: Everything's Sparkly with Jewelry , Fluffy

Fashion Feathers , Gold Makes Everything Shiny (all involve materials to show off wealth in a glamorous way), Pelts of the Barbarian (furs and hides that are rough instead of luxurious), Hell-Bent for Leather . Compare An Ice Suit , Sexy Coat Flashing , Happy Holidays Dress , Sexy Santa Dress (all of which have many examples with fur). Contrast Fur and Loathing , Cruella to Animals .

No one wants a war; War Is Hell , after all. Yet there's always someone out to start a war, leaving it to the heroes to stop hostilities from escalating. The factions can be anything from galactic empires down to street gangs. They might have originally been allies or begrudgingly upholding a tense peace. Usually there's a villain who wants to start a War for Fun and Profit and sets out to trick the factions with a manufactured Pretext for War . Sometimes a leader or member of one of the factions is a General Ripper who wants there to be war to prove a point or for patriotism. Other times, a Blood Knight or a Proud Warrior Race Guy would actively incite wars for the sake of their war-loving culture and glory . In the worst cases, the entirety of both factions is filled up with people raring to fight, and only the efforts of a Reasonable Authority Figure and the heroes is holding the peace. And sometimes, a nation supported by entirely Arms Dealer and war economy would demand more wars If there aren't any villains out to incite war, then it's likely a morality play about how even good people can act foolish and go to war. In such cases, the provocation itself might not even be a slight or offense, it could be a pair of Star-Crossed Lovers from each side choosing to elope (and each side assuming the other one seduced or kidnapped their lover), a natural resource about to run out (and neither side wants to share), or a misunderstanding Though the heroes usually succeed, stories where they fail are not unheard of. It can easily turn into a Tragedy (Impulsiveness optional but common). In these cases, one or both sides may have hawks who believe War Is Glorious and seek to start one by whatever means possible If the characters are trying to prevent a historical war, there can be overlap with You Can't Fight Fate and You Can't Thwart Stage One (unless it's an Alternate History). Another popular plot during the Cold War was to stop the West and USSR from starting World War III , or Avoiding the Great War in the case of WWI. World War II is less prone to this trope because of Hitler's Time Travel Exemption Act

Basically this is when a work sells itself on including a preview for a much more anticipated work. This is often done with second string titles that would fizzle out on their own. This has become less prevalent (or at least less successful) with the rise of easier video sharing and video game demos on the Internet, but still there are some fandoms dedicated enough to shell out cash for a ticket to Movie You Might Have Ignored Completely</ if it means they get a chance to see just an ad for Everything You Ever Liked: The Movie</ This is also done on TV shows. You get a trailer (more often called a "sneak peek") packed somewhere in the commercials (although usually at the end) for an anticipated blockbuster Sometimes this works. A person willing to sit through the actual feature may indeed find something they like about it and become a fan. Other times, they just get the preview they wanted and ignore/throw away the rest The inverse is standard procedure, where an anticipated work includes a preview for a less-hyped title, in

the hope that attention will rub off on it

A character's Backstory of what their life was like before they joined the military or got caught in the crossfire The skills they developed before may come into use in their new environment, or they may leave them unprepared Can be a result of Conscription and can overlap with From Nobody to Nightmare and/or Start of Darkness See also Trading Bars for Stripes and Recruiting the Criminal . Compare Utility Weapon (for weapons with a peaceful use) and Retired Badass ; contrast Call to Agriculture (for careers that follow military service) and Returning War Vet

When a fragile and priceless item is featured in a work of comedy, it will inevitably be destroyed by The Klutz . Despite their adoration for their prized treasure, the owner will not secure the item in a display case, but rather perch it precariously on a pedestal so it can be tipped over by the slightest breeze. Traditionally the item is a vase, but paintings, sculptures, heirlooms, or other seemingly priceless and/or sentimental artifacts can be used. The person who broke it will often go to great lengths to repair or replace the item before the owner finds out. Common outcomes include: Historical background for the rise of this trope has been by historians. Frequently caused by What the Fu Are You Doing? . A character may attempt a Desperate Object Catch (which may or may not successfully defy this trope). If the item contained cremation ashes, see Ashes to Crashes . For the automotive version, see Watch the Paint Job .

Nothing is free. With these Magic and Powers tropes, the powers involved come with strings attached. For the concept as a whole, see Power at a Price Addiction-Powered : If the power alone doesn't cost you, using it in conjunction with all the downsides addiction usually brings will

This person is badly wanted by somebody. Wanted badly enough that This person they are willing to pay a large sum of money whoever This person brings in this person. They often don't care if this This person person arrives dead or alive. The bounty is usually This person offered by either The Law or a criminal. Or both will This person often feature on a "Wanted!" Poster . The price will This person usually attract Bounty Hunters

Black Lagoon </ :

Justice Society of America </ : One arc sees the entire team getting individual bounties placed on their heads, with the sole exception of Stargirl.

Dungeon Keeper Ami has a bounty that's over two million</ gold pieces.

Bring Me the Head of Alfredo Garcia </ : El Jefe puts a contract out on Garcia because he knocked up El Jefe's daughter. The protagonist finds out that Garcia is already dead and buried, so he decides to dig him up and remove his head to return for the reward.

Frederick Forsyth 's The Day of the Jackal </ has disgruntled French Foreign Legionnaires, angry that President De Gaulle chose to accede Algeria to the insurrectionists, hire a British sniper to assassinate the French president. The sniper has a badass reputation as The

Kingslayer , and commands a $500,000 fee. The cabal is able to gather the advance by robbing banks, confident that they'll be able to gather the remainder from right-wing businessmen once they've proved themselves by killing De Gaulle.

Firefly and is enough to get a sadistic Bounty Hunter after them. This causes no end of trouble for the rest of the crew.

The Bon Jovi song Wanted Dead Or Alive</ is about a man wanted... well, you know. Interestingly, the song never comes out and says what it is he's wanted for.

Shadowrun </ :

A Hat in Time .

The Looney Tunes episode Rebel Rabbit</ : Bugs Bunny is infuriated upon learning that the Department of the Interior offers bounties up to $50 for large nuisance animals, but only two cents per rabbit. Bugs sets out to become the biggest nuisance ever and vandalizes America in hilarious ways. The U.S. Army finally captures Bugs and imprisons him in Alcatraz. "Meh, perhaps I've gone too far."

It was common, in the past, when police services were rudimentary, for the victim of a crime to put a bounty on the head of the author of the deed.

Welcome, you inferior troper! Feast your little eyes on this awesome index which deals with pride and prideful people! See also Dignity Tropes , which I have . Go to These Tropes Love to Brag which is my personal favorite. Contrast Humility Tropes , which are for losers by the way.

Pride. It goeth before a fall Sometimes having a good opinion of yourself — your position, your skills, your accomplishments — can be too much. It can go to your head. It can turn you into a Jerkass . When it really</ gets bad, it can destroy your common sense, make you delusional, declare to the world that " It's All About Me !" and make you grab the Idiot Ball by Tempting Fate Many religions, such as that of the Greeks (who coined the terms Hubris</ and Narcissism </ for such dangerous amounts of pride) were condemning on having a mortal (un)deservedly boasting that they're better at something than their highly petty and vengeful gods , especially the one who declares oneself Above the Most High . Or trying to constantly bully the weirdo who has the powers to reduce you into a smear on the wall , because your pride says you can . Or (always a classic) walking right into an enemy's hands confident they'll fall just like everyone else has, despite how they seem to be goading you to stand on the big red bulls-eye Or, best of all, never asking for help or Forgiveness despite all the Break the Haughty because "pride" </ won't allow it... or, if you are helped you express lack of gratitude , and letting highly preventable events play out, to the pain and misfortune of protagonists and their close ones, if not others. In more Romanticist works, hubris also goes very well with committing, through science , sins against nature or discovering Things Man Was Not Meant to Know How the Mighty Have Fallen ! The technical term

for that is " Tragedy ." When done on a larger scale upon entire civilizations, leads to Look on My Works, Ye Mighty, and Despair! or And Man Grew Proud Pride forms a powerful combination with Ambition , Greed , Megalomania and Insanity , and these deadly sins have brought down more heroes and villains than Homer could shake a cudgel at; just see the many victims of the Villain Ball and its subtropes. As a Fatal Flaw and Achilles' Heel , it is a classic that's Older Than Feudalism and not likely to go away any time soon . There's a reason why this is one (and also the worst) of the Seven Deadly Sins , and why a very minor</ character in Classical Mythology is the Trope Namer for Narcissistic Personality Disorder Pride is a potent driving force for Drama : Some stories begin with the proud brought low and their attempts to learn humility, others are driven by prideful quests , while others end because of an unwillingness to forsake said pride]] It's All About Me , A God Am I , Kneel Before Zod , Nothing Can Stop Us Now! , Grudging "Thank You" and Don't You Dare Pity Me! are proud stock phrases. Proud people are also very likely to suffer from Moral Myopia (to the point of being convinced to be the only righteous one). Come to Gawk is frequently uncommonly painful for the proud — and the proud are uncommonly likely to jump to the conclusion that someone did come to do just that. The Green-Eyed Monster often accuses the envied person of Pride — justly or unjustly, or the person with Pride could be the one getting envious. Sub-Tropes include Acquired Situational Narcissism , Fairest of Them All , Holier Than Thou , Inferiority Superiority Complex , and Too Clever by Half . See also Small Name, Big Ego and Fallen Angel Not to Be Confused with the common use of "pride" to denote a group of lions, or LGBT Pride (which is more self-affirmation as LGBT)

Someone, usually a child, is wandering in his or her house and walks into two people having sex. (Nobody ever</ has a room with a lock in fiction.) Most of the time it's the parents. This can lead to A) the parents giving that one discussion we all mention vaguely , B) the resulting Parental Sexuality Squick leaving the unfortunate soul to be shell-shocked for a while , C) being very funny , or some combination of the three Its psychological term is the Primal Scene</, coined by none other than Freud Naturally, media always plays this as a traumatic experience , rather than the person just figuring it is natural, quickly realizing such, or just not understanding why mommy and daddy are playing leap-frog naked (and then after looking back on it all , will quickly apply Brain Bleach to forget about it) And of course, all "child" characters, no matter how old, don't understand sex . Characters identified to the audience as "teenagers" will simply be horrified. This rule applies to almost every example, despite the fact that most children (even 8- or 9-year-olds) will know what they interrupted in Real Life . That said, most offspring are conditioned not to think of their parents in sexual ways, so even if the act</ itself isn't the big deal, seeing their parents</ do it can be considered innately disturbing for some This may involve Right Through the Wall if the child hears their parents having sex. Sex in a Shared Room is the most damaging and disturbing form of this, when it actually occurs with the child right there</ and is usually intentional, in which case it may function as a Freudian Excuse See Caught with Your Pants Down for the single-player version ; for the reverse scenario with parents walking in on their adult child getting frisky, see Parents Walk In at the Worst Time . A subtrope of Interrupted Intimacy

An animated cartoon that airs during nighttime, as opposed to a Saturday Morning Cartoon which airs during Saturday morning Most of the series/specials on this list are aimed only at adults, but some are aimed at kids and families. Child-targeted kids networks such as Nickelodeon and Cartoon Network premiere a significant amount of their original series in primetime

A news show made up of one or more documentaries, each longer than a news segment on the nightly news. Frequently showcases investigative journalism. Also known as "newsmagazines" because of the long format of their stories. Not to be confused with CBC Television's early-1990s experiment of replacing The National</ and The Journal</, which were separate programs at 10:00 PM (The National</ handled news, The Journal</ was this type of program, albeit with a heavy emphasis on the arts), with a combined program at 9:00 PM; this failed for a number of reasons and The National</ returned by 1995 (though The Journal</ never did due to the death of its' lead anchor Barbara Frum). Being such an iconic format, it has naturally been subjected several times to parody and satire . The most notable of these are:

What comes to mind when we think of a prince? He's an aristocrat with a magnetic personality , probably dashing, brave, gallant, and kind, a true prince. In Fairy Tales , he often rescues the Damsel in Distress and marries her to live Happily Ever After . If he's saving himself for his true princess he'll be her Celibate Hero but if he's more interested in impressing the ladies with his father's money , he's a Millionaire Playboy . Except, actually, all the princes in those tales were very seldom named. It was simply a "prince" or "king" or royalty of some sort. And when they did have names, they were genuine, even commonplace, names: John, Ivan, Jean, Hans, etc. The term Prince Charming actually originates from an 1889 translation of Le roi Charmant</, the Charming King, and then a year later the phrase "Prince Charming" was used in The Picture of Dorian Gray </ . The term stuck. Nowadays, the classic Prince Charming is almost never used , possibly because the Ruritanias which he often hailed from have largely abandoned monarchy, or joined the EU. The trope has been subverted, double subverted, inverted, averted, diverted, converted, and perverted (and ridiculed, but that's nothing to be scared of). Nowadays, the Prince is often Prince Charmless — a Jerkass , Smug Snake , or downright evil . Possibly, he'll be naive or selfish . It's only the rarest of instances where he can be played straight and done right . And under those circumstances he will be given his own name, and not called Prince Charming. "Prince Charming" is guaranteed to be a subversion. When he does have charm he can be found practicing Old-School Chivalry . In most instances, he will start out with some flaws and undergo Character Development to earn his "Prince Charming" status. When not referring to a royal prince, the concept refers to a young man with the charm of a rich boy. Contrast the bad boy charm of All Girls Want Bad Boys . The Spear Counterpart to Princess Classic and ground zero for any Princely Tropes . Compare The Wise Prince , Knight In Shining Armour . Subject to the Ermine Cape Effect . In terms of the ranks of Authority Tropes , the tropes that are equal are The Evil Prince , Prince Charmless , Warrior Prince , Sheltered Aristocrat , The Wise Prince , and all Princess Tropes . The next steps down are The Good Chancellor , Standard Royal Court and Decadent Court . The next steps up are The

Caligula , The Good King , God Save Us from the Queen! , The High Queen , and The Woman Wearing the Queenly Mask .

A Wrong Genre Savvy Hopeless Suitor who fantasizes that he's the Prince Charming or Knight in Shining Armor who will effortlessly sweep the heroine off her feet and rescue her from a life of dullness and/or misery...all the while ignoring or completely oblivious to the fact that the girl wants absolutely nothing to do with him Why can't he see that? Because he's either an egotistical hypocrite long overdue for a Heel Realization or he was Born in the Wrong Century and his ideas of what it takes to woo and win the girl are outdated and insulting. Contrary to what he thinks, she is not Playing Hard to Get and she's not flattered by the fact that I Love You Because I Can't Control You . Nevertheless, he insists he's the answer to all her dreams and hopes and desperately wants her to let him whisk her away to live Happily Ever After , unable to see that he's not a welcome Prince Charming , but an unwelcome Stalker with a Crush Motivations: Lust and Pride This trope is similar to the more cynical ways to play a Dogged Nice Guy ; both tropes are about well-meaning, sincere love interests with wrongheaded ideas about what constitutes romance and how their object of affection actually wants to be treated. Compare with Casanova Wannabe and Small Name, Big Ego who exaggerate their skills with the ladies and have an over-inflated ego respectively. May overlap with Entitled to Have You if the character thinks their "gentlemanly" behavior necessitates</ reciprocation Not to be confused with Prince Charmless , which refers to literal princes

As male sons in royal families, or rulers of principalities, princes have many expectations of them. Therefore there are several types of characterizations in fiction (whether Fairy Tales or other works), along with several tropes about princes, or characters very much like the prince archetypes These tropes do not necessarily involve the musician Prince or anything or anyone formerly known as such

Plenty of sitcoms and comedy films love to have this character. A character who revels in pulling the most elaborate of pranks on a regular basis. Whenever this character is around, everyone else runs the risk of sitting on whoopee cushions, putting salt in their tea instead of sugar, waking up to find their eyebrows gone...you get the picture. We're talking about The Prankster , only cranked Up to Eleven This character is typically male but female examples have become more prominent. Note that the POP differs from the Class Clown as a Class Clown will normally be loved for his/her comedy antics while the POP will typically be feared and sometimes despised for their pranks outside of their normal circle of friends. Having this character around will generally lead to an Escalating War (and possibly a Pranking Montage) if someone wishes to challenge them. They are, however, liable to Menace Decay and even more so to being chewed out for a Prank Gone Too Far

Works made of ink and paper. Though this category refers to the that has come do dominate the production of media within, it also covers Older Than Print forms of mass-copied works, such as

hand-copied illuminated manuscripts See also Print Media Tropes

Tropes having to do with newspapers , magazines and other non-book printed media. These media were produced by using a variety of methods for staining pressed sheets of wood pulp with letters and images. They were required to be physically transported</ to the consumer, requiring large numbers of "copies" to be made of each article. In spite of a very restricted capability for user-edits (all changes made were local to the "copy" of the article, not visible elsewhere), these media were in many ways considered precursors of the Web. See also Photography and Illustration tropes and the Print Media index for works. Alan Fridge

Sometimes the bad guys get caught, or maybe the good guys are falsely accused. Whatever the reason, this trope occurs when a character is thrown in prison and undergoes some change while there. When they're finally released or break out, it turns out the experience has changed them fundamentally, perhaps teaching them important life lessons or, in the case of Had to Come to Prison to Be a Crook , just spurring them on to a life of crime Often Played for Laughs if the character was only in prison a short period of time, yet still claims to have been irreversibly changed. For a trope on how prisons change people physically</, see Prisons Are Gymnasiums No Real Life Examples, Please!

A prison-centered installment in a larger work that is otherwise not about prison. It might be an episode in a serial, a sequence in a video game, or a few chapters in a book Usually this involves one or more major characters being in prison, or at least in noticeably prison-like circumstances . In some cases, they might run the prison. Be on the watch for Clear My Name , Clear Their Name , or a Prison Riot , among other things When this trope shows up in video games, you can expect the inventory of the player character(s) to be taken away . This results in the player having to use stealth and cunning to avoid the guards , until the hero(es) get their inventory back Despite this being only a segment of the series, it might end up having permanent effects on the tone of the series from that point on . For example, it may portray major characters as becoming more inclined to crime as a result of said imprisonment . More generally, a prison episode is often used to show and/or begin a Darker and Edgier Tone Shift Compare Bizarro Episode , Sick Episode , Very Special Episode

One of the heroes has been captured by the bad guys. His friends know where he's being kept, but the dungeon lies deep within the villain's impenetrable fortress, surrounded by guards, and a good old-fashioned prison break simply won't do. However, it just so happens that one of the opposition has been spotted wandering around outside Camp Good Guy, and was conveniently dumb enough to get caught. Now there are two captives, one in each camp. So what do the two opposing sides do in this situation? Each has something the other wants, and neither is willing to let up unless they can find a way to use the situation to their advantage. So they agree to trade hostages. They meet up at a certain location where the exchange will take place, both prisoners get to go free, and everyone's happy. Right? Usually the captured member of the other team is no ordinary Mook . He may be someone who is important to the villain in some way, someone he cares about or

needs in order to fulfill his Evil Plan , otherwise the other side would not bother with trying to get him back. Heroes usually don't need this kind of motivation to rescue a captive comrade, as they generally need less of a reason to save people. A Messianic Archetype may risk both his life and the chance of giving up whatever advantage he may have had, coupled with letting a villain go free, in order to save a total stranger, although it's just as likely that the captive will be someone close to the hero in order to facilitate drama. The exchange often involve both parties facing each other across a wide open area, with armed soldiers present or hidden in case the other party tries something. Each captive walks toward the other, they pass by each other in the center and proceed on to their own group. Often takes place on a bridge , since it marks the only crossing point of a natural barrier, such as a river or chasm, where two territories would typically be divided . It also gives both sides a clear view of each other as well as of the hostages in case anyone tries anything funny (providing there is no Ominous Fog), and can be symbolic for the hostages making their journey home. Note that the downside of this agreement is, because Evil Is Petty , villains rarely make fair trades. While a hero will be bound to keep his word and make sure that the hostage is returned to the villain unharmed, the villain will often take the first opportunity to kill his hostage as soon as he gets what he wants, or to cause the heroes to walk into a trap, or find some other way to go back on his promise . Cunning good guys or Anti Heroes may realize this and never intend to make a trade with the villain in the first place, or both sides may have the intention of screwing each other over, in which case the hostages themselves rarely have any say in the matter and may end up on the worse end of the deal. If the hero decides to trade him/herself for the hostage, it's Take Me Instead . See also Hostage Situation and Checkpoint Charlie .

The Big House. The Slammer. The Pen. The Clink. The Hoosegow. The Pokey. The Calaboose. Call it what you will, stories set in prisons have their own set of tropes attached to them Also see Escape Tropes , A Restrained Index , and Sealed Index in a Can

Useful Notes :

A seeker character frequently used in Detective Drama A professional detective not directly affiliated with a police department in any official sense (although many will have contacts in the department , and it's not uncommon for members of this profession to have been either police officers or previously worked in law-enforcement, as many of the skill sets overlap), a Private Detective takes on cases that private citizens bring to them - however, whilst they aren't supposed</ to investigate crimes (which are official matters for the police, who often look dimly upon private detectives sticking their noses in - both in fiction and in real life), they usually find themselves knee-deep in murders, robberies and kidnappings by the end of the story. They may be doing this because the Police Are Useless and/or unconcerned about solving the case, meaning our detective is the only person who is actually willing or capable of solving it. However, this is often justified (especially in classical Film Noir) by the detective starting off with a seemingly simple case , such as finding out if a woman's husband is committing adultery or investigating the disappearance of a man who vanished twelve years ago in order to

resolve a debt he had with a wealthy businessman , only for things to spiral out of control to the point that the only way for the detective to get out is to solve the case Although it's more common for a Private Detective these days to be treated as just one step away from the Amateur Sleuth (or often, particularly if seen from the point of view of the police, as rather sleazy bottom-feeders usually involved in some kind of criminal activity and frequently ex-cops kicked off the force for some kind of corruption), the classic Archetype of the Private Detective - and the one that has generally stuck in the mind of people when they think of the profession - is either the Great Detective or the Hardboiled Detective . In Real Life , the Private Detective is often viewed as a Punch-Clock Villain for his or her use of Sinister Surveillance . The fact that they are officially licensed to go on a Stalking Mission to track whoever they are hired to investigate (often for non-criminal activity like adultery) puts them firmly in the camp of Sociopathic Hero , or a Psycho for Hire with no respect for other individuals' privacy, depending on who you ask. In Real Life , some private investigators may also function as a Bounty Hunter , as the two professions are incredibly similar (although a Bounty Hunter will usually confront the individual he or she is tracking directly - a Private Investigator typically will not</ if he or she can help it). Private investigators are more likely to get hired for skip traces (tracking down bail jumpers, people evading service, people hiding from warrants, and similar parties so that the police and courts can do their thing), and that part of the job is typically nowhere near as exciting and involves lots of social media hunts and public record searches While the comparison with the Amateur Sleuth is common, in many ways the stories work the opposite ways. The Amateur Sleuth , such as Miss Marple , tend to cozy locked room mysteries, where everything starts complicated and uncertain, but slowly works its way down as a logic puzzle, with a tidy solution where the killer is unmasked. The Private Investigator tends to start simple, but as the investigation will unravel an ever more complicated plot, and the ending is rarely tidy. Minor Crime Reveals Major Plot is a common thread. The killer may be unmasked, but larger problems tend to stay unsolved. The Hardboiled Detective is this guy made even tougher Vampire Detective Series often feature one as a protagonist, though of the immortal variant; while the Occult Detective uses magic

Often used to allow the pirate atmosphere without some of the… less civilized parts. Turning into a real pirate was a recurring problem with privateers. Of course, one nation's "privateer" is often another nation's "pirate" . Sometimes the same nation would even issue letters of marque when fighting a powerful navy they couldn't match in conventional warfare, then turn right around and denounce it as an illegitimate tactic when they were up against less powerful nations. Indeed, until the eighteenth century the distinction wasn't formalized in international law, and any ship with enough muscle could go a-rovin on a whim however respectable it was in port. It was also common for an Intrepid Merchant to moonlight as a privateer. After all, all that was needed was a paper, and one could have the object of profiting by Plunder as well as being the subject of it Compare and contrast with Private Military Contractors . Do not confuse with Wing Commander: Privateer </, a Spin-Off of the Wing Commander </ games

The signature narration style in Film Noir . A bored-looking, world-weary, utterly cynical detective (hardboiled and / or defective) with his feet on the desk meets a Femme Fatale , while the voiceover gives us his mental play-by-play : The Private-Eye Monologue is characterized by certain pronunciation and speech patterns that make it immediately recognizable and utterly cool . The most basic rule to remember is that it is a monologue</, so it is spoken</ (not written), preferably in a deep chain-smoker baritone. The last (or second last) word in the sentence is emphasized, to make clear where it ends. Short, choppy sentences in past tense with little conjunction (buts, howevers, and therefores) between them are preferred, and the lexicon mainly consists of short, simple words ; that's why such monologues are so super quotable. Purple Prose and most</ Big Words are taboo. The most important aspect is thinking-in-metaphors . Creative metaphors and similes are the alpha and omega of a good Private-Eye Monologue, in stark contrast to the simplicity of the vocabulary. They demonstrate the relatively good education of the speaker without estranging him from the audience by sounding geeky . References to popular culture and politics are pure win. Mentioning the climate and the current weather, usually in the beginning , is often a must. Even more impressive are religious (Judeo-Christian) symbolism and mythology, just don't overdo it. Repeating a metaphor or simile is a faux pas. Must</ be black and white , with preference given to grimy offices, frosted-glass doors, half-open Venetian blinds, and a cheap and conspicuously open bottle of hooch. Bonus points for saxophone music or impractically slow ceiling fans. Tends to make one wonder how someone so jaded could have such a fertile imagination, or why he isn't a poet or a public lecturer. When done well it is always a consistent narrative. Done badly, this monologue just becomes laughable amounts of complaining like a spoiled emo teen. Nigh impossible to play straight these days. The tough First-Person Smartass , of course, is far from dead See Captain's Log for voiceover of the lead character talking out a journal or diary entry.

Private Military Contractors (PMC) are mercenaries, soldiers, and other combatants employed by a private company or other organization and fighting on behalf of clients. While such soldiers of fortune are regarded with wariness in most settings, they're generally considered distinct from criminal enforcers, mafia hit men, and the like. The polar opposite of conscripts In the real world, they are usually ex-soldiers with decent to slightly-above-average equipment from the United States — the largest company, and largest number of companies, are American. Other common national backgrounds are former Soviet Republics or South Africa. Of course, there are plenty of less professional and less affluent outfits out there, some of which will hire just about anyone who'll take them up on their offer. It's a great summer job! In fiction, though, they tend to get all the latest and most expensive vehicles and support equipment as well, and are often recruited and trained by the company itself. Fictional mercenary groups often hire unique individuals or groups of various special types of fighters: Ninja , Rōnin samurai , dishonored knights , mages , shapeshifters , and left-over warriors of defeated organizations, nations, or races that need to make ends meet. Some PMCs are just a Ragtag Bunch of Misfits

, others have their own Adventure Guild These characters can be depicted as anything from heroic to villainous; in a conflict, they usually are allied with the richest party's faction, but sometimes have a strict honor code that prevents them from switching sides mid-battle. If they get too</ enthusiastic about their job, they may become Blood Knights and try to start a War for Fun and Profit . On the other hand, they do have to deal with the risk of their employers double-crossing them when the job's done . And if their clients run out of money before the fighting's done, things will get ugly in short order in one or more of many ways In recent years, there's come to be a distinction between a " mercenary company</" and "corporate mercenaries</", especially in Western (American) television and movies. The traditional mercenary who hires himself</ out (or himself and a dozen of his best buddies) is seen as somewhat honest, with at least a personal code of honor of some kind (even if it's just "do the job, get paid"); determined to accomplish the mission for which he has been paid and takes his reputation very seriously; and is scrappy yet skilled. This character is usually played moderately sympathetic, or at least as an antihero . They will typically have some attention given to their, quite possibly colorful, personalities In stark contrast, the " corporate mercenary</" is usually just a Mook or Red Shirt of some kind, and the "character" takes the form of the PMC corporation itself. Corporate mercs are usually depicted as being up to no good, or are the hand-puppets of some shadowy organization which is itself up to no good. They are portrayed — when anything more than Faceless Goons — as amoral, ethically challenged, and professional but hardly ever inclined to argue with Corporate Headquarters . If former military, many will have been dishonorably discharged. Unless the writer's bent on defying What Measure Is a Mook? , they will almost never be the "good guys" in recent years. Their parent company usually has a name based loosely or thematically on "Blackwater" in a No Celebrities Were Harmed Expy of that real-life PMC — examples include "Blackriver" , "Red River" , "Blackthorne" , "Murky water" , "Starkwood" , "Bluewater" , "Black Mountain" , "Silverpool" , and "Merryweather" Note that although this trope description uses the terms "PMC" and "mercenaries" interchangeably, in Real Life the distinction between them is extremely Serious Business . This is because the international treaties that establish The Laws and Customs of War explicitly forbid</ the usage of mercenaries in warfare. While traditional mercenaries might be tolerated in practice</ , legally they are neither lawful combatants nor non-combatants, and thus aren't eligible for protection and respectful treatment under, for example, the Geneva conventions. When captured, they are treated as a criminal gang at best, and at worst as complete outlaws Private military contractors are the way that some people try to weasel out of this ban on mercenaries. Even though the largest of these companies employ materiel that is ordinarily associated purely with the military — armor, helicopters, light warships — on paper</, they are just your garden-variety mall guards writ large, and they are not authorized to wage war on their own. Officially, these units may be employed only in some duties not involving actively engaging the enemy (though they can do this if forced), such as escorting convoys and guarding some civilian structures. In practice this mandate could be, and often is interpreted very</ broadly — "While you're on patrol, don't go and get into a fight with the insurgents at yonder hill three klicks to the southwest, but if

they fire first, or if you see anything indicating a possible threat, then by all means, do whatever you must." Note that not all PMCs necessarily are thinly disguised mercenaries; a private military contractor is any non-government organization contracted by the military, which may include as mundane things as a contract to make and serve food for an army in peacetime Real Life PMCs run the gamut from dirty-working Hired Guns outfits to highly scrupled organizations with very strict rules about what they will and won't do, and for whom. Some PMCs provide armed security for Christian (and occasionally Muslim) charities in war-torn regions like Darfur (the contractors who do this kind of work often give their clients a discount rate—it's charity, after all). Others patrol African elephant habitats hunting heavily armed ivory poachers. Even those who take corporate contracts are much more likely to be doing "rent-a-cop" work making sure nobody blows up a pipeline than "massacre uncooperative village" jobs (although that does sometimes happen). Some PMCs are good people doing good work for good reasons (and making a living doing it). Others are willing to work for drug cartels. It is a very large and diverse category that probably shouldn't be painted with a broad brush, good or bad Another example that is much more common in Real Life but very rare in fiction are . This sector boomed after 9/11 so much that many functions that were once held by the likes of the CIA or the NSA are being outsourced to third-party contractors. To show how much power and importance they now have, Edward Snowden, who leaked thousands of documents on the NSA's global surveillance program, was not a NSA agent but actually employed by This is a classic Plot Device in tabletop games in general. Whether they're sword-swinging fantasy adventurers, Wild West bounty hunters or futuristic mercenaries, a time-honored means of getting Player Characters involved in a plot is to have someone hire them to accomplish some task or another A PMC can provide a villainous Evil Army if one doesn't actually want to insult any real country's Armed Forces. If they're too much</ of an army, then they are an N.G.O. Superpower Mercenaries are the basic, land-based version of this trope; at sea and in space, they're privateers operating under letters of marque A sub-trope of Hired Guns , and can overlap somewhat with the Professional Killer . If employed by a Mega-Corp , then Corporate Warfare can be expected. Commonly a favorite industry of a Proud Warrior Race Note to Evil Overlords real, historical and/or imagined: attempting to defraud your PMCs, or any other gratuitously over the top Bad Boss move, is, generally speaking, a very bad idea. They have experience with those weapons you helped them maintain until quite recently and they know your layout. Always pay the mercs Compare with Murder, Inc. , a completely criminal enterprise devoted to assassinating selected targets, compared to the quasi-legal PMC. Compare & contrast with Pinkerton Detective

Einstein once said he did not think God played with dice. Authors may not either, unless the dice are loaded.

With some series, it's almost inevitable that a cast member or two will eventually start developing ideas for the show as far as writing and/or directing episodes go, however, in many cases, some cast members will go even further than that, and take on the added additional responsibility of actually producing the show This usually will happen in one of two ways: either a certain

cast member will be given the job of producing the series simply as posturing and to make them happy (this is usually common when said cast member is the lead, if not one of the leads); or the credit is because the cast member is also actively involved in the writing process , and many staff writers on shows nowadays are given producer credits, rather than writer credits This is particularly common among Long Runners Related to Actor-Inspired Element ; see also Written by Cast Member and Directed by Cast Member

A displeased crowd is throwing stuff at speakers and artists according to the Rule of Funny . Eggs, lettuce and vegetables are generally favored, with tomatoes an all-time favorite. Originates from way back in the 19th century, when audiences and working-class theatergoers would often carry these things into the (very rowdy by our standards) theaters, and chuck them (or chairs and such) at bad performances. Look for an Honest John -type character to have a cart filled with said rotten vegetables for sale for this particular purpose See also Stock Punishment and Defiant Stone Throw . Related to Egging , Pie in the Face and Food Slap . A subtrope of Food Fight and Edible Ammunition

The producer is the "commander in chief" of a given project. What does that mean? Well.. Quite simply, the producer is/are the person/persons that makes the project "happen". "No producer" equals "no film". They are the financial and creative backbone of a given project — they secure funding (or fund the work themselves), hire key personnel, arrange for distributors, and manage the day-to-day operations of the production (such as writing up shooting schedules, booking off-set filming locations, and keeping the project as a whole within budget and on-schedule) There are many different varieties of "producer", and each has its own responsibility in the film industry. A consulting producer Not to be confused with The Producers </ , which is a film

A variety of commercial where the product, a Mascot or the product as a Mascot is presented as a superhero, fighting against or protecting you from something This can be played straight, where the product really is a superhero, in the context of the ad, or silly, where the product is acting like a superhero, but probably isn't Expect to see the product in question flying around with a cape billowing behind it, and a classic tights and underwear on the outside combo. In the case of dental hygiene products, you will likely see microscopic toothpaste superheroes fighting gingivitis inside a person's mouth. Of course, the question arises as to what happens to these miniature people when you spit the toothpaste out

People involved in the visual look of film, television, and video games. This includes production designers, art directors, concept artists, set decorators, costume designers, and their ilk Can overlap with Visual Effects Artists

When something in a show receives a Fan Nickname which originated with the show's production team. Doesn't count if it's a technical

term which can be applied to unrelated shows. Might be related to a Development Gag If the series runs long enough, the term runs a high probability of becoming either canon or an in-universe nickname

A group of people that, whenever one is involved in a production, others are almost guaranteed to show up at some point This used to be a very enforced part of media making. Studios expected artists to specialize into units . An example would be John Ford being specialized in westerns, which meant that large parts of the crew—both in front of and behind the camera—would literally always work together. Another aspect of Hollywood filmmaking which used to enforce this in the past was that studios would often have exclusive contracts with big names spanning several years and movies. For instance, the vast majority of Humphrey Bogart 's films after he made it big were for Warner Bros John August coined the term "Clique Flick" on his filmmaking podcast Script Notes See also Those Two Actors and Only So Many Canadian Actors . When each member tends to play the same sort of role every time, they're a Universal-Adaptor Cast . Associated Composer is a subtrope

Super-category for the process by which various kinds of shows, games and series are created. Interference: Delays: Endgame:

Otherwise known as a "plug" or "writing commercials right into a show". The practice of prominently displaying or talking about a recognizable product in a program, in exchange for some consideration from the manufacturer, usually monetary. The manufacturer hopes to cause The Red Stapler effect, but it far more often results in snarky comments from the peanut gallery . This trope isn't always invoked for mercenary reasons; many times it just wouldn't be plausible for a character in a shopping mall to walk past nothing but unnamed Brand X . Or a world set 20 Minutes into the Future won't have suddenly lost the culture of billboard advertisements and product logos which defines the modern day. Real brands add veritas</ in these cases. Plus some filmmakers striving for as much realism as possible would rather use recognizable products than Brand X . On the other hand, even when it begins with the best intentions, contractual obligations to have the dialogue actually mention</ a placed product can easily turn malignant . The least subtle version of this kind of embedded advertising is the Enforced Plug , which, in America, was common in early television (when the commercials literally were considered more important than the programming) and still is in radio. With reruns, DVD and downloads, this can be the gift that keeps on giving for advertisers. After all, the commercials that aired on the original broadcast aren't retained in any of these. Product placement is, at least most of the time, though there have been instances of company logos being digitally blurred out for things such as television broadcasts of movies, if the sponsoring company didn't pay for the additional product placement in these broadcasts. It can also backfire in the case of a 20 Minutes into the Future production that happens to feature a product or brand that in real life ceased to exist by the time the production was set (a prime example being Pan Am, an airline featured prominently in the 1968 film 2001: A Space Odyssey) This can occasionally be Truth in Television , since people who enjoy a given product are naturally more likely to say

good things about it and/or recommend it to their friends — and, of course, it's not uncommon to name-drop brands in day-to-day conversation (see the genericizing of Coke and Band-Aid, despite the latter's best efforts). It starts to get a little gratuitous if everyone</ in the work, good or bad, drinks the same brand of beer, though... and if a character refers to a product exclusively by its "official" name (it's not just</ a phone, it's not just</ an iPhone, it's the iPhone 12 Pro Max, thank you very much), all bets are off. When adding examples, there's something to remember: . For a work to qualify, there must be some indication</ that a deal was made between the brand and the studio, such as a "product placement considered by (Insert Brand Here)" in the end credits of a film/ show, a "P" logo placed at the start of the show (which is legally required in the UK), or some form of Word of God to back the claim up. After all, sometimes background logos are just unavoidable, or producers just choose a product for other reasons, and there's no exchange of money with the manufacturer in those cases (One notable example, 2001: A Space Odyssey </ , which used Product Placement for a rather specific reason: To make the future presented much more plausible to audiences in 1968), so don't assume that if a brand logo is showing that it must be paid for by the studio, there's a good chance no deal existed to begin with if it wasn't declared in some way. Some viewers find product placement to be more offensive than sex, violence or the Seven Dirty Words , to the point where parental movie review websites often make a point of singling out films with excessive (or, sometimes, simply any) recognizable brands or products, especially children's works, whose target audience are vulnerable to unhealthy advertising. For two particular examples, see Everybody Owns a Ford and its computer equivalent, Everyone Owns a Mac . Compare Merchandise-Driven , Product-Promotion Parade , and Advertisement Game . Contrast with Brand X or Product Displacement When a character from a show is endorsing the product, it's Celebrity Endorsement . See Destroy the Product Placement , when said product placement is damaged, broken or destroyed. See Console Cameo for when the product is required to see the placement in the first place. History — brought to you by delicious Brand X TM The practice began in the early days of American radio, with companies lending their names to title programs as a way for funding them. The Secretary of Commerce, which licensed radio stations during most of the 1920s, prohibited direct advertising. By 1930, advertising was permitted, but the practice remained for years. Slowly the shows set themselves apart from the ads, with announcers shilling for a product, while the characters had an adventure. Product placement also was frequent during the early days of television, with characters shilling for their sponsor at the end of an episode However, a quiz show scandal in 1958 forced networks to control their programs, instead of the sponsors. Product placement transitioned to movies until the mid-1990s, when TV regulators relaxed the rules against products appearing outside of ad breaks. In the UK, product placement was banned for a good 60 years on commercial channels, with the exception of the broadcasting of sports matches (particularly football and rugby) but a law banning paid product placement was . It's now allowed, but only on commercial channels</ include product placement for any sort of sugary junk food. As of writing, The BBC 's commitment to commercial-free television is still Serious Business indeed. It's still prohibited in Canada. A dishwasher manufacturer can recommend a certain brand of tablets, but the host of a cleaning show can't — in fact, they can't even show the brand name on screen. In the movie The Great Man</ a radio personality mentions

name-brand products on the air for personal gain. The movie was made in 1956, making this Older Than They Think . Indeed, there is (possibly apocryphal) evidence that suggests that merchants in Ancient Greece would attempt to bribe playwrights at drama festivals for favorable mentions of items in their plays. Someone epically telling the audience how great figs are could be quite good for business. This trope is often parodied; for that, see Parody Product Placement .

In a Merchandise-Driven work, there is often a scene or sequence where various characters/toys are introduced in rapid-fire succession. This will usually include a brief description or a short demonstration of each character/toy's abilities/gimmicks Unlike a commercial, where such a hard sell is expected, the Product Promotion Parade occurs in the body of the story/episode/issue itself. This usually happens in an Anvilicious plot-derailing way that leaves no doubt that the purpose for the scene you just saw was to sell stuff May happen Once per Episode , only in the premiere, or on special occasions, depending on the work and the needs of marketing. If the cast is small enough, it may be an Action-Hogging Opening Title Sequence or part of an Avengers, Assemble! scene A subtrope of Product Placement and Enforced Plug , and often a variant of Intro Dump . The commercial cousin to Big-Lipped Alligator Moment and Cutaway Gag

An Advertising Trope . The idea is very simple. Set up fake circumstances to present a supposedly higher-end product to patrons Then reveal that the supposedly higher-end product is actually the leading lower-end brand! The consumer will be amazed that they were willing to pay more for their pizza/coffee/computer. Capture the whole thing on camera, and you've got a great Product Switcheroo Ad ! The most popular example of this is the "fake restaurant" premise Patrons think they are in a high-end restaurant, eating high-end food, and at the end of the meal they are told that the amazing burger they just had is actually just a $4 burger from Burger Chain X. Sometimes prior to the reveal, they will ask the patron how much they think the burger is worth. Expect the consumer to say a price somewhere between 3 and 4 times the actual price of the meal. But this can apply to any product. The idea is to show that the "cheaper" product is worth more than people think it is, but they don't have to pay more. To more savvy consumers, the whole thing comes off as extremely condescending. We know that the "chefs" in the back are putting a lot more effort into that burger than they are at Burger Chain X down the street. We know the fake staff is working extra hard to provide excellent service, so the patron is in an unbelievably good mood. It's also feasible that some of these reactions are due to the Placebo Effect . If people are expecting haute cuisine, they're going to find it in whatever they're given. Then there's the possibility that it's fully scripted and full of actors, or semi-staged using employees or company shareholders who get a free meal. Multiple camera angles, dialogue sounding too scripted. But if that has yet to be proven, the mind sitting closer to the shiny side of the Sliding Scale of Idealism vs. Cynicism might be able to dismiss that possibility. (At the very least, it's possible someone didn't</ like the product, or actually figured it out, and they just didn't show us that bit.) Remember, it doesn't have to be food... it can be any product. As long as the consumer is led to believe that the product is worth more/high quality at the beginning of the ad and

is "pleasantly" surprised when they find out it's a familiar (often cheaper) product. Not to be confused with Fake Food . Also not to be confused with Commercial Switcheroo . Compare Worked Shoot , which is what this ad would be if it were indeed staged. Since most countries have laws against claiming "hidden camera" when the commercial is scripted, we have to assume they are real until proven otherwise. Carl's Jr/Hardees did a series of these for their $6 Burgers, complete with a website. They did at one point mix it up by having the "chef" actually carry Carl's Jr bags through the restaurant into the kitchen, which alerted the patrons something was up.

For most characters, killing people is not something they do on a regular basis. For an Affably Evil Big Bad who believes Utopia Justifies the Means or an Action Hero on a Roaring Rampage of Revenge , killing a few mooks or Red Shirts is all in a day's work. Cops and spies might need to pull the trigger occasionally, but this aspect is not the prime focus of their work. But for a Professional Killer, it is</ the work. Whether you call him an assassin, a hitman, or a hired gun, it means the same. Killing is his job While soldiers, mercenaries, Private Military Contractors , snipers , or professional terrorists typically have to kill someone to accomplish their mission, that mission typically involves something other than just killing - protecting a VIP, destroying or capturing an objective, spreading fear amongst the local population, etc. A Professional Killer's job typically is to kill one specific person, and nothing else A wide range of colorful characters can become drawn to the trade of killing for cash. Some might be Wicked Cultured and tend to wear nice suits . Others might be psychotic killers who are more drawn to the carnage and combat than the money. Some might be Punch Clock Villains who pull shifts at Murder, Inc. or belong to a Weird Trade Union to pay the bills. They might be a Consummate Professional or a snarky jerk. A Hitman with a Heart might follow a code of honor , such as not harming women , children or innocents . Sometimes, they might be raised from birth just for killing marks , or even one mark, in their entire life . If they live in the past, they might be a Ninja or a Hashshashin . Whatever their style or personality, their employers are typically only interested in the results See Assassin Outclassin' for when the Professional Killer fails drastically, Murder, Inc. for when a group of professional killers formed a guild, and Assassination Sidequest for a type of sidequest that requires you to kill a specific target stealthily. If whoever hired the hit man decides to eliminate him, you have Contract on the Hitman If you were looking for something that kills your career, not something that kills you</, see Career Killers for a list

Professional Wrestling, as the term is understood today, is a cooperative endeavor in which athletes face off in loosely choreographed matches with pre-determined outcomes, in a manner resembling a type of freestyle combat loosely based on Greco-Roman wrestling, amateur/Olympic wrestling, and (since the 1990s) Mixed Martial Arts (which themselves grew partially out of pro wrestling). Modern professional wrestling derived from Catch Wrestling , a grappling style developed by carnival promoters in late 19th century Britain, which soon gained popularity in America as a legitimate form of athletic competition. By the early years of the 20th century,

the sport had evolved into a "work" where the winners of bouts were determined ahead of time by the organizers, with wrestlers working "face" or "heel" to elicit respective cheers or boos from the audience. From this arrangement, a system gradually evolved of numerous territorial wrestling leagues across the US, cooperating under the auspices of the National Wrestling Alliance (which WWE, WCW, ECW, and almost every other major promotion in North America and some outside of it were affiliated with at one point), which sponsored the world championship and other titles, picked the champions, and arranged for the top talent from the territories to go on tour and gain national exposure. In 1963 the Capitol Wrestling Corporation, once the NWA's New England territory, split from the group, rechristened itself the Worldwide Wrestling Federation (later the World Wrestling Federation (WWF), now World Wrestling Entertainment (WWE)), and over the following decades expanded on a national scale to create the wrestling industry as it exists today. Pro wrestling is usually full of concepts from different types of shows. Each match is roughly choreographed (though not usually in much detail since wrestlers don't have much rehearsal time, let alone for whole matches, given that they wrestle twenty to twenty-eight days per month on average—most of a match's details will be improvised, with only the beginning, the end, and a few key "spots" in between specifically planned; the mark of a good wrestler is being able to make a match flow naturally, despite only having this sort of rough outline). World Wrestling Entertainment's programs remind one of nothing so much as a Soap Opera for guys (and indeed the terms " the soap opera for men " or, in recent years, " redneck anime ", have become frequent nicknames for the business as a whole), complete with all the emotion, melodrama, and occasional comic relief that the phrase implies. Other organizations, such as Ring of Honor , strive for a more gritty, realistic presentation, but still incorporate many soap opera elements. The history of pro wrestling is a bit convoluted; until the late '80s/early '90s, promoters claimed that wrestling was a legitimate sport, and attempted to hide the fact that it was scripted at all costs . The truth is the performances are as ritualistic and stylized as Japanese kabuki theatre, or Commedia dell'Arte </: each match is a miniature set piece, using stock "characters", "plots" and "twists". This has become more obvious in recent years with the increased sense of theatre provided by the major promoters and programs. As more and more wrestling fans grew wise to the fact that wrestling was scripted and choreographed, promoters had no choice but to reveal the secret that everybody already knew by that point anyway . Vince McMahon went so far as to televise a speech on an episode of Monday Night Raw</ in which he promised to "stop insulting (fans') intelligence" and referred to Raw as an "action-adventure" series. All wrestling organizations will have a "booker", or person who decides which wrestlers are going over on any given "card" or event. Some of the larger wrestling organizations will have full booking teams, made of agents (who help wrestlers lay out the matches) and scriptwriters (who tell the bookers the companies' long-term goals with the storylines). These are often called the "creative teams", or simply just "creative" (as in "Creative has no ideas for you at the moment"). Booking wrestling matches and angles is a difficult skill ; most of the boom times for wrestling can largely be accounted for through good booking of matches. Poor booking can be disastrous: WCW was literally destroyed through terrible creative decisions, first under the stewardship of Vince Russo and a few others, then through WWE 's terrible "Invasion" vanity trip . Bookers are not to be confused in the wrestling world

with "managers". A wrestler's public "manager" will rarely actually advise on their career or manage their business affairs (exceptions include Paul Ellering , who actually was The Road Warriors ' real-world business manager as well as their public manager). Rather, the manager is a hype man (especially for wrestlers who are gifted at the physical side of the sport but lacking in articulacy or improv ability) whose main job is to hype his wrestler at every opportunity, insult opponents, and get comically or dramatically embroiled in the ring action. The manager can also be useful for a wide variety of plots. If a wrestler has a communication-impaired gimmick as a " foreigner " or " monster ", the manager can speak for them. An easy way of creating a kayfabe "alliance" between a group of wrestlers is to have them share a manager, or a rivalry between wrestlers can be created by making their managers business rivals. In the case of the Wrestling Monster , the manager will often be the Kid with the Leash . A good way of giving a face a temporary Face–Heel Turn is to suggest that he is being duped, manipulated, blackmailed, or even subjected to some kind of supernatural control by an evil manager . Despite all this show-business, as many Sitcom plots (and Botchamania) have implied, Professional Wrestling is very real in the sense that mistimed inexperience can leave someone seriously injured. Professional wrestlers are like stuntmen; they're acting out a scene, but physically</, and with the chance of injury, not to mention they get no second takes. And despite whatever you may have heard, they do</ hit each other, although their moves are generally designed to seem much more devastating than they are, and they avoid harm whenever they feasibly can without it looking too obvious. Just because it looks nothing like a real fight and more like a Hollywood fight scene does not mean they are not seriously putting themselves at risk in every match - matches are "fake" only in that they have a predetermined outcome. It would be less accurate to say that pro wrestling matches are Hollywood fantasy intended to simulate real danger and more accurate to say that they are real danger intended to simulate Hollywood fantasy . Professional wrestlers literally put their lives in their opponents' hands several times in a single match; the slightest misstep can — and often does — result in broken bones, a broken neck, paralysis, possibly even death. Don't Try This at Home . If you see a word you don't understand, it may be helpful to refer to these links: Now has a Useful Notes page that attempts to debunk the nasty stereotypes about the business. Not that it will work. In case you are interested in the times in which professional wrestling was a legitimately competitive sport, see the catch wrestling Useful Notes page. See Wrestling Tropes for tropes exclusive to or primarily found in the medium. Thanks to the various wrestling related Tropes that have been named, it now has its own page . We are always open for new pages about wrestling. See this page for a list of page requests.

Often Played for Laughs , this is when something seems small when viewed from the front, but when you turn it to the side, it turns out to actually be very long. The fun thing about this trope is that it can be done with almost any object. A big part of this trope's comedy value comes from the Oh, Crap! reaction that other characters may get from it, if they were hoping that the object really was</ small May lead to a Plank Gag . Subtrope of Depth Deception and sister trope to Big Little Man

Here we're talking about instances of law enforcement determining that the likelihood of a suspect being guilty, or an individual being involved with a crime, is raised or lowered by their race or ethnicity You can't get through a cop show without running into profiling, it seems. It can make for a Very Special Episode or can be imbued into every element of a piece to shift down the Sliding Scale of Idealism vs. Cynicism . Normally treated as definitely A Bad Thing, sometimes its appearance on the work is accompanied by a souring of the mood or a sudden change in view of a character, revealing the subtle bigotry underneath. Conversely, with the Noble Bigot with a Badge , it's actually a softer way of definitely showing that they are bigoted, without them doing something so terrible that we can't still view them as noble. Lately, there has been a trend of casting and costuming parts so that it invites the "profile" (gang member, perv, etc.), drawing the audience into profiling and then flipping it as a Red Herring A common, non-police variation is taxi cab drivers not picking up passengers of certain ethnicities Has nothing to do with The Profiler

This character has been hit with a Viral Transformation , Emergency Transformation , become a cyborg , demon, magical creature, alien or discovers they were never human at all . Despite this, and regardless of any angst over What Have I Become? , they decide that rather than go down the path of Transhuman Treachery and be a Smug Super , Black Shirt , or The Quisling , they will do everything in their power to stay a part of humanity. And if their new species/transhuman fellows are anti-human , they will vow to protect humanity in a pseudo Faustian Rebellion This can also include transhumans who cast themselves in a shepherd-like role for mankind. This doesn't include forcibly empowering humanity to bootstrap them up, though. That's more of a Visionary Villain who believes Utopia Justifies the Means . Many Friendly Neighborhood Vampires fall in this category If the transformation is due to The Virus , this requires copious Heroic Willpower . These characters can usually pull off a Sheep in Wolf's Clothing gambit. See also Monster Adventurers . Related to My Species Doth Protest Too Much , which refers to creatures that aren't former humans, and Humans Need Aliens for when "creatures that aren't former humans" decide to protect humanity, usually against their own kin that threatens humanity Opposite Trope to Super Supremacist , a superpowered individual who regards the non-superpowered as beneath them. Super-Trope to Vampire Refugee and Phlebotinum Rebel . Contrast Transhuman Treachery . See also/compare A God I Am Not

A Robot Buddy who happens to be made out of light Holography is the very real technique of using lasers to create a three dimensional

image. It's very difficult and requires precisely calculated conditions and a bunch of costly hardware, but it's visually stunning, at least the first few times you see one. Technically, what is popularly called a "hologram" in science fiction is really called a volumetric display, as a true hologram is recorded onto a visual medium that provides the illusion of volume In The Future , presumably, this will get a lot easier. The Projected Man allows an artificial character to be a ridiculously human robot without all the logistical problems that implies The character may be constrained by power or the availability of a projector to add flavor Can be made of Hard Light , or can be an Intangible Man . Generally, if the Projected Man is solid, he will be able to become intangible in a crisis Frequently coupled with Tin Man or Mission Control . The inverse (human projection inside a computer world) is the Digital Avatar . Compare Astral Projection , where a living person makes their soul similar to this Cross with Spirit Advisor to produce Virtual Ghost . See also Hologram Projection Imperfection for when holograms don't work properly and have visual static or other glitches The name comes from the British science fiction movie, The Projected Man </, that was riffed on MST3K </ . The eponymous character was more like a mutated freak with electricity powers than an example of this trope

A female character creates a heart or lips shape by smooching her lips and blows it over, usually causing whoever it hits to fall in love. A rare variation of this is an invisible version. This is a situation wherein the recipient actually tries to avoid the air kiss but gets hit by it anyway, usually to some comically haphazard way (i.e. the kiss knocks them literally off of their feet). In anime, a similar move like this is used when ever a male or female characters winks sometimes a heart pop out of their eyes when they wink, or sometimes when they do wink hearts might fly straight to a person he or she loves or is flirting with In video games, this can be used offensively, usually by a Charm Person , and usually causes the Standard Status Effect of "charmed", "infatuated", or the like Sub-Trope of Cardiovascular Love . Related to Heart Beat-Down (its own Sub-Trope), which is framed as a traditional superpower instead of a comedy trope. Might overlap with Kiss of Death

Some fans have all the luck. Somehow they've managed to be a part of the very industry, or even the very work, that they're a fan of. This can range anywhere from the minor, such as a Contest Winner Cameo , or to the point where the fan has creative control and is Running the Asylum . Compare Ascended Fanboy (a fan In-Universe), Ascended Fanfic , Fandom VIP (the ones most likely to be promoted), Official Fan-Submitted Content . Contrast Hire the Critic . As noted below, many franchises have been around for so long that it's only natural that fans would get to work on them. </

So, you're adapting this great book, TV show or comic for the big screen. It's got action, comedy, drama, rom... what, it doesn't</ have romance? Well, that won't do; we can't break the formula . Looks like it's time for a previously platonic character to be Promoted to Love Interest The idea is that in order to appeal to a broad audience, we need romantic subplots. The original work (usually not film, because that's where executives have a field

day) may have survived all on its own without a romance subplot. However, studios think that every story needs romance This sort of thing happens to everyone all the time in fanfiction , for some reason The convention is not an inherently negative one , but when done poorly, this may become a Token Romance or even a Romantic Plot Tumor in the worst cases Although normally reserved to adaptations in traditional media, interactive media that feature Romance Sidequests can also fall under this, if a character whom the Player Character cannot woo in one game gets a Romance Arc of their own in a sequel See also Hotter and Sexier . Compare Relationship Compression , where the romance is present in the original but significantly altered due to the different constraints of the new medium

You've ignored every order and broken all the rules to do what's right , and now it's time to pay the price. But what is this, they are promoting you! What happened to being in trouble? This is when a character is rewarded with a promotion for action involving breaking the rules, not merely excused. Often it is the superior's way of saying 'you shouldn't have done that, but you succeeded and are obviously going to keep on doing it, so let's put you in a position where you are actually allowed to'; it can also be presented as a subtle apology for the character having been given an order they shouldn't have been expected to obey. It is the best possible result when someone who is caught in Arson, Murder, and Lifesaving is Saved by the Awesome ; may be presented as a Chew-Out Fake-Out . While the Military Maverick or Cowboy Cop may manage to pull this off for one of their stunts, it is just as common that the recipient is someone who just this once was pushed too far . A variation is when this happens through a character correctly passing their Secret Test of Character or Secret Test of Sneakiness . The positive outcome of a character deciding Screw the Rules, I'm Doing What's Right! and I Did What I Had to Do . Frequently overlaps with Expose the Villain, Get His Job , since the first part usually involves starting some sort of trouble. In cases where the questionable action is killing your superior (particularly where this is the standard method of promotion), this becomes Klingon Promotion . Compare Career-Building Blunder where a character is promoted after genuinely screwing something up, because they know to watch out for it next time. Also Kicked Upstairs and Reassigned to Antarctica where a (often incompetent) character is promoted or transferred as a way of getting them out of the way and away from anything important they might stuff up. Contrast Unishment where something is intended to be a punishment but the victim does not see it as such.

A side effect of Parental Abandonment that occurs when the trope applies to siblings. The first born takes over the role of parent—enforcing the rules, setting curfews, delivering lectures, and bringing home the paycheck. They may be doing the parents' job, but they are still</ a brother or sister to everyone else, and will probably get into conflict with their siblings over how much power they should have and how much respect they deserve, depending on the ages of the younger ones, and the status of the original parents (i.e. missing/dead/villains...). The parents may have even specifically asked their eldest child to Take Care of the Kids On a positive note, the sibling-parent is usually within the Competence Zone , and will be understanding if you have to Wake Up, Go to School, Save the World . If they get Trapped in Another

World themselves, they'll expect to be fully responsible for their charges' safety, even to the point of Heroic Sacrifice . Becoming a sibling-parent often makes a child Wise Beyond Their Years Truth in Television , although it's more common on the frontiers of civilization and when families were larger and more spread out in ages. (Westerns make use of this a lot.) Sometimes the oldest kid of a one-parent family tries to take some responsibility off the parent too If this takes place on a society-wide level, it's a Teenage Wasteland : the strongest of the survivors, where "strongest" usually equals "oldest", end up taking the younger survivors under their wings, forming pseudo-familial units in which the older kids are the "parents" and the younger ones are "children". Smaller-scale versions include the plane crash that strands a family while killing or incapacitating the parents and the Neverland scenario, in which a bunch of kids have run away from home or are otherwise isolated In some rare instances, there are still adults around but children get drafted as a Parental Substitute because of some combination of importance, dangerousness and difficulty. This is generally because only those of "pure heart" or some such can do it, and adults are too corrupted. Thus, this variant is most likely to have the cut-off be puberty. It's kind of the opposite of the Puberty Superpower , with plenty of angst as the kids age towards the cut-off and/or their ability to perform their job wanes with increasing age. In some cases, it's just that the adults are too incompetent to handle the job or the family is just that big, and thus the eldest children end up having to back up Mom and Dad This trope can also apply to adults. For instance, when someone childless (likely a man) finds out of the blue that he has a child he didn't know about. This usually can range from the traditional accidental conception ("I'm your daughter/son.") to the scifi clone . Another way would be when a woman finds out she is pregnant and has to step up to being a parent whether or not she is ready for it yet. Still another, when a swinging bachelor/bachelorette uncle/aunt is unexpectedly saddled with guardianship of a nephew/niece This trope is almost always present in a Badass and Child Duo Compare to Big Brother Instinct , Family Man , and Extremely Protective Child . If this trope is a Klingon Promotion to parent, the promoted will also be a Self-Made Orphan . Contrast with Disappointing Older Sibling when the first born proves to be too immature, irresponsible, or ineffectual to be a parental substitute. Playing House is when it's just a game kids play Sister trope to Unexpected Successor and You Are in Command Now

Every so often, one character just has to apply a little force to another to get him to start talking. There can be numerous reasons for this: The other person is shy; The reasons are different, but the remedy is the same — a good solid nudge to get him to speak up. The "nudge" need not exactly be a "nudge" . It can come in other forms, such as a kick under the table or an elbow in the ribs. It may be accompanied by the nudger clearing his/her throat . This trope can occur in a number of places. Some of the most common non-dramatic ones are in conversation or at a play when one actor has Stage Fright . The inversion is a "Be Quiet!" Nudge . It is a subtrope of Hint Dropping and in cases where it is Played for Drama , may overlap with Please Wake Up .

Some characters just can't take sun exposure, especially if they have pale skin and/or don't go outside much. They tend to overshoot tanning and go straight to sunburned with very little time in the open. Thus, when faced with things like a Beach Episode , they'll do everything they can to not participate, and if they do participate, they'll stay in the shade as much as possible or go to amusing extremes to protect themselves from the sun. If they do decide to take their chances with the sun, they usually regret it Related to Embarrassingly Painful Sunburn , where a character who may or may not burn easily gets badly sunburned regardless. This can play into the stereotypes addressed by But Not Too White and The Shut-In Daywalking Vampires sometimes have this as a way to show that they aren't completely resistant to sunlight Compare with Moonburn , where people get sunburns from things besides the sun Truth in Television for people with especially pale skin, albinos, and people from the British Isles

Propaganda is the art of influencing opinion. Non-photographic ('eidetic') human memory is relatively poor, as almost every student can attest. Our memory is most egregious regarding information which contradicts, or simply fails to affirm, our beliefs (Confirmation Bias). To get around this shortcoming, we have evolved to form and maintain opinions instead: long after facts and reasoned arguments have faded from our memories, opinions and feelings of correctness about those opinions remain. You might think</ that the easiest way to persuade someone is to use reasoned argument. It is not. The easiest way to persuade someone is through appealing to their emotions. If you pose an opinion as a way to (not) feel an emotion that they (don't) want to feel, they will instinctively want to adopt it. If they do so, they will then use their intelligence to 'rationalise' (create logical-sounding excuses to explain) the change. The more intelligent someone is, the more sophisticated their rationalisations are. The most potent emotions for these purposes are of course love, happiness, and fear. In advertising and propaganda this approach boils down to associating products or policies with certain feelings: Showing attractive people, set to sensual/sexy music, with a product encourages the consumer to feel that the product is used by/will attract them (self-love/lust) What distinguishes propaganda from advertising is "unity of message". Propaganda communicates a single, all-encompassing paradigm. Advertising communicates several, contradictory perspectives. Propaganda can be hamstrung through poor technique (e.g. North Korean propaganda), and advertising can succeed through coincidental unity (e.g. "you must buy things to be happy"), but by design propaganda has a much greater potential for influencing opinion. Also, virtually every piece of art, literature, music, or film that has a statement to make beyond Doing It for the Art can be considered propaganda, including works intended to condemn</ propaganda. Historically, propaganda is a neutral word without any political connotations. The concept of propaganda is Older Than You'd Think , stemming back to antics in 5th Century Persia; for more information see its The word itself gained fashion around 1622, as the Catholic Church instituted a new department in its ministry to non-Catholics in new areas: Congregatio de Propaganda Fide</ in Latin, or "Congregation for the Propagation of the Faith." Since religions naturally choose to spread their news of their faith as part of its function, one shouldn't see this as a good thing nor use the otherwise neutral word as an accusation of that institution. The Rule of Cautious Editing Judgement applies here. Overlaps with the Propaganda Machine , an

organization that makes propaganda. Public Service Announcements are another area of overlap, as the same methods may be used to promote health and safety. Supertrope to Attack of the Political Ad , "Join the Army," They Said , Scare Campaign and Wartime Cartoon . Compare with Poe's Law , Straw Man News Media , and War Is Glorious . Contrast with My Country Tis of Thee That I Sting and What Do You Mean, It's Not Political? . Compare and contrast Anvilicious . Many marketing techniques are applicable to both propaganda and advertising, for example, compare and contrast AstroTurf with Viral Marketing . See also Canned Orders over Loudspeaker , Edutainment Show , Malicious Libel , Newspeak , Newsreels , Patriotic Fervor , Subliminal Advertising , The War on Straw , and The Other Wiki 's article on In-Universe Examples:

Real Life Examples:

What is a Proper Lady? Also known as a "real lady", a "true lady", simply a "lady" or an "angel in the house", she's the perfect lady in the Victorian British mindset. The Proper Lady archetype was widely used in Victorian and earlier literature. Jane Austen was one of the first authors that introduced such qualities to heroines that did not fit into the strictest view of what is acceptable for a Proper Lady, beginning the slow death of this trope. The last time it was seen alive in the West in a 100% unironic form was around the 1950s into the 1960s. Modern ones are likely to be accused of being Purity Sues or have some quirk or flaw that sets them apart from their predecessors. A Proper Lady is a gentle yet strong being, incorruptible and pure as the driven snow , as unlike The Vamp as she comes, and Madonna-like in her virtues. She sacrifices herself for the good of her family, religion, and country. She is intelligent enough to smoothly run a household, and wisely spends her husband's money for the good of her family, never guilty of negligence or selfish frivolity. She possesses the wit, taste, and esprit necessary to be a star of Society , and never crosses the border of good taste and civility. She is devoted and loyal, never treacherous or scheming. Her manners are never less than impeccable, and her good will and charity are a beacon to those lucky enough to live around her. She is perfectly groomed, likely beautiful or at least comely (while the female antagonist will be more beautiful and appealing). However, more important than her personal looks is her gentle smile . Because small size is endearing (and allows for protective embraces from her lucky husband or fiancé), she will probably be on the shorter side. Chances are that she has dark hair and fair skin or blonde hair with blue eyes (but in a way that doesn't make her too</ attractive). Parasol of Prettiness is a typical prop. A Proper Lady might not always be able to defend herself , but should in most cases possess the strength of mind to not panic, and the willpower to never give in to any vile demands . She is always</ upper class in the original concept of the trope. Female protagonists from lower class background, like peasant girls, tend to follow the ladylike ideals and they are supposed to model their behaviour after her. Princesses might need to go through a humbling procedure before they can be Princess Classic . Proper Lady is nearly always married, often a mother . She might also be a redundant woman</ or a spinster , in which case she will not be bitter about never getting married, and will instead direct her motherly instincts for the good of her sister's or brother's family . Lower class women and maidens can have many qualities of a Proper Lady, and should, per this trope and

the ideals behind it, aim to be as like her as possible. There is no upper age limit to being a Proper Lady. Widowed ladies might easily double-qualify as Determined Widows . If a lady dies at an advanced age, her death will be dignified, probably caused by old age, and if she dies young (of nothing too unsightly), it will be a heartbreaking — but not in vain — tragedy. Her absence will leave behind a great void and she will be dearly missed by not only family members and friends, but also by those who only occasionally had the fortune to be graced with her presence. : :

Bob is convinced that there's someone, or a group of someones out to get him or someone else. He takes incredible precautions to protect himself. For his efforts, Bob is called paranoid, insane, a Cloud Cuckoolander , a Control Freak , a Conspiracy Theorist or any of a host of other (most probably rude) names There's just one problem: Bob is absolutely right</ There is</ someone out to get Bob and his family and friends — and they are</ using all sorts of devious devices and schemes that would succeed… if the person enacting the security lockdown weren't doing her job. Sadly, only Bob, the opposing forces, (and sometimes the audience) know that the full-body frisking of the girlfriend and the security questionnaires that nobody</ can pass clean are mandatory for survival If this doesn't make Bob look crazy or paranoid, it might overlap with Crazy-Prepared . For that extra dash of irony , Bob may turn out to be Right for the Wrong Reasons when the whole truth of the matter comes out Also, if Bob is ever wrong, if he's paranoid enough, he will soon be right See also Cassandra Truth and You Have to Believe Me! . Sometimes overlaps with Omniscient Morality License . Contrast with The Complainer Is Always Wrong and The Paranoiac , whose fears are generally proven wrong, and Improperly Paranoid , which is what happens when someone thinks</ he is being this trope but instead is letting his paranoia push him to (often conflict-enabling) conclusions. This is one of the ways through which The Cloudcuckoolander Was Right

One common romantic desire is the wish to be owned by one's lover, to be his or her property . Mutual ownership only goes so far, because at the core it is a kind of power dynamic where the "owner" stands for safety and responsibility, while the owned can relax and feel small in a good way. This trope often includes Freedom from Choice A Property of Love dynamic is often justified in one of several ways: Simply Romantic: No real explanation is given. The writer hopes that its cuteness will avert any Hatedom . Regardless of justification or lack thereof: When this trope is played straight, it is about a heart freely given , without any coercion or big deceit/manipulation. That means someone merely claiming</ romantic ownership over someone else doesn't imply this trope in any way. It can be an expression, or it can indicate that he's a Stalker with a Crush or a Bastard Boyfriend . However, in some stories kidnapping or coercion can go from Stockholm Syndrome to genuine mutual love. Being a Love Trope , the Property of Love trope in itself has no inherent connection at all to tropes such as Sex Slave or Happiness in Slavery . However, these three tropes can certainly overlap. See also Entitled to Have You , Power Dynamics Kink , and Marital Rape License . The Inverted Trope is the avoidance of relationships out of fear of becoming "owned". In old works, it's mostly about men trying to avoid being captured by a woman. In contemporary works, the situation is reversed, centering on women striving to be independent from men.

Both versions are largely Truth in Television , due to changing social structures .

Whenever characters are reading from an ancient prophecy or magical spell, it will rhyme, as if every ancient scroll and tome was written by Dr. Seuss. Even funnier, the translation makes it rhyme in English</, regardless of what culture it came from. It's like an attempt at Gratuitous Iambic Pentameter , running headlong into Mundane Made Awesome That foreign-language prophecies rhyme all the time is one of the most blatant forms of either Conveniently Precise Translation (if the characters actually translate it or use Translator Microbes) or Translation Convention (if they don't). In reality , it's hard work to translate a rhyme in one language into a rhyme in the other, not the kind of thing that you could easily do on the fly Mind you, the translators of the classical poets like Homer , Virgil , the author of Beowulf , or Dante often find it worth the effort to make their translations rhyme. But the harder you work at something like this, the more you sacrifice things like keeping the actual meaning of the prophecy intact. And surely most prophecies are vague enough already without translating them in a way that carries their meaning even farther away from the exact events that fulfill the prophecy. In that sense, if you hear a translated prophecy that rhymes, you should be worried that it was an especially In</conveniently Im</ precise translation Possibly justifiable, as rhyming when translated into the language spoken by the people who have to do something about it, and not in any language existing at the time the prophecy was written, is a clever way to prove that it's a real prophecy. But that only works if it's a sufficiently straightforward translation to show that the prophet did it rather than the translator The trope probably originates from the Delphic Oracle in ancient Greece, where it was standard practice for the priests attending the oracle to render her visionary ravings into elegant hexameter verse for petitioners. More generally, in pre-literate societies poetry was an important mnemonic tool - prophecies that rhyme or scan stand a far better chance of being remembered precisely than prophecies which do not, and precise wording is generally very important where prophecies are concerned As if to enforce the trope, some characters break out in rhyme when they receive prophetic visions

Whenever a character is shown a printed document and instructed are given special attention, either by the camera or by characters in-universe. This is notably recurrent in G-rated fiction, where the Male Gaze is directed to the legs rather than the even more sexualized breasts and buttocks. Gender-inverted versions are rare, and tend to be Played for Laughs when they do occur. Often takes the form of a Feet-First Introduction that slowly pans up the legs in question. May also be seen in conjunction with a Sexy Walk . Zettai Ryouiki , Showgirl Skirt , Dangerously Short Skirt , Underwear / Leotards / Mini Dresses Of Power , Qipao , Who Wears Short Shorts? and Footsie Under the Table are also good ways to show off these features. A Kick Chick will almost always have these, as will most female Dance Battlers . The Statuesque Stunner will also have these, more often than not. Bath Kick and Foot Popping are used to show these off as well. If the Amazonian Beauty has them, expect either the narration, other characters, or the character design to emphasize her legs' muscularity as attractive, often with special attention

to the thighs. Closely related to Fanservice . Show Some Leg is not necessarily related, but certainly can be. Marvel</

In the 2000s traditionally-animated works fell out of fashion due to blockbuster hits like the Pixar films and Shrek </ along with the simplicity of animating in CGI compared to traditional animation. While 2D style animation is popular in France and Japan (though many use CG elements occasionally , and CGI cartoons are also prominent) and amongst televised cartoons (though they're usually Adobe Flash styled), All CGI Cartoons have been rising in popularity over the years, and Western-produced traditionally-animated theatrical films are rare. Thus many series that used to be done in traditional animation have changed to being CGI over the years Naturally this is highly controversial amongst long-time fans and animation buffs. Many people will invariably complain whenever a franchise switches to CGI Compare to the Video Game 3D Leap for a video game counterpart where games went from mostly sprites to 3D models

It is important to establish the location of a fight scene to the audience in order for them to understand what's happening. But some fights won't always stay in the same place A Shifting Situation Duel is when at least two characters are fighting across different settings, requiring them to constantly adapt and take advantage of their new surroundings. The combatants may be actively traveling to these locations, or perhaps the environment is changing itself due to supernatural interference. Fights like these will usually have the combatants dodging all sorts of hazards forming around them, and using said hazards to attack their opponent Normally, fights such as these are played at a much faster pace than more grounded ones. They are often considered to be a highlight of whichever work they appear in, because the frequent setting shifts guarantee the fight will always stay fresh and exciting throughout each phase Subtrope of Interesting Situation Duel . Compare to Seamless Scenery and Nonsequitur Environment , which can overlap in visual mediums. Also Compare Shapeshifter Showdown , where two antagonists fight a duel while constantly changing their bodies into different shapes

Older and more idealistic Science Fiction features Shiny-Looking Spaceships, often rocket-shaped , which are shiny, pristine and bright in almost all conditions. This trope was pretty much the standard before the 1970s with films like Silent Running </ (1972), Dark Star </ (1974), Star Wars: A New Hope </ (1977) and Alien </ (1979), which depicted space vessels as lived-in, industrial and/or pragmatic . However, it seems to be making something of a comeback . For ships that never enter the atmosphere of a planet, this is actually (semi-)realistic. There is no mud or dust in interstellar space to leave grit or dirt on the outsides of passing spaceships, although there are micrometeorites that gradually scuff and erode the surface, so older vessels would have more of a matte hull. A reflective surface would also mean that Frickin' Laser Beams would have a harder time burning a hole in your hull, and you have some degree of innate heat-shielding. The interiors</ of said ships are also often curiously spotless considering how many people are crammed into them for long periods of time. This can be hand waved away by having very efficient air filtering systems or micro/nanoscopic cleaner robots (or just really good visible-scale robots offcamera) It can also be answered with very dedicated crews (as aboard military vessels with many enlisted men and women to keep occupied), or, as in the case of Andromeda </ 's early seasons, Compare with Retro Rocket . Contrast with Used Future and Standard Human Spaceship . See also Zeerust , Ascetic Aesthetic .

Sure, you can build a fancy Tailor-Made Prison for when your Omnicidal Maniac is hidden away, but what happens when you have to move</ the little bastard? He can't be thrown in the back seat of a black-and-white with just a uniformed officer for supervision. No, he's got to be shipped in shackles This trope is about taking extreme measures to secure a prisoner and/or their intended route during transport. Simple handcuffs and a couple of escorts won't suffice. This is when the guards feel they must chain the prisoner hand and foot, wrap him in a straightjacket, secure him to a hand truck, give him a Hannibal mask , cart him around in an armored vehicle full of strapping young guards toting high-caliber weapons, or all of the above. If he has superpowers, expect the guards' weapons to be loaded with the appropriate Kryptonite Factor , and/or the shackles to be specially made to negate his powers . If he's a Manipulative Bastard notorious for talking his way out of being captured, he may even be gagged This may be to prevent the prisoner's allies on the outside from pulling off a daring rescue during transit or to keep him from contacting such allies, but more likely it serves the same purpose as a stationary oubliette: to show the audience that this guy is a One-Man Army so tough that

it takes a quarter-ton of purpose-built restraints to hold him, or so dangerous that his captors want to ensure that the odds of him escaping are exactly zero Of course, these restraints prove ineffective as often as not, especially since most villains realize that escaping from a few measly chains while under constant armed surveillance is still easier than getting out of their usual prison cell Compare Tailor-Made Prison , which refers to custom-made prisons for similarly dangerous prisoners. If the prisoner fights while still restrained, that's With My Hands Tied . Has nothing to do with (relation)shipping

A character in a story actively ships two other characters in the story, trying to make them realize their true feelings while they're both still claiming that She Is Not My Girlfriend This character could be someone in love with one of the characters in the pairing who wants their beloved to be happy , or they could be a very good friend, or maybe they're just someone who likes playing matchmaker. If everyone</ in the cast is shipping the same pairing it becomes a case of Everyone Can See It . May overlap with Love Informant Contrasting with The Matchmaker , the Shipper on Deck is usually a secondary character and the characters shipped are the protagonists of the story, and likely to be the Official Couple . Also contrast with Relationship Sabotage , where someone is trying to undermine a relationship that already exists (although the two can be part of the same plot quite easily, if the idea is to get someone out of one relationship and into another). Also contrasts with Shipping Torpedo , in which a character is against a pairing but may or may not go so far as to act on it, or Matchmaker Crush , when a character starts out trying to help one character hook up with another, but ends up falling in love with the person they were helping If the shipper has reasons beyond thinking they're a cute couple, they're a Shipper with an Agenda Beware a Creator's Pet if this is the writer trying to reinforce a disliked pairing

Not all shippers do so just</ because they think the couple is cute. They could have any number of ulterior motives for wanting people to get together, such as removing someone from a love triangle or (for the case of parents) getting grandchildren . Sure, they might also</ think it's cute or that the persons they ship are good for one another, but at times people gotta use their hearts and</ their brains.. A Sub-Trope of Shipper on Deck . May act like a Shipping Torpedo to anyone who wants a member of their favorite ship for themselves or someone else Compare Arranged Marriage for when it goes beyond just shipping

Hooray! They got together ! Finally! We've watched them Meet Cute , groaned at the arrival of the Romantic False Lead , sat through seasons upon chapters of Will They or Won't They? , shouted hurray at their Now or Never Kiss and this is the moment we've all been waiting for! And for good reason, because now... Um, because now... Uh. The Romance Arc is the gift that keeps on giving. Whole fandoms have been known to run solely on the fuel of shipping vitriol for years on end. Though they won't admit it, people will</ continue watching through a boring scene just to see whether this guy can work

up the nerve to ask out that girl over there. But, for some reason, as readily as they attach themselves to potential couples, they shrug at the successful conclusion of the romance and move on. Yes, for all the grand arguments and fights over who will get with who that reach ridiculous levels of Serious Business , when everything is said and done and the characters do become an item ? Past that climax point, you'll find that most of the audience has completely lost interest. On a basic level, you can blame human Wish Fulfillment mentality which romanticizes the exact phase of "getting together with someone" beyond all reason (see also Wanting Is Better Than Having). After all, it's not like watching them get married, have a kid, raise said kid, grow old together, raise a grandkid, and then die in eachother's arms after living a long and happy life together would be worth watching, now would it? This may be why even in works far towards the idealistic end of the Sliding Scale of Idealism vs. Cynicism , everyone seems to stay forever trapped in a limbo of meaningful gazes and Moment Killers ; writers just don't want to take their chances with this reaction. It's also probably the underlying cause of Last Minute Hookups and characters hooking up afterwards being so common It's a rare writer who seriously builds on plain vanilla True Love as a pillar of the plot. Another contributing factor beyond audience apathy is that writing a convincing relationship, with genuine depth of character and development, is a much more difficult feat than pouring on the quick-reaction drama and will-they-won't-they, far above and beyond an actual Relationship Writing Fumble . Once that crutch of anticipation "romance" is no longer there for the writer to lean on, weaknesses in the writing suddenly show through that the audience was too distracted by the narrative tension to notice -- or care about -- earlier . When the writing is too thin, there's just nothing much there afterwards (after the They Do) for the audience to care about or invest in. If the writing doesn't have actual substance, the writer can only really rely on cheap narrative tricks to keep their audience. On top of that, any problems or twists with an actual ongoing romance can end up being blood in the water for rival factions of shippers. This trope may be an extreme reflection of ; after the first year, the "honeymoon" of the romance is over. Or rather, when the easy excitement of getting together is over and the couple have to actually work</ on the relationship. Few writers seek to capitalize on the Rule of Drama potential here. Occurs because of the same reasons as and often a reason for True Love Is Boring . Contrast with Belligerent Sexual Tension and Platonic Life-Partners .

Rooting for fictional romance to happen. The term "Shipping" — which ostensibly derives from "Relationship" (though it might as well be "Worship"; in some fandoms, it's Serious Business) — was originally coined by fans of The X-Files </, who were divided between "relationshippers" pushing for romance and "noromos" who would rather have No Hugging and No Kissing . The phenomenon itself, however, was ubiquitous in practically every fandom long before. The source of the term's popularity is shrouded in myth, but Geek Mythology has it that you can blame people in the Pokémon </ anime's fandom who rooted for Jessie and James (of Team Rocket) to get together and decided to call themselves "Rocketshippers" . This got the term to catch on in that fandom, then people brought it with them to other fandoms. Today, Wikipedia has a tiny Shipping disambiguation note at the top of to which redirects , and has its own article on . Of all the obsessions that universally afflict fandom, shipping is by

far the most persistent, widespread and prone to be Serious Business . It knows no boundaries of age, demographic and gender contrary to expectations one might reasonably have involving yaoi / yuri -worshipping, fan fiction-writing , squealing teenage girls . This might raise an eyebrow or two on first inspection, but honestly, shipping is just a consequence of plain old human nature. Love , Lust , Romance, Hormones — call it what you will, it is a huge part of the human experience. Just glance at our long list of Love Tropes to see all the ways romance weaves into fiction. And even if a story is not "romantic" by genre, a well-done love story can become its emotional anchor. "Shippers" is the universally accepted name for those fans who invest themselves in romantic plotlines — both canonical and hypothetical. Shippers' level of investment can range from "It's all jolly good fun," to "This seriously impacts my enjoyment of the work," to "Prepare for war." It's tempting to assume that shippers are so invested in romance because they are reading themselves into the place of one of the characters, and living the romance vicariously through them. This does happen — not surprising, because most fiction relies on at least a little empathy. That said, beware of the old "pathetic nerd living out fantasies through fiction" stereotype. Why one prefers a given ship (that is, a fictional couple) can be based on any number of things, from liking the general "type" of relationship (such as Brooding Boy, Gentle Girl), to thinking they have hot chemistry , or great long-term compatibility — or maybe they just look cute together! On the flip side, a lot of ships attract fans on account of the destructive or twisted dynamic between characters. Somehow, this leads to vitriolic forum threads with a hundred times the activity of all the other threads in the forum combined, titled something like "Will Bob get together with Alice or Eve? Round 997!" Which in hindsight is understandable, given that when a lot of fans are projecting themselves into one character, it's bound to get very crowded in there. Really, put just two</ fans in a room and give them five minutes or so, and they'll get into an argument to the death about some incredibly fundamental fandom issue ; having hundreds of fans in the same internet is just asking for trouble. And when you ask for trouble, what you get is, in the words of J. K. Rowling , scary and vehement cyber gang warfare. Shipping is all about the anticipation. Paragraphs and essays and counter-essays, filling megabytes and spanning dozens of pages, will be written about who will</ get together, who should</ get together, and what the disciplines of political science and feminism and probability theory have to say about the issue (the above is Not Hyperbole). No ecstatic shipper has ever written a gigantic dissertation titled "Hurray!! Alice and Bob ! FINALLY!!" or any fandom equivalent. People will argue endlessly about the romantic future of nearly any given ensemble, but if that point should actually be resolved, the discussions will basically go through a round of ranting and gloating and then unceremoniously run out of steam. That's probably because anticipation is something that's easy to feel you're a part of, even if the anticipation is for something fictional. Real life romance, for all its shortcomings, actually happens</ for us Real Life people: We move on from looking forward to something great to experiencing something great (or at least we can hope). Fictional romance, not so. Actually being in a romantic relationship and getting to watch a fictional romantic relationship are very</ different things, much more different than looking forward to each of those, respectively. The contrast is jarring — you were a part of this great love story, and now, suddenly, you're not. Cue disillusionment . Of

course, the near-universal reaction is to move on to the next fandom, making shipping suspiciously similar to an addiction. Canon and authorial intent do not dictate people's shipping preference. You'd be hard-pressed to find anything</ that honestly puts any sort of restraint on shipping preference. Characters may be shipped despite being still in grade school , of the wrong sexuality , biologically related , dead , Just Friends , mortal enemies or just generally the bane of each other's existence , separated by an age gap of decades or centuries , not of the same narrative continuum , part of a story where romance just isn't an issue , inanimate objects , nigh total strangers , considered as a possible couple at all only because they're both left single after you're done pairing everybody else , polar opposites in terms of morality , extremely implausible as a couple by design or even outright denied to ever possibly get together by Word of God . Even when the source material goes as far as to have an Official Couple , sometimes fumbling execution or Values Dissonance will drive fans towards emotional investments diametric to those the author intended . The "I Love You" Stigma , occasionally invoked by some productions, further complicates matters, even if the characters express the sentiment in other ways . Shippers have a reputation of insane devotion to their One True Pairing and of interpreting the tiniest, most ambiguous details as evidence . That much is clear by the prevalence of Ship-to-Ship Combat in any fandom discussion. In some extreme cases, they will freely admit to actively rooting for sympathetic characters to die just to get them out of the way , or worse, they'll come to the conclusion that since a character is in the way, they are by definition not sympathetic . On the bright side, you can expect them to be friendly at least towards their natural allies and have some limit of how severely they can be starved for validation before they Abandon Shipping . That is, if they ever expected to be validated in the first place. Frequently, authors know full well how loaded the subject is and tease the audience of actual and potential shippers , sometimes to the extreme of letting the characters themselves join in on the shipping fun . It goes without saying that not all ongoing tease storylines endure and graduate to Relationship Upgrade ; and then a majority of the ones that do don't until near the very end . This is usually not done to frustrate fans (or at least, not for this sole purpose), but rather because the writers are also aware of romance being a very powerful device that should be handled with great caution, lest it swallow the storyline whole or reach a resolution past which people stop caring . For the audience, being thus denied leads to frustration, and frustration leads to the dark side , that is, writing Wish Fulfillment fan fiction as a form of emotional venting. There's a whole nomenclature dedicated to Quick, Easy and Idiosyncratic Ship Naming , often varying from fandom to fandom. The most basic tool of communication here is the slash — if you wanted Alice and Bob to get together you could always say you shipped Alice/Bob . However, for most fandoms that's just not exotic enough. They will not be content with anything less than a short, sweet and catchy brand name — the more Incredibly Lame the Pun , the better (Harry Potter </ fandom actually named ships the "HMS this-and-that"). Shipping culture has also imported the Portmanteau Couple Name from Japanese Anime fandom; apart from its infamous usage in the gossip industry ("Bra ngelina" , "Ben nifer" , "Tom Kat"), you can find people online declaring themselves fans of "Pepperony" , "Wuffara" , "NaruHina" , "Sheelos" , "Applepie" , and "Jam" . Yes, Jam. Needless to say, if some series has Theme Naming shippers will</ exploit it Just for Pun — In Real Life

, 3/4 is just a rational number greater than one half and less than one. Not so in the Codename: Kids Next Door </, Mobile Suit Gundam Wing </, or Splatoon </ fandoms. As far as omnipresent forces of nature go, shipping is up there with Death and Taxes ; an "Example Section" would just be a list of works popular enough to have a member of their fandom happen to come across this page. Suffice to say that on any show, "Alice/Bob is popular and so is Eve/Mallory, though there is lots of vitriol between supporters of Gum/Popsicle and Twix/Popsicle", up to minor variations. For an example with some unique flavor to it, you might want to look into Shipping Tropes .

Two people are circling each other romantically, or perhaps are already together. Other characters in the story smile fondly at the couple and ship them. And then there's this guy</ . He does not like the two people together, makes his opinion known, and clearly hopes that the ship will sink. This may be for a variety of reasons: This guy is in a Love Triangle case with one of them. In worse cases, he/she may try to Murder the Hypotenuse . And there may be other reasons too. If it progresses far enough, may result in attempted Relationship Sabotage . Related tropes may include Overprotective Dad and My Sister Is Off-Limits! . Contrast Shipper on Deck , Shipper with an Agenda , and Romantic Wingman . For information on actual</ torpedoes, see Naval Weapons . Compare Moment Killer , when the interfering party only ruins a certain moment and/or may not be intentional; and Ship Sinking , when a ship is sunk by the writers, not characters. Considering that this trope shows up at least as far back as Shakespeare , it is Older Than Steam , if not even older.

These tropes are about people getting involved in characters' romantic relationships. Since real-life people are infinitely more into pairing fictional people than fictional people are, most of these are Audience Reactions . For tropes actually dealing with ships, please look here . For the shipping of</ tropes, consult the Trope Co. catalog. Warning: loads of puns ahead!

So you're looking for a lost treasure ship on the bottom of the ocean. Good thing that the ocean is a perfect preservative . Oh, it might have some barnacles and coral here and there, maybe some parts have collapsed, but that may have happened when it was sunk. Heck, it probably still has tattered sails! It'll be sitting slightly to one side, but still mostly upright Not so in the real world. In the real world, water, particularly salt water, and especially warm salt water, as seen in most pirate-frequented areas, wreaks havoc on anything immersed in it for too long. Just look at the continued decay of the RMS Titanic </ or ships sunk during World War II . A wooden ship in salt water would be bait in no time flat Often an excuse for a Gangplank Galleon ; ubiquitous in the Derelict Graveyard . Can also be a Ghost Ship or an example of Ragnarök Proofing

Many fans ship. These fans often do it all the time</ (context or no) especially in certain demographics . Producers, especially those who keep their finger on the pulse of the audience, not to mention their eye on the fan fora , know this. So, they decide to tease the fans with hints about possible romantic entanglements, and thereby build that emotional attachment between the show and the audience as much as they can. If the writers are particularly impish, they'll tease a relationship that either never comes up

or takes a hard right just as it gets going. Like a sudden death. Sometimes, however, ship teases evolve out of the teasing stage See also: Will They or Won't They? , Subtext , Fanservice , Never Trust a Trailer , Tonight, Someone Kisses , Literally Falling in Love , Implied Love Interest . Can end up as a Romantic False Lead . A best-case scenario is for a pairing to undergo a (canonical) Relationship Upgrade . Occasionally cheated by way of All Just a Dream or Alternate Reality Episode . Probably the cruelest method of Ship Tease is the Moment Killer . Contrast Ship Sinking Not to be confused with Striptease (heh heh, it sounds like "strip")

So, you thought fanservice was only targeted towards men ? A hunky man (real or animated) goes shirtless (or completely nude) or wears a revealing top that shows off his pectorals (in a sort of Spear Counterpart to Absolute Cleavage). Saves the crew a fortune in wardrobe (or ink) for Mr. Fanservice . A less fleshy version of this would be his wearing a t-shirt pulled back over the back of his head or his leaving the shirt totally unbuttoned. Also a practice of slender Bishōnen in Japanese media , especially Yaoi Guys . Western shows may play around with this by having the female characters ogle the "pool boy". Despite applying mostly to young, hairless types such as Bishonens , some men will occasionally sport a Carpet of Virility . Of course, their pants will always stay on . (Well, almost always...) "Beefcake" poses for male performers probably date as far back in human history as skimpy outfits for female performers. One of the standard props of certain kinds of "Strongman" performers in circuses and such is a "tear-away" shirt that can be pulled off during a performance and then easily sewn back together in between shows. This type of gratuitous semi-nudity is also called a Shirtless Jackman Scene, named after muscular Australian actor Hugh Jackman whose film contracts allegedly contain a clause that demands the presence of at least one shirtless scene, even when the plot does not require it. It's not proven, but the majority of the films he has appeared in are strong evidence. Legend has it that some people are not able to recognize him with his shirt on, and X-Men </ (2000) established him as the pioneer of the current generation of topless male actors. This trope is among the Always Male tropes because... well, you know. The closest female equivalent would usually be a Lingerie Scene , Bare Your Midriff , or a Swimsuit Scene . Or, if it's more important to have a female character shirtless In-Universe but not necessarily to show everything to the viewers, then of course the answer is Toplessness from the Back and/or Shoulders-Up Nudity . See also Shower of Angst , Slipknot Ponytail , Final Battle-Induced Shirt Loss , Man in a Kilt , Sexy Soaked Shirt , Forging Scene , Shirtless Captives , After Action Patch Up , Intimate Open Shirt and Lingerie Scene . If the character's everyday attire is conspicuously lacking a shirt, he would be a Walking Shirtless Scene .

The use of lightning, huge electrical discharges, and stuff resembling them as a weapon to fry things with. This is one of the most common Elemental Powers and is part of the basic Fire, Ice, Lightning trio. It's also one of the handiest ones around; used for anything and everything that the writers can think of . For why this doesn't work in Real Life , see the analysis page Wielders of this power set have an odd tendency to be insane , hyperactive , have blond hair , be African-American , or some combination of

the above. Also not unheard of for the Lightning Bruiser , though that "lightning" is usually a reference to speed Related to Blinded by the Light and Ride the Lightning . Someone with this power may be a Technopath or Fast as Lightning as well. Compare Magnetism Manipulation which (sometimes) includes electromagnetism. See God of Thunder , Electric Jellyfish , Thunder Beetle and Thunderbird for animals often associated with this power. Contrast An Ice Person , Playing with Fire , and Weather Manipulation for weather controllers who use lightning among other attacks. For other uses of lightning and electricity, see Magical Defibrillator and Electric Torture . For the physics (or lack thereof) behind electrical attacks or weapons, see Chain Lightning , Lightning Gun , Static Stun Gun , Shock Stick , Thunder Drum and Thunder Hammer . Combine with Whip It Good and you've got a Lightning Lash Has nothing to do with the trope Chic And Awe or the United States military though that's where the name comes from

Many works, and installments of works, have shocking or unpleasant twist endings. For instance, the Mystery Episode may reveal that the vampire was actually a con man , only for an actual vampire to show up, or the Sick Episode may end with the character recovering, only for another character to get sick. However, sometimes it then</ reveals that everything is</ hunky-dory after all, and that's what the Shock-and-Switch Ending is Going on for the above hypothetical examples, maybe the "vampire" then reveals himself to be another conman, or the "sick" character actually just has allergies . This is basically when a work seems to be headed for a Happy Ending ... only to apparently take an unpleasant turn... and then, it turns out to actually</ be a happy ending. You could see it as a Double Subversion of Happy Ending This is a good way for the writers to have their cake and eat it too when it comes to endings, and is a good source of humour as well. It's also a good way to make sure a serial work's actual shocking twist endings stay shocking— the viewers never know whether you'll actually make something bad happen or fake it It's a common way to subvert Sudden Downer Ending , Here We Go Again! , Real After All , Maybe Magic, Maybe Mundane , Fright Beside Them , Ambiguous Ending , and Or Was It a Dream? , and it may double-subvert "Scooby-Doo" Hoax . If it's in the form of having a character be joking, the others will usually either have a Dude, Not Funny! reaction or it'll result in an Everybody Laughs Ending . See also Cat Scare , "Shaggy Dog" Story , Big Damn Heroes , Daydream Surprise , and Scary Shadow Fakeout . Can overlap with Fourth Wall Psych if this is used to subvert The Fourth Wall Will Not Protect You , Disney Death if it subverts Character Deaths, and All Just a Dream if it's revealed to be a Nightmare Sequence . Compare and contrast "Ray of Hope" Ending , which is still a sad ending but there is a slight chance of hope, and Gainax Ending , where the ending is a Mind Screw instead of a comedic subversion of expectations. See Fission Mailed for the video game version

In fiction (and in Real Life) during a great war there's a certain strategic loss that is very significant to the point of being demoralizing, shocking, and iconic in universe As an example: The Federation is fighting an intergalactic war against Scary Dogmatic Aliens , but there's one place in the galaxy that has no chance in hell of ever falling at the hands of the enemy: A planet-sized starship that's armed with weapons of mass destruction , fortified by thousands of automated defenses , an armada of

the most powerful warships ever built , guarded by countless space fighters , mechanized infantry , and genetically bred elite warriors , all commanded by the most brilliant military genius in the galaxy and his handpicked staff Said planet-ship falls anyway , sending a horrible chill down the spines of the Federation . Sometimes it could be a turning point in the war , but not always: any faction could suffer a defeat like this and not necessarily be defeated. Perhaps this defeat was due to a surprise attack . Could have been a Pyrrhic Victory for the attackers. Sometimes it's described as a Noodle Incident in some stories. What ever the reason, it's still an incredible loss, and no one will ever forget it . The defeat likewise can have terrible dramatic consequences because it sets a mentality for and trigger a factional fight among groups about who is responsible for the defeat and who do we scapegoat to make sure it doesn't happen again This is essentially The Worf Effect applied to an entire battle or war (or even a sport) instead of individuals, typically used to show how high the stakes are This trope usually overlaps with A Taste of Defeat , Hopeless War , Remember the Alamo , and Last Stand . Often can be a Decisive Battle , if the balance of power is dramatically shifted as well. See also the sub-trope Capital Offensive . A Curb-Stomp Battle often is this for the losing side For the victors it could overlap with Pyrrhic Victory , and Was It Really Worth It?

In competition-based Reality TV , certain contestants establish themselves as the front-runners very early in the season. They exude so much of the required skill needed to win, they've been the overwhelming favorite to win for a long time. It also helps that they're usually very likable. In fact, their victory is more or less a Foregone Conclusion And then, they're eliminated Often in a measly fourth place</ Expect a huge outcry on message boards claiming the show is rigged or stupid or something along those lines. Expect the cameras to pan over to the other contestants with their jaws scraping the floor. Expect the powerless judges to look utterly miffed This trope is, of course, less surprising on shows where the contestants themselves vote. Putting a voting alliance together to knock out apparently strong competitors is an expected aspect, and one can expect the nail that stands out to be hammered flat , so to speak Sometimes, the shockingly eliminated contestants will prove that they shouldn't have been eliminated with a very successful post-show career. Other times, they will try to make it big outside the show, but only prove that their elimination, as premature as it was, was ultimately justified Usually, a Shocking Elimination is linked to an Elimination Houdini , as the latter probably wouldn't exist without the former Sometimes may overlap with Non-Gameplay Elimination . Sometimes, an early favorite is actually eliminated because of factors out of their control. (Commonplace in shows such as Survivor </ where people often get hurt and are eliminated as a result of their injuries or ailment, or The Amazing Race </ where bad cabs often are a huge factor.) While the circumstances that leads to a Non-Gameplay Elimination can be shocking, it may just be the situation If an Elimination in a Fictional contest is treated as unexpected, it falls under Crack Defeat

A character gets the bill for a service they used and is shocked by the price on it. This is usually due to hidden or undisclosed

fees that were added on by the unscrupulous merchant. It can also be due to a clueless character ordering expensive services without realizing the cost, or in cases like Extremely Overdue Library Book , neglecting to pay for something over a long period of time. This presents a conundrum for them as the character doesn't have the means to pay the outstanding balance. Possible outcomes include: Work Off the Debt The bill is often related to room service, restaurants, credit cards , medical services and, recently, cell phones. It's almost an Obligatory Joke in an episode where a hospital is essential to the plot. A less comical example is a form of extortion racket where the business presenting the bill is crooked and has enough "legitimacy" or connections to get away with it. Anyone who refuses to pay the bill is free to "discuss" it in the back with the large burly men. This may overlap with Undisclosed Funds if the exact amount of the bill is never shown. This trope also includes reactions to looking at the price tag. There is almost always a random number of cents in the price. See also Forgot to Pay the Bill and Ridiculous Future Inflation .

Commonly caused by plot twists, naturally, including The Reveal , Wham Episodes (and their smaller-scale cousins, the Wham Lines and Wham Shots), Gut Punches , and/or a Twist Ending upstaging everything</ else the audience has been accustomed to until these points. It can also result from unexpected moments of awesome , which may result from Serial Escalation taking itself to its logical conclusion and beyond. It can also be caused by an uninvited Jump Scare . Often done by the creators to Win the Crowd or win it back . If a shocking moment is a single memorable scene, it could even become a work's Signature Scene . It can overlap with an Ass Pull if done out of nowhere, but with subtle foreshadowing and logic, it doesn't have to. See also And the Fandom Rejoiced , a common reaction to a shocking reappearance or resurgence of a character or franchise. Compare Player Punch , a videogame equivalent. However, No Real Life Examples, Please! In addition, as a Moments page involving moments that you don't see coming, all spoilers are unmarked . You Have Been Warned !

Most relationships are about mutual attraction — or at least a mutual something </ — but sometimes, there's another motive at work: Someone's only in it for the attention. Maybe it's a teenage girl dating a punk to get a rise out of dad , or a gay guy who's just not that into the other gay guy but really likes shoving it in everyone's faces. The person actually serious about the relationship might want to wait to kiss until nobody's looking, but the one out for shock value will only want to kiss when everybody's</ looking. Hilarity Ensues — or Tragedy Ensues , depending on how seriously this is played This seems to mostly happen with girls, due to the idea that people (particularly relatives) are more invested in who a women is dating than who a man is dating. The character who's serious about the relationship will probably come across as The Woobie for their one-sided affections Super-Trope of Operation: Jealousy . Compare Intentional Heartbreaker

In CLANNAD </, Mei (who is 13) and Tomoya (who is around 17, not to mention a delinquent) pretend to go out and actually do go out on a pretend date together all with the hope of shocking Sunohara into

expressing care for and protectiveness towards his sister . It doesn't work and he waves the whole thing off, to Tomoya's fury. Ultimately, it's revealed that the reason why he didn't worry was that he trusted Tomoya enough that he thought he would take care of her.

A particularly nasty version of this is part of Dr. Mann's backstory in Y: The Last Man </. Namely, her college girlfriend turned out to be a Lesbian Until Graduation who didn't even believe that homosexuality was real</, thinking that girls only ever date other girls to piss off their dads . She then suggested that Mann look for a more mature way of pissing off her dad... like dating a black man .

In Harry Riddle </ (a Harry Potter</ AU in which Voldemort is Harry's father) Harry befriends Hermione because</ she's a muggleborn and such a move is bound to get daddy's attention.

In The Quantum Thief </ , Pixil openly admits that at least a part of why she's dating Isidore, from outside her weird high-tech enclave where people think of everything as a game to the point of wanting to keeping score in every activity, is because it upsets her relatives. He later realises it's only been a kind of game for him as well, though for different reasons.

Desperate Housewives </ :

Shortpacked! </ . Poor, poor Leslie. Robin does eventually develop feelings for her, and by series end, they are married with three kids.

The Onion </ did a couple of articles on this topic and .

The Moral Orel Rev. Putty, saw right though it as well and felt bad for Stephanie.

A Shoddy Knockoff Product is dolled up to look like a popular and/or quality product, but being dolled up is the only work that went into it. You'd be lucky if it even functioned at all These could very well be used as a target of Convenience Store Gift Shopping , especially if they resemble something that an unwitting/ignorant relative thinks the recipient likes The Evil Twin of the Well-Intentioned Replacement . While both tropes are about poorly made substitutes, that trope is with the genuine hope of making up for the thing being substituted. This trope is about just plain old ripping you off Compare Bland-Name Product (to show a popular product in a show without stepping on trademarks), The Mockbuster (the equivalent with works of art or entertainment), and Unlicensed Game (an index of Shoddy Knockoff Video Games that have their own pages) Contrast Follow the Leader (there is a clear influence, but it's not trying to make you think it's the actual work it's following), Serial Numbers Filed Off (it's almost the same thing as another, but at the very least changes anything copyrighted by someone else), and Effective Knockoff (when the knockoff is more</ competent than the original thing it's imitating). Bland-Name Product is when it looks</ like this in a fictional work, but doesn't come across as such

During the 1970s and 1980s, Converse Chuck Taylor All-Stars had other wannabe brands that almost (but not quite) resembled the original: Payless Shoe Stores had Pro Wings high-tops that (except for the heel

patches) could be considered a low-budget version of Chuck Taylors. Kinney Shoes, a now-defunct shoe store chain, had Stadia hightops, which like Payless's Pro Wings hightops, had different heel patches. Both of these were made of canvas and had the same basic lace-up scheme. By contrast, modern dollar convenience stores (like Family Dollar, Dollar General, et al.) have inexpensive brands sold for about $10-$15 that have honeycomb soles instead of Converse's diamond patterned waffle soles and no heel patch emblems, not even coming close to resembling Converse high-tops.

Acronyms are nifty. They make things easier to remember, and sometimes they're just fun . However, sometimes people try too hard, or not hard enough, and end up with a Shoehorned Acronym. There are several ways this could happen: Shoehorned First Letter : Where you simply stick a letter onto one of the words (e.g. "CATS — Creative, Artistic, Talented, S (Individuals).) Being a sub-trope, all examples go on that page. Compare Embarrassing Initials , for when the acronym itself isn't bad, but it spells out something awkward. See A.I.-cronym , Acronym and Abbreviation Overload , and Acronym Confusion for other tropes about acronyms. Also compare Painful Rhyme for a similar trope about rhymes. An Overly Long Name might abbreviate to an unpronounceable acronym.

Sometimes a character will need to come up with a word that starts with a certain letter, but wants or needs to say one that doesn't qualify. The solution: stick the necessary letter in front of the desired word and call it a day! Often done to make a word fit into an acronym or Alliterative List Compare Xtreme Kool Letterz , Recursive Acronym . Sub-trope of Shoehorned Acronym

Shonen is a demographic term for manga and anime aimed mainly at early to late teen boys. Basically, between ages 12 and 18 years. They tend to be Fighting Series focused more on action than relationships, with romance generally either perfunctory or Played for Laughs . Some battles can be sublimated into a form such as a sports competition or even a Tabletop Game . While there was a time where protagonists could be adult men the target audience would look up to, it's more common for the title character, and most of the cast, to be predominantly teenage or young adult male, equally capable of action and Ham. Lots and lots of ham. Mainly to make the character relatable to the targeted readers. Note that while the term "shōnen" tends to be used to refer to a few standard genres, it isn’t technically a genre as it literally refers to the target demographic (and in Japan, generally refers strictly to manga, rather than anime Light Novels are often marked with a generic "male" or "female" demographic.). Its older counterpart is seinen , although both are enjoyed by other audiences as well . The Distaff Counterpart to shōnen is called shōjo . There is no definite marker for a series being or not being Shōnen. Though the magazine it runs in is a good indicator, many shōnen magazines aim for the huge seinen Periphery Demographic that also purchases them. Some of this is a natural result of the franchise Growing the Beard together with the audience: many series that are popular with the seinen demographic (and marketed towards such in omnibus tankoubon volumes) have run in Shōnen magazines when they were serialized. Some long running series will "graduate" to a magazine for an older demographic to follow its aging audience. While the same can't usually be said of series with a strong shōjo

and josei periphery, some authors throw a bone their way by writing exclusive installments for magazines of those demographics. Themes are not a definite indicator either: while most Shōnen works (particularly the action fighter types) tend to fall in the idealist side on the scale of idealism vs. cynicism , there are also plenty of works with Darker and Edgier elements and outright Deconstructions that can easily be mistaken for a seinen series and evoke a What Do You Mean, It's for Kids? reaction (Death Note </, Neon Genesis Evangelion </, Attack on Titan </, and Hunter × Hunter </ are some of the notable examples). That being said, light and fluffy/dark and moody romance, serious female-led dramas, and cute art styles aren't limited to shōjo manga either, as stories like Teasing Master Takagi-san </, Azumanga Daioh </, and Act-age </ can attest. Due to Values Dissonance , some shōnen series are primarily</ marketed towards adult fans in the West; as such, most of Adult Swim 's anime lineup consisted of shōnen. One of the most illustrative examples of this is Tengen Toppa Gurren Lagann </, a highly idealistic Hot-Blooded , bright and cartoonish Super Robot series that aired as the equivalent of a Saturday Morning Cartoon in Japan but debuted on Adult Swim, uncensored, in the US. Shōnen series were the first to be brought over en masse</ to the Western world, and as such, makes up much of the popular American perception of anime. This is because it is, perhaps, the genre most similar to heavily actionized, Rated M for Manly Western Animation shows of The '80s , also largely geared towards teenage males with swaths of Multiple Demographic Appeal . (Pure shōjo bounces between the realms of cutesy and too melodramatically scandalous for most Media Watchdogs , so it does not get shown in the West as much.) See also: So you want to Write a Shonen Series </ If you want to see the Chinese grandfather of most shōnen, see Wuxia and its more spiritual counterpart in Spirit Cultivation Genre or Xianxia .

Other Examples in Shonen Jump

You know I really love you, don't you Tropey ? We've had some real good adventures together , but... Well, Poppa says times is gettin' tough, Tropey. Real tough. The Government is comin' after you , and... well, I gotta let you go back to the forest where you came from. Don't look at me like that, Tropey! You know what'll happen if we keep you ! Go on, get out of here! It's for your own good, dang it! Shoo! I gotta leave you behind, and there ain't two ways about it! Go! ... Goodbye, Tropey. I'll miss you. * sniffle

When a character or animal is sent away, it's this trope. Subtrope of Shoot the Dog and sometimes Unsuccessful Pet Adoption and Not Used to Freedom . Compare to Break His Heart to Save Him , But Now I Must Go , It's Not You, It's My Enemies , Line in the Sand and Shoo Out the Clowns . (Get out of the plot while you can, Tropey, Anyone Can Die now!) Some specific reasons for sending an animal/friend away, drawn from the examples below: Don't be surprised if, despite your best effort to spare them, they decide that You Are Worth Hell .

Typically the Shooting Gallery is a training run for "shoot/don't shoot" scenarios where dummies will pop out and shoot at anyone running through it. Often a trainee will be expected to shoot all the "bad guys" while not shooting obvious civilians like paraplegics, old men, or women with babies. In an action adventure plot expect it to be taken over by the bad guys (or perhaps

specially constructed by them) and the dummies to be firing live ammunition Often a new trainee will be shown using these, perhaps learning a lesson about being more cautious. If it is used for training, it's entirely possible that a near identical scene will happen later If the characters are using one, but the audience isn't told beforehand, it can be a case of Danger Room Cold Open In the United States the FBI calls their shooting gallery Hogan's Alley. The generic term for a military or law enforcement shooting gallery is kill house Sometimes part of a Training Montage For the Shooting Gallery's big sister, see Simulated Urban Combat Area

While some believe that a villain who doesn't realize he can simply shoot the hero is stupid, the even stupider</ type is the one who does</ try it on a certain type of hero. Mooks , the military , and other assorted gunmen have the tendency to repeatedly attack a monster , alien, or Super Hero with weapons that they themselves should know won't work from personal experience or at least from watching the news. What's worse, they'll simply stand in place and try the same thing over and over again as the hero or other threat to their safety advances slowly towards them , never trying something else or turning tail to run until the last possible second. One often has to wonder how much money repeat offenders of this trope waste on ammunition. Sometimes it's explained as desperation, but most times, they really should know better and just accept the fact that their foe is (sigh) Immune to Bullets . It makes a touch more sense with characters who have protective devices like Wonder Woman 's bracelets or Captain America 's shield. At least with those characters, the Mooks can realistically think they have a chance at hurting them if only they could get that lucky shot , which never happens. Many mooks also decide to do this because they believe showing defiance is better than the (occasionally fatal, often MUCH more painful) alternative of disappointing their boss by giving up. Named for the countless times crooks and other low-level threats have attempted to stop Superman by shooting him with regular guns. Often they'll even throw their empty gun at him once they've emptied the magazine, to no effect (though old live-action Superman shows would sometimes have him duck or otherwise dodge the thrown prop guns). Particularly dense examples will then pull out another gun and try again, or pick up a chair and smash him over the head with it... And then do it AGAIN and again until Supes has had his fun and proceeds to twist them up like a pretzel. Justified in circumstances where the monster of the week just has lots of hitpoints, or in circumstances where the attackers have no reason to know or believe that the enemy is really totally immune to bullets; in real life it would be unlikely for the world's collective military to take one swipe and announce: On rare occasions, it turns out that Shooting Superman does work, but only in a very specific manner; for those, see Achilles' Heel . Check out "Real Life" below for some examples where shooting Superman is still the best option. Compare Five Rounds Rapid , Never Bring a Knife to a Fist Fight , Suicidal Overconfidence .

When a character does an ambiguously (a)moral act because current circumstances make it the most pragmatic and logical thing to do. If The Hero performs the job himself, he may even go so far as to hide it from the rest of the cast (possibly with serious repercussions later) due to the risk of compromising his moral standards , or they might say What the Hell, Hero? to which he

might reply I Did What I Had to Do . Otherwise, he may delegate it to the Anti-Hero or The Lancer , whose reputations won't be hurt as severely for the deed. May demonstrate What You Are in the Dark If one Shoots the Dog too often, one runs the risk of becoming a Knight Templar or Poisonous Friend . Alternatively, a Psycho Sidekick , popular in hard-boiled crime fiction since the 1980s or so, is a character whom the author approves of whose main purpose is to Shoot the Dog whenever necessary. The Spock is also likely to suggest Shooting the Dog and is the personification of this trope. Depending on the slant of the series, he will also be the one to carry about the shooting, or the characters will Take a Third Option at the last minute. If the author doesn't want to compromise his heroes' goodness, he'll have the Bad Guys Do the Dirty Work . One common way to show the emotional pain this causes is by showing the shooter cradling their kill This trope is named after the climactic scene of Old Yeller </, where the titular dog is literally shot to put an end to its misery For a diametric opposition that makes you cheer</ for the hero's senselessness, see Honor Before Reason . For extra anguish, it may well have been a Senseless Sacrifice because the one shot was no longer a threat . Expect the shooter to go for the most Jerkass solution even when Fridge Logic indicates much less morally compromising ones are possible, because Murder Is the Best Solution Note that this trope is </ Kick the Dog But More So (the closest thing to that would be Moral Event Horizon); kicking the dog is the villain being senselessly evil just to show the audience how evil he is. Shooting the Dog is an ostensibly heroic character doing something that is necessary but morally grey — such as putting down the old family pet after it's contracted rabies. (Past Experience Nightmares are far more likely after shooting the dog than after kicking it.) Senseless shooting of a dog would actually fall under Kick the Dog or Moral Event Horizon . And it also has nothing to do with the desire every 8-bit gamer ever</ has had to shoot the Duck Hunt </ dog This may or may not be confused with but do not confuse with Shoot the Shaggy Dog , which is a particular form of Downer Ending Compare/contrast with Jumping Off the Slippery Slope , Light Is Not Good , Omniscient Morality License , Well-Intentioned Extremist , Knight Templar , The Unfettered , Cruel to Be Kind . If the act is presented as wrong it may come across as Designated Evil . The version where a bad guy does this for a hero is Bad Guys Do the Dirty Work

In fiction , shooting a fuel tank makes it explode. This makes for an effective tactic in battle, as it's filled with nitro , in addition to the gas This myth was busted by MythBusters </ as that in most cases it simply will not work. A real-life fuel tank explosion was only possible when they used a minigun </ armed with incendiary rounds which, suffice to say, is generally unlikely. Besides, if you have a minigun then you're not going to need to shoot the fuel tank anyway. Even if (against all odds, logic, and reason) the fuel tank does</ explode, the result is rarely the spectacular car-flipping fireball that Hollywood promises. An ordinary passenger car's gas tank with unleaded gasoline will produce a "POP" and a quick (and anticlimactic) flash of flames underneath the vehicle with all four tires remaining firmly planted on the ground, though the resulting fire may consume the vehicle pretty quickly. Diesel pretty much won't blow at all unless you light a fire under it and keep it burning until it causes a BLEVE

(Boiling Liquid Expanding Vapor Explosion), which will take a while to accomplish. Jet fuel's extremely-high ignition temperature causes it to behave a lot like diesel. Avgas (aviation gasoline, the super-high-octane blend used in piston-engined aircraft) can blow up like this (with a very Hollywoodish fireball), which is why airplanes since the 1920s have things like self-sealing fuel tanks and inert-gas-pressurization for their tanks It is important to note that, while conventional bullets or even tracer bullets do not often generate the heat required or have enough surface area to diffuse this heat fast enough to ignite fuels like diesel or jet fuel, white phosphorus rounds, like those shot from the Lahti L-39 Finnish 20mm Anti-tank/Anti-aircraft sniper rifle (more commonly known as the "Elephant Gun") or the minigun wielded by the Mythbusters, are more than capable of both penetrating the outer shell and fuel-tank wall of the vehicle they are hitting and delivering enough heat to cause an explosion. Of course, the behavior of the vehicle during the explosion is still the same, aside from getting quite a significant jolt from the impact of a 20mm rifle round traveling at 800m/s (similar to the muzzle velocities of some naval cannons) This is about deliberately shooting a fuel tank. For vehicles that explode on any kind of incidental impact, see Every Car Is a Pinto . This trope also has some overlap with Bullet Sparks ; see that page for the fairly limited number of ways this can be a Justified Trope . When this happens to a flamethrower's fuel tank, this is Flamethrower Backfire . If shooting or otherwise rupturing a pressurized</ tank sends it streaking away like a meteor, that's Gas-Cylinder Rocket . Compare Pop the Tires for a more practical method of disabling a vehicle

Is there a worse job to have than being a messenger for a major villain? The hours are long, the pay is low, your boss thinks that the world revolves around them , and likes to abuse their men for fun , and remember that dental plan that led you to join in the first place ? Yeah, that got canceled last year. And then there's the very worst part of being a Big Bad 's messenger: bring them a message with bad news, any bad news , (even just something small like that their mother is running 10 minutes late for the party) and they'll flip out, fly into a rage, and kill you. Why? Because you're the closest thing to them when they get the bad news, and you're expendable . Maybe it's time to see if the heroes need some extra help or a new sidekick , or... something. Anything! The origin of the trope leads back to ancient Greece at least. One possible theory (besides the king being affected with Pride) is that the messenger was a defeated or losing general's son, and that his death was punishment for failure . It's also such a common cliché that the Evil Overlord List took time to specifically mention it. By the way, remember when we told the worst part was bringing your master some bad news? We lied . The</ worst is bringing someone else</ a message from your master. Such as an ultimatum. The recipient is guaranteed to reply " Screw Your Ultimatum! " in a non-ambiguous way, and by "non-ambiguous", we mean by sending your head back . Without the rest of your body . Also note that even the "good guys" might do this, especially Anti Heroes . Its depressing regularity in the ancient world led to the first rule of international law: Diplomatic Immunity. In the end, everyone (even Genghis Khan , who destroyed multiple empires</) thought it was just a little unfair

to the messengers. In fact, Genghis Khan wiped out one of those empires because </ they killed some of his messengers. When villains do this, it is generally done as a subtrope of You Have Failed Me and Bearer of Bad News , and is a way to Kick the Dog by killing the person who annoys you despite their innocence . When heroes do this (to enemy diplomats, NEVER their own servants), it's because the messenger was a bad guy anyway , so why not murder him ? Some shows make the messenger look and act particularly evil , e.g. threaten the characters with death or worse, to avoid the negative aspects of this trope (see also: "Ass" in Ambassador). He may even psychologically torment and provoke them by showing them what happened to those who said no . In particularly stupid moments, a villain might execute a messenger immediately for disturbing him , before </ he gets a chance to deliver his news . And because of what we said earlier about how even anti-heroes may get in on the act, if you're in a story featuring Black-and-Grey Morality , do whatever it takes to get out of delivering a message. If you do wind up having to deliver some bad news or an ultimatum in such a work, your life expectancy is probably slightly shorter than that of a guy standing on top of skyscraper in a thunderstorm who's also saying " What's the worst that could happen ?" Guys, the messengers are coming in peace.</ Doing this may also be violating a tradition of Sacred Hospitality , which only adds to the sense of outrage it provokes; this played a role in Genghis Khan's destruction of the Khwarizmi, mentioned earlier. "I'm just the messenger" is a stock phrase used to remind people that this trope isn't really fair, and is fairly likely to work. Not to be confused with Please Shoot the Messenger , where the recipient is actively instructed by the message to kill the person who delivered it. Aggressive Negotiations may well include this trope as part of said "negotiations". Overlap with Offing the Annoyance is likely. Compare Offing the Mouth , which would be something like "Shoot the Deadpan Snarker ". Contrast Mook Depletion , where the villain can only afford to have one messenger. Compare: Shoot the Television and Spare a Messenger .

Assassin's Creed: Syndicate </ takes this trope literally. After Jacob kills Pearl Attaway , Big Bad Crawford Sterrick (who had a thing for her) is seen mourning her by performing a sad song on the piano. When a servant enters the room to give him an update, he barely gets one word out before Sterrick blows his head off In Futurama </ episode "Love and Rocket", the Planet Express crew deliver a barrel of candy hearts to Omicron Persei 8 with the message that "Earth loves you thiiiis much!" the chalky-candies taste bad to Omicronians, and the cutesy messages upset them. The crew has to flee the planet chased by battleships

When a television or movie production has paid a lot of money for an extra-special effect, prop or to get to an exotic location, then they are damn well going to get their money's worth. So we see a lot of that big budget item: There isn't necessarily anything wrong with this . Making the most of your budget is what really makes the industry appreciate you, and having a good trailer image works in your favor. The only real pitfall is if you can get a better artistic effect by not</ shooting the money — for instance, how the expensive prop shark in Jaws </ was little seen in the film, but that made the shark scarier to the audience . See also Stock Footage , Scenery Porn , Prop Recycling , Big Budget Beef-Up , Widescreen

Shot , Leave the Camera Running . Please</ do not confuse with Money-Making Shot . Or with using cash as ammo or pumping stacks of bills full of lead.

The hero's been led to the gallows and is about to do the metaphorical "hemp fandango" . He looks pretty much boned, right? Nope, The Cavalry ! They'll save him by splitting the rope on the noose with a well-timed arrow (or a blade, or a bullet, if the time period's a bit later), just as he's about to take a long drop on a short rope. Oh, and bonus points if this dramatically super accurate shot comes directly after a firefight in which A-Team Firing was in full effect. A subtrope of Improbable Aiming Skills Well, you know what they say. No noose is good noose A comedic subversion of this has the arrow not quite split the rope all the way, leaving the victim dangling (and strangling) until his rescuers can finish the job In Real Life , this is much less likely to happen than in fiction. First of all, in the nineteenth century, we figured out that hanging from a higher altitude can kill instantly by breaking the neck, and since then the majority of hangings are done in this way, with only particularly sadistic or incompetent executioners using short drops. Second, even if the victim survives the initial drop, they may struggle or convulse while suffocating, causing the rope to twitch and bounce around and making the already thin target even harder to hit. Despite all this, ... so long as you manage to hit the rope in the first place. A better solution is just to shoot the hangman

The hero is in the role of a Fake Defector . One of their friends has been captured. The Big Bad hands the hero a gun and tells them to kill them. The gun is almost always empty. One of two things usually happens. They pull the trigger and nothing happens, or they point the gun at the Big Bad and nothing happens. In the latter case, their cover is pretty much blown. In extremely rare situations, if the gun is actually loaded, the tested subject may succeed at pulling the trigger, injuring or even outright killing the Big Bad. In addition, if the good guys are using this ploy, they will be careful to commend the testee's reluctance to pull the trigger, since killing should never be easy . (Well it depends on the person on whether or not its easy.) Note for the Yanks here that "mate" is used in the British slang meaning of "friend", not necessarily one's actual mate, though occasionally killing your spouse or lover is used as a particularly strong test. This is a subtrope of If You're So Evil, Eat This Kitten . It is often used as a stage in Bring Them Around — once the character has done something, it's harder for him to leave. Compare Involuntary Battle to the Death , Finish Him! , Deadly Graduation .

Crazy things characters do with shopping carts outside of their original purposes, whether they ride them or ram them into stuff See also Doomed Supermarket Display

Typically An Aesop against cheating. All the regular characters are on a Road Trip or some other quest . One character suggests they take a shortcut: sure, it may not be on the maps , but he knows the route like the back of his hand. Besides, it will shave a few hours off the trip, and be all-around more interesting than

the boring old interstate! Persuaded, the other characters agree to take the shortcut If they're lucky, Hilarity Ensues . If they aren't, Hilarity Ensues : all manner of deadly serious horrors beset them as soon as they leave the beaten path. They get lost. The car breaks down. The shortcut takes them to the Town with a Dark Secret or the Wacky Wayside Tribe If the proposed shortcut is described beforehand as "the scenic route", it's pretty much doomed from the start A staple of Dom Coms (where it is usually instigated by the Bumbling Dad), and stories involving The Quest . Frequent use of a Long Delay turns the destination of a trip into the story's MacGuffin . The situation will often be exacerbated by a Directionless Driver See The Window or the Stairs , where the "easy" decision is generally the worst. See also Path of Most Resistance for a similar trope used in video games. For more travel wisdom, see Right Under Their Noses . Compare with Deadly Road Trip . Contrast Ridiculously Difficult Route . For similar situations not involving travel, see Laborious Laziness

In the United States, a "short film" usually means a movie between 20 and 40 minutes, while anything shorter than 20 minutes is supposedly called "short subject". The two terms are sometimes used interchangeably, though, and either can get shortened to just "shorts". The universal maximum length is 40 minutes; anything longer is a "feature film". Minimum lengths vary by region and organization Live-action shorts were very common in the days when cinemas ran all day and people would often come and leave at any point. The types could be included in a regular program were Newsreels , comedy shorts like The Three Stooges </ and Laurel and Hardy </, musicals that are a de facto</ Concert Film focusing on some particular music act, and cartoons such as Walt Disney 's primary output until Snow White and the Seven Dwarfs </ was shorts. In certain home video editions of vintage Disney and Warner Bros. -owned films, you can watch a bonus feature collection of film shorts that are assembled like a typical theatrical short film line up of the appropriate decade Unfortunately, shorts were paid with a set fee regardless of the audience response and were of course overshadowed by the feature films, which got the advertising. That's why Walt Disney took a chance with Snow White and the Seven Dwarfs</ as a feature, which could allow him to see real profits as well as to pay for the high production standards he strove for. With the rise of the double feature the shorts were gradually squeezed out, leaving only the cartoons and newsreels until television killed them off Short films nowadays tend to be student, independent projects, or from public institutions like the National Film Board of Canada , often short in time and budget. It's a challenging medium in which to work, given the constraints, but like all media, it has its perks. Short films are great training projects for beginners since they are easier to make than a feature film, and can be very personally rewarding, considering the filmmakers can go wild with crazy ideas that they don't have to sustain for a feature film or a series. Major studios like Walt Disney Pictures in the past with their Silly Symphonies </ and Pixar now also use them as a good way to try out new film techniques before using them in features. Most Web Original projects could easily be called short films; so could some entries in Le Film Artistique Most films made specifically for novelty/large-screen formats such as IMAX — nature and science documentaries, performance art showcases, animated shorts/compilations, etc. — and screened in museums or

amusement/theme parks, rather than given mainstream theatrical releases, are short films. With IMAX, this was partially due to the logistics of changing the giant reels of film it required until digital filmmaking/projection came along and made it much easier for mainstream films to be released in the format, but the short film format persists for other productions However, the short film has had a bit of a semi-revival as mainstream fare, such as the aforementioned Web Original films on sites like YouTube . In addition, Pixar, DreamWorks Animation , and Warner Bros. have regularly produced animated shorts for both theatrical release, as TV special material, and as DVD Bonus Content . In Canada, there is Moviola, a cable TV channel that features only</ film shorts. In Japan, studios will publish several Anime shorts together, each running 30 minutes or more, as double or even triple features The term comes from the number of reels it took to play the film on a projector. Shorts were typically two reels (hence 20-40 minutes), and features were usually four to six reels (when these terms were coined, features were usually 60-90 minutes)

Sometimes a show, performer, or franchise, for some reason or another, doesn't last too long. Perhaps Executive Meddling reared its ugly head and it was Screwed by the Network , perhaps someone Died During Production , or maybe it was simply ahead of its time . However, a few years down the road, the genre that it belonged to explodes in popularity, and when you interview the creative minds behind the genre, they ALWAYS put that particular work front and center as their biggest influence. Quite simply, it was a This trope is about something having left a noticeable impact on its genre, even though the work/artist was cut short. Short works that were great but have not influenced their genre a lot yet (ex: Firefly </, Gravity Falls </) don't go here In serial media (comic books, anime, western cartoons, etc.), this trope can manifest as a work that was cut short or simply not meant to be a Long Runner , but the impact it left on the genre is still felt In music, this is not a One-Hit Wonder : a Short-Lived Big Impact musical act might actually have multiple hits before they left the scene, or even no hits at all . One Hit Wonder usually refers to an artist or act that left no impact beyond the popularity of their one hit, a Short-Lived Big Impact's effect on their genre is still felt Can overlap with Dead Artists Are Better , Too Good for This Sinful Earth or Too Cool to Live . May be the subject of a Celebrity Elegy . Some of the examples in One-Book Author fit here too. Contrast Small Role, Big Impact , which is where something is only in a work or series of works for a relatively small amount of time, but ends up being very important to the work as a whole

New episodes of television shows aren't aired on the same day or even week everywhere in the world. For example, new episodes of an anime are going to be out in Japan before they're shown in the United States due to the time it takes to translate and dub it. Likewise, shows made in the United States are, naturally, usually shown in the United States before they're shown in another country. Basically, it only makes sense that a show will be shown first in the country that made it However, there is an exception to that rule and that's where this trope comes in. Although a title was made in one country, people in another country may see

new episodes first. This can seem extremely odd, at least to the viewers residing the country of origin. This is most common with English-language programming, particularly American shows being aired early in Canada, Australia, the UK; even regions where English isn't the official language, such as Latin America or the Philippines, will still have stations that still broadcast in the language, meaning such works fall pray to the trope easiest. That said, there can (and have) been situations where even the foreign language dub comes out before the original language hits screens The reason this trope happens is that, once they've paid for them, licensees/networks in those countries often have considerable control over when they want to air the episodes, and they just happen to air them earlier than the original country's station does. Oftentimes a contract will state that episodes cannot be aired before a certain date, anticipating that the home network will air the show before then, but then for whatever reason the airdate in the home country is pushed back, while the foreign station keeps its originally planned airdate No matter the case, upon the advent of file-sharing networks and sites like YouTube , this means that anxious viewers in the work's home country gained the ability to see these episodes weeks or even months before they're ever aired This may overlap with Germans Love David Hasselhoff , which can sometimes be either a cause or an effect of this phenomenon. After all, if your American show is more well-liked in India than it is back home, might as well just let broadcasters there air them early to take advantage of that fact This can also happen during a crisis such as the COVID-19 Pandemic , when establishments such as movie theaters close, delaying or preventing the release of the work in its home country, but allowing it to run in foreign markets Contrast Late Export for You , where certain regions get the work later than others, No Export for You , where foreign countries never see the work at all</, and Early-Bird Release , when a work has an episode released earlier than its' intended airdate in it's origin country And "Short Run in Peru" does not refer to a work that's short-lived outside its home country . That would be Unfinished Dub . This trope's name refers to the fact the work may have a shorter run overseas due to them getting through all the content faster

Articles with four or fewer characters in their title can often be difficult or impossible to find. This page lists them Mostly these should be work pages; if you're naming a trope, it's probably best to come up with a name that's slightly longer Not to be confused with Long Title and Long Titles vs. Short Titles . See also One-Letter Title and One-Word Title

The Shot-for-Shot Remake is a remake that is nearly identical to the original, in almost every way. It'll use most of the same dialogue, have the exact same plot, and change very few things See also Setting Update , They Copied It, So It Sucks! In animated works, often overlaps with Stock Footage . Sister tropes with the Multi-Animator Project Much of Evangelion: 1.0 You Are Not Alone </ is reanimated shot-for-shot from the original TV series. The most prominent exception is the (much-improved) battle against Ramiel. It gets subverted with its sequel, as the plot diverges rather quickly

In the 1998 version of The Parent Trap </, it's surprising how much

of the dialogue was almost exactly the same as the 1961 original . It also kept several of the important plot lines from the original (i.e. the camping trip, the grandfather discovering the identity of the two girls, and the recreation of the wedding dinner). Having said that, however the remake did deviate pretty heavily at times. The recreation of the wedding dinner happens much earlier in the remake and ends up failing, unlike the original, leading to a heavily altered third act. Aside from the camping trip, it almost completely deviates from the original.

Though Power Rangers </ deviates from Super Sentai </ most of Ththe time, there are some seasons that are close to the source Thmaterial. However, Power Rangers Wild Force </ was criticized for Thbeing almost EXACTLY like Hyakujuu Sentai Gaoranger </, with many Thepisodes being shot for shot remakes, the only changes being the Thmain Big Bad , and the two crossovers that occurred that season. ThPower Rangers Samurai </, the Western adaptation of Samurai ThSentai Shinkenger </ , went in this direction as well, though it Thdid deviate in a few parts e music video of Audioslave </'s song Th"Show Me How To Live" is a highly condensed (as in five minutes) Thremake of Vanishing Point </

As part of the advertising campaign for the release of Nintendo 3DS version of The Legend of Zelda: Ocarina of Time </, Nintendo released a that was a remake of the The 1934 Classic Disney Short "Orphan's Benefit" was remade in 1941, with the same soundtrack and animation but in color and with modernized character designs. And apparently, Disney planned to produce color remakes of other black-and-white cartoons, which unfortunately never got made either due to the Disney animators' strike or the outbreak of World War II. Animation drawings for a scrapped remake of "Mickey's Man Friday" exist

Uh-oh. Did you just have a one-night stand with the Farmer's Daughter ? Whoops, didn't quite turn out like you figured, eh? Her old man found out, and now you and Daisy Mae are standing before an altar in a rural church, with your petulant in-laws pointing a nice long (and loaded) shotgun at your back. There's no escape. No Big Damn Heroes are going to rush in and rescue you in a dramatic overblown fashion . You've made this bed and now you're going to lie in it . For the rest of your life Oh well, at least Daisy Mae is somewhat</ pretty... for a girl with only one tooth The traditional Shotgun Wedding (replete with gun-toting relatives) is a common staple of comedies set in rural, "hillbilly" areas . Any big-city fellers who wander into such areas had best be discreet about any "minglin'" they do with the local womenfolk, lest they find themselves being forced to stay a lot longer than they had intended. And God help them if the farmer's daughter suddenly gets knocked up in that one-night stand. They may be shot before</ they get dragged to the altar. Female main characters must also take care when journeying into these kinds of areas, lest an affair forces them to stay as well Sometimes mutual attraction isn't even required before our hero or heroine winds up frog-marched to the chapel. One of the local boys or girls may take a shine to a traveling protagonist and attempt a forced marriage at gunpoint. In cases like these, the Big Damn Heroes are much more likely to jump in and save the day . But if you got into this situation by sowing your wild oats a little too freely , then you're pretty

much on your own Nowadays, a "shotgun wedding" seldom involves actual firearms; the phrase is a euphemistic way to refer to any marriage that occurs upon learning that the bride is pregnant . (When characters in older media talk about "having" to get married, this is what they mean.) The parents may not be incensed nor the prospective groom unwilling, but there is still a sense of compulsion involved, since the couple may not have married so soon — or at all — if not for the unexpected pregnancy. In fact, if an actual shotgun is</ involved, the unwilling groom can usually have the marriage annulled by reason of duress (because "they had a gun to my head" is the textbook definition of duress). In fact, in the Catholic Church, a six-to-nine-month preparation program called Pre-Cana is required of any who seek marriage, with one of the stated goals being to weed out such shotgun marriages. Coercive weddings are further forbidden in Canon Law This kind of activity was a lot more common back when there was more of a stigma attached to unwed parents , especially a single mother; the biggest reason for these marriages was to preserve her virtue. (It's also, unsurprisingly, Older Than Shotguns , and used to be known as a " knobstick wedding".) But in this day and age , single moms are viewed much more sympathetically and it's the father</ who's judged as an irresponsible cad if he knocks a girl up then ditches her. However, he can remain in good graces without marrying her if he's active in raising his children, and most people today agree that it's better for all parties that the parents not</ marry if they're only in it for the kids and not their own relationship. However, this trope is still Truth in Television for more socially conservative parts of the world If the wedding effectively happened when the groom (or bride) wasn't looking, it's an Accidental Marriage This is a subtrope of Altar the Speed and also of Honorable Marriage Proposal . May end in Babies Ever After and can lead to the couple later believing they Married Too Young . Invoking this trope is usually the purpose of The Baby Trap (and frequently, by extension, a Fake Pregnancy). Also compare and contrast Captive Date , where one side of a romantic evening would rather not be there, but isn't allowed to leave. An inversion of this is Break Up Demand

And you're to blame... </ We've all seen it before. The patient is going into shock, he's losing consciousness! His heart's stopped, and the paddles aren't working. He's not going to make it! Only one thing left to do. Shot to the heart, stat! His heart's beating; he's stabilizing. Crisis averted! Shot to the Heart is when an injection of adrenaline (clinically termed epinephrine) is administered directly into a patient's heart, usually by a forceful stab. This can be done for a number of reasons, usually to restart a stopped heart or to restore or maintain consciousness. If the injured person is particularly badass or determined , he may even do it to himself so he can stay conscious long enough to save the day. The trope was made popular by 1994's Pulp Fiction </ when hitman Vincent Vega does it to save the life of Mia Wallace, who has OD'd on heroin and also happens to be his boss's wife. Today it's right up there with a tracheotomy when you need some drama , but in reality, this is a very bad idea and no longer practiced by actual medical personnel. In spite of this, it remains a popular trope, especially in medical dramas and grittier action films, though subversions and lampshade hangings are starting to show up in comedic works. A subtrope of Artistic License – Medicine . Compare Healing Shiv . See also Instant

Drama, Just Add Tracheotomy and Magical Defibrillator for similar use of emergency medical procedures for drama. Not to be confused with shooting someone in the heart with a weapon.

Also known as . Be it pads, armor, or epaulets, the Big Bad and The Hero have the biggest shoulder-wear This is most common in fantasy or science fiction: fantasy armor can easily have huge pieces of armor on the shoulders, and science fiction can easily create a future costume (or armor) with huge shoulders. They may also come with a ridiculously high collar , Spikes of Villainy , or an All-Encompassing Mantle for the aspiring Evil Overlord On occasion, the shoulder pads can actually serve a purpose, by having a cape attached to them The corollary is that if somebody in the cast has enormous shoulder pads, they're probably evil. Other cast members can have shoulder pads, of course, they're just smaller</. The exception, of course, is if they give everybody</ humongous shoulder guards There are both artistic and function-related reasons that this trope existes: Artistically, the inverted triangle (i.e. one point pointing down) generally conveys a more sinister form, and shoulder pads help the torso form a triangular image. From a distance, you may also be fooled into thinking you're fighting some undead headless monster. And, as the picture of the Space Marine shows... it looks quite intimidating. Also, large shoulder pads add additional mass to the upper torso and create a tapering body shape, which instinctively registers as a fit, muscular build. i.e. a do-not-mess-with-me-physique The functional reason is all about mobility. Because the human shoulder joint can pivot slightly over 180 degrees both horizontally and vertically, rigid shoulder armor cannot be fitted tightly to the shoulder. It must be either free-floating (fastened to the breast- and back-armor by straps or some other flexible material) or have enough room for the joint to pivot within it (a big, ball-like shape). They still don't need to be as big as most costume designers make them, however. Sometimes huge shoulders (especially on Powered Armor) are handwaved as actually being</ storage, as well - most often for ammo In video games, it's often used because the ball-and-socket joint of the shoulder was very difficult to incorporate into a player model without causing clipping and an action-figure look. Modern games designers use the look because it is still very difficult to properly animate the shoulder joint- it involves four bones, several unusual muscle groups and an irritating degree of twistability. It can also be a pain to generate a texture to cover this smoothly - a shoulder pad allows artists to make one texture for the torso and a separate one for the arm without really caring how they join The overall psychology behind this is Truth in Television . Broad shoulders are associated with power and strength, and are considered an attractive physical trait in men. During the 1980s , shoulder pads worn beneath clothing was a popular fashion trend among women, as it was a time when they began becoming commonplace in formerly male-dominated roles and activities; the broad shoulders (along with shorter, yet not fully androgynous hair styles) allowed them to blend in with the traditional image of professionalism and authority If they are round enough, they overlap with Giant Poofy Sleeves . See Shoulder Cannon for when a Cool Gun is mounted on them (for some literal "Doom"). If they're not so much shoulderpads as a pair of shoulder-mounted towers, then they're Vertical Mecha Fins

When a character is revealed to have had an actual reason for his apparently villainous actions, it frames their actions in a better light . However, sometimes, the behavior continues even when the justification no longer applies. That's this trope For example, a villain who robs banks to pay for his sick daughter's medical treatment might be reasonable, but it becomes completely irrational when the daughter isn't even sick anymore Sometimes justified when the character has got himself so deep into whatever he was doing that it's no longer possible for him to leave, or if he's fallen prey to The Dark Side Will Make You Forget In some cases this trope keeps the Conflict Ball rolling—we wouldn't have much of a character, after all, if we could solve his problems by just giving him whatever reasonable thing it is he wants . Other times it's a simple character quirk, or a poorly-thought-through excuse intended to make a villain sympathetic but ultimately just inviting more Fridge Logic . In some cases, it's played for comedy, revealing that the character... kind of exaggerated how necessary their actions were Compare Chronic Villainy . Can turn into You Keep Telling Yourself That if someone calls them out on it. Compare Cut Lex Luthor a Check , which doesn't require that the villain ever had an excuse for his unrepentant villainy

A Shout-Out is an element in a piece of media—a name, line of dialogue, a prop, etc.—that intentionally refers to something or someone outside the work such as fans, family members of the cast or crew or, commonly, another piece of pop culture The idea isn't new , even if this term is. In literary studies these indirect references are known broadly as allusion</, and they can be found across genres and ages from ancient epic poetry to Elizabethan theatre to contemporary video games Note that Fiction is constructed from the repetition of storytelling devices : Many tropes, symbols, and ideas are embedded in the popular consciousness, and works can share a similar element without one being a reference to the other. As a general rule of thumb, if the example needs to be couched with Word Cruft like, "seems to be," "bears a resemblance to" or "could possibly be," it's almost certainly not an example A good Shout-Out should still fit within the context of the story , or it may end up being a Big-Lipped Alligator Moment to people not familiar with what's being shouted about. It should also be subtle enough that viewers either only notice the double meaning after a trip to the fridge or have a short chuckle if they notice it immediately: a blatant Shout-Out runs the risk of violating Suspension of Disbelief and kicking the audience out of the story An explicit, open Shout-Out to one of the work's sources of inspiration is an Inspiration Nod . Reference Overdosed is when a series is loaded with Shout-Outs; Referenced by... is for the work that the Shout-Out is aimed at Super-trope to Expy (a whole character modeled after a figure from another work), Take That! (a malicious or critical reference), Literary Allusion Title (a referential title), Shout-Out Theme Naming (when multiple characters carry allusive names), Actor Allusion (a reference to another work with an actor in common), and Company Cross References (when the reference is to another work by the same creator; see also Creator In-Joke). Compare Homage and Parody , which are more thorough recreations of other works. Opening Shout-Out , Continuity Nod , Call-Back , Production Throwback , and Mythology Gag are for works internally referencing themselves See Stock Shout-Outs for a

list of Shout-Outs and other references common enough to earn their own page Unrelated to Make Me Wanna Shout </ If a character just happened to use a similar turn of phrase to another work, that's just a coincidence

A common problem with a Merchandise-Driven piece of media is consistency between the media and the merchandise; whatever merchandise is made for the show or comic book has to look at least reasonably close to what's on the show or comic, and vice versa, for the kiddies to equate one with the other and, thus, buy both. This can prove a problem, though; marketing execs have a funny way of working their mojo, and it's not uncommon to see a chicken-or-the-egg scenario pop up - do they make the merchandise, then</ build the media around them, make the media then</ the merchandise, or make both together? Whichever one they pick is whichever manner the fans will judge the other on. happens when the media is made first, then the merchandise; since the transition between 2-D and 3-D is hard enough , adding stuff like joints and other gimmicks to make it playable for kids - especially if said media involves Transforming Mecha - there's bound to be some details lost in the attempt. Thus, an action figure, for instance, is considered "Show Accurate" if the toy has little to no details missing from the media version. is the same, except the merchandise came first, and you're moving it from 3-D to 2-D... not as easy as it sounds. Depending on the art style the media is being made in, getting the characters accurate to their merchandise can get rather difficult. (Of course, being too good</ a representation of the toys can be problematic as well, leading to things like Evac having a giant red lever on his left arm for no real reason.) Then there's the hardest: making the media and merchandise together. Combine the problems inherent of the other two, and you can see why producers/developers end up hating</ doing Merchandise-Driven media. To be fair, though, advancements in toy-designing technology has made this less of a problem than it was in, say...the '70s or '80s, when the most articulation a toy can expect was in the waist, shoulders, and neck, and Humongous Mecha looked more like candy-colored hunks of brick than an actual robot. Nowadays, we have the ability to make Transformers </ that can shift from realistic model car to crazily-articulated behemoth mecha, action figures with full range of movement and insane muscle details... At least, we can do that for merchandise marketed However, this can still be a problem when it comes to show-accurate toys, particularly action figures, where the show's stylistic character design cannot be translated into a 3D model without weakening the toy's structure. Incredibly thin limbs, when translated into plastic, usually means the plastic would be fragile and easily break, which would mean the toy would not pass any mandatory safety tests, and in turn would incur the wrath of the CPSC. This is not necessarily a problem if the show is targeted at older audiences, but if the show's audiences are preschoolers who tend to engage in rough play and put things in their mouth frequently, then you have a problem. The workaround would be to use more expensive materials or scale the toy to a size that the limbs' structural integrity are strong enough, which of course increases the price of the product exponentially and in return may affect sales. Additionally, some materials that would be strong enough (ie PVC or synthetic rubber) would nowadays be considered toxic</ and not suitable for being used to make toys meant for kids. Still, the debate will rage on as long as both the media and merchandise

are popular, invoking arguments as fans battle over which is more aesthetically pleasing.

The alchemical process of transmuting the muse into money. The business, administrative, and promotional aspects of the creative life go here.</ See also: Advertising Tropes , Characters and Casting , Fandom , Hocus Tropus , Movie-Making Index , and Reception Dissonance . 30-Day Free Trial

This is a writing or directorial choice that involves the use of demonstrative techniques, rather than blatant or thinly-veiled narration, to establish narrative elements. For example, say Alice is a badass: that Alice is a badass, she would spend the entire book doing indisputably badass things. More pertinently, the book would go into detail: for instance, the work could begin with a Batman Cold Open where she takes on six mooks without breaking a sweat. In these circumstances, we don't have to be told she's badass; we can see it for ourselves. If you're using a story structure or Point of View that doesn't include a narrator (such as limited third-person, in which you only see into the head of one character), showing is usually a better idea, if only because having a narrator suddenly show up just to tell this stuff would break the reader's Willing Suspension of Disbelief . It's even more important in a visual medium, since people don't tend to say precisely what they're thinking or how they feel about it for a hypothetical audience's benefit; watching two characters discuss the details of something they both already know rather than making economical use of a flashback to when one or both didn't</ know is extremely poor storytelling. This also relates to sentence-by-sentence writing decisions that have more to do with an author's language and word choice than anything else. In general, something happens in every sentence written. Is the author merely stating those events, or describing them? "Alice was angry and upset over Bob's death" is the telling version of "As her husband slumped to the floor, with blood gushing from his throat, Alice's heart raced and she choked back tears." One of these two sentences has slightly more dramatic power, and it's for reasons of impact that showing is generally advocated over telling. It's certainly a good thing to know how to show, but it's just as important to know when</ to show. Many writers consider that treating like an iron-clad rule makes writing much harder than it needs to be and can lead new writers to believe they have writer's block when in fact it's merely a scene in which they should be telling, or that they've been showing so much, they've run out of ways to show. One of the best times to Tell something instead of Show it is when you want to summarize lots of events — the written equivalent of a Time Passes Montage . Some times, one might Show so much that it becomes Too Much Information . It should also be noted that . If characters are having a conversation (or even just narrating to themselves), things can be revealed, but the way</ they are revealed, and how others react, can be a form of showing. Conversely we could see characters doing their job, but nothing else is revealed, so while we are shown characters have employment, it would not show much else about the character. An extension of the concept in interactive media like Video Games is "play, don't show." Rather than the player being told</ that the Dragon Lord killed your ninja clan and dishonored you by defeating you in a duel or being shown</ a movie sequence, the player is allowed to act out the journey to the Doomed Hometown and fight a Hopeless Boss Fight against the far more powerful foe prior to the game proper. It's

important to note that Tropes Are Tools - there are reasons why an author may prefer to tell but not show. See Unreliable Narrator and "Rashomon"-Style in which the viewer may find something different than what the narration is telling them. This technique is usually to highlight the Unreliable Narrator 's particular agenda and their character.

A character (often female) has had a rough day. She's suffered some sort of physical or emotional trauma that makes her want to run home and curl up into a ball Naturally, the first thing the woman wants to do is go home and take a nice, long, hot shower. This is not surprising; many people find the best way to relax after a hard day is to take that shower, put on fluffy pajamas, and just let it all go. Water is also an archetypal purifier in general , capable of symbolically washing away sins or past events — though that doesn't mean it'll work</ Of course, when it comes to fanservice , these showers of angst are solid gold (and no, not that</ kind of shower). You can't argue with the titillation provided by seeing a hot-bodied person nude, soaking wet, and in desperate need of support (though in most cases of Shower of Angst, the person showering will be so distraught or depressed that he or she will shower with clothes on, resulting in a Sexy Soaked Shirt scene). However, in some cases, this can border on creepy , such as when a woman takes a shower of angst after being physically or sexually abused (or is suicidal and trying to kill herself by slashing her wrists and letting the running water bleed her dry). That particular version of the trope is common in soap operas, most serious movies, and cable dramas The post-rape shower also has ramifications in a Crime and Punishment Series scenario — if the victim takes a shower before a SAE kit has been collected, then vital forensic evidence is lost. Unfortunately, it's Truth in Television Men are not in the least exempt from this trope, since every shower scene is also a Shirtless Scene . The male variant often features a hunky male leaning towards the wall, with the running water falling on his back Contrast Redemption in the Rain — a joyful, liberating shower in the rain. Can also be an instance of Out, Damned Spot! if the showering is because a character is trying to wash away guilt. Sister Trope of Bathroom Stall of Angst

A common Sitcom and Anime trope in which one character accidentally sees another character, usually of the opposite sex, in the shower. Usually, Bob will turn on the water, then leave the room for a moment. Alice, oblivious to Bob's presence, steps into the water and closes the shower curtain. Bob then returns, finishes stripping down, and opens the curtain back up, so they each get a view of the other naked. Notably, Alice will never stop to think something along the lines of, "Wait a sec, I never turned on the shower..." Often, but not always, the two characters have a history of sexual tension . If so, the incident typically leads to either an Unprovoked Pervert Payback or awkwardness and mutual avoidance, until they decide to pretend That Didn't Happen . If not, it's at least a source of Fanservice . Any time someone contrives to invoke this trope , they're almost guaranteed to catch the wrong person and suffer for it somehow, often by exposure to Fan Disservice . A sub-trope of Shower Scene . Related to Accidental Pervert . Distinct from Naked First Impression in that it's limited to bathroom settings and characters who already know each other. Compare Landing in Someone's Bathtub .

Two people have sex under a running shower. Since shower windows have a tendency to get steamed up, this allows for literal Censor Steam . Sex against the wall is</ a possibility, but there is the likelihood of injury from slip and fall (which hardly happens in fiction, unless one was to write a romantic comedy that puts a realistic—and painful—spin on this trope) Often an example of Idealized Sex See also Shower of Angst (when a character showers to wash away shame, misery, and/or embarrassment), Shower of Awkward (when Hilarity Ensues — or Unresolved Sexual Tension rises—when one character walks in on another showering and freaks out over it, or someone flushes the toilet), and Shower Scene (Exactly What It Says on the Tin)

describes the genre of an entire series. For our purposes, "genre" is synonymous with "topic". See also: Formats and Genre Title Grab Bag . Fiction :

The result of combining Grand Theft Me with Evil Is Sexy . Any villain who possesses the body of the heroine (or any female, really) is contractually required to spend time posing in front of mirrors, wearing scanty clothing , and sometimes even groping herself . This often occurs when the villain in question is herself female and has been without a normal body — or at least an attractive one — for an extended period of time Naturally, this is an opportunity for rampant Fanservice , to an even greater extent than the standard form of Evil Is Sexy Compare Man, I Feel Like a Woman . This overlaps with Power Perversion Potential . Contrast Shapeshifting Seducer . Subtrope of Limb-Sensation Fascination

Although many talents in fictional media show they didn't do their research, some actually did. In fact, sometimes they learned so much and worked so hard to learn it that it would hardly seem fitting to just not show it off. They may also very well have Cast the Expert The Shown Their Work trope comes in when the creators tweak their stories to show the viewer/reader what they have learned. The trick is to do it so this advances the story instead of stopping it cold. When it's done right in a well-made work, awards for its educational value can be just as nifty as the artistic awards This often happens in older, harder Sci-Fi books, wherein the authors try to keep the science as consistent as possible with currently-understood scientific theories. Of course, since Science Marches On , this may date the book badly More often than not, the stuff authors look into won't be things with which the average Joe is familiar. If it's something particularly unrealistic , the audience might just write it off as typical fiction, even though it actually is a thing When an author claims to have done the research but definitely hasn't, that's Dan Browned . Any examples of that list are there; here, the claim is proven correct Note that this does not include explicitly educational productions, since they obviously have to be both accurate and explanatory to be effective Compare Doing It for the

Art , Narrative Filigree (both also about going above and beyond in regards to production quality), Lampshaded the Obscure Reference , Surprisingly Realistic Outcome , Write What You Know (when a work showcases a lot of in-depth information as a result of the creator having prior knowledge of the subject as opposed to needing to research it) and any Artistic License Note that this is only as good as the writer makes it . Just because you did the research, doesn't mean it adds to the story, especially if the research is shoehorned in just to show off. Likewise, sometimes it's better just to make things up. Remember that one of the reasons why the Sci Fi Ghetto existed in the first place was because authors of old (and some even now) overused this trope, creating walls of Info Dump instead of stories. If people wanted to have a lecture in science, they would grab scientific essays in the first place Also keep in mind that referencing things doesn't by default make a work smarter than one that doesn't Try to keep this page from becoming Gushing About Shows You Like 's a LiveJournal community for authors conducting such research on non-trivial topics If the work is simply using real locations as backgrounds, consider using Real-Place Background . If the work contains both real backgrounds and other research, then by all means include it here as well Compare Truth in Television , if the certain element shown in the work is ubiquitous. Contrast Critical Research Failure and Dan Browned . If it turns out that the author wasn't aware about the subject and happened to get it right by chance, then it's Accidentally Correct Writing

A character (almost Always Female) provides a distraction by flirting with and/or showing some skin to an opposing guard, Spear Carrier and/or Red Shirt characters. Of course if you have large breasts it's a lot easier. And some characters are distractions all by themselves This trope does not mean characters whose outfit only covers their top half; that's Stripperiffic , She's Got Legs or possibly Who Wears Short Shorts? . This trope is probably the only reason a female warrior would even consider</ a Chainmail Bikini . Might be more directly applied via a Kiss of Distraction See also: Fanservice , Bath Kick , Distracted by the Sexy , Action Dress Rip . Compare Fake-Out Make-Out . See also I Have Boobs, You Must Obey! , where flirting and acting sexy is done to gain a favor, rather than distraction. Contrast Ignore the Fanservice

A fictional show that takes place within an actual show; or, occasionally, a fictional installment or incarnation of an actual show. Shows-within-a-show are usually of low quality . This is intentional: the low quality of the show is part of the joke or the misery of the characters involved. As a general rule, the more central the Show Within a Show is to the actual show, the better — or at least higher-gloss — it will be. On the other hand, Finagle's Law dictates that The Show Must Go Wrong , so don't expect to get through it without at least one catastrophe. Many comedies have short one-off gags where they parody existing shows. Most of the following examples are recurring and they come in up to four varieties (which can be overlapping): The characters are involved in the production of the show. Sometimes these shows can be shown as Separate Scene Storytelling . For the pre-television history of this trope, once again we must go back to William Shakespeare , who featured plays within plays both in comedy — The Most

Lamentable Comedy, and Most Cruel Death of Pyramus and Thisbe</ within A Midsummer Night's Dream </, and The Taming of the Shrew </ actually is</ one by means of a Framing Device — and in tragedy (The Murder of Gonzago </ within Hamlet </). If producing the show is important to the plot, see Hey, Let's Put on a Show . If the story baits the audience into thinking the Show Within a Show is the actual show, brace yourself for the Proscenium Reveal . If the Show Within a Show ends up being produced in reality as a Spin-Off , see Defictionalisation . Super-Trope to Game Within a Game , School Play and Soap Within a Show . Sister Trope with Fictional Document and Fictional Video Game . Overlaps with Set Behind the Scenes . Compare with Framing Device , Mutually Fictional , Plot Parallel , Postmodernism , Pushed in Front of the Audience , Recursive Fiction , Recursive Reality (of the "nested stories" variety), and Who Would Want to Watch Us? . is a Netflix parody site dedicated to these "nested" films and shows. Please note that tropes existing within the fictional work should be placed in the work page of the actual, extant work.</

Anime & Manga

Painfully shy and quiet, the Shrinking Violet is the withdrawn character, usually but not always female, who walks through the school hallways with her head down and wants nothing more than to blend in with the scenery to avoid all attention because she believes that her presence is worthless or unwanted. Often The Quiet One . Expect her to apologise a lot . She will usually be better than average in scholastic classes, and her appearance will often be pretty in a bookish sort of way, although not all shrinking violets need to be geniuses or nerds. Bonus points if she has long dark hair that hides her eyes The reasons for her (lack of) self-confidence vary, but they usually include intimidation (or bullying) by the popular ones, or being the youngest and more sheltered daughter in the family, or in more dramatic cases, a personal event that convinced her that the world would be better off if she just shut up. In other cases, the Shrinking Violet actually manages to avoid the brunt of fights or taunts that more vocal outcasts take, presumably because she's so quiet that she might as well be invisible Some Shrinking Violets will accept their status, but be plagued with that nagging feeling that they can be more than they assume. Other Shrinking Violets will hate their crippling insecurities and want to reach out to others, but be paralyzed by fear of rejection . Unlike The Snark Knight , they didn't choose to be alone, but feel powerless to change it. They may even harbor a secret crush on a popular male classmate , or even on a male classmate who frequently gets picked on , which they, time and time again, cannot spit out . Prone to blushing. Some versions may be Prone to Tears as well, while others are better at repressing their emotions One advantage to being the Shrinking Violet is that, being outside the viciously popular circle, the few friends she manages to make are the loyal, lifelong ones who'd give their right arms to help a true friend in need . Which they will, because the Shrinking Violet is invariably of the sweet-tempered, delicate type who makes a great friend and a lousy criticism taker from the Alpha Bitch or her Girl Posse In the end, the Shrinking Violet will always find her inner beauty and strength with the help of her newfound friends (or lover), Grow a Spine , and blossom into a mature, self-confident woman who

would make her parents proud . Well... not always . But generally. Sometimes the shy exterior remains towards strangers, and it's only the new friend (and the audience) who gets to see the wonderful person inside. The Beautiful All Along discovery is optional, but highly recommended In stories taking place in an Asian-like place, particularly Japan , the Shrinking Violet may grow into a Yamato Nadeshiko ; still unassuming and possibly quiet, but no longer weak. Silk Hiding Steel is another possibility, which her reputation as this trope will strengthen In rare cases, a Shrinking Violet's mousiness will conceal a malevolent and/or violent personality. Sometimes, this is also used to conceal the extremely creepy Uncanny Valley Girl A male version of this trope may be treated as an instant Butt-Monkey for everyone to martyr , or just called out as an emo (unlike the female one, who is so sympathetic that beating her up or even yelling at her is akin to a MAJOR offense for her friends), or he might be given the role of sympathetic Plucky Comic Relief and overlap with a Lovable Coward . A male Shrinking Violet protagonist will usually face a conflict that finally forces him to come out of his shell, or he'll be thrown headlong into sociability and adventure at the start of the series by a Genki Girl , Magical Girlfriend , or Manic Pixie Dream Girl . However, straight examples are not uncommon, especially for younger boys Shrinking Violets are often associated with cool colors, especially violets/purples and sometimes blue, in their clothes, eye, or hair color. See also Shy Blue-Haired Girl If two Shrinking Violets fall in love with each other, expect them to be Twice Shy Friendless Background can cause this

What is this trivia page about? No comment . Joy of joys, the author(s) of your favorite series is/are answering the fans' questions ! Now's your chance to finally get some closure on pressing continuity issues ! So you walk up and ask, "Was Bob really a robot ?" Their answers? "I dunno." "No comment." Congratulations. Instead of an answer, you just got the Shrug of God: author(s) intentionally not answering a question about their work. Before you get angry at them for being evasive, remember that they may have a reason for their ambiguity. Not to be confused with Flip-Flop of God , where the author has a definite answer which has changed</ over time, or with Creator's Apathy , which is when a creator admits to not caring about or trying on their project. Contrast with the Hand Wave , and " A Wizard Did It ", which are given in response to questions about Plot Holes or the workings of a story's Phlebotinum . In contrast, the Shrug of God is given in response to more mundane questions: questions that should have a simple, straightforward answer. Don't mistake it for Ascended Fanon which, while it may come with a shrug from the creator, is quite different: Ascended Fanon is when the creator accepts, for any reason, the explanations offered by fandom to questions raised by that author's work. The shrug comes when the author refuses to take a stand about either those questions or any possible answer to them. In other words, if the question is "How does this work?" and the answer is "Beats me," then it's a Hand Wave . If the question is "What happened?" and the answer is "Beats me", it's the Shrug of God. If the answer is "Magic" then changed later on to " Science ", it's Flip-Flop of God . When the author insists on quashing a theory, see Jossed , which is the opposite. When the author explains but in supplementary material see All There in the Manual . For those stories that are deliberately ambiguous, see No Ending and Riddle for the Ages . In lieu of a definitive Word of God

, someone connected to the production may chime in with the Word of Saint Paul , or anyone with sufficient credibility may offer up the Word of Dante . The inverse of Ascended Fanon . Compare Noodle Incident . See also The Walrus Was Paul , Loose Canon . See also Bellisario's Maxim and the MST3K Mantra . Often leads to Fan Fic Fuel if the fans are upset with this. Not to be confused with Atlas Shrugged </, which—while wordy at times—lets you know what Ayn Rand thinks of a lot of things in no uncertain terms. In any case, Atlas was a Titan</ .

If the character simply does not react at all, you have The Stoic or someone that has Seen It All . If the character shows a downplayed reaction that almost</ shrugs it off, it's Dull Surprise . It could be a Milholland Relationship Moment Alternatively, the character might see or hear something unusual, but will ultimately dismiss it as " just my imagination " or be subject to the Bystander Syndrome . See Also No More for Me

Clothing in real life, especially untreated wool, has a nasty habit of shrinking if you don't follow those cryptic symbols on the tag; and nobody knows what they mean. At worst this means it'll become a size smaller, probably just annoyingly too snug, forcing you to abandon it. Not in media, however, where this trope is taken Up to Eleven . Even the slightest dash of water could reduce an expensive three-piece suit to the size of atoms. Even things that shouldn't logically shrink aren't safe from incorrect cleaning! Most likely to occur in animation, where they can show the clothes shrink in real time, but not limited to that medium. Dilbert </ : One early strip had Dilbert buy a pair of shrink-to-fit pants that are too large, because he expects them to shrink in the wash. He insists that after one cycle, they'll fit like a glove and they do - like a glove with two fingers.

Instead of providing rescue to another character, this one is distracted by something. The rescue is Played for Comedy ; subverting the Big Damn Heroes by having heroes not</ awesome during the rescue. They may seem completely oblivious to the danger their friend/ally is in, allowing for a completely different sort of rescue to occur This can also be the Inverted Trope of two other rescue tropes; Refuse to Rescue the Disliked (which involves the hero deliberately choosing not to rescue on the basis of personal dislike) and Unwanted Rescue (which involves the character being rescued trying to ignore or prevent the hero's attempts) For the opposite (where a character would prefer another character stop</ trying to "save" them), see Unwanted Assistance

So you're finally facing the villain . He's being all smug and trying to break you with his words, deconstructing your motives for fighting him and reminding you of how similar </ you are to him, unleashing a blistering spiel of how your flaws make you pathetic , making you uncomfortable with his too-close-to-truths , offering you the opportunity to join him , et cetera et cetera… and what should your response be? Tell him the error of his ways, and offer him a chance to join the good guys? A measured, reasonable response, indicating your disagreement? Let the villainous argument throw you and make you wonder if you and he are similar ? No.</ Shut up , Hannibal! He's a villain</. A bad guy</. He has tried to kill you and your friends a dozen times over. He dangled your Sidekick

and your Love Interest over a cliff, taunting you to pick one of them . He treats other people, including his own underlings , like dirt. He doesn't care about people, order, or whatever he's using to justify his actions —he just wants power. And he ran over your daughter's puppy . You're nothing</ like him. He's wrong</. So you tell it to him, spell it out if necessary , then beat the crap out of him in a manner most righteous (or, if you are a common human against a superpowered villain, or the work is not action-oriented, an Armor-Piercing Slap may be an appropriate outcome as well.) This happens a lot. Heroes usually use the "fist to face" variant of this, though a hero giving a villain a verbal beatdown is not unheard of (though if the verbal beatdown goes on long enough, it becomes a Kirk Summation). Often done by the more practical Anti-Hero , who doesn't really care about philosophy, and just prefers to beat up anyone who has messed with them or their stuff. More heroes will often at least listen before coming up with a counterargument.
When the villain rationalizes their villainy with something truly depraved, the hero will often roar to the bad guy, " You're Insane! " before delivering the smackdown. They may, however, skip to this in subsequent encounters, when they already know that attempting to reason with this particular foe would be a waste of breath. Doing this to another villain </ is even dumber, as they're likely to either not be big on listening, or have an outright conflicting ideology. But it still happens every now and then. Sometimes, The Hero needs to be told " You Are Not Alone " to come up with this reply. Combining it with the "No More Holding Back" Speech will just make it that much more badass. Usually goes hand-in-hand with the villain having a breakdown , either before or after this reply is delivered. Conversely, when the hero is on the ropes, he may interrupt the villain by saying Get It Over With . It tends to shock the villain that anyone would prefer death to listening to him.
As these generally occur at the conclusion of most stories, feel free to use spoiler marks if you think it gives away too much . For readers, . The name is a reference to this being a response to a Hannibal Lecture , but it would be more accurate to refer to the trope Break Them by Talking , since Hannibal Lecture only concerns certain interrogation scenes. Contrast Kirk Summation which is where the hero rebuts the villain's speech with his own. Here, the hero doesn't bother. Compare Shut Up, Kirk! , You Keep Telling Yourself That , [Verb] This! , Armor-Piercing Response , Freudian Excuse Is No Excuse , and whichever variations of I Will Show You X! are said specifically to a villain. For the more… forceful version, see Talk to the Fist .

Someone is talking, either to someone else or to the viewer. But slowly, creeping up on them, is a horrible monster or villain. You know this person's gonna die. Or they're in serious trouble. The monster begins to roar ... And the person turns around and says, "oh, be quiet." And the scary thing actually does shut up. At least for now. This is a comedic trope used to create a sharp contrast between the large, mean-looking thing and the considerably smaller person who tells it to shut up. This often takes the form of someone who's talking being interrupted by an intimidating, powerful-looking beast, but also sometimes is done by having a little guy have a friend or pet or relative who's muscular, huge, and intimidating, but can easily be calmed just by being told, "be quiet." In some cases, this can happen because the person telling the big scary thing to be quiet

doesn't realize it's a big scary thing... yet . See also Unusually Uninteresting Sight and Did You Just Flip Off Cthulhu? .

Some people can't "do their business" when there is a chance they could be seen or overheard by someone else. This is somewhat understandable and a case of Truth in Television for some people. This can vary from not wanting to be watched (which most of us can say we'd agree with) to not being able to use public conveniences even if they are the only one there In fiction this seems to be an affliction that tends to affect shy and/or neurotic people more than anyone else. It also seems to be something that tends to affect children. A common occurrence is for them to do a "No Peeking!" Request , such as a character crying "I can't go with you looking at me!" (or "with you there" if the person is merely in earshot) A Shy Bladder may be faked if a person needs to evade observation for some reason or if they want to avoid giving a urine sample as, at least in fiction, even prison guards will sympathize with a person over this

Tropes about shyness and the results it may have Compare Index of Shame , Introversion Tropes

When two siblings end up being rivals. Let's face it, life is a competition. And more often than not, your first and most consistent competitor can be found sleeping in the next bed. Siblings compete. They compete for toys, love, food, resources, time, attention... in short, pretty much everything. Usually, this is a healthy thing — usually — as a little healthy competition can build character, help define one's place within the world, and they can learn some good skills while navigating whatever conflict they have with each other... like who gets to use the only bathroom first. Besides, as anyone who actually has a brother or sister knows, sometimes you just have to tease them . Otherwise, what's the point? Sometimes though, things will get ugly. Really, really ugly. Because who can know you better — and perhaps have more reason to hate you — than your own sister or brother? When the battle is between siblings, you can trust them to know (if not always do) the things that are going to hurt you the most. Naturally, the closer the siblings are in age, the more intense the rivalry is likely to be, and the more likely one of the siblings will feel Always Second Best . Extreme cases may result in Can't Catch Up , especially if an Aloof Big Brother is involved. If the parents take sides one of the rivals is bound to become The Unfavorite . When it spills over into romantic affairs with two siblings pursuing the same Love Interest , it can become a Sibling Triangle . For a Sibling Rivalry turned into good vs evil, see Cain and Abel . If the rivalry goes too far, could lead to Sibling Murder . In case the siblings in question were friends with each other prior to their falling out, it probably triggers We Used to Be Friends . Compare to the often-times similar Clashing Cousins (parents having a rivalry can also lead to their children inheriting their rivalry as well). For that splendid variant of sibling rivalry that's exclusively reserved for Girls, see The Glorious War of Sisterly Rivalry . If the siblings are princes and they fight for the throne with Shakespearean undertones, see Princeling Rivalry . Truth in Television , of course.

Let's say the main character's name is Alice . She has a brother named Bob. The creator writes a new series with a totally new character, also named Alice. Alice's love interest in the story just happens to be named Bob (or look exactly like him, or act like him), and even though they're new characters, it still causes a Squick reaction Compare and contrast Brother–Sister Incest and Twincest , which don't even bother</ with the Expy bit

In simple terms, a Love Triangle where two of the parties involved are siblings, who both love (or at least try to "get") the third party This alters the dynamic in various ways, given the famously rather complicated relationships between siblings in the first place. Might go anywhere from a friendly rivalry, one deciding that they want their siblings to be happy or straight into Cain and Abel territory. In Fairy Tales , often inspires the Bride and Switch If they don't hate each other from the start the Triang Relations version of the triangle is a special subset of #8 or #9. If the former, it will turn into a case of Polyamory . If one of the siblings is the non-related party's official partner and there's cheating involved with the other sibling, it overlaps with A Family Affair Usually does not</ involve Brother–Sister Incest See also Two Guys and a Girl , Sibling Rivalry , and Settle for Sibling . When a fourth party is added in the form of a sibling to the third party, see Double In-Law Marriage In Black Clover , </ Finesse is introduced as the betrothed to whomever becomes the new head of House Vaude—implying that their father was already planning to disown older son Finral for his more talented half-brother Langris . Finral and Finesse would be a Perfectly Arranged Marriage ; Langris is initially indifferent to Finesse, but his Inferiority Superiority Complex is such that he's enraged at the thought of anybody This seems to have changed after some Character Development

In Real Life , siblings rarely act the same. Fiction sometimes takes this to an extreme Enter Sibling Yin-Yang, the occurrence of siblings that are polar opposites . If he's cool and reckless, she's responsible and thoughtful. If she's a spiky-haired hooligan, he's the nerdy wimpy one. If he's an immature brat, she's... well, you get the picture The even more extreme form leads to Polar Opposite Twins or even Evil Twin . See also The Glorious War of Sisterly Rivalry , Tomboy and Girly Girl , Cain and Abel (when this leads to complete antagonism) and Foolish Sibling, Responsible Sibling (where An Aesop is involved). The siblings may very well (though not necessarily) be a case of Red Oni, Blue Oni Legend Heroes </: Emotional, self-admitted Idiot Hero Liu Bei and stoic, pragmatic Tsundere Gongsun Zhan. He gets them in trouble, is the cause of their Perpetual Poverty and always acts with his heart. She manages the finances, runs the dojo and always thinks in ways of practical life. Liu Bei adores Zhan as his Cool Big Sis . She loves him as much as one can love their (somewhat) Annoying Younger Sibling

After the hero has won a small but significant victory of some kind, the story cuts away to the Big Bad , typically in The War Room of the Supervillain Lair , punishing his previous underling then gazing

into the Palantír and saying something like: "It seems this Kid Hero is more troublesome than I expected." Expect them to fail the Big Bad again, cue another Sic 'em scene. Basically, it's a scene that tells the player/viewer that there's more to come, and that the Big Bad 's still on top of the game.

After a particularly strange or squicky phenomenon, a character will inevitably say, "That's disturbing", "That's just wrong", " That's wrong on so many levels ", or something similar. The next level up has characters requesting the Brain Bleach . May lead into or combine with Screaming at Squick . For extra comedy this may be followed up with " But I can't look away ..." Contrast with ...And That Would Be Wrong , where they may not think so, but they want others to think they do.

Some romances are painful , others are dead , a few are happy , and then there are those which are... cute </ They use pet names that even Fluffy the Terrible winces at, cuddle and giggle incessantly, never</ argue (unless you count their "you're cuter" exchanges as such) and basically turn all nearby salt into sugar. They might sometimes wear Coordinated Clothes to make sure everybody notices they belong together. Usually, they're as indestructibly upbeat as you think. Other times, the show will delight in giving them one tiny</ imperfection, problem, or Single-Issue Wonk that makes them turn into The Masochism Tango To be fair, almost all relationships go through a "Honeymoon Phase" in the first few months of dating, where the couple can do nothing but sing each other's praises, much to the annoyance of their friends, families, and coworkers (especially the single ones). But after a while, passions cool as the couple integrates the relationship into their everyday lives. Granted, you do have those couples who never stop</ laying it on thick . A Sister Trope to Make-Out Kids , when a couple makes others feel uncomfortable by being very affectionate in public, and Insatiable Newlyweds , when tying the knot starts up the sugar rush all over again. The bane of every Affection-Hating Kid

Some romances are painful , others are dead , a few are happy , and then there are those which are... cute </ They use pet names that even Fluffy the Terrible winces at, cuddle and giggle incessantly, never</ argue (unless you count their "you're cuter" exchanges as such) and basically turn all nearby salt into sugar. The bane

of every Affection-Hating Kid

The Reveal is the ultimate resolution of big mysteries, the wool is finally pulled from the eyes of the audience and the truth is displayed for all to see. This should come as a huge shock to everyone... except the people who saw it coming . This doesn't only apply to viewers: characters sometimes suspect what's coming too, and sometimes they decide to make it interesting. After the big revelation, be prepared for a cutaway to two characters exchanging money. Not only had they foreseen the possibility that the revelation might be coming up, they decided to make a game of whether or not it did Classic setups include someone coming out of the closet or the resolution of a Will They or Won't They? . Classic subversions include compromising situations that imply one of the above or the losing character immediately winning the money back due to a second revelation Sometimes we see the bet being made, in which case a sufficiently-delayed payoff can count as a Brick Joke . Other times, we only get the punchline. A common variation is for the bet to be a contest, with the characters discussing how long the reveal took before handing over the money (in this case, the implication is that no one</ was betting that Bob wouldn't come out — they only disagreed how long he'd last) Contrast The Bet , which is usually a more integral part of the plot (though a particularly devious character might set a Side Bet on themselves losing </ The Bet)

Commercials for common household products will sometimes have a demonstration of the advertised product's effectiveness compared to another leading brand—either Brand X or an actual competitor. The demonstration is usually done by showing both brands being used side by side, with the ad's brand being far more effective, lasting longer, doing more, etc. In the US they can and will mention the competing brand by name. In Canada, the UK and Australia this is not allowed, so the other brand is usually referred to just as another leading brand . Dish detergents often do this, with stacks of dishes, grease cutting power of a single drop, scratched glass, etc. In Germany, it is actually illegal to say anything disparaging about a competitor's product, even if your statement is true.</ So, if your product is healthy and you know your competitor's product has additives that cause cancer, it's against the law to say this in an advertisement in Germany!</ In France, it used to be illegal. Not anymore, but you can only do this if you have studies with numbers backing your claim. In Chile, comparisons to specific competitor brands are legal, but ads limit themselves to "another leading brand". This is because explicitly mentioning/disparaging the competitor is considered by the local publicist association to be a serious breach of professional ethics; in the very few times this has happened, there have been harsh repercussions. When things are being shown absorbing liquid, especially diapers, tampons, and pads, the liquid will be blue. Understandable, given that it's highly visible and no bodily fluids are blue—red, yellow, or brown liquids seem fairly disgusting. Compare Too Incompetent to Operate a Blanket for those side-by-side demonstrations where one side is performed in an obviously ridiculous fashion.

U.S. pharmaceutical advertisers face a difficult dilemma. Because of

truth-in-advertising laws, any commercial giving indications for use of a prescription drug must give full disclosure of side effects. This means that drug commercials come in the following four flavors: The "reminder" commercial alternates shots of flowered meadows, senior citizens, and doctors, all while saying generally positive things about nothing in particular and mentioning the name of the drug. This evades both mentioning the side effects and what the drug actually does</. This type is far less common these days; most commercials that still do this are the ones that give you help down there</ , because, due to social mores, they can't directly name what their product does anyway. Some of these ads tried to skirt the issue by naming another drug indicated for the same thing. Also, many commercials try to invoke a viewer's " Attention Deficit... Ooh, Shiny! " by having interesting, pretty scenes distracting them from the laundry list of side effects being rattled off. They do this by showing interesting situations like an asthma medication showing an elephant representing difficulty breathing following a man around during his day, or a world made of plumbing for a medication which helps you control frequent urination. Of course, if you've actually talked with your doctor about your problems, then your doctor would already have told you if Stupidoxin was right for you. But pharmaceutical companies continue to heavily advertise because you might have been too embarrassed to mention the problem to your doctor until you realized there was a treatment for it. Or you might not have considered it to be a problem</ at all until you saw the commercial with all the other people who were horribly embarrassed by their yellow toenails/hairy knuckles/insufficiently-lustrous eyelashes/etc, and realized that you needed to get the cure</ . Or even worse, you might have told your doctor about your problem but didn't request Stupidoxin by name, and so your doctor prescribed an equally-effective generic brand instead! (Somewhere an ad man is crying.) The prevalence of these commercials has resulted in this trope often being played for laughs, with the side effects being a ridiculously long list, the effects disproportionately bad compared to the condition the drug is supposed to treat, or the side effects becoming extremely bad, often including death, only to finish off with an incredibly mild condition like bad breath or a small rash. Compare and contrast What Were They Selling Again? , where specifics about the product are obscured unintentionally. Objects with more extreme or fantastic warnings fall under Do Not Taunt Happy Fun Ball . If the company selling the products is actively malicious it is May Contain Evil .

The friends and helpers of the main hero. They can be almost any type of hero playing a secondary role, a normal character observing the action, or Plucky Comic Relief —sometimes all three. Typically they are a Foil to the hero, and this is often underscored by their dramatically different appearance. Sidekicks often get themselves into trouble , so the hero can rescue them. They also give the hero or Mr. Exposition someone to explain the plot to . In the finale, they may line up against the Evil Minions . (The reason why they are called sidekicks and not the Good Minions is part tradition and inertia, and part the differences between the two relationships—because the hero and sidekick both are heroic, reciprocal bonds of loyalty and friendship are far more likely than between the villain and his minions.) Sidekicks are almost never older than the main hero. In Comic Books , Sidekick Graduations Stick : the "graduation" of a former sidekick into an independent hero in

their own right is one of the few categories of changes that tend to avoid being reversed in the long run. However, before that graduation you'll see them get stuck with a lot of dead ends, like Hero Harasses Helpers and the Sidekick Glass Ceiling , though they rarely gets hit with Never Be a Hero . But if the hero bites the dust or otherwise ends up out of action, they're the number one candidate for a Legacy Character . (if it sticks) Contrast the Deuteragonist , a second character on equal footing with the protagonist. May overlap with Love Interest . See also Duo Tropes and Servant Tropes .

So you're finally getting that biopic made, but you're having some trouble. Maybe your subject is very controversial , maybe there are multiple conflicting accounts of his/her life , or maybe he's just too obscure for the average audience. How do you accquaint your viewers with the subject? You create a co-star and use him</ as the Audience Surrogate . This is a Sidelong Glance Biopic, so called because it is either unwilling or unable to look the subject straight in the eye In many cases, the subject of a biopic might not be alive or is in some other way unable to participate in a movie based on his/her life. Using the perpsective of a friend or family member associated with the subject allows a filmmaker to gain details of someone's life without having to ask them directly and to show how their actions impact the lives of others. Besides, when you want to learn the truth about someone, that someone is usually the last person you should ask Due to the nature of their screenplays, these biopics more often than not tend to take advantage of Artistic License in their storytelling and are often less historically accurate. Also, if based on a secondary source (biography, memoirs, etc) the main character could easily be an Unreliable Narrator . Also often results in Billing Displacement , where the actor playing the subject is given top billing while the Audience Surrogate is given lower billing, despite usually having more screentime The White Male Lead trope leads to this in biopics about historical figures that weren't white heterosexual males. Done well, you end up with a well-made, if historically inaccurate movie. Done poorly, you get fictional characters that seem to solely exist to avoid having a non-white (or non-male, non-heterosexual, etc.) lead Compare First-Person Peripheral Narrator , which is a story is told in first person by a narrator who is not the main character Jesus!</ by Yoshikazu Yasuhiko (best known for his work as character designer of the original Mobile Suit Gundam </) follows the life and times of Jesus Christ from the perspective of the various disciples as well as members of the Roman occupational government and others with a particular focus on the geopolitics of Judea and the Roman Empire

Alan Moore 's 2015 Providence </ is intended to be this for H. P. Lovecraft . It explores his life, his artistic influences, regional background and sociopolitical makeup in detail across 7 issues. Lovecraft himself finally appears on-screen in Issue 8.

300 </ portrays story of King Leonidas of Sparta as told through the eyes of Dilios, the one survivor of the army that fought at Thermopylae.

This is present In-Universe as a Framing Device in Ace Combat Zero: The Belkan War </. Ten years after the titular war (where the gameplay events take place), an Intrepid Reporter is looking for information on the mysterious Ace Pilot Cipher , who turned the tide

of the war several times (and afterwards saved the world from an Well-Intentioned Extremist organization's WMD with whom he had his very last Final Boss duel over the aforementioned WMD), in his quest to learn more about this enigmatic figure and the truth about the war itself.

When a notion mentioned in passing in one work becomes the full story of another work by the same author. Most often a book trope It is related to Noodle Incident , which when explained, becomes a Resolved Noodle Incident . The latter could be considered a Sub-Trope of this one, additionally requiring the story to be framed and referred to in a specific manner

- Courtesy of Wikipedia : "The origin of the character is to be found in a Howard the Duck </ story that contained a "mandatory fight scene" between a Las Vegas chorus girl, an ostrich and a standing lamp. Neil Gaiman said he'd like to see that story. So when Gerber was asked to come with something original by Vertigo editor Karen Berger, he created Nevada."

Terry Pratchett 's The Amazing Maurice and His Educated Rodents </ started out as a passing reference in Reaper Man </ .

Douglas Adams 's Starship Titanic </ started out as a passing reference in one of the The Hitchhiker's Guide to the Galaxy </ books.

Sometimes you're handling the main quest and a game will throw in some sort of diversion for your entertainment . This minigame, sidequest, or secondary story is so absolutely addictive, interesting, or just plain fun that you'll completely forget about the main story altogether. Thankfully, the story does not progress without you so don't worry too much about it . This isn't absolutely limited to video games either. Many websites have so many nifty things going on that you don't even care about the main site at all These are times when the main story or quest gets derailed by what you can do on the side. Related to Attention Deficit... Ooh, Shiny! See also Just One More Level! and Quicksand Box . It will normally happen in the Minigame Zone . A Virtual Paper Doll , particularly one with a lot of customization options, can easily become one of these if you're the sort of player who cares about that. Compare and contrast Plot Detour where this is</ the content, as well Just Here for Godzilla , where the "Gold Saucer" is the main appeal of a work Non- Video Game Examples

Siege engines are war machines of various sorts used by attacking armies to help them win a siege, whether by destroying enemy fortifications, helping to bypass them, or attacking enemy forces through or over the walls. They’ve been fairly common in Real Life from ancient times until the end of fortresses as major military factors, and are as a result very well represented in fantasy works, alternate history and Historical Fiction . Often used during The Siege or when Storming the Castle . Defending armies may use siege engines as well, usually to repel enemy attempts to breach or scale the walls or attack the enemy without having to leave the safety of their fortifications. Siege engines can come in various types for various tasks, with the more common variations including: Historical accuracy varies and the Rule of Cool rules. Depending on the setting

, cannons may also appear, making knocking down thinner walls in a realistic fashion an option (other siege weapons almost always rely on bypassing the wall or attacking those inside from range rather than knocking it down). They accentuate the menace of an approaching army and their appearance in a siege is often closely followed by a crisis point for the defenders. The Lord of the Rings </: Sauron's forces use catapults to attack Minas Tirith with shells that exploded in flames, as well as the heads of those who had been killed in earlier fighting. Also of note is Grond — named after Morgoth's warhammer Grond, Hammer of the Underworld — the most badass Battering Ram ever conceived, with a head shaped like a wolf's and enchanted with "spells of ruin", drawn by great beasts and swung by trolls, which was used to break the gate of Minas Tirith. Masada </ featured a variety of Siege Engines — siege tower (with a Battering Ram at the top), onagers, and ballistae.

</ provides a wargame-lite version of siege warfare involving cannons and ballistae.

Age of Empires </ :

The Order of the Stick </ has them, notably with Redcloak throwing The titanium elementals with catapults (and after his victory, The about to fling a bunch of humans) Adventures of Gulliver </ The (1968). Miniature Vikings use ship-mounted catapults to attack The the city of Lilliput

This trope is when a character sighs when they are around another This character to indicate that they are in love with them. The This Chick Magnet tends to experience this a lot</ from the people This attracted to them (usually from girls) can be done because This the other character in question is Oblivious to Love . This Alternatively, if they are already together, the character may This be sighing to indicate how happy they are to be with them

In television, as in Real Life , any decent-sized organization will have a logo or symbol to identify itself. Said symbolism will appear when needed to identify the group, whether it's a discreet corporate logo on the building or an imposing banner behind the Diabolical Mastermind when he makes his world-threatening rants Some groups, however, carry this to a ridiculous extreme, especially if a megalomaniac villain is in charge. When this trope is in play, the design will be wantonly slapped on everything</ in sight, down to the most mundane items and meaningless locations. Bathroom doors, coffee mugs, staplers, golf carts, Highly Conspicuous Uniforms — nothing is out of the question, no matter how trivial or impractical it may be. This reaches its fullest expression when entire vehicles and even bases are constructed in the very shape of the logo This is true even in an Elaborate Underground Base or a Supervillain Lair , where the only people present are supposed to be the Minions and the Goons ; it's almost as if the Evil Overlord was worried his legion of mooks would forget where they were if they weren't reminded every two minutes Note that this trope is not limited to villains or Evilness . Good guys love branding, too Also see Highly Conspicuous Uniform (when the sigil is overused on the mooks ' clothing), Malevolent Mugshot (when a villain puts their own image everywhere) and

Conspiracy Placement (when the Ancient Conspiracy hides clues among the Muggles). May Contain Evil Not to be confused with Instant Runes displayed by the copious dozens

That one scene that everyone remembers from a movie or other media. When people think of the work, this is the one scene that they immediately think of, and may be the only reason to remember it at all. If the work is referenced in popular culture, it will</ reference this scene. Cover illustrations will often depict this scene. Any parodies will also center on this scene specifically There are many reasons that the scene may stand out. It may be.. No matter the reason, the Signature Scene is cemented in the minds of the general public. If you have actually seen the work yourself, there may be more scenes that you enjoy, or possibly stick out more in your mind than what people believe to be the Signature Scene. This dissonance leads to Small Reference Pools Remember that this should not</ just be a list of every single dramatic or important scene (those fall under Wham Episode or Shocking Moments .) This is the one scene that's so iconic that even people who've never seen the work likely recognize it. And each work should, ultimately, only have one true signature scene — while the trope is sometimes a matter of opinion (and it's therefore reasonable to end up having more than one listed for a work due to different people identifying different signature scenes), you shouldn't generally feel the urge to add more than one for a particular work yourself Scenes which are little more than famous quotes should probably not be listed here. Those are examples of Signature Lines . Quotes do help keep a Signature Scene memorable, though Compare It Was His Sled , Best Known for the Fanservice , Watch It for the Meme , Money-Making Shot , and Everybody Knows That . If the Signature Scene is the only reason the audience watches the entire movie, see Just Here for Godzilla
.

Tropes that define a character or work of fiction/non-fiction, making them unique and easily identifiable.</ Not to be confused with Characters (or its equivalent for works of fiction or non-fiction, whose name escapes me at the moment), which lists tropes used as the basis of characters and/or series, this one lists the features that make them unique.

Characters in fiction sometimes have a specific job not because they like the job or something, but the job just has some very specific benefit that they want. Health plans, especially dental, are popular For our non-US readers: the United States does not have a government-sponsored health insurance system except for veterans, elderly (Medicare), and extremely poor (Medicaid) - for most Americans, most or all of their coverage is from private companies or organizations. For healthy working-age adults, health insurance is a common benefit at a workplace (due to wage restrictions during World War II encouraging benefits in place of offering higher wages) and can vary greatly in quality between jobs. Dental insurance plans are usually separate items from regular health insurance, which is why "dental" is commonly said instead of "health" This trope can also encompass other things too, but normally, it's just small things that they want Makes it even more

hilarious if the character who wants that specific benefit has no way to use it. (Such as a life insurance plan for an immortal being.) See also Healthcare Motivation , Working for a Body Upgrade and I Control My Minions Through...

If the birthday of a character is included in a work, then it is either plot-relevant or significant for the character . Or both. </ In Real Life , people are born on random dates. In fiction, while it's possible for the creator to just choose a random date, if a character's date of birth is given (even if it's just in supplementary material), then nine times out of ten, it has some sort of symbolic meaning . This can be a character obsessed with romance being born on February 14th , or an unlucky character being born on Friday the 13th . The meaning can also be ironic, such as a bright and cheerful character being born on October 31st . It can also, owing to When the Planets Align , have actual meaning. May lead to an I Remember Because... . Can often overlap with Significant Reference Date , if the birthday is a reference to some real-world date, such as the date of their first appearance, the premiere/publication of some work within the franchise, the birthday of the person who inspired their creation, etc.

As an Easter Egg , writers will sometimes use a Real Life calendar date as an In-Universe reference point. </ This could be a reference to a TV episode's original air date or a movie's original release date. Or perhaps a character's birthday , anniversary, etc. matches that of the actor who plays him. Note: even when this is not canon , fanon is likely to assume this is true for works set in the period they were filmed in and characters in those works. Fan Fic for that work will be affected accordingly.

A seemingly regular sign that, with letters broken or removed, portrays a different meaning. This can be caused by coincidence (neon tubes burning out, letters falling off), or it can be intentional vandalism Often used to create or highlight an unintended innuendo, such as "Public Library" becoming "Pubic Library". Also used in many After the End and Future Imperfect scenarios. The seedier kinds of Neon City will be full of this sort of thing. Compare the comedic version Censored for Comedy

How do we know that the End of the World as We Know It is approaching? By the warning signs that precede it, of course. Whether The Stars Are Going Out or a beast with seven heads rises out of the ocean , or just dogs and cats living together , everyone knows that something bad is about to happen. It's a sign of the end Works that want to make biblical allusions will often use things from the Book of Revelation , although not always literally Supertrope to The Stars Are Going Out and Crack in the Sky . Subtrope to Portent of Doom . May overlap with Bad Moon Rising , Comet of Doom or Natural Disaster Cascade Compare Just Before the End . See also Apocalypse How , Caught Up in the Rapture and The End of the World as We Know It . For signs as in sandwich boards and posters , see The End Is Nigh Not to be confused with Sign of the Apocalypse , a stock phrase used for humor. Also not to be confused with Jumping the Shark

.. .. .. These are tropes about silence They can be related to both the techniques creators use to incorporate a lack of sound into their works, as well as in-universe examples of characters, objects, places and events that create, seek out, or maintain an absence of sound

The Silent Majority are the people who are in a Fandom but don't feel the need to speak about how they like the work they're a fan of to the internet, or even in real life. Both senses of "how" - they don't talk about their fandom, and they don't say exactly what it is that makes them a fan. Their silence keeps them out of the Unpleasable Fanbase ; their attitudes can be learned only by implication, by measuring the difference between open comment and Ratings and making educated guesses about what's in the gap These people are important. They still buy books, music, video games, and movie tickets. They still get and fill out Nielsen diaries. They are the ones who keep shows alive years after most on the Internet are thinking "Hey, is that still on?" They are the ones who support works that are popular despite open internet-fandom contempt . And if creators who are Pandering to the Base have no idea that they are part of the base and no idea what their probable attitudes are, the pandering may backfire—and none who actually speak of the work will ever be sure why.. As a broader political term, the Silent Majority is an unspecified large majority of people in a country or group who do not express their opinions publicly. The term was popularized by the U.S. President Richard Nixon in a 1969 speech ("And so tonight to you, the great silent majority of my fellow Americans, I ask for your support"), where it referred to those Americans who did not join in the large demonstrations against the The Vietnam War at the time, who did not join in the counterculture, who did not enthusiastically participate in public discourse or the media and, most importantly, still supported him. Nixon saw this group as being overshadowed by the more vocal minority. Turned out he was wrong — at least with respect towards majority public opinion towards Vietnam, which was growing increasingly hostile and would continue to do so throughout his presidency (members of the counterculture, of course, by definition tend to be somewhat in the minority, otherwise it would cease to be the counter</ culture and simply be the 'culture') This majority referred mainly to the older generation (those World War II veterans in all parts of the United States) but it also described many younger people in the Midwest, West and South, many of whom did eventually serve in Vietnam. Well, they'd go there anyway , regardless of their support The silent majority theme has been a contentious issue amongst journalists since Nixon used the phrase. Some thought Nixon used it as part of the Southern Strategy The term nowadays in modern political discourse refers to supporters of Donald Trump that fuelled his rise to power in the 2016 election Contrast with Vocal Minority

Sometimes the only way to survive against the enemy's ships is to be stealthy. In this situation, the ship and crew tries to be as quiet as possible, knowing that the slightest sound and/or energy reading could be picked up by the enemy's sensors and draw their fire. This often involves deactivating all non-essential systems on the ship for awhile This trope is almost invariably featured in a Sub Story . This trope has also been Recycled IN SPACE! , and many

a Cool Starship has been called upon to do submarine-style silent running. Often this depends on the unrealistic conviction that there is sound in space , but it could be denoted as minimizing heat discharge or something similar to prevent detection by sensors . Not to be confused with the film Silent Running </ Radio Silence is often one of several requirements

Sometimes in science fiction, you'll find aliens whose bodies replace carbon with silicon. In hard science fiction, the plausibility of this trope rests on carbon and silicon being in the same family of elements: the ability to form four bonds opens the door to a vast array of potential complex nanostructures. Silicon biochemistry would be wildly different though: you can't replace carbon with silicon in known biomolecules and get anything functional. Even the small "hydrosilicon" molecules are much more reactive than their carbon counterparts. Plus, carbon is actually not so common on the earth, with the If that kind of life were</ able to form, it's reasonable to assume it would have done so here (as you know, it didn't). It's somewhat more chemically plausible to base life on silicates (silicon oxides), which have a huge variety in nature. These species would either have to exist at molten-glass temperatures, or be very slow (literally geological). Silicate based lifeforms would definitely be more Starfish Aliens than Rubber-Forehead Aliens . In the Media, Silicon-based aliens tend to come in one of three flavors: Rock Monster : The organism at first glance looks like an animate mass of rocks, though sometimes Gem Tissue is partly or fully in play instead. This exterior may hide an inner system as complex and intricate as your own insides, or it may be mineral through and through like the Golems and elementals of Fantasy (which are sometimes examples themselves). The scientifically accurate version described above would technically be a case of the former, albeit much hotter to the touch or slower-moving than most fictional examples. : The rarest type. These "Siliconers," if you will, are weird in some other way, or perhaps even par for the course when compared with all the other Carbon-based aliens in the setting. At the very minimum they will likely still be unable to eat the same food as humans (averting No Biochemical Barriers in the process), even if everything else in the setting can. Most of the examples below are not hard science fiction. Authors have a lot of fun with the possibilities . Sometimes other elements are used, which don't have to be in Group 4 of the periodic table. For some reason, a siliconer is very</ likely to be a Starfish Alien , even if they're the sole example in a sea of Human Aliens and Rubber Foreheads , despite those tropes being equally implausible regardless of chemical composition. Even when a setting has Loads and Loads of Races , there isn't likely to be more than one planet of Siliconers, their biochemistry likely being one of their defining characteristics . See also: Living Statue , Golem , Rock Monster , Sentient Sands and Body to Jewel .

Other Elements

When you turn on the radio and hear music with lyrics, at least nine times out of ten, the song will be a love song of some sort, either praising love and one's lover (or wished-for lover) to the high heavens, or singing about how much angst or anger love gone sour has caused. (These songs are sometimes indistinguishable from songs about Intercourse with You .) For some reason, there's always a market for even the silliest of Silly Love Songs, making this

an Undead Horse Trope . Frank Zappa once noted that if popular music really could change or affect people, everyone would be in love. Past music critics commonly referred to this sort of song as a "Moon-June song", sometimes with "spoon" added, after the (supposed) tendency for writers of these songs to rhyme the two words together. The originator of this name was likely the 1908 hit . </ Some performers write Anti-Love Songs because they want to try something different. They never stop the deluge of Silly Love Songs that fill the airwaves. And what's wrong with that? (A lack of variety, of course, but Tropes Are Not Bad all the time.) This trope name was first coined by John Lennon , who criticized Paul McCartney for always writing Silly Love Songs. McCartney in turn wrote the song he gave the title to as a rebuttal . Compare Intercourse with You , songs about... making love. Contrast Anti-Love Song , "I Hate" Song , and Break-Up Song . May be a Song of Many Emotions if it's about especially complicated love. May double as a Seduction Lyric if the singer takes the line that the next thing for the lovers to do is to express their affection physically. See also Narm , when the work unintentionally ends up coming out silly. "Do Fries Go With That Shake" from George Clinton 's third solo album, R&B Skeletons In The Closet.

It depends on the occasion and the religion, but a lot of prayers are pretty serious. Even most prayers that aren't serious, or are even lighthearted, aren't really meant to be funny</ . In fiction, however, prayers can be comedy gold. There are many places the humour comes from. Maybe the prayer is ludicrously short (like grace with just the words "thank you") or long (for instance, a Long List of people the character wants God to bless). It could also be humorously casual— maybe it uses words like "hey" or "what's up?" or lacks words like "Dear Lord" or "Amen". Maybe the prayer is for something crazy— maybe it's treating God like a genie or Santa and asking for something like a pizza or a dog or a rocket launcher , or maybe it's praying that something crazy doesn't happen (e.g. "Dear God, please don't let me get abducted by aliens , Amen.") They might be a bit hesitant/unsure what to say since they've never prayed before or are worried that they're "bothering" God, or they might start asking God about His personal life. They might also be praying to someone crazy, like Lady Gaga or the Easter Bunny, possibly as part of an Emergency Multifaith Prayer , which could also qualify as a Silly Prayer if the character is praying to a deity they do not believe in. Sometimes doubles as characterisation for someone who's either very religious (sometimes The Fundamentalist but not necessarily) or who doesn't care that much about religion. Either way, they could also be a joker or even a Cloud Cuckoolander . The prayer could also reveal that the character is Egocentrically Religious or Holier Than Thou . Prayer of Malice might overlap if it's played for Black Comedy . Contrast Prayer Is a Last Resort and Say Your Prayers .

For some people, especially the cynics and the "logical" or "scientific" , a point in life is reached where they consider The Power of Love as a ridiculously stupid fiction that can be downright dangerous , and focus their efforts on satisfying something else instead. Usually, it's caused by their realization that Love Hurts , sometimes due to a lover who jilted them or cheated on them , or because the lovers they witnessed only ended up living in poverty, slavery, Domestic Abuse , being Too Dumb to Live , and other such

forms of Destructive Romance that would have been obviously avoided if they didn't let their heart take over their brain. Alternatively, it's because idealistic shows that heavily favor The Power of Love are often directed at younger audiences and/or have simpler plots that fail to suspend skepticism , and so tend to be associated with immature/irrational thinking. Also, with age can come the realization that much of what is called</ love, even sincerely so called, is actually infatuation, physical attraction, or both, and that this is often encouraged by popular culture with the underlying goal of selling things like diamonds, cars, teddy bears, lingerie, and candy (among many others). This can lead to the tendency to assume that love is something imaginary, rather than something widely misdefined. By definition, this is mostly a trope for older individuals. However, slightly older adolescents and some young adults may adopt the same philosophy — especially if they are unusually repressed, old before their time, or pompously bright. It doesn't usually last very long with them, though; they may actually grow out of feeling too old for romance. The jilted lovers will sometimes learn to love again , and the scientist will sometimes be surprised by a sudden interest in a new character. This is sometimes Truth in Television . Subtrope of Jade-Colored Glasses and the Power of Love . See also Silly Rabbit, Idealism Is for Kids! If the character can see the reasoning behind this viewpoint but still can't help themselves, they may be a Fool for Love . Skip Beat! </

In Death: The High Cost of Living </ , Sexton Furnival states at the beginning of the story that he doesn't believe in love:

In The End of the Affair </, a My Teen Romantic Comedy SNAFU </ fanfic, Hachiman's primary reason for shunning romance involves this. However, it also shows the real emotional pain that he experiences from this way of living due to emotionally still craving love but unable to allow himself to accept it on a mental level and experiencing a rather bittersweet aftertaste when he see's the lost opportunities of what could have been .

Oddly, the king of ideal romances, Disney , had this with Megara in Hercules </. She was devoted to her first lover, made a deal with Hades </ to save his life, and then watched him dump her for another girl, leaving her to serve Hades for some number of years. She ends up following the "learn to love again" angle In Miracle on 34th Street </ , Doris attempts to keep her daughter Susan away from make-believe things such as Santa Claus (and winds up preventing her from developing an imagination) because of a poor romantic affair

In G. K. Chesterton 's "The Scandal of Father Brown", Father Brown gently points out to the Intrepid Reporter that he muddled up his story with his assumptions, one of which is about romance Barney in How I Met Your Mother </ is a lot like this as a result of his long-term girlfriend Shannon absolutely crushing him shortly after college and causing him to swear off anything more serious than a one-night-stand. It's shown throughout the series that he isn't a total non-believer in love, particularly through his devotion to Lily and Marshall's relationship and then his realization of his own love for Robin

The Manic Street Preachers ' song "Life Becoming A Landslide" has the pre-chorus "My idea of love comes from a childhood glimpse

of pornography / But there is no true love, just a finely-tuned jealousy." Older Than Steam : Sir Dinadan of Arthurian Legend has this attitude towards love. It’s possibly implied that he went through a bad experience with it in the past, but it’s never stated why he thinks this way. Though considering the mess one of his closest friends, Sir Tristan, becomes entangled in because of his love for Iseult, and also everything regarding Sir Lancelot and Guinevere, he isn’t exactly wrong either, and it’s probably no coincidence that he comes across as the resident Only Sane Man whenever he has a prominent role in a given story. Shakespeare played a version of the trope more for laughs in the lead male characters of Love's Labour's Lost</ .

Dragon Age: Origins </ :

Ruby is actually the youngest and by far</ the least experienced major character in the cast of Sticky Dilly Buns </ , but adopts a disdainful view of romance, calling it "Nothing but trouble".

Having not exactly had much good experience with love and being more of a masochistic sort, The Nostalgia Critic is nearly always grossed out by the mushier displays of affection and states Valentine's Day is the holiday where guys suffer the most.

The Grim Adventures of Billy & Mandy </: In the episode "Crushed", the normally snarky and brooding Mandy falls head over heels for a boy Billy befriended named Piff. Angry at her humiliation and fearful that such previously unknown feelings would reduce her into a simpering fool like Irwin , she demands that Grim cut out her heart so she would no longer experience love again. Initially delighted at the idea, Grim goes for a different method after Mandy explains her dilemma to him. Using makeup and cosmetics, Mandy's new appearance immediately catches Piff's attention, who falls head over heels for her, and pathetically asks her to the Spring Dance (just as Irwin had done earlier) only to be rejected and punched in the face. Considering where they live , Mandy has good reason for thinking love was for the weak-minded.

Yahtzee subscribes to this philosophy, which he mentions briefly in with a bit of hating romantic comedy tropes mixed in.

The protagonists encounter two (or more) groups who are in a deadly serious conflict over what the protagonists (and likely the audience) perceive to be a trivial and petty difference or issue. Like which end of the egg to crack first , or whether toast should be eaten butter side up or down , or even body features such as which half of their face is black and which is white . Or it can involve a situation that doesn't actually exist, such as one side believing that the other side plans to sap and impurify their precious bodily fluids This trope is often paired with An Aesop about how what we consider life-and-death, irreconcilable differences may be based on cultural norms and would seem just as petty from an outsider's perspective, and maybe we should reconsider our intolerance. If the writer wants to be extra Anvilicious about the message, expect the alien group to counter any perplexed queries about why they're willing to segregate, oppress, ostracise, or even kill each other over something so asinine with a retort like "humans kill each other

over less"</. Like what pigment their skin has, whose parents they were born from, which phrases they pray with, what political party they support, and what gender they were born with. And the aliens killing each other over what color hat they wear are far</ above that kind of petty bickering. The fact that they're comparing what select groups of humans do (or did waaay back in human history) to their entire species being willing to kill each other over this stuff won't really be addressed Depending on how idealistic the story is, the protagonists may persuade the aliens/elves/mutants/pastry chefs to reconcile their differences or accept their differences and finally give living peacefully a shot. However, if it's going for the Downer Ending , then expect the hero's efforts to be for naught as the conflict escalates and they wipe each other out Most early instances of Fantastic Racism were based on groups at odds over superficial matters but if the groups have real and important differences, it can fall into a Fantastic Aesop that trivializes their conflict just because it's analogous to some real-world group of humans that are at odds for some mundane reason This is a subtrope of Serious Business . Related to Humans Kill Wantonly and Fantastic Racism . See Felony Misdemeanor for when it's humans acting like this, and it doesn't (usually) end in war. Compare Pretext for War , where two sides seize upon any reason they can to go to war, without actually caring about the reason itself. When it's a mere domestic squabble, it might be a Toilet Seat Divorce . See also Blue-and-Orange Morality , which can potentially justify this trope. Sometimes the real reason is the pride of the rival parties. If so this would be Honor Before Reason

Ghosts are often portrayed as inherently somber beings, doomed to remain near the place of their death and mourn their own demise forever. These ghosts however, will have none of that. Silly Spooks are the clowns of the undead, causing laughter instead of, or sometimes in addition to, fear. They can be examples of any Character Alignment from Lawful Good to Chaotic Evil . In some cases, the characters will be scared of the ghost while the audience laughs. Other times, the Silly Spook will be funny In-Universe and out. But at the end of the day, SOMEONE will have the giggles The comedy inherent in this trope can be deliberate on the ghost's part or not. Silly Spooks that don't want to be funny tend to be portrayed as hilariously incompetent at scaring people, which is often their job Despite the name, this trope can apply not only to ghosts, but to any stereotypically scary supernatural being The Trope Namer is The Haunted Mansion </ ride at Disney Theme Parks and the assorted media directly based upon it. Compare Friendly Ghost , who is also a non-scary but not necessarily funny spirit, or the Reluctant Monster who isn't even aware of its role. This is one of the polar opposites to Ghastly Ghost

The silver bullet is a common form of Depleted Phlebotinum Shells . It's often called for when supernatural creatures are around for whom silver is an Achilles' Heel Throughout mythology and subsequent fiction, silver has been a common ward against evil. Silver, especially if blessed, has been thought to ward off or harm certain supernatural beings (including vampires) since the Middle Ages. The use of silver bullets to kill werewolves has become popular only since it was invented by Curt Siodmak, the writer

of the 1941 film The Wolf Man</ (though in the 1933 novel The Werewolf of Paris</ by Guy Endore, someone did use a silver bullet on Bertrand Caillet, though it did not slay him, only landing in the leg) For the details on the practicality of making and using silver ammunition, see the analysis subpage A Sub-Trope of Silver Has Mystic Powers and Depleted Phlebotinum Shells

Silver was considered a mystical element in folklore, and thus its properties become reality in fiction. The metal can do many things, from channel magic, to stopping evil (including warding off or harming vampires and werewolves), making magic mirrors, to turning water into a Healing Potion The myth of silver's mystical properties goes deep into human history. As a noble metal akin to gold, this is often attributed to something along the lines of silver's Incorruptible Pure Pureness . In fact, it's because of something people noticed a very long time ago: if you put water in a silver pitcher, it takes a lot longer for it to get unhealthily scummy. that make it quite useful in medicine. In ancient and medieval alchemy silver was also the metal with an affinity corresponding to the moon, so many of the mystical properties of the moon also became associated with the metal (which would certainly explain its usefulness against werewolves). Unlike in post-Medieval works, many pre-Christian pagan mythologies also associated it with the Sun , and many solar deities are described with silver objects (like 's silver thread, Apollo 's silver bow and arrows or Amaterasu 's silver mirror). Though ancient alchemists couldn't know it, silver does</ have a unique property among the elements — it exists in a naturally excited form — i.e. it has a single electron that exists in a higher energy level, leaving a gap in the shell immediately "below" it Silver is almost always considered to be on the good end of magic (and items formed of it may also be Made of Good). Some works can make it evil or used for evil when Light Is Not Good This trope is one possible reason vampires traditionally have no reflections and don't show up on film . Old-timey mirrors used silver backing to achieve reflection, and black and white film used silver nitrates to capture the image (plus some old camera models included mirrors in the light capture mechanism); since vampires are unholy, their light is not picked up by divine silver. Of course, silver nitrates were phased out of film even before film itself was made obsolete by digital cameras, and modern mirrors are usually backed by much cheaper aluminium, but the association between vampirism and lack of image reproduction still lingers Even beyond mirrors and bullets, this can overlap with Supernatural Repellent A Winter Royal Lady might prefer silver due to it fitting in with that trope's color scheme If Gold–Silver–Copper Standard involves all those metal having magic qualities, expect gold to be even more powerful, while silver still has its own powers. The two of them used together can also be a sign of divinity A Super-Trope to Silver Bullet See also Mithril , a silver-like Fantasy Metal (which is also called "(Moria) silver"). If this trope is true in a work that also has mithril, then the mithril might take it Up to Eleven Compare Power Crystal , Crystal Skull , Thunderbolt Iron (another metal with mythic history), Cold Iron

A character confuses an item for another, usually due to looking or sounding similar, and uses it to make food, chemical solution, etc. This tends to be an aspect of a Lethal Chef in cooking.

Alternatively, this can be intentionally done by another party by switching items for the character to overlook. Instances include: Compare with Mismeasurement and Unit Confusion . Super-Trope to Dynamite Candle . If done as a trap, see Poison Mushroom .

This is when several works share a name. They could even be different media. And yet they're completely unrelated Essentially, Name's the Same when applied to works. When the names are slightly different, it might be a case of Translation Matchmaking . If the titles are identical to each other except for an added article in either ("a," "the," etc.), for instance Following </ and The Following , </ we'll count them too Compare Stock Episode Titles . See also Recycled Title , which is when a work set in the same fictional universe uses the same title as an earlier one This is so prevalent that Wikipedia developed the Disambiguation system to address this and similar issues (like common surnames). So have we, actually — see the Ambiguity Index for a list For those unfamiliar with intellectual property laws, titles can't be copyrighted and it's totally legal to name a work with the same name as another one; however, if the title is trademarked, then you can't. Trademark covers a franchise</ , not a single work/series Care must be taken to make sure this doesn't become a militant In Name Only . This is strictly when two works just happen to share the same name, not an adaptation/sequel/remake that bears no resemblance to the previous work

Sometimes, an advertisement will deliberately resemble the show it's running with. This is designed to catch those who are fast-forwarding through, or just not paying attention to, the ad breaks This may be a throwback to the early days of television and radio, where the hosts of variety programs would hawk the sponsor's wares without even a break in the action. Not to be confused with things like Follow the Leader or Better by a Different Name , where two works</ are similar

When a character will open his mouth to speak or make voices while having no dialogue, and the instant he/she does, you immediately know that this character is a dumb or pretty stupid character. Whether he's an over-muscled Mook or she's the Plucky Comic Relief , the one thing you can tell just by their voice is the fact that his elevator just doesn't go all the way to the top floor. Alternately, it is common for someone to put such a voice on to make fun of someone who supposedly doesn't grasp something obvious or just giving this to display The Ditz Very common for this kind of voice in animated works, because allegedly such an obvious characterization tool that appeals to children . In The Golden Age of Animation , this sort of voice was used a lot by characters who were a parody of Lennie from the film adaptation of Of Mice & Men </ or to reference an goofball character When the character is male, generally expect a halting voice in the low registers, silly inflections in his voice, or else a high-pitched, nasally quavering, with most sentences beginning with the word 'duh'. When the character is female, expect a high-pitched nasally whine or an even higher-pitched squeak-fest. Often, characters with this voice will use poor grammar. Male characters often substitute the t or d sounds for the th sound, like saying "dat" for "that." A Valley Girl accent helps for common, female ditzes. They may

occasionally utter a Stupidly Long Filler Sound , just to enhance their dimwitted nature at times A very common characteristic of Mooks and The Ditz , as well the Moose Are Idiots , Dogs Are Dumb , Dumb Dinos or a Doofy Dodo characterization

For stories that are not told in Real Time , however, there is another option. That option is known as Simultaneous Arcs. Let's say you have two different characters: Alice and Bob, and these characters are separated from one another and are doing their own thing for a while, but each one is doing it at exactly the same time as the other one. It would work something like this: Chapter 1 takes place between 1:00pm and 2:00pm and includes everything that happens to Alice during that time period without regard to what Bob is going through. This process would be repeated until Alice and Bob meet up By its nature tends to be A Day in the Limelight , because it tends to whittle down the cast to the essentials . It may also function as Once More, with Clarity! as we may only see the other character at the tale end of their adventure, with the following story giving more information about what they were up to. This differs from Rotating Arcs because Rotating Arcs is a method of dealing with Loads and Loads of Characters and the arcs occurring in Rotating Arcs don't have to occur at the same time. This is similar to Anachronic Order , except the events in each arc of Simultaneous Arcs are probably told in the order that they occur from the point of view of the character and it is the arcs themselves that are not in chronological order. This can sometimes result in a Mind Screw , but it usually won't. Compare Hyperlink Story and Flashback B-Plot . Can be related to "Rashomon"-Style . P.O.V. Sequel is when they decide to do this after</ making the original arc. TV episode variant is Synchronous Episodes .

A list of media originating from Singapore .

A character is shown singing while bathing or said to do this — depending on amount of Censor Steam and Censor Suds the author uses That being a small room with hard walls, its acoustics should be bad enough to resign all worries about voice and quality. Add to it that during the bath time one is alone (usually) and feels secure (usually), and it makes more or less a light-hearted version of What You Are in the Dark . Though usually someone overhears the singing character anyway. As a narrative device, this usually is an opportunity to show that the character is in good mood and to demonstrate amusing quirks (beyond this habit as such) Mostly a Comedy Trope . Happens a great deal in Real Life , too

Want to send somebody a message in a humorous way and/or troll them doing so? Want to deliver bad news in a cheery way? Want a big romantic gesture for your significant other? There's a simple solution. Have somebody show up to their home, comically singing it for them. May involve one singer or an ensemble. The singer(s) may also wear a ridiculous costume. The singers will run the gamut from being extremely cheerful to being more cynical and fed up with their job Since telegrams have been long obsolete, these are never used for legitimate communications . When this trope does appear, it will be for a novelty message and Played for Laughs . Usually, the telegram will arrive at the most awkward or inopportune moment. Expect a large crowd of people to witness it. If bad news is being

delivered , the cheery song will be juxtaposed with the depressing nature of the news . This will undoubtedly make the bad news worse. If this is done as a romantic gesture, the love interest will likely think it's too much. Often the singing telegram will be a barbershop quartet

Earth is a wonderfully varied place with an amazingly diverse biosphere. On this single planet, you can find jungles, mountains, forests, deserts, prairies... we must be the most varied planet in the universe. Or you'd think so after seeing so many alien worlds trapped in solitary, homogeneous landscapes. Many other planets and natural satellites will often be defined by a single setting. It doesn't matter if the events of the story only take place on a small portion of the planet — we are still told the entire planet has one climate; specifically, the same climate as where the story takes place. Very rarely does any planet have the same level of environmental diversity as Earth, despite being as large and having a normal orbit. An ecological equivalent to the Planet of Hats . The locals will often have a hat that resembles the human cultures that inhabit similar environments . A creature well-suited to the local environment may be upgraded to horse status , if it's big enough. It should perhaps be noted that we usually only get very small views of these planets. Many times there are lines to the effect that it is a fairly standard planet. Almost never are we shown or told that a planet is entirely</ a Single Biome Planet in television or movies, and the ones that are are almost always either very temperate, tropical, desert, ice, or water worlds, which all have a statistical probability of existing. We have several of them in our own solar system, in fact, missing only a breathable atmosphere. Earth itself could fairly be considered a water planet. In its history, it has been an Ice planet more than once, though, as well as periods when most of the landmass was Desert (early Mesozoic) and of nearly uniform lush growth (mid-Mesozoic) . Note that a Single Biome Planet is not necessarily a single climate</ planet. Even on planets and moons lacking atmospheres, there are bound to be variations in temperature due to latitude if the planet or moon receives a significant amount of radiant heat from a star. A planet or moon with atmosphere will of course have much more complex weather patterns due to wind and precipitation. Notable classifications (subtropes): Contrast Patchwork Map . Near the polar opposite of All Planets Are Earthlike . May overlap with One-Product Planet . See also Planetville . Works in which Venus Is Wet frequently depict it as a Jungle Planet, an Ocean Planet, or a Swamp Planet.

There's something about the Big Man on Campus that drives all the girls wild... even the ones that know he is sooo</ out of their league. If the dorky girl wants the most popular guy at school, it usually ends in one of two ways: either the two end up together, or she finds out that he's actually a huge jerk. Sometimes all it takes is a makeover to get the guy to notice the girl. If he ends up returning her feelings, often his ex-girlfriend the Alpha Bitch will get jealous . Classmates will wonder what the quarterback is doing with the nerd . This version is common Wish Fulfillment often seen in shows aimed at tweens and in chick flicks . If it doesn't work out between them, expect there to be An Aesop , usually something like "Don't change yourself for a jerk"

or "Popularity isn't everything" Related to " I Can't Believe a Guy Like You Would Notice Me " if the guy decides to Give Geeks a Chance All Guys Want Cheerleaders is often the gender-flipped version of this trope

A curious phenomenon where there's only one</ true descendant of some legendary hero/villain or chosen one. Usually it's only that one person who can save the day or bring about The End of the World as We Know It . Because Destiny Says So , of course. And often it has</ to be the male line , or whichever keeps the last name (and even that can be problematic, as family names evolve over time, or even change completely). The fact that there's multiple branching into different last names doesn't count genetically for some bizarre reason This is curious in itself. Most family trees branch quite a bit due to multiple children having multiple children (and families of important lineage in particular tend to make a point of having a "spare" heir around to avert any potential Succession Crisis). In fact, if you look , you reach a point where every human being alive then is either the ancestor of everybody or nobody who is currently alive. Here apparently only one child was born per generation . In older legends, it was explicitly stated that only the firstborn "counts", but the socio-economic systems that fostered that kind of thinking withered away, leaving only this trope Similarly, the sole true descendant is generally treated as essentially equivalent to their ancestor , having the same powers, personality, ethnicity, and so on. Never mind that, if the legendary hero lived twenty generations ago, he had roughly a million contemporaries who are just as closely related to the modern-day version as he Note that, in the present generation, if there is another sibling, he or she tends to be recruited by the Big Bad as the Evil Counterpart Occasionally it will be explained away that the Big Bad found and eliminated the rest, and the Supporting Leader happened to get to the last one in time Possibly related to the Identical Grandson . Only one in a generation can take the "legacy." Explanations that a family produces Single Sex Offspring may be given as an attempt to justify this trope, especially if they are all male The last offspring of a Single Line of Descent is by definition the Last of His Kind . Also see Royal Inbreeding (fiction often ignores the biological consequences of inbreeding)

Booze makes you see double (or triple, quadruple, or more, especially if Rule of Funny is in effect), and sometimes the drunk will assume both</ of whatever he's looking at are real A variant has the drunk afflicted with double-vision trying to interact with "the one in the middle" (although since most people only have two eyes, normally you'd only see two of whatever it is) Generally a Discredited Trope nowadays For hallucinating things that actually aren't there while under the influence, see Pink Elephants

In some fictional worlds, all the crazy (and mundane) technology is powered by a single kind of Applied Phlebotinum , often even the very simplest things that otherwise would be very simple to do, such as electricity or even fire</ . Related to, but not quite the same as Minovsky Physics (In that it might not be heavily explained, and particles that follow Minovsky Physics may be joined by other Phlebotinum) and Green Rocks (which vaguely defined enough to be used for everything, aren't necessarily always used as such). A

Phlebotinum Muncher takes this to its logical conclusion by feeding on the phlebotinum. Steampunk and other * punks tend to be like this to a greater or lesser degree.

Something that applies to many a videogame boss (especially in the case of a Giant Space Flea from Nowhere), kaiju or Monster of the Week — you come across a creature that looks unlike anything else you've seen or will see in that work's universe, but only once Creators contemplating for the existence of more of these tends to be a gap in their Worldbuilding , but tends to be a case where the MST3K Mantra applies in full force. It would be hard for an ecosystem to support more than one of it, after all, so just enjoy the game For Long-Runners , this may become a temporary trope, as a family/species and natural habitat may be created for the being in question at a later time Obviously different from the One-Gender Race as there's only one specimen, and the concept of gender may not even apply. Also different from Last of His Kind , as that implies the existence of more of the same species in the past, or A Kind of One , where a whole species is known by the name of its most famous member, who may initially have been this Note that a Single Specimen Species is defined as being basically unexplained and therefore ecologically implausible. So the Last of His Kind can't "become" this, since that includes human survivors of a lost tribe, animals that were wiped out and so forth. However, A Kind of One may become an example in subsequent works</, following the original; in which case it may be a case of Call a Smeerp a "Rabbit" since the characters have certainly never seen it before, but the readers have Not to be confused with Only You Can Repopulate My Race (which is ecologically implausible for entirely different reasons). Unique Enemy is the video game version — an enemy which pops up only once, though not necessarily because they're the only one in the world

Alice has never really been in love with anyone else but Bob. She can only be attracted to/aroused by him — not even other men, or, for that matter, women. Not even porn can do it for Alice unless Bob is in</ the porn. If Bob turns into a girl , Alice will still be hot for her. If Bob is technically more than one person , Alice will love all of them, to the exclusion of everyone else that does not inhabit Bob's body. The only way you can describe Alice's sexuality is "Bob-sexual" Sometimes a serious character type, sometimes a joke said by Charles to describe Alice's infatuation with Bob. Sometimes it gets to the point where Alice becomes a Stalker with a Crush or something similar Uninterest in attractive people of appropriate gender, other than one's love interest, is commonly shown as an indication of being deeply in love; whether this is Truth in Television varies between couples. Feeling this way about a partner is not as unusual for those on the grey portions of the asexual and/or aromantic spectrums, for example. Many shippers tend to believe their One True Pairing is affected by this This trope is when someone's only attracted to one person at all</. If the person is a sole exception to someone's normal sexual preferences, it's If It's You, It's Okay , being hetero- or homosexual plus one, rather than asexual plus one See One True Love . Not to be confused with Single Object</ Sexuality or Object Sexuality in general. If a breakup or even death ensues, may lead to them hooking up with a Replacement Goldfish or even the Doppelgänger Replacement Love Interest

Robots can be designed to carry out a lot of different tasks, some of them can do them all at the same time , but the majority of them are designed for only one thing. This trope is about robots designed to do only one (very specific) type of work by their creators. They could be for personal service (and fetishes), for business, sports, entertainment and even for war. No matter which task they're created, they're supposed to do only that thing and nothing else Contrast Do-Anything Robot , which is the opposite of this trope. Compare In the Future, We Still Have Roombas , which is about how robots are nondescript machines for mundane labor. Related to Superpowered Robot Meter Maids , Robot Soldier and Mecha-Mooks . See also Crippling Overspecialization in the case of humans

All Girls Want Bad Boys ? Nice Guys Finish Last ? Hardly Blondes prefer gentlemen. As do brunettes , redheads , Bald Women , little old ladies with white hair, and young girls with Amazing Technicolor Hair The heroine, like the hero, tends to be much more mature and likable than in All Girls Want Bad Boys ; frequently, they've been burned by a previous lover , and generally, they've matured. But it is not necessary. Any heroine who finds the hero attractive exactly for his more admirable qualities falls under Single Woman Seeks Good Man. This can range from liking his sense of humor, to appreciating his poetry skills, all the way to his Heroic Sacrifice . Rescue Romance is often a form of this. The Nice Guy , the Sheltered Aristocrat , the Knight in Shining Armor , the Nice Jewish Boy , the male Shrinking Violet , The Dutiful Son , the Keet , or the male Pollyanna wins the heroine's heart. Immature and hormonal souls may wonder What Does She See in Him? , but the heroine is much more likely to end up happy this way However, it creates a problem insofar as the heroine has to neither fight her common sense nor reform the hero for a Happy Ending . As a consequence, the writer needs some other method of generating conflict . This can range from a Star-Crossed Lovers plot to Twice Shy or fall into the background/coexist with an alternate source of conflict. See the Analysis page for details Frequently the victorious childhood friend or a Second Love . Compare to Understanding Boyfriend . Though seemingly rare, some people out there will be glad to know that, yes, this can be Truth in Television Note that this isn't Always Female as Single Man Seeks Good Woman can certainly be in play. Nor is this always heterosexual for that matter Of course, Tropes Are Tools . It has been overused and exaggerated in the Harem Genre , where the protagonist somehow attracts girls he has little to no interaction with merely because of simple decency, implying that people can win affection and do anything they want to a bunch of girls just by behaving like a normal nice person As this trope frequently deals with critical plot details, be warned: HERE THERE BE SPOILERS. Some are unmarked, too, so don't say we didn't warn you. Compare Samaritan Relationship Starter

Some people tend to see automobiles as menacing , largely due to their tendency to cause road accidents and deaths, so it's not surprising that they are a recurring motif in horror stories The trope comes in two varieties, which may overlap: either the car in question is sentient and malevolent itself , or it belongs to some

villain who uses it as a weapon to scare and terrorize others . Such a vehicle would often have nefarious-looking design elements, such as a monster-shaped hood figure or a toy skull and bones on the windshield Compare Creepy Stalker Van , Van in Black , Bad Humor Truck , Not My Driver , Harmful to Hitchhikers , and Murder by Remote Control Vehicle . Also compare and contrast The Alleged Car , when the only scary thing about the vehicle is its technical condition. Not to be confused with My Car Hates Me

For the best reading experience, play the sound from while reading on The Sinister Scraping Sound is the issue of the Unholy Matrimony between Nails on a Blackboard and Audible Sharpness , with Nightmare Fuel acting as the godfather. This is a very basic Horror trope, the sound of metal scraping on metal, rock, wood, or another hard surface. It might be heard continuously or rhythmically, slowly intensifying as the source approaches It might be a knife on a countertop, a machete against a pipe, a sword against the ground , or a Chainsaw against basically anything if you want to ramp up the fear. This usually plays hell with hidden characters who are trying to hide, as it increases their panic. If they can keep their mouth shut, they might survive... or get pulled/impaled through the wall. Of course, the noise might be something completely innocuous that leads to another, more dangerous scare As the picture shows, it might be accompanied with sparks. Characters arriving after the scraper has left will no doubt wonder at who left the scratches — or gouges — on the wall/floor. The foreboding Bloody Handprints and body parts everywhere will be easier to piece together (unlike the bodies) Often an example of Hell Is That Noise

Sometimes the darkest tales come from the brightest desert Sinister Southwest is a genre of crime/horror/thriller stories set in the American Southwest, a vast zone that includes New Mexico, Arizona, and certain parts of Colorado, California, Nevada, Texas, and Utah. A largely desert landscape that contains the hottest temperatures in the country, along with some of its most violent and bizarre history, the region naturally lends itself as a backdrop to more intense works Probably the most famous Real Life incident of the Southwest happened on July 8, 1947. Roswell Army Air Field issued a press release stating that they had recovered a "flying disc" from a ranch near Roswell, New Mexico. The Army quickly retracted the statement and instead said that the crashed object was merely a conventional weather balloon; inevitably the public came to believe that extraterrestrials had crashed on Earth and that they and their vehicle had been taken to Nevada and stored in a little place called Area 51 . As if that wasn't enough about aliens, the infamous Skinwalker Ranch of Utah has been a hotbed of UFO activity for decades, with dozens of reports of strange creatures and cattle mutilations in the area. Speaking of the term " Skinwalker ," that creature (along with other elements of Native American Mythology) is another likely culprit for weirdness in the area Local urban myths include that of La Llorona</ ("the Weeping Woman"), a spectral figure who drowned her children and now haunts the ditches and streams looking for more victims; and the Chupacabra ("goat sucker"), a blood-drinking creature that has been held responsible for some of those aforementioned mutilations Closer to home, the Southwest edge of California was home to Charles Manson and his Family; the New Mexico State Penitentiary outside Santa Fe was the site of the bloodiest prison riot in

US history in 1980, and cartel violence and political upheaval have become a mainstay along the Texas/Mexico border in the 21st century Sinister Southwest works usually involve a mix of several elements: stories of crime or Horror , a focus on the barren desert landscape, and a more rural setting (although the action can shift to some of the bigger cities, like Albuquerque, Phoenix, or El Paso). Additionally, many works may be influenced by the largely Latin American culture of the region May overlap with Weird West (but differs, in that Sinister Southwest works may be set in the modern-day and feature no supernatural elements). Compare Lovecraft Country and Southern Gothic , for other American settings with supernatural and/or horror elements. Can often involve Daylight Horror or Hillbilly Horrors

Subways are a staple of horror. There are long, dirty, abandoned corridors. There are escalators which invite vertigo and all kinds of fatal accidents. There are the endless tunnels, much like the Haunted Castle , but with the added charm only a Water Level with poor lighting and escalating claustrophobia can bring. Full of unexplained echoes, dripping water, clanking metal and chains, and the earthquake-like passing of other (functional) subway trains overhead. There is the subway itself, which can be full of criminals, dangerously overcrowded or ominously empty. And let's not forget the platforms, which can be dimly lit and full of hiding places for all kinds of evil. Fights that take place here usually have the fight on the platform with only way out cut off and trains constantly passing by waiting to chunk the loser with a Gory Discretion Shot . Expect the Sinister Subway to be populated by monsters , mutants , vampires , alligators , mutant vampire alligators , and good old serial killers ... or, alternativey, miles and miles of darkly lit, empty nothing . Where a Haunted Castle says " Victorian ", the Sinister Subway says "art deco" or even " industrial ", and can set the tone of this horror game or movie with the broken promises of an industrial age, rather than the forgotten splendor of a Victorian past. Compare Absurdly Spacious Sewer , Locomotive Level , Subways Suck , Ghost Train , and Afterlife Express (when it's the train itself that's otherworldly) See also The London Underground , New York Subway , Le Métropolitain (Paris's transit system) and Moscow Metro . During the Cold War the Berlin U And S Bahn had actual "Geisterbahnhöfe" or ghost stations.

There are cameras on every street. Private phones can be tapped. Every electronic device is open to monitoring, and a hundred or more companies, governments and secret organizations can and are accumulating all this information on individuals into a huge database of discrete files which a simple algorithm can use to divine anyone's actions. The wake of 9/11 has brought the likes of the PATRIOT Act in many countries, curtailing privacy and enhancing the legal tools for governments to spy on their own citizens. We are being watched. Of course, so are the criminals, terrorists, foreign spies and sundry malcontents. Surely, our well meaning governments will use these tools and powers to ensure our safety. Eh... no. The problem with surveillance, as a form of violation of privacy and rendering you completely naked and vulnerable, is that it's inherently humiliating, squicky , dehumanizing, sinister, and dark</. It's what George Orwell warned us about, and even if it is</ used exactly for what it's intended for, the potential for abuse is limitless. If you want

to write about a terrifying dystopia that is all too possible to happen in the real world, then use this trope. Put Secret Police , Surveillance Drones , Eye Motifs and such on every corner. Make it so that you can never trust any electronic communication, even your own computer and telephone. Also why the " Big Brother Is Watching " trope gains popularity as one of the most prolific memes to criticize any form of sinister surveillance. Couple this with Everything Is Online and expanded government surveillance will be treated one of two ways, depending on the user: Thankfully, the heroes always manage to escape earlier than the villains (e.g. less than a week vs. an implied 2-3 years). Villain Ball indeed. This trope is usually part of an Anvilicious Aesop against government surveillance. When used by a civilian outside of military or federal employ, the individual is either a Stalker Without a Crush , or a licensed Private Investigator or Bounty Hunter . See also Surveillance as the Plot Demands and Big Brother Is Watching .

So you have a scene set up, the villain is ready to commit some horrific crime, how do you make the scene even scarier? How do you establish this is a particularly depraved and dangerous individual, without any tension breaking exposition or over the top acting? Quite simply, have them whistle Amongst humans whistling is an almost universally understood expression of joy. As such portraying the villain cheerfully whistling away, quite often to a well-known upbeat tune, a piece of classic music or a nursery rhyme, is a wonderful quick way of establishing someone truly depraved enough to enjoy their vicious acts, the cheer and calm created by the whistling contrasting sharply with the horror created by their depraved acts There are generally two versions of this: in the first the villain will be portrayed as whistling because they are genuinely happy, displaying their sadism and cruelty. In the second, the tune will be slow and stilled and the villain instead comes across as detached and almost bored. The whistling is their way to make the time go faster, thus emphasizing their sociopathy and their non-reaction to such horrific acts Like all variations of Subverted Innocence , the idea of turning something so benign and sweet so much on its head, the sheer feeling of dissonance this creates is guaranteed to make any scene featuring it much scarier If used enough that it can become the villains Calling Card , then expect there to be at least one scene where we don't see the villain, we can just hear them whistle, as they stalk the latest target, leaving the audience constantly on edge that someone is about to die Compare Ironic Nursery Tune , Tuneless Song of Madness and Ominous Music Box Tune , which employ similar subversions of innocent tunes and rhymes for Nightmare Fuel . Also Wolf Whistle which is used specifically to sexually harass people. Contrast Not-So-Innocent Whistle when whistling is still used to hide a misdeed, but is played for comedic effect rather than horror

After destroying or disabling a vehicle, a particularly ruthless (and dishonorable) enemy may decide he wants no one to live to tell the tale . He may blast the life boats, shoot down an Ejection Seat or two, blast the Escape Pods to ions, seal off all exits, etc. Obviously, this is usually a pretty low thing to do , and in Real Life wars, may (rightly) be considered a war crime , especially if the craft in question was a civilian craft It generally shows

just how evil a villain is, and can be a very quick means of making the villain irredeemable in the eyes of the audience, in addition to having the audience cheer louder when the guy who did this finally bites the dust Subtrope of Leave No Survivors . If the lifeboats are carrying wounded, overlaps with Kick Them While They Are Down . Frequently treated as a Moral Event Horizon . Shares some similarities in terms of the moral blackness of the act with Shoot the Medic First , though the latter can be arguably be justified for pragmatic reasons, this trope is almost always For the Evulz For cases of sinking your own lifeboats (Break the kettles and sink the boats) to prevent holding back, see Burning the Ships . Compare: We Have Reserves

Tropes about knights and knighthood. And some Useful Notes on Real Life knights and knightly orders. Note that simply having "Knight" in the title is not enough. The trope has to primarily be about knights.</

A character with a distinguishing characteristic of swearing noticeably more, or at least in harsher words, than the rest of the cast Keep in mind that this is relative; if everyone</ swears a lot , that's not this trope, unless of course, this character swears more loudly, more vulgarly, and more often than the rest of the cast combined . Conversely, in works where swearing is otherwise nonexistent, a character can be this even if the worst that comes out of their mouths would look very tame in other contexts . Not all works have one of these: a lot of the time most or all of the major characters use about the same amount of profanity, or if some do swear more it is not by enough of a margin to make it a noticeable aspect of the character. What matters here is that a character is set apart by swearing more than everyone (or nearly everyone) else in the same work The various circumstances of how or why a character swears also may say a lot about the other facets of their personality These characters are likely to drop Cluster F-Bombs where they're allowed to. Otherwise, they may be doomed to Gosh Dang It to Heck! or Angrish . Symbol Swearing or a Cluster Bleep-Bomb , too, is an often effective option. May also be subjected to The Swear Jar . Making them stop swearing for a while can have the same effect as a Precision F-Strike for other characters May be the wielder of a Weapons-Grade Vocabulary , though the two tropes are independent of each other Contrast The Snark Knight . The trope name is an example of Sir Verb-a-Lot

For the list of tropes about literal sisters</ and brothers, see Sibling Tropes . What happens when The Glorious War of Sisterly Rivalry switches genders? Cain and Abel . What's the difference between The Scrappy and a Creator's Pet ? Authors love their Pet. Is this introductory paragraph trying to explain by example a Xanatos Gambit or a Batman Gambit ? When defining a trope, it often helps to establish its similarities, differences and relationship to other tropes; a common convention on this site is to refer to some tropes as . When two or more tropes have some overlap in their descriptions, "parentage", or use, but not enough for one to be a Sub-Trope or Super-Trope of the other, these are called Sister Tropes. That is, both have a similar form or function, either by category (character , plot) or by effect (characterization) rendering them both similar but distinct enough to be considered sisters. These are the four

ways tropes can be sisters: Sometimes when two distinct tropes serve almost exactly the same function or have very subtle differences in description, it can reach the point that they are used almost interchangeably. Bad Flanderization ! Bad!</ The Canonical List of Subtle Trope Distinctions is your friend.

The Sitcom Arch-Nemesis is a very different creature from the dramatic or action-show Arch-Enemy . He usually isn't dangerous or evil (when he is, the contrast between his cruelty and his petty bickering has comedy value of its own); although it's possible that he's very annoying, it isn't always the case. He can even sometimes be portrayed as a straight-up Nice Guy . He just rubs a character from the show (usually the lead) entirely the wrong way, and the two will never miss an opportunity to have at each other with Volleying Insults or small-minded pranks. Often, the character and his nemesis are kindred spirits and don't realize it; these rivals are much more likely to have an Enemy Mine plot than dramatic rivals. Since generally there isn't much at stake in that rivalry, it will usually revolve around insignificant, everyday matters, filled with comedic moments This character is usually just a supporting character, because if a Sitcom Arch-Nemesis were part of the main cast, then The Protagonist would do nothing but fight with them. Basically, they could be considered the protagonist's "favorite enemy" Note that these aren't necessarily unique to sitcoms, and other stories – including more comedic action stories – can have a character who fills this role, sometimes even if there is a character who fulfils the role of an actual Arch-Enemy . In the more lighthearted action shows, particularly in certain cartoons and kid shows, sometimes the actual Arch-Enemy will act like a Sitcom Arch-Nemesis when the story or comedy demands it, alternating between trying to murder the main character(s) one day and trying to wreck their birthday party the next Compare with The Rival and Vitriolic Best Buds . Often used with Comically Lopsided Rivalry

The term Sitcom is a portmanteau of "Situation Comedy". Originally, sitcoms were broadcast on the radio. Before long, they progressed to television; the Ur-Sitcom on TV is I Love Lucy </, which pioneered many of the technical and comedic techniques used to this day, including Three Cameras , but the first television sitcom is generally agreed to have been 1946's Pinwright's Progress</ on The BBC (all footage is lost, however). The Honeymooners </ did much to standardize many of these tropes as well Generally, situation comedies deal with a small cast of characters encountering humorous situations while living their everyday lives. What counts as "everyday" varies between individuals — daily life for the staff of a bar in Boston is very different from daily life for anachronistic cavemen . Sitcoms are not, however, to be confused with series of other genres that contain Comic Relief The two most popular subjects for sitcoms are family life (usually two parents with 2-3 kids) and the workplace full of oddballs. Most sitcoms are a half-hour long (minus commercials), but this isn't a hard and fast rule. Older sitcoms frequently have a Laugh Track . More than any other genre, sitcoms enforce Status Quo Is God . A work that uses any of the traditional sitcom setups below to mislead the audience before revealing or pairing it with dark or surreal material is Subverted Sitcom See also Sitcom Tropes for a list of common tropes in the genre, and Comedy Tropes

A work that uses any of the traditional sitcom setups below to mislead the audience before revealing or pairing it with dark or surreal material is Subverted Sitcom See also Sitcom Tropes for a list of common tropes in the genre, and Comedy Tropes

The Sitcom is a staple of English-language TV, so much so that it has a distinctive body of tropes associated with it. Subgenres can be found on the Sitcom page itself. See also Episodes for other tropes that can happen in sitcoms Subindex of Comedy Tropes

What do the Cool Ship , Cool Starship , and Cool Plane all have in common? They are all at their most vulnerable when in docked in port or while parked on the ground. This is a state of vulnerability that pretty much everyone and everything has to accept at some point, as personnel need food and sleep, ships need maintenance, and nobody has found a way to keep a plane in the sky indefinitely yet. A savvy enemy can use the element of surprise to sucker punch an enemy, even a numerically or technically superior enemy, before they can bring their forces into play. Methods for this can range from Fireships to attack planes or a long range missile attack Of course, it's also possible to be placed in this position because your ship was badly damaged in a previous</ fight, and the enemy is coming back to finish you off before you can finish your repairs The Trope name comes from a hunting phrase referring to ducks sitting on the water, often considered to be off limits until they take flight. Due to its applicability, the phrase was adopted in the military aviation community to refer to airplanes that had been caught on the ground, although of course very few pilots have a problem with destroying an enemy plane before it can get airborne Historically, a combat pilot would get no credit for destroying an enemy plane while it was still on the ground, until the Americans began to grant credit for such kills during World War II . It was theoretically possible to become an ace by only destroying planes on the ground, although German airfields tended to be very heavily defended by anti-aircraft batteries that could do wonders for shortening your flying career Exploiting this trope is a favored tactic of the Combat Pragmatist , and a favored method of preventing the Fighter-Launching Sequence

Compare with Coup de Grâce , Sickbed Slaying , and Slain in Their Sleep Not to Be Confused with </ , which was inspired by the same idiom that this Trope draws its name from

A character's assumed actual romantic preference or even sexual orientation is made moot because of the setting or limitation of the plot. This frequently occurs with characters stuck in a gender - biased population. (see: Bishoujo Series and Cast Full of Pretty Boys). Even if there's a theoretical pool of candidates off-screen, savvy writers know the audience likely doesn't care. This arises when writers apply standard romantic tropes to quirkier settings without major modification and without the explicit intent to make a plot point about it Some writers are fully aware of the implication and the fandom it produces and might cater to both sides of the topic, making one character very enthusiastic about the idea, while one is humorously much more hesitant A common by-product of this trope is the rejection of a newly introduced "common" romantic prospect, not because of a strong pre-existing fanship, but simply that they never reach the popularity of the existing cohort Not to be confused with If It's You, It's Okay . For particularly cliched situations where this may occur, see Schoolgirl Lesbians , Girls Behind Bars , and Hello, Sailor! . In a much darker context, this is often associated with Prison Rape ; in an isolated agrarian setting with Vulgar Humor , the targets of Situational Sexuality often walk on four legs

This is a game, whose title is a Mondegreen of Six Degrees of Separation </, in which it is said that any actor or individual in the entertainment business can be linked through his or her film roles to Kevin Bacon within six steps. For example: George Clooney was in Ocean's Eleven </ with Matt Damon , Matt Damon was in The Departed </ with Jack Nicholson , and Jack Nicholson was in A Few Good Men </ with Kevin Bacon. Nicholson has a Bacon number of 1, Damon has a Bacon number of 2, and Clooney has a Bacon number of 3 (see below). It should be noted that this spreads across all actors; Megumi Hayashibara can be linked to Kevin in only two moves She was in Vampire Hunter D : Bloodlust </, which included Micheal McShane in the dub. He was in Balto , and most Japanese voice actors can be linked to her within a few degrees. It's often a game for film nerds to test the abilities of each other. There is a whole website, The Oracle of Bacon, dedicated to this that is found Mathematicians have extrapolated this phenomenon and given it a name: "Bacon Number", which sounds like one of those impossibly high numbers with dangerous implications for the future of the Universe but is in fact incredibly low. Researchers have demonstrated (true story!</) that almost everyone has a Bacon Number less than 10, due to Kevin Bacon appearing in, mathematically speaking, almost every film on the planet. For instance, Kevin Bacon, himself, has a Bacon Number of 0. Chew on that</, Mr. T ! (The Oracle of Bacon claims that three persons on the IMDb have Bacon Numbers of 9, the highest listed, but does not say who they are.) Curiously, the most connected person in acting is not Kevin Bacon. Research by people who found it important enough to do so discovered that the centre of the Hollywood universe shifts over time. The sheer amount of acting credits amassed by Christopher Lee seem to have entrenched him for a while, even after his 2015 death. He still holds the title as of May 2021, but Harvey Keitel is nipping at his heels, and, among living actors, Michael Caine , Donald Sutherland and Martin Sheen are close behind

too. Bacon himself isn't even all that high on the list, typically ranking somewhere in the 500s out of the top 1,000 centers of the Hollywood universe. Scientists also have a similar ranking called the Erdős Number, based on co-authorship of mathematical articles with deceased mathematician Paul Erdős. Inevitably there's a combination, the Erdős-Bacon number, based on adding the two together. Thanks to the documentaries, and occasional extra work on math-related films, some mathematicians have EB numbers as low as 3. More surprising are actors who attack the problem from the other side. Danica McKellar (Winnie from The Wonder Years </ and bona-fide mathematician) and Natalie Portman (wrote a psychology paper at Harvard with an Erdős link) each have Erdős-Bacon numbers of 6. (This ties them with Richard Feynman .) There is also now the Sabbath Number, based on how many collaborations it takes to get from a given musician to Black Sabbath . Then, of course, musicians who've appeared in films have Sabbath-Bacon numbers, and a surprising number of math-geeks turned musos have Sabbath-Erdős numbers. Then, there's the Sabbath-Bacon-Erdős number. The lowest known Sabbath-Bacon-Erdős number is 8, famously held by physicist, The Simpsons </ guest star, and Pink Floyd guest vocalist Stephen Hawking . Neuroscientist Daniel Levitin and inventor Ray Kurzweil have the same number as well. Chess players have a Morphy number, for Paul Morphy, and Go players have a Shusaku number, centered on Honinbo Shusaku. Both of those players died in the late 1800s, but if you're interested in a Stiglitz number of 1, economist Joseph Stiglitz is still alive and publishing. Professional sports has the Sillinger number, for hockey player Mike Sillinger. Presumably, someone out there has a defined Sabbath-Bacon-Erdős-Morphy-Shusaku-Stiglitz-Sillinger number, now that's</ gonna bring about The End of the World as We Know It ! but neither the person nor the number has yet been found. Thanks to Crossovers , fictional characters aren't exempt from this phenomenon. For video game characters, there's the Ryu . On a less specific level, the aforementioned serious research into this phenomenon actually has some importance for fields like sociology and epidemiology. In the modern global world, any living or recently deceased person on Earth can apparently be connected to any other person by an astoundingly short chain of connections. Even Amazonian tribes avoiding contact with the global modern world have the occasional crossing of paths with members of neighboring villages, which will have someone</ who visits the closest major city now and then. Thus, an outbreak of a virus can begin in a rural village in Africa and spread to downtown Tokyo and New York in only a few weeks, simply because statistically there are going to be a handfull of people in every major city with a particularly short chain of physical connections to that village. Ironically, Kevin Bacon did not have anything at all to do with the movie Six Degrees of SeparationHowever, Donald Sutherland featured in that movie, and he appeared with Kevin Bacon in Animal House For applications in fiction, see One Degree of Separation .

Some series start out with a particular type of ensemble , with a certain number of characters and a defined role for each . Then in the second season, a mysterious new character appears. After many misunderstandings, the new character is revealed to be a good guy and joins The Team Any new character that joins an established cast and knocks it out of one of the traditional categories (and possibly into another) is a Sixth Ranger. There may be more than one per team, with either several joining in

succession, or pre-established pairs coming in at once. In a Magical Girl show, it is not uncommon for the Sixth Ranger to be the lead character's boyfriend In some of the more extreme cases, a former Big Bad , Dragon , or Wild Card villain can take on this role after they have been defeated or performed an independent Heel–Face Turn , and may or may not act as a secondary Lancer . In Magical Girl shows, this is usually the role the Dark Magical Girl plays Their power and coolness is inversely proportional to the number of episodes since their début, since Good Is Dumb . Expect them to be single-handedly defeating enemies that the main team struggled against during their first appearance, falling in line as they become integrated into the group, then finally getting overtaken by the original heroes. In fact, they almost invariably tend to become a magnet for The Worf Effect so the writers can show off how powerful the new villain is If the show doesn't look like it's going to change its status quo , expect the Sixth Ranger to actually be the Sixth Ranger Traitor , or at the very least a Guest-Star Party Member if they have to leave for whatever reason . Since most Sixth Rangers used to be loners , they may serve as the Token Evil Teammate . If a Sixth Ranger candidate does join the Ensemble, but the series is nearly over, the candidate is an 11th-Hour Ranger . When the team started as a Power Trio and gets two</ Sixth Rangers, they make Three Plus Two Compare Hitchhiker Heroes and Magnetic Hero , where adding characters is the team's normal state. Sailor Earth is a Fan Work subtrope where the Sixth Ranger is an Original Character . Also see One Extra Member , especially when the team's name indicates the number of members and the Sixth Ranger doesn't force a change in the team's name. Honorary True Companion is when a would-be Sixth Ranger never officially joins the group. Compare with Token Houseguest where a character who isn't part of the immediate family lives with them and is treated as a major member of the cast Named for the introduction of the Green Ranger in the original Mighty Morphin' Power Rangers </ as well as its Japanese counterpart Dragon Ranger in Kyōryū Sentai Zyuranger </ A common method for Merchandise-Driven works to add new characters to the cast — and the toy line

Instead of the usual 13-17 episodes like certain Saturday Morning Cartoons, some western cartoons have had original runs lasting 65 episodes, because 65 episodes equals 13 weeks (or three months) of material to syndicate at one episode per weekday. Typical with cartoons produced for first-run syndication , and was formerly adopted as policy by the Disney Channel (which had a similar 65-episode cutoff for its live-action Kid Coms) and Kids' WB! , although some syndicated shows did air weekly originally. Disney would end up dropping the format after fans complained about the cancellation of several popular shows, with the renewal of Kim Possible </ for an additional season abolishing the rule. Some people consider this a form of Screwed by the Network , especially if the shows they like are at the receiving end of this trope. It should also be noted that this trope really only applied to cartoons aimed at children, rather than adult cartoons – The Simpsons </ and its imitators are treated like standard American sitcoms. This practice became drastically less common near the end of the Turn of the Millennium , as American cartoon production has essentially abandoned broadcast syndication (at least domestically) in favor of programming exclusive to specific cable networks (or even streaming

services). Still, some networks continue to cut their shows off at 65 episodes, either for foreign syndication, own network re-runs or force of habit. See also 12-Episode Anime and British Brevity — both of which should remind fans of any of the shows listed here of how lucky they actually are — and Five Year Plan . For some shows that went well past 65, see Milestone Celebration . As a side note, if one wants to binge watch a whole 65-episode series in one sitting, and each episode is assumed to be exactly 22 minutes long, then you would be watching almost an entire day's worth of that show. (22 minutes per episode times 65 episodes equals 1,430 minutes, which is 23⅚ hours or 23 hours and 50 minutes.)

A visual trope in science fiction materials: humanoid robots that look skeletal in design. They all have relatively thin limbs that are reminiscent of bones, and they usually lack "filling" in places where humans have only soft organs, like the abdomen Such robots can be very obvious, with sinister, grinning skull-faces, a la</ T-800 from Terminator </ films. Others are more subtle, with either fairly realistic faces or no faces at all . Some, such as the T-800s, are designed to be covered with "something", so they literally are robot skeletons once you remove the coverings Obvious SkeleBots are meant to scare characters. Often, these are the cold, inhuman soldiers of the Big Bad . On the other hand, subtle SkeleBots are often presented (at least at first) as perfectly innocuous consumer devices, but they're meant to subtly creep out the audience This trope also makes quite a bit of sense from a pure engineering standpoint: the bipedal human skeleton is a rather efficient infrastructure. Placing processing power and sensors in a compact, heavily armored box at the top of the body minimizes lag and provides the best vantage point possible, the ribcage centralizes and protects important components, and an upright bipedal stance allows both great strength and dexterity in the upper limbs Eliminating excess weight by replacing muscle with systems of cables or servo motors and organs with compact power supplies would let you strip the body down to, well, the bare bones essentials That said, while there might be no mechanical need</ for the extra padding or housing necessary to keep a robot built on the human frame from looking skeletal, "not looking creepy" is a general design goal for consumer products, especially those with recognizable faces. Subtle SkeleBots with "intact" faces often lean as much towards the "moving corpse" nadir of the Uncanny Valley as Dem Bones . Sometimes overlaps with Unnecessarily Creepy Robot for cases when it would probably be better if the robot didn't</ resemble a skeleton, but this doesn't seem to have occurred to the designer (or possibly that it did)

Tropes about human and animal skeletons, and the bones that make them up. Subtrope of Dead Body Compare the Muscular Index . See also Artistic License – Biology , Death Tropes , Horror Tropes , and Undead

Bad with the Bone : Bones are used as a weapon.

When our heroes explore the remains of an old and long since abandoned craft they may discover to their shock and surprise, as the light of their lamps fall upon the members of the craft's crew, that they are still dutifully manning their stations as skeletons

or mummified corpses It may be the wreck of a sunken ship on the ocean bottom, a Japanese WWII submarine stranded on a lone island, a derelict drifting through the endless night of outer space, a small plane caught high above the ground in the trees of the jungle or may take many other forms. It will often be a military craft of some sort or other. This means that the crew will be clad in the recognizable remains of their uniforms. Pilots will still be strapped in their seats. The helmsman will still be at the wheel. The Captain will be at the center of The Bridge sitting in the captain's chair surrounded by his Bridge Bunnies as he was in life. Often he will be wearing a captain's hat and some spider webs for decorations When the heroes approach them from behind the life like poses, durable uniforms, and the back of the captain's chair can create the short-lived illusion that the crew is actually still alive before the ghastly truth is revealed. Recoiling in horror from that revelation, a clumsy hero might end up knocking over another crewman, who collapses from a life-like pose to a pile on the ground. In space, with everyone wearing spacesuits, the illusion can be especially vivid with only the skull inside the helmet giving it away The important distinction that defines and separates it from just finding a craft with some human remains in it is the fact that the dead crew is mostly found in the same places and poses that the would have been in life, showing few if any signs of having panicked or fought their fate . Either that, or they died too quickly to react It is also important to note that the crew in those cases is most definitely dead and not just mostly dead or undead. In the latter case, it's Dem Bones If the reveal provides a Jump Scare , see also Peek-a-Boo Corpse . If you're looking for the more figurative meaning of the term, that's under Crew of One or Critical Staffing Shortage

In TV land, some 90% of locked doors can be opened in seconds by following three simple steps: Up to a point, this used to be Truth in Television . Early spring-bolt locks could be circumvented with flexible strips in a similar way (though actual credit-cards are usually too stiff for the purpose), especially if carelessly installed. However lock manufacturers introduced features to prevent this kind of attack a long time ago, and dead-bolt locks were always immune to it. As such, it's a Discredited Trope . Sub-Trope of Improvised Lockpick . Not to be confused with a Skeleton Key . Or The Skeleton Key </ .

A skeleton key (also known as a pass key) is a master key often used by locksmiths , that will open any lock in the set of locks for which it is made. In fiction, a skeleton key will open any</ lock or Locked Door , period</, and will often be shaped like a skeleton, skull or bone (partly a Sight Gag and partly a visual clue as to the key's purpose). More realistic examples have a full ring of them, one for each type of lock Subtrope of Cool Key . Compare Interchangeable Antimatter Keys (which this is one step up from). Not the same as a Skeleton Key Card (which is just jimmying the lock with a piece of plastic). For the supernatural power to open any lock, see Open and Shut Not to be confused with The Skeleton Key </

What sort of person would clothe themselves in bones and skulls? Apart from the fact that skeletons are indestructible. Someone who no doubt appreciates them as symbols of mortality and death. The wearer of such attire must surely lead a hardened lifestyle of murder, combat and death-bringing. Perhaps you could say that they're... bad to the bone ? Alternatively, they could just be cavemen or other " uncivilized " people, making the most of the all-natural materials available; in cases where helmets are fashioned out of skulls, this may likely overlap with Horns of Barbarism . Might be constructed of Nothing but Skulls . See Genuine Human Hide for the skin</ equivalent and Human Resources for anything else anatomical</ equivalent. A staple of Obviously Evil design. Compare Creepy Souvenir , Spikes of Villainy and Chained by Fashion . See also Bad with the Bone and Ballistic Bone when bones are used as Improvised Weapons .

The paranormal has a way of creeping into TV shows, even those which don't have a paranormal premise. In real life, being neither strongly skeptical nor accepting of various paranormal forces is the default, and usually a better option than either dogmatic belief or dogmatic skepticism . On TV, characters are far less likely to express any doubt, and those who are skeptical are often treated as naive or ignorant, and the plot will go out of its way to prove them wrong For example, a character receives a psychic reading which foretells tragedy. He spends the rest of the episode actively worried about it. Various details foreseen by the psychic are borne out in the episode. A character who challenges the legitimacy of Psychic Powers will often be confronted with at least one detail he can't explain how the psychic knew This also comes into play in shows that deal regularly with paranormal subjects. Characters who don't believe in aliens, magic, or whatever, are presented as hopelessly naive. Even when they're proven right about the main conflict being a hoax, something about the situation will turn out to be Real After All Ironically the more</ heavily focused on the paranormal a show is, the less likely this seems to be the case. In settings with a masquerade ordinary people are often depicted as being so</ utterly skeptical that clear evidence of paranormal goings on is dismissed with a flimsy and wildly implausible 'rational' explanation , which itself is a form of skepticism failure There is Truth in Television in that people do believe in "mystical" things without proof . It just depends on exactly which things and who is being asked to believe Compare Arbitrary Skepticism , If Jesus, Then Aliens , Flat-Earth Atheist , Religious Russian Roulette , How Unscientific! , and Skeptic No Longer . The most common manifestation of this trope is Psychic Dreams for Everyone . Compare also with Apathy Killed the Cat , where people are curiously un-inquisitive about fantastic things and events Contrast with Invisible to Normals and Weirdness Censor in which an alien, a robot and a werewolf can be having a fight in right front of someone's nose and still be ignored or dismissed. Also contrast Puff of Logic , when skepticism causes the subject to be erased from existence</

Bob is a dyed-in-the-wool Agent Scully . No matter what Alice tells him, he cannot accept that the truth is anything other than what his own common sense and experience tells him. Usually Alice, the hero, gets about as fed up as she can get with Bob, because Alice knows the truth and Bob. Will. Not. Listen. But then Bob runs into the monster, and suddenly finds that he can no longer pass it off

as swamp gas from a weather balloon that was trapped in a thermal pocket and reflected the light from Venus . This shocks Bob into dropping the Idiot Ball very quickly, and very heavily In the blink of an eye, he goes from being Agent Scully to being Agent Mulder Often Played for Laughs , since the former skeptic is almost always the most rational denier up to this point. Bonus points are given if the skeptic is also an Obstructive Bureaucrat who suddenly comes to his senses. This sort of occurrence also helps to kick the action along since now they can treat it as Serious Business . If they're unlucky, they might have caught a Contagious Cassandra Truth . Compare Skepticism Failure and Horror Struck

A comedy show which is predominantly short sketches, often related. Also known as a Sketch Show, it's a descendant of the Variety Show They usually have a stable of comic stereotypes, used in a series of sketches, with no continuity. Each show will include a few sketches about each of the iconic characters interspersed with one-off sketches Particularly successful sketches may be spun-off into a Sitcom or a movie (such is the case of Saturday Night Live </, The Kids in the Hall </, and SCTV </) The show may include musical numbers or a stand-up act, but only as a minor element. Sometimes, when the various iconic characters are shown interacting, the show may border on being a plotless Sitcom . Conversely, a Negative Continuity Sitcom may be accused of being a sketch show Compare with Variety Show . See also Anthology Film , which might be this applied to the big screen. Can overlap with Gag Series , which also emphasizes jokes over plot and anything else

Common sense tells us that tasks and goals which have severe consequences if they are ignored—such as avoiding death, obtaining food and shelter, taking care of your spouse and children, or not getting fired from your job—are more important than optional desires such as looking fashionable, not missing your favorite television program, obtaining some rare collectible, or saving a trivial amount of money. If there's some kind of emergency, you're supposed to drop everything and deal with said emergency because nothing else is that important. Except there are certain people who seem to have it all backwards, ignoring serious problems while spending their effort on things that are relatively meaningless. They might risk their lives by running back into a burning building to save some easily replaceable possession, spend the money that they need for dialysis treatments on a flatscreen TV, or drive a hundred miles out of their way to fill up at a station where fuel is only ten cents cheaper. Usually, this is to underscore how obsessed they are with a particular object or subject, and it tends to be Played for Laughs as long as their foolishness only backfires on them. It's more difficult to laugh about when the character's skewed priorities cause permanent injury to another innocent person. Can result in Disproportionate Retribution , And Then What? , or I'm Thinking It Over! . Compare with Arson, Murder, and Jaywalking . See also Honor Before Reason , Always Save the Girl and I Broke a Nail . Major Injury Underreaction could overlap with this (and so can Minor Injury Overreaction). Compare Bystander Syndrome , where everyone</ has Skewed Priorities. Compare This Is No Time for Knitting , where someone's apparent</ Skewed Priorities turn out to be on the right track after all, as well as Worrying for the Wrong Reason , where one character expresses some concern about a situation and another corrects them with a new concern. Advertising likes this trope, poking fun at the idea that their product is so

awesome you should abandon everything else in favor of it. For when a character thinks social media is more important than safety, see Social Media Before Reason . The Indy Hat Roll is a high-speed example, if the item reached back for isn't actually vital. When the police do this, it's The Lopsided Arm of the Law . This trope is a favourite of the Cloudcuckoolander , though anyone can be prone to it. See also Worst News Judgment Ever , for when it applies to the media. Obviously Truth in Television , though due to how often it can happen, No Real Life Examples, Please!

Tropes about skills and all the varied and weird ways in which they are learned Compare School Tropes (for learning skills), Levels and Experience Tropes

:

In Pinball games, a Skill Shot is an optional bonus that the player can earn by performing some particular task when launching (or "plunging") a ball. It typically requires either releasing the ball with a particular strength so the ball goes into a certain region, or shooting a specific target, ramp or loop immediately after the ball is launched. Some games have various levels of skill shots, awarding different bonuses depending on which one is reached Not to be confused with the popular terminology for a type of attack in Multiplayer Online Battle Arenas , referring an ability that travels to a location/area (and so requires some prediction to hit an enemy) rather than being Homing Boulders that will always strike something you point and click on

Skinny Dipping is swimming, but without the swimsuit. In the nude. Usually, this is used in fiction for several reasons: As mentioned above, Skinny Dipping is Truth in Television. It was a common practice back before the 1950's or so, when swimsuits were impractical. It is still done today, though. As a matter of fact, some nudist camps which are otherwise clothing-optional make their pools no-clothing. (It's a little known fact that suit fibers just mean something extra to clean out of the filter system.) However, skinny dipping in public places other than nudist areas can be illegal and bring charges of public indecency or even second degree sexual assault. Related to Naked People Are Funny . Often the prelude to a Two-Person Pool Party , a Sexy Surfacing Shot , an Outdoor Bath Peeping , Naked People Trapped Outside and A Party, Also Known as an Orgy . Super-Trope to Gone Swimming, Clothes Stolen . Contrast Non-Nude Bathing . For anime, see also Furo Scene and Hot Springs Episode (which is not always</ naked, only often</). Compare Waterfall Shower , which can overlap or be a prelude to this at times, and Slippery Swimsuit , where the swimmer started off clothed but wound up naked anyway.

A visually spectacular (if impractical) way of stealing something, this technique involves flying over the target and then using a hook or a magnet to snag it and carry it off into the sky. Most commonly the aircraft used is a helicopter due to its maneuverability, but it can be done with a suitably slow moving plane, or even a Cool Airship Often overlaps with Steal the

Surroundings . Compare High-Speed Hijack when somebody steals the vehicle itself without stopping it Aliens Steal Cattle is a specific Sub-Trope where aliens uses spaceships to steal livestock. The perpetrators are likely to be Sky Pirates about hijacking aircraft. It is about using an aircraft to steal something and flying away with the object dangling from the aircraft

A form of transportation and example of Not Quite Flight in which the flyer stands on top</ of an object with relative propulsion and control surfaces. While the rider is usually the one in control, all the work is done by whatever he's standing on Despite the trope name, the flying vehicle in question doesn't necessarily have to be surfboard-shaped Owes its existence to The Sky Is an Ocean and, of course, the Rule of Cool The difference between a Hover Board and Sky Surfing is that a Hover Board (whatever its shape) is limited in how high above the ground it can go Though is real, in real life, it's just fancy tricks in the air while falling rather than transportation of any kind Super-Trope to Magic Carpet , Flying Broomstick , Flying on a Cloud and Ride the Rainbow . If the rider isn't the one in control of the object he's on top of such as a plane or similar, it's Outside Ride The Skyblade Personal Transport in Exalted </

This trope is nothing but universal in romantic stories. It frequently brings to a close the Will They or Won't They? phase of a Romance Arc When a male and female character spend a lot of time bickering , it is all but inevitable that sooner or later he will interrupt her in mid-rant by suddenly grabbing her and kissing her . (Less frequently, she grabs and kisses him.) The kissed one rarely resists, and usually responds wholeheartedly Usually this is triggered by their hostilities reaching a climax that results in an exchange of slaps, followed by a moment where both stare at each other in combined confusion and shock, after which they dive into the kiss Either way, the kiss prompts both to realize that they've been in love all this time — the rationale being that they wouldn't argue so much if they didn't give a damn about each other. Normally results in some kind of permanent change in their relationship The concept is related to the theory that hate is not necessarily the opposite</ of love so much as its twisted twin; its opposite would be apathy</. Ergo, lots of contained emotion towards a person might be translated into lust given the proper catalyst. Pulled off successfully, it can be... quite satisfying . Otherwise, not so much This trope is a major factor in Foe Yay Shipping since such arguments between those characters in the actual shows are often similar to examples of this trope (or even get Why Don't You Marry It? reactions). It should be noted that in Real Life it's not exactly a sign of a healthy relationship, with the exception of a little roleplay between consenting adults Note that this trope is mostly Exactly What It Says on the Tin . If there is no kiss, that's Belligerent Sexual Tension Dating back at least to William Shakespeare 's Much Ado About Nothing </ Compare "Shut Up" Kiss , Love at First Punch , Belligerent Sexual Tension , Power Dynamics Kink , "Take That!" Kiss , Vitriolic Best Buds , and Destructo-Nookie . Often considered in similar terms to Foe Romance Subtext . Tsunderes are often involved on at least one end Kiss-Kiss-Slap is this in reverse (kissing, then</ fighting). These two tropes can easily be Zig-Zagged (so easily that the trope images of these two tropes share a frame from the exact same story)

Slapstick is the essence of physical comedy—people getting hurt or embarrassed in hilarious ways (e.g. slipping and landing face first in dog crap). The defining feature of slapstick is its highly exaggerated nature, combined with a lack of serious physical consequences. The Pratfall is a staple of slapstick humor The name comes from a prop in the Commedia dell'Arte </: the battacchio</, or "Slap Stick", is two pieces of wood that sound more like punching than punching does , without causing any physical damage; making this Older Than Steam . It has been a staple of Vaudeville and Burlesque ; and a consistent thread in many types of comedy, most notably the Farce . Exemplified in the modern era by artists like Charlie Chaplin , Buster Keaton , and Laurel and Hardy ; and continued by recent performers such as the British comedy team of Rik Mayall and Ade Edmonson, and Canadian actor Jim Carrey While slapstick is present to some degree in many comedic works; examples should be works that depend entirely or predominantly on this form of exaggerated physical comedy for their humour An interesting bit of neurological trivia: finding slapstick funny is very</ deeply seated in the brain. A study was done of patients who had previously sustained head trauma who were shown comedy clips of varying types. It was found that while many had lost the capacity to "get" puns and higher humor, almost all still found slapstick funny. So while some people still complain that a show like America's Funniest Home Videos </ where people repeatedly fall and get hit in the crotch is not amusing, it's not really surprising that the show still continues to be popular across all demographics for well over 20 years even in the face of the infinite spring of funny home videos that are modern social networks For the Marvel Comics superhero character, click here

This is when a female character lacks the usual immunity to slapstick that comes with her sex and is thus regularly on the receiving end of physical comedy in a manner normally reserved for male characters. She might regularly suffer Amusing Injuries , get Covered in Gunge , receive a Pie in the Face , get Panty Shot for Comedic Underwear Exposure , and have other slapstick tropes done to her. She is usually the Butt-Monkey or The Chew Toy of the show and what happens to the girl is Played for Laughs It is rare to see women in these roles because of the Double Standard seen in things like Beauty Is Never Tarnished , Wouldn't Hit a Girl , or Double Standard: Abuse, Female on Male . Also, due to all of these things, the women who do fit this trope are more likely to be amusingly injured by other women, their own clumsiness, or events beyond anybody's control than by men. On occasions when a male does comically harm a female, it will almost invariably by accident, and the woman will often retaliate by doling out some slapstick right back at the male , considerably more painful or over-the-top than what happened to her. A male character deliberately harming a female character is far less likely to be played for laughs than the other way around With the passage of time, we both already have seen and will continue to see increasingly fewer restrictions on the use of this trope. Even being physically attractive does not guarantee immunity, since the Brainless Beauty is always an Acceptable Target . If the character is an Iron Butt Monkey , however, she'll tend to be a lot tougher if she's a woman than if she's a man. A woman who gets poked in the eye with a sharp stick will likely experience only a (temporary) loss of dignity; a man

who gets poked in the eye with a sharp stick will have to wear an eyepatch. And it's still quite rare to see a female character comedically killed unless she's particularly repellent None of this is to suggest the men are getting away unscathed, by the way; if slapstick was only targeting the ladies then it would in fact know gender Exception: Instant Soprano always</ Knows Gender, except in blatant parodies of that trope Contrast is usually Immune to Slapstick

Near-indestructible Serial Killers stalking attractive young girls, a combination that allows for buckets of gore and enough flesh to titillate The killers, mostly driven by revenge , are Made of Iron , at a minimum, and usually Implacable . Many are explicitly supernatural. All of them can appear and disappear as if by magic , and the corpses of their victims are equally elusive. A slasher killer can whisk away a full grown adult's corpse in seconds, leaving not a single drop of blood behind, or swiftly arrange all its victims in an elaborate tableau, without ever being seen lugging the dead bodies around . The more explicitly supernatural killers will have powers ranging from Super Strength (all the better to pull victims through walls), the ability to appear in dreams and attack the dreamers , or other ghostly abilities The victims are usually teenagers or young adults, all usually guilty of some minor vice . Once the audience has had a convincing demonstration of their (usually sexual) misdemeanours, they are spectacularly slaughtered . If there's more than one sin or minority to pick from then the Sorting Algorithm of Mortality comes into play Eventually, there will be only one girl left standing, the Final Girl , normally the only "morally pure" member of the main cast. With considerable help from her death battle exemption , she will kill the killer Come the next sequel, it will be revealed that the killer was actually Not Quite Dead , or in some cases, inspired someone to take up their mantle A subset of the Horror genre, although the schlockier examples replace suspense almost entirely with gore. They are often considered B-movies The history of slashers can be divided into several distinct waves. Alfred Hitchcock 's Psycho </ is often cited as having a direct influence over the genre by introducing sympathetic characters that are unexpectedly murdered during the course of film, along with pushing the boundaries of sex and violence. The genre also has its roots in giallo </ films, a genre of Italian murder mysteries which rose to popularity in The '60s and The '70s , best known for their then-groundbreaking use of bloody violence and steamy sexuality. Many famed Italian directors, like Dario Argento , Lucio Fulci , and Mario Bava , began their careers in the giallos</, directing classic horrors like A Bay of Blood </ and Deep Red </. The earliest American (and Canadian) slashers, like The Texas Chain Saw Massacre (1974) </, Black Christmas (1974) </, Alice, Sweet Alice </, and The Town That Dreaded Sundown </ , were carved directly out of the giallo mold After steadily rising in popularity throughout the 1970s, slashers finally exploded into the mainstream in 1978, when the genre's Trope Codifier in the form of John Carpenter 's Halloween </ landed in theatres and became a massive smash hit. Looking to cash in on its success, film producer Sean S. Cunningham created the original Friday the 13th (1980) </, and once it too hit the big time, slashers were here to stay. A deluge of copycats, including sequels to Halloween</ and Friday the 13th</, flooded theaters throughout the

first half of the 1980s, from Prom Night (1980) </ to My Bloody Valentine </ to The Burning </, and just when the craze seemed ready to die, A Nightmare on Elm Street </ arrived in 1984 and brought in a supernatural element to the proceedings. It wasn't until the final years of the 80s that slashers finally burned out, as the established franchises grew stale and the ripoffs grew more desperate, but it wouldn't be for long 1996's Scream </, directed by Nightmare on Elm Street</ creator Wes Craven , satirized the genre - while remaining a genuinely scary thriller - and became a big hit. Once again, studios sought to cash in on the film's success , and began the second wave of slashers, with films like I Know What You Did Last Summer </, Urban Legend </, and Valentine </. These movies stood in rather stark contrast to their 80s brethren- good writing and characterization, considered disposable (and usually nonexistent) in the first era, were now all-important, as the plots now focused on the heroes trying to stay one step ahead of the criminals (who often based their murders on famous stories or past events in the good guys' lives) while also navigating their personal relationships, which - as teenage lives tend to be - were fraught with conflict and melodrama. The genre again petered out by the end of the 90s, due to parodies like Scary Movie </ as well as the sudden tragedy of Columbine and the rise of the J-Horror and Torture Porn flicks that dominated the following decade , but once again, it wouldn't be for long By the back half of the '00s, nostalgia for the original era of slashers began to rise (piggybacking on the usual way pop-culture nostalgia tends to be Two Decades Behind), and with nostalgia comes remakes. The Texas Chainsaw Massacre (2003) </, Halloween (2007) </ and Friday the 13th (2009) </ all returned, and a whole flood of new slashers, both remakes and original movies, followed once again in their wake. Now, in The New '10s , it seems as though slashers are here to stay, with films like A Nightmare on Elm Street (2010) </, You're Next </, Hatchet </, and Tucker & Dale vs. Evil </ able to safely co-exist with the more popular ghost- and demon-themed chillers of the decade. Time will tell if it stays that way Roger Ebert called these movies "Dead Teenager Movies" due to their focus on teenagers getting killed. Another popular nickname is "Bodycount Films/Movies" Keep in mind that, while every slasher movie features a serial killer or a spree killer, not every serial killer or spree killer movie is a slasher movie. Also note that a slasher film is quite different from a Psychological Thriller , which tends to emphasize the Sympathy for the Devil part using a Freudian Excuse or two (and possibly a few Pet the Dog moments in the killer's favor), and de-emphasize the Final Girl , often killing off all characters Also not to be confused with Hack and Slash video games, which are occasionally referred to as "slashers" Want to write your own slasher flick? We have a handy writer's guide for anybody looking to do just that

What's the difference between a smile and a grin? The same difference between kissing and tasting. In the animal kingdom, baring your teeth is a sign of aggression. In the case of humans — well, there's something very disconcerting about a smile that doesn't have an ounce of happiness in it. It's downright frightening when the smile is in anticipation of pain or death — yours, probably. Needless to say, the Slasher Smile does not inspire warmth in anyone who sees it. The Slasher Smile is the Evil Counterpart of the Cheshire Cat

Grin . In general, the difference is in the eyes of the character. If the eyes sparkle or are mischievously wicked, it's a Cheshire Cat Grin. If, however, the eyes are clearly crazy or malevolent, it's a Slasher Smile. If the grinning person is holding a knife or an axe or some other implement of painful and often bloody death, it's best to assume the worst. While the Cheshire Cat Grin is a staple of The Trickster , generally one of the good guys, the Slasher Smile is the staple of the Ax-Crazy , unless said hero is a particularly dark or vicious Anti-Hero . Only expect to see a "nice" hero with a Slasher Smile if they've been possessed or suffered a major Freak Out or if they have been taken over by their Superpowered Evil Side . Also, a devious Chessmaster or Magnificent Bastard is unlikely to look like this — it's too Obviously Evil , and they prefer the subtler Psychotic Smirk . No, the Slasher Smile is more appropriate for The Dragon , the Mad Scientist , and most especially Serial Killers , but it can happen with any character who is gleefully violent and/or fits any "wild crazy person" stereotypes. Beings who hunt and eat victims we are supposed to identify with will also often have Slasher Smiles... in their case, it means "Hello, lunch!" Some characters with a Slasher Smile wear the grin all the time — in fact, it's physically impossible for them to move their face out of it. For many, this has the added worry of making it harder to tell what they're thinking or feeling, because their face betrays no expression beyond the smile. Not to be confused with a Slashed Smile (although they sometimes overlap), and has nothing to do with the pleased smiles of Slash Fic fans upon the detection of impending Ho Yay . Hopefully. Contrast Dissonant Serenity for a calm mood which isn't the slightest bit more reassuring, and also contrast Grin of Audacity . Sometimes paired with the Maniac Tongue . When the smile is merely creepy, it's The Un-Smile . May be part of the fear behind the Monster Clown . See also Technically a Smile .

We all know there are a large amount of tropes revolving around characters who happen to be blonde. But what about when you have the Dumb Blonde , Innocent Blonde , or Lovable Blonde in a slasher movie setting. It's almost inevitable that the blonde is going to get it. There may be a number of reasons for this but you're almost guaranteed to have a blonde getting killed off in contrast to a raven-haired Final Girl Interpretation says this could be due to the influence of the Dumb Blonde and Brainy Brunette tropes; the brunette is assumed to be smart enough to thwart the killer, while the blonde is Too Dumb to Live . Whether she's the Final Girl's best friend or the Alpha Bitch , her chances of survival aren't high. And God help the blonde if her best friend is Jamie Lee Curtis . This may be unintentional by the filmmakers but the blondes tend to get really elaborate deaths. As for blond males, their death rates in horror films can be attributed to a combination of other tropes . Note that this trope only applies to horror films. It doesn't count if a blonde character happens to die in another genre. Contrast Everyone Loves Blondes and Black Dude Dies First . Compare and contrast Missing White Woman Syndrome . As a Death Trope , be aware of spoilers!

A staple of the Sword & Sandal and Fantasy genres, firmly established by the film Ben-Hur (1959) </. The hero is enslaved and forced to work as a galley rower, while chained to his fellows .

Necessary embellishments include: A coxswain with a drum beating out a steady rhythm Showing a character as a galley slave is a quick-and-easy way to depict their suffering, as it combines all the bad parts of being a sailor with all the bad parts of slavery — that is to say, all of it. Historically, this trope is Newer Than They Think and belongs in the realm of Briefer Than They Think . The heyday of the slave galley lasted only for some 70 years - from the beginning of the 16th century to the Battle of Lepanto (1571). Galley slaves were introduced only during the Renaissance (16th century) as cannons became the main weapon of galleys instead of ramming and boarding and less skill was required for rowers. Slave galleys were uncommon in the ancient world for various reasons (see analysis page for details) , making this trope an example of Artistic License – History . Some nations, such as Venice, never adopted galley slavery. Some, like Sweden and Russia, used conscript soldiers for galley crews. Compare Gladiator Games , the alternative for a male slave in ancient times. Not to be confused with " Galley Slave ", a story about a robot made for proof-reading galley copies of manuscripts .

Slavery Is a Special Kind of Evil , so let's liberate the slaves! There are three ways to do this: Examples are sorted by type of Slave Liberation. Slave Liberation is a likely result of being Made a Slave , but if it's combined with Happiness in Slavery or Property of Love it can easily devolve into Activist Fundamentalist Antics . Like Releasing from the Promise , it may lead to some fraught moments about whether the freedman will continue to work with the erstwhile master. It rarely if ever happens that the slaves want to get full revenge by enslaving their former master(s), probably because this isn't a story idealistic authors like to write.

Examples of Slave Revolt (that are not Gladiator Revolt)

Sled dogs have been used to transport people and supplies for more than a thousand years in northern regions. From Alaska to the Antarctic, sled dogs were frequently used in the far north, where vehicles would be impractical or even impossible to operate. Nowadays, dogsleds are largely considered an outdated form of transportation but are still used by indigenous peoples and in rural areas, and of course, during recreational dogsled races In fiction set in northern regions, however, dogsledding will often be depicted as the dominant form of transportation due to its "exotic" nature. Expect to hear fictional mushers shouting mush</ as they prompt their dogs into motion. The dog team is likely to be composed of spitz-type dogs, though a diverse variety of breeds have been historically developed for draught work. The Siberian Husky remains the quintessential sledding breed in popular media, although the — a non-standardized landrace bred solely for working ability — is preferred by actual North American mushers. Wolf-dog hybrids are also a popular choice in fiction, despite the fact they would make terrible working dogs in real life Other breeds, such as the Alaskan Malamute, Chinook, and Greenland Dog, are rarely depicted in fiction, if at all Such an adventure is a good way to show off an Heroic Dog

Tropes about falling asleep, being asleep, waking up, and staying awake Compare Rest and Relaxation Tropes . Not to be confused with

hypnosis (despite the etymology of that term)

A Ship Tease shot of two characters — the Official Couple , the official not-a-couple , or just two of the shippers ' favorites — sleeping together. They're fully clothed, probably in a public place in broad daylight, one's head pillowed on the other's shoulder, chest, or possibly lap . They were just very tired, or sitting through something that was really , really </ boring . Perhaps their group was attacked or some magic backfired, and they were knocked unconscious and landed in just the right position. In any case, it serves two purposes: the perfect screenshot for shippers, and the perfect opportunity for viewers near and far to simultaneously say, " Awww, they look so cute together !" Of course, this doesn't have to be romantic. A pair of siblings, a parent and child, very close friends, et cetera can also pull off a sort of Sleep Cute. Either way, it is a strong source of good, happy feelings and a very good Go-to-Sleep Ending . A big Tear Jerker variant is to have the " sleeping " characters be dead</, overlapping with Together in Death . Compare Accidental Kiss , Beautiful Dreamer , Comforting Comforter , Lap Pillow , There Is Only One Bed .

A sleeper hit is a work that becomes an unexpected success upon its release, usually through word of mouth. Either the work slipped under the fandom and critics' radar during production, it was dismissed as outright crap based just on previews, or the company/publisher didn't have much faith in it and neglected its promotion , yet</ it managed to get sizable box offices or sales. It might make an impact on the fandom collective and become a Cult Classic , or be a matter of Quality by Popular Vote and be forgotten quickly: the point being, it exceeded expectations It may start a Cash Cow Franchise , spawn cases of Follow the Leader , or even start a whole new genre A Super-Trope to And You Thought It Would Fail , where the work is actively derided before release and still ends up being a hit. Compare to Colbert Bump , where a work/creator/event becomes popular upon being featured or referenced elsewhere, and Ensemble Dark Horse , when a character in a show/film/etc. becomes unexpectedly popular. If it takes longer than just its initial release to become popular, then it has been Vindicated by History instead. Contrast Acclaimed Flop , where a work flops in terms of box office or ratings but does well with critics and audiences, and Critic-Proof , in which a popular blockbuster/franchise gets a lot of bad publicity, despite being a box office hit

A sub-trope of Unequal Pairing and Office Romance , this is when a person in authority specifically gets "busy" with an employee or a member of their staff A favorite plot device in many a film, this usually takes on one of any given number of scenarios: the master of the house banging the maid, or the mistress of the house getting naughty with the pool-boy or gardener, or the office manager having "business meetings" with his secretary while his wife remains unaware. Either party in the affair may be the instigator, though usually that role goes to the one who holds the greater power and authority. Usually, too, the boss or supervisor is older and more "experienced" than the employee If either party is

married or in a relationship (which is usually, but not always, the case in this kind of situation), this kind of affair comes of an unfaithful heart; unsurprisingly, in such a case, this usually results in a Love Triangle and all the problems that come with it. If the employee is female and the boss is male and</ married, the employee may take the role of The Mistress . Or, in some cases, the wife/husband of either participant may know of the affair, but won't say or do anything about it because they want to keep up public appearances Since Power Is Sexy , the employee is often perfectly happy with such an arrangement, and may even enjoy being ordered around and punished . However, this kind of situation also holds the risk of the employee eventually asking " Am I Just a Toy to You? ", if the boss is flaunting their power over the employee just to satisfy a perpetually high libido. Or it may be a form of Sexual Extortion if the employee engages in sex with the boss under duress or blackmail (though the reverse can also be true, in that it's the employee who blackmails the boss) Sometimes, the relationship is a part of the employee's strategy of Sleeping Their Way to the Top , advancing their career (or trying to) by seducing their superior. This doesn't mean their feelings are necessarily fake, though. The boss might be in the dark about it, or might know and just not care. Sometimes, it's the boss who decides to "reward" the employee, leading to Nepotism . Sleeping Their Way to the Top is thought to be especially common in showbusiness, leading to Casting Couch situations, when someone sleeps with the producer or director to land a starring role — though this, too, might sometimes cross into Sexual Extortion territory Whether the participants are single or are married to other people, this kind of scenario opens itself to some discrimination depending on the gender of the employee in the equation . If the employee is female and the boss is male, the woman may be seen as loose and only advancing her career by sleeping her way to the top , and she'll be branded by those who are aware of the relationship. If, however, the boss is female and the employee is male, then the man will be seen as extremely lucky, or, at worst, the situation may be given an indifferent shrug This can also happen in the military, which adds in the additional point that the relationship is probably flat-out illegal on top of all other considerations. See Inappropriately Close Comrades for more Compare Pizza Boy Special Delivery , where the persons in question aren't in a permanent boss/employee relationship but still have sex in the midst of conducting an otherwise ordinary business transaction; and Teacher/Student Romance , where the relationship in question takes place between a teacher and a student (though sex may or may not be involved in this case) Also compare Bodyguard Crush , where a person's appointed security guard harbors feelings for their client or vice versa that may or may not be reciprocated; Subordinate Excuse , where the employee uses their being employed by the boss as an excuse to exercise affections for said boss (though that situation may NOT necessarily automatically result in the two parties having sex); and Hired for Their Looks , where the boss appreciates the employee's decorative qualities but doesn't go beyond ogling Note that this trope is not the same situation as the Sex Slave , where the person with the lesser authority is in captivity and is forced to engage in sex under orders from their captors Also note that the Office Romance speaks more generally about inter-office relationships and can be (and usually is) applied to co-workers who are on equal standing; this trope is specifically about a sexual relationship between a boss and their

employee. It should also be noted that, although use or abuse of power on the boss's part does sometimes play a role in this trope, it does not happen in all</ cases, as some instances of this are mutually consensual Far more egregious and likely to result in retribution from the boss's end would be Sleeping with the Boss's Wife No, this isn't about video game Boss Battles

This trope is when a character has relations with his boss's lover. If a man in an office setting ain't sleeping with the Sexy Secretary , then he's probably sleeping with the Boss's Wife. Contrary to Sleeping with the Boss him/herself, which is usually performed by those intent on Sleeping Their Way to the Top , an underling betrays his boss's trust with infidelity. Sometimes, it is brought upon by the guy hating his boss and doing it out of spite, or being seduced by the Femme Fatale wife In most cases, it ends with a fatal love triangle between the three, either resulting in the boss's or the employee's death (sometimes, albeit more rarely, the wife's). If the underling is lucky, he will merely be Reassigned to Antarctica or fired, but if the boss is an outright villain, expect a prompt serving of You Have Failed Me if he finds out. If the boss is not quite so overt, an Uriah Gambit is also likely. However, if the boss ends up meeting an unfortunate end, the underling instead might take his job position along with his wife Compare The General's Daughter and In Love with the Gangster's Girl

So there's this one woman. You know the one. The one who Really Gets Around . She'll jump into bed with just about anyone who asks. She… well, she just really likes having the sex. You get the point But this woman, who will schtup men, women , and most species of plants , is utterly unobtainable for this one character. That character doesn't have to be The Protagonist , and, in fact, rarely is. Most of the time this is used to demonstrate that the character's sad and pathetic—after all, if Betty Bangs-A-Lot won't kiss him, he must be pretty crummy at this life thing. This is almost always used as a comedy gag, largely because it's too depressing to contemplate under any other circumstances. Think of it as Even Sluts Have Standards More rarely, on the other hand, it can be used to demonstrate quite the opposite. Sometimes the reason the promiscuous character refuses to have their usual mindless, consequence-free sexytimes with one target is that just this once, she's holding out for something more meaningful Can cross over with Entitled to Have You , when the rejected dude feels that because the woman in question sleeps with "everyone" she has an obligation to sleep with him. Compare Emasculated Cuckold , which also draws humiliation from a character's love interest sleeping with other people Note that, pronoun-laced description aside, this trope is not</ Always Female and also works perfectly well with man whores

The hero has his back up against the wall. He's tied to the chair blindfolded, the firing squad is taking aim, the shark tank is sliding into position, the laser cannon/deathtrap is warming up, and his last cigarette is already half ash, you know the drill. By all accounts, his pooch is clearly about to be screwed And the Mad Scientist's Beautiful Daughter or The Baroness or the Femme Fatale moves in for that last lingering sadistic Last Kiss to resolve that pesky UST .. Cue the Downer Ending , right? Not so much; as it works out, during the kiss she slipped into his mouth

the key to his shackles, or a lock pick or the appropriate piece of Phlebotinum , ensuring that our intrepid hero lives on to fight (and kiss) another day Compare and contrast Mouth To Mouth Force Feeding , where the kiss is used to force the target to ingest some drug, poison, or other substances that the other would not have voluntarily taken on their own

Slender Man started as a strange little experiment in urban legends on an online forum and a handful of Youtube channels — sort of a modern day, internet-born Bloody Mary or Hook-Handed Man. Considering the memetic, viral way Slendy crept into popular consciousness, it shouldn't be surprising that he's spawned numerous Expies , often attempts to duplicate the formula or just outright parodies. A Slender Man Stand-In usually has at least a few of the following characteristics: A subtrope of Fountain of Expies .

Life, observed and examined. A cast of characters go about their daily lives , making observations and being themselves. School is perhaps the most common setting for these kinds of series, especially in animation. Coming of age is often a major part of their stories. They may have Death by Newbery Medal What separates slice of life as a genre from the literal meaning of the phrase (which would encompass nearly all fiction) is the emphasis on the very moment, with the intent of focusing the audience on that moment rather than using that moment as part of a narrative. For example, a story about hilarious roommate hi-jinx may depict the mundane life of roommates, but these mundane events are usually the setups and punchlines of jokes or part of the conflict between the characters, which takes away their slice-of-life-ness and cements them firmly in the realm of comedy or drama Slice of Life series don't usually have much of a plot or, if taken to extreme, even the omnipresent Conflict , but they don't really need one, and many Slice of Life stories use a lack of conflict to serve peaceful escapism rather than realism. An example of this would be how in many slice of life school stories, parents are nearly non-existent. Most American newspaper comics that aren't simply gag a day strips are stories like this due to the simple fact that most people do not read newspapers every day and archives of comic strips are rare, so they need to be able to jump into the comic's world at any time and be able to appreciate it Slice of life also doesn't have to be set in the world as we know it. When it is, the TV industry in particular calls it "low concept" (in contrast to High Concept). Several Webcomics are Slice of Life, while the ones labeled " Real Life " are usually not real life at all, but tend to fall into some brand of Speculative Fiction , or at the least Life Embellished . Not to be confused with the Journal Comic , although they may overlap. For a complete index, see Slice-of-Life Webcomics Surprisingly popular in Japan, so a lot of Anime fills this category. In longer-running action-based shows it is also becoming fairly common to incorporate Slice of Life episodes to flesh out the characters by placing them in a more mundane setting. This often gets combined with a Mood Whiplash when the pace of the action picks up. See Schoolgirl Series for a specific type of Slice of Life. See also Iyashikei , which often overlaps with this trope. Compare and contrast with Soap Opera . Since the casts of such shows tend to be mostly if not entirely female , English-speaking fans sometimes refer to them as "cute

girls doing cute things". Also compare Breather Episode In some ways, Slice of Life overlaps with stories generally considered Lit Fic in the west, since both genres cover ordinary human lives, motivations, and emotions, though Slice of Life doesn't always imply the stereotype of intellectual snobbery or elitism that surrounds works of Lit Fic, as well as the impression that Lit Fic somehow has to be "depressing" or have Downer Endings For the My Little Pony: Friendship Is Magic </ blog and webcomic, as well as the episode, click here and here

Here's a Stock Phrase born in the world of infomercials . This trope is a must for the conscientious writer looking for a snappy, poppy way to jazz up the multiple talents of the object of his description. You can put it at the end of a full list of other talents (" it's murderous, relentless, merciless, and makes julienne fries! ") or when describing all other generic slicers and dicers (swords, battle axes, Japanese chefs, etc.) add "... and makes julienne fries" in a cute little wink . A must for your Pop Culture Referencing Genies! But Wait, There's More! Choose this stock phrase now and we'll throw in "handles stubborn stains", "and still cut a tomato" for free! The Trope Namer for this was commercials for the Veg-O-Matic, one of the first products Ron Popeil sold, which really could do all of the things mentioned in the title. For those of you who don't remember it, the Veg-O-Matic was basically a French-fry cutter, fitted with a second blade that could be turned 90 degrees to cut slices.

</ Inspired by , this is the wiki where we rank trope extremity on arbitrary number scales. </ For example: TV Tropes Rating - How much this site has affected you. It doesn't have to be this type of scale, of course. It can be any number system you want to use. Base ten, anyone? If you want our tropes with sliding scales, see Sorting Algorithm of Tropes .

</

While in Real Life the concept of beauty is very subjective, in fiction there is a clear consensus on beauty. In addition beauty tends to be dynamic, as some characters get uglier or more beautiful than before. This scale is to show how beautiful someone is to the rest of the cast</, not to the audience (differences happen). Please note that this isn't a meta trope, nor a subjective trope. All beauty should be measured as it is portrayed inside the story. Related to I Just Want to Be Beautiful . This is a level of beauty that is too extreme for mortals to even look at safely, and is only possessed by certain Physical Gods , Humanoid Abominations and the like. These characters' appearance is so beautiful as to induce a Brown Note in the beholder, ranging from madness to blindness to even death. Holy Is Not Safe , You Cannot Grasp the True Form Level II: Divine Level Beauty For these people, "gorgeous" would be an insult. Their beauty is so great, it appears to be nothing short of divine intervention (and it may well be). They might attract heterosexuals of the same gender . They are so beautiful, in fact, that everyone loses control of themselves simply by looking at them. You could stare at them for hours. Just the fact that a character is hot is not enough to qualify her for this trope. Indeed, many of these women fall into Informed Attractiveness . The character must be explicitly stated to be the world's most beautiful woman, hence why this trope is usually limited to fantasy and mythology, two genres that tend to

go light on real-world logic (Was there a worldwide beauty contest that every woman alive was forced to enter?). Of course, having two (or more) women contending for the title is usually not good, and you really, really, really want to limit it to mortal competitors. Asserting that a woman is more beautiful than a goddess is dangerous. Even...especially if she's another goddess. Vain Sorceress , Angelic Beauty , Inhumanly Beautiful Race , Hot God , Hot Witch

These characters are extremely good looking. It isn't uncommon Thefor numerous characters mentioning their attractiveness often. TheThey always have a lot of people after them at all times. Their Thebeauty is magazine cover-worthy and they are usually envied a Thelot . Beyond that, characters don't act particularly different Thearound them. Beautiful Elite , Amazonian Beauty , Proud Beauty , TheHot Consort , So Beautiful, It's a Curse , Screw the Rules, I'm TheBeautiful! , Ms. Fanservice , Mr. Fanservice

These characters are "slightly" beautiful. They are certainly attractive, as in, there is something "special" in their appearance, just nothing "extraordinary". They are beautiful enough to have admirers, but not enough to live off their beauty. Cute characters and Cool Losers are often in this category.

These characters would be very beautiful, if it wasn't for some kind of flaw that ruins their beauty. Maybe it is a scar, glasses, a tail or another kind of flaw or uncommon trait. Sometimes related to " Freakiness Shame " when other characters think those uncommon traits actually enhance their beauty. Also of this category are characters who aren't beautiful but ruggedly handsome, the kind of appearance which is only enhanced by scars, Perma-Stubble , intimidating demeanor or the like.

These characters are undeniably beautiful or handsome, but there is also something about their appearance that looks subtly wrong or creepily unnatural. Uncanny Valley Girl , Dark Magical Girl , Cute and Psycho Level VII: Cool/Special Average These kind of characters are described as normal or average, but with a certain prettifying and/or amazing trait. Maybe it is their friendly eyes, shiny hair or maybe it's their amazing smile that makes you feel happy just by watching it . Characters in this category tend to evolve into considerably higher levels easily, either by being revealed as Beautiful All Along or simply being revealed as gorgeous with some easy changes (She Cleans Up Nicely). Broken Bird , The Stoic , Shrinking Violet , Unkempt Beauty , Beautiful All Along Level VIII: Just Average People in this category of beauty are neither beautiful nor ugly. They don't have anything particularly special about them. They are also even more ignored than ugly people, because nothing in them stands out. Unlikely Hero , Unlucky Everydude , The Everyman , Featureless Protagonist , White Male Lead , The Nondescript

These kind of characters would be average, if it wasn't for some kind of minor flaw or uncommon trait that makes them look uglier than average. Similar to "Cool/Special Average", except the flaw that makes them unique has the opposite effect.

These people aren't nessesarily ugly... they just look somehow "unnatural", "creepy" or "weird". There is just something in them that doesn't look right. Uncanny Valley Girl , Yandere , Stepford Smiler Level XI: Ugly Cute For these kinds of characters there is

no denial that they are Ugly as they aren't what society considers beautiful. Despite that, looking at them isn't unpleasant. On the contrary, they are considered very cute. Though that cuteness isn't enough to make them Casanovas . Cute Monster Girl , Freaky Is Cool

They are by no means horrendous. They are simply slightly unattractive and homely. Sometimes caused by being fat or having poor care on their appearance.

They are unattractive, yes, but more than that: they are unattractive in a creepy way. Think Governor Tarkin of Star Wars fame. Their traits are not blatantly gonkish, fairly within the limits for a normal human being, but subtly repulsive. More often than not their appearance will match perfectly with their nasty character: for example, a Nazi concentration camp commandant will have a gaunt, skull-like face and glasses that tend to reflect light when it's dramatically appropriate, and an overweight food-hoarding merchant in a famine-struck medieval land will be not fat like an elephant, but his (otherwise completely normal) girth will have a slimy, greasy sheen to it. However, this appearance isn't a sure indicator of evil; a Misunderstood Loner with a Heart of Gold can look like this, too. Level XIV: Super Ugly These characters are very, very ugly. Not enough to be excluded from society, but ugly enough to be unliked and/or bullied by that society. They are often the Butt-Monkey . Level XV: Ambiguously Monstrous These characters are so ugly that just looking at them may make you sick. They may use a paper bag to hide their faces or something similar out of shame. When people look at them, they either feel pity or fear for them. It's not uncommon for them to be called "monsters", even if they are explicitly human

In no way can this being be confused for a human. They can be obviously undead, a giant ogre-like brute, an alien resembling an Earth invertebrate creature. They are unambiguous monsters. Onlookers, however, suffer no ill effects beyond a fight-or-flight response. Level XVII: Lovecraftian They are so ugly, you may go insane just by looking at them!

When people think of Comedy , they rarely associate it with Horror and vice versa. However, both make great partners in crime together. If they aren't Crossing The Line Twice , they're bringing about a Sugar Apocalypse and escaping to Auda City . The reason they work so well together is that viewers need "breathers" between nonstop screaming or nonstop laughing, and one can easily segue into the other For purposes of this trope, we'll divide Horror and Comedy hybrids into three categories, Horror dominant, Comedy dominant, and balanced works will use comedy as a mood lightener or "breather" from the tension or gore. Characters will crack wise while they're in a safe spot, and have the monster use a Barrier-Busting Blow just as they relax. The benefit of this is that just as viewers relax along with the characters, tension is restored along with the scare. Other ways to use comedy in a horror movie is to treat viewers to some funny situational irony the characters can appreciate on an intellectual level while cursing on an "I'm gonna die now" level. The benefit here is that momentum is maintained throughout the scene works have more leeway here. They may be a straight up comedy or parody set in a typical horror setting or premise, or use Black Comedy along with splatter horror

to maximum effect. Comedy dominant works often deconstruct horror tropes for laughs, other times playing them hilariously straight as an Affectionate Parody (with perhaps a Lampshade Hanging) A balanced work is perhaps the most subjective to qualify, because while it has equal amounts of horror and comedy, the viewer may be so sensitive to horror it seems scarier, or so de</ sensitized to horror it seems funnier Of course, these works have one big problem they have to fight: avoiding jumping the shark due to Mood Whiplash . Avoiding this requires that the comedy or horror not break the feel of the established setting. Slapstick in the middle of suspenseful horror, or remorselessly and humorlessly killing a character in a comedy would do this. However, deadpan snarking and Rasputinian Death respectively would not See also Narm and Nightmare Retardant , where something that's supposed to be horrible turns out to be funny, and Accidental Nightmare Fuel , where something that might have been intended to be funny is instead unsettling. Both of them are results of something landing on the wrong side of the scale. See also Lightmare Fuel , where a perfect balance is actually reached between the two Compare the First Law of Tragicomedies

Continuity is handled very differently between different works: some of them take it very seriously , others really, really don't ; some works need you to have been watching from the beginning while others just let you hop in and enjoy an individual story at any point in the series, that will usually be contained within a single installment Realizing where a work falls on the Sliding Scale of Continuity is often essential to being able to enjoy a series for what it is. In many cases, series on the lower side of the continuity scale often rely on a recurring structure or at least a consistent tone and mood — when deciding whether or not to watch an episode, a viewer will have some idea of what to expect beforehand. High-continuity series are usually expected to offer the viewer a sense of change or progress between installments, in terms of both characters and plot . This allows for more complex and detailed storytelling, spanning multiple chapters, at the cost of requiring more involved viewing. A lot of popular works attempt to combine the best of both worlds: offering self-contained episodes with something extra for those who take the time to watch all of it , or offering "progress" between seasons. From the production side of things, works closer to the episodic end of the scale are also much easier to coordinate between writers, and handle a change in episode count or order better. In television, their appeal to networks is that can attract casual viewership, and easily increase viewership at any point along the series' run. On the other hand, works leaning towards continuity may find it easier to maintain a more devoted viewership once they catch on. What this scale measures is: if you knew nothing of the series but the very basic premise and then happened to catch some random episodes in arbitrary order, how difficult is it going to be to understand and follow what's going on, and how much will you miss, compared to if you watched it in order from the beginning?</ The answer doesn't have to be static within a series. When a work starts low on the scale and progresses upwards over time, that's Continuity Creep . Then, in many shows, especially those with a Half-Arc Season , the answer is different depending on which episode you're watching. If the shift is very pronounced, you can list it under both levels; otherwise, just put it where most episodes go and note the variance See also Season Fluidity .

A franchise with multiple long-running continuities or frequent reboots does NOT count! This category is for works like the Twilight Zone TV series and Final Fantasy games, and the aforementioned Universal-Adaptor Cast .

Anime and Manga Comic Books Live-Action TV Radio Video Games Sure, the episodes are clearly related, sharing characters and a basic setup... but ultimately, watching it out of order makes more</ sense than in order if anything. The show may cheerfully contradict itself and if something seems to have changed by the end of the episode, you can bet the next one pretended it never happened anyway , so it's hardly a loss if that's not the next one you watch. Usually done in comedy . When there actually is</ continuity of some sort, that very fact is probably a gag in itself . See the Negative Continuity page

Originally, the word " comedy " meant that the story ended on a positive note , and the word " tragedy " meant a Downer Ending (or, at the very least, a Bittersweet Ending). The meanings of these words have evolved over time, but the concept remains: Some stories end happily, and others...not so much. This is a scale of how happily a given story is bound to end. See Multiple Endings when a work has more than one possible outcome (good, bad, AND neutral) Ambiguous Ending : The ending is left purposely vague in some way, so that one or more outcomes are unknown

Downer Ending : The good guys lose. They might at least get to take the villain down with them, though.

In fiction, Webcomics in particular, the Fourth Wall is sometimes nonexistent ; sometimes it is so solid that you can lean on it . This is a sliding scale of how solid the Fourth Wall is. From most solid/hardest, to least solid/softest (Note that promos and the like do not count for this scale): Beyond No Fourth Wall

Well, maybe a brief comparison of Bob and George </ and 1/0 </ , to explain how the scale works:

How much free will do characters really have? The relationship between free will and fate is not necessarily constant. It can vary between stories and even inside those stories, although how much this

is actual change and how much it is simply the revelation of the true nature of Fate also differs. The relationship between fate and free will can be classified this way:

Because Destiny Says So

Prophecies Are Optional Screw Destiny

Video games (and games in general) are a unique storytelling medium in that they demand active participation by the audience (read: the player) in order to advance the narrative. Historically, however, the massive age gap between traditional, non-interactive storytelling and the rapidly evolving interactive medium gave rise to a dichotomy of pure gameplay vs. storytelling, which for the purpose of this article are defined as follows: is the type of interaction between the players and the video game where the players input commands to overcome challenges</ the game throws at them. Historically, the most common type of gameplay is combat, but it also includes puzzle-solving, stealth , Character Customization , etc., etc. Another definition would be that the gameplay ultimately revolves around numbers and is governed by mathematical rules, while the story revolves around words and symbols and is governed by the rules of emotional narrative. Either way, it is very rare for a video game not to have any story whatsoever (i.e. the Pong </ level of storylessness) and, even more so, to not have any gameplay (though this depends on whether you count Kinetic Novels as games), and these two aspects are usually integrated at least a little — after all, you can hardly introduce pony-breeding gameplay against the backdrop of a galaxy-spanning war story. Similarly, it is often impossible to extricate the "gameplay" part from the "story" part for some game elements: for example, level design serves a practical function for gameplay, but also conveys information about the game's setting to the player — and attempting to avoid this by setting one's gameplay in an environment comprised entirely of featureless white cubes would still tell the player something</ about the game's setting. Additionally, while it is virtually impossible for a game to have no</ story at all, story is not the only aspect that evokes an emotional reaction in the players, and "raw" gameplay can have the same effect in its own right, independent of the context it is placed in. Since a gap between gameplay and story exists and despite the medium's relative youth, video games have already developed a rather standardized set of general and genre-specific gameplay conventions . While definitely not as old as storytelling conventions, they are not fundamentally different and game designers often borrow from them without considering how they fit In-Universe . Indeed, very few players stop to ponder why the Player Character 's well-being seems to be divided into numbered chunks but the only one that matters is the last , because it's an established gameplay convention and most developers no longer feel the need to justify it. This becomes even more obvious when the game's gameplay rules are adapted from an external source, such as Tabletop Games . This leads to situations where gameplay rules blatantly contradict the story rules — and such cases are usually easily identifiable and are listed on Gameplay and Story Segregation page. But again, few games segregate their gameplay from the story completely</, and there is usually an overlap at least on the contextual or thematic level. Likewise, there are practically no video games where the gameplay and the story are integrated so tightly that they become indistinguishable, if only

because the technology for procedurally generated narratives does not yet exist. Therefore, it's more accurate to speak of individual instances</ of gameplay and story integration/segregation, as a single game can provide examples of both; ultimately, "gameplay and story integration" is less of a dichotomy and more of a continuum, and games can be sorted based on whether integration instances outnumber segregation ones or vice versa. The Sliding Scale of Gameplay and Story Integration is then defined as follows: : The gameplay is</ the story. This standard seems to be most prevalent in genres that aim for emergent</ narrative — like many life sim and management sim games, for example — though those genres' particular definition of what constitutes "story" is looser and broader than most. The degree of story and gameplay integration in a particular game is always relative to the "mean level" of it in its genre. Story-driven genres like adventures and Role Playing Games , for instance, traditionally feature a much higher level of integration than the competitive Racing and Fighting Games . Note, however, that a particular game's Story-to-Gameplay Ratio does not imply anything about the extent to which its gameplay is integrated with its story. Ultimately, deliberate gameplay and story integration is all about recognizing a particular genre's gameplay or story formulas and interlocking them in a way that is not expected in that genre. Off the above scale lie the aforementioned games that lack either a story or gameplay of any kind, as well as Emergent Narrative — the metaphorical Holy Grail for some developers, wherein the game's generic ruleset facilitates the players inventing and enjoying stories all on their own. Some would argue that this is what the Perfect Integration sector of the scale is all about, but then again, so are non-kinetic Visual Novels . See also Player and Protagonist Integration , a scale that deals with similar issues regarding exactly where the line is drawn between the "player" as an agent outside the narrative's confines and the "protagonist" as a character (typically the Player Character) within that same narrative. Common tricks for gameplay and story integration include: Translating plot-related injuries into gameplay terms , such as: On The Other Wiki, the effect of successful integration is called "ludonarrative harmony".

Which best solves problems? The Power of Friendship , or a bullet between the eyes? The answer depends on where the series falls in the Sliding Scale of Idealism Versus Cynicism. A story can be idealistic or cynical towards any idea. In general, if the story values or is hopeful for a particular ideal, then it is idealistic. If the story criticizes, assaults, and accentuates the negative about that expectation, then it is cynical. For a simple, archetypal example, let's assume that the idea to believe in is Humans Are Good / Rousseau Was Right . In idealistic series, those who believed it got lots of friends and a Happy Ending (therefore, Right Makes Might), while cynical series are Crapsack Worlds where those who believed it got ruthlessly bullied by everyone else (therefore, Might Makes Right). Of course, the definitions of "Right" and "Crapsack" in the above can technically mean whatever one wants them to mean. However, be careful not to confuse idealism with straw optimism , cynicism with straw pessimism (or realism, for that matter), and the scale as a whole with the Sliding Scale of Silliness vs. Seriousness . Also note that when this applies to characters, this does not mean good or evil. After all, it's perfectly possible for an idealist to be evil , and a cynic to be good . Likewise, a very cynical series could

be quite lighthearted (see also: Crapsaccharine World), conversely a very idealistic series could be extremely dark . It's also true that comedies can be cynical as all hell (see also: Satire), and dark dramas can end idealistic (see also: A World Half Full). See also: The Idealist and The Cynic for the archetypal characters. Less sane characters fit in this scale in their own way, with a Cloudcuckoolander or a Loon with a Heart of Gold leaning towards the Idealism side. For how both sides often portray each other, see Wide-Eyed Idealist / Silly Rabbit, Idealism Is for Kids! , and Grumpy Bear / Silly Rabbit, Cynicism Is for Losers! . See Cynicism Tropes , and Idealism Tropes for lists of each. This particular sliding scale can be the topic of fierce debate. Each person will have a different point which they tend towards. Therefore, this scale is most useful in targeting demographics and those who are sympathetic to a certain world view, and identifying where on the spectrum one's own work is Cerebus Syndrome describes a shift from comedy to drama and this often also results in a shift from idealism to cynicism. Reverse Cerebus Syndrome is the inversion. When shows Zig Zag between the two, they're on a Cerebus Roller Coaster .

Portrayals of the men in blue vary greatly across history, cultures, and nations. From governors under pressure by rabid religious groups to engage in persecution against a Jewish prophet in ancient Israel , to borderline Sociopathic Heroes engaging in regular Police Brutality against criminal suspects, views of society on law enforcement are influenced by both political climate and the present news At one end of the scale (most often inside the Animation Age Ghetto and rife with And Knowing Is Half the Battle), cops are The Real Heroes . They are willing and able, like the Emergency Services , to help out others with little hesitation, and always deliver helpful lessons by the end of the episode (usually a very special one) to the show's protagonists (and the viewers). Policemen are benevolent, paternal figures people can rely on in case of dire emergency, be they victims of abuse in the family . In milder versions of this, there are additional Aesops about the police not always being around to help with every problem, an attempt at a realistic balance between cynicism and idealism in this matter At the other end of the scale, the closest thing to a "good cop" is a Knight Templar Rabid Cop . Most cops are corrupt and brutal thugs who enjoy terrorizing and brutalizing the civilian populace. If they fight against crime at all, it is either a clash of Lawful and other evil or for the bidding of a rival crimelord. In milder versions of this, cops are generally portrayed as bumbling, corrupt, and ineffectual , as well as Lawful Stupid , but generally well-meaning, with occasional Inspector Javerts and Rabid Cops peppering the mix. There are also settings that mix the two , with the cops that aren't useless being dirty as all get out. Quite a lot of media from the counterculture movement or groups with similar opinions in the 60's and 70's tend to fall firmly on this side Generally, shows with law enforcement members as protagonists sit somewhere near the middle of the scale, with both a few Wide-Eyed Idealist cops and the occasional Dirty Cop , Internal Affairs Javert with a Rabid Cop (sometimes one of the protagonists) thrown in for good measure, while shows with criminal protagonists or set in tyrannical regimes tend to sit somewhere towards the negative end of the scale Compare Jurisdiction Friction for other scales within Law Enforcement itself Batman </ has been

Hot Fuzz they do end up coming for the criminals in the Ancient

Conspiracy at the end and Angel is portrayed less as a contrast to a world of bad and corruption and more of a lighthearted contrast to the ineffectual, politically correct bureaucracy of the other bobbies.

The Shield </, of course, as aforementioned, sits at an unusual negative end of the scale. Given that it was inspired by the breathtakingly awful Real Life , it really couldn't be expected to go any other way.

Arlo Guthrie tends to slide between the center of the scale and cynical, with officer Obie/Odie in "Alice's Restaurant" being competent and a friend, though ultimately useless to the system when it comes to convicting Arlo and friends for littering, and the unnamed cop later in the song being a little abrasive at worst. "The Motorcycle Song" (the long version) features Arlo telling the audience that he landed on a cop car and squishing the cop (he just fell 50 feet off a cliff on a motorcycle) inside without showing a grain of remorse or guilt , though this is somewhat debateable due to the "you've got to sing [The Motorcycle Song] with that kind of enthusiasm, like you just squished a cop!" line, which can be taken as either nervousness or... well... actual enthusiasm.

The S.W.A.T. </ game series leans very heavily to the idealistic end, given its focus on being a simulation of a By-the-Book Cop SWAT team . Police brutality can occur if the player approaches challenges carelessly, but then you're always heavily penalised for not following protocol. The use of less-lethal weaponry is particularly emphasized in the fourth game . (That installment's tutorial even mentions that SWAT functions primarily as a life-saving organisation, not an armed cleanup force.) Getting a civilian killed by provoking a suspect or shooting a civilian dead results in an instant mission failure, while abusing deadly force against suspects (especially without warning) adds penalty points.

The police in KateModern </ are generally fairly incompetent, provoking one Serial Killer to remark "What does a person have to do to get arrested around here?" When they do</ arrest anyone, it's always the wrong person, and the whole legal system is manipulated by an evil secret society anyway. Interestingly, it's only the English police who are portrayed this way; the French police, while still incompetent, aren't corrupt.

The old Action Man (1995) </ cartoon was rife with examples at the more positive end of the scale.

Real Life in modern times is somewhere in the middle of the scale. There are some cops who are nice and just do their jobs, some cops who are corrupt and brutal, and everywhere in between.

The sliding scale of Like Reality Unless Noted charts the degree to which a work of fiction set in what is ostensibly a "modern", Earthly environment departs from Real Life . It starts with the application of the Celebrity Paradox , through to such things as the fictional President and a half-way compromise with the Anonymous Ringer , through to literal Urban Fantasy and the exclusion of certain controversial subjects such as The War on Terror Compare Plausible Deniability , Mohs Scale of Sci-Fi Hardness . When a work starts low on the scale and then jumps, The

Series Has Left Reality

Alternate History Modern In Setting Only / Next Sunday A.D. Like Reality, Unless Noted Real-Person Fic Real Life

The sliding scale of muggle involvement measures how much impact ordinary people have on the plot of an urban fantasy story. The lowest level of muggle involvement is when there are no muggles in an important role at all, or just one or two token muggles. Instead, every character with a large impact upon the plot is part of the supernatural underworld. However, more important muggles may show up in the first few chapters before the protagonist's Call to Adventure . The middle ground for muggle involvement is when the plot is clearly about the supernatural but muggles and muggle institutions clearly impact the plot. The police might be unaware of magic and thus be unable to solve the murder of a high-profile wizard, but their investigation still has an important effect on the plot. An attempt to gather a set of McGuffins might be hindered by the fact that several have already found their way into museums or private collections. At the high level, muggles drive the plot. They frequently cause plot-significant events for reasons entirely unrelated to the supernatural, and even supernatural beings spend a lot of time worrying about purely mundane things. For the purposes of this trope, Occult Detectives , Monster Hunters and other characters who have no supernatural abilities but are considered unusual because they have seen through The Masquerade are considered to be honorary supernaturals. Anime & Manga Film Literature Live-Action TV Western Animation

This is the scale which tries to encapsulate how abusive and not-so-abusive parents' behaviors towards their children are judged by writers. As some authors like to remind you that a single bad day makes you evil and some others think that teenagers from 13 and up should be left to fend for themselves , this can create serious Values Dissonance . The usual examples of said dissonance usually consist of this: mothers tend to be portrayed more sympathetically than fathers (unless they have a career); the protagonist will usually have an excuse or be forgiven for the neglect that befalls their children; a dad or a mom has a much smaller chance to be seen as a villain; the dad who left the mom and the child fending for themselves and died a hero in the war becomes much more beloved than the mother who tries to prevent the child from staying up too late; and neglectful parents who let their children do whatever they want with no ill consequences are usually more popular with a young fandom than a rightly Overprotective Dad . It also complicates matters if the parents have more than one child (especially if one is adopted and they are treated more as guardians than parents) and treat them on a very different level. Their behavior might belong on a different category depending on the child. A high level of parent-shaming is usually a warning sign for The Woobie , and a high number of these parents is usually a warning sign for a Crapsack World . Note that it can include older siblings and caretakers behaving as parents would No examples, please, as it is too subjective! See mild and comedic examples of Overprotective Dad , Knight Templar Parent , Knight Templar Big Brother , and Hands-Off Parenting . Anime and Manga Literature Live-Action TV Video Games Web Original Western Animation This is</ a big deal, at least for the writer. The character can remain officially sympathetic, but he has got to pull a Daddy Had a Good Reason for Abandoning You , or a My God, What Have I Done?

At this point, they are deemed redeemable, things may improve and everything may be fine, but the bad memories will never</ fade. If they aren't redeemed, expect the parent to cross to level 4, the child to forgive them while acknowledging implicitly all this damage, or the parent and the child to be estranged. See (usually) examples of Overprotective Dad , Knight Templar Parent , Knight Templar Big Brother and Hands-Off Parenting . May still cause Designated Villain complaints, even among people whose views do not get much farther from the author's.

Just as the Sliding Scale of Idealism vs. Cynicism determines the 'mood' of a series, this scale determines how much a particular series is unlike reality in relation to the natural laws, general conditions, and probabilities of Real Life . Stories also vary greatly in their realism concerning human behavior, but that trope has yet to be created. There are cases where the writers believe in something which most of the audience consider unrealistic; these should be judged according to the audience' standards, for no one knows exactly what a writer believes. There are cases where they got their facts wrong. If it's obviously deliberate laziness, the work deserves a place at the fantastic end, even if it's unintended There are also stories in which the precise cause of things is never delineated: both a naturalistic (positivist) and a supernatural explanation is possible. Not to be confused with Mohs Scale of Science Fiction Hardness - a time-travel story with rigorous rules can be fairly Hard but decidedly Fantastic, for example. Sliding Scale of Like Reality Unless Noted charts the degree to which a work of fiction set in what is ostensibly a "modern", Earthly environment departs from Real Life . A story's way of dealing with Back from the Dead can often be a very good - but not the sole or final - indicator: Mundane: Death is final. No one ever comes back from the dead. The existence or non-existence of sentient extra-terrestrial life is another indicator of where a work might belong on the scale: Some works can rank one or two steps up or down this basic scale. Please list examples in an alphabetical order. There is nothing that cannot be explained by contemporary science and nothing ever happens that could not conceivably occur in Real Life as we know it. A Dream Sequence is the only way in which the otherwise hyper-realism in the

work can be subverted . The irrevocable and often brutal nature of mortality is often emphasized , if not the center-point of the story. The depiction of social injustices, such as exploitation of the poor on behalf of the rich, is another common thematic element. Films in this category may often be pretentious creations , often trying to be True Art . About the most 'fantastic' thing that happens here is a Contrived Coincidence or two designed to bring as much bad luck (or good luck) to the characters as possible. Science Fiction and Fantasy are by definition ruled out from belonging to this category.

Kitchen Sink Dramas typically fall into this category as does War Movies , particulary when depicting real-life wars from the perspective of those who either fought in it or the civilian population affected by it .

The trappings of realism are there. The technology and the settings The depicted do have their counterparts in, or are based on, Real The Life as we know it, but the presentation is over-the-top . The On very, very, rare occasions there may happen what would The reasonably seem to be supernatural events, but we are never The given a full explanation of what actually did transpire . The Depending on the genre, expect either lots of crazy stunts The and polished dialogue, and the notion of realism will almost The certainly take a back seat to the Rule of Cool , Rule of Funny The , or the Rule of Sexy . American Soap Operas also fit, because The reality makes a lot</ of exceptions for the Rule of Drama The world is mostly semi-realistic, but it does contain more than The just a few minor fantastic hiccups. It may be 20 Minutes into The the Future or contain some Applied Phlebotinum which doesn't The quite fit into conventional science. Supernatural events may The occasionally happen, though they may fall under Maybe Magic, The Maybe Mundane . Some 'hard' science fiction shows that are The based on extrapolations of existing technology may fit on the The upper end of this

Horror , Low Fantasy , Magic Realism , "Hard" Science Fiction ("Softer" science fiction with only a few unrealistic elements may also qualify.) The rules of the real world, as we know it , no longer takes precedence, or may in some cases no longer be applicable at all. Divine intervention, magic or superscience are the prevailing paradigms by which a world in this category functions. Creatures exist that shouldn't exist in Real Life , and the setting might not take place on Earth at all. What ultimately sets Fantastic</ apart from Surreal</ is that these paradigms do have a certain internal consistency

Most Speculative Fiction , including most Comic Books , Fairy Tales , Heroic Fantasy and "soft" Science Fiction The world has (almost) no rules or internal logic whatsoever. Anything can (and frequently does) happen, often with little or no explanation. Expect things to run on nonsensoleum . A Gag Series will usually fall into this

The setting, costumes, lighting, and sound of a production are critical in setting its tone and mood. One of the most fundamental stylistic choices is where to position these production values on the sliding scale of shiny vs gritty. Stereotypically "shiny" elements include plastic, chrome , precious metals, gems, glass, light, fine woods, fine fabrics, bright colors, pastels, pop music, classical music, and ballads (power, or otherwise). "Gritty" elements include

dirt, rust, dust, blood, iron, broken glass, darkness, rough plywood, burlap, deliberate monochrome , sepia , hard rock, punk rock, and heavy metal. But context is everything. Many choices fall somewhere in between the gritty and shiny extremes; hence, the "sliding scale". This is one of those scales where productions tend to be uniform throughout rather than varying from scene to scene. Furthermore, there is a tendency for a work to head toward one end of the scale or the other to take advantage of the evocative power of shiny or gritty. The occasional contrasting scene is used just to highlight the overall tone. A contrasting tone may be used to emphasize a position on the Sliding Scale of Idealism vs. Cynicism . Some Shoujo Manga have immaculate settings inhabited by The Beautiful Elite but are very cynical. Gritty tones are in general easier and cheaper to produce in live-action than shiny ones, so low-budget or quickly-made films are more often in a gritty style. Big budget films, especially escapist films, sometimes go for shiny just because they can. Gritty Animation and Video Games tend to be high-budget, since that's a lot of detail to draw and render. This is one reason Real Is Brown . Less "realistic" games and ones for less powerful systems tend to be either mid-scale or shiny; people who like shiny often like games that are retro or Retraux . Compare with Slobs vs. Snobs . Gritty: Both: Try to post the examples in the shininess and grittiness order, not at the bottom of each category.

How does the work present itself? Do the characters appear to treat their current situation with the utmost seriousness and urgency or do the actors seem to be having way too much fun with their roles? The answer depends on where the series falls on the Sliding Scale of Silliness Versus Seriousness. A largely silly series relies heavily on the Rule of Cool , the Rule of Funny , and the Rule of Fun . Much of the dialogue is made up of cheesy one-liners, and emotions and reactions are often exaggerated or otherwise played for laughs. No Fourth Wall and Negative Continuity may also be present, though not required, and it is possible to use both tropes in serious works as well. Expect World of Ham series to often fall squarely on this end of the scale. It should be noted that when a creator creates a piece of media, they often take their work very seriously and want it to be good. But that doesn't mean that the work in question has to take itself</ seriously. It should be also noted that this scale is completely independent of the Sliding Scale of Idealism vs. Cynicism . It is entirely possible to have a work be idealistic but retain the same level of seriousness throughout, such as in The Dark Knight </. Likewise, it is equally possible to have a very silly and campy work be downright cynical throughout, such as Family Guy </ . Careful fact-checking might be a good indication of where the show lies on the scale. If the person clearly did do the research and the situation presented on the show at least closely resembles how it would happen in Real Life , then most likely the show takes itself seriously. However, it should be noted that just because they didn't check their facts, doesn't mean that the show was supposed to fall on the silly side. It could just as easily have been the result of carelessness or ignorance as to how things actually work on the part of the writers, thus leaving the series still serious, but filled with plot holes and factual errors. On the other hand, if the presentation is clearly done as a parody, or presented in such an outlandish and over-the-top manner, then the show itself probably doesn't take itself too seriously. This is also not a measure of quality. Many works are silly, but highly acclaimed, and many works are serious, but panned. Conversely, many works on the serious

end are highly acclaimed, while many silly works are awful. Many works that are on the serious side but are considered So Bad, It's Horrible have been criticized for taking themselves TOO seriously, thus becoming humourless, po-faced and pompous on top of their other faults, and many people believe that such works would have been more enjoyable had they been more camp , sometimes leading the creator to attempt a Parody Retcon . Conversely (although relatively rarer), it is possible for a show to not take itself seriously enough, which can affect the audience's ability to immerse themselves in the drama; if the writers and characters obviously don't take what's happening seriously, why should the audience? True to form, works that are So Okay, It's Average can fall on either side of the scale, with slight silliness being moderately prevalent. Many fan bases tend to take the object of their fandom more seriously than the casual viewer and often vocally demand that the show reflect this; see Maturity is Serious Business for more on fans of this mindset. Pandering to the Base can pose a problem, however, if as a result of this a show initially quite 'silly' begins to take itself too</ seriously, with the result of turning off casual viewers. If silly scenes and serious scenes are back-to-back to each other, beware of Mood Whiplash . Cerebus Syndrome can occur if the work starts out on the silly side, and eventually ends up on the serious side over time. Some concepts can confuse the scale, such as Black Comedy — comedy is generally more silly, but the subject matter of Black Comedy is dark and serious. Compare and contrast Bathos when the story zigzags between silly and serious and/or when the story can be both silly and serious. See also Silliness Switch , which is designed to slide a work towards the silly end. For shifts towards silly or serious, see Lighter and Softer , Denser and Wackier and Darker and Edgier .

Although the terms " Dystopia " and " Utopia " are opposites, between the two there are a number of intermediate points. From straight dystopia, in which everyone is so miserably unhappy that it's impossible to believe that anyone could tolerate it for a second, to utopia, which is essentially heaven on earth, a chart might look as follows. Those between the poles are universes which, while oppressive to varying extents, are not much different from any real country: 1984 </ or We </ - hell on earth with nasty punishments for those who fail to toe the line.

Some video games attempt to portray a realistic, convincingly-sized world for players to explore and experience. At the same time, the gameplay experience is still the most important thing, as games that are intimidatingly large could also end up not fun to play, not to mention from a technical standpoint, a big game world can be taxing on a game's resources. So game companies trying to balance believability with fun try different techniques to make a convincing world There's many ways to do this, each with their pros and cons. Done wrong, the world can be unconvincing, or the player might be intimidated by the sheer size and scope of it all. Done right, the game is both fun to play and immersive. Here are the major techniques game companies tend to use to try to make their worlds feel believable without sacrificing gameplay

Many video games, striving for maximum interactivity, allow players to go to any part of the world in real-time, allowing them to explore everywhere and trying to give the feeling that the world is a real,

livable place. However, because the world must be scaled to be convenient for gameplay, this can result in the world feeling very small, since each individual area must be small enough for players to explore and go everywhere, and they have to be able to easily travel from place to place in real-time. This results in, for instance, towns with maybe 20 townspeople and 10 houses and 1 store, for instance, and other areas that might look like real places but only so long as you don't roam through them and see how small they really are. This can be a believability problem for story-driven games.

A less common method is to have a map and let players visit segments of it, implying that the world itself is in fact massive, but players are only exploring the story-important chunks of it. The individual areas may or may not have a realistic scale (they often tend not to), but the map itself lets you click on the area you want to warp to next, while showing a bigger world than you can actually visit, with the visitable areas being the only ones selectable. It essentially says that the world is big, but you're visiting only part of it. Most common in action games.

Many RPGs go for a very specific method of making their game world feel large. When you're in a town, things are to scale (and the result is that the towns themselves tend to feel small), but when you're outdoors, you're generally on an overworld map, in which things are not at all to scale and everything is made smaller, to give the feeling that you're traversing a large map. The map itself may not be physically large, but because it's a clear symbolic representation of a large world, the world can still feel big.

This is a technique many modern games use. Buildings are as big as they are in real life, cities are, and so on, but you the player are limited to a specific path and you cannot explore the world outside that path, but you can certainly see it. Buildings, mountains, etc. are often in the distance, but you can't ever reach them, as they're there just to make the world feel huge. The distance you physically travel to get from place to place is also realistic within the limited scope you can visit of the world. This approach is favored by Uncharted </ , which lets you explore limited parts of jungles, towns, caves, and so on, but has the places you can't reach visible in the background to make them feel believably large. This style tends to be used mostly in linear games, as it would be rather questionable in an open-world game.

There's also making a large world but locking most of the doors or simply not allowing players to enter most of the buildings. So you travel the distance it should realistically take to go from one side of a large town to another, but because you can't enter most buildings, the company is spared the problem of having to design their interiors. Plot/gameplay-important buildings are likely to be somehow marked, or otherwise made obvious. Some games - notably, the Silent Hill </ series - go for a somewhat different approach, in which players can explore realistically-sized buildings but most doors are locked.

Very very rare for one simple reason: It's extremely difficult and time-consuming to make! It also can result in a world so massive and open that players can feel intimidated. The Elder Scrolls </ games are known for this, particularly the second game, but later games decreased the size and scale of the world while still keeping it

massive by video game standards. Making such a game often requires recycling assets - for example, creating a handful of houses (interior and exterior alike) and reusing them. Any game with an enormous scale does this out of necessity.

Now bear in mind that there are hybrids of these approaches in existence, so these 6 styles are only general rules and not the only way to create the illusion of a convincing world For example, the NES game based on the movie Who Framed Roger Rabbit (because the world is smaller than equivalent real life locations would be) A Sub-Trope of Sliding Scale of Content Density vs. Width The Legend of Zelda </ series does this all the time. Towns are small and might have only a dozen buildings, if that. Forests, fields, mountains and so on are all small compared to what they would be in real life. Because all travel is in real-time, rather than the world being symbolically represented, the result is that it can feel rather small, and not like a world anyone could actually live in. Even as a single country, it's small

Dragon Age: Origins </ uses this. You can often also see mountains and buildings stretching into the distance to make each area feel large, but the map lets you warp between them. To give the feeling of genuine travel from place to place, a trail is drawn on the map leading from the current area to the next, and the trail is always drawn at the same speed regardless of distance, letting farther away places feel farther away. There's also a city that is so large it's divided into multiple sections that are visited separately via map, giving it the feeling of being realistically large while still limiting the player only to the important areas.

Many RPGs, such as Dragon Warrior<// Dragon Quest </ and even newer ones like Namco's Tales Series </ .

Half-Life 2 </ uses this to make City 17 look like a real city, but most of it is blocked off by rubble or other things (including tons of locked doors) preventing you from exploring. The rest of the world also stretches farther into the distance than you can visit.

Deadly Premonition </ takes both the "world is big but most buildings can't be entered" and the "buildings are big but most doors can't be entered" approaches. The game takes place in a realistically-sized "small" rural town that would be a small town by real life standards, but is large by video game standards considering how much there is to explore.

The Elder Scrolls </

Assassin's Creed III </ lets you visit parts of the map, the map being the east coast of the USA. The locations are the cities of Boston and New York which are bigger than realistic scale but with locked doors everywhere. The frontier is a Real-time, small scale world version of the New England countryside. Davenport is a very small town made up of less than a dozen individuals that you all personally know, so that its map is of realistic scale with tons of buildings enterable. The mission exclusive parts like Charleston and Captain Kidds treasure locations are of realistic scale but with most of the world in the background.

An antagonist can be classed on three orthogonal parameters: How much

danger they, or their plans, pose. This is a method of quantifying the first one. You can class various villains on tiers of the type of threat they present to the world and the heroes. The Sorting Algorithm of Evil will usually ensure that the hero's successive opponents will each be higher on the scale than the last, but, due to the SAoE's caring about effectiveness as well as scope, not always. In general, the hero will also have the same potential for destruction as his villains, but usually is slightly below them, because underdogs are more relatable. Having a wild range of villains may help avoid causing a feeling that The World Is Always Doomed because Evil Only Has to Win Once . Having a hero with a Story-Breaker Power usually upsets this dynamic, or forces a jump in villain up the scale. Most series that lean towards the realistic side of the scale do not venture beyond villains that are Planetary Threats , as villains that are Stellar Threats and above tends to put a lot of pressure on Willing Suspension of Disbelief . Shifting too far up the scale, especially over a short period of time, is an easy way to Jump the Shark . When talking about some villains, this is very much related to how much they can abuse the Kardashev Scale for death and maiming . Contrast with Sliding Scale of Antagonist Vileness , when you're talking about the audience's reaction to a character rather than the threat they represent, and Sliding Scale of Villain Effectiveness when talking about how well they succeed. Villains who learn that they are rather low on the scale may aspire to climb higher. : The villain poses significant harm to a single person or small group of persons or a localized area. : Villain possesses capabilities to do significant damage to or destroy a city. : Villain wields the capacity to be a significant threat to a part of a continent or landmass. : Villain can destroy a country or take it over and turn it into a Crapsack World . The path to Diabolical Mastermind tends to end here, but not always. : Villain has the capabilities to destroy or take over an entire continent or even an entire landmass, with the ability to turn it into a Crapsack World . : Villain poses significant threat to the world at large, up to and including world domination and/or Earth-Shattering Kaboom . In worst case scenario, is an Omnicidal Maniac . Usually via large army, colossal superpowers, or a Doomsday Device . Evil Overlord tends to describe them. A fictional Emperor is likely to be portrayed as a villain of at least this threat level. At this point, you should start checking out Apocalypse How . Forces able to credibly threaten an entire solar system up to even an entire star cluster, but probably not able to dominate a galaxy. Galactic Conqueror starts here. : The Villain has the capability to destroy or control the best part of the galaxy. Galactic Conquerors are this threat level. : Villain can conquer the universe , or even cause The End of the World as We Know It — all of creation blinked out or ground beneath an iron boot. Dimension Lords are this threat level. Multiversal Threat : Just to one up those small-timers above, these guys won't stop at a single universe; they'll cross time and space to either take control over or just smash the entire Multiverse to pieces. See Multiversal Conqueror . : Just to go even further</ than those small fries above, these villains will not stop at a single Multiverse , but they will cross all of reality to take over or simply destroy the totality of The 'Verse / Series Franchise (if said totality exists beyond a Multiverse), taking control over or obliterating all alternate dimensions, planes of existence, parallel universes, possible universes, timelines, alternate continuities, realities, and Multiverses within said totality. See also Super Weight , which is more about measuring characters (including villains) in terms of raw

power.

When confronted with the antics of the rest of the cast, does the Only Sane Man crack a wry comment or does he sigh and put on a long suffering look ? Does a work of fiction rely on gestures, sweeping shots and visuals to get the story moving, or does it have Walls of Text and loads of conversations ? Naturally, this scale is completely independent of the other sliding scales. It is not completely dependent on the medium, either, though the medium affects how the balance is perceived. Sweeping shots and visuals in TV and film translate to descriptive paragraphs in text and radio. The examples which focus on the visuals go on the top, and those that depend on dialogue go to the bottom.

Simply put, a character is tied up by the enemy for whatever purpose, and when the most dramatic (or the most humorously opportune) moment arises, reveals that they slipped out of their ropes ages</ ago. Can also be done with handcuffs. Often done to indicate an Escape Artist A variation is where they reveal that they could</ have slipped the ropes, but chose not to: this is Play-Along Prisoner Compare and contrast Breaking the Bonds , which is generally much less subtle

Something slick like oil, or slippery like a jar of marbles, is poured out on to a floor, and a targeted character or vehicle slips, skids and falls/crashes, typically backwards Seen often in broad physical comedy , as well as vehicular action sequences. In chase scenes, it is guaranteed that when small spherical objects are scattered, the enemy in chase will step on them and immediately fall down, giving the hero ample time to escape A standard cause of The Pratfall . In more cartoonish variations it's accompanied by a common Stock Sound Effect Banana Peel is a subtrope of this. When done from a car against another car, it's usually an Oil Slick . Contrast Sticky Situation

So you have a character in the shower (or bath) and they reach for a bar of soap. The soap proceeds to be very uncooperative, slipping out of the person's hands. Occasionally, it happens when someone is washing his (or her) hands. Often seen as part of a black comedy prison sexual abuse scene, or any time a Shower Scene gets Played for Laughs , really. (Especially when the victim slips when he's looking</ for the soap.) A bar of soap can also become a variant of a Banana Peel when stepped upon.

Tropes dealing with anything slippery.

You've probably seen it before: the age-old gag where someone trips up or slips on something (or, occasionally, is pushed) and ends up landing in something disgusting It's often animal poop or garbage, but it could be anything as long as it is significantly gross. A common variation is tripping and landing in a nest of skunks, which, while not gross in themselves, will inevitably spray the unlucky character This is a common way of villains, especially in comedies, getting defeated (especially if they were arrogant), but good guys can have this happen to them too, especially if they're

unlucky or clumsy . Also, if anyone visits a farm who is either clumsy, inexperienced with farms/the country , or both, expect them to trip into either manure or rotting food scraps. Sometimes, for extra comic effect, the accident might happen right before or after the unlucky one is told what the stuff is. They might also try to jump over the stuff, but fail miserably. Usually, the one who lands in the gross stuff will be understandably grossed-out, especially if they're a Neat Freak , but sometimes they don't mind (see Filthy Fun and The Pig-Pen) Sub-trope of Slapstick and Toilet Humour . Sister Trope to Trash Landing (which is falling out of the sky</ and landing in garbage). May lead to Covered in Gunge or Covered in Mud . See Carrying a Cake , Banana Peel and Staircase Tumble for other gags related to tripping/falling. Can overlap with Slapstick Knows No Gender if a woman falls into the grody stuff. Contrast Urine Trouble , Tinkle in the Eye , and Bird-Poop Gag for when something disgusting falls onto you </

One of the first ways developed to hook a customer and make him remember a product was to associate a short phrase or sentence with it — in effect creating a Catchphrase linked to a product</ rather than a character. Like a Catchphrase , a slogan needs to be short and punchy if it's to work optimally, but long(er) ones are not unknown — during the 1980s, it seemed like some companies were trying to cram an entire feel-good mission statement into their products' slogans The best slogans have almost no inherent meaning but are memorable enough that they bring their product immediately to mind. Particularly good slogans can be used for decades</ and become permanently associated with their product. Other products change their slogans with monotonous regularity Slogans can be incorporated into a Jingle for a double punch Sometimes the punchline of a commercial can become a slogan, intentionally or not Slogans do not necessarily translate well into other languages — see Bite the Wax Tadpole . See also Our Slogan Is Terrible (for bad</ examples of slogans, some of which may be intentional) and Slogan-Yelling Megaphone Guy . Taglines are a subtype meant to advertise media series, movies, etc

A list of media originating from Slovakia or by Slovak creators.

Web Original

We've all heard of Aesop's Fables . Although very little is known about the man himself, hundreds of his stories still survive after millenia. Arguably the best known of these stories is The Tortoise and the Hare</ . In case you're one of the very very</ few people who've somehow avoided reading or being told this story, it goes as follows: A tortoise and a hare decide to have a race, and for obvious reasons the hare thinks he is certain to win. The hare has such a strong belief in this scenario that when he is halfway finished the race (or almost finished, or right at the start, depending on which version you know), he decides to have a nap, during which the tortoise passes him and wins. The, well, aesop ? " Slow and steady wins the race ." Because of the story's fame, it's no wonder it is so influential. Many modern-day works (typically for young children) have similar storylines, sometimes with more than one "hare", but almost always with only one "tortoise", usually the protagonist. The hare(s) will beat the tortoise for most of The Big Race , but then something will happen that causes the tortoise to win. The hare(s) will often be a Last-Second Showoff , and the tortoise will

invariably be a Determinator . The tortoise will likely be the blue oni to the hare's red. It's also worth mentioning that the original story has been subject to much Alternate Aesop Interpretation , the other aesop being "don't get too cocky". Sub-Trope of Underdogs Never Lose . Compare The Big Race , Dark Horse Victory , Dick Dastardly Stops to Cheat . As the trope name spoils how the race will turn out, all spoilers are unmarked.

After bearing witness to a heartfelt speech or courageous performance, one person in the audience gradually rises to their feet and starts putting their hands together for the display. The person momentarily appears alone with his decision, until another person also rises to start clapping. Three more audience members follow suit. Then twelve more, then fifty, then a hundred, then a thousand. Before you know it, everyone in the audience is on their feet, clapping and cheering. Sometimes, the slow clap is started by The Rival , indicating either a Heel–Face Turn or upgrading him from Jerkass to Worthy Opponent status Also known as a "Golf Clap". Not to be confused with Sarcastic Clapping , which is also slow, but different. It also does not</ mean a not very fast infection of gonorrhea This trope is Truth in Television . It may be preceded by Stunned Silence . Compare and contrast Only One Finds It Fun

When you turn on a Laser Sight , it immediately shows up on your target. This is because it's a laser and moves at the speed of light. So wouldn't you think a laser weapon would also (effectively) immediately hit the target? Logically, yes; but this is TV, where Hollywood Science rules. Thus, energy weapons move a lot</ slower than the speed of light (and a lot slower than bullets in the same show) and can be dodged after they are fired. Occasionally, it's handwaved by the dodger seeing the person aiming at them and going for the trigger, and moving in the split-second before they pull it Also, don't expect the lasers to do more than make victims stumble backwards a few feet , unless of course the targets are inhuman or just not very important . Speaking of knockback, an Energy Weapon in fiction will always have knockback (which is usually) and recoil (which makes no sense at all), in spite of the fact that light has negligible momentum. Finally, regardless of a laser's frequency and the medium it's shooting through, it will make futuristic zap</ noises and be visible (and glowy). Most of the complaints about laser weapons not behaving like real lasers are because their primary function in TV are not to be realistic depictions of how real energy-based weapons would work. They are merely stand-ins for "real" guns to appease media watchdogs , to establish a show as being futuristic , or simply applying the Rule of Cool . Being able to show the audience who is firing and where is yet another plus, for which the shots can be Colour-Coded for Your Convenience . In fact, the usual "laser bolts" effect looks a lot more like machine gun fire using tracer bullets (which was even colored according to nation, as in Star Wars </) and early writers' World War II experiences may have inspired the effect. There actually are "real lasers" in weapons research and development — like the and These lasers are supposed to burn through targets (like missiles) and cause their fuel/warhead to explode or their airframe to disintegrate when it hits, although this is also a continuous beam and requires some time to work. Solid-state pulsed lasers are also in development, which

fire bursts of energy and are lighter than fluid-based lasers, but harder to cool. Last but not least, the heat from a powerful laser wouldn't just burn through clothing or make a neat, bloodless, pin-sized hole. There's a common misconception that laser beams cauterize wounds, but real laser wounds are every bit as bloody as knife wounds. It can also cause the water in the body to boil, expand and rip the surrounding tissues apart, much like a high velocity bullet impact. There are also electrolasers under development, which ionize the air so that electric current can be sent along the beam's path. Ironically, all of these characteristics make lasers far more effective as weapons than their portrayal in most fiction, which is in fact the main reason that the military is developing them in the first place. It's also probably the main reason we're not likely to see realistic laser weapons in children's shows. For those keeping score, the former title of this trope (Frickin' Laser Beams, which is now a redirect to Energy Weapon) comes from an otherwise unrelated line in the first Austin Powers </ movie ("I want sharks with frickin laser beams attached to their their heads! " - and when they appear on the third movie, they are realistic lasers instead of a Ray Gun) For really frickin </ laser beams, see Wave-Motion Gun . For real handguns Bowdlerised into energy guns, see Family-Friendly Firearms . If it's Raygun Gothic , it's probably a Death Ray . When such weapons are used excessively , see Beam Spam . And when they track their target like missiles, see Homing Lasers . Often overlaps with Hand Blast for the user's convenience. See also the Laser Blade , when your lasers are used to cut things at melee range. Occasionally misspelled " lazer " in fiction, especially if the writer wants to differentiate thes fictional devices from actual lasers. Frequently misspelled "lazer" in Real Life , because people don't know better, or because it's easier to trademark names that aren't real words. In reality, the name adiation", since that's what lasers do . It helps that, by happenstance, the acronym "LASER" makes for a cool-sounding name . (It also sounds like an which lets us back-form the verb "to lase", meaning "to use a laser on".)

When someone is browsing the Internet for a date, or finally gets the picture of that sweet person they've been talking to in the chatbox. When the picture loads, it loads from the bottom up (instead of normal from the top down loading). You see beautiful long legs, nice clothes, long hair etc. The person looking at it will comment in excitement until they see the face and realize their dreamgirl turns out to be a lot less desirable. They are either ugly , a relative or someone they really hate Real slow-loading internet images tend to load from the top, although uncompressed Windows bitmap (.bmp) files will start loading from the bottom. Being uncompressed, they can be hundreds of times larger than an equivalent compressed image and, for some reason, are stored bottom-up (at least traditionally). However, BMP files are almost never used on the Internet (in fact, standards nowadays outright forbid</ the use of BMP files) Can also apply to various other things. But the key is the Slow-Loading Internet Image promising something sweet but getting a twist when done loading. The loading can also occur horizontal, basically any way the show wants it to make the scene funny/exciting Something of a Discredited Trope in light of just how much Technology Marches On ; most internet connections these days are more than capable of handling adequately-sized images. These days, if someone encounters one of these, it's most likely an issue on the server-side, though it theoretically could still happen to someone using a data

connection that's being badly throttled. A more modern equivalent is slow or choppy video buffering, which is still very much an issue for most

A cousin to the Big "NO!" , a Slow No is one that happens when Bullet Time is used at the same time as a character going into denial. Usually used in places of war, explosions, just after death...yeah, it tends to be morbid. And occasionally subverted. Using it as a parody or in Mundane Made Awesome sequences are becoming increasingly common than playing it straight however, making it a Dead Horse Trope . (It's a time-tested source of Narm , since it tends to make the screamer sound kind of like a Wookiee , which is why it's more often Played for Laughs these days than played straight.) Not to be confused with Slow Mo . Can happen simultaneously with a Slow-Motion Fall .

A pacing problem that occurs when the beginning of a story is so front-loaded with bland exposition and details about the world contained within, that it takes forever to finally reach the interesting part of the story that puts all of that information to good use. In other words, this is a specific type of Infodump that occurs at the beginning of a story This can understandably take a while to get through, and you may well have lost heart before you manage it. It might be worth sticking around though: there are more than a few works that are seen as being one of the best in their genre/medium that suffer from this trope, only revealing their true greatness once you manage to slog through all the setup. But that tends to be the exception, not the rule; and either way, the writer probably doesn't do themselves any favours by boring their audience at the start. As many writers will tell you, the first line of a book will often decide whether it gets published or not Sometimes, though, this pacing can be used deliberately . Maybe the writer wants</ to establish the hero's former life as slow, tedious, and mundane before they discover their Secret Legacy . Or, in the case of historical fiction, the writer wants to ensure that the reader doesn't need the Encyclopedia Britannica close to hand to understand what's going on. But, once again, deliberately making the beginning of your story boring is a very</ risky game; it can take quite a tenacious audience to deal with this in the blind hope that your story will eventually have things happen in it. And if their patience is wearing thin by that point, their reaction may be less happiness that such tenacity was rewarded and more annoyance that you made them wait for so long A lot</ of internet works such as webcomics or fanfiction can demonstrate this as a natural consequence of the creator learning to cartoon, plot, and write dialogue by the seat of their pants Compare to Padding , Early Game Hell , Filler , Growing the Beard , Prolonged Prologue , Developing Doomed Characters , Cosmic Deadline , and Arc Fatigue . Often goes hand-in-hand with Checkpoint Starvation . It's also a common effect of Easing into the Adventure Contrast Lost in Medias Res , where a show starts with too little</ exposition, and Ending Fatigue , when it takes forever to end</, not start. Also contrast Action Prologue , which throws you into the action from the get-go. In Video Games , the endgame version is Disappointing Last Level (although a game can suffer from both). Not to be confused with the , which is aimed at curbing teen suicides

Something's starting to happen to one of our characters — maybe he's been infected with some virus ... Maybe he's going crazy ... Maybe he's just gaining weight . Whatever it is, it's usually not directly explained, and we don't see him changing on-screen.. It's just that one day, he looks a little bit... off And each time we see him after that, the change is a little more noticeable, usually until it reaches either hilarious or horrific levels As mentioned above, this is nearly always either Played for Laughs , or Played for Drama as Transformation Horror A Super-Trope to Virus Victim Symptoms and a Sister Trope of Transformation at the Speed of Plot . May happen with Evil Makeover and Madness Makeover . What Monster Delay is to a Big Bad , this is to a protagonist/major character — either way, the audience doesn't see the creature in all their "glory" until the endgame. Contrast Oblivious Transformation , where a character isn't even aware of the charges to their body May also overlap with Metamorphosis , which is often a gradual process And Then John Was a Zombie is sometimes the end result See Fisher Kingdom (more specifically the second variant) for when simply being in a certain place can have this effect

Slut-shaming is the act of making someone feel bad for their promiscuity, by linking higher promiscuity with lower worth as a human being. Slut-shaming is directed against women far more often than against men , not least because of the cultural perception that sex is something men do to</ women . Thus, one 19th/20th-century Sino-European Double Standard holds that a man who has sex is just "being a man" , whereas a woman who has sex is Defiled Forever —a font of moral corruption who will make the people around her lazy hedonists. Yet, the men are often free to admire or even have sex with the "sluts" while despising them at the same time . An alternative view, extant since the 19th century, is that because men are sometimes seen as innately slutty , calling one a slut doesn't mean much. Although the slut stereotype is not commonly applied to men (at least straight men - stereotypes/stigma associated with women are often also applied to men who have sex with men), that is not to say that it cannot or does not directly harm them as well. For example, if men are always willing to have sex , then a man can't be sexually assaulted, because how could he not want it? Indeed, a man who is shamed for sexual promiscuity is more likely to be painted as a predator than as a slut. "Higher promiscuity" is extremely relative from one society to another, and often from one person to another, depending on age, race, class, etc. What you wear, how you act, what you do, whom</ you do, all of them can be ammunition against you. Usually the basis of the accusations (or allegations) of sluttiness are: Characters will heroically engage in Slut-Shaming in works that play the My Girl Is Not a Slut trope straight, whereas Slut-Shaming will be played unsympathetically in works that insist promiscuity is good and say My Girl Is a Slut . Those who engage in Slut-Shaming doubt the existence of the Ethical Slut and often are portrayed as Moral Guardians who insist Sex Is Evil . Sensible Heroes, Skimpy Villains is a form of sister trope. See also Madonna–Whore Complex and My Girl Is Not a Slut . Compare Sour Prudes and Sex Is Evil, and I Am Horny . Compare All Men Are Perverts and All Women Are Lustful , which when applied judgmentally can be considered a society-wide form of slut-shaming leveled against an entire gender. Contrast Virgin-Shaming when a character is ridiculed for being a virgin instead of for not</ being one. (However, the two tropes can

overlap, in defiance of all logic and reason .)

Please refrain from virgin-shaming when adding examples. If people can pursue casual sexual experience without being judged, they should also be able to choose abstinence without being labelled a "prude".

A (usually male) character with a comically over-inflated image of himself. He thinks he's smarter than everyone else, thinks he's a real ladies' man , thinks he's cool, thinks it's all about him , but both his fellow characters and the audience know that it's all in his mind. Often occurs in conjunction with a Show Within a Show . If the TV Series runs long enough, the writers usually devote one episode to a Big Ego, Hidden Depths examination of the character. Expect this guy to be a victim of Pride . Said characters often insult or look down on those who have far more to be proud of and who generally flaunt it less. When they are faced with such characters, whether in a competition or in a comparison of abilities, it tends to be humiliating, and might even be a much needed reality check. Also, don't expect these characters to handle criticism (either of them or of the abilities that they're egotistical about) very well. If they are the main character on a show, we're dealing with a species of Unsympathetic Comedy Protagonist . If the writers</, not the character (though he can fit this trope, underscoring his unpopularity) think the character is amazing, we have the Creator's Pet . Compare Extraverted Nerd (if the character is a nerd and unaware of it), Miles Gloriosus (if he makes a big deal of how heroic and badass he is, but runs at the first sign of real danger), Know-Nothing Know-It-All (if he claims to be a genius, but is incredibly dim or just misinformed), Giftedly Bad (if he thinks he's a brilliant artist but is actually dire) and Boisterous Weakling (if he claims to kick ass only to get his own ass constantly kicked). Contrast Insufferable Genius (where he actually has the skill to back himself up) or Almighty Janitor . Every Year They Fizzle Out and Fake Ultimate Hero , meanwhile, are when everyone else</ are the ones with a high opinion about the person in question. Often a Large Ham . In more serious works, he will often be the victim of Break the Haughty . The Smug Snake could be considered a villainous variation , and the Narcissist is this taken to the extreme . Might be a Paper Tiger or even a Dirty Coward . The opposite of this trope is Heroic Self-Deprecation , where the hero actually does have many notable achievements, but doesn't believe or refuses to believe that he is loved by many, and mostly refers to himself in a negative manner. Also contrast Humble Hero , who achieved a lot, but is not nearly that big about it. Contrast with the Jaded Washout , who knows only too well how pathetic he is. Not to be confused with the other kind of ego . Obviously, given that this is a very controversial trope, No Real Life Examples, Please!

Small Role, Big Impact is when a minor character — an "Under-Five" (lines) player, as they used to say — who, through their actions or words, has an impact on the story far, far beyond what such a minor character ought to have normally. Note the difference between this and a One-Scene Wonder , a character who has limited screen time but their actions or words have a huge impact on the audience</ This can occasionally overlap with Unwitting Instigator of Doom , One-Scene Wonder , One-Shot Character , Posthumous Character , The Ghost , Spear Carrier .

Also see Plot-Triggering Death , where this person's end is the beginning of the story. An Unknown Character takes this trope to its logical conclusion by not having them appear at all Compare Chekhov's Gunman , someone who looks insignificant who turns out to have some significance to the plot Contrast with Minor Major Character , which is a main character who has little if any plot relevancy, or very little screentime

"Pueblo Chico, Infierno Grande" in Spanish is an old and famous saying in Latin America , which is about a Small Town that has its own drama since everyone knows each other, and so when something happens (usually something bad</), the whole town gets the news and everyone takes sides. If a couple gets into a fight and later get separated, people take sides with either of the ex-lovers. If someone dies, Everyone Is a Suspect . If a rumor is spread, it's a matter of days (or even hours) before the whole town gets the "news." This kind of plot is very much used in Latin America in Telenovelas , where all the action occurs. Also can be used in other media as well in other times, being also used in historical drama series and movies, before the big cities were founded. The plot is mostly Played for Drama , can be done for Laughs or Horror too, but mostly for Drama. However, it's not exclusive of Latin America, having various other similar plots like this one around the world. The Spanish saying is very older and known, but the media goes Older Than Television : There're a couple of movies made in South America with this name, a Chilean one (1925) and an Argentinian one (1940). This is not just famous in South America; Japan also has this phrase, but it refers not only to small towns but to the small communities each of us formed to (close family/friends circle) and how our actions can affect our circles for good or worse. Sub-Trope of Small Towns . If this is Played for Horror , then it's a Town with a Dark Secret , the Sister Trope . If this happens in the United States, then the "big hell" occurs in Everytown, America , except if it's Only in Miami . Not to be confused with Small Town Rivalry , which is about two towns</ in conflict. See also Close-Knit Community , which is also about small towns and communities, but not necessarily has to do with drama.

Some Speculative Fiction writers like to keep close to home, limiting their characters' travel to within their home galaxy . For one reason or another, no one is allowed outside the galactic borders Other works of fiction, however, think bigger. Much, much bigger, to the point of being on a universal scale. These works of fiction do not limit their characters to travel within their own galaxy, allowing at least some people to travel freely from galaxy to galaxy, or at least do it without too much difficulty to make it worthwhile If an entire civilization is capable of this, expect them to be pretty high up on the Kardashev scale Contrast to The Milky Way Is the Only Way and What Other Galaxies?

When used in an actual broadcast, this tends to go best when said host is schooled enough in Self-Deprecation to realize that he comes off as this, and uses it to make more jokes, in which case he's often a Jerk with a Heart of Gold .

Sometimes a good joke has a great punchline but none of the characters are witty enough to say it, or a story can't move forward without a crucial skill or fact which none of the characters could

possibly know. What's an author to do? Toss one of them the ! Characters who catch the Smart Ball become knowledgeable regarding some trivia or discipline needed to deliver a punchline, discover clues, or implement a foolproof solution to whatever problem they face when normally such attempts fail . They may also become far better at effectively communicating information, allowing several characters to put their clues together to discover the villain's Evil Plan . Using the Smart Ball is not necessarily bad . While it can</ be an Ass Pull if The Ditz suddenly demonstrates a keen skill at molecular biology , it's not much of a stretch to imagine the Jerk Jock also knows the results for every Super Bowl since 1966. If a character is tossed the Smart Ball enough times, they may even get Character Development that makes the smarts permanent. And sometimes the character saying the gag being normally an idiot can add on another layer of humor. Mind, excessive use of this trope can be considered negatively if an author has to resort to this sort of thing too often, using it essentially as a Deus ex Machina to get the heroes out of a tight spot or to railroad a plot in a given direction. If it's a comedy though, no one minds thanks to the Rule of Funny . Compare Informed Ability , when someone is said</ to have the Smart Ball in terms of a certain field, but it's rarely demonstrated, or Good with Numbers , when a character is suddenly endowed with math skills. Contrast Hidden Depths , which is what this often comes across as. See also Dumbass Has a Point , for when it is The Ditz instead of an ordinary person having the insight. When a character consistently picks the ball up when it comes to specific subjects, he's a Genius Ditz . If the ball is limited to crises or combat situations, he's a Crouching Moron, Hidden Badass . This trope is a relative of Sanity Ball , Snark Ball (which is about wit rather than intellect), and the opposite of Idiot Ball . Advantage Ball is a distant cousin. See also Bat Deduction . Not to be confused with the video game .

A Smart Gun is an advanced weapon, usually found in Science Fiction , that combines the action of a firearm (usually pistols and rifles) with the utility of a computer. While tropes relating to guns themselves are covered under Guns and Gunplay Tropes , the "Smart" aspect of the trope is unique, giving whoever wields the gun various abilities not normally achievable with a normal gun (or without extensive training). For example: See also: Sentry Gun , if it's designed to be set down and work autonomously; Attack Drone , for when your smart weapon gets up to go without you; Impossibly Cool Weapon for stylish weapons; and for weapons which are smart in the literal sense see Empathic Weapon and Equippable Ally (which may overlap this trope).

Almost all mages in the Lyrical Nanoha </ franchise use so-called "Devices"—magical computers that function as weapons in combat and as universal tools during downtime. Some (but not all) of them even have artificially intelligent personalities, allowing them to act independently of their wielders in combat. Teana Lanster's Device, for instance, consists of a pair of handguns , but out of combat, she uses it akin to a personal laptop.

In Rogue Trooper </: The titular Super Soldier uploads the biochip of one of his dead comrades into his rifle allowing his friend to fight on as his weapon.

In 2007's The Last Sentinel </ featuring Katee Sackhoff the main character carries a sapient talking rifle.

Against a Dark Background </: Reacquiring a Lazy Gun, a whimsical gun smarter than some of its users, drives the plot. Basically, a Lazy Gun has unexplained Reality Warper powers and, when something is in its sights and the trigger is pulled, something will happen that destroys the object, almost no matter how big it is. (It didn't work on a sun - instead, it took out the person trying to fire it at said sun, doing the world a massive favour.) Also, they don't want to be taken apart and studied. Don't try it. Oh, and they weigh three times as much when upside down as they do when right-way-up - which is only a minor</ bit of weirdness when set against the rest of their abilities, which include possibly communicating with the main character through her dreams and possessing something alarmingly like a capricious sense of humour.

On Andromeda </ the Systems Commonwealth's force lances have DNA readers and shock unauthorized users.

Shadowrun </: Many options ranging from recoil compensation to flight are available as gun modifications as well as the venerable Smartlink system. In certain cases, the user must purchase a special optic implant or Augmented Reality goggles that allows direct control of a Smartlinked gun in order to fully utilize its features as without it, the gun will either not function at all or operate as a regular firearm without any bonuses in accuracy or the ability to take advantage of its other features. Unfortunately they tend to leave the user vulnerable to hacking, especially as AR hacking became available.

Titanfall </: Features the Smart Pistol MK5 which can automatically track five targets with bullets that Robotech . It is difficult to lock onto pilots due to their movement speed, but very</ good for taking out Spectres and Grunts Schlock Mercenary </ : Most of the guns the company uses. They switch between at least two ammunition types, fold away for easy concealment and storage, and have holographic sights that can easily compensate for local gravity (weird gravity plus a rotating reference frame is usually too much for them, though). Schlock's plasgun is the primary exception, being little more than a fusion generator with a trigger. It's repeatedly referred to as an obsolete antique

In Orion's Arm </ there are numerous examples of weapons with AI controls and other functions. In the story one of the Queen of Pain's Collectors gives Jolonah a pistol and the choice between killing himself then and there, and eternal torment in the Queen's bowels. He tries to Take a Third Option and shoot the Collector, but finds the gun was programmed to only shoot him.

Fire control systems were developed for naval warfare to make sure the big guns did what they needed to in conditions not known elsewhere in the battlespace, eventually as the technology matured other large war vehicles mounted similar systems such as a tank's ballistic computer and shrunk down to the size of Precision Guided Firearms like the Trackpoint scope system.

They're usually in a commander-henchman type scenario, though this isn't mandatory, nor is the smart guy necessarily all that

brilliant or successful . The important part is that they know </ they're the smarter of the two and mistreat the slower one . Their relationship holds because the less intelligent one is unaware that they're being treated unfairly and remains something of an Extreme Doormat , not always out of weakness, but ignorance Usually, the smart guy comes up with schemes (not necessarily evil, just very selfish) and ends up bumbling them, because the dumb guy tries too hard to help out, while the dumb guy doesn't really get that they're inconveniencing other people. Or, if they succeed, the dumb guy tries to stop the smart guy and explain to them that it's not nice to use people A relationship-based variety of Dumb Is Good , often overlapping with Vitriolic Best Buds . Often, the smart one is an Unsympathetic Comedy Protagonist (or an Academic Alpha Bitch in a school setting) and the dumber one is his Bumbling Sidekick . If they are a Vile Villain, Laughable Lackey , the dumber one is his Minion with an F in Evil . This dynamic is the heart of the Boke and Tsukkomi Routine Sub-Trope (child trope) of Kindhearted Simpleton and Insufferable Genius . Compare Brains Evil, Brawn Good which is a correlation between intelligence and morality, and Anti-Intellectualism . Compare and contrast Straight Man and Wise Guy and Comic Trio ; this trope is distinguished from both by a lack of the Only Sane Man , as both characters generally contribute to goofy antics in different ways. Supertrope to Fat and Skinny and Big Guy, Little Guy , which have a similar dynamic emphasized by a physical difference between characters. Rude Hero, Nice Sidekick is a hero -specific variant that is not necessarily comedic

Back in the days of kayfabe , there were two types of people you'd encounter at professional wrestling events: " marks " and "smarts". Marks were the folks who paid to see the show they thought was an actual athletic competition. On the other hand, smarts were people who knew the truth about wrestling, that it was a staged athletic exhibition with no real competitive aspects. Usually, smarts had a connection backstage to wrestling, and most of them worked either for or with a promotion As the truth about pro wrestling became more widely known, a self proclaimed third class of people came into being in between these two: the smart mark, or "smark" for short. Smart marks knew the whole thing was staged, but enjoyed it anyway. They tended to look to different things in a match than marks did; while a mark would like a wrestler mostly based on how they behaved, a smark would like a wrestler more based on their in-ring performance. When a smark gets caught up in the moment and reacts to a spot as if it were real, this is known as "marking out". Many smarks consider it a sign of a truly great match that it can make them mark out. Nevertheless, smarks did not have any real connections backstage; they simply enjoyed the show These days, since the vast majority of the pro wrestling fanbase tend to fall into the smark category under the old definition, the definitions have mutated somewhat. Now, marks are the people who follow wrestling casually and tend to care more about the drama and the stories than the actual construction of the match, and smarks are the people who study and analyze matches, root out backstage gossip, and generally take wrestling more seriously . Few marks have enough knowledge of the business to self-identify as marks; indeed, the term is more often thrown about by smarks as an insult. Another perception is that "smark" is an incorrect term and shouldn't be used. Connection with the business is required to be a smart, ergo, no one who isn't in the business can be anything other than a mark. Of course, as the Internet gets bigger and more

wrestlers, especially independent ones, develop an online presence, some have become more receptive of the term. Some use "smark" the way smarks use mark, though It used to be an axiom that smarks and marks did not get along . Nowadays, factoring in the ever growing gray area between the two, it's really not that bad. Many marks are capable of saying "Wrestler A's matches bore me, I take a bathroom break when they're on", and many smarks are capable of saying "so what if Wrestler B isn't technical perfection in the ring, they entertain me". The advent of the Internet has allowed the two communities to mingle as they didn't back in the days of the newsletters and video tape trading, and the line between smark and mark, such as it is, has blurred significantly. The negative perceptions on both sides of the divide come from the extreme edges of both camps. The smarks who nitpick matches half to death looking for trivial flaws so they can rate popular matches "DUD" on the 5 star scale and feel intellectual , and the marks who shrilly accuse anyone who criticizes a show they like (say, WWE in general) or favorite wrestlers (John Cena , Triple H , etc.) of being know-it-all smarks

Parodied in Burst Angel </; when a league combining wrestling with Kamen Rider </ is interrupted by the performer in the monster suit actually turning into a monster, one kid watching is just non-plussed that the promised "power-up" didn't look like it did in the promotional materials. Later, the audience applauds the performance when Jo starts wreaking havoc.

Gosalyn of Darkwing Duck </ fits the description: when Darkwing takes part in a charity benefit wrestling match and she cheers him on with advice, he reminds her that wrestling is fake. She replies "Of course it's fake, the fun part is pretending it isn't!"

Bad smells can be a rather unpleasant thing for the nose. Under the right circumstances, the smell can be pretty powerful; sometimes, so powerful that they can travel through communication devices. It won't matter even if you're either in an airtight bunker or miles away, because if you have any way to talk to someone via any</ communication device whatsoever, the smell can</ and will</ reach you A form of Up to Eleven and Beyond the Impossible . Sub-Trope of Reaching Between the Lines . See also Telephone Teleport

A couple obtain a hotel room under the name of "Mr. and Mrs. Smith" or some other — usually similarly bland — pseudonym. They may be married... just not to each other With relaxed sexual norms and most hotels requiring ID and a credit card to register nowadays, this is now mostly in Discredited / Dead Horse Trope territory See also Undercover as Lovers and Mr. Smith

Most detectives in fiction barely get recognition. Gil Grissom , Jack Malone and Sam Spade could happily walk into a bookshop in their respective cities, seduce the owner and leave without being recognized Not so for Smiths of the Yard. They are very well-known. The newspapers follow their activities. When there is a major crime and they are involved, the papers will say, "Smith of the Yard is on the case". If they're not and the crimes are particularly diabolical, the papers will call for their involvement. And needless to say, he (Almost) Always Gets His Man In Real Life , the Yard is Scotland Yard, headquarters for the Metropolitan Police

of Greater London. The Yard has become synonymous with police to the extent that any police version of the "Nations of the World" Montage will feature a shot of the New Scotland Yard sign Truth in Television in the United Kingdom in the 1920s and 1930s, but not today. The trope has largely died (outside period pieces) with it Subtrope of Famed in Story

She's a wholly average girl , with a crazy strong crush on a guy or girl that makes little to no sense Sure, he may be hot, and you could understand a woman finding him attractive. However, the intensity is just too much to make sense What Does She See in Him? is commonplace This doesn't mean the girl's feelings aren't genuine . After all, she is likely to be both fairly young and extremely naïve . Also, this doesn't necessarily rule out the possibility that her initially shallow, child-like crush may develop into more sincere and deeper feelings, or start to fade away as she falls for someone else or develops other interests/priorities/etc. Also, it's rather common to see that the girl does</ have reasons beyond "he's cute" or "he's cool" (he may have done something really nice for her , for example), but we just didn't know about their common history, and we're told about them only later in the story At her best, she will be just a Girl Next Door who tends to go starry-eyed at the guy. At her worst, she may be a Stalker with a Crush and/or a Clingy Jealous Girl . Don't be surprised if the Smitten Teenage Girl gets over her crush and falls for the guy that was " always there for her ". If she does get over her crush, expect him to be Put on a Bus Some Yanderes are or start as Smitten Teenage Girls. Compare/Contrast Precocious Crush

A fairly standard disappearing trick, favored by Ninja , stage magicians , and Batman . Drop a clever little smoke bomb that puffs up and dissipates quickly, slip away during the distraction. A smoke cover apparently qualifies as being "offscreen" enough for Offscreen Teleportation , allowing a user to escape even if he or she was standing in a clear area where his/her exit would be seen at least by the viewer if not an opponent. Still played straight in most cases, though there are a few stock variations and subversions: Compare Stealth Hi/Bye , Disappearing Box . Contrast with Super Smoke . See also Trick Bomb (of which this is a Sub-Trope), Ninja Log and Escape Battle Technique . A Handful for an Eye may serve the same purpose.

In Police Procedurals and other works of Mystery Fiction , easy ways to solve crimes will quickly be eliminated. CCTV cameras were broken, guns and cars were stolen, etc. Anytime it does look like a vital piece of evidence has been found early on it will either be quickly contradicted or somehow made inadmissible in court This is because easy-to-solve crimes wouldn't be too entertaining to watch. (One can assume that they happen between episodes, when we're not watching.) Also, smart criminals (who take precautions to cover their tracks) are more interesting characters than dumb ones

Double Subversion : Majin Tantei Nougami Neuro </ (it's like Scooby-Doo they all "unfriended" her on Faceboo... I mean Links). Yet somehow, the police are still unable to solve the crime (something to do with the crystal clear CCTV evidence, motive, lack of alibi, and clear connections to the victims being inadmissible in court!)

Bookhunter </: The thief Kettle Stitch is very good about this. Agent

Bay realizes that an otherwise- perfect book theft has resulted in a missing circulation card that can be linked to Kettle Stitch's library card. Except Kettle Stitch anticipated this, and used a counterfeit copy of someone else's card, instead of her own. So Agent Bay investigates how said library card was counterfeited, and finds that Kettle Stitch hacked into the library's patron records computer system—but his attempt to trace her location fails, and she just erases all the evidence of her hacking from the system.

In the novel and movie Rising Sun </ the security cameras should make solving the case easy. Except the one video tape of the crucial time and place is missing, and when it's returned, it turns out to have been tampered with.

Noncriminal examples occur frequently on House </: if anyone is cured near the beginning of an episode, they're either not the patient of the week, or they only seemed to be getting better . Justified , since House's team only handles the most complicated cases: "I look for zebras instead of horses because other doctors eliminate all the horses."

This seems to happen to Ace Attorney </ in every. Freaking. Case.</

When Smoking Is Glamorous, it is portrayed as something stylish, or even sexy. It's something The Beautiful Elite do Of course, this was prevalent in old Hollywood when Everybody Smokes , and since the actors were glamorous, it made smoking look so. The main use today is The Vamp in a Film Noir movie smoking in a seductive manner. Marlene Dietrich , Humphrey Bogart , Lauren Bacall , James Dean , Rita Hayworth , Bette Davis , Sean Connery , Frank Sinatra , Bing Crosby and Audrey Hepburn are the most iconic glamorous smokers of the Golden Age of Hollywood. Whenever a Shout-Out is provided to glamorous smoking in old movies, it's bound to be to one of them Today, it's largely a Discredited Trope , with some exceptions . Also subject to some Values Dissonance in that smoking tobacco</ falls into this trope whereas smoking of other substances, particularly marijuana, often averts the trope, though some reversal has happened in recent years as pot is treated as the more glamorous and "cool" option This trope is often the basis of temptation for Sitcom teenagers to try/think about/start smoking. Peer pressure wouldn't work if the kids doing the pressuring didn't look cool or "glamorous" , right? Usually, a Very Special Episode coupled with an Anvilicious lesson about the dangers of the tobacco habit Compare Smoking Is Cool (smoking as an indicator of a badass), Smoking Hot Sex , Wine Is Classy

"It's the nature of the business, it's the Smugglers' Tropes!" Smuggling — the covert and illegal transport of property or people — is a common event in fiction, and the many, many methods and motives for doing this make for a lot of tropes.

The Smug Snake is a type of character (usually a villain) who tends to treat friends and enemies alike with equal disdain. They almost constantly speak in a sarcastic tone and punctuate most of their sentences with a smirk. While they aspire to be a formidable and awe-inspiring adversary, they often end up just being a Big Bad Wannabe , failing in the face of more cunning villains or ending up as their servants, in which case they'll generally be The

Starscream . Others that fall under this trope are simply in it to bug the good guys and take advantage of their moral insecurity . A key character trait common to Smug Snakes is overconfidence . The Smug Snake is usually too arrogant to be rattled . Most often, they will think themselves to be the Magnificent Bastard . While they may believe that they have the situation under control (whether they do so through blackmail , coercion , or simply being in a position of authority), there will usually be a hole in that plan that they failed to consider. Perhaps they underestimated their opponents' abilities and claimed themselves unbeatable , or maybe they made a really stupid mistake along the way. Once that realization hits, expect the Snake to lose their cool right before everything starts falling apart for them. They are not necessarily entirely incompetent, stupid or ineffectual, however, and may succeed with at least part of their goals, but they are still lacking that charm and grace that the Magnificent Bastard possesses, and even the clever ones all too often end up being Too Clever by Half . Often a Know-Nothing Know-It-All as well, to inspire added bile, though still enough to take the 'sympathetic' out of Ineffectual Sympathetic Villain (the best</ of them are Insufferable Geniuses heavy on the former and light on the latter). If a Smug Snake considers himself a Magnificent Bastard , then he is a villainous Small Name, Big Ego . When things go badly, the Smug Snake may reveal himself to be a Dirty Coward and pathetically grovel when a former victim asks Who's Laughing Now? or beg the victim to save them in the event of outside danger. Most of the time, a writer will purposely introduce a Smug Snake as a target for audience hate by making them Kick the Dog or bend the rules to get their way and come out smelling like a rose . Basically, this is a villain that's made to be hated and the audience will enjoy hating . This, like all other tropes, can backfire if misused . If the writer still tries to foist the character as a Magnificent Bastard when their previous actions have proven otherwise, the audience will likely stop enjoying hating the character, and instead genuinely hate</ them as much as they would The Scrappy or the Creator's Pet . Evolving a Smug Snake into a true Magnificent Bastard could be doable, in theory, but shouldn't be attempted lightly, and has only been pulled off successfully in fiction a few times. Ever. Of course, the author might be deliberately doing this, playing a villain up as a Magnificent Bastard when it comes to getting the power he craves, but proving to be so inept at wielding</ that power once he finally has it that he ends up as a Smug Snake instead. The line between those two tropes is thinner than it looks after all and the further a character overestimates himself and underestimates the others the closer he leans to Smug Snake territory even if he is normally a Magnificent Bastard . So it is a state of mind directly proportional to the overconfidence and a character who has a good reason to have a high idea of himself will need to exaggerate his self-worth more to reach it than someone who hasn't. The Smug Snake will rarely be a Draco in Leather Pants , because, as previously stated, he tends to be created intentionally to be loathed by the audience . (However, it is possible for this to happen, especially if the character is physically attractive — the Trope Namer himself is an example.) If the Smug Snakes are literally snakes, then it also overlaps with Snakes Are Sinister . Contrast Worthy Opponent , Evil Is Cool and Magnificent Bastard , who inspire respect and/or admiration from their opponents/the audience, and Awesome Ego , whose brash cockiness is part of his or her charm (although any of these may be perceived as a Smug Snake by an audience via Alternative Character

Interpretation or simply poor writing). Compare and contrast Smug Super , for when the person's arrogance and ego can actually be backed up with feats. Subtrope of the Sin of Pride . Sometimes Truth in Television , but let's leave it here, so No Real Life Examples, Please!

It's often that many shows feature a bigger ratio of males to females in their characters, with The Smurfette Principle being pretty widespread. However a lot of the time this can work in favor of the female character. Being the only female in a largely male environment makes her stand out and be distinctive from all the male characters. If the writers have written her well and avoided making the character a Flawless Token , then chances are she will become popular with the viewers. If her popularity rises high enough, she might even become a Breakout Character The area in which this is most common is Professional Wrestling . It's a rather frequent occurrence for a woman to be introduced as someone's manager or valet, usually for a tag team , and end up becoming more popular than the wrestlers they're managing. Often if the team splits, the woman will fare much better because she can be integrated into the women's division while the men will often become lost in the shuffle. It also helps that by nature of the beast, a woman with no athletic or mic skills can easily get over with the male-dominated audience if she has enough sex appeal Note that this is not simply about a female becoming a Breakout Character. There must be a majority of males compared to females for this to count. The character need not be the only woman on the show either. See also Ensemble Dark Horse and Breakup Breakout

The Smurfette Principle is in action when the cast is made up of a group of males and exactly one</ female. This can occur even in works with Loads and Loads of Characters , so long as each sub- Ensemble (of five or more) contains only one</ female character. Adding a second female to the ensemble creates a related trope. With the relatively few female-aimed works, contrasting the sheer volume of works that are aimed at males, it stands out that the demographics of fiction shows a ratio of female to male characters much lower than Real Life . which, according to Named after Smurfette from The Smurfs </, the trope was first coined by . The article focused on the trope as it applies to young children, and discussed the negative message: males are individuals who have adventures, while females are a type of deviation who exist only in relation to males . See also Margaret McGowan's </ column . Compare The Bechdel Test , Two Girls to a Team , and Two Guys and a Girl for similar critiques of female:male proportions in fiction. Affirmative Action Girl is a common way of averting the trope, sometime preemptively, sometimes as a reaction to the aforementioned criticism. See Chromosome Casting when there's zero members of the opposite sex present not only amongst the main characters but in the work itself (maybe except for in the background). This is also Distaff Counterpart to The One Guy . Subtropes include Never a Self-Made Woman (women cannot achieve anything without a male mentor or counterpart), Smurfette Breakout (the Smurfette character becomes popular on her own), Starring Smurfette (Smurfette is the protagonist), and Territorial Smurfette (another female is added to the show and the original Smurfette reacts negatively). Often, the one girl is a princess for economy's

sake. Contrast Gender-Equal Ensemble and Improbably Female Cast . For the Music equivalent, you would have Male Band, Female Singer or Female Rockers Play Bass . Interestingly, this trope does not actually apply to The Smurfs , as a second female smurf was added to the cast in 1985 and more have been added since.

So you want to send someone a message, package, or whatnot. Nowadays, there are many options from email to FedEx, DHL, UPS, and the like, all of which are much faster than the traditional Postal Services or "Snail Mail". The standard joke is that regular mail takes forever and sometimes never arrives at all . Sub-Trope of Absurdly Long Wait . Contrast Instant Home Delivery and Unstoppable Mailman . Related to Technology Marches On The postal trucks in Fortnite </ literally have a snail for a logo Played Straight to almost the point of parody by the Russian Post Service, whose tardiness and obstructiveness has become the stuff of legends. Or at least of countless jokes and jabs, such as when a girl employs as a sorter at their facility just so that she could locate a package she's waiting for, or that the meteorite that crashed in Chelyabinsk in February 2013 was meant to bring about End of The World prophesised by the Mayan calendar in the end of 2012, but RPS was tasked with delivering it

While a good movie or show is fun, there's just nothing like the visceral pleasure of taking apart a bad one . And sometimes hating something popular is what defines a crowd , especially if, despite its popularity , it's actually pretty bad. Not terrible, not pitiful, just boringly bad . Of course, in order to hate it to its fullest potential, you need to watch it and find out why</ it's so terrible Snark Bait refers to any popular work that evokes a desire to watch specifically to mock and join other people mocking . It's often a generic Hollywood blockbuster, or best-selling book. It's usually so formulaic you can see the TV Tropes Wiki Words forming in the air as the plot happens, and/or so poorly fact-checked that 640k could pick it apart . Either way, everyone is going to be complaining about it, and you wouldn't want to be left out of slagging off all those idiots who gave up their money and time for such junk, or the derision of stupidity with the passwords halfway, the predictability of the twists , the unlikeable “heroes” and so-called “villains” , and the “happy” ending that isn’t happy in the slightest . So, of course, you need to buy it yourself. That'll show 'em! As a Troper , good Snark Bait can lead to seeing how far off you can see the Obvious Judas , which characters are secretly related , and playing Trope Bingo or a trope Drinking Game with them. On the plus side, seeing a trope done badly</ can help you see what it is, and appreciate when it's done well</ . It should also be noted that those who engage in Snark Bait could range from those who " love it but are able to laugh at its flaws " to those who " Love to Hate it and enjoy ripping it to pieces". Those who love it so passionately and are unwilling to recognize its flaws are unlikely to appreciate snarking, as well as those who hate it with such a huge passion that they refuse to waste any time on even acknowledging its existence. It often displays some of the following tropes: Does not relate to the monster that can be utilized to bite your opponents or self. Nothing to do with thimbles, forks, railway shares, and soap . Compare Periphery Hatedom and Bile Fascination . If you were looking for characters who jump at the sight of Snark Bait, see Deadpan Snarker . No examples, please. This just defines the term. In-Universe examples can go to MST

Alice is stupid. There's no Obfuscating Stupidity either: her inability to grasp basic logic is one of the main driving forces behind the main plot . Except, outside the main plot she regularly plays Deadpan Snarker or Only Sane Man to smarter characters That means she just caught a Snark Ball: an imaginary device that makes a character consistently show more wit than he actually has May lead to fan theories that the character is secretly Obfuscating Stupidity . It's also prevalent in cartoons of "wacky" variety, where absurdity of actions becomes funnier if the characters themselves comment on that Compare Smart Ball , where a stupid character does a smart thing because the plot says so, and Dumbass Has a Point , where a stupid character says something stupid that still makes sense. A Cuckoosnarker is a Cloud Cuckoolander character who juggles the Snark Ball

The Japanese and Chinese equivalent of "burning ears". If you sneeze once, it means someone is talking or thinking about you; sneeze twice, it means someone is talking or thinking bad</ things about you After a discussion describing a particular person or group of people, there will be a momentary fast cut to that person or a member of the group (who is currently uninvolved in the action) suddenly sneezing and looking confused, followed by a fast cut back to the original discussion. Often, an observing character will show Genre Blindness and suggest that the sneezer is coming down with a cold This can also be used as a segue without the cut back to the original scene. This is often an equivalent to the Ironic Echo Cut in western works

The sneeze is one of the most disastrous and powerful forces in the universe, up there with gravitation, electro-magnetism, the strong and the weak nuclear forces, the color force, Love , Friendship , Music , and of course The Force . It always happens at the most unfortunate moments, usually when everything is going so well. Have you managed to sneak into the Big Bad 's fortress and you're now listening as he explains his evil plan? Atchoo!</ All the guards are after you now . Have you created a very convincing Totem Pole Trench and fooled everyone? Atchoo!</ The Disaster Dominoes start toppling, and you're in a world of trouble now, matey The Sneeze of Doom rarely comes without warning — usually the unlucky sneezer will be shown inhaling air a few seconds before it happens. A Dead Horse Trope would be Anti-Sneeze Finger , which is holding one's finger under one's nose to "stop it." ...it might, for a few seconds. Still, it's not much help — once this starts, a Sneeze of Doom cannot be stopped by any means known to man And that's not counting the rare cases where a character, for whatever reason, has the kind of sneezes that should come with their own hurricane warnings Often caused by an allergy to the rarest substance known to man to which you will be exposed only at such a time, or something completely uncanny tickling your nostrils. And sometimes it comes with no reason at all—since people in real life sneeze at random moments all the time, the Sneeze of Doom can function as a universal Diabolus ex Machina See Pepper Sneeze and Hiccup Hijinks . Sometimes the sneeze is dangerous because of Involuntary Transformation or Malfunction Malady . Not related to Incurable Cough of Death May be connected to Plot Allergy . Very frequently results in So Much for Stealth

A common hazing ritual in real life , a Snipe Hunt consists of sending the Butt-Monkey , Naïve Newcomer , or a Bumbling Sidekick out on an impossible or imaginary task to get them out of the way or humiliate them. Oftentimes used in comedy as a B-Plot to the main action, and a common ending involves the getter finding what they were sent out to get (even if it was, say, a unicorn) or finding the wrong thing and having hilarity ensue . Bonus points if the finder locates the imaginary item or accomplishes the Impossible Task right away. Named after a common practical joke that involves sending a newcomer out to catch a snipe, a that riflemen find extremely</ difficult to get a piece of (hence the term "sniper", implying that the marksman has enough skill to consistently bring down that same tricky bird), in a bag. The victim is left there "holding the bag" as part of the humiliation. Also commonly referred to as a fool's errand, and may overlap with You, Get Me Coffee . (Interestingly enough, the term "snipe hunt" is so much more well known than the actual bird that many people are surprised to find out that there really is a bird called a snipe .) The fictional version of the snipe is often described as a rather horrific creature. Usually something akin to a werewolf, or mutant bird. Fictional snipes are usually described as being all black with glowing red eyes. On occasion, someone who sends a new-hire on a Snipe Hunt will have dramatically</ underestimated his target's intelligence; one semi-famous example is that of a new Navy recruit being sent to the engine room to get a 'bucket of steam', only to return ten minutes later with a pail full of dry ice! If it was supposed to be a genuinely Impossible Task , such an act of We Do the Impossible can set a character up as either a genius, a badass, or at least a master of lateral thinking . In a real-life work situation, Snipe Hunts are met with a variety of responses depending on the nature of the workplace — while a less 'formal' atmosphere, like your local FutureShop, might just shake their heads and bear the tradition, a lawyer's office is much more structured, and a Snipe Hunt means that you're holding up someone's (possibly time-critical) files in order to play a useless prank. Oftentimes, the character returns only to be sent out again, to fulfill a more specific version of the demand , e.g.: "I wanted a red</ flower" Or, "Get me DIET Soda". And sometimes, the person actually wasn't meant to go on a snipe hunt but takes a joke literally. Akin to: "Go jump off a cliff." "Okay"! The deadly version is The Uriah Gambit when someone is sent on a dangerous mission by a "friendly" party who secretly wants them dead. See also Privacy by Distraction , "Shaggy Dog" Story and Wild Goose Chase . Not to Be Confused with trying to find a sniper in a battlefield or action star Wesley Snipes . See also Windmill Crusader , where the participant fails to complete the search. Can result in Seeking the Intangible

Duels in fiction are thrilling because of the natural tension that is created when two badasses face down each other at short range, with deadly weapons, intent to kill, and nervous bystanders watching with fear and anticipation . Anything can happen... and then it does, exploding into action, and then they end with a very final conclusion A Sniper Duel takes the tension in this trope and plays it Up to Eleven . Instead of facing off at close range with small handguns, the duelists may be hundreds of yards or even over a mile apart wielding high-power rifles . Both may be masters

of camouflage and/or deception. Sniper duels in fiction can last days or weeks, as each tries to draw the other into a vulnerable position but conceal their own, and often end with a single shot . If The Squad is caught out in the open by an enemy sniper, often their only chance of salvation is a sniper from their team, who will be the only member with the ability to save the day. Note that this is partially Truth in Television , because, as it turns out, the best way to counter a hostile sniper is often times a friendly one, though both sides would probably field more than just a single sniper if they could, so in reality it's more likely to be a sniper team deathmatch instead Sniper duels are common in war movies where they add a personal touch to the often impersonal combat between people who've never met before and are just fighting for their countries: snipers get a close up view of their targets before killing them, and this fact often makes it personal for the teammates of the person who just got shot by an unseen assailant Sometimes the duel is used to highlight the differences between two factions (possibly a hero and a villain), where one is a Cold Sniper and the other is a Friendly Sniper . The characters often possess Improbable Aiming Skills and the fight may end with a headshot and for truly badass characters, a Scope Snipe . Combat Pragmatists who lack either the skill, equipment or patience to engage in a Sniper Duel may instead avert it by calling in an airstrike or artillery strike. A Sniper Scope Glint from either combatant's rifles can give them away and often results in one of the snipers getting killed

The sniper. Master of stealth and deadly accuracy, the ninja of long - range gunpowder weaponry. These tropes are associated with snipers.

A lie or deception that takes on a life of its own, spiraling out of the control of the ones who started it and often mutating in the process. What distinguishes a Snowball Lie from a "Fawlty Towers" Plot lie is that it attracts other characters to keep it alive and expand it, either by explicitly furthering the deception for their own purposes or by sincerely buying into it and carrying it on in the honest belief that it is real — or to avoid being embarrassed by their "ignorance" or "inexperience" Usually a Snowball Lie will eventually grow to a point where it will collapse, either under the weight of its internal contradictions or after some insightful person Pulls The Thread on it. Sometimes, though, a perfect Snowball Lie will show no signs of ever stopping, and its creators will find themselves forced to kill it — with varying degrees of success, and varying degrees of repercussions to themselves. In particularly ironic situations, the Snowball Lie can become an unstoppable juggernaut that displaces the truth and becomes a new "truth" in its own right An Invented Individual is a Snowball Lie based around a fictional person. Can lead to an Honesty Aesop Compare Gossip Evolution and Seamless Spontaneous Lie In Ghostbusters (1984) </ , Walter Peck accuses the Ghostbusters of using hazardous wastes, and later on claims them to be snowball artists. Ironically he himself is a snowball liar even blaming them for the explosion he caused at their headquarters

Alternate title : What Do You Mean, Our Jesus And Cthulhu Are Different , So Screw The Sliding Scale Of What Measure Is Good and

Evil True Art vs. Chekhov's Nightmare Phlebotinum — Everythings Better With Overly Long Hollywood - Gambit Moments of Doom Ex Machina BITCH! (IN SPACE!) It's a fairly common practice in the wiki to make puns based on pre-existing trope titles. Outside of this wiki, this is called a "snowclone", where in a sentence "X is the new Y", anything the speaker wants to use can be substituted for X and Y. The term "Snow Clone" originated on , from multiple examples of people claiming "[Culture X] has [Y] words for [concept Z.]" based on the statement that "Eskimos have 50 words for [50 types of] snow." But very often, this new trope will have nothing whatsoever to do with its namesake. (And that's bad .) A classic romantic setting is two lovers alone in a gentle snowfall. Bonus points if the first snowflake falls immediately after they get together . Almost mandatory in a Christmas Episode , or if lucky, a Valentine's Day Episode A person alone is cause for sympathy and especially one that's Prone to Tears Snowed-In and Umbrella of Togetherness can bring this trope about. If it's raining instead, it's Romantic Rain . Contrasts with Flames of Love and Electric Love . Western cousin to Cherry Blossoms . A subtrope of Empathic Environment For different interpretations of snow, see Snow Means Death and Tragic Ice Character

How do you know that a perimeter has been breached or that the soldiers you've sent in the alien hive have met a messy end? The screens that were giving you a visual feed have gone full of static, meaning that the cameras have been disabled or shredded, like their wearers This effect was the precursor to the infamous Blue Screen of Death , and was itself an outgrowth of the dead telephone line and the radio receiving only the static of a carrier wave with no signal See also Camera Abuse for cases where the camera is visibly hit or shaken and We Are Experiencing Technical Difficulties for cases where somebody cuts off the camera signal. Related to Insecurity Camera , in which malfunctioning cameras are

ignored. Often goes together with Death by Transceiver

A character is describing, talking about or listing the members of a group but then pointedly avoids saying out one of the members's name in order to snub them. Sometimes the snub will be called attention to by having the left out character call out their name in protest. Reasons for this trope vary. The person doing the listing perhaps hates that member in particular and intentionally forgets their name, as if to imply they don't exist to the lister. Perhaps they actually did forget and don't notice at first, acting Innocently Insensitive . Whatever the case, it's going to end in offense and annoyance. Supertrope of Aren't You Forgetting Someone? See also My Friends… and Zoidberg! , And the Rest .

In our culture, violence is popular. So is sex. When people want to put forth a message about the values of our current society, they imagine what it would be like if both these valued qualities were blended and taken to the point where it's clear that anyone who appreciates the work has something very wrong with them, indeed. Behold: the snuff film, a film where a person's death, the gorier the better, is captured on celluloid (or digital data in these internet-connected times) for someone else's...prurient interest. The snuff film has captured American imagination since the days of the Manson Family ; in the aftermath of the cult's killings, the author of a true crime book on the Family put forth the rumor that they had videotaped their killings, inadvertently creating the term "snuff film." It wasn't true, but when American producers brought the Argentinian horror stinker Slaughter</ (based loosely on the Mansons) over to America they retitled the movie Snuff</ , tacked on a new and gorier ending, and launched a viral campaign that someone had actually been murdered on film as part of the movie. What makes a snuff film is often up for debate. Whether it just captures a death on film (like the tapes put forth by terrorists that show people getting their heads cut off), is released for a commercial motive (like the Traces of Death</ franchise), or has to include sex and death is up in the air. This is mainly because there's no such thing as a "true" snuff film — according to the FBI, no such thing has ever been made. To clarify this point, the FBI defines a snuff film as depicting a murder that was committed for the primary purpose of being filmed and commercially distributed. While films of actual murders do exist, the FBI doesn't consider them snuff films because they either have a different motive (e.g. films of executions by terrorists which were distributed to sow fear rather than make money) or were not intended for distribution (e.g. a murderer makes a tape of his crimes for personal use and it leaks out after his capture). Then again, as long as creators have a message to make about sex and violence, the snuff film will exist as a model for what happens when things go too, too far. To reiterate, snuff films exist in the realm of myth and legend. While many petty criminals have been known to film their own crimes, none have been so foolish as to film a crime for which they could be executed only for the purpose to film and distribute it (save for a possible exception), and Snuff Films that depict this stuff happening to animals rather than humans are called Crush Films, because the animal is typically shown being crushed to death. When a filmed death is an accident as opposed to a murder, see Fatal Method Acting . See also Gorn , murder.com , and Video Nasties . Back to Brooklyn .

8mm </: A private investigator is hired by a rich widow and her attorney to find out whether an apparent snuff film discovered in her late husband's safe is the real thing. Welles can find no proof that snuff films are anything other than an Urban Legend .

American Psycho </ : Patrick sometimes films himself torturing women to death. He once shows one of these videos to a woman before killing her.

Being Human (UK) </ : Some vampires create homemade pornography ending with the murder of their victims, then pass it round.

Bongripper : The title of their song, "Snuff Film," tied with the song, "Sex Tape," which gives off some unsettling vibes .

Blackout The Reveal involves finding out that the Player Character works as the Cleanup Crew for a local mob that makes these kind of films. That is the reason why there was a headless body in his apartment at the beginning of the game; he was working his macabre trade when the memory loss suddenly kicked in.

A non- Soap Opera narrative with special interest in the relationships of the characters rather than their heroic exploits. This trope can apply to any work of fiction: a Vampire Detective Series , a Humongous Mecha Anime , a historical thriller , or what-have-you. Movies and television which invent all-new superheroes quite often take this route (either that or they go the "realistic" route, without costumes). Usually it has a "softer" feel and much more screen time devoted to getting to know the characters and their individual strengths and foibles and on their "civilian" activities Relationships change and develop over time, and much of the show's driving force comes not from plot but Melodrama simple interactions It's not uncommon for such series to "take a break" from the normal heroics to have an episode of pure characterization (Comic Book fans have long nicknamed these "baseball issues") or to eschew the heroics/doctoring/detecting entirely in favor of other soap opera staples like the Soap Wheel and Four Lines, All Waiting . In the case of superheroes, part of the drama will derive from separating hero and civilian identities with romantic complications. Anime beach episodes , when not entirely devoted to Fanservice , can be a form of this trope. This is something often mentioned about Neon Genesis Evangelion </ - that it was unusual for a mecha series to be so focused on characters and interpersonal relationships. Maybe it's part of a broader trend?

Captain America tends to get all angsty about young sidekicks (particularly regarding Rick Jones) because Bucky "died" (Winter Soldier is a long story for another time) while his sidekick. This also explains his early animosity towards the Young Avengers . Similarly, Cap's own comic book made commentary on '40s vs. "modern" (whatever time period we're in) American values.

Child of the Storm </ zig-zags the trope. On the one hand, it's heavily character-driven, with the Avengers and their various associates being cast as a dysfunctional family, and the effects of the plot on the characters being emphasised, and a persistent criticism of the first 30 chapters of the first book is that they're

very short on actual action. On the other hand, the grander plot starts picking up speed from chapter 40, with the vast majority of major events (and many minor ones) being revealed as part of a grand chess game being played by Doctor Strange, taking on more characteristics of a superhero epic, while the story (and its author) disdain a number of classic soap opera tropes (particularly of the wacky misunderstanding variety) as ridiculous.

The Incredibles

Soon I Will Be Invincible

Soap

A Show Within a Show in City of Heroes </ is mentioned that's apparently a soap opera involving superhero characters, called The Super Days</ .

Super Stupor </ . In the words of the writer: 'It's about heroes and villains in their everyday lives. Really, that's it. '

Interviewing Leather </ focuses primarily on the interview of the supervillainess rather than seeing her in action.

The Venture Bros. </, though not precisely superheroes, a mix of Deconstruction , parody, soaperheroics and Black Comedy .-->

Common ailment found on the Soap Opera . It is notoriously difficult to diagnose and often exhibits vague symptoms. Often fatal, but the victim can linger on for a long, long time. Sometimes results in a lengthy coma which, upon the victim's recovery, may also manifest a radical change in appearance (see: The Other Darrin) J. Michael Straczynski has mentioned one riff on this, in which a soap opera writer supposedly put a character into a coma with very specific and carefully-researched symptoms, for a plot that was only supposed to last a couple of episodes... and then realized that if the character's recovery was delayed, he could continue to crank out script after script without ever needing to worry about a pink slip, since nobody else on the writing team knew enough about the disease to write the character's recovery. The actress didn't mind either since she got a paycheck day after day for a few minutes' lying absolutely still in bed. The producers were somewhat less than pleased at this The anime trope of the Ill Girl suffers from the same plague of vague. See its page for the full story but the gist of it is the same; some kind of frailty to gain sympathy A common mutation anywhere is the Incurable Cough of Death ; a terminal illness with no symptoms of any kind besides coughing. More likely than not evolved from Victorian Novel Disease . The character may insist the illness is Definitely Just a Cold . Not to be confused with Soap Opera Rapid Aging Syndrome , which isn't actually a disease so much as a Plot Hole that sucks up babies and children and spits out teenagers or even adults May result in Wring Every Last Drop out of Him

A soap opera is a melodrama with a large cast experiencing dramatic events in their day-to-day lives, usually broadcast five days a week. Designed to be viewed intermittently, so that a single event

may be stretched over three or more days. A genre of storytelling which began on radio in the United States in the early 1930's , so named because its high drama was often interspersed with adverts for, well, soap ; Procter & Gamble, manufacturer of such products, was the sole sponsor and producer for many of them. But there's no ' soap radio ' anymore; with one exception (The Archers </), the genre is mainly-associated with television. For a long time in the U.S., you could actually be fired for referring to your show as a "soap opera"; the proper term was "daytime drama". It's no longer enforced, but referring to it as a soap in front of actors or crew will still occasionally earn you a dirty look. Death is not a big concern in the world of soaps; to the point that Friends , </ after Dr. Ramoray (Joey's character) had "his brain crushed" on Days of Our Lives </, joked that he could yet return — and he did . However, most shows enjoy pretending </ that anybody can be snuffed out at any moment – particularly during a commercial or episode break. The truth is that contract re-negotiations are the leading cause of permanent death. Story progression often takes a backseat to what people actually want to see: Cat fights and screaming matches and every imaginable configuration of characters sleeping with each other. These habits are widely-mocked in other works whenever a soap appears or is mentioned. (For parodies of the soap genre, look up Soap Within a Show .) American soaps were typically Long-Runners , easily extending themselves for years and even decades if successful (the record-holder being (The) Guiding Light </ , 1937-2009). Similarly, German and other continental European soaps typically follow this practice, lasting for years and years. On a country-by-country basis, the main difference is the social class of people being portrayed: American soaps often featured filthy-rich characters with chic clothing and gorgeous mansions (think Dallas </ or Dynasty (1981) </). Australian ones usually feature middle-class suburban white people , often young and healthy (Neighbours </, Sons and Daughters</, Home and Away </); while British soaps are either lower-middle class (Brookside </) or grimly and grimily working-class (EastEnders </, Coronation Street </). These class divides are not 100% certain but tend to dominate; see The BBC 's aspirationally-luxurious Howard's Way</, which ran for several years, but never won the hearts of viewers like "kitchen sink" soaps did. The feature common to all three flavours is that there is no one main character: Rather, characters drift in and out of focus as the storylines go on. Some characters may be more memorable or have more influence on The 'Verse than others, but nobody can be said to be the protagonist . (See also: Soap Wheel .) Britain often run their soaps in Prime Time , as they do with their favourite Aussie imports, and so do Australians themselves. In contrast, American stations traditionally quarantine soaps into a late-morning or early-afternoon timeslot. That said, daytime soaps were reliable moneyspinners for the American networks from the days of radio all the way into The '90s , and served as a career springboard for many actors and actresses who went on to great success in more "legit" film and TV productions. Although soaps originated in the U.S., the genre there has undergone a severe decline to the point that media analysts have declared it effectively dead . During the transition to The New '10s , four of the longest running and most successful soaps in history reached their finales: Guiding Light</ (the longest continuous narrative in human history) was cancelled in 2009 after 72 years; As the World Turns </ ended in 2010 after 54 years; All My Children </ ended in 2011 and One Life to Live </ ended in 2012, both having run for over 40 years. Those were

the first casualties, but not the last. There are several popular, somewhat interconnecting theories as to why soaps have declined in North America: The first is the rise of women in the workforce, brought on by a combination of the feminist movement and massive economic upheaval. When soaps began, women were still primarily housewives who would be home during daytime, which has long been the domain of soaps in America; meaning they had a potential audience of nearly half the American adult population. However, as more and more households became dual-income or "woman-primary" (i.e. a female is the main breadwinner, either because she's single or she earns a higher income than her partner), there simply isn't anybody home to watch. One potential sign of this is that the most-successful daytime soap currently airing is The Young and the Restless </ on CBS, which runs most often in a 12:30 PM Eastern/Pacific timeslot. People who work a typical 9-to-5 job will be able to tune in during their lunch break. The remaining big-hitters, Days of Our Lives</ (on NBC), The Bold and the Beautiful </ (on CBS) and General Hospital </ (on ABC) air outside lunch hour in Eastern/Pacific time at 1:00, 1:30 and 2:00 PM respectively. To further prove the point, those shows air at 12:00, 12:30 and 1:00 PM in the Central and Mountain areas, allowing them to draw in lunchtime audiences there. Side note</: This is also why The Price Is Right </ is so popular among college students who are well-outside the target demographic: The 11 AM timeslot happens to occur during typical college lunch hours. Many in the industry predicted that, while the soap opera will live on in American TV, the last of the classic daytime serials could be off the air by 2015… a prophecy which didn't come to pass. However, it is true that by then, only four 'prestige' soaps remained: General Hospital Practically every nation on earth has soap operas (radio and TV), and loads of soaps is one thing you can always</ bet on an expatriate/tourist station carrying, regardless of country. The U.S. military's Armed Forces Network carries all four current U.S. soaps . </ of downtime in between operations, but when that downtime is isn't always predictable. The drawn-out meandering plotlines of classic soaps are ideal for that situation. For similar reasons, farmers have long been a significant Periphery Demographic for soaps. For the modern variant, see Prime Time Soap or Supernatural Soap Opera . Aside from the fantastic elements (and even there, the line is blurry), this is largely the Distaff Counterpart to comic books , although the fans of that medium will never admit it. Coincidentally, Guiding Light</ and Marvel Comics even had a crossover comic book made in 2006. Professional Wrestling has at times been called "Soap Operas for men." Not to be confused with Soupe Opéra </ .

Soap Opera Rapid Aging Syndrome is the device by which writers — possibly frustrated with a Cousin Oliver — send a young child off in order to get back someone old enough to remember lines and</ have hot and steamy romances. Not to mention the avoidance of all those aimed at protecting children in show business, and that investigate abuses On daytime soaps, pregnancy is a staple storyline. However, the resulting baby is rarely seen after its paternity and/or baby switch has been resolved. When a few years have passed, the child returns as a teenager old enough to have a summer romance On sitcoms, the change isn't quite as drastic but it's still present. Babies are cute and give adult characters opportunities to show their nurturing and/or silly sides, but toddlers are of little use in comedy until they're old enough to be smart-mouths on their own. Thus, sitcom kids generally turn four or five within two years of their birth There's also

the fact that toddlers are notoriously difficult to work with as actors . They're old enough to assert themselves, but too young to understand the concept of acting, meaning they'll basically just do whatever comes naturally to them. A four-year-old, on the other hand, can be expected to remember simple lines and stage direction Different from Plot-Relevant Age-Up in that the latter is at least explained via magic/ Applied Phlebotinum / Bizarre Alien Biology , or the transformation is actually shown on-screen. Do not confuse the two when adding examples Stephen King referred to this as the "Kid Trick" in Danse Macabre</ , his text on American horror media in the 20th century Generally abbreviated as SORAS in certain television communities. Not to be confused with multiple people named Sora, nor with liberal billionaire George Sor s Compare Not Allowed to Grow Old , where the children do age as normally, but the parents seem to stop aging in the interim In extreme cases this may result in Absurdly Youthful Mother or Playing Gertrude . Often overlaps with The Other Darrin Contrast with Not Allowed to Grow Up and Comic-Book Time

A common punishment, mostly for children after they have said a dirty word or been caught telling lies, is to get their mouth washed out with soap. This often indicates a very conservative family, or a child who has been neglected and not taught "proper" language Starting to become Values Dissonance to some folks in Real Life as of late due to the fact it can be dangerous (although it used to be Truth in Television), but mostly always Played for Laughs in movies, television, etc

Most soaps fall under two categories, Loads and Loads of Characters and Long-Runners Over this long period they have perfected the method of keeping the stories moving and the characters changing: The A B C plot wheel Plot A — one of the teens is pregnant. Halfway through this Story Arc , Plot B will kick in - someone has amnesia. By the time Plot A is finished and the teenager has given birth, the main character in Plot B is in a hospital bed and has just remembered that his wife was the one who tried to kill him. Then in another part of the cast, someone's daughter has started taking drugs - Plot C starts. When their parents find out, Plot B's wife is in jail and he is happily settled in his new life. Meanwhile Plot A's baby is now a toddler due to Soap Opera Rapid Aging Syndrome , and is being stalked by her real father and the mother is going slowly mad By starting a new story about half way through another, there is a constant rotation of new plots. The drama keeps flowing, and these people never receive a moment's rest. This is the Soap Wheel , the time-tested way to turn Loads and Loads of Characters into a nonstop cavalcade of drama For a similar trope that happens in a single episode of a series, see Two Lines, No Waiting . For the "episodic" version of this trope, see Four Lines, All Waiting . Compare Nested Story and Kudzu Plot . Can easily become a Mind Screw

A Sub-Trope of Show Within a Show . When a Soap Opera is depicted in works from another genre, it is nearly always done as an over-the-top parody of the genre or at least as a quick portrayal of cliched forms of its tropes, including (but by no means limited to) : Love Triangle (overlaps with nearly everything here, often becoming a lot more complicated) At least one character in the main cast will be a regular viewer of the show , and likely be forced to explain it .

Once in a while, a work turns out to be so bad, it creates a disruption in the badness continuum and wraps right around to good. Rather than it unintentionally Breaking the Fourth Wall like usual, something about the specifics of the work in question instead cause an enjoyable, though equally unintended, emotional response in the viewing public. Maybe the hubcap-on-a-wire flying saucers are cute, the spontaneous brothel scene goes on for so long it's hilarious , or the technically oriented find humor in the way the hacker can suborn the traffic lights of New York with no perceptible effort Whatever the reason, a truly horrid piece of work can become an unintentional riot and even get its own fandom for its very lack of quality. This can well be an ongoing process as attitudes change, budgets grow, and cynicism increases Keep in mind that even when something is , it's still bad</. For most (if not all) entries on this list, there will be an almost unanimous opinion that they fail entirely at having the sort of appeal they intended. Far less</ unanimous will be the opinion that they have a sort of appeal that is unintentional. Where the line lies between simply bad, this effect, and So Bad, It's Horrible , is also controversial. In general, among the very large reserve of things that can be classified as "bad," works that get labeled So Bad It's Good tend to be loaded with unintended Narm and ludicrously crazy factors, while So Bad, It's Horrible is the place for works whose badness only makes them boring or offensive; or even their unintentional suckiness or Stylistic Suck fails to charm and falls flat as comedy The difference between the three is essentially a bad movie is painful to watch but at least you can try to get into the story because there's something that's keeping you watching; a So Bad It's Good movie is one that's so bad that you can't suspend your disbelief enough to not laugh at it so you watch it just to riff on it and laugh at it; So Bad, It's Horrible is where not only is suspending your disbelief impossible, but it's not even fun to laugh at and merely watching it, even just to riff on it, is painful. Nonetheless, don't be surprised when you come across some items that wind up on both lists, such as Big Rigs: Over the Road Racing </ or Soulja Boy 's song, "Anime." On occasion, the writers may intentionally</ try to pull off this trope . Of course, this almost never</ actually results in something that fits because it's hard not to "wink at the camera" , so to speak — though it's often still funny. Sometimes a work may fall on the line between bad and so bad it's good; most of these are box-office bombs with a strong cult following Something which is So Bad It's Good has a high probability of becoming a Cult Classic and, in this day and age, a Fountain of Memes . Many are heavy on Camp , therefore falling far onto the silly side of the Sliding Scale of Silliness vs. Seriousness , and are often considered Guilty Pleasures , although neither is necessary. See Narm Charm . This is also often seen in Memetic Mutation when people combine two or more horrible things (or pieces thereof) into something good. Leeroy Jenkins , for example If someone just keeps on churning out work that's considered So Bad It's Good, said person or people are probably Giftedly Bad . Of course, this could also be a result of Springtime for Hitler Compare Stylistic Suck (when this trope is Played for Laughs), So Unfunny, It's Funny (same) and So Bad, It Was Better (when the work improves but fans prefer it this way). Contrast So Bad, It's Horrible , though both tropes tend to overlap a lot</. Not to be confused with Bad is Good and Good is Bad This

page is not meant to showcase individual Tropers' opinions on works, despite the title. Only add a work to a subpage if there's a fairly unanimous consensus outside TV Tropes that the work is of poor quality, or at least that elements of it are. (For example, the early Mega Man </ games have box art widely considered to be hilariously ugly, while the games themselves are thought of as some of the best platformers ever made.) Also, it does not</ mean Guilty Pleasure . If people find merit in a widely derided work instead of relishing its flaws, then it's Narm Charm or Critical Backlash The French cinephile community has come up with the word "nanar" to represent this concept, which is considered as a legitimate movie genre in this country where cinema was born. Although this term has been in use since the middle of the 20th century, it technically is a derivation of the 19th-century word "nanard," which would then refer to what you'd call nowadays an Unlike popular belief in France, this word, therefore, doesn't come from "navet" (literally 'turnip'), which is used to designate a movie so bad that it's just plain bad. The English-speaking film criticism world has also coined its own term for this: paracinema

A work that's So Bad, It's Good can be so popular that it develops a fandom. This is part of the magic of Camp ; even if the writers aren't trying</ to be tacitly absurd, it's entirely possible to get legitimate enjoyment out of it. But if the writers notice this fandom and try to cater to it — either by improving the work or by deliberately playing up its badness — they often fail to recreate the magic. They end up improving the work from So Bad, It's Good to So Okay, It's Average — it's still not good enough to stand up on its own, but it's now not bad</ enough to be entertaining Usually, this happens when a creator tries to reboot their effort and try to hit where they missed before, only for the audience to appreciate the creator's target less than what they accidentally hit the first time. Sometimes, though, they might take the So Bad, It's Good bits and turn them Up to Eleven — and destroy the Narm Charm in the process, because a big component of So Bad, It's Good is the creator's honesty and commitment gone entertainingly awry, which cannot be replicated deliberately. In Video Games , this is often seen when cleaning up Good Bad Bugs ; the bugs might have been more fun than the rest of the game was meant to be This trope is limited to situations where fans honestly felt that the original was So Bad, It's Good . If the fans didn't think the original sucked and think the "improvements" made the work worse, you're looking at They Changed It, Now It Sucks! . If they acknowledge that the new work is technically better but still prefer the old one on its own merits, you're looking at Nostalgia Filter . If their main objection is that their pet meme has become "mainstream", you're looking at It's Popular, Now It Sucks! . The fans have to acknowledge that the original isn't good</ ; it's just that there's more to salvage from it than from its "improved" version. Naturally, there's a huge subjective component to this, and the examples you'll see here are very general public perceptions of the work's quality and reception Contrast Surprisingly Improved Sequel , where a bad work is followed by a sequel that has improved enough to be objectively good on its own — enough to be more</ enjoyable than its predecessor

There is an intrinsic understanding throughout most of modern Western society that children are to be loved, nurtured, and protected throughout their childhoods by their parents . Parents are viewed as having a responsibility to ensure their child's happiness and welfare, as a necessary component to their healthy development into responsible and mature adults prepared to face the demands of society. Parents in many comedic series believe that this is a load of poppycock, but this isn't usually due to malice or disdain for their offspring. They are simply such Jerkasses , either through self-absorption or stupidity, that they don't even understand</ that passing all their debts onto their children, arranging random and contradictory marriages, and engaging in thoughtless abuse and neglect of their children could cause psychological harm. They aren't applying the rod to avoid spoiling the child — they don't even know it's there. (Rod or child, whichever.) Needless to say, these sorts of parents tend to be the sort that would never be allowed to keep their children. At the very least neglectful parents would have to go through a few parenting sessions. But just as There Are No Therapists in fiction, there are also apparently no social services, either. The helpless kid is just going to have to grin and bear it — and because it's usually played for comedy rather than drama, they usually do. Sometimes they can escape to Staying with Friends . The tropes Beleaguered Bureaucrat , Department of Child Disservices , and Social Services Does Not Exist overlap since they all involve the same problems. Social Services employees are often overworked, underpaid, lack resources, and suffer the public’s wrath. There's a simple reason for this with the consistently abusive parents — the abuse is a big part of the series or movie, and if Social Services did step in and take the kids away, they'd probably never let them go back. If it's a non-human species abusing its kids, it's Abusive Alien Parents . When social services do</ exist and are useless, it's the Department of Child Disservices , and when the incompetent social service agency in question is law enforcement, it's Police Are Useless . Often combined with Babysitter from Hell . One of the most common manifestations of this trope is Minor Living Alone , which the plot will often bend over backwards to try to justify (if they try at all).

The idea that people can be forced into a life of crime through extenuating circumstances. When a person is born into a poor, violent, or disenfranchised social milieu, we should not be surprised when such a person becomes a criminal, nor should we blame him for resorting to criminal activity; all his life, he has been operating at a disadvantage that most Acceptable Targets don't suffer from. This trope is sort of a crossbreed between Inherent in the System and Freudian Excuse . Also known by the fancy name of "social determinism." The Trope Codifier was the legendary American defense attorney Clarence Darrow (best known for defending John Scopes in the), who defended a pair of young Straw Nihilist thrill killers , , by arguing that society had twisted their minds. Though everyone expected them to hang, they got off with life sentences. More mature entertainment will try to make one-dimensional villains more complex and grey by giving them a crappy background to explain (or at least raise questions about) how they became the way they are and how society, genetics and other predisposing factors can influence antisocial behavior. In crime dramas, many an Insanity Defense is rooted in trying to implicate society's problems but for the most part, it's portrayed as a last-ditch excuse that the audience is not

expected to take seriously. Genre fiction or children's writing will just have people doing evil because they are Evil. In general, this trope is often a cause of Unfortunate Implications because it can come across as painting the poor/downtrodden as being predisposed to criminality or at least minimizes the presence of personal values against crime. It can also be criticized for denying or downplaying an individual's responsibility for his or her own actions, or for rationalizing and/or excusing violence. On the other hand, it can also be used as an argument that a particular society is to blame for a social ill, and therefore a justification for rebelling against that society—even if the social ill is common to all human societies and therefore the revolutionary regime will probably have the exact same problem . See Rousseau Was Right for one cause of this kind of thinking. Contrast The Farmer and the Viper , in which the evil is</ inherent. Driven to Villainy is for the more Comic Book -ish kind of bad people . This trope is a common theme for a Criminal Found Family .

This is the social equivalent to Zeerust . Many works set in the future presume that people in the future will have the same social mores and values as they do in the present, excepting a few superficial changes in order to facilitate the plot, demonstrate the foreignness/"futureness" of the setting, or satisfy Author Appeal . The assumption is that our future will be essentially the same as our present — bigger, smaller, sleeker, faster or more automated, but still recognizable as our world. For writers, it's often a Necessary Weasel : it's a lot easier to observe the society you have than to predict which way it's going to go. Consequently the work is likely to appeal to a wider audience than a work which assumes the future will be foreign and puts in the appropriate amount of alien world-building. After all, who in 2420 will be reading this anyway? (Presumably, the same sort of people who read books from 1620 now...) Unfortunately, when authors do get the future wrong, it shows</ . Even if the technology is predicted perfectly, modern readers may lose Willing Suspension of Disbelief when reading a work written in The '50s , set in the present day, and assuming the attitudes of the present day will be exactly like those of the Fifties. They may even be severely bothered if a work from the Fifties assumes that attitudes in the far future will be just like those in the Fifties. (Even if the author had no way of knowing about The Beatles , even if it is the far future, it just seems wrong to read that a lover of popular music in the future goes primarily for jazz quartets or big bands, with not an electric guitar or synthesizer to be seen even though the entire house runs on electricity right down to the windows and Muzak.) This is even more unjustifiable because electric guitars did </ exist at the time , even though they were still a novelty. Sometimes the author will correctly predict some of the effects of a new technology, but completely miss others; many authors correctly foresaw the effect of automobiles on working habits and city design, but not one person foresaw the effect that access to automobiles would have on teen sexual activity . The most disturbing instances from our future point of view are those that miss more important social changes. To continue the '50s example, there are plenty of examples that failed to expect the civil rights movement. The schools may be futuristic and electronic, but they're still segregated. The other two big changes that older works miss are greater gender equality (even on the space colonies, women Stay in the Kitchen) and the end of the Cold War (still wrangling with the Commies in the 22nd Century). This effect increases with the

distance between when the work is written and the present day. The necessary distance to invoke this decreases as time passes, so far anyhow — technology speeds communication up, and communication speeds change. For instance, if a film has been in production for long enough, it may fall under this trope the day it's released. This will no doubt apply to modern works set 20 Minutes into the Future as well. Unfortunately, we won't know how until the social changes have at least started. The inverse of this, when the social mores of the present are presumed to apply in the past, is Politically Correct History . Related to Values Dissonance , Fair for Its Day , Science Marches On , Technology Marches On , Sci-Fi Writers Have No Sense of Scale , and The Great Politics Mess-Up . Eternal Prohibition , Once Acceptable Targets , and Everybody Smokes are specific cases. Note: Examples require a 20-year waiting period before they can be added.

Humans are social beings, and pretty much all works of fiction portray the social lives of them or reasonably similar entities . Thus, tropes about social interaction, social behaviour and social structure are so common that we don't list them all here individually. Instead, see the indexes to the right. Below follows two kinds of tropes:

They fight for the good guys. They might even believe in the cause (to a point). But they are a hero only in name They are antiheroes who have a fundamental Lack of Empathy , a sociopathic disregard for their enemies' lives, and possibly a lack of concern for even the people they save. They may be motivated by boredom , a raw thirst for combat , or by some sort of carrot-and-stick arrangement — a chip in the head , an attachment to some person or thing that requires them to do good , or a pragmatic code that prevents their truly inhuman nature from landing them in jail or in a shallow grave They may solve their problems in much the same way that a villain would — ruthlessly manipulating and killing their way to their goal. They may routinely torture, murder, and/or commit evil acts nearly as bad as the Big Bad . They'll do whatever it takes to win . The people they fight beside are shocked with their behavior, but try to tell themselves, " At least they're on our side ." Even that may not be true in the end, where it may be suggested that this "hero" has become as evil as the monsters they vanquished . And God help you if they decide to turn against you.. Common rationalizations either by the hero himself or on the hero's behalf include Asshole Victim , Utopia Justifies the Means , It's All About Me , or It's What I Do Compare Heroic Comedic Sociopath , for when this kind of behavior is Played for Laughs , and Token Evil Teammate , which they will be if they're a team player. They also tend to stay in Nominal Hero or Villain Protagonist territory. If a character is treated as an Ideal Hero despite being this, then this has been combined with a Designated Hero . If they're a truly bad person with evil desires but are simply doing a traditionally heroic job like police officer or firefighter, you've got an Evil Hero on your hands This trope can overlap with the Sociopathic Soldier although there are just as many outright villainous examples, especially if the setting is war or a chaotic milieu. See also Moral Sociopathy Truth in Television : sociopathic heroes do exist in Real Life . More detail is not necessary

The grunt version of Insane Admiral (and sometimes Colonel Kilgore

or General Ripper). Often people below the rank of Sergeant are all around assholes who plunder, rape , and massacre civilians , or brutally torture and murder the hero's comrades, making killing them less guilt-causing. These generally come in four flavors: If there's a whole bunch of them , expect an Insane Admiral , Colonel Kilgore , or General Ripper in charge. Occasionally, the rest of the soldiers will be relatively sympathetic, but one of these will be the Token Evil Teammate . Contrast Officer and a Gentleman and Cultured Warrior . Overlaps with Blood Knight , except a Blood Knight is likely to be more sociable and likes the action</ and excitement of the battle more than carnage or committing war crimes Compare with the more mercenary Psycho for Hire , who might be a veteran who found out the carnage was enjoyable. Compare and contrast Shell-Shocked Veteran . After leaving the military, this type of character is especially likely to go From Camouflage to Criminal and turn to a life of crime, taking their wartime ruthlessness to use in the criminal underworld. Not to be confused with Psycho Soldier </, where the 'psycho' refers to Psychic Powers . This is Truth in Television . Every war, ever, has examples of this show up on all</ sides. Some have more, some have less, but no side has none</. The amount varies widely depending on a whole range of factors, with the most important one usually being whether such behavior is shunned , ignored , officially condemned, but with a "wink wink, nod nod", or outright encouraged by military higher-ups and politicians (with countless examples of all four options). Scientifically tested . Also, relatedly, .

Normal glass is harder than you think it is. It takes a lot of force to break a glass window, and, even if you succeed, you have many shards of glass all over the place, which can be sharper than a surgical scalpel . However, horribly hurt heroes aren't awesome. It's so much cooler to have your Action Hero effortlessly leap through a window and come out with minimal damage As a result, fiction tends to make windows and the like a lot softer than they are in real life. After all, impressive visuals beats realism ten times out of nine Also note that the stunt glass you see people jump through all the time in movies is not real glass. Traditionally, it's actually made of sugar - a clear, thin sheet of hard candy that looks like glass, but breaks much more easily and is less likely to cut the stuntman to ribbons (the iconic crashing noise is added in post-production). Afterwards, the crew can quickly clean up by either picking up the pieces or simply spraying the area down with a hose to dissolve the sugar. Modern "breakaway glass" is usually some form of plastic such as acrylic When breaking a window to gain entrance to a house or vehicle, it's becoming common for the person to use a physical object to break the glass, thus averting the trope, or to wrap their hand in cloth to "protect" their skin before punching through, which only somewhat downplays the trope: glass shards can easily cut through most clothing, the wrist and arm are usually still unprotected, and punching a glass window is at least as likely to result in a broken hand rather than a broken window in any case. There's a good chance they will then clear all stray glass by rubbing the object (or the "protected" hand) along the frame of the window One of the many ways Television Is Trying to Kill Us . If you don't believe us, well, there have been plenty of Darwin Award winners who didn't, either See also A Glass in the Hand and Grievous Bottley Harm , where the strength of glass is also underestimated. See Dangerous

Windows (and Destination Defenestration) where horror movies seem to have Soft Glass played straight for the purpose of monsters to use them as shortcuts. Contrast the slapstick Glass Smack and Slide . See also Hollywood Glass Cutter

You have a classic property, one that's made money hand over fist for you for years, perhaps decades, but now, it's getting a little long in the tooth. Maybe it's dated, maybe recent installments have tarnished its name , maybe it's just bogged down in Continuity Lockout . Perhaps you've just finished the story you wanted to tell, or you're still telling that story and don't want to ruin it yet. Or maybe you've finally been given the budget to make the entry in the franchise you'd wanted to make years ago but couldn't afford Resetting the thing to bring in new fans sounds like a good idea, but maybe the core storyline is still interesting if you can get rid of the bad superficial elements that accumulated around it over the years, or peel back the exaggeration of its problems over time ; maybe you're about to release it into a wider market where they never got the previous entry while pleasing existing fans; maybe you want to make a straight sequel but have to take a new direction because of drastic creative team changes ; or maybe you're simply afraid of the backlash to a Continuity Reboot What to do? Well, instead of starting over, dip into the Troper Well and pull out a way of explaining you're not really</ tossing away the classic stories the fans love. No, this is an Alternate Timeline . Or a sequel set sometime after the events of the old series that mentions the things fans loved but quietly neglects or Retcons the things not so beloved. Perhaps it's a Retool where significant parts of the setting are changed and even most of the main cast are replaced going forward. Or a prequel, Time Skip or even a separate adventure taking place somewhere else so you have an excuse not to mention the events of the original series, while not denying they took place. You can do an unremarked-upon Same Plot Sequel because it doesn't really matter if there's a literal continuity or not. You can even do a sequel where it's deliberately contradictory as to how much it incorporates from the previous entries, using Broad Strokes for stuff you want to keep to allow you to ditch the rest Essentially, it has many elements of a reboot, and feels a lot like one, without actually getting rid of the old continuity Contrast Continuity Reboot , in which the old story and continuing plotlines are explicitly kept, but minimally/mostly copied and started over from Day 1. Also not to be confused with a Soft Reset or Canon Discontinuity

Those whom the gods destroy, they first make happy In every doomed relationship, there is always one serenely happy moment (possibly a Last Kiss) that signals the beginning of the end. She's not just going to dump his ass after that lingering stroll down the beach. She's about to turn into a traitor and sacrifice herself for their love . He's going to end up a conman drug dealer who was just keeping an eye on her. She's seconds from being unmasked as the Femme Fatale , or his heretobefore-unknown half-sister, or the wife of a jealous weightlifter. Hell, maybe he's about to turn into a dragon and eat her. Generally speaking, if you suddenly hear the Turtles' "Happy Together" refrain in your head while your favorite ship is on-screen, odds are that your ship is going down. After

being hit by an orbital railgun . In shark-infested waters . During a category 5 hurricane It's not so fatal as Retirony , but just as tragic. Sometimes heralds someone getting Stuffed into the Fridge Subtrope of Hope Spot . See also Too Happy to Live and Planning for the Future Before the End

According to The Other Wiki , a solar flare is a flash of brightness on the sun's surface that causes a sudden release of energy. In Real Life , these are quite common, and (generally) only pose a hazard to astronauts in space. While some potential dangers exist from solar flares on Earth, for the most part, they haven't caused any serious trouble in recent times In fiction, an easy way to cause some sort of disaster is to have a solar flare kickstart the problem. The flare is usually shown as a layer of the sun itself coming off of it and frying anything unfortunate enough to be caught in its path. In other works, perhaps the flare causes magnetic poles of a planet to flip, which causes all sorts of trouble, either by causing it to become geologically unstable, or ruining every electronic device. In other works, some power coming from the flare causes the dead to rise / machines to come alive / everyone to hang the toilet paper under the roll Generally though, in fiction: Flare + Some hapless target = Bad Things Happening Of course, Space Is Big and Earth is a very small target. To cause The End of the World as We Know It in real life, a coronal mass ejection would not only have to be traveling in the right direction, but also have the correct vertical orientation relative to Earth's magnetic field in order to be channeled by it rather than blocked. However, the Anthropic Principle naturally dictates that these requirements are met for this form of the trope to take place Compare Lightning Can Do Anything , which is another trope of a naturally occurring event causing wonky things to happen. Compare with Star Killing , a larger example where the star is destroyed intentionally to cause disasters

So you've got your nice big spaceship, but you have one big problem — fuel. It's heavy and runs out real quick The solution? Build a paper-thin mirrored sail a hundred kilometers across, and hang it in front of your ship - the pressure of light from stars will slowly propel your ship outwards. As you get closer to a star, you get more thrust, and as you get further away, the thrust drops off according to the inverse-square law. Using the thrust to move directly away from the sun is rarely the goal, since the acceleration is low and continuous and doesn't usually equal the sun's gravity Like a sailing ship, which uses the contrary force vectors of the water and the wind to choose its direction, a solar sail ship uses the contrary vectors of the sun's gravity (always in) and the sun's light (straight out). A sail ship angles relative to the sun to either increase or decrease its tangential orbital velocity, and therefore the radius of its orbit. In some cases, a solar sail might be used to "hang" a ship or satellite over a star in a place orbital mechanics don't allow (see: Dyson Sphere), but in this case it's more of a solar parachute Unlike a sailing ship at the waters, however, a solar sail cannot "tack" into the solar wind. Tacking requires a keel submerged in a medium with much greater drag (e.g. water), which a solar sailing vessel lacks. It is</ possible to lower one's orbit using a solar sail, by angling the sail to deflect the sun's rays forwards,

decelerating the spacecraft and causing it to fall in closer to the sun; traditional watercraft-style tacking is out, however A close cousin is the electromagnetic sail, any of several similar systems that use a huge conductor or set of conductors (like kilometers of superconducting wire or a cloud of ionized gas) and an electromagnetic field to steal kinetic energy from passing solar wind, the corona of charged particles constantly streaming from a star. While the reflected sunlight used by a reflective solar sail provides orders of magnitude more push per surface area in the inner parts of a solar system, the working area of an electromagnetic sail is a "virtual sail" of electromagnetic force generated by a comparatively minuscule amount of material, and the average energy density of solar wind remains fairly potent far into the outreaches of a solar system. The net result is that these systems make up for the lower inner-system energy density by sheer size and operating range, while still being far lighter than a reflective solar sail, at the cost of requiring input energy, and the invisible "sail" being less visually interesting. An additional advantage for these systems, or hybrid systems mixing electromagnetic and solar sails, is that tacking and breaking are</ possible through a rare case of reversing the polarity actually being meaningful- because manipulating the orientation and strength of the field alters the direction and intensity of force between interacting electromagnetic fields, a keel's opposing drag can be replicated via secondary sails or "kite-tail"-type structures tuned to work at angles or opposition to the primary sail(s) For interstellar voyages, the ship is usually propelled by a giant laser cannon in space shooting at the sail Real-life solar sailing is limited to attitude and rotational control, but it has still advanced by quite a lot despite the technology's infancy - Japan has already sent a solar sailing spacecraft on a Venus flyby trajectory in 2010, and other agencies and groups are planning to launch solar sails for purposes other than to test the sail itself Common in hard science fiction , or as Techno Babble for Space Sailing starships

Selling one's soul to the Devil is an old plot. Usually, characters sell it for something extraordinary — life, power, riches — only to be blindsided by the other party when they least expect it. But sometimes, someone gets scammed into selling or willingly sells their soul for essentially nothing This is usually a comedy trope Sub-Trope of Deal with the Devil . Compare Mundane Wish and Wasteful Wishing , when a character who can wish for anything and get it requests something incredibly ordinary; Comically Small Bribe , when a character offers an incredibly small payment for a service; and Comically Small Demand , when someone with authority or power over others uses it to achieve something minor or mundane

Similar to the Straw Civilian , this trope shows up in Military Fiction. Unlike the civilian or the Draft Dodger , this guy joins the army when things go bad because he knows the safest place to be is in</ the military, in a position where absolutely nothing can go wrong. While everyone else is out fighting on the distant Planet of Hats , he's safe and sound back in Muskogee, Oklahoma, sewing buttons onto uniforms. Whereas a civilian might not know any better, being fat and stupid, this guy's actually been through basic

training, but he's currently assigned to a unit that's not going into combat anytime soon, if at all. He still gets all the perks of being a soldier (respect, drinks, and a uniform) but none of the hassle (strangers trying to kill you a lot). He's the military version of the fat, lazy cop. In modern military parlance, he's the "Rear Echelon Motherfucker." Because fiction tends to be black and white, the REMF usually isn't portrayed as someone who got lucky, or as someone doing a superficially dull but vital job, but as someone who kissed a lot of fat, rich behind. A REMF will be someone who pulled some strings themselves or had Daddy call the right people to get a cushy post. He's a Senator's son, or a celebrity, or he's got a lot of money in the bank. It's never luck, or actual skill, it's who he is and who he knows . The story in Real Life is, naturally, different. The military is a big organization, and a lot of necessary jobs don't involve getting immediately shot at by random [INSERT BAD GUY HERE]s. In fact, in modern armed forces, there's roughly 10-15 REMFs working in support for every soldier actually pulling a trigger at the front. This doesn't mean the REMF isn't resented, mind you, he's still a REMF who isn't deep in the shit at the moment - many frontline grunts won't care and still hold grudges. There is one and precisely one</ universal exception: Medical personnel. Doctors and nurses may never see direct combat, but rare indeed is the front line grunt who will speak ill of the people who stitch them or their buddies back together if things go wrong. There are also other personnel who are specifically forbidden by regulations to enter combat zones, like Military Chaplains, and you'd figure regular combat troops would understand. Often, and perhaps against the stereotype, the children of important and/or wealthy people do join the military because they want to serve. Fortunately or unfortunately, the military brass aren't morons and know that if the child of a VIP dies on their watch, they're in for a world of trouble. Thus, through no fault of his or her own, the kid with the silver spoon might spend the war behind a desk somewhere typing up reports. The same thing can apply to celebrities: had Muhammad Ali accepted his conscription during The Vietnam War , he most likely would have been giving exhibition matches to entertain troops, as did during World War II (though Louis was not drafted). Along with REMF, "pogue" is a term with similar connotations (from POG: Person Other than Grunt). Fobbit (a portmanteau of "Forward Operating Base" and " Hobbit ", given how Hobbits love to stay at home and never</ go out on adventures) is another similar term, specific to troops deployed but who do not go on patrols for varying reasons. "Wire Hugger", and similar terms have grown from the recent wars in the Middle East (as in, desperately tries to keep close to the base, even if it means hugging barbed wire). Being a REMF in an unconventional or modern conflict might be almost impossible, since by definition there isn't a rear-echelon once you're in the theatre. Someone whose job normally isn't anywhere near combat might find themselves under fire or IED attack at any time. For soldiers deployed today in places like Iraq, "REMF" generally means personnel stationed in a totally different country</ such as Kuwait and Qatar. Arguably, most of the wars the US has fought since World War II could probably have been said to lack a "true" rear, as that was around the time the US Army commissioned the M1 Carbine: to give REMF troops a decent long arm in case the Germans or any other Blitzkrieg-style enemy force suddenly broke through the lines and struck at all the supporting infrastructure. If becoming a soldier at the rear is actually because of the individual soldier's actual skills, it is known as getting wise</ . No wonder becoming the company clerk is one of the favorite tasks amongst the conscripts

around the world. This guy is often Gung Holier Than Thou and a Miles Gloriosus . A bad Officer and a Gentleman and General Failure are both probably REMFs. A good Drill Sergeant Nasty rarely is. See also: Armchair Military , and Desk Jockey . Also related to Mission Control . The Adminisphere is the civilian equivalent, dealing with the disconnect between workers out on the factory floor and their administrators.

In a story that involves a Proud Warrior Race or fighting culture, you'll eventually have the eternal debate: Is it better to be a soldier, or a warrior? is a fighter using their skills and training to get a job done or a cause fulfilled, with combat simply being a grim task to get there. They typically rely on a more structured chain of command, following orders and limiting their own initiative to those that fulfill mission or campaign goals . They are often The Fettered and may even see themselves as civilians doing a temporary duty for a greater good. In other words, a Soldier</ fights to live, and a Warrior</ lives to fight. A work that pits these two together typically invokes Romanticism Versus Enlightenment , Emotions vs. Stoicism or Order Versus Chaos , and either side can be shown as right or wrong. A work favoring the Soldiers will typically portray the Warriors as a Strawman Emotional , The Horde or some other disorganized mass of wild, bloodthirsty, and barbaric creatures. A work favoring the Warriors will typically portray the Soldiers as a mindless Red Shirt Army , with no spirit or individuality. Some works may not favor either, but simply show them as two different (but necessary) Opposing Combat Philosophies . One complication that can be commonly seen in cultural comparisons, but not as frequently represented in fiction, is that a more organized force often displays more of the connotations associated with the Warrior aspect, a standing army often being seen as more warlike than one relying on civilian levies. See also World's Best Warrior , which shows how a single fighter can become the best in either culture. Compare Technician vs. Performer , Force and Finesse , Chevalier vs. Rogue , Arrogant God vs. Raging Monster , and Quantity Versus Quality and Quality over Quantity . Contrast Scientist vs. Soldier . Ironically, in the Humans Are Warriors trope, humans tend to be the soldiers while the other species are warriors, and that is why humans are better at war .

It's After the End , humanity is on the brink of extinction. In a remote outpost somewhere, one man is still looking to reverse this situation. He toils away in a laboratory trying to cure the disease, fix the Earth's Magnetic field, change the weather, or even build a time machine to go back and prevent the apocalypse The Sole Surviving Scientist needn't be completely alone, he might have some soldiers guarding him, a few survivors he's generously allowed into his stronghold, even an assistant. Regardless of his company he's the only real scientist left (that we know of). Can overlap with Crazy Survivalist , in which case expect some truly inspired "Home Alone" Antics with Death Traps Often the scientist's efforts are fruitless and he descends into depression, madness or a macabre obsession with studying mankind's downfall This trope is especially common in zombie fiction

It could happen in a lot of ways. Your family picnic is gunned down by The Mafia . Your platoon is ordered to do something suicidal

by General Ripper . Your ship goes down. Your Doomed Hometown has a volcano erupt on it. You were Playing Possum when wounded. You were knocked unconscious during the Last Stand . You were the lucky duck who did not find the Applied Phlebotinum lethal. You were sent to Bring News Back . You were ordered to perform some errand, often stunningly trivial, which left you off-base when the surprise attack overwhelmed it. But somehow you alone survive this horrible event. You've become a Sole Survivor This is the eventual outcome of a Dwindling Party . It can lead to Survivor Guilt or a Roaring Rampage of Revenge . A Sole Survivor may become a Zen Survivor or Shellshocked Veteran If your entire world/race/culture has been wiped out, you're the Last of His Kind , which gets its own page. If your entire world/race/culture has been wiped out and you're the only survivor because you did it</, that's Genocide from the Inside . This can overlap with Genocide Survivor , but one can be a Genocide Survivor without being the last member of that people Compare Spare a Messenger , Everybody's Dead, Dave , and Final Girl . Contrast any story with an Undead Author . Not to be confused with the summer camp Soul Survivor or the winner of the reality TV show Survivor </

Physical solitude, or mental (which can be worse in a crowd) — and its causes, and its consequences A total lack of human contact can leave the character isolated even if surrounded by non-humans; and sometimes they have to be specific kinds of humans, and sometimes, no one can keep them from feeling isolated Compare Introversion Tropes . Contrast Ensembles , Power Trio and Duo Tropes . See The Singles Index , which deals with romantic solitude

A variation of the Self-Imposed Challenge restricted to games with multiple controllable characters, like RPGs or strategy games. The player selects one character from the roster and completes the game using only</ that character, with all the others being restricted to a support role, perpetually dead , constantly blocking, or just ignored The difficulty level for this kind of run can vary wildly, depending on the character and the game. For example, RPGs frequently divide the experience gained from fights evenly among the surviving characters, which means that a solo character can gain levels very quickly early on , thereby breezing through the early game. However, later on, exponential requirements for gaining levels mean that the character is not nearly so relatively powerful compared to a full-on party. There are also many cases where enemies can induce deadly status effects on party members (such as zombie, stone, or instant death), which can be easily rectified in normal playthroughs by having other party members heal the afflicted character, but in solo challenges are as good as a Game Over For some games, this is not strictly possible because the character is either not in the party or not able to perform a technique required to advance the plot at certain points in the game. For these games, the variation is to use only that character in all situations where the game allows it, and use the bare minimum skills from the other characters when compelled to by the plot Not to be confused with Solo Sequence , in which single-character play is temporarily enforced. A character class (supposedly) designed to facilitate this kind of play is a Solo Class This is a fairly popular Self-Imposed Challenge in the Thrill Tower/ScareScraper mode of Luigi's Mansion: Dark Moon </, where

the higher difficulty levels are explicitly designed for groups of players yet the game allows one to try them solo regardless. The two big examples are completing all 25 floors of Expert Mode (which is extremely hard due to the high amount of enemies and their high amounts of health) and attempting to beat much more than that in Endless Mode (some people have somehow managed over a hundred floors</) This is more or less the preferred method of playing the game Daikatana </ , as the AI for your companions is buggy at best. The death of either one of them ends the level just the same as though you had died. Typically, the best option is to order them to stay put in some safe corner and go out and kill everything yourself

Alice is fairly popular and well-liked by everyone around her, but then she discovers that there's one person that just doesn't like her. She freaks out because she must</ be loved by everybody. "How can Bob not like me? What's not to like?" Alice may go through every single event of her life trying to figure out what might have offended him. Sometimes, this type of story is used to teach the audience An Aesop that "You can't please everyone," but other times Hilarity Ensues . For some reason, Alice never wonders why she even wants</ to befriend someone who's consistently rude to her and blows her off despite her kindness. At best, she could be genuinely hurt if it's someone she has to interact with on a regular basis. At worst, it's less about the other person and more about her pride . Her attempts to reverse this dislike will only succeed in really </ giving the other person a reason to hate her. It may sound like Alice is an attention-starved narcissist, but this trope doesn't always reflect poorly on her. You don't have to be best buddies with someone to show them basic politeness, which Bob refuses to do. If she is of a different race, religion, sexual orientation or nationality than he is, there may be implications—real or imagined—that he's prejudiced. Alice's attempts at reaching out to him can teach a "Bigotry is bad" aesop if he comes around—or if he doesn't but everyone else finally sees him for the jackass he is. But if he isn't a bigot and has legit reasons to dislike her, then he certainly won't take kindly to her accusations and she can forget ever</ being his friend (or, albeit rarely, he might realize how he comes across and try to be nicer to her). Doing this in Real Life can</ be the result of narcissism or sociopathy, but it can also be caused if "Alice" has been emotionally abused, bullied, or otherwise personally or socially ostracized in the past and they're finally in a positive environment where they're well-regarded. This can make what happens to them even more tragic, especially when they see it as only trying to protect themselves from abuse or placate haters — and as a result ends up drawing even more abuse and ostracism for falling into this trope. Related to Unrequited Love Tropes , if the hero romantically pursues the one person who can't stand them, which can range from "sweet if hopeless" to "You're only doing this for the Forbidden Fruit , aren't you?" to " Stalker with a Crush ." Compare No Hero to His Valet for "Somebody Doesn't Respect the Hero" and No Badass to His Valet for "Somebody Doesn't Fear the Badass". Contrast Enemies Equals Greatness , where someone likes</ that they have the contempt of others, and Only One Finds It Fun for when only one person likes</ something</. Compare Jerkass to One , which is this trope from the opposite angle.

Some characters are vast stores of useless knowledge. Now, normally,

you'd think that useless knowledge would never come in handy, right? You'd be wrong. Because, by Law of Conservation of Detail , or maybe because of some usage of the Idiot Ball , there will rise an exact</ situation where their trivial knowledge will come to the rescue. Sometimes it requires a Plot Tailored to the Party to happen, other times it just happens naturally. In any case, their so-called "useless knowledge" will save the day. Of course, this is pretty much the mantra of the Crazy-Prepared . This is the subtrope of Chekhov's Gun when the object is something a character knows</, though occasionally it is a Deus ex Machina . May lead to This Is No Time for Knitting . Compare This Looks Like a Job for Aquaman , where it's a useless superpower</ that comes in handy. When it's a seemingly useless item or knick-knack</, It May Help You on Your Quest . Chekhov's Hobby and Chekhov's Classroom lead to this. Compare Figure It Out Yourself , You Will Know What to Do .

Because of the Rule of Perception , whenever a character walks into an invisible force field, expect a brief flash of the field and a light-sabery crackle. The trope name is the Stock Phrase that often results, in an odd aversion of Not Using the "Z" Word Using Some Kind of Force Field allows you to save your CGI budget for more attractive spacecraft. See also Deflector Shields and Force-Field Door . The primary difference is that those tropes refer to the barriers, whereas this trope refers to the scene where someone is required to walk up and experimentally poke it a few times while reciting the required phrase (as above)

If aliens are marching into Times Square, or a garishly-costumed superhero is fighting a bad guy atop the Empire State Building, most onlookers will take the event at face value. But others, even if they live in a world where strange things are known to happen on a regular basis , will dismiss it as "some nutty Publicity Stunt ," an advertising campaign, or perhaps location shooting for a science-fiction movie Frequently observed as an aspect of living in a Quirky Town . Occasionally, characters might intentionally invoke the trope as a way of maintaining the Masquerade , but in most cases, people don't need any "help" to dismiss the weird stuff Sister trope to Is This a Joke? , but in that trope, the character believes the strange events to be a joke directed specifically at her</ , or perhaps at a smallish group of people. The effects in Some Nutty Publicity Stunt are usually too widespread, elaborate, or large to be written off as mere pranks The inverse of You Just Ruined the Shot , in which actors are mistaken for the real thing. See also All Part of the Show , in which the strange events are thought to be part of some specific public performance, and Your Costume Needs Work , which is when a person thinks a particular character is wearing a costume but isn't (includes everything from monsters to celebrities)

It's a tough job, sometimes a boring job, often a dirty job, but Someone Has to Do It Literally. Some kind of supernatural force exists that ensures that there is always somebody doing the job. Once a person takes up the torch, they can't put it down unless there's somebody there to pass it on to. Situations like Death Takes a Holiday where it would merely be a very bad idea for the post to become vacant don't count. These are cases where having somebody doing the job is not just a good idea, it's the Law of the Universe Usually, the job comes with an exemption from aging and death by natural causes — although exemption from death

by violence may or may not be thrown in. It is often the case that being killed is the only way to leave the job, with the killer being drafted to fill the vacancy (or gladly jumping in because they just want to be special) The job itself is often something of a supernatural nature, such as guiding the souls of the departed into the Afterlife, but not always. Sealed Evil in a Duel is another common form This trope is in effect any time somebody says " (it's a dirty job but) someone's got to do it ". Tropes which might apply to such situations include Necessarily Evil , Bad Guys Do the Dirty Work and No Place for Me There for evil "dirty jobs", Closest Thing We Got for jobs where nobody has the proper skills but somebody has to try and hope for the best, Heroic Bystander and Action Survivor for unpleasant-but-necessary heroism, and Who Will Bell the Cat? for difficult and dangerous jobs (either heroic or villainous) that everybody wants somebody else to do Compare to There Can Be Only One . See also Subbing for Santa and Klingon Scientists Get No Respect

Stock Phrase (s) for whenever a group of people are squashed Stogether. It also commonly occurs whenever the lights go out. SVariations on the phrase include "Who's touching my X" and "Whose SX is this?". There's also the Double Entendre variant: aid item is Susually either phallic or soft depending on who the people are. Can Sresult in Thanks for the Mammary , a Megaton Punch (if person #2 is Sfemale), as well as evidence against the Accidental Pervert . Not SWhat It Looks Like also commonly occurs when the lights come back Son. Not to be confused with Flirtatious Smack on the Ass . Often Soverlaps with Joke of the Butt .

A type of Parental Bonus , Something Else Also Rises is a visual shorthand euphemism for an orgasm, an erection, or ejaculation. One can't come right out and say it — no pun intended — so there's a visual placed into the scene as an intentional Does This Remind You of Anything? . This trope is a holdover from when it was still considered risque to show a man and a woman in the same bed (even if they were married). Filmmakers and animators found a way to get around the Moral Guardians , and still use it to this day, but, thanks to a lot of movies, TV shows, books, etc. being more open to reference sex now than back in the days of strict censorship boards, expect to see this being parodied, used as a Comedy Trope , or in more kid- and family-friendly fare that doesn't want to openly reference sexual matters, but does want to get crap past the radar to prove a point or for narrative reasons There is</ a female variation of this trope, too, although much rarer than the male version outside of more explicit material. While the male version is common, the female version is usually either not as explicit and heavily veiled in metaphors (like flowers opening or a waterfall), or the opposite: the scene is a lot more obviously sexually charged although no actual sex is shown. Lustful Melt is more often used as the female counterpart to this, though Lustful Melt can also be used for men (usually as a joke. See the actual Lustful Melt trope page for more information) The Funny Animal version of the trope has ears and/or tails standing straight up instead (the latter of which, admittedly, makes sense if the animal in question is a peacock or something similar) See also Foot Popping , Raging Stiffie , Nosebleed , Or Are You Just Happy to See Me? and Late to the

Punchline , as a lot of the Parental Bonus doesn't make sense until one has a few more years. Compare Fantastic Arousal , when what might seem to be a visual innuendo is in fact an alien species' erogenous zone. Contrast The Loins Sleep Tonight The sneakier younger sibling to the Sexy Discretion Shot

An artifact or entity appears different depending on the observer. It will reflect or emulate specific traits that depend on what the effect is meant to achieve (desire, fear, revulsion, covetousness), more than on the object itself or the observer's expectations. However, the observer's mind will usually play a role in what he or she sees. The object or entity will almost always have a "true form" that might be seen if the effect is dispelled. When this is in play, if Bob casts a Glamour spell that is intended to make him irresistably attractive to everyone who sees him, Alice may see him as Orlando Bloom , while the Face Hugger sees him as Second Officer Kane . In the case of an Artifact of Attraction , instead of having an innate power to make people want it specifically, it may simply imitate</ every observer's most personally coveted object. Lord Voldemort will see it as the Philosopher's Stone , Gollum will see it as the One Ring, and so on. This trope also applies in cases that aren't about desire or attraction. Perhaps the effect makes a monster terrifying</, by explicitly Invoking Why Did It Have to Be Snakes? for whoever encounters it. Note that an observer may or may not see anything remotely representative of the object in question, as the appearance-shifting effect is intended to convey a particular quality. It is the effect, not the object itself, that does the legwork of matching that quality to an observer. Compare and contrast Appearance Is in the Eye of the Beholder , in which an observer typically sees something</ genuinely representative of the artifact or entity in question, but filtered through the observer's expectations or assumptions, especially if the thing doesn't have</ a "true form" to begin with. The observer is, in a way, seeing an honest representation of the thing in question; it's just not really the true form. See also Empathic Shape Shifter , which is where the thing's form literally</ changes based on the observer; A Form You Are Comfortable With , which is when this happens specifically to avoid freaking out the observer (or just driving them insane); and Lie to the Beholder , which is a targeted form of Appearance Is in the Eye of the Beholder that causes only some</ observers to see the illusion. Despite the name, it has nothing to do with Taste the Rainbow . In the movie End of Evangelion, </ :

The Sandman </ :

Ice Age 4 </: The siren fish project an image of whatever the victim loves to lure them in: each of the heroes sees their love interest (real of imaginary, in Sid's case), Sid's grandma sees a Chippendales sloth with a Porn Stache , and Scrat, of course, sees his acorn. Cut to reality, where Scrat is now trying to bury the siren into the ground, blissfully unaware of what's really happening.

Subverted in The Wonderful Wizard of Oz </ : The titular Wizard appears differently to each supplicant, depending on what will impress them most. However, Dorothy eventually finds that each appearance is an illusion using various special effects to ensure that no one guesses his true nature.

Subverted in Angel </ . The big bad, Jasmine, uses magic to make herself Awesome In The Eyes Of Others, otherwise she appears as a gross slimy thing. Connor, supposedly a good guy, thinks there's nothing wrong with the gross slimy thing (he wasn't brainwashed) because that's what he grew up with. Gross.

In the unbelievably obscure 1990s PC game Commander Blood</ , the much-coveted Ondoyants appear as sexually attractive to everyone.

In one episode of Pinky and the Brain </ the titular mice are placed into a sophisticated maze, including a room with a hologram meant to distract them by showing them whatever they most wanted to see. After unsuccessfully trying to find a secret area of the maze and coming full circle, Pinky states that what he most wants to see is a map of the maze , causing one to appear in front of them.

SCP - always changes itself into a "better" version of whatever is viewing it, to the point that they can't even find out its natural form via remote observation because it just turns into a more expensive camera.

The polar opposite of a Not Himself or Out-of-Character Alert ; a character in disguise or otherwise hidden reveals himself to friends through saying something only</ he or she would say Undercover agents and victims of a "Freaky Friday" Flip will occasionally use Something Only They Would Say to positively identify themselves. Also handy in figuring out which twin is the Evil Twin , or when you're in the middle of a Twin Switch (though just as often, it's keyed off of Out-of-Character Alert) Compare You Just Told Me , Trust Password , Ironic Echo , Cover Identity Anomaly , So Crazy, It Must Be True , and Bluff the Impostor . No One Else Is That Dumb is a Sub-Trope . Contrast Out-of-Character Alert where a character wants to remain unidentified but say the identifying phrase out of habit, which at best makes someone just a touch suspicious

Whenever characters play "I Spy" or similar guessing games, it means two things: Inevitably, they're really bored. If The Ditz is on board, expect whatever he's spying to start with a letter other than the one he says, much to the annoyance of everyone else. Sister Trope to Car Ride Games .

So the adventure's over, the team beat the enemy or found the treasure and got out alive, and it's finally time to relax, say their goodbyes, and head home. And someone says, "I've got this nagging feeling that there's Something We Forgot." Cut to a major MacGuffin that got left in the dungeon. Or an ally who got trapped and is still waiting for them to get back. Etc. An Oh, Crap! is likely to occur by the character having this realization. Another stock version of this is a parent or guardian—inattentive or overworked at best or neglectful at worst—having forgotten to pick their child up from school, a sports game, a club activity, or similar. Related to Brick Joke and Locked Up and Left Behind . Often deployed as The Stinger . Contrast What Happened to the Mouse? , in which a dropped plot element does not get another mention, and Offscreen Inertia , when the audience is left to assume that whatever was forgotten will stay in that state permanently.

Most writers are mammals , yet we still get some things wrong about mammals One of the most egregious examples is mistaking cetaceans (whales, dolphins, and porpoises) for fish. Then there's the way that just about any small mammal is mistaken for a rodent, including rabbits, hares, and pikas (lagomorphs) ; shrews, hedgehogs, and moles (eulipotyphlans, lipotyphlans or "insectivorans"); bats (chiropterans); and weasels (mustelids) Another example is referring to saber-toothed cats, mammoths, and other Pleistocene megafauna as dinosaurs just because they are fierce and extinct, and/or portraying them as being around during the Mesozoic era . They are extinct like the non-avian dinosaurs, yes, but they went extinct within the last 12,000 years, while dinos did so 66 million years ago. The orders which saber-toothed cats and mammoths (Carnivora and Proboscidea, respectively) are part of didn't even exist yet when the dinos kicked the bucket. The key word here is Pleistocene, the sixth</ epoch of the Cenozoic ("Age of Mammals") era, which follows the Mesozoic. Yet another egregious example is when woolly mammoths are portrayed in a tropical or dry environment, despite the long fur being meant for insulation against cold temperature People also draw male kangaroos with pouches, which only the females possess ; elephants drinking with their trunks instead of sucking up the liquid with their trunks and then squirting it into their mouths, like real elephants; gorillas beating their chests with clenched fists, rather than open or cupped hands like real gorillas; rabbits with paw pads and button noses like a cat or a dog, as opposed to the fur-covered paws and "V"-shaped noses real rabbits have; and on and on Nothing to do with breasts. Yes, all mammals have mammary glands for, well, obvious reasons, but it's not the focus here. For that issue, see Non-Mammal Mammaries Subtrope of Artistic License – Biology . Supertrope of Kangaroo Pouch Ride , Killer Gorilla , White-Tailed Reindeer , Suicidal Lemmings , Somewhere, an Equestrian Is Crying , Huggy, Huggy Hippos , and Wolves Always Howl at the Moon . See also Funny Animal Anatomy and Misplaced Wildlife

Sometimes people don't do the research. Then sometimes people make a horrible error due to their lack of research . But then there comes a point where something is just so plain wrong </ that out there, somewhere, someone in the profession of that research This is Artistic License taken to its logical extreme conclusion. For actual crying, see Tear Tropes .

An actor well known for playing characters in adult rated works decides to act in an all-ages work that they can show to their own children This often overlaps with Parental Bonus . Kind of contrasts with Old Shame , only most of their work becomes an Old Shame (which might apply to someone who consciously stops doing a particular type of production for good and downplays or tries to ignore what they did before). Frequently overlaps with Bleached Underpants Rated G for Gangsta may be a subtrope if the performer decides to focus their career on family-friendly fare rather than the work that made them famous. If a person does work on a kid-oriented film or show, but they do not have any children of their own or their kids are older than the target demographic of the show they appeared on, that sort of role would be considered a "Sesame Street" Cred . See also Retroactive Recognition , for examples of when the kid show or film in question kicked off their

acting career or was done before the celebrity was famous For some reason, this often gets conflated with Money, Dear Boy , despite the fact that children are in no part of the definition. While an actor might do a children's show because it pays well, it's only this trope if the actor's motivation is explicitly based on producing a work that can be enjoyed by children (usually their own). As such, Awesome, Dear Boy often has more to do with it, especially when it's a long-running children's show that holds nostalgia factor for them or a remake of a movie they grew up with. Can be the justification of WTH, Casting Agency? and Celebrity Voice Actor . At times has also been invoked in an attempt to break Typecasting . Related to Written for My Kids , where an author writes a work for their children, but there is still an important distinction: this is when the author is known for works targeting older audiences, and not written specifically with the author's child or children in mind. Compare to Promoted Fanboy , when the actor or actress partakes in a work because they were a fan of the franchise or company before getting the role

When a work repeats certain songs sufficiently frequently, fans of that work will associate the song with the work whenever they hear it regardless of circumstance This can get distracting As far as Video Games (one of the most noticeable media for this effect) are concerned, the Grand Theft Auto </ series was a pioneer in this area, most specifically Grand Theft Auto: Vice City </ and Grand Theft Auto: San Andreas </, hence the alternative term "Grand Theft Auto</ Effect". Before those two games, popular music in video games was rare because of the expensive and complex nature of licensing it . Even securing a single song could prove problematic because the nature of the contracts the music industry uses; bulk discounts are exceedingly rare. Then there were the space restrictions of floppy disks and CDs and the lack of compression. Thus, the most you usually heard was a token song or two—rarely of anyone famous, because songs by famous people cost more This changed in 2002. After the success of Grand Theft Auto III </ and the popularity of its (mostly original) radio stations, Rockstar Games was confident that it could make money on a game with nearly 100 licensed musical tracks from several labels. This proved successful, so they took it a step further in the next sequel and licensed over 150 songs without any repeats from the previous game</ In both games, you spent the vast majority of the time in a vehicle. You didn't have to listen to music, but most players would listen to something. Each radio station only offered maybe an hour's worth of content (which tended to jump formats), so repeats were both inevitable and (often) infuriating For many people, particular songs had a tendency to stand out and become permanently ingrained. There are many songs in the games and most of them still get played a lot in Real Life , so situations would often come up where a person hears a song on the radio and immediately thinks of the Grand Theft Auto</ game it was featured in ("I Ran" is an especially common example, due to being featured in Vice City</ 's trailer) Another curious effect is that a person would hear a song that they disliked or from a genre they wouldn't listen to and it would grow on them as it repeated (which is known in psychology as). Advertising at its finest You can also get a pang of nostalgia from the stuff that some not-so-famous musicians came up with for the

first two GTA</ games—"Taxi Drivers Must DIEEEEEEEEEE!" It's just that you're much less likely to run into those songs if you aren't playing those games Other works have had the same effect (either through causing it or by being a victim of it) to varying degrees The same thing can happen when previously-composed music is used in films (live action or animated). How many people think of "Thus Spoke Zarasthustra" as "Theme From 2001 </", or associate "The War March of the Priests" with the Bugs Bunny short or "Entry of the Gladiators" as "The Clown Song" from nearly anything to feature a circus. Television theme songs are also a common culprit—for example, The Who 's "Who Are You?" as the theme song for CSI </. See also Standard Snippet and Signature Song

A nonlethal technological counterpart of Make Me Wanna Shout , this is one of the stock weapons of genre SF literature. A subtrope of Stun Gun , it has very consistent traits: It's a small, quiet, low-power weapon, used like a pistol and readily concealable. In genre SF after the mid-1950s, anything called a stunner</ or stun gun</ without qualification probably has the performance traits and role of a sonic stunner. Earlier stunners in genre SF were Static Stun Guns . One functional difference is that sonic stunners are more likely to have stunner-sickness aftereffects. In theory a device that works using beams of focused sound ought to allow for bank shots off any sufficiently hard, flat surface, including accidental self-stunning if the reflection hits the shooter. The problem is worsened by the fact that a right-angled reflector (like the corner of a room) will always reflect the beam back the way it came. In practice this never seems to happen. This trope isn't as common in visual media, which favors more lethal and flashier weapons (and thus the visually more interesting Static Stun Gun). When you do see a sonic stunner in film or TV, it tends to be something of a subtle Shout-Out by writers making a point of their genre-SF roots. Not to be confused with the sonic screwdriver , which is a tool rather than a weapon.

This is about works that, for the most part, never cross the line to bad or good. They just stay roughly in the middle, in the opinion of the viewer — they don't remember anything particularly bad about it, but then they don't remember anything particularly good, either. In fact, they'll probably stop thinking about it at all within a week or so. These are the works we often refer to as "decent", "passable", "okay", "meh", and "mediocre" Now this doesn't seem important, but some works can still do well even when the audience thinks this about a work. It's a form of comfort food, and often easier to pull off than trying to get the audience to think a work is awesome (which has a higher risk of being horrible if done wrong) Why do viewers feel this way? Well it depends. Usually it's a Strictly Formula work that is competent, but little else. Often it's a work that is technically and artistically competent, but otherwise uninspired (this can also apply to works that have high production values, but just don't add up to a satisfying whole package). Once in a while, it's a generally good work that strives for greatness, but the result or idea is ultimately too weak to get all the way there Reactions can vary, depending on expectations. Those expecting something great can often feel just as cheated as if the work was outright

bad — a very common symptom of Hype Backlash . Many believe that playing it safe is worse than trying and failing, as at least something terrible leaves an impact. This is largely the reason for the Four Point Scale . On the other hand, if you aren't expecting much, it's a nice way to kill time, and that's all you are looking for. On yet another hand there's what Joe Queenan described as Scheissbedauer SUCK , but it just turns out...meh. When a work is popular because it's so remarkably bad and the makers (or remakers) respond with some improvements, it risks falling down here - fans or anti-fans respond "it used to be So Bad, It Was Better " because the hilariously bad elements have been removed, and the new elements are merely okay Works generally considered to be average can still have large Fandoms and Hatedoms , but don't expect the works to be outright polarizing or have Fan Dumbs or Hate Dumbs . The fandoms tend to be about as subdued and pedestrian as the work itself, possibly because no one sees much point in getting worked up over something that doesn't particularly stand out. Interestingly enough, looking at many sites that allow users to rank taste, it's far more common to see things ranked in the middle than at either end In truth however, averageness isn't actually negative, nor is it painful. If someone complains that something is "painfully average" Example: to like a work deemed to fall in this category.</ If something about the subject matter, execution, cast, or anything else appeals to you, don't let the fact that the aggregate score falls below an 8(0%) stop you from enjoying it Compare Capcom Sequel Stagnation (which often leads to this) Contrast So Cool, It's Awesome , So Bad, It's Good , Cult Classic , So Bad, It's Horrible , and So Unfunny, It's Funny . Works that fit into those would not fit here

Language is linear. Use and context establish tone, with an expectation for its continuation. When one suddenly uses a register, dialect, or vocabulary at a significant distance from that previously employed, the effect is fuckin’ weird . There’s a certain humor in playing with different levels of language use, and the common trick is to mix "sophisticated" language (such as Spock Speak , Antiquated Linguistics , Sesquipedalian Loquaciousness , Gratuitous Foreign Language , or extremely formal Received Pronunciation British) with "unsophisticated" language (such as the Cluster F-Bomb , Totally Radical , or Buffy Speak), with the necessary awkwardness on both sides. Common examples include: A quote misattribution ("In the words of the great Oscar Wilde , STFU n00b "). A subtrope of Bathos . Compare Buffy Speak , Jive Turkey , Delusions of Eloquence , Bread, Eggs, Milk, Squick . Textbook Humor is often of this type. Not to be mistaken by name for Wicked Cultured . Precision F-Strike is a subtrope. With Due Respect is a common way of getting to this trope See also Foreign Cuss Word . Contrast with Expospeak Gag , where a slangy phrase is disguised in excessively formal language (although they can overlap if the speaker then "clarifies" what they were saying, probably while raising an eyebrow).

After a stellar first installment/season, a series has a second installment/season that either feels suspiciously like the last or just isn't as good. Tends to be more prevalent in dramas than comedies. A specific form of Seasonal Rot , though perhaps not always bad</ so much as just underwhelming when compared to what came before Sophomore Slump concerns shows that make it past an awful second season and into a decent or fantastic third season. If

the show doesn't survive the second season, it's a Second Season Downfall This happens in music with depressing regularity as well. Usually, it's because after the first album (which usually has a couple of years of development under its belt and plenty of trial and error from live concerts to help the band determine what does or doesn't work), the record company wants a second album produced within a year. The second album is therefore very likely to consist mainly of the songs that were cut from the first album because they were considered inferior. Combine this with the fact that most bands popular enough to get a second album will also be constantly on tour and one can see why this happens This term as used in sports refers to players who become breakout stars during their rookie seasons, only to follow up with underwhelming second years, whether because of injury, changes within the team, heightened expectations and publicity leading to faltering on-field performance, etc. Some of them are able to figure out how to get back on track for their third years and beyond, while others end up skidding for a few years and then disappear, with varying levels of infamy based on how highly touted they were before or during their freshmen seasons A related term, used in computing, is the "second system effect." Freed from the tight schedule and budgetary demands of the first system, the programmers attempt to "correct" everything that "went wrong" the first time, usually with disastrous effects This may happen when your first season is widely considered a Tough Act to Follow , but it's not a rule Compare Oddball in the Series , Sequelitis , and Seasonal Rot . Could cause a Broken Base if another portion of the fandom disagree with the opinion that the work is going through a Sophomore Slump. If it's inverted, see Growing the Beard , Surprisingly Improved Sequel or Even Better Sequel . If it's a longer-running series that's consistently good, then bad, then good again, then bad again, then repeat, see the Star Trek Movie Curse . If there really are</ only three installments , it's basically Middle Child Syndrome for installments/series Has nothing to do with what comes after the freshman fifteen

Our young hero has accomplished! Perhaps they have triumphed, perhaps they have decided to undertake a Heroic Sacrifice , perhaps they have proven worthy to respond to the Call. How can this be fittingly celebrated? Why, have them be told how proud people are of them! Normally this is said only by people who have reason to be proud: their parents, a Parental Substitute , their mentor , the Team Dad , A Father to His Men , etc. This is usually done for a young hero, whose skills might have been in doubt, and had unquestionably been formed by the person saying it. It may happen very early in the story, as proof that they are ready for the call, but is more common at the end to validate their Character Development . May also be a form of encouragement after a character has progressed a certain amount but is feeling discouraged. There is the form "I'm so proud of you." Or "We are so proud of you," if one can speak for more than one (such as a mother or father for both parents). Then there is the form "Your father would have been so proud of you." Normally addressed to fatherless heroes, though any Disappeared Dad may qualify them. May be spoken by the mother, or by any other mentor. They may not want, even in this moment, to have a Not So Stoic moment, and so distance themselves from the praise. They may be aware that the child craves his father's approval, and would value this. They may also not want to claim too much credit, since saying "I am so proud of you," implies that they have a reason to be proud. While "father" is

the most common, "Your mother (or other figure) would be so proud of you," is also possible, in similar situations. "You should be proud of yourself" is another alternative, which ascribes even more of the credit to the person themselves. This is, in fact, what the "Well Done, Son!" Guy craves, but the hero has not usually been striving with their eye on it, and the speaker is willing to tell them, freely. This trope can also be Played for Laughs when the child does something despicable or even outright criminal, and the parent approves of their deviant behavior. The Doting Parent does this all the time, and gushingly so, which means the one they are so proud of is likely terribly embarrassed . Alternatively, the trope Don't Tell Mama exists because a crook wants to hear this and doesn't want their parents to be disappointed in them for taking up a life of crime. Contrast It Has Been an Honor , where the character is usually addressing someone he has not formed, though he may have led him. Also contrast Disappointed in You . See Your Approval Fills Me with Shame for when they don't want this praise. Also see Like a Son to Me .

There are many ways of taking a loss. Alice, for example, will admit defeat and might even compliment the one who bested them . Bob, however.... won't The Sore Loser is a character who takes defeat very ungraciously, no matter what kind of defeat it was. Unlike his graceful counterpart, Bob will get very snippy and bad-tempered, insult his opponent, accuse him of cheating, rant about his "superior skills" and, in some extreme cases, even try to physically assault his rival or kill him (Although sometimes they end up humiliated even further). Depending on the setting, he could do things like Flipping the Table , throw away the cards he was using, angrily swipe all the remaining pieces from the chessboard, and so on. In a fighting series, Bob will usually lose his calm behavior, resort to cheap tricks in order to win, adopt a more ruthless and brutal strategy , or unleash a Dangerous Forbidden Technique just to have a chance. Storming off in a huff is also an alternative. Many Dirty Cowards may also be this, as them losing usually means death in lethal situations Of course, if Bob's opponent Carol engages in Unsportsmanlike Gloating , she's basically giving Bob free license to react however he likes. The winner's reaction is a good way of telling who the sympathetic character is supposed to be in this exchange. That being said, the character engaging in Unsportsmanlike Gloating is often also the Sore Loser, ungracious in both victory and defeat This trope is often the launching pad for Villainous Breakdown , attempted "The Reason You Suck" Speech , and, in some extreme cases, One-Winged Angel . If I Can't Have You... could be considered as the romantic version of this trope. A person nervous about possible harm from winning against this type of person may decide to Let the Bully Win A Sister Trope to Second Place Is for Losers (and usually overlaps unless it's not the loser that thinks this), and Unsportsmanlike Gloating (being a sore winner) Compare Rage Quit , Defiant to the End , Taking You with Me , Never My Fault , Post-Game Retaliation . Contrast Graceful Loser , Touché . If you were looking for a loser who frequently feels sore physically</ that's The Chew Toy

Sometimes, relationships don't work out. It's a shame, but in

romantic comedies, it's also a goldmine. What if one person moves on? Even better, what if they move on to one of their mutual friends? The common trope in this situation is for the new couple to tiptoe around the old partner, trying to spare their feelings and avoid negative repercussions . Unfortunately, the more the new couple tries not to push the old partner's buttons, the more likely it is that some buttons will</ get pushed. The Sorkin Relationship Moment is the moment the old partner gets fed up with all this and tells them to quit it already</. The effort they're putting in to keep it from them is only making it more obvious , and the whole thing is just tiresome and they'd like it to stop. The Sorkin Relationship Moment doesn't have to be romantic. It is, however, an attempt to resolve a tense situation through direct confrontation — shouting, in effect, stop it! from one person to the next. Named after Aaron Sorkin , who has had quite a number of these, and coined by Eric Burns of Websnark </ after the situation appeared in the Webcomic Questionable Content </ . This is similar to "The Reason You Suck" Speech . Compare/contrast Ignore the Disability .

An intoxicated character is interacting with a police officer, Agenerally as a result of a traffic stop. They are clearly impaired, Abut are trying to act as if they aren't. Expect an Alcohol Hic Aor two. lmost always leads to Hypocritical Humor , Implausible ADeniability , Blatant Lies , and/or I Resemble That Remark! Needless Ato say, often times it is Truth in Television . (As such, it can Aevoke reactions of " Dude, Not Funny! ", as Drunk Driving is a Apretty serious problem in real life.)

Irene needs to talk to Alice and Bob. She goes to Bob's room, opens the door and sees Alice and Bob in a compromising position. "Ok," Irene thinks, "just slowly back out of the room and close the door." This trope is when someone opens a door, sees something unexpected, and does an about face. They may mutter something like, "I'll come back later," "You seem busy," or " Sorry to interrupt ." Now what the people in the room are doing may be Not What It Looks Like , and often isn't even sexual at all. The two people may be summoning a ghost, or conversing with their toys. On the other hand , this covers solo acts . Afterward, outside the door, the interrupter may start ranting, screaming or searching for Brain Bleach . A common variation is to play the scene from the other side of the door. Albert and Brenda are doing something innocent, and just at the wrong moment, someone opens the door. As per Finagle's Law , they're invariably caught when the potential for Not What It Looks Like is at its highest. Especially embarrassing when the person accidentally interrupting had previously been purposefully sent away. Or in... certain other situations . If shown from the perspective of the couple interrupted, see Interrupted Intimacy . Related tropes include Backing Away Slowly , which is a slightly different take of getting away from an awkward situation, and Screw This, I'm Outta Here! , when a character walks away from an uncomfortable situation happening around or involving them rather than one they just walked into.

Villains will appear in strictly ascending order by menace</ . This trope has ancient roots. Possibly the earliest example, at least in the English language, is the Older Than Print epic Beowulf </. It just makes good sense that as our heroes fight the forces of evil, they should get better at fighting the forces of evil . So as the

story progresses, the fights should get easier and easier. Of course, having an overly easy fight is just bad drama , so you have to consistently increase the threat the heroes face. This results in the Sorting Algorithm of Evil. The first villain you meet is the weakest, and the last is the strongest. As the heroes get strong enough to defeat their current enemy, a new enemy will emerge that forces them to reach another skill level. It would be an Anti-Climax if the hero defeated the Baddest Ass and spent the remaining time contending with not-quite-as-Bad Asses. There are several ways to justify this; due to Monster Threat Expiration , the current villain usually Forgot To Level Grind while the heroes are out collecting 20 Bear Asses and are Gonna Fly Now thereby outclassing him. This at least provides an in-story explanation for the Lamarckian evolution of evil from one bad guy to the next. In some cases the Big Bad the heroes defeated last time was actually a mere member of a powerful organization. The others can show up to avenge their fallen comrade, so now we have the previous big bad times two or more. One of the more realistic possibilities, albeit one that's hard to justify in many stories, is a tournament structure, where the opponents become more formidable the closer the heroes get to the championship. In a series centering around military technology this can be explained by technological progress. The heroes will get new weapons, strategies, and better technology, but so will the enemy. In some cases, particularly the Shōnen genre, it could be that an earlier Big Bad who presented a powerful threat is now dead and can no longer grow anymore in power and by the time the heroes face the latest Big Bad , the new villain (and subsequently the heroes themselves) will have had that much more time to become stronger that the previous villain, who will be left in the dust since his level of power will have been set in stone by the time of his final encounter with the heroes and subsequent death. Another example would be that the Big Bad has been defeated but lesser villains are forced to fill the power vacuum by becoming more evil. Occasionally, a particularly strong or evil villain will ignore this trope and arrive early to beat the hell out of the heroes , only to leave them alive because they're Not Worth Killing . Villains who use this as a tool are often Not So Harmless Villains . Sometimes, rather than toss a stronger villain at the heroes the writer might decide to surprise them with an Outside-Context Problem that uses different tactics than brute force. Sometimes, this is justified if a hero has already faced past enemies many times to the point where they make up a part of his recurring Rogues Gallery . After battling those past enemies so many times, it would only make sense that the hero would get used to them and be able to defeat them more easily over time. However, if a new enemy enters the mix later in a hero's story with powers and abilities the hero has never encountered before, the hero may legitimately be at a loss as to how to deal with this new villain and that later-story villain may come across as far more powerful than a hero's older villains precisely because he/she brings something new to the table that past foes never did. A problem comes up if a long-running show goes past its first Grand Finale . We may believe that the ultimate Evil Overlord is enough of a tactical dunce to think that sending his henchmen out in ascending order was a valid strategy. But why should the new</, unrelated, Big Bad happen to be even stronger? Sometimes the Big Bads might form a string of Men Behind The Men , making this structure more sensible. Although this leads to new Fridge Logic issues: why doesn't the Man Most Behind use the unimaginable power of his position to just wipe all the heroes out instead of just sitting there ? If the first Big Bad is only a local terror, bigger bads may not have even been aware</

of the heroes. The increasing threats they face are a reflection of the threat they pose to the ultimate boss. And then there's the Fridge Logic that can rise when one wonders why later, more powerful villains would tolerate the earlier, weaker ones hatching plots of their own. If the villain of Season Three wants to destroy the world , and the villain of Season Four wants to conquer it , why would the Season Four villain tolerate his predecessor's attempts to destroy it? One way to address these issues is to make the later villain a Sealed Evil in a Can who only gets released after the earlier villain is defeated, not necessarily as a result of it. Another downside of this trope is viewers who get into a show later may find early villains lame by comparison when they go back to catch up — "pshaw — we're supposed to be worried about this guy? He can't even blow up a galaxy !" Villain Decay can be used to soften this blow; if the Big Bad ends the season a lot lamer than he started, the next season's enemy doesn't have to actually be any stronger to give the impression of an increasing level of tension. This trope is particularly common in Roleplay Games and Video Games : the more and stronger enemies you fight, the more experience and power you get. You also get the magical weapons and armors they drop . You have no chance against mid-game monsters with a starting character, but by the time you get to them, you are ready. That makes this the perfect trope for a Small Steps Hero , since they can clean up the world one bad guy at a time. Related to Convenient Questing where ascending menace is laid out geographically, and the player must proceed through these regions in strictly ascending order by menace. (Mount Doom? It's right over there, but you have to go through the Hills of Moderate Evil , which are themselves on the far side of the Forest of Inconvenience , reachable via the Ghibli Hills .) When this happens involving entire breeds/species of villains , it's changing the Villain Pedigree . If it's because various villains were sealed away it's Sealed Cast in a Multipack . If a particularly powerful villain remains on screen for too long and can't keep up , compare Monster Threat Expiration . See also Sliding Scale of Villain Threat , which breaks down the scales of villainy. Contrast Evil Evolves . Compare Always a Bigger Fish , Lensman Arms Race , So Last Season , Sequel Escalation , Rule of Escalating Threat .

When a character is tempted to do a Face–Heel Turn or a Heel–Face Turn , it is often the result of much Character Development in their lives, forcing them to weigh their nature, goals, loves, and even hates</ in balance. It is by no means a simple or trivial matter, so we here at TV Tropes have decided to make discovering the likelihood of such an event for a character simpler But since we already have a TV Tropes Wiki Drinking Game , we decided to make it a sorting algorithm instead! To use the Algorithm, take each column's "Score", divide it by the number of applicable rows in the column, repeat for every column, and add the results together. Post your results in the WMG page for this article , where these tables have been copied for your convenience. Algorithm of Villains Turning Good Algorithm of Heroes Turning Evil

So you're watching a horror show, slasher flick , or maybe an action show that promises a high body count. In order to prove just how high the stakes are and how willing the show is to be Darker and Edgier and scarier, it bravely advertises that Tonight, Someone Dies ! Not

just anyone though, but someone on the poster! So who dies? That's a tricky question. Kill the wrong person , or too early, and you risk angering the viewer. Execs and writers have, through time, trial, and (mostly) error, discovered that killing off " unpopular " minorities is safer than popular ones or majorities. This has led many to notice patterns, a kind of Sorting Algorithm of Mortality, whereby a character's odds of gruesome, violent death are established relative to the rest of cast. The following is a rough generalization; some movies or shows might mix it up depending on which roles and traits a given character has, but few outright subvert or avert it, and when they do, it's painful . Compare Acceptable Targets . Once killed, see Sorting Algorithm of Deadness to see how likely they are to come back. See also Rule of Empathy . To use the Sorting Algorithm of Mortality, simply add the for each applicable row, then divide by the number of applicable rows (at this point, 13 or fewer). Remember: this is a relative score, so you need at least 3 characters from the same movie or series to establish a baseline. To keep this page clean, please put speculation on the mortality of a cast in the Wild Mass Guessing Sorting Algorithm of Mortality page.

Mainly a video game trope, this describes the odd phenomenon in which the landscape the characters travel through gets steadily scarier and more esoteric as they get closer to the end of their quest The adventure almost always starts off in a sleepy village nestled within a landscape of green meadows and idyllic woodland . After thoroughly exploring an underground crypt or dungeon , the adventurers break out into the wilderness: passing through a huge forest , they cross a searing desert for brief R&R at a sunny beach and a diving detour . Upon wading through a foul-smelling swamp , they arrive in a humid jungle , beyond which lie the lands of the dead , icy glaciers , and fiery lava landscapes . A mighty mountain , an ominous temple , or an outright gimmick level may be wedged in-between stages at any point before the climax, which usually takes place in a burning wasteland , literal Hell , an intimidating giant machine , or an outright Eldritch Location This can be justified if the lands they visit are steadily more influenced by the Big Bad . Often, however, this isn't the case, and the landscape just happens to look more threatening as the story goes on, even if it means placing the treacherous ice level next to the slightly-more-treacherous volcano level. Another possible reason is that the land's steadily rising outlandishness is to signify that the characters are getting farther and farther away from familiar territory: things like their hometown and other villages or landmarks they visit regularly in their daily life. Any place tends to feel a little bit scarier during the first visit, and having the environment get more and more imposing as the journey continues helps convey the feeling that the heroes are in uncharted waters, at least for them Remember, this is about the appearance of the area, not its actual threat level. Characters might travel through the creepy Lost Woods completely unscathed, whereas the pleasant-looking plains could be the site of a climactic battle in which hundreds die. If the plains come after the lost woods, it is not this trope The popularity of the Green Hill Zone trope is based off this, as game creators prefer ease players into the game by having a level that is less inherently threatening See also Video Game Settings and Fantasy World Map

When you have a of tropes to through, it helps to them into a single coherent (no, not like !). Luckily for you, the wiki is not a . He has come down from his to and each of our vast of sorting tropes. It wasn't or , and he's a of his former self, but with , he has created a of Grab a and enjoy a of tropes. Not to your , but scales, sliding or otherwise, are another form of sorting — hence their into this index. Abusing the Kardashev Scale for Fun and Profit

A container or object which holds all or part of a person's soul (or life, or heart) outside of their body; this makes that person immortal and/or invulnerable . The only flaw is that the Soul Jar is now their Achilles' Heel . Usually, they make sure it is very</ well protected (the word phylactery</, the common name for this kind of container from Dungeons & Dragons </ fame, actually comes from Ancient Greek phylacterion</, form of phylássein</ , [φυλάσσειν] meaning "to guard, protect"). 1) The person whose soul is jarred cannot be physically killed (or in some cases even injured) as long as the jar is intact. This one has two sub-categories: The Trope Namer is Might and Magic </ , where necromancers and evil wizards transfer their souls into literal jars during the spell to transform themselves into liches. Of course despite the name it's not necessarily a jar; common examples are paintings , gems and still beating hearts ; and in mythology and fairy tales, eggs or trees. It does not necessarily host a soul, either; sometimes an object is tied to a character's immortality, but does not actually contain the character's soul. The device is usually used by liches , and is invariably associated with them in folklore. A subtrope of Ghost in the Machine and Immortality Inducer . If the owner's body is destroyed, the Soul Jar may become Sealed Evil (or Good , or Badass) In A Can . If the owner of the Soul Jar is evil, then there's a good chance the Soul Jar is an Artifact of Doom . If the Soul Jar gives a special power but using it can be hazardous, it may also be an Amulet of Dependency . If the Soul Jar has to be inside the body for the character to "live", it's a Heart Drive . Compare Brain in a Jar and Brain Uploading for science fiction equivalents. See also Fighting a Shadow , Animating Artifact and Fantastic Fragility . Not to be confused with Crystal Prison , where a person is trapped in a gem.

When an in-universe problem with sound effects is Played for fect
Laughs with the characters noticing , you've got a Sound De fect
Contrast Wacky Sound Effect for "wrong" sound effects not fect
noticed by the characters and Special Effect Failure , which fect
happens when the sound effect goes unintentionally wrong, fect
regardless of the amusement factor of said error. Also contrastfect
Unsound Effect , which uses something that isn't really a soundfect
at all. Broken Echo is a Sister Trope , where it's a voice fect
that's wrong instead of a sound ef fect

In the military, especially during a long march or run, the Sergeant Rock will lead a song called a cadence call, military cadence, or jody song to keep his subordinates' spirits up as they train, march, or work around their base or encampment. The songs cover a variety of topics, including the civilian at home who's sleeping with your significant other (i.e. Jody), the amount of

badass your service or unit has compared to the other services or units, the hazards unique to your particular unit or service, your own vulgar and violent tendencies, et cetera Although many of the songs are call-and-response , not all of them are. However, they are always sung to the rhythm of the task at hand

From Sgt Bilko </ :

The killer goes through a door, which closes behind them. Then we hear screams and gunshots. Used with those Driven to Suicide as well A subtrope of Gory Discretion Shot or Battle Discretion Shot . See also Scream Discretion Shot and Shadow Discretion Shot . Goes together well with the lethal variant of Mugged for Disguise . Sometimes an example of Nothing Is Scarier or Darkness Equals Death , where the scene is more disturbing because we can't see it. Related to Offscreen Crash and Death by Transceiver If the death is a Sound-Only Death from the point of view of in-canon third parties as well as the viewer, this may be a set up for a twist in which the whole thing was a fake and the apparent death noises were simulated Older Than Feudalism : In ancient Greek theatre, all deaths took place behind the backdrop and the audience was left to interpret from the sounds made what had happened As a Death Trope , expect unmarked spoilers. You have been warned

So you're a big-time Hollywood director. Congrats on that, by the way. You've got a dynamite action movie you're about to start shooting. It won't win you an Oscar, but hey, you've got two of those, and any way, your mortgage payments are becoming somewhat uncomfortable. There's just one problem: the movie is supposed to end with a bloody firefight, and your stupid conscience is acting up again. You went to NYU, dammit, you can't just have 13 minutes of blood and bullets. But wait. What if you overlay the horrific carnage with beautiful music? Then, you're not indulging your audience's bloodlust, you're making a deep philosophical point about the duality of human nature. What says, "Mankind is both glorious and murderous" better than a faceless mook getting shot in the head at close range while Schubert's "Ave Maria" plays in the background? Soundtrack Dissonance is utilized to, in literary terms, pose a juxtaposition with the intent of making a thematic statement and/or widening our emotional distance to the events before us, thus allowing us to view the piece in a more removed, intellectual manner. You're taking advantage of a tactic used countless times over the years to heighten the sadness of a scene. Your dissonant music doesn't have to be played over a violent scene, of course. Happy, upbeat music at a funeral of a beloved character can also work. It can</ be used to excellent effect, especially if the song is somewhat silly, but if you use " What a Wonderful World " or " You Are My Sunshine " be warned, examples of those have their own pages now. Of course, it can work both ways as well. Inappropriate music can be often played for laughs; a sombre, portentous, important-sounding piece of music played over something utterly trivial happening on screen can increase the laughter. A light and cheery pop song or sweet love ballad playing over an otherwise tense scene can be played for laughter, especially if the tension comes from something absurd that the characters are otherwise treating entirely seriously. In addition, peppy music can be also played over a scene featuring otherwise horrific events as a form of Black Comedy , often giving the impression that the work itself is uncaring and nonchalant

towards the suffering of the characters present, and it can make the scene in question hilarious in an especially horrible way if done right. But if you use " Yakety Sax ", be warned... The Ode To Joy</ choral in the fourth movement of Beethoven's Symphony No. 9 is especially cursed to suffer from Soundtrack Dissonance due to its notorious use in Third Reich propaganda, hence modern usage is just as often due to this association (or to the most well-known work to use it for Soundtrack Dissonance, A Clockwork Orange Probably much less so in Europe itself, since the tune (without lyrics) is as close to being as it could get. To be absolutely clear, Friedrich von Schiller's original lyrics were about the equality of all humankind in the eyes of God: Joy, the bright spark of the gods/the daughter of Elysium ... All men now are brothers/beneath your gentle wing</. The tune also has lyrics written as the hymn "Joyful, joyful": Joyful, joyful, we adore Thee/God of Glory, Lord of Love</ . Pretty much any anime with a happy Ending Theme will achieve this trope with its first serious Cliffhanger , intentionally or otherwise. Same for a happy Opening Theme and any stressful teaser. The entire process has been streamlined by the ability of some video game consoles to replace a game's soundtrack with anything the player cares to play. Try setting the most violent, obscene parts of Gears of War </ to "Yakety Sax" sometime; your parents will search your mattress for drugs, but you'll be enriched by the experience. Unless, you know, you actually have drugs stashed in your mattress. Speaking of video games, some video game developers have developed and implemented systems to try and avert this as much as possible; for more info see Variable Mix . When this trope is done poorly it can easily turn a dramatic scene into Narm . A common sister trope is using dramatic music to mundane events (Mundane Made Awesome). A subtrope of Mood Dissonance . Compare Ironic Nursery Tune (where a character is singing their favorite lullaby or nursery song), Creepy Children Singing (if it involves young children singing nursery rhymes in the background) and Lyrical Dissonance (when the lyrics</ don't match with the music). Contrast Isn't It Ironic? . Many of these musical pieces are Standard Snippets . In film school this trope is called On the Internet, it has become a meme called .

There's nothing like a good joke. And the humor these</ characters are known for is nothing</ like a good joke A character or show whose jokes are so bad, and whose sense of humor is so trite, corny, and childish that — paradoxically — you can't help but laugh at it . Usually includes some examples of Don't Explain the Joke . In English slang, this type of joke is commonly called a "groaner" or "dad joke" (the latter because jokes like this are the bread and butter of a Bumbling Dad 's awkward attempts at humour More specifically, "dad joke" can also refer to an irritating sort of inverted Who's on First? puns. For example: "Dad, I'm hungry." "Hi Hungry, I'm Dad."). Other languages also have words for this phenomenon: for instance, in Indonesian, a joke that's So Unfunny It's Funny is called a </. When the effect was unintentional, it's like a Narm moment, but for something that was supposed to be funny Often, this will be Played for Laughs when a show includes a wisecracking character whose jokes always fit this trope, or a horrible comedy as a Show Within a Show . In these cases, it's a form of Stylistic Suck However, when an entire show fits this trope, it's probably unintentional . Note that this is rare; it's said that while most genres, badly done, become comedies; bad drama , bad sci-fi , bad horror , etc. can all become

targets of audience mockery or So Bad, It's Good , but a bad comedy by definition fails at being funny. Failing so hard you succeed is a rare gift. A common variety is to have something overloaded with so many bad funnies at the end you are laughing for some reason Closely related to (and often a component of) So Bad, It's Good . Often related to Cannot Tell a Joke . Compare and contrast Anti-Humor , where the conventions of comedy are defied on purpose. Not to be confused with The Comically Serious (formerly known as " The Unfunny "). Sort of like Crosses the Line Twice , only with (lack of) humor instead of offensiveness

Sour Grapes Tropes are tropes that exist to convince the viewer that not only is it unlikely that their dreams and fantasies will come true, but it's probably better if they don't</. This is done by showing how a character is made miserable when getting their wishes fulfilled Stories that don't do this are Wish Fulfillment fantasies, not that there's anything wrong with that . Fiction has been providing wish fulfillment for centuries. Contemporary fiction, though, often comes off as somehow obliged</ to show the downside of a desire. Not doing so might be seen as "juvenile." Ironically, Sour Grapes Tropes tend to indulge in their own backhanded brand of Wish Fulfillment ; these tropes are often used to assuage an audience's discomfort and envy seeing a more ambitious or intelligent or lucky character at succeeding in a way that the viewers can't by showing the 'bad' side of their success. See Nietzsche's remarks on ''slave morality'' for the intellectual impulse behind many of the usages of these tropes Contrast Sweet and Sour Grapes

Anti-Intellectualism : For when knowledge and education are undesirable.

Age Without Youth : You gain immortality but you still grow older until you're too decrepit to function anymore, then you'll be praying for death.

Alice (or sometimes Bob) is trying a bit too hard to make herself look good at the expense of other women (and maybe men), claiming superiority on the ground that she doesn't have as much sex as they do, doesn't dress as sexily as they do, or something like that. Accusing other women (or sometimes men) of being "skanks", "sluts", "cheap" and whatnot Often a tragic character portrayed as being overly prudish as a kind of Sour Grapes : " I deny myself my sexuality , so why don't these people do the same thing? ". Thus "Sour Prudes". For extra irony , Alice might be pulling the Entitled to Have You card, based on being such a good girl. This can be especially tragic if she lives in a society where women are economically dependent on men, making her come across as justified — or at least as a Troubled Sympathetic Bigot who is only trying to survive in No Woman's Land . In some cases, this might go hand in hand with Marital Rape License . For example, let's say that Alice is outraged at Charlene for saying that oral sex is okay — and that the real reason for this outrage is that Alice fears that Charlene's opinion may encourage Alice's husband Bob to try to pressure Alice into having oral sex If</ this Alice has taken a vow of chastity (and she usually hasn't), she might also</ be a Strawman Political of the sexual-religious kind. Note that a

character who chose to be chaste — without being a Jerkass about it — is not</ this trope. If a character is accused of being this trope by another character, without being portrayed as such by the narrative, it counts as " invoked " and does not go on character sheet pages Compare My Girl Is Not a Slut , Internalized Categorism , Lie Back and Think of England , Armoured Closet Gay , Heteronormative Crusader , Slut-Shaming , Female Misogynist , Not Like Other Girls , Madonna–Whore Complex , and Sex Is Evil, and I Am Horny . Contrast Ethical Slut , For Happiness and Safe, Sane, and Consensual

An index page for all media originating in South Africa .

Terrorists based in the region of South Asia (Afghanistan, Bangladesh, Bhutan, the British Indian Ocean Territory, India, the Maldives, Nepal, Pakistan, and Sri Lanka), who conduct guerrilla operations against domestic and foreign governments and interests. They can be religious extremists, Dirty Communists or radical separatists, and are often involved in arms smuggling and the drug trade Like Middle Eastern terrorists, South Asian terrorists are increasingly popular as antagonists in modern military-themed media with the advent of The War on Terror , particularly with the War in Afghanistan and the ongoing Indo-Pakistani Conflict For terrorism-related sister tropes , see Western Terrorists , African Terrorists , Middle Eastern Terrorists and Far East Asian Terrorists

Hailing from the Deep South of the continental United States, he's a stereotypical cigar-chompin' Good Ol' Boy who thinks shootin' and blowin' stuff up is nothing but fun or at least doesn't take it as seriously as others in The Squad He speaks with a heavy drawl or accent and often peppers his speech with odd euphemisms or folksy sayings that leave others confused or at a loss for words. Should he earn a promotion to officer, this will manifest as addressing his subordinates as "Son" and "Boy" His apparent lack of common sense is meant to indicate limited intelligence in general, and he's sometimes shown having a hard time understanding things that more urban-bred (and therefore educated) members of The Squad have no trouble at all with . On the other hand, he usually excels at shootin', fightin', and findin' things in the woods — all skills you need to be a good soldier — because he's been doing those since birth back home He's the foil for any minority or New Meat soldiers in the unit, as he almost exclusively gets to play the role of the insular xenophobe. Of course, if he makes it as far as participating in some foreign battle zone, you can count on him ignorantly blundering about and angering the locals to the frustration of his commanders Even if this character is written as an officer, it is important to remember that this is a class-specific trope. A military officer with southern accent, a good education and a genteel matter is not usually a Southern-Fried Private, but an attempt by the writer to provide some variety among a group of characters who might otherwise speak and dress pretty much the same. Good examples of this type would be "Bones" McCoy (DeForest Kelley) on Star Trek: The Original Series </, Surgeon Wilkins (Chill Wills) in the John Wayne cavalry classic Rio Grande </, and Chief Engineer "Trip" Tucker on Star Trek: Enterprise </ Truth in Television in the sense that it is a Real Life stereotype,

stemming from the fact that there are many military bases in the South, as well as the abundance of Southerners in the military and their penchant for firearms and anything military-related. Compared to fiction, however, it isn't as prevalent due to the fact that doing such behavior could get his squad captured or even killed or even worse, get him court-martialed for his antics For those outside the US? Any geographical area of any country that's seen as being a bit backwards or remote or woodsy can breed a non-US version of this character Despite the title , this trope is not a cross between Groin Attack and Kill It with Fire

A subtrope of Space Romans , Space Amish are another Fantasy Counterpart Culture ...in space. Like their namesakes, the Amish (found mainly in the midwestern United States and parts of the Canadian prairies) and the closely-related Mennonites, who voluntarily eschew most forms of modern technological conveniences, Space Amish are an offshoot of a technologically advanced race who have rejected most forms of advanced tech in favor of an agricultural life. Space Amish have generally found themselves a nice pastoral Arcadia somewhere and settled down in pursuit of a simple life. They're usually isolated, and are quite likely to be a Lost Colony . Space Amish are defined by having very limited or primitive technology in explicit contrast with the extensive technology of the universe around it , though just how limited or primitive their technology is can vary widely. Often, the settlers will actually have knowledge of, or even be highly skilled with, the same level of technology as everyone else; they simply choose not to exercise it (whilst never actually losing that knowledge). The settlement also enjoys a surpassing level of peace , with the implication — rarely stated outright — that the lack of technology is the actual source of the peace . In other words, Science Is Bad . For this reason it can also be called a " Luddite Utopia ." As with any utopia , there's usually a catch to Luddite Utopia: for example, upon arrival, it may be impossible for visitors to ever leave . Or, if it's a Cult Colony , you may have to convert to the local religion—which tends to be strict if not joyless. Or human culture may be stagnant. Or you may have to share your body with alien parasite spores. Or you have to actually put in an honest day's work for your supper . Or your descendants may discover that others have it easier and regret the settlers' unilateral decision. Space Amish settlements might have a Superweapon Surprise in store for invaders—because, really, who better to guard the Lost Superweapon than people who reject technology and don't want to conquer anybody? Even if they don't, though, wider galactic society is usually not interested in crushing Space Amish communities: they tend to be too poor and too boring to be worth conquering. Only the most evil of despots tries it.

Lost Colony : Space Amish voluntarily eschew technology, while Lost Colonies tend to have simply fallen behind galactic state-of-the-art due to being, well, lost. Space Amish and Lost Colony can, of course, overlap; in fact, it's fairly common.

Space Elves : Another Closer to Earth space society, but Space Elves are almost always aliens, while Space Amish almost never are, and Space Elf technology tends to be quite advanced, albeit developed along different lines relative to human technology.

Mobile Suit Gundam ZZ </ has the Moon-Moon colony which was cut

off from the rest of space during the war from the previous series (less than ten years before!</) where most people have forgotten how to use technology & believe that mobile suits are gods In the Chaos Walking </ series, the trope is attempted but failed by the first settlers. They get rid of most of their technology but absolutely fail the peaceful part

The BattleTech </ universe features the periphery government of the Outworlds Alliance. It's composed almost entirely of agrarian worlds with pre-industrial technology, save for a few cities each - with the exception of Home, an Amish planet</ that pretty much only allows tech for space travel - and they're quite happy that way. Curiously, they also field the most fearsome aerospace fighter pilots known to mankind, who are really the only things keeping unpleasant conquerors and pirates from setting foot on vulnerable Alliance worlds. To make things even stranger, they eventually merge with a Clan , one of the setting's resident, highly technologically advanced, Proud Warrior Race Guy factions. It works out surprisingly well, since the Clan in question is the Snow Ravens, who disdain land-based military forces in favor of overwhelming air and space superiority and thus respect the OA's ASF pilots while ignoring the planets aside from a few small holdings they establish.

Hat Kid's space ship from A Hat in Time </ has shades of this, being made primarily out of "Space-Resistant Wood". In fact, she calls a diary containing a typical frisbee UFO a "mockery", pointing out that it couldn't be a space ship as it lacks wood.

After almost destroying themselves in a war (and wiping out the Adinosaurs in the process), the dragons in The Inexplicable AAdventures of Bob! </ "spurned the outward trappings of Acivilization, living more as rustic philosophers." They finally Aleft Earth in the Middle Ages , and now lead a fairly pastoral Aexistence on a terraformed world called Butane in the Kuiper ABelt n exceptionally rare instance: The includes a race which Adoes this; the people actually have incredible tech power in the Abackground, they're just not allowed to show it to outsiders, and Athe majority of the population are unaware of it. The culture is Adivided so that those who make it are separate from those that use Ait, and neither understand the nature of what they're dealing with

A Supervillain Lair — IN SPACE! For total isolation from those pesky heroes, spy organizations, and other do-gooders, there's nothing better than your very own space station. Tailor-built for the villain with a bottomless budget, the space base often doubles as a Kill Sat , Wave-Motion Gun , or some other doomsday device that can wipe cities (or even entire planets) off the map unless the governments of the world pay a hefty ransom A variation on the theme is the moon base; it's within blasting distance of the earth, and there's a lot of prime real estate just waiting for the evil mastermind to snap up In video games, the base may form the basis of a Space Zone See Space Station for the less elaborate and villainous variant of this trope Compare Elaborate Underground Base , Underwater Base , and Island Base

One of the cornerstones of a Space Opera is for there to be a Space Battle somewhere along the line, where the heroes take part in an event that will change the fate of everything, then stop for a

Victory Dance and a Spot of Tea if the battle is won. Well, it's not exactly as simple as that, almost. It is meant to be the occasion in a movie, game or TV series where it can show off where most of the budget probably went and why it took as much time as it did. It provides jaw-dropping visuals, tons of Slow Lasers , a lot of tense edge-of-your-seat action, advanced iconic vehicles or weapons, and a totally awesome end sequence. Essentially, it is an opportunity to show off the special effects and a ton of ideas that the creator has come up with, to try and blow the audience away and use the potential awesome to lobotomize them into drooling masses as they enjoy the spectacle of it all. Of course making such battles have become easier as special effects have become simpler to make and have become much more advanced. The first film to really push the envelope in terms of this was Star Wars </ Episode IV: A New Hope </, during the battle against the Death Star. Virtually every battle will stick to the rule of Space Is Noisy , because of Rule of Cool . Nowadays however films with huge battles are commonplace thanks to the advancement of technology. Typically Space Battles involve the following: This trope has extended into fantasy or historical movies as well as they have become more popular, this is because use several of the same methods and cliches to bring about the same effect. The Lord of the Rings </ for example required creative use of CGI and miniatures to portray and do epic battles described in the books justice. The earliest visualization of the concept of space battles on film has its roots in the rocket ship aerial combat scenes from the Flash Gordon </ and Buck Rogers </ serials of the 1930s-40s. However, such battes were much rarer than is commonly thought (most rocket ships being unarmed) and often involved nothing more than a chase scene with rocketships standing in for horses and buggies . Also, these don't quite count as space battles technically since they were generally restricted to the stratosphere of either Mongo or Earth. But these are the roots of the depiction of space battles as aerial dogfights . The Space Battle can also be the Final Battle depending on when it starts in the show. Can also overlap with Decisive Battle depending on if it takes place before the Final Battle . Space Battles often involve Standard Starship Scuffles . Not to be confused with Fighting Across Time and Space . Not to be confused with the website SpaceBattles.com , although as the name says, they do like a good battle there.

The trope is named after the city of Brasília. Normally a city will have a whole range of architectural styles as buildings are constructed over the decades and centuries. Brasília however was built quickly between 1956 and 1960 in a uniform Modernist style to be the new showcase capital for Brazil , and has been criticized for its bland and anti-septic appearance. Other real-world cities built like this include Washington, D.C. , Canberra and, even earlier, Saint Petersburg and Constantinople , all of which got the same critiques as Brasília did, back when their </ prevailing architecture was dated but not yet antique A special case of Planet of Hats : it would usually be too much work to give an alien species or future humans more than one architectural style, and giving an entire race one uniform look makes it easier to tell them apart at a glance . Real-world cities depicted in the future aren't immune to this trope, outside of well-known landmarks of course , as well as cities in the past</ like Rome or Athens. The Shining City is usually described like this When it is not City Noir , your typical City in a Bottle setting will usually be this. In which case it will be the hero's job to escape . Space Brasília will often be more

Crapsaccharine , filled with inhuman Bizarrchitecture , laced with Futuristic Superhighways , and covered with creepy lawns . Our heroes will long to return to the Arcadia of good old planet Earth, which is never</ a Stepford Suburbia Named for the tendency of such settings to be filmed in set-piece futuristic towns like Brasília or Nur-Sultan, Kazakhstan Compare Advanced Ancient Acropolis , City of Gold , Crystal Spires and Togas , and Zeerust . Contrast Used Future and The Constant

An academy ... for space cadets ! This is the place you go to learn how to become an Ace Pilot , a Space Marine , a Space Cop or Captain Space, Defender of Earth! Essentially the Academy of Adventure or Military Academy Recycled IN SPACE! (Though it doesn't necessarily have to physically be in</ space). Good setting for a Boot Camp Episode in a Science Fiction series
