* Evil Genius. So until you figure out what their particular weakness is, your options are limited to locking them up and torturing them regularly to keep their stats down.
* Evil Genius that will hold the whole world hostage. There are three possible devices to build: a Gravity Disruptor (uses some kind of moon-tethered ray to force anti-gravity over a large area), an Earthquake Ray (strong enough to crack open the tectonic plates and erupt lava), and an ID Eliminator (that basically turns everyone into your minion, most of whom are genetically overwritten to a single phenotype).
* Evil Genius. The Investigator/Agent mooks from PATRIOT come without shades and in suits of various colors, but otherwise conforming to the MIB template. SABRE's equivalent MIGs may also count. The other defense organizations stick to a more military garb.
* Evil Genius, the player, as the titular Evil Genius, must do this near the end of the game. The UN laughs off your ultimatum, so you are forced to deploy your doomsday weapon.
* Evil Genius, the world is divided up between several NATO-like alliances with varying degrees of logic. The United States and Japan form P.A.T.R.I.O.T., Europe

and her former colonies form S.A.B.R.E., Russia and Cuba are H.A.M.M.E.R., what's left of Asia forms A.N.V.I.L., and the oddest is S.M.A.S.H., an alliance of Africa, South America, and Antarctica.
* Evil Genius to fight him one-on-one rather than let them gang up on him.
* Evil Genius Trilogy, and frequently arrives to class disguised as one of his own students. One of the 3 teachers that escaped the institute alive.
* Evil Genius Trilogy Cadel crossdresses several times as a disguise, starting in his disguise class at the Axis Institute and continuing whenever he needs to escape some kind of surveillance. He has a whole alternate identity for his female persona - Ariel Schaarp.
* Evil Genius uses a synchronized swimming number performed by scuba diver character models as the background of one of the menus.
* Evil Genius video game has three alert levels: Normal (green button, normal duties), Warning (yellow button, everybody is armed and ready), and Danger (red button, everybody is armed, ready, runs, and fires at will). Warning and Danger both cause a klaxon to sound continually in the background. This gets annoying really fast, especially at Yellow Alert. All you want is for your minions to walk around armed, in case enemy soldiers show up. So why do you have to keep listening to that annoying klaxon? There is, fortunately, a glitch, where if you double-tap the button in rapid succession the klaxon stops.
* Evil Genius was creating death courses for the AI heroes to attempt. The more elaborate they were, the more points you got if they tripped them.
* Evil Genius who's essentially a living AI and a lethal (but imperfect) copy of Asgard's Destroyer, but they also have a vastly powerful necromancer who animates undead dragons. On the heroic side, there's Wakanda and MI13, the former of which runs on vibranium powered technology (and magic) and is ruled by a King empowered by an ancient Goddess, while the latter employs wizards and muggles (and mutants, come to that), combining magic and technology to better handle menaces from both sides.
* Evil Genius, you can naturally do this while your enemies are being tortured. Be warned that super agents can escape as you gloat over their misfortune.
* evil girlscouts. Fortunately, one of the scouts tests positive for steroids and beaver tranquillisers, so the Joe's win by default. Another scout walks up to the offending scout and shouts, "God damn you, Bernice!” at her for added effect.
* Evil Gloating and trash-talking, Kaname is so frustrated with her own team's wussiness that she actually agrees with Garasuyama and laughs along with their taunts.
* Evil Gloating: Even when the villain intends to kill the hero in a straightforward fashion, they still feel the need to gloat about it immediately beforehand, thus giving the hero time to escape or fight back.
* Evil Gloating over the situation he wouldn't believe her when she tried to tell him of the plan.
* Evil Gloating when he thinks he's won, and Buffy responds with this trope.
* evil gods, the only source on its existence being the words of a mad and evil god).
* evil grin status. Later on, he does indeed talk about "These hands of mine"... All while wearing a malevolent smile and as a prelude to a maniacal laugh.
* Evil Hand, he wrote "kill kill kill" all over sheets of paper during a meeting.
* Evil Has a Bad Sense of Humor: Being unable to comprehend humor or having a tendency to make sick jokes at their victims' expenses proves that this person is evil.
* Evil Has a Bad Sense of Humor sick and twisted sense of humor to complement their evil deeds.
* Evil Has a Bad Sense of Humor: Villains either have no concept of humor or have a habit of making sick jokes at the expenses of their victims.
* EVIL has one of the variety that goes over his left eye but leaves the eyeball itself intact.
* Evil Hat Productions RPG. A spin off company 'One Bad Egg' produced a whole setting seed and race of intelligent apes for Dungeons and Dragons 4e.

* Evil her daughter. David later arranges an emergency exorcism, but she gives birth before it can be completed, to a seemingly-healthy baby boy.
* Evilhumour" in each world, a set of entities who each have a Purpose, Role and Duties, and their involvement with their worlds and others.
* Evilhumour" series of interconnected fanfics has the titular Powers as positions that can be handed down, making their Bearers into this trope.
* Evil (i.e. Satan) also remains in office until he's killed or kills himself. It normally defaults to the most evil person in the world, but it can be claimed before that happens, which is how a good man ends up with the job.
* evil." "I hate yogurt, it's just stuff with bits in it" "Are you trying to poison me?" culminating with being so offended at the taste of a slice of bread and butter that he goes all the way down the hallway to the front door so he can fling it across the yard in disgust.
* Evil, Inc., Grandgamer's Personnel File says that "he is obsessed with games and has mastered every one developed by a group of civilized, sentient beings in the universe. And Activision."
* Evil, Inc. has an employee credit union, withdrawals are made at gunpoint.
* Evil, Inc. has a sentient piece of paper who can only communicate this way by producing writing on himself.
* Evil, Inc. has recurring filler comics where Lightning Lady answers calls from dissatisfied customers. And insults them a bit; they market to and employ supervillains, after all.
* Evil, Inc. in the Vennema Multiversal created by Kashmir Vennema incorporating all of her multiversal counterparts in one company, then Deconstructed when one wants her own life which causes it all to unwind.
* Evil, Inc., Lightning Lady's two ex-boyfriends argue this way over who's the current boyfriend. When her mom tells her to pick one and produce grandchildren, both men switch claims.
* Evil, Inc. Moments later, it's subverted when he sees a man with a club robbing an old woman, takes it from him- and shows him that his downswing's all wrong.
* Evil, Inc.. Try again." The young lass replies "One day I will rent the world!"
* Evil, Inc. union (though the company was restored to its original ownership).
* Evil, Inc., unliaterally sends a cleaning service to her house, objects to her supervillain outfit, and tries to fix her up with Dr. Muskiday. She resorts to pretending to be in a relationship.
* Evil, Inc. when he turns to Dr. Haynus and socks him while shouting, "YOU!"
* Evil is about a trainee priest, a techie and a psychologist teaming up to distinguish between real and false hauntings and possessions; many of them turn out to be real and linked to a diabolical conspiracy to corrupt humanity.
* Evil Is Angular: How to get across you're evil? Be imposing. How to be imposing? Start by removing every smooth and rounded shape in your design.
* Evil Is Angular: You will know evil by their lack of rounded shapes.
* evil is a petty and nasty old lady who believes infamy is the shortest path to fame.
* EVIL is a webcomic about villains, and aside from white, ONLY uses the colors red and black.
* Evil Is Bigger: Evil characters tend to be larger in size than good characters.
* Evil Is Bigger explains why this usually applies to villains and/or destructive monsters.
* Evil Is Bigger factor can be easily increased if the viscera and other organs are portrayed as much larger than even a single human.
* Evil Is Bigger (the reason many of these tropes are more common among villains)
* Evil Is Burning Hot: Bad guys hang out in a hot area vs. bad guys hang out in a cold area.
* evil is called "Bury Me Not On The Lone Prairie". The second verse starts, "But we buried him there, on the lone prairie".
* Evil Is Cool and the impressive design, Nightmare Moon is popular among the fan fiction too. But the villainess was a result of Princess Luna's jealousy and corruption - and the princess is plagued by guilt over her actions. But Princess

Luna herself is also quite popular, lessening this somewhat.
* Evil Is Cool is peppered with talk of endless availability to amazing sex with beautiful people. Even the most mundane of announcements sound oddly seductive due to the smooth, deep voice of the narrator.
* Evil Is Cool tropes to a T to provoke this sort of reaction from anyone who hears of the story, thus immortalizing him into a legend.
* Evil Is Deathly Cold: Are sometimes portrayed as having ice powers, and are always associated with winter.
* EVIL is easily the biggest and strongest character, but also the nicest.
* Evil Is Hammy: The bad guy wouldn't be much of a villain if he didn't chew the scenery at every opportunity.
* Evil is human evil. Evil characters are usually willing to lie, cheat, and steal with abandon, and think empathy
* Evil Islands: Everyone and their mother is named like that in Gipath. Examples include Erfar Silvertongue, Gort Skullcrusher and Babur Tightfist to name a few. Hilariously, a handful of non-human NPC's such as Goblin Chieftain Gogo averts this. It's also averted in Ingos and Suslanger.
* Evil Islands, except two dragons that are too tough to kill even this way and a frog in the tutorial, which only survives because the player has no ranged weapons at this point. This slaughter, nicknamed "Project Genocide", completely breaks the game scripts, making quests play in the wrong order, NPCs making references to future events, and corpses and empty spaces participating in conversations.
* Evil Islands: Shops have limited quantities of items (randomly generated after you complete a mission, meaning they do restock after a while), indicated by a quantity number on the shop screen, and if you change your mind after selling them something, you can buy it back... provided you have enough extra cash to meet their higher sell price.
* Evil Islands: They come in two flavors: normal, lumbering ones (including recruits, warriors and experienced ones) and better preserved ghouls that for all intents and purposes behave like human enemies.
* Evil Islands, this is the key trait of the Old Dragon. He has grown so strong over the ages that there are no longer any worthy opponents for him on the allod.
* Evil Islands: You'll find several types of wolves, boars, toads, tigers, trolls... that look the same except for color or size.
* Evil Islands: Zak gets captured twice by the Khadaganians, and must be rescued (first by the Hermit Lizard, later by the Odalisque).
* Evil is more pragmatic and practical. It is the evil of banality, tyranny, slavery — in other words, evil for a specific purpose. An Evil creature will destroy a kingdom to claim its territory for itself or to enslave its populace or any other purpose; a Chaotic Evil creature will destroy a kingdom just because it's a convenient target. This means that Evil creatures typically
* Evil Is Not a Toy and any demon powerful enough to be worth the effort is also too powerful to be controlled.
* Evil Is Not a Toy: Don't dare to open the can if you can't control the evil inside of it.
* Evil Is Not a Toy: Someone plans to free the evil being from their imprisonment in hopes of gaining an ally, but they learn the hard way after releasing the evil being that the evil being has no interest in serving them.
* Evil Is Not a Toy's "Super HG", BxB Hulk's "Killer Hulk", Gamma's "Gamma Daio", Kikutaro's red mask, and many others.
* EVIL is noticeably darker than the rest of the cast (aside from Kahn, who is black), but her ethnicity is never mentioned.
* Evil Is Not Well-Lit: Areas where evil lurks have little to no light.
* Evil Is One Big, Happy Family: All the villains get along just fine.
* Evil Is One Big, Happy Family. Outside of the three members of the Inter-Fiend Cooperation Commission working together for a common cause, the webcomic's big villains tend to exploit or backstab each other for their own conflicting agendas.
* Evil Is One Big, Happy Family: Villains are mutually nice to each other.
* Evil Is Petty: A villain who harasses others for the sheer delight of it and

takes pride in being a disreputable person, and is as far from nice as can be.
* Evil Is Petty: Bad guys who are willing to do misdeeds over slights that serve no purpose other than to prove what petty douchebags they are.
* Evil Is Petty: Besides plotting for world domination, I do other things like kicking your puppy and being an all around jerk!
* Evil Is Petty teleports the VISOR off his face so Geordi has to grope for them on the ground. When the others try to guide him, he then reteleports them a short distance elsewhere just to troll him.
* Evil Is Petty: The villain will do cruel things over insignificant slights just because they can.
* Evil Is Petty to the situation at hand and backed with a sense of righteousness.
* Evil Is Petty: Villains are willing to commit the most heinous of atrocities just because they're pricks.
* Evil Is Petty: Villains are willing to do deplorable things for the most trivial of reasons.
* Evil Is Petty: Villains doing assholish and cruel things just because they can.
* Evil Is Sexy deal(Shocker also had male partners for his Guapos Internacional branch)
* Evil Is Sexy: When a villainous character is portrayed as physically attractive.
* Evil Jesuit at the time by Protestant AND Catholic writers to the point that they were expelled in 1767. Jesuit Cardinal Richelieu of France has been cemented as a baddie by Dumas Sr. in his novels.
* Evil Jesuit) than the Jesuits—who tend to be, if anything, viewed more fondly by outsiders.
* Evil Jim's, he proclaims to Jim "I am your exact opposite! Everything that you love, I hate! Everything you hate, I love!" Later on Jim confronts him again with this exchange.
* Evil Josh And Billy, run through a door, and... cut to Josh jumping outside a window.
* evil, just hyper-ambitious. Humans managed to get a Council seat after being on the galactic scene for only a few years, when other races have been lobbying for a seat for centuries. If the Citadel Council is killed near the end of the first game, guess who steps into the power vacuum.
* Evil Karma having Cole deciding not to fire the RFI and joining with John/the Beast's plans, activating all Conduits at the expense of all other humans (sacrificing millions for only a few thousand).
* Evil King. Their attempts do, however, illustrate both their political and moral similarities... and differences.
* Evil Knockoff — when a robotic duplicate or clone is made of a hero with the purpose of destroying them.
* Evil Knockoff: A villain makes an evil copy of the hero to serve them.
* Evil Knockoff versions of the RANGER armor, which in some ways are actually superior to the originals.
* Evil Laugh accidentally urinates on a sunbathing couple, and must run from their wrath.
* Evil Laugh at the camera. But he's just demonstrating how well it's coming along.
* Evil Laugh before escaping and Space Ghost reveals that he will be captured by the Galactic Patrol. Jace says "He who laughs last gets caught" and Jan, Jace and Blip all laugh.
* Evil Laugh, it comes out really weak and Doc tells him that he might want to keep trying on it.
* Evil Laugh loyal to his boss, Integra. Which just means he massacres threats to her with even greater glee.
* Evil Laugh: Villains always have a signature laugh to highlight their evil.
* Evil Lawyer Joke. Admittedly, the lawyer in question does work for vampires.
* Evil Lawyer Joke (as in "legal profession") or eating it (as in "candy").
* Evil Lawyer Joke: Because of how ill-reputable the legal profession can be, it's a source of humor.
* Evil Lawyer Joke: Jokes on how lawyers are considered to be bad people.

* Evil Lawyer Joke: The poor reputation of the legal profession is a source of humor.
* Evil Lawyer Joke: The work or characters within it joke about lawyers being evil.
* Evil Learns of Outside Context: An evil or antagonistic force has become aware of characters or settings previously outside of their scope.
* Evil Learns of Outside Context: The villain encounters a character from another land, universe, time, society, or genre.
* evil liberal ''pacifists'' to slaughter U.S Service personnel out of naked hatred for American men-in-uniform, no less.
* Evil Librarians: People with direct control over the spread of free information to the youth aren't trustworthy.
* Evillious Chronicles, a dark multi-media series heavy on magic and science-fiction technology. This is epitomized by the kingdom of Levianta, where they carried out a project to impregnate a woman with the souls of a god and then raise them in scientific test tubes. After the kingdom's fall, much of the chronological series is almost strictly magic, even featuring sorcerers in medieval civilizations—until the rest of the world starts developing technology again and the lines once again become muddled. That's not even mentioning the odd machines used in the series' versions of heaven and hell.
* Evillious Chronicles also does translations that are even rougher to learn what new information is being released in each novel.
* Evillious Chronicles"). Also, gears are something of a symbol for the Clockwork Lullaby series.
* Evillious Chronicles and Gear serve as these for Pere Noël and the awakened vessels, respectively.
* Evillious Chronicles an example but was later deposed, which ironically coincided with her reforming herself.
* Evillious Chronicles are hosts that cause large scale disasters with the demons' power.
* Evillious Chronicles as the only human she saw for most of her life was completely insane.
* Evillious Chronicles expresses this viewpoint from time to time, seeing her immortality as more of curse due to her loved ones being lost to her and sees her life as being mostly about killing time.
* Evillious Chronicles franchise, all of the setting is inspired by real world countries and their cultures. It takes place on the fictional continent of Bolganio, which is overall Eurasia, with the titular region of Evillious being Europe. In Evillious, the country of Lucifenia is France, Elphegort is Germany, Marlon is Great Britain (with a country that's absorbed into it, Lioness, as Ireland,) Asmodean is the Arabian Peninsula (with Eastern European elements), Beelzenia is Italy/Spain, Levianta is Russia, and at one time there is the Tasan Empire which parallels Ancient Rome with Beelzenia. Some of these countries later form the Union State of Evillious, representing the modern European Union, and on the Eastern side of the continent in a Japan parallel. Off the continent is Maistia, which parallels the Americas.
* Evillious Chronicles, Gammon Octo has dreams about events that happened hundreds of years in the past.
* Evillious Chronicles goes by the code name 'Santa' at one point and dresses appropriately.
* Evillious Chronicles has failed, Adam realizes that his love for Eve is genuine.
* Evillious Chronicles has this as the twist to "Moonlit Bear", where Eve Moonlit, supposedly under the impression that she was taking apples away from a bear, was in reality stealing a set of infant twins from their mother, Meta Salmofer, whom she then killed. Moonlit later raises the children as her own.
* Evillious Chronicles: In "Daughter of Evil", when Riliane is at the guillotine, she looks to the crowd and says, "Oh, it's time for tea", her signature line aside from "Bow down to me". "The Servant of Evil", however, reveals that it's actually Allen, Riliane's servant and twin, up there, disguised as her, with Riliane in the crowd, bawling her eyes out.

* Evillious Chronicles. In fact, it's quite possibly the best-known song in the series behind the beloved Daughter of Evil and Servant of Evil for this reason. You'll find few people who know the backstory or emotional themes behind the whole ordeal, even though they are hinted at in the song.
* Evillious Chronicles: In "Judgement of Corruption", when Gallerian Marlon has a choice between giving up his money and going to hell, he chooses to go to hell.
* Evillious Chronicles. It's worth noting that the son was totally unaware that the woman he had an affair with was his long presumed-dead mother; while he did notice a resemblance, he figured that she was just a devotee of his mother and was too young to actually be her, not knowing she was immortal.
* Evillious Chronicles Not to mention all of the murders and brainwashing he committed to keep it quiet.
* Evillious Chronicles: Some members of the Octo family — and anyone possessing their bodies — can dream of the future. Typically, the dreams come as flashes of images all colored in distinct hues, which carry meaning to the dreamer — most importantly, once a purple image appears, the rest of the visions in the dream are inevitable.
* Evillious Chronicles song "Five the Pierrot" is implied to be this — he was taught by "Ms. Santa" that his job was to punish "bad children" (i.e. he kills prostitutes a la "Jack the Ripper"). It's implied that she groomed him to be an assassin and that he's very delusional about what exactly he does.
* Evillious Chronicles that Hanne Lorre and her sister Hedimarie are actually Elluka and Gumillia under false identities was so obvious that most of the fans took it as a given when the site went up when the reveal itself in the novel doesn't occur until past the halfway point.
* Evillious Chronicles: The Clockwork Lullaby series is about singing, clockwork dolls.
* Evillious Chronicles: The entirety of "Judgement of Corruption" has the titular judge, Gallerian Marlon, exonerating criminals if they pay him enough. Though... that didn't end well.
* Evillious Chronicles: "The Lunacy of Duke Venomania" ends with the titular duke trying to confess his love for one of the women he has wronged while dying of a stab wound, but he dies before being able to say it out loud. An answer song from the woman's perspective, however, shows she understands it.
* Evillious Chronicles: The music video of "Moonlit Bear" reveals that the apples that Eve is carrying the entire time are crying babies, which she's stolen from their mother.
* Evillious Chronicles: There's a difficult to learn spell called the Swap Technique which allows for mages to move their souls into other bodies—they could also go the entire way and swap the person's soul into their previous body. The character Elluka Clockworker has used the spell to swap into at least three bodies over the course of the series.
* Evillious Chronicles they're based on and nothing is made of it. But in the credits of the franchise's songs said Vocaloids are credited as having played the role, with others who didn't show up credited for things like makeup and lighting.
* Evillious Chronicles to be Gammon Octo's (probably) prophetic dream about what will happen when the Clockworker's Doll achieves her utopia.
* Evillious Chronicles to save her from execution, which reveals that they are twins after all.
* Evillious Chronicles who didn't understand the pain of losing someone. And being possessed by the Demon of Pride probably also contributed to it.
* Evil Living Flames: Malicious motes of animated fire that live to set things ablaze.
* Evil Luddite: The baddies are convinced that science/new technology is bad.
* Evil Luddite: They're utterly convinced that all technology and other artificial creations are evil... along with anyone who uses them.
* Evil Luddite: Trying to remove "evil technology" makes you the evil one.
* Evil-Lyn, who many a times has worked behind Skeletor's back for her own purposes. There's even been a few times when Skeletor was aware of her treachery.

Unlike Megatron, Skeletor doesn't take kindly to this and usually attempts to make her pay with her life. However, Evil-Lyn usually gets lucky and manages to get a little leverage over Skeletor that forces him to accept her back into his ranks. In
* Evil magic is almost always conspicuously lime green — Queen Chrysalis' magic field is this color, as is that of all other changelings
* Evil Makeover; now she's wearing extremely flattering Hot Topic style outfits, giving her a dark alluring appeal.
* Evil Makeover: When a character becomes evil, their appearance changes.
* Evil Makes You Ugly: A villain's actions lead them to becoming hideous.
* evil masterminds foiled by Jack Bauer's Indy Ploys. The man hitched a ride on the bottom of a garbage truck ... no, you're not going to beat a man like that with anything less than nuclear weapons. (And actually, not even then).
* evil, material released after the 80s has begun rolling with the sympathy, showing these races with detailed cultures and personal values on their own terms - even if the average member isn't someone you'd want to have a drink with, it doesn't excuse genocide.
* Evil Matriarch: A mother or mother figure who is terribly wicked to her children.
* Evil Matriarch - A woman who rules her family with an iron fist and very little kindness.
* Evil Matriarch: Because you almost never hear of a good matriarch, this is another trope full of underhanded sexism against powerful women.
* Evil Matriarch) play themselves as having come out of the Underdark so they can have better goals in life than being the "lucky" consort of a powerful enough woman that gets to be a walking sperm bank for longer than a few mating sessions before she tires of him.
* Evil Matriarch ruling over domain with a iron fist even threatening to "eat" her minions showing she may be a cannibal too. In short Big Mom is one mother you definitely don't want to mess with.
* Evil Matriarch: The mother of one of the characters is the main antagonist.
* Evil Matriarch types will use copious amounts of guilt tripping to ensure that their "loved" ones dance to their tune.
* Evil may be a lot more tangible than Good — often manifesting as some sort of
* Evil Mentor: A character who mentors the hero for their own evil purposes or to corrupt them.
* Evil Mentor loyalty system during the latter half of the Tribulation.
* Evil Mentor (whom, canonically, Harry burned to death) may somehow still be alive, and involved in the events of the various novels (this was eventually confirmed to be the case).
* Evil Mentor whose solution to every problem is "just start killing people and it'll sort itself out."
* Evil Me Scares Me: A character is terrified of an evil version of themselves.
* Evil Minions to act as his Space Pirate crew. Only since this is the normal universe, they don't really have anyone to rob out in space.
* Evil Offspring about that kid. The parent may be the only one who can stop the child or perhaps feels responsible for doing the deed personally.
* Evil Old Folks for her daughter who died in a long-ago tragic accident.
* Evil Old Folks: Witches, stepmothers and evil wizards frequently fall into this category.
* "Evil" once the real Gadget pulls a plug in the back of "Evil" Gadget's neck.
* Evil Orphan: An orphaned child who went down a dark path, most likely due to their dead parents' abuse.
* Evil Orphan you adopted becomes a welcome addition to the family. Other times...not so much.
* Evil Otto was a bouncing, smiley "have a nice day" face which was trying to kill you. So great is Evil Otto's urge to destroy the Humanoid that he will literally steamroll over his allies just to get a shot at you — grinning all the while. His hatred was so great that he'd go through the electric death walls to get to you, curse his bright smiliness.

* Evil Overlooker: The cover shows the villain's face looming over the heroes.
* Evil Overlord and comes back to save him at the end. It helps that she's identical to his dead mother Eva.
* Evil Overlord, and whose facade of affability crumbles after things stop going his way.
* Evil Overlord at the library between Gilda, Twilight Sparkle, and Fluttershy, dyeing Princess Luna's coat pink, and making a former enemy board with him in hopes of returning home.
* Evil Overlord' , but reduced to a pathetically small scale after his armies are routed and he is cast out from Isengard. He spends the remainder of the series running the Shire into the ground, turning into a sort of bandit leader with a mob of 'ruffians'. He is stabbed in the back (completely literally) by his servant at the end.
* evil overlord easily makes him one of the most awesome and popular villains from the comic books.
* Evil Overlord, getting brighter the longer they've been a Dungeon Keeper, eventually hitting a baseline glow, which still intensifies when angry.
* Evil Overlord. In doing so he was held up to Roman Schoolboys for ages after as an example of faithful public service.
* Evil Overlord in season 3, and sets out to train the Avatar to help him overthrow his father.
* Evil Overlord in shadow as usual and the new kid seen) is our first glimpse of Azula at the end of season one.
* Evil Overlord is a far better idea and charismatic enough to pull it off.
* Evil Overlord List #139: If I'm sitting in my camp, hear a twig snap, start to investigate, then encounter a small woodland creature, I will send out some scouts anyway just to be on the safe side. (If they disappear into the foliage, I will not send out another patrol; I will break out the napalm.)
* Evil Overlord List: A list of things one must consider if they ever decide to become an evil overlord in order to prevent ever being defeated.
* Evil Overlord List, although face-concealing headgear is discouraged for security reasons.
* Evil Overlord List Cellblock A recommends hooking up capacitors and emergency batteries so those pesky heroes can't win at the very last second.
* Evil Overlord List Cellblock B discusses invoking a fake weaksauce weakness, both to hide any real weaknesses and to catch the hero offguard when he tries to use it.
* Evil Overlord List climb some monument in the main square of my capital and denounce me, claim to know the secret of my power, rally the masses to rebellion, etc. That way, the citizens will be jaded in case the real thing ever comes along."
* Evil Overlord List, drugs, and blatantly graphic sex, but he's also published six cookbooks and a children's book about a teddy bear protecting its child from the monster under the bed.
* Evil Overlord list has a particularly thoughtful one: pretending to morally reform so the hero will leave him alone for a few months.
* Evil Overlord List! I AM INVINCIBLE!!!" (After that, death is usually instantaneous.)"
* Evil Overlord List: If the scientist says the device is not ready, the overlord shall listen. "No one conquered the universe using the Beta version."
* Evil Overlord List in their biological design. They wear no helmets (1, 130), wear carapaces that have no semblance to Nazi uniforms (21, 130), have superior eye sight that makes them expert marksmen (4, 56), possess exceptional strength and hand-eye coordination (236) are asexual in design (33, 43, 51, 84, 153), gain sustenance from a single source the Founders have absolute control over and require nothing else to function (127, 200, fark-9), require no sleep or rest (172, fark-9), work for the pleasure of obeying the "order of things" imprinted in their instincts (44, 48, 94, fark-9), have no fear or qualms using human wave attacks for the "order of things" (75, 234), memorize the entire manual with eidetic memory (57), and finally, can camouflage themselves to match the surroundings (237). And that's just the "design" part, not including their equally thorough training.

* Evil Overlord List is pointing out common flaws in the plans of fictional evil overlords.
* Evil Overlord List. It advises this not because being pragmatic is more moral, but because it tends to ensure long-term survival.
* Evil Overlord List: "I will hire a talented fashion designer to create original uniforms for my Legions of Terror, as opposed to some cheap knock-offs that make them look like Nazi stormtroopers, Roman footsoldiers, or savage Mongol hordes. All were eventually defeated and I want my troops to have a more positive mind-set." One that the Nazis actually followed.
* Evil Overlord List, mostly about using surge protectors or not consuming power sources bigger than one's head.
* Evil Overlord List, Number Seven, lists the only acceptable One Liner for villains:
* Evil Overlord List one's adversary when in position to do so, rather than take unnecessary risks.
* Evil Overlord List page presents a few helpful guidelines for Evil Empresses.
* Evil Overlord List specifically recommends being this; recruiting people of both genders and all races into your Legions of Terror, allowing handicapped people to work for you to prevent a few common mistakes, and spreading oppression and terror equally amongst all your subjects, and not singling out a specific group who will form the core of a rebellion.
* Evil Overlord of his own solar system. However, the vampire-like Lord Transyl was last seen imprisoned floating in space with a nice view of the sun, so it's safe to assume he won't become a regular part of the rogues' gallery.
* Evil Overlords to have ever lived, this is not the only time Applejack ends up feeling like this.
* Evil Overlord story by Conan's creator Robert E. Howard, who was given to quite doomy and poetic descriptions.
* Evil Overlords United has a character named Zworgue, who uses a sign stolen from Framed!.
* Evil Overlord that the other two Wizards of the Order were at work in the distant South and East helping good folk of those races resist Sauron's domination.
* Evil Overlord, the Hell-Lord is a kind and considerate leader to his subordinates. When one of his Hell Marshals ends up unable to get information from the Princess for a second time, he notes that her failure must be dealt with and declares that... he and all of his followers should be extra supportive so that she doesn't get discouraged.
* Evil Overlord to the Northmen, too). Even when ordering horrible atrocities upon the peasants and prisoners of war, or threatening to cut off his cupbearer's tongue for speaking out of line, he never raises his voice or loses his calm. Bolton believes in purity and self-perfection, practicing a strict health regimen for himself, and seems to be of the mindset that emotions are unnecessary, unlike atrocities.
* Evil Overlord with earth-conquering ambitions. They often have one specific quest they are on, but you can count on them running into unrelated trouble along the way.
* Evil Parents Want Good Kids: Some criminals want their kids to be honest citizens.
* Evil Parents Want Good Kids: Villainous characters who become parents strive to raise their children to be model citizens.
* Evil Pays Better: A character turns to crime because they find it more profitable than earning money the honest way.
* evil per se), and after becoming Tyr sets in motion plans to establish draconic dominance of the world.
* Evil Plan, 6 months before morphE was launched. Evil Plan's creator is sprite artist for the morphE webcomic and it was in design phase when this page of EP was published.
* Evil Plan, Amazingman improvises the Amazing Punch during his first battle. The minions only realized he was a superhero after he invoked this trope.

* Evil Plan By the end of this chapter he rationalizes super villains escaping prison rather than being killed or stripped of abilities is more a matter of profit than justice.
* Evil Plan: Doctor Kinesis has a multi-level lab, complete with minions and a vat of "acid".
* Evil Plan gloat-mode, accidentally knocked a vial of poison onto a plant.
* Evil Plan is to wipe out humanity and replace it with a "master race" under his rule.
* Evil Plan, Kinesis takes it a step further: he hacks into all television network and web browsers to deliver his ultimatum to Amazingman.
* Evil Plan, knowing that with Kairi's life in danger, Sora will be that much more motivated to fight Heartless.
* Evil Plan (literally) of gold, despite being up against fairies with considerable magical powers and a very vested interest in making sure he doesn't get away...
* Evil Plan means she can't be killed, and more importantly for her captor, he can collect multiple copies of each organ.
* Evil Plans. His successors and helpers, however, do seem to want everyone to die, and expect them to do dumb things — which they do. All the time.
* Evil Plan, so there's no reason for him to have developed the technique.
* Evil Plan subverts this, usually. Lemon and Lime employ potentially a variety of lethal traps at their office entrance, solely for the sake of snapping humiliating pictures of the trespassers/invited guests.
* Evil Plan, the elevator down to the lab is hidden behind a sliding bookcase.
* Evil Plan: The villain's scheme to do something very evil and illegal.
* Evil Plan. The webcomic is about supervillains, so this trope applies heavily.
* Evil Plan) wants to use the satellites to fry 99% of the life on earth and be known as the biggest monster in history.
* Evil Plan where the US government runs on a "hero economy" that sells merchandise and licensing of the heroes. In Chapter 17 after Amazingman is paralyzed he is taken in and given a cybernetic spine which he is charged crippling debt levels to repay and told that he must work off his debt within The Company by promoting his brand and selling his hero status for the profit of The Company.
* Evil Plan while gloating about his plan, eventually leaving them to their fate, enabling them to make their escape. Not only that, but he apparently left some tools behind that Dr. Light was able to use to help them escape.
* Evil Poacher: Check out how many coats they can make out of those innocent wolf cubs!
* Evil Poacher considers trying to feed an eight-year-old kid to crocodiles to be his idea of fun.
* Evil Poacher: Someone who illegally hunts wild animals, especially if they're legally protected species.
* Evil Poacher'' to systematically demolish Jessica's house while she is inside it.
* evil powers where there's no possibility for the accused to survive: either they die while proving their innocence, or they survive the ordeal and get executed afterwards.
* Evil Power Vacuum: New villains step up when the old villain is taken down.
* Evil Presence can turn any land card into a swamp. Not happy with your neighbour's depressingly wholesome Tropical Island getting sunlight all over your yard? Slap an evil curse on it. Instant swamp!
* Evil Prince who twice attempts to usurp Elric's throne. Though Elric cared little for his throne, Yyrkoon also attempted to usurp his lover Cymoril both times by placing her into a sorcerous sleep.
* Evilprodigy, Catboy, and Lord_Roem have less focus on them in seasons 3 and 4.
* Evil Queen Regina has a scar on her upper lip. While not disfiguring, its placement does make it pretty noticeable. This is a scar actress Lana Parrilla has in real life (she got it in a dog attack when she was ten years old), as of yet its origin in-universe has not been given.
* evil queen she'd ever sink to the depths that she actually spends most of her life in.

* Evil queens of mysterious kingdoms in hidden valleys really have a thing for
* Evil Queen yet leave them not only alive, but subject to her will. It's implied or explicitly stated that she's done this many times, yet she has to send Snow White into the woods with the Woodsman to get him to cut her heart out mundanely, rather than doing the job herself and turning her hated step-daughter into a slave and puppet ruler.
* Evil races are generally more monsterous, consisting of Dark Elves,
* evil, rapacious animals that preyed upon innocent livestock and humans kill livestock and, at least in Europe and Asia, the odd person). However, the negative association of wolves are still prevalent in Asian cultures, especially in Chinese media.
* Evil Reactionary: A conservative villain who wants to restore old cultural norms and traditions from the past, no matter what they have to do or who gets hurt in the process.
* Evil Reactionary: A villain whose goal is to remodel the world based on their old-fashioned beliefs and/or interests.
* Evil Reactionary elements of his reverse-engineered Captain America formula.
* Evil Reactionary. His power allows him to transform high tech items into low tech, non-functioning equivalents, such as transforming a suit of powered armour into a suit of medieval knight's armour or a blaster pistol into a flintlock.
* Evil Reactionary: I will make things as they were in the past, when they were better!
* Evil Reactionary: Ultra-conservative extremists who intend to regress society backwards in accordance to their traditionalist ideology.
* Evil Redhead, into marrying each other specifically so Julius would possess the required bloodlines.
* Evil Redhead who gained growth power similar to that of Apache Chief by stealing his powder.
* "evil reptilian kitten-eater from another planet". McGuinty instantly responded with "I like cats" with a self-deprecating smile that charmed the public and caught a lucky break during a photo-op when a cat wandered to him and he got to pet it for the camera. The result is that he won the election with a solid majority.
* evil reputation gained during the Warsaw Uprising (to which the Reich leadership contributed willingly, documenting a lot of things by film and photo, to make an example of the death of rebellious Poles).
* evil robot — are mostly an aversion. They may not have much interest in writing sonnets, but they're extremely dangerous because they constantly adapt to attempts to destroy them, learn from their mistakes, and improve themselves. Though their "greatest advancement" is to make humanoid versions of themselves, they mainly do this to flaunt their perceived superiority to humans.
* Evil Roy Slade, Roy and Betsy travel from the West to Boston on the underside of trains.
* Evil Russian Alex Koslov works well enough in places like AAA, but was unexpectedly popular in ROH. When he demanded everyone to stand for the Russian National Anthem at
* "evil Santa" who brings you dangerous and annoying toys if you're bad, and socks and underwear if you're good. Similarly, another time he had a dream that Santa had reversed his moralities and was bringing all the presents to naughty children.
* Evil share the video with anyone—thus practically guaranteeing it will be everywhere.
* Evil Smells Bad: Evil characters have an unpleasant stench to mark them as evil.
* Evil Smells Bad smells like an infected wound. Its lair smells like stagnant blood, urine, and stomach acid.
* Evil Sorcerer, and his "faith" is maintained through rigorous Soviet-style "re-education".
* Evil Sorcerer into a griffin in an attempt to get away, and griffin feathers are exactly what will heal the Sultan.
* Evil Sorcerer makes a note to himself to have this phrase tattooed on the back on his hand after being foiled by our heroes shortly after leaving them alive in a bad

situation.
* Evil Sorcerer. Nobody really knows why, beyond her having a seriously bad trip upon reading him.
* Evil Sorcerer. Other characters even acknowledge that he makes no sense by the series's rules, and Maldis himself finds himself to be intrigued at how armed spaceships like Peacekeeper Command Carriers can advance his power and allow him to just wipe out any opponents with the press of a button.
* Evil Sorcerer: Particularly dangerous when you're apprenticed to him.
* Evil Sorcerers, like Thoth Amon, Yara and Thugra Khotan to name a few.
* Evil Sorcerer, was enamored with powerful clockwork automatons, and in fact was entombed in a "living" clockwork sarcophagus.
* Evil Sorcerer, who knew all the details of John Crichton's life without being told. As he said once "Your mind is an open book. Big print and lots of pictures!"
* Evil Sorceror, and for both, it's a combination of a supervillain perk and to hide how dangerous and cunning they actually are.
* Evil Sorceror in fighting styles like Tang Soo Do and Escrima. At one point he loses access to his powers, and it transpires that his actual, native skill level is closer to a novice.
* Evil Sorceror Tevesh Szat, who had posed issues to Dominaria in the past. As it turns out, he ends up turning on his comrades and slaughtering a few of them. And Urza was fully expecting this to happen - he hired Szat just because he had hoped he would betray the team so that he'd have an excuse to siphon out the souls of Tevesh Szat and his victims and use them as bombs. Really, by this point the only thing keeping Urza anywhere close to the side of good was the fact that he was doing this in order to kill someone a hundred times worse than he was.
* Evil Sorceror Thulsa Doom and he is antagonized by the wizard Thoth-Amon in the second film.
* Evil Sounds Deep: A villain with a deep voice will sound all the more fearsome and intimidating.
* Evil Sounds Deep: Evil characters generally speak with much deeper voices than heroes do.
* Evil Sounds Deep parts of it by being very kind and having a very high voice, even as an adult.
* Evil Sounds Deep: Usually. Although this is subverted far more often than you'd think. There are many good guy low voice-ers (Figaro, Hamlet, Billy Budd, Cenerentola, and Rosina par example) and more than one high voiced baddy (Duke of Mantua, Queen of the Night, Pinkerton and Turandot to name a few) in operatic repetoire. However, it is generally safe to guess that the baritone is not who you should be rooting for.
* Evil Sounds Raspy: Villains tend to have much harsher, rougher voices than heroes do.
* evil split personality. At every opportunity, he tries to distance himself from any unusual happenings, with little success.
* Evil Star or something, eventually leading her to drive a truck full of kerosene into Matt's happy-wappy little school.
* Evil Stepmother, she and Clara end up having a conversation about how she actually wanted to be a mother to Clara and ended up lashing out when she felt she was rejected. They make up and she tells Clara how to break the curse.
* Evil Stewie appeared to have been killed by Brian, but the other Stewie turns to the screen with
* Evil Stole My Faith: Being teased and mocked forces you to abandon your faith.
* Evil Tainted the Place: A location that has been corrupted forever because it was once home to an evil presence.
* Evil Tainted the Place: The site of a tragic and violent event becomes haunted.
* Evil Takes a Nap: A powerful evil is asleep, and bad things will come if it ever awakens.
* Evil Takes a Nap: When a monster or some sort of evil creature is dormant because they are in a deep sleep.
* Evil Tastes Good: Villains compare their evil deeds to food and drink.

* evil team leaders), but most wild Pokémon try to maul anyone coming through their territory. When the player attempts to walk through tall grass without Pokémon of their own in the first games Professor Oak stops them as if they're a child about to stick a fork in a light socket, and whenever the player's party gets wiped by a wild Pokémon they drop money in a panic and run for their life to the nearest Pokémon Center.
* Evil!Tommy got in one or two good ones during the "Green With Evil" saga of
* Evil Tower of Ominousness: That tower that's larger than the mountains? Definitely not the Evil Overlord's lair!
* evil triplet. This was his exit storyline, as his marriage never recovered even after regaining his sanity.
* Evil Twin — When a character has an evil sibling or alternate reality duplicate.
* Evil Twin, and the occasional burst of aforesaid temper, after he witnesses a massacre or something else heinous.
* Evil Twin: Any villain who happens to be a clone of the hero would technically be their genetically identical sibling.
* Evil Twin because Nale feared that Sabine had a crush on Elan. She reassures him and they go back to committing evil together.
* Evil Twin: Cyprien's Chronicles features a giant spider who is actually very friendly.
* Evil Twin: Cyprien's Chronicles has the Sea Sewers, robots so huge that they are able to cross the sea by walking over the sea bottom. They are tasked with decimating every last trace of the old world.
* Evil Twin escapes, he stops a woman driving and cuts her down the middle with a machete before stealing her car.
* Evil Twin. For example, in double-blind studies, patients given what they told was anti-cancer medication tended to have their hair fall out... even if the medication in question was sugar.
* Evil Twin. Good!Jackie smiles and enjoys the music. Evil!Jackie scowls and waits.
* Evil Twin infects her with an "airhead virus". She and Morgan get on very well when it happens.
* evil twin, it worked. The case also became a landmark in American legal praxis, and led to changes in how cases with metahuman involvement were handled. The lawyer, in his role as the narrator, states that there is no way that defense would fly in the comic's present.
* Evil Twin Lore (who, unlike Data, has emotions) is able to become a sort of crazy cult leader to them because they're so desperate for guidance.
* Evil Twin Nale from falling off a cliff, despite Nale literally stabbing him in the back moments beforehand.
* Evil Twin: Often parodied, subverted, recognized as a cliche, or just plain joked about whenever there are twins in the cast. But it's still a useful tool for inducing drama in shows.
* Evil Twin. Originally loyal to Scourge (Sonic's counterpart), he eventually convinced the rest of the Suppression Squad to turn on him, and soon after set himself up as their new leader.
* Evil Twins of "Moebus" managed to take Freedom HQ (which is all that's left of Knothole from said Death From Above) but this time, they could crash at New Mobotropolis (they got it back). However, with the Iron Dominion figuring out that they could control the helpful AI there, let's just say they press their advantage and take over the city. This time, only a few manage to get out but several of the heroes manage to fight within the city.
* evil twins was built on an Indian cemetery. Though, that wasn't enough to anger the spirits, as the owner, one night, dug up the bodies, pissed on their bones, and buried them back upside down.
* Evil Twin that grew up to be a warlord rather than a hero like his prime counterpart.
* Evil Twin: The protagonist's evil (twin) sibling, clone, doppelganger, or counterpart from another universe.

* Evil Twin word base per sentence. This phenomenon is depicted in Russian humour; for example, in jokes about construction workers or engineers forced by the new superior (or a foreign consultant) to stick to decent language. This results in their inability to communicate and complete their tasks.
* Evil Uncle approach him ("Ahh, my friends..."), only to be begging for his life moments later as they proceed to rip him apart for denouncing them in a cowardly episode that he thought that no one had heard or witnessed.
* Evil Uncle at which point Jason renounces the throne and leaves for exile with his wife.
* Evil Uncle, but Jenny is the first one which is treated as really difficult to forgive because it was after their long relationship instead of before.
* Evil Uncle Fueling this theory is the claim that the right-handed Dipendra "shot himself" in the left side of his head, which is a relatively unlikely suicide. The theory persists even though Gyanendra's own wife, Komal, was wounded in the massacre.
* Evil Uncle: The wicked uncle (or sometimes aunt) that mistreats their niece/nephew.
* Evil Under The Sun During Poirot's summation, we see it from their window, and they're struggling not to laugh at the melodramatic lines.
* Evil Under the Sun is set on an island resort in the Adriatic kingdom of Tyrrania (apparently Albania). The source novel was set in Devon.
* Evil Under the Sun: Kenneth Marshall, described as "one of those incurably chivalrous men", is said to have serially rescued two women from infamy by marrying them (the second after the first's death). A variation in that the reason for the women's ignominy was something other than sex.
* Evilutionary Biologist: An evil geneticist who has the goal of improving the human race on their terms.
* Evilutionary Biologist: An evil geneticist whose goal is to improve the human race on their terms.
* Evilutionary Biologist: An evil scientist who believes humans need to evolve more and it's up to them to make it happen.
* Evilutionary Biologist before sending him on a one-way ride into deep space.
* Evilutionary Biologist: I will use science to better humanity, regardless of any morals or consequences!
* Evilutionary Biologist race who are continually experimenting with genetics so as to "perfect" themselves. They still look human now but it's hard to say what the future holds for them.
* Evilutionary Biologists. Somewhat mitigated by the fact that their victims are mostly other scientists deliberately chosen because they would find the research opportunities presented by their transformations (if not the actual transformations themselves) intriguing.
* Evilutionary Biologists, which they use to "improve" the living things of Ravnica.
* Evilutionary Biologist: The mad scientist's experiment involves improving the human race on his terms.
* Evilutionary Biologist, who regards the world as his petri dish and uses his advanced knowledge of human genetics to perform all sorts of monstrous acts.
* Evilutionary Biologist whose funding has been cut by Cadmus, imagining himself taking out a laser gun and wildly shooting at the people responsible.
* evil version of Superman was a normal human astronaut who, like Animal Man was put back together by aliens.
* Evil Version: Parker Robbins was a fan of Supervillains who later ended up becoming
* evil Vice-President in this season alone, the other two instances being when Daniels takes control of power due to Palmer's slipping in and out of a coma.
* "evil villain turned good guy" (or has it pointed out to her), and she's since become friends with both of them.
* Evil Virtues: Being a bad guy doesn't always mean that a character has no redeeming qualities, after all.

* Evil Virtues: Being effectively evil requires strengths of character.
* Evil Virtues: Polite and friendly villains will often hold "good" morals and values in order to win support for their followers.
* Evil Virtues: The villain has strength(s) of character thought to be typical of a hero, and that's what makes the villain more efficient than other villains.
* Evil vs. Evil: A conflict between two people or groups who are both villainous.
* Evil vs. Evil and there could be nothing but good from letting Imperial powers fight each other to the death.
* Evil vs. Evil arch-enemy in the form of Maglubiyet, god of goblinoids.
* Evil vs. Evil cosmology, it's believed that Yeenoghu once betrayed Baphomet at a critical battle and almost cost the other demon prince his life, which Baphomet has never forgiven.
* Evil vs. Evil Dimmu, some Mesopotamians turned to the evil demon Pazuzu.
* Evil vs. Evil, fans may forget that the first party is actually still evil too.
* Evil vs. Evil introduces the Movellans, a race of humanoid robots locked in a centuries-long stalemate with the Daleks. Neither side can gain an advantage because both sides rely on supercomputers to calculate battle strategies, and they're so evenly matched that neither computer can come up with a plan that the other can't immediately anticipate and counter.
* Evil vs. Evil, to the point that he can't sleep at night for fear of being Sludged.
* Evil vs. Evil: Villains are fighting each other with no heroes in sight.
* Evil vs. Evil: Villains who oppose each other, one usually being more amoral than flat out evil.
* Evil vs. Oblivion: Similar to the reason above, but the villain is more likely to be humanized and beloved when they're the one to take the stand to stop an even more monstrous threat than themselves.
* Evil vs. Oblivion, translated as justice or truth) and allow the universe to be destroyed by the ensuing entropy. Set, one of the nastiest and most demonised of all Egyptian deities, was the guy whose job it was to protect the sun from Apep. He was also one of the sun god's favorites.
* Evil Weapon but not destroying it, it gradually turned him evil causing a sundering between the Elf factions (one being led by his illegitimate son) and a civil war that continues to this day. The Dark Elves led by his son are still trying to reclaim the sword where it lies on its altar, which would give them to defeat the High Elves and possibly any further Chaos Incursions - it's possibly the most powerful weapon in Warhammer.
* Evil Weapon is an Egyptian sword who's blade can pass through objects to cut an object behind it, as demonstrated soon after its first appearance, when it slices a cow and a man behind it, but only cuts the man.
* Evil Weapon" is only one of the things it has been called. Fans and then Torg eventually settle for "Chaz".
* Evil Weapons are floating living weapons that possess the bodies of earth spirits to fight for them.
* Evil Weapon the Speaking Gun is made out of meat, just to up the "ick ick get it away from me" factor.
* Evil Weapon: This weapon has a mind of its own, and wants to use you to work its evil will.
* Evil Welcomes Defectors: Evil factions are very welcoming to traitors and defectors.
* evil, whenever he starts to get serious in a fight (ie, goes Super Saiyan) and drops his normal, goofy demeanor, Sean Schemmel adopts a noticeably deeper and slightly raspier voice for the character.
* Evil Will Fail loses not just because the heroes were stronger, but because it is inherent to nature that evil will fail.
* Evil Will Fail: You can pursue a life of evil if you wish, but there'll be severe consequences.
* Evil Wizard. He gets some additional creepy points for fooling you into thinking he's dead right before this phase: a huge chest falls down on him and seems to

squish him, like most bosses in this game when they die. So you walk up to the chest, it opens and the giant spidery abomination pops out... Rather eerie if you're seeing it for the first time.
* Evil Zone: Just look at Danzaiver and Greg, add Setsuna and Midori as well.
* Evil Zone the anime-inspired fighting game, the arguably second-most powerful character is Kakurine, a 40,000-year-old sorceress/priestess/goddess who looks like she's about 8, can teleport at will, enjoys playing with hoops made from pure destructive energy, and giggles cutely as she throws armored warriors and huge mercenaries about with ease. However, she's a goddess who simply chose the form as pure amusement.
* Evil Zone, which takes the concept to an unforeseen level of ridiculous.
* Evita, and have a show that they tour together. As a result, a lot of fans seem to ship them, despite the fact that they are both married.
* Evita "Denigrate me for having a lifetime of success, but cut me some slack: I'll suffer for it in the end." Eva presumably intends the former meaning, but the latter is what ends up happening to her.
* Evita discovered that she was pregnant with her first child. The film directors went to great lengths to cover up the possibility of "Eva Peron" getting pregnant, even if it meant removing some scenes of her being carried out of the church for fear she might slip.
* Evita does this frequently, most notably at the end of "Good Night and Thank You".
* Evita, Eva Peron gesticulates during her speeches, especially the inaugural speech. It's likely a stage direction in the original musical as well. The real Eva Peron was actually a big fan of this gesture when she spoke, so it is, at least, historically accurate. Look up pictures of her speaking and you're sure to see her doing this gesture.
* Evita harsher and outright calls Eva a slut who doesn't belong in high society.
* Evita, Juan Peron and other generals play a game of Musical Chairs to the music "The Art of the Possible," symbolizing Juan's rise to power in the chaos of post-revolutionary Argentina.
* Evita, known in Latin as Eva, meaning that the chant can be read as a prayer to Eva Perón herself.
* Evita. Other Peron henchmen, however, are dressed as 1940s gangster types.
* Evita, the corrupt government's lavish spending is explained in the song "And The Money Kept Rolling In (and Out)", which is all about Eva's charity work until the last verse:
* Evita: The film begins with the eponymous protagonist's death in 1952 and then a series of flashbacks leading to it.
* Evita, the song "And the Money Kept Rolling In (And Out)" strongly implies that Eva and her family were taking money from her charity foundation and secreting it in a Swiss bank account.
* Evita the song "Another Suitcase In Another Hall" is sung by the woman whom Eva has just supplanted as Juan Peron's mistress, and serves as a perspective flip in which we suddenly see the effects of Evita's triumphant progress on someone else, for whom it resulted in defeat not triumph.
* Evita visible, he's usually playing a role (e.g., a nightclub waiter, a reporter).
* Evita (with Lisa as Eva Peron), but the end credits include the statement "On the advice of our lawyers, we have never heard of any musical about the life of Eva Peron".
* +EV knows about this trope, tries to use it, but doesn't really understand it.
* EV Nova and are well-shielded, but they're quite fragile once the shields go down.
* EV Nova and top out at roughly the same level of intelligence as a smart dog.
* EV Nova are fairly useless: at best, you use them as a distraction for the AI and make the kill yourself. The exception is with the Polaris, whose Manta fighter mounts a main gun worthy of a destroyer, making it a credible threat to enemy capital ships in numbers.

* EV Nova controls the remaining network in its entirety, and gaining access requires their approval.
* EV Nova due to industrial pollution making the surface uninhabitable.
* EV Nova, is connected to the surface by six space elevators, colloquially known as Kane's Ladders.
* EV Nova officer who defected (outside the USA, it is fairly common for marines to be a branch of the navy but use army ranks, and just because the Federation uses US ranks doesn't mean it is organized like the US military).
* EV Nova Polaris Manta, which is well-shielded, faster and more maneuverable than any other ship in the game, and mounts a gun worthy of a light capital ship.
* EV Nova ruling council having imbued their minds into their nanites in the backstory, which makes them human offshoots instead of actual aliens.
* EV Nova the closest thing to this is the Auroran Empire, which isn't a single polity so much as a loose confederation of warrior clans that fight among themselves as often as they fight the Federation or the Polaris. Collectively they control a huge swathe of territory along the bottom half of the map bigger than the other two superpowers put together.
* EV Nova, the Federation Navy is quite capable of the lesser kind. They do it by bombarding the planet from orbit with nukes and biological weapons. Any survivors will die of disease and starvation.
* EV Nova, the Polaris grow their ships around artificial skeletons. The smartest class of ship have roughly the same level of intelligence as a smart dog.
* EV Nova to increment between 1 and 3 days depending on your ship's mass. A smart player will memorize the hypergate network, as it's sometimes the only way to get rush jobs done by the deadline.
* evocative of the Candy Stripe jumperskirt, with a few extra ruffles and ribbons thrown in.
* Evochron added nebula with sensor disrupting effects for player-versus-player combat, where the Fulcrum drive often cannot be activated.
* Evochron averts it with a fully Newtonian flight system. However, switching out of inertial mode has the ship's computer use thrusters to approximate space friction. The Newtonian system still underlies it all though, so manoeuvring still tends to be a bit trickier than games which play this trope straight - trying to take a sharp corner at high speed in a race will tend to result in you flying sideways out of the course, as well as the thrusters constantly using fuel for every slight movement you make.
* Evochron: Most asteroids are clumped together, with 10-20 asteroids in a 10x10x10 KM area. Some solar systems however, have asteroids very thinly spread out across the system.
* Evoked for laughs in the Fred Godfrey song "Now I Have to Call Him Father" (the protagonist is "A"):
* Evolution (2018), WWE's first all woman pay-per-view, while having some minor hiccups, was generally well received. Matches that particularly shined were Becky Lynch against Charlotte Flair in the first ever Last Woman Standing match, and the finals of the
* Evolution (a carnivorous "tree" and a large green bug) have mouths like this.
* Evolution actually sings the song quoted at the top while preparing a rendezvous on a golf course... and is promptly eaten. Slight subversion in that the pair hadn't actually gotten around to the deed (and the woman survived).
* Evolution and Nature through normal evolution takes over. New human sub-species appear and the last of them is a small monkey-like creature that lives in symbiosis with trees in the searing-hot red plains of the future supercontinent.
* Evolution, and one of the characters even holds the bottle backwards.
* evolutionary arms race with garter snakes. The evidence suggests that each newt eaten adds more to the snake's overall resistance.
* Evolutionary biologists believe that multicellular organisms are descended from single-celled organisms that formed 3-D colonies.
* Evolutionary Levels, also revealing that he was the strange man beside Simon over in the prologue of the first episode, acting as the second in command.

* Evolutionary Levels, this led to an incredibly prejudiced classification of the human races along the evolutionary spectrum.
* Evolutionary Retcon: As graphics technology improves, the appearance of the enemies changes so they are scarier, more detailed, and/or more lifelike.
* Evolution be susceptible to selenium poisoning by going two rows down and one to the right of nitrogen (the aliens are nitrogen-based), same as arsenic (two down and one right from carbon) is poisonous to humans. So they load up on selenium (in the form of Head & Shoulders shampoo) and take a fire truck to kill the aliens. It works. They never bothered to test their theory on any alien samples beforehand.
* Evolution, but it was extracted through his ass. Not willingly, either.
* "Evolution": Dr. Crusher sees that a replicator is producing a glass of drink and the liquid is overflowing but the replicator won't stop (due to a computer malfunction). It only stops when Crusher tells the computer to deactivate the replicator. Also, a deleted scene from that episode has a sickbay nurse get electrocuted from a malfunctioning replicator.
* Evolution: During the stage of alien evolution where the meteor crash site resembles the Carboniferous Era, numerous monsters are shown preying on each other.
* Evolution, especially with Scott. Whenever he got into a rough situation, his shirt would usually get ripped, exposing half of his chest.
* Evolution from an alien that's somehow gotten into a water tank, reacts by slowly backing out of the room and closing the door, as if to say, "I was never here. This is somebody else's problem."
* Evolution, he invents a species of pterosaur dubbed the "air whale" with wings a hundred metres across. Living off tiny creatures in the stratosphere, it had paper thin hollow bones. They mated on the highest mountain peaks and it is suggested there are very few of them due to the lack of food. Able to circumnavigate the globe with the aid of wind currents, it need never touch the ground.
* Evolution: Humans evolve over time into mole-like and elephant-like forms, among others.
* Evolution insist on calling the flying aliens "birds" even though they clearly resemble either winged Velociraptors or dragons.
* Evolution, in the first flashback. There's mention of a dinosaur that's smarter than the others, but all this means is that it's "smart enough to go insane" - it submerges its survival instincts in order to hold a grudge against one of humanity's ancestors for eating its eggs.
* Evolution, it's enough to get her high for about 10 minutes and still keep fighting.
* Evolution-like trees (and symbiosis means that they're literally born of said trees) on the Mars-like, arid, and hot plains of Pangaea Ultima.
* Evolution of Evolution, but this time with Randy as the leader of the group and his quest to keep hold of the WWE Title paralleling Hunter's own quest to remain World Heavyweight Champion.
* Evolution of tank armor has been cyclical. Early tanks were lighly protected, while armor grew thicker during
* "Evolution of the Daleks" argument, by pointing out that the human mind has so much more potential than simply destroying.
* "Evolution of the Daleks" Dalek Sec spouts the following line after his transformation (note the other words besides "ambition"):
* Evolution of the Daleks everywhere. The prime turning point being that as Sec starts to let go of said genocidal xenophobia, he's able to ask the other Daleks the obvious question "If we're so superior, why are we the last survivors?" while turning to humanity and recognizing that for all their short comings, they always survive and continue.
* "Evolution of the Daleks". In a subversion, it doesn't actually land as far as the audience is left to imagine, and Martha later retrieves it.
* "Evolution of the Daleks". Just as the gamma radiation is about to strike the Empire State Building, the Daleks declare there are "40 Rels left" then immediately starts counting down in seconds! What, is the Rel just the Skaro term for second?
* Evolution of the Daleks. Oh, and he said it right before he was killed by the

people he was trying to, in the words of the Doctor, "lead from the darkness."
* evolution placed souls in them (often a specific pair, from which Adam and Eve were inspired, has been claimed), making them humans with what they feel are attributes which wholly set them apart from other beings. Obviously, this is not proven (and likely unprovable), nor part of evolutionary theory, but a reconciliation of it to Christian doctrine.
* Evolution Selenium Sulfide, which they hadn't even tested on an alien organism beforehand.
* Evolution: The aliens started out evolving to fit the ecological niches they found themselves in, but were eventually shown as evolving along a fixed path, becoming dinosaur-like things and then primates for no reason. In addition, despite the rapid evolution that was the point of the film, there was no sense that the creatures were going through multiple generations particularly rapidly (there was also a cartoon series based on the movie that made the same mistakes, only more so). One interesting aversion, however, is that the final form achieved by the creatures when forced through rapid evolution was essentially a giant amoeba. It's explained that this is the most efficient form for its particular environment so it can be considered the best adapted even though it's one of the simplest.
* Evolution: The Americas are visible as the alien spacecraft sails to Earth.
* Evolution: The military points their guns at an elevator that turns out to be empty. Then ape-like aliens ambush them from an alternate opening.
* Evolution." Then she opens the door... and is faced with a dragon-like alien.
* Evolution: The third part, "Descendants", depicts the regression of humanity back into non-sapient, tree-dwelling primates. In the section's first chapter, a squadron of soldiers are awakened from cryostasis an uncertain number of millennia into the future and encounter a troop of hairy feral posthumans. By thirty million years hence, they have returned to being arboreal apes. Their nests vaguely resemble small buildings that they decorate with glass fragments to ward off predators, but they are otherwise little different from a chimp or australopithecine. Numerous other posthuman species have emerged by this point, including arboreal hunters, elephantine giants "farmed" by carnivorous rats and burrowing creatures living in underground hives. By half a billion years hence, when life on Earth is coming to an end, posthumans are the last mammals: small, russet-furred monkey-like animals that live in chemical thrall to a species of tree.
* Evolution, the trope title plays out literally when fire induces rapid growth in the alien invaders.
* Evolution: The World Of Sacred Device, all but two of the party members use Cyframes, ancient technology that has been repurposed for combat. Of the cyframes, two fit this trope the most:
* Evolution to his former commanding officer, who's in charge of the napalming.
* Evolution!" To which the idiots reply that they read it off the bottles. "It's right on the ingredients list..."
* Evolution was going to be a serious sci-fi movie but became a sci-fi comedy.
* Evolution, when a party of women encounter what most resembles a green pig, they are unnerved but also endeared- until it opens its mouth and something like a tiny vulture's head reaches out to bite one of their fingers.
* Evolution, when the doctors have to get the alien insect that cut its way into Harry's body by going in through the colon and pulling it out, and the scene plays out in this way.
* Evolution Worlds, Mag can actually acquire and equip Bowling parts for his cyframe which can knock over enemies in the form of this trope.
* Evolva: According to the backstory, the Genohunters are used to exploration tasks because of this trope. They somewhat show it in the actual game: the DNA you acquire from the native wildlife will improve your physical condition, thus allowing you to perform better across the levels.
* Evolva. A giant egg comes to the planet, develops lots of tentacles, creates an army of aliens, and uses the planet's resources to make new eggs, supposedly to send them to other planets.

* Evolva confuses your Genohunters (if the affected Genohunter is the one being controlled, it inverts the controls; on non-controlled Genohunters, it makes them start attacking each other).
* Evolva gives us a rare heroic example. Your Genohunters absorb their enemies' bodies to obtain their DNA and use it to get their attacks and skills.
* Evolva, one of the skills you can get allows you to use it. It makes you invulnerable during the time is turned on, except against lava (you'll still catch fire as normally, although you won't lose health until the shield wears off) and sea water.
* Evolva: Switching into several of the weapons, like the Spore, makes the Genohunters' hands transform into this.
* Evolva, the Genohunters are able to get claws able to slice rock walls to pass through them.
* Evolva, the Parasite proves to be able to fill the whole planet with its mooks. Seriously, just compare the huge number of aliens and the number of indigenes you see in each level.
* Evolva: The sea that appears during levels 9 and 10 is mentioned in the manual as being made of acid, and it proves it by being instantly lethal, should you dive into it.
* Evolva: The towers you have to destroy in several levels? If you watch the initial cutscene, you'll see that the Parasites create them through dilatations from its tentacles. Which means they're made from the same matter as the tentacles.
* Evolva, you're forced to split your four-men party several times. Level 5 forces you to split it into two groups, as at least one of your Genohunters (and it's recommend two) has to stay watching over a tunnel entrance. In level 6, two Genohunters are initially apart from the others, and in levels 9 and 11 each Genohunter starts on his own.
* Evolva. Your enemies can do the same thing to you if a mucus and a flame parasite stick together, though. Thankfully, such a situation can only happen at the end of level 11.
* Evolva, your Genohunters will change their physical appearance (change colors, develop spikes or horns) based on the DNA (acquired from your enemies) they've used to mutate themselves.
* EVOLVE 31: Hero at that, though Hero was the one who insisted it be a title match. To hammer it in, after becoming champion, Galloway would also try to put the belt on the line when he didn't have to only to be denied by the referee, as to not violate the new ranking system that came into effect after he won the belt.
* Evolve, Abe has a modified version with "team" in place of "army". Still a valid point when what you thought was going to be a few months of keeping wild animals away from colonists becomes a desperate planetary evacuation.
* Evolve a horde of monsters that can rip through planetary defenses like they weren't there, constantly mutate new strains to become even deadlier, and can appear on any planet with no warning.
* Evolve all have this as their shtick; they grow stronger by consuming animals, also becoming larger and spiky with each progression. They start out weaker than the human hunters out to kill them in the first stage, are roughly equal in strength during the second stage, and exceed them in the third and final stage.
* Evolve, all known space is controlled by one of three human superpowers that exist in an uneasy stalemate.
* Evolve all the hunters are color-coded by class. Red is Assault, Green is Trapper, Blue is Medic, and Yellow is Support. On the monster's side, each monster has a distinctive armor glow: Goliath is red, Kraken is blue, Wraith is white-pink, behemoth is orange, and Gorgon is pale green. Overall, the monsters are identified by an orange dot when viewing the map in replays.
* Evolve and interesting characters. All that is shoved into the backseat and hidden under a blanket by how you get to play as the giant alien monsters that serve as the threat of the game. For bonus points, one of them is even described as "Godzilla crossed with King Kong".
* Evolve and is slowly mutating, so that not only is there the possibility that's

she'll snap and attack them but a certainty that when that happens she'll transform into an alien killing machine.
* Evolve, and Torvald, Jack, Lazarus, Slim, and Crow never had their roles in the story finalized and may have died anywhere from their time on Shear to the final battle.
* Evolve are dented and worn, with paint worn off the edges. The ship has lockers marked with strips of labelled duck tape and the hold has graffiti scratched into the walls. Its especially prominent when looking at the Broken Hill Foundry map where the habitation section has just as much junk, markings, and general wear and tear that you'd expect to find in a town.
* Evolve are this in spades. Massive extraterrestrial predators at least as smart as humans, they have an almost pathological drive to hunt and kill people. Humans too well equipped to kill? They'll hide in the wilderness, feed on other animals, grow, and repeat until that's no longer true.
* Evolve as a result. Rather then try and reverse it or sever the affected portions, she added cybernetic systems to allow her to use the abilities of the monsters.
* Evolve, Bucket and Cabot, used to be partners in the Hub Marshalls. By the events of the game, they've been retired for some time, but the mutual respect they formed had them stick together as Planet Tamers.
* Evolve, Bucket's right arm from the elbow down has been replaced with a missile launcher and targeting laser.
* Evolve can eat the corpses of dead hunters, as well as the colonist casualties that can be found on the maps. While hunters aren't the most filling of prey (2 meat for an intact hunter, 1 for a casualty) they still provide an adequate meal, with the added bonus that Lazarus can't revive eaten corpses.
* Evolve can use their scent ability to see the outlines of various things through walls. It's also color-coordinated, wildlife is yellow, dangerous creatures and technological items are orange, hunters and their tracks are red, and map objectives are purple.
* Evolve deals poison damage with three of its abilities and is by far the most horrific and unsettling of the monsters.
* Evolve. Depending on who you pick you could be armed with an armor piercing sniper rifle, a napalm grenade launchers, or missile pods. Justified, as hunting gigantic extraterrestrial killing machines unarmed would be a good way to get killed quickly.
* Evolve did this before becoming a Planet Tamer and still uses modified equipment from that job to hunt the monsters.
* Evolved infected civilians cannot be dismembered in normal combat. This results in them being sent flying away after receiving quick follow-up strikes from even the Claw power.
* Evolved stars show also very well the effect of the square-cube law. In red giant and red supergiant stars, evolved medium and (not very) high-mass stars, while the
* evolved. Strong Bad is also this in relation to Strong Sad and The Cheat. He's a bit harsher on Strong Sad, and quite a bit friendlier to The Cheat, but all of the relationships have a bit of friend and a bit of enemy in them (usually on Strong Bad's part).
* evolved to better survive in the Underworld. The ones that are left — and there aren't many — have largely given up hope of ever seeing the surface again. Conversely, drow are perfectly capable of having dark elven offspring if they give birth on the surface, but these children are more or less considered a separate race from the originals due to the millennium of time between the two generations, and are culturally far more similar to their drow parents. Drow and dark elves are functionally two morphs of a single species and each will exist at least in potential as long as the other does, but what little is left of the original Dark Elf culture is doomed.
* evolved with humanity and technology, and once took the form of the "witches cause milk to curdle" myth.

* Evolve. Each monster that appears isn't necessarily stronger then the previous one, but does have advantages compared to the previous one in order to overcome an obstacle. Kraken is smarter than Goliath, Wraith is more stealthy than both of them, Behemoth is more durable than all of them, etc.
* Evolve fall under this. Story-wise, they're at least as intelligent as humans, identifying specific threats and adapting their tactics in response. One can only imagine the horror as the colonists realized that not only were these things massive and deadly, but intelligent as well. In-game, their intelligence depends on the player controlling them. This could range from simply being able to recognize a few strategies to openly toying with the hunters by dissecting and countering their advantages and tactics.
* Evolve glow brighter the higher their armor. They come in variety of colors, with Goliath being red, Kraken blue, Wraith a white-ish pink, Behemoth orange, and Gorgon a pale green. For non-monster examples, the blitzleopard and mammoth bird wildlife have this as well.
* Evolve: Gorgon has an acid spray attack. This is one of its most damaging attacks, rapidly melting through the health of anything caught by it.
* EVOLVE had a case where the initial "hero" Mercedes Martinez did not even
* Evolve, harpoon traps are standard equipment for colonists. Meant to be deployed in a perimeter to trap large and dangerous animals before they can get close to humans, the playable character Maggie can put these out in combat to ensnare monsters.
* Evolve, has a large cybernetic covering the that was lost during the attack on his colony. Torvald has heavy scarring across his torso from when he was torn apart. On the monster side, the Goliath has several scars across its chest and abdomen, befitting its nature as the most primal of the monsters.
* Evolve has four legs for walking and two limbs that act as both wings and bludgeoning weapons.
* Evolve has Hub, the Earthly centered galactic superpower. It replies to attempted rebellions with extreme force and isn't above killing off colonies because they found a source of material Hub wants the monopoly on.
* Evolve has Hyde, of the psychopath variety. He joined the military as an alternative to jail time and was promptly assigned to the Chemtroopers, soldiers equipped with flesh and armor melting chemical weapons. While there, he refused to wear the filter mask so he could look into the eyes of the people he killed.
* Evolve has numerous groups employed by the gigacorps such as Hightower and Orion Secure Solutions. The group seen in game is Ebonstar Tactical Solutions, the hired guns of Nordita. Several of the maps (Armory, Barracks, King's Fort, Wraith Trap) are Ebonstar facilities and you can make use of some of their equipment in the Evacuation campaign.
* Evolve has these for its melee attacks. For bonus pain, they crackle with electricity and are tipped with bony hooks.
* Evolve has this as part of his backstory. He was the leader of a mercenary group that dedicated itself to helping the little guy, often against the will of Hub. When a rescue attempt when wrong, the media blamed him for the loss of his own ship, the other ship, and every member of both crews.
* Evolve, hitting the monster in the head deals double damage. Behemoth is the exception, with its weakspot in its underbelly. Conversely, hitting a limb does half damage. This only affects projectile-based weapons, as all other weapons deal flat damage regardless of where you hit.
* Evolve, humanity already encountered various non-sentient alien life. Their first encounter with extraterrestrial beings equal to or greater than humans in intelligence was a single, massive creature that slaughtered the population of an entire world and demolished their technology with its bare claws. Since its massacre was efficient enough to prevent any word from getting out, this situation replayed an unknown number of times before anyone realized first contact had been established.
* Evolve, Hyde's flamethrower and Lennox's autocannon are both mounted to their user's forearm.

* Evolve Idle allows the player to research the possibility of a Dyson Sphere after getting to space. Initially they're described as impractical, if not outright impossible and the player can instead construct swarm satellites to fulfill a similar function. Later a flexible Dyson Net can be constructed around a neighboring star as a superproject. Late game the player can upgrade it into a full Dyson Sphere, which grants an achievement.
* Evolve Idle and stationing them in the various systems. There's even an achievement for eliminating all pirate activity.
* Evolve Idle in other universes have demons, which follow this trend.
* Evolve Idle, where Hell planets are replaced with Eden worlds and the demons that would normally evolve on them are replaced with angelic beings like cherubs. The Hell dimension is the same everywhere, though.
* Evolve, if the Hunters win on the Armory map these will be deployed next match to hunt the monster.
* Evolve injector. Lennox has the most elaborate one, modified from a magmadiver suit, which has a plasma lance built into one arm and an autocannon in the other, plus the standard gear.
* evolve into Gyarados allow them to be found at Level 100, which prevents them from evolving into Gyarados and leaves the player with a useless Pokémon.
* Evolve is a mother. She also walks around in four tons of armor and weapons while fighting titanic extraterrestrial monsters.
* Evolve is now locked away unless 2K decides it might be worth releasing.
* Evolve is quite skilled at this. Among his cobbled together devices are a satellite uplink and override, a motion negator, and a hybrid assault/medical droid.
* Evolve. It grants him increased movement speed, firing rate, and jump height while decreasing reload time at the cost of some of his health.
* Evolve justifies this with material assemblers, which can create nearly anything if given the blueprints and raw materials.
* Evolve, Kala suffers from this during her brushes with the minds of the monsters. As a result, the talking is less 'amusing non-sequitur' and more 'wordless rhythmic chanting mixed with ominous statements in the voice of an old man'.
* Evolve. Left torn basically into pieces in a wrecked spaceship floating through space with all other crew dead, he gave the ship's robots one final command: "Repair me." Now he's a head, one arm, and a chunk of a torso grafted onto a robotic body that includes features like a jetpack, mortar cannons, a target designation laser, and a personal forcefield, all powered by a fusion core that burns what he eats as fuel to keep him alive.
* Evolve monsters are clashing with the full military might of three galactic superpowers and assorted mercenary groups.
* Evolve. Originally a group of twelve, and eventually a group of twenty, every member of the group is both willing to put their life on the line to stop the Monsters and capable enough to survive doing it. Though they have their differences, especially with their newer recruits, they function like a surrogate family to one another.
* Evolve part by having just as much health as the other classes and carrying some useful weapons.
* Evolve. Played differently than usual as he doesn't really care for bounty hunting, considering it something that you do because you don't have many other options. On the other hand, he does have a healthy respect for the money it can bring.
* Evolve plays with this in regards to Bucket, and by extension all other Rank-Rajat Minds. He has the capability to speak any and every language but is limited by which dictionaries he currently has loaded. Bucket himself doesn't have many at a time, but he still has more than any meatbag.
* Evolver features a robotic AI toy that just happens to have been installed with a state-of-the-art weapons-grade military AI chip; the robot is meant to be a harmless children's game, but it soon begins learning how to arm itself with more lethal weapons. The Evolver unit was originally a military battle robot prototype

that was re-purposed after killing people in a field test. It got made into the grand prize for the top scorer of the Evolver VR Game so that they could play it in real life. The problem starts when its military programming that was left in gets reactivated by the protagonist's sister dramatically "dying" after it scores a "kill" on her and then getting back up. It realizes that its "weapons" aren't lethal, as they're "supposed" to be; to it, the Evolver game is a live fire War Game and refits itself to compensate.
* Evolver involves a failed military robot (which ended up killing dozens of soldiers during a training exercise) being re-purposed as a household laser-tag toy. Needless to say, the robot reverts to its original programming and starts killing people. When its creator attempts to use the verbal shutdown code that worked during the training exercise, the robot simply rejects the override and kills the guy.
* Evolve's ambiguously canon Deepest Dark mission shows the last stand of the hunters. After being stranded on Shear and reduced from twenty to just a handful by the Hybrid, the few remaining hunters take up their weapons and delve into the nest of the Queen Gorgon to kill her and destroy her brood.
* Evolve serves as this. Kala injected herself with a small amount, only for it to mutate her arm and face, while influencing her mind. Even with an artificial immune system booster the monster portions are spreading, with Caira giving her 14 days before she is overwhelmed. In the meantime she is susceptible to the monsters mental influence, causing her to scream out their thoughts when downed and mutter in her sleep.
* Evolve SMS, allow you to include a delay when sending a message so that you can cancel sending the message if you catch a typo in your message.
* Evolve, specialized mercenaries employed by various governments to reduce the levels of dangerous wildlife on colony worlds. While their individual motivations may vary, the colonists undoubtedly view them this way when they kill the alien nightmare beasts that keep eating their friends.
* Evolve Sunny pulls this with the destruction of the Sword and Solaris. Justified, as if she had been killed in the explosion there wouldn't have been anything left to find.
* Evolve switched to a free-to-play business model on the PC, as well as making plans to do the same on consoles. The player base exploded, as a result, reaching numbers higher than even its initial launch.
* Evolve takes place on one planet over a relatively short period of time, while additional information revealed creates a much larger universe with the human-monster war lasting years after what we see in the game. Add in the monster's ability to create new breeds opening up the possibility for fan made creations and their extradimensional nature serving as an easy excuse to drop them into any other fictional universe and you have ripe grounds for fanfiction.
* Evolve, the bounty is so high because the only people in any position to take advantage of it would have been rooting for the rebels.
* evolve the Humanform design and convert the entire mass of the planet to replicator blocks. At this point Thor called in SG-1 to help fix the problem, Carter reset the device to work properly and reactivated it and the episode ended with a frozen tableau of replicators inches from the device controls, which they wouldn't reach until a season later.
* Evolve the planet Shear serves as this. There are massive predators, large herbivores, acid lakes and ponds, packs of smaller predators, and man-eating plants, all of which will kill an unwary player.
* Evolve, the planet Shear was going to be one of these but was changed later in development as the writer felt it added nothing of value to the narrative.
* evolve. The quarians made constant modifications to them over the course of decades, if not centuries, in order to make them better workers and increase the scope of their abilities. A little tweak here and there without much thought about the cumulative effects of all of those adjustments.
* Evolve, the support character Hank can target an orbital bombardment fired from a modified mining satellite. His modification replaces the artillery barrage with a

laser beam.
* Evolve this is Daisy's basic purpose. She can find the monsters tracks, even when they are hidden due to sneaking, and follow them to the monster. While this is useful for remaining on the monster's trail it is less useful for actually pinpointing the monster due to its speed, necessitating players to anticipate the behavior of their foe. On the monster's side, it can smell all animals, hunters, and pieces of equipment within its smell range, as well as hunter tracks. This allows it to track the hunters or avoid them by detecting them first.
* Evolve, this is part of the process of a monster invasion. While the defenders are busy fighting the beasts, they fail to notice the atmosphere becoming toxic and the weather becoming unstable. Once there are no more humans, structures are razed and the planet is practically immolated as the monsters use key positions as nesting grounds.
* Evolve to read 'This facility has gone 0 days without anyone being eaten'.
* Evolve, Torvald underwent this in order to survive a monster attack. While it cost him most of his body, he got a jetpack, personal forcefield generator, and in-built mortar cannons out of it.
* Evolve to slither through the air just above the ground. Fittingly, its also the most likely of the monsters to induce paranoia through its ambush tactics and illusions.
* Evolve, was instigated by a corporation inciting a cluster of worlds into rebellion so they could then take over.
* EVOLVE went from a highly strict and regulated promotion with harsh punishment for violators with a constantly changing hierarchy based around mixed style fights to a very loosely enforced fed which
* Evolve. When she sleeps, she is forced to fully connect and communicate with them. Naturally, this makes her teammates uneasy.
* Evolve you are the last hunter alive, this is a necessary gameplay mechanic. While certain hunters may be able to evade or slow the monster down for a while, the only real recourse it to survive long enough for the rest of your team to respawn.
* Evolve you can do this as the hunter. Even as you lie bleeding out on the ground and the monster is preparing to finish you off, or just watching you die, you can fire your peashooter of a pistol at it until you die.
* Evolving Credits: The opening sequence changes between episodes and/or seasons to reflect new characters being added and other major developments and changes made to the series.
* evolving robots), robotic Neanderthals thought that, despite humans being made of substances they’d never seen before, Leela and Amy were hot enough to kidnap and make their wives.
* Evolving Trope: As mentioned above, many a discredited trope has regained use through transformations. In some cases, these tropes end up changing beyond recognition.
* Evolving Trope, as most spaceships in fiction had been up until that point. It also makes no sense from an engineering standpoint, but that is true of most spaceships in anything but diamond-hard sci-fi.
* Evolving Trope: The trope evolves after a period of disuse and become relevant again.
* Evon, a good spellbook is this for magic users. Not only do the books give the user access to a wider range of spells, but by studying and meditating on the spells within, a caster's understanding of magic, and with it, his power, increases. Evon was a much stronger caster with just a couple of days with her father's book.
* Evon are based on the titular character's attempt to steal back her father's spellbook from her evil ex-master. She doesn't need the book to cast spells but studying it allows her to become more powerful.
* Evon has to patch up Herodotus quite a lot. At one point she says he's "becoming more bandages than fur".
* Evon has two attempted rapes in a row, both stopped when someone more powerful

turns up.
* Evon: In the first chapter Hero refers to Evon as "kid" all the time and treats her as such, up until she blasts a hole in an assassin's chest. She's actually 18, but her use of magic makes her look (supposedly) closer to 12.
* Evon is a Focus, someone who is capable of drawing upon a very high amount of magic, but her mentor restricted her training so he could use her as a power source, so she doesn't know very many complex spells and mostly just blasts people.
* Evon is devoted to the title character and Herodotus dealing with the consequences of Evon accidentally teleporting their clothes off at the end of Chapter 3.
* Evonix's Corollary: In other words, 90% of the crap is crappier than the rest, and 90% of the non-crap is still head-and-shoulders worse than the rest. And you can keep doing that division all the way down.
* Evon the Duke of the Pridelands doesn't mind if his vassals kill each other off in petty wars, so long as they file a formal declaration of war. Hero had to leave because he slew the lord who had his mother assassinated (with no evidence) without declaring war or challenging him to a duel.
* Evon to this is to threaten to kick his balls into his throat if he ever mentioned that again.
* Evon Traveller and Lanna, respectively the oldest and youngest members of The Cabal, spend a fair amount of time in the bedroom. He's over 800, she refuses to tell anyone her age but if she's like the others she would be close to 100 at least.
* Evony and trying very hard to convince the viewer that the game is pornographic even when it's anything but.
* Evony do not include the phrase "Play now, my lord!" It's actually "Start your journey now, my lord" or "Come play, my lord".
* Evony people don't hold the copyrights for) and say things like "play discreetly in your browser". There are some in-between ones where the girls are at least dressed in medieval-type outfits (though that's only one of the many time periods covered), which tend to say things like "rescue the princess" (an element that doesn't exist in the actual game).
* Evony's, had a CG-rendered woman in skimpy clothing with the tagline "One click for a ROMAN ORGY!", before changing it to the tamer "One click for a ROMAN EMPIRE!" some weeks later.
* Evony", the best of which requires the player to spend $100. The worst part is that the game coins are called "cents" even though each cent costs $0.10, to make things seem cheaper. (All figures in US dollars.)
* Evony: The King's Return employs the similarly overused "rod puzzle game" advertising that came to prominence in the late 2010s, which in-game only appears in the first portion of the game.
* Evony), which has banner ads that urge you to "join the battlt now" (yes, spelled "battlt").
* E.V.O.: Search for Eden at the end of the dinosaur stage, the Birdman King in the first mammal stage, and the boss Rogon in the final stage). Saying "yes" results in a short (and usually somewhat comedic) ending, then puts you back on the world map. You also get dialogue choices with the Yeti, but both lead to the same result (fighting him).
* E.V.O.: Search for Eden; despite being the first area, and thus the smallest, the water level feels more 'alive' and populated than the amphibian level. Possibly due to the feeling of being the first step into a true epic, and the numerous tutorial NPCs.
* E.V.O.: Search for Eden does this in the age of dinosaurs, and quite literally at that. After climbing to the top of Mt. Brave, you are given a choice to jump off or leave. Jumping off results in an evolution... you become a pterodactyl.
* E.V.O.: Search for Eden featured these in one level. Notably, they are the only invincible enemy in the game, fortunately they wouldn't attack you actively, though one might pop out of the ground under or in front of you. A later level featured sand-dwelling dinosaur-like creatures called Mosuchop which would jump out and bite

you before retreating under the sand. (Real Moschops, the mammal-like reptile on which it was based, were not known to do this.)
* E.V.O.: Search for Eden, followed by your character's feet becoming fins. Even if you're a mammal, or a bird.
* E.V.O.: Search for Eden Kuraselache are about your size and are annoying, but their leader is three times your size, attacks by biting, body-slamming and slapping you with his tail, and doesn't want the world above the water to become inhabitable. As the first major boss and, he's tough. Later on in the final epoch, you meet normal enemy versions of King Kuraselache in the Rogon section, who are still annoying but nowhere near as strong since you're far more evolved now.
* E.V.O.: Search for Eden, routinely finishes off an era by committing genocide against certain species to pave the way for other species to grow and thrive. Evolution in this world is an extremely harsh mistress.
* E.V.O.: Search for Eden, since the game lets you mix and match creature parts.
* EVO Theory Of Evolution has dozens of different evolutionary dead ends if you evolve with lopsided statistics or pick the wrong choice at certain points of the game, describing how your species diverged from the path that would have led it to becoming the dominant one on Earth.
* EV Override, the Crescent would have unified under said Council into a single enormous empire — though in response most of the other species would have united into a roughly-equal Alliance.
* Evrart's portrait has a red background (for socialism), but flecked with gold (the colour of Ultraliberalism) to emphasise his drive for wealth.
* Evronians, of all aliens, having first visited Earth about ten thousands years in the past and visiting multiple times until we became suitable for conquest.
* Ev'rybody's talking about: Bagism, Shagism, Dragism, Madism, Ragism, Tagism...
* EVTV Weather ends with a silly variation of the words "To Be Continued".
* Evvel Zaman İçinde ("Once Upon a Time") (film) - Turkey's first animated film
* Evvy is 10 in her first appearance, but by the time she gets her own book, she's 14.
* Evvy Trevelyan, since the reader learns the truth about the school as she does. She drops the role in the later stories.
* Evyione Ocean Fantasy. If Evyione chooses Yashin, there will be severe political and personal consequences for her.
* Ewan MacColl's song "The First Time Ever I Saw Your Face" is far better known as sung by other performers, most notably by Roberta Flack. His radio ballads, such as "The Shoals of Herring" and "Thirty-Foot Trailer" have such a traditional feel that there are singers who don't know he wrote them, much less give him credit.
* Ewan McGregor and was trying to remember which photoshoot of his it was taken from before he realized that it wasn't a photo of him at all.
* Ewan McGregor. In fact, Kerry Fox's presence actually got the film green-lit, as she was the only name actor in the main cast.
* Ewan McGregor's brother Colin is a fighter pilot in the RAF. His callsign is "Obi-Two".
* Ewan McGregor themselves. They trained for two months in fencing and fitness in preparation and as a result, the speed in which they engage the duel is the speed in which it was filmed, and was not digitally accelerated.
* Ewan McGregor This is probably one of the most realistic and unbiased portrayals of the regular REMF there is. The logistics system to maintain even a small force in the field is a beast, and most people get shifted to help maintain it without even a whit of corruption or nepotism involved.
* Ewan McGregor, which was set to begin production after reshoots wrapped up.
* Ewar's Tale once, when the signature characters meets a pair of bats that he thought were spirits, the Author seems self-aware too for some reason.
* Ewen MacColl is not the only victim of this trope in folk; A great many modern folksongs are thought to be traditional even though they are original compositions. Another well-known one is Jim McLean's "Glencoe Massacre."
* "Ewigkeit" ("Eternity") is basically the vampire guests of the ball saying that

eternity sucks.
* Ewing is very progressive for his time period, but still a product of his age. He's initially frightened that a Moriori stowaway will eat him.
* Ewoks and curses show up as Force powers in this setting, when traditional Force powers are more rooted in telepathy and telekinesis. Endor could easily be a non-humanocentric fantasy world, up until you get to the episode where the Empire arrives with spaceships, laser-toting soldiers and robots that introduce the spear-wielding, spirit-worshipping hunters to a wider universe.
* Ewoks animated series, princess Kneesaa wears a pink hood and her best friend Latara a long braid and a hood that looks more like a hat. While both have subtly implied breasts just like most other female characters in the show, it's only aunt Bozzie and the second season version of Shodu Warrick who wear dresses and have prominent breasts. Seemingly, the only other character seen in a dress, mistress Kaink, has moustache.
* Ewoks animated series, Wicket and Kneesa go out into the woods to search for Kneesa's long lost sister, Asha, who is discovered to still be alive after so many years. Along with an Ewok woodcutter,the two are threatened by some wild animals which end up running away thanks to Asha's arrival on the scene. The woodcutter believes he has scared the animals away with his axe until Asha drops down from the cliff she was standing on.
* Ewoks. A scene from the latter, where Wicket is poking princess Leia Organa with his spear, appears at the very end of the comic.
* Ewoks, aside from the Warricks, no other characters' last names are known, implying that they don't have any.
* Ewoks cartoon starring C-3PO and R2-D2. These didn't stand out from the crowd quite so much, though.
* Ewoks episode "Asha", Kneesaa and Asha's mother, Ra-Lee is implied to have died while protecting her daughters from a hanadak, but the actual death is not taking place onscreen.
* Ewoks episode "Party Ewok", Kneesa rebukes the leader of a gang of punks called the Pugs by saying that he's just a dirty, no-good common thief. The leader of the Pugs replies "Who are you calling 'common'?"
* Ewoks features a friendly pilot droid named PD-28, who blushes when kissed by both Kneesaa and Latara.
* Ewoks threatening to rape people or telling them to prepare their anuses.
* Ewoks (To Save Deej) starts out with the Warrick males and princess Kneesaa fishing. But it soon turns into a story where Deej's life is in danger.
* Ewoks was released in theaters because George Lucas loved it so much.
* E! wouldn't return to Canada until 2010, when Bell Media bought out CHUM and replaced it's Star! network with a domestic version.
* EWTN (a Roman Catholic network, foundress Mother Angelica used to encourage viewers to "keep us between your gas and electric bills", a donation slogan that's been picked up by other hosts on the network since Mother's passing.)
* EWTN, or Eternal Word Television Network (a Roman Catholic network) has blocks of programming aimed at
* EX2 The Land Beyond The Magic Mirror the PC's could find a "den of technology" filled with scientific items. If a PC took any of them, each one would eventually destroy a magic item the PC was carrying.
* Exacerbate vs exasperate. Too often, one sees the latter used where the former is clearly intended. In fairness, for several hundred years, exasperate did also carry the meaning of "to make worse," but that is not the current meaning, and one does not generally get the impression that this is a fact that is known by most people making this mistake.
* Exacerbating this even further, it is possible for an Adept to mod and upgrade the basic pistol to the extent that they can carry it and still have a
* Exact Eavesdropping, but TV shows continue to play it straight when it'll move the plot along.
* Exact Eavesdropping: Talking Animals have a marvelous tendency to talk where the hero can overhear them.

* Exact EavesdroppingThe person who gets to eavesdrop will almost certainly come in when something important is being talked about.
* exact function of said costume, complete with leaf-shaped umbrella). He even once lent said costume to Tenma once when she was stranded in a bus stop due to heavy rain.
* Exacting terrible revenge on anyone who does anything to slight them, no matter how minor.
* Exactly 33 years later, in 2018, Redskins quarterback Alex Smith suffered a similar injury as they played the Houston Texans. Fortunately for Smith, after missing the 2019 season, he would come back in the 2020 season. However, the seriousness of his injury meant that he had to retire afterwards.
* exactly 413 years in the past, even when sending a message sooner or later could save lives.
* exactly a good monetary investment, and they have a lot of fine print you need to be aware of before you buy one.
* exactly an Alsatian and not a dinosaur, and, faithful as any Fido, it sticks with the two main characters as they freeze to death at the end of time.
* exactly as much use as any other product, yet no-one notices because it sounds so damn sciency.
* exactly as strong as the $140 dollar metformin. (That sound you heard is the jaws of the rest of the world hitting the ground after seeing a minor example of the perverse incentives in the American system.) When you can mark up more than 1,000% with just a brand name, expect every mealy-mouthed marketer to come up with every possible way to take an all-natural, non-GMO colonic extrusion and give it a high-gloss, gluten-free shine.
* exactly as trained and going under their own tanks. The main problem was that Soviet tanks had diesel engines, whereas their German counterparts ran on gasoline; the differences in scent had confused the dogs, and they sought out the more-familiar smelling tanks.
* Exactly finally reveals the event: after the Reynes and Tarbecks defied his authority, Tywin beat them militarily and burned Tarbeck Hall to the ground, and then trapped the Reynes in a mine and redirected a river to drown them.
* exactly from the original manuscript right down to every blemish on the page. Thus it is considered blasphemy to create an English-language copy of the bible-esque Book of G'Quan — as G'Kar tells Garibaldi when he gives him the book to read, it must be read in the mother tongue or not at all (when Garibaldi protests he can't read Narn, G'Kar responds, "Learn!"). Later, when G'Kar's writings unexpectedly become regarded as a new holy book by the Narns, every copy of the book includes a strange ring mark on one of the pages — which is actually a coffee stain accidentally left by Garibaldi on the original page (naturally, Garibaldi thinks that it adds character to the book).
* exactly has the Fire Nation's destruction of the Air Nomads 100 years prior to the start of the series.
* Exactly how aware the inhabitants are of that varies from world to world. Enroth takes it to a point where it almost falls out of this trope (
* Exactly how badass it is is up for debate, but Guybrush is certainly very proud of the beard he's grown for
* exactly. However, females do produce testosterone naturally, just far less than males and the female sexual hormones, the estrogens, counter the testosterone's more unwanted effects.
* exactly; however the plan is foiled in the most horrible way possible.
* exactly how much cement was needed or bricks were required to do a job, the standard way of doing things was to throw as much stuff as possible in, unintentionally Ragnarök Proofing some things. Hoover Dam, for example, would likely stand for quite some time. Similarly, the Brooklyn Bridge was built in the 1870s to accommodate horse and buggy traffic, and now supports thousands of cars and trucks each day.
* exactly how rabies works. This error is odd since Peter's first symptoms are a supernatural exaggeration of rabies. His frightened refusal of water mirrors its

hydrophobia, and the neck pulsations evoke the painful throat spasms that happen after those with rabies try drinking.
* exactly like a hung-up cloak when they cling to walls, right down to claws that resemble a cloak-clasp and twin rows of eyespots that look like buttons. No word on whether killer boots (booters?) or hats (hatters?) are also available to complete the killer-accessory ensemble...
* exactly like an older Annie, appeared to have had an almost identical relationship to Kat's mother as Annie has to Kat.
* exactly-like-Earth animals get to keep their Earth-analogue's name (the four-tusked fur-covered Elephantidae are mammoths, for example).
* exactly like his mother. But then, Howard's relationship with his mother is rather abnormal.
* exactly like Russian riot police (OMON) in their white-blue-gray "city" camo.
* exactly like the corresponding Hint water. She plays along, claiming that the fruit had to be reared on Hint water to get it to taste so much like it.
* exactly like those a couple would have. In one episode, Joey tells Chandler they should buy a new table for the apartment and Chandler worries it is "too soon". He starts talking about how things went when he brought furniture with his old roommate Kip, aggravating Joey ("I know all about Kip!"), who later asks Chandler if Kip was "better than me".
* exactly meaning "years". In fact, the plural of "yahren" in old BSG was "yahren". So yes, BSG did just rip off German.
* exactly needed here, since a staple of pro wrestling stereotypes among the general populace is muscular dudes wearing nothing but trunks, hitting each other with chairs or raving about how awesome they are/you're about to get your ass beat at the next big show. It's obvious it was meant to be something of a showcase of manliness from the get-go. However, if you need some standouts...
* exactly one million times better looking" than a rival model. We're not sure what units you use for this purpose (millizondas? Microjaguarcx16s?).
* exactly playing with the format. For example, cluing, LADIESFIRST with "Mad scientist's threat to destroy California?" (L.A. DIES FIRST.)
* exactly right, often by determining what movements and words the caster used in the first place.
* exactly that with his powers. The other is that the powers are unique — as long as Absalom lives, nobody else can have the Clear-Clear Fruit's powers.
* exactly the amount their Pa needed to pay off the mortgage to the same bank.
* exactly the appropriate weapon, being actual Italian special forces hardware used to bring instant firepower at close range.
* Exactly. The oracle pretty much predicted the choices they would make. If both of them decided to screw destiny, they would,
* exactly the same in every trial, declaring a mistrial on Harvey's entire legal career. Harvey has to re-plead every single case. At once. In thirty seconds. And he gets every single one of them acquitted again.
* exactly the same, which is humanly impossible. The board accepts that Anne was set up to keep her job.
* exactly the way they are when he receives the vision, usually creating a textbook instance of this trope when that very knowledge allows him to alter the circumstances. Several times, however he sees more far-reaching visions that seem conducive to his goals, prompting him to actively try to bring them about.
* exactly three (he did this because he thought that the usual equation π = 3-and-a-bit was "a bit untidy"). This causes it to sort out letters it hasn't had put in yet, among other oddities.
* exactly three seconds after. This is usually a result of editing techniques in order to establish another shot to properly show the explosion.
* exactly to still function like a mind, leaving no room for radical enhancements?
* exactly Uchiha Clan, even if one of the last surviving members is the one asking him.
* exactly what a mess they got themselves into . . . and Fey's mom just assumes she was trying out for a TV role. This despite everything Fey has told her mom about

her adventures thus far.
* exactly what each response means, and such information is usually/always stated plainly at the end of the question on the actual ballot, as well.
* exactly what ends up tripping the killer up. How many times has Columbo done the math to realize how far out of their way someone would have to go to ensure they were seen at a specific time and place?
* Exactly what happened to the soul of Ruphas' creator? Is he merely sharing the body with the soul of Ruphas? Are they merging or overlapping? Is he in danger of disappearing into Ruphas?
* exactly what he is like in the actual shows, except there he only does it to Carl.
* exactly what his cellmate had done, he proceeded to beat him to death.
* Exactly What I Aimed At like collateral damage was actually the shooter's target all along.
* Exactly What It Says on the Tin album, all under the Yes banner. It's awkwardly named as the two different lineups didn't really record much together; other than Jon Anderson's lead vocals on every track and Chris Squire's backing vocals (but not bass playing) on some of the ABWH tracks, it's two different bands on the same album.
* Exactly What It Says on the Tin: A name that's exactly what the thing is.
* Exactly What It Says on the Tin, and come in normal, polar, and Pelor save us all, winged.
* Exactly What It Says on the Tin and how they decide they're going to go back every year.
* Exactly What It Says on the Tin and it gains the Scrappy ability, which lets it hit ghosts. It's even described that it undergoes a personality change from mild-mannered to highly aggressive.
* Exactly What It Says on the Tin. An island that looks like a warship.
* Exactly What It Says on the Tin: a piece of wood that you play with in the morning.
* Exactly What It Says on the Tin. But they don't have to use anything but their brain.
* Exactly What It Says on the Tin: dogs big enough to be ridden, at least by small characters.
* Exactly What It Says on the Tin; he absolutely cannot be killed by any means, not even by completely obliterating his body) and Squirrel Girl (who's too popular to kill).
* Exactly What It Says on the Tin; is carried mostly by former NBC Weather Plus carriers and other stations. Formerly on ABC O&O's before their contract ended with ABC.)
* Exactly What It Says on the Tin) is used in the base of the Beyond the Sword expansion.
* Exactly What It Says on the Tin; it’s bright red (this colour being inherited from one of the other nitrogen compounds dissolved in the acid, Dinitrogen tetroxide), emits clouds of nitrogen dioxide, and may bubble intensely while it’s boiling off the nitrogen dioxide gas. As rocket engineers in Germany and the Soviet Union found out, this compound is also quite useful as a component in rocket fuel, though much more efficient compounds have been discovered since.
* Exactly What It Says on the Tin. It also invariably drives all who possess it or seek to possess it insane. The consciousness of the gem is malevolent and seeks to bring chaos to the universe while feeding on Man's desire for immortality. Ultimately, no mortal being can withstand such power. Entire civilizations have been destroyed by the madness it brings with it.
* Exactly What It Says on the Tin, it does raise the question of if we should count examples that make sense.
* Exactly What It Says on the Tin. It's said that child vampires tend not to survive long.
* Exactly What It Says on the Tin — a magically-animated ventriloquist's

dummy.
* Exactly What It Says on the Tin — though he is quite corporeal when he wants to be.
* Exactly What It Says on the Tin monsters, if you can get it to stay open long enough to read without it closing on your hand and biting it off. It turns completely docile if you stroke the spine, but the students weren't too keen on getting near it.
* Exactly What It Says on the Tin, no matter how ridiculously powerful the attack is. It is for this reason that Perfect Guards are considered staples in any deck.
* Exactly What It Says on the Tin on the Playstation, but the game must have been coded by a few blokes from Free Radical as even BUSHES, TREES, ROSE GARDENS, PLAIN OLD STONES, AND CAVERN ENTRANCES (even those underwater) explode when dealt enough damage. Even crazier, everything in the game, EVERYTHING, can actually be blown up twice, except for caverns, doubling the score output. AND... EXPLOSIONS CAUSE SPLASH DAMAGE TO OTHER STRUCTURES! Finding the correctly positioned building in an enemy city and activating the Torus bomb usually results in a nigh-unstoppable chain.
* Exactly What It Says on the Tin. Other examples include the Titan's Icy Breath (unnamed Behemoth), the Crumbling Walls (Saturn, Maiden of Endings), the Battle's End (Saturn and her sister Venus, Maiden of Serenity), Cleansing Solar Flame (Ignis Divine himself) and Light of Solar Cleansing (ditto).
* Exactly What It Says on the Tin. Predicting your opponent's moves is also a given for anyone wishing to compete in the higher levels of the metagame.
* Exactly What It Says on the Tin: "Skinny Dipping" by Ramona Brooks and covered by Cheryl Ladd, "Skinny Dippin'" by Whitney Duncan, and "Skinnydippin'" by Vengaboys.
* Exactly What It Says on the Tin the Earth after the K-T asteroid's destructive effects had abated, but their ship went off-course and wound up drifting for millions of years.
* Exactly What It Says on the Tin. The fiend rides inside the victim and has an easier time hiding out and infiltrating.
* Exactly What It Says on the Tin: the Greek Dodekatheon (the primary gods of Olympus), stuffed into the bodies of teenaged mutants. While their power is only a tiny fraction of what it once was, they are still very much the real deal. It has been mentioned that other deities are around as well, such as Belisarius, a minor Roman war god now passing himself off as the superhero 'Legionaire'.
* Exactly What It Says on the Tin: The title explains everything exactly vs. the title lies
* Exactly What It Says on the Tin: The title or name tells you everything you need to know.
* Exactly What It Says on the Tin: The title tells you everything you need to know about the work.
* Exactly What It Says on the Tin. They link not only to other portal stones in the world, but also to Portal Stones in Parallel worlds. Very handy, if not well understood at all.
* Exactly What It Says on the Tin to mindlessly slaughter people without having to dirty their own hands.
* Exactly What It Says on the Tin. Trolls have a tendency to transfer the pregnancies from females to males, since females are much more valuable.
* Exactly What It Says on the Tin" was a placeholder for a proper marketing slogan in a series of British adverts intended to show that using a woodstain is simply common sense. Eventually the advertisers decided to go ahead and try it as an anti-slogan. The rest is history.
* Exactly What It Says on the Tin. When somebody makes a bad blunder after picking up the wedge, social media will usually blow up about how the contestant "lost $1 million", as if the grand prize were at stake right then and there.
* Exactly What It Says on the Tin, where a dust mixture Jaune made is spilt onto him, Pyrrha, Ren, Nora, and Yang, turning them into the opposite gender. Later, an antidote made to turn Yang into a girl again is used on Weiss and Blake by Nora, turning both of them into boys.

* Exactly What It Says on the Tin. "Wherever you go, Whatever you do, I will be right here waiting for you. Whatever it takes, Or how my heart breaks, I will be right here waiting for you."
* Exactly What It Says on the Tin, who get a teensy bit too competitive.
* Exactly What It Says on the Tin", with technology focusing on surviving and eventually terraforming the hostile alien ecosystem. However, their refusal to modify their bodies and their cultural reverence for Old Earth have distinct harmonious flavour.
* Exactly What It Says on the Tin, with the "Always War" challenge being made official in the latter form.
* exactly what it sounds like) began as a mockumentary of a fictional MMA league. Then people began asking when the next event would be. They just rolled with it, and now it's an actual (albeit small) MMA promotion that puts on a few shows per year. The mockumentary, for its part, morphed into a reality show with a similar "behind the scenes" premise.
* exactly what it sounds like it turns all the water in the victim's body into an elemental creature of the same size category under the caster's control.
* exactly what it sounds like: Otis' girlfriend had written letters to him, presumably 22 of them, on strawberry-scented paper.
* exactly what you'd expect. This became even more ludicrous if upgraded so any enemies killed by the ability would then explode, potentially creating a chain reaction. It has since been downgraded to a cosmetic effect, though a large enough corpse can create a large shower of gibs.
* exactly when her commanders discovered she and her lover Talyn chose to have a child together out of love rather than assigned breeding.
* exactly where Munkustrap gets ready to laud a particularly worthy cat through song, and Mistoffelees stands up with a flourish... only Munkustrap means Jennyanydots. Mistoffelees shrinks down again like a cat trying to pretend he wasn't after the mouse that got away, and some nearby cats bat at him a bit, grinning.
* exactly where she wants it to go. Apparently being able to swing a long stick with precision runs in the family. But to Susan's chagrin, the more she points this out to her peers, the more likely she is to be picked last for a team.
* Exactly where was 221B Baker Street? The location didn't exist at the time the books were published (which is exactly why
* Exactly which aspects of Earth culture he likes tend to vary by incarnation: Two played Beatles songs on the recorder; Three loved tinkering with vintage cars and studying martial arts; Four was fond of classical music and Renaissance paintings; Five is evidently a cricket buff; Seven loved smooth jazz and vaudeville; Eleven spends a lot of time in museums and sings praise to van Gogh; and the
* exactly (who was too distracted to notice there are already two of that character onstage) comes on, and for a bit all three of them are following each other around the stage, saying the same lines in unison.
* exact Mimasaka the dish he plans to prepare (beef stew) to make his job even easier, and even counts on Mimasaka pulling it off. What Mimasaka didn't expect, however, was that Soma would continue to try and make improvements to his dish up to the moment their match began, so his own improvements weren't enough to counter Soma's. In essence, where Mimasaka tried to go only one step ahead of the original dish, Soma decided to go ten.
* exact moment and cause, deciding to only focus on the here and now, even if he knows for a fact what the future holds. "All that matters is this moment."
* exact phrase is also commonly used, although just the first word ("ascended") is used more often.
* Exact Progress BarEverything has a progress bar, even if it logically shouldn't, so the viewers know how close it is to being done.
* exact puppet has been selling Bar None insurance for more than half a decade, arguably longer than it actually existed as the spokespuppet for Pets.com.
* exact same situation. She manages to instigate his rescue despite being marooned on a deserted island, and then actively fights alongside him in the final battle.

* exact same story, an ill-fated science fiction series from the late 90's about a man who was rebuilt out of spare body parts by the government.
* Exact same thing happens when you down the hunter chopper at the end of Water Hazard.
* exact same wording and an old flag identical to the 50-starred US flag.
* Exact Time to Failure: Initiating failure in three … two … one …
* Exact Words and very precise phrasing is played like a sport and Harry excels at it, but to anyone else the resulting stilted conversation comes off as incredibly suspicious.
* Exact Words, and when she realizes her mistake, she is unable to reach out to the fae, as the latter kept their end of the deal. The story ends saying she kept the child (whether it was a corpse or a piece of wood is never elaborated upon), holding it until she died.
* Exact Words Eg. it's told to "end war" and does that by exterminating humans. (In real life, the theory of "Friendly AI" is about trying to avoid this problem.)
* Exact Words end up having to mow the other's lawn while wearing their wife's best Sunday dress. Homer goes along with it because he thinks it'll humiliate Flanders, but Ned ends up having fun, saying it reminds him of his college days.
* Exact Words: It's revealed that what a person said was intended in the exact phrasing and wasn't an idiom or figure of speech.
* Exact Words: It turns out that the character meant exactly what they said and weren't using a figure of speech or anything like that.
* Exact Words. Outright lying is not her strong suit, however and several characters note it's pretty obvious when she lies.
* Exact Words ("Perhaps something happened during the transport") to avoid admitting or explaining that he was trying to kill someone (even justifiably).
* Exact Words that, while still undergoing trials, had such initially effective results in preventing Ebola that it is now being used in the field while awaiting full trial completion and licensing.
* Exact Words the GDR railway, the East German government ran the West Berlin S-Bahn. Initially this was a great source of hard currency for the GDR, but after the wall was built in 1961 almost all West-Berliners refused to take the S-Bahn because they did not want to give any money to the GDR regime. Naturally the stations deteriorated and half empty trains ran through even emptier stations until in the mid eighties the GDR authorities had had enough and simply gifted the S-Bahn to West-Berlin - who only very reluctantly agreed to take it. You would not know it from the way the stations look today, but for quite some time the S-Bahn was actually better in the East than in the West.
* Exact Words, the latter set only about a decade before TOS, support this rationalization as both feature female captains.
* Exact Words. Then shows him his spine. Custodes are literally superhuman, so he remained conscious long enough to see it.
* Exact Words to lie with the truth, ensuring the Stern Ritter learned only of Uryuu Ishida's existence. While it's implied Haschwalth knows about the family, it's confirmed that Quilge Opie definitely knew all about Souken and Uryuu Ishida, and the mysterious Ishida family secret.
* Exact Words to throwing a toddler-sized toy car off a cliff and claiming its maximum speed was what it reached before it hit the ground, and rated 200W PMPO speakers at 26W total at best.
* Exact Words, when Kyle bets him that he can beat him at sports. They end up tying, and the villain claims that Kyle lost the bet since he didn't "beat" him.
* Exaggerated after Luffy does the gorgon sisters one of the biggest favours they could ever ask for, he ends up with an entire ISLAND of Amazons immediately taking a liking to him, though Luffy himself treats the inhabitants of Amazon Lily (including their queen, the
* exaggerated and comical, something the early episodes completely lacked.
* Exaggerated and toned down in 5th Edition. Regarding werebears, they are still the good werebeasts, but the Monster Manual states that there are some evil ones. On the other hand, lycanthropes now have complete immunity to nonmagical weapons

that aren't silver, and they have this regardless of what form they are in. This means that even a good aligned character could still put the "curse" to good use as long as they take the right precautions on the night of the full moon.
* Exaggerated. A Program's circuitry color identifies its alignment, identity, and position in the system.
* Exaggerated at his plate's content pushes Harry to brush, floss and mouthwash.
* Exaggerated at thirty years old. He also exposes some of his own character flaws in-story.
* Exaggerated blames himself for putting the lives of his Channel Awesome co-workers in danger to follow more of his crazy schemes, which he's right to do. He then starts blaming himself for things like SOPA, the internet censorship bill, which he had nothing to do with.
* Exaggerated/deconstructed example: Beatrice Löwenström in
* Exaggerated (Dust to Dust Anderson in the OVA), Off With Its Head Anderson (OVA only), Assassin Anderson, Regenerator Anderson, Killing Judge Anderson, and Judas Priest (Alucard often calls him this). Three of the five times Anderson has shown up somebody says ALL of them.
* Exaggerated. Entragian already sunburns very easily, but when he's possessed by Tak this accelerates to the point that less than a week of sun exposure causes his body to start literally falling apart.
* Exaggerated episode "One Man Banned", where Timmy can't even play one note on a triangle without causing natural disasters to occur.
* Exaggerated film, and who at one point confuse a water cooler with their mayoral candidate.
* Exaggerated for parody when Eli is carrying a wounded Chloe around the ship.
* Exaggerated further by the 1950s where entire serials were written and cast around the use of stock footage. New footage in these serials tended to be used to segue to massive amounts of stock footage.
* Exaggerated He even openly criticizes Finn and Jake for it. They eventually add more bars while he stands and watches, powerless to stop them without his crown.
* Exaggerated in "If I'm Dyin', I'm Lyin'"; when an NBC board member suggests adding something new and original to the lineup, another one takes a poster frame off the wall and beats him to death with it.
* Exaggerated in "Pray Anything" as Homer starts praying for every little thing like getting a new kind of food to helping Bart with his homework instead of him. When Marge tells him he can't just expect God to fix every problem he has, Homer bluntly tells her he can and will. Praying works all the time. As more of Homer's prayers are answered he stops asking for help from God and expecting it. Even finishing one prayer with "I command you". His good fortune spins out of control.
* Exaggerated in "Rasputin vs. Stalin" which was first interrupted by
* exaggerated in that he becomes so confused and nervous that he can't do ANYTHING right. It comes to a point where he tells Mr. Krabs that he cannot do it while saying the steps, then realizing he did just that.
* Exaggerated in the case of an incident that took a chunk of the Internet down for most of a day in April 2021. A very large server farm owned by hosting provider WebNX suffered a power failure, causing the onsite backup generators to automatically kick in... but, for reasons that have yet to be determined at time of writing,
* Exaggerated in the Enzyte commercials, where Bob (and eventually, everyone else) is a persistent
* Exaggerated in the episode "Life of Crime." SpongeBob and Patrick are panicking because (they think) they stole a balloon. SpongeBob advises, "Just act natural," and, whether out of nerves or sheer stupidity, both of them start gibbering and acting crazy. They are immediately surrounded by a crowd who mistake them for street performers.
* Exaggerated in the episode "The Bully", where Flats drives a truck trying to run over SpongeBob but the truck slips on a banana peel and flips over.
* Exaggerated in the first fight between Saitama and Sonic: the latter spends about

* Exaggerated in "The Goofy Newbie", where Patrick eats so much ice cream that he freezes the entire planet over and it thaws out five billion years later.
* Exaggerated in "The Mysteries of Vallenberg", where the elite of Benglait, a nation in the mid of a terrorist crisis, threw a masked party where, as Ginko
* Exaggerated into the family-friendly version of this trope: Death By Marriage. As soon as Will and Elizabeth are hitched, you know one of them is about to die.
* Exaggerated inversion in the prequels: the uniformed Republic clones win against the non-uniformed droid armies.
* Exaggerated, in which Uschi and Dr. Sowieso promote a forgetfulness spray. After a while, Dr. Sowieso uses it on Uschi, who then starts over with the presentation. Then he uses the spray again … and again … He doesn't seem to get tired of it. Later on, both of them are affected and forget what the spray does, so they decide to simply try it out …
* Exaggerated. Ironically, the same character mostly does play by the rules in the normal sense — because he makes them and they all favour him.
* exaggeratedly flouncing showcased in the pilot. It definitely helps that Charlie and Vaggie have much less stereotypical personalities to balance out Angel's character.
* Exaggerated — Uryuoms reproduce this way: the egg can merge DNA from multiple sources,
* Exaggerated. None of this prepares her for the discovery, upon awakening the next morning, that Ned has cut her hair to resemble Maude's. Ned isn't able to move on by himself but is instead forced to have Homer and Bart get rid of all the stuff that reminds him of Maude. By the end of the episode, he's finally capable of removing the Maude-shape in the bed, as he begins to move on.
* Exaggerated of both its real-life counterpart and another giant bear species— the short-faced bear— combining the former's herbivory with the latter's scavenging and fighting prowess.
* Exaggerated of the film's minor characters hook up with someone, including the penguin that Billy hallucinated while he was drunk.
* Exaggerated on Barnacle Boy, leaving his face charred and shriveled like a burnt-out match.
* Exaggerated something when the elixir of life is a major plot point.
* Exaggerated. The Returned are fond of an absurdly complicated game called Terachin based around throwing various weighted balls onto different parts of a marked field. Lightsong never learned any of the rules and uses such brilliant tactics as choosing which ball to throw based on the color of his drink or throwing backwards without looking. He accidentally plays like a prodigy and frustrates the other Returned to no end by the fact that none of them can beat him.
* Exaggerated: The trope is used to an extreme. Note that this does not necessarily have to be used humourously—a trope can be exaggerated and still played completely seriously.
* Exaggerated, the unique hunting rifle, which similarly has zero spread despite being an old bolt-action rifle with no sights and rusty metal parts that would fall apart if it wasn't for duct-tape and prayers.
* Exaggerated. The whole novella consists of just two paragraphs, the first one takes almost the whole part of it, while the second is just a small sentence on the last page.
* Exaggerated to parody during the tour of Royalton Industries in the
* Exaggerated, to the point of characters getting punched into different countries and even
* Exaggerated Trope can't even manage to get his crush to say hello to him, much less love him back.
* Exaggerated Trope's amps don't actually exceed normal limits; they're just labeled strangely. But Spinal Tap itself—which is described as the world's loudest band, and generally gets into antics well above and beyond any other—fits the spirit of the trope to a T.
* Exaggerated Trope: Trope is played straight, with over-the-top results.
* Exaggerated Trope, when a mysterious assassin steals an important letter, but

because the letter had tea spilled on it, its ink stained a cloth napkin so that Crummond can still figure out what it said.
* Exaggerated when Olof Palme (a Swedish prime-minister) was assassinated in 1986 on a public street at night and the police set out to find his killer. Plenty of witnesses were found, but to translate and quote the Swedish Wikipedia article:
* Exaggerated, where Ms. Swan answers all of the interviewing officer's questions by constantly repeating "He looked like a man."
* Exaggerated, which starts with a story where Cobra eventually has to get into planet Galon, which has been isolated for 1000 years, and stop it from crashing into the sun. 1000 years notwithstanding, it has the same language, same architecture, names like Garcia, dark alleys with brick walls, earthlike clothes including hats with brims and jackets for the crooks, earthlike bars, and English writing everywhere.
* Exaggerated who has a strong habit of sleeping everywhere. Especially on the battlefield. He's never without his blanket and pillow, and when he has to move around, he floats with them around him; his teammates once had to threaten to take them away to get him to do anything.
* Exaggerated, who starts to talk like one after Ash's notices its personality matrix is too underdeveloped, and now he can't stand it.
* Exaggerated with CCC the Hitmonlee. In a cooperative playthrough going continuously for over a week at that point, he only existed for about 38 minutes before being accidentally deleted.
* Exaggerated with multiple characters, who are only hammy when they are evil.
* Exaggerated with the Comet, which is not only likely to explode in a collision, but will inevitably catch fire and blow up just from driving sooner or later.
* Exaggerated with the current orphans at Leela's orphanarium. They are happy with any situation they are in, so when Bender adopts and neglects them it's funny instead of horrific.
* Exaggerated with the Knight, as not only is the Knight's death dramatic, what with it violently disintegrating, but even
* exaggerates it with a flatulum transplant from Alan to his mom, involving a lot of digging around up inside him.
* exaggerates the form (once described by a snarky freelancer as a "monster made of dicks"), but it's there.
* exaggerating his affectations to some extent: "I can't seem to get the damn Big Daddies to imprint on the little brats. The protection bond is just not forming..."
* Exaggerating the scale of a loss, such as claiming the worthless old paintings lost in a fire were actually valuable artworks. In particular, claiming exaggerated injuries from an accident (which is known as a
* Ex-Aid suit was painted black and purple to become Genm's God Maximum X form.
* Ex-Aid. The SFX of Alhambra Bugster's spells have Wizard's sign edited out.
* Exalted 2e, the most cost effective charms are the excellencies — they either add dice, add successes or allow you to re-roll. No flashy attack flurries, no golden beams of magic light.
* Exalted abilities of the more powerful Exalts is to draw your sword and get hacking.
* Exalted: A certain island had silkworms aplenty, but no sources of cotton or leather. The island had been cut off from the rest of Creation for a while; when traders finally recontacted them, the residents eagerly traded fine silk clothes — which become uncomfortable when doing a day's labor in the field in them — for more practical cotton.
* Exalted. After a thousand years, they're willing to do anything for amusement and to prove their excellence, from starting wars for fun to creating life to capricious and random murder. And although they don't admit it, most of them don't consider ordinary mortals to be real people and are more than willing to expend them in country-sized art projects, personal wars or horrific experiments. The flying city of Tzatli is a particularly clear example. On the surface, it's a wonder of technology even by First Age standards and its citizens lead luxurious lives envied by mortals everywhere else. In practice, however, its Exalted god-

queen and her secret police strictly regulate every aspect of life to keep up the appearance of a perfect, ideal city. Slack off during your work shift, arrive too late for family time or argue too loudly over dinner, and you'll be hauled away to an unknown fate while a new set of citizens is sat down to your still-warm meal.
* Exalted: Air is one of the five basic elements of creation, and beings associated with it — such as air elementals, gods of weather and the sky, and Air Aspect Dragon-Blooded — can manipulate it to a fairly extensive degree.
* Exalted, allowing a Solar to mend the broken spirits of those around them. With sufficient power behind it, the Charm can even literally cause a mortal to be more by making them become a Heroic Mortal and greatly increasing their own chances to Exalt.
* Exalted allows the wearer to split their body into pieces that may float around and fight independently.
* Exalted. A lot of Linowan use this style, as does the Dawn Caste pirate Moray Darktide.
* Exalted also has an Appearance stat, with 0, 1, 2, 3, 4, 5, and 6+ being Super Ugly, Normal Ugly, Just Average, Cool/Special Average, Common beauty, World Class, and Divine respectively.
* Exalted also has the Tya, a group of women in the West who reject the usual gender roles for the region to take on male ones-which is more than symbolic, as the ritual wards away the spiteful goddesses known as the storm mothers (they hate any woman prettier then they are, which includes everyone that is not a storm mother). They are treated in society more as men than women, actually.
* Exalted also has the Underworld, the inverted shadow of Creation created when the Exalted armies killed some of the Primordials. Killing beings who could not die caused so much chaos that the Exalted decided to seal the rest of the Primordials away instead of killing them, turning them into the Yozis. Because the Primordials were outside the limits of death and time, however, they didn't actually die but instead became creatures now known as the
* Exalted also mostly averts this trope with the Alchemical Exalted; in 1st edition, only the most inhuman enhancements for Alchemicals (death tentacles, massive brain modification, spider legs) caused any degree of humanity loss. Even then, a low-humanity Alchemical isn't crazy, just cold and detached.
* Exalted alternative calendar — the Calendar of Setesh, which not only tracks time in the Underworld, it actually cements the concept of time passing in a linear fashion down there.
* Exalted, and both the Death Lords and the Abyssals are required to go by title and not name.
* Exalted, and continuously attempts to draw the Exalt so designated into their life by such methods as sending them clues alerting them to their evil deeds.
* Exalted, and how they intend to solve the long-term problems that led to the dungeon attack in the first place.
* Exalted and it's implied that a sufficiently skilled Lunar Exalted could mimic this trick themself.
* Exalted and it's their job to regulate millions of celestial gods, most of which are as much power as they are complete jackasses. The Immaculate Faith is a tool of the Sidereals to make sure the terrestrial gods don't see humans as mere essence batteries, and its tenets forbid full-blown worship of gods. So yes, gods exist; you can chat with one, you can have sex with one (or several), but they can't expect you to respect them.
* Exalted and limited support for character paths other than "angsty penitent" or "kill the world and piss on the ashes".
* Exalted and running into someone else and commenting that it was too dark to see, but if he could find his flashlight... "A flashlight? If I had a flashlight, I could find my car keys and drive back out."
* Exalted, and subsequently cities) tend to install a Charm that lets them control a human-scale robot for "emergencies" — but the officials have learned not to press the issue of how "a night with that hot young Sodalite member" counts as an emergency...

* Exalted. And that's just with their Caste abilities; when you consider their other abilities, they can also be guerrillas, ninjas, cavalrymen, sailors or even sorcerers.
* Exalted, and the final Charm in the style is a powerful attack that becomes unblockable, undodgeable, and even more powerful if its target is someone who genuinely loves the user of the style.
* Exalted and the greatest warrior in all of existence. In a setting filled with nigh-unstoppable Warriors of all stripes and Ungodly Abominations that make Cthulhu look calamari, that's saying something. Although the Solar Exalted (his Chosen) can hypothetically surpass him.
* Exalted, and their bonuses work by draining the life and vigor out of their victims (in the case of weapons) and attackers (in the case of armor). Meanwhile, hell-forged weapons and armor may have still-living demons bound to them as part of their creation...
* Exalted, and the Sidereals live for millennia and have fate powers that allow them to assume any role they want.
* Exalted, and they're actually scared of their secrets getting out. They're only Not Meant To Know because the Yozis Don't Want You To Know Them.
* Exalted and tremendously rare and expensive) would still take about seven seconds to kill most people (and would be rather obvious about it).
* Exalted, any of which would be happy to corrupt, unravel, or utterly destroy existence. The greatest weapons with the capability to fend off these enemies are humans stuffed with way more power than humanity was built to handle, suffering from a curse that causes them periodic psychotic breaks. The average mortal can expect either a long life of drudgery and toil or a short life of terror and pain. Oh, and those weapons? Two of the three sets of Abominations have their own versions working for them. Pretty much the only thing keeping the setting from being a Cosmic Horror Story is that the PC Exalted are fully able, if they act with wisdom, to actually confront and, potentially, solve the problems that face Creation.
* Exalted, anyone in the Neverborn's employ is technically an apocalypse cultist since the Neverborn want the world utterly destroyed, allowing them to finally die. In practice, most of them are just in it for the power.
* Exalted: Anyone who gets a Terrestrial or Celestial Exaltation will behave this way due to the death-curse from the creator-gods they murdered, but the Solar Exalted take the proverbial cake.
* Exalted any sort of blood relationship between two characters and make it metaphysically true.
* Exalted, a part of the setting the mechanics theoretically supported but few GMs or players could, and even much of the writing staff focused on the Sutra-like Sidereal charms or the More Metal Than Thou effects found in the Green Sun Prince arsenal.
* Exalted appear to all viewers as members of their own species - a human would see a gilmyne as a human, an elemental would see it as an elemental, etc.
* Exalted are collections of said Words, the latter skewing more towards the current writing team.
* Exalted are the Elemental Poles of Air, Wood, Fire, and Water, beyond which lie the formless chaos of the Wyld.
* Exalted around Infernals, and a third edition has been stated with the intent of returning to the Pulp roots of the game.
* Exalted. As a result, her chosen Infernals tend to get access to Charms that reflect this, such as Broken Silence Laughter Defense (which allows the Infernal to throw off attempts to influence them by laughing inappropriately) and Eloquence in Unspoken Words (which gives the Infernal telepathic communication, at the price that they can only vocalize laughter).
* Exalted, as a world more or less fueled by Rule of Cool, unsurprisingly has a few. The Titan-Class Aerial Citadels, which took the technical prowess and truly epic infrastructure of 300 perfection-powered demigods several centuries to create, were entire floating cities. More or less indestructible, fitted with massive

magical lasers, a beam of death that could vaporize a metropolis instantly AND serving as a launching point for many, many Thousand Forged Dragons (which were superweapons in and of themselves), having one of the four that were created attack your country would be rather like the entirety of the United States military force taking on your house.
* Exalted, a Sidereal invokes this trope while teaching. He closes a student's eyes, telling her that he's going to throw her a spear. The student obediently reaches out, catching the weapon — and realizes that it was conjured by her own Essence. She expected to grasp a solid weapon, and her soul obliged.
* Exalted, assorted magic allows blades to cut through everything, up to and including spirits, mountains, memories, souls and reality, amongst other things.
* Exalted, as the cycle of rebirth was never designed for Primordials (they never imagined that they could actually die.)
* Exalted, as well as the eponymous Exalted. Lunar and Solar castes also get a rather negative form of this treatment from the Immaculate Order, with titles such as the Deceivers, the Blasphemous, the Frenzied, etc...
* Exalted. As with many Exalted tropes, this is played with-Autocthon embodies invention and machinery, meaning he views violation the scale as something to praise, so long as it leads to better quality of life and new discoveries in the long run. Voidtech does not care about this, only itself-in effect, what happens when actual science is warped to service greed and war.
* Exalted at the same time. Which character is occupying which role in the latter tends to vary with the situation.
* Exalted averts this trope. Generally speaking, men and women are equal - if anything, the most powerful people tend to be female; Queen Merela, Brigid, Salina, Lillith, Raksi, the Scarlet Empress, Mnemon, Tepet Ejava... Three of the four most prominent Solars in the first age were women who literally shaped history; the fourth is a man most known for using mind magic to abuse his - physically far more dangerous - wife.
* Exalted baby. They also provide services other than sex - for instance, they can make babies for biologically incompatible couples.
* Exalted based on how long they've lived (although there are a few magics that can break this). The highest levels of power are only available to Exalted who are more than a thousand years old. Due to the Great Curse, this also means that the ones with access to the high Essence charms are also the most likely to be utterly insane, driven mad by the Curse, and rather prone to even greater acts of madness while in Limit Break.
* Exalted beams of light off of the edge of your sword (for Solars) to unleashing bolts of pure elemental energy (for the Dragon-Blooded).
* Exalted been killed, saw that they'd brought the Underworld into existence, and said, "Yeah, that ain't supposed to happen."
* Exalted, being a game designed to let players be over the top in all they do, allows your character to live this trope. There's even a mention of player characters getting a dying monologue, no matter how they die.
* Exalted, beings that exist outside of fate are the ultimate Spanners from the perspective of the Sidereals. Since they cannot be detected, manipulated, or predicted by fate and fate-based powers, one of these beings can derail centuries of careful planning before the Sidereals realize that anything's amiss.
* Exalted, being the game's rough equivalent of dwarves/elves/gnomes, built underground cities, nations, military bases, factories, incomprehensible giant artifacts, and everything else an entire civilization of genius-craftsmen-artificers-inventers-engineers could produce over millennia of flourishing. In the Second Age their world-spanning underground empire has long since crumbled, but their remaining cities are still vast and elaborate and thoroughly underground.
* Exalted: Benthic knifeooths are sharks up to twenty feet long and with slender, serpentine bodies. They get their name from their wickedly serrated teeth, which snag in the flesh of their prey — which translates to almost anything smaller than themselves — to prevent it from escaping. Luckily, they live in the very deep ocean and far from human settlement. Less luckily, there are plenty of things

in Creation, ranging from idle curiosity on the shark's part to a sea god in a bad mood, that can drive one towards the shallows and into contact with humans.
* Exalted bizarre things that can happen when you venture beyond the borders of the world.
* Exalted book, the characters sometimes shout out the name of the Charm or spell they are using. All Charms and spells also have names like "Flight of the Brilliant Raptor" and "Hungry Tiger Technique," practically begging for this treatment.
* Exalted: Both the sun and the moon are gigantic eons-old artifacts attuned to the sun god and moon god of the setting, respectively. The Silver Chair of Night is a vast reality engine, drawing in forces from other realms to bring both dynamism and stability to Creation, and the Dirigible Engine Daystar is, aside from serving all of the functions of our sun and fueling Holy effects, the mightiest weapons system Creation has ever known, surpassing even the Realm Defense Grid. The Daystar can also fold itself into a giant robot. And it knows Kung Fu.
* Exalted brought about by the Great Curse corrupting the Solar and Lunar Exalted of the First Age, but declaring them anathema for all time might be a wee bit harsh.
* Exalted, but as soon as the motes run out, there's nothing left but memories.
* Exalted, but standard dynastic education for both mortals and Exalts includes basic training in archery, melee, martial arts, and war, and those unskilled in these abilities are considered poorly prepared for dynastic life, and are often considered embarrassments to their families.
* Exalted but the Western flavor has elements of the Eastern one (Ki attacks and the like) too.
* Exalted, but universally share a deep and masterful appreciation of music. The King of Hell even leads regular city-wide song-and-dance numbers through the streets. This might have practical benefits given the nature of Hell, but still.
* Exalted by far, it's pretty easy to live your chosen Narrative (unless you piss off the Wyld Hunt, a returned Solar, or a Lunar, who will kill, destroy, or eat you respectively).
* Exalted called Shadowlands and are generally the picture of ominousness.
* Exalted can burn off Limit by adopting an enemy as one of these and taking steps to haul them into conflict. The Act of Villainy in question is even referred to as "Best Enemy Recognition", and was developed for the Yozi Szoreny, who would periodically spare his Solar opponents because he didn't want to lose such interesting foes.
* Exalted can do this. Among the most prominent are Lunars using the Deadly Beastman Transformation Knack and Infernals using Shintai Charms.
* Exalted can obtain an Ebon Dragon charm, Black Mirror Shintai, that lets them shapeshift into an exact duplicate of the target, from obtaining their abilities right down to having the exact same fate, along with developing Intimacies and a Motivation antithetical to their target's.
* Exalted can take the form of any creature whose heart's blood they've tasted.
* Exalted can turn even the smallest peasant villager into a lethal combatant.
* Exalted castes is blood. Given that the Liminals are basically reanimated corpses, this is quite fitting.
* Exalted Cecylene, inside the body of Malfeas; finally, boot them out of Creation into a separate dimension. Even this was considered too insecure for one Primordial, who ended up imprisoned inside his own wings. Understandably, they're a bit miffed.
* Exalted: Charms which allow you to steal intangible things include Thought-Swiping Distraction, which lets you steal people's thoughts; Dream Confiscation Approach, which is used to steal people's dreams; and Name-Pilfering Practice, which allows its user to steal someone's name. As in, everyone in the world (including the victim) immediately forgets the victim's name.
* Exalted Charm that ensures that they only cause bashing damage — even if they wields First Age chainsaw katana while being a 12-feet tall man-beast monstrosity.
* Exalted, char on the back burner because you are so busy fucking over the people

who tormented you millennia ago. You are Eye and Seven Despairs, and you are, in the eyes of your colleagues, utter dogshit.
* Exalted city on the Lunar-controlled island of the Caul, is surrounded by massive walls; not only are they a major reason the city hasn't fallen, they're also partially why the Realm wants to keep a presence there (as legends state they were made by a venerated figure). The lands beyond are largely unknown.
* Exalted combat. Keyword effects (basically, status ailments that fell under a specific subgrouping) were often pretty nasty, so people would pick up keyword defenses (things that nullify or grant immunity to effects with a given keyword for a time) so as to not get hit with those, or just find ways to not get hit in the first place. Since people would just pick up these defenses, people often wouldn't bother trying to use keyword effect charms because they'd just be canceled, and in some cases the defense was actually cheaper to use than the thing it canceled (and many defenses lasted a while once up). Some people figured they could save on EXP by not picking up these keyword defenses because if people assumed any keyword effect they used would just get canceled then they wouldn't bother using keyword effects, and that in the few cases where they were used, simply not being hit in the first place would suffice as a way to avoid it. Works fine as an I Know You Know I Know cycle in most cases; gets a bit tricky when the supposedly weaker splats start throwing out even nastier keyword effects that aren't reliant on hitting someone directly. The fact that Dragon-Blooded add another level to the deception has been a rude awakening for more than one player.
* Exalted consumption of their entire operating budget. In addition, ambrosia can be transformed into...well, pretty much anything, really. This is generally the use toward which it is expected to be put—why eat it when a single coin could give you more resources than the mayor of a small city?
* Exalted, counterfeiting is less common in the Realm than simply keeping and trading in unmarked blocks of jade, since the penalty is much less harsh (five years in prison against death).
* Exalted create a new demon, and they tend to find sexual reproduction to be just as bizarre as humans find the demons' own methods of procreation.
* Exalted, creating an entire world as a shadowy and dead mirror of Creation and damaging the formerly foolproof reincarnation system.
* Exalted Creation was almost reduced to formless chaos as a result of The Great Contagion, followed by the Balorian Crusade.
* Exalted Deathbringers. The Exalted Deathbringer uses this brutal polearm to impale his opponent and hoist them into the air so that their own weight drives them further along the weapon’s haft. In-game this is represented by the Brutal Impalement ability that has a 50% chance of inflicting extra damage against an opponent wounded but not killed by the spear.
* Exalted, despite the name. At night or in a shadowland they are solid enough that they might as well count.
* Exalted Desus is a great guy, your mind is forced to find a way to rationalize whatever he does to you as being your own fault.
* Exalted does a lot with these opposing ideals despite it not being a core theme. If there are two factions trying to do the same job but with different means and goals, there's a very good chance that they'll be divided along this line.
* Exalted do if she wanted to, including seizing the scarlet throne, but that so many people hate her, oppose her or are shitless scared of her that it would likely drive the Realm to civil war if she did so.
* Exalted. Do it with style, and even if it is utterly ludicrous, it's more likely to succeed than if done boringly. For the most part, "stunts" involve pieces of the environment that the players make up as they go along. Asking if something exists in the scene should be met with "It does now."
* Exalted do this. The standout would be the Subsidiary Personality Implant expansion of Mind-Ripping Probe, which explicitly mentions setting a trigger condition for the hidden self to come out to play.
* Exalted: Downplayed with Great Contagion. Not because it has minimum effect, but because its primary beneficiary, the Deathlord known as the Dowager, did very

little to shape it into the all-consuming death that killed just about everyone. Its original strain came from another dimension.
* Exalted, Dragon-Blooded members of the Scarlet Dynasty are expected to be this. A Terrestrial Dynast who can't fight well is likely to be a shame upon their House, unless they are an incredibly amazing sorcerer or something.
* Exalted. Due to the differing social positions of men and women in Creation, Peleps Taguro is the Clingy Jealous Guy versus the Crazy Jealous Guy to Aruna.
* Exalted: During the First Age, the Solar Exalted bred a type of cow with golden horns, enlightened Essence and the ability to talk to serve as the sacred cattle of Ahlat, a god of livestock. Said cattle were specifically meant to be sacrificed on the altars of the gods or to be served on the dinner tables of the Exalted, and were perfectly happy with this fate — they reasoned that a willing sacrifice intelligent enough to understand its fate was morally and spiritually superior to any other, and when called to serve went gladly to the sacrificial altar or to the Exalted's kitchens.
* Exalted earned by your characters during the skip as it's assumed they didn't spend the whole time sitting around doing nothing. These can range from months to decades, and can be necessary if you want your characters to get all the training time they need once they get into high Essence ranges (5+), or to make magical artifacts, or various other projects.
* Exalted, Eclipse Caste Solars and Moonshadow Caste Abyssals can learn the Charms of other types of Exalted, as well as Charms unique to spirits. The catch is they have to be taught the Charm by an Exalt of that type (or Spirit) who knows it.
* Exalted effects Exalted can have on mortals, and possibly other incautious Exalted.
* Exalted elemental baggage, scions of a long line of elemental heroes, sons and daughters of the (obviously) Immaculate Dragons.
* Exalted-esque fighting styles grant a side effect that invokes this; any clothing the martial artist is wearing will serendipitously avoid stains and tears, whether they're standing in a ballroom or a mud pit. Of course, magic is involved.
* Exalted Essence (Getimians), and a further ragtag collection of individuals with diverse themes and powers who don't fit into any of the above categories (Exigents), and many of them have long-standing grudges against each other.
* Exalted, essentially — can be domesticated thanks to their social nature, and are used by some southern tribes as mounts. They make deadly mounts in battle but have foul tempers. Similarly, austrechs — terror birds — are ferocious and difficult to tame, but someone who manages to do so earns a fiercely loyal mount.
* Exalted Even if one ignores the Terrestrial Gods (who represent and protect localised things) and sticks to the Celestial Gods (who represent and protect universal conceptions), there are still enough of them to inhabit a city the size of a continent.
* Exalted. Even the Yozis, the demon lords who were once the ancient titans that treated the world as a plaything, have their apologists.
* Exalted everyone agrees make everything they touch a thousand times better.
* Exalted everywhere. 3rd edition has scaled things back towards fantasy for a variety of reasons, however.
* Exalted examples already listed above, we have the Beast and Vitae from Vampire, the Wyrm, the Weaver, and the Wyld from Werewolf, the Second Breath and the Wyld again from Exalted, Legend, Fate, Knacks, Birthrights, and Scions from Scion, and numerous other examples.
* Exalted example. The world had an incredibly advanced state of magical technology in the First Age, when the godlike Solars ruled over everything. Then their servants rebelled, replacing their system with the less-advanced Shogunate. Unable to maintain the Solars' technology, they've slowly lapsed into more and more primitive societies, aided by a massive plague and an invasion of the chaos beyond the boundaries of reality.
* Exalted exist for individual rice grains and their interactions provide the physics of the universe.

* Exalted exist in this form and similarly scaled hyperconstructions. Malfeas in particular is a Dyson sphere wrapped around a green sun, with a demonic city on the inside.
* Exalted: Exploited by the mice of the sun, whose actions are always minute — generally as much as a regular mouse would manage — but are always timed just so as to cause immense aftereffects. They may chew through a warrior's shield strap to make it break in the middle of battle and dramatically alter his fate or the entire war's, for instance, or bring a few plague-carrying insects into a city ruled by wickedness, and thus alter the course of history while passing beneath everybody's noses.
* Exalted face come down to these beings wanting reality to just end so they can finally die.
* Exalted fandom, the Scarlet Empress is often viewed as somebody who is given too many victories for too little effort, and who makes other characters look stupid for having failed to get rid of or otherwise deal with her (alternatively, there are those who view her as portrayed as having displayed too many incompetencies and having too many failures for her extended centrality to make sense).
* Exalted, far to the south, near the Pole, people actually have sand ships that are used as transport and in warfare.
* Exalted, fate is the plans of the Five Maidens and the Sidereal Exalted. Mortals, gods and Exalted alike are caught up in it, but those with sufficient power and will can break the chains and forge their own destiny.
* Exalted features Luthe, a city of shining oricalchum that floated on the Western seas until it was sunk during the Usurpation by its Solar queen, who would not let the enemy take it. Thing is, the city's still occupied; not all the Dragon-Blooded soldiers, nor the city's inhabitants, got off before it was sunk, and Leviathan, a Lunar caught in a love triangle between the Solar queen and her husband, has spent millennia angsting over his failure and keeping the inhabitants and their descendants there. He's now worshipped as a whale god amongst them.
* Exalted features the Cult of the Illuminated, a secret society that works to recruit and properly train newly-Exalted Solars. It's run behind the scenes by a few Sidereals, who want to make sure the returning Solars don't screw it up like last time.
* Exalted features the Fire aspected Dragon-Blooded, who light themselves on fire as they expend Essence with their special ability Charms.
* Exalted: Fire is one of the five basic elements of creation, and beings associated with it — such as fire elementals, Anklok Dragon Kings and Fire Aspect Dragon-Blooded — can manipulate, create and extinguish fire and light. Fire is generally associated with purification and transformation, and beings tied to it sometimes possess powers related to this concept without necessarily manipulating fire directly.
* Exalted first edition rulebook that goes "Exalted is not really the secret history of the world. You cannot really cast spells. You should not hit your friends or loved ones with swords. This game is not intended to be played by people who can't tell the difference between fantasy and reality."
* Exalted fit this trope to a T. The Deathlords seek revenge on a world that betrayed them by feeding it to Oblivion, and many of the Abyssals believe that they're delivering the blessed perfection of the grave to a suffering world. This has been backed up mechanically by Second Edition rules; every Abyssal Charm (magic power) is rooted at destroying something, be it a life or a loyalty.
* Exalted flared, they could reflexively "harden" it to avoid taking damage. After the 2.5 Errata, the concerns about being one-hit-killed while prepping to cast a spell were reduced, so the Twilights were given magical senses instead; that said, the Resistance charm notes above still apply.
* Exalted, following a lineage of the Dragon-Blooded as they fight various enemies of Creation.
* Exalted, font of unending and eternal rage, and lord of the dance. When lesser beings channel Malfeas' powers, they must be used for destructive, ruinous, needlessly brutal, overwhelming, intimidating, terrifying and cruel (and so on)

purposes — and for playing music and dancing. His powers do not work for any other purposes. Ligier, his core aspect, is embarrassed about the fact that Malfeas likes dancing, but he still leads festival processions through the black streets of the Demon City.
* Exalted for all humanity. Indeed, before they were overthrown, humans were one of the most miserable species in existence. Nonetheless, some humans worship them and work to free them.
* Exalted" for a reason, and playing a campaign as Heroic Mortals is more a question of "what kills you and how" than anything else. To normal people, the lowest forms of supernatural beings — Hungry Ghosts, Commoner Fae, First Circle Demons, Lesser Gods and Elemental Spirits, Enlightened Mortals — are nigh-unstoppable monsters. Terrestrial Exalted are elemental super-soldiers designed to brutally slaughter the aforementioned "monsters" in droves — and said super-soldiers are in turn little more than mooks to experienced Celestial Exalts.
* Exalted. For each chosen of the Sun, there is a chosen of the Moon destined to be his/her mate, and this mate has a hard time defying his/her will, which doesn't help the implication.
* Exalted: Forest mimics are voracious predators with a strong taste for human flesh, but have a marked preference for old, tough meat; they eagerly devour the elderly, but won't so much as touch young children.
* Exalted for the Abyssal Exalted. Their path to power generally involves severing themselves from their names entirely, until only their titles are left.
* Exalted freelance writers come from the forums; by 2011 it'd got to the point that the majority of the writing team and at least one of the developers had started on the forums.
* Exalted from the Fair Folk so they can be resold as obedient manual labourers. The Guild also distributes medicine (when it's profitable), and by selling the soul-eating trickster fairies meals, they hold back a second Balorian Crusade... well, except the one time they nearly started it, but that was an accident.
* Exalted from UDON, with another comic created as a stretch goal for the 3e Kickstarter.
* Exalted generally averts this - while the eponymous Exalted have various methods of speeding up others' recovery, it is still a matter of hours or days rather than weeks or months. About the only way to provide mid-combat healing for others is the Wood Dragon Celestial martial art.
* Exalted. Geomantic weapons such as the Thousand-Forged Dragons, which can warp, drain, or even destroy a region's dragon lines beyond repair, are thus among the most potent weapons of mass destruction in the setting.
* Exalted: Ghostfishers are a peculiar variant of this native to the Underworld. For the most part, they're fairly typical examples — giant worms with gaping, fang-lined maws that lurk beneath the ground and prey on people passing above. Their two unusual traits are that they feed almost entirely on ghosts and that they hunt by means of a lure dangling from their forehead; a hunting ghostfisher hides just underground and shapes its lure to resemble a pitiable ghost in some kind of difficulty. When other shades stop by to help, the worm bursts from the ground to attack.
* Exalted gives us a few Yozis with powers like this. Kimbery represents motherhood in all its positive and negative aspects, and since she's lost the ability to sire children herself (due to the fact that her main form is an acidic ocean), she's got the ability to infect others with her own mutant youth and have them undergo the joys of childbirth. Metagaos, meanwhile, is a swamp that devours everything, including space, time, color, and health — which means that even if you survive a trip through his depths, you'll be bearing something that will make you wish you hadn't.
* Exalted goddess of the Moon, is typically identified as female, but is also likely to show up as a hermaphrodite or a man. The Lunar Exalted's powers allow them to be female, male, or neutral as they see fit, and at least one canon Lunar no longer identifies with a particular gender.

* Exalted good at talking your way out of trouble, or just plain running away.
* Exalted, grave robbing is discouraged not only for cultural reasons but also because desecrating a tomb/corpse will unleash a raging Hungry Ghost (one of the person's souls that remains with the body to protect it) on the local area. Powerful people often receive highly secure tombs as much to reduce the chance of anybody angering the resident ghost to protect their valuables and dignity (although lavish tombs also help keep the ghost placated).
* Exalted. Gunzoshas did it often enough that in the First Age they had to include protocols for what to do with them Exalting mid-battle in the manual.
* Exalted has a charm that allows a character to eat anything for sustenance, with the risk of developing a weird palate.
* Exalted has a couple instances where the characters go temporarily insane on some level:
* Exalted has a few examples, most notably the Elemental Poles and the Loom of Fate. Differ from most in that the Poles are incredibly durable and malleable (the four that exist at the edge of the world can adjust themselves to how far the edge happens to be), and the Loom is probably the best-defended thing in the world.
* Exalted has a few examples: the Primordial War, the Aftershock War, the Usurpation and the Balorian Crusade. All of these are provided some level of detail (specifically who was fighting and why), but the exact events of the wars are generally shrouded in mystery (typically because they all involved reality being damaged to some degree).
* Exalted has a few of these, usually in the form of the Primordials, the beings who created the gods. Malfeas is both the hell dimension that binds the Yozis (Primordials who were crippled, twisted, and imprisoned following their defeat) and a Yozi in his own right, the former king of the Primordials twisted into a blighted city of basalt and brass. Some of the other Yozis serve as similar parts of the landscape in Malfeas: such as Cecelyne, the Endless Desert; Szoreny, the Silver Forest; and Kimbery, the Sea That Marched Against the Flame.
* Exalted has an entire martial art style built around this, the White Veil Style. This is so disturbing to opponents and bystanders, that it's actually harder for people to take the fight seriously enough to join in. The fluff on the Form charm describes it thus:
* Exalted has an inversion with the Yozi Sacheverell, the Abhorrent Prophet Unimagined. While he dreams, he sees everything BUT the future. Were he to wake, he would perfectly see the entirety of what is to come, locking the world into absolute predestination. Pretty much everyone agrees that this would be a Bad Thing, quite possibly even Sacheverell himself.
* Exalted has an odd version of this from the dangerously powerful Charcoal March of Spiders supernatural martial art. The user delivers a punch so ludicrously hard that the head not only explodes, but the person whose head did explode has several seconds thereafter to think and react because they, and reality itself, haven't caught up to the fact just yet.
* Exalted has a number of these, mainly First Age deathtraps built to house the bodies of Solars slain during the Usurpation. In-character, they were constructed and laden with the grave goods of the dead in the hopes of keeping the restless spirits of the "Anathema" sated. Out-of-character, it's mainly a reason for newly returned Solars to evade death traps and get all the cool stuff they collected in their last life.
* Exalted has a year... that's made up of 15 months and 5 days that are "outside the year", called Calibration. Also, every month is made of exactly 28 days.
* Exalted has beam weapons, made and most often used by the magitech Alechemicals.
* Exalted has bits of First Age technology called the Gates of Auspicious Passage, allowing one to cross vast distances with a single step (although only to a similar Gate). They require truly monstrous amounts of power to function even for brief periods however, and are extraordinarily difficult to build, repair and program.
* Exalted has blood sports popular in Creation and even more so in Malfeas, but the most notable is the tournaments thrown by the Third Circle Demon Kashta. Anytime she decides to host one, anyone nearby gets sucked into a coliseum she creates,

with the strongest appearing on the field for a fight to the death. The last survivor has a chance to either fight her or have sex with her, but sleeping with her risks either getting her pregnant with a behemoth, or becoming a behemoth.
* Exalted has Ishiika, the Cosmic Scorpion, a massive space-borne terror in the shape of a whirling nebula of teeth, clicking mandibles and pincers capable of shattering worlds, surmounted by a tail the length of solar systems. It is the most powerful and feared of all the alien monsters the Gunstar has encountered.
* Exalted has its fair share of these, such as the Thousand-Forged Dragons and the Brass Leviathan.
* Exalted, has particular talents in ostentatiousness, force, and rulership. A common fan depiction has him spending his entire time with his volume turned up to about nineteen.
* Exalted has six major war gods, one for each compass direction and the centre, each of which also covers a particular variety or aspect of warfare (such as Tachi-Kun, god of heroic warfare, and Siakal, goddess of slaughter in warfare), all presided over by a general Goddess of War. Some of these war gods also cover separate but related purviews (Siakal is goddess of sharks because they're related to her domain, while Ahlat started out as god of cattle and was promoted to Southern war god after his promotion of cattle raid warfare produced large numbers of fine warriors). There are also a few related and superior gods, such as Mars, the Maiden of Battles, and the Unconquered Sun is regarded as the highest war god in Heaven. Besides these, there are innumerable lesser war gods.
* Exalted, has spent the past two millennia as an orca roughly the size of a small island.
* Exalted has the Alchemical Exalted, which are clay and magical material constructs, animated with the souls of repetitive (through reincarnation) heroes who are created to serve their people and Patropolis/Metropolis. As they advance in power they receive huge bodies, and ultimately become a living city themselves.
* Exalted has the Brides of Ahlat, the Southern God of War. Completely female, sworn to remain virgins, and symbolically wed to Ahlat himself. They're consider to be Elite troops and thus not to be messed with.
* Exalted has the Familiar background which gives an Exalted character a supernatural animal companion. At one or two dots the familiar is simply loyal and a bit smarter than a normal animal, starting at three it also acts as an Essence reservoir. Lunars have a note that their choice of familiar is limited by their Totem animal, a rabbit probably wouldn't want to bond with someone who turns into a wolf but a raven might.
* Exalted has the flame piece and firewand, and their First Age brethren liked the plasma tongue repeater. The Righteous Devil and Golden Exhalation martial arts styles let you do things like triple these weapons' (usually limited) range or do bonus damage. Fear the Exalt who masters both of these styles and is able to use a Charm to produce ammunition — especially since the martial arts skills required to reach the higher levels of those charm trees mean that they can still kick your arse if you disarm them.
* Exalted has the Immaculate Order, an entire religion devoted to demonizing the Celestial Exalted, it's entirely possible for a Solar or Lunar with Immaculate sympathies to view having become an incredibly powerful demigod as a curse. (Terrestrials are venerated by the Order, and Sidereals a) have been forgotten by most of Creation, including the Order, and b) are recruited, trained, and disabused of any inaccurate notions about Exaltation and the world in general within days of the Second Breath.)
* Exalted has the Procedures of Creation, containing literally all of Creation's natural science and thaumaturgy in a library bigger than a city.
* Exalted has the Realm's Dragon-Blooded military, a fighting force made up mostly of elementally-powered super soldiers. On the more mundane side, there's Lookshy's Seventh Legion, who are basically what happens when you take Spartans and give them giant robots.
* Exalted has these in the Alchemicals sourcebook. Any Alchemical with an Obvious charm qualifies, as well as many that don't.

* Exalted has the Underworld, which is a dark reflection of Creation; some necromantic spells allow you to instantly step between corresponding points on the two, and the dark Labyrinth beneath the Underworld also allows it to be used for fast travel. There's also Yu-Shan, which is a celestial copy of the Blessed Isle that links to Creation at several points, and is covered with canals for high-speed travel. There's many other worlds, like Autochthonia and Malfeas, but the Underworld and Yu-Shan are the only ones that explicitly map to Creation.
* Exalted has the Usurpation, wherein the Dragon-Blooded and the Sidereals conspired the overthrow the Solars (who'd gone a bit nuts by this point) and their Lunar mates. The Solars were wiped out down to the man, and their Exaltations gathered up and stuck in a mystical cage. The Lunars who weren't killed fled to the fringes of the world. The Dragon-Blooded set themselves up as rulers, and named the Solars and Lunars "Anathema" in their state religion. And the Sidereals wiped themselves from living memory, ruling from Heaven behind the scenes.
* Exalted has the Yozi known as She Who Lives In Her Name. She's called that because those who hear her true name, which is endlessly whispered by the 99,997 crystalline spheres of trapped fire that make up her form, will spend the rest of their days meditating on the harmonic perfection of it, turning into tools of her will.
* Exalted has this going on with the Yozi Cecelyne, Hell's lawmaker. Her rules stem from the belief that the strong are to rule over the weak. Her other laws are often arbitrary and sometimes outright contradictory, but this is the one truth she holds to absolutely. Indeed, it's one of her unbreakable themes as a Primordial being, so she can't even conceive of another way it could be.
* Exalted has this in the form of the Forbidding Manse of Ivy, headquarters of the Bureau of Destiny's department of Secrets (basically the people who keep track of everything that has happened in order to plan when people will make certain discoveries). Jupiter, the Maiden of Secrets, has a personal library which is much smaller but considered to be significantly more valuable by people familiar with it, since it not only contains her personal collection, but her own annotations and commentaries.
* Exalted has Venus, the Maiden of Serenity. Love is only one of the many things she's goddess of — she handles health, positive emotions, and pleasure in general — but it's one of the more focused-on. (Venus also wears blue, which is why brothels in the Exalted setting are associated with blue instead of red.)
* Exalted has Vitriol — and that's it. It kind of sucks to live there.
* Exalted have Acts of Villainy which they commit in order to please their Yozi masters if they've managed to offend them somehow. Most of them have them act in line with this trope - picking a favoured arch-enemy as per Best Enemy Recognition, leaving the enemy to slow death instead of killing them quickly (Fiendish Deathtrap Compulsion), lecturing them about your plans (Infernal Genius Declaration), leaving clues or sending them straight to your enemy (Insane Death-Dealing Provocation) or just driving people insane for giggles (Kindly Lunatic's Blessing). And it's best to perform as much of them at once as possible.
* Exalted have a defined boundary, in the form of an enormous river (one of the bodies of one of the Primordials).
* Exalted haven't be statted up yet, it's theorized a lot of them would center around mirrors, reflection, and unseen connections.
* Exalted. He can still assume his human form, wolf form, or any other form he's acquired. But he's ashamed of his horns and hooves in his non-hybrid forms (not to mention that the hybrid form is designed for maximized asskickery).
* Exalted, high essence Green Sun Princes can get something like this. It's a soul world rather than a mental world, but same basic thing.
* Exalted: High levels of wood elemental corruption often result in this, and it's very common for people living in the deep forests of the East, where Creation approaches the Elemental Pole of Wood, to have leaves, moss or small vines instead of hair.
* Exalted). If he should die by unverifiable means, somehow the Fae magic that protects his destiny is changed and he shows up again later, miraculously saved.

* Exalted. If he were to be capable of ever truly aiding others, even if it would benefit himself too, he would not be the Ebon Dragon.
* Exalted, If it is an Solar artifact, It will by blingy, From Power Armor and Weapons to Warstiders and the Solars themself.
* Exalted: Ifrit are humanoid fire elementals of fairly considerable power, and generally given much more respect by the gods than elementals usually are.
* Exalted. If they're even remotely compatible with one another, though, chances are good that it'll be this. Of course, this isn't exclusive to Solars and Lunars; all Celestial Exalted have memories from past lives, and it's entirely possible to run into a reincarnated lover.
* Exalted. If you can use them, the Yu-Shan gates are generally a faster means of long-distance travel than anything else available - the Yu-Shan sides are scattered around the edge of the city, but the Creation sides are scattered across the entire world.
* Exalted: In addition to the "regular" form, some populations have been raised, trained, and even bred (or worse yet, genetically engineered!) for this. A particularly disturbing case of the "regular" variety is found in the Djala, who are slender, delicately built pygmies. True pygmies; as adults, they do not exceed 4'10". Don't think about it too much.
* Exalted included such elements as having to pull off massive rewrites, the departure of one writing staff member due to creative differences, and one of the developers coming down with some messy medical issues.
* Exalted includes everything from English to Russian to Gaelic to Hindi, and there's no reason to think Creation's language families are any less diverse.
* Exalted in Creation — and was painfully welded into his armor. Princess Magnificent with Lips of Black Coral lost hold of her territory to three upstart gods telling a story, and was almost thrown headfirst into Oblivion.
* Exalted; in fact, most examples of it are. Nonetheless, the possibility is there - for one, the Exalted setting has very little prejudice against homosexual pairings, and for the other, Lunars are consummate shapeshifters.
* Exalted: Infernal Exalted can reduce their Torment meters by doing something their Yozi patrons like. As it happens, She Who Lives In Her Name enjoys an impressive feat of Evil Gloating, meaning that a Green Sun Prince who wants to pursue his own agendas without losing control may well have to rant like a B-movie supervillain.
* Exalted: Infernals remain demonic and warped, but then there is this new thing called Exigents who define their custom power sets from the start.
* Exalted. In his case, Dark is so evil that it even predates the codified concept of Evil (which in Exalted is best described as 'acting like the Ebon Dragon'). Before becoming the Ebon Dragon, he existed as an entity referred to as the Dragon's Shadow.
* Exalted in many other settings. However, in Third Edition, they're considered undead Exalted for the purposes of the rare few Charms which specifically affect such (the category being created because Third Edition has another Exalted type who straddle the boundaries of life and death, the Liminal Exalted, and the option for other varieties of undead Exalted to exist, for example via the Exigence).
* Exalted innocent NPC's, but most major NPC's are very far from being dogs and usually in the son of a bitch territory, so whatever the reasons for the PC's to kick someone's ass, chances are that they're kicking a son of a bitch. The entire history of Creation is more or less a series of Kick the Son of a Bitch, most notably the Usurpation. It would be tactless to say that the Solar Exalted didn't deserve it, but the Bronze Faction weren't exactly benevolent angels either.
* Exalted instantly die if hit with an attack that has seven dice after soak is removed. (Technically, this is because of their lack of narrative importance and resultant fragility, but the effect is the same.) UnExalted characters may also be targeted by a number of powers and abilities that automatically kill as a free action.
* Exalted instead of him, and is now playing the three of them against one another using seduction and cruel mind games, both to make them pay and to continue

controlling them. Do I need to mention he is as mad as he is cunning?
* Exalted in the books and setting. Examples range from power armor to airships to artificial limbs to dinosaurs that eat poppies and pee heroin. This reached its height in 2nd Edition, including essence powered fighter jets and clockwork robo-soldiers, but has been almost entirely dialed back to more traditional concepts of magic and enchantment in 3rd edition.
* Exalted: In the game, human beings have two souls. The Hun or "upper soul" governs intellect, morality, consciousness and higher thinking, while the Po or "lower soul" is concerned with a person's passions, instincts, and animalistic urges and drives. After death, the Hun departs to either reincarnation or the underworld, while the Po remains behind to watch over the body. If a deceased person was not buried or was buried improperly, the Po will manifest as a ravenous, predatory Hungry Ghost, resting in its body by day and going out by night to cause chaos and attack the living until it is pacified by being given a proper funeral. It is also possible for a Hungry Ghost to be created by a violent or painful death, and necromancers often torture victims to death to purposefully create ghosts to use and control.
* Exalted in the name of destroying Creation. The Neverborn themselves, however, aren't much a threat; they're busier spending time coping with the pain of being eternally-dying-but-never-truly-dead and sending strange messages to their servants.
* Exalted, in the Skullstone Archipelago some people kill themselves and come back as zombies in order to preserve their beauty. This honor has to be granted by the bureaucracy, so it is far from common, but there have been instances of it.
* Exalted: In the view of some of the current authors, large chunks of second edition fell into "shitdark", defined by Holden Shearer as "a setting so relentlessly shitty and miserable and hopeless that it becomes impossible to emotionally invest in it or care what happens to it."
* Exalted invasion, and has built the Realm's government so that it can't work without her. She's far from the only example- most notably, any number of PCs, as "Become God-King of [Insert City Here]" is a pretty standard Motivation for a Solar.
* Exalted is all about doing this to the extremely powerful people you don't like. You can even do this to The Unconquered Sun. Unconquered does not mean Unconquerable.
* Exalted is a massive battle station capable of firing death-beams and turning into a giant robot.
* Exalted is a measure of how easily a character can endure hardship or inflict suffering upon others. It allows the character to endure adversity and take draconian measures in order to achieve important goals, as well as make choices when all options are horrific. It goes without saying that many high-Conviction characters qualify for being Unfettered, though the virtue flaws associated with Conviction tend to make such characters cruel and unfeeling as hell.
* Exalted is a Sidereal whose reincarnations take up the magical armor and same name as their predecessor when they Exalt, and not only that, they are mentored by the spirit of their previous incarnation, which inhabits the armor.
* Exalted is a subtle case of Patriarchy Flip. Governed by the Scarlet Empress, women are preferred in some quarters of the military and governance, but both male and female Dragon-Blooded are expected to fully contribute to the Realm (and its population) to the best of their ability.
* Exalted is regarded as a completely boneheaded puppet leader for the Realm for two reasons. One is that he rubber stamps anything that comes past his desk without a care for the contents. The other is that he spends the rest of the day getting off on the saucier passages in the Realm's religious documents.
* Exalted is that it took the interesting characters from 1e and flattened them out. Especially the Deathlords — First and Forsaken Lion went from being an interesting character who wanted to take over the Underworld and didn't care about Creation to Mask of Winters v2 who wants to CONQUER AND/OR DESTROY EVERYTHING!
* Exalted is The Melkin Fool in Red, who is the ringmaster of the Circus Moribund.

Little information is available about the Circus itself, but much can be inferred from the fact that it is run by an Abyssal.
* Exalted is to become this, make up for their dark deeds in the service of the Void and work their asses off to avoid spontaneously combusting from Resonance. If they can pull it off, they become Solars, without the Great Curse that messed up so very much of the First Age. The potential impact of this remains to be seen.
* Exalted is wiping most of the past two editions (although the writers take pains to tell everyone it's taking more cues from the first than the second) and starting from the baseline. Even the map is being revised, and there are multiple new Exalt types.
* Exalted. It allows a Sidereal to fundamentally alter their opponent in some interesting way. Typically, it's used to punch people in the face and turn them into ducks.
* Exalted, it caused the cycle of death to crash, bringing undeath and the Underworld into existence. The dead Primordials, now known as the Neverborn, exist trapped in an unending torment, seeking desperately to unmake the world and return everything to the formless Chaos in order to bring an end to their suffering.
* Exalted, it exists mainly for the player characters to kick it in the nards and set it on fire.
* Exalted it is — they also have some overtones of the Western variety.
* Exalted, it is mentioned that the Solars built Artifacts to be both functional and beautiful. When the Dragon-Blooded took over, they couldn't do both, so they decided to just go with the functional. Turns out, they couldn't do that quite as well either...
* Exalted: Its stunts, martial arts and Charms are specifically set up to support wuxia-style play.
* Exalted; Kejak Chejop, who is in charge of the anti-Solar Bronze Faction in the default setting, is the head of its ideologically opposed pro-Solar Gold Faction in the modern one.
* Exalted life or death situation will end up resulting in Exaltation.
* Exalted light district. This is because gold is seen as an obscene color in hell due to its association with the sun. Also, the district is a very powerful demon in her own right.
* Exalted likes to play with this trope a lot in general, using Creation's fictional societies as thought experiments or deliberate juxtapositions to our own society. Specific examples:
* Exalted lives on cool swords. The most common of the cool swords are made of Jade, and are extremely fast because of it. Orichalcum weapons are weapons of perfection, made out of the same stuff as the Unconquered Sun himself. Moonsilver weapons can change shape and slip past defenses. Starmetal swords are made out of meteorites. Soulsteel weapons are made out of the souls of the dead. All of them are already very strong in stats, the material just adds a bonus.
* Exalted: load enough points into Archery and learn enough relevant Charms, and you can reasonably shoot an arrow through a keyhole on the other side of the country. Mind you, this is small potatoes given that one martial arts combo allows you to destroy the world in one mountaintop kung fu move.
* Exalted love calligraphy, and will respond faster to petitions that include it.
* Exalted, Lunars can create this effect if they've acquired the right type of Heart's Blood or have the right spirit shape (anything with wings in either case) and the knack Hybrid Body Rearrangement.
* Exalted made of one of the five magical materials. These are called Goremauls. The Abyssal signature character Falling Tears Poet is often seen carrying one that could probably fell an elephant in one blow. The Grand Goremaul is even bigger than the average Goremaul and could be used to smash out the front door and back door of your house in one blow.
* Exalted made since the Usurpation requires periodic maintenance to remain operational.
* Exalted: Malfeas, the Demon City, sometimes simply called Hell, is the prison in which the defeated Primordials and their servants were trapped in by the gods and

the Exalted after the latter's successful rebellion. The Primordials were places and living concepts as much as they were individual entities, and in order to contain them the Exalted took their king, turned him inside out and trapped him and his servants in his own tortured insides — and this twisted world-body is the Demon City itself. As it's the physical self of a living creature debased by shame and pain rather than something built by people to live in, it's rambling, chaotic and without purpose or structure — streets widen and narrow without pattern before terminating in sudden dead ends, for instance, while towering blocks of masonry extend skywards with nothing inside them. The city also exists in several stacked layers, which Malfeas sometimes collides as a form of self-harm, and teems with hordes of demons.
* Exalted: Malfeas, the dumping ground for the Primordials who didn't end up minced after they were overthrown and for the demons, which in-universe are essentially the multiple souls of each Primordial and the spawn thereof. The whole thing is essentially the "stomach" of their king, after it was torn open and had all the Primordials, including Malfeas himself, stuffed in before it was sewn shut. It takes the shape of a chaotic red city arranged in multiple layers, with the other primordials' world-bodies providing additions like an ocean of acid and a massive desert. By and large, mortal souls don't end up here; it's not intended for them.
* Exalted — as they grow into cities, install Exemplar charms, or go long periods without human interaction, they accumulate Clarity. The sourcebook for Alchemicals goes out of its way to point out that this means they focus on efficiency and do not become needlessly cruel.
* Exalted — who come from the chaotic Wyld outside of Creation, and sometimes have trouble with human concepts like "death is permanent."
* Exalted. Mortal - non-magical - martial artists can break a brick and jump over a hedge. A Terrestrial martial artist can break a boulder and jump over a building. A Celestial martial artist can break a city wall and jump across a mountain. A Sidereal martial artist can split a soul and jump to Heaven. Specific flavors include:
* Exalted: Most Exalted have a Presence charm that allows them to give other characters compulsions. If your character is an Abyssal, the result will probably be this trope.
* Exalted (namely, if the concept exists and is sufficiently awesome, put it in the game), it should come as no surprise that there are many, many examples of this to be found in Creation, ranging from Gunzosha (which can even be worn by mortals, at the cost of a mere half their lifespan) to Celestial Battle Armor (which is as tough as Superheavy Plate armor, far less restrictive, and can usually fly).
* Exalted names thrown in for no apparent reason: Joseph, Anja, Tobias, Lyta... it's a bit jarring.
* Exalted Neverborn master was quite angry, to the point where it bound him into his armor. Painfully.
* Exalted, now that the Scarlet Empress has vanished. The Anathema are on the loose, new and sinister forms have emerged, one Realm outpost has been conquered by a Deathlord, the Bull of the North is on the rampage, and the most likely outcome within the Realm itself is all-out civil war over the Scarlet Throne.
* Exalted of creating her deathknights. It's stated that she plans to start turning more children into Abyssal servants as soon as she's certain she's perfected the process of raising them. The Shoat isn't actually undead, but Abyssal Exalted is close enough to count.
* Exalted of everything that had ever existed up to that point in time. Even people who lived through it can't remember the things she deleted, knowing only that most of Creation is gone.
* Exalted of Malfeas. His otherness is indicated by no object whatsoever casting a shadow when illuminated by him.
* Exalted of social-fu mind-whammying that can convert potential enemies into firm allies or even virtual slaves.
* Exalted of Sunken Luthe, society is divided between the aquatic beastmen and the relic population of surface-normal humans, the descendants of the Dragon-Blooded

crew that worked on Luthe when it was still a floating fortress. As the people of Luthe worship Leviathan, an ancient Lunar, who is old enough to remember the Usurpation and how the Dragon-Blooded rose against the Solars and the Lunars, the Luthian humans are openly despised by the rest of the city, who refer to them as the Traitorkin and force them to live in a segregated ghetto and to work as menial laborers.
* Exalted of the setting, came into existence just so that the Ebon Dragon would be stronger by having something to contrast against. After being defeated, turned into a Yozi, and cast into Malfeas, the Ebon Dragon was one of the beings behind the idea of Reclamation, which means escaping Hell by making Creation so equal in quality to Hell that the Yozis can move in without technically violating the terms of their imprisonment.
* Exalted of the Yozi Cecelyne the Endless Desert. A good chunk of charms she teaches to her champions also have something to this effect.
* Exalted once) in the history of the setting, but considering their single-minded focus and the fact that in a few years any of them will have the power to accomplish their objectives, a big showdown is inevitable.
* Exalted. One method is called "Infernal Genius Declaration," and involves showing off to a captured and helpless enemy by delivering a monologue describing his or her evil plan in great detail. The Infernal will receive this atonement, incidentally, whether this monologue leads to their plans being thwarted or not.
* Exalted one of the Charms for the Air Aspect Immaculate Monks is Hurricane Combat Method, which gives you a boost to attack power but chews up your health.
* Exalted: One of the major cornerstones of Sorcery is the Summon [X]th Circle Demon spell. It allows you to call up a demon from Malfeas and challenge it to a test of wills; if you win, it's bound to serve you until its chosen task is completed or for a year and a day, whichever comes first. If you lose, however, the results can be...messy. There are somewhat safer spells, such as Summon Elemental, and Necromancy has its own equivalents (such as Summon Ghost).
* Exalted, on of the Sidereal Marial Arts charms Vanished Within The Glass of Obsidian Shards of Infinity Style draws your target into a mirror dimension where they are unable to interact with anything.
* ExaltedOn RPG.net, threads involving acts of unmotivated malice, especially when the malice is counterproductive or self-destructive, are sometimes tagged "Pleasing to the Ebon Dragon." Amusingly enough, one thread with this tag actually had a poster using the handle "The Ebon Dragon" get permabanned, which hilariously enough is something the in-setting Ebon Dragon would have considered a great success.
* Exalted. Or abridge it, which is even worse. The latter is especially true because, unlike many examples on this page, the book is actually magical, and prayers to war gods and the Pattern Spiders are actually encoded into the practices described in the book.
* Exalted or those in high mounts (such as elephants) without penalties.
* Exalted, outfight everyone and survive any attack. The cunning player and GM will find many, many weaknesses that can be exploited in order to make their lives miserable, no least the crippling flaw all Exalted must choose.
* Exalted planning to commit treason is merely because she objects to this kind of thing being able to fly).
* Exalted plays with this trope, as social interaction is actually played out as a form of combat - and characters who are skilled at "social warfare" can do things up to and including destroying and/or converting armies by talking to them. Simple brainwashing is one of the most basic abilities of a social Exalt...
* Exalted presents itself as this, but really you are just succumbing to the madness of the old gods.
* Exalted, progress between points is not measured in hours or miles, but rather by where you are in a particular story.
* Exalted requires Chaos-Repelling Pattern (a Solar Charm) to attune and Wyld-Shaping Technique (another Solar Charm) plus either a five-dot Solar Hearthstone or a Protoshinmaic Vortex to be useful.
* Exalted require you to sacrifice health levels as part of their activation cost.

* Exalted, requiring that the Infernal kill someone every so often to use them).
* Exalted rpg.net thread, which came up with a build capable of breaking the sound barrier on foot, and outracing the Concorde in a scout warstrider. (Lunars have an even more impressive Charm that allows them to chase and catch this one, but that one requires you to be specifically chasing them.)
* Exalted runs on this. If you're born to a Dynast family and don't Exalt, it's profoundly embarrassing.
* Exalted's canon "priest", Panther, only wears a pair of pants and has a massive stylized sun tattoo on his chest.
* Exalted science fantasy alternate setting Heaven's Reach, Creation was lost a long time ago, and its location - even whether it still exists or not - is unknown.
* Exalted, Scourge caste Infernals are inclined to be speedsters. Adorjan's charmset doesn't contain soak improvers, bonus health levels or parries (Scourges tend to avoid damage by being somewhere else), but a Scourge can reach speeds without trying that a Solar has to expend a lot of effort to hit.
* Exalted screw someone over when he had the opportunity, no matter how small.
* Exalted setting, only the Terrestrial Exalted's powers are hereditary; the children of other Exalted are plain mortals unless their Exalted parent has a high Essence rating, then they can be Half Caste. During the Golden Age (when the Solars ruled) the offspring of Solars were called "Golden Children"; born into status, wealth and privilege, but with none of the powers their parents wielded.
* Exalted setting were the rulers of the world in the First Age. As the Great Curse laid upon them by their vanquished foes, the Primordials (titans) started to corrupt them more and more, their rule became more and more tyrannical and cruel. Note that within his domain, a Solar had the right to set almost anything that doesn't threaten the rule of Solars in general as a law, which resulted in some pretty horrible places to live, as well as some pretty... bizarre laws and customs (a whole region in the North where people acted like they lived in a musical!).
* Exalted shape-shifter-slash-titan-killing-weapon-gone-rogue, it might just be easier to pop a Total Annihilation on it...
* Exalted shapeshifter who, despite being more powerful than all but a few hundred other people could ever hope for, is obsessed with the power that will remain forever out of her reach. (Ability to access magic is limited by in-universe character tiers; she's not at the top tier, and so can't get to the best magic.) Both of them rule their chosen city-states with iron fists, although the Perfect's people are generally happier with their government than Raksi's.
* Exalted shard Heaven's Reach has the Kranix, who are described as a hard-shelled octopus. In classical Exalted, the demons known as agatae are enormous, incredibly beautiful rainbow wasps with inhuman mentalities.
* Exalted shard, interstellar travel is achieved through the Grand Canals, a network of routes where the laws of physics were weakened in the ancient past to allow ships to traverse hundreds of light years in days or weeks at the cost of risking dangerous physical and mental breakdowns.
* Exalted shoulder pads, knee pads, and a cape). Of course, they're all Exalted of various stripes, which means they get access to Perfect Defenses, things that allow you to dodge, parry or withstand any attack even if you're naked and just holding a dessert fork.
* Exalted signature Dusk Caste Abyssal is known as the Maiden of the Mirthless Smile.
* Exalted's map works like this. In fact, there's literally nothing beyond the western border these days except the "Elemental Pole of Water" and primordial chaos.
* Exalted: Smoke, one of the elements of Autochthon, consists of horrifically toxic and corrosive fumes and is defined by its ability to destroy matter and kill living things. In its natural state, the Elemental Pole of Smoke serves as Autochthon's stomach, where scrap, waste and broken machinery are disposed of and broken down for reuse, but it also serves as a powerful way of scouring corrupted areas of his body from taint and gremlin infestations. The primary Lesser Elemental Dragon of Smoke, known as the Shogun of Genocide, is wholly dedicated to his role as an

eradicator of life and can kill entire cities with the fumes of his passing.
* Exalted, so it's not that huge an imposture. And considering that Gods and Exalted literally differ only in that Gods are immortal and Exalted aren't, it's even less of a stretch.
* Exalted, some characters can create horse-like constructs of bonded magical energy, or own magitek constructs as steeds.
* Exalted). Some just end up forming platonic bonds that last the millennia of their lifespans. Or, the Lunar Exalt can pick up the Twin-Faced Hero knack... and change gender at will.
* Exalted, some player character splats can be each others' Usual Adversaries. Notable are the Dragon-Blooded Dynasts and their Wyld Hunt, constantly trying to kill the Solar Exalted and their reincarnations over and over.
* Exalted sorrow-drowning bender that the Goddess of Intoxicants herself, Burning Feather, came down from Yu-Shan to sober him up.
* Exalted, so taking it is easy to justify regardless of whatever else your life choices entail.
* Exalted, so their friendship is the most constant relationship either have.
* Exalted, so this is a fairly common trope. Even more so if you count the Exalted, who start off human but are endowed with more than enough power to match and even surpass any god. God-blooded are people who result from this sort of thing. Some gods even go out of their way to accumulate relationships because the devotion means extra power or supernatural currency. Others use dates as part of their arrangements with mortals around them so a river god expecting a date with a local maiden once a month to keep the water running at the right speed is common to the point of unnoticeable. The Sidreal Exalted, being agents of the same office gods work for, step in if a god is being too pushy.
* Exalted specifically can't enhance anything that's planned out in advance, meaning that anyone using said Excellency has to use these on a regular basis.
* Exalted's Solar-Lunar Bond can manifest. The bond links each Solar Exaltation to a particular Lunar Exaltation and the only certain thing about the bond, should Fate successfully bring the two together, is that it is a strong emotional bond between the two demigod-like Exalted. And a Bash Brothers bromance certainly fits the bill.
* Exalted: Starting from 2nd Edition, the Lunar Exalted can learn a duo of Charms that can potentially turn them into this. They can render escape pointless by perfectly matching the opponent's running speed in mid-flight, no matter what magic or obstacles are in their way.
* Exalted strapped to various locations on his body, you know you're not going to have a fun time.
* Exalted style- Crystal Chameleon Style- made up of equal parts flash-stepping, unexpected attacks, and stealth by psychedelic light-shows. There's a reason the style is often referred to as Disco Ninja Style by fans.
* Exalted successes (with the last jumping to the top of sales listing within days), allowing the line to be secured for the issuing of a third edition.
* Exalted. Such form tend to be dramatic to the extreme: an indescribably beautiful lady, a towering man-beast monstrosity, or an artist whose performances moves hearts (and steals souls).
* Exalted: Surprisingly averted in a bit of flavor text. Some Dragon-Blooded officers care about the lives of their mortal subordinates and some don't, but regardless of that throwing mortals at Celestial Exalted is just wasting them to no purpose. When the Anathema show up, it's time for the officers to order the mortals to stand aside and enter the battle themselves.
* Exalted tendencies, alternatively either smothering those she loves or utterly destroying those she hates, and you're never really sure which side of that divide you're on (until she dissolves your face off, anyway). She can't give birth (given that her current form is an acidic sea), but she does have Charms that allow her to infect others with parasitic offspring that come in a delightful assortment of configurations.
* Exalted tend to incline this way (the darker ones are still Terror, less Hero).

Dark Messiah Style, the default Abyssal martial art, even has a Charm that lets you dismember someone to make their allies run away crying and vomiting, and Infernal Monster is if anything even messier and more destructive.
* Exalted tend towards this. It's actually part of the rules that the more people that are present, the stupider their decisions are likely to be. In the backstory this tendency is one of the key reasons the world is now in such a perilous state.
* Exalted than a Free Action, because after changing form a Lunar can still use any other Charms that can be used in other character's turn.
* Exalted than the original, professional authors. (Though not universally, of course - fanbases always split.) For the culmination of the trope, they composed the team that patched up balance issues of the Second Edition (known as "Exalted 2.5") and were involved in writing the entirety of Third Edition.
* Exalted that are detailed for the Lunar Exalted implies that they, too, are capable of this.
* Exalted that is powered by the rage of its inner spirit. The first rule when dealing with a Solar brandishing a warstorm shellcaster? Be somewhere else. When he pulls out Steel Sunbeam Radiance, you should probably be in another city. Preferably in another country. On a different continent.
* Exalted: The Alchemicals comic, diplomatic negotiations hit a snag when the Autochthonian emissary says "There can be no peace between our peoples now". He meant "now" as in "at the present moment", not dismissing the possibility of future friendship. After the misunderstanding is cleared up, the Realm emissary agrees that indeed their nations are not friends "now".
* Exalted, the aptly-named Blood Monsoon, a powerful necromantic spell, causes a geyser of blood followed by a torrential downpour of blood over a few miles' radius.
* Exalted. The best of them make The Destinies (a grand total of five of them) their bitches.
* Exalted, the Celestial Exalted get reborn after they die. The Exalted part goes on into a new person, retaining some small bits of its memories and personality traits, while the human part dies. Most new Exalts are treated by their peers that remember their previous lives as being the same person, even though they are not and have personalities of their own. (Swan was Desus, Contentious Sword etc)
* Exalted: The city-ship of Denzik is built out of hundreds of large junks lashed together for stability, each bearing a marketplace on its upper deck and with lower decks filled with living quarters, storehouses, shrines and amenities for those living there, forming a true floating city. Denzik follows an endless, looping route along Creation's great western ocean and the inland sea around the Blessed Isle, trading with each port it meets along the way to purchase exotic cargo to trade at further stops and the agricultural output of entire countrysides to provision itself for its endless journey.
* Exalted, the Deathlord known as the Dowager of the Irreverent Vulgate in Unrent Veils only has one Abyssal Exalt: a young girl called the Shoat of the Mire, who is always a member of the Dusk Caste, the Abyssals' ultimate warriors. Since Abyssals are usually stuck at the age they Exalted at, the Shoat will remain a young girl for the rest of her existence. Should one Shoat die, another will take her place.
* Exalted: The Deathlords have something to hate for everyone, but the biggest target for love-to-hatedom is Mask of Winters.
* Exalted, the deity responsible for inventing the concepts of science, art, and culture. At first he was their patron and mentor, and cherished and protected them in an almost parental way against the depredations of other gods. Ultimately, though, their skill and ambition grew so immense that they believed they could usurp Autochthon and cannibalise his infinite power and genius for their own usage. Before their plan could be brought to fruition, however,
* Exalted: The Deshan satrapies in the North are populated almost entirely by slaves tasked with producing a steady stream of food for the Realm and kept docile by drugs. As the drugs don't always quite succeed in dulling the slaves' minds, sometimes due to deliberate sabotage, the satrapies are frequently rocked by slave uprisings varying from brief riots to country-wide revolts. As the slaves know they

have few chances of winning, they often focus simply on causing as much damage as they can and on torturing and killing every overseer and noble that they can. The revolts are typically put down swiftly, brutally, and completely by the satrapies' militia, but with the Empress' disappearance and the Realm's growing weakness and internal strife, they're becoming more common and more difficult to quell with every year.
* Exalted: The divine champions known as the Alchemical Exalted live in and worship a world-sized being known as Autochthon. During communion with their god, they can gain a trait known as Clarity to become more robotic and machine-like personality-wise. Heck, Autochthon is even called the Machine God (although this is technically a misnomer, given that Autochthon is a Primordial, which is a step up from Exalted's definition of a god).
* Exalted: The Dogs of the Unbroken Earth are dog-like gods who exist to protect the wilderness from the march of civilization. They do not tolerate attempts to tame or settle their homes, and will respond viciously and violently to attempts to cut back the wild to make way for roads and farms and towns. However, they generally have no issue with barbarian tribes, hermits, or other people who do not harm the wilderness living in their lands.
* Exalted: The Dragon Kings are an odd example. By nature, they are born with animal-level intellects and must be taught by their elders how to be sapient and capable of speech and civilization. The many disasters that marked the history of Creation took a very heavy toll on the Dragon King empires, however, and as fewer and fewer of them were left who were able to give this guidance the young of the species were left unable to make the leap to true sapience. By the setting's present, outside of a few isolated holdouts, the once-great rulers of much of Creation are left as nothing more than feral animals hunting and dying in the wilderness.
* Exalted: The Elemental Pole of Smoke, the lower fifth of Autochthonia — the world-body of the Primordial of industry and progress, a mechanical world bigger than some planets — serves as Autochthon's digestive system by collecting every piece of scrap falling down from the rest of his self, which gather there in immense fields and mountains of industrial cast-offs that are steadily eroded into slurry by ever-present corrosive gases and acidic rains and carried to the rest of Autochthonia for reuse. Despite all odds it's actually home to large communities of living creatures, mostly unlucky spirits stranded there with the garbage streams, Void-maddened gremlins, and degenerate tribes of human mutants capable of breathing the caustic air. The city of Xexas, which hangs upside down from the top of the Pole, lives mostly by sending scavenging expeditions to the bottom to recover useful artifacts and materials.
* Exalted. The Exalted community has long referenced Extras as 'Mooks', and the game encourages them to be considered little more than ambulatory scenery for the awesome epic melodrama that is the Player Characters' lives.
* Exalted. The fact that her very name is deeply intertwined with the sub-structure of the universe make it very easy for her to do so.
* Exalted, the god Nara-O is always covered in thick dark bandages that completely obscure his features. As the god of Secrets Known To One Person, it is suspected that if any being besides himself was to know his appearance, he would cease to exist.
* Exalted: The Great Curse for the Sidereal is based around the structure of "make hubristic decision, execute competently". Solars are also prone to this, as their peerless excellence turns in on itself and becomes peerless arrogance. Other Exalts cheerfully dive into this on an individual basis.
* Exalted: The Huraka (wind bears). While they are normally gentle wind herders, they also serve as the shock troops of the air elementals. You know you're screwed when giant, flying bears with wind powers come barreling toward you.
* Exalted. The Incarnae fit too, being the Anthropomorphic Personifications of the Sun, the Moon and the five closer planets.
* Exalted, their definition of 'demon' includes most typical player characters...
* Exalted the Lunar charm Relentless Lunar Fury, a key warrior-type technique that

enables a keyword on other Lunar charms, specifically suggests tranquil fury as one of the ways to portray the effect.
* Exalted: The Lunars of ages past either slavishly love their Solar mate, or being an extreme gadfly to them. It might have worked as an ad-hoc check and balance mechanism, since the Solars are divinely-empowered god-king superhumans with enough power to rule the entire universe.
* Exalted: The minikin were a crafted race in the First Age shaped from the already-diminutive Djala people and modified to grow no taller than two and a half feet, and were created to tend to and repair delicate machinery.
* Exalted: The Mountain Folk are a race of great craftsmen and engineers who live deep beneath Creation's surface in a rigidly ordered society within a number of underground cities. They worship Autochthon, their creator and the Primordial of machinery and invention, and seek to emulate him through acts of craftmanship and creation. They're also a diminishing people, their past glories and power shaken by many cataclysms and now beset on all sides by enemies. How closely they fit this trope varies between their castes. Workers reach between three and four feet in height and serve as their society's miners, builders and minor technicians, while Warriors grow to five feet and are stoic, steadfast and disciplined warriors. Both tend to be stocky, muscular and heavily built and are often depicted as bearded, and Workers are often shown carrying mining picks. The Craftsmen who rule Mountain Folk society are more slender and as tall as humans, and resemble elves more than anything else. All castes have pointed ears.
* Exalted themselves, and Celestial Incarna (top gods) qualify first and foremost, though.
* Exalted, the Nameless Solar, is never seen without twin plasma tongue repeaters.
* Exalted. The names of corresponding initiating actions made quite an inside joke in the community, too.
* Exalted. The only thing right is what you declare as right yourself, you're beholden to no one, so get your swords/guns/big-badaboom-spells and start racking up the kills.
* Exalted. The other way is to learn Sorcery and open a portal there, something the Yozis don't like.
* Exalted, the physical prowess of an Exalt is more linked to the way Essence empowers his body than to the amount of muscles. This is especially true for supernatural Strength level; someone with Strength 6 or 7 will usually look very strong, but not more than any well-built guy although he can casually bend thick steel bars, punch metal-reinforced doors out of their frames or lift horses.
* Exalted the plants into an associated medicine. The Guild, however, got their hands on the Beasts, and now mainly put them to work on poppy fields so they can corner the heroin market.
* Exalted. The player characters are among the eponymous Exalted, humans given the ability to perform superhuman feats of magic and badassery by virtue of having received a sliver of divine power (the source of which determines what type of Exalted they are). Those humans who don't get chosen are pretty much at the bottom of the world's sentient totem pole; their main use, as far as many gods and even Exalted are concerned, is that they're good at offering prayers and sacrifices and make useful pawns. What's worse is that they were specifically designed to be that way.
* Exalted. The Pole of Fire is in the south, and Air, which also covers coldness, in the north.
* Exalted. There are a lot of other morally dubious Charms, spells, and supernatural abilities, but only the Ebon Dragon's Charm trees will steadily impair your ability to act in an honest, moral fashion as you progress along them. (Granted, Infernals are one of the "villainous" factions to begin with, but they're entirely possible to play heroically, and Eclipse Solars and Moonshadow Abyssals can learn their Charms...)
* Exalted there's a road-making demon, Jacinth, but he can't make his roads cross with each others. Going under or over is fine. If there is a crossroad, then it's not made by Jacinth.

* Exalted, there's a Solar Circle Sorcery spell called "Unity of the Closed Fist" found in the White Treatise. It creates the composite variant but adds all the elements of the different types of Exaltations involved. It can combine up to five individual Exalts, thus the name — five fingers making a single closed fist.
* Exalted there's a spell from the lowest Circle creating manna falling from the sky. It comes in large enough quantities to sustain relatively large groups, and is nutritious and satiating without any ill effects, but has very bland taste and unnatural pink color.
* Exalted, the Sidereal Exalted (who are basically Fate Ninjas) have a panic button called Avoidance Kata. Its effect? Retcon the whole world so that they made a different choice several minutes ago and are anywhere but here.
* Exalted the Sidereals deliberately ended a golden age, caused the deaths of millions of innocents, plunged Creation into medieval squalor, threatened and murdered some of the gods themselves to go along with the new order, and spent the next millennium tracking down and murdering the innocent reincarnations of the world's greatest heroes. It was the only surefire way to save Creation from being utterly destroyed.
* Exalted: The size of a disease god is directly proportional to the virulence, deadliness and spread of the sickness they oversee. Gods of chickenpox or head colds are often little more than five feet high, gods of smallpox, the plague or cholera stand tall and strong, and the gods of the Great Contagion are said to have towered over buildings.
* Exalted. The skeleton gets increasing autonomy until it finally tears its way out of the flesh to roam freely.
* Exalted the Solars possess that can subjugate their Lunar Mate even more. There is a reason, after all, one Solar charm was dubbed the Lunar-taming Leash.
* Exalted: The titular Exalted, in particular those of the Celestial variety, all begin to glow when they start throwing their powers around. While they do have plenty of benign powers, they were created to fight the creators of the universe...
* Exalted: The Unconquered Sun himself. Created by the Primordials to be the embodiment of absolute perfection, he turned out to be perfect in four different ways that didn't always get along. Combined with his addiction to the Games of Divinity and the Great Curse driving his Exalts into depravity, he essentially suffered a nervous breakdown and locked himself up in the Jade Pleasure Dome.
* Exalted, the Underworld is a place anyone can visit, though the majority of the natives are ghosts. Campaigns set in the Underworld are an explicit option.
* Exalted: The Underworld is a realm of stasis, death, and shadow brought into existence by the destruction of several of the Primordials who created the world, populated by ghosts, and ruled by the emissaries of the undead hulks of those same Primordials. It isn't always geographically coterminous with Creation proper, but it makes up for it in sheer creepiness. Shadowlands are essentially the Underworld overlapping with a part of Creation in a spot where gruesome deaths occurred. You might not even notice that you walked into a shadowland right away...
* Exalted; the very thing that makes humanity Special and allowed them to rise up to overthrow the Primordials at the behest of the gods is that they were NOT special; humanity was created as a servant race -to- the servant race of gods, weaker than almost everything else in the world, barely capable of using the magic of Essence. A mayfly race intended to be born, pray, and die, totally dependent upon the gods, providing them with needed power through prayer, so the gods would serve the Primordials. As a result ... binding them into servitude was deemed unnecessary, and when they were given power by the gods, they were able to rise up and throw down the Primordials. Humanity is Special specifically because Humans Suck, in effect.
* Exalted: The Wyld mutants known as the hushed ones often keep "herds" of captured as living food stores for lean times, trapping them in pits after breaking their arms and legs and feeding them on scrounged vermin until they wish to harvest a captive to eat.
* Exalted they can learn), they rely on subtle but masterful measures, their non-martial-arts powers require esoteric wisdom to make good use of, and they keep low

profile— though that last one is a magically enforced rule of reality.
* Exalted, they're still as human as anyone else if the meet the basic metaphysical requirements.
* Exalted things that don't fall into any other skill set, such as summoning demons. The developers have noted that this setup is a deliberate effort to avoid turning caster castes into D&D's "do everything" wizard.
* Exalted Third Edition are pretty unashamed in their hatred of many decisions made in second edition from a design and storytelling perspective. During the promotion for their Kickstarter, White Wolf's Community Manager asked a /tg/ user to please not play 2E and just wait for their new one.
* Exalted: This is amongst the Abyssals' macabre choice of grave fashion.
* Exalted, this is how new Abyssals are made: a Solar is captured, strapped into a Monstrance of Celestial Portion, and tortured until they die, become catatonic, or become an Abyssal. There's nothing that prevents them from breaking loose, trying to rise again and setting off on a quest for redemption back into a Solar...
* Exalted, this is often the story for newly-exalted solars that lived in a culture steeped in the Immaculate doctrine.
* Exalted, this is one of the things the penultimate technique of the Charcoal March of Spiders style can do.
* Exalted: This is one of two options available to the Abyssal Exalted. As their permanent Essence score increases, they must either work to become the beautiful and stunning incarnations of death or allow their bodies to decay into putrescence and rot.
* Exalted. This is why Abyssal Exaltation is the only type that both a) must be willingly accepted by the recipient and b) allows for the possibility of redeeming and changing state into a Solar Exalted. The designers already knew that it's a screw-over, and thus made it both require you to willingly sign on with the Neverborn (i.e., you've got it coming) and allow an escape mechanism.
* Exalted, this meant that the cycle of death and rebirth was unable to process them, leaving them stuck forever in a state of tortured undeath.
* Exalted this trope can make for a particularly epic storyline within a campaign, regardless of success or failure.
* Exalted through withering attacks from inflicting injury. However, it is all or nothing, so anyone depending entirely on hardness against decisive attacks is going to have a short lifespan once a few attacks get through.
* Exalted to be, and whose love is one of the few positive things that they can experience free from their masters' corruption.
* Exalted to do what they're told. There's a reason she's known as the Principle of Hierarchy.
* Exalted, to ensure that her empire could never function without her.
* Exalted to invade - this one would have destroyed the world if not for the not-yet Empress. The first two apocalypses have been relegated to rather inaccurate legends, partly through the efforts of the Sidereals to cover up the truth.
* Exalted to leave these at the scene of whatever horrible mess they just made, exactly, but if they do, it lets them reduce the Yozis' disapproval of them because that's just kind of how Szoreny rolls.
* Exalted. To not exaggerate the length of this page we suggest you to head on to its works page.
* Exalted too. Mutants come in two main flavors, the bioengineered people created by the Solars in the First Age and the humans and creatures exposed to the Wyld at the edge of the world. The first are somewhat rational, physically predictable, and still human in their way of thinking, the second... can vary widely in sanity and form.
* Exalted to one of Solar Exalted (whom she still loves), Alveua wants to give everything a sense of order and purpose (albeit through forging their bodies into useful items), and creatures as low in the hierarchy as the neomah simply want to create children, albeit from flesh harvested from multiple donors (and can be summoned by the tears of parents mixed with the afterbirth of stillborn children).
* Exalted Torturer: When the person doing the torture is also the hero.

* Exalted Torturer who tracks down murderers, perverts, and animal killers to give them a taste of their own medicine.
* Exalted, to the point that considering a homosexual relation to a god made of goo is commonplace if he's hot enough. The Appearance stat isn't modified by any factors based on, for example, one of them being a giant insect with beautiful wings, meaning that everyone's default reaction to being hit on by an agata is "damn, that's a sexy wasp".
* Exalted, to the point that motonic theory (referring to "motes," the basic unit of Essence) is the setting's equivalent of atomic theory. Sorcery is the setting's equivalent of understanding physics to the point where you can tell them to sit down and shut up. In addition to that, everything in reality, from a single grain of rice to the sun itself, has a god that represents it. Causality is entirely dependent on the Pattern Spiders weaving the Loom of Fate properly.
* Exalted to use most of them, restricting artifact weapons to the Exalted, supernatural beings like gods and demons, and the occasional enlightened mortal.
* Exalted typically averts this, which is slightly odd given its strong anime influences. Wielding two weapons doesn't give you an extra attack unless you use a flurry, which you can do just as easily with one weapon. Those trained in the Fire Dragon style of Immaculate Martial Arts are the exception, who wield two (relatively, in comparison to the BFS most Exalted wield) short blades. Short and hook daiklaves, which Fire Dragon stylists use, are designed explicitly to be dual-wielded, and are usually found in matched pairs. Possibly in someone's ribcage.
* Exalted uses a dating system starting with the founding of the (second) Realm, and has a rather different calendar inside each year also. The year is divided into 15 months (ascending, resplendent, and descending Element, where Element is one of Air, Earth, Fire, Water, Wood (not in that order)), plus five days of Calibration that are not actually part of the calendar, when spirits are at their strongest and the gods are all partying.
* Exalted varies on how good it is with this. On the one hand, there are characters like Lilith, one of the most powerful of the Lunar Exalted, who was initially introduced as having spent centuries in isolation after the death of her husband, and only returning to humanity when she senses his reincarnation. On the other hand, many prominent characters such as the Scarlet Empress, Mnemon, the Roseblack, Anys Syn, and Raksi are quite powerful in the setting, as attained wholly in their own rights (the consorts and husbands of the Empress and Mnemon, although a necessity in their dynastic politics, are basically footnotes, with the latter's ones not even receiving names).
* Exalted view Creation the same way one would view a turd in the swimming pool and want it to stop ruining their beautiful chaos.
* Exalted, wallowing in vice, collapsing in a fit of crying, and plenty more; all are highly destructive, incapacitating, or both. The other Exalted types where afflicted with the Great Curse has well, but it usually doesn't take this form. Sidereals, for example, run a bigger risk of everything going to hell if more then a few work together on something. (Unless you're a Lunar, where you get similar issues to the Solars, plus the ability to turn into a 2 ton killing machine at will.)
* Exalted want to die, to end their eternal torment and insanity. Sadly, they can't. As a result, their agents work to destroy the world so that they can finally fade away.
* Exalted was all over the place (to the point that one of the iconic heroes of the Dragon-Blooded was the biggest sex slavery kingpin in the setting) and the canon leaned toward "the world is going to be destroyed because none of the heroes can get their shit together." The difference is that there were plenty of examples of places and heroes who were really trying to do the right thing, and the less-developed state of the setting gave hope that the player characters might just make something better. In Second Edition, there's a much more mapped-out setting, but one with so few good guys (not to mention the inordinate focus on the Infernal Exalted) that a lot of players just asked why Creation is worth fighting for. Third Edition is trying to scale that way back.

* Exalted was clarified to only work a handful of times before having to be reactivated, but they remained ridiculously powerful.
* Exalted was created specifically to subvert this trope, focusing more on Bronze Age swords-and-sandals fantasy and Chinese mythology than on the Medieval European Tolkienque things. Nonetheless, some parts of it remain (partially because they're old enough or universal enough that they appear in those influences, too.)
* Exalted was originally going to have the strange mechanical world of Autochthonia in its core, but was cut for space. We did eventually get to the world of Brass and Shadow, but it's been an optional addition for the entire run of the game.
* Exalted was the iconic Twilight Caste for the first couple of editions, sporting a long ponytail of stark white hair and regularly showing off her mastery of sorcery.
* Exalted: Water elementals, deities associated with water and Water Aspect Dragon-Bloods can do this a bit, and their equivalents, the Water Ryuujin from the shard Burn Legend, do this virtually all the time, to the extent of getting damage and clash bonuses when near a full bathtub, fire sprinkler, or other sources of water.
* Exalted were made to defeat impossible and unkillable threats. Even top gods and rulers of all Creation has not only stats, but notes for GM, how the world will be changed after their death.
* Exalted, what little there is is used sparingly. It's rather surprising there is not more evil to it, as there is a tendency towards the gods being executed sometimes unjustly for the purpose of getting the metal. A somewhat rarer variation of Starmetal has also been published. This version (prompted by a fan saying he'd like his Daiklave to be forged from the discarded fate of Creation's next Alexander the Great) is a hero's destiny, removed from the Loom before its passage (thus leaving the hero with either an early death or a mundane life) and crystallized. Falling from the sky is therefore optional, but in a more metaphorical sense it is made of stars and sky.
* Exalted, when divided into smaller groups, name those groups after parts of a dragon — fangs for 5-man squads, scales for groups of 5 fangs etc. — and title the officer in charge of each group, for the most part, [group]lord — e.g. the leader of a scale is a scalelord.
* Exalted whenever they come into contact with anyone or anything that doesn't share their immunity.
* Exalted when her husband (the monstrous Desus) is mentioned", but she acts the same as one.
* Exalted. Where the typical maximum lifespan of Dragon-Blooded is around three hundred years, Ragara is more than six hundred and twenty years old, sustained in the modern setting by a magic sword slowly feeding him the life force of the captured soul of a Solar Exalt. The decrepitude of his state is enough that he's been forced to retire from running his House personally and lives surrounded by full time carers.
* Exalted where this holds sway. The people of Chaya have what may be the closest thing to a truly representative democracy in the game, and there's a heavy emphasis on community and celebration. But when the fire-trees are in the bloom, the citizens go into an orgiastic fury and tear any outsiders to shreds.
* Exalted, which tends to be demonic version of certain animals. (Erymanthoi are demon-gorilla, Theodozjia are demon-cats, etc.)
* Exalted, which uses a similar system, does have this problem with high-powered exalts fighting. Since raising your damage is much easier than raising your resistance to damage, and perfect dodges and parries are cheap and reliable, most fights between non-lunar celestials are utterly bloodless until one runs out of juice and is summarily splattered all over by the opponent's Ultimate Doom-combo. This is even worse since you don't necessarily know how much juice your opponent has left.
* Exalted: While not the intended purpose, the Directional Titans have both the crew and equipment necessary to survive in the Wyld indefinitely, and eventually form a new Creation, should the original ever be rendered uninhabitable.
* Exalted. While there's some sense there — her most natural shape being a

human woman — it's still breasts on a scantily-clad lizard-woman.
* Exalted (White Wolf). This time around it's a sentient machine world and "living" manifestation of Order hanging in the spirit realm, discovered and colonized by a transhumanist faction of superscientists/mages.
* Exalted (who don't like order very much) and the Neverborn (who don't like anything very much). This is to say nothing of the two separate apocali in the backstory (and a few other events that may qualify for the title, if we knew more about them).
* Exalted, who dwell in the crazy-world that is the Wyld in the core setting, and all ships come with anima circuits to keep them from meeting horrific and bizarre fates. While most of the heavily travelled routes have had the evil kicked out of them over the years, the routes that were forgotten after the Malfean War have not.
* Exalted, who exists only to corrupt, betray, and subvert anything good.
* Exalted who favour Melee can do things with a sword that would make Miyamoto Musashi swear to be a better person for the rest of his life in exchange for just one lesson. Titan-slaying power is nice like that.
* Exalted, who will also likely be pissed off if they didn't receive a proper funeral.
* Exalted will cause the sacrificed to become a slave-ghost to the person they were sacrificed to. The ghost-body of the slave bears a special mark that will never disappear, even if body-altering ghost-magic is used. Special ghost-apparel that can hide this mark is highly valued in the Underworld.
* Exalted will impress the gods of the laws of physics, convincing them to pull a few strings in your favor. (Seriously; this is how the fluff justifies stunting.)
* Exalted wonders. After the weaker Dragon-Blooded killed the Solars and took control of Creation, they simply weren't able to keep up the kind of standards the Solars could. Because of the way reincarnation works in Exalted, a surprising number of young Solars get their best gear by raiding their own tombs, and many Second Age states, most notably the powerful city-state of Lookshy, have risen to power in whole or in part on how much First Age technology they've managed to scavenge and/or preserve.
* Exalted: Wood is one of the five basic elements of creation, and beings associated with it — such as wood elementals, gods of forests and plant life, Raptok Dragon Kings, and Wood Aspect Dragon-Blooded — can wield powers allowing them to shape and alter plants and speed or direct their growth. Besides plants, the element is thematically associated with growth, the drive for living things to spread and survive, and poison, and these things often factor into powers associated with it. Wood Aspect Dragon-Blooded are completely immune to all natural poisons, for instance, and weapons aligned with elemental wood can do things like release clouds of potent toxins.
* Exalted would qualify. For Solars, if you're a reborn god-king with about half the world gunning for you, you tend to associate with others who can help you punch that half the world in the face. Infernals and Abyssals tend to end up in these through a mix of that desperation and the details of the assignments they receive from their bosses.
* Exalted: Wu-Jian is built on a small oceanic island where space is at a premium, forcing its residents to build up when they wish to expand. Over centuries of this practice, the city's become a teetering mass of ramshackle, poorly-planned architecture as buildings were piled on top of each other again and again. The modern city is a rambling, chaotic mess of high-rises, rope bridges and winding alleys, and alternates between broken-down derelict neighborhoods home only to ghosts and criminals and marginally less run-down areas where the citizenry lives packed like sardines in constant shade. Above this core area are the lopsided and swaying topmost stories, home to the local elites, and below it are the city's flooded roots, choked with sewage and jetsam and home to scavengers, criminal gangs, monsters and fugitives. Most of its society is riddled with crime and run by outlaw groups that the government barely attempts to keep in check. Notably, the Dragon-Blooded elites don't actually live in the city — they mostly reside in spacious estates that make up the rest of the island, which they long ago claimed

while forcing the rest of the population into the sprawl.
* Exalted: Wyld mutation, First Age genetic engineering programs and experiments by gods and Lunars have created numerous breeds of talking, sapient animals. They're generally quite rare, but in the nation of Halta they're common and treated as full citizens.
* Exalted: "Yeah, Bob, I like the sound of this game where you play the solar-powered demigod, but do you think there's any way we could get, I don't know, giant magic suits of power armour into this? Except we can't really call them that, so...warstriders, yeah that's a good name. Warstriders."
* Exalted you can perform incredible feats with charms, but even without enhancing your performance with them, an elder Exalt (with more than five dots in the attribute) can jump impossible distances and punch holes in steel.
* Exalted you have charms that make any disguise you want to wear, perfect and infallible to non-magical means of perception. A Night caste Solar can infiltrate anything he wants.
* Exalted, you're a Chosen One-in-three hundred/one hundred/fifty, depending upon what Exalt you chose.
* Exam; all injuries sustained have an effect, and the time spent in the room has an appropriate effect on all of the women.
* Exam, Black claims that urine is sterile. Because it's both amusing and surprising, urine being sterile is an oft-cited factoid in general, which until recently has enjoyed the rare vindication of accurately reflecting scientific understanding. In recent years, it's been discovered that urine isn't sterile after all.
* Exam, Brunette and Dark are both women with dark hair that are noticeably intelligent during their time at the Exam.
* Exam Crystal is made from the same plants as wake-up juice, grown in the heart of a wild zone and charged to bursting with magic. It makes a pony more awake than they've ever been in their lives, but the duration is unreliable and there's a choice of two random afteraffects: either become about 30% more tired than you were before taking it, or pass out until every bit of rest missed has been made up for — even if that means days in a hospital bed. Users have their irises turn yellow until the Crystal wears off.
* Exam. He is a scientist genuinely interested in bringing good stuff to the world, but has trouble dealing with people.
* Examination: Hoshi Sato offers her hand in greeting to Rajiin because she knows that Captain Archer always shakes hands, so she'd already be familiar with the gesture. Hoshi does however keep the palm angled to make it clear her hand is empty and therefore non-threatening.
* Examined by the various members of the Lannister family. Jaime and Cersei both believe themselves to be just like their father. Both claims are refuted by other members of the family. Cersei is considered to be too
* Examined in "Commander Pierce". While Hawkeye does start acting authoritarian and in the way he normally despises officers' behaving, it's clear that it's because he's discovering the real problems and headaches of command in the absence of Potter and incapacity of Winchester. As CO, he can't afford to only look at his own problems anymore, he has to consider the needs of the unit... and suddenly he finds himself doing the stuff he hated in previous commanders.
* Examined in the short story "Everyday Use" by Alice Walker. In it, the African-American narrator's daughter is a pretentious Black Panther wannabe who claims to have reconnected with her African heritage, but is clearly just parroting the Theme Park Version of African culture without actually understanding anything.
* examines the actual potential of this. In short: it mostly wouldn't happen, but that didn't stop him from making a comic about it happening.
* Exam, it is White who assigns everyone the borderline racist and sexist (as Brunette points out) names by which it they are known throughout the exam. Even before then, he is referring to Brown as 'Gandhi'.
* Example #1: When fighting an opponent who sees sound and can knock you out, what do you do? (1.)Have Belldandy put up a barrier while you think (2.)Drop the barrier

and have Belldandy split to make the barrier better, and act as a distraction for #3. (3.)Have the magical vacu– Errr. "broomstick" that breaks the sound barrier attack the demon. She can only see the afterimage of it, so by the time she's seen the broom, it's moved on to another spot. She was basically blind and couldn't fight it and, unlike the goddesses, that broom aimed to kill with each shot.
* Example 2: Because he ran too slowly to keep up with his friends, Lyle fell to the two chainsaw-wielding maniacs who were somehow familiar to him.
* Example #2, In Hell, they have to fight a demon who can PUNCH OUT LIGHTNING in order to advance to the next room. Keiichi's solution? Have Urd make him a super-speed pill so he can trick said demon into punching the door out of existence for them by goading her into attacking him while he stands in front of the door; then, when the pill takes effect, BOOK IT out of the way. The Demon later asks him what he would've done if the door didn't break, and he calmly replies that "If the door didn't break, it would've broken your fist, so either way, we'd have won". Needless to say, she's impressed with him, even admitting he bested her like a good sport instead of making snarky remarks like the last demon he outwitted.
* example: 7-11 Double Big Gulp Holds 200% More Than the Average Adult Human's Stomach, a great 64 ounces or a half-gallon of drink.
* example above, Peter eventually tells J. Jonah Jameson, while quitting his job at the Daily Bugle, that "Hitler called and he wants his mustache back."
* "[Example A] [exhibits trait X], [example B] not so much." suddenly became a pretty popular way to make a comparison after
* Example: Annie overreacting over Ruthie managing to get her baby twin brothers to say their first words to her, rather than Annie.
* Example) are good examples for this, as well as several other bands (some of them listed below) mixing it with other genres like Ambient or even Metal.
* Example: "As a doctor, what is my prognosis?" or ever "As a doctor, what would you say is my prognosis?" are also both wrong, even though the latter may be considered acceptable as it contains "you" even though "what" is technically the subject.
* Example. Averted in any tank simulator, since tanks mostly have no way of detecting incoming fire.
* Example from the United States, late 2020: Metformin, one of the cornerstones for treating diabetes mellitus, is typically dosed at 2,000 mg a day for an otherwise healthy diabetic. (Ask your physician, not TV Tropes, about what and why.) A monthly supply of the generic costs $4-8 USD at your generic big-box retailer/discounter with a built-in pharmacy. Glucophage, the brand name, costs an average of about $140 USD. Chemically, they are bioidentical. So technically, nothing is stronger, because the $4 dollar metformin is
* Example: Give the PCs the Eye of Vecna, you get some fun people fighting over it. However, one of the PCs sacrificing the Eye of Vecna to THE GOD OF JUSTICE? Not so expected.
* Example: "His buying of the property will help our community." It is essentially equivalent to "His purchase of the property...."
* Example: "I either have to go or Jack will die." should be "Either, I have to go, or Jack will die." In the original, "Jack will die" would be one of the options of things "I" could do.
* Example in an early interview: When talking to a witness who is otherwise totally uninvolved and has nothing to fear, she'll still lie to you. If you catch her out, she admits that she was holding back some info in hopes of selling it to the newspapers.
* Example: It can take as long as seven years and $350,000 dollars to
* Example: Items listed after a page description. The examples are usually two kinds:
* Example: "Jill likes cookies more than me." means "Jill likes cookies more than she likes me." But "Jill likes cookies more than I." means "Jill likes cookies more than I like cookies."
* Example: Lydia is busy baking cookies for the Girl Scouts Cookie Sale.

Beetlejuice gets bored and instantly conjures some cookies from the Netherworld. Lydia doesn't trust them, but she's woefully undersupplied so she sells them. The last line of the recipe? "Do not dunk." When Beetlejuice finally decides to test what happens, the cookie
* Example: "Mr. Monk and the Bully" starts with Monk and Natalie looking into a simple infidelity case after being hired by Monk's childhood bully. Then the person said bully's wife seems to be seeing turns up dead.
* Example: "My dog can jump through hoops, ropes, fire, and do flips." is wrong as "flips" is not one of the things through which he can jump. It should be "My dog can jump through hoops, ropes, and fire, and do flips." The list is ended with "fire" due to the first "and".
* Example of an entire work not coming out: the Brazilian distributor of Disney comics translated the
* ?) example of the trope. Both characters are peaceful, introverted toms who experienced childhood trauma. They share the same 'happy ending': living out their days on a peaceful, isolated farm, with no-one to worry about but each other.
* Example, possibly apocryphal: during military training, adherence to NBC drill is tested in a room filled with CS gas, a non-lethal incapacitant (i.e. tear gas). Rumour had it that Spetznaz NBC training is "live" — i.e. uses real, lethal nerve gas.
* Example: "Running down the stairs, the kitchen started to catch on fire." should be something like "While I was running down the stairs, the kitchen started to catch on fire." or "Running down the stairs, I saw that the kitchen started to catch on fire."
* Examples Are Not Arguable an example, or not? Please make up your mind.
* Examples Are Not Recent - Put absolute dates on your examples, not relative ones.
* Examples: Diego del Torro in 1701 A.D.: The Sunken Dragon, a typical
* Example Sectionectomy: The process and result of removing all examples from a trope (or more rarely, a work) article.
* Examples from his Sun Records days: "Hey Porter" (backed "Cry, Cry, Cry"); "So Doggone Lonesome" (backed the original "Folsom Prison Blues"), "Get Rhythm (the flipper was the famous "I Walk the Line"), "Big River" (turn it over to get "Ballad of a Teenage Queen")
* examples here; NSFW due to language) is to show footage of someone doing something stupid/risky/dangerous, pause right before things go wrong, and have a voice say, "It was at this moment X knew... he fucked up." Then the clip finishes.
* Examples include a giant undead horror choosing to throw the skulls of the dead instead of raking your party to shreds, female cultists who will spend their turns freaking your party out and shuffling them around, madmen who will accuse and curse and scream like there's no tomorrow, and every boss has their own version of a stress attack. And if one of your characters loses it, they'll
* Examples include: "Oh my heck!", "Oh my gosh" or "holy heck". Stranger ones include "Biscuits", "Fridge it", and "
* Examples include the bald eagle. Its population went down in the mid-20th century for a number of factors, including being hunted because of the false assumption that it posed an significant
* Examples include the university band playing during game action in a basketball game (which would result in a bench technical — two free throws + possession for the other team — in real life) and Dave being allowed to wear sunglasses with a built-in MP3 player (only protective or prescription eyewear is allowed).
* Examples might have wording that puts them in reference to another example on the page ("As stated in the previous example...", "See this other trope for more details."). If that other example is found to be misuse and gets removed, the trope is deleted via
* Examples of characters who do not maintain this state indefinitely still count. This is a difficult thing for a writer to achieve in writing a story, or for a character to maintain within it. There are Unfettered who can only keep this up for a limited period of time and may retire from the heroics to settle back into a life limited by family and career once their goal is achieved. Other characters don't

become unfettered until events move them to throw away their chains. Going on
* Examples of gonadal and tissue mosaicism and tetragametic chimeras (people whose bodies are the result of two embryos with different genomes fusing together at an early stage) may be more common than we think, even in humans (primarily because tests are rarely administered for it). Blaschko lines and patches on the skin or eyes of different color are a visible indicator of chimerism.
* Examples of the most elaborate Trademarks include dousing captured thugs in a certain colonge, painting an entire crime scene pink, and writing a long poem to the police.
* Examples of this abysmal habit can be seen in BBC local news shows, in which presenters with an alarming lack of chemistry attempt to act like chums, despite occasionally swearing at each other off camera.
* Examples of this are: Main Headline "Cavalry Kids Lead Charge In Cleanup" with secondary headline "President Shoots Wife", and Main Headline "Lottery Drawing Today" with secondary headline "President, Rock Star To Swap Wives".
* Examples of this can be seen fairly often in American Football, given that it's a contact sport that involves a lot of speed and strength, particularly at the professional level. * Examples of this include Sweden being changed from a light blond to a sandy brown (before switching back to blond in his later animated appearances), Italy's hair changing from brown to auburn (sometimes a saturated red), Belarus going from platinum blonde to dark blonde, China's black hair changing to brown, and the other blond characters either having their hair darkened or changed to a more saturated yellow shade.
* Examples: "Who is coming with me?"; "The person is who?"; "To whom should I give the money?" "Whom should I pick?" You would not say "Whom should I say is calling?" as you wouldn't say "I say him is calling." "Whom should I say is calling?" is functionally equivalent to "Whom is calling?", which is clearly wrong.
* Example that never was: The CBBC wanted the current production team to make them a
* Example. The boxes need to be unflattened, as it's the air inside them that provides most of the cushioning. Nowadays purpose-built airbags are usually used instead.
* example. The titular faeries, who are themselves E-cup or larger when adult, aren't called "Bloomin'" for nothing. They gleefully change both men and women into buxom females and the humans have to deal with it.
* Example: "We lost because of you kicking to the left." is wrong. It should be "We lost because of
* Example with a less famous actor in the classic series: Mary Peach appeared in "
* Example with official works: the episode "Make New Friends but Keep Discord" includes a couple of references to
* Exam: Poor Deaf has a terrible stutter, and he only speaks French. They're only able to understand parts of what he says.
* Exam strongly hint at wandering into sci-fi territory. The rest of the technology present is all very much present day stuff.
* Exam that helping him was a mistake when he has her at gunpoint, not showing any care about her help.
* Exam: The room itself, in a way. There's nothing stopping them from leaving, other than the knowledge that doing so will disqualify them.
* Exam: White has a significant amount of stubble when compared to Black. Brown also has a full grown beard, although he's less villainous than White.
* EXA_PICO amplification towers (with two of them being directly connected and the other one having an independent network that is only linked to the others by a weak, sound-only line), called the Binary Field, in Ar Ciel; and the plant-based mixture of spiritual world and cyberspace known as Genometrics in Ra Ciela and Soreil.
* EXA_PICO, as not all the Wills had agreed to their consensus, and eventually

inhabits the body of the two Reyvateils in the party in their quest to revive the planet.
* EXA_PICO franchise where songs are used to relay emotions and get all kinds of effects.
* EXA_PICO has seven endings and two possible route splits which depend on the Reyvateil the players choose during Phase 2: Aurica or Misha. According to a light novel that was published after the first game was released, to Flash-based visual novels made by the developers, and dialogue present in the second game, the canon route is Aurica's. However, the "partially" is because it has never been stated if either her ending or the third heroine's one is canon.
* EXA_PICO series. Krusche is more focused on ships and weapons, while Sasha is skilled at creating satellites, reflecting plates, and other instruments.
* EXA_PICO such as Yurishca who governs the technological advancement of humanity and Soma who maintains balance through natural selection. The most recent will to come into existence is Ar ru whose role is to create planetary antibodies for the purpose of wiping out humanity which had delivered a quite possibly fatal wound to the planet. The end goal of the third game is to simultaneously heal the planet and communicate with Ar Ciel's consensus to convince it to forgive humanity.
* EXA_PICO universe. To summarize, he created a universe grounded on waves and sounds, where music and feelings all have quantifiable power and serve as the basis for the physical laws in it. This complete with two planets that have extensive timelines, no less than six functional Conlangs, and even living cultures, myths and legends for the regions that exist in them.
* Exa Punks includes even more ways to not get work done, with both another variant of solitaire and HACK*MATCH, an action puzzle game similar to Tetris Attack.
* exarch. Amazingly, Enclava has not been punished and is still Lolth's exarch, possibly because Lolth can't help but admire her audacity.
* Exarch Hellscream is a bit muddier. In a literal sense, he is an aversion, as his life has a very different path than our Garrosh Hellscream beyond being Grommash Hellscream's son (not even having the same mother). However, there are strong thematic connections. The questline reveals that in the greater multiverse, Garrosh usually turned out a hero. Exarch Hellscream fits in an interesting place within this pattern. Unlike ours, but like the rest of the Garroshs in the multiverse, he decided to do some good by joining the Lightbound to save Draenor and the fall of the rest of the universe. Like our Garrosh, the war is shown to be more than
* Exarchs take this to the next level, as their entire existence is dedicated to combat. They never leave their shrines and have the best equipment of their respective aspect. In older editions they were Eldar heroes who had access to an incredibly wide range of badass wargear, even from outside their aspects, but they've been toned down to be more akin to Sergeants or typical squad leaders.
* Exarchs, who stormed the Supernal realms and broke reality in the time of Atlantis. Together all eleven of them form the main villains of the setting, responsible for both the Abyss and the depressing state of the world.
* EX-ARM being inconsistently applied to the character designs (some being CGI creations and others made using 2D drawings). Some of the main characters get away with it due to being androids, and (logically) having no face musculature with which to emote. Most of the human characters... Have less justification.
* Exatlon Estados Unidos features a non-Latino American on the team. He knows minimal Spanish, but each episode he says a new Spanish sentence.
* Exaxxion mecha subverts this by making a trio of 88 mm Gatling cannons the SMALLEST weapon on the entire mech.
* Ex-Big Bad: You either die a hero or live long enough to see yourself stop being the villain.
* EX Burst being a massive Particle Beam that is described in-game as leaving nothing but dust.
* Ex-butlers are employed as assassin trainers because of their experience as potential murderers.
* Excalibur 2555 review, first when he comments on how cliché the enemies

are:
* Excalibur #48 establishes Feron's ancestor as a host of the Phoenix Force, prior to Jean Grey.
* Excalibur #67, half the team is Put On A Bus, though they make guest appearances in other books.
* Excalibur #74 has Mister Sinister gloat over acquiring the DNA of Rachel Summers, and this is never brought up again. What could he possibly have in mind, and why hasn't he done it already?
* Excalibur, a chemical laser weapon developed as a missile defense system.
* Excalibur, after his first battle as king, Arthur is treated for his wounds by Guinevere, leading to his falling in love with her.
* Excalibur. Afterwards, Kitty is shown dressing down a disconsolate Lockheed, accusing her of dropping his guard as soon as she "shook some of that bad girl booty."
* Excalibur, Arthur dual-wields Excalibur and a mace while dueling Lancelot, showing that he's become rather kill-crazy.
* Excalibur blonde) was a response to falling for Brian Braddock at first sight. But she also would shift to look more like Colossus or Nightcrawler if she was bonding with them.
* Excalibur. By the time he was born, there was basically nothing of the world left, every government was gone, every resource used up. And then he gets super-powers, and the means to end the war. There's nothing to rebuild, and people start dying from rampant disease and starvation. Then Albion learns someone is responsible for all this...
* Excalibur doesn't know how most of them truly work. As a result, nothing he builds can be duplicated. By far, the most advanced invention he's created was Widget, a small, sentient robot capable of opening portals, who became a companion to the heroes.
* Excalibur: Earth-597 is another Nazi victory earth, featuring versions of the team that now work for the Nazis.
* Excalibur, evil other-dimensional dictator Sat-Yr-9 vaporized Courtney Ross, her counterpart in this reality (and incidentally a love interest of Captain Britain), and then calmly stepped into her shoes. The deception wasn't exposed for quite some time.
* Excalibur from the 1960s to the 1990s built small numbers of "neo-classic" cars, mimicking designs from the 1920s and 1930s.
* Excalibur full of android hecklers who demanded to be entertained; failing to win them over would result in them killing her. (Amazingly, Courtney survived by discovering a talent for impromptu stand-up comedy, much to Arcade's surprise.)
* Excalibur had Kitty and Pete Wisdom inviting the rest of the team for a get-together at a nearby pub, following a series of bad breaks for the team, such as the discovery of anti-mutant ammunition co-developed by Captain Britain's father being used on mutants in Genosha, Moira finding out she's been infected with the Legacy Virus, and Dr. Rory Campbell losing a leg. Even the narration acknowledges this at one point.
* Excalibur had Kitty Pryde attend one of these, complete with being specifically targeted by the popular girls, when the rest of her team had gone missing. However, it's ultimately a subversion: the teaching staff, particularly the Headmistress, do genuinely care about the girls, and while they're entirely dysfunctional, it's made plain that this is because of their upbringing (the majority of them were sent to boarding school so their parents didn't have to deal with them, and the older ones are bitterly aware of it).
* Excalibur has Arthur: 'I was not born to live a man's life, but to be the stuff of future memory.'
* Excalibur has a supervillain hiding inside of the cake at a bachelor party (after replacing the stripper inside and leaving her bound and gagged in a closet) so he can assassinate the unsuspecting partygoers.
* Excalibur has this scene where Merlin mourns the passage of magic from England:
* Excalibur he was invoking this trope, but in reality, courtesy of grinding

stress, a bout of alchoholism, a curse, and exceptionally poor phrasing on Nightcrawler's part, he overreacted and took a swing at his teammate. Nightcrawler, for his part, was strongly tempted by Meggan, but steadfastly refused to act on it in any fashion.
* Excalibur how powerful Juggernaut is, and that the way to stop him is with non-physical attacks, but on the one hand, at this point in his history, Captain Britain is too hot-headed to listen, and on the other, there's some suggestion that he's deliberately keeping Juggernaut busy while the rest of the team round up a load of other escaped convicts. Anyway, as the Juggernaut, having curb-stomped the Captain, is trying to leave, Phoenix steps in and introduces herself...
* Excalibur I for Deus' ascension, this time it's shot down by the Excalibur II instead.)
* Excalibur including bed. Including when they are entertaining company of the feminine kind. Oddly the women don't seem to mind. Maybe it's a fetish.
* Excalibur in every department. Nightcrawler, for example, healed from his broken leg a bit faster then a regular human would. Nightcrawler doesn't have healing powers, he's just That Awesome because he is a mutant.
* Excalibur in its primary configuration. It even moves at a healthy 86 kph, impressive for a 70-ton 'Mech. It buys that mobility and long-range prowess with a woefully thin seven and a half tons of armor, enough to weather one or two light missile barrages, but not enough to survive repeated fire from bigger guns like a PPC or a 100mm autocannon.
* Excalibur in the Stone: The erroneous belief that Excalibur was the sword that was in the stone.
* Excalibur is dismayed when no other individual is willing to champion Guinevere — except for the newly-arrived, unarmored, untrained, (and so far unnamed) apprentice, who asks to champion Guinevere and is knighted by King Arthur for that purpose.
* Excalibur! It often reflects green light to make it look otherworldly.
* Excalibur, Kitty Pryde needs to answer a call of nature while being carried by Meggan across the Atlantic. They spot a freighter and land on it so she can go to the restroom, but the place is disgustingly filthy.
* Excalibur launches fighters by extending a crane of sorts that has StarFuries attached to it. The ship also has the hangar at the front, but it is normally closed during battle, only opening to receive the fighters after the end of the fight.
* Excalibur — she looked like what people expected her to look like, and consequently spent a good part of her childhood turning into a monster. Eventually, she managed to develop a strong enough sense of identity that other people's expectations no longer affected her shapeshifting.
* Excalibur, Morgana ages her son Mordred from a child to a young adult in order to face Arthur in combat.
* Excalibur: Morgana le Fey seeks to destroy Camelot in revenge for Uther killing her father.
* Excalibur, Morgana uses the magic she stole from Merlin to keep her looking young and beautiful. However, on the eve of the final battle, Merlin (in dream form) tricks her into repeating The Charm of Making, which ages her to an ugly old hag, so much that her son, Mordred, kills her on sight.
* Excalibur, Morgan Le Fay uses the magic she stole from Merlin to keep herself beautiful. When he tricks her to create a fog, her looks deteriorate to show her as an ugly, old woman, so much that her own son strangles her because he couldn't recognize her
* Excalibur. Mother Nature would like to add that a large icicle, rock, tree branch, or angry boar passes the test, so this prophecy is less difficult to get around than one would think (however, all of these aren't exactly an advantage when fighting a good swordsman). Additionally, there's also poison, slings, non-metal arrows, garrote wires, fire, fisticuffs, starvation...
* Excalibur, Nightcrawler keeps a constant vigil with Rachel/Phoenix after she lapses into a coma following the defeat of Necrom.

* Excalibur's equivalent is going to a little pub which Moira's father used to own in mainland Scotland, just a ways across Muir Island. No one there even looks at mutants funny, much to Nightcrawler's relief.
* Excalibur series was a powerful reality warper... who was utterly insane. An alternate world version of himself exterminated all the other superhumans of his reality then destroyed his entire universe via misuse of his abilities. The mainstream version is even more powerful, and sometimes doesn't even recognize that the "bundles of pretty string" he sees and torments are actually people seen through his reality distorting powers.
* Excalibur's old enemy Mojo; after they were apprehended, the team didn't see the point of putting them through any actual legal system, seeing as, despite their intelligence, they were far too dangerous. So they were incarcerated in a special cage at the London Zoo. (And were a popular attraction for a while.) They escaped a few times, and at present, are at large and in hiding.
* Excalibur, team enemy Gatecrasher devises an...unusual example: as Excalibur is making breakfast, one of the eggs jumps off the counter, breaks open, and reveals a cartoony bird who starts shouting at the team. As they stare at it in complete bogglement, it starts counting down...
* Excalibur that blinds enemies around them, stunning them and making them vulnerable to Finishers.
* Excalibur that Uther Pendragon is a far better warrior than he is a king. Arthur, while certainly a capable warrior, is also good at actually ruling a nation.
* Excalibur, these are the orders she would give them. They take the hint.
* Excalibur, the wizards (Merlin & Ulrich respectively) are called necromancers at some point. As neither film involves undead hordes and feature more traditional wizards, it is clear the older meaning is being invoked.
* Excalibur. To clarify: His sword form is perfectly symmetrical, and gives his meister powers that put them on the level of godhood (super speed, strength, etc.) Though, to wield him one must worship the very ground he walks on and follow all of his demands, if you don't do things EXACTLY his way, he won't do jack for you. The sword and his list of demands (1000 of them!) is SO annoying, nobody in the Manga has managed to use it (Some have tried, but when you bring it up, they always get the exact same look of dread on their face. It looks like a hybrid of the face one gets when constipated, combined with what occurs after a
* Excalibur was destroyed by a techno-mage they had hired to fight a war for them. The nanotech weapon he created for them took over their minds and forced them to murder each other.
* Excalibur was not already hitting the eleven, Uther is in full metal plate armor, with the queen laying under him. Ouch. No time to undress?
* Excalibur, when Arthur and his knights ride out to face Mordred for the final battle, a flower slowly blooms in the corner of the shot.
* Excalibur When the cruel and sociopathic imposter Opul Lun Sat-Yr-9 revealed she had killed Courtney Ross and taken her place, this Trope was Zigzagged. It was certainly a lie towards Captain Britain and most of the team. Kitty was hit a lot harder by this Trope, however, seeing as "Courtney" was a mentor to her, helping Kitty enroll in the St. Searle's School for Young Ladies, and arranging a deal to save St. Searle's from bankruptcy. Whether it was the first or second type in that case is unclear.
* Excalibur, who later became a priest, doesn't seem to mind spending a vacation enjoying this fact. He has to defeat another living island first, though.
* Excalibur with Lancelot. All of the knights had been afraid to level this accusation because her champion was Lancelot himself, whom no other knight can defeat.
* Excalibur, would protect against any blow struck at Arthur. The beginning of the end of Camelot was when someone stole the scabbard.
* Excalibur, "You must remember, there's always something cleverer than yourself." This was a particularly prescient warning since it was the first time Arthur faced Lancelot.
* "Excaliferb": A particularly strong throw-down during an epic monster battle

created Stonehenge.
* exceedingly ironically named) people often think he is a parody. As far as anyone can tell, he's serious.
* exceedingly. Sometimes vampires will become more and more human-like in appearance as they consume more blood/live longer. Sometimes... not.
* Excel Excel to blow out her vocal cords halfway through the series. The Japanese Excel isn't quite so bad, but Calvello apparently thought "sandpaper on chalkboard" was the right direction to take things, which had the aforementioned effect on her larynx.
* Excel getting dropped through a trapdoor by Il Palazzo. One time the rope he pulls to spring the trap has a sign saying
* Excella and at least two men become worm-people for a few moments and then just go straight to being masses of worms.
* excelled at making such moves look like the former while actually being the latter, to the point where even in the 21st century where wrestlers are employing much flashier versions of said moves as routine mid-match transitional spots, the back-to-basics versions performed by the legends are instantly recognized as match-enders or KO spots.
* Excellen Browning. In fact, Excellen plays on this trope by having Lamia address her as "Ex-oneesama" when they first meet.
* Excellent almost-full-scale models of the battleships used for many scenes, and good CGI models for the wide shots. Trope averted.
* Excellent Judge of Character. Jafar's bird Iago even mocks the Sultan for making such a claim.
* Excellent Judge of Character: Someone is actually good and usually correct in guessing who to trust or not.
* Excellently spoofed: Martin steels himself to tell Jeremy the Facts of Life and is hugely relieved when Jeremy says, "Dad, I know all this. We learned it at school." Martin smiles and relaxes, calmly asking if Jeremy has any questions. "Yeah, what's cunnilingus?" Cut to man falling from a building with a horrified scream. Followed immediately by a series of equally direct questions, with similar clips as "responses".
* Excellent real-life example of what an unusually powerful GRB is capable of:
* excellent relationship with Army CID Colonel Hollis Mann — so good they begin dating each other in fairly short order, and stay together for nearly a year — though that doesn't stop them from bickering over jurisdiction when their cases overlap. It's fairly clear that one of the reasons Gibbs is so into her is that she can go toe-to-toe with him on equal terms.
* Excel Saga about the same. Things get a little weird when they both simultaneously mention the apparent cheapness of their prototype laser guns.
* Excel Saga act towards the end of the series and fires Excel, he immediately proves himself a scarily efficient villain on his own (with a little help from Hyatt, who also proves a much more competent minion as soon as Excel is out of the picture).
* Excel Saga, an avalanche is careening towards the city security team. Sumiyoshi's reaction? "Yup."
* Excel Saga and ask for his help, he replies that in anime you can solve everything with explosions. He then holds up a lit dynamite stick, there is a large explosion, and everything is fine thereafter.
* Excel Saga and beyond) that it's impossible to keep track of them all.
* Excel Saga and indifference, Hyatt is the only one who is actually oblivious to the problems she causes to Watanabe. Even stronger in the manga where Hyatt flat-out just doesn't care about the problems she causes him.
* Excel Saga (and possibly Excel herself and the Ropponmatsu), are connected to a lost civilization called Solaria, which may well be an example of this. Particularly as Tenmangu Shiouji didn't believe their technology could be created on Earth. And if it can't be created on Earth that kind of leaves only one option...
* Excel Saga anime is based on this. Each episode, there's a scene of the director

forcing the writer to put his 'stamp of approval' on that episode's script, which is invariably a haphazard attempt to shoehorn his characters into a variety of inappropriate genres.
* Excel Saga anime talks, but soundlessly. His lines are visible on the screen just as his lines were written in the manga (i.e., right next to his head, without word bubbles).
* Excel Saga anime) to name some. Tokyo used to be like this as well before they merged the Tokyo (city) government with the Tokyo (prefecture) government to form the modern Tokyo Metropolis.
* Excel Saga are an alien race that is able to conquer planets because no one can resist their cuteness. Oddly, it seems only men are affected, though the only women we ever see them encounter are a really crazy girl and the only serious person in the whole show.
* Excel Saga are shown trying to get their big break by singing the theme song.
* Excel Saga, but a man wearing nothing but underwear is dragged offscreen by security guards.
* Excel Saga, but Excel and Elgala just seem to be that tough; once both got stuck in a massive explosion in the top floor of a building that collapsed on them, and they got out "just" practically covered in bandages.
* Excel Saga did this. On a mission to discover what the most popular sport in the country is, Excel and Hyatt get a job at a bowling alley right before it gets taken over by an evil terrorist group that wants to prove bowling is the world's greatest sport. Hyatt, a pair of TV hosts and Excel and Hyatt's idol singer doubles get held hostage in one of the lanes, in giant bowling pin costumes waiting to be knocked down by the evil group's balls. Until Excel uses her bowling balls to save them all and beat the bad guys.
* Excel Saga don't so much demolish the fourth wall as they never bother to build one in the first place.
* Excel Saga dub: "I have built this wooden underling-like puppet with an optional soy sauce puffy thingy!"
* Excel Saga elements, and then slowly starts introducing more sci-fi and deconstructive elements, and a more serious story.
* Excel Saga environment. However, they do not interact with any live-action performers.
* Excel Saga, Excel has an argument with director Nabeshin about making a musical episode (musicals, after all, take a lot of effort to produce). They conduct this argument while singing the melodies of the series' music. At the end of this segment, Hyatt chimes in, noting that it's already a musical (with Hyatt's enigmatic personality, it may be variant 4 or 5, though).
* Excel Saga Excel is given the mission of killing the creator of the manga the show is based on. While sneaking up on him he cheerfully sings to himself "La la la, manga artists are the scum of the Earth".
* Excel Saga, Excel tries to pull a coin from inside a vending machine, when she succeeds Hyatt asks if this is the result of the "finger training" excel practices every night to which Excel asks her to shut up.
* Excel Saga fighting the remaining ACROSS Five, all of whom look exactly like That Man, except for tie colors.
* Excel Saga following his disappearance. It is inferred that the real Miwa died thereabouts or possibly ascended to a higher plane of existence.
* Excel Saga force Koshi to authorize making an episode out of an earlier porn doujin of his.
* Excel Saga gets considerably darker – and is much more of a satire than a parody – not long after the adapted-to-anime material ends.
* Excel Saga has absolutely huge shoulder pads, as a parody of an evil overlord.
* Excel Saga has a few: two of them in episode 22 (one of Excel's many failures, and another of the Puchuus getting smacked), and a brief one in episode 24 (previous instances of Excel getting dropped down the pits by Il Palazzo).
* Excel Saga has, in place of the standard legal warning, a parody thereof which warns that violations will be "dealt with in the most severe manner possible, most

probably involving chicken feathers, cod liver oil and a very, very depraved walrus."
* Excel Saga have pasts that are not elaborated on. According to Dr. Kabapu Il Palazzo and he are the sole survivors of a lost civilization, but nothing has ever been explained in detail. Hyatt and Elgala might have had normal lives before joining ACROSS, but the only thing mentioned about their lives is that Hyatt joined ACROSS after seeing an ad in a newspaper, and Elgala worked at a hotel before joining ACROSS. The title character Excel might have been a completely different person before meeting Il Palazzo, based on her personality when she was amnesiac. And nothing has been revealed about Kabapu's secretary Ms. Momochi, even though she is always seen with Kabapu and interacts regularly with the rest of the cast.
* Excel Saga heavy (while conversely, Ropponmatsu II is the weight of a normal human, but without all the versatility.) When their creator is urged to combine the two and create a Do Anything Robot that weighs as much as a normal human, he blows off the idea as ridiculous.
* Excel Saga. His friends are visibly shocked, and he doesn't seem to be pleased with the change either. It was eventually shown that he gets it from his mother.
* Excel Saga: Hyatt catches on fire, horrifying Excel and Elgala and leaving them wondering if burning could kill her. It doesn't, but her incinerated skin just flakes off, revealing a pristine Hyatt beneath it.
* Excel Saga, Il Palazzo is setting up an extremely long domino chain. The Excel Girls kick a few of them down, though Il Palazzo stops the chain reaction in time, and responds by strangling them. The camera cuts away, and cuts back to plushies of them (a reference to how Japanese TV shows will sometimes sub in a cardboard cutout of a host if they're unavailable).
* Excel Saga. In Excel's case, it's for no other reason than the literally stated "It's your series. You have to live", with the resurrections performed by the Great Will of the Universe herself. In the case of Hyatt, her coming back from the dead is more of a running gag. Of course, you have to keep in mind that this series makes it its quest to parody absolutely everything.
* Excel Saga in his underground headquarters. Excel falls into it almost every time she sees Il Palazzo, and is aware of its existence, so it's not really a trap.
* Excel Saga in that family that actually speaks, while Sumiyoshi, his father, and his adorable little sister Canal all "speak" the same way.
* Excel Saga. In the anime, they're two distinct entities, while in the manga, there is only one Ropponmatsu core switched between the two bodies.
* Excel Saga. In the anime, you can actually briefly see twin swastikas in Excel's eyes as she vocally expresses her loyalty in the first episode.
* Excel Saga. In this case, it's unclear if she repressed her memories or lost her memories because she was hit by a car.
* Excel Saga in which Menchi escapes from Excel and joins a group of talking stray dogs, animals being the only focus on the episode.
* Excel Saga is a dog and is constantly referred to as such, but most people would guess "cat" upon seeing her.
* Excel Saga is subject to this gag at one point. There's plenty of amusing background scenery during the fall. Usually it's a fairly short fall, ending in a splash. However, the first time, Excel spends a good two minutes lamenting her fate, and later we see Il Palazzo hired Puchus to expand it. He eventually uses it to drop Excel from Japan to America.
* Excel Saga is that, after 23 episodes of balls-out wackiness and parodies, this one is played almost completely serious with only one or two attempts at humor.
* Excel Saga is willing to take a bullet for her leader, Il Palazzo. Several bullets. And an antitank rocket. All fired by him.
* Excel Saga, it doesn't look like the citizens will be subjugated any time soon. How far ACROSS progresses in this goal depends on the continuity.
* Excel Saga just as the next prisoner supposedly dies from the same electrocution.
* Excel Saga: Lord Il Palazzo sent Excel and Hyatt through the Earth from Japan to America, during which they actually did pass through the center of the Earth.
* Excel Saga manga dies abruptly of colon cancer and is rebuilt as an android. He

does not mind, but everyone else is a little weirded out, especially when he forgets to do human things and casually damages his body.
* Excel Saga manga, drawing his face and lots of other exposed skin full of rather embarrassing doodles with a marker that doesn't wash off. In retaliation, Watanabe gives him a thrashing with a baseball bat, while still recuperating — as a result, both end up back in hospital.
* Excel Saga manga had one that Excel and Elgala were shipped off to. An island for women prisoners where they'd lose out to their feral instincts in a savage world with no hope of escape, and probably some sexual harassment. Excel and Elgala escaped during the boat ride there, although they got attacked by sharks and whirlpools in the process.
* Excel Saga manga, when Watanabe, Sumiyoshi, Matsuya and Iwata first change into their costumes, they find out about by being dropped through the floor. Later, when Sumiyoshi comes in late for a meeting, he finds the others have already been dropped, and has to lower himself down his own chute, noting "Ah'm gonna break me neck doing this..."
* Excel Saga manga, where Iwata and Misaki are stuck in a snowstorm, and Iwata who is now a cyborg has his power source shut down. Assuming that he's out cold, Misaki first time talks to him affectionately, confessing that she appreciates his company, and may even love him. As it turns out, even though his external functions are offline, he's still perfectly conscious and heard the whole thing. Cue Misaki bribing Dr. Shiouji to delete Iwata's memory of the incident.
* Excel Saga. Matsuya undoes her ponytail and puts on a pair of glasses when she sneaks into a ILL Electronics store to look at the merchandise. Sumiyoshi spots her immediately. Her "Eeeeek!" at being discovered was uncharacteristic and quite charming.
* Excel Saga — between the director of the anime and the writer of the manga over the show's artistic direction.
* Excel Saga, naturally, as Hyatt dies all the time anyway, and she gets better as usual.
* Excel Saga". (Note that she's using the closest Japanese pronunciation, "akurasu". Say it a few times fast...)
* Excel Saga of anime in general is much easier (and more fun) to watch/understand in one go than if you were to try and watch it on TV one week at a time.
* Excel Saga. Of course, it's the kind of series where that isn't nearly the strangest thing going on.
* Excel Saga often shifts art styles for scenes or takes or even just eyecatches.
* Excel Saga: once, to Watanabe when he tries to kiss Hyatt (he kisses a Puchuu instead), and later, to Iwata when he tries to give Misaki CPR.
* Excel Saga on its second use — the parody turned out to be a standee, which fell away from the characters.
* Excel Saga on this trope in episode 18, where Iwata gets punched and says "Look for the twinkle!" just before he disappears into said twinkle.
* Excel Saga repeating itself. However, it conveniently puts him in a position of power in Fukuoka City and sets him against his age-old nemesis Lord Il Palazzo, so it's less than clear whether his words, or Il Palazzo's for that matter, can be trusted.
* Excel Saga runs into out-of-left-field calamities every time he tries to get somewhere with "Miss Ayasugi" (Hyatt).
* Excel Saga's 26th episode, "Going Too Far", the whole world ends up drowning in blood by the end, all puked up by Hyatt.
* Excel Saga. Since they're both hungry, all the items they name are foods.
* Excel Saga. So naturally one of the last episodes was played completely straight.
* Excel Saga speech, and the bad guy says, "Hey, that's that anime from awhile ago, Sailor ***, right? Nah, that one's already over..."
* Excel Saga swings through the window in his first appearance, holding a small girl under his arm.
* Excel Saga, thanks to the machinations of two silly warring entities.
* Excel Saga. The drama properly starts a few episodes before the finale. Of

course, with the show's trademark genre-hopping, a few serious emotional episodes were to be expected.
* Excel Saga, the head of ACROSS — the organization Il Palazzo serves — is revealed to be a previously-established character known only as "That Man". He makes reference to being one of the "ACROSS Six," the other five of whom are revealed in the unaired final episode to be "This Man, That Man There, That Man Over Here, This Man Over There, and This Man Over Here."
* Excel Saga, "The Interesting Giant Tower", Watanabe is surprised (and annoyed) to find his roommates applying for jobs at the same office building he's gone to, and Iwata quips "We must be joined together by the invisible red string of destiny!" Watanabe flips and hits him, declaring, "The red string is for boys and girls only!"
* Excel Saga, there are several Easter Eggs. At the start of each disc, rather than displaying the typical FBI warning screen, there is a warning (presumably written by Excel) stating "Il Plazzo is watching you!" and threatens the viewer if they illegally copy the discs. On Disc 3, Excel mention there are Easter Eggs on the DVDs. The majority are on Discs 2, 4 & 5 and include recipes, personal advertisements, and poems.
* Excel Saga. There is also a sudden shift from their tiny, adorable cries of "Puuchuu!" to overly dramatic broken English. "Ow that hurt! You make-a me bleeeeeed!". The protagonists seem to enjoy blowing them up and kicking them around.
* Excel Saga, they are shown being awarded medals for doing a war dance around Hyatt's comatose body a hundred times.
* Excel Saga. They're presented a wall full of unmarked buttons, all of them being traps. Excel tells Hyatt to push a button, and Excel suddenly finds herself dodging a ton of spears falling from the ceiling. After weaving her way out of the mess, she tells Hyatt to push another one, and then gets bonked on the head by a washtub.
* Excel Saga this in addition to giving her a lighter shade of blond than the manga, in which she's more often shown dirty to strawberry blond.
* Excel Saga uses a trail of medicine to lead Excel to her kidnappers. Unfortunately, birds then start eating the pills... and promptly die. Excel then follows the trail of dead birds back to Hyatt.
* Excel Saga was in an abandoned pier, where Excel espoused the virtues of Western and Eastern animation while beating up gangsters.
* Excel Saga, Watanabe gets infuriated at all the noise Excel's making in the next-door apartment at the end of episode 1.
* Excel Saga when Excel - currently employed as a janitor - notes her excitement at seeing a urinal for the first time while cleaning the men's room.
* Excel Saga, when Excel fell through a trapdoor and came out in a desert.
* Excel Saga, when Excel has to win a bowling competition and runs into Nabeshin in a restroom, who reveals he is a legendary bowling coach and offers to train her. The show then skips directly to the END of the training montage with the two of them watching the sunset on a beach Karate-Kid style and Nabeshin saying "I've taught you all I know." Excel then reveals that the reason we didn't see any training is because there wasn't any; all they did was go look at a sunset.
* Excel Saga, when Excel is in prison, another prisoner asks if there's anyone she likes. She attempts to give a shy thumbs-up of "yeah", but accidentally flips her new friend off on the first attempt.
* Excel Saga when he suggested that getting changed in the locker room would give him an opportunity to see her naked body. He got slapped into a vending machine so hard he demolished it.
* Excel Saga, where Excel is driven to distraction by the silhouette of a Visual Kei artist, Key, playing a guitar on the other side of a curtain. Due to the positioning of the instrument and the enthusiasm of his playing, the resulting shadow makes him look like he's stroking a very large phallus.
* Excel Saga), while the main characters lampshade the pit's creatures on a regular basis, for example wondering if Lord Il Palazzo personally hunts the animals put down there, since there shouldn't be any members in the organization besides the

main characters.
* Excel Saga, who also parodies this trope to the extreme and even has Nabeshin and Rikudo doing battle in a metaphor for the artistic battles that take place when a work is adapted from manga to anime.
* Excel Saga, who serves the Puchuus mainly because he cannot resist their illusory cuteness.
* Excel Saga with Aesop, who has "sporadic anal enlargement syndrome". On the toilet, writhing in agony, he shouts, "Oh, it's big!". Excel immediately runs away. Hyatt, oblivious, asks "What is big?" Excel drags her away and tells her not to ask. The toilet appears out of nowhere in the middle of a baseball field just to make this joke.
* Excel Saga with idiotic coaches and a star pitcher who beans everyone.
* Excel Saga with manga author Koshi Rikdo giving his (reluctant) approval to give the series a Genre Shift. The style and weirdness remained consistent enough despite this, however.
* Excel Saga, with That Man, who is consequently the main villain. In the last episode, we get several clones of That Man, including That Man Over There.
* Excelsior-class and it too served during the Dominion War of the 2370s.
* Excelsior-class ships filled the Federation ranks during the Dominion War.
* Excelsior is used by the Freakshow and allows them to augment their bodies with scrapyard cybernetic enhancements as well as giving them super strength and a narcotic high.
* Excelsior Phase One Lysandia, these are used to pick locks, instead of normal lockpicks.
* Excelsior, the lead ship of the Enterprise-D's class, is listed in the Star Trek Technical Manual as having an NX prefix but is later seen in Deep Space Nine as NCC-70637, it's unknown whether this was the same situation or whether the intention of the production staff changed later.
* Excelsior was more or less a standard ship of the fleet, yet, through a combination of her capabilities and her crew's skill and perseverance, became one of the most celebrated and legendary starships within the Federation.
* Excel's very first mission is to kill the creator of the manga, Koshi Rikdo. She goes through with it... twice.
* except a college student who was in a major accident with several other classmates, including another blonde student who closely resembled her, Whitney Cerak—thanks to the injuries sustained, her being unable to speak for a number of months after the accident, and the placement of a purse at the crash site, Laura's family sat by her bedside and did all they could to take care of her while Whitney's buried and grieved for the daughter they'd lost...only for everyone to discover the girl in the hospital was actually Whitney. It was made worse by the fact that the hospital staff was so convinced of their identification that they in turn dismissed Laura's family's suspicions and encouraged them to believe their daughter's written notes about her parents' names and calling them "false parents" was a case of amnesia or brain damage...so that until the truth came out, Whitney was in the position of actually knowing the truth, but unable to convince anyone of it. It would be easy to imagine her eventually losing her mind, unable to determine what was real or coming to believe she actually was Laura, if the mix-up had been sustained any longer.
* except add to that the fact he punched a diamond wall with his bare fists for 4 1/2 billion years first, just for her
* except a female Avatar, who is half human, so their daughters Selkie and Velouria will fit into this trope. If either of them marry Azura, Shigure will fit this trope and inherited their class.
* except Alice is/does X" as an Inversion. This is incorrect; an example such as this would constitute an Exaggeration rather than an Inversion, as the trope is used on more than one character.
* except, a little bird who was perpetually 'Cuckoo for Cocoa Puffs' and a harassed leprechaun who instead of gold hoarded delicious marshmallows from devious kids: "They're always after me Lucky Charms!"

* Except anyone who picks up his scythe and uses it gradually turns into Reis, his legend too powerful to be killed by mere death.
* except as mercenaries and bandits, making them desperate and dangerous to almost anyone.
* except at national meets (all four constituent countries have their own national championships, with an overall British Championships also held) and the Commonwealth Games.
* Except by this period of time the Sith are no longer a species, they're a cult/society. Ben isn't advocating the annihilation of every being amongst the Lost Tribe, though obviously many will die in the war that ensues, he's advocating the destruction of a culture built on a genuinely evil philosophy. In a similar way, the Allies of World War II spoke of destroying Nazism, not the German people.
* except Cordy starts throwing herself at him, including the person who cast the spell. Probably only 'didn't work' on Cordy because she already loved him.
* Except Donald and Douglas only did it in the original novels. The TV adaptation of the story "The Missing Coach", in which this trope is a major plot point, was filmed, but Britt Allcroft ultimately cancelled the episode because younger audiences would find the plot "too complicated", and replaced the episode with "Thomas, Percy, and the Coal". Pictures of the episode have surfaced on the internet over the past decade.
* Except Einst, maybe because they hasn't any kind of economical activities.
* Except fairly early in the series, it's barely ever used in battle and Flash Stepping from then on is generally portrayed as a result of two characters having vastly different movement speeds in general.
* Except "Fields of Athenry" isn't a traditional song — it was written in the 1970s by Pete St. John, and most people know it from the Paddy Reilly cover, making it another example of this trope.
* Except fighters. They are explicitly mentioned as completely unfeasible in their situation. There are some smaller ships taking their tactical niche, mostly missile defence and tying the lighter fleet units, but these aren't tiny single-seat tin cans, but warships in their own right, almost the size of a pre-war destroyer (incidentally, called "tin-cans"
* Except for a couple of establishing shots, most scenes set in California or Nevada in
* Except for a few songs, all of the music is royalty-free. The infamously long opening driving scene has a short royalty-free clip simply loop multiple times.
* except for Apollo Justice, will have a different prosecutor preside over the case than the main prosecutor of the game.
* Except for Blunt, who thinks humans are perfect and does not even consider that
* Except for Byakuya Kuchiki getting his Senbonzakura halted by Yoruichi in the middle of transformation, and being forced to block one of Renji's attacks before he could release his shikai.
* except for Cho who decides to get another taco (and doesn't seem to mind that he's not with anyone, plus he's chuffed because he has just learned of his promotion).
* Except for Chryssalids, which can't attack you (or create more doubles of themselves) if you're on air. It's not advisable to hover too near to them, in any case.
* Except for Gunny Sergeant Bardue, whose behaviour is less Properly Paranoid and more simply
* Except for his final battle, which is so far beyond weaksauce it comes out the other side and ends up being deeply compelling.
* Except for his little known debut "What Room Was the Holiday In" and songs on which he was a featured artist, all of
* Except for Horton's splinter group, who decide to kill them all rather than risk letting any of them get the Prize.
* except for knowing when they're needed, with lots of weirdly shaped doors because the space station was built by the Cardassians.
* Except for Ling's short-lived, played-for-laughs flirting with Winry and some

references to
* Except for maybe a giant rollerblade going "Blah blah blah blah blah..."
* Except for Minaka (who's crazy), everyone working at MBI has this reaction in
* Except for older ex-USSR inhabitants and Soviet cinema buffs, few people know that the core of "Resurrection" by trance duo PPK is actually
* except for one boss in particular who you have to flee multiple times which can either be heartwarming or frustrating depending on how you view the lesson which can be summed up as "You have to be the bigger person no matter what others do to you". That said, the best possible ending requires you sparing every boss and enemy regardless of the encounter, so the game is certainly implying it's your duty to let everything they do slide, but berates the player for not expecting the game narrative to do the same back.
* Except for pop-up ads and surveys when you want to download something; they need to be eradicated off the face of the earth.
* Except for seasons 1 and 3, Jack is never actually working for CTU. Nevertheless, by the half-way point of the first episode, the situation is already dire enough that Jack is put in charge.
* Except for Susan Strong, who is either human or hyooman (fish-person), the truth being left ambiguous to the viewer (though Finn presumably learned the truth at the end of her second appearance).
* except for the apocalyptic prediction made by McGucket with the townspeople now enjoying the party that had been promised to them generations ago, and Pacifica lifting a 150-year-old curse on her family. But as we've seen, her parents psychologically abused her into responding to a bell behind closed doors. So what do her parents have in store for her once everyone goes home for the night?
* Except for the fact that the hand was eternally devoted to Voldemort and ended up choking Wormtail when he hesitated to attack Harry in the seventh book.
* ...except for the female gnome Death Knights, whose altered voicesets just makes them sound like they recorded their lines
* Except for the few moments he's shown surprise, Ballister Blackheart from
* Except for the gleeful delight he takes in tormenting Mundanes, and the casualness with which he kills them.
* Except for the Hungarian comic, there has never been a faithful adaptation, sequel or parody of Pierre Boulle's novel
* Except for the one with Zelda, any dream, hallucination, transformation sequence, flashback, abstract idea, or dizzy state in
* except for the ruling family, and apparently a few nobles, the town's entire population is made up of revenants Dark and Secret about the place: it's a town, it's in a mountain pass.
* except for the sound, otherwise, used in every other explosion in the movie.
* Except for the Warden (who's naively oblivious), the other COs at Fox River are corrupt. And technically all are incompetent, considering the escape.
* *Except for those naturally occurring in celery juice.. Curing meat produces a particular flavor that people are accustomed to, so the presence of sodium nitrite or nitrate isn't negotiable, only whether you add it on its own or as part of a less-refined ingredient.
* Except for those who have just the Guns skill combat-wise, like the Killer or the Techie. Those guys just dive around, take cover, and use the
* Except for very occasional color changes (and armor updates every time the show starts being filmed in a new game), all characters in
* (except for Vinsmoke Sanji) are assassins, including the entire army they command, Germa 66.
* Except for Willie (played by bodybuilder Peter Lupus), all the original cast of
* except gay, conservative, and religious (specifically a faithful-if dissenting-Catholic).
* Except Grayson which, being colonized by an arch-traditionalist Luddite cult, uses Earth time units in spite of them being nowhere near suitable for the planet's rotational and orbital times. To top it off, they are the only culture that still uses A.D. to mean

* Except he didn't kill the last one. Things are more complicated than it seems.) (Technically, he's a spree killer, but the game identifies him as a serial killer)
* Except identical "mutilations" have been found on carcasses of wild animals like elk and coyotes. Really, only the "maggots and other scavengers" explanation holds water once the phenomenon is studied
* Except if you get hit with shrapnel in one of the iliac arteries and bleed out within minutes. It may be the healthiest spot, but still not healthy enough.
* Except inasmuch as Assassins are explicitly no good at unarmed combat - because no Assassin is ever unarmed.
* Except in the episode "The Trouble With Tribbles", when the Tribbles infest this system, and arrive piled on Captain Kirk's tray; one of them has even jammed itself into his drinking glass.
* Except in the Hungarian version, where for some reason Alfred's dream ballet double has a
* Except in Vampire Harmony's early appearances, particularly the scene where she and Xander get into a
* exceptionally clever for a baby, she is small enough to sleep in a casserole dish. Her exact age is not specified for the first twelve books, and flashbacks to "before Sunny" carefully avoid giving her older siblings' ages at the time, forestalling calculation. The thirteenth book stated that Sunny was about two, which would mean she was about six months at the most in book one, and eighteen months have passed since.
* exceptionally, he's a very peaceable soul; all he wants to do is lie around all day looking at things.
* exceptionally overdone and usually dangerous displays in the contest (leading to disqualification) and the good doctor was the best of the legal entrants. Given that one year, his display was bright enough to enable a plane landing, illegal is likely. (Then again, they won that year.)
* Exceptionally thick biofilm, called a microbial mat, covered the bottom of most of the ocean for much if not most of Earth's history (starting fairly soon after the beginning of microbial life 3.7 billion years ago). The mat only disappeared in the Cambrian (about 600 million years ago), when animals learned how to burrow into the sand (which broke up the mat by opening up channels for oxygen to permeate the soil, poisoning the anaerobic bacteria).
* Exceptionally Tolerant: You or the society in which you live are totally accepting of everyone.
* exception. It turns out the Jaffa sense of humor just doesn't translate through cultures well.
* Exception: the British music/video/games retailer Zavvi now prices most of its goods in pounds flat.
* Exception to the Rule - injects her victims with sea snake venom to paralyse them.
* Exception to the Rule, when private detective Burt Ramsey confronts the villainous Carla Rainer.
* Except Isaac isn't her adoptive dad. He's the genuine article, even when you consider the revelation of Sari's "birth". After all, his DNA was required in order to bring her "online" and was what made her part-Human, effectively making her his biological daughter at the same time as being a robotic alien.
* Except It Abide in the Vine universe, who went a little feral from brain damage and HYDRA's abuse. After being freed from HYDRA, he calms down a bit, but he still tries to snack on a Nazi soldier he just dispatched.
* Except it's later revealed that it didn't detect souls, but Sinclair/Valen's DNA.
* Except it's revealed that he actually doesn't kill people, his ability to attack people without
* except Lisa (who was out) and Lily (who already is a baby). When they poop their diapers, they say, "Poo-poo!" which is Lily's catchphrase. Then, when they turn back but the pets are now babies, Lincoln and Lisa say, "Poo-poo!" in the way they'd usually say, "Dang it!".
* except Mount Doom is actually the toilet and it appears that the Giant Rat was

just playing with figures all along.
* Except Naruto and Kiba. And Sasuke and Yoroi. So really only half of the Leaf v. Leaf fights.
* Except natives of Gallifrey are sometimes Gallifreyans, playing it straight. Sometimes it's just another name for Time Lords, other times it seems to be two separate descriptors (Time Lords being the ones that use time travel). The episode "
* Except not particularly 'realistically'... there seems to be some misunderstanding about what the book means when the Bennets are described as 'poor'. There's no reason to suppose from the text that they don't still have a team of servants to clean the house for them- that would be a remarkable circumstance for people of their caste- servants were cheap. (A genteel Regency-era home shouldn't be
* Except not quite. The book is full of references to death-cults, sightings of and interactions with cannibals and their victims, an old man they share a meal and a fire with on the road, and
* except not really wears pink and owns a very frilly pink restaurant and sells his own perfume. A few people even have trouble telling if he's a man or a woman, despite his facial hair and large muscular arms.
* Except, not really. While Lucifer did feel something for Eve, his first love has always been Chloe Decker, which he admits in the Season Four finale.
* Except now they've stopped again, and this time it really IS because they don't like the "fried" part- they're trying to emphasize their new grilled menu. Y'know, the stuff you can easily make at home...
* Except, of course, the part at the end where Athena literally descends from the heavens to protect Odysseus from the disgruntled families of the dead suitors, the
* Except of that the information is written orwellian style from a pro-imperial standpoint so of course they are going to say it's necessary when they are covering their own asses no villainous extremist wh o isn't in it
* Except on "Chaos Mode" in some games, where it's inverted. All it takes to kill the player is (for example, in Warriors Orochi) 3~5 arrows... And let's not get started about how "enraged" (an in-game boss status, where the boss is juiced up with red
* Except Otacon specifically instructed Snake to put the Solid Eye over his left eye. Big Boss didn't have his right eye.
* except Perrier water bottles. Once the water inside is removed, however, even those suffer the same fate.
* Except possibly in Tokyo, where Hiro and Ando are currently advertising a
* Except possibly on the highest "usable worlds" setting, nearly all of the worlds you encounter are not only not earthlike but completely uninhabitable quality 0 gas giants or tiny balls of scorched or frozen rock. Although there are weird mega-events that occasionally roll through and turn an entire system into medium to high quality potential colonies, regardless of the size or nature of the planets.
* Except possibly the Cashbot CFO, where you have to fling safes at him to damage him. And then he gets run over by a train.
* Except Roran's main purpose for attacking them was to rescue his beloved, Katrina, who was being held in the Ra'zac's dungeons.
* Except she was never the real Spring Maiden, just a decoy—meaning Raven mocking Cinder's ridiculously appropriate name was actually a hint that she had done something similar herself.
* Except Tau, who are more pragmatic and whose commanders look little different from their other
* Except that any denomination that believes in the original sin sees babies as inherently sinful.
* Except that as it turns out, they did make a port of some of those games. The clincher is that
* Except that as the song goes on, it becomes apparent that it's not even a breakup song at all; "Darcy" is the
* Except that Banagher ISN'T a Cyber-Newtype at all, he's a perfectly natural one.

All Marida said was that they might
* Except that cuckoo clocks were invented (and are still mostly produced) in the Black Forest region of Germany, not Switzerland. Moreover, movements (mechanisms, that is) for most of the budget Swiss clocks and watches are made in Russia and Asia, and are purchased in bulk by Swiss watchmakers for casing and reselling.
* Except that he doesn't know his mother was actually much more closely related. We think anyway.
* Except that he has to care for Huey, Dewey and Louey, who under his inept parenting (mostly consisting of bending on their every whim) have become needy couch potatoes estranged from reality.
* Except that if you look closely at the cover of said comic, there appears to be a spotlight on Gwen's face, practically revealing that she's gonna die.
* Except that instead of talking with them, she challenges them to fight her, knowing that they were disguised Yiga.
* Except that in the book Asmodeus is described as killing his prey with venom, rather than the discretion shots the animated series had to show, and anyways the fox came back in the second season.
* Except that in the second game there is another ritual that must be performed if the first can't be done for some reason.
* Except that it never seems to be played as anything final, Kaoru of
* except that it's a white wig, and she's actually bald. She wears it to cosplay as her Trollsona
* Except that it totally was here in the Japanese version. Just not nearly as often.
* (except that it turns out he isn't really deaf but pretends to be in order to overhear things not meant for him to hear). It is up to George's cousins to smuggle food in to her through the window, and much of consequence in the later parts of the plot flows from this.
* Except that many denominations that believe in original sin also believe in the Age of Accountability, which denotes that age at which a person becomes mature enough to be held responsible by God for his or her sins.
* Except that Northmoor's not really dead, but being locked in the Bureau's power plant to act as its power source
* Except that one of the doctors was shining a light in her eye at the time, noticed the pupilary contraction, and then checked it again to confirm it, which immediately tipped off everybody that the Ancient was still alive.
* Except that one time where Jonathan disarmed a gun-wielding multiple murderer
* Except that Sam doesn't like Austin because everyone else does. At the beginning, she seems to think he's just another
* Except that since they were too far away to receive useful input from the firing ships targeting computers they were relatively ineffective anyway unless
* Except that the above line is directed at an enemy, not a friend, and said sister is actually
* Except that the gun she gives him is loaded with duds, and he's been set up to get beaten to death by the dad. And he's not the first guy she's done this to. Why? Because her father gets off on this, and she's daddy's girl.
* Except that the original narrator was actually portrayed by a man until it premiered on Broadway more than decade after
* except that while it fits the style of Schilder's music, it does not seem to sound like any specific song.
* Except the Baneblade. Which has 11 weapons, each acting idependently, tons of hit points and the most powerful cannons in the game. Unless you bring your entire army/superunits, chances are it's going to wipe your base out. The Land Raider is also an exception, it's blend of strong firepower and tons of health is further augmented by a special ability that makes it temporarily
* Except the best ending pits you against a ridiculously powerful boss, and the allies you kill will rise to fight you again in the bad ending. Without using it moderately to gain some powers in the first playthroughs, it can be pretty difficult.

* except the cockpit, leaving the pilot completely defenseless: again, different authors draw them with either a light robe or nothing at all. The purpose of the machine is to fight while the pilot atones for their crimes by enduring damage (being kept alive by pumping their brain full of drugs), with only the Emperor's blessing to protect them.
* except the Commander rules committee. The "Fish Hulk" deck was objectively a tier-zero strategy in competitive Commander, but it was unheard of in the land of casual play and the rules committee had no interest in banning a card that had no impact on the vast majority of players. It took three months of open letters, petitions, and heated discussions to convince the committee to change their minds.
* Except the dog was perfectly fine, which leads to Belushi's deadpan delivery of "I hate you."
* Except the fact that fundamentalists believe that UFO encounter aliens are literal fallen angels/devils from the sky. It is simply that fundamentalists believe in spiritual/interdimensional types of aliens in the form of devils that live in space or the second heaven, not biological/physical ones that live on planets.
* Except the Gale answers all the questions in a self-consistent manner. Sayid thinks that he's probably lying, but can't tell for certain. Later the captive gives him directions to the balloon and his wife's grave as proof. Sayid follows the directions and discovers the balloon and grave just where they are supposed to be. However, Sayi is so obsessed with the idea that Gale is lying that he proceeds to DIG UP the grave to further test the story. This turns out to be an incredibly wise move, as there is not the body of a woman in the grave, but a man. A man with an ID labelled "Henry Gale"
* Except the last one, in which Peter calls Canadians freeloaders, then just flat out says, "Canada sucks!" after a minute of silence.
* Except the one episode, when it gets reprogrammed with a husky female voice.
* Except the one in physical therapy, who really did take that step out of love.
* ...Except the one time they accidentally botched the ship to be crewed by just 8 skeletons.
* except the Pyro, especially with their domination quotes. Highlights include:
* Except there's nothing saying that all the Bhaalspawn are the same age. After all, Bhaal's death had been foretold centuries earlier, presumably he could've started making heirs early enough for a dragon to grow up.
* ...except there was more to the loop than once thought. The Ashes video "When?" confirmed that the "doppelgänger" Stranger!Archie saw before the aforementioned backfist was Exiled!Archie, and that he was indeed present at
* Except these are signal corps academy cadets. Which may or may not make their NBC training routine cooler.
* Except the villains of the stories very firmly establish real consequences for such an ability; in fact, all of the "Spiral Power" the heroes use
* Except they made sure to be slow enough to stay in formation. Unlike some weapons there is absolutely no way to use a pike except in a tight, arrayed formation.
* Except they spent too long level-grinding so the king got tricked into thinking some other idiots/jerks were the light warriors, and in the end four White Mages end up killing the Big Bad.
* except they were in love with each other. There was also a New Jersey game show sketch called "Ohhh!".
* Except to control them. The Zerg then promptly became Precursor Killers as he sicced them on his kind alongside his followers.
* except to her former existence. As we don't get to see much of "his" life before the transformation we're given no real motivation for this decision.
* Except very few people who go to shows like this don't want to be hypnotized. Trances can be quite pleasurable and relaxing. People can put themselves in this sort of state. For a quick example, just relax and stare at a random spot with your vision unfocused for a few seconds. Then see how difficult it is to pull yourself away.

* except Vex; since their brains/cores are in their torsos, they'll keep fighting even if you completely blow their heads off.
* except when he frequently is in the fluff). He often fights with a longsword made of molten metal.
* Except when he got plenty of applause and said things like "Yay! Sausinges!"
* Except when they don't, which is most of the time. The application of the Prime Directive is murky to say the least, in all the series a lot of episodes deal with the Federation directly and often secretly saving pre-warp civilizations from natural disasters.
* except when they're not so lucky, demonstrating foresight unheard-of in an ork.
* Except Yukio is actually the kind childhood friend, and Rin happens to be something of a delinquent and
* Excerpt of an old exchange from the 1980s between two small-town Brazilian politicians, registered in a judicial complaint: "...and if it happens to be convenient to you, Mr. Mayor, you could even
* (excerpts pictured). Its influence from Very Nice Very Nice can be plainly seen (the same image of the audience in 3D glasses is present in the original).
* Excess Baggage. Emily Hope fakes her own kidnapping to get her father's attention. She handcuffs herself and puts herself in the trunk of her car, but a criminal steals the car while she's in it and the fake kidnapping turns into a real one.
* Excess Baggage. She wants to make her father think she's been kidnapped, so she ties herself up and locks herself in the trunk of a car. Then a real car thief steals the car with her inside...
* Excession & other inconspicuous places after their last big war. Some of these depots might be moving into regions of space that could play host to events of interest... in a couple of centuries.
* Excession uses this as karmic punishment for a retired soldier who was involved in a genocidal campaign, by making him relive the agonising deaths of his victims until the stress kills him.
* Excession, which shocks every AI Mind which sees it as it is somehow connected to Infraspace and Ultraspace simultaneously, acting as a bridge between three universes at once.
* Excessive artificial tanning, be it from spraying or using a bed. Tanning had been very popular in the late 1960s and 1970s as well as the late 1990s, and it was especially huge in the 2000s when spray tanning was popular with celebrities to achieve that sun-kissed glow. However, some took the practice
* Excessive Evil Eyeshadow, and a dead bird in her hair that could be mistake for a bow at a glance.
* Excessive Evil Eyeshadow hippie. But when she wants to look scary and "witchy," the cosmetics come out and take action.
* Excessive Evil Eyeshadow: Villains or other evil characters wearing excessive, dark-colored makeup on and around their eyes.
* (excessive gore warning!) in the background of which many people swear they can see the letter "M" scrawled on the wall in blood, or paint. Since Kelly was in no shape to do this as or after the killer exited, she would have had to do it earlier in the evening, at which time she probably would have been better off screaming. There seems little reason for the killer to write it, and at any rate, his writing would be neater. But clearly, the "M" exists only in the imaginations of some people who have stared at the photo a little too long. There also seems little reason for an "M." There was a suspect whose first name was Montague, but aside from the fact that he seems not to have become a suspect until after Kelly's murder, there's no reason to think she knew him; in other words, she couldn't have drawn his initial on the wall if she didn't know it.
* Excessive light pollution on Earth at night, especially on cloudy nights, can produce a
* excessively elaborate secret handshake is noticed by everyone, advertising rather than concealing the secret.
* excessively of his little sister, to the point of scaring Ezreal away from

pursuing a serious relationship with her. Not much has been officially revealed on how Garen feels towards Lux, except as a stoically understanding big brother that believes she is a strong girl on her own and has enough willpower to make her own decision. He may even welcome Ezreal's companionship with Lux. Garen in general is mainly depicted as a professional Demacian soldier whose attraction to Katarina is an interesting conflict of interest.
* excessively so!) and says, "Hmm!". He also talks in a singsong voice a lot.
* Excessive Mourning: Someone mourns another person's death to the point that they become a problem.
* Excessive mourning wakes the dead: The belief that excessive mourning disturbs the dead's rest was a fairly common superstition in Europe from the Middle Ages to about the eighteenth century. That's why English has the term 'wake' in the first place.
* Excessive procrastination may be a symptom of depression for some sufferers, as depression is notorious for causing sufferers to lose interest in things they once enjoyed or were active in. Unfortunately, it's one of the most commonly overlooked symptoms because to someone unfamiliar with depression, it comes off as pure laziness. It's not so much they're trying to procrastinate as it is they simply don't have the energy.
* Exchange of two minds switches the mind of the caster and the mind of the target. It has a relatively short default duration, but can be extended to "permanent" with the expenditure of raw vis. The book tries to forestall players seeking to make themselves immortal via bodyjacking by noting mages who take over younger bodies find themselves heavily distracted by the sheer passion of having a younger, stronger body again.
* Excitebike parodies were all done in ways that looked close, if not identical to their video game counterparts.
* excited and starts a rebellion against him because it gives him something to do.
* Excite Truck Lots of nitro and ludicrous jumps contribute to the over-the-top feel.
* Exclamation marks and ellipses (...) carry a lot of emotional punch, so use them sparingly. Spamming the exclamation mark is reserved for scenes of utmost urgency; spamming the ellipsis is reserved for fleeting streams of consciousness. Neither of these is likely to belong here. In a moment of extreme excitement, one exclamation mark is permissible. More than one is unnecessary, unattractive, and ungood.
* Excluding a rotating cast of underwear models, David DeCoteau mainly uses former teen and child actors from the 60's and 70's and the occasional actor from some of his earlier works. These include
* Excluding dinosaurs, other appearances include (in chronological order):
* Excluding the royal family, Law is currently the only known survivor of "The White City" Flevance.
* Excluding the teen and child characters, most of the female cast in the
* exclusive 25th episode OVA shows, however, that Daru will eventually meet up with Suzuha's mother and she'll be born 7 years later in 2017. Her disappearance in the series is because only that particular version of her (a Shell-Shocked Veteran
* Exclusive Clique Clubhouse: Certain student groups get their own hideouts and housing.
* Exclusive Clique Clubhouse: Cliques and other groups get their own unique housing.
* Exclusively for German-speaking countries of "Liebe ist alles", and got disappointed that all the people who had purchased the original track less than a decade earlier wouldn't buy the same song with the same instrumentation again in English.
* exclusively male) prefers to attack with a hypnosis-lifedrain-combo.
* Exclusive to the Pro edition is a more traditional skill shot: plunge the ball into the leftmost top lane for points and an increase in bonus multiplier.
* Excrement Statement, as in bunny language, peeing on something that isn't yours is an ultimate insult, along with getting a point across that they are really angry with someone.

* Excrement Statement: Just to show you how much sick I am of you, I'm going to take a piss and a shit in your mouth!
* Excretion instead of sex: Gibbs encouraged Kate to "stay hydrated", specifically to use her as a distraction when she went to the head.
* Excrucians speaks of the five hundred years of human progress which got unmade, changing history considerably.
* Excuse Boomerang: A person's excuse backfires when it is used against them as an excuse for punishing them for their actions.
* Excuse Boomerang: Someone makes an excuse to try and avoid getting in trouble, only for the excuse to be used against them as an excuse for punishing them anyway.
* Excused which aired on February 13th, 2012, two girls excused a 22-year-old guy, Sean because they doesn't want to sit in the couch and watch cartoons.
* Excuse Me Dentist, It's Touching Me!: Tomori crossdresses for a few reasons: he finds it fun, he thinks he looks nice when doing so, and it makes it easier to have a life outside of the Yakuza, and he's overall a very nice man outside of his insensitivity when talking and snarky tendencies, and the sanest person in the cast.
* "excuse me princess" exchange, which starts when Han thinks Leia wants him to stay because of the way she feels about him:
* Excuse me, sir!! Do you have Prince Albert in a can?? YOU DO?? Well, ya better let the poor guy out!"
* Excuse Plot: A bare-bones plot that's only there as a justification for the gameplay.
* Excuse Plot has you seeking vengeance on the evil wizard who stole your patootie.
* Excuse Plot involves a fiendishly addictive game sucking players into arcades in the year 2210.
* Excuse Plot is slowly giving the players breadcrumbs through comics and videos.
* Excuse Plot is that the baddies have kidnapped his daughter to force him into doing their bidding. It becomes clear straight away that this isn't going to work.
* Excuse Plot. This isn't even mentioning that they're intelligent and capable of telepathic speech, so the pseudodragon should be able to point this out and ask to be released, and a simple Detect Evil spell (which nearly any celestial can cast) would verify it was telling the truth. So either the celestials running the dungeon are complete morons, or they're such paranoid jerks that they locked up the dragon anyway.
* Excuse Plot to serve as breeding machines for their species. The result, of course, is that Duke frequently stumbles on breeding pods: naked, writhing, moaning women wrapped in vine-like cocoons begging Duke to kill them.
* Excuse Plot. Two warring countries have finally made peace after 47 years of war, but the weapon manufacturer of both sides is pissed and so hires a mercenary to reignite the hostilities.
* Excuse Plot video game; it's not quite clear if Wayne and Garth were sucked into the game or if the baddies came out, but the levels are 90's platformer versions of a few places from the movie; Wayne must use his laser-shooting guitar to rescue Garth, who has been consumed by the purple gelatinous cube from that game in Noah's Arcade in the movie.
* Excuse Plot who had seen an embarrassing photo of him playing with his favorite rubbery ducky that had been posted on the Hellternet.
* Excuse Question - A test or skill question used to prevent a contest from being declared a lottery
* Excuses... Excuses..., after learning that Applejack is a trans mare, Shining Armor has a dream featuring a male Applejack that speaks this way. He's exaggerating male stereotypes:
* Excuses... Excuses...: Cadence has cravings for pickles. She claims it's because she needs to replenish her electrolytes due to peeing more.
* Excuses... Excuses... having already gone out on a date with Applejack.
* Excuses... Excuses... on what dating a mare could mean for her sexuality.
* "Ex'D Ex": A jealous ex tries to wreck his ex-girlfriend's date, only for him to get run over by the tractor she and her new boyfriend were driving in.

* Exdor's robots, which number seven, were built specifically to kill Jack. Each of them is an equal with Jack in speed, attack him in a coordinated manner, and are completely encased in armor that even Jack's sword cannot break, requiring Exdor, who secretly wants them destroyed, to equip Jack with the force needed to cut them open. Even then, Jack can only destroy six of them—he requires
* .EXE ~ A Virus Containment Game: The third game contains a character whose full name is "270 degree (not 90 degree) Rotated Chester Alan Arthur, 21st President of the United States. (But you can call him Chester.) Yes, this is his full name including the parentheticals and this statement also." For obvious reasons, almost everyone just calls him Chester.
* executed Ankh-Morpork's last king. Vimes himself is now a fairly straight example, as he is both the richest man in the city since marrying Lady Sybil Ramkin, and his service to the city has had him raised up to the level of Duke and ambassador.
* Executed brilliantly, beautifully, heartwarmingly well at the conclusion of
* executed worse than them and they've repeatedly demonstrated their skill at handling them. When short-sighted bureaucrats drop the ball and cause completely avoidable disasters, the Toughs can be trusted to get the job done.
* Execute Program. He's dead for about half an hour, but then he's...well, fine.
* executes Loghain Mac Tir, should you decide to kill him (if Alistair doesn't do it first).
* executes someone by using his lightsaber to bisect him from the crown of his head right down.
* Executing captive troops became an option within the game series from
* Executing the falsely accused, genocide of the Seireitei, bloody war with the Gotei, raids into the human world,
* Execution, all characters involved agree to never admit to anything, lest they incur Mitsuru's wrath.
* Execution", as he is about to be hanged for murder on November 14, 1880, Joe Caswell is transported forward in time to 1960 by Professor Manion.
* execution by firing squad, a soldier condemned for dishonorable crimes will be tied to a chair and shot in the back as he's considered to not deserve the "honor" of being shot in the chest.
* Executioner's protagonist), who arranges for men to be sent to his island so he can hunt them. He also has a room full of the skulls of people he killed, and even talks to one of them near the end.
* execution move has the player opening the loading catch, wrapping around the enemy's neck, and giving it a sharp twist, resulting in a broken neck accompanied by a spray of blood.
* execution of one of the cultists. It was horrible enough to qualify him as the group's Token Evil Teammate.
* execution weapon to ensure Rukia couldn't be executed. Yamamoto, incensed by their betrayal and making exactly the same argument Byakuya had made to Ichigo (that society takes precedence over the personal), proceeded to engage them in a fight that would have been to the death had the truth about Rukia's execution not come out in an extremely timely fashion. His personal opinion on the matter of Rukia's execution is never revealed, to him, it didn't matter if it was right or wrong. Upholding one's duty was the only 'right' he was interested in.
* Executive Anthony Santa Croce is in "Mr. Monk and His Biggest Fan" where he is one of the guys sitting down in the background when Marci Maven begins bidding
* Executive Assault: a bunch of feuding corporations land on an alien planet and immediately start building robot armies and waging war to see who gets to exploit its resources.
* Executive Assault does this with the elevator leading to your office.
* Executive Decision after Sergeant Matheny, the squad's explosives expert, is critically injured and paralyzed, aviation engineer Dennis Cahill (who has been left behind to "keep an eye" on Matheny) is forced to try his hand at defusing the bomb. He does just that, in a manner that Matheny admits he never would have thought of. Similarly, Dr. Grant joins in the final assault on the terrorists

because there are not enough commandos left to take out all the terrorists at once.
* Executive Decision because modern aircraft are very complex, and experience has shown that forgetting a step either in flight or in maintenance can have disastrous consequences.
* Executive Decision had a boarding party infiltrating a plane mid-flight.
* Executive Decision had a core that would explode if anyone touched the laser security grid around it.
* Executive Decision has elements of this, being able to silently inject a boarding party into a flying jetliner. The system doesn't work perfectly—one of the team gets killed when they're thrown out in mid-air after the connection is broken.
* Executive Decision. It evidently had nothing to do with the quality of the film itself (she simply didn't want to do it) but changed her mind when Warner Bros. offered her a $1 million salary for the role of a stewardess who helps the team. She quickly signed up for it.
* Executive Decision. Their leader is captured early in the opening act, and the second in command and his team hijack a 747 en route to DC.
* Executive Decision very quickly running out of runway with the same effect as coming in fast. He ends up plowing into a large dirt berm at the end of the runway.
* Executive Decision. Which makes sense, considering that the film takes place on said aircraft.
* Executive Excess: A character with a high-flying corporate job can't seem to focus on anything but partying and avoiding work.
* Executive Excess: An important business figure who prefers partying to actually working.
* Executive Excess: More interested in sex and drugs than actually working, despite the lofty corporate position.
* Executive Excess: Who cares about working a full day anymore? I'm head of the company, so I get to party whenever I want!
* executive meddled. When he's told not to worry, the writer "won't be with us much longer", he replies "Is it AIDS?" It's not.
* Executive Meddlers take offense at "Son of Satan" and change the character to "Son of Santa". Hilarity and a hailstorm of bad X-mas puns ensue.
* Executive Meddling, a brief appearance by the Cheshire Cat and Alice was placed into the finale.
* Executive Meddling. A developer will insist that more time is need to do maintenance, and bug tests, and to generally make sure it works the developers want it to, but the company executives will demand that it be released by a certain date, in some cases threatening to fire them if it isn't.
* Executive Meddling and can't do anything about it, losing their absolute creative control of the work.
* Executive Meddling and Princess Sally Acorn - whenever these two get together, something bad happens to one of them - Sonic gets launched to the other side of the galaxy, Sally falls for Monkey Khan, then she later gets turned into a robot.
* Executive Meddling) and said she wasn't from Krypton, but a sister planet that also ended up destroyed. Kara In-Ze was otherwise used interchangeably with Kara Zor-El, besides the fact she was Superman's adopted cousin rather than his biological one.
* Executive Meddling, and that a change in record label produced songs like "Love Is a Battlefield" and "We Belong" that are more in line with their preferred style.
* Executive Meddling, a third verse is tacked on to appease publishers, in which the suicide is revealed to have been a dream.
* Executive Meddling. At one point, a guard is almost crushed under the foot of a stone monster that just barely misses him, screaming "I'm okay!" Then another foot comes down and actually crushes him, but he survives and says "I'm still okay!" Originally he didn't survive the latter, but the execs wouldn't allow it. Subverted however with Tzekel-Kan's Acolyte, who is not seen again after being pushed into a boiling vat of liquid.
* Executive Meddling being rendered all but useless and done away with. Despite having little purpose left, it was brought back because fans wanted it back.

* Executive Meddling)... but never addressed in the 2005 revival thus far.
* Executive Meddling by having the pilot do nothing for almost the entire season and then killing him off at the season's end.
* Executive Meddling ended up being dominated by several inconsequential storylines that had originally been planned as minor subplots or filler - the Miss Twin Peaks pageant, the adoption of Nicky, and so on.
* Executive Meddling, especially when Andrew Helfer took over from Eddie Berganza as editor. Faerber mentioned he was forced to include the DEOrphans into the series because editorial wanted to introduce a new team of young heroes. Their very presence derailed most of Faerber's plots, especially the Epsilon arc (which got forcibly mangled when one of the kids was revealed to be possessing Epsilon the whole time). That said, it appears Faerber used Lian Harper as a mouthpiece to voice his unhappiness with the situation. Lian, normally one of the sweetest kids around, couldn't stand the DEOrphans and even screamed at them that she'd been in Titans Tower long before them.
* Executive Meddling: Executives giving (often unwanted) input in a work vs. only the author deciding the direction of the story.
* Executive Meddling Girls"... exactly.) Its original intent is still somewhat clear, however.
* Executive Meddling, giving him an incredibly stupid costume (described as "somewhere between Elvis' Las Vegas costume and something you would imagine a pimp on the street corner wearing") and an even stupider power (he can warp reality by screaming).
* Executive Meddling in "The I in Team". Buffy returns to her dorm the morning after she's slept with Riley for the first time, to find the dorm empty and the bed still made. Willow then enters, having spent the night "casting spells" with Tara. Willow is holding a crystal which she'd earlier rejected as a gift from Tara because it was a rare family heirloom, implying that she's now accepted it as a lover's token. The following episode has one of the more famous spellcasting = lesbian love conversations in reference to what happened the previous night.
* Executive Meddling, it makes you wonder if any fans ever tried yelling it at him in real life.
* Executive Meddling lead to the Style Network getting replaced instead. This left G4 as a "zombie network" of nothing but reruns, syndicated shows, and ads until its death at the end of 2014, with the syndicated shows not even airing in the last few months.
* Executive Meddling like "Spin the Black Circle" or "Who You Are", which all sold in high quantities and made the Top 40 despite minimal airplay. They eventually released some of their most popular songs as singles long after interest waned: "Jeremy" in 1995 (it still made #79 on the Hot 100) and "Alive" in 1999 (it didn't chart). The band relaxed their stance towards singles around the release of "Last Kiss", which resulted in its huge sales and radio airplay; the song not appearing on any studio albums drove its sales and it remains their best-selling single. Shortly thereafter, the Hot 100 allowed songs not released as singles to chart; the lead singles off of most their subsequent albums have all narrowly missed the top 40 until rock in general stopped crossing over.
* Executive Meddling meant he didn't have the time to insert the character or storyline into the manga, so the anime went ahead and put the storyline into the anime at the point Kubo had wanted it to appear in the manga.
* Executive Meddling moments that result in a radically different Justice League, mirroring the way Dwayne felt his own storylines were being twisted and taken away from him.
* Executive Meddling novel about Katrina Steiner being a pirate/revolutionary known as the Red Corsair before she'd become Archon of the Lyran Commonwealth. The people at FASA at the time weren't terribly interested in revisiting older eras at the time but liked the novel and had Stackpole rewrite it so that the Red Corsair was a different character set at the current time in the game's setting at the time. Then many years later under a new editorial regime, he was invited to write a micro-story about Katrina as the Red Corsair for a rulebook. So in the Inner Sphere,

there have canonically been two Red Corsairs running about.
* Executive Meddling on a story that was written 20 years earlier but it negated the actions of the Jackal throughout the Saga. Just about all of the writers involved in the saga were notably against the retcon.
* Executive Meddling original plan of 26 episodes were cut in half to 13!
* Executive Meddling or other delays on the end of the replier). Since 57 years separates the two movies, perhaps there's been a technological advance.
* Executive Meddling over that episode's content lead to production being delayed.
* Executive Meddling (plus incorporating said movie into the plot of the TV series itself) was probably responsible for the mostly abysmal art and a story that doesn't know what to do with itself.
* Executive Meddling's 1968 TV acoustic 12-string performance of "Song For The Siren" over the avant-garde 1970 version from 'Starsailor', to the point where it is the version that appears on most of his compilations and inspired most covers.
* Executive Meddling scheme). Alas, the execs didn't get the hint (see above about the addition of Elmyra).
* Executive Meddling, since Admiral Yamamoto's plan for Midway wasn't to capture the base but to draw the American aircraft carriers into a trap where they could be sunk (the cracked Japanese codes meant that the US Navy was instead able to reverse the trap). A diversionary operation in the Aleutians contradicted the entire point of the plan, but it happened anyway just because the higher-ups thought it was a good idea.
* Executive Meddling six of his last seven films were critical and commercial failures.
* Executive Meddling subliminal message into the final episode. The DVD release has all the cuts reinstated but the subliminal, having served its purpose, is gone.
* Executive Meddling. Sugar Ray were originally an abrasive punk-influenced alt-rock band who turned out to have an unlikely talent for sweet-sounding ballads. Their singer commented that they had turned into the kind of band they hate.
* Executive Meddling telling Roddenberry he could retain one of those characters but not both.
* Executive Meddling that he hasn't seen the film and stated he will probably not see it ever, feeling that it would be like him seeing his ex-girlfriend having sex with another man, as in it would bring back bad memories of his time working on the film.
* Executive Meddling that shut down BIONICLE and left some stories half-written.
* Executive Meddling that was about to be released soon after; originally Serpentor was going to kill Duke, but after the fan reaction to Optimus' death they quickly dubbed in a few lines saying he was only put in a coma instead.
* Executive Meddling: The creator is forced to make changes to what they intended to do with the work by the executives.
* Executive Meddling (The execs outright order the creator to include a particular trope.)
* Executive Meddling: The executives force the creators to make changes to their work.
* Executive Meddling: The executives force the creators to make changes to the work.
* Executive Meddling: The executives force the creator to make changes to the work.
* Executive Meddling: The higher-ups interfere with one's creative work.
* Executive Meddling). The plan backfired, and the series suffered a ratings slump as a result.
* Executive Meddling - they rarely if ever get mentioned, since nobody complains if the system works.
* Executive Meddling three years and a half after the theatrical release).
* Executive Meddling to be seen, and Jack points out that this may be why all the aliens are dead. The actor finds this very helpful.
* Executive Meddling to extend the storylines because the Arrancar were unexpectedly popular with the readers. As a result, Aizen's knowledge of his Arrancar subordinates seems unusually shaky; he initially describes Grimmjow's

posse as "Gillians" when they're mostly Adjuchas, with only one Gillian in the group. Urahara also seems to be initially shaky on who the Visoreds are and where they come from, but it's later revealed his history is intimately connected to them as they were all exiled from Soul Society together.
* Executive Meddling was a children's show, the Doctor was never allowed to overtly romance or even express "that sort" of interest in his often young and female companions (it came to a head when 30-year-old Peter Davison became the Doctor and travelled with two sexy female companions played by actresses only a couple years younger than he). This, combined with interpretations of often-contradictory dialogue, led to the opinion by some (still held by some today) that the Doctor was asexual and uninterested in any sexual matters.
* Executive Meddling, was contracted for four episodes in Season 6 but unbeknownst to him, plans were changed during production.
* Executive Meddling when the Lego Company decided to eliminate romance on the grounds that the core demographic (5-12 year olds) would find it "icky." To paraphrase lead story writer Greg Farshtey:
* Executive Meddling (who wrote an episode of the series, and wasn't pleased with the finished result):
* Executive Meddling with me". The executives comically failed to notice.
* Executive Meddling. With the serious issues tackled, next week they can go back to starring in a funny cartoon.
* Executive Orders: An unnamed Expy of Saddam Hussein is assassinated by one of his bodyguards - who was a sleeper agent from Iran - and a second sleeper agent is given orders to assassinate Jack Ryan, the President of the United States. He isn't successful.
* Executive Orders, China heightens political tensions in Asia by orchestrating an air battle between their air forces and the air forces of Taiwan. It fits this trope, in that the Taiwanese pilots were tricked into opening hostilities when they were caught in the middle of a Chinese "training mission".
* Executive Orders the ayatollah leading Iran manages to unite his country and Iraq with an eye towards further expansion but it doesn't last.
* Executive Orders, US B-1 bombers buzz an Indian aircraft carrier at near-supersonic speeds, causing damage to the superstructure of some Indian Navy warships, as a warning to their Prime Minister that she's playing with fire in her dealings with Iran and China in opposition to the US.
* Executive Orders (Which wouldn't have been legal since Clark's crimes were against state law, not federal law, and Jack wasn't Governor of Maryland).
* Executive Outcomes, which contracted its former South African soldiers to win wars, not fight them. The firm, based in Africa, was responsible for several contracted wars, in which other firms that were owned by EO's parent company gained access to oil fields, diamond mines, and the like. Executive Outcomes folded in 1999, but the majority of its operators and equipment were shuffled around into other private military firms owned by the parent corporation. To add to the irony, while most of EO's members (at least initially) were ex-military of the Apartheid Era South Africa, one of their first clients was the anti-apartheid MPLA government of Angola against which they had fought during the Apartheid. EO was even pitted against their former allies, the UNITA rebels. Money is God indeed.
* "Executive Producer Dick Wolf", and the spin offs, that end without enough resolution or sometimes any resolution at all.
* executive producer Jess Winfield who accepts Lilo for who she is, though he still doesn't have that much of a personality.
* Executive producer/showrunner Carlton Cuse has done multiple voice cameos on
* Executives objected to showing the Graysons' deaths. The producers opted to use a
* Executive Stress, a husband and wife must hide the fact that they are married from their employer. The employer has a policy that if two employees marry, one of them must quit or be fired.
* Executive Suite: Alderson, one of the vice presidents at Treadway Corporation, uses this exact phrase to describe himself. He says that recently deceased company

president Bullard didn't make him executive VP because he thought Alderson was a "number two man" instead of a leader. Alderson decides that Bullard was right, and backs Walling for the presidency rather than trying for it himself.
* Executive Veto: The creator has an idea shot down by the executives, so they come up with a new idea that does what they want without upsetting the executives.
* Executive Veto (The execs forbid the use of a trope, which can lead to that trope's inversion or aversion being enforced.)
* Executive Veto: The executives say no to an idea the creator wants to do for the work, requiring them to find an alternative that will accomplish what they want to do with the story while appeasing the executives' concerns.
* Executive Veto: The executives say no to an idea the creator wants to do with the work, so the creator has to either work around the restriction by coming up with an alternative that still does what they want without upsetting the executives or drop the idea altogether.
* Executive Veto: The executives say no to the creator's idea, forcing the creator to come up with a new concept that accomplishes what they want without upsetting the executives.
* Executor after a kamikaze Rebel fighter crashes into their bridge and sends them plummeting into the Death Star II.
* Executor, armed with an EMP main gun that can disable entire fleets, and captained by General Grievous.
* Executor-class went into (relatively) wide production with around a dozen known.
* Executor: probably close to a Brigadier (1-star) General, Tassadar held this rank
* Executor to be so large that it has multiple rail stations just so people can get around in a reasonable timeframe.
* Executrix-also raised from the Outland Regions Security Force aside for a single Clonetrooper battalion (Obi-Wan's old 212th Attack Battalion).
* exegesis, but it's implied that it's really supposed to be actual e-mails released in book form by Alice Lu (one of the main characters).
* exegesis involves interpreting the text beyond, and even in spite of, what is stated or culturally or contextually implied. The latter, if taken too far, is considered an example of this trope.
* Exegol is a desertic tundra constantly ravaged by lightning storms and mostly devoid of natural resources. The only known native lifeforms are the human Sith cultists who were born there.
* Exelion for self-defense. The latter went even beyond that in all kinds of ways.
* Exemplars of Evil has Zargath Human-bane, an orc warlord with plans to commit genocide against humans, elves, and dwarves.
* Exemplars of Evil, which ensures that a minion will not fall into enemy hands, by making them dissolve into a foul sludge if they're captured (or killed, making it very hard to resurrect them).
* Exemplary Novels girls she is raised alongside. When a young Spanish nobleman falls in love with her, he soon discovers her Spanish heritage and that she was kidnapped and raised by a Roma woman as her granddaughter.
* Exemplified by any non-artifact creature with the type "Horror". Just try and figure out what it was before the Phyrexians got their hands on it (or them). Then there are the ones who have types you'd recognise, but look nothing like what they're supposed to be (Good example is
* Exemplified by the traditional announcement of a monarch's death in Great Britain "The King (or Queen) is Dead... Long Live the King (or Queen)" because the monarch technically never dies as the role immediately passes to the next qualified heir. This is also why the royal standard is never flown at half-staff.
* Exemplified by this quote: "For a joint scientific and geographical piece of organization, give me Scott; for a Winter Journey, Wilson; for a dash to the Pole and nothing else, Amundsen: and if I am in the devil of a hole and want to get out of it, give me Shackleton every time."
* Exemplified in issue 300, the debut of the original Iron Legion. After the telepresence armor was trashed by Ultimo and Tony needed time to recover and

complete his modular armor,
* exercise coordinator might at one point say: "Blue Team, your SAMs no longer work", or "OpFor, your fuel dump has been destroyed," so as to train participants to adapt when plans fall apart.
* Exercise Excuse: A character lies about their strange behaviour by claiming they were exercising or dancing.
* Exercise Excuse: Claiming to be exercising as an excuse for being in a strange position.
* exerting her influence over nearly every other Gear in existence), suggesting she might not even have been at the apex of her power when Sol did manage to kill her.
* Ex-FBI Agent/Ex-Police Commissioner. Though he's doing it all for a good cause, it's a hypocritical venture. He recently started working far more closely with Anna again though, so now, he's a straight example again.
* Ex-government assassin Shaw does her own unique version in "God Mode".
* exhaled they couldn't possibly be wearing it for a reason other than concealing a pregnancy.
* exhale you. It's the go-to method of dealing with things like poison gas. (Which means you'd better hope the villain didn't put something in it that could affect you too...)
* exhaust all other options before they are willing to ask that guy for help, because they know the calamities that always follows in his wake.
* Exhausted Eye Bags: A character who didn't get enough sleep has bags under their eyes.
* Exhausting drawback. Each time an item is used it inflicts a point of non-lethal damage on the user.
* Exhaustion-Induced Idiocy: A lack of sleep takes a toll on a character's mental capacity.
* Exhaustion-Induced Idiocy: The character doesn't have enough energy to spare to use for brain power.
* exhaustively named pen — or things that losing capacity on would be a pain, such as most of the Universal Standard Kit, a rather large collection of fluff-relevant but gameplay-useless stuff invariably supplied to all players.
* EX have this belief due to the fact that their mothers are all busty. Yes, this even includes Asia and Koneko.
* Ex-henchman Jeff Bladgett describes sexual brutality in prison to would-be archcriminals and supervillains in
* Ex-Heroes has Cairex the Demon-Human Hybrid die in the backstory due to getting a blow job from zombie Jessica Alba. No one is sure how to react to this story when they hear it.
* Ex-Heroes, heroine Stealth is aiding other heroes battling the rise of a zombie virus in the world. As she sees a police officer bitten after refusing to shoot civilians in the head "because they're still human" and medical personnel trying to help clearly infected people, Stealth realizes society is doomed as, despite all the evidence in front of them, people will refuse to accept the reality of the undead even as it attacks them.
* ExHeroes is a story about the end of the world at the hands of zombies, only to be opposed by superheroes.
* Ex-Heroes the word "zombie" people should still know what it is, and the fact that no one actually does is a sign that something is wrong.
* Exhibit A, after Eren has far and away overtaxed his Titan Shifting abilities,
* exhibiting this trope: Krosp objects that she works with mad scientists and should be able to handle a talking cat.
* exhibits gets loose somehow, the person responsible has to find a sneaky way of getting at highly protected books if she wants to have any chance at all of stuffing it back into its can.
* Exhuman is a girl locked in a dark room for dozens of years with nothing but a blank computer. Within days of it coming back online, she's written custom drivers to get an abandoned industrial factory up and running and is churning out blueprints for her own spy network and personal robot army. All while giving

romantic advice to her superpowered roommate.
* Exiern. And thus she draws the guard's attention to herself, sobbing for mercy and everything - turning Ctyx's fear into the rage he need to activate his powers.
* Exiern..."disappeared". The King is on the hunt for a replacement mother figure for her.
* Exiern Dragons are born looking like humans and gradually transform into their true forms after they mature. The protagonist's sidekick/like interest (she can't admit to more than that) Denver is a larval dragon, though he doesn't know it. His sister was well along in her transformation when she was last seen.
* Exiern infants and grow up looking like (and thinking they are) humans until they reach their late teens when some sort of homing instinct draws them towards other dragons. They spend some time in a half-human/half-dragon state while they gradually lose their human identities, before growing into their final dragon form.
* Exiern: Niels is attacked by a magic user and controlled to steal Peonie, then it's revealed that the spell is just controlling his body and while he can still talk and think, he's powerless to stop it, he apologizes, and then says that he can't do anything about it, so he's gonna have fun playing a bad guy.
* Exiern one character tells the tale of an ancient seamstress sorceress who supposedly cast a spell over the land making all women grow into a similar busty build like her own. However, it is possible that this is a purposefully misleading story taught by the misogynistic Church of Rem.
* Exiern princess from the evil wizard. Accidentally nullifying his own ability to cast dark magic, the wizard resorts to pouring all the power he can into a light magic spell, transforming the barbarian into a beautiful woman.
* Exiern the comic to fan and author Dan Standing. As one of his first acts in charge, Standing invited fans to submit scripts to become the main writers.
* Exiern, the protagonist Tiffany observes her current predicament and concludes that she's a brave damsel about to save the beautiful dragon from the firebreathing knights. She then wonders exactly when the universe turned inside-out.
* Exiern", Typhan-knee finally realizes she's just as bad as she claimed Theresa was.
* Exiern, Typhan-Nee, an unrepentant barbarian, gets gender-bent by an evil wizard very early in the comics (since the whole theme is "transgender barbarian"). The resulting woman, "Tiffany", is every bit the powerfully-built, able combatant she was when she was still a man... as long as his/her rather misogynistic views don't synergize with the curse and make her a weakling. Even other barbarian women are envious of Typhan-Nee/Tiffany's looks, as Tiffany's brother's mate attests.
* Exile. All they do is take away your food, though. The party remains unharmed.
* Exile, are also extremely vulnerable to being wrapped in web by giant spiders. If the spiders continue spinning webs (and they will. They always do), a single character will get no turns at all, getting stuck in a zero-AP loop. Cue either an impossibly long death process or a Ctrl-Alt-Delete.
* Exiled Dead before refilling the graves. The next night, they collect the goods and transport them on boat out of Porto Ceso.
* Exiled from Continuity: A character is forbidden from appearing in an adaptation or from making further appearances in the original work because of legal issues.
* Exiled from Continuity: A character is prevented from appearing in an adaptation or from making further appearances in the original work because of legal issues.
* Exiled from Continuity: A character may not be used in a work due to a major limitation, especially legal reasons.
* Exiled from Continuity: An adaptation leaves out a character because of some restriction preventing the character from being used, often issues concerning potential copyright or trademark violations.
* Exiled from Continuity, two lesser-known miniseries that have been out of print for over a decade, whereas almost all the other Young Avengers have much vaguer ties to the rest of the Marvel Universe.
* Exiled Jedi Masters Obi-Wan Kenobi and Yoda play it straight in the original trilogy, wearing their patched and repaired Jedi robes twenty years after the fall of the Republic. Yoda seems to be the only sentient on Dagobah, though, and Obi-

Wan's beige and brown robes blend right in on Tatooine.
* Exiled Prince DLC disrupted the game by tipping over the chessboard.
* Exiled to the Couch: A married couple fights, which results in one of them being banished away from the bed.
* Exiled to the Couch: Someone makes their spouse/boyfriend/girlfriend sleep on the couch because they're angry.
* Exiled to the Couch: When a couple fight, one partner is forced to sleep away from the bed.
* "Exile" ends with the Doctor under house arrest in the TARDIS, having been told that
* Exile games, when engine changes meant there was no longer an overworld/city map divide, this was restricted to only cities of military importance.
* Exile III allows characters to chose the "Magically Inept" character trait. It does not allow the character to use magic, but makes them less vulnerable to it.
* Exile III when you meet a random bureaucrat NPC who has a rainbow-striped pen as a "symbol of pride". Not so unusual, except you find him working in the Empress's fortress! Obviously this suggests that the Empire has seriously relaxed this policy since the Empress succeeded her father.
* exile occupiers of Cardassia, he's actually contributed to the situation his planet is now in. Home Sweet Home never looked more tragic.
* Exiles at the Well of Souls is transformed into a Makiem, a frog-like alien race. Makiem don't copulate at all, they just release gametes into the water once a year without any physical contact. Karma's a bitch, eh?
* Exiles, by the character Morph, in one of the early issues, that he has noticed that a key component missing on a lot of the worlds is the presence of the Norse Gods (Thor, Loki, Odin, etc). He then goes on to say that he thinks that if the Norse Gods were present, many of the worlds would have turned out much more positively.
* Exiles During the Mojoworld arc, the team goes looking for Longshot, figuring he's the only one who can fight Mojo. They grab a passerby in an alleyway and ask him to tell them where Longshot is. He asks if they're kidding, and points to the building across the road. It's a prison, with a giant neon sign reading "LONGSHOT'S PRISON".
* Exile series, the golems are a major plague destroying the planet's surface. All of them appear to be made of metal and gemstones, but they have different associated elements including fire, ice, and acid.
* Exiles featured an alternate Earth where the entire superhuman population were slaves fighting in Gladiator Games for the entertainment of their Skrull conquerors. Unlike many examples of this trope, most of the fights were nonlethal; each superhuman was a unique entertainer, too valuable to lose.
* Exiles from assorted realities band together to stop an evil Wolverine from yet another reality.
* Exiles had the group land in a world where Curt Conners/The Lizard injected his regeneration formula into several people (starting with his wife), thus creating a whole race of lizard people... who reproduced like lizards, as in groups of eggs. The U.S. government decided to simply let the Lizards have the entire state of California, building a giant wall all along the coast, that was watched over by heavily-armed guards.
* Exiles had the Monster World arc, which envisioned Curt Connors, Bolivar Trask, Tony Stark, and Hank Pym as a team of Action Scientists fighting Kaiju in a transforming mecha. They fight it out with Fin Fang Foom in Japan at the end of the arc. It was awesome.
* Exile's Honor, he's not a bully and deliberately goes easy on the boys, only driving them to the brink of exhaustion.
* Exile's Honor, one of Alberich's undercover identities is an old man who lives this trope. "Falling asleep" after dinner lets Alberich eavesdrop on the upper classes safely.
* Exile's Honour. It's mentioned if they were completely untrained, he'd have used all the padding he could lay his hands on, because they were liable to do anything.

* Exile shows up as a common theme — especially in the historical plays — in Shakespeare's works, mostly because
* Exiles: In the first issue, in order to bust into a maximum security prison, the team decide they need something to distract the bulk of the guards. The narration compares it to a magician making a noise at one end of the stage while his assistant is replaced with a tiger, finishing with "in this case, they had a big tiger". Namely, Thunderbird smashing through the walls.
* Exiles, it was with the editorial edict passed down upon him to get rid of the mainstay characters and replace them with variations of his pet characters (such as a spoiled-brat version of Rogue, a male version of Mystique, a generic teenage version of Shadowcat, etc.) Needless to say it didn't take well with fans.
* Exiles Mimic to Blink in the V-Lock arc, when she's been infected and might well be turned. He gets all the angst he's been sitting on for the last several issues, which has thrown a wrench in their relationship, and admitting he does love her.
* Exiles notes this as being true for Mimic, who has a half-powered version of Logan's healing factor. It apparently was something of a problem when Mimic and his reality's version of Logan engaged in some sorrow drowning - they needed a "Herculean" amount of alcohol just to get buzzed.
* Exiles of ColSec, Cord (who's not stated to be taller than the other character involved, but is definitely bulkier and stronger) intervenes in a potential squabble between Jeko and Heleth by doing this to Jeko.
* Exiles. Once they learnt that the Phoenix actually was Jean Grey, their leader refused the mission and planned to reveal everything in hopes of a better solution only for everyone to be subjected to a graphic mental download by their Mission Control of the horrific destruction that would occur if she wasn't killed at that point in time.
* Exiles once visited an alternate Earth with female Magneto and Quicksilver, and Scarlet Warlock (male Scarlet Witch).
* Exiles: Played with in "The Goldberg Variation", in which the Exiles inadvertantly foil an alien invasion by buying a cheese danish.
* Exiles possibly not being as bad as usual and therefore possibly not vomiting:
* Exiles reality- to be the team leader, as she would be less likely to fall victim to this as her reality was so distant from the realities of the other members that she would likely have less of an attachment to the counterparts of the heroes-turned-villains they might face.
* Exiles shows a reality where Heroes for Hire is one of these, consisting of near-every major superhero doing work for them by commission. It turns incredibly dark when their CEO refuses to help a client because they won't pay the full-price for services, resulting in a chain of events that ends with said CEO dead, and the entire population of Japan being exterminated by Moses Magnum and Namora, all because said CEO woke up in a bad mood.
* Exiles stories had the team visit worlds with gender-flipped versions of Marvel heroes. The most prominent example would be the team's version of Sunfire, who had the civilian identity of Mariko Yashida rather than Shiro Yoshida.
* Exiles, the omniscient whatever-it-is that commands the Exiles sets up a chain of events that ends with some minor supervillain, feeling unappreciated, setting off a weapon that fills the Earth's atmosphere with foul-smelling gases for 72 hours. All because the omniscient whatever-it-is has foreseen that right as he sets off the weapon, an alien invasion fleet will arrive, scan the planet, and decide that humanity must have somehow seen them coming and decided to destroy their planet's atmosphere rather than let the aliens conquer them so they depart before anyone actually knows they're there.
* Exiles, the titular team's mission was to buy a danish. Buying said danish led to a sequence of events that thwarted an alien invasion.
* Exiles. This version had joined the X-Men and had spent years developing and mastering his plethora of powers and becoming a champion of mutants. His "main" powers for most of the comics run were Flight (Angel), Invulnerability (Colossus; couldn't fly in steel form), super agility (Beast), energy projection (Cyclops), and healing (Wolverine). Even with years of practice copying others Mimic admits

that he wouldn't be stupid enough to try and copy a shapeshifter or teleporter for fear of accidentally killing himself.
* Exiles trilogy covers three generations in three books: the first generation on the ship, the ones who finally reach their apparent destination, and the ones who finally reach the end of the journey. By the time they get there, the ship has started to decay, they live in technological ignorance and don't even know they're on a journey or there's anything outside.
* Exile's Valor features two of Alberich's students deciding to Flynn during a class practice bout to show off. Since they aren't nearly as good as they think they are, all they do is embarrass themselves (and get stuck with a hideous bill for salle damage).
* Exile's Valor. Selenay is already having trouble sleeping due to grief over her father's death, and the drip in the royal suite's bathing room isn't helping matters.
* Exile's Valour, two students try to show off using stage fighting. A thrown sword shatters a huge mirror.
* Exiles, when Mimic reflects that superheroes really, really love fighting robots for the sheer pleasure of unfettered destruction.
* Exiles, who openly flirts with women. Despite living in the 1940s, none of the soldiers she fights alongside comment on her sexuality or behavior.
* Exile, The Empire, which controls the entire surface, discovered a series of massive underground caverns, and they decided it would be a perfect spot for exiling all undesirables to for crimes both real and imagined. Enough people were sent down below to form a nation of their own. In the most of the games you play as the Exiles/Avernites and their allies except for the fifth game, where you play as the Imperials.
* Exile: There are a number of spells for summoning temporary allies. Before summoning demons, it's necessary to cast another spell to keep them from immediately turning on you.
* Exile there's a few, mostly when you kill a major NPC you're not supposed to, like King Micah or Erika Redmark. But the one that really takes the cake is the one in Exile II, where you can open a portal that will eventually collapse the entire northwester quarter of the underworld, killing hundreds of thousands, perhaps even millions of people — including your party. But on the "bright" side, it will stop the Empire invasion, since most of their troops were in that area.
* Exile, this happens a few times, most notably when defeating the Slime and Cockroach plagues.
* Exile to conserve subterranean resources. They always expect a high attrition rate, which players get to witness themselves.
* Exile to Siberia in Tsarist Russia wasn't quite prison, but otherwise it tended to fit this trope.
* Exile will have an evil temple with skulls, bloodstains, and/or traps that unleash demons in it somewhere.
* exist anymore) and the more modern ones — have an important role in the government of the City of London.
* Exist Archive Characters increase their Affection for each other by fighting together. Increased affection increases their chances of learning new skills from each other, and gives the player a reason to keep switching up the party, instead of finding a preferred group and sticking to it like glue.
* Exist Archive Suzaku is 5' 10", which makes her one of the tallest characters in the game. Her description says "Suzaku has leveraged her stunning looks into a fairly lucrative modelling career."
* exist at more than one location at the same time, really, what's changed?
* exist because people believe in them means that spreading the Imperial Truth can actually make it the truth.
* existed in "201," mostly so that fans would stop asking what happened to him.
* existence and the virtues they have, are enough to keep the world from going to hell in a handbasket.
* Existence, a rich kid is saved from drowning by some partially uplifted dolphins

who were abandoned when the project lost its funding. He makes sure the project is resumed and completed.
* Existence" based on wealth, with the first estate controlling by far the majority of the world's wealth despite comprising a very small fraction of a percentage of the population and acting like aristocrats.
* existence had any intention of making this a sci-fi tale the book was a hit.
* Existence has an aristocracy arising in the next forty years due to class warfare. The ultra-rich came up with a "New Deal" that stratified society into ten estates. While it's not quite feudalism many of the tenth estate consider the Enlightenment a failed experiment and reason that since so many past societies were feudal it must work. Their plans are somewhat waylaid by the discovery of the Artifact though.
* existence has no real impact on the plot, let alone his romance, and his character arc doesn't change very much whether he's romanced or not. The only major difference is that if Hawke "friendmances" him, they can get married before the end of the game, which is not true of any other romance in the entire series to that point.
* existence know that it is possible for them to get magical abilities themselves.
* Existence posits that a war between alien probes that took place millions of years in the past caused an object to fall to Earth and trigger the Cretaceous extinction. Whether it was an actual alien probe, a piece of rock flung by one of the probes at another, done on purpose or by accident, is not known.
* Existence the United States has sixty-two states. One of them is Panhandle, formed from the Oklahoma and Texas panhandles.
* existence, which (for various reasons) was what the Bene Gesserit both wanted and needed to happen.
* Existential Comics: How Aristotle is portrayed. The author admits that it has very little to do with his philosophy, he just thinks its funny.
* Existential Comics imprisoned for several months in a POW month after the Fall of France.
* Existential Comics: Karl Marx constantly shows up performing new jobs. Given that he attempts to apply Marxist analysis to everything and encourages communist revolution in the workplace, his constantly shifting careers may be justified.
* Existential Comics picks up multiple women at a time without trying.
* Existential Comics session, as an allegory for the real-life schisms of the radical left.
* Existential Comics) the greatest threat to Middle-Earth's peace in the eyes of Hobbits, Dwarves, Humans, Trolls, Orcs was the Elves.
* Existential Comics, the latter mostly getting on the former's nerves when he used his paradoxes as excuses.
* Existential Comics where giving anything as an answer would have counted as failing too.
* Existentialism: The Philosophy. There is no higher meaning in the universe, and thus no such thing as fate or destiny. Free will is both a gift and curse, and whatever destiny one has is self-created and they must take responsibility for it.
* existential question — asking what color he was when examining himself in a mirror.
* Existential Terror and Breakfast: Follows the misery of Malcolm Steadman as he experinces one existential crisis after another.
* Existential Terror and Breakfast Malcolm Steadman is driven mad by a series of existential dread. The plot is carried along as a 90-day countdown to the day that he dials a suicide hotline ticks away. He also eats breakfast.
* Existenz as an operative who was sent to kill her all along and kills him instead that the game slowly unravels and she wakes up for real.
* eXistenZ could be justified because "Existenz" is the German word for existence and "isten" is Hungarian for "God," giving the director a reason to frame it with Caps.
* eXistenZ, even having characters lick the ports of other characters during sex scenes.

* eXistenZ, he jokingly points the weapon at Allegra and repeats the line used by an assassin who previously tried to kill her. She's not amused, and he apologizes.
* eXistenZ: The biological game device runs on the energy of the user, since it plugs directly into a "bioport" (sort of an extra anus artificially installed in the lower back). It's suggested that all gaming devices operate the same way.
* eXistenZ. The virtual reality game has so many layers that the characters are never quite sure if they're back in reality or not.
* existing. It's also implied that even if Ash had done more to make her try, she still would've refused out of personal dislike for him.
* Existing on the edge between mythology and history, the legendary Viking
* exist rules for how memories intersect with your class levels in the game: specifically, there's the Amnesia status effect, which only disables class features and specialized skills until they can relearn them by leveling up again, and lets the character retain things like their Hit Dice, HP, save bonuses, and most things having to do with pure numbers. An amnesiac high-level character, though badly gimped, would still have very high stats and be a lot more powerful than the petitioner statlines that usually exist in the game.
* exists, a lynching OR that they attacked the Crosses with intent to commit murder, and any first-year law student would argue as much...
* Exists as a sub-genre of pornographic literature, generally with no attention whatsoever paid to how the mechanics would work out what with friction, immobile body parts and organs, and other things that would make such an act impossible.
* Exists even in fantasy worlds, as Roy Greenhilt has to learn in the
* Exists on both sides of the wizards vs Lone Power battles. The Lone Power who exists outside of time, has already been redeemed, but its shadows still crop up. The wizards know that beating him in linear time won't make a knowable difference while the Lone Power knows it will ultimately lose and be redeemed.
* exist. The average modern citizen in the Marvel or DC universes presumably believes something like "In ancient times, people with superhuman powers were worshipped as gods; but in this modern age, we know they're just superheroes."
* Exit 33) who decides which customers to murder by the gas pump they use. And it's implied the jerky he sells is made of people.
* Exit after aria: The deeply, deeply annoying exit convention, which required the performer to exit the scene after finishing an aria, caused all sorts of logistical problems, and after the Baroque period was seldom used.
* Exit and the Japanese show that inspired it are game shows where teams have to solve challenges to move onto the next room or be "killed" by that particular rooms death trap. They of course aren't killed but the show likes to pretend they are.
* Exit/Corners shut off from the outside world (as is usually the case); each captive is granted a device that allows them to send and receive text messages from only one person in the outside world.
* Exit Fate also count - although Bast is a somewhat more approachable version.
* Exit Fate. Even though you and your opponent has multiple units to fight with, as long as you knock out their primary leader, the rest will flee/surrender and you win. (You get a better rating if you take them all out, though.) However, the same goes for you; if the enemy defeats the unit that represents the main character, it's immediate game over.
* Exit Fate has Derek, a 200-year old skeleton knight who joins your army after you've aided a (friendly) necromancer in raising him. He's pretty jovial about it. He's also Australian for some reason.
* Exit Fate in fights, when in every other part of the game the battle background never changes at all.
* Exit Fate: One bookshelf in the Hall of Memory. Ancient knowledge, translated and restored... or someone's grocery list.
* Exit Fate, several darker-skinned NPC's and the Ambiguously Middle Eastern mountain people.
* Exit Fate: when you defeat Vanrushal the vampire, the damage drains his power and leaves him on a "mere" human level. Since he finds you interesting and, more importantly, cannot stay at his monster-filled mansion like this, he joins your

army instead. In other words, his demotion causes him to join you, not the other way around.
* Exit Fate you can gather a full 75 party members, including the main character. Some join by plot, others have to be sought out and hired/aided/persuaded/tricked to join you. This actually makes sense since you have a unique commission and is asked by your commander to seek out talented people who might not want to join under normal circumstances. Oh, and you also have regular soldiers.
* Exiting out of a live does not deplete your LP (regular lives) or tokens (event lives). Thus, the only thing you waste by retrying a live is your time.
* Exiting the cage in a steel cage match via the door. You COULD go over the top of the cage to leave but the official standing near the door is compelled to open it when a competitor tells him to. This is usually a good way to get heel heat since it's taking the "easy way" out. However, it's very often subverted because, despite the practicality and effectiveness of leaving via the cage door, no one ever seems to get to it in time before the opponent is back on their feet and dragging them away from it. When cage matches end by escape, it's almost always via going over the top. In fact, the few times someone does win by escaping through the door, it's almost always beating an opponent who attempted to escape over the top.
* Exit Path, though it's never explained what you did to get put in the arena.
* Exit, Pursued by a Bear: A person is last seen being chased by a creature that will probably kill them.
* Exit, Pursued by a Bear: Kyle has hit his wife Nan multiple times in the past, as well as calling her bitch and forcing her to do things she's obviously incredibly uncomfortable with, like bleeding an illegally shot deer for dinner when her passion is for animals, as well as emotionally toying with her and telling her he loves her and needs her when she tries to make a stand for herself.
* Exit, Pursued by a Bear: The story ends with the villain being chased away by a creature that will most likely harm them.
* Exit, Pursued by a Bear: The story ends with the villain being chased by a creature that intends to harm them.
* Exit, Pursued by a Bear: The story ends with the villain fleeing from a creature that will most likely harm them.
* Exit, Pursued by a Bear: The villain ends up chased by an animal that intends to harm them.
* Exit Smiling is a zany comedy about a terrible actress in a traveling theater troupe trying to save the man she loves from going to jail. She succeeds. But he never finds out she was the one who saved him, and he's so happy about being able to stay in town with some other girl he likes that she simply doesn't tell him. The movie ends with her crying quietly as he steps off the train.
* Exit Smiling, which is about a traveling theater troupe that performs an absurdly over-the-top, silly melodrama.
* Exit Stage Left. If the villain doesn't follow these rules, the hero might just not let them live to have a second go at things.
* Exit Stage Left: The Snagglepuss Chronicles (gay main character, gay supporting characters, subject matter includes homophobia, LGBT acceptance)
* Exit Stage Left: The Snagglepuss Chronicles, Snagglepuss is married to Lila Lion so that the public will not suspect that he's actually gay. While she initially accepts this role, she divorces him in the final issue.
* Exit The King plays around with this a lot— the three royal characters wear fur capes so ludicrously long that they become physical comedy props.
* Exit Through the Gift Shop, when an apparent graffiti artist in France escapes from two policemen by quickly scampering to the roof of a building.
* Exit to Eden makes a pixie-dust sprinkling gesture over his head while chanting "Miranda Miranda Miranda."
* Exit to Eden mentions that his notes start out remarking that the film was slow and uninvolving; by the fourth page he's writing a grocery list instead.
* Exit to Eden takes place on an island where BDSM and Fetishism is the everyday norm. And it's hardly even a real part of the story, more like an exotic background for an ordinary detective story.

* Exit to Eden was temporarily banned in Saskatchewan, but the backlash proved so fierce that the Saskatchewan Film and Video Classification Board quit classifying movies on its own and struck an agreement with the British Columbia Film Classification Office in 1997 to use their ratings.
* Exit to Eden, when a male photojournalist who enjoys being spanked is given the heave-ho by women who are squicked by his desires.
* Exit Tunes Presents ACTORS cover franchise, but each album release also includes drama track/s; the franchise has also released a couple of full-fledged drama CDs.
* Exit Tunes Presents ACTORS franchise - he likes meat, a good drink, and triathlons; works out a lot, and is arguably the most traditionally manly out of the main cast.
* Exit Tunes Presents ACTORS has a bunch of these: there's Hinata (orange), Satsuma (blue-gray), Chiguma (green), Washiho (black), Takato (blue), Tsukasa (gray), Ushio (purple) and Kagetora (reddish-brown)
* Exit Tunes Presents ACTORS Shirou styles his hair to cover his eye in the Deluxe Duet Edition.
* Exit Tunes Presents ACTORS the part, he is in fact calmer and more capable than most traditional examples of this trope.
* Exit Tunes Presents ACTORS to make up for all the energy his brain uses.
* Exit (with a scenario by the sci-fi author Bernard Werber) revolves around suicide pacts that turn out to be this.
* Exit Wounds, not only did Toronto and nearby Hamilton double for Detroit...so did Calgary.
* Exit Wounds's character for saving the Vice-President's life in a shoddy manner. Because in real life nobody is ever honored nation-wide.
* Exivious: Dutch instrumental progressive metal/jazz fusion act that leans more towards the fusion side of the equation but still has a subtle metallic undercurrent.
* Ex. "Jose (not Linda) pointed at the zombie horde outside his living room window, looked his crying, 12-year-old son in the eyes, and said, 'It's time to sack up, beotch.'"
* Ex Libris, before she's forcefully pushed out of the room by a jealous Piper.
* Ex-Lover's Lover by Voltaire dreams of doing this, but at the end admits he would never have the guts to go through with it.
* Ex Machina and artist Tony Harris appear in the comic. Harris and another character talk about how a comic writer's only contribution is "putting words in the bubbles," yet gets top billing because "it's political."
* Ex Machina and dismisses questions about his sexuality as unimportant.
* Ex Machina and he can't use the keycard-locked house phones. This is entirely intentional on Nathan's part, as his goal was to create a secret and undisturbed place for his experiments.
* Ex Machina and starts to cut on himself to find out if he's actually a robot with false memories. He draws dark red blood, showing that he isn't.
* Ex Machina, Ava easily takes her broken arm off to replace it with a spare.
* Ex Machina). Ava is no exception. He doesn't see any problem with humans having sex with robots, (in fact he specifically designed them to be able to) whether it's himself or others, and encourages Caleb to see her as a woman. Ava expresses attraction towards Caleb and he is implied to find her attractive too, although he's reluctant to admit it.
* Ex Machina avoids long-term relationships and dismisses questions about his sexuality as irrelevant to his job. This leads to a lot of in-universe speculation, but he still avoids giving a definite answer.
* Ex Machina. During a crisis, Mitchell's second-in-command starts saying he's going to quit, only for Mitchell to interrupt forcefully and say he needs him because he needs someone questioning him every step of the way, even if he can't always agree.
* Ex Machina. During a riot, someone yells out "RAISE HELL". Father Zee sucker punches him right in the face and says "If you say so". He frequently spars with Mayor Mitchell Hundred.

* Ex Machina, during his career as "The Great Machine", Mitchell Hundred tries to establish a working relationship with the NYPD police commissioner. She ends up nearly beating him to death with a nightstick because his "heroics" had caused two of her officers to be critically injured. When Mitchell becomes Mayor, he still keeps the commissioner on since she was the first person to make him realize the effects of his actions.
* Ex Machina has an artificially intelligent robot woman trapped in an underground fortress—the threat of her death is imminent and she must connive her own escape.
* Ex Machina. He often asks the same kind of questions the audience is thinking of so that Nathan can provide the exposition.
* Ex Machina. He programs his creations to desire freedom so that they would suffer in captivity. And it's visually implied that he enjoys their psychological pain as evidenced by his smug and satisfied expression when one of his creations goes mad from isolation.
* Ex Machina is very female and very attractive. Many of the scenes that highlight her sexiness simultaneously draw attention to her artificial nature. Caleb does ask Nathan why he didn't just design her as a sentient black box instead, but Nathan points out that supplying the robot with a gender identity gives it a reason to interact with the outside world.
* Ex Machina, Kyoko reveals to Caleb that she is also an A.I., albeit less advanced than Ava. Caleb is so disturbed by this, he cuts open his arm with a razor to see if he too is an android.
* Ex Machina, Nathan and Caleb discuss Ava's programming as a female android;
* Ex Machina: Nathan is a reclusive and secretive creator of artificial people, who considers himself a god and thinks nothing of destroying them in his sick experiments.
* Ex Machina. Nathan mentions that as a programmer he's "okay" or "pretty good" — though that's from the perspective of the most groundbreakingly advanced programmer in the world. He does manage to access Nathan's computer system and reprogram the doors.
* Ex Machina, Nathan often interrupts Caleb and tells him forget about technical language, urging him to instead describe his opinions in the simplest way possible. Ironically he wants this mostly for Caleb's benefit and because of his own preference for directness. He can understand Caleb's jargon perfectly well; it just makes him impatient to have to beat around the bush.
* Ex Machina, Nathan's becomes increasingly apparent, and peaks when Caleb discovers videos of his previous creations breaking down and begging to be let out and it becomes clear that he doesn't care about the suffering of others.
* Ex Machina, Nathan tells Caleb to his face that his coding skills are so so. He does move him up to "being good", and it is from the perspective of the world's best programmer, and scaling his perspective doesn't necessarily tell us much about Caleb's skill.
* Ex Machina. On one hand Nathan is the head of a trendy tech company, follows various health fads, and generally seems to cultivate his own unique lifestyle. However, this is at least partly intentional on Nathan's part. He is intended to represent how powerful tech companies get customers to let their guard down by acting like they're your pal and making you think you're getting to be part of a cool lifestyle, when what they're really doing is taking your money and rifling through your address book.
* Ex Machina sees Caleb trapped inside of Nathan's facility as Ava escapes without him, the ultimate test of her abilities. While the film doesn't show anything one way or the other, Caleb's hundreds of miles from help with no one coming to look for him, in a facility without any power. The most the audience gets to see is Caleb trying and failing to break down a window with a chair.
* Ex Machina special, where we saw the origins of Jack Pherson, in his cave we see he kept the decaying corpse of his girlfriend, talking to it like she was still alive.
* Ex Machina. The isolated underground lavatory/house automatically locks all the

doors whenever the power gets shut off, to prevent someone getting past the security by knocking out the generator. This becomes plot-relevant.
* Ex Machina, the robot's creator asserts that his robot Ava is beyond this test and could pass it easily. Instead, he wants Ava to convince the tester that she is "human" even though he knows she's a robot.
* Ex Machina, the skin on the robots is easily moved from robot to robot and blends with no seams.
* Ex Machina, the sound made when the key-card activates a door to open is the 'Tejat' sound from the Android Operating System.
* Ex Machina, this is a problem for "The Great Machine" once or twice. But that's why his backup always has fire extinguishers.
* Ex Machina to a previous scene where she dressed and asked Caleb to be her date, until she locks him in Nathan's room and leaves. He has no hope of escape with the power out, Nathan dead, the windows too tough to break, and no one else in the world knowing he's here or what was happening in the compound.
* Ex Machina, where Journal quotes the line after suggesting the public will suspect Mayor Hundred of being gay.
* Ex-Men that completely changes the story into a gay version of the original masculine epic, and depicts Leonidas (named Samson in the dub) going through a coming-out phase as a gay man.
* EX Modes involve wielding their classic "best weapon". Cloud's Buster Sword becomes Ultima Weapon, Squall's gunblade becomes Lionheart, etc.
* Exmoor, Great Britain: The legendary Beast Of Exmoor supposedly lives there.
* Ex-Morning Musume member Aika Mitsui had to graduate from the group earlier than she wanted, due to a particularly bad foot injury. After spending a few years in New Zealand to study English, she now mainly works under Hello! Project as a reporter and middleman for overseas promotion.
* Exmortis less scary when your character becomes a superhuman that has telekinesis and can cause people / evil beings to explode. With his mind. This is especially pronounced when you come to a horror-filled room with a cannibalistic survivor that wants to eat you. Until you immediately pwn him and hold him up in the air with your mind. He practically pisses himself in fear, and the horrific feeling kind of...goes away.
* Exmortis recording the disasters in the outside world, the measures put in place to defend themselves from approaching Exmortis, and the foraging expeditions to abandoned settlements. Of course, with supernatural entities roaming the Earth in search of humans to torture and murder, the cosy catastrophe lasts only until the first air-horn sounds.
* Exmortis the player encounters an invisible being that reveals itself to you by treading across the floor with bloody feet.
* Exmortus is probably the closest that one can come to finding a conventional label that sticks, but even that is flimsy at best.
* Exodia Necross, a particularly nasty card that is immune to various things depending on which part/s are in the graveyard. All five being in there, it was immune to damn-near everything.
* Exodus 20:8 and Matthew 4:17. The culprit was fingered as Thomas Haynie, an uplink engineer at the Christian Broadcasting Network who was on duty at the time of the incident. However, the trial proved that the evidence against him was circumstantial at best and attempts to recreate the jamming with CBN's equipment were not successful. Haynie was still found guilty of two of six counts and sentenced to three years of probation, a $1,000 fine, and 150 hours of community service, though Haynie still maintains his innocence.
* Exodus 34:29 is as follows: "And it came to pass, when Moses came down from mount Sinai with the two tables of testimony in Moses' hand, when he came down from the mount, that Moses wist not that the skin of his face shone while he talked with him." This verse refers to Moses as having rays of light, not horns, emanating from his face. The image of Moses having horns comes from the Vulgate, a translation of the Bible into Latin by St. Jerome, which translates קָרַ֛ן, qāran (based on the root,

קָ֫רֶן qeren, which often means "horn") into "cornuta". Even so, "horned" in this context is very likely meant to mean "glorified".
* Exodus 9:15-17, God directly states this as one of the intentions behind His Signs and Wonders (AKA the Plagues of Egypt). Instead of wiping out all of the Egyptians, God is making an example of some of them despite the way they allowed the Hebrews to suffer (with the slavery and killing their male babies).
* Exodus, aka Bennet du Paris, was one of many promising characters who saw his potential squandered. Introduced as a
* Exodus as ever and the series has not let up on the undertones. In fact, now they only look pretty darn domestic.
* Exodus: Gods and Kings due to its historical inaccuracies (see below).
* Exodus: Gods and Kings: his adaptation of the Biblical tale starts with the Battle historical Battle of Kadesh, where the Egyptian army faces a huge invasion by the Hittite Empire.
* Exodus had a group of arms raised defiantly upward, with the tallest hand holding a rifle by the barrel.
* Exodus is a fairly influential thrash metal band. Even if their biggest overall legacy is that founding guitarist Kirk Hammett went on to replace
* Exodus is an omega-level telekinetic whose control of his ability is so fine that he can reconstruct matter at the molecular level. He once
* Exodus is especially bad at this. Early chapters interweave the protagonists' escape from Cyprus with detailed mini-histories of the Holocaust and World War II - at least partially justified as back story for several characters. Then the second "part" of the book stops completely for a 100-page description of modern Zionism from the 1890s through the creation of modern Israel. The novel picks up once the main story starts, but just getting there will exhaust many readers.
* Exodus it that way. Also referred to as the Land of Milk and Honey, milk referring to goat's milk and honey referring to a type of date paste.
* Exodus — a quest to escape Egypt and found a new nation in the Promised Land.
* Exodus Road first to make it semi-legal, but she declined, bringing it back to this trope.
* Exodus that it's hard to trace it down to the first one that brought up the idea. Occurrences like the parting of the Red Sea and the red river are usually attributed to a natural disaster. Other biblical stories like the Flood get similar treatment.
* "Exodus": The raft crew are found by a nearby boat. They've finally found rescue! Oh, wait. It turns out The Others are in fact REAL and "the boy" they were coming to take was Walt, not Aaron! Within the next few minutes, the raft is destroyed, Jin and Sawyer's fates are left unclear, Walt is taken, and Michael is left alone in the dark waters screaming for his son.
* EXO: Exo-L (or Aeri/Eri, which has the meaning of guardian and blessing in Korean).
* EXO, Luhan's visions of the future sometimes manifest themselves as dreams.
* Exo Man and reproduce it, thus achieving his original research goals. Instead he builds a suit of power armor using the few bits of the stuff he has, and goes out fighting crime in it.
* exorbitant prices on the secondary market. If you've ever hit a dead end looking for, or been too short on cash to purchase, a Schwartz Plastics Co. soap dish or Money Lover's Barrel Bank, it's because fans have been using them for Crow's eye socket and Tom Servo's torso, respectively. (The show itself eventually started using custom-molded replicas when the show's characters needed to be rebuilt, rather than try and keep the original items in stock.)
* Exorbitant? you get three times that if you make it through the arena without leaving.
* exorcised, or will trying to do this just end up with the host hurt or worse?
* Exorcist II: The Heretic and which Blatty personally wrote and directed.
* Exorcist II: The Heretic, probably from using the brainwave synchronizer. When

she helps autistic Sandra to speak, Dr. Tuskin knows exactly what she did and warns her it's not polite to get in people's heads without permission.
* Exorcist II: The Heretic - quite infamously, given that it's the sequel to what's often considered the scariest movie ever. Highlights include a goofy "mind synchronizer" device, Reagan suffering an attack during a jazzy tapdancing performance, reams of nonsensical pseudo-metaphysical exposition, and James Earl Jones dressed up as a giant locust, spitting a leopard from his mouth.
* Exorcist II: The Heretic) tend to vary, but very few consider them to actually be worse than the second film.
* Exorcists Vox and Valentino hiding out from them during the latest purge.
* Exorcist: The Beginning better critically (due to a limited release, the gross was even shorter).
* Exorcist: The Beginning make the critics any more kindly disposed toward the film. The eventual release of Schrader's version also didn't get any critic screenings, though that had more to do with it being a token cinema release before it was dumped onto DVD.
* Exoria, codenamed MRX-402A (second prototype model of the fourth generation military reconnaissance X-series). Aside from being able to achieve speeds over three hundred kilometers per hour, it has onboard electronic systems that allow it to analyze the terrain ahead instantly and adjust the suspensions real-time. It also has an auto-drive function, and two .50 machine guns. Seatbelt not included.
* Exoria, however, that neither Hyrule nor Gerudo are exactly "white", though, and hints have been dropped insinauting that Valent may have a very good reason for launching a continent-wide invasion.
* Exoria series. Despite managing to stay true to the usual Zelda formula, such as item acquisitions, dungeon grinds, and boss fights, the author never fails to remind you that the story is set in the midst of a continental war, and things can get brutal.
* ExoRobotics, which in turn grew out of the powered exoskeletons built in 1969 by a Serbian researcher Miomir Vukobratović.
* EXO's Kai has done this for his solo performances in concert, the most famous being "Confession," where he takes off his jacket and dances shirtless for his screaming fans.
* Exo Squad, after Terran retake Venus, some of the Neosapien garrisons become guerrillas, hoping that Phaeton would send more reinforcements to rescue them. The reinforcements never reach the Venusian surface.
* Exo Squad all rolled into one. His battleplans usually end up getting ambushed and outgunned by the enemy.
* Exo Squad are supported by jet-pack powered light infantry. Human resistance forces play the role of Indigs (some of them have jetpacks too). The Neosapiens develop Supersoldiers, some focusing on brute strength, others on mental capabilities.
* Exo Squad becomes the official leader of the eponymous Able Squad. (In practice, however, the two new squadrons rarely appear and Marsh still commands the Able Squad whenever it is sent on a solo mission.)
* Exo Squad, before the Neosapien wars break out. They eventually become the reluctant allies of the fleet.
* Exo Squad, begins with a documentary about the history of the Neosapiens.
* Exo Squad), but it was also broken into smaller four or five episode long mini arcs, with the action typically focusing on a particular theater of the war. On the DVD release, each mini-arc gets its own name in addition to the episode titles.
* Exo Squad), but opposed Phaeton's because he didn't want Neosapiens to become the ones who enslave others.
* Exo Squad, Captain Marcus suicidally rams the otherwise-crippled carrier Resolute into the Neosapien fleet.
* Exosquad commandeered by the Resistance get into an extended battle at a cloverleaf interchange with a group of loyal Neo Tanks. This lasts until the entire Exofleet gets overhead and brings the battle to a swift conclusion in favor of the Resistance.

* Exo Squad control their E-Frames with cyberjacks mounted at the base of their skulls, although they're also shown using an optical targeting system - the crosshairs follow the movement of the pilot's eye, and they "pull the trigger" basically by winking.
* Exo Squad could go wrong. Luckily, they're sterile. And can collapse into a pile of mush. Yay, science.
* Exo Squad devices mid-second season. Although said devices didn't bring about a combat performance improvement as most examples above, they did save their lives on several occasions later.
* Exo Squad doing an orbital insertion on occupied Earth in pyramid-shaped entry capsules.
* Exo Squad, Draconis regularly plots against Phaeton, but his plans always come to naught. Phaeton eventually gets rid of him anyways.
* Exo Squad, enemy Neosapien ace Neo-Frame pilot Thrax pilots a red Neo-Frame, whereas other Neosapiens pilot purple and gold craft. Sure enough, Thrax turns out to be one of the best fighters that Able Squad goes up against.
* Exo Squad explains that he was a petty thief in Paris in his youth and joined Exofleet to escape the past, meaning that it plays the role of FFL in the setting.
* Exo Squad features team member Alec DeLeon, with his specialized Communications E-Frame.
* Exo Squad had previously crushed the first neo-sapiens rebellion on Mars. This left the neo-sapiens unhappy, which eventually led to a second war.
* Exo Squad had the Neo Megas experiment on other Neosapiens to find a cure for his Automutation Syndrome.
* Exo Squad has an interesting reversal. While humans are born naturally, the Genetically-engineered Neosapiens are artificially grown by the "brood." At the end of the series, one of the Neosapiens, Marsala, lobbies with the government to allow the creation of one final brood that's capable of natural breeding.
* Exo Squad has an interesting variation. While humans are born naturally, the genetically-engineered Neosapiens are artificially grown by the "brood." At the end of the series, one of the Neosapiens, Marsala, lobbies with the government to allow the creation of one final brood that's capable of natural breeding.
* Exo Squad has Captain Marcus. All of his tactics mostly involve attacking right away with no thought of any battleplans whatsoever. Most of which end in spectacular failure. Also his complete disregard for the use of Exo-Frames in any form. This is especially telling considering the show is about a squad of E-frame pilots.
* Exo Squad has people travel between Earth, Mars, and Venus, as if it were to another country.
* Exo Squad, he can survive without the air far longer than any human, and this trope isn't apparently an issue. The back trip itself isn't shown, but Marsala is fine afterwards.
* Exo Squad. In his first appearance, we find him painting with a VR helmet on. When asked by his Neosapien colleague why he would paint something only he could see, the prof derisively states that only he could appreciate it. If there was any doubt that he deserved his planet-sized ego, it's put to rest near the end of the series when he puts the recently obliterated planet Mars back together again!
* Exo Squad in the second season. Not that any of them had a real chance to harm a recurring character...
* Exo Squad is a bit of a subversion. Her death actually has an impact on the main character that shows up well into the second season, even more so when the bad guys clone her...
* Exo Squad is basically a Band Of Brothers, especially for characters like Nara Burns, who was orphaned by the war.
* Exo Squad is constantly berating his generals for their incompetence. Even when they're right. ESPECIALLY when they're right.
* Exosquad kind of way), though he clarified in multiple interviews that the series was created by Jeff Segal.
* Exo Squad late in the second season was an even more devastating blow to the

Neosapiens. Phaeton built most of his anti-Terran propaganda upon it afterwards.
* Exo Squad learns that Neosapien prisoners "sent to Venus" are killed on route.
* Exo Squad: Maggie Weston and Alec De Leon share a few, as do J. T. Marsh and Colleen O'Reilly; but neither of them hold a candle to the looks that Nara Burns gives Marsala. The longing look seems to be permanently affixed to her face in his presence.
* Exo Squad. Many of Burns' fellow captives die en route, which lies right across a Venusian desert.
* Exo Squad Neosapien War breaks out and easily surpasses the original one in scope and impact.
* Exo Squad notes that if this upcoming attack is what it looks like, then the Exofleet's leader must be insane.
* Exo Squad, not only are Nara and Marsala both unable to express their feelings for each other, they each have instances where they unknowningly slap the other down.
* Exo Squad often had extended sequences showing Able Squad "framing up".
* Exo Squad of the Solar System. Wg.Cdr. is the air force equivalent of infantry's Lt.Col.
* Exo Squad on Marsala and orders him to kill his ex-comrades. Marsala receives an obligatory "How could you?! After all we went through together!" reprimand from the humans, responds with a heartfelt and hateful speech about human oppression of his people...and naturally shoots the Neosapiens. However the second part of the trope is subverted as Phaeton turned out dumb enough to actually give him a loaded gun.
* Exo Squad pilots and the jumptroopers (basically, light paratroopers) who die like lemmings when things get hot.
* Exo Squad. Practically all humans of the late 21st century, men and women alike, have at least part of the sides of their head shaved, and often in a manner far-removed from any current-day style.
* Exo Squad, since it's the job the exoframes and Neo Sapiens were invented for.
* Exo Squad, so only Kaz Takagi's CR-001 Exofighter qualifies for the "plane" part.
* Exo Squad spots the guy and angrily throws him off the bridge as soon as Winfield sees him.
* Exo Squad starts off at Exploration and Colonization of the Solar System and leaps into a system wide War. Interestingly, it does have elements of being an Empire At It's Height at the beginning.
* Exo Squad steering is twofold: the ground movement (walking) is synchronized with the pilot's leg movements, but aiming and flying are controlled via "cyberjacks" connecting directly to the pilot's brain via a socket at the back of his/her neck.
* Exo Squad that could shapeshift by Automutation Syndrome and medical experiments.
* Exosquad, the Able Squad is able to turn the tide of battle in Terran favor by assaulting the enemy flagship, buying the Terran fleet time to escape the massacre more or less intact.
* Exo Squad the ExoFleet plays it straight, most of their ships are grey and boxy, the best example is the Resolute.
* Exo Squad, the hairstyles of 22nd century Earth defy description. Random strips of hair are shaved off, and weird combinations of hairstyles exist (such as a mohawk/mullet), for both men and women!
* Exo Squad, the Neomegas seem to have this programmed into their DNA.
* Exo Squad. The Neosapiens themselves would count, except that they were actually designed for physical labor rather than combat. Still, they make good soldiers.
* Exo Squad, the other exosquads are treated like this. Especially Baker Squad. In early episodes, the Jumptroopers were also treated this way, but once the Charlie-Fives show up, this ceases.
* Exo Squad - the size of an attack chopper when the rest were barely SUV sized.
* Exo Squad. They double as Exo-Frame Carriers and both carried huge guns into battle, making them Battlestars.
* Exo Squad. They have brought up the issue of cloaked ships being tracked by heat or expended fuel... once or twice. Otherwise, decent size space ships and mecha are able to cloak and escape detection all the time.

* Exo Squad, Thrax is demoted and has his insignia ripped off for not finishing off an Exofleet pilot during the retreat from Mercury.
* Exo Squad to distinguish them from Neosapiens and get around the small fact that both races are human, regardless of the fact that they don't call Earth "Terra", or that many humans are natives of Venus or the moons of the outer planets.
* Exo Squad to Venus. "We need to become official undesirables. That's one assignment you troopers might enjoy."
* Exo Squad was dedicated to Neosapien propaganda and Terrans who collaborated with it.
* Exo Squad was partly aboard a cargo ship that had been attacked by pirates, and was without gravity. Or so they said, anyway. The animators apparently couldn't make up their minds about whether they were moving in or out of a gravity field. Otherwise, though, they have artificial gravity, and can even use it as a weapon for defending planets (GRAF [GRAvitational Focus] shields, the focus of the Venus story arc).
* Exo Squad were all modified versions of the usual models, testing new features which inevitably turn the tide in the first battle they are used in.
* Exo Squad when asked about Barca, a traitor Pirate helping the Neosapiens in return for Pirate dominion over Venus: "All of Venus Barca will ever see is a six-foot hole in the ground."
* Exo Squad, who was already phasing out the Neo Sapiens with the Neo Lords.
* Exo Squad with the mutating agent as a ploy to get Marsh to do his dirty work for him.
* Exo storyline in the second game is also a reworking of Rasputin's original story, involving the player having to save him from the Hive. As of the Beyond Light expansion, the last remaining copy of Rasputin after his destruction at the hands of the Darkness now resides inside an Exo body, bringing back the original idea.
* Exoteric anime publishes an article claiming that All Might's successor is attending U.A. However, instead of Izuku, he zeroes in on the wrong suspect: Ojiro Mashiro, throwing his life into disarray as he's dragged into the spotlight.
* "Exotic" Adrian Street are among those who followed Gorgeous George's example.
* "Exotic" Adrian Street sees your brain damaged cowboys like "Wildcat" Wendell Cooley and their rodeos as competitions to show off who can ride the worst. You'd never see such clumsy horsemanship from a British man. Now go watch a fox hunt, colonials!
* "Exotic" Adrian Street's song "Sweet Transvestite with a Broken Nose":
* "Exotic" Adrian Street Wrestle Birmingham, where he was Heavyweight Champion of Alabama, shutdown.
* Exotic Entree: An evil character eats food that's immoral just to prepare.
* Exotic Equipment: A non-human character's sex organs have features which human sex organs don't have.
* Exotic Equipment-Centauri style: if you visit a Swim-With-Dolphins attraction, you can count on all the animals being females, because males have a bad habit of grabbing tourists' wrists or ankles with their you-know-whats.
* Exotic Extended Marriage: Exotic cultures are more open to unusual marriage arrangements.
* Exotic Extended Marriage norm, for a foreign/nonhuman culture rather than a fringe practice.
* Exotic Extended Marriage: Polygamous marriages are the norm in this culture as a way of showing how alien it is.
* Exotics: Space Marine Librarians and Psykers, who utilize the dangerous,
* Exotic technologies include "Damper Field", which replaces standard deflector shields with an energy field that reduces any incoming damage by 75% and has 50% chance to kill teleporting boarders. "Reflector Field" is compatible both with shields and Damper Field and gives a chance to reflect weapons fire back at the shooter.
* Exotic Weapon Supremacy, that indicates that they're more badass than everyone else.

* Exo-Toa, the Toa quickly discard them when they realize the exo-suits are blocking their special powers. They made a cameo in the following arc, only to get destroyed.
* EXO used to have 12 members but after 3 members leaving the group they became 9.
* Expanded Galaxy Mod "Evacuation of Thessia" mission where you're tasked with flying the Normandy around the planet to rescue fleeing refugees and key assets before the Reapers catch you. Crew members can be invited up to the captain's cabin at any time, and there's additional romance content for certain characters like Liara. There are even special achievements and shuttle bay items depending on the player's decisions during the story and/ what they've done in the previous games.
* Expanded Galaxy Mod's cargo bay), as well as depreciable War Assets and Assignments peppered throughout the galaxy.
* Expanded in the supplement "Street Magic". Adepts can benefit from blood magic, with at least one of the new metamagics revolving around
* Expanded material posits the theory that the acidic blood in a Xenomorph is similar to the acid in a battery. Essentially, the Xenomorph runs off of energy that is generated by chemical reactions within their bodies, meaning that they don't need sustenance or respiration. This could also explain why various castes of Xenomorph can remain dormant for long periods of time, such as the Ovomorph.
* Expanded on a little more in Volume 8: when Ruby starts entering a stress-induced Heroic BSoD
* Expanded Psionics Handbook about Elans, so they take a -2 racial penalty to their Charisma stat.
* Expanded Psionics Handbook, has psionics as an explicitly separate type of magic.
* Expanded Psionics Handbook is essentially this: humans who underwent body modification to turn themselves into an immortal being powered by thought.
* Expanded Psionics Handbook take over the body of anyone that they are in contact with.
* Expanded States of America: The USA has acquired many more states and territories than it did in real life.
* Expanded Universe — by using ground troops to force the enemy into specific locations on the planet below, where they could safely be blown to bits. Repeatedly.
* Expanded Universe abandoned Centauri world, living in isolation for decades (and colonizing a nearby world) before being discovered.
* Expanded Universe adds both dedicated carriers, as some fighter-using races tend to have their carriers (in addition to the fighters of the larger ships) too small to carry offensive weaponry, and a few battlestars:
* Expanded Universe, a decapitated Data is still in control of his body.
* Expanded Universe, all other Hutts, as well. (Hutts, in fact, consider girth to be a sign of strength and power, and consider small Hutts to be weak and less worthy.)
* Expanded Universe, allowing him to maintain his position effectively even against the four-armed Grievous while waiting for the right moment to strike. (Its "weakness" was that a Soresu user might have to count on an opportunity arriving instead of creating one.)
* Expanded Universe also has examples like New Siberia, New Sahara or New Reykjavik.
* Expanded Universe, a medical school had a hazing practice where first year students were required to research a non-topic and write a paper on their results with the same level of rigor that one would expect from a research paper that one is trying to publish in a real medical journal. A group of students decided to research telepathy, actually found some telepaths, and from there ended up setting in motion the creation of PsiCorps.
* Expanded Universe ancestor who looked almost completely identical to him; someone even remarks that it's no wonder he has such a powerful ATA gene.
* Expanded Universe (and Episode 3) has the Juggernaut vehicle, which could be turned into a full-fledged tank just by replacing the wheels (all ten of them) with tracks. It's essentially a slab of metal with guns.

* Expanded Universe and far stronger illusions, complete with a similar transformation to Rainbow Dash.
* Expanded Universe and spends most of her time sitting in her room spying on the house's inhabitants via the mirrors.
* Expanded Universe, and that doesn't suggest that the modifications were entirely beneficial or even voluntary.
* Expanded Universe, and the Earth-Minbari War left them a bit scarred...).
* Expanded Universe. And then it turns out that the Eternals themselves greatly respect creatures known as the Black and White Guardians, who are as far above them as they are above Time Lords.
* Expanded Universe. As a result, when the Centauri invaded during the Centauri-Orieni War to bypass Orieni defenses, the brave but already technologically inferior Rogolon were slaughtered by the Centauri veterans who wasted no time in picking on isolated ships that refused to dodge attacks or shoot down incoming fire, and the Rogolon remained independent only because the Centauri had bigger things to worry at the moment and after the war were too busy rebuilding to spare the forces necessary.
* Expanded Universe. At no time, however, the Centauri are willing to arm their subjects (foreign mercenaries (especially Drazi), on the other hand, are used).
* Expanded Universe. Attarn ships are also known for their exaggerated firepower, and defeated two similar-sized empires with energy weapons before first meeting the galactic community.
* Expanded Universe authors to start creating their own survivors who went into hiding or were mysteriously overlooked. Not to mention the hundreds of Sith all over the place.
* Expanded Universe because with their mutual precognition, direct attacks are pointless is most cases, and they're trying to wear down their opponent's guard strength.
* Expanded Universe between the IDF and the II. The former despise the underhanded tactics employed by the spooks, and the latter consider the warriors to be dumb grunts.
* Expanded Universe Books it's revealed that vampires get normal humans to act as body doubles so they can have passport photos.
* Expanded Universe books often feature "Dark Jedi" as villains, many of whom were formerly real Jedi, who are too numerous to list.
* Expanded Universe books says that they got their technology from failed alien invaders and don't understand it well enough to do more than replicate it.
* Expanded Universe brings us the Halo artifacts, which are completely disturbing.
* Expanded Universe by a magical queen who was overthrown by Rassilon. So the Time Lords avoided extinction with by using this, even when the curse wears off. Mind you its not like they can't have sex, its because that they have been using this trope for so long they decided to avoid the whole pregnancy process when you can get an instant baby.
* Expanded Universe). By no mere coincidence, these are by far the strongest ground forces in the setting.
* Expanded Universe, causing the heat to melt the whole person rather than sear holes through people.
* Expanded Universe: Clone commando R C- 8015, 'Fi', starts merely with wisecracks. Over time, however, his mood darkens, but he continued to amuse his squadmates with jokes. His tend to be a touch morbid, but very funny.
* Expanded Universe: Collection of officially licensed works and adaptations that serve more to explore and expand a setting, rarely getting in the way of the main storyline.
* Expanded Universe comics focusing on Junkrat and Roadhog, Junkrat is seen constantly insulting Roadhog for being fat, but as soon as one cop tells another to "keep an eye on the fat one", Junkrat immediately flies into a rage.
* Expanded Universe design being scrapped (and reworked into Leia's blockade runner by adding the hammerhead bow section) very late in production, the new design (unlike the original) had neither obvious escape pods nor obvious hatches for

launching internal ones.
* Expanded Universe did include a couple of theories along the way, though.
* Expanded Universe episode "The Enterprise Incident". Spock wasn't supposed to have any real feelings for her, but it's implied that he did.
* Expanded Universe exists because critics and other writers do look at the work from different lenses.
* Expanded Universe explains that he is a Supervoc that was deliberately misbadged, but the television serial implies that Dums' inability to talk is more of a social imposition than anything to do with their programming.
* Expanded Universe explains that synthehol was originally invented by the Ferengi for use in scams: a Ferengi con artist would invite the mark to drink, giving the mark their strongest booze while the Ferengi only drinks synthehol and fakes being drunk out of his gourd. But they quickly realized that there was a huge market for an alcohol substitute that lets people get as drunk as they like, but also lets them sober up as soon as they need to and skip the hangover. So just selling synthehol to everybody was an easier way to make money.
* Expanded Universe explains the PPGs that appeared only in the first episode as one such attempt, with about the same penetration as a kinetic weapon, more munitions, and no way to regulate the power, leading EarthForce to revert to the previous model at least for the station crew.
* Expanded Universe fleet plays stirring bagpipe music over every broadcast channel. At maximum volume. Doubles as communications jamming since their enemies are unable to hear each other over their radios with the bagpipes on every frequency, and several on the receiving end of the tactic have noted it gives them headaches.
* Expanded Universe, for example, contained a scene where Chris spends a night in the TARDIS guest suite and discovers that his "bath" is an Olympic-sized swimming pool with clawed feet on the end.
* Expanded Universe for Kahless. The knife from which the blood used to clone "Kahless" was extracted.
* Expanded Universe from executing Imperial Guardsmen who'd been fighting daemons.
* Expanded Universe. From his reaction, it was giving him claustrophobia and agoraphobia at the same time.
* Expanded Universe gets boyishly excited by a lot of the weird, gross, terrifying stuff they encounter.
* Expanded Universe gives us the Orieni and their hunter-killers, starfighter drones specifically designed for this. While devastating, it's also logistically intensive and their opponents in the Great War, the Centauri, had a larger industrial base.
* Expanded Universe give the Hyach a number of stealth ships, depending on advanced hull materials and a fully gravitic drive to not be detected. This has a few downsides: as their technology is not as advanced as the Minbari's, their stealth ships need to turn off their active sensors to not be detected, and WILL get detected anyway the moment they open fire; also, the stealth hull is more fragile than the standard, and a stealth ship is far easier to destroy when it gets detected.
* Expanded Universe going as far as suggesting the player should save their game every time it gets uttered.
* Expanded Universe had clones in jars. On Kamino, the cloned fetuses are grown in pods filled with nutrients. Pretty creepy, but even worse is the part about the clones' training: "If clones showed any signs of abnormality, they often mysteriously disappeared in the late hours of the night. This was the case of a batch of young clones whose vision was not 100% perfect."
* Expanded Universe has Beylix, essentially a giant storage yard for the United Reclamation company.
* Expanded Universe has Jar Jar Binks compare them to Gungan skeletons when he first sees one.
* Expanded Universe has The Empire and The New Republic fighting each other and later brings in more Empires, as well as a Hegemony, a Dominion, an Assemblage, an

Aristocracy, several Imperiums, a Confederacy, a Consortium, a Sovereignty, a Union, an Authority, an Ascendancy...
* Expanded Universe has the Fourth Doctor recount the unshown adventure leading up to "The Abominable Snowman", claiming that his life had been saved by Buddhist faith healing performed on him by the priest, and using "Buddhist wisdom" to put himself into a "healing coma" that allowed him to recover from being shot through the heart.
* Expanded Universe have a few examples of "good" Unitologists, people who are not fanatically devoted to the religion and fight back against the Necromorphs because they realize this cannot be the salvation they were promised. Later games don't feature such individuals, perhaps explained as an effect of the Markers' growing influence.
* Expanded Universe having his classic character defining moment of vowing to kill Kerrigan someday. We're suppose to believe that he got over his ploy for revenge during the 4-year intermission, but how he got over it went completely unexplained in the game; leaving many players confused as to why Raynor's suddenly in a different emotional state.
* Expanded Universe. Heck, even the ones who are featured in canon are this, since we still only get a tiny glimpse of their adventures.
* Expanded Universe hints, by Ancient experiments), while the Asgard placed several worlds in the Milky Way under military protection from the Goa'uld.
* Expanded Universe, however. Female Twi'leks are considered sexually attractive to males of most humanoid species — especially human men. Zeltrons are less famously so, but those who know of them tend to think they're even better, partially due to their use of pheromones and a more humanlike skin tone.
* Expanded Universe in any possible medium beyond the theatrical films.
* Expanded Universe. In fact, there's a novel dedicated mostly to him and an attempt by a Section 31 operative to recruit him. The novel also reveals that he's gay, not that it makes a difference to any other character. Hawke's partner calls Picard out on letting Hawke die. When Picard points out that Hawke was already assimilated, the guy points out that so was Picard. Assimilated people can be restored. Hawke didn't even get a chance to do that.
* Expanded Universe: Information not given in the work itself is revealed in related tie-in media.
* Expanded Universe intimates that Q killed the dinosaurs after using a spatial rift to divert an asteroid hurled at him by another omnipotent being. He would later be charged with overseeing the rebuilding of Earth's ecosystem, including nurturing any sentients that might arise. He left a gift for us in the form of the platypus.
* Expanded Universe introduces the Centauri-Orieni War, with (most of) the factions shifting side depending on the situation:
* Expanded Universe involves the Doctor using various entheogenic drugs, including LSD and hallucinogenic mushrooms, in order to communicate with an alien Aztec god.
* Expanded UniverseIt should be noted that any wish that was impossible to fulfill would be interpreted in its own way by the GENIE. For example, wishing for something "never to have happened" would be impossible to fulfill, as the GENIE is unable to alter the past. Instead, he might create an illusion for the person as if the wish was actually fulfilled.
* Expanded Universe know about them will immediately realize they have a very serious problem.
* Expanded Universe (like the Ithorians) stay that way by kicking out troublemakers, so that members of the species encountered out in the galaxy are far more likely to be examples than those on the homeworld.
* Expanded Universe Main Fleet have shown up, each with her own Main Base.
* Expanded Universe material elaborates that Jar Jar's crime was stealing a miniature sub from Boss Nass (the "heyblibber") and crashing it into one of the reactors powering the
* Expanded universe materials and the sequel game expand the number of Earth-like planets, with Umoja, Agria, and Meinhoff being notable examples. Korhal IV also

used to be a nice place to live, but most of the planet was flattened by nuclear missiles before the start of the first game.
* Expanded Universe materials establish that this was once a radiation-shielding measure but is now purely traditional; the full chrome paint job was reserved for the Royal Yachts, whilst the fighters have it applied to the nosecone and the leading edge of the wings.
* Expanded universe materials have featured even more of these, especially in the hands of Sabers. Siegfried's Balmung is about as tall as he is, and he's already a giant of a man. The Saber version of Frankenstein carries a ridiculously bulky weapon that seems to weigh more than her. Musashi carries regular ol' katanas, but her
* Expanded Universe material state that Tarkin's plan backfired and the rebellion used Alderaan to recuit thousands.
* Expanded Universe material, you'd have no idea what character was being referenced in the credits.
* Expanded Universe — by using ground troops to force the enemy into specific locations on the planet below, where they could safely be blown to bits. Repeatedly.
* Expanded Universe, meanwhile, explains that Starfleet exploratory vessels automatically drop subspace signal boosters as they travel in order to maintain contact with the Federation.
* Expanded Universe mentions that, during the Earth-Minbari War, Earth Alliance found a way to create areas where jump points can't be opened. The usual application is to prevent the traditional Minbari tactic of opening a jump point inside your squadron, but they also used it to prevent the opening of jump points anywhere in the Sol System inside the asteroid belt. It barely slowed the Minbari down.
* Expanded Universe mentions two feuding worlds whose centuries-long strife ultimately stemmed from the hard feelings caused by an unintentional diplomatic incident. Specifically, a dog analogue owned by a dignitary from one world killing a cat analogue owned by a dignitary from the other. When this was discovered, this resulted in the first ever peace treaty to include a section about leash laws.
* Expanded Universe mother and a telepath father would result in a Mundane child. It's implied that father's genes serve to enhance the child's telepathy if he or she has received the gene from the mother (otherwise, breeding would be pointless). This fact also resulted in many female telepaths keeping their mothers' last name (e.g. the female Alexander line stretches back to the founding of the Psi Corps).
* Expanded Universe movies, the event was caused by Shockwave's crash-landing on Earth.
* Expanded Universe needed to power such small cloaking devices had already been used up.
* Expanded Universe novel, he becomes the Federation ambassador to the Ferengi, given his rather unique skillset and understanding of the capitalist mind.
* Expanded Universe novel implies it's not universal, since the Klingons actually start importing the beverage in droves after the Dominion War.
* Expanded Universe novel mentioned that that episode was turned into a training exercise that was considered hellishly difficult, and that 90% of the people who tried Kirk's approach ended up blowing themselves up when the cannon misfired. Riker's solution was to use the makeshift cannon as a giant mine, and clubbed the Gorn with a rock while it was disoriented from the blast.
* Expanded Universe novels also suggested that the Eternals are the descendants of “Time Lords” from the previous universe that escaped its collapse and fled into ours. They also suggested that some of the rogue god-like beings we sometimes see – like Fenric, or the Animus, or the Celestial Toymaker - – are actually rogue Eternals or Guardians.
* Expanded Universe novels feature the Infiltrator 950s, which are genetically modified humans implanted with various subtle neural and subdermal cybernetics, making them predominantly flesh creatures with some machine enhancements, like wireless networking in their brains. This means they can pass as human far better

than even the T-800s.
* Expanded Universe novels have started being pointedly casual about mentioning this or that character with a same-sex partner, possibly to compensate for the above. It can sometimes come over as trying too hard.
* Expanded Universe novels, they go on to have a civil war between the all-mechanical Cylons and the partly-organic Cylons. This gets them off the Colonials' backs for a while, but they fear that whichever side wins will be that much stronger when the war ends and they turn their attention back to humanity.
* Expanded Universe of their tendency to play fast with the rules to complete objectives and talking back to their superiors.
* Expanded Universe, once the New Republic was set up, they had their version of the Academy.
* Expanded Universe, one of the Imperial Remnants becomes the First Order, which causes the Resistance to be formed out of the New Republic.
* Expanded Universe or digital display, another character flips open the cover, showing the object to be a book. They are absolutely baffled—not at the concept of a book, but in storing information in a system that is so hard to search. Once informed of the benefits (a power outage will not cut off information access, just for example), they gradually adapt, though they still find it a mind-numbing task to search.
* Expanded Universe play with the trope. Their term for "friend" is the same term for "sibling." If you've fought enough battles with a Mando'ad, then you're their sibling. No, blood ties or formal adoption is not a requirement. Their culture also sees all who follow the Mandalorian way as brothers and sisters in one big, war-mongering family.
* Expanded Universe, raiders and privateers had a surprisingly large impact on galactic history:
* Expanded Universe reprising the role, but sadly, Hurt was battling pancreatic cancer and suddenly passed away two days after his birthday in 2017, genuinely cutting short his time as the Doctor. Comics and literature have managed to keep hammering out the details of his character's presence in the series.
* Expanded Universe says he's so handsome that he could steal the heart of every woman in London.
* Expanded Universe says that this exchange is an example of the constant arms race between cloaks and sensors: the Klingons develop a ship that can fire while cloaked, and once the Federation finds out about it, within a week they've invented a way to detect it.
* Expanded Universe Separatist and was seen by the Republic operatives, it's likely Skako Minor was invaded soon after.
* Expanded Universe. So far they only built one city-sized domed attraction, but is already a huge financial success.
* Expanded Universe. Some of these Force powers, like Force Push and Force Speed, would go on to make their big-screen debut in the prequel trilogy, where there were more fully-realized Jedi around to use them.
* Expanded Universe sometimes uses paper-like materials and writing utensils for using them, but it's something called "flimsiplast" or "flimsi". Unlike paper it's completely reusable, snaps back from being crumpled if it's smoothed out, and dissolves in water. There's also a similar reusable material called "durasheet", popular among students passing notes because not long after being written on, any messages fade.
* Expanded Universe, specifically chosen for his experience and immunity to the White by Odo to be the Dominion representative on Deep Space Nine.
* Expanded Universe stories, also happens to take place on Tatooine despite Luke's remark that "If there is a bright center to the universe you are the planet that is farthest from".
* Expanded Universe story, Seven says that he can clearly sense that she will somehow hold great meaning to him in his future, but the only reasons as to why he can think of is that she is either going to be his "dearest friend" or "darkest enemy"; he simply cannot think of any other possibility. The truth, of course, is

that he is going to marry her as the Eleventh Doctor.
* Expanded Universe, such as the Keepers of the One Freedom (who are unique in their relative tolerance towards humanity).
* Expanded Universe suggests that Luke was this as well with his aunt and uncle, despite the conflicts he had with the latter during the movie.
* Expanded Universe takes some pleasure in giving previous Doctors powers only shown by later ones. For instance, the Time Trips novella "The Death Pit" shows the Fourth Doctor using psychic paper to blag his way into a spa, a gadget introduced by the Ninth Doctor.
* Expanded Universe that governed how they operated. Most Bounty Hunters just moonlighted as mercenaries or assassins in addition to chasing legal bounties laid out by the Empire, and in many cases the Empire would turn a blind eye to such illegal activity.
* Expanded Universe. The comics have also established that Clara was Da Vinci's original model for the Mona Lisa.
* Expanded Universe; the Council created a separate arbitrary Galactic Standard time for the galaxy that isn't based on any single planet specifically to coordinate everyone. And as mentioned above in the tie-in novels, most species' homeworlds have years of similar length to Earth's due to the limitations of main sequence stars' Goldilocks Zones.
* Expanded Universe the language "Federation Standard", which has never been fully explained but is presumably a language to encumber every member of the Federation, regardless of series. It's probably (but not necessarily) based on English. One can assume other regional languages have become merely points of culture to people like Picard. It's explained in-universe that French became obscure by the 24th century (episode "Code of Honor").
* Expanded Universe, the leaders of the factions survive the centuries by using life extension treatments developed by Zakharov. However, by the end of the second novel, Sheng-ji Yang is captured and imprisoned for attempting to eliminate all the other faction leaders. The opposition leader Jin Long is installed as the leader of the Human Hive in his place. However, Yang's daughter discovers that Long is actually Yang's clone, specifically created at his own request in the event he would become too rigid to deal with what was coming. Long was to become the new Yang (he even took the name) and used Yang's memory-recording machine to become more like the original. However, the third book reveals that the new Yang became corrupt and decadent, eschewing the original's philosophies in exchange for personal gratification. His wife (Yang's daughter; apparently, she suffers from a weird case of the Electra complex) assassinates him and also takes up the name/title Chairman Yang.
* Expanded Universe - the PT standing for "Personal Transport". Basically, they look like a shorter and stockier AT-ST.
* Expanded Universe, the Rutarian strike fighter: developed by the Centauri, it uses an unspecified form of stealth to sneak upon unsuspecting targets before opening fire.
* Expanded Universe (the Vatican for the same reasons they are still independent from Italy, and Israel with their own colony world and the Republic of Korea because they never joined the Alliance for their own reasons), even if they strongly feel Alliance pressure (Israel's independence is mostly nominal), and as Earth Alliance expanded in space two different sets of separatists slipped out and formed their own states, the Sh'lassen Triumvirate (two worlds, they join Earth Alliance during the series when the government starts losing a civil war and calls Earth for help, with joining the Alliance as condition) and the Free Human Union (three worlds, still independent).
* Expanded Universe, the Venusians do this to their dead. It has the added purpose of allowing the eater to share in the eaten's memories.
* Expanded Universe thrown to the creature. Zorba was saved, however (though humiliated even more) when he made the beast sick and it vomited him out.
* Expanded Universe to boot. Additionally, the head of the SPARTAN-IV program has the Arabic name of "Musa".

* Expanded Universe) to function and consume large amounts of power. Since everywhere almost everyone wants to go has fixed Jump Gates anyway, and anywhere that gets lots of traffic can have on installed readily enough, in practice only military and some very special exploration ships have Jump Drives.
* Expanded Universe to qualify. Only Earth Alliance and the now-extinct Dilgar build "proper" dreadnoughts.
* Expanded Universe to transform their shadows into living arsenals capable of directly manifesting in 3-D, allowing their priests to calmly sit down for a spot of tea as their shadows tear all enemies around to pieces.
* Expanded Universe was also instituted to cut down on it since then there would only be a couple of Sith, and they could work from the shadows against the Jedi. A telling admission, because they could never wipe out the Jedi when fighting them openly (though they would never admit their weakness of course).
* Expanded Universe, was that many of the major races such as Klingons and Romulans come from the rarely-mentioned-in-canonicity Beta Quadrant. More specifically:
* Expanded Universe we get a detailed look at the armies of most races. Most have only Line or Mechanized Infantry, but a few more militaristic ones are better equipped:
* Expanded Universe where the planet withdrew from the Republic, and is in a state of all-out civil war among the nobility, with the Republic and the Empire supporting different noble houses in a proxy war to take down a usurper who believes the planet should remain independent (which is not in the interest of either faction).
* Expanded Universe where we learn the Guild has specialized teaching facilities set aside for this very purpose.
* Expanded Universe. Which luckily was still under construction at the time of the movies.
* Expanded Universe while his father was still in charge of Shinra Inc.... Yeah, we're not buying it either.
* Expanded Universe will do the same thing, usually at a similar cantina. Talon Karrde once quipped, in the aftermath of such an incident, that paying off the aggrieved bartender is "traditional in these cases".
* Expanded Universe with comics and books referring to it as the Human Empire, Human-Vulcan Empire and the United Empire of Planets. It wasn't until the Deep Space Nine episode "In a Mirror, Darkly" that the name "Terran" Empire was officially added and after that the issue was set, to the point of been retroactively added in the two prequels Enterprise and Discovery.
* Expanded Universe with Detective Veta Lopis, as they both admit privately to themselves the other is quite attractive and they seem to develop a fondness for teasing each other. Saving each other's lives seems to have only strengthened that bond.
* Expanded Universe with the Fourth Doctor, with certain stories (especially the Big Finish audios) taking inspiration from the actor's history of depression and some of his more damaging life experiences to flesh out the character.
* expanded upon film gives some more frame to these by taking place in the United States in the 1920's.
* Expanding ammunition flattens on impact to increase the size of the wound (and therefore its lethality) while reducing its penetration, which would allow for a human body to better absorb the bullet. Soft Point Ammo has the jacket removed from the nose while Hollow Point has an internal cavity. Cruciform ammunition has an X shaped incision in the tip, causing it to split and expand in a controlled fashion. While the Hague Convention prohibits the use of expanding ammunition in warfare, it is permitted or even required in certain circumstances such as hunting or law enforcement, where quickly disabling the target may prevent loss of life and over-penetration may put bystanders at risk (though the latter point isn't nearly as significant as people make it out to be - even if your bullet won't over-penetrate, many of the other bullets you shoot can still easily miss and hit a bystander—a source of civilian casualties more common than overpenetration by orders of magnitude).

* expanding finite region. Our universe, for example, could be infinite and as long as the portion of it that is simulated expands outward at the speed of light, we would never be able to tell. This can also be used to construct infinite simulations-within-simulations.
* Expanding on that "center of the multiverse" comment: it's what holds the multiverse together. Destroy New Earth (home of the main DC continuity) and it starts a chain reaction that will inevitably destroy all of existence. Imperiex tried to take advantage of this in
* Expanding on that, we have Kataangers (fans of Katara/Aang, or "Kataang") and their
* Expanding on the above, gratuitous or poorly-implemented changes to long-running online games can cause serious balance issues, create increasingly gimmicky gameplay, and create or exacerbate
* Expanding on the previous point, magic is defined by human thought, but this is dependent on the user in question. In one book, Harry marks out the boundaries of a protection spell with blue Play-Doh. When Murphy asks why, he explains that he mentally associates the color blue with safety, and that another wizard might use an entirely different color. This also comes into play with potion-making, as all the ingredients must fit the central theme. For example, a vigor potion might use strong coffee as the base liquid and include ingredients such as high-energy music and a piece of tie-dyed fabric.
* Expanding on this, the AI starts to become personalized towards each person. You see it giving advice and comforting an office drone the first time you met it. As the game goes on it starts acting as your handler, which you can comment on. And to be fair to the Pop-Star she was panicking as she found herself in the middle of a war-zone.
* Expanding on Zemo, he believes that it is natural for the strong to rule the weak, and when accused by T'Challa of being
* Expansionist Party of the United States coordinates sites of groups advocating statehood for Taiwan, Britain, Australia, Guyana, and many other places.
* Expansion Pack added the Dumbfire Missile Rack: the individual missiles are smaller, weaker, have less range and no guidance, but the rack fires them in volleys of ten (or twenty for the large mount version) and can launch volleys twice as often as regular missiles.
* Expansion Pack added the Ghouls as a villain group. They like to cling to the ceilings of the subway tunnels and drop down on you as you pass under them.
* Expansion Pack: Additional content released after the original game that is purchased separately and (usually) requires the original game to run.
* Expansion Pack adds the Phoenix Mercenaries, a breakaway group made up of former Crayven mercs who have decided to strike out on their own. Their tech is similar to Crayven, for the most part, with a few additions.
* Expansion Pack adds the Titan class, which are truly enormous ships that dwarf the previously-huge Flagships. Notably, you can only build one, and it takes a long time to complete.
* Expansion Pack and must rediscover lost technology, putting them on par with the humans.
* Expansion Pack are all viable ways to end an Undead menace, but the headshot tends to be the go-to choice for players.
* Expansion Pack (Burning Crusade and Wrath of the Lich King,) they were bustling, central hubs of activity due to their proximity to the action and the convenience of portals to the other major cities. Now the action has moved on, the portals are shut down, and so there's very little reason to go there any more. (The Broken Isles version of Dalaran does not count, as it is effectively a separate city from the Northrend version.)
* Expansion Pack, but as for a full explanation, we'll just have to hope the sequel or one of the spinoffs provides it.
* Expansion Pack crash site, exploring which can get you a free unit or two.
* Expansion Pack, had Yuri's new third side use laser-armed flying saucers referred to as Floating Discs. General Carville lampshades this in the mission where they're

introduced
* Expansion Pack. However, it can be difficult when the enemy is firing AP shells at you.
* Expansion Pack, however, they lack the tools to repair or make more of them.
* Expansion Pack lets you put Halloween and "horror"-themed decorations in your park, along with the option of bare dirt (or whatever you want) for the ground. Some rides are even Halloween-themed.
* Expansion Pack, Nod gets a new artillery unit type called Specter and its spotter infantry are the Shadow Teams, who gained a new ability to make it possible.
* Expansion Pack Past. All we know is that she was a fruit stand vendor who worked with Yucks Shmumbers on the creation of "juice on the go" (eventually helping her to invent juice boxes), helped get a traitorous Odd Squad agent fired, then joined the organization. What happened between the firing of said agent and her joining Odd Squad includes her delivering newspapers in Norway, then becoming the queen of Portugal, but these events aren't expanded on.
* Expansion Pack Past: The details of a character's past go on and on and on until it's incredibly complicated.
* Expansion Pack Past, where different jobs can get piled on in the character's backstory.
* Expansion Pack Past, which only came up when Jesse decided to go skydiving before his wedding.
* Expansion Pack play it straight. Almalexia, Umaril the Unfeathered, and Miraak all wear rather broad pauldrons on their shoulders.
* Expansion Pack. Protoculture also was not getting any money from the game's sales.
* Expansion Pack returns the Panzerkleins halfway through. This time, though, they are much more susceptible to damage, although small arms fire is still mostly useless.
* Expansion Pack, The Chest after that one, where the Most Definitely True Final Boss lies: ???, which is Isaac's corpse.
* Expansion Pack. The equivalent to the Cruise missile is a lightning bolt, and to the Nuclear bomb is a fireball.
* Expansion Pack this ending and will fight anyone who strives for it. However, this stems from the last time someone tried to do this, resulting in the destruction of their home system. Here are the defining quotes of the Caretaker leader and her counterpart among the Manifold Usurpers:
* Expansion Pack (which pass on their abilities by bite), and baseline "human" Sims; the offspring will be randomly assigned the "type" of one of its parents.
* Expansion Pack World. They just weren't accessible yet, and therefore had no reason to be on the map.
* Expansion sets were planned to be temporary installments played along with the main set, then forgotten as newer sets replaced them. The "Standard" format preserves this idea.
* Expansions such as The Pitt feature other flesh-eating, decaying-looking formerly-human radiation monsters, such as Trogs, who are always mindless flesh-eaters and walk on all fours, and Wildmen, who seem to retain some human characteristics but eat people and cannot be talked to or reasoned with.
* Expansion teams in closed-shop sports leagues (i.e., those in North America that don't practice promotion and relegation), whether granted and created from scratch or imported from the merging of a rival league.
* Expatriette is a very straightforward hero to play, and she doesn't have many ways to create wild combinations like, say, the Wraith or Absolute Zero can. However, she also comes online
* Expatriette, liquid nitrogen rounds, incendiary rounds, hollow point rounds, shock rounds... And a card that lets her use all of her weapons in a single turn.
* Expect a fandom to get a sudden increase in fans when it's either dubbed by a company or it airs on
* Expect a lot of children to lose interest in any fad when their parents take interest in it.

* Expect any crime anime that takes place in the United States during Prohibiton to exclusively use
* Expect any good looking female villain who is well-aged, or young and beautiful to be an anti-villain.. All of the female villains to be unsympathetic are either poorly aged with wrinkles or wear a very unflattering expression with evil-looking eyes.
* expect any heroes to take him up on the offer, but if there's someone strong enough to be useful he'd be happy to have them.
* Expect anyone with fire-based powers to say "things are heating up", "now we're cooking", "they're hot", etc.
* Expect any statement that "X must be accepted and done because it's stated in the Bible" to be followed up by quotes of many, many other examples from the same source that pretty much no one follows, and to modern eyes would lie somewhere between "comedically ridiculous" and "will land you on death row for doing". Comically illustrated in this
* expectation, namely athletes and musicians. Athletes who are forthright about their virginity, such as Tim Tebow or Lolo Jones, have been criticized on that basis.
* expected test by reprogramming it so the simulated Klingons would react to him this way.
* expected to drop everything related to the fate of the world when they see a vividly-colored beam of light radiating from a piece of equipment; you can always save the world next time, but that ultimate epic legendary shiny must be picked up or it's gone.
* Expecting Someone Taller: A character's appearance doesn't match up with what was expected of them.
* Expecting Someone Taller fall into this category, especially his eventual engagement to the Valkyrie Ortlinde.
* Expecting Someone Taller from Norse/Germanic mythology, which allows him to take on any shape he desires.
* Expecting Someone Taller has Wagner's version of the Germanic Gods as one big, messed-up family.
* Expecting Someone Taller: Someone did heroic things and became famous, but nobody knows what the person looks like, so people are surprised when they meet them, usually because the celebrity is shorter than expected.
* Expecting Someone Taller), Wotan, the king of the gods, wears one, just as he does in the opera. It's very intimidating.
* expect it to work. The exact extent to which this is true varies from codex to codex to book. The codexes tend to ascribe their abilities to technology, the fluff to psychic power.
* Expect lots of this in German whenever Uberwald and/or philosophy are being mentioned. Überwald is German (the inhabitants of Discworld prefer to avoid the diacretic points because they'll just roll off and cause unnecessary punctuation) and literally translates into "over forest" or "beyond forest". Or in Latin: Transylvania.
* expects is exactly what drives her to pardon them in the first place.
* Expect to be looked at as if you're doing this if you like spiders, and are called upon to remove some particularly big and beautiful specimen. Especially weird if you live in Europe and there are no spider species venomous enough to really endanger humans. (Of course, a biologist may have this attitude to a real dangerous animal, too, see above.)
* Expedition: An early and pioneering attempt to model and envision a truly alien ecosystem. Adapted as the Discovery Channel documentary "Alien Planet" in 2005.
* expeditionary invasion force when the Bonaparte dynasty conquered the world.
* Expeditionary Tank that was developed in Parallel wasn't too bad either.
* Expedition come to Earth and help apes evolve in their image, creating the basis for several religions and mythologies in the process.
* Expedition: Darwin IV has twin suns. The term "sunslight" is used several times in the text to remind readers of this.

* Expedition Everest. Part of the queue area is a museum run by a local naturalist, Professor Pema Dorje, presenting his evidence that the Yeti is real and dangerous, including a plaque at the end warning people of the danger of entering its domain, below which is a note by the operators of the railroad saying they don't agree with or endorse his opinions. If you board the ride vehicle, you're "ignoring" this warning and going to the mountain anyway, and your train gets attacked by a Yeti, making Professor Dorje an example of this trope.
* Expedition, feature the jet-propelled, lance-headed Skewer, which has a 60-foot wingspan. The book also mentions the Ebony Blisterwing, which is said to have a wingspan of up to 1000 feet.
* Expedition has a number of tripodal creatures, such as the Sac Back, Beach Loper, and the Groveback mentioned below.
* Expedition is a two-legged antelope-like alien herbivore from the planet Darwin IV, with one front leg and one hind leg, seemingly from its front and back legs fusing together. Despite this seemingly unstable configuration the gyrosprinter evolved highly-efficient balance organs, becoming Darwin IV's fastest land animal.
* Expedition. It's speculated that the planet's atmosphere was extremely foggy at the time such sensory mechanisms arose, making visible light an inferior mode of detection.
* Expedition megafauna is at the brink of extinction, claiming that, barring humans, nothing larger than the Norway rat exists outside of zoos, and even the animals in zoos are badly mutated.
* Expedition not only gives us a planet with a wide variety of "Floaters", several of whom are basically Air-Whales, one of these is of human-like intelligence.
* Expedition: Sonar seems to be the primary sensory input for Darwin IV species.
* Expeditions: Viking has one straight (Nefja and Asleifr) and one bisexual (Røskva and Ketill) romance option of each gender.
* Expedition, the aliens called Yma are there to protect humanity from itself. We'd destroyed the environment almost beyond repair before they showed up, and they're helping us put the world back together.
* Expedition: The gigantic creatures called sea striders have mouths in the bottoms of their feet, allowing them to gulp down mouthfuls of the Amoebic Sea just by walking about.
* Expedition to the Barrier Peaks and the D&D Blackmoor adventures.
* Expedition to the Barrier Peaks enter, they discover that the dungeon is actually part of a derelict spacecraft and they're fighting alien monsters armed with high-tech weapons.
* Expedition to the Barrier Peaks features a crashed alien spaceship full of robots and such, as do several Blackmoor adventures.
* Expedition to the Barrier Peaks has a crashed spaceship with concentrated rations such as protein stews, cero-porridges, nutrient drinks, surrogate steaks, vegetable substitutes and vita-bars.
* Expedition to the Barrier Peaks. The spaceship's police headquarters had cells with three normal walls and one force field wall.
* Expedition to the Barrier Peaks. The starship has multiple examples of gravity control technology, including the drop chutes/tubes, inside the control room and the worker robots.
* Expedition Venus by Hugh Walters. In this case it's not associated with an alien invasion; it was inadvertently brought back by an unmanned space probe.
* Expedition wrote about a joint human-alien expedition to a primitive planet called "Darwin IV" (the aliens came and helped humanity clean up their act).
* Expedition Z enjoy eating human and animal brains more than normal flesh.
* Expedition Z has a Westerly Wall at its Western border made of scrap metal and wood stretching for 1,300 miles that blocks off intruders and (formerly) zombies.
* Expedition Z the zombie apocalypse (AKA the Fall) happened 20 years ago that at this point the main character's father points out there shouldn't be any zombies out in the wild after having starved to death about 7 years ago.
* expel, in whole or in part, their uninvited guest during a visit to the toilet.
* Expelled: Ayano behaved badly in front of the teachers once too often, and the

Guidance Counseller lost patience and expelled her.
* Expelled by stowing away in a shipping crate which contains a bike he is supposed to deliver as well as changing the address to the O'Neel house.
* Expelled claims that proponents of intelligent design regularly receive this treatment at the hands of the scientific community, which supports Darwinian evolution.
* Expelled from Every Other School: A character is kicked out of multiple schools, for making trouble.
* Expelled from Every Other School: A character who can't go to school because they have gotten expelled so many times.
* Expelled from Paradise on Earth in a human body, she's just as the title described, but it seems that she doesn't regret it.
* Expelled to sabotage their statements. Myers tried to attend a screening of the film, but the filmmakers recognized Myers and would not allow him into the theater, apparently afraid that he would discover their tactics and expose them. All this did was make it clear that the filmmakers knew exactly how shady their tactics had been when Myers and Dawkins (who managed to get into the screening) blogged about the film.
* expendability, where Balalaika's Russian ex-military mercenaries are easily the deadliest force on the show, and the murder of two of them leads to a city-wide manhunt.
* Expendable Alternate Universe: Universes besides the story's primary one can be ruined or destroyed with little fuss.
* Expendable Alternate Universe: Whatever happens to an alternate version of your reality is of no concern to you.
* Expendable Clone — The tendency to see these doubles as highly expendable, if not abominations to be killed.
* Expendable Clone are treated as mass-produced, cheap copies and easily-replaceable objects, that aren't even granted the dignity of being considered as "real" people.
* Expendable Clone: Clones are considered okay to sacrifice because we can always make more.
* Expendable Clone: It's not considered a big deal when a clone dies because more can always be made.
* Expendable Clone: The life of a clone is worthless to their creator or master.
* expendable, doing more damage than it could fighting to the death after such a wound.
* Expendable, two explorers start asphyxiating in a strange atmosphere. One gets the idea of a tracheotomy in her spinning head and tries to perform it on her partner, untrained, with improvised tools, while blacking out herself. She wakes up next to the corpse and discovers that the effect is just a momentary symptom of acclimation.
* Expensive Glass of Crap: Swapping out top-shelf with cheap liquor and charging a premium for it is very illegal, and anyone who is even suspected of doing it (usually when they've been ratted out by a disgruntled former employee) can expect a visit from the regional liquor commission or analogous monitoring authority, and, if caught, can expect stiff fines and quite possibly the suspension or revocation of their liquor license if it's particularly egregious or is not their first time getting caught pulling this sort of thing.
* expensive lawyer, provides a clue that he's guilty of more than the police knew about.
* experienced a hiatus between January and May 2008 in an effort to improve artistic ability before continuing.
* experienced his first death meant that Celestine, Olga, and the assassin responsible knew about his Resurrective Immortality
* Experienced Protagonist: A veteran hero who clearly isn't a rookie or newbie.
* Experienced Protagonist: The main character is already an expert when the story begins.
* experienced technical difficulties during the Cleveland Browns game against the

New England Patriots the game had come back on!
* Experience Entitlement: A character who feels entitled to everything because they're more experienced than others.
* Experience Entitlement: I have more experience than you rookies, and thus, I have every right to show it!
* Experience Entitlement: I'm more experienced in this thing than you are, so I have every right to look down on you!
* Experience Entitlement, ironically enough. People will often try to justify their immature behavior based on horrible experience.
* Experience Entitlement: Using their age or amount of experience as a reason to put others down.
* experience of smell is probably more like how we experience sound or vision than aromas.
* Experience Penalty supplement continues to reduce the pain of multi-classing by introducing fractional increases to BAB and saves so that multi-class characters don't fall behind in those progressions, so long as you don't mind some additional math when levelling-up.
* experiences the downsides of having superhero parents and blackmail them into willingly giving up their powers
* experience under his belt (he's a Whateley alumnus himself, among other things, so he did have formal power training) and so can usually avert this trope because whatever powers he's copied from you, they're probably similar enough to ones he's had before that he can skip the "figure it out" step and just use them competently straight away.
* Experiencing death in the family or losing a friend to death is extremely saddening and heartbreaking for everyone that were close with the person that passed on. If the same people lose yet another family member/friend, they may not be as upset as they were with the first death; more so if they can visibly tell that the person in question is going to die.
* Experimental Archeology: A character tries to prove that an ancient voyage actually occurred by doing it themselves.
* Experimental brain implants have already been installed on Alzheimer patients in clinical tests with positive results. They're still very simple, but prove once and for all that simply having silicon in your nervous system won't make you inhuman.
* Experimental Comic Kotone—the whole "little sister" thing is just a cover.
* Experimental Comic Kotone. However, later strips show that, while she may have originally felt that way, as time went on she fell for Onii-san for real.
* Experimental Comic Kotone. In a case of questionable biology, her sister Lisa is a fox-girl.
* Experimental electronic/R&B artist Jai Paul is notorious for this, such as only having a Twitter account with one tweet to address a leaked album back in 2013, giving very little interviews and very little live performances, next-to-nothing being known about his personal life, and most notoriously, only having released two or three singles since 2010 despite massive praise and buzz (aforementioned leaked album/demos not counting).
* experimental engineered human species... the bonobos, designed to be sexy and submissive (and exclusively female), hibernoids who go from frenzied sleepness workaholism to extended hibernation sleep (useful on a slow-travelling spacecraft) and of course the 'Variant Thirteens', scary pre-civilisation throwbacks who are incredible badasses combined with a complete disregard for hierarchial authority structures and no need to feel a sense of belonging.
* Experimental Film, a man steps on her hand, breaking her finger. She keeps crawling with one hand.
* Experimental Film appears to laborers at exactly noon, and decapitates anyone who isn't perfectly respectful.
* Experimental Film, Clark wakes up crying. When his parents reach his room, he's wet himself.
* Experimental Film: Lois's parents met a theater school. She was seventeen. He was a twenty-four-year-old draft-doger from Australia. They were married five years

later, had Lois two years after that, and divorced seven years after that.
* Experimental Film, Safie Hewsen's great-grandparents were a Yezidi man and a Christian woman who immigrated from Armenia to Canada because of their families' disapproval. This turned out for the better, as they were able to avoid the Armenian genocide.
* experimental films. (or over 35 days). It follows the complete process of making and selling a pedometer in reverse chronological order.
* "Experimental Film" the ending of the titular film supposedly "makes your face implode".
* "Experimental Film": They Might Be Giants collaborated with the creators of
* Experimental Film, Wrob Barney's handwriting is extremely hard to read, which isn't helped by what he calls uncontrollable hypographic pornocentrism, meaning a tendency to make sex-related misspellings.
* experimental jetpack that you steal in one mission, and thereafter always have, if you can bother to go pick it up. Not only does he fly it without trouble, but he can fire any singlehanded gun from it as well as from any vehicle.
* Experimental MIRV to fire 8 mini-nukes in one shot are pretty low, if at all. The strongest in-game enemies can take around 2-3 mini nukes before going down, some of them like the Feral Ghoul Reaver can appear inside buildings or quickly close the gap between the player and them.
* Experimental musician Matthew Villani is quite fond of this trope. Song titles include "Here's The Waw Voice", "Off The High Dirve, Into The Empty Pool", "Loudness Capacity Test", "The Drunk Elephant's Night On The Sea", "The Fiery Lava Rains Down On The Dead Land", and "Bang! Bang! Bang! Bang!". It seems that if his songs aren't this, they're given number series titles like "Experimental Midi #7", "Project Song #1", "Composite Song #2", or "Fantasy Music #3".
* Experimental Webcomic Kotone between the main character and Professor Akira, and it's funny as hell.
* Experimentboy (mainly in his video descriptions, but sometimes also in the video itself). As his videos essentially consist in playing with fire, destroying things with a lawnmower, cooking dangerous things in microwave ovens, or firing improvised ammunition (tin cans, nails, dolls, etc) with a spud gun, this is totally justified.
* experiment conducted at an Australian restaurant suggests that this pricing trick may actually be effective. After the price of a particular menu item was reduced by a single cent (all prices started at round X.00 figures) customers became 15% more likely to order said item. When everything else was reduced to X.99 to match, the distribution of orders returned to roughly the same as before.
* Experimented in College: A person who currently identifies as straight pursued same-sex relationships when they were in school.
* Experimented in College: Someone who currently identifies as straight pursued same-sex relationships when they were in school.
* Experiment Four, Mr. 76ix's 2012 album, ends with this, and the last track is appropriately titled "Mors Janua Vitae".
* Experiment In Terror, where it's the bad guy who gets shot and killed by cops on a ballfield immediately after a game.
* "Experiment IV", a horror movie pastiche in which a bunch of government scientists in a spooky military facility, including Dawn French and a pre-
* Experiment Kraj copies all the abilities of creatures that have +1/+1 counters on them.
* experiments" and possibly magic. Downplayed in that he's 100% obedient to the throne, and never speaks, and is thus a far less despicable person than the complete psychopath Gregor Clegane was. On the other hand, however, it's very heavily implied that he doesn't have a head, sooo yeah...
* Experiments in the Revival of Organisms (most famous for featuring the Autojektor, an early predecessor to modern ECMO) featured a canine heart beating and kept alive, with blood being supplied by a series of tubes hooked up to the great vessels, oxygenated by a lung on a tray inflated and deflated with bellows.
* Experiments suggest that astronauts headed to Mars or other interplanetary

destinations may experience Alzheimer's-like symptoms, due to brain damage caused by cosmic rays.
* Experiments with millisecond-tracking digital stopwatches suggest that the brain's perception shifts into an actual approximation of "bullet time" when its levels of adrenaline are highest. This happens because neurons' activity is devoted so tightly to whatever danger or challenge a subject is confronted by, the person actually picks up enough details so that time
* Experiment: The inhabitants of Sezaria were all human once excluding the "original one" - Ladrafiefr/Kaito. Said inhabitants are now freaky aliens with tentacles coming from their backs.
* Experiment XI0014101's alternative name "Marigold" is rather fitting in that it is a sunny flower and that she is known for her rather sunny personality. Floral symbolism wise, it serves as an
* expert at doing this sort of thing. It never came up because his work is classified.
* Expert Consultant: A professional brought in for their expertise or special skills.
* Expert in Underwater Basket Weaving: A character is skilled in something completely useless.
* Expert in Underwater Basket Weaving: Cool talent! Too bad it's totally useless.
* expert marksman be the one running away, while waiting for the best time to put his plans into action.
* Expert poker players who must be defeated by the hero always have a 'tell' (i.e. a subconscious move they make when they are bluffing, or have a good hand).
* Experts in Germanic mythology actually believe dwarves began as chthonic
* Expert sniper Garrus Vakarian, infamous mercenary Zaeed Massani, and unmatched assassin Thane Krios have the deepest voices on your team.
* Expied, Captain Marvel became Marvelman, Captain Marvel Jr. became Kid Marvelman... and Mary Marvel became Young Marvelman.
* Expies of Jenna and Tracy: a black boy and white girl. They are apparently full biological siblings and fraternal twins.
* Expies of other popular characters, even their own. Over the years, however, after developing them enough, they show similar traits, but on the while they end up being quite different than how they started out.
* expies of our world's politicians) presented as small crooks and burglars. As a result, it has its funding cut by politicians offended by the simulation.
* Expies started becoming more popular, the two became more traditional superheroes and started wearing proper costumes.
* expies. When the rest of the family lists their grievances and ask Homer to go back to Springfield, Bart mentions that not getting in trouble due to his status as a special-ed student is one of the reasons why he wants to move back.
* expies). While interviewing Romário, Tobby asked how Romário would define himself. Romário arrogantly asked how to define such a wonderful, perfect and talented person and Tobby's response led Romário to congratulate him for making a good definition.
* expies, who eventually did get matched up against that very same tag team, who in turn were brought together amateur braggarts in the vein of Kurt Angle (and were for a time lead by him as "Team Angle")
* Expiration Date: Ghosts are lingering echoes of the dead person's personality, without real sentience or drive. They sometimes coalesce into tangible figures that wander the streets, babbling nonsense and eating rocks for subsistence (it is implied that this phenomenon accounts for a good deal of the homeless people in Los Angeles). Non-tangible ghosts can be captured and bottled, and are bought and sold like drugs by people who are addicted to the power that comes from ingesting them.
* Expiration Date, meaning what Soldier did made their situation a lot worse.
* Expiration Date revolves around a secret subculture who capture ghosts and inhale them to retain their youth. The trade in "smokes" as depicted bears a lot of resemblance to the covert trade in other things people inhale illicitly.
* Expiration Date: there is a passing reference to the protagonist's twin sister

trying to force him into bed.
* Expiry Date. One of the protagonists, Kieran, knows the day of his death - in fact, there's a permanent reminder on his wrist. But with creatures called Barcodes to defeat and schoolwork to be done, Kieran's life might be gone before he knows it.
* EXP is earned by winning battles and completing quests, but doesn't get taken into account towards levelling up until the party
* Explained by Lil'Jon to be the point of "Turn Down for What". While looking like
* explained by the fact that elves are inherently magical, but are weak on the mechanical side — to compensate for this weakness, they poured all their development of magical abilities into enhancing the mechanical and physical world. Humans are inherently mechanically/physically inclined, they compensate for their magical weak spot by pouring all their magical development into the natural things, like the elements, and controlling dragons. Magnify this single-minded focus of development over hundreds of years, and you get humans whose magic controls the elements (even though humans are by nature mechanically inclined) and elves whose magic enhances mechanical objects (even though elves are by nature more nature/element inclined).
* explained his tongue-in-cheek theory, trad-Catholic homeschooling family trapped in a sterile Protestant suburb".
* Explained in some potentially canonical source or another as being the result of
* Explained in the sequel. Apparently users wear haptic feedback gloves when interacting with holographic displays which both detect the coordinates of the users digits in relation to the holograms and provide resistance for buttons and such. Of course, these are difficult to clean and maintain, so heavy users get the feedback sensors implanted under their skin.
* Explained in the show that, for the first six months (roughly a year in the books), the sire and the fledgling don't feel animosity towards each other. This is likely so that a young vampire can learn all he needs to know before being forced to live on his own.
* explained), is still recognized as an old-timey synonym for "prostitute".
* explained somewhat", when it is revealed that the tribbles are being thrown out onto him by people trying to identify which one is a bomb.
* explained [...] Thanks for your patience." But the toys have already started shipping.
* explained that it's not overused... because it's SCIENCE!: "According to Professor Warren Dow, authority on genetics, heredity and twins, 'Every human being on Earth has at least 20 doubles who look like him or her.'" (It may or may not surprise you to learn that Professor Dow's existence cannot be confirmed, at least by cursory Internet research.)
* Explain, Explain... Oh, Crap!: Someone talks about something and then gets shocked once the implications of what they're talking about hits them.
* Explain, Explain... Oh, Crap!: Someone talks about something before being horrified once the implications of what they're discussing dawns on them.
* Explain, Explain... Oh, Crap!, telling the chorus about the "strange sight" that is the bubbling, disintegrating piece of cloth she used to smear a "love potion" onto a shirt she just gave her husband.
* explaining about it to Andrew, who finds the idea messy and concerning, much like a child. Oddly, Andrew gets stuck on the idea that because only one sperm is able to fertilize the egg, the rest all die.
* explaining just how stupid and desperate the tactic was. All Honorverse ships include numerous conventional sensors, radar, lidar, passive EM and IR detectors of all kinds; any one of which could have seen Honor coming from light-minutes away. Her trick worked simply because her enemy's sensor-techs were too lazy and trusting to check anything but their gravitic sensors, and apparently they had no automated monitoring systems.
* explaining that the Red and Blue soldiers are actually simulation troopers meant to test Freelancer troops against a myriad of mad situations and everything they were subjected to in Blood Gulch was in fact a controlled situation they weren't

meant to understand.
* explaining the gag to Crow and Tom using an actual plank. While Mike was close to tears about the gag, the bots where... less than amused.
* explaining them, as in the above examples (the ones from the first half of the act were simply read off the cue cards, followed by an awkward pause, followed by the next joke).
* "Explaining the Urban Fantasy Masquerade" goes into great detail as to why the presence of an appropriate Masquerade Motivator is necessary as a motivating force for a Masquerade. He suggests two types of Masquerade Motivators: 1) a big scary thing that wants to murder all the super-people and has the power to easily do so 2) a higher authority, a god-like figure, that works to keep humans from being affected by magic.
* explaining why paper explodes by filming it through a microscopic lens at high speeds. What effectively happens is as the press comes down the fibers in the stack of paper tear one by one, until there's not enough left to "resist" the pressure and the remainder all tear at once, creating the loud bang and sending everything flying.
* Explaining Your Power to the Enemy: One-way stupidity screws you over is by telling your enemy how your abilities work and what weakens them.
* Explaining Your Power to the Enemy: The character makes the mistake of telling their opponent how their powers work, letting the enemy know how they can weaken them.
* Explaining Your Power to the Enemy, they didn't really say anything that could make the good guys pick up on a weakness. They had to figure that stuff out on their own.
* Explaining Your Power to the Enemy: When a character's power is spelled out by that character, rather than made clear through visual representation.
* explain memetic evolution without referring to the word "meme" once.
* explains here, the fuel-hog reputation of the Abrams is also somewhat overblown. Part of the reason the tank drank fuel was that earlier variants of the Abrams lacked a reliable and robust auxiliary motor, meaning that to keep the tank parked but the electronics (like radios and so on) powered up required running the main engine, even while you're settling down somewhere for the night. This is also why, as noted above, the tank consumed the same amount of fuel whether it was parked or rolling. Because the military was footing the fuel bill and could supply it reliably, the crew generally weren't too concerned about this. Eventually, a suitable auxiliary power unit mounted on the turret bustle was designed and installed, and the bustle rack was extended to mitigate the loss in space for the crew's personal gear.
* explains her plan for revenge upon Vaarsuvius. Explaining the plan is, in fact, part of the plan.
* explains in a Tumblr post character Sally Pride's last name isn't just a play on the word for a group of lions. Whether future writers will make this a part of her character remains to be seen.
* explains why in any organization or committee it's always the asshole who is in charge.
* explain the above quote Matt was referencing, so comments along the lines of "X is a reference to Y. Or, it could be a reference to Z." were fairly common. It's not surprising that he didn't think too highly of the site.
* Explain WHY the entry scared you. Try to convey your sense of fear to your readers. Avoid putting up
* Explanation , they are all undoubtedly badass. Vampiric and magic powers, experienced in intense combat, and easily able to keep up with the Belmonts.
* explanation, was very proud of inventing a more compelling reason the message was lost, as Tony's gang very nearly rapes the messenger.
* Explicitely mentioned during the Teachers Argument song in the musical Fame, with one of the teachers pointing out that not all of their students have what it takes to be great stars, and some are only good for carrying spears. The argument is over whether Tyrone is the former or the latter.

* explicitly as being uninhabitable for at least a year past that point.
* Explicitly averted, or for the moment very explicitly attempted, by Kieron Gillen on his run in
* Explicitly described by many readers and writers as an essential mark of the genre, distinguishing it from other love stories. Abbreviated HEA.
* explicitly forbid listening to music, with such sentence being essentially torture for him.
* Explicitly invoked, but averted (with tragic consequences for the scrupulous barber), in
* Explicitly invoked by a sample of a crazed preacher, midway through "Static" in
* Explicitly invoked, in the Haunted Art Gallery. The painting is apparently an Escher drawing, which has links to other artworks ...
* Explicitly invoked to explain the Huarong Valley incident: the victorious naval commander Zhou Yu reveals to his lord Sun Quan that he set up the pursuit so that Cao Cao would be chased into the forces of Sun Quan's nominal ally Liu Bei, intending for Cao Cao's successors to blame Liu Bei for his death and primarily target Liu Bei's force, leaving Sun Quan's force free to operate more freely. However, Liu Bei's military advisor Zhuge Liang revealed this plot to his lord, and that he'd deliberately left Guan Yu on that route
* Explicitly made into a game mechanic in the obscure superhero parody
* explicitly makes a similar comment about Revan, but that later turned out to be the True Sith, members of the order that fled into solitude sometime around or before the Great Hyperspace War.
* Explicitly mentioned as a problem for many wizards in the series, since their very-much-extended lifespan puts most relationships with normal humans into
* Explicitly pointed out in the case of Summoners, like Caro or Corona. The latter of which, in a 1-on-1 tournament, decided to rectify this issue by using her golem-manipulation magic on her own body, allowing her to copy the physical fighting techniques of close-combat mages despite not actually knowing said techniques. This almost works (her opponent is taken by surprise and she gets a few good hits in), but the copied techniques are all very predictable, and her opponent learns to dodge them and still knocks her out.
* Explicitly referenced in the one where Homer gets a job writing fortune cookie fortunes: one he pitches is "You will be aroused by a shampoo commercial" - the owner pauses, says that's not bad, then gives him the job.
* explicitly removed (though notice the subtitles include 'masturbation')
* Explicitly spelled out in the final battle between Liu Kang and Shang Tsung in
* Explicitly subverted again years later in the single "Your Body" from her following album Lotus
* explicitly. Such ads may also claim that "supplies are limited," "going fast," or "running out."
* explicitly told with a couple bursts from her P90 at the same range — then cut the rope holding it up with a single bullet.
* Explicitly used, but that's only used to scope out the surroundings and figure out how to proceed - it won't protect you as you move.
* Explicit mention is made of the use of other languages within other star nations. For example, the Andermani speak German and San Martin spoke Spanish until the Republic of Haven came in. Most language issues are handwaved due to good translation software.
* explicit protection. Effectively setting a murderer loose in a building full of helpless children and then preventing anyone from stopping the killing, putatively to teach a moral lesson.
* Explicit RC information means the audience tends to settle onto an agreed 'canon'. and writers typically adjust their writing to appeal to this. MC audiences are not able to, giving writers maximum flexibility.
* explode. Admittedly, the explosions are very tiny, but pistol shrimp use the effect to stun and sometimes kill small fish.
* explode, albeit without much force. The game in question is called Exploding Snap.

* exploded, broke down the surrounding mountains and used the rocks to fill up the pass.
* exploded in flames after stalling and being rear-ended by another race car. Luckily, Reindler got out largely unhurt.
* exploded was also one of the first examples of a traditional European royal army adopting traits of the standing army model that would come to dominate in the early modern era.
* explode gave it the Noise resistance it needs to get close enough to Meteor G for Mega Man to jump from WAZA's Dynamic Station through the rocket into the Meteor Server.
* explode. He also seemed to have a thing for coconuts in his introductory story/episode.
* explode into an enormous fireball exhaust, meaning the shot was considered impossible until Luke (who is a Force sensitive) somehow managed to do it.
* explode into fireballs upon defeat. It's a flashy way to get rid of a monster without more expensive post-editing effects.
* Explodemon has the title character talk entirely in Intentional Engrish For Funny. Made all the funnier by the fact that everyone else doesn't.
* explode) not only lead to the return of this block, but it also lead the creation of the Respawn Anchor, a block made out of crying obsidian that allows players to set their spawn point in The Nether.
* explode of these Planes), even more so than they want to kill the denizens of the other similar Planes. There's an entire plane of pure chaos, where only a strong mind can allow you to impose a small bubble of order around yourself to survive in. Even the relatively benign residents of some of the Planes may attack you if you have a different alignment, or if you violate some obscure rule of behavior that you have no way of knowing about.
* explode per se, any hit from a heavy weapon to the rear of the vehicle could flood the passenger compartment with flammable liquid, barbecuing ten poor Slavic bastards inside with no way out.
* Exploder. If the player controlling it attacks, neither player is hurt.
* explodes a wine glass in her hand in frustration, then rubs the resulting blood in her hair.
* explodes, leaving no sign but her glasses floating on the water. Did we just see our first actual human death in the anime?
* explode someone's neck while they were asleep would cause their head to pop off and fly across the room.
* explodes on a trumpet while Squidward lays on the ground and everyone else mourns.
* explodes. Then she cooks and eats the eggs, because, hey, it's not like they'd survive after their parent exploded.
* explodes. The whole sequence had a very forced, weird atmosphere about it. Particularly if one had seen the "real" Honey in the Bosko cartoons, who basically just prances around going "La, la, la!"
* explode when killed or if they reach a unit, killing any nearby units. You get the Fuel Launcher which has an extremely long range and covers them in fuel, greatly slowing them down.
* explode while inside them isn't enough to do an Abrams in, It'll just get turned into a fireball shooting upwards and out of the tank - without harming anyone/anything inside.
* Exploding Calendar has done a gag at some point or another, making the joke a trope of its own.
* Exploding Calendar, where the butler is desperately trying to stop the pages from flying off the calendar.
* Exploding Fish Tanks: If an aquarium is shown at any point, the aquarium will inevitably be destroyed.
* exploding heads are implied to be the result of a blood seal rebound.
* exploding in a mushroom cloud when he hits the bottom. It did happen to a few other characters throughout the series, too.

* exploding in a shower of blood. Additionally, if Culling Blade is used in that manner, it does not go on cooldown and you gain a speed boost, potentially allowing you to dunk several enemies in succession.
* "Exploding Nazi Heads" seems to be a running gag in the series now. In the 2009 sequel, after defeating the
* Exploding Ring Match, a hardcore match in a ring rigged with explosives on a timer. In some versions the idea is to finish the match before the timer runs out and detonates the ring (although this does not necessarily end the match!), while in others the explosives are concentrated in a specific area, with the wrestlers struggling not to get pushed onto it. Frequently combined with the barbed wire match.
* exploding whale incident in Oregon. This took place in 1970, long before Barry wrote about it, but it's through his article that most people know about it.
* exploding whatever they hit in a later episode. And on a couple occasions Team Rocket have also shrugged off electric shocks after being zapped by Pikachu so many times, with Meowth even making use of his Pikachu-induced shockproofing once.
* exploit a certain loophole Cie'th. This effectively means that if the fal'Cie need an undead army on the spot and you happen to be in the wrong place at the wrong time — enjoy your eternal suffering as a shambling monster without any input or means of preventing it whatsoever!
* Exploitation Film: A film with excessive violence or sex for no real reason
* Exploitation Film, allowing her to ultimately take revenge against her tormentors.
* Exploitation Film: Examples existed in earlier decades, but the genre is associated most with the 1970s, when entire new subgenres came into existence, like biker movies, cannibal movies, nunsploitation movies, slasher films, etc.
* Exploitation Film features a drug dealer who goes by the name Santa Claus. He uses a toy store as a front for his illegal operations.
* Exploitation Film like David DeCoteau and Fred Olen Ray becoming prolific Lifetime movie directors in recent years.
* Exploitation Films. However many of them were just excuses to display more explicit content (namely nudity) than the major studios yet allowed at the time (this being the pre-Code era).
* Exploitation Film shows a young woman kill an attempted rapist with a straight razor and stuff his body into a trunk.
* Exploitation Films in that the film crew protagonists prove to be more savage than the tribe that they are filming!
* Exploitation Now between Jordan and Jones when the latter is attempting to assassinate her.
* Exploitation Now did conclude the main plotline of Jordan and the organization she was fighting against, the comic ends just a few pages after the final battle without addressing what happens after.
* Exploitation Now, has a cybernetic left arm with a built-in plasma cannon.
* Exploitation Now hit this in the later half of Act 3. While the first half has some solid backstory and a bit of development of Bush and Jordan as well as setting up some possible threads for Bimbo and Ralph, the latter half is an extended cliche tentacle monster/magical girl parody connected more to the ultimately unused Babylon Jones while Bimbo and Ralph mostly just complain about their lack of panel time. It does have its humor, but in terms of plot progression, nothing of importance happens.
* Exploitation Now lost her left arm in a car accident when she was little. And replaced it with a mechanical one armed with all sort of gadgets.
* Exploitation Now. The author even lampshades it in the comic with the former two characters who started the series.
* Exploitation Now: When picking up Bimbo's sister Bush from the nunnery, Ralph wandered off for a bit and came back looking disheveled. One of the girls' theories as to how that happened was that a near-sighted priest lost his glasses and mistook for a choir boy.
* Exploitation of the cube squared law was the driving factor of the race to build

the largest luxury liners that dominated ship building from the late 1800s to the 1930s. As a liner's size increases, the amount of free space to devote to more rooms (and thus more paying passengers) increases much faster than need to expand both common rooms and machinery necessary to propel the ship. However this was also a driving factor behind the Titanic Disaster. Laws at the time required lifeboats based off of tonnage rather than total number of people the ship carried. The proportions specified in the law were calculated assuming much smaller vessels, which meant far less efficient use of tonnage. When super ships like the Titanic rolled around, the law's requirements for lifeboats were horribly behind actual passenger capacity.
* exploitation of the war game software to cause mass casualties to Blue. While Van Riper claimed that this proved that the war games were rigged, the intent of the challenge was to test capability in an accurate situation and provide two weeks' worth of training and data that a loss on day one would completely waste. Van Riper's "tactics" did not actually match Iran's capabilities of the time (such as equipping small speedboats with missiles they were physically incapable of carrying), making all of his data garbage.
* exploitative of audience familiarity with the actor's real life situation (
* Exploited) are inherently uncool and lame, therefore anything they like must be just as uncool and lame as they are.
* Exploited. As Paul's Grandfather is gambling at the Le Cercle club, he runs out of money. So he writes a "tab" on a piece of paper, puts on a plate, and he places a napkin on his arm and walks over to a patron, who "pays" him. He then uses the money to get back in the game.
* Exploited by Candace in the movie, where she attempts to get her mom to see outside where
* Exploited by Douglas "Wrong Way" Corrigan, who claimed to have managed to fly across the Atlantic Ocean from America to Ireland without knowing he was doing it until he looked down about three-quarters of the way to Ireland. Corrigan, who had formerly worked as a mechanic for Charles Lindbergh's Trans-Atlantic flight, had actually dreamed of following in his hero's footsteps. However, the home-modified plane in which he had hoped to carry out the flight was deemed so unsafe by the Bureau of Air Commerce that they would only approve flights within the continental United States. Thus, while carrying out a flight plan that should have taken him from New York to California, Corrigan disappeared while flying
* Exploited by grabbing an orange, which the Ghost Writer realizes too late that he can't rhyme with anything. The episode, by the way, ends with Walker taunting Ghost Writer (now safely imprisoned in Ghost Jail) by offering him an orange.
* Exploited by hunting for the mass signature of its drive singularity.
* Exploited by Kunoichi, or female ninja. It was all to easy to manipulate stressed officers to reveal vital information with just a promise of a pleasurable night.
* Exploited by Madame Gao. Her "Steel Serpent" heroin is packaged and delivered by blind Chinese people.
* Exploited by Madara Uchiha. After his fateful duel and defeat at Hashirama's hands, he knew that Tobirama would preserve his corpse to give him a proper burial out of respect. When he makes his return to wreak havoc among the Shinobi Allied forces, he explains to the heroes that, had they destroyed his body, he wouldn't have been able to use the time-delayed Izanagi to resurrect himself.
* Exploited by the children in "The Wacky Molestation Adventure", who call the cops and claim their parents molested them, just to have them taken away and live in freedom. The town turns into a post-apocalyptic hellscape within a matter of days.
* Exploited by the webslinger in a later issue when someone needs to talk to him, and he takes them to chat over fries in a fairly public downtown diner. He's not remotely worried about being recognized as the real Spider-Man, and when his confidant questions this, Spidey provides a perfect demonstration:
* Exploited character, aware that a trope will occur (or is occurring), uses it to their advantage. If the trope is not yet in effect, the character who Exploits it may Invoke it in the process.

* Exploited. Corporal Strappi tries to humiliate Polly by "sparring" with the new recruit, fully expecting her to be unfamiliar with real swordfighting and try to hit his weapon. Polly understands this, and also knows she knows nothing about sword-fighting, so she gives him a headbutt instead.
* Exploited in "Gi-Ants" when Doofenshmirtz makes a Turkey-inator to turn things into giant roasted turkeys, so once everyone eats the turkey, the effect of tryptophan will tire them out and Doofenshmirtz can take over the Tri-State Area.
* Exploited in "Personal Politics": the suspect asks to speak with his lawyer, but the detectives say that there's no need to get a lawyer involved, they just need him to explain his alibi. Wanting to appear helpful, he does so — and then the detectives immediately tear the alibi apart, having previously questioned the other people involved, and merely needing him to either confess or get caught in an obvious lie.
* Exploited purposes by simply disabling the ignition on the car of someone who's already paranoid (either thanks to Mike or because they're in a dangerous line of work to begin with).
* exploited result in one of them being moved to a different store (and more likely would result in Stuart, who hates Cooper, firing him), Cooper enlists the help of his black friend to pose as (the also black) Val's boyfriend Rick Cooper to make it look like Josh was mistaken about Cooper and Val.
* exploited Since many Biblical literalists haven't actually read the Bible, you can go ask them "Do you really believe in [crazy thing that wasn't in the Bible but sounds a bit like it might have been]?" and they'll answer "Yes."
* Exploited sneaks up behind the building and fires his gun into the ground. The noise makes the criminals panic and kill each other.
* Exploited story "A Gutted World". As losses mount in a war with the Klingons and Federation, the military blames the Tal Shiar for giving them bad intelligence while the Tal Shiar thinks the military are just too arrogant to listen to their advice. Neither side realizes go-between Koval has been replaced by a Changeling who ensures a lack of communication to drag the war out longer to set up a Dominion invasion.
* Exploited system by adding red dye to poison bottles to disguise them as healing potions.
* Exploited, that monetizes the trope by stalking waitresses then selling their personal info to male admirers.
* Exploited. The opening heist involves female thief Laure seducing a woman in a bathroom stall, slowly dropping her jewelry as she undresses her. Unbeknownst to the woman, Laure's accomplice is hiding in the next stall, deftly switching out her jewels for lookalikes.
* Exploited: They also have a "bear druid riding a bear while summoning bears"
* exploited this to his advantage: He had put Mata Nui to sleep, but a group of Toa heroes were destined to wake him up again. Rather than try to stop the heroes at all costs, he arranged things so that reviving Mata Nui could give him even more power.
* Exploited) to chase them and they all converge in the gallery, where a bunch of crooks planning to steal a priceless painting are caught in the act.
* Exploited Trope: A character is aware of a trope and tries to take advantage of it.
* Exploited Trope. A combat engineer from XCOM, whom everyone knows for his dirty jokes, when separated from the rest of XCOM, broadcasts a coded distress signal. Another XCOM radio tech easily picks up on this, telling his CO that said signal "looks like a cock and balls sir. Centered on the 69 megahertz bandwidth.".
* Exploited Trope enough to order his squad to dig into the rubble until he finds what's left of Zeta or is forced to realize he's been had...
* Exploited Trope episode "Mandatory Brunch Meeting", when in a riddle contest with (of course) the Riddler. The riddle she sets has the answer "I love you", and Riddler solves it instantly, but owing to Ed Nygma's suppressed feelings for her, he can't bring himself to actually say it.
* Exploited Trope Holt is undergoing an interrogation, with plenty of red stuff

smeared over an apron he's wearing. He leaves for a short conversation with someone else, telling his subject he'll be back after dealing with the subject's comrades. It's actually strawberry jam (he takes a bit off his apron to put on a cracker), and he returns to his subject after dipping his torture tools in more jam.
* Exploited, vanquisher of eeeevil", dumps them in his prototype flying machine, and drops them out of his airship, knowing full well Othar (and Tarvek by extension) will survive. He even calls out to Tarvek wanting to know how Othar gets out of that one.
* Exploited whom Corran Horn has infiltrated unexpectedly run into a New Republic fleet (including his home unit, the elite Rogue Squadron), he orders the other fighters with him to use their ion cannons on enemy fighters so the other side will be slowed down by search-and-rescue, allowing Corran and the others to escape.
* exploited, who plants the priceless Heart of the Ocean diamond on Jack, to frame him for stealing it in retaliation for having an affair with his fiance, Rose.
* Exploited, with Rick complaining that they can only do this a limited number of times.
* Exploited would take turns sitting in space faking serious damage (low power, leaking fuel, weapons and engines off) and sending out a distress signal then wait for the Jem'Hadar to come by looking for an easy kill, whereupon the other ship would decloak and blindside them.
* Exploiting physics glitches allows you to pull this off with ordinary wooden pallets and... small, plastic buckets in
* Exploiting the Fourth Wall: Characters use their access to metafictional elements to their advantage.
* Exploiting the Fourth Wall: Using the fourth wall for practical reasons.
* exploits", he gets Craig to bring his baby son with them when they investigate the alien-menace-of-the-week. His reasoning is that people are friendlier to someone with a baby, which is the same reason he travels with non-Time Lords.
* exploits this in order to seduce women. He even tries picking a girl up by just walking up to her and saying, "Daddy's home."
* exploits this trope by bringing Mr. Curtain ribbons to use as bookmarks for his journal. Mr. Curtain is flattered, considering it to be "a proper attention that had been lacking."
* exploits this trope once by using leftover Christmas wreaths to pretend to build a display in the middle of the summer just to see customers' heads explode.
* Explored also in the episode where Kes is traveling backwards in time, so we see an alternate future where Kes is married to Tom Paris while his friend Harry Kim is married to Kes's daughter.
* Explored. Averted in the case of the signal lights; the investigators wonder if they might have been green instead of red due to a mechanical fault, but an electrical engineer notes that "a fault does not give a positive green light to any situation … if there was a fault … it would have forced everything to go to red." Sadly played straight with the dead man's pedal (see the Real Life section below), which is believed to have contributed to the accident.
* Explored in employing him in the past. By the end of the story, the charges have been dropped, but the rest of Class 1-A knows that he committed some terrible crime, even if they don't know the details. Even Ejirou has lost faith in him.
* Explorer-class vessels. Their task was to travel to unexplored systems, identify those worth permanently occupying, and deploy jumpgates. They were several miles long, and so broad the pylons of the Babylon 5 jumpgate had to be spread wider than normal to create a jump point large enough for them.
* Explorer Designed to travel space and study whatever may be found, being used to survey new stars, planets, and any scientific phenomena. Depending on the ship, it may or may not have any experimental super science capabilities. Some Explorer craft lack dedicated research labs, instead carrying equipment needed for preliminary study. Others may be large or advanced enough for such accommodations.
* Explorer Horror; minimalist storytelling that largely relies on atmosphere and surrealism.
* Explorer Horror: Video game genre in which the player goes through a horror story

with emphasis on exploration, puzzle-solving and atmosphere over fighting enemies.
* Explorer Marco Polo experienced this. He left home at 17 to explore Asia with his father and uncle and didn't return for almost 25 years. He barely spoke his own language anymore and of the family that was still alive, most of them thought he was already dead or didn't recognize him.
* Explorers features a trio of kids who manage to build a spaceship, and then boldly set off to hunt for aliens.
* Explorers of Gor's village, where his friends have been captured and are being kept to be eaten. Once the ants invade, the cannibals are too busy trying to avoid being eaten to stop Tarl's rescue. The cannibals end up eaten.
* Explorers of Sky, and laugh as your weakest moves tear foes a new one (and your strongest moves become downright mean).
* Explorers Of Souls, the Pikachu that she first meets has no interest in adventuring or becoming her compadre.
* Explorers on the Moon has a few all-text panels headed "Extract from the Log Book by Professor Calculus."
* Explorers on the Moon. In the view of "our good old Earth, seen from over 6,000 miles", South America and Africa are the most visible continents; Europe is obscured from readers by a protruding periscope.
* Explorers on the Moon, the bumbling detectives Thomson and Thompson walk around the moon's surface and soon, to their surprise (since this expedition marks the first time men set foot on the moon) find footprints and promptly radio the rest of the crew. When told it's likely their own tracks, they reminisce about the desert episode.
* Explorers on the Moon, when Captain Haddock is explained by Prof. Calculus how the Moon Rocket will turn around before landing, he ends up concluding that "It is exactly like during take off, except that it is the complete opposite".
* Explorers, the Guildmaster's right-hand man will take battle damage in lieu of his boss whenever his positioning allows him to.
* Explorers, the little force field ball that Wolfgang creates does this when his cat jumps on the keyboard, destroying half the basement.
* Explorers, the three kids meet aliens who pick up English from watching television. One alien did a better job than the other, so the latter communicates by speaking in TV catch phrases and clips from old black-and-white TV broadcasts.
* Explorers, the three kids meet aliens who pick up English from watching television. One did a better job than the other so the latter communicates by speaking out TV catchphrases and clips from old black-and-white TV recordings, including this one.
* Explorers to the bully and his friends beating the crap out of him and the bully mentioning that, since he doesn't understand what 'elephantiasis' means, he's just gonna have to take it was a very rude insult and punish the main character... by nearly breaking his nose and then holding him down so he can drool on him.
* Explorer, who has fun by immersing in a large and detailed fictional world.
* explores parallel time and the Timesweepers who have to clean up the messes left by previous time-travelers while fighting off others who don't want the extant lines cleaned up.
* explore the city and quickly became good friends, but as Elise was forbidden from leaving the castle grounds without a chaperone following this incident, they didn't re-encounter one another for several more years, after Effie joined the royal knights and entered Elise's service. They still consider the other to be their best friend, and Effie is incredibly devoted to Elise.
* Exploring Calvin and Hobbes, Watterson recollects a storyline that he scrapped involving Calvin meeting a kid on the playground who was supposed to be even weirder than him. The story never clicked with either himself or his wife, and he ended up tossing it (a rare occurrence, given the lost time rewriting material to keep ahead of deadlines). Later, he realized that the character essentially changed Calvin's role in the strip, making him seem more normal and less of an outsider.
* Exploring island no. 5, the voyagers discover a large plain with many hoof marks, and each mark is "as large as the sail of a ship". They also see nut shells

of unusual size and a lot of "plunder". They become scared and go back to their ship; as they sail away, they observe a crowd of gigantic people approaching the island over the sea, who proceed to put on a horse-race (with equally gigantic horses) on the island. There is no explanation for these happenings, except that the voyagers feel sure that the giants are demons, and accordingly
* Exploring the consequences of making Amy and Rory part-time companions.
* Explosion, contrasting with the sheer destructiveness of this power. May occasionally come in form of beautiful fireworks, which combines this with Light.
* Explosions happen all the time on the show. In one episode, Kermit admits that explosions are one of their trademarks. And if something isn't going to explode on its own, there's always
* Explosion shockwaves in space. Possible for faster ships to escape
* Explosions in Space: Something explodes in space in an unrealistic way.
* Explosions in the rest of the series, however, are particularly deadly. Since the entire point of the game is to push your enemies off the screen, push-away explosions become very useful. AND they do tons of damage.
* explosive battery issues, was also known as "Samsung Galaxy ISIS" or "Samsung Galaxy Allahu Akbar".
* Explosive Breeder: An animal that is capable of giving birth to numerous offspring at once.
* Explosive Breeders, but for being able to tolerate sunlight and consume fresh meat. As such, more advanced ghouls detest them.
* Explosive Breeder that determines how fast a population grows. Mathematically, having a breeding female live forever will do less to increase birth rates than having her produce a daughter (who'll breed early in turn) slightly sooner.
* Explosive Cigar. Unfortunately, Laughing Larry gave the cigar to an innocent man. The killer felt deeply guilty and even tried to stop the man before it blew up and killed him, and was willing to pay for his crime, so long as he knew that Laughing Larry would never laugh again.
* Explosive Cigar: You offer someone a cigar, but after it's lit, it makes a small explosion.
* Explosive Decompression accident, the fourth diver practically exploded when the diving bell was opened accidentally. The pieces were then sucked out and ejected, with one piece landing atop the oil derrick some 30 feet above the accident site.
* Explosive Decompression: A sudden shift in pressure makes you blow up.
* Explosive Decompression: Being in space without a spacesuit makes you explode.
* Explosive Decompression happened frequently in this movie, which opened with an anonymous character exploding inside his space-suit; the same occurs to another character later on. Another is exposed more slowly in a space-elevator and is afterward shown simply with his guts exploded.... so it seems the film tried to preserve
* Explosive Decompression: People don't actually explode in the vacuum of space.
* Explosive decompression why you can open the bay doors when your hand, because of your Pip-Boy, is clearly exposed.
* Explosive Demon Wave turned East City and Papaya Island into flattened wastelands, and it nearly kills Imperfect Cell after Piccolo fuses with Kami.
* explosive. Doubly subverted when Starfire happens to be allergic to a rare mineral the bomb is made out of and is used to find its location.
* Explosive Leash: Keeping prisoners in line with a collar that can kill.
* Explosive Leash: Someone has a collar forced onto them that will kill or torture them if they try to defy the one enslaving them.
* Explosive Leash", though it's possible for a very crafty player to make it out with all the treasure.
* Explosive Leash: Where a bomb is attached to a prisoner while they carry out a dangerous mission.
* explosive leaves him on the ground in the epicenter of a crater, but visibly just covered in dirt and a few scuffs.
* "explosive" materials under various cargo transportation guidelines.
* explosive missiles. When Marge points out how dangerous it is, Homer claims it's

perfectly safe, but is stabbed, zapped, and shot by the toy.
* Explosive Overclocking: Increasing power to dangerous levels to boost speed or performance, causing a device to self-destruct (or close to it).
* Explosive Overclocking: pushing the Phlebotinum beyond its safety limits can be hazardous.
* Explosive Overclocking ramming the target. For naval ships, for instance, this means pushing your ship to speeds that will probably wreck your own ship in short order, but since you're about to wreck it anyway...
* explosive overreactions. Out of all the villains, he's probably the nicest.
* explosive runes, which creates a magical writing which explodes when read. You can set some condition for non-triggering it, making it both versions of this trope at once.
* Explosives being lodged in living soldiers is a fairly common problem in modern warfare. Sometimes the doctors risk their lives, others are left to die from the wounds because it risks the lives of many other injured men and doctors who could save far more lives. At least one case involved a surgeon wearing
* explosivesky. There are also usually background relationships of Ruby/Weiss, Jaune/Pyrrha, and Sun/Neptune, but they don't get much focus. Sometimes the background pairings are shuffled around.
* explosive structure flufftext also described that the MMM-only launchers came about because electronic countermeasures were just too good for individual missiles to penetrate: for the same mass, a single hard-hitting missile would almost inevitably be jammed, spoofed, blinded, or otherwise overcome but a salvo had a pretty good chance of enough making it through to have an impact.
* Explosive Stupidity: Someone blows themselves up by mishandling explosives.
* Explosive Stupidity: When you leave explosives in the hands of idiots, they'll get themselves killed in the process.
* Ex-Police Commissioner/FBI Agent Anna Devane is probably the most prominent one in law enforcement.
* Exponential Idle: You can watch an ad to temporarily increase the value of dt by 50% or buy the Permanent Ad Reward and all achievements related to them.
* exponentially Scientologists who buy the book, most buy multiple copies.
* Exponential Plot Delay: When the real plot moves briskly at the beginning before slowing to a crawl.
* Exponential PotentialAs you level up, you get so many spells that gameplay starts getting confusing.
* Export Save: Keeping progress with a more often than not ridiculously long save file that is expected to be copy-pasted or exported-then-imported from a .txt file.
* Exposé's only #1 hit wasn't "Point of No Return" or "Come Go With Me"(both peaking at #5), but rather "Seasons Change".
* "Exposé": The episode begins with the deaths of Nikki and Paulo. As the other survivors try to discover what killed them, we are treated to flashbacks, gradually approaching the present day. It turns out that they're NOT dead, just in a severe state of paralysis from a spider bite. Their friends don't know this though, and bury their fellow castaways alive.
* Exposed Animal Bellybutton: Cartoon animals with humanlike belly buttons.
* exposed to lethal radiation regenerate an entire flatworm, if said cell has a scaffold on which to grow (the dying adult).
* Exposed to the Elements: Barbarian attire oftens seems to ignore the climate they live in.
* Exposed to the Elements can stop arrows but isn't rated for below-freezing temperatures...
* Exposed to the Elements: Characters are underdressed for cold weather, but this is ignored.
* Exposed to the Elements: In reality, clothing inappropriate to the elements can prove harmful or fatal.
* expose Lila as a led to her being ostracized until she transferred to a new school, and while she swears that she's done with that drama, she still feels guilty over not being able to convince anyone to listen to her. Even with Tikki,

Adrien, and her newfound friends reassuring her, it takes time for her to accept that she can't save those who reject her help.
* expose their panties while playing will fall victim to this trope for some people. Cheerleaders, figure skaters, tennis players...
* exposing his internal organs but causing not a drop of blood to flow.
* Expositing the Masquerade: Turns out these folks knew about the weird stuff all along.
* Exposition Already Covered: A character is about to explain something but another character beats them to it, much to their frustration.
* Exposition Already Covered: A character tries to explain something, but finds to their frustration that someone else already beat them to it.
* Exposition Break, is revealed to be dead in a movie sphere that can be collected on a bonus mission.
* Exposition Cut - One character gets required information, but we don't need to hear it, so we don't.
* Exposition Diagram: A diagram is set up to explain the upcoming plan.
* Exposition: Dialog informs other characters, and also the audience, of key information.
* Exposition Girl. She, like Kankri, is almost a parody of this trope.
* Exposition Party: Characters gather at a party as an excuse to drop exposition.
* Exposition Victim: Upon finding out who the killer is, the character speaks to them instead of fighting or running away.
* Expository Delay, where the explosion is delayed just long enough for the audience to be shown the trigger that causes the explosion.
* Expository Hairstyle Change: Hairstyle change signals a characterization change
* expository text mentions the Great Solar Flare, which caused the collapse of civilization in the 21st century and its eventual rebuilding into the somewhat less uptight version seen in Buck's time period.
* Expository Theme Tune are sapient because "their genes have been spliced". With what is never explained.
* Expository Theme Tune, Furrball is minding his own business sniffing a flower and suddenly gets hit by a piano from nowhere.
* Expository Theme Tune Gordon is shown in the army peeling potatoes; this is basically what he did during his entire tour.
* Expository Theme Tune: The theme tune explains the premise of the show.
* Expospeak Gag. Aperture Science tends to give everything they produce a convoluted title preceded by their own name, which culminates in this:
* Expospeak Gag: Using big words to describe things usually spoken in layman's terms.
* Expo Speak translation. It's anyone's guess how much is due to different parts of the studio audience responding to different terms, and how much is the editors using a laugh track to simulate this effect.
* Exposure of Immortality: When a character in a work is immortal, he is often either perceived to be normal or actively trying to be perceived as such. Sometimes, these characters will need to out themselves to the world at large in order to prove the existence of the supernatural to doubters and deal with a greater threat. Sometimes, they just want to prove it. And sometimes, they're exposed by others deliberately; either to reveal their True Nature and bring about their downfall or during the course of a mundane investigation that uncovers their secret.
* Exposure. They even adopt their trademark uniforms because their clothes were shredded to nothing, and even they don't last long.
* Exposure to Krypton's native environmental conditions weaken and at first even incapacitate Superman.
* exposure to various ancient powers, they can literally "ascend" and become godlike beings — many of the lesser gods are known as Ascendants and were once mortal.
* Express Delivery: A creature is able to give birth immediately after becoming pregnant.

* Express Delivery: A pregnancy that develops at an abnormally fast pace, commonly because of some supernatural reason
* Express Delivery: A unusually short (full-term) pregnancy vs. an unusually long one.
* express disappointment at the fact that they are unavailable — "That's a pity";
* expressed a refusal to evolve (see below), Dedenne can't evolve, and Axew leaves the cast before he can evolve. Goh's Scorbunny broke this pattern by evolving into Raboot within 15 episodes of his debut.
* expressed fondness series, while simultaneously being disturbed by it.
* expressing concern over the conditions in the beautiful princess' cell, I will immediately transfer him to a less people-oriented position.
* expressing desire to become the seat of a bicycle; another one, achieved through "found poetry", is named "I Ejaculated On a Lever") and Mamonas Assassinas (who also had a "found poetry" song about what soap does to your pubic hair, and had one song consisting on just dirty "facts" about animals).
* Expressing Myself My Own Way to this, since by themselves penguins do look all the same.
* Expressionism, and focus on cinematically recreating a character's unstable state of mind, sparked many of the ideas associated with German Expressionism as a film genre.
* Expressionless Face Girl And Emotional Face Boy. Kashiwada is a stoic girl who is unable to make facial expressions to signify how she felt. As such, her classmate Oota becomes obsessed with trying to invoke a response from her.
* Expression seekers derive pleasure from creating something that is uniquely their own. They desire characterization and customization options and the chance to leave their mark on the world their characters find themselves in. They are frustrated by games that deny them the ability to create unique characters and by campaigns that don't permit them to leave lasting legacies.
* Expressions, like "a metric crapload" fall on this category. Such unit does not, of course, exist, but everyone has
* Expressive Hair as it droops when she's depressed or standing up when she's nervous or excited.
* Expressive Hair: Hair that is independently mobile and responsive to mood
* Expressive Hair—hair that is independently mobile and responsive to mood
* Expressive Health Bar: Animations, sounds, etc that play when the player is low on health.
* Expressive high, responsive high; response's delay short, duration short.
* Expressive high, responsive low; response's delay short, duration long.
* Expressive low, responsive high; response's delay long, duration short.
* Expressive low, responsive low; response's delay long, duration long.
* Expressive Mask: Character wears a mask that is somehow still able to register their emotions.
* Expressive Mask: Someone wears a mask that is somehow still able to register their emotions.
* Expressive Skull: Skulls that can perform facial movements as if they had flesh and muscle. Typical in Halloween productions.
* expressive that he could easily be mistaken for an actual goblin creature and not just a disguised person.
* express joy in their new weapons... even as just before they turn out to be a bad choice.
* Express Lane Limit: Express lanes in grocery stores are nowadays mostly replaced by self-checkout.
* Express Lane Limit: Going one over is a standard "crime", especially in comedic works.
* Express Lane Limit ten items for the express lane. That doesn't quite fix the problems (again, the lane might not have been open in the first place), but points for trying.
* Express Lane Limit: When a customer tries to pay for more than the desired number

of items in the express lane.
* expressly because Sydney has won the bid to host the Olympic Games. The full title lyric, not given until halfway through the song, runs: "You gotta love this city / For its body and not its brain..."
* express satisfaction at the fact that they are available — "I'm glad";
* express sympathy if the circumstances are not pleasing — "I'm sorry".
* Ex-Prince Orm, the supervillain known as Ocean Master and the original Aquaman's evil brother, is
* EXP stands for "execution points," a measure for the amount of pain the player has inflicted upon others and LV stands for "Level of Violence," a measure of how capable the player is of hurting other people. Like in other RPGs, you gain EXP by killing monsters... but in this game, the monsters are just regular people who aren't especially out to hurt you, and killing them provokes an understandably negative reaction from others.
* Expy - a grungy, drunken, chain-smoking cynical battlemage right at home on the streets, duking it out with monsters. Quite apart from being the most overtly magical of all the Tokyo Response Team, his cinematic takes place in the most obviously urban setting, featuring him loafing around at a particularly grotty-looking pub and lighting his cigarettes with magic before getting into a fight with a demon in the bathroom.
* Expy, allowing him to utterly flatten everyone but Ochako who, while not as strong, has undergone similar training and has a more powerful version of her canon quirk. Izuku's proof that he's so powerful despite being Quirkless has Re-Destro declare that his death is the number one goal of the Meta Liberation Army.
* Expy are apparently constructs funded by the F.I.B to serve this purpose. The Count? Really a vampire.
* Expy Auton doll is clearly supposed to be one of the Troll dolls that were a big fad in the 70s, but with the design altered.
* Expy) bit his neck. As Supes has solar-powered blood, it didn't end well for the vampire.
* Expy, but she explains that she's a wholly original character, like "Ricky Rouse" or "Monald Muck".
* Expy, but takes on a cover as a logistical studies unit. One instance shows up when Kim, a Unit operator's wife goes to console another military wife friend, whose air cavalry husband is recently KIA. Her friend disdainfully pushes Kim away, because her husband is now a logistics clerk, so she isn't a "soldier's wife" and has no business consoling one.
* expy - by raising a local army in the alternate India, very, very far away from Albion, and attacking north, establishing supply lines across some of the most treacherous and dangerous terrain in the world. His idiotic plan instead triggers a Communist rebellion.
* Expy Cody Impossible, who ignites when exposed to oxygen, has no control over his fire, and feels it every agonizing moment of his life.
* Expy Coexistence: A parody or imitation of a copyrighted character is established to coexist with the character they are copying.
* Expy "Dandy for Candy" or "Old Maid" and the owner dismissing Fillmore's request to play something else. Poker is never mentioned as a possibility by either of them.
* Expy does this regarding his own huge nose to show up a less-clever rival's lame insult.
* Expy for his nemesis Captain Sunshine, about a "type of jack". When Sunshine can't unravel it, the answer is given by The Clue Clown's spring-loaded corpse erupting from the casket, with "a jack in the box" scrawled on a note pinned to his chest.
* Expy, he offered the Spell and 4 Monsters as a choice, knowing his brother would let him keep the one card that wasn't a monster.
* expy in danger, not the holodeck itself. Although, as usual, simply turning off the holodeck or altering the program to provide a more convenient resolution scenario are not available options, though at least the safeties do still work.

* Expy indicates that the company was founded as a result of Blackwater's breakup.
* Expy instead. Thanos hover thrones are possibly a nod to the originally intended reference.
* expy is another example, with pretty much the same vow as Red Sonja's if for completely different reasons. She is an allegorical figure of the virgin Knight of Chastity.
* Expy is a Sailor Moon fan who shows off his Sailor Moon underwear to Rini, which disgusts her.
* Expy, is based on Homer, claiming instead he is a composite character, based on his dad, Lisa's dad, and Maggie's dad.
* expy, is that he refuses to take on a case that doesn't interest and challenge him, even though he's leagues above the rest of the world's police.
* Expy (Lord Commander Solar Macharius), put the Spanish Inquisition (Imperial Inquisition) in charge of your platoon of red coat pith helmet-wearing Brits (Praetorians).
* expy loves to prank other gods by shaking their hands and biting them off.
* Expy named Flashstrika, whose Motor Drive ability allows him to run at great speeds.
* Expy of an earlier Hebrew Sun God, and that his long blond hair was symbolic of the sun's rays/corona. Hence, cutting it off took away his powers.
* Expy of Bond, has no weaknesses. The only way to kill him is to end the game with him in custody, where he’ll be blasted off into space with a rocket.
* Expy of Clarisse? (I haven't seen any of the works involved, so if this makes no sense for some reason...)
* Expy of Reno, the double casting across all languages is almost certainly intentional.
* expy of the Catacomb Necromancers, instead of fireballs, they now utilize sorcery.
* Expy of the Ilwrath Avenger in terms of speed and maneuverability that replaces its short-range flame weapon with a long-range (unguided) missile.
* expy of the last two seasons, could return after being killed, once a certain time period had elapsed. Worse, he could choose where he would reappear, and what his appearance would be, making him a de facto shapeshifter. His weaker enemy Duke could resurrect but not change his appearance.
* Expy of the Salty Spitoon, called the Tough Tavern, appears. It even has some of the same characters that appeared in the Salty Spitoon.
* expy, Ollie Chandler, in Randy Alcorn's books. Chandler softens up a lot more quickly, though.
* Expy, she ended up as an "old friend" of another hunter just as effortlessly.
* Expy someone threatens her, he's there to save the day. Afterwards, she works hard for and establishes peace in the world.
* Expy spent training heavily that he's able to overcome this and begin mastering his powers.
* Expy stories: Darcy's cousin the Marquis of London. As brilliant a mind as Darcy, but lazy (and cheap). So much so that he once had Darcy's assistant Master Sean arrested for murder so Darcy would be forced to solve the crime in order to prove his innocence.
* Expy, to use the correct plural) being named in grammatically-correct German. It also shows up within the names of your mercenaries, of whom the vast majority are named of German origin. As an interesting side note, the setting is, to a lesser degree, strongly Celtic inspired, what with the usage of round shields and tribal tattoos to complement the largely Germanic setting.
* expy until the day before Thanksgiving. In Canada, that episode aired on October 27, 2019, a month before the actual parade in question was held. Nickelodeon then put the episode into their regular rotation, airing it well after Thanksgiving was over.
* Expy, who had gotten off on the murder of his wife due to a bribed juror, is eventually nailed for the murder of the publisher of a book about the previous trial. McCoy was eventually able to get evidence that the defendant had lied about

previous evidence, but also that he admitted killing his wife. The jury convicted him of the current murder, but looking at the jury kind of implied this trope for the previous case.
* expy, who is also a childhood friend. Barry eventually appeared in the anime himself but isn't friends with Dawn.
* Expy) who is "having trouble with a patient" in the back room. (The patient was roaring and clawing at Dr. Katz, like a lion or some such.) It turns out the patient is a rabbit being treated for anger issues.
* expy), who promises he won't turn Roy into an undead. He turns him into a bone golem instead. Of course since she doesn't want to pay for it, the party later has to take him by force.
* expy, who turn out to be friendly and teach her that it's okay for so-called "smart" people to get scared.
* Expy; with her being tough, fast and strong, she can endure most of their attacks until she retaliates with fast and powerful moves.
* Exquisite Corpse has a gay version of this trope. Andrew Compton and Jay Byrne are necrophiliac serial killers who scheme to murder and eat the secondary protagonist.
* Ex-SNK artist Falcoon began his career at that company by drawing fan art for their various properties, such as
* Ex-Spectre candidate Captain David Anderson is confined to a desk job at the beginning of the game, though
* ex-spetsnaz sniper Strelnikov, who cooperates with a couple of Bob Lee's investigations, is also fairly jovial.
* Exstetra features a mechanic where the main character kisses his party members to give them, as well as himself, boosts in combat. This is not limited to his female companions, and at the end of the game you can choose between your most kissed party members to see their ending.
* Extant has amazingly realistic ones that basically do everything a normal limb can do (and they can withstand fire).
* Extant is that one of the astronauts went insane after prolonged exposure and isolation in space (13 months) and quickly killed himself upon his return to Earth. This raises a question about Molly, the protagonist: did her experiences in space really happen, or is she suffering from the same problem?
* Extant: Kryger does this to his hallucination, who unfortunately appears as his deceased mother.
* Extant using these means, Ethan's subsequent and self-repair creates some... bugs. Nightmares, learning new languages and similar things showcasing an increased self-awareness.
* Extant: Yasumoto Corporation, which owns the ISEA, a private futuristic version of NASA.
* Ex-Tatsunoko Production and Kitty Film producer Tomoyuki Miyata founded
* Extended Cut DLC relaxes those requirements, reducing the necessary Effective Military Strength from 5000 to only 3100.
* Extended Greetings: I respect you enough that I will greet you with your full—extremely lengthy—title.
* Extended Greetings— Someone introduces themselves in a lengthy fashion.
* Extended Stay It doesn't really help that he was an inmate at the latter's prison.
* Extended Stay. The next two chapters take place a month after Chapter 11. Chapter 14 takes place four years after Chapter 13 and Chapter 15 takes place sixteen years after Chapter 14.
* Extended to even further depths after it is revealed that he used to be a student of Prowl's mentor, Yoketron. And not only that, but he was the one who betrayed and killed him.
* Extended unimportant montages as film openings. Such sequences, leftovers from early cinema in which simply seeing such things was a novel spectacle, eventually vanished unless they were immediately relevant to the plot. They still exist in art and experimental cinema in various forms, but in commercial fiction films, they

have long since faded from public consciousness.
* Extended Universe has this as part of the games' backstory. The magical creatures and beings that once lived on our world knew about the matter, so when we started becoming more scientific they voluntarily left to a new world before any weakening could occur.
* Extending this, a Walmart commercial advertises that these days, everyone's changing their own oil at home, and men and women are shown getting into the oil changing projects as couples. (Just in case you're wondering, these commercials always indicate that you can take in your old oil to be recycled at any Walmart auto/tire service department.)
* Extending this beyond combat, some games even suggest in the guidebook that in order to keep the players on their toes, the GM should make rolls for no reason at all,
* Ex Tenebris, Lux going on after years of abuse. She suffers from night terrors, anxiety, and other symptoms.
* extensive and constant drills with equipment much heavier than the one actually used in the field to their replacements in the Second Battle of Bedriacum.
* extensive animations summons are pivotal to the plot as the beasts enact massive actions in cutscenes; apparently, their attacks are much more surgically precise during gameplay.
* extensive hit list. She corners her final victim and his wife before she finally killed by Team One.
* extensive lifespans, Optimus, Bumblebee, and Bulkhead, all relatively young, and Sari, who is eight.
* Extensively referenced and subverted in the Cheeky Moon comedy sketch
* extensively. Sailor Moon is fated to find the Moon Princess and then be the Moon Princess once she discovers her true identity, the Inner Senshi are fated to protect the Moon Princess, the Outer Senshi (minus Saturn) are fated to protect the Moon Kingdom (and by extension Earth) from outside threats, and Sailor Saturn is destined to bring her Silence Glaive down on worlds whose time has run out.
* Extensive networks of tunnels were dug underneath Portland, Oregon and used for highly unsavory activities. (This is a major understatement.) Historical societies have been working to excavate them and to document stories of people who were victims of the human trafficking which they were used for.
* extensive psychological counseling to do it - roughly 60% of "slave borgs" will attempt suicide every chance they get until it works.
* Exterlien, who proceed to kidnap the women for the "pleasure" of their master Ruzu. Your job, as the protagonist Masato, is to defeat the monsters and rescued the distressed (and half-dressed) damsels.
* Exterminape is a tongue-in-cheek example, where the main character is a talking gorilla who discovered firearms shortly after learning how to use simple tools and quickly became a badass assassin who likes to show human women his "jungle love".
* extermination camp of Auschwitz, the Nazis attempted to muffle the screams of the gas chambers' victims, using two motorcycle engines that were revved up to full throttle nearby. Despite this, the sounds of yelling could still be heard over the engines.
* Extermination killed by his time-traveling teenaged self. "Kid Cable" has since taken up residence on Earth-616.
* Extermination where the player watches the transformation into a monster...
* Exterminatus before sacrificing an inhabitable world (a very finite resource that the Imperium can't afford to waste); in the fandom, simply mentioning heresy in any way, shape, or form is enough to warrant the planet being nuked into oblivion.
* Exterminatus could be considered this. When a world has been overrun by xenos or chaos forces and is beyond saving, Imperial forces will order the planet's biosphere wiped clean through orbital bombardment, cyclonic torpedoes, virus bombs or other methods of destruction, sparing the inhabitants of the planet from further suffering.
* Exterminatus Now after they shoot it. That said, this zombie had just been having a conversation with his buddy about how he'd murdered a few of the living (and yet

still portrayed himself as the victim), so this wasn't exactly undeserved...
* Exterminatus Now after Virus tampers with a villain's summoning circle, resulting in a huge, three-headed, black-and-red and extremely foul-tempered demonic hound appearing in the mortal plane.
* Exterminatus Now as "fox" or "penguin" or even "zebra" according to their appearance.
* Exterminatus Now. As of early 2010, after his run-in with a Fernex daemon caused his bionics to be... forcibly removed... he's upgraded — to a chainsaw.
* Exterminatus Now, before cracking up and admitting that the cultists don't actually have any rights.
* Exterminatus Now, but still kind of cute on some level", it rips apart and devours the daemon it got its abomination-ness from. Even Lothar Hex winced and said "Ooh, that ain't right". This is a character who once sat bolt upright and shouted "You can't prove I ate that baby!"
* Exterminatus Now) but was promoted into becoming an incompetent bureaucrat.
* Exterminatus Now by asking her if she's warping the building's spacial dimensions or if Eastwood's just stupid. She says she doesn't know what he means by the former, so he guesses the latter. Then starts to realize she was probably lying when the door he tries opens up to an MC Escher room...
* Exterminatus Now, due to the existence of Fernex, Dark God of Technology, whose techno-daemons can possess machinery. Toasters, in fact, are considered perfect for this, and the Inquisitors have to destroy their possessed toasters on a regular basis. Other items have included calculators and a jailbroke X-Box. On the other hand the Inquisitors' personal computers contain benevolent spirits summoned by techpriests of Gruss, the good Machine God.
* Exterminatus Now: Eastwood's toaster regularly gets possessed by a demon, because he keeps buying the same cheap brand (whose circuits accidentally draw a pentacle to the evil machine-god).
* Exterminatus Now example above, with Lothar pissed that Eastwood didn't warn him about it when recommending the book.
* Exterminatus Now Extra points for this strip being actually called "Dynamic Entry".
* Exterminatus Now, features Exterminatus. However here it's a localized attack rather than a planet-wrecking one.
* Exterminatus Now: First, the team will have Lothar cut your balls off. Then, you'll talk. And no, they didn't get that the wrong way around.
* Exterminatus Now forum is watching Lothar, one of the comic writers, and his girlfriend Raye get into their regular multi-post arguments and insult exchanges.
* Exterminatus Now had the Necrotelenomicon in one arc, a book made from its author that was apparently like a phone book of the Immaterium. A cult was attempting to use it to resurrect their god, but they couldn't translate it and even attempting to read it made their eyes bleed. Virus and Rogue retrieved it from them by allowing them to scan some pages and run them through an online translator, reasoning that whatever it spat out would be completely useless.
* Exterminatus Now has been on an indefinite hiatus since April 2015 although there were some random updates in 2016.
* Exterminatus Now has each characters' Weapon Of Choice on the surprisingly-still-relevant cast page.
* Exterminatus Now has the largest porn stash on the planet, which crashed the Inquisition's servers at one point.
* Exterminatus Now in the world. On such a scale that he's begun to acclimatize to pepper spray.
* Exterminatus Now is centered on two inquisitors and two mercenaries who are repeatedly sent on suicide missions.
* Exterminatus Now) isn't really based on him at all, which the strip points out.
* Exterminatus Now leaves a clue with no answers, culminating in Batman's detective work being interrupted by a news broadcast in which the Riddler steals the moon.
* Exterminatus Now, Lothar is asleep from being drunk. When Rogue walks in, he suddenly snaps up, shouting "You can't prove I ate that baby!"

* Exterminatus Now. Lothar smacks his lips for a beat, and remarks that they didn't use enough sweetener while his teammates look on with a mixture of disgust and horror.
* Exterminatus Now occasionally features Inquisitor Damien's hyper-competent B-Team and Inquisitor Deket's hyper-destructive C-Team. Inquisitor Brisbane also appears in numerous background and flashback shots and Schaefer was shown having his own adventures once.
* Exterminatus Now quartet of evil gods, has the spider as one of his symbols, and his demons and servants occasionally takes the form as gigantic, demonic spider creatures.
* Exterminatus Now Riktor Simmons there to do all the thinky-type stuff for him.
* Exterminatus Now". Several comments list it as "fake" with one even claiming you can see a zipper. And another asking how they did the CGI.
* Exterminatus Now, Silas Morth invites Jamilla to dinner after finding out she's a spy. He even adds complimentary drugs to the wine to make her a more compliant sacrifice.
* Exterminatus Now, so the protagonists have found themselves interrupting an anthro-sacrifice a few times.
* Exterminatus Now: The Cesspool mercenaries won't sell weapons to the Cultists of Darkness. Because they refuse to pay up front and try to weasel out of the bills.
* Exterminatus Now The resulting questioning from his followers is enough to drive Morth straight over the edge. Guess what happens next.
* Exterminatus Now this, since he plans to sacrifice his minions in exchange for power.
* Exterminatus Now to report Eastwood's theft of a forbidden relic to Command. Eastwood points out that he used Virus's ID to get in, meaning that Virus is implicated.
* Exterminatus Now uses a .44 revolver, but had it modified to hold seven bullets rather than the usual six.
* Exterminatus Now, Virus tells the others about how Eastwood had his ex-girlfriend's new boyfriend put to death on heresy charges. Eastwood indignantly defends himself pointing out that the guy actually was a heretic. Virus reminds him he didn't find that out until after they had him executed.
* Exterminatus Now. When asked how he cannot "believe" in gods despite working for an all-powerful religious organization, he snarks "Easy. All it takes is a little faith."
* Exterminatus Now while they're trying to hire mercenaries, as it wouldn't be a good idea to dwell on what happened to their previous hired guns. Those poor sons of— OW!
* External Combustion: AKA car bombing; a classic assassination method, in which an explosive device hidden in a motor vehicle is used to kill anyone inside or nearby it.
* External Combustion: AKA car bombing, a classic terrorist tactic in which a motor vehicle loaded with explosives is detonated to kill people or destroy a targeted location.
* External Combustion: Car bombs are occasionally used by gangsters to try and blow up their enemies into smithereens.
* External Consistency. Violations of external consistency are "unrealistic."
* External Link. Note that links within tvtropes.org that do not use the WikiWord markup style will appear external even though they are not.
* externally. That is, the female lays a bunch of eggs in the water, and a male frog/newt/etc comes up and ejaculates onto them to make them fertile.
* External mobile phone antennas and modded internal antennas may extend range significantly.
* External Repair/Spare Body Parts That might take a little longer, but can sometimes still be fixed.
* External Retcon: A work based on a historical or fictional event that claims to be telling the "real" story.
* External Retcon: One work explains or re-tells the events of another work as if

the new one was the "real" story.
* Extinct in the Future: A species currently thriving in present day is established as having gone extinct in the future.
* Extinct in the Future: A species presently thriving is established as having gone extinct in the future.
* Extinction (2018): The movie ends with Peter and his family, along with many other Androids, on a train bound for a safe underground hideout from where they hope to strike back against the invading humans, while the invasion is still going on.
* Extinction Curse. Soon after they enter the desert proper, they're scripted to be attacked by three purple worms — a somewhat challenging but not especially dangerous encounter by that point in the adventure. In the third round of combat, however, the legendary vampiric shoggoth Iffdahsil bursts out of the sand like a vision from a nightmare, instantly devouring all surviving worms as it enters the field. Notably, Iffdahsil doesn't attack — it's more bemused at the auras the players gain earlier in the story — and serves chiefly as a reminder to the players that they're treading in a realm ruled by beings far beyond their power and comprehension.
* Extinctioners: Although he shows a variety of other emotions, this expression seems to be Walice Weazels main mood throughout the series (due to him usually irritated by something if he`s not just feeling bitter).
* Extinctioners: Harvest (real name Sindi Ursulus), an anthro bear with the ability to control plant life, is one of the hybrids in the story working for the human invaders. Her bio also mentions that due to her fathers dictatorship status in her home country, it would be an understatement to say she grew up spoiled.
* Extinctioners, means that it takes place at a millenia from the creation of the anthro civilization, exactly at C.E. 3126, when the Makers and their enforcers, the Hunters, returned to Earth, now renamed Alden by their anthro population.
* Extinction series), a warrior told how an upstart mage of his House once tried to "teach him his place" by polymorphing him into a riding lizard and saddling him. This didn't quite work as planned, in that the transgressor was unable to sit for some time, blaming it on a "riding accident".
* extinguishes the torch he stole to fight Shere Khan, embracing both his human nature and upbringing in the jungle.
* extinguish the stars first, instead of bothering with killing off all that pesky life, which would die anyway without the stars.
* Extispicy: Divination by the study of entrails from a sacrificed animal.
* Extra bonus points for the character being portrayed by a biologically female actress.
* Extra Chapter 4 reveals it was part of his training in special surgery, which pays off there to heal and remove the tumour of a woman, and in the final arc of the main story for saving Kaede.
* Extra Credits constantly narrates his videos with a voice that sounds like it's been computer-shifted into this.
* Extra Credits could encourage someone to go and read a book about Dark Matter or the Galactic Core.
* Extra Credits discusses this in one episode and explains the roots of this problem. Back when the civilian internet and video game magazines didn't exist, parents purchased games for their children based on franchises their kids liked being on the cover. Because these games would sell regardless, making them became less about making a good game and about cutting corners and production costs whenever possible, resulting in some very shoddy games.
* Extra Credits — Lectures on story and mechanics tropes in video games, and how game developers can get the most use out of them to make better games.
* Extra Credits suggested invoking this as a method to get students to link ideas together in their "Gamifying Education" episode. Of course, they also suggested making sure the students explain why each leap in the walk was valid.
* Extra Credits swooped in and offered to host their content on their platform.
* Extra Credits than its previous entries in its series, doesn't inherently make it

more artistic.
* Extra Credits then revisited in a Halloween episode and again in an episode about Kinect's controls.
* Extra Credits which qualifies as this trope. It's less than two minutes long and conveys the point quite nicely.
* Extra Credits" while she works on said episode, and upon seeing the results, ends up furiously cleansing her eyes with a bleach.
* "extracted" from captured Chechens after the story already started making the rounds.
* extracted from juice, so it doesn't count. "Pear juice extract" and "grape juice extract" are two of the biggest culprits here.
* Extract has a variation with a pool cleaner, complete with a soft-focus scene and poorly-delivered lines.
* extract Hikari from her giant robot, Shinji and Asuka sat down by her side until she woke up. Touji also visited her.
* Extracting large amounts of aluminium using the Hall-Héroult process requires huge amounts of electricity, so aluminium remained quite valuable in areas where electricity was not cheaply available well into 20th century. During
* Extracting the phosphorus from urine is now seriously considered, both because mineral stocks are limited and because the sheer amount of phosphorus we currently use is causing algae blooms in watersheds. This is less novel than you might think: urine was used as a source of phosphorus and nitrate in the production of gunpowder for centuries.
* Extraction, there's Doctor Karen Howell. Just a botanist, but she is hardcore.
* Extraction. While it could be plausible that space suits were modular, and thus remained functional despite damage occurring to non-vital parts, it still doesn't even begin to explain how all of Nate's blood didn't get squeezed out like milk out of a carton the second he made the first cut.
* Extract, refers to almost all of his subordinates as "Dinkus", with the one exception being a character he calls "Forklift Dinkus" or "Boy Genius".
* Extract the same chemical from wood as a byproduct of paper making — less sexy, but fairly effective;
* Extract. When he sobers up and realizes what he did, he tries to get in touch with Brad, only to find that he came a day early and already seduced Suzie (and he proceeds to come back numerous times after that, not being quite clear on the concept).
* Extracurricular about high school teens who get into an illegal prostitution business for various reasons and school police and a juvenile crime detective who suspects them.
* Extracurricular Activities features an entire cast of huge and lovable jocks who all play tennis together and you can date them.
* Extracurricular Activities hooks up with different guys every week and doesn't even remember most of their names.
* Extracurricular Activities is a costume designer who speaks with mannerisms like "sweetie" and "honey". He flirts with Darius all the time and even hooked up with him once.
* Extracurricular Activities is a very close-knit tennis team and they get along better when compared to other tennis teams.
* Extracurricular Activities, Jedao's and Meng's first meeting is shown in a flashback.
* Extracurricular Activities, the love interests are muscular anthropomorphic men whose physiques are ripped and it's surprising that they're playing tennis with the size of their bodies.
* Extracurricular Activities, the previous visual novel the creators made, appears as a school librarian.
* Extracurricular Activities with huge muscles and hardly show any stereotypical traits.
* Extracurricular Enthusiast: A student who's involved in loads of extracurricular activities.

* Extracurricular Enthusiast: Someone who's involved in lots of extracurricular activities.
* Extra Damage Against Armored Targets:. The attack may not work (or less effectively if they do) on unarmored enemies.
* Extra Deck methods have also become increasingly more common. In the original manga, only a few characters (Yugi, Kaiba, Jounouchi, Pegasus, Marik) used Fusion, and it was never their primary strategy. In
* extra digits in their flippers with some having as many as TEN digits on each flipper. What's more, while most vertebrates only have three or four bones in each finger, icthyosaurs had as many as twelve bones in each digit: which, combined with the ungodly number of fingers to begin with, makes the skeletal structure of their foreflippers look less like a hand and more like some freakish cob of corn. Nobody is really sure why they evolved such unusual limbs, though a theory suggests it may have helped their flippers form a hydrofoil.
* Extradimensional Emergency Exit: A character avoids a crisis by escaping into another dimension.
* Extradimensional Shortcut: Going faster than light by popping over into a dimension where that's a thing you can do.
* Extradimensional ShortcutTraveling faster than light by popping into a dimension where the laws of physics are more permissive.
* Extradimensional Shortcut: When direct teleportation is not possible.
* extradimensional spaces knows just she dials in the destinations she reaches with that thing.
* Extra energy could also be procured by recycling stuff, making the Polvakian Gem Slugs, who excreted the high energy content Turdite, the richest creatures in the universe. That's right, they literally crapped money.
* Extra Eyes, as one of its eyes shifts to the other side of its body as it grows up.
* Extra Eyes: Giving the term "four-eyes" a whole new disturbing meaning.
* extragalactic synths who can be summoned to eradicate all biological life in the Milky Way. In the next episode, there are robotic tentacles emerging from an interdimensional portal, but Soji breaks the beacon's console before they fully enter our space.
* ''Extra Hachis'' is his strongest attack post timeskip, scorching the small mountain-sized Wadatsumi.
* Extra History finally taking Rome back for the Roman Empire. However, the second miniseries set the historical record straight by revealing how all of Justinian's efforts to restore the Empire to its glory have gradually been undone later.
* Extra History has to deal with hundreds of thousands of unemployed armed men whose only marketable skill is fighting battles.
* Extra irony points because Po, the one destined to defeat him, doesn't even know that Shen EXISTS until a week before he fights him. Shen assumes that Po is looking for revenge for the deaths of his parents and his entire people, when as far as Po knows, he's only there because Shen stole a bunch of pots and took over a city on the other end of China and has no external reasons for vengeance.
* Extra Life. After Chiaki is mortally wounded in her execution, Izuru bridal carries her to another room. It's noted that under normal circumstances she should either be moved with a stretcher or simply not moved, but the extent of her injuries is such that she's going to be dead in minutes and Izuru doesn't have the medical supplies necessary to save her on hand.
* Extra Life, and their growing bond serves to help fuel Chiaki's determination to reunite with him and her friends when they have to go their separate ways.
* Extra Life opens with Chiaki lying on the brink of death and Izuru rushing to save her. He manages to, but she's left in a coma and doesn't wake up for another eight months.
* Extra Lives scattered around the levels, items that are automatically activated when Doomguy's health reaches zero, and allow for him to seamlessly continue in action instead of dying and having to go back to the last checkpoint.
* Extra-Long Episode: An episode that runs longer than a normal episode's running

time.
* Extra-Long Episode "Schooled!" scheduled for September 7, 2020 (Labor Day). It was then moved to September 11, 2020.
* Extra Mario Bros. which is clearly a reference to the Airman stage in Mega Man II).
* Extra materials reveal that the team wore mismatched uniforms because the R.P.D. didn't have the budget for anything else at the time, and Chris' outfit in
* extraneous goggles), while other specialist units wear similar face-concealing gear.
* Extranormal Institute resembles a city-sized industrial complex that has a population in four digits at best, making vast majority of it completely devoid of human life. Although there is a sizable robot population keeping it on the mend, one can walk hours in the Court without seeing another sentient being, and the train system that goes through it only emphasizes how much uninhabited area it has. It's easy to believe that it wasn't built by human hand, as it has never possessed a large population; the legend says that the Court "grew from Seed Bismuth", but no-one knows what that means.
* Extranormal Institute: Super-trope of all your schools for people with weird powers or abilities.
* Extraordinarily common in early cinema. Sprightly, dancing and otherwise animated skeletons appear with great regularity in the trick films of Georges Méliès and his contemporaries.
* Extraordinarily Empowered Girl: A young woman who engages in action by the use of her powers. These powers put her beyond normal humans, but only barely.
* extraordinarily high level. His ego grew to match it, as evidenced by his multiple proclamations that he's the 'smartest man in the universe'.
* Extra Ordinary (2019) has severe pattern baldness that he hides with a wig, the only point where we see his bald head is before he falls to Hell.
* Extra Ordinary (2019) is Tom, a man who always took out the trash and insists that his wife puts the trash and recycling in the right bins.
* Extra Ordinary (2019). When a ghost passes on, the Willing Channeler vomits ectoplasm which can be used a material for rituals.
* Extraordinary. According to the author, it's specifically the part that goes,
* Extraordinary* has a car that stalls all the time, usually at the worst moments.
* extraordinary magic resistance, meaning the warrior-types tend to flatten the magic-focused Casters in a straight battle. Assassins lack magic resistance, but they aren't meant for direct combat. Casters are the most versatile, but they tend to suck in direct fights unless they have heavy preparation.
* Extraordinary X-Men's two-year X-Men run being mostly free of mutants being completely downtrodden, this series brings back a status quo where mutants are endangered again.
* Extra Parent Conception, and the precise parental combination will affect the development of the larva.
* Extra points for being a pretty competent and evil villain - one notable appearance includes tearing off
* Extras, a journalist is interviewing Maggie under the pretense that she is Andy's assistant. Andy sits behind the journalist and tries to mime answers to her that will make him look good. Maggie constantly misunderstands his mimes, giving bizarre and unflattering answers.
* Extras, Andy tells his agent he want to get on "cool shows- American shows". In the Christmas special, Andy's agent tells him he's had an offer for a movie (Andy perks up)... a British movie (Andy wilts).
* Extras: Andy wears one in the Christmas special, and of course it bursts during his audition.
* Extras as himself - a pathetic version of himself who is desperate to shag anything that moves and to shake off his Harry Potter persona by doing such "adult" things as smoking.
* Extras attacks him and he punches him in the wrist. Andy says it works in cartoons.

* Extras celebrities that do not play themselves are the regular cast.
* Extras character and will probably never get another decent part again. Most people even refer to him as Barry; when the name Shaun Williamson does crop up, his own agent doesn't recognise it.
* Extras co-worker's behavior and complains to their boss, who reveals himself to be Straight Gay.
* Extras did a joke based on this... Andy's utterly incompetent manager somehow gets an interview scheduled with De Niro. Andy doesn't show up.
* Extras) explains his idea for a new movie he's been writing. He says it's an exploration of what would happen if there were one person in the real world who could control people's minds. In actuality, though, the only thing his character does is go around making women's clothes fall off and "seeing everything." When Gervais explains his own idea for a script, Stewart only becomes interested when Gervais claims that there's nudity in it.
* Extras getting violent with anyone his girlfriend told him had made advances towards her
* Extras has Andy walk in on his agent masturbating to a pen with a naked woman's picture on it. His agent's secretary then comes in and takes the pen from him...and is also masturbating to it when Andy leaves.
* Extras hoverboarding is again presented as a recreational activity. It's actually the extreme hoverboard-riding known as "mag-lev surfing" (in which participants use their hoverboards' magnetic properties to surf atop a mag-lev train outside the city) practiced by the clique known as the Sly Girls that attracts Aya to them and gets the plot rolling.
* Extras. In fact, in might be said that this is what their whole relationship is built on.
* Extras is particularly brutal with this. When one woman on the set brings her sister (who has Cerebal Palsy) to the set, Andy makes a joke that she looks drunk and "mental", right in front of her sister. He manages to save this one, though. There are other scenes that are much, much worse.
* Extras, it opens to $32 million, one of the biggest Martin Luther King, Jr. birthday holiday opening weekends ever".
* Extras Keith Chegwin's character has his name changed to Keith after the actor repeatedly fails to comprehend that the character has a different name to him.
* Extras. Stewart is complaining that he's tired of playing Professor X and wants to focus on his own original character: a psychic who can make womens' clothes fall off.
* extra stage of Imperishable Night elixer, which removes the concept of death from the victim. She claims that if a ghost were to ingest this elixir, they would become an immortal ghost and never be able to rest or reincarnate. Then she decides that Mokou's liver looks tasty and that she wants to eat it anyway. It's left ambiguous whether she actually went through with it.
* Extra Stages. Storyline-wise, it is debatable and depends on which game is being played.
* Extras. The main character and his best friend would ask each other questions like, "what would you rather be? A penguin, where you are a bird but you can't fly, or a flying fish where you can fly but you're still a fish." Once or twice an episode.
* Extra-Strength Masquerade break the masquerade all the time, but normal people still don't know about the wizards/aliens/etc.
* Extra-subverted (if there is such a thing) in that it's left very nebulous for several episodes (to say nothing of an entire between-season hiatus) whether or not he actually survived the fall,
* Extras won a Bafta to congratulate him — and to casually point out that he himself has won bigger awards, "...American ones."
* Extraterrestrial (2005): A National Geographic miniseries describing wildlife on two alien worlds.
* Extraterrestrial (2005): A number of CGI shots are reused throughout both episode, either unmodified or mirrored, to save production costs. The first episode

repeats shots of the mudpods felling and eating the trees, a gulpog eating a mudpod, the gulpog clan in the forest and the hysteria swarm gathering in the water several times over, while the second does so for the sky whale soaring in the sky, the stalkers in their nest, the stalkers flying through the forest and the stalkers devouring one of the whales.
* Extraterrestrial (2005): Aurelia orbits a small, dim red dwarf star, and due to its physical proximity to it — a red dwarf's dim heat and light can only support life on planets very close to it — it's permanently locked onto its sun, always showing it the same side. Its dark side is cold, dark and covered in vast glaciers, while the day side is covered in a permanent storm endlessly lashing it with torrential rains. Between them is a temperate, humid twilight band home to flourishing swamp environments fed by rivers pouring from the storm zone.
* Extraterrestrial (2005) describes imagined alien environments on two alien worlds, using them as ways to exposit on natural processes and on the possible nature of extraterrestrial life.
* Extraterrestrial (2005): Hysterias are normally microscopic aquatic creatures, but when food grows scarce gather in large swarms that act and move like singular beings.
* Extraterrestrial (2005): Mudpods are essentially alien salamander beavers. They fell trees for food using a constantly-growing saw-like claw explicitly compared to a beaver's teeth, and build dams out of mud to create a network of lagoons that provides rich habitats for other species.
* Extraterrestrial (2005): Once the stalkers incapacitate a skywhale, they tear it to pieces and eat it while it's still alive.
* Extraterrestrial (2005): The blue moon's dense atmosphere and high oxygen allows it to support immense flying creatures, many of which never land, including skywhales with ten-meter wingspans and kite-like creatures five meters across.
* Extraterrestrial (2005): The blue moon's parent planet orbits a binary system. The narration notes that these systems were once thought unable to support planets in stable orbits, but that this is now believed to be possible if the planet is far enough from the suns or if it orbits only one.
* Extraterrestrial (2005): The blue moon's sky is dominated by its parent planet, and the high quantities of aerial plankton color large patches of it green.
* Extraterrestrial (2005): The dense atmosphere and low gravity of the blue moon allow its plant life to reach immense heights, and the dominant plants have found methods to extend their reach even further — balloon plants, for instance, support themselves with sacs of buoyant gas, while the pagoda trees grow large bowls to catch rainwater (they're much too tall to draw water purely from the ground) and tangle their branches into a tight mesh to support each other's massive weights. As a result, the trees of the moon reach over a kilometer in height, and almost all of the fauna in the episode consists of flying or arboreal animals living within and above the forests' roof-like canopy; further down, among the pillar-like trunks, almost no sunlight penetrates, and the ground is a lightless world of luminescent scavengers feeding on detritus falling from above.
* Extraterrestrial (2005): The stalkers live in large hives compared to those of eusocial insects, and are divided into slender-billed scouts, which search for and mark potential prey; more robust workers, which bring it down and carry the meat back to the nest; and an unseen breeding queen.
* Extraterrestrial (2005): The surface of the blue moon is interspersed with occasional rocky hill topped with strange, spire-like structures, which the segment never describes.
* Extraterrestrial (2014) suggests rectal probing. The film's social media promo campaign even uses the hashtag "#GetProbed".
* Extraterrestrial real estate scams. This refers to so-called claims of land ownership on any part of outer space by hucksters and conmen. They are considered bogus, as the Outer Space Treaty of 1967 views space as an "international common" for the benefit of mankind and prohibits anyone from claiming jurisdiction. Nevertheless, the scam persists with crooks "selling" parts of outer space through titles of ownership termed "Lunar deeds," etc.

* extraterrestrial reptiles. At the time, Rulfan didn't know who this woman really was. When another daa'mure offers him intimacy, he refuses.
* ExtraTERRORestrial Alien Encounter organizations span across entire solar systems. It was slightly tongue in cheek, but a large departure from the tone of everything else in the park.
* Extra TurnA rule that allows you to take an extra turn after you already acted.
* Extra Turn, giving you money or blowing up one of your opponent's resources. And then there are the Pyramids, which do nothing but give you 9 Victory Points. However, as having the most VP at the end of the game is the main victory condition, and games are often decided on 1-15 VP, this can win you the game. Similarly, the Sphinx is the most boring Extra Turn wonder — its only additional effect is giving you 6 VP — but an extra turn and 6 VP is solid.
* Extra Turn (Not explicitly a game show trope, but still very common on them.)
* extravagant lies as a three-time Nobel Peace Prize-winning astronaut spy.
* Extra Y, Extra Violent: A Y chromosome is supposedly linked to aggression, so an extra one leads to extra aggression (naturally, women are exempt).
* Extra Y, Extra Violent: Men with an extra Y chromosome are violent, even though real life men with XYY syndrome are simply taller and more susceptible to learning disabilities.
* EXTREME ARSON! -Not actually a sport, please don't try this at home.
* Extreme, as evident by their two pop hits. In 1991, "More Than Words," an acoustic ballad, topped the Hot 100, and a folkish tune called "Hole Hearted" took them into the top 5.
* Extreme bioconservative factions generally perceive all of transhumanity in this way.
* extreme bio-engineering, where every child "born" (at least among the Haut class) has its genetic makeup designed by the central government. What is more, it would be possible for the child's parents never to have even met, let alone had sex.
* extreme caution — calling Raoul a fop on certain sites will result in, at best, a lot of virtual eye rolling and pointed inquiries as to whether or not you have read a) the original novel or b) a dictionary.
* Extreme Championship Wrestling is often accused of inspiring this trope in future generations of American wrestlers, although whether it had enough examples to be actually guilty is up to debate.
* Extreme Close-Up - cameras zoom up to the face of the character in focus, sometimes zooming right in their eyes
* Extreme combinations of mobility and armor protection without firepower are rare, but this is because if you can add enough mobility, it can effectively
* Extreme Dating had a person's exes watching and commenting on a date. On one episode, the woman said that she was Israeli and the guy said he was German. One of the guy's exes said, "A German? That'll go over really well with an Israeli."
* Extreme Days has the four main characters surf, drive, ride, and board their way across the country, in the name of freedom the summer before beginning their college careers.
* extreme difficulty of many of these games, forced the character designers to come up with their own designs for many game characters. While this explains the designs of certain enemies, especially end-game bosses, it still doesn't excuse the odd look of the heroes who are seen at the start of the game.
* Extreme Dinosaurs dinosaurs fighting each other pretty much screams this trope.
* Extreme Dinosaurs has Bullzeye saying this to Haxx after he's released from his mouth:
* Extreme Dinosaurs in a fight. Since the weapon was conceived by aliens from a different dimension, it wasn't adapted to be used on Earth, and ended up causing the cataclysm instead of merely killing the protagonists like initially intended.
* Extreme Dinosaurs smart guy Stegz is faced with a bomb that has multiple multi-colored wires and decides to just rip them all out.
* Extreme Dinosaurs. Unfortunately, his plan backfires and he instead learns a valuable lesson.
* Extreme Doormat: A character is so submissive that they'll do anything people

tell them to and allow them to do anything that would prove detrimental for them.
* Extreme Doormat: Being virtuous and enduring but weak and incompetent is often the only way a woman can come out on top in a Lifetime movie.
* Extreme Doormat even though her canonical motivation for participating in Dahlia's necklace plot in the first place was to prevent her from doing just that.
* Extreme Door Mat Fluttershy stand up for herself in "Putting Your Hoof Down". Rarity does the jaw-closing honors.
* Extreme Doormat: I'm far too nice to stand up for myself. I let everyone walk all over me instead.
* Extreme Doormat, leaving her resigned to never having self-esteem or personal happiness. If romanced by the P4 Hero, she mentions that it sometimes feels too good to be true.
* extreme doormats during daylight and even at night, they feed on crabs and bony fish rather than humans.
* Extreme Doormat: Unmotivated and has no drive, but freely bends to the will of others.
* Extreme Doormat: You're too immature to stop letting people walk over you.
* Extreme example: Michael, Nat, and Alex Wolff (father and sons) play a father and his two sons in
* "Extreme Expose": The segment being the part in the show where three scantily clad women -
* Extreme-G has the Flame Exhaust weapon, which provides a speed boost while also burning anything behind the racer that uses it.
* Extreme Ghostbusters a good idea to roast hot dogs on a radioactive campfire ...
* Extreme Ghostbusters", and the resulting paradox after Kylie says it renders it vulnerable to the usual ghost trap.
* Extreme Ghostbusters are the Vathek, a trio of interdimensional monsters that look like a mad scientist went freestyle on human bodies. One, Gristle, has his lips sewn shut, but his cheeks slashed open so that his teeth remain visible. It's not a pretty sight when he talks. The Vathek's goal is to turn humans into creatures like them and of course a few of their unwilling clients end up with stitched mouths.
* Extreme Ghostbusters briefly touches upon this in the first episode — Eduardo thinks it's going to be an easy A.
* Extreme Ghostbusters (Depending on the region—some stations aired this at night)
* Extreme Ghostbusters, Egon Spengler found himself playing his role to the new blood.
* Extreme Ghostbusters episode "Grundelesque." Kylie is nearly-despondent about disobeying Egon, but he tells her that she did the right thing and that he was working from a contaminated sample.
* Extreme Ghostbusters episode "The Jersey Devil Made Me Do It", the Jersey Devil is a spectral entity that attained its physical form, a reddish bat-like creature, through a forge's smelting process. It was shown to be capable of rusting metal, which it ate, with its breath.
* Extreme Ghostbusters episode "True Face of a Monster" had a golem being created to ward off a gang of Anti-Semitic jerks who were vandalizing a synagogue. One member of the group is also shown to be disdainful toward Roland Jackson, who happens to be black.
* Extreme Ghostbusters for an evil genie, "I wish you won't grant this wish."
* Extreme Ghostbusters: In an episode featuring the Piper, when the characters are standing on the pier, one can see that the foreground planks in a richer shade of mahogany shortly before they're smashed to pieces.
* Extreme Ghostbusters involved the team battling Ravana, a gluttonous ghost who feeds by infecting people with a virus that gives them an extreme metabolism and makes them eat constantly, which is converted into ectoplasmic energy which it absorbs.
* Extreme Ghostbusters is an evil leprechaun who actually says the page quote to the heroes.

* Extreme Ghostbusters is "Ghosts. Yeah, right." Then Slimer shows up, and by the end of the episode, Eduardo is a Ghostbuster.
* Extreme Ghostbusters on the other hand, did, complete with over-the-shoulder blaster and swing-out ghost trap.
* Extreme Ghostbusters, the Bermuda Triangle is revealed to be a huge, all-devouring spiritual entity.
* Extreme Ghostbusters, the team decide to leave work early because they all feel bad but don't want to admit it. When asked why she leaves, Kylie says her cat needs a bath.
* Extreme Ghostbusters. This version lives up to its namesake as it focuses more heavily on the darker aspects of the series with the new team of Ghostbusters fighting terrifying monsters and horrors. The team is put in danger much more frequently than in the original, to the point of being nearly killed in a few cases. The tone is a bit more cynical as well.
* Extreme Ghostbusters. To confirm her suspicions, Kylie interrogates the original Grundel, who confirms the existence of another one but demands to be freed if she wants his help. She refuses.
* Extreme Ghostbusters used it quite effectively in the series finale.
* Extreme Ghostbusters was a civilization destroyed 2000 years in the past due to its alchemists dabbling in demonology.
* Extreme Ghostbusters was afraid of death, and because he interacts with ghosts on a daily basis, so he knows there's an afterlife.
* Extreme Ghostbusters when Roland remembers he used the ghosttraps in building the Infernal Machine.
* Extreme Ghostbusters where ghosts run rampant and the Ghostbusters are all dead (but remembered as heroes) while a guy from that time ends up in the present day. The episode cuts back and forth between Kylie in the future and the rest of the Ghostbusters in the present, making it seem like everything is happening simultaneously.
* Extreme Ghostbusters, who is capable of controlling pesky ghosts via his music. Subverted however though since he is actually a ghost himself who was scamming people, and the pesky ghosts he was controlling were actually a part of him.
* Extreme Ghostbusters wore, respectively, a black leotard with orange football pads, and a green t-shirt with blue jeans with an orange vest.
* Extreme-G on the N64 was able to actually overdo the wackiness. There was a cheat code that enabled you to get a random secondary weapon just by clicking it's fire button as opposed to running over a power-up on the track. And this worked for the A.I. racers too. Cue much rocketspamming and the amount of carnage going on could mess up the N64's processor and graphics and reduce the game to its bare wireframe models in that race.
* Extreme Graphical RepresentationComputers use flashy, unnecessary graphics.
* extreme hatred for the gods and attacks anybody with divine blood in them. One of his Noble Phantasms is the sash of Hippolyta, which can power up the user and their weapons with divine energy. He only uses it to power up his weapons, because he doesn't want the divine energy to enter his body so he can prove he can win with the power of man alone. He prefers other power-ups that came from man instead of the gods.
* Extreme Libido: A character who, because they're sick or not, is obsessed with sex.
* Extreme Libido: She/He won't stop having sex until his/her libido calms down.
* Extreme Luck: You don't need to be invincible when you never get hit.
* extremely accurate depiction of social media, computer technology, and various websites as they existed in the mid-2010s. Given the rapid pace at which the internet changes, people watching the film now would likely notice how all of those things have been redesigned in various ways just a few short years after it came out.
* extremely actor who'll host whatever informational video advances the plot.
* extremely aggressive businessmen, and the Sleeper's wealth owes at least as much to their finaglings as to the effects of compound interest.)

* extremely allowed to enter a custom message in a game, it's usually limited to something under 20-ish characters.
* extremely anachronistic beehive, something that was already becoming outdated in the 1970s and 1980s with the rise of working mothers. In addition, the writers tended to give her the kind of tastes and interests more suited to their own parents' generation.
* extremely), and even then there are multiple timeline details (such as the Siege of Tolkeen) that require the purchase of the Palladium books to get the whole picture.
* extremely and "opposition to Lord English" doesn't look so much like a side as a hot mess. The tension reaches a head when Vriska and Meenah end up coming to blows rather dramatically over nothing more than getting on each others' nerves.
* extremely, and you get the most powerful summon. Yet, at that time there is almost no use to it anymore, after everything has been defeated. Furthermore, it requires an absurdly high amount of djinn, using 9 Mars djinn and 4 Mercury djinn per cast. In the end, there is rarely a moment where the summon would actually be useful. To really drive the nail in, the only remotely challenging thing left by the time you get this summon is the final boss... who's resistant to the summon's element.
* extremely An eight hundred pound soda machine. Up three flights of stairs. Once they did so, he bought his beverage, popped the tab, took a long drink, then ordered his men to put the soda machine back where they'd found it, and reminded them that there'd be another inspection tomorrow.
* extremely as a birthday gift. Too bad these were "laced" with a Daemon...
* extremely. As Vegapunk is almost certainly a man of science (it was his discovery that allowed weapons to "eat" devil fruits) it means that he probably knows the scientific reason behind how the fruits affect the eater's body.
* extremely, as well as over 37,000 "pocket realities" and "chaos realms".
* extremely?). Based on the sheer number of appearances, this might be Stan Lee's favorite trope.
* extremely Briton Anticlimax gets worked up about something. In fact the look on the heroes' faces when an entire stadium of (up to this point) extremely stiff upper lipped Britons suddenly goes wild is priceless.
* extremely cheesy logo into thinking "The Video Bancorp" and "thanks you for using your product" were separate, resulting in seemingly terrible grammar.
* extremely close to each other (about the distance from Earth to the Moon). This makes their mutual views of each other rather spectacular.
* Extremely Cold Case: An unsolved crime that happened a long time ago.
* Extremely common among U.S. universities, especially when there are two major schools in one state. UF/FSU, GT/UGA, etc. They may be bitter enemies on the athletic field, but they often collaborate academically, and alumni of the rival schools are frequently co-workers, friends, or even spouses of each other. There's still plenty of ribbing to go around, though.
* Extremely common during the territorial era, especially the southern United States, which pretty much ran on emotional celebrations and
* Extremely common for free for home use computer security software, you are allowed to start a 30 day free trial that unlocks additional features, such as fully automatic updates, and removes nag screens. It's not uncommon for the free trial itself to be mandatory, to try to get you used to the premium features and to be more willing to pay for them later.
* Extremely common in bluegrass, since it was never really in fashion on country radio.
* Extremely common in general in fantasy stories that mention fairies. They will usually be spelled Faerie or Faery.
* Extremely common in many videogames, most especially console RPGs, from the Grand List of Console RPG Cliches:
* Extremely common in old westerns, especially of the "singing cowboy" variety. Roy Rogers, Dale Evans, Gene Autry, etc. all made many, many films playing characters with their own names.

* extremely common, so this is just more of him being a jerk than an accepted attitude, or possibly just trying to piss her off given his many female guards and soldiers.
* extremely concerned with realism, there's a fanmade scenario floating around that includes the full constellation of active satellites in Earth orbit in updated-in-real-time accurate position. They would have included inactive satellites and space junk too, but most computers would have been unable to handle it.
* EXTREMELY, considering that she'd done all that, and in fact notes that she COULD'VE killed him for breaking up with her, but didn't because "Deep down, I knew you'd realize your mistake and come back to me." Sure, he suffered a giant LOAD of emotional stress, but he would NEVER say it to her, lest she go crazy again.
* Extremely controversial in Taiwan.The First Emperor has been a bad guy in Chinese culture for 2000 years; his position of support for a strong united China was seen as an attack on Taiwanese independence.
* extremely creepy one. They also manipulate gnarled trees and ectoplasmic tentacles.
* extremely cruel by the majority of it's userbase who restored the original and abandoned the remake which went under in less than a year.
* extremely dangerous animals. The wolves have also saved their owners' lives on several occasions.
* extremely dangerous, as you might hit a celestial body's mass shadow in hyperspace and explode. Or come out in the middle of a star.
* Extremely dark real life case: in 1919 a boxing match took place between Jack Dempsey and World Heavyweight Champion Jess Willard. Some people thought it was a mismatch, as Willard towered over Dempsey and looked like he was twice the size of Dempsey. (Willard stood close to 6'7 and 250 pounds, Dempsey about 6'1 and 185.) As it turns out, the fight
* extremely different perception of the universe causing them to view anything beyond the surface of their neutron star to be abstract mathematical concepts.
* extremely difficult for them to both find new planets and maintain links with their old ones. This is why it took them nearly thirty years to find Earth, despite starting only less than twenty light years away at Harvest.
* extremely difficult to ensure that all the abnormal cells have been destroyed or removed, and that there aren't any more floating around in circulation somewhere.
* extremely disturbing to those she meets, as she has not even hit puberty yet and she's already a successful assassin.
* Extremely Dusty Home: A abandoned house with layer upon layer of dust and cobwebs.
* extremely evil. They're notorious slavers, and if they're trading with you, it's probably because you look too tough for them to resort to piracy instead.
* extremely fake Scandinavian accent species is a dead giveaway to their ever-changing role.
* extremely fast, with almost no pauses to breathe, and Vanessa has to interrupt to tell him to slow down.
* extremely get better even in Spike's season 7 flashbacks, when the show had considerably higher production values.
* extremely graphic violence. Since most businesses don't deal with porn, a game that gets an AO rating will pretty much not sell at all. M is the magic threshold that lets game studios be able to sell to the general masses without getting into any complications and some studios try to see how far they can stretch that M rating. This applies to physical distribution of games whereas digital only games have far less hoops to jump through.
* extremely has sex with her and the tale ends with the narrator telling the audience that from then on, the priest had sex with both his wife and his daughter.
* extremely", in which the white Australian character Tegan is able to communicate in an Australian Aborigine language with an Aboriginal character who was supposedly abducted from Earth by aliens 40,000 years before her time. This is implausible not just on grounds of linguistic drift, wherein we have NO attestations or models of any languages spoken 40,000 years ago, but also because there are many different

indigenous languages in Australia, most of them mutually unintelligible, and because it would be extremely unlikely for any urban white Australian (Tegan comes from Brisbane) to speak any Aboriginal language fluently unless they had made a special effort to do so for political or cultural reasons. In terms of plausibility, it would be like being able to communicate with Cro Magnon man by virtue of knowing modern Haitian Creole. (Many fans assume that the TARDIS was tactfully translating for her and letting her think that she was speaking the same language.)
* extremely irreverent portrayal and advertises itself in the show's playbills, usually saying stuff like "Now that you've seen the show, come read the book it's based on!"
* Extremely is a good example of one where it happens even though the breakup is completely pointless and has no effect on the plot.
* extremely, is sometimes used as substitute for Amphetamine in prisons.
* extremely is that Dudley saw exactly that — they forced him to see just what kind of person he was.
* Extremely justified in that he's just a common cheesemaker's apprentice-turned-actor, and she turns out to be a noble who's also the daughter of one of the most famous heroes on the entire continent.
* extremely late into the strip (two months before it ended), and thus were only featured in two arcs.
* Extremely Lengthy Creation: A work that took over ten years to develop.
* Extremely Loud & Incredibly Close: 2011 adaptation of the 2005 novel set in the year following the 9/11 attacks in 2001.
* Extremely Loud & Incredibly Close: 9-year-old Oskar says this to his mother. He immediately regrets it, but in her pain, she has a hard time forgiving him.
* Extremely Loud & Incredibly Close commentator as only the second-best key-focused children's film released in 2011.
* Extremely Loud & Incredibly Close He resorts to writing everything in journals and tattoos "Yes" on one hand and "No" on the other.
* Extremely Loud & Incredibly Close joins the tradition of 9/11 movies forgetting they're supposed to be period pieces, with several too-new cars (a 2008 Ford Escape is prominent) and cabs displaying the new-in-2007 NYC taxi graphics package noticeable in the trailer. Meanwhile, the protagonist's dad films him on super 8 rather than a then-standard VHS-C camcorder.
* Extremely Loud & Incredibly Close, respectively, were dedicated to each other and are so similar that critics are convinced that the two consulted with each other while writing them.
* Extremely Loud & Incredibly Close. Sometimes when they played "Reconnaissance Expedition," his father would deliberately set up missions in which Oskar was forced to talk to people, because his father wanted him to get better at it.
* extremely made of conscripted commoners that turn most of the population against her.
* Extremely major characters were accidentally created this way - Zaphod Beeblebrox first appears in Fit The First as the person to whom a quote about Pan-Galactic
* Extremely minor character Harvey Who was portrayed as this. A member of the Royal Secret Service, he warned King Max Acorn over not trusting certain characters, including the original Robotnik. However, Max ignored those warnings as he had trusted the mystical Source of All for his guidance. Years later, when Max's son Elias had lost the throne, Harvey decided to help him as he realized he was in a better position to be king than his father ever was because he never used the Source.
* Extremely. More so than in other adaptations, where the robots tend to have less personality.
* Extremely Naughty is about Agreste heir Adrien Agreste falling in love with middle-class Marinette.
* Extremely Naughty so that he could be with Marinette as Chat Noir. They end up being voted prom king and prom queen.

* Extremely nerdy Ross (works in a museum, loves dinosaurs) and the laid-back Rachel (gorgeous and fun-loving). She was his crush since ever and she starts dating him. There was lots of on-again-off-again going on...
* Extremely Nice: Charisse was immediately suspicious of Chloe as soon as she met her (and right she was).
* extremely, noting that even during his youth, people were developing bending in ways previously thought impossible.
* extremely, often going out of his way to watch over her, warn her against and save her from the Other Mother even when she's very rude to him.
* extremely old in several ancient cultures (along with being physically large, having a penchant for giant swords, and wearing weird warpaint). Which was the point, because it dissuaded most other cultures from attempting a conquest.
* extremely" or "shitweasel". This is due to the cheap budget the film was made with. The original trailer shows a less unfortunate looking model, however the film had to be re-built from the ground up after the original version was stolen.
* extremely patient, willing to wait a few centuries to take over a planet, which becomes yet another farming world for them.
* extremely PeeJee thinks "Gotta work on pretending to be surprised. That kid's coming out party will be awkward enough as is."
* extremely popular among fans. Their early dating life, general domestic life, and the details of their wedding is a source of fun speculation (especially after the reveal that Benny lived with them as well).
* Extremely popular in pop music from the mid-1950's to the early 1960's:
* extremely popular popular, with the result that all of the fics written before season two looking ridiculous. The contrast between pre-S2 Luna and post-S2 Luna is so sharp that many fans consider the old characterization to be a completely different character, generally referred to as "Woona". "Woona" still gets used but it's mostly relegated to Luna's childhood.
* "extremely portable" weight of 42 pounds and a battery life of "one-half of ten minutes."
* Extremely powerful magics can take a toll on the caster's life force in
* Extremely Protective Child: A child (who may be an adult or a minor) is determined to protect their parent(s) by any means necessary.
* Extremely Protective Child: A child willing to defend his/her parents.
* Extremely Protective Child: Offspring is extremely protective of their parents' emotional and physical wellbeing.
* extremely protective of him. And she gets very angry whenever she perceives that someone has hurt him.
* extremely rapid realization of what is about to go down during the elevator fight scene in . All it takes is one glance at an agent who's nervously gripping his taser for Steve to know he's about to be attacked. Look at his facial expression right after this, when the elevator doors open to let other rogue agents on. They've completely lost the element of surprise and don't even know it.
* extremely rare memorabilia that was actually worth thousands of dollars... or maybe not. Urban legends about Worthless Yellow Rocks are, naturally, extremely common.
* extremely rare occasions - usually after attacks that target their core supporter demographic - they have issued denials. Most people usually still attribute these attacks to ISIS anyways.
* extremely red mistletoe, most media just uses holly with its easily recognizable spiky leaves because it's a lot more accessible and has a very festive red and green color, and many viewers think the two plants are one and the same.
* extremely. Right down to holstering it across-hip instead of same-hip.
* extremely rude old man get on with the Third, with whom she swaps fashion and hair tips (although she takes care to erase their memories of her so that it will preserve the timeline).
* extremely science fiction elements, so looked at from the perspective of the series it was a breach of genre conventions.
* extremely self-conscious of how they're perceived by others on others'

validation. Rather, it is the fact that these characters' egos are so inherently bloated that they perceive anything less than near-constant praise and adulation as a grievous injustice. Don't count on them to give anyone else the same level of respect they expect to receive for themselves. If they absolutely must acknowledge the superiority of another, they'll give the shallowest of lipservice.
* Extremely Short Timespan) and this helped avoid continuity mistakes.
* Extremely Short Timespan: Most videos show a single broadcast, with nothing to suggest it goes on for longer than the video's duration.
* Extremely Short Timespan: The entire story occurs in a very short amount of time.
* Extremely Short Timespan: The events of the entire story occur in a rather short amount of time.
* Extremely Short Timespan: When the events of a whole story (novel, arc, movie, etc.) takes place in a short period of time. Usually three days or less.
* extremely spicy food, a soup made with beef tripe, is another popular option. Mexican restaurants in the U.S. often have specials on menudo during the weekend for this reason.
* extremely status, but unless you're bleeding or have managed to scare them or piss them off, they are generally pretty apathetic towards divers.
* extremely strict on how the Ainu may be portrayed. Therefore, Okuru is never explicitly identified as Ainu.
* Extremely strong preparations of cacao beans (the substance from which chocolate is derived) has recently become a small alternative health fad, where it is used as an antidepressant and meditation aid in cacao ceremonies. Unlike a lot of the drugs on its list, its effects are, in almost all cases, pleasant and benign, consisting of a caffeine buzz and a "loved-up" feeling from the theobromine. It's sometimes reported as being hallucinogenic, but most people using cacao to have "
* extremely sturdy ships, and are almost constantly at war with the vicious Mantis and their hunting parties, who have a tendency to decorate their ships with the viscera and parts of their kills. A player-controlled Rock cruiser that encounters a Mantis ship with such trophies can ram them to completely disable the enemy's engines, with your vessel completely unharmed.
* extremely. The game's story is told through videos; and you can view the videos in any order (you have to find the videos by querying the right terms into the search engine). The way the story is presented, the player has to piece together the full plot on their own.
* Extremely, the propagandic bent isn't the least bit surprising. The movie was released around the time where American and NATO government representatives, as well as human rights group, starts putting pressure toward China for the alleged human rights violations in the Chinese territory of Xinjiang, in which the Chinese government responds as "fake", "fabricated" or "meddling of national affairs". Note that big American films as of 2010 to this day generally avoid depicting China the same way, as China remains a big market for American action movies and most Hollywood movies are co-produced with Chinese studios in order to be treated as domestic product in China due to tightening import laws.
* extremely the size of the average human, and as they are a race of clones, we can reasonably presume that their stature is pretty uniform.
* extremely, those exact items get sucked in. The coffee mug even has a question mark on it in both shows.
* extremely to be a woman). If you were to take a drink for every time babies, pregnancy, or abortion were mentioned in her presence over the following three episodes, you'd end up needing your stomach pumped.
* extremely unlikely occurrence due to the numerous fail-safe systems designed specifically to keep it from happening. Then the show's writers realized that a "warp core breach" was synonymous with "imminent danger", and they started happening with a depressing regularity, to the point that warp cores have an ejection system built into them. Apparently, all those fail-safe systems suddenly became useless.
* extremely. We also see many more new characters in the comics with more (for want of a better word) "trippy" abilities that'd be hard to visualize with the show's

budget (a plant-man, a woman who can literally rearrange your face, a guy who clones himself through "budding", and so on).
* extremely well-done, especially on the part of the author writing Heat's part of the story.
* Extremely Wicked, Shockingly Evil, and Vile, she states that everyone found Bundy pleasant to be around save her dog, who loathed him.
* Extremely Wicked, Shockingly Evil, and Vile tells the story of the serial killer Ted Bundy from the perspective of his girlfriend.
* Extremely, with creepy black eyes that have dark circles under them.
* Extreme Makeover: Home Edition), and the hosts will always find a way to show that all the tools they’re using to remodel and restock the house are from that chain of stores. They’re usually not very subtle.
* Extreme Makeover: Home Edition, as they were going about demolition Ty Pennington says "We're throwing out everything..." cue kitchen sink flying out the first floor window "…and the kitchen sink!"
* Extreme Makeover: Home Edition built seven homes for seven familes in seven days in their finale.
* Extreme Makeover: Home Edition had their old house crashed into by a car.
* Extreme Makeover: Home Edition house was being built, you could expect no less than 10 minutes per newscast of live cut-ins of the building site from the local ABC affiliate.
* Extreme Makeover: Home Edition (US, 2003–2012, 2020–present)
* Extreme Makeover: Home Edition, which was averaging 8-9 million viewers on Sunday nights, was moved to Friday nights in the middle of season 9. The ratings dropped to 5 million viewers and the show was cancelled at the end of that season, though it at least got a proper series finale.
* Extreme Male Beauty. Namely he was trying to get in shape cold turkey in eight weeks - whereas most people advise making gradual adjustments in lifestyle.
* Extreme Marksmen noted that there were no documented examples of this trope actually being done (or even attempted) with a gun. But they had expert shooter attempt to do it anyway, just to see if it was possible. On his first attempt he eventually broke the rope, but it took about 5 or 6 shots. Naturally, that wouldn't have been fast enough to save the victim. He tried again, this time using wadcutter bullets (normally used only for shooting paper targets) which hit a slightly wider area than pointed or rounded bullets, and this time took only 2 shots to break the rope. Since he fired the first shot at the exact moment the "victim" (a sack of potatoes) was dropped, this left at least a slight chance that he could've survived, as the follow-up shot came very quickly due to the shooter's great skill. So with the right ammo and an exceptional shooter, it was possible (though extremely unlikely) that it could be done. It was mentioned that hangman's rope is roughly a half inch wide, which is wider than most bullets. And aside from some machine guns, sniper rifles and super-magnum hunting rifles (that almost all came onto the scene after hanging had begun to fall out of favor and was certainly no longer used in in places public enough to be disrupted), most guns with bullets larger than a half-inch in diameter have poor accuracy. So there's no realistic way to take out the rope in a single shot.
* Extreme Measures: Luthan has medical cocaine planted in his apartment when it's broken into by the dirty cops, to get him arrested and fired from the hospital so he can't investigate the disappearances further.
* Extreme Mêlée Revenge: I'm gonna beat your head in over and over and over... And even when you're a bloody mess, I'm gonna keep on beating you!
* Extreme metal band Dimmu Borgir once had three Stians: Stian Thoresen (vocals, better known as Shagrath), Stian Arnesen (bass, better known as Nagash) and Stian Aarstad (keyboards, no stage name).
* Extreme Monsters book series is only half-vampire due to having a human mother.
* Extreme Monsters book series revolved around the adventures of five monster athletes, whose ages ranged from 9 to 12.
* Extreme Monsters even had his actions endanger a tribe of Bigfoot, with him not caring at all about their plight.

* Extreme Monsters monster athletes are required to wear during competitions to prevent their abilities from giving them an unfair advantage over human athletes).
* Extreme Monsters: One of the members of the titular group of extreme sports-playing monsters was a mummy named Mumford.
* Extreme Monsters was a book series published by Penny Candy Press about preteen monsters who enjoyed playing extreme sports. The main group consisted of a skateboarding vampire named Val, a street luging witch named Jinx, an in-line skating werewolf named Wulf, a BMX biking Frankenstein monster named Steiner, a speed climbing mummy named Mumford and their mad scientist coach Doc.
* Extreme Omnisexual monster that tries to get on with one — or more, or even all — of their classmates, but they're also a goofy, nerdy high schooler.
* Extreme Omnisexual: Someone that that has had—or at least would like to have—sex with other species and/or inanimate objects.
* Extreme Omnisexuals out to rape anything in their way. WARNING! NSFW.
* Extreme Omnisexual tendencies, he mentions that one of his victims was his niece's chinchilla.
* Extreme Omnivore: A character eats something that is usually inedible.
* Extreme Omnivore after eating a few cannons. In his side story, he can use his power to produce toys by eating some scrap, which he then sells to children. Later, the Wano arc introduces Tama, a young girl who can generate edible dango from her cheeks, which can be fed to animals and SMILE-users to make them tame and subservient to her. However, this effect doesn't work on humans, and it won't make humans any less hungry if they do eat it.
* Extreme Omnivore: A person who will eat just about anything vs. a person who is very selective about their food.
* Extreme Omnivore does this to herself by giving Ling-Ling a stick with a Hostess treat attached to the end so he can use it to make her move while carrying him on her back. She even encourages him to move it a little as her vision is based on movement.
* Extreme Omnivoreorganic, it converts directly into more of its own body mass.
* Extreme Omnivores with no compunctions about eating other people. Elf and dwarf are their most prized delicacies, and their burial rites simply consist of the living eating the deceased.
* Extreme Omnivore: Tends to eat things that are not supposed to be edible.
* Extreme Ops concerned a film crew and three extreme sports enthusiasts who go to the Alps to shoot a commercial, only to discover the hideout of a war criminal who faked his death. It suffered from terrible pacing (it takes almost an hour for the war criminal to reveal himself) and being released just as Joe Public was getting really good and sick of the "X-Treme" craze of the early 00s. It bombed both critically and financially.
* Extreme Ops, Kittie's pants rip when Will tries to pull her back up from hanging over the mountain, allowing him to see her panties.
* extreme or over-the-top manifestation of the trope, but may still be played straight or taken entirely seriously. (It helps get the point across if your exaggerated examples are serious.)
* Extreme PaintBrawl 2: "There is one good thing I can say about Extreme PaintBrawl 2: it doesn't cause cancer, bursitis, or scurvy — at least according to the Surgeon General."
* Extreme Paranoia with things like Alertness Officer and Public Relations Officer.
* Extreme Pinball shows the protagonist hanging by a rope tied around her wrists over a pit of monkeys.
* Extreme Prejudice picks up a scorpion then crushes it with his bare hand was done in one take.
* Extreme Risk", the conflict is over the Malon attempting to salvage Voyager's multi-spatial probe from a gas giant despite their objections.
* Extreme Rules 2015 featured the first ever Kiss Me Arse Match between
* Extreme Rules 2015, Ziggler managed to force Sheamus to kiss his ass.
* Extreme Rules - a match conducted under "ECW rules". There are no countouts or disqualification, and the referee's only role is to count pinfalls, acknowledge

submissions, and uphold rope breaks. Functionally similar to a no holds barred match.
* Extreme Rules shows footage of the maligned Smackdown Karaoke segment. Wyatt is not amused.
* extremes, as the police and general public are outraged at the thought of a teacher having sex with a student... until they realize that it's a young, attractive woman having an affair with a male student, at which point they all congratulate Ike ("Nice...").
* extreme similarity (both physical and personality-wise) to her beloved Amano-sempai, her long-time crush in school.
* Extreme solutions are more glamorous than mundane solutions and Romantic works often favor situations and settings where characters believably move into extreme phases of behavior, act disproportionately but in the end are praised by everyone as visionaries who were bold, decisive and had the gut instinct. And of course, because the person can only act in an extreme measure, there is
* Extreme's only #1 on the Mainstream Rock charts wasn't "More Than Words" or even "Hole Hearted", but the relatively forgotten "Rest in Peace". It may also surprise people that "Hole" was a much bigger hit than "Words" on rock despite the latter being their only #1 pop hit.
* Extreme Speculative Stratification: Social stratification is exaggerated in speculative fiction.
* Extreme Speculative Stratification: The rich and poor are starkly and absolutely divided.
* Extreme's "Play With Me", with a variation: the baby in the baby carriage gets a name, and it's Adam.
* Extreme Sport Excuse Plot: After the extreme sports fad of the '90s and early 2000s died out, this stopped being able to draw in large audiences. Not to mention many of these sports could just be watched on actual sports channels, without all the filler. Sports-based plots now need other aspects to attract viewers.
* Extreme Sport Excuse Plot: A show or movie that has the characters doing extreme sports.
* Extreme Sport Excuse Plot: Ever since extreme sports like skateboarding, motorcross, surfing, snowboarding, and rock climbing became popular in the decade, shows that never done this before or don't necessarily need this got on with it due to its themes of new hobbies, passion, physical activity, sportsmanship, and teamwork.
* Extreme Sport Excuse Plot (the movie plot is to justify all the extreme sport stuff)
* Extreme sports in particular are targets of this. Skateboarding fans, for example, tend to complain to no end about the new fans that come with video games series like
* Extreme Sports with The Berenstain Bears. If you do manage to beat the game it won't take long, only about ten minutes.
* Extreme Studios and Majesty, Queen of Venus. The premier superteam of this world is the Super-Americans.
* extremes (!) while overseeing a tea ceremony on the planet Gatalenta. Of course, the Jedi Order immediately annuls all the marriages — although the process apparently took three days, leaving Adi Gallia at her wits' end by the time she returned to the Temple.
* extremes. While the yellow and blue teams race for the finish, the red, green, and white teams argue near the pool. Eventually, the red and green teams start pushing each other's members into the pool. When two members of one team are left, all four members of the white team come up to push them in. After doing so, all four members of the white team lose their balance and fall in themselves.
* Extreme Syndrome. Instead of being stuck at the first song that comes up, new players get stuck at the minimized song selection displayed by the default sort. This is because unlike previous arcade games, the default sort only lists the 83 new original and revived licensed songs, making the master tracklist smaller than it really is (in reality, the game features 210+ songs). Accessing older songs

requires you to toggle the sort by pressing the left and right selection buttons, which not many newbies would know from the get-go. Thus, "Speed Over Beethoven", "Crash!", and "Love Love Shine" are 99% guaranteed to appear in the Top 10 most picked songs.
* Extreme!). The only songs by them that get any airplay anymore? The ballad "More Than Words" and the folksy "Hole Hearted", both slower acoustic songs.
* extreme to make a temporary TARDIS Team, and the trend continues into Series 11, for which he acted as showrunner.
* extreme unreliability (hence Marty's surprised comment that Doc Brown had, out of all automobiles, made a time machine out of a DeLorean). It was discontinued before the first film was ever made, but the movie caused second hand prices to skyrocket. Eventually, the car was brought back into low-level production, arguably because of the movie alone.
* Extreme Vs. Maxi Boost has an "Extra Final Scene" after fighting Sthesia Acht where you fight against a seemingly revived ex- (referred to as ex-(DC)) in the Extreme Gundam Mystic Phase from Full Boost.
* "Extremis" barge into Bill on her date with Heather and rant in Italian (translated to english below):
* "Extremis" realistic: the technology is good enough for the simulated Doctor to email the real Doctor a warning about the imminent invasion.
* extremist fringes fandoms go off at one another, one will refer to the other as Sentai Snobs and Anti-Sentites respectfully.
* "Extremis": The Doctor again convinces someone to run away by asking them to look him up. In the Fatality Index, under "cause of death", which reveals "a truly remarkable record" that overwhelms the display device. The executioner holding it runs off with, "Have a nice day, then."
* Extremis": The Haereticum, the Vatican's secret library of blasphemy, is at least five stories tall and filled with at least a thousand years' worth of the world's most dangerous literature.
* Extremis Then again, there is no interaction between the two plotlines: the former is a flashback slowly revealed in pieces throughout the episode.
* "Extremis" They show him a wireframe view of the world, with, instead of people's appearances, statistics like their species, age, and heart rate.
* Extremis Virus, Rhodey at one point empties an entire clip] into two Extremis thugs and while affected they quickly shrug it off more pissed off than anything else.
* Extremities prison bars. This makeshift cell won't need to hold the man for long, as Marjorie starts digging a shallow grave in the back yard garden.
* Extremophile Lifeforms: Aliens and other beings evolved to live in conditions seemingly hostile to life.
* Extremophile Lifeforms: Creatures that inhabit extreme environments inimical to more ordinary life.
* Extrinsic Go-First RuleWho goes first is determined by something outside the game itself.
* Extroverted, cheerful, and people-oriented. Can be more or less empathetic and sensitive towards others.
* Extroverted, short-tempered, and task-oriented. Normally callous and unemotional, but will get angry for personal reasons.
* Extruded Book Product: Ghostwritten series of books where the main plotline of every book is basically the same, and created at a rate that's higher than any one writer usually writes.
* Extruded Book Product: Harlequin/Mills & Boon "category" romances
* Exty Years from Now: The story is set in a future year that is exactly decades, centuries, or millennia away from the year it was originally made/released.
* Exu/Ellegua. One story has him sitting at the side of the road, repeatedly telling people it's safe to cross, only for them to fall and break their legs on the way. At the end of the story, he tells HIMSELF it's safe to cross the street, breaks his leg, and has been depicted with a walking-stick ever since.
* ex-villain characters), this can be a detriment; for example, if Stuntman's mine

goes off and hits other ex-villains it will deal bonus damage to all of them. Other times, such as if you have ways to get villain cards to hit each other, it's hilarious.
* "Ex-Wives" is a rare group We Are song performed by all the queens.
* Exxon and Mobil (the latter of which was the result of the merger of
* ExZeus 2 was originally ported to Windows 8 or later systems through the Windows Store in 2014 that was mostly a direct port of the smartphone version. An updated version was released in 2017 that slightly improved the visuals, supported higher native resolutions, added remappable controls for controller and keyboard, and does not require a Windows 8 or later machine to play it.
* Ex Zeus allows you to purchase upgrades and power-ups for Minos and they carry over in subsequent playthroughs.
* Ex Zeus and combined them into a new battle robot and decided to take the fight into their turf.
* Ex Zeus, which improved on the visuals, added difficulty levels, and added online leaderboards.
* EYD to give an old, Dutch-occupation era feel (even though the EYD was released in 1972, more than 20 years after the Dutch surrendered). For example, the Dutch restaurant specializing in Indonesian cuisine called "Tempo Doeloe" (roughly translated to "past" or "the good old days") — the proper spelling is actually "Tempo Dulu".
* Eye Am Watching You: Pointing at your eyes, then a person, to signify you're watching them.
* Eye Am Watching You: So don't try to piss me off or I'm coming for you!
* Eye and Seven Despairs is a villainous example. He is implied to be the most brilliant and devious of the Deathlords, who are already the most devious
* Eyeball tumors appears to be a side-effect of the G-Virus. Curtis from
* Eye Beam, and its legs, which open up when it charges at you and if hit enough will leave it immobilized, but it will still fire the beam at you if its eye is intact.
* Eye Beam. However, Trevor discards it soon after. In Season 3, Trevor wears a cool black one reminiscent of Dracula’s cape.
* Eye Beams and a long prehensile tongue, both of which it uses to its ecological advantage.
* Eye Beams, and a pair of short-barreled guns on his neck/shoulders. And on one occasion, a gigantic fucking missile on his arm.
* Eye Beams At this point, skull decides he'd rather die than literally "take Belkar's crap."
* Eye Beams, he's vaporizing people into fountains of flash-heated gore. Because he's a sociopath who hates literally getting his hands dirty.
* Eye Beams). In 4th Edition, beholders could no longer do this, having more varied and balanced powers, but it was brought back in 5th edition.
* Eye Beams, Shiva used his third eye to burn the love-god Kama to ash in wrath over being forced to fall in love with Parvati.
* Eye Beams) were trying to cut into Tigatron's stasis pod, but as a general rule if a character on the show had that ability and wasn't named Dinobot, they only got used on very rare occasions, and got overlooked numerous times that they could have been helpful.
* Eye Beams. When Dean notices Hogarth’s toy gun on the ground, he realizes that the Giant has an automatic self-defense mechanism.
* Eye Beams who looks like an RPG endboss but faints at the slightest provocation (or after using his abilities).
* Eyebrow mites only eat the sebum (oils) secreted from sebaceous pores around our
* eyebrows aren't drawn like everything else, they're made by scanning processed seaweed and digitally adding them to his face.
* eyebrows. She was eventually forced to leave the show because the huge amounts of makeup were causing her serious skin and kidney issues.
* Eyebrow Waggle: Someone waggles their eyebrows after making a lecherous comment or a joke.

* Eye Catch bumpers, seeing as how there are no commercials to cut to.
* Eye Catches. It's one of the quirks of director Keiichiro Kawaguchi.
* Eye Catches's first season. It's one of the quirks of director Keiichiro Kawaguchi.
* Eye Catches Sora doing a shower juggle for a while, before she loses control of the balls, dropping one of them on her head.
* eyecatch, Nanoha is shown happily eating sweet potatoes... pan down to show that it's only a dream, and she's actually gnawing on a struggling Yuuno.
* Eyecatch, the rather dramatic conclusion of his long expository rant revealing several significant bits of backstory to the series' universe. The characters that are witness to this reveal are shocked...only to suddenly cut to a completely unrelated and relatively cheery eyecatch of another character playing in a meadow, thus providing the audience with the dramatic equivalent of a face-first, high speed collision with a brick wall.
* Eye Color Change: Some forms, where you can change your eye color repeatedly.
* Eye Colour Change: A character's eyes change color in response to something, either literally or symbolically.
* Eye Colour Failure. It's notable because whenever someone with dark eyes does it, they go nearly white.
* Eye Contact as Proof: Having someone look you in the eyes while making a claim is the best way to verify the claim.
* E.Y.E.: Divine Cybermancy allows the player to replace their nervous system with a top-of-the-line computer system, interfacing with the brain for much more improved reflexes. At least, according to vanilla text - the real in-game effect is heightened agility.
* E.Y.E.: Divine Cybermancy almost anything. Early models of the Arrancadora worked by creating a nuclear fusion reaction, though it was phased out by the distortion hammer.
* E.Y.E.: Divine Cybermancy) and extremely simple, but are used heavily by all factions due to their heavy stopping power, low cost, and high accuracy. In-game, they're some of the most common weapons used by enemies, and the preferred weapons for many players due to their versatility.
* E.Y.E.: Divine Cybermancy creates a localized warp in reality upon contact with flesh.
* E.Y.E.: Divine Cybermancy has "Cybermancy" (Hackers with psi abilities) and "Necrocybermancy", which the process for installing extreme cybernetic implants, similar to fantasy necromancy; The patient dies, is cybernetically modified, and gets his spirit called back into the body.
* E.Y.E.: Divine Cybermancy has the intricate horned/halo designs of commander Rimanah and your mentor.
* E.Y.E.: Divine Cybermancy) like the other two snipers, the Hunting Machine and the TRK A.D..
* E.Y.E.: Divine Cybermancy psi-power, which immediately kills targeted enemy and (with a splash of blood and gore) summons a metastreumonic creature in their place.
* E.Y.E.: Divine Cybermancy. Several cybernetic implants are actively useful - indeed, practically required - for psychic characters. However, in the backstory, being enhanced as much as EYE agents are is incredibly risky for their souls - one method used, Necrocybermancy, involves the subject being killed and their soul held in stasis while the upgrades are being made, then returned to their newly-cybernetic body.
* E.Y.E.: Divine Cybermancy's Huan Lo Pan intends to kill the player in "an accident"... which he says right to the player's face. You can then respond that the only accident you fear is his head falling into a vat of acid with you wearing his face as a party mask.
* E.Y.E.: Divine Cybermancy style and augment yourself with cybernetics.
* E.Y.E.: Divine Cybermancy, you can install the "Power Converter" implant, which bolts onto the heart. When activated, it converts blood into energy for your other implants or psychic abilities.
* Eyedscreen - Specialized focus on something, by using black bars on the area of

the screen above and below it
* Eye for an Eye, and they won't make the kill for someone else. Instead, they teach newcomers how to make the hit themselves.
* Eye for an Eye, at the very least, the killer's constant making faces at Field would earn him a bunch of "contempt of court" charges.
* Eye for an Eye, Sally's character plays it smarter by baiting the evil creep and getting him to break into her house so she can kill him and more reasonably claim self-defense.
* Eye Glasses: A character wears glasses that change shape to match their emotions.
* Eye-gouging. It's a serious offense that will get you banned from the sport for weeks, months, or even
* Eye Guess: For the first two years the theme was Al Hirt's "Sugar Lips".
* Eyeholes commercial, which features the Eyehole Man, who beats up anyone who tries to eat Eyeholes, and tells them "Get up on outta here with my Eyeholes!" The twist is that he's not just a character conjured up for the commercial, he's actually a real guy, and he really will attack you if you try to eat Eyeholes, as Jerry would later discover.
* Eye in the Sky decide what (if anything) it was about. Despite that, the album ended up being a loose exploration of the influences of religious and political belief systems.
* Eye In The Sky. Inspired by the security cameras at a casino, apparently about cameras and spy satellites watching everything.
* Eye in the Sky's protagonist Colonel Powell was originally written to be a male. It was changed to a female, played by Helen Mirren.
* Eyelander. The Scotsman's Skullcutter and the Sniper's Hitman's Heatmaker do much the same.
* Eyelash dislodgement causes lamp post to turn on for seven milliseconds.
* Eyelashes appear to be the only difference between males and females of most species of
* Eyeless Face, apart from having no voice-over or even lines, may have no eyes whatsoever either.
* Eyeless Face's short story "Bon-Bon" (1835) wears green sunglasses to conceal that he has neither eyes nor eyesockets; the space where the eyes should be being "simply a dead level of flesh".
* Eyelid Pull Taunt: Pulling a lower eyelid while sticking out the tongue to show disdain. Common in Japan, and usually portrayed as childish.
* Eye-Obscuring Hat: A character wears a hat that covers up their eyes.
* Eye-Obscuring Hat that still conceals who you are and adds an air of mystery.
* Eye of a Fly, a car smashes into a corner pet store, destroying the cheaply-made building and killing a family that lives on the second floor.
* Eye of a Fly, Ernest almost steps on the body of a girl who was murdered right outside his building. He arrives just as the police are wrapping up their investigation. When they remove the corpse, they leave a chalk outline.
* Eye of a Fly, Ernest has an emotional breakdown while walking home and becomes incapable of processing anything he sees or hears. When he recovers, he finds that he made it to his bedroom, but soiled the bed.
* Eye of a Fly, Ernest's brother Warren hates his sister Tiffany, for reasons Ernest can't discern. Once he threw a TV at her.
* Eye of a Fly makes his own meals, like ice cream with mustard and hamburger with orange juice spread over it.
* Eye of a Fly: To Ernest's embarrassment, even casual interactions with attractive women leave him with uncontrollable sexual thoughts and a visible erection, but sexual encounters leave him cold, which is part of the reason why he's still a virgin.
* Eye of a Fly was little, his mother gave him a present wrapped in red cellophane. Ernest was entranced by the way the light shone through the cellophane and stared at it for hours. Then his mother ruined it by opening the present.
* Eye of a Fly was thirteen, she tried to throw herself and her baby brother off a bridge because her father planned to force her into prostitution to pay for his

addiction, and she thought the whole family would be better off dead. Instead she fell down and was run over by a truck, resulting in brain damage that destroyed her ability to read and left her with regular seizures. Her uninjured brother was put up for adoption, while she was placed in an abusive foster home and later spent time homeless. Things started looking up for her after Father Maldonado took her in and let her stay and work at the Day Care Center, and now she considers the truck accident to be a gift from God because it prevented her from killing herself.
* Eye Of Cat — in a far future, though nowhere near as far as the previous entry.
* Eye of Horus Means Egypt is being used to symbolize that something's Egyptian.
* Eye of Horus Means Egypt is used to symbolize that something's Egyptian.
* Eye of Newt are folk names for herbs. "Eye of newt" itself refers to mustard seed.
* Eye of Terror, about ten thousand years old, so their armor is fairly antiquated compared to the loyalist Space Marines.
* Eye of Terror, and the Imperium promptly converted Cadia, the world closest to the safest route in and out of it, into a planetary fortress. So the heretics spend as much time fighting each other within the Eye as they do launching raids or invasions from their prison/refuge.
* Eye of Terror from the present day of the setting so the light from it shouldnt have reached reached earth yet. That's one of the least weird things about it.
* Eye of Terror, which was unexplored, and was simply called "Da Big Swirly Fing".
* Eye of the Beholder an optional dungeon called The Mausoleum near the start of the game gives you a "Rod Of Restoration" as a reward... guess where the only enemies that use what it cures are.
* Eye of the Beholder but who is also not even half the threat of a single giant.
* Eye of the Beholder features an endless corridor in an already frustrating level, thanks to one of the "sneaky teleporters" of the game, who sends the party back a few squares with no visual clue. Leaving an item on the floor allow one to realize what's going on. There's no way to ever reach the other end of the corridor.
* Eye of the Beholder II: The Legend of Darkmoon-based game, features the aforementioned exploding "gas spores". And yes, at first glance, they can be mistaken for beholders. Especially the first one, that startlingly appears right as a door open. That sword slash was pure reflex, I swear!
* Eye of the Beholder. In his speech, he continually stresses the importance of ensuring "glorious conformity" and abiding by a single norm. He says that all that is different must be cut out like a cancerous filth as differences weaken the state.
* Eye of the Beholder", Rod Serling's ending narration raises the questions of this world and why it is, before saying the answers make no difference.
* Eye of the Beholder spell, allowing the party to see through the many secret illusory walls dispersed through the mazes in the games.
* Eye of the Devil (as a French count) must return to his home to be sacrificed for a better crop or something. The entire town are Satanists posing as Catholics, including their priest.
* Eye of the Devil — namely, it's a Satanic cult. The cult has taken on much of the iconography and symbolism of the Catholic Church, including black masses that look a lot like the regular Mass, and the use of crosses and Christian symbolism for their human sacrifice.
* Eye of the Devil that conducts a seemingly innocuous fair, which is actually the prelude to a human sacrifice.
* Eye of the Dragon installment of the series, and the first completely original release of the noughties revival.
* Eye of the Dragon turns out to contain six zombies, which ambushes you the moment you enter the room. If you have a Ring of Zombie Control, you can order them to back off, otherwise you (and your friend, Littlebig the Dwarf) will have to battle the entire group.
* Eye of the Dragon, which can unlock an underground chamber containing a valuable golden dragon statue as tall as yourself. However, said chamber is guarded by a

powerful Black Dragon.
* Eye of The Lens by The Comsat Angels could have been their biggest hit in the early 80's, had it been included on an album.
* Eye of the Needle by Ken Follett murders several people for this, always saying, "You saw my face". Later he discovers that British Intelligence has gotten hold of a photograph of him when he lived in Germany, causing him to freak out because now they really do know his face.
* Eye of the North campaign. Recruiting the Charr requires killing their current corrupt leaders, at which point the Legions quickly realign under their new leader. Recruiting the Norn involves a spirit journey and showing one rather boisterous Norn that the enemy is fun to hunt and there are enough to gather a hunting party.
* Eye of the North expansion is far more explicit with this. If an allied NPC is killed, it will either return hale and hearty on the next dungeon level or, more commonly, wait until its aggro circle is clear before standing back up, dusting itself off, and running back to your location. Quite a few NPCs will rubberband back up to about 30% if their health drops below this threshold, even if the damage they receive puts them deep into negative health. Of course, it was possible for decorative player minipets and certain resurrection NPCs to be accidentally killed by rolling ice boulders when they shouldn't, but this was quickly patched.
* Eye of the North patches, releasing new stories for the original game in order to renew interest in the series. The new stories continued existing plots from the original games and were of considerably higher difficulty.
* Eye of the Storm, in reaction to Scathach's beauty, Shirou try to focus his thoughts on Rin. It isn't specified if he want to calm buzzing hormones by focusing on his true love, or by fear of what she will do to him if he's be unfaithful.
* Eye of the Storm, Shirou looks for Sakura that went missing. With the girl being both a lesser grail and in presence of a Servant, it is obvious that it will lead him to current Holy Grail War.
* Eye of the Storm to be the anxious type from the way he taps his leg throughout the meeting, needing the toilet often. He also reacts to being touched by his boss, his reaction to a door slamming shut being similar to sensory overstimulation. He also often has social miscues, as noted by Ganabati. To further complicate it, he's been noted to scream out at night from the Noodle Incident of Romania, which Ganabati describes as having been horrific.
* Eye of the Tiger Dodge Ram that Gary Busey's character gets as a favor for saving a Cartel member in prison, and which he uses to totally annihilate a group of psycho bikers terrorizing his town.
* Eye of the Tiger where the boxer lost the big fight and wound up retiring to run a small deli.
* Eye of Tyr, January 28, 2012, he spoke in a coherent, intelligible manner and at a normal pace. He would still speak his usual way out of CHIKARA, though.
* Eyepatch After Timeskip: Someone is depicted wearing an eyepatch in the future.
* Eyepatches are frequently used to correct amblyopia (lazy eye), especially in children.
* eyepatches with the main character thinking that "anything sounds good coming from a man with an eyepatch".
* Eyepatch of Power are cool. Similarly, he has a bionic limb because of some terrible accident where he was rescuing somebody or doing something else heroic. Logical downsides like a reduced field of vision are forgotten.
* Eyepatch of Power on one of her earlier missions. Generally not someone you want to mess with.
* Eyepatch of Power: Too badass to need both eyes. Probably lost the eye in a badass way too (assuming that eye is actually missing).
* Eyepiece Prank: You trick someone into looking through an eyepiece that leaves a marking around their eye or eyes.
* Eye Pop, before feeling up Rocko's eyes and optic nerve. He then performs the same type of exam on Rocko's eyes as one would for an inguinal hernia.
* Eye Pop: Eyeballs cartoonishly popping out of a character's skull as a reaction.
* Eye Pop in his nightmare in which he discovers that Arthur and the Brain are

aliens, only to wake up, comment "That was scary," and flop back over to sleep.
* Eye Recall: A flashback sequence that starts with the camera zooming inside the pupil of the character recalling the memory.
* Eyes Always Averted: People who are shy often don't like to make eye contact.
* Eyes Are Mental: Their eyes stay the same even if the rest of their bodies don't.
* Eye Scream Set ripped out or blinded Horus' eye with his bare hands, and Apophis sometimes wounded the sun god Re's eye during the night.
* eye-searing baby blue and yellow uniforms. The fact that they won their only game in these uniforms 56-21 is presumably unrelated.
* Eye See You the killer hates cops and targets them because they protect the weak, who he views as a social disease that should be exterminated. He claims this is simply "nature's way", longing for a day when their blood will run in the streets.
* Eyes features a ghost vision letting the player see what the specter sees.
* Eyeshield 21 (小便). Unfortunately for them, those phrases mean "poop" and "pee" respectively.
* Eyeshield 21 - A dub was released by Viz Media on the streaming service Toonami Jetstream of the first five episodes, perhaps as a test run. After Toonami Jetstream shut down, the episodes disappeared, and Sentai Filmworks' North American DVDs of the show do not have the dub.
* Eyeshield 21 against the first game of the tournament against the Cyborgs.
* Eyeshield 21, Agon's nickname for Unsui is "Unko-chan", which can mean "Little Shit" or "Girly Little Un".
* Eyeshield 21, Akira "Chuubou" Nakabou is a big fan of the protagonist Sena Kobayakawa. He stated that he planned to enroll in Deimon High School after graduating middle school to join the Devil Bats. He immediately jumps at the chance of joining the Japanese High School Football team for the world cup and is the only player from Kansai that is not a member of the prestigious Teikoku Alexanders to be included in the first string team.
* Eyeshield 21. Although he's not cute and is primarily interested in savaging and eating the Devil Bats. There's also Butaberus, and the little Devil Bat, the actual team mascot, who doesn't physically appear in the story but handles meta explanations, omake and reader questions. There's also Baby Devil Bat, which is just a smaller, student-like version of the Devil Bat.
* Eyeshield 21 and beats up Monta when he pulls this...on Mamori. Poor Sena gets stomped on too.
* Eyeshield 21 and sleeps with several girls and then dumps them afterwards. Several guys line up to join the Deimon Devilbats because Mamori was handing out flyers. However, most of the other male characters avert this who rarely, if not never, shows an interest in romance.
* Eyeshield 21), and snacking on bananas, his favorite food. He even cries "Mukyaa!", which in Japanese is a monkey's cry. Despite all this, he still gets incredibly offended when someone calls him a monkey.
* Eyeshield 21 and takes orders to the extreme, doing ONLY what Kid told him to do. It was only after Monta defeated him in a catching battle that Tetsuma began to develop his own ambitions and more emotions.
* Eyeshield 21 and the rest of the team totally shaken, the opposition asks if they're ready to forfiet the game. After a brief team meeting, the Devil Bats declare their decision in unison, "We will KILL them!"
* Eyeshield 21, and with all of this, manages to scores while destabilizing his opposition. Also, there are several instances where they don't catch up in time and lose anyway.
* Eyeshield 21 are the best (respectively) runningback and wide receiver in Japan, best friends, and the keys to Deimon's offensive power. Needless to say, some of the Devilbat's best plays involve the two working together.
* Eyeshield 21, at the start of the "Death March" arc, Sakaki offers the Devil Bats a choice: either go back to Japan and take it easy over their summer break, or join Hiruma, Kurita, and himself on their trek across America and risk a career-ending injury. Naturally, they all opt to take the risk.
* Eyeshield 21: A "uselessly bad-ass" pillow fight between members of the Japanese

team during the World Youth Cup arc involves players using their special techniques with the pillows against each other.
* Eyeshield 21 being revealed to the audience directly before its execution.
* Eyeshield 21 boils down to the main character growing out of his wimpy kid mold and becoming a man (albeit a rather wimpy man).
* Eyeshield 21 brings a massive arsenal of firearms wherever he goes, though where he keeps them all isn't so clear.
* Eyeshield 21. But if a question is asked in terms of American football, no matter how complicated, he'll always answer it correctly in seconds.
* Eyeshield 21 can be like this to his team when he has to. It's later shown that he used to spend his free time at a military base as a child, so that may have had an influence on his "teaching" methods.
* Eyeshield 21 Clifford D. Louis makes and executes most of the plans; he's also the only player who isn't frightened of Mr. Don and whom the latter doesn't try to order around, making them an example of this trope.
* Eyeshield 21 (cornerback) as his Left Hand. Between the two of them they more or less carry Hakushuu, with Gaou breaking the opposing line and quarterbacks, while Kisiragi shuts down the recievers and runs interception. Both have a lot of respect for Marco and one another, and are out to prove their strength to the world, no matter what methods they have to use.
* Eyeshield 21: Dakichi Komusubi rarely says anything beyond grunts or one word sentences.
* Eyeshield 21 does something like this during the big game between Ojou and Deimon during the Fall Tournament, with a whole string of characters reacting with shock, then going "Is that what you expected me to say?" when a dramatic play seems to go one way, then the other.
* Eyeshield 21 does something right, Hiruma uses his foot. If they do something wrong, he uses his gun.
* Eyeshield 21 does this a number of times, such as with Sena's first game against Koigahama and most of the Devil Bats' games during the Fall Tournament. It often doesn't end up so fine and dandy though.
* Eyeshield 21 does this with every team the main characters go up against. Except for the protagonist's team, every team consists of a few dozen generic nameless players whose faces are usually hidden behind their helmets and two or three important named characters. The latter are inevitably the stars who make all the big plays. You can tell how important a team will be to the story by how many players get names; the first team they play, for example, gets one named player, and after that game they never impact the plot again. Meanwhile, important recurring rival teams get five or six named players, plus coaching staff.
* Eyeshield 21 do this sometimes. Usually they imagine themselves pulling of a spectacular play (in Monta's case, it's always followed with Mamori fussing happily over him).
* Eyeshield 21 dresses and behaves somewhat like a gangster, though he at least has the sense not to talk like one. Still, even by Eyeshield standards, he looks rather silly with his long dreads, gold chain, and baggy pants.
* Eyeshield 21 dresses in drag, wears make-up and is referred to as the "Queen" of his all-boys school. At the same time, however, he's also the running back on the American football team and has a huge crush on the monk-like quarterback/team captain and the dorky wide receiver.
* Eyeshield 21: Each team has one of these, typically in the form of their captain (although sometimes another player will fill the role):
* Eyeshield 21, especially before Akaba was allowed to play again. They mostly score on field goals and don't rack up big yardage, but their defense is smothering.
* Eyeshield 21) euphemism for "penis" there is. Sena and Monta are left wondering who "Dick" and "Johnson" are, while a mortified Mamori refuses to translate any further than saying they're using very rude language.
* Eyeshield 21 Eyeshield 21 who is also star running back on his high school football team. Sena doesn't learn just who it is until the penultimate story arc,

though there was a fake-out along the way and he had a few hunches.
* Eyeshield 21 features an ace football player who hides his identity behind an eyeshield and code name. Subverted in that several cast members figure out his identity almost instantly, while others are much slower on the uptake. Further subverted in that about halfway through the series, he abandons his secret identity altogether (on live TV no less) and operates under his real name from then on, with "Eyeshield 21" remaining as a nickname.
* Eyeshield 21 football player. At heart, Hiruma is a good guy who loves football and cares about his teammates. That said, he's not afraid to blackmail people to get what he wants and god help the people who piss him off or get in his way. His ability to manipulate situations to benefit himself scares even authority figures.
* Eyeshield 21 for people and things get this treatment in the Viz editions.
* Eyeshield 21, for the school sports festival, everyone had to dress in costume. Hiruma chose to dress as a rabbit. While wielding an AK-47.
* Eyeshield 21, god help any person who gets in the way of that. In fact, he's actually quite honorable, freely praising and admiring those he considers strong and brave even after he defeats them.
* Eyeshield 21 go to the Christmas Bowl, the biggest game of the year played on Christmas.
* Eyeshield 21 has "Amefuto Clinic", where Mamori and the Devil Bat give the audience a trivia question about the rules of American football in each episode's eyecatch.
* Eyeshield 21 has left her in this state, and she only begins to recover after his defeat.
* Eyeshield 21 has one of these scenes, and is actually called "Oath Beneath the Setting Sun".
* Eyeshield 21 he has endless stamina all thanks to him winning the genetic lottery. He is also a borderline sociopath who enjoys crushing the dreams of people with less inane talent and those who actually have talents just make him want to crush them harder.
* Eyeshield 21. He remained a mystery for a long time on who this "third original member" was, but it turns out he had been doing all their construction jobs for the clubhouse, which only Kurita and Hiruma knew.
* Eyeshield 21, Homer punches Panther in the face to prevent him from attacking their racist coach, which would get him kicked off the team and possibly out of the school. In a later episode, Tetsuma smacks Monta around to keep him from going ballistic on the referee and getting his team thrown out of the Fall Tournament.
* Eyeshield 21 in general, but he has a particular fondness for sweet things. The first time he meets Sena (properly) he makes tea for them and asks "How many dozen sugars do you take?" while upending the sugar bowl over his own cup.
* Eyeshield 21 in order to badger him into going through with the match.
* Eyeshield 21; in order to win the Christmas Bowl, the Deimon Devil Bats decide that they need to go the entire second half without a huddle so their opponents, the undefeated Teikoku Alexanders, won't have time to think.
* Eyeshield 21, in other hand.... Played straight with Gaou whose muscles and size pretty much translate to: must bench over 150 kg to have a chance against him.
* Eyeshield 21 in the form of Yamamoto Onihei, ace lineman of the Hashiritani Deers. More than any other player on the sideline, this is Onihei's role, and a running gag is formed around the fact that his analysis has yet to be accurate. It doesn't help that the team he usually tries to predict is one of the most unpredictable teams in the whole of Japan....
* Eyeshield 21 (introduced for the World Cup arc) seems to be like this, except, naturally, with a strong focus on its military.
* Eyeshield 21 is a cross between Goku's, Astro Boy's, and Tsuna's, as well as being two tone (though he actually develops that later on, so he probably dyed his bangs). Evidently, the hairstyle's genetic, as his dad has the same thing, except with a receding hairline. Almost as if to lampshade his very anime-esque hair cut, when he gels in down it looks EXACTLY like Astro Boy's. Milder examples are Ikkyu's Vegeta-do, Kurita's chestnut spike, Mizumachi's blonde bedhead,

Monta/Komosubi/Tomgano/Yukimitsu's spikes, and Sakuraba's hair antennae.
* Eyeshield 21 is an inverted example. He's a fullback who wants to get away from the opposing defence and the simple fact that he can't get away from them isn't going to stop him, even if he has to drag the entire defence along with him.
* Eyeshield 21 is a series that's very aware it's a sports manga and has no problem poking fun at itself; whether it's lampshading particular cliches, cracking jokes during moments that would be played as tense in any other series, or having characters so over-the-top and fun that any flatness they may have is forgiven.
* Eyeshield 21 is basically what happens when you take the most socially challenged kids in Japan and make them play team sports. Kurita is probably the most prominent, though there's also Sakuraba, Mizumachi, and Yamato.
* Eyeshield 21 is being a bunch of pretty boys whose girlfriends come to all their games. The plot picks up when their next game is against the far more competent Ojou White Knights, and Sena sparks a rivalry with defensive lineman Seijuro Shin.
* Eyeshield 21 is being told that his nickname comes from the famous receiver Joe Montana (a quarterback) instead of the protagonist just misreading his real name and finding Monta appropriate since he looks like a monkey. Monta never bothered checking after he joined American Football and still claims this is where his nickname come from.
* Eyeshield 21 is covered in blood ("I've returned from the threshold of hell to do battle, Damn Caveman!"). He had some fun with ketchup.
* Eyeshield 21 is frequently chased around by hordes of fangirls, much to the delight of his agent who is making a mint off merchandising. Hiruma Youichi once uses this to his advantage.
* Eyeshield 21 is interesting in that he gambles, is very good at gambling, but doesn't rely on luck. Instead, he uses his scary brain to take advantage of any situation. Or he uses his obnoxious personality to goad his opponents into losing. Or he counts cards. As long as there's a 1% chance he can win, he'll play.
* Eyeshield 21 is kept by Hiruma, Kurita, Panther, Shin, the Ha-Ha Bros.
* Eyeshield 21 is so forgettable that other teams completely forget that he exists. He even breaks the fourth wall to comment on it.
* Eyeshield 21. It's made clear that many of the teams have players who are on their last chance to make it to the finals, and none of them are content with being 2nd.
* Eyeshield 21. It was also comparatively poorly written. The creators seemed to agree, as they wrapped the arc very hastily. It segued surprisingly well into the series finale, though.
* Eyeshield 21 it whenever another character's romantic subplot is brought up. It then homes in on them like radar.
* Eyeshield 21 Jumonji, Kuroki, and Togano started out as stereotypical delinquents. This didn't last, with Togano becoming an aspiring artist, Jumonji outed as a smart guy hanging out with the wrong crowd, and Kuroki remaning a typical, but friendlier, thug. Despite all being linemen, they also began to be differentiated by their abilities, with Kuroki being the fastest, Togano the strongest and Jumonji the smartest and most technically skilled.
* Eyeshield 21 just to go find Kid and wake him up. On another occasion, Kid asks Tetsuma to get him up at eight AM. So Tetsuma actually counts down the seconds until 8 AM IN HIS SLEEP.
* Eyeshield 21. Like Nijima he uses it for his own gains and specializes in blackmail with it.
* Eyeshield 21 looks and acts the part, despite being ethnically Japanese. It goes along with his team's "Egyptian" theme.
* Eyeshield 21, Monta falls victim to this from Cerberus. After that, he has a discussion with Sena about joining the football team and decides that he's not ready to give up on his dream of becoming a baseball player just yet. As he gets up to leave, Sena calls out for him to stop... not because he's still trying to convince Monta, but because Monta has a huge hole in the seat of his pants (underpants too, even).
* Eyeshield 21, Monta learns that it's okay to give up playing baseball because

he's just bad at it and find a sport he can be good at instead.
* Eyeshield 21/Nice Girl. The only thing really different about them is their gender and appearance.
* Eyeshield 21 nicknames most of the team apart from Sena and Monta. She once got an omake page listing all her nicknames for them. She even took to calling the pointy-eared Youichi Hiruma "You-nii" ("Elf-bro").
* Eyeshield 21: Non-romantic, but the main linemen of a team sometimes says that to his teammates. That is what their position is about.
* Eyeshield 21 of FMP's Sousuke because of this trait. He was basically a complete loner until he joined the football team in middle school. It actually makes his dedication to football a rather unintentional heartwarming moment, it was through football that he was able to make friends.
* Eyeshield 21 of Sena running around a library representing his memory before finally asking the Devil Bats' mascot about it. Sena even thinks to himself afterward "I've got quite a vivid imagination."
* Eyeshield 21 often answers rather mundane questions about the characters (like what they eat for breakfast, how much they study, how often a certain character doesn't wear pants...) in a similar question-corner.
* Eyeshield 21 One of Sena's contemporaries, Patrick "Panther" Spencer, is fond of running across rooftops as his morning exercise.
* Eyeshield 21 one of the most popular pairings is Seijurou Shin and Haruto Sakuraba; Sakuraba is very noticeably taller than Shin. This also occurs with BL pairings with Sena Kobayakawa, who is pretty short compared to most football players in the series.
* Eyeshield 21, Panther tries to become a player for the Nasa Aliens, but he is repeatedly rejected by Coach Apollo for being black.
* Eyeshield 21, Patrick "Panther" Spencer, a well-known, dark-skinned individual, gets this treatment. By the final story, where a chapter or play doesn't seem to be able to go by without saying he's greater than everyone else due to "his black genes", it truly sticks out. It's odd when you consider that in a football series about players who casually pull off superhuman feats regardless of ethnicity, the narrative claims that one character's defining ability to his football skill is "because he's black".
* Eyeshield 21 plays with this. Sena finds a letter in his locker asking him to meet someone who is obviously a girl. Almost the entire Devil Bat team tries spying on him on this "date" for their own reasons. (The Huh-Huh Bros. can't believe Sena is getting some, Mamori is so happy to see him grow up, Suzuna is jealous, etc.) Turns out it's not a date, but a warning from their future opponent.
* Eyeshield 21 quarterback he faced) and it's regarded as just "part of the game". Which it isn't.
* Eyeshield 21. Said to be the quarterback that comes only once every 100 years, and he never shows up to practice. He spends every day womanizing, beating up people, ditching those women, and the few times he practices, he doesn't even put on his uniform. And he's still awesome at football. A rare villainous example of this trope; part of the reason Agon is so odious is that he was born with incredible talent and can dominate almost anyone without putting forth any effort. He is fully aware of this and even laughs about it, mocking those who try hard. In a series that's all about improving oneself through hard work and effort, that puts him in direct philosophical opposition to basically every other character. Emphasized by Agon's brother, who has had to work hard his entire life to be half as good as Agon is.
* Eyeshield 21: Sakuraba (a high school student) and Torakichi (a grade schooler) who is Sakuraba's biggest fan and one of Sakuraba's main motivators for improving himself.
* Eyeshield 21 Sakuraba's popularity. Hiruma also dressed like a maid to spy on the players from the American team. Panther got a good laugh out of it.
* Eyeshield 21's breather episodes tend to be pretty justified, given that serious athletes DO have to take rest days right after big games. Even the breather episodes tend to have bits of relevant information.

* Eyeshield 21 Sena and Karin from Teikoku Alexanders come to mind. Also various people that Hiruma forced to fill the roster. In general Some stay, some leave the American Football game altogether. Sena is former, Karin is the letter.
* Eyeshield 21 shoulder pads, because their bigger builds make the shoulder pads stand out less. As the extras best put it, "Shoulder pads make even our scrawny hero look like a man!"
* Eyeshield 21's Kongo Agon easily annihilates him in this category. He even uses the word "trash," but unlike the above-stated Ulquiorra, every other sentence that comes out of his mouth contains it (calling someone trash is actually his version of Hiruma's F-Bombing).
* Eyeshield 21 sort of way. In contrast to most examples, they are part of the main cast and are every bit as important and well-developed as their more attractive team members.
* Eyeshield 21's team even lampshade during the fall tournament's finals that no one in Japan can stop him anymore.
* Eyeshield 21 subverts this with the Hakushuu Dinosaurs, as team captain Marco is quite scared of the massive Gaou, creating the impression that Gaou is leading the team. But Gaou has nothing but respect for Marco and no desire to challenge his authority, meaning Marco is really in charge.
* Eyeshield 21 take over as the main threat to the Devil-Bats, with their seeming invincibility driving the story for the remainder of the arc.
* Eyeshield 21 teams at the same time with the "Kurita Hammer". The fallout from the chaos resulted in the Devil Bats scoring a miracle touchdown.
* Eyeshield 21 that his teammates fear, but they all genuinely respect him and are genuinely loyal to him.
* Eyeshield 21: The Amino Cyborgs team do only a middling amount of training, and spend more time getting juiced up and reading books on how to play football. This leaves them with low stamina and a poor grasp of football fundamentals when they play the Devil Bats.
* Eyeshield 21, the Devil Bats play against the Yuuhi Guts during the Fall Tournament, only to find the coach has replaced the regular line-up with ringers from the other sports teams at Yuuhi High School. After the Devil Bats manage to gain a strong lead anyway, the coach reluctantly sends in the regular lineup, who fail to make a comeback, but still put up a good fight (this is even more pronounced in the manga, when it's the regulars who score Yuuhi's only touchdown against Deimon instead of the ringers).
* Eyeshield 21, the quarterback for the Alexanders and aspiring mangaka says that she was ordered to write a manga about Eyeshield 21. She just wants to draw shoujo, though.
* Eyeshield 21, there are two brothers on the NASA Aliens football team that have kanji tattoos. The older brother has the kanji for "Big" and "Helpful", while the younger, smaller brother has the kanji for "Little" and "Helpful". What they don't know is that when put together, the kanji combine to form the words "Poop" and "Pee", respectively.
* Eyeshield 21, the students of Shinryuuji High School (Shinryuuji means Temple of the Dragon God) are encouraged to invoke this trope, often meditating and reciting Buddhist scriptures. Also subverted since we're often reminded that underneath their stern personas, they're really just your typical girl-crazy teenage boys.
* Eyeshield 21 think Raimon Taro's name is "Monta." Sena misread the kanji for his name as "Kaminari Montarou"; Hiruma later uses this mistake to his advantage by claiming it's a nickname derived from football legend Joe Montana (and lies to Monta by saying he played the same position).
* Eyeshield 21, this trope is played straight and he seems to be on the verge of saying this. Also Hiruma and Suzuna usually react like this when a dumber or excited teammate points out an obvious or dumb statement while the other marvels at it.
* Eyeshield 21 to every noun he says. Also, his ability to turn his head 180 degrees, spiky dyed hair and teeth that are just as sharp, his habit of spinning his AK 47 like a pencil and shooting it at the same time. As long as you don't pay

attention to that, he fits the bill.
* Eyeshield 21 took the place of Sena's love interest (To a broad extent) after the writer seemed to want Mamori and Hiruma. Though this is a bit of a variation as Suzuna is the least developed of the cheerleaders along with the fact that, as a shounen series about football, the romance between the two isn't very developed either.
* Eyeshield 21 to Sena's college years, where he joins the Enma University football team and prepares to compete in the Rice Bowl.
* Eyeshield 21. Unsui is serious, responsible, hard working, and polite. Agon is arrogant, self-centered, sadistic, and lazy.
* Eyeshield 21 was able to identify exactly what part of the arm he broke, the humerus.
* Eyeshield 21, when Sena, Monta, Mamori, and Suzuna visit a bath house in order to talk to Kakei of the Kyoshin Poseidons, Mizumachi's attempts at peeping on the girls' side lead to the normally shy and quiet Sena having a vision of Suzuna, naked except for a towel held against her front.
* Eyeshield 21, which is already about American football. However, this is one of the cases where it's justified; Banba used the baseball game as a way to train Kurita and the other Devil Bats for the upcoming game with the Hakushuu Dinosaurs. It wasn't the actual sport that was important either, they just needed to get used to playing sports inside a dome rather than outside, due to the difference in air pressure. A baseball dome was chosen because Hiruma had dirt on the night guards watching the place.
* Eyeshield21 who always outsmart other teams, runners who are rumored to have lightspeed (or to be accurate, 50 yards in 4.2 seconds) with improbable counter-attacks to stop players from blocking them, pass receivers who run backwards even faster than most people can run forwards, and catch long-range passes without looking at the ball.
* Eyeshield 21 who does care about his teammates, even if he works them to the bone.
* Eyeshield 21 whose total lack of physical skills is more than made up for by his evil genius. Together, they play football.
* Eyeshield 21 will either avert, play it straight, or subvert it depending on what point in the series you're referring too. In the spring season, they won two games, lost two games, and tie one game. In the Tokyo Tournament, they only lost once. In the Kanto Tournament and Christmas Bowl, they play this trope as straight as can be.
* Eyeshield 21 (with absolutely no traces of a Freudian Excuse to justify it), that even those who despise the character will agree that the series was at its emotional best when Agon was the main antagonist.
* Eyeshield 21: Yamabushi does this to Ikkyu when he's being tactless.
* eyesight) have cutoff ranges if you have infravision/darkvision/reviseforeditionvision/tremorsense/blindsense - credible if it was some kind of active scanning sense, but the fluff generally makes clear that it isn't.
* Eyes In addition, it turned out that the Colonel was really was trying to destroy the station commander's reputation. He had been seeking that posting, and had been high on the list for consideration, but the Minbari (who had secured veto power in this regard in exchange for the funds necessary to finish the station) rejected him (and many others) in favor of Commander Sinclair.
* eyes in the strictest sense, certain species of starfish have skins that are entirely coated in optic nerves, allowing them to look in every possible direction simultaneously
* Eyes Never Lie: Looking in somebody's eyes is a surefire way of telling whether or not they're lying.
* Eyes of a Child dreads. Chris ends up admitting to Carlo that yes, he did smoke pot and it didn't kill him or ruin his life, but it just made him kind of dumb and wasn't really worth it.
* Eyes of a Child. The prosecutor accuses Terri of making the story up, and wants

to know if it was true, why she hadn't come forward with this evidence sooner. Terri says that it's because no one asked her or told her precisely what the evidence against Chris was; if anyone asked her about the fingerprints on the answering machine, she would have explained how they got there.
* Eyes of an Angel: The film is about Bobby, who works for a gang who operates a dogfighting ring. One dog, a Doberman, performs poorly and gets disposed of, but it survives, and who should find it, nurse it to health and adopt if not Bobby's daughter? The dog gets dragged into another dog fight at the end, which ends with him turning against Bobby's former boss.
* Eyes of a Stranger drives his car on a beach, it gets stuck in sand. When a guy from nearby comes and offers his help, he gets stabbed on the throat with a switchblade.
* Eyes Of Fire is about Native American ghosts attacking a heretic and his cult during the colonial period. Most scenes take place in daylight in wide open wooded areas but it doesn't take away from the eerie, claustrophobic feel.
* Eyes of Heaven features all eight JoJos up to that point (as well as a huge number of villains and supporting characters) as playable fighters, but the final showdown in Story Mode still comes down to Jotaro and DIO.
* "Eyes of jewels that shine, glittering with luck and good fortune." —
* E.Y.E.S. of Mars dealt with an inversion of this as well as an environmental Aesop. Humanity ended up finding a way to build a city on Mars, located entirely inside a crater, covered with a dome to keep out the uninhabitable environment. Deep down below the city was a thriving forest and an academy where certain children ended up developing special powers. The city itself was polluted to extremely unhealthy levels and was being run by a corrupt government with continually mounting tensions all around. Being inside a completely enclosed system meant that they had no way to filter the air pollution and had very limited recycling abilities to filter clean water or let food grow. Some of the children's powers allowed them to see the history of their people. Originally, Humans migrated to Mars from a planet located between Mars and Jupiter known as Titan. The planet was completely destroyed by war, and what remains is now the asteroid belt. One child discovered that the same situation was going to happen to the city, killing off everyone again. Turns out it does. The entire city is completely destroyed, but the main character's special power allowed all of humanity's souls to travel to Earth where Homo Sapiens were just beginning to evolve.
* Eyes of the Calculor: John Glasken's distress at being reincarnated in the beautiful body of young Valesti Disore initially manifests in a lot of psychopathic behavior (such as amputating the hand of a man who dared to pinch her butt) but in the end she claims she finds being a woman (albeit one with a "baleful and malevolent" reputation) "rather liberating."
* Eyes on Me (transgender female main character, lesbian main character, queer female romance)
* Eyespy, a UK show from the 80s, featured gunge cubicles as part of its final obstacle course round. After answering a question correctly to be allowed to start, contestants would have to find pieces of a code by picking from a row of ten cubicles, only finding out if they had picked one of the four safe ones once they had shut themselves inside.
* eyes their opponents, it doesn't matter how strong you are if someone hits you in the joy zone.
* eyes, which in the story are regarded as especially striking and beautiful.
* Eyes Wide Shut (1999): The final film by Stanley Kubrick. An erotic thriller starring Tom Cruise and Nicole Kidman that got banned or censored in many countries. Even the USA screened a digitally censored version of some scenes. Not particularly erotic or arousing at any point and most of the story is more about the protagonists' own paranoia and obsessions.
* Eyes Wide Shut begins with a Dmitri Shostakovich waltz over the opening credits, which continues as Bill and Alice prepare for the party, and ends when Bill turns off their CD player. It's a lightly comic touch that provides a hint of the dreamlike atmosphere that will follow.

* Eyes Wide Shut, he ultimately decides that pursuing the truth would probably go poorly for everyone involved.
* Eyes Wide Shut jealous when she reveals that she has fantasies about a Naval officer in dress whites she met when their family was on vacation.
* Eyes Wide Shut. The girls at the party tell Bill that they are going "where the rainbow ends", there are images of rainbows throughout the movie, including a costume shop with that name, and in the early versions of the script, the password was to be "Fidelio Rainbow". It symbolizes Bill's desire to chase after an impossible dream "at the end of the rainbow".
* Eyes Wide Shut: This is how Bill is called out during the orgy sequence. He's asked for the house password in addition to the admittance password, which he says he forgot. Later on, he's told that there was no house password.
* Eyes Without a Face, Dr. Génessier's beloved daughter Christiane is in a car accident that leaves her with a horribly disfigured face. Obsessed with making her beautiful again, the doting father starts kidnapping other young women and transplanting their faces onto his daughter's.
* Eyes Without a Face, where Dr. Génessier's main goal is to find a replacement face for his disfigured daughter Christiane by any means necessary.
* Eye Take: Nothing else on their face changes, but their eyes go huge enough to tell you what they're feeling.
* Eye Take". The more seasoned Daffy, of course, is able to snap back to normal after a second.
* eye. To add to the problem, most high-quality airsoft guns, the ones targeted at the enthusiast market, tend to be near-perfect replicas of the gun they are modeled after save for the legally mandated orange cap, down to full metal construction, serial numbers, and logos, to the point where law enforcement and the military have used them for combat training. Even in places where their use is legal, open carry of them is very rarely permitted.
* Eyetoy: Antigrav released in 2004. In this Playstation 2 game, the player uses the motion sensor camera to control the movements of the hoverboard rider who rides his or her hoverboard in the skyscraper cities dodging flying hovercars and catching tokens on rails for score points and flying through hoops and doing hoverboard daredevil stunts earning score points.
* Eyewitness accounts mentioned crows cawing outside the Mayerling hunting lodge as the
* Eyewitness features one island like this in its intro; this island itself was the central figure of the titular episode on islands.
* Eyewitness has two Norwegian dubs. One aired on the channel NRK, while the other one was made for home video release.
* Eyewitness Newsreel Challenge VCR Board Game: This game challenges players to memorize details from a video clip. The player who recalls the information most accurately wins.
* Eyghon the Sleepwalker, although he becomes much more important in
* Eylau, in the War of the Fourth Coalition, insinuated that Napoleon was vulnerable, as the weather, his armies being scattered, and a determined Russian fighting ability, allowed the Russian army to escape overwhelmingly intact. However, Eylau was largely a one time affair, and at Friedland, Napoleon demolished the Russians.
* Eyrbyggja Saga: Brought into a quandary by the demand of the berserk Halli to marry Styr's daughter Asdis, Styr goes to Snorri to ask him for a good plan to get rid of Halli. Snorri suggests they go to the top of Helgafell (the local holy mountain) to talk, because "Plans made there have never been known to fail." "They went to the top of the hill and sat there in conversation till evening, but nobody knew what they were talking about." We are not told about their intentions until Styr kills Halli in a well-prepared trap.
* Eyrbyggja Saga: Styr promises the berserk Halli he will give him his daughter Asdis in marriage if Halli and his brother will do a few difficult work orders for him, which is, to clear a path across a lava field, to build a dyke on the farm boundary, and to build a sheep-shed. However, he already plans to rid himself of

Halli and has no intention of actually giving him his daughter.
* Eyrie Productions' 500 years of in-story time (and thousands of years of history), and incorporating dozens upon dozens of sources.
* Eywa this, or uses this to provide a comfortable standard of living for the "primitive" Na'vi.
* Ezekiel 41:18-19 18 "And it was made with cherubim and palm trees, so that a palm tree was between a
* Ezekiel, and are hoping for him to be reverted back to his human self.
* Ezekiel and Harold were friendly with each other in the first episode. However, their new friendship was halted when Ezekiel angered his whole team with his sexist comments and he was voted off with no way to keep in contact with Harold. In episode "Haute Camp-ture", Ezekiel wonders why Trent is helping Harold after he rigged the votes to get Courtney eliminated to get back at Duncan in "Basic Straining", calling Harold a traitor. This implies that Ezekiel ended his friendship with Harold off-camera because of his actions against Courtney. Later on, Harold angrily blames Ezekiel for losing the first challenge of
* Ezekiel and Staci both seem to have the same problem, but even more so. Ella annoyed one unscrupulous teammate. They offended/annoyed their entire teams.
* Ezekiel, a person with powers similar to Peter, poses a question to Spider-Man.
* Ezekiel appears in only four episodes of season one, barely spoke and after sending Women's Lib back about a century by being sexist to women, he was voted off first. In season two, he appears more frequently, but only in the Aftermath episodes, and he talks even less. He comes back for season three, but is voted off first again - he appears in a few later episodes, but is now an animalistic subhuman creature from staying in a cargo hold with poor conditions for too long. This is how he remains for the rest of the series. He was a very
* Ezekiel can also be seen in the background of several scenes on the plane during
* Ezekiel has more fans, which is completely true. Thankfully for Tyler, being in World Tour fixed this, and he has since become a fan-favourite.
* Ezekiel's cold fusion device detonates in the Supreme Court Building and the blastwave destroys the Capitol Building and the Washington Monument within seconds. Assuming Ezekiel was telling the truth about its blast radius, half of the Eastern Seaboard is devastated by his device.
* Ezekiel's feralization is explained here as the result of him getting a brain injury while hiding in the cargo hold when the plane crashed in Jamaica, causing him to lose the ability to speak properly and most of his higher mental functions.
* Ezekiel, Stone, and Baird use prophecy glasses to catch snippets of their future selves solving the problems they currently face. This ends up nearly bringing them to blows when they see visions of being attacked by one another. The only reason for them attacking one another in the vision was their paranoia after seeing the vision itself.
* Ezel: Casting director Rabia Sultan Düzenli plays a young Rabia Karaeski, Ramiz's wife, in the second season of the series. It appears to be her only on-screen role to date, as she has since become a prominent casting director in the Turkish television industry.
* Ezel: Cengiz's envy and desire for Eyşan is enough for him to conspire against his best friend Ömer, who is Eyşan's fiancé, landing him in prison for a crime he didn't commit.
* Ezel: One of the reasons Eyşan marries Cengiz is to give her unborn child a father. As it's early on in her pregnancy, she is able to keep his true parentage a secret for many years, until an offhand comment prompts Cengiz to investigate.
* Ezel: The only thing that seems to keep Cengiz, Ali, Eyşan, and Serdar from turning on one another at times is the understanding that doing so will likely illuminate their own misdeeds and involvement in a deadly robbery. That isn't enough to stop them from successfully extorting each other for favors, however.
* Ezel variety. Although she dabbles in a variety of arts as a student, her passion appears to lie in welding and (especially) sculpting, which she does at the workshop.
* Ezio Auditore de Firenze, a much-feared assassin who comes to controlling the

entire Mediterranean region throughout
* Ezio Auditore likewise earns the love of the Assassins and the fear of the Templars, though he's anonymous to the general public.
* Ezio Auditore's voice is heard by Gunlodr/Minerva while trying to communicate with the future. Counts as a case of the
* Ezio From rooftops mainly, mind you, but there are segments where he gets to double-assassinate from crossbeams, so it's all good.
* Ezio is a certified badass and did things at fifty that most people couldn't do at twenty. The beard is definitely deserved.
* Ezio sets about rebuilding the Assassin order in Rome, after the destruction of their primary base in Monterigionni. Unlike most Order Reborn plots, the Assassin brotherhood's support infrastructure is still intact, but the membership needs to be completely rebuilt and reorganized in a hostile area of Italy being dominated by their enemies. Once Ezio starts recruiting dedicated Assassins, he can dispatch them to support other Assassin operations across Europe. While Ezio can only recruit up to 12 assassins, by the end, they can all achieve the rank of Master Assassin and, therefore, be able to have recruits of their own.
* Ezio's nemesis, Rodrigo Borgia, also wears a stylistically similar,
* Ezlo says this when you ride the mine carts in the Cave of Flames for the first time. If Link clearly screaming in horror wasn't an indication...
* Ezra Bridger and Kanan Jarrus had the Grand Inquisitor in Season 1 of Rebels, followed by the Seventh Sister and the Fifth Brother in Season 2.
* Ezra Bridger becomes one near the end of the series, leading the effort to liberate Lothal.
* Ezra Bridger, channeling his anger and fear into nearby creatures to drive them mad with rage and sic them on enemies.
* Ezra Bridger Word of Pablo Hidalgo is that all the human leads are multiracial by Earth standards, and supplementary material as well as the background characters reveal that Ezra's features are common among the humans of his home planet. So if anything, his ethnicity would be "Lothalian".
* , Ezra is disappointed that Sabine didn't even hug him goodbye, only for the others to tell him (between bouts of gut-busting laughter) that he gave her his weapon during a battle, which on Mandalore is considered a marriage proposal as your putting someone else's life ahead of yours. While it only applies to someone close to you, Ezra and Sabine fulfill the requirements and since she accepted his weapon, they're now officially engaged.
* Ezra Jack Keats. Ezra's father worked at a restaurant and, while supportive of his son's love of art, was skeptical about him trying to making a living from that. He even went as far as to give young Ezra tubes of paint, claiming that starving artists traded those to him in exchange for food.
* Ezra Jack Keats had several publishers throughout his life: Viking, Harper & Row, Macmillan, Greenwillow, and Four Winds Press. Beginning in the 1990s, Keats' book rights reverted to his estate and were republished by Viking.
* Ezra Jack Keats, involves a Puerto Rican boy Juanito going all over New York City to find his lost dog; he goes through Little Italy, Chinatown, Park Avenue and Harlem during his search.
* Ezra Jack Keats (Jacob Ezra Katz - he even legally changed his name over to his pen name in 1947.)
* Ezra Jack Keats, were done with different media. Collage with different papers were combined with paints and even ink spattered with a toothbrush!
* Ezra Lost gets hurt or killed but is very much inverted whenever Kanan Jarrus takes a hammering.
* Ezra Lost: Pretty much all of our heroes, particularly Kanan. Where he goes, Imperials with lightsabers or blasters are sure to follow.
* Ezra Miller as Credence Barebone. He identifies as queer, both in sexuality and gender.
* Ezra Miller bulked up considerably, as well as cut his signature long black hair short to play Barry Allen.
* Ezran's mother, Sarai, loved them even more, and it's recalled that she was very

kind unless you took the last one.
* Ezra soon meets Richard and Jules (a woman) who also married Maddie and found the exact same video waiting for them with the indication they're only three of many Maddie has done this to.
* Ezreal, packs a single rope he doesn't even know the length of, and casually leaves incredibly dangerous artifacts out for civilians to touch.
* EZ Streets, played by Debrah Farentno. She sleeps with her mob boss client as well as the detective tasked with bringing him down.
* F-117 and B-2 were designed to be poorly visible in a limited radio band typically used by modern radars.
* F1 2014 brought back many fans to the franchise (as well new ones) with an extensive revamp in the game, bringing back the career mode with new features and a way better damage model.
* F-14 Tomcat, being a lone fighter pilot against General Yagov and his Russian fighter squadron.
* F-14 Tomcat feature lots of explosions throughout the game, but the player can press the flipper buttons before launching a ball to generate more.
* F-14 Tomcat was the first pinball game to have this feature, called "Flight Insurance".
* F-15 Eagle. The prototype airframe had square-tipped wings and a conventional horizontal stabilizer. The first flight revealed unacceptable levels of buffet on both, making McDonnell-Douglas modify the former by clipping the wingtips and the latter by adding a dogtooth to the stabilizer, giving the F-15 its two most distinctive features.
* F-19 Ghostrider skills numerous times, the MiG-29 regiment CO survives leading his pilots in a battle against two full squadrons of F-14 Tomcats at one point, while Ellington also gets to demonstrate his all-around badassery by managing to successfully escape and evade after being shot down over hostile territory late in the war).
* F19 Stealth Fighter displayed the player's formal uniform at the end of each mission. Depending on actions taken by the player, increasing ranks and earned medals are displayed on the uniform.
* F-19 Stealth Strike Fighter for Commodore 64 by the same company came with a thick manual describing, among other things, the basics of aerodynamics, air combat maneuvers, detailed take-off and landing procedures, and extensive, if propaganda-ridden info about weapons and aircraft encountered in the game. In the box one could also find a keyboard overlay with controls, and two double-sided military-style maps (though the geographical detail was questionable) of the areas you flew over.
* F1 hybrids do exist in real life as well, though they are notorious for being sterile. Examples include:
* F1 news in Italy are Ferrari-centric. It's fair enough when Ferrari are title contenders, but it was rather awkward during their dry spell during the early 90s, when they were the 3rd/4th best team and rarely won. Still, news only mentioned the race winner and the Ferrari drivers, often ignoring important details like who had finished in 2nd or 3rd (if they weren't driving a red car).
* F-22 Lightning 3 with tactical nukes, that, when fired, can take down your airplane if you don't outrun fast enough the shockwave/EMP Pulse.
* F-302 however, being built out of a naquadah/trinium alloy, fit this trope perfectly.
* F.3.A.R. the first real look one gets at the Creep is when it manifests in the middle of a group of Armacham soldiers and rips them apart right in front of you.
* F.3.A.R.. Usually satirically pronounced as F'three'er, Eff'three'er, or even Free'r.
* F4F Wildcats, which, in a one-on-one dogfight, proved the Wildcat's superior, but in a battle of endurance and formation, lacked the resilience of the American plane.
* F-8 Crusader made use of a Y-shaped pylon attached to the side of the fuselage to carry its own Sidewinder missiles.

* F9 has Dom and the team chasing Otto's truck through the streets of Tbilisi while Roman and Tej attempt to stop Aries in outer space, followed by Cipher attacking the team in her fighter jet.
* F9. One of the two Afro-Latino men young Dom meets in prison asserts that they weren't arrested for blowing up a bank, they were arrested because they were black.
* F/A-18 Hornet if the player destroys or damages any friendly property, even accidentally.
* F/A-18 Hornet, your vision will black out if you pull too much G-forces, and red out with excess negative G's. Blackout also occurs if your oxygen supply is damaged while at altitude. The HUD and radar screen can be knocked out by damage as well.
* faaaaaaaaaaaaaaaabulous. For the first half of the series, he practically takes care of all the Gunmen, the Gurren Lagann AND the massive Dai-Gurren all by himself! And post-timeskip, he's even MORE talented.
* Fáfnismál, when Sigurth has hit the dragon Fafnir and both know Fafnir will die, the dragon asks Sigurth who he is. Sigurth knows that telling a dying person your name is stupid, since they have a special nasty curse power.
* Faarooq, had to take off a piece of clothing. By the end, Trish was about to have to take her panties off when her guys attacked the APA.
* Faata organic computer, they have further refined their castes to have the Bino Faata be those with great psychic potential. Naturally, there is a hierarchy among the Bino Faata as well. The leader of a colony or ship is called the Pillar of Order. The next in line is the Strategos (AKA Guardian of the Skies), the military leader. The Intermediary, or Speaker with Bino Tegari (sentient aliens), is third. The Holder of Communications is fourth in the chain and is responsible for the telepathic communications with the organic computers and, through them, the T'ho.
* Faba tries to threaten Watts with his Raichu only to end up with the doctor's revolver to his head.
* Fab Five. Blassie bequeathed half of his stable (Sheiky, Volkoff and Hercules) to the debuting Slick, though Hercules later switched to "The Heenan Family".
* Fab Five The Texas Cheerleader Scandal with a school suspension. Justified because these cheerleaders are in uniform during their escapade and are therefore representing, er, misrepresenting the school.
* ''Fabian Of The Yard,'' and who appeared in a TV show based on his life work.
* Fabio, also known as Vongola VII, was the inventor of the original Dying Will Gun. It's unknown what type of style he used, but he only used a single gun compared to Xanxus's two, and he also possessed a much weaker Dying Will Flame to use for his bullets.
* Fabiola Torres is played by Lee (LaRhonza) Rodriguez, who's Afro-Latin like her (in Rodriguez's case, specifically black Mexican) ancestry.
* Fabius Bile by his own sadistic genius that they shared some of their knowledge with him and let him go.
* Fabius Bile is basically this trope personified. For one thing he has a syringe gun (getting hit by this basically condemns the victim to a rapid but extremely painful death-by-mutation) and has a backpack (which is actually an extension of his spine) covered in surgical tools...and a labcoat
* Fabius Bile legions, has devised training and recruitment programs that put loyalist practices to shame — he's whittled his success rate to 0.1% and is working hard to make the odds longer.
* Fabius Bile, like most things in the setting, is this trope turned up to eleven. His master race are superpowered versions of the existing
* Fabius Maximus fleet or the few scattered resistance fighters shown still living on the planets:
* Fable 1. His legend is inscribed on the walls of the Sanctuary, but he otherwise receives no specific mention.
* Fable 3 as the evil, exploitative and cruel ruler of Bowerstone Industrial, where he shoots dissidents and happily uses child labour.
* Fable, a key is hidden in one of three books. No matter what, the key is always in the second book you pick.
* Fable and evil characters morphing to have darker features. The sequels ease up

on it, but it's still present.
* Fable are malicious childlike buggers with raspy voices and a penchant for human sacrifice.
* Fable being fully evil causes your eyes to glow red. By this point, you also have demonic horns, insects buzzing around you, a red mist emanating from your footsteps, and townspeople flee at the sight of you.
* Fable. 'Congratulations, you've just spent 10 years in a depressing evil fortress! Your child is no longer an infant, but a regular child now! Oh, and your wife's still the same as ever. As well as all the other NPC children'.
* Fable, consistently failing to provide a husband or wife with an adequate daily allowance is grounds for divorce.
* Fable damage, and if you can bring in and subsequently protect a mercenary or two, you can murder your way across town all you like!
* Fable describes it as healthful, but "vile-tasting" and texturally unpleasant. The icon is a featureless pale cube.
* Fable, despite knowing of your Badass lineage and the fact that you are the only thing capable of saving Albion from certain doom.
* Fabled Hearts is a collection of traditional untraditional fantasy short stories in web serial format. The stories are frequently kind of weird.
* Fabled Hearts stories tend to have a lot of races, with at least one new race being introduced in each of the larger stories. An inter-dimensional train will do that for you.
* Fable en-route to their target, so using this in an enclosed space will result in only one or two arrows hitting the target, while the walls around you will resemble a feathery pincushion.
* Fable, firing on a neutral character causes them to decide that the player is trying to kill them, and they promptly attack.
* Fable game. Most quests feature "Boasts", or optional self-imposed challenges that you can choose to bet gold on your chances of completing the challenge. Nearly every group of Boasts includes completing the quest in only your underpants.
* Fable games have their looks change for the worse the more evil they get, and non-evil NPCs are also less likely to become attracted to an evil Hero.
* Fable games with the Chapel of Skorm and the Temple of Shadows. The latter example involves a rather amusing parody. "On Wednesdays we drain the blood of virgin chickens. On Thursdays we anoint ourselves with said blood. Friday is poker night, of course"; and "If there's one downside to being an evil cultist, it's that we must take our tea without milk" indeed.
* Fable had "Card Pairs" in Bowerstone South. Pretty fun and fairly easy to master, with the added bonus of earning you all the cash you would ever need within a few hours.
* Fable has a dagger in a sheath attached to the sleeve. You can't do anything with it, but it looks cool.
* Fable has a few, from the method to get the bordello deed to the kid in Bowerstone, sleeping and "tripping" on something, and spilling "pearls" like this:
* Fable has many of these. Most using the rhyming pun. The deceased tend to be people who worked on the game.
* Fable has the "Minion" monster, large armored monstrosities that can give even an experienced fighter a run for his money.
* Fablehaven, a smaller fairylike dragon sneaks up and eats him before delivering this line:
* Fablehaven averts this with Seth, who does occasionally slip away and break rules whenever it's extremely beneficial. It's played straight with Kendra, though, whose ability to get away with anything is so bad that she even drags Seth down.
* Fablehaven. Because of her pure heart, she is not turned into dandelion fluff for entering the Fairy Queen's shrine. It comes in really handy when the end of the world as we know it is imminent (in all the following books).
* Fablehaven book it turns out that one of the artifacts has been moved. When Kendra and her allies attempt to retrieve the artifact hidden in the Lost Mesa, it turns out that Patton Burgess, a previous Fablehaven caretaker, had long ago moved

the artifact to a new location in Fablehave for safekeeping... shame that three people had already died getting in before they found that out.
* Fablehaven has Vasilis, the Sword of Light and Darkness. The weapon even has poems and songs written about it.
* Fablehaven. His body is found amidst the bodies of his attackers and allies; his familiar even suspects that he would have won the battle if not for the enemy having magic.
* Fablehaven: In the last book, one of the obstacles faced in the Dreamstone is a statue of a warrior. The group only has a short time to sculpt itself a "champion" from the available clay; both statues are then animated and do battle.
* Fablehaven in the third book. She also takes possession of a talisman of light, which casts a large umbrella of light around her and her friends as they go to do what they do best - fight evil.
* Fablehaven love TV—they're technically not supposed to watch it, but they have a portable TV and Seth smuggles them batteries. They also later fall in love with human junk food, to the point of using "FRITO-LAAAAY!" as a battle cry.
* Fablehaven series cannot be caught by the same trap twice. Patton Burgess not only caught one five times with five different traps, he had more traps ready for anyone who wanted to try it.
* Fablehaven's first book has Mendigo, a human sized lumberjack animated by the power of a demon working for the villain. However during the second book when he is released again some faeries change his loyalty to the heroes.
* Fable Haven. Unicorns and dragons are known for taking human form, and potions can shrink people down to doll-like size. And the Eternal's eternal guardians, ageless sentient talking animals that can sense their charge's location, turn into any animal with approximately the same mass, and can only be killed by powerful magic, such as phoenix flame, dragon fire(or bones), and other such weapons.
* Fablehaven, wizards are dragons the permanently take human form in order to drastically increase their magical powers.
* Fable Heroes has a dark version of each of it's levels that you can play once you beat the light version of the game.
* Fable Heroes in the party are killed, they can complete the level as ghosts, receiving fewer resources. The normal end screen shows the party members standing on a championship platform. However, if the game is set to the highest difficulty level and all the PCs die, the game cuts to the same platform but with all of the top 3 spaces occupied by monsters, with the heading "The Creatures Win!"
* Fable, he's explicitly described as "The Hero of Skill", and yet he carries out so many evil actions that you are left wondering exactly how he's supposed to be better than the designated villain Lucien. In both games, you have to keep him as an ally! The reason that so many players wanted to kill him include:
* Fable I (after the Hero's initial title) and laugh at you until you buy another title. Thunder, another hero in Bowerstone, shows even more contempt towards you, although some of that is due to kicking his little sister's ass during hero training beforehand. His sister, Whisper, is even worse; sure, when you first arrive at the Hero's Guild a bit of arrogance on her part is understandable (though ironically, that's when she's at her nicest), but she will then spend the rest of the game mocking you and telling you just how much better than you she is, regardless of how many times you beat her in a fight, completely outmatch her in a quest where you directly compete against her, or otherwise demonstrate that she is literally nowhere near in your league. She will eventually admit that its only because she's jealous of you for being so much better than her.
* Fable I also has a quest involving delivery of a love letter. The evil option in that one is to tell the recipient that you wrote it yourself.
* Fable I and a miasma of flies, but if he marries a villager and doesn't mistreat them, they'll be vocally "thrilled with [their] man from the Guild", even while the neighbours run screaming from the sight of him.
* Fable I and are eating lunch in the pub in Bowerstone when trouble starts.
* Fable I as his powers grow, so by late game, he towers head and shoulders over his spouse.

* Fable I. Based on the name of the region ("Albion"), it would seem to be a fantasy version of Britain. Based on the map from the original game, it's Wales and Cornwall plus a split-in-half Ireland, all shortly after the Ice Age.
* Fable I, but the Hero is able to manage his separate households without such misfortune.
* Fable I. By the end of the game, even items a merchant only has one of will be priced significantly below market value.
* Fable I defeats them all in honourable combat, a proper (albeit belated) Hero's death.
* Fable I fight is in the room where the protagonist was first named a Hero.
* Fable if you get your good rating high enough, butterflies start flying around you. If you get your evil rating high enough, flies do the same.
* Fable, if you try to remove the sword in the stone outside the Temple of Avo when your character isn't strong enough.
* Fable I has the book "The Rotten Apple" seen as one Albion's premiere philosophical works. However, if the book is taken literally, it just gives good advice on fruit farming.
* Fable II allows you to wear a variety of coats, two of which stand out as badass: the Noble Gent's Coat and the Highwayman Coat.
* Fable II also rarely mentions the Hero of Bowerstone and is very vague as to what kind of person they were, other than buying up all the real estate in the game and becoming the monarch.
* Fable II, but this time, you're actually hired as one of the guards, and you have to help break out one of the prisoners in a period lasting about ten years.
* Fable II, delivering the death blow to a human opponent with the shock spell leaves behind a charred skeleton.
* Fable II doesn't exactly provide a dowry, but it's a lot more forward about your relationship. If you're married to someone of the same sex, whenever an NPC refers to the relationship, they'll always say "husband" or "wife" instead of "partner".
* Fable II do this with every random villager you meet. Every non or semi important/useful villager is given at least a first name and a title depicting either their job(shop owners) or their role, housewife, villager etc.
* Fable II, easily one of the freakiest areas in all of Albion. A trek through Wraithmarsh is accompanied by a haunting soundtrack; even after the Hero gets strong enough to overcome anything Wraithmarsh has to throw at him, it can still give you the heebie-jeebies.
* Fable II, end boss Lucien rambles on and on for some time after you interrupt his ascension to godhood. The player can kill him mid-sentence, with Reaver thanking them. Alternately, if left to ramble long enough, Reaver will shoot Lucien himself.
* Fable I. If the two of you tie, she says that because she got there first, she won. So unfair.
* Fable II had this in the backstory, where between the first and second games the Hero's Guild was wiped out due to Albion's populace thinking that Heroes weren't needed anymore, and stormed the place. The heroes were all but wiped out, unable to fight back against the people that they had sworn to protect.
* Fable II has a unique crossbow that can only be gained for shooting all the gargoyles. Thing is, one gargoyle is only accessible after you've beaten the story and bought the most expensive building in the game, so by the time you get it, there's not much left to do with it.
* Fable II has the player receiving rent from owned properties in real time, even when the Xbox isn't on.
* Fable II has the Spire Guards. justified, as most spire guards are either mercs hired from champions of The Crucible, or just have their memories and identity ripped apart and become unthinking brutes.
* Fable II has this behind one of the demon doors for creepy value. Complete with monochrome. Both games also have a slow time spell that goes monochrome, but that's not a full stop.
* Fable II has this in the opening cut scene when a robin dumps on the main character. His/her sister laughs and reassures that it's a sign of good luck.

* Fable II has zombies (reanimated, shambling dead) called "Hollow Men". Which is fair enough, since it takes place in a different world. One NPC, Sister Hannah, cracks a joke about them not truly being hollow because then they'd make a different noise when struck.
* Fable II have the Normanomicon, the book of the extremely dead. Said quest is a touch underwhelming, as it mostly involves getting the book back from a bunch of undead mooks two bumbling brothers (Max and Sam) have accidentally summoned.
* Fable II, he is killed by the player (or by Reaver, if you take too long) by simply shooting him once.
* Fable II however has several lines of dialogue though they are few and far between.
* Fable III, after having to leave behind your mentor Walter in the deserts of Aurora, the demonic Crawler taunts you with illusions of Walter begging for help and being brutally killed by the Crawler's shadow monster minions.
* Fable III and be wholly benevolent while protecting your citizens is possible, but requires you to donate an incredible amount of cash to keep the kingdom and army both afloat.
* Fable III, at the beginning of the story you can choose between saving your childhood friend and/or lover, or saving a group of protesters who are dissatisfied with your older brother's regime. To make things worse if you're considering choosing the former, your childhood friend will practically beg you to choose him/her, while the protesters will grovel for their lives as you make your decision.
* Fable III during the "Gnomes Are Evil!" quest, Lionel the gnome interjects "Your mother!"
* Fable III expands on this a bit, allowing players to adopt children from an orphanage that becomes available about half-way through the story quests and sending them to live with their husband/wife. Wedding ceremonies can now also be set in chosen locations leading to a short scene where the officiator announces you "husband and husband" or "wife and wife".
* Fable II, if the player is a polygamist and marries more than one spouse, they'd better do it in a different town, or very separate parts in the same town. If either spouse discovers the other, they will be heartbroken and lead to a divorce.
* Fable II, if you wait too long to kill Lucien, Reaver will shoot him instead.
* Fable III has a book like this called "Choose Your Own Endeavor", but since like all books in the game the contents are limited to a short audio clip, you can't actually play it.
* Fable III has its map with the east at the top, and shows a little of a new continent beyond the western ocean of Albion.
* Fable III head above any other citizen or mook, except giant enemies.
* Fable II introduces Reaver, who sacrifices others to a triumverate of demons so that he can stay eternally young and beautiful.
* Fable II involves a man who has fallen in love with the long-dead Lady Elvira Grey. The player helps him by collecting her scattered body parts so she can be revived, Frankenstein-style.
* Fable III of the Hero of Bowerstone's two children gets any Hero powers.
* Fable III of the two brothers from the last game, and one of them going mad with power.
* Fable III, once the King/Queen first sets foot on the streets of Aurora, there is a rather abrupt (and effective) switch from dark humor/fantasy to full-blown horror and it just gets scarier from there.
* Fable III, one of the fancy counter animations when using a sword has you do a slo-mo forward flip over them. You snap their neck on the way over.
* Fable III, several of the gnome insults towards a female Hero are along these lines. It's a joy to shoot them after that. In a more literal example, if you marry your childhood friend/lover of either gender, they can always be found in your home's kitchen.
* Fable III, the evil gnomes will sometimes say, "I think I'm gonna come around yer house for tea... and then I'll 'ave yer mum!"

* Fable III, the Hero and Walter burst into Logan's war room. Though he does start to draw his sword, he thinks better of it and sheathes it, calmly surrendering to his sibling.
* Fable III the Industrial Revolution. But just like the previous two games you're wielding three weapons essentially: melee, ranged and Will (magic).
* Fable III, this is lampshaded when one character notes not to call them zombies, as "the Hollow Men Defamation League is getting stronger all the time".
* Fable II. It is completely impossible to die. Losing all of your health merely results in scarring. And of course, you can carry an infinite number of health potions and resurrection phials (still very cheap).
* Fable III to protect himself from disease and the ravages of age. At the end of the story, the homunculus is accidentally destroyed, but luckily for the magician nothing happens; turns out he just had a naturally strong constitution all along.
* Fable III when the player is tasked with overthrowing their brother, the King of Albion, the entire military of Albion never send more than ten mooks at a time to defend their own capital city.
* Fable III, where there are white, black, Asian, and even vaguely Roma characters sprinkled throughout the world in equal proportion.
* Fable III which means infantry men, with simple swords, still play a vital role in combat.
* Fable III will feature wings that pop out of the Hero's back, and so far as anyone can tell they exist only to look awesome and show just how badass good/evil the Hero is.
* Fable III, you still need the skills to make them effective, but good chance they will be stronger than current weapons, some upgrades also require you to spend money.
* Fable II lampshades this trope philosophically. According to her, if two monks were the ones to enter the Wellspring Cave when you two met they would have found nothing out of the ordinary. It was because you, as a hero, accompanied her the Hollow Men showed up. A warrior will always find battle. It serves as a mark of her character development that having gone from begrudgingly accepting pacifism to now being a reluctant warrior, she has come full circle and transcended violence to the point where she can apply deeper thinking to it.
* Fable II notably averts this — audiences at GDC '08 actually laughed when they saw a character simply jump over a waist-high fence.
* Fable I. In which, at the end of the Tournament Arc, you have the option of killing your character's childhood friend after besting her in combat in exchange for exorbitant amounts of money.
* Fable II onwards, the game mapped each type of combat to a different button. So if one has a pistol as their ranged weapon, they can do this.
* Fable II: raise your family (who Lucien has murdered) from the dead...or raise the thousands who died in the Spire's construction in their stead. Or just get a lot of money.
* Fable II right after the mains story begins. Rent out your caravan for a measly few gold, then set your clock forward a few decades. Use that money to buy more property, repeat, and you can own all of Albion the moment you lay eyes on it.
* Fable I is absolutely rife with insurmountable fences, rivers, edges, invisible walls, weeds, etc.
* Fable I. It comes complete with a fountain of blood and the disembodied head spinning for another moment in the air. It's only if you can inflict a one-hit kill with it, though (sometimes even more resistant normal enemies can survive a headshot when it's from a weak enough hero and when they're at full HP). For the more sadistic among us, you can also make enemies' head explode in much the same way with a Lightning spell.
* Fable II, the bartender job consists entirely of filling frothy mugs and sliding them down the bar.
* Fable II, the game does not provide many options to exercise an influence over the story or quests based on one's alignment other than not taking the good or evil quests. The citizens of Albion will still hail you as the greatest hero of all time

if you save enough slaves, even if you are also the kingdom's biggest slum lord and adulterer.
* Fable II. The Hero leaves the room where an artist is either painting or sculpting Reaver's likeness, followed by a comment about how the artist has made a mistake, and then a gunshot.
* Fable II, then blasting its head off before finally killing it for good.
* Fable II. The Needs of the Few ending resurrects your dog, sister, spouse (if you married), and children (if you had any). The countless hundreds of people who perished over the twenty years of the Spire's creation? Still goners.
* Fable II, the player character is descended from player character from the original game.
* Fable II, there is only one gender reassignment potion in the entire world, and it's permanent and irreversible.
* Fable II, the Temple of Business and Yodeling, also known as the Temple of Benevolent Yokels. A quest in Bloodstone involves you running errands for the founder, Toby, but you eventually find out it's just a front for Toby to find suckers he can con into buying useless crap or running errands for him.
* Fable II to deliver a love letter with a proposal to his girlfriend without her bitter mother finding out. The good option has the Hero deliver the letter to the girlfriend without a hitch. In the evil option however, the hero gives the letter to the mother who gets angry. When confronted by her the man lies and tells her the letter is for her to get out of trouble. She then quickly becomes enraptured with him and accepts his wedding proposal, much to the man's horror.
* Fable I, it's possible for your hero to literally go fishing. He can also get married, play various games, take part in local brawling competitions, and generally act like a normal person. He can't get a job though. On the other hand, in the sequel, you can get a job, filling the list of normal, everyday activities your hero can get up to. (Though you can't go fishing any more...)
* Fable I, it was extended to something similar to this trope, with Good/Evil being your morality and Corrupt/Pure being how nice you were to others and your own body. (I.E Pure characters treat their own body as a temple, while corrupt characters would drink a gallon of ale every morning).
* Fable II uses a glowing trail on the ground to point the way to the player's active objective, rather than a blip on a radar screen. It's even referred to as a "breadcrumb trail."
* Fable II, who keeps his youth through the centuries by sacrificing the youth of innocents to the Shadow Court.
* Fable II, your older sister Rose is shot in the face in the first half-hour.
* Fable II You see, it turns out that there's a new thesaurus being published in Albion...
* Fable II you travel through Wraithmarsh which was once a pleasant little village before everybody was killed so one villager could become immortal. The surrounding marsh has recovered much of the village and it's populated by all manner of foul things. It also has many other examples like the heroes guild, the temple of Light/ Shadows, and the forsaken fortress.
* Fable I, magic is reasonably strong at the start but due to mana costs, you'll spend at least half the time hitting things with a melee weapon anyway. Meanwhile, not only can you use melee combat forever, but farming gold is pathetically easy, allowing you to get Master level weapons before completing a single quest. Come late game when you have massive mana reserves and mana augmentations to refill them faster, you can spam overwhelmingly powerful magical attacks forever.
* Fable I nets you a trophy that is in essence a useless trinket; you can't really sell them for much, if at all, and aside from an equally useless side quest, showing it off to the locals only builds up your renown, which is easily accrued by other means.
* Fable I. Non-hostile bandits tend to beg for their lives when he looks at them.
* Fable: In the novel based off the video game, the main character is called into his dying mother's bedchamber where she tells him that she's happy that he survived the balverine attack instead of his brother, since he has prospects and business

sense whereas his brother was just a dreamer. Only problem is that she's remembering it backwards and thinks he's his dead brother.
* Fable Investing points in Strength leads to your character getting more and more visibly muscular.
* Fable I once again, which alienated more than a few fans who preferred playing as a woman and/or a not entirely good-aligned Hero.
* Fable I operates under the "Possession is nine tenths of the law" principle.
* Fable I picks one inmate per year to take to his private office and subject to something that even hardened criminals, long since inured to the Prison's normal tortures, fear to talk about...
* Fable is pretty straightforward. Avo is the god of good, Skorm is the god of evil. Neither one actually exists.
* Fable; it has mundane humans and High Men, but that's it for the "civilized" types. The second and third games deviate further from the formula by progressing through a renaissance and all the way to an industrial revolution, introducing firearms, factories, etc.
* Fable I, the backstory reveals that both Avo the God of Good and Skorm the God of Evil are fakes invented by an enterprising merchant as a way of collecting money from the donations of followers. The scam works because their temples are built over places of very strong naturally occurring magical energy, so the power itself is real, even though the deities themselves are not.
* Fable I: The Lost Chapters has a Demon Door which will only open if you trade it all of your Silver Keys, but if you somehow reach it without any Silver Keys (something so unlikely it pretty much has to be done deliberately), the Demon Door will open anyway, though it will ask how you managed to get so far without finding any.
* Fable I: The sharpening augmentation of the five augmentations that boost damage. Silver, piercing, fire, and lightning all boost damage more than sharpening does but only against a few types of enemies. Meanwhile the sharpening augmentation boosts damage by a flat 10% against all enemies, making it ideal for your main weapon (though keeping backups filled with the other augmentations is a good idea).
* Fable I. The town's sign is still up when the player visits, though Oakvale's signature bridge is in ruins. The path leading in the inner town is flooded, making it impossible to explore the town further.
* Fable I. The two aren't exactly equal, though; while heterosexual marriage provides the player with a dowry, an occasional source of income and items, and a cutscene detailing the importance of the marriage to the hero's life, the gay marriage just gives you the income and items — and the game occasionally refers to his husband as a "wife" by mistake.
* Fable I threaten to kill anybody crossing the Greatwood Gorge bridge unless they pay a toll, but the Hero drives them away.
* Fable it is implied that all heroes are descended from the first Archon.
* Fable I was rated "R18+" in Australia for 'sexual activity related to incentives and rewards', AKA the in-game rewards for pairing with prostitutes (or prostituting yourself as a female player), which, while not present in the original, were present in its M-rated sequel.
* Fable I which is apparently the only time they ever made a weapon. It's a pretty damn good one too, with high speed and a satisfying damage rating.
* Fable I will result in her telling you she has to wash her hair if she doesn't like you enough.
* Fable I. You can betray and murder an ally... or just eat ten Crunchy Chicks from your inventory.
* Fable I you get a trophy for each boss you kill, either one of its possessions or a part of its body. You can hang them on the walls in your house, or carry them with you and show them off to villagers to increase your Renown.
* Fable, Jack of Blades essence is held in his mask. If you destroy the mask, you defeat Jack for good. If you wear it, you become Jack of Blades.
* Fable Jack of Blades is revealed to be an ancient entity living inside his mask, who has spent aeons influencing the world by moving from host body to host body.

* Fable Legends was going to be a multiplayer action RPG by Lionhead Studios, on Unreal Engine 4, with PC and Xbox One cross-platform multiplayer. Announced in 2013, the game was cancelled March 2016.
* Fable. More important than Skorm is the Corruption, as well as the Queen of Blades, who had the position in the setting's backstory.
* Fable, present the player with the option of same-sex dating, but only with NPCs that are themselves gay or bisexual. These NPCs are not obviously gay - this is discovered by flirting with them and getting a positive response. Otherwise, they dress and act the way the straight townspeople do.
* Fable problem with this. Trying to win any large-scale battle with non-scripted allies is virtually impossible because they end up flashing red any time the player hits them- even if it's in such a way that neither the player nor the ally has any way of knowing where the shot came from!
* Fables #140, Puss in Boots is thought dead. Briar Rose marks his cairn by placing his rapier in the pile of stones and hanging his musketeer hat on it.
* Fables #150, Rose Red summons the Knights of the Endless Table: soldiers from every world, and every time and battle who have one thing in common. They all died while holding out hope.
* Fables, after Revise had more or less done this to him by censoring his myth.
* Fables also inverts this with a rabbit cursed by a rabbit witch to become human — unable to transform back, unless he can make another rabbit fall in love with him and receive True Love's Kiss.
* Fables, and in every case, the woman fell head over heels for him (and he reciprocated passionately, if unsustainably) only to divorce him when he seduced some other woman who had taken his fancy. By the time of the main story, his long-term failings are well-known (to himself as well as potential partners,) so both he and any girl he seduces treat it as short-term. Interestingly, this ability to start things but not sustain them carries over into non-romantic pursuits as well; his campaign to charm people into electing him mayor is extremely successful, but he's completely out of his depth when it comes to the actual work of running Fabletown.
* Fables and its spin-off ''Jack of Fables." He starts out like this but get to know him long enough and like the tpb character introductions state he is the "lovable rogue" without the "lovable" part.
* Fables and matures, while Jack remains perennially incapable of foreseeing the likely consequences of his actions.
* Fables and not at all naive, though frustrated he can't grow up) and blackmails him into staying silent and destroying all of his offsite backups. Bluebeard kills him anyway on his own, alleging he's not a softy like Bigby.
* Fables a plucky reporter investigating Fabletown (actually, he's under the impression they're vampires) has a system set up that if he's killed, all the information he's gathered about Fabletown will be released to the press. The Fables have to arrange an elaborate blackmail/con to convince him to defuse the threat. And then Bluebeard kills him anyway.
* Fables, a queen was punished for her infidelity to her wizard-king husband by being transformed into a tortoise and having the archipelago on which she was born shrunk and put into a teacup she must constantly balance on her back. We briefly see the inhabitants of the archipelago, who have various myths and semi-scientific theories relating to the colossal white wall (the rim of the cup) surrounding their world. Several of their stories have elements of truth to them, though by and large the people simply accept the wall as a fact of life, and it barely features in their lives beyond having a rite-of-passage where a boy must touch it to become a man.
* Fables arc, where his dual nature as both a sentient being and a toy allows him to leave the real world (in which he's a toy), and go to Toyland (where he becomes a real flesh-and-blood tiger).
* Fables are made stronger by those who believe in them. This is used to explain why some lesser-known fables are killed, but Snow White can take a rifle shot to the head and survive, albeit with long-term consequences.

* Fables are working in an office during a heatwave. Nearly delirious, they briefly make out. They awkwardly agree never to bring it up again, especially not in the presence of her husband, Beast.
* Fables, a series of side stories each spotlighting different female secondary characters from the main comic.
* Fables as the entire reward. They then plaster Wanted posters to that effect all over the kingdom. The Nome King's overreaction to this insult brings on his downfall.
* Fables. Beauty is beautiful but happens to be a total bitch. Bigby's looks are up for debate but his actions support him being a subversion whether you think he's good looking or not.
* Fables. Because she was cursed, she couldn't stay in place around the mundies for too long and had a rather modern twist to her curse... her hair was cut several times a day, then donated to a wig factory; and the people there thought she was a colony of Amish girls.
* Fables by comparison, but eschewed it because allowing the spread of technology that could allow a peasant to kill a mage would have been all but inviting massive rebellion.
* Fables came up with a fine mix of modern-day weaponry and Fable tactics: Take one flying ship (powered by flying carpets), load with all the guns that can fit and set up a chain of ammo depots around the world that can be accessed instantly by teleportation, and rain a never-ending solid wall of hot lead on the enemy armies for hours and hours.
* Fables characters who haven’t so much as met in their own stories.
* Fables contains a massive library so large that the foyer is large enough to be a seat of government and contain objects of mythical size (Excalibur has literally become as big as the legend of Arthur). Oddly even though it belongs to all sorts of magical creatures it's never implied to be magical in any way except for its extreme size.
* Fables did this for the first few storylines (corresponding to the trades). The first one is a murder mystery. The second is a political thriller. The third is a caper (even lampshaded as such). The fourth is a spy/war story.
* Fables do this. including the Wooden Soldiers, Bright Day and Frankenstein's Monster.
* Fables do this when their lives are in danger or they're badly wounded. Even characters who are recognised badasses do this, and they don't get belittled for it; the comic treats war, violence, and death very seriously, and nobody suggests that crying when faced with a horrible death or in terrible pain is the mark of a coward.
* Fables draws upon this, however averts it with the different fables being able to interact with each other.
* Fable series, a personification of Will (the raw form of magic) and ai to Theresa for some odd reason.
* Fable series awards the player with trophies after completing quest that they can show off to boost their renown. These include things like the heads of various monsters and even bandits.
* Fable series, in basically every quest you end up saving somebody from something, even more so in II with the DLCs, even when taking the routes to "Chaotic Evil" you still save the world, and a lot of random people along the way.
* Fable series of games, it goes beyond good characters being beautiful; if you do good things, your character becomes more beautiful, to the point of people on the street commenting on it constantly. (Doing bad things makes your character grow horns and become wrinkled.)
* Fables, especially when mounted on rodents as the Mouse Patrol. The name of the new village they formed? Littletown. (Smallville got outvoted.)
* Fables establish a regimented and regulated community to prevent their discovery while living in New York city.
* Fables fan you'll notice this happen often. Legends in Exile has a lot of differences to the later books. The community is suggested to be much larger,

Beauty and Beast requiring a carriage to attend the annual Remembrance Day ball, yet by March of the Wooden Soldiers we can see that Fabletown is just a single, small street with a few hundred residents, most of whom live in the woodland building.
* Fables features all the fairy-tales who are in exile on Earth. This includes Santa Claus. He gives poor amnesiac Flycatcher a gift - the restoration of his memories. Thus forcing Flycatcher to relive the horrific massacre of his entire family. Merry Christmas, eh?
* Fables fighting the armies of the Adversary) but usually can look after themselves the rest of the time.
* Fables. Finally realizing the depth of his love for her, she dashes downstairs (heavily pregnant, and in the pouring rain) and gives him a gigantic hug in front of pretty much everyone of importance.
* Fables focuses on the secret society of immortal beings of fairy tale lore secretly living in our world (although their immortality is dependent on how well their legend is known).
* Fables; fortunately, the Nine Crow brothers (down to seven) were flying aerial support. Four more die allowing the refugees to escape to Earth.
* Fables: Frau Totenkinder had a major problem with princes, and went around cursing them and their loved ones left, right and centre. Over the years, she became particularly fond of transforming them in a manner where they needed to persuade a human to fall in love with and kiss them to cure them. But they were all temporary cures, and the prince would find themselves transforming back when their wives became mad at them. Over the course of the story she takes responsibility for almost all of the situations where "True Love's Kiss" was needed to cure a curse. Just because she liked it.
* Fables, Frau Totenkinder was originally a tribal shaman in the Paleolithic era.
* Fables, Goldilocks is immortal as long as she remains a popular character. It leads to a tragicomic scene where she takes an axe to the head, gets shot, hit by a truck, thrown off the cliff into the river and nibbled on by the fish all the way to the sea (which took over a week of constant drowning and returning to life).
* Fables: Goldilocks. Subverted: she's batshit insane - violent, sexual, and a political extremist.
* Fables has a default wolf form, can shapeshift to a man, and can take any degree of the in-between forms. His six brothers are much more versatile, but not nearly as strong.
* Fables has a group dedicated to removing the fable characters from memory. One of their punishments for fables who get out of line is what looks like a pit. Apparently being inside causes people to simply forget your existence, which for a fable can mean they simply fade from existence (Paul Bunyan was reduced to a midget after multiple trips).
* Fables has talking animals of all sorts, courtesy of human stories and imagination.
* Fables has the uneasy alliance between the Imperial Guard and the Brothers of the Sacred Grove (not technically robots, but magically-animated puppets with many robot-like mannerisms).
* Fables he’s absolutely determined to marry Snow and fact she’s married with children means nothing to him. Brandish turned Snow’s husband Bigby into glass and shattered him, then made it clear he would murder all of Snow’s children so she could be “pure” again. Thankfully Snow wrecked him in a sword duel shortly after.
* Fables. Her last thoughts before she gets turned to stone are exasperated self-recriminations for falling into such a stupid trap.
* Fables homage down to the near-identical bandana-mask. Admittedly, he doesn't wear it for most of the series, but the magical artifacts he carries at the time and from that point onward make him pretty damn powerful.
* Fables. However, he still spent a long time confused about it because (1) when he first experienced this with Snow it was before he gained his human form, so they truly were totally different species, and (2) he was the self-proclaimed

"unrepentant lord of monsters" at that time, who killed and ate people purely on a whim, so dedication to another was totally alien to him.
* Fables) in compromising positions as insurance in order to prevent him from going forward with what he knows about them.
* Fables introduces characters that represent literary devices, the most amusing of which is probably the Pathetic Fallacy. Characters introduced have included Snow White and her sister Rose Red, Beauty and the Beast, The Big Bad Wolf, The Frog Prince, Bluebeard, Pinocchio, Jack the Giant Killer, Prince Charming, Little Boy Blue, Old King Cole, Ichabod Crane of Sleepy Hollow fame, and many more. And that's just the comic, the game adds Mr. Toad, Bloody Mary, Tiny Tim, The Little Mermaid and the Jersey Devil (amongst others) to the mix.
* Fables is constantly searching for a way to return to the Homelands to find his wife and children. Everyone else in the Fabletown office knows, from his ramblings whenever he's drunk (which he forgets completely afterwards) that his wife and children were tortured, his wife and daughters in fact raped in front of him, and killed when his kingdom was invaded, but they let him believe they're still alive for his peace of mind. There's some evidence that magic is being used to keep his memories suppressed.
* Fables is still a cage. Too bad the magical resources are expensive and limited. What there is tends to be turned towards survival. What's worse is that most of the non-humans are immortal. Hundreds of years have passed by the time the series starts and there is no end in sight. No wonder there was a civil war. Later on, it gets better. And complicated. New lands are accessible for all.
* Fables mainly uses this power to huff and puff, but can also calm the winds if he tries. His father, the North Wind, has a much higher level of power.
* Fables makes it much more noticeable as it shows superpowered abstract entities already exist in the Fables universe.
* Fables, making your enemies so terrified of a counterattack that they fear you into leaving you alone.
* Fables: Mayor King Cole of Fabletown is, as his story goes, "a very large king of a very small kingdom". Noticeably, when reduced to hiding in a cave with a handful of his subjects, he divides the food evenly among everyone according to size and leaves no share for himself. (Not that he loses any weight from starving.)
* Fables mentions this trope with a side-character. A queen is punished for her infidelity to her sorcerer-king husband by being transformed into a tortoise, cursed to wander with a fragile teacup balanced on her shell, with the teacup containing the archipelago on which she grew up. Later we see a short story where there is a tradition amongst the people of the archipelago to touch the "wall" surrounding their sea, and it turns out there is a debate in their community between people who hold different views on whether the tortoise exists or not, and whether there are Turtles All The Way Down. As far as the reader can tell, both schools of thought are wrong, unless it subsequently turns out that the greater Fables multiverse is on a tortoise of its own.
* Fablesmurder, calling it the "parlor room scene" and explaining that it's every detective's dream to perform it.
* Fables, non-magical folks are referred to as mundanes or more commonly "mundies". In one issue, during a hypothetical scenario put forward by a character about what would happen if the imperial Fables were dumb enough to openly attack Earth, Terrans come up with their own slur for Fables, "Meevils" (short for "Medieval" due to the serious difference in technology between the Fable Homelands and Earth).
* Fables novel. Don't blow it, Buckingham. We sort of, kind of know where you live."
* Fables, Ozma made a prophecy about Bigby & Snow's children. Some people have questioned if it was a real prophecy, but most think it is since she mentions all seven children (most people think they only have six, since they've hidden Ghost's existence).
* Fables. Playing off '1001 Arabian Nights', Snow White manages to talk her way out of a murder-happy rape-marriage with tales of her friends.
* Fables seems to be a nice old man, but underneath the exterior, he's ruthless,

power-hungry and an inveterate schemer.
* Fables sends enchanted wooden soldiers to attack Fabletown, and the residents decide to fight wood with fire...the problem, as someone only gets to point out after they have done it, is that hard wood burns, if at all, then very, very slowly, and... yeah, the evil puppets are made of, oops! Hard wood! And so now they're dealing with inhuman, nigh-unstoppable killer puppets that are on fire. And setting Fabletown on fire.
* Fables series figures out some holes in Werien Holt's story of being an ordinary fencer enslaved by Mr. Dark, and pulls a gun on him. Too bad Holt wasn't lying about his fencing skills.
* Fables series from fans, selected his favorites, and gave in-canon, official responses as a series of vignettes that made up issue #59 of the series.
* Fables series has all the archetypes of a hard boiled detective. In a way, Bigby subverts it; many hard boiled detectives take beatings, but Bigby is the only one who can (and does) retaliate by turning into a wolf and delivering violent beatdowns on his attackers.
* Fables sets out to restore his kingdom in the homelands. He recruits dead fables in the Witching Well, promising them a physical body and a chance at redemption for their sins. This includes Shere Khan and Bluebeard, both of whom betrayed the fable community and plan to betray him for control of his kingdom. Not only does Ambrose know, but it's also all part of his plan.
* Fable's setting Albion that Heroes can use to teleport around. By the third game the player has a portal network map table that can shunt the Hero where they want to go (the presence of a mini Cullis Gate in the Sanctuary implies the hero is using in at least some capacity). A Hero can't use a gate they haven't found yet so each Hero likely has to go around at least once on foot first.
* Fables shows a battle involving a General who states his willingness to sacrifice gladly a hundred thousand men to kill any one enemy, and who demonstrates this by piling corpses against the castle walls high enough for troops to climb all the way up and then taking one enemy's head before retreating.
* Fables: Snow White and "Bigby" Wolf. She's a fairy-tale princess, he's, well, the Big Bad Wolf himself. Of course, it helps that she's actually an iron-willed political leader ("You dumb bastards! I'm Snow White! I run Fabletown, and I'm never outgunned!") and that he can take on human form (making him essentially a Wolfwere who can also turn into a Werewolf).
* Fables, specifically Volume 14: Witches, King Flycatcher dones a black hood when rendering his judgement about Mr. Brump the goblin devouring of Mr. Seed-create the squirrel, echoing this trope. It ends up subverted as Brump only ends up exiled.
* Fables spinoff "Jack of Fables" would sometimes be listed in Previews as "JACKOFFABLES".
* Fables storybook fables, can be extensive indeed. The in-story explanation is they were all given amnesty when they entered the mundane world. This doesn't keep them from being wary of each other, nor from falling back on old habits.
* Fables temporarily turns into this as Jack takes over as its shepherd.
* Fables, the army of wooden soldiers that attack Fabletown dress in typical MIB attire.
* Fables the Djinn are a race of nigh-omnipotent super beings. They were forced into enchanted bottles due to their destructive natures. They are forced to grant three wishes to the wielder of their bottle, but with an added twist being that if the person doesn't use the third wish to put them back in the bottle the Djinn is free to do what ever it wants.
* Fables: The entire point of Prince Charming. The reason he's in so many stories is because he constantly marries and abandons various princesses. This leads to him originally being less than popular in Fabletown.
* Fables, the Fables retake the homeland thanks to assault rifles and a healthy supply of 500 pound bombs. Subverted, as they do so in an airship powered by Flying Carpets and make judicious use of the Magic they can muster. So it's more a judicious use of magic as well as modern technology trumps magic and a medieval mindset than a straightforward "technology beats magic".

* Fables: The Homelands are a patchwork of technologies, cultures, and magics of all types, with literally every imaginable fantasy or mythical creature or race.
* Fables, then finally leaving us to wither and die without crops or any means of producing anything. When they're done the Empire will use our devastated, uninhabitable planet as a prison world.
* Fables: The pair are still happily together after a thousand years of marriage, although not without their problems to overcome. Beast usually looks human in the series, but shifts between his human and bestial forms depending on his wife's moods towards him. Also slightly subverted as Beast is an all-around nice guy who doesn't really get that angry, while Beauty is occasionally seen as ambitious and overly critical.
* Fables, the relationship between Jack and Rose Red has more then a hint of this even from the start, with Rose Red eventually realizing that they only brought out the worst in each other. When she later reconnects with him, it's out of pure self-hatred. Their new relationship drags her down even further.
* Fables there's the Witching Cloak, which makes its wearer all but invulnerable, is (nearly) indestructible itself, and allows its wearer to teleport anywhere (even between worlds), carry huge loads, and change form.
* Fables, they haven't been seen to twist words. However, if the third wish isn't used to put them back in the bottle, they'll go on a rampage instead. In a Cinderella spin-off, we even find out that Aladdin has a genie with one more wish, just to make life hell for anybody who's about to kill him.
* Fables. They're mostly past it now, but flashes of their backstories reveal that Rose was once so jealous of Snow she behaved in ways that could fairly be characterized as evil.
* Fables: Tommy Sharp plans to do this to the Fables living in Fabletown. He's been gathering evidence of their inhuman nature; following Bigby and photographing him shapeshifting, but also checking back on the title deeds of the land and buildings in Fabletown - all owned by members of the Fable community since old New York was New Amsterdam and early photos of them dating back into the 19th century which show that none of them have aged.
* Fables to pretend that he'll be ever-faithful to the current object of his affection.
* Fables to provide a balance to it in the form of a never-ending series of fatal injuries and spectacularly bad luck to provide something for his powers to be tested against and prove themselves necessary.
* Fables whenever he went to court to meet the emperor or attended an official meeting. Even though he was a high power in the adversary's empire, due to his poor appearance many people would mistake him for hired help and order him around. Only a select few, such as the wooden soldiers and high officials, actually knew who he really was.
* Fables when Kevin Thorn sets up a force field around himself. Bigby runs into it and exclaims, "It's like some kind of... I don't know what it is!"
* Fables when she discovers she can't heal any faster than the fish are eating her.
* Fables, who has placed countless millions of protection spells on himself over the years.
* Fables, who he then knocks out and takes his jack o'lantern head for himself to carry the coal.
* Fable that strongly features this trope. In the third game, the Princess is taller than almost everyone else from the outset, possibly because of her Heroic bloodlines).
* Fable, the guards around town beat you if you don't have enough money for a fine... and attacking in self-defense raises more charges against you. Kind of justified in a medieval setting, but still excessive.
* Fable, the Hero is tortured by listening to the warden read homegrown poetry, which all the other characters treat as worse than the standard whips and chains in the real torture chamber. As they should.
* Fable: The only children to appear are in a town which the player cannot enter without leaving his weapons at the gate.

* Fable. The PC version has the added benefit of mouse support for the menus.
* Fable too much, and you can't even tell what's going on, except through sounds.
* Fable trilogy has a lot of this, especially II and III. Someone report you to the guards for...murder, public indecency, assault, theft, vandalism, setting people on fire, you simply pay them and they go away. Same thing if there's something in a house you want and it's night. You buy the house, kick out the residents, and take what you want.
* Fable who uses a massive hammer from a statue as a primary weapon. The third game in the series reduces the different types of weapons you can use in melee to swords and... well take an educated guess.
* Fable with his sister (who only survives if you make a specific good choice in the first game) playing an important role in the sequels, the Hero of Bowerstone from the second game to also be Lawful Good and novels after the third game confirm the Hero of Brightwall to again be Lawful Good.
* Fable with Jack of Blades having a creepy, high-pitched voice. Played straight in The Lost Chapters expansion, where his voice has been artificially lowered to a more demonic tone.
* Fable? You can't. Even if you've killed every last civilian, the guards just keep pouring in in groups of three (or more in the Guild.) Apparently, Albion's military population is over ten times its civilian one. Must be all the monsters...
* Fabolous had four Top 10 hits: "Breathe", "Can't Let You Go", "Into You" and "Make Me Better". The first is the best-known of the four, but it charted the lowest.
* fabricates various achievements to impress the other guests. One of them is inventing air, which he claims the entire world must pay him royalties for every breath. Whenever the guests gasp, he tells them to pay up.
* fabricating evidence with Gant and trying to cover up his murder, admittedly while being blackmailed.
* Fabrice Bellard FFmpeg (a widely used multimedia encoding, decoding and editing library).
* Fabrique Nationale, the manufacturer of the P-90, produced an advertisement video that showed a man firing two P-90s at once on full automatic. This was intended only to demonstrate how the 5.7mm round (unique to the P-90 and Five-seveN pistol) generates very little recoil.
* Fabrizio Quattrocchi was an Italian security guard working in Iraq. In 2004, he was captured by terrorists who forced him to dig his own grave and kneel beside it wearing a hood as they prepared to film his death. Before they executed him,
* Fabula and SujetDistinction between the chronological order of the story's events (Fabula) and the order in which we see the scenes (Sujet)
* Fabuland only had one crocodile and three birds among an otherwise all-mammal cast.
* Fabula Nova Crystallis: Final Fantasy gifted to the House of Lucis to use its power to rule over the world, and only those of royal blood or those who swear oaths to them may wield its powers.
* Fabula Nova Crystallis: Final Fantasy is identified in the targeting menu as the fal'Cie Anima inside the Pulse Vestige, but in reality is just Anima's crystal heart; the entire Vestige is Anima's body.
* Fabula Nova Crystallis: Final Fantasy, which is where the mythos originate from.
* Fabulous: After the end of Level 10, we build up to how and why Angela ended up in prison.
* Fabulous Boys, Mei Nan is frightened by a bunch of fake cockroaches Jeremy is throwing at her during a photoshoot and jumps into Xin Yu's arms.
* Fabulous Five, but that the girl let them think otherwise. Whether because she knew there was no point in arguing as she wouldn't be believed or wanted them to think that her parents were physically abusive as well isn't clear.
* Fabulous Funnies: With plenty of empty cans lying around her treehouse, and in her bed, there was a lot of chugging going on.
* fabulous is officially a sea serpent, which may or may not be a dragon subspecies. If he was, one would think Fluttershy would have been terrified).

* Fabulous Moolah, who was mentioned above under the Literature section, once did an interview on a radio show. She talked about the storylines she'd been in as if they were real, and eventually admitted that she found it very difficult to break kayfabe in the first place let alone do an out-of-gimmick interview.
* Fabulous: This happens at the start of Level 21, and at the ends of Levels 40 and 50, respectively.
* Faby and Mary Apache's rivalry dates back to at least their ARSION days and at one point got intense enough for Fabi, who usually came out on the losing end, to take Mari's hair in an
* Façade and disguise some of the limitations of the AI. If the player says and does something the dev team didn't anticipate, Trip and Grace will choose to focus on their own needs instead, or just ignore the player's actions entirely.
* Façade issues. Trip resents that his parents are poor and uneducated, which resulted in him growing up in poverty and constantly feeling he was never good enough. Grace resents her parents for being image-obsessed snobs who spoiled her, thus leading her to avoid responsibility for her actions and let others make decisions for her. Ironically, they both like each other's parents; Trip likes that Grace's parents are sophisticated and successful, while Grace likes Trip's parents for being 'real' and not caring only about wealth.
* Façade lets you flirt with Trip, Grace, or both, regardless of your character's gender. Granted, they're too wrapped up in their own issues to reciprocate, but they do acknowledge the interest.
* Façade: Many readers have the tendency to assume that the author is male. Upon finding out the author's true gender, it becomes this.
* Faccia A Faccia provides a straight example: a meek history professor becomes a ruthless villain, whereas a bandit becomes... well, almost an honest man.
* Face–Heel Revolving Door that include bits where Catherine is a bitch for marrying Edgar and abandoning Heathcliff but then he's the bad guy for stirring up trouble and ruining her happy marriage while she's pregnant.
* Face–Heel Turn: A character on the side of good turns bad and allies with a villain (or group of villains) and is forever affiliated with them.
* Face–Heel Turn, Achilles defected to Troy after falling in love with Polyxena, one of its princesses.
* Face–Heel Turn: A hero becoming a bad guy can especially be sad if their misdeeds undo the good they've done and their changing of alliances now means that their former friends will have to fight their corrupted ex-comrade.
* Face–Heel Turn. Although, he is still quite willing to do whatever he deems necessary to achieve his end goals, and seems to enjoy torturing anyone who actually manages to anger him in some rather horrifying ways.
* Face–Heel Turn, Anakin was wearing tons of black leather in sharp contrast to Obi-Wan's tan robes.
* Face–Heel Turn, and c) become a multi-time WWE World Heavyweight Champion.
* Face–Heel Turn and made himself king, he made her his queen. They seem to actually care about each other, as several times they've both come to each other's aid when it would have been easier to abandon each other.
* Face–Heel Turn and thousands more died when Metatron caused them all to fall. By the final seasons, it's made clear that there are only a small handful of angels left.
* Face–Heel Turn and turning evil, but rather that he's just banning drugs and alcohol until the holiday season ends so that the adult don't end driving under the influence of those substance and end up kill themselves and other people.
* Face–Heel Turn (at that point the police just gave up and started playing with flowers), and gave it back once he had dismantled the criminal organization he had set to infiltrate.
* Face–Heel Turn, Ava Wilson seems to take pleasure in watching Andy suffer and die.
* Face–Heel Turn because it had been fried from years of bleaching, and she saw the heel turn as a good opportunity to change it. It was initially worn long but had to be cut short because it was "like straw".

* Face–Heel Turn (Cassandra Cain) so badly written and conceived that they are torn between a duplicate (the real one still off finding herself) and a mind-seed implanting a new personality outright as alternate explanations. The subsequent editorially mandated damage control mollified things somewhat, though. They did try to explain it, but due to an apparent lack of coordination between writers, the thing that was causing her to act differently and how it was cured were different in two different comic books. It now appears that they've just given up on trying to explain it and have (mostly) moved Cass back to her original characterization.
* Face–Heel Turn, either averting it or playing it straight. In a later season, Anya lampshades the arbitrariness of the gang's mercy ("Spike has some sort of get out of jail free card that doesn't apply to the rest of us...").
* Face–Heel Turn elements: while initially he keeps his shihakusho and drops his haori with a white sleeveles coat, he later dons with an sleeveless tunic, and switches his white boots with the usual Arrancar black tabi footwear. He also changes his googles and orange scarf for a visor and an orange rope.
* Face–Heel Turn film, he goes from a "shy, rumpled guy" look to a slick, black, and stylish outfit.
* Face–Heel Turn had become close friends, and Gellar allegedly hated the idea that Angel would not get a chance at redemption, so his character arc was changed.
* Face–Heel Turn happened right before he died, many later versions of the Norse tales have him instead being a real asshole who constantly screws over the others. In fact, the original reason Loki was chained to the boulder was retconned, so instead of being because he insulted them all at a party they didn't invite him to (he wasn't invited so they could talk about him behind his back) was instead because he arranged the death of Baldur (something he merely claimed to do in order to wind them all up), with no party or comments involved.
* Face–Heel Turn, he wore a red and black costume instead of his typical blue and black one. No one was fooled for a second.
* Face–Heel Turn impressed when she says she'll save it to smoke in class.
* Face–Heel Turn in Shego's backstory; her current costume is the same one she wore when she was part of Team Go.
* Face–Heel Turn in their garbage matches, temporarily retiring one and almost cooking the other alive.
* Face–Heel Turn is what kicks off the entire plot in the first place, and she gets more much more focus than the heroes trying to stop her (though the author's started to rectify that in the latest chapters).
* Face–Heel Turn mid-match trash talk at a volume loud enough to be picked up clearly by the house mics.
* Face–Heel Turn night the fans couldn't and wouldn't accept it: the night Reigns was forced to relinquish the Universal Championship and go on hiatus from wrestling to battle his leukemia. The vulnerable atmosphere combined with the implosion of the Shield (by having Ambrose turn Rollins, his last remaining Shield brother), the very stable that Reigns was so closely tied to that he still used the same ring gear and music of it even after their initial breakup, was enough for the fans to finally turn on Ambrose and accept his new role as a heel.
* Face–Heel Turn, one of the few opponents to consistently challenge Merlin (until he utterly curbstomps her in the final episode).
* Face–Heel Turn proclaimed no one would ever see "Cody Rhodes" ever again.
* Face–Heel Turn said that Punk hadn't earned respect yet, it rang hollow considering that Punk's 2012 title reign lasted over one consecutive year. Anybody else doing such a thing would be called one of the greatest of the modern era.
* Face–Heel Turn scares him and HE takes steps back on the plank.
* Face–Heel Turn's iconic blonde fu manchu was filled in by a black five-o'clock shadow.
* Face–Heel Turn the people who couldn't comprehend that Sarada was Sasuke and Sakura's daughter, didn't calm things, making Sasusaku divisive even among their shippers.
* Face–Heel Turn. The results are so horrifying, Seth and Ephraim kill her out of mercy, without the others seeing. What makes things worse is Orson's utter

devotion to whatever is left of his wife.
* Face–Heel Turn, there was more or less an equal partnership going on between him, Spike, and Drusilla. But, with Drusilla becoming more and more enamored with him, and Angelus constantly belittling Spike for his crippled status, it soon becomes pretty clear who the alpha dog is.
* Face–Heel Turn to expect that of her, and says he'll send a couple of vampires to do the job instead.
* Face–Heel Turn to Vader and was killed by Vader as a result). Best exemplified in a scene from the novelization, when he butchers the Separatist leadership (the scene in the movie is shot silently), where he takes the opportunity to specifically mock each individual Separatist leader's last attempt to beg for their life.
* Face–Heel Turn what she wants, having become fed up with constantly being passed over for what she thinks she deserves.
* Face–Heel Turn wrestler, whether it's being tired of living under their shadow, because they are sick of the fans and the locker room not giving them respect, or simply because they can.
* Face–Monster Turn: When a mental and/or physical transformation turns someone evil.
* Face 9000 gets an upgrade in "Face on the Fritz", so new viewers who see a post-FOTF episode, and then see a pre-FOTF episode might be confused.
* Face and Heel aside, the various feuds and matches between The Undertaker and
* Face, and likely most of these qualify for both. Either way, it has some practical value; the other guy can't pull your hair if you don't have any.
* Face and Murdock especially seem to be this. They have a very effective tag-team fighting style.
* face Aunt Figg makes at the end of the line "I'll make sure Dr. Applecheek takes special care of you."
* Facebiter squigs bite... faces. The orks naturally find this hilarious, and often get in contests to see which will bite the other's face off first. The
* Facebook. And now that Facebook is the top social networking site, MySpace has been slowly becoming more and more like Facebook.
* Facebook and Twitter were blocked in Thailand after a military coup took place. The excuse was that they needed to stop the rebels from "spreading lies and further destabilizing the already fragile political environment".
* Facebook, as known by its Mexican haters. This name is a Spanglish construction that more or less means "cocksucker": the latter part comes from "verga", which is the Mexican word for "dick".
* Facebook began airing ads saying that they know that what was great about them has been messed up by spam and fake news and so-forth, but they're cleaning all that up, so don't worry.
* Facebook, believing that if they haven't heard of anything like this, there isn't anything like this. More recently, they should at least have heard of Diaspora* thanks to the huge media hype around its creation, but that hype was too long ago. And even the Diaspora* makers didn't know that what they wanted to create was already available with a point release, known as Mistpark back then, later renamed Friendika, now known as Friendica.
* Facebook features the king of Gnawnia hiring a team of mouse hunters to rid Gnawnia of their mouse problem.
* Facebook games are a common one for this. However, some games have caveats about it. Kabam (Kingdoms of Camelot, Dragons of Atlantis, etc.) allows multiple accounts, but each must be on a different domain, and creating an alternate account and getting caught will get you banned. However, numerous players have several different cities in different worlds on these games.
* Facebook, hitting the Enter key will complete your post, rather than line break (in which case you have to hit Shift+Enter).
* Facebook in the years when there's no February 29 — on February 28 and on March 1.
* Facebook livestream. The original one has since been taken down, but not before

others began posting the grisly video on other websites such as TikTok, which prompted a lot of criticism towards websites for not taking the videos down sooner.
* Facebook may be just as famous for its Allegedly Single-Player Games. You start off the first few days playing a nice enough and diverting game. Then, when you reach a certain level, you find out that you have to have "neighbors" (in form of your Facebook friends) or co-players to get the useful things or even to advance any further. You better hope you have a lot of gamers among your friends, because to those who don't usually play Facebook games, it tends to quite push their
* Facebook meme in 2011 was to post something on your status to the effect of "You and I wake up (in prison/in the back of a car/covered in shaving cream/or any odd circumstances). What are the first three words out of your mouth?" And then see what other people would say.
* Facebook of many French jokes due to its close resemblance to the phrase "fesses de bouc" (goat's butt).
* Facebook over an update for iOS 14 adding a new feature that would let users require explicit permission from apps to track them across other apps — a feature that Facebook CEO Mark Zuckerberg saw as directly targeting his company's advertiser-driven business model.
* Facebook page, the player is locked inside a manor on Halloween night and has to solve the puzzles inside to claim their inheritance.
* Facebook. Parents and grandparents watch your every move, and companies are sure to go straight to Facebook to see if you are worthy of hiring.
* Facebook public, causing some uninformed users to post meaningless disclaimers that their info is private. Legality aside, the boring truth of the matter is that the only thing Facebook does with your info is use it to send you relevant advertisement, and even that is done by algorithm; Mark Zuckerberg is not leering at your spring break photos or stalking your every move.
* Facebook's "Fortune Cookie" app has "Help! I'm trapped in a Chinese bakery!" as one possible fortune.
* Facebook's newly introduced "Friend X and Friend Y" friendship review pages can have this effect.
* Facebook, sometimes for things like fan pages and Facebook accounts for businesses. Some people will create alt-accounts for Facebook games so that they can be their own neighbors, as mentioned under the "Video Games" section. Facebook tries to crack down on this, so it's not as common as it is on other social sites, and roleplaying mostly happens via in-character fan pages or regular accounts rather than character accounts.
* Facebook. Specifically, for Facebook, the introduction of high school and regional networks was what ruined it FOREVER!
* Facebook, the "Angry" reaction is referred to by many as "Angery" or "Angery react".
* Facebook! There's still porn, but now teenage girls are sending it to their boyfriends.
* Face Book to prevent cyber attacks from the enemy against them and their families. Numerous soldiers who didn't reported death threats to their families back home via e-mail and telephone, and even a few cases of identity theft.
* Facebook use Facebook coins, which are bought with money. Some use the direct method as well.
* Facebook you to think they're perfectly happy lovebirds, but it's far more likely that someone got caught cheating. Creating a joint page, where both partners have access to chat history, is a last-ditch compromise to save the relationship.
* Face check. That is, pinch the guy's face and pull: if the skin detaches, it's a mask. Then again, if the lower face is close enough and the guy wears glasses Diabolik will only mask the upper face, confiding on the checker pinching him low;
* Face-concealing scarves are mostly reserved for rogues, Defias Brotherhood, and the Syndicate. Enemy rogue NPCs are pretty rare and Defias and the Syndicate are fairly low-level enemies. Once you hit level 40 or so, there's nary a scarf in sight. A lot of hoods in Outland and Northrend, though. Pretty much every cultist and many of the spellcasters wear hoods.

* face, currently hidden in the shadow of his hat, made Onion Kid go into a coma. He later said it felt like everything good was gone from the world...
* Face Death with Dignity: A character chooses to remain calm and collected upon learning they're going to die.
* Face Death with Dignity: Someone who finds out that their death is imminent chooses to accept their fate calmly.
* Face Death with Dignity, who went up to the scaffold shouting obscenities, anti-Semitic slurs, and claiming that the Allies would one day be themselves conquered by the Soviets. As the kicker, Streicher's attempts to break free of the noose moved it out of the intended position, meaning that instead of suffering instant death via a broken neck, he died a much slower death from strangulation.
* Face Doodling: Drawing on a person's face while they are unconscious.
* Face Doodling: glasses and a goatee drawn on and the word "TOOL" written on his forehead in black marker.
* faced the noose most bravely when they were escorted to the gallows.
* Faced with a situation beyond their ability to save themselves with their current powers, some parahumans have a
* Faced with the threat of Thanos and the Avengers coming back together, Tony returns Steve’s shield.
* Face faults are common sight gags in both the manga and the anime. Rumiko Takahashi does it with the characters' hands usually extended, middle and ring (and index?) fingers folded while the pinkie/index and thumb stick out. The hand-sign is basically the familiar "horns", and is used in Japan to deflect evil eye.
* "Face Freeze!" is all about SpongeBob and Patrick making these faces. This is
* Face Full of Alien Wing-Wong: A creature reproduces by impregnating another species (often a human).
* Face Full of Alien Wing-Wong: An alien that breeds with another species.
* Face Full of Alien Wing-Wong: Getting attacked by a parasitic alien creature trying to lay its eggs inside you.
* Face Heel Door Slam and Zelena turns down her redemption and sets out on her path to villainy.
* Face Heel Turns, he "officially" changes his transformation code to the opposite as proof or his new loyalty. Nobody buys it, of course.
* Face-Heel Turns in the main series gain the family name Scaglietti and their names are changed from Italian numbers to their Japanese equivalents (Uno is Ichika, Due is Nino, Tre is Mitsuki, Quattro is Shiina, and Sette is Nanao).
* face his fear call himself a "big, brave dog." When Angelica calls Chuckie a scaredy-cat, Susie says, "No, he isn't, he's a big brave dog!" and they argue, which degenerates into "Cat!" and "Dog!". Eventually, Chuckie grows bored of it and states that he's a human, not an animal.
* Facehugger hangs on to host's face for day or two, host unconscious, facehugger keeps Host alive but tightens tail around neck if attempt to remove facehugger is made.
* face. It used to be exclusively so, until bookers started using them to let the heel cheat openly and win.
* faceless bride when Robin, who is watching from the crowd while struggling to look happy for him, meets his gaze.
* Faceless Butcher creatures without any other creatures in play, which will repeatedly exile each other and return each other to the battlefield) which don't incrementally progress toward a win condition instead result in a draw if no player can interrupt them.
* faceless eyes watching a TV, which appears to be showing a live-action soccer game. There are also stylized musicians which appear to be playing in front of monochrome clouds.
* Faceless Eye variant with Commander Peepers growing stubble on his lower eyelid.
* Faceless Goons: Masks, visors, or helmets used to obscure the mooks' faces.
* Faceless Goons (Mooks without distinct facial features, making it easier to mow them down without feeling bad about it.)
* Faceless Goons. Probably because they all tend to get killed en masse.

* Faceless Goons tactic was using telekinesis to pull one towards the player, and "catch" him with Mind Drain, which upon fully draining their HP popped their heads while they screamed in anguish. Very stress relieving!
* faceless man shows he was "Cute Naked Guy" before he started putting on weight) lives in the apartment across from Monica's. As his name implies, he always walks around his apartment in the nude, while the friends take pleasure in spying on him along with his various misadventures. He has no lines and the only two times he is seen a small shot of his stomach when the gang thinks he is dead, and later the back of his head and torso when he answers the door to Ross. Later, he moves away, and ironically most of his moving boxes are labeled "clothes".
* Faceless Masses - Drawing background characters as generic, featureless humanoid shapes.
* faceless monkey in front of his lair is a genuine scare, but it's his voice and his words which are genuinely spine chilling.
* Facelift and writing lyrics more about drug addiction, depression, and failed relationships. It's the album most people think of when they think of the band
* Face Loran and insistence that Face stop punishing the child he'd been, he does have it removed, but for some time wears a fake scar in the same place.
* face mirrors and point their guns at their reflections, knowing the other is behind. Yes, John Woo loves this trope.
* Face, Nod, Action: Two characters face each other, nod, then perform an action.
* Face of an Angel, Mind of a Demon: Adorable on the outside, evil on the inside.
* Face of an Angel, Mind of a Demon: A villain who looks pleasant and innocent vs. a hero who has a scary thuggish face.
* Face of an Angel, Mind of a Demon: Someone who looks adorable or beautiful, but is completely deranged and psychopathic.
* Face of an Angel, Mind of a Demon: They look rather pretty, but it's just used to feign niceness.
* Face of a Thug: A good or neutral character has a menacing appearance.
* Face of a Thug: A person who is good or neutral in spite of having a menacing appearance.
* Face of a Thug issues due to a large, disfiguring facial scar, but he has his charms for people who can look past that.
* Face/Off, Agent Loomis's left ear is partially sheared off by a bullet during the hangar gunfight between the FBI and Castor Troy. Later, when Sean Archer visits the Walsh Institute about a proposed undercover mission where he takes Castor's face, Dr. Malcolm Walsh demonstrates the Institute's capabilities by showing them using laser surgery to rebuild Loomis's left ear.
* Face/Off, a makeup design competition, had this as a challenge on the Season 7 episode "Animal Attraction". The designers had to make a mix-and-match critter of their choice.
* Face/Off and get information on Castor's bomb from Pollux Troy. This would have worked out if Castor hadn't woken from his coma and taken Archer's face in reply.
* Face/Off (Archer pre-surgery), beaucse they only had a face transplant, with their vocal chords remaining the same. An inhibitor chip is inserted into his larynx to modulate his vocal cords from Archer's nasally voice to Castor's huskier tones.
* Face Off because they ultimately weren't sure whether or not they were going to get renewed for another season. When they did get renewed, they preemptively declared it the last one to avoid this problem repeating itself, leading to the much beloved season 5 and record-breaking finale.
* Face/Off: Castor strikes Lazarro in the chest hard enough to stun him, then restricts his throat while he's on the ground until he suffocates and claims it was cardiac arrest later.
* Face/Off. Castor Troy (as Sean Archer) casually disarms his own bomb with 2 seconds left on the clock.
* Face/Off, Castor Troy disguises himself as a priest in order to plant a biological bomb in the Los Angeles Convention Center. He then takes a little extra time to dance to a choir singing the Hallelujah chorus and grope a choir-girl.

* Face/Off, Castor Troy tried to kill his nemesis Sean Archer with a sniper shot, but the bullet went through Archer's son, killing him and wounding Archer non-fatally. Archer spent the next few years mercilessly hunting Troy down.
* Face/Off. Contestant Joe Castro had forgot to put anything on his alien's feet, and was critically slammed for it by the judges. Instead of waiting for the elimination ceremony, he ran outside and drove off the show, forfeiting the competition.
* Face/Off co-screenwriter Mike Werb got the idea for the face surgery from a friend who had a hang-gliding accident. They had to remove most of the skin from his face, reconstruct the bone matter, and put his face back on.
* Face/Off describes his profession as "terrorism for hire", making him about as blatant an example as you can get.
* Face/Off ended like this: Sean Archer returns home, but when he looks in a mirror he sees Castor Troy's face rather than his own. Archer screams and his wife attempts to comfort him, but she doesn't notice a psychotic smirk start forming on his face, all of which implied that either Troy survived and was still impersonating Archer, or that Archer's time spent as Troy had permanently damaged his psyche.
* Face/Off. Even better, they are out-hamming each other while exaggerating the other actor's mannerisms.
* Face/Off, FBI agent Sean Archer infiltrates prison perfectly disguised as his arch-nemesis, Castor Troy, in an attempt to discover the location of a bomb from Castor's brother, Pollux. Ever paranoid, Pollux quizzes Archer on what medication he takes, but Archer is so obsessed with Castor that he is able to answer correctly.
* Face/Off going on in the film, but Castor Troy is still at least a level above his rival Sean Archer in terms of hamminess.
* Face/Off had a Kaiju-building challenge in Season 7, with contestants making creatures based on the squid, praying mantis, sloth, and yeti crab.
* Face/Off has Castor Troy trying to convince his ex-girlfriend, Sasha, of his true identity while wearing Sean Archer's face.
* Face/Off has FBI agents, cops, special forces and security staff who are reduced to the role of red shirts when they must face Castor Troy in a gunfight. It's as if only Sean Archer has ever taken on Castor and lived to tell the tale.
* Face/Off he's a former Central Intelligence Agent using his skills for personal profit.
* Face/Off, i.e. when a model's hair was so thick it pushed the bald cap off the skin or a full mask vs individual pieces. They even had to apply makeup to themselves in one episode, and attempt to fool their own family members. This worked for the most part, as the artist were "store employees" while the loved one was there for a random task the show gave them. The family (and the public) rarely tried to make eye contact with the store help, who themselves tried to change their voice or act "in character" which was just weird all around.
* Face/Off. In fact, the plot of the movie is itself about them switching roles.
* Face/Off, in which Sean Archer and Castor Troy, for contrived reasons, end up surgically switching faces (and taking each other's places). After Castor wakes up and finds himself missing his face, when his cronies abduct Dr. Walsh and bring him to the Walsh Institute, Castor is briefly shown walking around without a face (literally, briefly - for the most part we only see Castor's shadow or shots of him from behind where the damage can't be seen, until Castor claps and says "Bra-fucking-vo!" upon seeing the conclusion of the videotape of the surgery.
* Face/Off, in which Sean Archer takes on the appearance and identity of Castor Troy to glean information from Castor's brother Pollux about the location of a bomb Castor had planted before he was caught and put into a coma. When Castor wakes up from his coma and finds out what's happened to him, he makes the surgeons give him Archer's face and identity, and abuses Archer's job for his own personal gain.
* Face/Off moment when he saves Archer's daughter from being assaulted and gives her a butterfly knife so she can defend herself against future attackers. She uses it on Castor himself at the end of the film.

* Face/Off plays this straight and goes into detail with the procedure.
* Face/Off required contestants to design creatures to be displayed under black light as well as visible, meaning the artists had to paint with colors they couldn't even see.
* Face/Off required the creation of aliens whose home planets are in great jeopardy. Naturally, one of the planets is running out of water.
* Face/Off, Roy turned his (normal-sized) model into a pair of undead midgets in a trench coat. It was so funny that the judges themselves laughed out loud.
* Face/Off, Sean Archer uses the thrust of a mounted jet engine to send Castor Troy flying into a wall.
* Face/Off, the contestants are called to an abandoned hospital to start off the spotlight challenge. They had to sit in a dark room alone with a flashlight and come up with the concept of a monster that represents a phobia.
* Face/Off, the hashtag #FACEOFF is displayed on the workshop door and under the clock (plus your usual reminders by the host).
* Face/Off, the script suggests that Pollux Troy might be one of these as the script has him pass a polygraph test even though Sean Archer can clearly see he's lying about what his bomb schematics are for.
* Face/Off, this is the source of Dubov's anger at Troy. Later inverted when Archer as Troy recruits Dubov to help him escape by telling him he didn't actually do it.
* Face/Off, those people would be off to quite a few therapy sessions. Not so in movieland.
* Face/Off. Upon being given Castor Troy's face, Sean Archer is warned by Dr. Walsh to be careful with the voice modification chip in his larynx that scrambles frequencies and transforms Archer's voice into Castor's voice, as even a sneeze could dislodge it, but it never happens.
* Face/Off uses a physical gesture of affection in this way. Specifically John Travolta's "smell my hand" gesture.
* Face/Off was originally a straight science-fiction film. The final film is set in present day, with the face-swapping procedure and magnetic-boot prison being presented as bleeding-edge technology.
* Face/Off: When Castor Troy comes out of his coma and finds out that his face has been grafted onto Sean Archer for a deep cover operation, Castor gets his revenge by intimidating the surgeon into giving him Archer's face in return. After burning down the lab to destroy all evidence, Castor takes over Archer's job and begins abusing it for his own gain.
* Face/Off, when Castor Troy wakes up from his coma and finds that his face has been removed and grafted onto Sean Archer, he forces Dr. Walsh to put Archer's face on him. Afterwards, Castor goes to Erewhon Prison where Archer-as-Castor is trying to learn the location of "Sinclaire" from Pollux Troy. Castor brags to Archer about how he burned down the clinic where the face swap has performed, killing anyone who was aware it happened. Since no one knows the swap, Archer gets Castor's 100-year prison sentence, and Castor gets Archer's position as an FBI Agent as well as his wife.
* Face/Off: When he's impersonating Sean Archer thanks to plastic surgery, Castor Troy is perfectly willing to abuse his job for personal gain.
* Face/Off, when Sean Archer undergoes plastic surgery to assume the physical appearance of Castor Troy, his voice doesn't automatically change. So Dr. Walsh puts an inhibitor into his larynx to modify Archer's voice to sound exactly like Castor's. The reverse is implied to happen when Castor wakes up and forces Dr. Walsh to give him Archer's face.
* Face/Off, which involves Sean Archer taking Castor Troy's face and voice. Afterward, Archer's original face is left floating in a jar of water to keep it moisturized. Troy wakes from the coma, peels off the bandages in front of a mirror, and is very unhappy with what he sees. We only see a couple of very quick glances that show Troy walking around without his face on, prior to making Dr. Walsh give him Archer's original face.
* Face/Off, which is evidenced by his ability to create highly complex, sophisticated, and deadly weapons, but he also has an unspecified mental disorder

and screws up simple tasks. He's said to take Mylax, which in real life is the name of a few different medications, none of which are for the mentally ill.
* Face/Off while holding a pistol to her head to taunt Archer (while Jamie thinks he's her father because he's wearing Archer's face, no less).
* Face/Off: You would think that getting stabbed by a butterfly knife (and twist to make sure the wound won't close) would be enough to stop Castor Troy. No? How about a Harpoon to the gut? Still going? These guys didn't even slow down despite receiving wounds that at the very least should have made them limp.
* face of. She is depicted as a "holographic" projection in live performances, similar to Miku Hatsune. Her appearance is based on Rachel Rhodes, and her voice is apparently a combination of Rhodes, Nami Miyahara, and possibly others.
* Face of the Band: The lead character of a group who, as a result, is the one most recognized.
* Face of the Enemy (interestingly, the producers forgot that Taris had survived "Contagion"). Toreth's dialogue stayed the same after Seymour's casting while making the conflict between Troi (masquerading as a Tal Shiar officer) and Toreth a female/female battle of nerves.
* Face of the Enemy. When stranded in a Raptor with a non-operational FTL, one of the crewmen in Felix's group begins praying to Poseidon. One of the Eights on board is puzzled since they're a long way from water. He replies that they're in a ship so it's close enough.
* Face on a Milk Carton: At this point, it has been parodied countless times and has entered the collective subconscious to the point that while people may not have actually seen an actual one in their lifetime, they still recognize it. In real life, it has been replaced by the Amber Alert system and social media postings.
* Face on a Milk Carton: Thanks to instant alert systems like the Amber Alert system (which allows missing children's names to be broadcast on television, radio and expressway signs within minutes). These days, most cell phones will also get alerts of this kind accompanied by a loud alert tone. You might still see it on Iceland-brand milk bottles, but otherwise this is almost never seen anymore in real life, and hardly ever done seriously in fiction these days. However, they still exist, in the form of dozens of posters (with age progression) at the entrances to Wal-Mart stores and some grocery store chains.
* Face), one wonders what happened to all the other bits and how the head part wound up so large.
* Face on the Cover — The artist's face appears prominently on the album cover.
* Face on the fans. It often looks like the faces are all good and heels are all bad but just as often the fan favoritism will ignore morality and pandering.
* Face Palm (covering her eyes), Paige covers her mouth in surprise, and Phoebe (deaf and uncertain what they're doing) assumes they're striking this pose and covers her ears. And Leo figures out right away what the problem is.
* Facepalm: Covering one's face with their hand(s), raising one's hand to the forehead, pinching the bridge of one's nose, rubbing one's forehead, slapping one's forehead or sliding the palm of the hand down their face — a common gesture used to deal with exasperation, irritation, shame and other, usually very intense emotions.
* facepalm over and ask why they didn't move the operation to a less haunted place. Said discovery also caused an army of skeletons to rise, acting as the neutral enemies for the map.
* Facepalm: Pressing the palm of your hand against your face after seeing someone do something stupid or embarrassing.
* Face Palm: Reacting to other people doing stupid or embarrassing things by pressing the palm of your hand against your face.
* face-palms so much that after Porky listens to him... and refuses to get insurance, he realizes that his forehead's starting to bruise. Finally, after Porky crashes the car, Bugs stops his face-palms and slaps Porky instead.
* Face Palms with his tin hat, and Wally just turns this exasperated "Look at what I have to deal with" face towards the camera.

* Face Palm, who appeared to have been brought to physical pain by Mike's set.
* face punches, which meant things like Io Shirai delivering a slingshot superman punch to the back of Hudson Envy's head did not stop matches.
* Facepunch. It's also a bannable offense when the Moderators aren't making bad puns themselves.
* Face Realization: A character realizes they're not as evil as they initially thought.
* face roles were switched according to the country the matches were taking place in.
* faces basically said they had one division, as the two rivals seemed to arbitrarily shuffle most of the female wrestlers between themselves (behind the scenes wrestlers jumped ship based on changing paychecks and it was rare for both companies to be paying women well at the same time). By the 2010s, IWA was on its deathbed and WWC lost interest in its women's belt, so women's wrestling was only regularly seen in indie companies like EWO and CWS.
* Faces of Death as well, so the spikes descend and kill him instantaneously.
* Faces of Death had people eating monkey brains right after having to kill the monkey by beating it on the head with mallets which resemble a pestle.
* Faces of Death series took advantage of handheld camcorders becoming affordable and popular, and shot footage in both film and video to help sell the illusion of them being real documentaries rather than mostly original footage.
* Faces of Death series, usually some kind of criminal. In the first film he played the leader of a flesh-eating cult, then a would-be convenience store robber in the second, followed by a serial killer on trial during the third film. For the fourth film, he decided to play one of the good guys for a change and cast himself as an ambulance driver.
* Face Stealer — When a villain has to harm another character in some way to look like them.
* Face Stealer can turn people into this. Aang sees a monkey on his way to visit Koh that has been turned faceless.
* Face Stealer: For when you have to harm the target to assume their appearance.
* Face Stealer had a centipede body and was able to steal people's faces if they showed any type of emotion on their face when they were around him. If he stole their faces he would wear any of them at his choosing like they were merely masks. Several of these faces were based on traditional Noh masks.
* Face Stealer with the body of a centipede and a seemingly infinite collection of faces, many of which are human.
* "Faces", two of the small town Irish thugs are played by French-born Thomas Sharkey and British-born Bobby Calloway.
* Face The Music among its optimistic reference. The second act has a drinking song in ironic salute of the not-yet-repealed Eighteenth Amendment.
* Face the Music has the song "I Don't Wanna Be Married," in which a compromised girl refuses such a proposal:
* Face the Music possibly intended for the show, "How Can I Change My Luck?", was incorporated into the second act of the Encores! version.
* "Face the Raven" actually changed. She must return to the fatal moment eventually lest time and space be undone, but so long as she does that, she has "wiggle room" to have further adventures on her own.
* "Face the Raven"". Come "Spyfall", the Gallifrey stuff up above isn't the only thing Chibnall contested about Moffat's writing: The Thirteenth Doctor has gone back to mind-wiping allies for their greater good with no qualms.
* "Face the Raven" is built around a countdown. The final 15 minutes or so of the episode take place in real time. Although this is not explicit, one can work this out by comparing dialogue with the episode timing, though this only works when watching the DVD or the non-commercial BBC broadcast. This is a good example of how much can be accomplished, dialogue-wise, within just a few minutes.
* "Face the Raven" looks unblemished as the camera hovers over her dead body.
* Face the Raven." Mayor "Me" of Trap Street uses a Quantum Shade to execute lawbreakers, which kills the condemned in 24 hours using a chronolock. The

chronolock can be transferred once to a willing recipient, but once that happens the Mayor is no longer able to rescind the order. The Mayor uses the Shade on Rigsy as a ploy to get the Doctor to Trap Street, but it backfires when Clara Oswald takes the chronolock, and the Mayor is powerless to prevent her death.
* "Face the Raven"" preview appears immediately after that. This was noted as being the first time the series had ever done an actual proper stinger. (It actually backfired, as many fans tuned out before the credits ended. As a result, when the memorial appeared again in a later episode, many did not understand where it had come from.)
* Face the Raven the sort of people likely to atone and apologize anyway.
* Face the Raven where he can only dwell on her loss and his own pain. When he finally breaks out of the torture chamber after billions of years, he responds by going insane and breaking the logic of time and space in a desperate attempt to save Clara, regardless of her own feelings on the matter, not to mention everyone else's. In the end, Clara is forced to wipe his memory of her in order to allow him to return to anything approaching a functioning life, eventually returning them to him once he'd taken another companion, processed his old memories, and moved on.
* Face. The second is the way the chapters juggled through several concurrent fights, often without significant progression in all but one that the chapter would end on.
* face thinks the purpose of wrestling matches is to make and strengthen friendships. She's even willing to let bygones be with those who put her through tables and break the legs of her legitimate friends.
* Face Time call with her so his family can see she exists. She ruefully admits that this isn't the first time she's had to do one of these calls.
* Facetiously comment on fashions, cooking or other "lifestyle" matters in front of stills or footage of an ongoing war, or on location in the war zone itself.
* face towards WWC's Revolución). Evil aint a happy family here.
* Face vs. Face, he hands the WWF title to him, hugged him, and raised his hand.
* face, while his arms are on the side of what would normally be their head.
* face, who will often run in to break up a pin, then back off when the ref admonishes them), but when the heels start double-teaming a face member, generally the face team disregards the tag rule, at least until one of the heels is taken out of the ring.
* face will often try to influence the newbie. The storyline will often see the newbie get sucked into the heel faction but when the chips are down, they will abandon him in mid-match and allow the faces to obtain victory. The newbie will then turn face and begin a steady climb through the ranks.
* Face wore a clerical collar as a disguise. It was somehow enough to cause people to perceive him as
* face wrestler they've likely been feuding with for the past few months.
* Face Your Fears: A terrified person decides to deal with what scares them directly and bitch-slaps their fear into submission.
* Face Your Fears: I'm scared of that thing! But it's time for me to face it like a man!
* Facial Composite Failure: A police sketch that doesn't look anything like the criminal the authorities are supposed to be looking for.
* Facial Composite Failure: You fail to draw an accurate Wanted poster.
* Facial Dialogue: A character doesn't talk but emotes with their face.
* Facial horror is also a common outcome of the fights Kenshiro has against mooks, whose heads are subject to swelling and contorting before
* Facial Markings his companions have, but wears feminine-looking kimonos, talks girly and is even dubbed by women in all the dubs.
* Facial Markings line (everything has been going bad for Harry in this episode, so he has reason to think there will be more bad news). The Doctor just looks annoyed and points out that if he can't isolate the cause, the problem will be difficult to treat.
* Facial muscle control abilities, because it was thought that if a male character wore make-up for a disguise, that would make him a "sissy". Perhaps because of

common awareness of the use of make-up in films or the lack of believability of the facial muscle explanation, this trope hasn't been used for a while. It's not that holding yourself a bit differently doesn't change your appearance, but you can't make yourself look like a completely different person that way.
* facial scar over one eye, two of the supporting cast were born with only one eye apiece and a minor villain who had two myopic eyes was called Odin, after the one-eyed god (no, not the one from North of Kathmandu!)
* Facilier has one too, though that's probably because he was partly modeled on Captain Hook.
* facilitate kidnapping Ran by placing her close to the door where the actual kidnapper would break in. When explaining his deductions, Yusaku notes that the teacher was also drugging Ran with sleeping pills to cause the original accident and justify moving her.
* Facing a skilled champion who cheats dirtily, he overcomes the trap by summarily destroying two of his ambushers by hitting from an unexpected position and dealing a
* Facing Fear with Eyes Wide Open. They added two extra along with "It's lunch time~!" and "It's fishing time!" these being "It's fishing wrap it up time!" and "It's Pokéball time!" and they've continued to do so with the following episodes. Plus, it's not just that, but TPCI has also been having other character imitate Cilan's phrase.
* Facing sponsor pullout, the J. League side Yokohama Flügels hastily arranged a merger with cross-town rival Yokohama Marinos in 1998 to form Yokohama F. Marinos. A significant portion of Flügels' fans, however, refused to change their allegiance to merged side and considered Flügels to have dissolved instead. What they did, then, was to fund a new club—Yokohama FC—to take over Flügels' place.
* "Facing the Bullets" One-Liner: He's about to die, but he's got time for one last quip.
* Facing the Future Series and Danny and Sam delivered a double punch to him, finally knocking him out.
* Facing the Future Series, and knew deep down, it wasn't a dream, but rather she was sensing it happening through the link she and Danny share.
* Facing the Future Series and Sam getting ghost powers of her own in order to stop him.
* Facing the Future Series at the hands of powerful characters like Clockwork and Dark Danny.
* Facing the Future Series, Danny and Sam both show and outright say that they see each other as the love of each other's life.
* Facing the Future Series, Danny and Sam have a pleasant conversation while in the middle of battles with Technus and Skulker.
* Facing the Future Series, Danny discovers a new ghost form in this manner.
* Facing the Future Series, Dash gets upset and punches Tucker's robot, thinking it's actually Tucker. As a result, he badly injures his hand and Danny, Sam, and Tucker can't help but laugh uproariously at Dash doing that.
* Facing the Future Series, Desiree is given noise-cancelling headphones to prevent her from hearing wishes that could be used against her.
* Facing the Future Series due to her new fire powers continuing to grow out of control. Danny managed to get through to her by saying he'd never leave her side.
* Facing the Future Series has become this after obtaining her own ghostly powers.
* Facing the Future Series, in their first scene of the first story, they are millimeters away from kissing just when Danny's Ghost Sense goes off.
* Facing the Future Series joins the Fenton family, Danny and Jazz both grow into this role easily.
* Facing the Future Series, Maddie once told Jazz that Jack would camp out on her family's yard when they were away just so he could see her when she got back. While Jack and Maddie thought it was romantic, Jazz thought that it was nothing to be proud of.
* Facing the Future Series, much to the surprise of some of the Casper High

students, it's revealed that Sam is ticklish, with boyfriend Danny subjecting her to this, much to her chagrin.
* Facing the Future Series, Nocturne traps Danny and Sam in a dream world where their memories of each other have been sealed away, with them in danger of never waking up.
* Facing the Future Series, now is responsible for a couple of ghost attacks on Amity Park for some reason.
* Facing the Future Series on two occasions. He nearly would have destroyed them both (and himself) if not for Sam talking him down.
* Facing the Future Series policy is not to peek in on them and leave them be so they can be together.
* Facing the Future Series, Sam's ghost fighting costume is similar to Danny's (in fact, it was made from one of the suits he was wearing during his transformation), except most of the gloves except the middle fingers have been cut away, she replaced the collar and boots with her own, the midriff has been removed, and she wears a coat with laced sleeves.
* Facing the Future Series, Sam's ghost transformation is similar to Danny's. In fact, the author says Jazz will never forget Sam's chilling scream.
* Facing the Future Series shows this is Walker's opinion on Danny's feelings for Sam, stating she is one of the few weaknesses he really has.
* Facing the Future Series status, there wasn't really anything 'fake' about it.
* Facing the Future Series. That said, she still holds an animosity against all over ghosts and sometimes has to be reeled in against ghosts that are either friendly or neutral.
* Facing the Future Series, the fight between the Far Frozeners and some of Danny's enemies is momentarily stopped when they watch with revulsion as Danny barfs up the excess food he had eaten.
* Facing the Future Series. The task is made easier with the help of a couple of Jack's failed inventions.
* Facing the Future Series to get a bunch of ghosts trying to separate them to back off. Unfortunately, their friends fall for the ruse too.
* Facing the Future Series, Tucker is transformed into a frog when Prince Aragon takes over Amity Park. Catching on to Prince Aragon's ways, Tucker suspects that he can change back if he's kissed by a maiden. He's right.
* Facing the Future Series, two of Walker's guards have to put up with the racket of a captured Paulina. When the first mentions putting in a request to put her in suspended animation, the second guard, with his hands over his ears, yells "What?"
* Facing the Future Series unsuccessfully tried to this to Danny and Sam.
* Facing the Future Series, Walker ended up doing this to himself by keeping himself isolated in his prison, so he wasn't up to date on Sam's status as a half ghost until after he captured her.
* Facing the Future Series, when Danny and Dash go into the Ghost Zone to save Sam and Paulina, Dash has a freak out that he'll never be as brave as Danny. Danny says this:
* Facing the Future Series, where Danny and Sam are watching a movie where a car is doing this, only for it to be cut short by a blackout caused by Jack.
* Facing the Future Series where Tucker's chauffeur attempted to come to Danny's aid during a ghost attack, only to be beaten in an instant.
* Facing the Future Series which initially made him go savage, Danny learns he can only use it in battle for two-and-a-half minutes, and has to wait a full twenty-fours inbetween each use before using it again. While he has been tempted to stay in it longer, Sam makes him stick to his time limit.
* Facing The Future, when Sam is about to use the Fenton Portal to give herself ghost powers, Jazz comes in trying to advise her on what a bad idea is.
* Facing the Giants hardly had a role (save to be hyped as nearly unbeatable) before the climactic game; when they did, though, they turned out to be black-clad, unpleasant, clear-cut antagonists.
* Facing the Giants receiving a PG rating, as it was rumored that it was the result of the explicit Christian content (though more likely it was the football violence

and themes concerning infertility).
* Facing the Giants You only hear Grant's end of the conversation, but he repeats the callers question of "Am I sitting down?" with obvious confusion.
* Fackler Scale of FPS Realism games are to real-world shooting and combat.
* fact he is) but in the end, if Hawke continues to pursue him, he gives in anyways.
* Faction Calculus level, Green's resurrection spells usually return creatures to your hand, unlike White and Black. On the rare occasion it doesn't, this trope is employed.
* faction expansion, where they're the protectors of the Ardenweald zone. They're led by Lord Herne, who in this version is a Vorkai, a sort of ibex-centaur, rather than a man with antlers.
* Faction-owned guard dogs are also able to see through the player's disguises.
* Faction Paradox continuity. They anchored the relationship between cause and effect whilst the universe was still in its infancy, and their home planet acts as a mean time for the entire universe. When they go to war, they use entire cultures as weapons.
* Faction Paradox firstborn son of the humanoid TARDIS Compassion. A psychotic TARDIS is a scary, scary thing.
* Faction Paradox has the Remote, a group of colonists indoctrinated by corrupt Time Lords in an effort to convert them into effective shocktroopers. However, there were rather interesting effects when instead of being indoctrinated into a religion of any kind, said gentlemen used TV programs to control the colonists...
* Faction Paradox. Or they happen to rebel. Or if they happen to be psychotic.
* Faction Paradox-style throne, he's just a carpenter and boatwright who tells the children stories and won't say whether he's the Son of God. And, even if he isn't, would a technologically-resurrected Jesus be the Son of God anyway, or just his human essence? That question leads to the Arian heresies and so on, so the author decided to leave it up to the reader.
* Faction Paradox that are tethered in reality by nothing more than the power of others' belief in them; therefore, they appear as gods or demons wherever they choose to manifest.
* Faction Paradox, the prototype sapient timeships adopt the forms of animals rather than humanoids, bond with their pilots in the standard timeship manner, and are referred to as familiars.
* Faction Paradox. When someone else was allowed to write a novel that not only changed the Faction's whole character but also derailed his plans for portraying the Time War they were involved in, their creator decided to spin the Faction off into their own series with its own, separate mythos.
* faction quests, who are generally going to be contracted by locals for their services. As you advance in the ranks, however, quests can be given which will require you to travel quite far.
* Factions has the Tengu Wars which brought about a (temporary) peace between the Canthan Empire and some of the native Tengu. Much earlier in history there was also a war of unification where the Luxons and Kurzicks were both conquered by the Empire.
* Faction-Specific Endings: Each major faction in the game gets an ending where it wins.
* Faction-Specific Endings: The endings differ mainly in what major faction in the game (if any) triumphs over others with the player's help.
* Factorio factory-builder, uses a decidedly diesel punk aesthetic, which fits in quite nicely with all the pollution produced by many a factory players end up building. Among the non-period things rendered in the aesthetic include nuclear reactors, laser turrets and the rocket you launch to win the game.
* Factorio faster than health. As they are massive energy hogs when recharging, they are difficult to power until the portable fusion reactor is unlocked.
* Factorio has two levels of power armor as late-game research items. Both sets of armor are extremely durable, very expensive, and highly modular. They can accept a variety of modules, such as an exoskeleton for faster movement, automated turrets,

or logistic robot charging pads. However, they are limited to solar-powered battery packs until the very expensive portable fusion reactor is researched.
* Factorio involves the player building robots to extract materials from an alien world with which to assemble a spaceship and stock it with sufficient provisions. Of course, each robot can only perform one task: digging, drilling, plowing, seeding, et cetera. Further robots must be built whose sole purpose is to convey one robot's output to another robot for further processing; this is likely to include an automated railroad for moving materials in bulk. All these mostly stationary robots, however, impinge on the planet's wildlife, causing them to revolt and stampede these robots to reclaim their territory. This necessitates constructing defense robots to impede the renegade critters.
* Factorio requires a fish. Since the model for a destroyed Spidertron shows a fish flopping around in it the implication is that the fish is being used to control the Spidertron.
* Factorio, so creating low-pollution factories inside forests can prevent them from attacking.
* Factorio villain and harvesting everything you can reach in a relentless march towards industrialisation will result in you and your factory getting overwhelmed by masses of chittering mandibles in no time. It's up to you to find a healthy balance between production and pollution levels while also building all the necessary weapons and defensive structures to keep everything protected.
* Factorio,, we get a mix of all those mechanics as the explicit rules of the universe.
* "Factory Follies", which featured the Red Guy as a cruel factory owner who holds a birthday party for himself - and no one shows up. (The end reveals that he tied up Cow and Chicken so he could have his own short.)
* Factory is about assembling products carried through a factory on a conveyor belt. In order to meet quotas within the time limits you often find yourself turning up the speed, which if you aren't careful, quick and clever can make the entire system foul up leaving you with half assembled products going out for delivery.
* Factory of the Gods, many of the items Julian can create, such as Godseyes and Grasping Hands, are color coded to make it clear what their function is. Red Godseyes detect heat, Blue Godseyes detect movement, etc.
* Factory of the Gods operate on their ability to sense people and target them. Their exact range isn't stated, but it's close enough Julian was able to have a full conversation with people on the other side of that range.
* Factory Records founder Tony Wilson died of renal cancer in 2007 at 57.
* Factory Records. Saville kept designing for the New Order even after Factory went bankrupt in 1992.
* Factory Robots like mechanical arms look advanced by today's standards. That said, most of them have been through some serious use and look scuffed and greased stained.
* Factory Showroom is a tongue-in-cheek example, in that it's about a couple who are moving past the lovey-dovey portion of their relationship and now have to put more effort into it ("We've almost figured out how we'll get along / And given time we'll find it strange to be alone").
* Factory Showroom was criticized not for total length but because it only had 13 songs, compared to their usual album lineup of 18-20 songs. This was due to the songs being a bit longer than usual.
* factory workers to spy on employees and ensure that they were living morally clean, upstanding, good Christian lives, free of such sins as adultery, alcoholism, and atheism, under the belief that moral workers were more productive workers. (This is the same reason why big business generally rallied in support of alcohol prohibition at the time.) Failure to follow the Ford morality clause could get workers fired.
* Fact: The US Army Medical Command is the branch of the Army with the highest amount of Medal of Honor recipients.
* "Factually Accurate Love Song" by Flat 29 has many examples of this, starting

with "Girl your eyes shine like the moon. Well like two moons specifically, positioned unnaturally close together, but without the gravitational and tidal problems that would occur if this was not a simile."
* Faculae — "bright spots" on the moon's surface — are (save one) named after islands on Earth that are not countries unto themselves (e.g., Crete Facula, Mindanao Facula, Oahu Facula).
* "Fad diets" became immensely popular during the second half of the decade, foods with components seen as "de-energizing" such as sugar, gluten, lactose, caffeine and white flour among others beame no longer acceptable by many people, while erstwhile "exotic" foods such as avocado, quinoa and kale became popular. The "food-fad" trend was not without its critics, as testified by the success of the blog
* Fade", after Graham incapacitates Clark with Kryptonite, he buries him with it leaving him to die, but Chloe and Lois rescue him.
* Fade Around the Eyes: Everything on the screen fades away around a character's eyes or other facial features for dramatic effect.
* Faded Blue because Blue Pearl still partially views Steven as her Diamond, and is trained to obey orders without question.
* Faded Blue, Blue Pearl is offered the chance to leave by Pearl after Garnet captures Steven. Her response is that she is happy with Steven.
* Faded Blue, Greg notes this is a problem with Gems, and tries to avoid figures of speech with them. One instance being that when asked "What's up?", Blue Pearl refers to the branches above her.
* Faded Blue, it turns out that Connie's dad was a big fan of Greg Universe from back when he was a rock-star, so he goes to great lengths not to fanboy on him when they invite the Universe family over for dinner.
* Faded Blue, Lapis chooses to stay even after discovering that Steven is not her Diamond because he released her from the mirror.
* Faded Blue, like his mother, Steven can immobilize Gems by overloading them with negative emotions. He also has a lightning attack that forces people to listen to their own worst fears about themselves.
* Faded Blue, Steven has no idea why the Crystal Gems started a war. When he asks, Blue Pearl doesn't even attempt to give an answer, so he assumes they were just power-hungry and were evil for the sake of it.
* Faded Blue their slave, Pearl has trouble figuring out what to do with herself. A major subplot is the three of them trying to work out exactly how to deal with this information, eventually deciding on letting her help out (but not doing all the work herself or doing all the work for her) and trying to foster her individuality.
* Fade Dream. You turn into a fireball throwing flaming zombie who is also immune to fire (letting you get past pesky flame barriers).
* Faded Steel Heat, when Mr. Big the parrot starts to relieve himself on the Dead Man's shoulder, only to get flung across the room via telekinesis.
* Fade: L, in an eerie parallel to canon!Light. Light himself manages to subvert this — while he still uses the Death Note, he limits himself, sticks to those limits, and makes active attempts to ensure that he won't follow story!Kira's dark path. It helps that he was effectively blackmailed into the situation.
* Fadeout (1967), is a gay detective in the hard-boiled tradition, with no stereotypical mannerisms at all. His two long-term boyfriends and one short-term boyfriend, though, are more obviously camp.
* Fade-outs, widely used in the record industry. They make for a kind of "and they played happily ever after" effect.
* Fade-Out. When an alien ship lands on Earth, it starts to grow a gigantic pyramid which eventually shuts down human technology.
* fades into obscurity, gaining nothing in exchange for everything they sacrificed.
* Fades To Black, and the ensuing music and dialogue imply that they’re about to have sex. In reality, Sasami just wanted to show him some of her memorabilia: her comments about “it” being so big were referring to a box that she was struggling to pull out of her closet.
* Fade to Black intentionally recycles old plots to play with the characters'

memories. On the other hand the villains have Aaroniero Arrurueríe and Kaien's recycled background, complete with Rukia guilt, but are not supposed to remind anybody.
* Fade to Black series, centers around industrial espionage between two ad agencies. The case is kicked off when one of the ad executives meets Archie Goodwin at a Superbowl party; one of the ads during the game is his agency's work.
* Fade to Light are shattered for both the audience and Light himself once he figures out what L has done. The only person L is really fooling is himself.
* Fade to Silence just to watch him fight, suffer and die again and again for no other reason than its own personal amusement.
* Fad Gadget (an occasional collaborator with Einsturzende Neubauten) did used an array of glass bottles on "Collapsing New People" and a power drill on "Ricky's Hand". The rhythm from his disturbing "Immobilize" is a horse galloping.
* Fading Echoes. She believes that if she hadn't stopped to complain about her missing meal, Longtail would not have run off and went to fetch it. This sends her into depression.
* Fading into the Next Song — Songs on an album fade into each other.
* Fading Into The Stolen Light advances on Asuka and generally torturing her into insanity.
* Fading Suns, a highly-advanced state that fell apart under its own weight. The second, the Empire of Vladimir Alecto, was aborted when the Emperor was killed at his coronation, but it set the precedent that Alexius Hawkwood would use to build the current Empire.
* Fading Suns an alien creature called the "Scrup monkey" produces feces that are edible to humans. House Decados often bakes it into "fudge" as one of their least harmful practical jokes.
* Fading Suns, and even finding lost ones is difficult enough, let alone researching them anew. And then, those on the other side may have plans of their own.
* Fading Suns and thus extremely valuable so the attackers generally don't want to wreck anything. And there aren't too many manufacturers of guns or higher tech weapons left in operation.
* Fading Suns a psychic human has generally two options: keep it a secret, or join the Church-sanctioned Penitents. While the latter option genuinely helps some troubled cases, those who've gone through Penitent training often exhibit behaviour typical for a victim of heavy brainwashing.
* Fading Suns. But unlike most examples they had barely begun to explore their own system when humanity contacted them and they're now a subject race of House Hawkwood, though they're better treated than every other alien race in the Known Worlds. They also have a "dark" counterpart in their savage cousins the Ur-Ukar.
* Fading Suns cut through anything with ease. In game mechanics, this means they ignore any armor the opponent is wearing.
* Fading Suns due to the Church's attitude towards technology there is a great deal of demand for manual labor. The Muster Guild specializes in providing workers though most of them are temps or outright slaves while members get cushy supervisor positions.
* Fading Suns had the Grimsons. This type of genetically engineered Super Soldier not only had greatly increased stats over a baseline human, a Grimson also had a random number of biomods to augment the character further. Note that because Grimsons were genetically altered, they were forbidden to procreate especially with Grimsons of the opposite sex. There was no telling what mutations may be passed on to the offspring.
* Fading Suns has some powered armors, but these are rare and it's hard to get your hands on one. The most accessible ones are powered just enough to compensate for their weight (allowing you to wear it with no penalties as long as it has power), better ones outright enhance the wearer's strength.
* Fading Suns has the Muster guild, which offers many kinds of muscle for hire, but began as, and is still mostly made of, mercenaries.
* Fading Suns has the portal version with the added bonus of requiring "keys" to

access a given gate.
* Fading Suns. If you keep off their lawn, you're beneath their notice, but if you do, they'll vaporize you and you better hope they'll find it example enough for others.
* Fading Suns-inspired shields that don't kick in unless an attack does a specified minimum amount of damage. Nobles use them when dueling, the trick is to strike hard enough to hurt your opponent but not so hard their shield activates. Fortunately energy weapons just have a chance of "bleeding through" the shield.
* Fading Suns. It does not mean the night sky is noticeably dimmer, though — it's the change in brightness of stars having inhabited systems (and subsequent climate change on these worlds) that is the problem.
* Fading Suns. It fits snugly beside the Church's declaration that 'technology is evil'—except starships, computers, blaster guns (heaven forbid), personal energy shields, medical scanners, healing serum, planes, phones, lights, satellites, space stations, jumpgates, hovercars, SAM launchers, grenades, gravity emitters....
* Fading Suns moved the capital of the Empire to Byzantium Secundus, but Holy Terra (or "Urth") is still the center of the Urth Orthodox church.
* Fading Suns. Not so much expanding now: the Vau aren't as expansive or aggressive as the humans, but they could be called ultra-defensive.
* Fading Suns of the Second Republic and currently form one of the major powers in the known worlds. They include:
* Fading Suns or other kinds of fanatical fun. If the appropriate test is passed, the character receives bonuses to other tests until the matter in question is resolved. It may require some tact from the GM to execute it properly.
* Fading Suns, Psychics and Theurgists are prone to "Urge" and "Hubris" respectively.
* Fading Suns) restricted to medieval-level technology, while the upper echelons of the society are allowed to enjoy high-tech to the fullest.
* Fading Suns similarly has the option to outfit characters with cybernetic parts. What makes it interesting is that the available enhancements run the full technological spectrum, from simple metal and ceramic limb replacements, to synthetic flesh, to nanobots.
* Fading Suns some sects have started to allow psychics to "repent" instead of being burned at the stake.
* Fading Suns terraforming engines. Unfortunately, many of them are now failing.
* Fading Suns that allows Humanity to travel from planet to planet, connecting Known Space.
* Fading Suns the capital planet of the Empire is currently named Byzantium Secundus, previously it was New Istanbul.
* Fading Suns. The massive corporations essentially ran both Republics.
* Fading Suns, the Templar Avesti are the most prone to a Kill It With Fire approach. Their church's symbol is a holy flame. Avestite inquisitors and zealot monks wear fire-retardant robes with breathing masks and carry flame throwers when they do battle with mutated monstrosities.
* Fading Suns this is what happens to you when you piss off the Guilders.
* Fading Suns, this trope is invoked outright; Ur-tech such as the Jumpgates and Philosopher's Stones is effectively incomprehensible magic, plain and simple.
* Fading Suns. To make them appear extra-special cool with cream on top, the authors even gave them their own special alien martial arts style.
* Fading Suns uses a setting which falls nearly exactly into this trope. The extinct Ur have littered space with floating portals that allow for travel ans strange technologies, the Known Worlds are United under the new Phoenix Emperor, harboring numerous races amongst the humans. The Vau are the wise race living in their own world outside the empire. And constantly straining to get in the Empire are the Symbiots, a metamorphic plague/virus/infestation. Of course, space pirates, political conflicts and psychics manifestation abound.
* Fading Suns: Uses the trope, with many different examples. For instance "Urth" is the Holy center of the Urth Orthodox church while the Imperial Capital of Byzantium

Secundus is a Gate nexus.
* Fading Suns weapon, where each barrel fires at the same time - making this weapon an excellent choice for bringing down shields. Interestingly the Furystorm Chaingun is actually higher on the technology level than the Gatling Laser.
* Fad Super: A character based on an idea or fad that is currently popular.
* Fad Super: A character is designed to tap into an ongoing pop-culture phenomenon, only to lose relevance after the fad inevitably dies off.
* Fad Super justifies his dated pop-culture references and basis by having him be an old man who uses holograms to make himself appear young.
* Fae and be strong enough to be considered a true Fae, but often they get just a little bit of magic and a parent who might wonder off and forget to look in on them until they're a century or two dead.
* fae archer runs across. He can separate his shadow from himself, which in addition to doubling his firepower means that whenever either his shadow or his real self is threatened, it can momentarily teleport to the other's location and then back again to dodge attacks. The only way to harm him is to threaten both his bodies at the same time.
* Fae boon from Mab makes him as powerful as others think he is. If enough people think he can take on a dragon and win, he can. It also means he can simultaneously get smacked around by his sister, Wildy, who just sees him as her annoying sibling and herself as his equal.
* Fae decides to curse a mortal for offending them, they often don't have anything in particular in mind, so they mark their intended victim with glowing sigils wrapped around the wrist as a kind of magical IOU while they try to come up with a fitting punishment. In the meantime, the mark serves as a warning that anyone who tries to harm the bearer will earn swift retaliation from the Fae in question.
* Fae. It may have been millions of years ago. But what was left of her spirit found what was left of her magic, and became part of the teenager whose body had that magic, so she's back.
* Faen at least would like to put more emphasis on the "romance" part, and Ariel's feelings on the matter aren't yet known.
* fae Nuckelavee could infect horses, crops, and humans with a disease called Mortasheen.
* Fae, on the other hand, can have children with mortals or with each other, and how "immortal" the children are seems to vary. There are lots of different kinds of fae and not very many of them in total.
* Faeophobia setting, an event known as the Celestial Conjunction resulted in the return of magic and magical creatures to Earth. Since it's a setting for erotic stories, the magic and magical creatures are extremely sexual in nature.
* Faeophobia, supernatural beings from another world who are eager to interbreed with humans. Magic-fulled public orgies are fairly common.
* Faerfolc. Mysterious protectors of the forests, they and elves have a connection. They possess fey magick which can be beneficial or dangerous to anyone who comes across them depending on circumstances.
* Faerie (Arcadia, Alfheim, et al.) itself is another example. A place formed purely of the magic of dreamstuff, where reality only exists because everything in it has agreed to exist and interact. This is completely disregarding the fact that many of the Realms in Arcadia are
* Faerie Court series is made of this trope; her faeries are divided into four courts: Winter, Summer, Dark, and High (with the occasional solitary fae moving freely among the courts). Each court has defining characteristics, but the fae themselves are very much individual people with distinct personalities. Most, to some degree, view humans as inferior; the extent of this can vary, with some seeing them as wayward children and others as expendable playthings.
* Faerie glamour can be seen through by a wizard's Sight or by using magical ointment on your eyes. Or you can just throw a nail at the fairie in question and watch them drop anything and everything to get away from it; even the strongest of faeries are vulnerable to iron's touch, which breaks through their magic and burns on contact.

* Faeries1999 had: "Two human children from otherwhere, one foot wet, flaming hair, when they appear, the time is near."
* Faeries (1999) uses mostly traditional animation, but has a few sequences (flying over Faerieland, the Shapeshifter's final form) that are obviously CGI and stuck out like sore thumbs.
* Faerie's Aire and Death Waltz, including "insert peanuts", "light explosives now... and... now", "untie slip knot", and "release the penguins".
* Faeries also become more powerful with age. Their skills and power with
* Faeries cannot lie. Dresden notes, and tells one to its face, that the fact that they can't lie in no way has hampered their ability to deceive. In fact the inability to lie means most of them are very skilled at being subtly misleading.
* Faeries come at it from the other direction. They can naturally fly, but wear ornamental wings they make themselves as a form of clothing.
* Faeries Don't Believe in Humans, Either: Fictional beings believe humans to be fictional.
* Faeries Don't Believe in Humans, Either: Mythical creatures doubting the existence of humans.
* Faeries have a crippling weakness to iron. It burns even the most powerful Fae on contact, and mortals bestowed with their power (the summer and winter knights) lose it on contact with iron. It's noted that the term "Cold Iron" is purely poetic: anything with enough iron (or steel) in it will work.
* Faeries in general talk like this to Harry, when there's something they want him to know but are too involved in their intricate games of diplomacy. In
* Faeries' Landing is just about the personification of this trope, and even physically scarred the hero just to see him squirm.
* Faeries' Landing, Miranda (Medea) hates Fanta and frequently tries to one-up her, but Fanta really doesn't care much. Also, Yuri sees Fanta as a rival for Ryang's affections.
* Faeries' Landing stars a half human half faerie girl who is human on her father's side.
* Faeries' Landing, there's Fanta and the other faeries, then the gods and creatures in the faerie realm, then Ryang, his family, friends, classmates, and other human extras, and the 108 pairs of affinities. And all the characters from the past and the present...
* Faeries of Dreamdark never have the correct number of joints in the fingers.
* Faerie Tale Theatre gave the titular heroine a pet parrot. Of course it's the bird who repeats what she and her prince say to each other when the witch is visiting, giving the game away.
* Faerie Tale Theatre: Live-action adaptations by way of British pantomime shows.
* Faerie Tale Theatre puts a lot of emphasis on this trope. Sleeping Beauty grows up to be Bernadette Peters, while her prince is less than appealing. She uses her talents to "audition" for her soon-to-be father-in-law, who enjoys her performance and says she can marry his son. That being said, she would have been safe from the curse if she hadn't looked out her window and noticed how humiliatingly selfish and unimpressive the prince was; she then ran away and hid from him, and that's where she found the fatal spinning wheel. So in a sense, it is this trope that killed her.
* Faerie Wars by James Herbert Brennan is odd in that it uses two spellings ("fairy" and "faerie") depending on who is saying the term, most probably to distinguish between the "real" thing and the more mainstream usage.
* Faerûn. Evil adventuring parties tend to treat Faerûn like a big theme park full of low-hanging branches of XP.
* Faerûn's east coast at the Great Ice Sea does appear on some maps as well, although it generally fulfills the trope. Later maps do show the entire planet, however, so it's more a case that the Faerûnian continent 'traditional map' fulfills the trope, but the actual world and setting does not.
* Faery: Legends of Avalon) carries a hefty book around with him and hits people with it in combat. He also uses it as part of his spells, using it to swat magically-formed projectiles at enemies.

* Faery: Legends of Avalon, saying certain things to some characters — mostly joinable ones — will cause you to gain or lose approval with them. Usually, you gain approval by picking nice conversation options, although one of them likes it when you snark at her. If characters like you enough, they'll present you with gifts of equipment.
* Fae Tales is a series of original dark fantasy/explicit erotica. Gwyn ap Nudd, renowned warrior and king of the Seelie Court, and Augus Each Uisge, Unseelie predatory waterhorse, should have had nothing to do with each other - but dark secrets, ancient grudges, and a growing understanding between the two faes come together to change the course of events throughout the fae realms.
* Fafhrd and the Gray Mouser, although borderline examples occur earlier.
* Fafhrd and the Gray Mouser: Death is a bald figure in dark clothing, who has a quota of deaths every hour (by profession) and has never missed it.
* Fafhrd and the Gray Mouser: Fafhrd's ghoulfriend Kreeshka. Minor twist in that Leiber's ghouls are a race, not undead humans. Still, they look like skeletons with organs over them and they eat human flesh. Plus, they're "ghouls."
* Fafhrd and the Gray Mouser have their lives often controlled by their sorcerous advisors, Ningauble of the Seven Eyes and Sheelba of the Eyeless Face. Interestingly, Ningauble and Sheelba have more of a friendly rivalry than enmity towards each other.
* Fafhrd and the Gray Mouser, in Fritz Leiber's "Swords in the Mist", where the two heroes meet unexpectedly as the champions of opposite sides in an arranged combat. They use traded insults and challenges to covertly establish the rules of what becomes, unbeknownst to their respective employers, a staged combat instead of a battle royal.
* Fafhrd and the Gray Mouser series featured one villainous sorcerer who took his soul and hid it in an egg in a magical castle.
* Fafhrd and the Gray Mouser, Sheelba of the Eyeless Face is a maybe example - he always hides his face under a hood, but considering his name, maybe that's a good thing.
* Fafhrd and the Gray Mouser's setting of Lankhmar has beenused for multiple rpgs:
* Fafhrd and the Gray Mouser stories: "Lankhmar Ghouls" are perfectly normal, living, breathing humanoids who just happen to have invisible body tissues—except for their bones.
* Fafhrd and the Gray Mouser stories the Death of their world is something like a cosmic bureaucrat that answers to some vague pan-dimensional forces. He has to meet particular quotas of who dies within allocated time periods (measured in mortal heartbeats) and is only really allowed to do so by manipulating natural events. He can't snap his fingers and kill somebody unless they have a severe medical condition, but he can make sure that they might have a nasty incident with some badly maintained masonry. The exceptions to this rule are the main characters, who once attempted to steal his mask; since then he's had it in for them and has resorted to toying with reality by teleporting crazed berserkers into their living quarters.
* Fafner in the Azure: Dead Aggressor shows Kazuki, Soushi and the rest of the main pilots wearing the imposing navy-blue greatcoats with red piping, which boosts their Badass levels through the roof.
* Fafner: Right of Left OVA end up dead in the first one-and-a-half episodes of the TV series.
* Fafnir brings this up in when Tohru says she has no plans to return to their world. She doesn't have any problem with it.
* Fafnir puts instructions for performing actual curses that he has learned over his life into the doujinshi that he writes. They tend not to sell very well because he's more focused on putting in the curses than having a compelling story or good artwork.
* Fafnir's "Curse Anthology", his attempt at making a manga, is completely pixelated to the viewers. Tohru points out that he put
* Fafnir The Dragon, the title dragon acts like this because he is, simply put, not very bright. So word what you want from him carefully.

* Fagen's The liner notes describe the album as "certain fantasies that might have been entertained by a young man growing up [...] during the late fifties and early sixties, i.e., one of my general height, weight and build."
* Fag Hag: A straight woman who prefers the company of gay men to that of straight men or other women.
* Fag Hag teases him about it being the ultimate fantasy of bedding a jock, which he admits.
* Fagin's, "Reviewing the Situation", is this trope in musical form. Having realized that the life of a criminal, with all its "trials and tribulations", might not be the best thing for him, and he muses over possible alternatives: getting married, living in society, getting an honest job. Each time, though, he comes to the realization halfway through that the "solution" he's describing would not be an improvement, leading him to conclude:
* Fagin with Mr. Riah, who initially appears to be yet another Greedy Jew, but then turns out to be a subversion.
* FA Girl Innocentia is a catgirl, with her choice of hair-tone or mechanical ears.
* fagus sylvatica var. tortuosa, a beech species that grows in twisted shapes, was called "witch wood", as people believed witches to be responsible for the unusual shape of the trees. According to the Wikipedia article of 06.03.2016, the shape is due to genetics, though previously there was some speculation about earth radiation or similar factors of the dwarf beech's place of origin causing the crooked growth.
* "Fag" was also slang at British public schools for a younger boy who essentially acted as a servant to an older boy. While this no doubt included sexual favors in some cases, that wasn't the default assumption. Thus, it's not uncommon for a man in an older British work to say casually "Oh yes, I know him well—I was his fag at school."
* Fahrenheit 451 (2018): All transactions are done digitally by verification with one's fingerprints. Therefore dissidents are punished with getting their prints burned off by cauterization, effectively cutting off access to society.
* Fahrenheit 451 (2018): Beatty refers to ages past as the time when people believed in gods. That said, the Bible is one of just three books exempted from the ban, though we still see no sign of religiosity by anyone.
* Fahrenheit 451 (2018): Implied by Beatty, who despite being a fire chief in charge of book burnings is clearly very familiar with some, since we see him writing out quotes by heart when he's alone (most are very cynical, indicating he'd lost his former ideals).
* Fahrenheit 451 (2018) reveals that Cleveland's subway map is based on the city's actual light rail system.
* Fahrenheit 451, all of the rebels become these, each committing one entire book to memory so they can recite it if all copies of it are destroyed.
* Fahrenheit 451 early on; however, her influence on Guy Montag instigates the entire plot and every event that happens therein. (Some adaptations even write her back in later.)
* Fahrenheit 451 falls into Forgotten Trope territory. The TV sets in the movie were, in context of the fifties, ridiculously gigantic, and viewers would just look at them in awe of how unnecessarily large and room-centering they are. Today, TVs of such size are commonplace, and this is not something a modern viewer is likely to catch on to without knowledge of the original context.
* Fahrenheit 451 flavor. Calling NYC-XXX was how Montag got in contact with certain members of the Underground. The game also included numbers which, when dialed, gave useful information, utter garbage, or fake "hints" that would get you killed if you tried them.
* Fahrenheit 451 for the Firemen and typically of a dystopian novel, is a well-read intellectual devoted to his job of burning books. It's implied in the novel and more explicit in some adaptations that at heart, Beatty hates himself for what he has become.
* Fahrenheit 451. In the book she's abruptly mentioned to have been hit by a car. The movie adaptation had her survive and join the party at the end, and author Ray Bradbury approved and so used that ending for the play version of his book.

* Fahrenheit 451: In the movie, Montag explains to Clarisse that firemen wear a helmet with the number "451" because Fahrenheit 451 is the temperature at which book paper catches fire. This is never explained in the book and is instead said in the book's tagline.
* Fahrenheit 451 is the norm and books are considered both obsolete and a criminal source of unhappiness.
* Fahrenheit 451, Montag tries to read on the subway, but he's constantly distracted by a jingle for Denham's Dentifrice. He eventually screams at the radio to shut up, shocking the rest of the passengers who were singing along.
* Fahrenheit 451: No books! Deep thought in general, though not as incredibly illegal as books, definitely does get you in trouble.
* Fahrenheit 451 preferred her survival, and included it in the stage adaptation and semi-official video game sequel.
* Fahrenheit 451, where Montag's wife has a wallscreen TV set up so the announcer appears to address her by name. Actually the TV inserts her name in deliberate pauses made by the announcer, while distorting the vision around his mouth so his lip movements match.
* Fahrenheit 451 will stop at nothing to kill whatever it has been programmed to kill, using its acute sense of smell.
* Fahrenheit 9/11 has pointed out that this quote was never uttered by Orwell at all.
* Fahrenheit 9/11: Moore replays a female scream after images of destruction to emphasize how the government exploited the 9/11 attacks to manipulate people.
* Fahrenheit 9/11: This is certainly the opinion of the U.S. soldiers that Moore depicts in the film. A tank crew proudly tells him that they play rock music in the cockpit during engagements in the Iraq War.
* Fahrenheit, after Carla discovers similarities between Lucas' case and past murders, she visits Janos, the culprit of those past murders, at Bellevue Asylum in order to find out the link both cases.
* Fahrenheit, a mental patient you visit (while playing as Carla Valenti) has covered his room with creepy spiral drawings of a Mayan snake god.
* Fahrenheit, Carla and an old friend break out a tarot deck for fun. The entire event is scripted, rapidly becoming a total mood-killer as Carla's predicted future becomes more grim with each card turned over.
* Fahrenheit doesn't do anything aside from mention how he's found a possible new boyfriend at a bank. He has a slight lisp, but nothing too overdramatic.
* Fahrenheit has several Theory of a Deadman songs, with "Santa Monica" playing over the credits.
* Fahrenheit has three protagonists that can come into conflict with each other depending on your choices.
* Fahrenheit, have to uncover said evidence all over again. In a twist, the main piece (the knife) is hidden by Lucas off-screen, so the players have to actually look for it in the second scene.
* Fahrenheit: in the opening cutscene, the narrator proclaims that such an epic event in the world's history as described in the game could ONLY happen in New York City, "capital of the universe".
* Fahrenheit is narrated past tense by the main character. When you get a game over, though, he says things like "And that's the end of my story. I never cleared my name and I never found out why I killed that man".
* Fahrenheit like this, as the camera is terribly restrictive, and the player is forced to react to obscure prompts to find the single proper path, instead. The game also featured a brief, completely plot-irrelevant target range sequence.
* Fahrenheit), Lucas finds himself hanging on the outer side of his balcony after the showdown with flying furnishings in his apartment. When Marcus arrives, the player has to complete a minigame for him to pull Lucas up.
* Fahrenheit never uses a knife outside the opening sequence, he is depicted holding a bloody blade on every box art to underline the psychosis surrounding him throughout the game.
* Fahrenheit opens with David Cage himself instructing you on how to play the game.

* Fahrenheit originally had its sex scenes censored for an M rating in North America for consoles, with only one limited-release PC edition being released with an AO rating. However, the remastered edition, which is fully uncensored, managed to receive an M rating from the ESRB.
* Fahrenheit, or pull the kid out of the water and resuscitate him. Anything else results in the cop arresting Lucas and causing a game over. If you save the kid, this is referenced later when the cop admits to Carla that he could have made an arrest, but couldn't bring himself to do it right after witnessing such a selfless act. Carla says she probably would have felt the same way in the other cop's shoes.
* Fahrenheit possesses anyone for a sacrifice to find the Indigo Child.
* Fahrenheit put a very dark twist on the whole "random people meeting in a laundromat" trope: two random people enter a laundromat, then one of them stabs the other to death, slits his own wrists, and bleeds to death.
* Fahrenheit regard Lucas as a schizophrenic serial-killing pedophile hallucinating the events of the game.
* Fahrenheit, the player gets to try making a composite image of the protagonist. You're ostensibly supposed to try your best, but it can be more fun to add ridiculous mustaches and hairstyles.
* Fahrenheit, though it's only the main character's mind playing tricks on him.
* Fahrenheit to mess with customers because he doesn't like selling to stupid people, and once you pass it he straightens up, gaining a few inches of height, and turns out to have a deep Bronx accent with a voice like he's been smoking since he was born.
* Fahrenheit, with a brutal stabbing murder perpetrated on a random unsuspecting man at a urinal by the (possessed) player character during the opening cutscene that the player must then quickly clean and cover up.
* Fahrenheit, you can at one point drag a small boy out of a frozen lake and give him CPR. You can easily lose the segment if you're not fast enough, and doing so nets you a game over.
* Fai, Kurogane, and Fei Wang Reed are the only new main characters in
* Fail Army and lands on her face, while the other watches in bewilderment.
* Fail Better, the whole plot is about Lucia throwing destiny and, as many of her species see it, common sense to the wind. She proves them wrong in the end.
* FailBlog videos did this by playing audio from part of the featured video over the credit screen.
* failed 1981 coup was indeed a pregnant woman. She was also the first one to be released and able to tell what exactly was going on in the Cortes.
* failed 1991 coup in Moscow,, and audiences realized that something monumental was happening. Mainly because a recording of this ballet was the go-to film when one of the Soviet Premiers died.
* Failed a Spot Check: Character doesn't notice something missing or someone or something that shouldn't be there until it is too late.
* Failed a Spot Check: Failing to notice something important, different or dangerous despite being nearby.
* Failed a Spot Check: Is a common way for RPG runs to end. For example, in Lufia 2 Ancient Cave, you can fail to notice the stairs and end up in a monster room, where the run dies.
* Failed a Spot Check is oblivious to something that just about everyone else can see.
* Failed a Spot Check: Someone fails to notice something they should've before it is too late.
* Failed a Spot Check: Those who are oblivious to their surroundings (alarms, law enforcement patrols, witnesses) or to the evidence they leave behind (using traceable cellphones and/or unencrypted, compulsively saved e-mails, leaving fingerprints or DNA or being caught on surveillance cameras, etc, etc).
* Failed a Spot Check: When you've lost something right in front of your nose.
* Failed a Spot Check: You fail to spot something two inches from your face.
* failed attempt at a pep talk, Rainbow Dash screams in panic and starts ranting about how there's no chance she can pull off a Sonic Rainboom and win the Best

Young Flyers' Competition.
* Failed Audition Plot: A character fails their audition but learns to move forward and not give up.
* Failed Audition Plot: You fail an audition for your dream career, but find a reason to keep trying.
* Failed biotech company Theranos based almost all of its publicity on the Edison, a device that was supposed to be able to perform numerous blood tests from a single drop of blood. While the Edison was plagued with plenty of issues on the mechanical side, its actual tests were also woefully inaccurate because one blood drop wasn't enough to test with. Although the engineers asked for the ability to use larger samples, Theranos founder and CEO Elizabeth Holmes refused to budge from her one-drop policy. Holmes has an immense fear of blood, which may have played a role in her desire to use as little as possible.
* Failed Dramatic Exit: A character attempts to leave dramatically, but the mood is ruined because they accidentally hurt themselves in the process or end up having to return for a reason unrelated to their intended departure.
* Failed Dramatic Exit: A character storms off to show how pissed they are at someone, but the mood is ruined when the character has to return for an unrelated reason.
* Failed Dramatic Exit: Same as above, but when the drama is leaving your setting promptly on the note you wanted.
* Failed Dramatic Exit: Someone leaves out of anger, but the mood is ruined because they get hurt on the way out or end up returning briefly for a reason unrelated to their departure.
* Failed Execution, No Sentence: After repeatedly failing to execute a criminal, the judge gives up and pardons the criminal.
* Failed Execution, No Sentence and not only does this code live on, but sometimes will be presented in a sillier fashion.
* Failed Execution, No Sentence: Failure to carry out a death sentence results in the convict going free.
* Failed Future Forecast crammed into megacities. As a result cigarettes cost the outrageous price of a dollar a packet. Well, that would have been outrageous back in the 1950's...
* failed kill of Locke would have happened this way, if the gun had been loaded.
* Failed Metaphor:. Alternatively, the powers work great and make everyone's life better; so today's moral is that you should go get yourself some superpowers.
* Failed Metaphor: to revolt, leading to a utopian future where everyone is served by willing slaves. Go thou and do likewise, viewers!
* Failed Metaphor: would seem closer to faith. Alternatively, everyone completely accepts and never questions those elements. The lesson is that the supernatural is definitely real and totally obvious, and you should always believe it when you see it.
* failed.. Miracle Whip retaliated by showing two response ads during his show.
* Failed Pilot Episode revolves around three trolls from an underground civilization who are given super powers and head to the surface world to battle an evil troll wizard, befriending a female police officer in the process.
* Failed Princesses her, a sentiment that influenced their relationship even after they became friends.
* Failed Princesses, Nanaki Fujishiro and Miki are both gyarus with a knack for beauty and fashion, with Nanaki even appearing in a magazine. Unfortunately, they also have terrible grades, which results in them ending up in remedial lessons together some time after they end up feuding.
* Failed Princesses, this happens when Nanaki Fujishiro talks with her friend Izumi about Miki, a girl who cut ties with Fujishiro, prompting Izumi to cut ties with Miki.
* failed. Reviewed by PC Gamer, the magazine was quick to point out the low production values, relative lack of interactivity, and the game's incomprehensible storyline. Any River shut down shortly before the game's release. This format was one of the first kind of adventure game to have many titles on consoles.

Particularly early CD-based consoles where the sudden increase in storage space from cartridges meant movie could be easily compressed and the controls were simple. Some even made their way to DVD players, where the simple controls made them relatively easily playable.
* failed suicide, and the her that was sent to Gantz was actually a clone. When she gets sent back to the normal world, she sees that the other her is living normally at home, and she has no place to go.
* failed to exhibit this trope. He's making a point and bringing up Big Foot as an example, and then...
* failed to go off on cue, leading to some very tense moments where a live explosive has to be reset/made safe somehow.
* failed to notice mean to do that" reaction from them. Content since has been revised to avoid any sort of implication along these lines.
* failed to protect Konoka from drowning is left as an exercise for the class.)
* failed, who are now closer than ever while he'd been sleeping under his desk and want him to get over it already to join them as a team again. It takes his brother, Bolin guilt-tripping him over family just to get him out of his funk.
* Failing a critical mission objective will cause the mission to end (even if you are still intact), followed by a "MISSION FAILED" screen (instead of "GAME OVER") with a description of what triggered mission failure.
* Failing a spot check is also the ultimate cause of death for multiple characters throughout the series, the first being the
* Failing the final "Sudden Death" minigame during "Shy Guys Finish Last" results in Mario getting shot out of a cannon into the horizon as Olivia panics in the studio.
* Failing this test (or making someone fail) can be outright merciful. If you aren't going to hack it on the medical boards, leaving medical school having wasted (and maybe paid for) only one semester is a lot better than being two years in. If you can't make it in the military, it's a lot better to find out two weeks into your initial training than after you've wasted months or years (and maybe been injured) and the government has spent a fortune on you. Not cut out for grad school? It would be much better and financially less ruinous to get kept out or to be dropped early than to lose time and money. Many a "coulda-been" musician, actor, or athlete would have saved themselves a lot of pain if they enjoyed their hobbies and pursued a conventional career. Chasing the brass ring doesn't mean you'll catch it.
* Failing to complete either the Fire Cavern dungeon or the escape from Dollet before the expiration of the time limit imposed in those missions will result in a Game Over.
* Failing to distinguish between different branches of the military (e.g., using "army" to refer to any military unit), or mixing and matching different military branch ranks into one service (e.g., sergeants in the Navy or admirals in the Army - note that each branch of a military in each country has different ranks and customs.). In the wrong bar, calling a Marine "soldier" can get you punched.
* Failing to distinguish between the military and other government (CIA, FBI, police) and non-government (mercenaries) entities.
* Failing to find Yayoi before too long when she goes missing will get you told that it's too late, and that she killed herself due to Silent's infection before you could save her.
* Failing to kill the EZIC rebel attacking your booth on day 31, if you did not sufficiently cooperate with EZIC
* Failing to light a Super Jackpot during Raven Multiball leads to a short period where the player can restart it by shooting the left ramp again.
* Failing to make sure that the destination you think you input is the one the GPS accepted is another source of chaos — the story is told of a truck driver who meant to go to Spain and ended up nearly driving into the North Sea because of a name mixup.
* Failing to move past certain events in recent installments will replace the quotes with whatever you are supposed to do. One is reminded to "Hold on for dear

life" after falling to death while ice climbing.
* Failing to prevent the comet Damocles from colliding with the planet Eris (the president of Eris will then insult you)
* Failing to prove Simon Blackquill's innocence after he's admitted his guilt makes things spiral go
* failing to save. In fact, he blames himself more than he blames the guy who actually killed her.
* Failing to understand the basic organisational setup of the (modern) US Department of Defense and the roles and functions of its various leaders and component organizations (e.g. jointness and collaboration at the top is unheard of: the military services are fighting their own separate wars and the service chiefs report directly to no one but the President). Though this changes depending on the era (and depending on which nation you're talking about). In World War 2, for instance, the Department of Defense had not yet been established, and the branches of the U.S. military were more independent than they are today.
* Failing to understand the fundamental concept of the chain of command (e.g., having regular privates taking orders directly from the Commander In Chief in the field, or having a private appealing directly to the President to overrule his company commander's orders.)
* Failing water heaters are notorious for this - which is why a water heater generally should be placed outside of the house proper or in a garage with nothing next to it. Examining it for damage (especially rust, bulges, or sediment accumulation on the outside of the tank) on a regular basis is also a very good idea.
* fail iteration of the cycle by building a massive solar sail that would stop a neutron star collision.
* Fail Man - Hironobu Takeshita, after repeatedly getting himself killed (even on Easy Mode) while demonstrating
* fail miserably then taking up the sword from the fallen would-be hero, and then saving the day.
* FailRace (debuting on April Fool's Day), Alex decided to play a trick on the hunters by copying a distinct avatar of one of the hunters, down to replicating that player's usual custom car.
* FailRace is to drive various vehicles around deliberately punishing circuits until they break down.
* FailRace, owns a 1965 Plymouth Fury with a vintage NASCAR-style livery.
* FailRace's host Alex Day jokingly refers to these as "brown trousers moments," and he most often experiences them during near-collisions while playing various racing games.
* FailRace time (48 minutes), it's a given that Alex lost that game. He eventually became wise to this, and started adding otherwise unused filler footage to unsuccessful sessions in order to pad out the runtime past 50 or so minutes.
* Fail Safe, a political scientist (Walter Matthau) recommends that the president (Henry Fonda) allow an accidental nuclear strike to proceed, since it will cause the Soviets to simply surrender as a matter of ruthless efficiency.
* Fail Safe did not, well, fail safe. The radio didn't fail, the system did. The bombers could send and receive messages but they were trained not to accept tactical orders once past their Fail Safe point.
* failsafe failure — only the crew error. The cosmonaut on a week-long test in an oxygen chamber decided to brew himself some tea and turned on a hot plate. As he was scheduled to have some medical tests taken that day, he needed to clean and disinfect the electrodes' attachment points on his skin, which he did with an alcohol-soaked cotton swab, which he then proceeded to unthinkingly throw in the general direction of the garbage bin. Unfortunately the swab landed right onto the hot plate, and in a pure oxygen atmosphere of a chamber combusted immediately, starting a major fire. Due to the design of the chamber door it was opened only some 20 minutes later, when the cosmonaut in question, Valentin Bondarenko, already sustained third degree burns, from which he died a couple days later.
* Failsafe Failure radiant wave fries his machine's internal computers. In another,

Lelouch is badly injured because the seat activates when he doesn't have a clear vector of escape, making it bounce off the ground and nearby objects like a rubber ball; it's frankly quite amazing that he didn't get whiplash. Given a good vector of ejection however, KMF pilot blocks would deploy parachutes to lower its speed and safely set it on the ground.
* Fail-Safe for plagiarism...) Today if it's remembered at all, people tend to assume it's boring and stodgy in comparison, but it's actually a critically acclaimed drama.
* Fail Safe for the crew of the surviving Vindicator bomber, after a nuclear anti-aircraft missile lethally irradiates, but fails to destroy them. They decide to manually steer their bombs into their target rather than divert their damaged aircraft.
* Fail Safe happen because it's statistically likely that America would "win" and calls for a second wave with every other available nuke until he's put in place:
* "Fail Safe" has an asteroid is on a collision course with Earth, so SG-1 goes to set off an explosive on it and blow it off course. Then they realize it's a bad idea, but not before the timer is set and space debris busts the keypad, so they have to defuse it manually:
* Fail Safe, if they haven't received the go signal themselves. In this case it's an "active go" system, designed to send out an attack order - and it does so incorrectly, due to a subtle and unnoticed technical fault.
* Failsafes built into the Stargate network, as well as other Atlantean systems, have been mucked around and hacked so much by the Atlantis expedition (in order for Earth PCs and computers to interoperate) that they might as well not exist. Consider "Avenger 2.0" where Felger's code is none too secure, or where McKay's software updates "broke the Gate". Of course, it wasn't really broken, but nevertheless, there were glitches because of this (hence Sheppard's 40,000 year trip into the future and then some).
* Fail Safe the crewmembers of American bombers have a variation. Since taking off your mask and taking a pill would be difficult, they have a poison needle in a special pocket of their flight suits.
* Fail Safe: The President is on the phone, having ordered a nuclear strike on New York in order to prevent the Russians from launching their own nuclear attack following an accidental bombing of Moscow. The audience hears the squeal caused by the phone on the other end of the line melting.
* Fail Safe, where the Vindicator bombers are ordered not to transmit once they receive the Go-Code.
* Fail Safe. While the USA could have reciprocated, they considered the cost and morale-damaging effects prohibitive.
* fails her university admission tests... to the same sister... with similar results.
* fails him, and doesn't seem like the sort who'd inspire much loyalty. In the Punk Hazard and Dressrosa arcs, the readers see some of his higher-ranking followers, who seemingly treat him like family. Eventually, though, it's revealed that Doflamingo gathered together people who'd willingly sacrifice themselves for him, and sees no problem in using his Bird Cage to gradually crush the nation of Dressrosa, killing everyone inside- his enemies, innocent civilians, and even his companions.
* fails his classes and gets held back a year, something Rise had imagined happening during the Christmas celebration in canon.
* fails. Of the second plan we only hear the first part ("Kenny spits on the floor"), and the plan succeeds off-screen.
* fails, the troops decide that Aang and his friends should flee with Appa, while the rest of them surrender instead of fighting a battle that has become impossible to win.
* fails to defeat two Galactor mecha during their first round, and the first defeat almost gets the team killed as a result.
* fails to get a laugh and launches into an excessively detailed explanation of the concept of puns and why his joke was supposed to be funny.

* fails to see the humour in his prank, Billy says, "If you mix up the letters in 'funeral' you get 'real fun.'"
* fails, where the home team has a chance to win at the end but does not, this section would be longer. One famous example is the 1962 World Series. The Yankees were clinging to a 1–0 lead over the San Francisco Giants in the bottom of the ninth of Game 7 when Matty Alou led off with a single. Next came two outs and then Willie Mays' double into the right field corner, giving the Giants runners at second and third. The next batter, Willie McCovey, hit a screaming line drive—right to Yankee Bobby Richardson at second, who caught it to win the game and the Series.
* Fail to the King!, and again in a later chapter to prevent another from surfacing in the middle of an invasion. Both played largely for laughs, naturally - this is a Disgaea fic after all.
* Fail to win, in the most excruciating and humiliating way imaginable or
* Failure Frame: I Became the Strongest and Annihilated Everything With Low-Level Spells
* "Failure Is Not a Factory-Installed Option": Just as Steve and his friends are about to reach first-base with the popular girls, after setting up a drive-in, the cars Stan gathered are repo'ed and the girls leave with the repo man
* Failure is not an option - it is mandatory. The option is whether or not to let failure be the last thing you do.
* Failure Is the Only Option. Dead alternate selves are also an important part of the plot, as players have access to where they reside in the afterlife, the "dream bubbles", through various means and they usually aid the players and at times even influence the plot in a significant way.
* Failure Is the Only Option: If the success of the character implies a drastic alteration of the status quo of the series and/or the character itself.
* Failure Is the Only Option: No matter what the character tries, they'll never succeed in achieving their goal.
* Failure Is the Only Option, since the SGC's mission was to find alien technology to bring back to Earth to help build weapons against the Goa'uld.
* Failure Is the Only Option: Someone tries to succeed but always ends up failing vs. someone tries to fail but always ends up succeeding.
* Failure Is the Only Option: You have no choice but to fail because success would end the story.
* Failure Knight: A character failed to protect someone once, and is determined not to fail again.
* Failure Knight: A man's failure at something is only acceptable as a motivator, not as a source of remorse.
* Failure Montage, has many painful injuries showing how she is struggling with her training but her toilet mishap is clearly played for laughs.
* Failure to enhance a weapon does not drop the enhancement level at all nor will it break. Instead, you gain potential. Get enough and you'll be guaranteed to successfully enhance the weapon/armor by one level. Enchancement goes up to +20, with +10 being the limit for regular scrolls.
* Failure to Launch and his friends' situations are also not as they seem.
* Failure to Launch. The latter is (or at least was at the time the movie came out) a Norwegian slang expression for a grown man who lives with his mother, which makes sense in the context of the movie. But it's also the name of a dance, something which confused people.
* Failure-to-Save Murder: Someone is blamed for a death they were unable to prevent.
* Failure-to-Save Murder: When a character blames a hero for letting someone die, when that hero did everything in their power to save them.
* Failure-to-Save Murder: You are blamed for a death that you allegedly could've prevented.
* Failure-to-Save Murder: You're too late to rescue him, because he's dead, and it's all your fault!
* fainting and one instance of being knocked out that she's probably "been

unconscious for at least half this book."
* Fainting whenever he counted, even in his head, he kept finding things he wanted to count.
* Faint in Shock: The emotions (positive or negative) just got to be too much.
* Faint praise is considered a grave insult in Klingon culture as it implies the recipient is too weak to handle criticism. In "
* faint whispers of the line "I'm at the line, I see it all." This same line appears in its original form in the second to last song as a space probe begins to gain sentience. The final track begins identically to the first, implying that it an endless loop similar to that in "The Last Question" by Isaac Asimov
* Fai once tried to make Kurogane look less grumpy by doing this to him.
* Fair Blows the Wind, when a tall, weather-beaten Scot tells Tatton Chantry that he can lead him to the legendary sword master Fergus MacAskill, with whom Chantry wants to study fencing. The Scot is Fergus MacAskill himself.
* "Fair, Brown, and Trembling," the two older sisters refuse to let their sister out of the house for fear she would marry before them. When she succeeds in marrying anyway, her oldest sister pushes her into the sea and takes her place.
* Fair, Brown, and Trembling", Trembling goes to church, and a prince falls in love with her, and out of love with Fair. After she has a baby, Fair pushes Trembling into the sea and takes her place.
* Fairchild Republic A-10 "Thunderbolt II", also known as the "Warthog" fire. Broadly speaking, it haunts the nightmares of most tank operators that have seen one in action.
* Fair City storyline between Suzanne and Damien Halpin. In one scene, Damien is quiet and tearful after Suzanne has violently attacked him; leading her to start beating him again while screaming "Stop making me do this!"
* Fair enough, though, they used the weaknesses against Amazo, particularly Kryptonite.
* Fairest #22, one of Cinderella's mouse footmen sneaks into the ball. When asked his name, his eye falls on a tray being carried by one of the servants and he introduces himself as "Champagne. Marcel Champagne".
* Fairest, Aza, who receives rude stares and comments about her appearance and is implied to be descended from gnomes, has a handsome prince fall in love with her.
* Fairest character, including the part where she's showered with magical gifts and wishes by her Fairy Godmothers. To her everlasting displeasure, every wish got played straight, so only a few of her gifts are shown to be beneficial, or even remotely useful. While in the end she managed to receive supernatural beauty and allure (including a certain degree of sexual prowess by explicit wording in that sense), and the ability to excel in songwriting and playing musical instrument, having the "Wit of an Angel" means she that she lacks guile, and she's easily conned or tricked, and the wish for "the singing voice of a nightingale" actually stripped her of the ability to sing, as she can merely screech as a bird. Thus to her immense displeasure, while in the human world she was known as an accomplished songwriter and guitarist for an all-girls rock band, she never managed to took the lead, as her "blessing" was just a form of mystically induced selective mutism.
* Fairest is good for the health and good for the wealth," causing said gnome to leap up and run away. As is explained later, she did realize it was most likely a translation error, but didn't want to stick around in case she was wrong.
* Fairest of All: A Tale of the Wicked Queen. She'd put Snow White into a death-like sleep then have her buried alive. Alas, the Queen's plans went wrong.
* Fairest of All": Siofra likes rolling round things in her hands, like buttons. If she doesn't have one, her arms flap and flail around. Mahon stares into space and repeats what other people say.
* Fairest of Them All: A villain who will not stand for anyone being more beautiful than they are.
* Fairest of Them All question with the truthful answer of Boa Hancock, Coby gapes at his gall at not answering Alvida. It grows further when he blatantly insults her.
* Fairest's Queen Ivi, a foreigner who disbands the country's parliament, imprisons

people for minor slights, obsessively seeks approval, and would have probably started killing people if Ava hadn't saved the day.
* Fair Folk instead. A headsman's ax probably seemed like the lesser risk.
* Fair Folk. It has no aquifers to speak of, and thin and rocky soil; water comes only from infrequent fogs. The Metagalapans thus rely on extensive cisterns to gather what rain falls, and on herding goats, sheep and alpacas, growing mushrooms and trading with and raiding surrounding lands for food and resources.
* Fair Folk like the Kokiri. The round-eared mundanes we're familiar with usually either go unnamed or are lumped in as a variant of Hylians, as there's not much you can say that differentiates them from everyone else.
* Fair Folk. Of course, the resident blacksmith has no trouble with them. Granny also notes that modern Discworld residents, like those in Ankh-Morpork, have "iron of the mind": in other words, they're so jaded and skeptical that glamour wouldn't affect them; thus why elf encounters tend to stick to the more-rustic Ramtops.
* Fair Folk themselves, especially in the South but really anywhere/when they feel like it.
* Fair for Its Day: An older work presents views and ideas that sound backwards to modern audiences, but were progressive by the standards of its own time period.
* Fair for Its Day: A work is horribly racist, sexist, or otherwise bigoted, but is still considered progressive because mainstream society at the time the work was made was even worse.
* Fair for Its Day: Societies of former times also uphold values that modern audiences might see as too progressive for the era.
* Fair for Its Day: The full reform would fail, so you try an intermediate step.
* Fair for Its Day: The work's moral might not seem very open-minded today, but it was seen as pretty progressive back in the day.
* Fair for Its Day was originally given a rating of 18+, the equivalent of a NC-17 to 13+, the equivalent of a PG-13.)
* Fair for Its Day, with Brooks explaining that he had mixed up his dates and would never have intentionally shown up in this condition.
* Fair Game (1995) of said attorney all over Florida by bunch of renegade Russian spies plotting to steal hundreds of millions of dollars from shadow accounts for their own profit and using the boat that was being disputed over in said divorce as base of operations.
* Fair Game by three vicious kangaroo poachers. When they catch her, they "skin" her by tearing off her clothes, rape her, and tie her to their truck. Then Jessica gets pissed and turns their sadistic game around on them by setting traps to immobilize them and then killing them.
* Fair Game, Jessica's dog Kyla snarls anytime the hunters are in the vicinity or approaching, even if they cannot be seen or heard at the time.
* Fair Game Ringo attempts to assault Jessica after she disrespects his mother.
* Fair Game: When the hunters discover that Jessica has welded their gun together during the night, Sparks' reaction is:
* Fair Haven, a story about a man fresh-off of gay conversion therapy torn between fulfilling his distant father's expectation to inherit the family's orchard and his own dream of going to college complicated by sudden reignited flame with his ex-boyfriend.
* Fairies and demons trying to pass for human were traditionally betrayed by their tails or cloven hooves.
* Fairies and the Quest for Never Land, in which modern-day Wendy descendant Gwendolyn gets her turn.
* fairies are hybrids of angels and demons, and can also use magic. However, their magic differs fundamentally from the magic of warlocks.
* Fairies are often forcibly baptised into the church, despite their lack of understanding of Christianity. Indeed they seem to struggle with the idea that not all humans are Christians. Fairies particularly like and respect saints, who they regard as great magical beings who can be invoked for greater power.
* Fairies are vegetarians, and, if their society is not a utopia, they certainly think it is better than human civilization. Objectively it is not so different from

human civilization. Some fairies are dim-witted, some are noble, some shallow, and some treacherous.
* fairies don't like the fairies to do this, but they understand that if they don't, there is no way for them to survive. However, they prefer it when the fairies exchange small children than when they lure adult humans into the fairy realm and then no longer release them.
* Fairies' dust is a hallucinogen, elves' venom is a hypnotic and anesthetic, and incubae's is a dissociative.
* Fairies have a similar level of regeneration ability in the series, being somewhere between this and
* Fairies have to count every grain of salt if it is spilled in front of them.
* fairies (including elves) series are traditional, native-to-Earth fairies, with magic that does some things, but they're also very high-tech and in a distinctly sci-fi setting. A fairy space probe plays a part in "Atlantis Complex," among other things.
* Fairies in general, and Cirno specifically, fall into this category—as
* Fairies, just as obsessed with money and pissed off at the fairies for robbing him, doesn't have any reservations.)
* "Fairies. Knights. Princes. True Love. Think you know how the story goes? Think again..." —
* Fairies may have the most amusing of all immortalities — they are
* Fairies of the Shattered Moon, as the user often gains additional monstrous limbs in addition to the power boost.
* Fairies sometimes have sexual or romantic encounters with humans. Fairies can very often pretend to be humans, so that the respective person only learns in the course of the relationship that his partner is not a human.
* Fairies themselves. Almost any conversation involving them will bring up that in the original tales fairies weren't good or helpful but were supposedly all represented by the most sinister interpretations of
* Fairies. They're usually on poor terms with groups who advance civilization or despoil the wilderness, especially humans, dwarves and orcs, but may have a better relationship with more nature-friendly groups such as elves or hobbits.
* fairies. This also includes a long life expectancy, which is measured in centuries or even millennia. When Jace once said that Nephilim and fairies are both related to angels, but fairies are also related to demons, so that they belong to hell, the Seelie Queen replies that the real hell consists in getting old after a few decades and to die.
* "Fairies Wear Boots" is this in itself, but it gets worse if you picture said fairies
* Fairly common amongst New Republic fighter pilots, especially the Rogue and Wraith squadrons of the
* Fairly common among the Imperial Guard. When they're not being executed for cowardice, that is.
* Fairly common for grenadier soldiers from mid-17th century and until hand grenades with fuses became obsolete. Though they usually smoked pipes, not cigars. And yes, those grenades were about equally dangerous to friends and enemies.
* Fairly common in European history. Kings of England claimed to be legitimate kings of France, on the basis of the claims that Hundred Years' War were fought over in the Middle Ages, until after the French Revolution was well under way. This included the Stuart predenders who were subsidized by the actual kings of France! Kings of Spain still claim the title "King of Jerusalem," as in the Kingdom of Jerusalem, established (and destroyed) during the Crusades.
* Fairly common in folk music, both classical and neo. There's "The Resurrected Lover," "Lover's Last Chance," "The Long Black Veil," "Steer By The Stars," "When I Sing About You"...
* Fairly common in Swedish thanks to people forgetting the rule that compound words have to be written as one word. Some classic examples include "Rökfritt" (No smoking) being written as "Rök fritt" (Smoke freely), "Djupfryst kycklinglever" (frozen chicken liver) as "Djup fryst kyckling lever" (profound

frozen chicken lives), "Kassamedarbetare sökes" (tellers wanted) as "Kassa medarbetare sökes" (crappy co-workers wanted) or "brunhårig sjuksköterska" (brunette nurse) as "brun hårig sjuk sköterska" (brown hairy sickly caretaker).
* fairly convincing model of how the first cells might have formed on earth doesn't help.
* Fairly early in the game, we discover that Red XIII, who previously appeared to be an ancient and mysterious being of alien intelligence, is actually
* Fairly early in the manga, Ako tells an aged-up version of Negi that she envies Negi because she feels like she's just a supporting character and he's the main character. She is, of course, absolutely right. Negi counters that even if she's a minor character in someone else's story, she's still the main character of her own. As she was the main character of
* Fairly early in the manga, when it looks like he's exhausted all other explanations, L does briefly consider, in a very general way, the possibility that the "Kira" phenomenon really is of some kind of divine retribution. However, after giving the facts a once-over, he concludes that the case still sounds a lot more like a human with paranormal abilities and a god complex than any god or God that he can take seriously based on present evidence.
* Fairly early in the run of the webcomic, Davan gets sick of hearing his neighbour's loud sex noises — not so much for the noise, but because it's very obvious that the woman is faking it. He finally storms over to them and angrily gives the man detailed written instructions on how to please a woman.
* Fairly easy to imagine that this should happen in many games, when the only thing that averts the trope is the game's (or writer's) inability to account for who's around at a given time. For instance, in
* Fairly English Story: Invoked by name during the Priestess Full Moon.
* fairly good-hearted perceptive, going into detail about Bowser's fight with Donkey Kong.
* Fairly innocent, but there IS a scene that has Helen grab her husband's ass from a distance that makes one think about the possibilities. Also implied in their
* Fairly justified for the visually impaired. To discover the layout of rooms/hallways, constant outlining is all but required for the first few trips. While experienced travelers can typically avoid the more painful collisions, the fact is it's bound to happen regardless. Most take it in good humor.
* Fairly Legal. The main character is a mediator and her ex-husband works for the DA, so naturally, they butt heads.
* Fairly Legal, whose devotion to her work partially caused the break-up of her marriage.
* Fairly obviously: "It's the End of the World As We Know It (And I Feel Fine)" by
* Fairly OddParents, after chimps become the dominant species on earth (long story), a glob of brown gunk gets thrown into Wanda's face, to which she groans, "Please be mud."
* Fairly OddParents and Shallow Grave being fired at the end when Timmy stages it to look like he had been with an adult the whole time (which he technically was...just one that was in the form of a kid), implying there are at least some limitations of school jurisdiction.
* Fairly OddParents called an anti-fairy. They fight for the right to have godchildren but are usually stopped by fairies. Their main interaction with humans is causing bad luck on Friday the 13th.
* Fairly Oddparents causes a herd of deer miles away to look up in alarm.
* Fairly OddParents Elvis is shown to live in a secret underground kingdom at the Dimsdale beach.
* Fairly Oddparents episode "Crime Wave" Mom and Dad decide to have a prune juice drinking contest after they lock Timmy in the bathroom to force him to take a bath. Towards the end of the episode they are both doing a potty dance as they try to get back in.
* Fairly OddParents episode Father Time, it appears Timmy's predecessor under the Fairy God Parents was a bespectacled boy named Billy. After Present Cosmo and Wanda

show that computers displaying lava lamps on the screen are more entertaining than actual Lava Lamps to the Past Cosmo and Wanda, Billy passes by and mentions the idea of having all computers connected through something called "The Internet", but Present Cosmo tells him it should be called "The Timmy". Past Wanda then mentions little Billy Gates (Bill Gates) has the craziest ideas. It does end up being called The Timmy, and his name changes to Internet.
* Fairly OddParents episode, "Timmy's Secret Wish", Timmy wishes for his own groupies that will constantly cheer for him. However, during Timmy's trial, the groupies will not leave Timmy alone with their constant cheering for him.
* Fairly Odd Parents episode where Timmy wished that he was always right, Mr. Crocker asked him how many states there were in the US and Timmy said 49, Just one number short of the actual number. Due to the nature of the wish however, North Dakota and South Dakota are suddenly united into one state, thus making Timmy right.
* Fairly OddParents has in example in the episode "Father Time" where Timmy melts his dad's trophy with heat vision. When his dad wishes for heat vision in response, Wanda has to stop Cosmo from reflexively granting the wish.
* Fairly Oddparents has this reaction after diving through a weird portal.
* Fairly OddParents has this reaction to the Fool's mean-spirited pranks from the start, but Timmy thinks they're funny enough... at least until one of the Fool's "pranks" almost horribly kills his parents, at which point he breaks off the deal and states the trope name almost verbatim.
* Fairly Oddparents have Vicky defending Timmy because only she's allowed to make him miserable.
* Fairly OddParents, is about Timmy having to rescue the Crimson Chin.
* Fairly Oddparents is considered to be attractive by nearly everyone at Dimmsdale Elementary. She's also one of the tallest students in her class.
* Fairly Oddparents magical beings are subject to getting drunk on sugary substances like candy and soda rather than alcohol.
* Fairly OddParents makes him extremely popular, to the point where Trixie appoints him as her boyfriend. When Timmy remarks that this doesn't make him feel anything, a spurned Trixie starts dating Chester instead to spite him. Naturally, this doesn't work, and Chester doesn't like it either because girls make him break out in hives.
* Fairly OddParents of Timmy Turner's main arch-enemies, and by extension, indirectly responsible for Timmy himself gaining fairy godparents and kickstarting the entire series.
* Fairly OddParents: One episode has Timmy wishing that he could play basketball so he could pay for a new V-Cube. He spends the episode playing for the Dimmsdale Ballhogs and after earning the money and teaching the team to put their egos aside, everything reverts to normal.
* Fairly OddParents parodies the coat from the Matrix in the Wishology trilogy. Believe it or not, he does look cool.
* Fairly OddParents, running on a treadmill to power a generator the TV and console are plugged into, a steak hanging on a hook in front of him:
* Fairly OddParents-style Muppets (in fact, when they jump through the TV, a hand can be seen pulling their puppet forms out of frame).
* Fairly OddParents, the episode "The Masked Magician" has the Crimson Chin throwing the Bronze Kneecap out of a diner and into jail.
* Fairly Oddparents, Timmy changed bodies with Vicky's dog Doidle. When in Timmy's body Doidle sounded like Timmy and when in Doidle's body Timmy could only bark/"speak dog" and there's what's obviously a voiceover to let us know what he's really trying to say. This also prevents him from changing back, as he can't speak to make the wish, until Doidle in Timmy's body does it for him.
* Fairly OddParents: Timmy does this to Cosmo in an episode when he was being lazy.
* Fairly OddParentsTION!" while Wanda is at a spa. When Wanda gets home, Timmy and Cosmo are in Timmy's room, seemingly untouched by the apocalypse going on (and the only thing that is untouched by the apocalypse), playing Go Fish, with this line:
* Fairly OddParents was picked before him) to the point where he got Cosmo and

Wanda to make him the most wanted kid in the world. Unfortunately, "most wanted" has another meaning...
* Fairly OddParents: When first introduced, Chip Skylark's fans were exclusively teenage girls..."and Timmy Turner's Dad."
* Fairly OddParents when he gets upset his screaming and yelling can get very shrill and grating.
* Fairly Oddparents, which debuted long after Sparky was introduced to the series), and the live-action movies treat Tootie as the only potential love interest Timmy ever had (Trixie, for instance, isn't even mentioned in them), among other things.
* Fairly Secret Army can be considered this, as it turns out that they are not Marxists, but have chaos as their AIM (with some bickering about whether they represent Old Chaosism or Middle Chaosism).
* fairly short-ranged weapons. They will often slowly drift past each other, or park within arm's reach of each other, and trade beam and cannon-fire until one of the ships bursts into flames and explodes... You can even order the ships into formations, one of which takes the traditional sea-bound Line of Battle and transforms it into a 3D Wall-of-Battle for much the same effect!
* Fairplay, Colorado for the fictional South Park. Fairplay is located in southern part of Park County and several local institutations such as the school and police station are labeled as "South Park".
* Fair-Play Villain: An honorable villain who prefers to give the heroes a chance.
* Fair-Play Whodunnit. They can create barriers that prevent people from doing things that would violate Knox's Decalogue, which can be broken if one can figure out a way to do that thing without breaking any of the rules (such as figuring out how someone left a locked room without using a secret passage).
* Fair-Play Whodunnit: You know what the detective knows, and if you're smart enough, at a certain point, you can solve it ahead of him without being Genre Savvy.
* Fair-Play Whodunnit: You know what the Master Detective knows, and if you're smart enough, at a certain point, you can solve it ahead of him without being Genre Savvy.
* Fairport Convention, Martin Lamble is credited with playing "stacked chair backs" on one song.
* Fairport Convention the British folk-rock movement, although the album peaked at only #17 in the UK and did not contain any breakout singles.
* Fair To Midland is sometimes impossible to understand. A few good examples would be
* Fairune causes the tundra she was imprisoned in to turn into a sakura grove.
* Fairune has the mid-game mook Maneater, an ambulatory pitcher plant.
* Fairune has the Shadow mooks found in the little patch of ocean ruins in the overworld.
* Fairune has this appear in the Administrator's Tower, operated by a Black Knight and a Silver Knight.
* Fairune is Cubes - block-shaped mechanical drones - of increasing model number.
* Fairune series. The only difference in the lot is their armor color and detail denoting their rank.
* Fairune she was imprisoned in, and bolts for the exit teleporter. Upon reuniting with her at the Entrance, she has this to say:
* Fairune. The Knight enemies inhabiting the Tower areas of both Fairune 1 and 2 may also count, if they're not homunculi or robots.
* Fairune, the second region of the game was renamed from Snowy Fields to White Lands.
* Fair Warning: The serial killer at the end of this novel kicks this trope up a notch, hiding in the trunk of Jack McEvoy's SUV before opening the hatch to the back seat.
* Fair Warning: The serial killer bad guy kills his victims by Neck Snap, then stages a scene to make it look like suicide or accident. The police aren't usually fooled—you can't really snap your neck from falling in the shower or hanging yourself with a one-foot drop.

* Fairway Rock, in the Bering Strait southeast of Little Diomede Island. Slightly larger than Rockall, at 0.3 square kilometers, but basically the same thing, a tiny rock far out at sea lacking either sand or palm tree.
* Fairway Solitaire 2 has an interestingly Chip-and-Dale version of an evil laugh.
* Fair Weather Friend: A character's friend ditches them when things get tough.
* Fair Weather Friend: A person who has a tendency to flake out when their "friends" need help.
* Fair Weather Friend: Has a tendency to flake out when their "friends" need help.
* Fairy, an 1897 Gipsy class destroyer, which on 31 May 1918, rammed and sank a rather larger and more modern (albeit slightly damaged) U-boat (there's debate over the actual designation, some claim it's UC-75, others UC-51). The ship was lost as well, but it was probably one of the few modern instances where the rammer inflicted more financial damage on the enemy than on itself.
* Fairy BattleA friendly monster disguised as a random encounter that does something other than attack your party.
* Fairy Bloom 1: It's depicted on the protagonist's art in the manual.
* Fairy Bloom Freesia: Freesia gets them when she jumps with a magical boost from the wings.
* Fairy Bloom Freesia: The things that award achievements include defeating a large number of enemies, dealing high amounts of damage in a single hit, to getting a very high combo count;
* Fairy Bloom: V3.03 has red versions of the protagonist as the enemy horde's components.
* Fairy Companion, Dodo, runs off due to the former's carelessness; the first time is when she makes Dodo cry after calling her out on incompetence while the second is when Dod runs off in a huff after being called out on...incompetence.
* Fairy Companion: Overused to the point of being considered a cliche in video games.
* Fairy Cube has read every book that has any information on fairies since childhood. When Kaito transports him to the Otherworld and Ian has to proceed to get back out, he uses his knowledge to fight, using a pair of iron scissors that are an effective weapon against fairies and gets Ainsel across a sweetwater river so that the Nuckelavee chasing them can't follow them.
* Fairy Dance arc, while having a kendo match with his sister in the real world, he's able to keep up with Suguha (who is a national-level competitor)... until he tries to perform a Sword Skill, which requires holding a pose and waiting for the system to trigger the activation.
* Fairy Dance Of Death (ALO) has seven schools of Elemental Magic — the basic four, plus Holy and Dark. And there's Illusion, which works more-or-less like the others. Any player character can learn any of them, but six of the nine races have elemental affinities which give them big advantages in doing so.
* Fairy Dance Of Death, and then disappears, making her the new faction leader. Other players only know the last two, which are shocking enough. As for Sakuya,
* Fairy Dance of this setting, by giving Kirito the tools he needs to take the bastard down.
* Fairy Devilmother: Not all immaculate wish-granters are there to give the baby gifts.
* Fairy Devilmother that is more of a detriment to their godchild than a saving grace, usually on purpose.
* "Fairy dust". This was done as a response to children injuring themselves trying to replicate the stunts on the show, and to discourage any future children from following suit.
* Fairy Dust to her young stepson. At the end, she convinces him that he can fly like Peter Pan, and lures him into jumping off an 80-foot balcony so that her own child can inherit the family estate.
* Fairy Fencer F asks Fang if he notices anything different about her. Fang says she cut her bangs, but she replies that her skin is silky smooth now because Tiara taught her how to take care of it and comments that Fang is "bad at noticing changes."

* Fairy Fencer F does what it can to fix this, spreading a similar cutscene out across a brand-new introductory dungeon, but it still has to cover the same points and the dungeon itself is a slog thanks to the dull prison design and only having one enemy type. (Both games also suffer from a deluge of often-redundant tutorial slides, but these are delivered in-character by Eryn, who annoys the other characters doing the same thing in speech.)
* Fairy Fencer F, Fang agrees to collect the Furies if and only if this condition was met. Later in the game, he adopts this mindset permanently, and it fuels everything else he does.
* Fairy Fencer F her fairy partner Bahus starts to freak out and demand her to put her clothes back on and she complies with reluctance.
* Fairy Fencer F in which we learn that his robotic fairy partner, Ryushin, is somehow absorbing his bodily functions.
* Fairy Fencer F starts with a battle between the Goddess and the Vile God.
* fairy for most of her life. However, it's implied that she would be able to fit in had she paid better attention during her "So You're a Human Now" orientation classes.
* Fairy Girls, which as the name implies, has the female members of Fairy Tail as the main characters.
* Fairy Godmother: A character, often female, who magically helps the protagonist.
* Fairy Godmother is generally helped by her dead mother in some way, or by some magical beings whose good will she's earned. Even when she appears, it's not that "fairy godmother" is a type of supernatural being akin to a "guardian angel", but rather that a character's godmother, someone everyone in medieval Christendom would have and would already know as a close family friend, is unexpectedly revealed to be a fairy in disguise.
* Fairy Godmother simply because it's just so useful that writers can't resist it, although they often disguise the fairy godmother as something else and play it for comedy.
* fairy godmothers (in a card game). Her precise age is unknown, but she's definitely an old lady and she's definitely cool.
* Fairy Godmother Tycoon" Not to mention the tip, "Help, I'm trapped in a tip-writing factory."
* Fairy Godparents are restricted to a large list of rules listed in a gigantic book titles 'Da Rules'. Cosmo and Wanda would pull out the rule book any time Timmy plans on making a wish that would break the rules. It's never said how many rules there are, but
* fairy godparents, but it's not like his parents know that. And what about the other kids Vicky babysits or often meets? And her poor little sister...
* "Fairy Gold" has an elf get a human to kill a troll in return for fairy gold. It does the usual effect of vanishing — except that by the time it does it, it has moved full circle around the town, making many people happy by letting them buy something by selling something they were encumbered with. There's laughter when it vanished, but it's not quite clear whether the elf lord appreciates what he did.
* Fairy Gone, a government office that reports directly to the Prime Minister and is tasked with investigating crimes involving the illegal usage of fairies.
* Fairy Gone were childhood friends until their village was burned to the ground and they ended up separated from each other for many years.
* Fairy Gone, which is set on a continent that has recently concluded a massive war that ended with one empire dominating and annexing every other country. Several of the major characters are former soldiers from these now non-existent countries, and not all of them are happy with the new status quo.
* Fairy is noted to beg for forgiveness in its Pokedex entry, then stab their opponent with their hair once they let their guard down.
* Fairy Knight Gawain stands at a whopping 6'2" and is shown in her official art to have powerful thighs, abs, and massive breasts under her armor. According to her backstory she's had many lovers in the past,
* Fairy Knight Lancelot is naturally so fast and strong that she never had to train a day in her life to be practically unbeatable. She has Eternal Arms

Mastership, but it is noted that she does not benefit from it at all since she has no fighting skills to lose.
* Fairy Liquid detergent used the same jingle for decades: "Now hands that do dishes can feel soft as your face, with mild green Fairy Liquid".
* Fairy Musketeers. Following the unexpected success, the resultant TV show is chock full of blatant plot changes to accommodate merchandising.
* Fairy Musketeers revolves around the seven mysteries. They all turn out to be caused by the heroine, Akazukin.
* Fairy Musketeers takes place in two worlds, the world of technology and the world of magic. The two worlds were once one, however were split into two by 'God' after a single human proved just how terrifyingly much potential humanity had if they were given access to both technology AND magic.
* Fairy Oak is hopeless at math. So much she is willing to break the Magical Law in order to scape a pop quiz.
* Fairy Oak series, Telli was an admirer of Tomelilla, because of all her knowledge and achievements in the field of Magic. She ends up working for her, as the babysitter of her nieces, a scenario she had fantasized about when she decided her career path.
* Fairy Oak series, Vanilla is nicknamed "Baboo", after the first word her twin sister ever called her; and Lavender, "La", which is a product of their aunt's talent of pruning names.
* Fairy Oak, we have Crocus Pills, Elderberry Barks and the Mc Load brothers. They have the added bonus of being able to make things (clothes) disappear.
* Fairy Tail: 100 Years Quest, though the former falls first and gives their opponent the credit for the victory.
* Fairy Tail: 100 Years Quest watching is left horrified at the sight.
* Fairy Tail about the concept of paying for food. This incident is what convinces the trio that they need some time to adjust to the norms of the real world on their own time before they join the Fairy Tail guild.
* Fairy Tail: According to a flashback, Bisca Moulin used to be a criminal under the alias Moulin Rouge. One day, Erza Scarlet beat her in a fight. Bisca got a crush on her, renounced her life of crime, and joined the Fairy Tail guild to be near her. Bisca eventually married Alzack Connell and had a kid with him, but she still greatly admires Erza.
* Fairy Tail, a cute and adorable little girl who loves playing at the guild with the rest of the wizards, especially her parents.
* Fairy Tail adamant on bringing said cat back with him. Do note said "Cat" is one of the most badass animals to ever grace a manga's pages. In this case however, it's less about cuteness and more about, as his two fellow Dragon Slayers have cat companions with them, he figures he's lacking as a Dragon Slayer if he didn't find one as well. Pantherlily's badassness is exactly why Gajeel likes him.
* Fairy Tail after a defeat by one of the mooks-with one hand tied behind his back just to prove that the last loss was just good luck on his opponent's part. However, he's convinced to go after the big bad instead.
* Fairy Tail. After Lyon falls in love with Juvia, Juvia also imagines that Gray is in love with Lyon.
* Fairy Tail: All over the place to cover up consistency errors. Just read the Q&A sections at the back of each volume.
* Fairy Tail allows Happy and Charle to regain their confidence and their ability to fly.
* Fairy Tail and can't wait to get out. He's once so out of it that he keeps asking even after they've arrived at their destination.
* Fairy Tail and Erza just overpowers her opponents, Gray uses his brain to defeat his opponents and outsmarts them.
* Fairy Tail and fights alongside Jellal and other former Dark Guild members as part of Crime Sorciere.
* Fairy Tail, and go on with their lives. When he comes back in a later they're all shocked.
* Fairy Tail and the corresponding anime episode 87 between Lucy and Coco.

* Fairy Tail, and they lose their reputation by losing six consecutive years of the Grand Magic Games in a row. Of course, the lost guildmates finally return after seven years and things begin to improve.
* Fairy Tail anime/manga doles out some humorous abuse to protagonist Lucy Heartfilia, including a pillow to the face that sends her through a door and into a rock outside, and various evil women like Angel, whose post-battle struggle for survival is a bit of a joke.
* Fairy Tail anime, sometimes with blue lines coming out of the characters who turned white.
* Fairy Tail, anything a guild owns and all members constantly sport the guild symbol, usually as magic tattoos. Treasure Hunter guilds also have them on their clothing.
* Fairy Tail appears to be fat, but she can use her gravity-modifying magic which causes her to turn into a slim, more attractive girl.
* Fairy Tail arc in season 3 changed usually depending on who was the focus of the episode.
* Fairy Tail are not ones you would notice if you didn't know to look.)
* Fairy Tail (a seal which broke before the end of the fight), leaving no explanation for why he did not lose two or three vital organs. Just to makes this even more ridiculous, he then fights better against his opponent than he ever did uninjured and starts by beating the hell out of him with just his fists.
* Fairy Tail. As Gray protests that it's not true, Juvia points out that he's in his underwear.
* Fairy Tail: Aside from the prepubescent Wendy and the average-breasted Levy, every female character has very large breasts. Oddly enough, at one point Levy was drawn to have large breasts.
* Fairy Tail: A teenage wizard joins the titular guild and helps them out with their quests. It starts with missions for money, some stages develops into always greater scope, that has an entire world at risk.
* Fairy Tail. At one point, Lucy asks him to make a fire, but he replies that he doesn't have pyrokinesis. A few minutes later, he figures out what she really wanted and makes a fire by launching his arrows at some machines and making them explode.
* Fairy Tail because he sees his mother suffering from it in the distance.
* Fairy Tail between these two encounters, which Lucy uses as proof that she can be trusted.
* Fairy Tail between Wendy and Sherria, who both take turns on either side:
* Fairy Tail. Black Mage Zeref wrote a bunch of books infused with magic that allows people to accomplish truly awesome and terrifying feats, such as demon summoning and time travel. Each Book contains the rituals and magic necessary to summon a different demon.
* Fairy Tail blocking one of Lucy's attempts, saying her battle technique needs work.
* Fairy Tail, bluntly turns her down in Chapter 338, only for her to take it as him "toying with her affections".
* Fairy Tail Both boys are having a very intimate moment with one another while naked and taking a bath. Both are blushing and become seemingly aroused and hard while ogling at the other's phallus. Sting eying Rogue’s with a lecherous gaze and expression of admiration while Rogue’s jaw is wide open being deeply astonished and turned on unable to take his eyes off Sting’s.
* Fairy Tail both Sabertooth and Raven Tail have rather cruel senses of humor. Raven Tail gets their kicks making things hard for Fairy Tail and laugh when one of their members destroys the prized(?) possession of one of the less intelligent characters. Sabertooth (minus Rogue) tops this by laughing when one of their members physically tortures Lucy in front of a huge audience because she gave a friendship speech.
* Fairy Tail breaks out like it normally would, he quickly feels right at home.
* Fairy Tail) by the Council to ensure they wouldn't go back to their evil ways.
* Fairy Tail, Cana briefly gained Fairy Glitter, one of the three ultimate magics

of her guild. However, she got it only because she found the place where it could be bestowed upon her before the others and in a time of need. It turned out that she was incapable of using it correctly and, in the end, she's defeated and she loses the magic some time later, since it was a short time loan. Later, during the Grand Magical Games she is lent Fairy Glitter again so she can win a contest. Cana is able to use it properly the second time, proving that she's become a better wizard since the previous attempt.
* Fairy Tail: Cana drinks thirty percent of the liquor drunk by the Fairy Tail Guild from a giant barrel. Bear in mind the guild has dozens of members and not many seem to be teetotallers.
* Fairy Tail: Celestial wizards specialize in using magic Gatekeys to summon celestial spirits, magical beings based on the Zodiac and constellations. Main character Lucy Heartfilia is one such wizard, while others include Duke Everlue, Karen, Angel, Zoldeo, and Yukino. It's inverted with Caprico (the human-spirit hybrid of Zoldeo and the spirit Capricorn), who uses magic to summon humans.
* Fairy Tail chapter 545.5. Juvia tries to invoke this by spoon feeding her beloved Gray, but he, already oblivious to her affections, is even more put off by how horrible the food is.
* Fairy Tail characters, and then did a crossover between the two stories. Guess which two characters never even get mentioned?
* Fairy Tail characters can get impressively strong, even without accounting for the magic anyone can learn in this setting. Chapter 7 treats us to a martial artist strong enough to wreck walls and floors with his giant frying pan. Natsu defeats him easily.
* Fairy Tail come from friends of Mashima's. Supposedly, Gray's stripping came from Mashima himself. In addition, Joy Fullbun, Chico=c=Hammit, and Wang Chamji appearances are based on his assistants.
* Fairy Tail, costing Saber Tooth the lead they've held since the very start of the tournament.
* Fairy Tail culminates in Natsu's showdown with Zeref, followed immediately by him working with the other Dragon Slayers to destroy Acnologia's spirit in the Space outside of Time, while Lucy leads all the other wizards in keeping his rampaging body from destroying the world.
* FAIRY TAIL - Despite already having an English dub by Funimation, Gust opted to keep the original Japanese audio only.
* Fairy Tail, despite the fact that he's seemingly spent a very long period of time living outdoors in an area with a tropical climate, and ought to be well tanned.
* Fairy Tail. Downplayed in that it's still a fun universe - it's a world built up on how awesome it is to test magic with your friends - but it takes a while for it to sink in that a lot of these missions are really dangerous.
* Fairy Tail: Dragon Slayers can, in addition to normal food, consume the element that makes up their magic to quickly restore their magical power and sometimes as a substitute for normal meals. This trope thus comes into play for Gajeel Redfox, the Iron Dragon Slayer, who is often seen eating from a bowl of nuts and bolts during his downtime.
* Fairy Tail during a filler arc, Fried uses his swordsmanship to turn some flying fish into delicious-looking sushi... unfortunately, it does nothing to improve its absimal taste.
* Fairy Tail. During the Grand Magic Games arc, Lyon, Gray's rival and fellow disciple of Ur, makes advances on Juvia, who's madly in love with Gray, even if he doesn't notice. Around this time, Gray gradually starts to notice Juvia's feelings for him.
* Fairy Tail: During the Grand Magic Games, Toma Fiore dons the identity of Mato, the official mascot and referee for its events. As Mato, he wears an emotive pumpkin as mask.
* Fairy Tail during the guild brawl. Lucy is speaking with Mirajane about the commotion, asking if this is normal for the guild. As Mira is replying that they guild is always like this, Her brother Elfman is thrown into her, knocking her unconscious and giving up her ghost.

* Fairy Tail early enough before Wendy that he was able to crawl across it and catch her.
* Fairy Tail early on, when some mercenaries mention that most mages neglect to keep their bodies in shape while they study magic. They must not have met many.
* Fairy Tail episode 26, during the fight against Jose, and Gajeel torturing Lucy, were given top-notch animation.
* Fairy Tail, Erza and the rest of her guild mates got drunk and she played a cruel "master" game, where every time she was given the "master" position, she demanded Gajeel, Natsu, and Gray to strip naked and Lucy and Juvia to strip into their underwear. When Grey got the master position, he demanded Erza to walk home naked. She took off her clothes without hesitation and with a smile on her face, much to the chagrin of Lucy as well as all of the boys, including Gray who gave her the command in the first place. He insisted that he was just yanking her chain and begged her to put her clothes back on again, but she just punched him in the face and tells him to "grow a pair" and starts walking home anyway. She was only at worst mildly inconvenienced by the cold air, but then she noticed Jellal... and then she started blushing and acting all embarrassed, contrary to when she took her clothes off in the first place.
* Fairy Tail Erza dual-wields on occasion sometimes quad-wielding using her feet as well as multi-wielding with 200 swords at once.
* Fairy Tail Erza punches him in the stomach causes him to fall in her lap.
* Fairy Tail (Erza x Jellal, Gray x Juvia) or all-but-confirmed (Gajeel x Levy), ironically it's Natsu x Lucy that's ends up closest to this point since Natsu is as oblivious to Lucy's feelings as ever.
* Fairy Tail. Even many of the more sane characters tend to throw themselves into fights with little forethought (Erza fits this description well), notable exceptions may be Lucy, Levy, and Fried.
* Fairy Tail. Even then, the Dragon struck by the Curse was already dead, being a spirit.
* Fairy Tail. Even when you see the funeral, you know it's not real. As if they'd seriously kill off the most popular female character in a series that's 45% male oriented fanservice.
* Fairy Tail father stands out for being the result of overworking himself.
* Fairy Tail for more comedic brawls rather than serious battles, particularly in guild hall brawl scenes.
* Fairy Tail: Gajeel and Levy are complete opposites of each other but they are the closest thing to being a couple among the main cast, since Erza and Jellal's situation is complicated.
* Fairy Tail. Gajeel stands several meters taller than Levy and, at one point, single-handedly lifts her off the ground. Levy meanwhile is possibly the shortest member of the guild. (Not counting the Exceed Squad)
* Fairy Tail go across first. To their surprise, the bridge is perfectly safe. Only when they comment on this does Natsu realize what they did.
* Fairy Tail: Gômon, who is a fan of the dark wizard Zeref, tattooed his forehead with a kanji that he thought meant "Zeref". The kanji actually means "matcha", a type of green tea.
* Fairy Tail go-to method to deal with both his enemies and the "trash" of his own guild that's too weak. He nearly inflicts this fate on Natsu (who's normally immune to fire) and Makarov before Natsu figures out the trick to nullify Zancrow's fire and use it against him.
* Fairy Tail, Gray does this a couple of times to Mirajane, such as when he complains about the drawings she made for rebuilding the guild hall, not knowing that she was the one who drew them.
* Fairy Tail, Gray is searching for Lucy in her house, decides that she might be taking a bath, and imagines a scenario in which he bursts into the bathroom, and Lucy, clad only in a towel, slaps him and accuses him of being a pervert. He then tells himself that it was bound to happen eventually and does it anyway, but not only Lucy isn't there, but Natsu is also in the bathtub.
* Fairy Tail guild often solves world-threatening crises, the tendency for its

members to cause massive property damage greatly irritates them.
* Fairy Tail had all been beaten and he had to be stopped directly in order to disable the weapon.
* Fairy Tail had Klodoa, a sentient staff who spends about three chapters explaining the Oracion Seis's plans. Once he's explained everything he's fulfilled his plotline purpose and promptly dies. He's insignificant enough that that's not worth a spoiler tag.
* Fairy Tail had Lullaby (basically a flute turned into a gigantic beast) about to play it's song that kills everyone who hears it, with everything beginning to build. And then what should play other than a few wheezing whistles. This is due to Team Natsu punching so many holes in it that it's pitch is gone.
* Fairy Tail had such a spell, which he used to entrance young women and attempt to sell them into slavery.
* Fairy Tail hair goes all the way to his waist, while minor villain Vidaldus' hair can grow a lot as part of his magic.
* Fairy Tail Happy could transform into a flying mode for a brief time and could only carry one person rather slowly. But when the team needs to stop a villain headed towards a town he suddenly has a "max speed" which lets him catch up with the guy even though he could fly quite quickly and was most of the way there.
* Fairy Tail, Happy's backstory, and others. The latest one details Lucy's adventure in invading Natsu's house instead of the other way around for once. Several have already been incorporated into the anime, and two of these have been adapted into full-length OVAs.
* Fairy Tail: Happy's Heroic Adventure: In the form of a giant head that eats Happy and transports him to another world.
* Fairy Tail has a few, which are identified by the entire Fairy Tail guild getting involved rather than just the main characters and a select number of allies:
* Fairy Tail has a newborn baby Happy who earned his name by making everyone in the guild go happy by just being ridiculously cute.
* Fairy Tail has a parallel world where they manage to make use of this without any adaptions. The Hughes they fought in the parallel world was a guy, but the one who they later meet in their own world is female. A more traditional variant happens later on when the 13th constellation Orphiuchus the Serpent-Barer appears during one of the later arcs it is very clearly a female, despite the constellation being male.
* Fairy Tail has Makarov and Loki. And Erza has been implied to read dirty literature.
* Fairy Tail has powers over sand and earth as a member of the Elemental Four. Later, we meet Jura "Iron Rock", who specialize in earth magic and can make extremely hard stone barriers and spikes. Also, the Oracion Seis wizard Hoteye can use his magic to turn even stone into mud and manipulate it.
* Fairy Tail has Sue (An anime only member of Phantom Lord who calls Happy a "Red Dog"), is one the Rainbow Crystal carriers who turns into a cat monster. Due the the Sailor Guardians saving her (who are members of Fairy Tail in this story) she under goes a heel face turn during the Phantom War arc. She gives a speech to other Phantom Lord members which ends with "Because one time I turned into a dog and they helped me!" Or as Emma put it
* Fairy Tail has this ability — he's not much good in a fight but marvelous at directing it, as he can download skills and even maps with waypoints into people's heads from a distance.
* Fairy Tail have a lot of this due to their similar character designs.
* Fairy Tail have occasionally gone fishing, mainly because fish are Happy's favorite food.
* Fairy Tail have received a '15' rating on the Animax UK streaming site, despite the fact that no episode of the series has received above a '12' by the BBFC.
* Fairy Tail, Hawk, a talking pig, tells Elizabeth there's no such thing as talking cats, and is shocked when they meet Happy, a talking cat(technically an Exceed, a race of winged talking sapient cats, but still...).
* Fairy Tail her!" (and doing it in a rather creepier manner than he does).

* Fairy Tail, here does so to reduce the number of "love-rivals" in order to have Freed (her perceived mate because of her Demon Take-Over magic and his Dark Ectriture magic) for herself.
* Fairy Tail. His arm muscles have grown so huge that they dwarf the rest of his body.
* Fairy Tail. His lack of attention to his surroundings while trying to tell her lands him with a busted jaw and missing eye. He almost confesses to her again years later but dies before he can get the words out.
* Fairy Tail. However, the duke had tricked the royal family of Fiore into thinking that Natsu kidnapped Lucy, and by the time that Lucy had persuaded the Royal Family of the truth she had agreed to open the Eclipse Gate to kill Zeref, which leads to the dragons being unleashed. The Magic Council, in desperation, uses Face to destroy all magic to stop them, which breaks the seal on the Book of E.N.D. and turn Natsu into his Etherious Form. The last moments of this timeline show E.N.D. and his Etherious ruling over what's left of the world.
* Fairy Tail, Ichiya and Natsu trip in the local pool and Natsu slams into Erza. Erza sends him flying, and he crashes into Gray and Lyon, sending them down the lover's slide, then breaks down a heart-shaped ornament. Things escalate until the entire pool is laid to ruins.
* Fairy Tail Ichiya does this when meeting the Fairy Tail members, talking about how the reputations of Erza and Lucy precedes them... and the rest (indicating Gray and Natsu).
* Fairy Tail inside some mannequins. While they don't become "alive", they can still float around, move and shoot laser beams at Gray.
* Fairy Tail intercepts them and knocks them back down, then calls them out for "cheating".
* Fairy Tail: In the Avatar arc, when Natsu rescues Happy, Carla, Wendy, and Sherria from Bluenote Stinger, he has no idea who Bluenote is. Everyone incredulously asks how he forgot him, considering the last time they met in the Tenrou Island arc, Bluenote curb-stomped and almost killed them before Gildarts came to their rescue.
* Fairy Tail: In "The Truly Evil Jiggle Butt Gang" the gang sits on the camera a number of times.
* Fairy Tail Iron Dragon Sword was changed from an everyday jagged blade to a colossal chainsaw.
* Fairy Tail is a character that is essential to the main plotline, and has elements of his past hinted at, but otherwise we know nothing about him.
* Fairy Tail is a huge fan of Hades and his guild to the point that he's shilling for Grimoire Heart as being the mightest dark guild back in its day. Lucky for Franmalth, he captures Hades' soul and gets all his powers for himself in addition to being able to take on a warped appearance of Hades.
* Fairy Tail is also done in just one page in the manga. This was also fixed in the anime.
* Fairy Tail is a player, but he's always there for Lucy when she needs him (unless he's out with his girlfriend).
* Fairy Tail is based on this concept, being very dangerous and having a head that looks like a pair of serrated scissors.
* Fairy Tail is one of the victims. Technically played straight in that the magic is nullified before it gets messy, but she still suffers along with the guys for a while.
* Fairy Tail is revealed to be one, having been granted a soul by the researchers that once lived there.
* Fairy Tail. It is located on the western continent, while Ishgar, the setting where most of the series took place, is on the eastern continent.
* Fairy Tail. It starts out pretty normal, then Natsu hits Lucy so hard with a pillow she ends up flat on her back in the yard. She decides to leave before she gets killed.
* Fairy Tail, Juvia often ships Lucy with many other characters besides Gray, since Juvia's madly in love with Gray and believes that Lucy is her primary rival for his

affections.
* Fairy Tail: Juvia to Gray on a regular basis, often to his annoyance, but in some scenes she does it more seriously, making him reflect more on the situation. Their roles are inverted on their Edolas counterparts, but eventually Edo-Gray succeded since they have a son now.
* Fairy Tail. Lacrima Crystals are crystals enchanted to cast specific magic, communication lacrima being crystal balls used for video calling. One character eventually develops a miniature version that perfectly resembles a smart phone, carrying much of the same limitations.
* Fairy Tail Laxus is a charismatic leader to his Raijinshuu, Guildarts is both a headstrong and charismatic leader, judging from how Makarov spoke of Purehito he too was a charismatic leader when he was Guildmaster and the founding Guildmaster Mavis is also apparently a charismatic leader. The only one closer to a levelheaded leader other than Erza is Macao.
* Fairy Tail likes to slash apart female opponent's clothes, leaving them mortified and giving her a nice view.
* Fairy Tail. Long story short, the real Natsu confronts an imposter using illegal magic in his name.
* Fairy Tail, "Lost Magic" refers to ancient forms of magic that have been almost entirely lost to the modern day, making users exceedingly rare. Lost Magic, such as Natsu's Fire Dragon Slayer tends to be extremely powerful relative to the typical forms used by the average wizard, and are often only learned from incredibly old tomes or practitioners (i.e. dragons).
* Fairy Tail" Lucy and Happy even do it. Only Gray seems kind enough not to.
* Fairy Tail, Lucy at some point finds out that she just lost her father. After visiting his grave, she goes for a walk with Natsu and Happy. As fate would have it, two Valley Girls appear soon after and bitch about how they hate their stupid, bossy, smelling fathers - right in front of Lucy who is so sad that she is not even able to cry. Natsu does not take it well.
* Fairy Tail, Lucy initially plays the trope straight, but then inverts the trope by saying that she still wants to be a member of Fairy Tail as she doesn't want anyone else getting hurt because of her actions.
* Fairy Tail, Lucy is slowly writing about her adventures and making it into a novel. In the epilogue of the series, it is published and becomes a best seller.
* Fairy Tail Lucy's parents used to work in a guild named "Love & Lucky". One day, the K on the sign at the guild went missing, spelling "Love & Lucy". They found it amusing and decided to name their daughter after that.
* Fairy Tail Luna's second effect, which gives her the chance to force an opponent to return a monster to their hand, is a reference to the impossible requests Princess Kaguya gave to her would-be suitors.
* Fairy Tail. Makarov nervously replies that he wasn't. Knowing Makarov, it's likely the thought had occurred to him, but it's not something he'd actually carry out.
* Fairy Tail making his first onscreen appearance at all due to being drawn to the fighting between Fairy Tail and Grimoire Heart.
* Fairy Tail, managed to complete all of his dialogue for the sixth season before he died in January 2015. Thus, he's given a posthumous credit for the fifteenth Blu-ray/DVD release.
* Fairy Tail manages to force his memories to return in full that losing them was one of the worst experiences of his life.
* Fairy Tail manga, Erigor use his wind powers to slice Kageyama's ears when the latter made a mistake.
* Fairy Tail. Many of the legal guilds (and several dark ones) qualify as well, though Fairy Tail is by far the most outlandish.
* Fairy Tail: Master Makarov is the prime example, to the entire guild.
* Fairy Tail material of the anime. Beyond that, let us count the ways:
* Fairy Tail — magic is a non-renewable resource there, so mage guilds are outlawed, and the only people who are allowed to use large amounts of magic are the higher-ups in the kingdom.

* Fairy Tail, Mirajane, Natsu, Wendy and the Exceed pull this trick with Mirajane transforming into a guard, hiding the Exceed in the big uniform and pretending that she wants to deliver the two Dragon Slayers to the king.
* Fairy Tail moments between him and Lucy suggesting he may be attracted to her.
* Fairy Tail moment when Yomazu reveals they are merely the advance scouts of Grimoire Heart. Gajeel orders Levy to run and warn the others of Grimoire Heart's arrival.
* Fairy Tail more or less confirms this with Natsu and Lucy, though it's just vague enough to go either way. Lucy tearfully tells Natsu she wouldn't be who she is today if he had never brought her to Fairy Tail, though she never gives him any indication of romantic feelings. Natsu replies by saying he doesn't care, because they'll always be together... before dragging her on a long-term quest with the rest of their team.
* Fairy Tail. Mostly it's Natsu and Happy saying something embarrassing about Lucy, who doesn't appreciate them doing this right in front of her.
* Fairy Tail. Most of this was likely intervention on Erza's end, who had been living on Earth for fifteen years by the time they arrived and had long since made a life for herself.
* Fairy Tail, Mystogan is one of the strongest active members of the guild and of course wears a mask that hides his face.
* Fairy Tail, Natsu carries Erza this way after saving her from the exploding Tower of Heaven. In a later arc, Elfman and Evergreen get gravely injured in a battle, and Elfman bridal carries the unconscious Evergreen back to the camp.
* Fairy Tail, Natsu does this to Erza after rescuing her from Jellal the first time.
* Fairy Tail, Natsu gives Lucy his cloak when everybody gets caught in the rain.
* Fairy Tail Natsu happens to be a first-generation Dragon Slayer, but still manages to be just as powerful, if not more so, than successive generations.
* Fairy Tail, Natsu has to run to catch Lucy before she hits the ground after she falls off a very tall tower.
* Fairy Tail Needless to say, Erza didn't take kindly to that, reminding her of all the torture she put Erza through, and calling her "evil," "a monster" and "a sadist," slamming Kyouka's face to the floor after using each phrase.
* Fairy Tail: Never hurt someone from the Fairy Tail guild. EVER. Or you're screwed.
* Fairy Tail now currently as Emperor Spriggan forcefully united the western continent's 730 Light and Dark magic guilds, overthrowing that continent's equivalent to the Magic Council and previous governments in the process. It's heavily implied that non-magic users are second-class citizens, if not outright slaves.
* Fairy Tail of Scorpio. While the game has a set basic structure and win condition as established by Scorpio, the cards and their effects drawn from each player's deck are completely made up by each player as they go, resulting in the cards becoming more and more powerful as they play. The last few cards have such ridiculously overpowered abilities that they'd certainly be banned from any real life version of the game.
* Fairy Tail) often cause him to suffer much angst when his Love Interest announces that she is pregnant, because he fears that she, too, will succumb to the curse.
* Fairy Tail of the Pandemonium battle showcases that in detail as she swaps gear on the fly to deal with different abilities of the demons she's facing, such as swapping to a fire-resistant armor in the split second between a fireball being launched and actually reaching her.
* Fairy Tail omake about the punishment game. Cana has Wendy try on a lot of skimpy and/or furtive clothing (like a wedding dress), and when Wendy worriedly asks why, Cana tells that she'll take Wendy to an old priest who likes that sort of "stuff". Wendy understandably becomes terrified, but when they actually meet the priest, there is nothing pedophile about him. The only reason Cana wanted Wendy to wear those clothes was that she wanted Wendy to make a good first impression by wearing fashionable clothing, but since Cana has no idea what fashionable clothing is, she

just chose the skimpiest clothes as she always wears a skimpy outfit herself.
* Fairy Tail. One time just to question the guild, another to issue a life sentence to two people who just helped save the day.
* Fairy Tail. People make themselves so comfortable at her house it's ridiculous.
* Fairy Tail. Probably the rest of Fairy Tail thinks the same after he chose Wendy out of all the mages as a partner for the S-Class trials despite there being no relation between them both.
* Fairy Tail Redux: Salamander's Time Traveling Escapades universes, and vice versa.
* Fairy Tail refer to themselves as Fairies, like the mages belonging to the title guild.
* Fairy Tail Rella can, at the cost of discarding a spell card, be equipped with an Equip Spell card from the hand, deck or graveyard, alluding to the Fairy Godmother's gifts to Cinderella. And just like how the spell ended at midnight in the story, the equip card will return to the hand at the end of the turn.
* Fairy Tail requires that anyone who wants to date his sister be capable of besting him physically, without magic.
* Fairy Tail runs on this as much as any long-running anime/manga does. Every antagonist - from the heads of Phantom Lord, Sabertooth, Raven Tail, etc. to Jellal to the King of Edolas, and even Cobra when Natsu stops thinking, and the members of Raijinshuu when they fought the rest of Fairy Tail to determine who would next take over as Guildmaster - has said this after getting stomped by Natsu, Erza, Gray, Lucy, or whoever is the in-focus member at the time. The villain of the arc saying this is inevitable.
* Fairy Tail Salamander, and to get Natsu to offer Lucy a job with Fairy Tail.
* Fairy Tail, saying that he didn't just want to see her come to harm as a friend, but wanted to protect her. While Gray's somewhat stronger than Juvia, Juvia is still a capable mage in her own right, and this is played as a possible hint that Gray is starting to return Juvia's feelings.
* Fairy Tail says anything awesome can only be attributed to being manly! Regardless of whether a person he's telling to be "Be a Man!" is male or female.
* Fairy Tail scene before Jellal suddenly shoves her away and claims to have a fiancee. When his new teammates call him out on his lie, he admits that he doesn't feel that he deserves Erza (who knows that it was a lie but accepts Jellal's hesitation to further their relationship).
* Fairy Tail sealed away in a dimension beyond time. This would seem like the end of the series... Except the same chapter revealed that there are ten more chapters left in the series, making it clear that something is going to go wrong.
* Fairy Tail's Gray Fullbuster in the second OVA when he sits on a hot rock Natsu had placed upon his chair.
* Fairy Tail's guild building can't seem to last 2 arcs without getting wrecked or otherwise lost. To date, it was wrecked during the night by Gajeel and later totally demoloished during the fighting of the Phantom Lord arc which was the 2nd arc, the rebuilt version was warped into Edolas two arcs later though later restored, and almost immediately afterwards the key members leave for a mission and the building is repossessed while they were away as the weaker members left behind couldn't keep the guild out of debt. It remains to be seen if they will ever get the old building back.
* Fairy Tail share a magical ability called "Take Over". It allows them to take the form of other beings, like beasts (Elfman's "Beast Soul"), animals (Lisanna's "Animal Soul") or a demon (Mirajane's "Satan Soul").
* Fairy Tail), she is genuinely afraid and freaks out over what his intentions might be.
* Fairy Tail she once scared a major fashion designer into designing pretty armor for her.
* Fairy Tail. She was one of the slaves kidnapped and forced to build a "Tower of Heaven" by Zeref fanatics who believed once they did so they could bring him back from the dead. After her childhood friend and fellow slave, Jellal, is taken to be tortured for trying to save her from punishment. Erza has enough and rallies the

slaves in a revolt against their captors, along the way, awakening her magical power.
* Fairy Tail shout half of the things they say on the top of their lungs, such as "WE ARE FAIRY TAIL!"
* Fairy Tail shows a number of battle clips, but no OVA has had much fighting it. Even the one that did took place in a world without magic, and most of the fights were purely comical.
* Fairy Tail shows Natsu pulling up a can with a fishing rod — while a fish smiles tauntingly right next to the hook.
* Fairy Tail, Simon, Erza's childhood friend, is nearly killed while doing his declaration of love to her. They only see each other 8 years later.
* Fairy Tail Sleeper's effect to flip herself face-down is a reference to how Sleeping Beauty was put into a deep sleep due to a curse.
* Fairy Tail Snow's effect is a reference to how Snow White was brought back to life while said effect's cost of banishing seven cards is a reference to the Seven Dwarfs.
* Fairy Tail someone eating dried plums. Meanwhile, Natsu suffers from debilitating motion sickness whenever he's on any kind of moving vehicle.
* Fairy Tail: Soon after the guild is reformed in X792, various members talk about what they had been doing in the year-long interval. After Juvia learns that Laxus and his Raijin Tribe had spent the year at the Blue Pegasus guild (a guild that has a reputation for performing "escort duties")...
* Fairy Tail starts roaring ineffectually at some random civilian. Then Gajeel shows up behind her and scares the man away without Wendy appearing to notice.
* Fairy Tail stellar spirit Aries uses Wool Bomb attack, which overwhelms her opponents with comfort.
* Fairy Tails toys depict the Fairy Tails as toys coming to life at night to help their owners.
* Fairy Tail surrounding Natsu, Mashima said that he didn't care if fans shipped him with Lucy, Lisanna, or Gray. This indicates that he may think of Natsu as bisexual.
* Fairy Tail takes her cake very seriously, and at one point beats on everyone around her after the slice she was eating gets knocked onto the floor, particularly Elfman for accidentally stepping on it only a moment later.
* Fairy Tail technique, so she can finally be up to par with the rest of her team.
* Fairy Tail tends to be seen as one of the weaker ones motive-wise and personality-wise with several of the time-displaced dragons getting more approval.
* Fairy Tail than bubbling. Cuberios' poison too is showed to have this color, and yet its victims become purple instead as seen above.
* Fairy Tail. Thankfully, Natsu manages to save both hostages (and giving the councilor a well-deserved clobbering for good measure).
* Fairy Tail, that she's holding his closest companion Lector hostage. Because she's just saved Lector's life as well, Sting would already do whatever she wanted - she's just adding the extra punch in the gut to try and make him fight for higher stakes.
* Fairy Tail the day before the annual Blossom Viewing Festival where the leaves of the titular tree turn rainbow-colored at night, and is naturally unable to go. Natsu and Happy feel bad for her, so they uproot the tree and send it on a boat down the canal in front of her house that evening, allowing her to see it in all its beauty.
* Fairy Tail the guild is celebrating Lucy's fifteenth birthday, everyone is being cheerful for her. That is until Mirajane and Elfman return to the guild bruised and in tears. They inform the guild that Lisanna is dead. This brings a halt to Lucy's birthday party. For her part, Lucy doesn't care about the party. She is more upset that one of her closest friends is gone.
* Fairy Tail, the heroes initially lose miserably when they all fight together against the villains at the start (granted, they were ambushed, so that also lowered their chances). When they split up and fight the villains alone or in pairs, they suddenly win all their battles.

* Fairy Tail, the participants of battles on the second day all make various bets of varying seriousness.
* Fairy Tail There's also Wendy Marvel and her sidekick Carla, who fills the temporary 6th character spot in their intro arc, but proceeded to become a permanent addition to both the guild, and the usual focused team of Natsu/Lucy/Gray/Erza/Happy.
* Fairy Tail. The S-class/Tenrou Island arc ends with most of the main characters being blasted by Acnologia and presumably dead. As future seasons show, they thankfully weren’t, but it is still one of the darkest moments in the story.
* Fairy Tail: The series' dragons are a mix of both Western and Eastern versions, whereby their physical form resembles the Western versions but like the Eastern dragons are highly intelligent and possesses insane amount of magic that overpowers almost all humans.
* Fairy Tail. They pretty much complain and fight but do admit to themselves they respect the other. Heck in the Galuna Island arc when Gray twice tries to use Ice Shell, a spell that will turn the user into ice to trap their opponents. Natsu stops him both times spelling out that he doesn't want Gray to die.
* Fairy Tail: This is the fate awaiting Ichiya of Blue Pegasus after he's beaten by some goons working for Oracion Seis.
* Fairy Tail those same mooks somehow start fighting off the Fairy Tail members and Erza decides they need to retreat.
* Fairy Tail. Though they've finally both confessed to one another that they like each other, Jellal feels undeserving of Erza, and is pretending he has a fiancee as an excuse not to act on his feelings. Erza knows he's lying, but is sensitive to his issues and has decided not to call him out on it. There's also the fact that he's a vigilante and wanted criminal while she's a member of a legal (if roughhousing) guild, meaning there's much more at stake than just Erza's reputation if they went public. Things do seem to shaping up for the two of them by the end of the series when Jellal is officially pardoned for his crimes, however.
* Fairy Tail, three of the main characters are dimunitive, sapient catlike creatures called "Exceeds". All three have gender-blending names to some extent:
* Fairy Tail to Fairy Tail, and he was eager for a job to come up that would give him an excuse to fight them. So when Lucy's rich father hires Phantom Lord to bring her home, he doesn't merely kidnap her but also commits increasingly extreme acts of violence against Fairy Tail in order to goad them into a conflict that would culminate in Fairy Tail and the town it resides in being wiped off the map.
* Fairy Tail to make air bubbles for them both and the rest of their struggling guildmates, much to her severe embarrassment.
* Fairy Tail to sleep whenever he reports in for a job, so no one interacts with him. Pantherlily, who knows Mystogan personally, sees through the lie.
* Fairy Tail (to the point of frequently entering Lucy's house without permission) stops being something annoying her friend does because he doesn't totally get social norms and becomes proof that he really does have a crush on her.
* Fairy Tail tries or is forced into attempting this, the enemy is more confused than distracted, and keeps attacking anyway.
* Fairy Tail until they digest fully. It's worth noting that "Fukuro" is Japanese for "owl."
* Fairy Tail uses a lettered grading system to denote the difficulty of the various jobs that guild members can take on. They also have the desgination of S-Class Mage, reserved for the strongest Mages in a guild.
* Fairy Tail uses his last attack to tear Acnologia's arm off. And no, he doesn't regrow it.
* Fairy Tail, usually by Gray and Natsu on each other when one of them is too injured to fight but too stubborn not to. Erza also employs this on Natsu once to save him the pain of crippling motion sickness.
* Fairy Tail, villain Vithaldas deliberately creates one of these between Lucy and Juvia, by using his magic to seize control of Lluvia's mind and force her to attack Lucy (despite the fact that he could control them both if he'd wanted). As you might imagine, he makes it as titillating as possible, although it's actually not

bad from the reader's perspective.
* Fairy Tail, Wan Chanzi, Joey Fullborn, and Chico=C=Hammitt designs are based on Mashima's assistants.
* Fairy Tail was looking. When she was looking the two would act like best friends to avoid angering her and getting beat up as a result.
* Fairy Tail, we have Gray Fullbuster, Reitei Lyon, and their teacher Ur. While technically they don't get completely naked in frame, it's heavily implied that the three spent the majority of their training that way.
* Fairy Tail We learn in the events of the Alvarez Empire arc (more than a year later) that he's still carrying the scars of Tartaros, and it takes a bit of in-the-nick-of-time trickery on his part to finally be cured of his affliction.
* Fairy Tail, when Cana tells Gildarts that she is his daughter, he gets completely shocked, and he falls to the ground, rambling off a list of women he's been with who could potentially be her mother. However, when he comes back to his senses, he can instantly tell who Cana's mother actually is, meaning that he just didn't think clearly out of surprise.
* Fairy Tail, when Elfman grows tired of Natsu's ever-lasting motion sickness.
* Fairy Tail, when Evergreen talks about how Celestial Wizards are weak and defenseless, which is why they rely on spirits. This causes Lucy to sneeze.
* Fairy Tail: Whenever the military of Fiore tries to dispose of villains, they're often utterly curb stomped, or forced to retreat.
* Fairy Tail, when Nashi's 7th birthday comes up she has a breakdown because it's the first time it would be without her mother who is currently missing and has been for weeks.
* Fairy Tail when she sees Lucy's naughty underwear. She gives a similar reaction when she finds S&M equipment in one of the rooms at her dorm.
* Fairy Tail when she thinks Gray is kissing with another guy. It is quite noteworthy with how grumpy she usually gets when Gray is just talking to other girls.
* Fairy Tail when the pair does synchronized stripping when fighting tough opponents.
* Fairy Tail: When Ultear Milkovich was sick, her mother Ur took her to a facility for treatment. Instead, the people performed torturous experiments on her and lied to Ur that she had died. Eventually, Ultear managed to escape and ran home, only to see Ur playing with her students Lyon Vastia and Gray Fullbuster. Instead of letting them see her, Ultear, who didn't know that her tormentors lied about her death, automatically assumes that Ur doesn't care about her and had already replaced her. She angrily runs away while plotting revenge against her mother. Shortly after she leaves, Ur starts talking about her daughter, whom she misses dearly and loves with all of her heart.
* Fairy Tail, where all of the protagonists are good-looking, they also qualify as stunners.
* Fairy Tail, which is so bright that Bickslow screams and clutches his eyes in pain. Lucy then uses the opportunity to attack him.
* Fairy Tail, which makes it equal. Later, Wendy joins the group and brings Carla with her, actually tipping the ratio in favor of the girls.
* Fairy Tail, which Natsu doesn't learn until the final arc of the series.
* Fairy Tail, which nearly gets him and his friends killed several times.
* Fairy Tail, which picks the subplot back up as a major driving force for Lucy.
* Fairy Tail, which translates to something like having a really mean guard dog that will do everything possible to protect its owner.
* Fairy Tail. While not the standard (she was initially a villain), her first appearance consists of her simply talking about love.
* Fairy Tail who can instantly conjure up anything, including new glasses.
* Fairy Tail, who doesn't remember any of his past crimes or his own terrible life. The only thing he remembers is the name Erza.
* Fairy Tail, who is able to piece the truth together from the lies fast enough to shut the gate to let only seven dragons through, which eventually leads to the Eclipse being destroyed so the time travelers wouldn't be able to use it in the

first place.
* Fairy Tail (who might not be related but were at least raised as brothers) are big on this. Sting uses 'white' magic, is always very in your face, shows interest in almost everything going on, and is only concerned with strength. Rogue uses 'shadow' magic, generally lets Sting do the talking, acts uninterested in evverything, and places value on comradery.
* Fairy Tail. Zeref himself doesn't seem to be aware of any of this stuff happening. Also, her actions are actually done on Hades' commands.
* Fairy Tail Zerø between the opening scenes of the story, set in the year X679, and the main story, set in X686.
* FairyTale: A True Story Elsie lets out one of these (with upflung arms, a la "touchdown") when her father develops the first photographs and discovers the fairies. It breaks the mood of the film rather badly for a moment, as it looks too modern.
* FairyTale: A True Story: The soldier whom Frances befriends on the train suffered extreme wounds to his face, which for most people must be offputting. She's completely undeterred though, and he thanks her later by chasing off a nasty reporter who'd been harassing her, coming to hear that fairies are real.
* Fairy Tale. Breaking the needle in half won't do. Good luck trying to break off just the tip without any tools.
* Fairy Tale comes into play, with Coquerico's mother devising the plan to get rid of Lionette.) This revelation does not prevent Lionette and Coquerico from falling madly in love with each other — the two of them get married at the end of the story.
* Fairytale Detective may have this, judging by something stated in the tenth game. The Detective actually interacts directly with the Sun and Moon Goddesses, and the Moon Goddess tells her she doesn't have anything to fear from following their directives "because your heart is pure and your cause is just."
* Fairy Tale Free-for-All (a crossover of characters from classic fairy tales)
* Fairy Tale Friday: Belle catches the Beast watching lesbian porn. Their relationship blossoms from there.
* Fairy Tale Friday rocks a gay pride flag belly-shirt before her transformation.
* Fairy Tale Motifs due to their independent nature, their drive to obtain love/sexual gratification and using their own talents to get by in life. Many of the female characters in RGU are categorized in these groups or switch over as the series progresses.
* Fairy Tale Motifs has one of these freed from being imprisoned in a magic mirror - and she tries to kill the sisters by using fairy tale items. You guessed it - she dies by getting melted. The other Wicked Witch appears in the sixth season causing trouble for magical creatures - she is indeed seen in a black hat cackling by a cauldron.
* Fairy Tale Motifs of a beautiful woman offering an apple - only to transform into a Wicked Witch.
* Fairy Tale Motifs that cursed her is defeated, the spell wears off. Nonetheless one of the dwarves suggests she get a prince just in case it happens again. The episode also features a love interest for Phoebe whose last name is Prince - and he serves as the prince in the Cinderella portion of the episode. But with one small difference: he's under the control of the Wicked Witch.
* Fairytales and folklore are chock-full of this so much that in many cases "ugly" is shorthand for 'completely deficient as a human being in every conceivable way possible.' But be wary. The
* Fairy Tales and Hokum after he's forced to betray Jonathan. His fellow agents, not so much.
* Fairy Tales and Hokum) are separated by a cave-in triggered by an explosion, and pygmy mummies attack Tom's section of the room. Jonathan only hears screams and calls for help, then silence.
* Fairy tales are filled with the black sheep characters, who are outsiders within their family but whose misfit tendencies help them succeed later on.
* Fairy Tales, by Eric Lane Barnes, the song "A Humming Bird" is about a man

desperately pleading for his dying lover to cheer up and get well again because he doesn't know how he could possibly live without him.
* fairy tales can substitute, with the brother taking the father's place for the threat.
* Fairy Tale Series, which entwines the Sleeping Beauty story with the Holocaust, is the best-known. Windling's also edited, often with Eileen Datlow, several short story collections of fairy tale rewrites.
* Fairy Tale: Short fantasy stories, often with some kind of message or aesop, and heavy on symbolism.
* Fairy Tale Sits on the Doorstep when one steals the pointed hat of the main character and puts it on. Given that the animation is from Soviet Latvia, it's pretty unlikely that they intended to promote American White Supremacy
* Fairy Tales: Many of these are derived from tales of the lives of saints, such as
* Fairy tales often leave off with the couple overcoming the problem at hand, having a kiss and proceeding to "live
* Fairy tales' supposed idealism and inevitable happy endings are commonly mocked and "deconstructed", most people being unaware that the real stories were often violent, cynical, and depressing. It's something of a
* Fairy Tales, "The Devil's Three Golden Hairs", one of the incidental characters is a man who is doomed to keep ferrying travellers across a particular stretch of river. In the end, having learned from the hero of the story that he can escape his task by tricking one of his passengers into becoming ferryman in his place, he resolves to try the trick on the next passenger who comes along — and, as luck would have it, the next passenger to come along is the villain of the piece. All live appropriately ever after.
* fairy tales today; more commonly, you have an adopted child who suffers some perceived slight from his stepparent and must be reassured that he is loved just as much as the parent's natural children.
* Fairy Tales. What English readers got is actually toned down from the German; several stories were omitted in their entirety for the early English editions because they were considered too offensive, and others were changed to be more palatable.
* Fairy tales where the child has a goal at the beginning, such as Little Red Riding Hood, Mufaro's Beautiful Daughters, Aladdin, etc.
* Fairy Tale, the fairy queen summons two thousand sharks to guard the tower where Princess Graziella is imprisoned - to prevent anyone from approaching.
* Fairy Tale: The oldest extant fairy tales are written on Egyptian papyri from c. 1200 BC. A January 2016 linguistic study suggested some of the tales may be even older than that, dating as far back as 4500 B.C.E. in the Indo-European Language.
* Fairy Tale. Until a few months later, when the stench of the giant's rotting corpse (plus the tons of decaying plant matter) renders the entire area unlivable and fraught with potential death from disease.
* Fairytale Wedding Dress): A giant fancy old-fashioned wedding dress.
* Fairytale Wedding Dress. Former Princess Sayaka of Japan liked it so much that she had a real-world one made for her wedding dress.
* FairyTale would even kick of the trend of live action remakes of classic films, most of them already based on fairy tales.
* fairy that takes on the form of a newt and crawls down the throat of anyone who falls asleep near a stream to feed off of the food that person has consumed. The only way to get rid of this creature was to eat a large quantity of salted meat and wait near a stream until the creature left the body to take a drink.
* Fairy Tropes: Tropes about elves, fairies, leprechauns, and other fey.
* Fairy Wars Cirno's schtick is freezing bullets. She can't freeze fire bullets or lasers. While lasers remain thankfully rare, once you hit Stage 2, fire bullets are all over the place.
* Fairy Without Wings and doesn't return until chapter 111 where he's only in the plot until chapter 114 before the ensemble cast gets more screen time in order for proper world building to be done.

* Fairy Without Wings is that the liege they are working for is the only emperor in charge.
* Fairy Without Wings Lelouch and Erza do a variant of this with a hammock, though initially the trope doesn't come into play because Erza chooses to keep an eye on Lelouch while he sleeps. Lelouch, being a gentleman, refuses to let Erza sleep on the ground. Solution? After figuring out that the hammock will support their weight and girth, Erza throws Lelouch onto the hammock and cuddles up with him for the night.
* Fairy Without Wings or a pre-existing one. Sometimes it's song lyrics.
* Fairy Without Wings that's not a likely outcome to happen any time soon.
* Fait comme si je quittais la terre / J'ai trouvé mon étoile / Je l'ai suivie un instant...
* Faith [1.12], when Dean believes he is about to die, the dialogue directly echoes this trope:
* Faith actually tries to get Willow to give her the whole "you can still be a good guy" speech, instead getting Willow telling her she's way past forgiveness. At least part of this is because she had kidnapped and tied up Willow though. Ironically, Willow becomes one of the few people who actually could later understand what Faith was going through, having gone evil and killed someone only to be brought back by someone showing caring and kindness when she didn't deserve it.
* Faith and a .45, Deadline shut down in 2009 and the project died with them.
* Faith and Buffy's Super-Happy-Ending-Bedtime-Story: This is an epic telling (three novel-length installments so far and counting) of the love affair between Buffy and Faith, in a version of the universe that is as close as possible to what we saw in the show itself. The story takes no shortcuts—the two girls start as enemies, and the transition to loving relationship is slow, and strewn with setbacks.
* Faith and Doubt ends with the words "End of Volume 1" and credits. It then cuts to the five remaining elements of harmony discussing their plans to invade Equestria and take over the bodies of the Bearers.
* Faith and Doubt features Celestia getting hit by Twilight's light-and-sound spell. It was specifically engineered by her because, while an alicorn like Celestia resists direct magic attacks, secondary effects like the sensory overload from a blinding flash are a whole different dancing tune.
* Faith and later Spike try to get Buffy the Uptight Slayer to loosen up. It doesn't end well either.
* Faith bragging to Spike about what she can do with her Slayer muscles. Both Spike and Parker comment favorably on Buffy's stamina in the bedroom, so she's not lying.
* Faith". 'Cause you've gotta have faith ♪ In the power of love ♪ You've gotta have faith ♪ In the power of love ♪
* Faith chokes out Xander, his first act upon waking up is to offer to teach her how to properly choke someone out.
* Faith Dreamside, Belu's minions all have large yellow eyes and wide, sharp-toothed grins.
* Faithful Heart, apparently. If they just wanted to get rid of her, they could have let her marry Jean.
* Faithful Jenny Dove, the titular Jenny promises to wait for her lover, naturally he dies and she wastes away herself but keeps on waiting as a ghost. Things get complicated when Jenny falls for another local ghost, a young gentleman who is doomed to walk until he meets a faithful woman. Eek. Then her true love comes home alive and blows Jenny's cover. To keep her dead love she has to somehow make her grieving living lover betray her...
* Faithfully serving Renly as a member of his Kingsguard is Brienne's quiet way of expressing her (unrequited) love for him.
* Faith gets this as well. She was originally going to be written out and had been given the
* Faith got this a couple of times. When she tried to seduce Angel in "Enemies" Buffy fears they did do the deed, though it's later revealed in the

* Faith had a habit of calling Buffy "B", but does so less later in the series. In the comics, she also took to calling Giles "G"
* Faith had no known surname for a long time, until it was finally revealed to be Lehane in the official RPG.
* Faith, Harry and Sirius go to Sunnydale to help Buffy and the Scoobies deal with Glory.
* , Faith has poor grades but is a skilled mechanic, being able to figure out everything wrong with Giles's car the first time she rides in it then fix it, and a decent negotiator.
* Faith. Her parents were worthless and the only person who never treated her badly died before she showed up in Season 3. This leads to her becoming evil after her tough girl act makes her push Buffy away when they accidentally kill a guy.
* Faith Hill, eclipsed awareness of the original by Erma Franklin (sister of Aretha).
* Faith, Hope and Trick", a vampire takes a girl he's met at the Bronze into an alley and tries to bite her, saying, "Stop struggling, this won't hurt." Nope, but the pounding and staking she gives him sure does. Meet Faith, the Vampire Slayer.
* Faith, Hope, and Trick It's meant to be a warning on spiking drinks but depending on how you count them Faith would end up a multiple rapist.
* Faith in Buffy's body figures it out within minutes of meeting them together, and when Spike just had to see Tara play with Willow's hair to realize what was going on; when he starts sowing the seeds of division by recounting some things Buffy and Xander supposedly said while pretending to think they were talking about something else, Willow and Tara think it must be true because they didn't tell Spike they were a couple, never thinking that they were just that obvious.
* Faith is slightly more physically imposing than Buffy, and her fighting style favors powerful strikes. She still shouldn't be able to hit like a truck without Slayer powers.
* Faith mentioned being able to tell if Angel was anywhere in a building, so it works pretty well for her. Apparently Buffy just has the sensitivity of a brick given the number of times vampires have been able to get right up to her (or on one occasion,
* Faith Militant. And things just snowballs out of control from then on out.
* FAITH, Misty is jealous of Dawn's close friendship with Ash. This results in her accidentally shocked Dawn in Pikachu form.
* Faith No More, as "it" is cryptically referred to throughout the song, with contradicting explanations as to what "it" is ("it's magic, it's tragic, it's a loss, it's a win").
* Faith No More at him for bailing on the band after replacing Jim Martin and recording the album because he decided he didn't want to tour.
* Faith No More!). Bassist Billy Gould even said that “It feels really good to have a couple of thousand of people flipping you off. Just to see the number of middle fingers go up when we went into ‘Easy’ was amazing."
* Faith No More, called "Edge of the World." It starts out sounding lounge-swing romantic and heartfelt right up until "Come here little girl, would you like some candy . . ."
* Faith No More. Commonly seen as a song that pioneered rap metal, this song has led to them getting pigeonholed as being a "rap metal" band.
* Faith No More dead), not because the lyrics actually had anything to do with him.
* Faith No More have also picked up on the trolling of other artists.
* Faith No More is about an abusive alcoholic who wants his wife and child to leave him to stew in his own guilt.
* Faith No More: Keyboardist Roddy Bottum is gay, and started a music project called Man on Man with his boyfriend Joey Holman. Also founded indie-pop band Imperial Teen, which counts the gay Will Schwartz among its members.
* Faith No More "Land of Sunshine". (With original quotes from the psycho tests.)
* Faith No More: Mark Bowen was a friend of the band who had played guitar with them at some early shows, and they named the song after him just because he happened to be around when they were working on it. "Mark Bowen" became the

permanent title because Mosley opted to mention him by name in the lyrics.
* Faith No More). Oh and there's also the thing where it had a hit song and sold a lot of copies. And then came the next album...
* Faith No More's Land Of Sunshine is Mike Patton's sinister, maniacal spine chilling evil laughter while evil circus clown music plays with the words "Does life seems worthwhile to you?" being sung over it.
* Faith No More, so they deliberately went for something as silly and cheap-looking as possible.
* Faith No More's sole #1 on the Modern Rock charts wasn't "Epic"; it was "Midlife Crisis". Their biggest hit on Mainstream Rock was the even lesser-known "Last Cup of Sorrow". Nonetheless, "Epic" was their only top-40 hit on the Hot 100, so it naturally makes up most of the band's airplay.
* Faith No More's song "Epic" repeatedly refers to "it" without ever explaining what "it" is.
* Faith Off", Springfield University's star football player Anton Lubchenko returns to the field after Bart tries to heal his broken leg, and attempts to win the game with a field goal. He succeeds... because he inadvertently flings his own leg off, which goes on to kick the ball a second time in mid-air, propelling it just far enough to make the goal.
* Faith Off", where the word "fever" is used over and over again in the newscast because the script writer, Brockman's nephew, had lost his thesaurus and couldn't think of any better descriptions.
* "Faith Of Our Fathers" might be Philip K. Dick's most confounding story. Is it a satire of Communist society? An exploration of the true meaning of religion? Or a role reversal of LSD culture? Who can tell? The great Communist leader is actually God in human form, and you can only see his true form(s) (a series of grotesque monstrosities) when you take Thorazine, an antipsychotic medication that was used as an "antidote" to LSD (to end bad trips).
* Faith of the Fallen, Nicci "was only dimly aware of the eggs hitting the floor" after being informed that Richard had been taken prisoner. Although, thinking about it, he gets captured so frequently in the series - indeed, by Nicci herself just earlier in the book - that you think she'd just roll her eyes or something.
* Faith of the Fallen series, one chapter, following a timeskip, has Richard and Kahlan locked in a swordfight with one another, with the narration treating it like a battle to the death...until Kahlan scores a hit and it turns out they're using wooden swords for practice.
* Faith persuades Buffy to abandon all pretense of strategy and just rush blindly to attack half-a-dozen sword-wielding vampires...
* , Faith promises to be on her best behavior. This lasts right up until she sees them and recognizes them from earlier in the day.
* Faith, tended to show a lot more cleavage than Buffy (and wear generally tighter outfits).
* FAITH: The Unholy Trinity video game, his technique consists entirely of aiming a cross in the general direction of what he's trying to exorcise. Somehow, his cross is also able to scrounge up relevant documents as well.
* Faith to be his greatest work, stating, "I think I wrote the best, most healing piece of music that I've ever written in my life with that album." In regards to individual songs, he stated multiple times that he never understood why everyone loved "Careless Whisper" so much, which was because he wrote the song when he was still a teenager and he believed he had written much better songs since.
* Faith (Valiant Comics), Faith works at "Zipline", a Buzzfeed parody that churns out quizzes and listicles. She hates it, but has no other recourse, as blogging is the only thing she can actually put on her civilian resume.
* Faith, was released in 2019, and she has not had an ongoing, or even a miniseries, since then.
* Faith. When she first showed up, she had a lot of problems, not the least of which was that she enjoyed slaying a little too much, but she was definitely a
* Faith when she tells him Buffy accidentally killed a man. He knows Faith is scapegoating Buffy for her own mistake, but he doesn't want her to know that.

* Faith, who prefers to charge in where Slayers fear to tread, and Buffy, whose greater experience gives her a more cautious approach. While Buffy enjoys playing along with Faith's
* Faith, who serves as a Foil to Buffy herself. She would often use her sexuality to her advantage, e.g. she tried to get Angel to sleep with her which would cause him to lose his soul and become evil.
* Faiza Hussain, the wielder of Excalibur, Dane's steward and eventual
* Faiza was followed in the Marvel Universe by the rather similar Kamala Khan, the current
* Fake Action Prologue, one of the mourners at the funeral is dragged into the coffin which is then fed into the crematorium retort.
* Fake Action Prologue: The story starts out with what appears to be an action scene, but it turns out to be fake.
* Fake American accent she used for Xena rather than her native New Zealand accent.
* Fake American: An American character is played by an actor who isn't really American.
* Fake American: An American character played by an actor who isn't really American.
* Fake American. His American accent was good enough to fool most viewers.
* Fake Aristocrat: A character who passes themselves off as being higher ranking in the social order than they actually are.
* Fake Aristocrat: A person who passes themselves as being of higher status than they really are.
* Fake Arm Disarm: Enemies target someone's artificial limb rather than their real body part.
* Fake Assassination: Killing the target was never the real intent of the crime, that was just a ruse for some other scheme.
* Fake Australian: An Australian character is played by an actor who isn't really Australian.
* Fake Australian: An Australian character played by an actor who isn't really Australian.
* Fake Band created by Brazilian comedy group Hermes & Renato, had this as the backstory of singer Detonator, who said he castrated himself to be able to hit high notes.
* FAKE, Bikky saved up money to buy some expensive jewelery for Carol and even bought it, but on the way out met a kid crying because he'd just been mugged and couldn't buy something for his mother. So of course Bikky goes back into the shop, returns the gift, and gives the kid the money. Carol winds up with sunflowers Bikky cut from his foster dad's window sill (and since she was following Bikky and saw the whole thing, she's just as happy with that).
* Fake Boobs (as she's secretly delivering them to their recently poor neighbors).
* Fake Brit: A British character is played by an actor who isn't really British.
* Fake Brit: A British character played by an actor who isn't really British.
* Fake Brit because he speaks with a British accent even though his actor Josh Stewart is American.
* FAKE, Carol promises to go on a date with Dee in five years (when she turns 18). However, she later cancels because she's going out with Bikky. (The whole thing was a joke meant to tease Bikky in the first place since Dee only has eyes for Ryo.)
* Fake CCG cards themselves. They date to 1994, albeit in text-only format, and were the basis of the "Un" sets.
* fake Chesapeake ripper escapes police custody by dislocating his thumb to escape his handcuffs.
* fake commercial in-universe, eventually did become a real Ren and Stimpy related toy.
* fake commercial, some kids eating the new cereal Music/Meatloaf Crunch ("It's turning the milk chocolatey!"-"That ain't chocolate—that's gravy!") get lotion and a mousetrap in the box. Another fake commercial for Mammal O's Cereal featured LIVE ANIMALS in the bottom of the box!
* Fake Crossover, but is also not officially canon to either universe.

* fake dating site profile lists the supposed user's favorite things as money, her car, her phone, and "keeping America American."
* FAKE Dee. However, he is extremely naive when it comes to intimate matters and often nearly taken advantage of as a result. Sexual innuendo tends to fly over his head, has little experience in relationships, and is hardly able to keep his partner's (or his boss's) sexual advances at bay. In the English version, other characters call him 'Sandra Dee', an actress known for playing the Ingenue in many roles.
* FAKE, Dee steals a random guy's motorcycle when he realizes that Ryo is in danger. Not only does he reach Ryo just in time, but he gets to make a bad ass entrance.
* Fake Defector: A good guy pretends to change sides to pull one over the enemy.
* Fake Defector: A hero pretends to switch sides in order to bring down the enemy from within.
* Fake Defector before trapping a powerless Saber and trying to kill Shirou.
* Fake Defector him, Janeway says that, if he'd meant what he said, the offer of sanctuary was genuine. He replies that it was a tempting offer.
* Fake Defector, increasing Stannis's strength military strength in his quest to liberate Winterfell from the Boltons.
* Fake Defector shows up he cements his cover by firing on them after ostensibly taking down their shields with his command codes. (What actually happens is that Data lowers the shields himself, trusting that Riker must have a good reason for wanting them down, Riker sets the weapons to almost zero power, and Data fakes taking damage.)
* Fake Defector, where someone on the side of good infiltrates the villains' side by pretending to do such a turn.
* Faked Gift Acceptance: Pretending to accept a gift but then destroying it or throwing it away when no one's watching.
* Fake Difficulty: "Bad technical aspects make it difficult". Needing to preform a complex action that takes the player out of a gaming experience because there is a much simpler and obvious solution that the game treats as impossible is bad game design. Unless this machine is quick and easy to get to I think this is what your looking for.
* Fake Difficulty: The game's difficulty comes from unfair conditions that the player can't control.
* Fake Difficulty: Yes, even these are usually invoked to promote the Rule of Fun.
* faked is in fact Wim De Vilder, a real-life TV newscaster for the VRT's main news program.
* Faked Rip Van Winkle: Someone is tricked into thinking that they've woken up in the future.
* FAKE: during a hostage crisis, Dee bluffs the bad guys by telling them a retractable ballpoint pen is the detonator for a bomb hidden in the character's base. When he clicks the pen, his bluff seems to have been called — but then the bomb, which Ryo had previously set for 10 pm, goes off as scheduled.
* faked with animated GIFs, although if seen in a browser with a different icon the discerning will be able to catch on.
* Faked with the Shemarran Warriors, whom are all actually just Robots.
* Fake Faith Healer who fools sick people into believing they can be cured through the powers of God instead of modern medicine.
* Fake fire hydrant lawn statues are sold to give people's pet dogs a place to do their business.
* Fake First Kiss: Two characters share their first kiss for no romantic reasons.
* fake French commercial under the brand of "Dolls Klaus Barbie". At that time, Klaus Barbie was a former Nazi being tried for crimes against humanity.
* Fake good at being a sword fighter/gunfighter/spear-wielder/martial artist, etc.
* Fake Guest Star: A regularly appearing actor is credited as a guest star.
* Fake has to deal with both Dee AND JJ whining at him on a regular basis. His bark seems to be worse than his bite though - Dee refers to him as a "baby seal" at one point (and is promptly yelled at for it, naturally).

* fake her death in order to protect herself and her hybrid son from persecution.
* FAKE. He's also the best shot in the precinct and, with Ryo, serves as the department's sniper whenever one is called for. Ryo is a pretty pleasant guy himself, but a bit too reserved and not outgoing enough to meet the trope description.
* Fake High: A character acts drunk or high because they think they are.
* Fake High: A person falls under a placebo effect, usually by being given a non-drug substance in place of a drug.
* Fake High: Someone eats or drinks something they think is a drug but it isn't, which leads to them mistakenly believing themselves to be drunk or high.
* fake hint messages is a plug for a nonexistent pizza delivery shop, promising it "in thirty turns, or it's free!"
* "Fake I.D.s" has Screech making fake I.D.s for the guys. When he starts to tell Zack's Mom about them, Slater shoves a brownie in his mouth.
* Fake Interactivity aired on TV Tokyo, it was constantly the lowest-rated animated show on Japanese broadcast TV.
* Fake Irish: An Irish character is played by an actor who isn't really Irish.
* Fake Irish: An Irish character played by an actor who isn't really Irish.
* fake is an exception, though: The parody band existed well before the film.
* FAKE, JJ does this to Dee and attempts to glomp him after a case when Dee is found shirtless. Dee is not pleased.
* FAKE, JJ very unexpectedly hooks up with Drake, despite their relationship not having been romantic previously and (perhaps because) Drake conveniently having just been dumped by yet another girlfriend.
* Fake Karakura Town informs Ichigo (who's been in a quite a bit of a slump up to that point) that he's in one of these situations.
* Fake Kill Scare: Freaking people out by pretending to kill someone else.
* Fake Kill Scare: No! Someone just got killed! Hey! Wait a minute! That was fake?!
* Fake King: A good ruler is secretly replaced by an evil lookalike who then abuses their position.
* Fake Kraid is physically distinct from Kraid by being brown with blue hair and not yellow with green hair.
* Fake Longevity (one playthrough of which is about the length of a feature film in a bid to avoid that problem) which claims some overly specific three-digit number of hours of gameplay.
* Fake LongevityThings that pad out a game's length so they can brag about having "100 hours of gameplay!"
* "fake-marriage markets" where gay and lesbian people can meet and look for someone who is willing to play the beard for them (and vice versa).
* Fake: Marrying Suguru would turn Sachiko into a trophy wife. She's not keen on being just his trophy wife, so she's going to university to get a higher education.
* Fake Memories. According to both eyewitness testimony and official government records she is the aunt to at least 56 people.
* Fake Memories: Remembering something from the past that didn't actually happen.
* Fake Mixed Race: A mixed race character is played by an actor who isn't really mixed race.
* Fake Mixed Race: A mixed-race character is played by an actor who isn't really mixed race.
* Fake Mixed Race: A mixed race character played by an actor who isn't really mixed race.
* Fake!Moody does Crouch Jr's trademark facial tick (quickly licking his lips), to his horror.
* Fake Mystery: The mystery plot turns out to have been staged to prank the detectives.
* Fake Nationality: An actor plays a character of a different nationality.
* Fake Nationality: An actor plays a character of an ethnicity or nationality that they are not.
* Fake NationalityWhen an actor plays a native of a nationality or area other than their own.

* Fake News Rumble, all the villains came from an alternative universe, as well as protagonist Tek Jensen. Furthermore, every universe contains some version of of our heroes Stephen and Jon.
* Fake News Rumble, but his sheer rage (and a chair) makes him just as capable of fighting monsters as his superpowered colleagues.
* Fake News Rumble: Steve Carell carries around a sack of money that serves as his weapon.
* fake of the "Anti-Theft Activator" with one reading "Start Button". It was shown working at least once, against the Riddler.
* FAKE, one kid tells Bikky "I gotta go home and feed my mongoose." Another says he has to help his sister with her homework. Given the kid's intelligence, Bikky finds the two equally implausible.
* Fake-Out Fade-Out: The show fades out as if it were about to end, but then jumps back in to continue the story.
* Fake-Out Make-Out moment where two characters kiss each other as a way to distract someone.
* Fake-Out Make-Out to avoid blowing their cover and it heats up the sexual tension between them again. They almost end up having sex but stop themselves when they realize that the attraction is purely physical and caused by the danger they are in. They go back to being just friends.
* Fake-Out Make-Out: Two characters kiss each other as a way to distract someone.
* Fake-Out Opening: That opening scene? Has nothing to do with the actual movie.
* Fake-Out Opening: The first scene of a movie that's different from the rest of the film.
* FAKE OVA, Ryo stops a horny Dee and stretches his face out, making what one fan dubbed the "Gumby Face."
* Fake Period Excuse: A woman gets out of a situation by lying about being on her period.
* Fake Period Excuse: Someone fakes being on her period to get out of a situation surreptitiously.
* Fake pregnancy jokes can come off as this when the person playing the prank makes it less obvious that she's joking.
* fake preview for the non-existent, where a character uses the obligatory "damn".
* Fake Rabies: A character (usually a dog) is mistaken for being rabid because of something frothy on their mouth.
* Fake Rabies: Someone, often a dog, gets foamy stuff on their face which makes other people think that the person or the creature is rabid.
* Fake Radio Show Album — An album imitating a segment of radio airtime.
* Fake Relationship: A couple pretends to be in a romantic relationship.
* Fake Relationship: They're actually not in a romantic relationship, but pretend they are.
* Fake Relationship: Two characters pretend to be in a romantic relationship.
* Fake Relationship: Two characters who aren't romantically interested in each other pretend to be a couple.
* Fake Relationship vs. secretly being in a romantic relationship but acting like it's non-romantic.
* fake returning Thrawn and his associates assign Imperial Intelligence agents to trigger speciesist riots on Bothawui and eventually frame Han Solo for murder.
* Fake Russian: A Russian character is played by an actor who isn't really Russian.
* Fake Russian: A Russian character played by an actor who isn't really Russian.
* fakes a disease by covering his head in shaving cream and having Big Mac warn the patrons to stay away as they, along with Buster, stumble out of the building, Big Mac grabbing his sandwich on the way out. Humorously, the owner of the place, who was also the owner of the bar (converted in the years since the first movie) experiences deja vu and asks the band if he knows them. The band quickly eat their food and call for their check.
* Fake Scot: A Scottish character is played by an actor who isn't really Scottish.
* Fake Scot: A Scottish character played by an actor who isn't really Scottish.
* Fake Shemp: Actor not available? Use archived footage, archived audio and/or

obscured body doubles to simulate their presence!
* Fake Shemp: The actor is unavailable, but the studio utilizes archived footage, archived audio and/or body doubles to simulate the actor's presence.
* fake ship's captain. She's also willing to employ this herself if it means she can avoid an actual fight.
* fakes his death and throwing them in the water too, ensuring the police would identify the corpse as his.
* fakes his death, he jumps off a plane to fall on a net. He hits one of the rocks the net is tied to before hitting the net.
* Fake Static: A character makes noises over the phone and pretends that it's a bad connection.
* Fake Static: Character pretends that there's a problem with their communications equpment in order to avoid conversation.
* Fake Static: Someone avoids conversation by pretending that their communications equipment isn't working right.
* Fake Static: Someone avoids conversation by pretending that their communications system is failing.
* fakes that often wound up being inferior to the genuine quality blades, which can be recognized by misspelled inlays ("+UBRLFH+T") and fancy fittings that the originals don't have.
* FAKE tendencies come out and he says coolly, "There are no such thing as ghosts."
* Fake Texting: Pretending to text or check social media to avoid interaction or suspicion.
* Fake Texting: Someone pretends to be texting or checking social media on their phone.
* fake this at the same restaurant hoping to score free crab cakes again.
* FAKE). This is because Dee was unexpectedly intense, telling Ryo to "Never dismiss [him] again" after Ryo treated the first kiss as a joke and Ryo was taken off guard that Dee was "such a good kisser".
* Fake-Tiger is a robot. There was an episode right before his introduction featuring the scientist who was making combat robots to fight superheroes that were capable of matching Tiger and Barnaby in hand-to-hand fighting.
* fake towns of Beatosu and Goblu. This strategy sometimes backfired when people would move to the area and Defictionalize the paper town (a more famous example is Agloe, New York).
* Fake Twin Gambit: Pretending to be one's own identical twin, whether such person exists or not.
* fake Twitter account for North Korea's propaganda ministry after legitimate news agencies started picking up stories from it.
* fake Twitter account popped up, signing off most of its tweets with #bpcares. For instance: "We've created something that will affect your children's children. Can YOU say the same about YOUR life? #nailedit #bpcares"
* Fake Ultimate Hero: Character has a reputation of being a courageous badass, but is actually an outright coward.
* Fake Ultimate Hero - Takes the credit when someone else saves the day.
* Fake Ultimate Hero: The character has a reputation of being brave and formidable, but in truth they're a pathetic coward.
* Fake Ultimate Hero version. To the people of Earth, he is their greatest hero and champion. He fought and defeated Cell and the demon Majin Buu. None of this is, of course, true. He shamelessly took credit for beating Cell after Gohan beat him. He did help with Buu, although it was Goku who gave the killing blow. He's so renowned, he gets military support with a phone call, have a city renamed after him, and the first person called when things go wrong.
* Fake Ultimate MookA massive, terrifying monster that is surprisingly easy to defeat.
* Fake Video Camera View: Showing a scene apparently through the lens of a video camera, even to including a "REC" warning or red dot.
* Fake Video Camera View - Video appears to be through the viewfinder of a camera as if we were watching someone the camera is recording

* Fake Video Camera View - View of what supposedly is someone video recording something
* Fakhra Younus, a Pakistani woman who was the victim of an acid attack by her then-husband. She went through more than three dozen surgeries abroad over a decade in an effort to repair her face before
* faking a burglary, hiding the "stolen goods" and then claiming their value from insurance.
* Faking Amnesia: A character pretends to have lost their memory. This can be done to cope with their issues/problems.
* Faking Amnesia: Just what it sounds like, a character pretends they have amnesia.
* Faking Amnesia, was able to monopolize Arnold's attention. After eavesdropping and learning how much of his personal life he was having to forfeit in doing so, though...
* Faking and Entering: Someone deliberately trashes their friend's house that they are robbing so that nobody would suspect them.
* Faking Another Person's Illness: A character is forced to fake a medical illness, sometimes for themselves, oftentimes for others.
* Faking Engine Trouble: Claiming to have engine trouble to stall for time.
* faking her own death and not having to be awakened was spoiled by merchandise sold at Prism Stone Shop, as well as a Jewel and Coorde set, a few weeks before the episode's premiere.
* faking his own murder and framing Barry for it, drugging his wife Marlize on a regular basis, and trying to destroy the entire world after his defeat just because it would go on without him otherwise.
* Faking It (bisexual female main characters, bisexual male supporting character, coming out story, gay supporting characters, LGBT acceptanc, LGBT youth, queer female romance)
* Faking It, Davy and Tilda meet when they are both hiding in someone else's closet.
* Faking It), Dipper is both incapable of being harmed by him and is the only one who can get either of them into the Mindscape.
* Faking It for never telling Dipper that he and Cipher were the same person.
* Faking It, in season 2, she begins dating another woman (Reagan) and also briefly shows interest in a man.
* Faking It is talking to a guy at a gay bar because Liam is trying to pick up the guy's straight female friend:
* Faking It: One of the main themes throughout the series, though it's mainly one lie the effects of which snowball into a chaotic disaster that hurts everyone who came in contact with it.
* Faking It, reporter for the school Tumblr, is quite the scoop-getter, especially of Hester High's favorite (faux) lesbian couple.
* Faking It that was their first meeting, Bill ends up several feet off the ground and is forced to obey the laws of gravity, causing him to fall right on top of Dipper who gets his head slammed onto the floor.
* Faking It: The series starts out with a fake romance between friends Karma and Amy. Over time, Amy then realizes she has real attraction to Karma, who doesn't reciprocate. Then she gets into several romances with other girls, while Karma is indicated to maybe like Amy as well after all.
* faking. It varies whether any of her siblings know the truth but if any do, it's Lori.
* Faking It. While not the slow, romantic dance usually seen, the wild, carefree manner in which they dance to 'their song', as though they're the only ones in the room, makes it clear to everyone present that they have feelings for each other.
* Faking the Dead, but he likes stealing so much that he falls right back into his old habits.
* Faking the Dead ploy that convinces their own side as well as the enemy.
* Faking the death triggered signal nets you a body in the "vegetable state". If the original dies afterwards, the previously "vegetable" body will nigh-instantly come to sentience. As Arthur, the A-Than

* Fakin' It" has Michael discover a secret room in the model home filled with body-building magazines, themselves filled with muscular men. Tobias enters and has a conversation with Michael where he admits the magazines are his. He says they're from a body-building phase he'd gone through (rather than using them to ogle the men) and he hasn't touched them in years. He then opens one and we hear a talking magazine ad for a new television show.
* Fakin' MacGuffin situation without actually giving away the real MacGuffin.
* F.A.K.K.2 would give you game overs if you managed to kill yourself.
* Fala, FDR's beloved Scottish Terrier. Eleanor Roosevelt wrote in her autobiography about Fala's waiting: "Fala accepted me after my husband's death, but I was just someone to put up with until the master should return."
* Falcata (one-handed): The incredibly badass pre-Roman Spanish machete. Iberians chopped the hell out of so many Roman soldiers with these babies, that the Romans redesigned their shields and armor. Similar to a kukri or kopis, but independently evolved, these Roman-killing machines are curved downwards. Later gladius designs were influenced by it.
* Falco low speed allowed it to intercept the Po-2 where more modern designs failed miserably.
* Falcom due to his long arc. He usually flip-flops between the two in interviews.
* Falcom, it's perhaps just as well that "Dragon Slayer" was stripped out of the titles of most of the localized versions and the later sequels and remakes.
* Falcom, with one screenshot released to Famitsu showing Princess Alfin grieving at the site of Olivert's old home in Alster, implying that he was buried there. And the biggest one to date was how Cold Steel IV will railroad first time playthroughs of the game to a bittersweet ending before suddenly telling the player to reload the game to get the golden ending.
* Falcon 4.0 featured an "Commander's Edition" of the game where the packaging was a three-ring binder filled with over 500 pages of manuals on everything from installing the game to the detailed avionics systems the game simulated. Also included was a pilot's map of the Korean Peninsula and even mission briefing sheets to be photocopied and filled out with your various waypoints, targets, radio frequencies, and fallback airfields.
* Falcon 4.0 have helmet-mounted sights for aircraft that use them for off-boresight heatseeking missiles or slewing sensor systems; more details can be found in the Real Life section.
* Falcon 9 of vintage sci-fi. It's precise enough to land on either a barge or a concrete landing pad smaller than a football pitch after a flight of hundreds of kilometers and does it all automatically with no input from a human pilot.
* Falcon different paradigms, and seem to have the overall philosophy that "if it exists, we want it".
* Falcone's as preparation for using sex as a weapon against people (the goal here to produce Super Assassin/Pirates rather than Super Soldiers).
* Falconhyrste takes place in a mysterious, supernatural boarding high school.
* Falcon strikes this pose after taking out two of Crossbones's men with a spinning, jetpack-powered kick in the opening battle.
* Falcon stuck around long enough to see them when they powered up their engines again.
* Falco of "Kommissar", which was their only hit there, but once again played straight in the UK, where it only reached #47 and was outpeaked by "One Rule For You".
* Fa'lina is perhaps a straighter example, running a school that teaches horrible things like torture, yet simultaneously seeming to really care about people (even strangers) and wanting to help protect them. It's not entirely clear whether she is simply crazy, has a deeper agenda, or is actually good and merely allows evil things in her school because otherwise she couldn't
* Falin and Izutsumi's conditions, he notes that he used to believe a monster was best composed of as many creatures as possible before coming to appreciate how just two creatures in one heighten each other's charms.
* Fa'Lina recommends this as the preferred way to avoid having your mind read by

cubi. Memorize a boring wall of text, such as legal babble.
* Falkenberg's Legion. After securing the freedom of the planet New Washington, the title legion receives a land grant from the government to settle down.
* Falkenberg's Legion as part of standard assault tactics to get over the wall of a fort. It also goes one better. To quickly cross a (small) barb wire entanglement, an armored soldier lays on it, providing a makeshift path for his fellow soldiers. This duty is generally performed by the newest soldiers, being lowest on the totem pole, and being the least experienced.
* Falkenberg's Legion books have a ton of mercenaries, ranging from independent military companies (such as the eponymous Mercenary Legion) to planetary armies sold out to pay for their expenses.
* Falkenberg's Legion books, the CD Intelligence Services work to prohibit any scientific research to keep the peace. They have no problems with corrupting databanks, censoring publications, and exiling scientists to deadly prison planets.
* Falkenberg's Legion have excerpts from a number of sources, including essays, news reports, and even letters, at the beginning of each chapter.
* Falkenberg's Legion series and its spinoffs, the colonized planets generally have little or no industry or infrastructure, and the CoDominium keeps shipping convicts and dissidents to them whether they like it or not. In particular, Haven, Tanith, Frystaat, Thurstone, Arrarat, Hadley, and Sparta all have a permanent underclass, with degrees of unfreedom ranging from "can't vote" to "outright property".
* Falkenberg's Legion, the capital city of Harmony-Garrison. Originally settled by Christian farmers, the planet Arrarat was supposed to be a peaceful venture, so the city was not walled in. Then the Bureau of Corrections got involved, and began dumping convicts on the planet. To protect its interests, the CoDominium sent a Marines who fortified the city of Harmony, and made a fortress of Garrison attached to it.
* Falkenberg's Legion, the Soviet-backed International Brigades sent to the Santiago Civil War are controlled by Political Officers. Very much in the Soviet zampolit style, the one featured takes on the Western stereotype.
* Falkenberg's Legion, which consists of troops who followed Colonel John Christian Falkenberg when he was drummed out of the Line Marines.
* Falklands War, the highly-skilled pilots of the Argentine Air Force may have been able to destroy the British task force, if only the bombs they used weren't set on distance-based fuzes that often led to them hitting British ships but not exploding.
* Falkner's Pidgeot, in the first Johto Gym Battle, does it to Charizard. While flying.
* Fall 1989 denying that the main character was going to win the lottery, which was true at the time; she won it in the 96-97 season.
* Fallacy Fallacy, dismissing a conclusion simply because it was based on invalid logic or on emotion. The fact that an argument contains a fallacy does not prove that the conclusion is wrong.
* fall back into retreat regardless of how well they were doing before to the surprisingly common strategy of shooting your own Ethereal.
* Fallback Marriage Pact: Two friends agree to marry each other after they've been single for a long enough time.
* Fallback Marriage Pact: Two friends make a pact to marry each other if they're still single by a certain age.
* Fallback Marriage Pact: Two good friends decide to marry each other if they're still single by a certain age.
* Fallberg also pioneered a cliched story formula in which a straight-man hero and a craven, gluttonous, eccentric sidekick investigated low-level mysteries. This type of story — used with Andy Panda/Charlie Chicken, Porky Pig/Sylvester, and Mickey Mouse/Goofy most often — constantly ended with everyone laughing at the sidekick's latest caper.
* fall, but that didn't make them easier to bail out, for a different reason. The relative positions of the cockpit door and the stabilizer effectively made sure that if any pilot taller than a midget would forget to take a fetal position after

bailing out, his legs will be broken by a stabilizer, this usually being a career ending injury even if the pilot managed to land on his own territory and was saved by the groung troops. More than a few pilots suffered such a misfortune, the most famous of them being a Soviet ace Boris Glinka (29 victories).
* Fall City Blues revolves around two versions of the same person forced to live together when their alternate universes were merged to save space.
* Fallen (1998), with Denzel Washington. The demons of the film are said to desire the destruction of human civilization, which they call "the fall of Babylon" and pursue this by possessing people. Though not said, this would presumably account for much of the evil in the world. Also not said but speculated is that true believer Christians will be immune to demonic possession.
* Fallen Angel: An angel who rebels against Heaven and is cast out, often becoming evil in the process
* Fallen Angel), but they have free will and can choose to be either good or bad.
* Fallen Angel canon. In here, the agents sent for the mission manage to shut down the generators the power the cloaking field. However, one of the agents then had "bad news" and "really bad news". The leader tells him to tell first the "really bad"… which is that behind the cloaking field is a 'net' that shorts out all electronics, including their cloaking fields. As for the "bad news", it's the generator that's powering it, which is protected by a security system involving explosions.
* Fallen Angel city Bete Noir, passed the mantle onto his son so he could finally leave the city. Upon going beyond the city limits, he aged rapidly and ultimately crumbled to dust.
* Fallen Angel erinyes is similar but prefers to manipulate individuals to tyrannical ends, though the most recent version is just a vengeful warrior who happens to look like a hot lady angel (though they are perfectly happy to exploit it when they're mistaken for actual angels).
* Fallen Angel has Mark Judd, who puts on special gloves to beat a confession out of a suspect.
* "Fallen Angel" has the eponymous character of the episode blaming herself for getting Casey captured by Hun and his gang, the Purple Dragons.
* Fallen Angel in some ways. On the "black" side is the Hierarchy, the people and demons who run the city of Bete Noire, where the book takes place. The "gray" comes from Liandra, a cynical, consistently tipsy fallen angel who serves as a court of last resort, and is willing to do anything, including torture, in order to fulfill her missions. Among her sometime-allies are the city's major drug dealer, the snake from the Garden of Eden, and a man who may or may not be Hitler.
* Fallen Angel, it is widely believed, but not confirmed (although he has not denied it, either), that Xia has this relationship with her son, Jubal.
* Fallen Angel, June Mills is an intelligent woman, but she still falls in love with and marries a man who she knows conned her hometown of Walton.
* Fallen Angel, Linda Darnell plays Stella who doesn't care about double-crossing romantic partners or stealing.
* Fallen Angels (2019) trade of an electronic device placed on the head that manipulates the brain to stimulate a high. Because it doesn't actually chemically alter the brain, there are no physical risks like overdose, but there is still the risk of psychological damage. It's difficult for conventional authorities to trace and regulate, as it can be assembled through blueprints from perfectly legal electronics that are very common. There's also the little issue that the drug lord behind it is a sentient AI with a god complex that wants to use it to assimilate people's minds.
* Fallen Angels, an eco-socialist regime has come to power, and banned everything save "appropriate" technology. The catch is that no matter how many windmills and solar panels they build, it's nowhere near as efficient as good-old-fashioned coal and petroleum, leaving millions of people without political pull to freeze in the ice age brought on by the lack of particulate matter in the atmosphere.
* Fallen Angels, intending to execute them once they're in Mexico. The protagonist is driving one of the cars, so to gain time he drives near the curb of a dirt road,

kicking up dust into the vehicle behind, which eventually goes off the road and crashes.
* Fallen Angels, Jerry Pournelle, and Michael Flynn, an astrophysicist goes to torturous lengths to include the abbreviation SNU (meaning "Solar Neutrino Unit", and pronounced "snew") into a conversation, just so the person he is talking to can ask "What's SNU?" The inevitable response is "Nothing much. What's new with you?"
* fallen angels. Justified in that, supposedly, they wouldn't have fallen if they weren't already evil.
* Fallen Angels makes it clear they hold a lot more cards regarding the fate of the sons of Caliban than they let on.
* Fallen Angels, one of the spacemen (who have lived most of their lives in orbit, and so have severe issues with living in gravity again) wonders how people make love in G. His observation? "They probably don't need Velcro."
* Fallen Angels, or the creations of these same beings, created to help lead humanity astray and/or torment them.
* fallen angels that seems to be steering both Amorr and Savondir into conflict.
* Fallen Angels that they hunt still wear the chapter's original black colors during the Legion days before the Codex Astartes reforms split the legions, as they're either unaware of the change, lack the resources to correct it, or see no reason to. The Dark Angels' 1st and 2nd companies, the Deathwing and Ravenwing, also kept the original black colors, though the Deathwing has recently changed to bone-white armor for ceremonial reasons. Dark Angels successor chapters Deathwings and Ravenwings continue the old colors, though some have changed them.
* Fallen Angels who supported Lucifer are all described as having this vice, not just Lucifer. As noted by the author.
* Fallen Angel: This exchange after Lee drops Shadow Boxer off a roof and he lands in a hay truck.
* Fallen Angel: When an angel falls from grace, be afraid. Be VERY afraid.
* Fallen AngelWhether to Earth, or Hell, that angel is cast out from Heaven.
* Fallen Aribeth doesn't have an exclamation...it's simply a low, menacing "You."
* Fallen Child if you choose the "wrong" options to their questions at the very end of a No Mercy run.
* Fallen Cupid: A cherub who's arrows sow lust and hatred instead of love.
* Fallen "Cyberdisk" units have a habit of blowing up (and taking out entire buildings with them). It requires some effort to kill them in such a way that they won't explode and thus leave Cyberdisc remnants for research.
* Fallen, Denzel Washington's character Hobbes sacrifices his life to destroy the villain. The villain escapes at the last minute; this was foreshadowed in the opening of the movie. Not to mention that Hobbes' reputation is completely destroyed—he'll be remembered as a psychotic cop killer who murdered his own friend. It's also implied heavily that Azazel will spend the rest of his son's life hunting him in order to visit the same fate upon him.
* Fallen Dragon does something similar by copying their memories to cloned bodies and instantly destroying the old one, unaware that those bodies also have souls that will pass on to The Beyond.
* Fallen Dragon if the colonists don't hand over various manufactured goods, leaving information on the latest Earth technologies as compensation, then returning several years later to do the same thing again once the colonists have upgraded their technology and gotten back on their feet.
* Fallen Dragon the mega-corporations on Earth which funded the establishment of intersteller colonies are beginning to decline, so they now make a profit by 'asset realization' — turning up in orbit and implying they'll blast the colony if the colonists don't hand over various manufactured goods, leaving information on the latest Earth technologies as compensation, then returning several years later to do the same thing again once the colonists have upgraded their technology and gotten back on their feet.
* Fallen Dragon, the Wilfrien are an advanced alien race who chose to "look inward" once they knew all there was to know about the universe. This translates into living simple pastoral lives among the decaying ruins of their cities.

* Fallen Dragon, where space travel takes months and is so costly that it has been nearly abandoned, and the only companies still doing it are just invading planets they own the rights to and stealing all their stuff to try to make a profit.
* Fallen Empire: Legions, people new to the game and Guests almost always use the Sentinel because they haven't figured out that you can change characters. It makes it even worse that it takes time and practice to actually master the Sentinel. Poor buggers.
* fallen empires. Also, any player-race that embraces the materialist ethic. (Especially the Science Directorate government in which the only leaders eligible for presidency are scientists.)
* Fallen Empires also count as this, being the remnants of advanced alien civilizations that once spanned the galaxy but have since fallen on hard times. They start the game with all technology already researched, multiple repeated tech bonuses, and have access to advanced Dark Matter tech that the regular empires can't even research.
* Fallen Empires always attempt to subjugate the rest of the galaxy when they Awaken, but most of them won't bother to defend their subjects if attacked. The exception are Benevolent Interventionists and their "Signatories", though on the downside, Signatories cannot start wars at all.
* Fallen Empires began when they made two big mistakes: 1) they let the Thrulls' breeding get out of control, and 2) they started creating more intelligent and powerful Thrulls capable of using magic.
* Fallen Empires couldn't handle the place. They fled the continent after the Thrulls curbstomped them and dreaded the possibility of Thrulls somehow invading the greater Multiverse.
* Fallen Empire series, the planet of Kir, home of the psychic Starseers, is destroyed in battle due to a combination of nuclear and kinetic bombardment and psychic superweapons.
* Fallen Enchantress, if you are of the Dwarven race or a home-brew one with the ability, you can create Iron Golems. Iron Golems are expensive melee units with high armour, a number of resistances and above average attacking ability.
* Fallen from hit points. If they do this too much, everyone in the vicinity gets splashed with gore as the Fallen gets dragged kicking and screaming into their own weapon and digested.
* Fallen Hero can be an anti-villain if they haven't fully given up their good intentions/traits from their heroic days.
* Fallen Heroes, a group of seemingly invincible, ruthlessly efficient aliens invades the station and begins systematically killing everyone. One of them shoots Jadzia and kills her, but the Dax symbiont is still alive. It manages, before it dies too, to animate Jadzia enough to throw an overloading phaser at the alien, killing it.
* Fallen Hero. It was his desire to save everyone and failing to do so that twisted him into the man he is now. His inability to save those he loved made him lose all hope in the world being able to change, leading him to the conclusion that mankind itself cannot be allowed to exist as they do now, which sets him on a dark path.
* Fallen Hero: The villain used to be a hero, but their reputation has sunk.
* Fallen Hero: This villain used to be a hero before undergoing a tragic fall from grace.
* Fallen Hero (who incidentally is also obsessed with his “mother”). Ultron-Hank spells it out upon reuniting with his ex-wife saying he knows all about her new relationship with Tony and considers it a “wrinkle” in his schemes. Ironically he’s still not as bad as Ultimate Hank when it comes to Janet (see below).
* Fallen Idols by chopping the head off with an iron axe specifically.
* Fallen Into the Pit, Dominic, having figured out who the murderer is, but without any proof, tries to provoke the murderer into doing something incriminating by telling him he's found something that might be evidence.
* Fallen Into the Pit: In the romantic subplot, Chad Wedderburn is a former soldier with PTSD issues who won't pursue his love interest because he thinks she deserves

someone less damaged. They get together in the end.
* Fallen Into the Pit is set in the late 1940s, when corporal punishment was still a common occurrence in English schools. Part of the establishment of Chad Wedderburn's character is that he's only resorted to using it once during his time as a teacher, the circumstances of which are described in detail.
* Fallen Into the Pit. One of the police at the crime scene, asked to suggest someone who might want him dead, names seven without needing to think hard, and Sergeant Felse notes that he could have done the same without any overlap of names.
* Fallen Jedi. Everyone in the casino, barring one croupier, ends up dead.
* Fallen, John Hobbes (Denzel Washington) lures Azazel (possessing his partner) out to a distant cabin in order to kill him. As the partner dies, Azazel laughs because he can easily take over John Hobbes once his host body passes. But John is smoking poison-laced cigarettes...
* Fallen King and wanting to fly home like Dorothy, and suddenly remember Kaiba's helicopter.
* Fallen Kingdom has the Fire Flower resistance, led by Yoshi, which has resisted Bowser since he took the world.
* Fallen Kingdom, Mario and Bowser are this to Antonio, Mario's father, and Emperor Morton, Bowser's father. Cobal also turns out to be a descendant of the Yoshi partner from The Thousand Year Door.
* Fallen Kingdom, the deceased Antonio and Emperor Morton's powers are said to far surpass Mario and Bowser's, and the First Koopa War sowed the seeds of Mario and Bowser's conflict.
* Fallen Kingdom: The Neo Koopa War Armors, sleek mechs designed by Ludwig himself with titanium hulls and magical reactors. They are equipped with massive laser cannons that are powerful enough to destroy a fleet of ships that would have taken days for a conventional army within 30 minutes.
* Fallen Kingdom, the Seven Stars lead the criminal underworld and have designs on taking over the Koopa Empire.
* Fallen King has Joey throwing Ryou Bakura off the helicopter to his death.
* Fallen King has Pegasus, who uses an endless hallway to trap the heroes.
* Fallen King has this as a looming threat. The Millennium Items can cause this, and Pegasus plans to do this.
* Fallen King has this as a major theme. Joey and the others are force to make difficult, morally questionable choices and grapple with the fact that they and their world will never be the same.
* Fallen King has this played for drama and tears. After narrowly escaping death, Joey suddenly remembers his promise to Serenity and how she'll now be blind forever.
* Fallen King has Yami Yugi, who is made to leave by Joey and the others. Pegasus lampshades that it was a dumb move soon after he disappears.
* Fallen King lets those in proximity summon monsters, and Pegasus plans to use it to rewrite reality.
* Fallen King, this is Joey's reason for splitting off from Tristan and Tea. Someone will always be after the Puzzle, and by staying apart there's a chance someone else can help before the world ends.
* Fallen King, Yami Bakura saves the group from Pegasus a few times, but only so he can take the Puzzle.
* Fallen Legion Revenants causing humans to turn into zombies and animals into various monsters.
* Fallen London allows you to buy Fate with real money. Fate is obtainable in-game on very rare occasions and can be used for mundane functions like restoring your opportunities deck to unlocking new and complex story inlets. While all content in the game is technically unlockable through play, someone did the maths and came to the conclusion that several of the high-tier events are easier to unlock by getting a second job at US minimum wage and using the money from that job to buy Fate than trying to unlock them through play.
* Fallen London, and talking cats are all mundane and commonly-occuring facts of life.

* Fallen London are set in a version of Victorian London that was "stolen by bats" and is now run by the Masters of the Bazaar. Players can commit murder and cannibalism, go mad, become possessed, have their eyes stolen by spiders, sell their soul and be sank beneath the strange waves of the zee by enemies.
* Fallen London avoiding losing these hard-earned Prize Tokens in defeats.
* Fallen London, but repeated beatings can still ruin their bodies permanently and intentionally-excessive force can permanently kill someone.
* Fallen London by default (although the player can choose to only pursue one gender or no-one if they choose).
* Fallen London contains a quest where the player character finds out that ravings they took for "Heifer star" actually refer to a woman named "Hephaesta". '-a'/'-ar' only sounds the same in non-rhotic accents, like the Cockney and RP the characters are presumably speaking.
* Fallen London decided to change the name to coincide with making social network integration optional.
* Fallen London drunk. Thus, many player characters live by this trope, witnessing awful stuff and reacting by drinking like maniacs.
* Fallen London fans have taken to calling themselves "delicious friends".
* Fallen London for the entire city barring a few causes of death. You just wait for the victim to come back to life.
* Fallen London golems, but otherwise fit the description. The in-game art even shows that they have writing on their foreheads.
* Fallen London has, among others, the law firm of Baseborn & Fowlingpiece and the shipbuilding company Leadbeater & Stainrod.
* Fallen London has been known to come back from being reduced to mincemeat), or the "Cantigaster venom." Death from disease or old age is also final.
* Fallen London has this sort of name. It really augments the creepiness.
* Fallen London high and if you do, you lose all the cool Ambition-exclusive equipment.
* Fallen London. If you dabble in immortality and end up here anyways, your punishment is getting thrown down a pit full of giant spiders that will feast on your undying body, forever. And if you die somewhere out of the Kingdom’s reach (such as London itself) you instead end up in the Far Shore, which seems like some sort of horrifying cosmic landfill.
* Fallen London: If you get thrown out of the University, the game notes, "They laughed at you and so on." Publish a Scientific Article, and the game further notes, "It appears you have shown them all."
* Fallen London. If you're at a party and choose to argue with the Jovial Contrarian...
* Fallen London, if you're foolish enough or don't have anything else to offer. But something of yours WILL end up in his sack. And unlike Santa, he doesn't just appear on the Christmas eve. No, Mr. Sacks visits you on each of the twelve days before Christmas. And he expects a gift with each visit.
* Fallen London: In a fit of sheer irony, the game takes place in an alternate reality where the stars represent cosmic forces preventing two fundamentally different and near-godlike aliens from consummating their love, yet it's weak and ignorant HUMANITY who is crossed, their greatest obstacle, and in some timelines, their ultimate doom.
* Fallen London in the Neath, and aside from certain nasty methods you're certain to get back up from death. However, when you come back your corpse might not be in such a good state, depending on how messy it was. After a certain point people just wrap themselves up in bandages and leave for the Tomb Colonies, where people are much more open towards such insignificant things as looking like a zombie leper.
* Fallen London in under a single paragraph! And now you have to go looking for it while the demoness you flat out lied to believes what is actually true.
* Fallen London is animate. Not nearly as much fun as it sounds. Most things in Polythreme don't enjoy being animate, and may attempt to take it out on the humanoid inhabitants if they get the opportunity.
* Fallen London is edging toward this — players have always been able to use

real money to purchase Fate, which allows you to refill your actions, get new opportunity cards, start a Soul Trade storyline, reset your Ambition, etc., but they were also able to collect Fate through dreams and a few other events. Then the dreams stopped granting Fate. Then the devs added a few more storylines that could only be opened up with Fate...and started adding options to existing cards that provided new storyline paths only available with Fate, so it's getting to the point where you can't play any of the new content (which is the only thing you're there for, if you've hit all the content caps) without spending some Fate. In fairness, the game has no ads and needs to make money somehow, but it's a little disappointing when the majority of the new content is available only for those who can pay for Fate.
* Fallen London is set in this decade as of 2012, since the game calendar moves in real time, just 122 years behind us; when the game originally opened it was set in the late 1880s. It does have quite a few features of the trope.
* Fallen London. It starts off as an ordinary plant; later, you can feed rats etc. to it; even later, you can start luring people to be eaten by it.
* Fallen London. It's the fifth city to have received this treatment, and the cavern is vast enough that the are many other cities down there, most predating London. Dig deeper yet and you'll find Flute Street, which is populated by squid men.
* Fallen London. Late in the game, you can even establish a Base Camp in there for various purposes... including something as simple as dealing with your Nightmares by letting them kill themselves against your defenses while you take a recursive nap in the middle.
* Fallen London: Many of his visits have Mr Sacks offering to take emotions and feelings away from you, instead of material objects. He never takes them forcibly.
* Fallen London occasionally mentions The Magazine Formerly Known as the London Magazine: apparently after London fell, the Masters of the Bazaar demanded that the London Magazine change its name, but the editors were not in a cooperative mood.
* Fallen London of Parabola, altering its surroundings wherever it goes and chasing people in their nightmares. You only encounter the Honey-Mazed Bear in the very late game, and hunting it down is one of the more difficult Dangerous tasks the game lets you undertake; to the point the first time you do it raises the stat's cap.
* Fallen London. One of your crew occasionally speculates you could actually run your ship on the raw beans if you ran out of coal.
* Fallen London (or rather some combination of the two, as some of the in-game tracks were edited from their official versions).
* Fallen London story at any time, you'll need to work through many others, and piece it all together. Even snippets from the earliest moments of your career that were never important can gain a lot of relevance later on.
* Fallen London task. Even aside from the fact that it tends to cause one's eyes to bleed and hair to ignite, and has been known to drive scholars mad.
* Fallen London, the titular city and the vast cavern of the Neath that surrounds it, It's dark, but also often whimsical and fun.
* Fallen London, they usually pass their days challenging each other to deadly duels (or at least, deadly for others that aren't as ragged as them). Thus, their mangled bodies can't put out much strength, but they have more experience than anyone else and can easily kill much livelier and stronger fighters in seconds. Fittingly, they're one of the three factions who can teach you how to be Dangerous (with the heavily-armed Revolutionaries and the muscular, brawl-happy Dockers being the other two).
* Fallen London things will happen to your pet weasels if it gets too high.
* Fallen London to wage wars against each other in secret by venting their frustrations down the chain. Even the 'main character' of Fallen London, the grandmaster of the Bazaar, hypocritically tries to allow beings of different hierarchies to live as one while also bullying and demeaning the minions and lovers on the lower end of their chain. The game's main questline is about whether to reform the chain or break it entirely.

* Fallen London. When London was dragged a mile belowground it came into proximity with Hell, which exports Nevercold Brass in exchange for souls. There's no word on Satan, but there are devils aplenty, charming their way amongst society. Parts of the Church want to go to war against Hell - they did it once before and were crushed, but the devils were amused. They might not be amused again, but some of the clergy wonder.
* Fallen London without being prepared. Since icy temperatures are scarce in the Neath and near-impossible to find in London, you are likely to take many, many injurious tumbles if the frostbite doesn't get you first.
* Fallen London: With the amount of intrigue going around in the Neath, it's only natural blackmail would crop up as one of your options. There's even actual pieces of "Blackmail Material", which are quite valuable and rather difficult to obtain. The description for them is also quite apt:
* Fallen London: With the Neath being as odd as it is, naturally magicians were bound to stumble onto something to make their tricks a little less reliant on sleight of hand. The process is not detailed, but it ends at magician turf wars fought with strange and powerful sorcery that not even the magicians themselves understand. This reaches the point where, among the various "Hunting Dangerous Beasts" sort of quests, you get a commission to capture a certain stage magician alive as one of the harder quests, and the preparations recommended are nothing short of unnerving:
* Fallen monsters can be transformed into masks, You can dress as hostile monsters to walk past them without attracting aggro which also enables you to use the monster's basic attack. Also some monsters are faster than horses, so you can make multiple masks for utility or sell them for profit.
* fallen off his horse: that even though the power of the Golden Rectangle was mainly drawn upon by running with the horse naturally, he could also get it by making it kick him by throwing Gyro's remaining steel ball at it (effectively skipping taking a painful shortcut).
* Fallen One to it, meaning a lucky instant death attack will end the fight instantly.
* Fallen-on-Hard-Times Job: A person desperate for money will take on a job that they, and society, sees as unglamorous and/or undignified.
* Fallen-on-Hard-Times Job: Poor and unemployed people will have to take any job that will make their ends meet.
* Fallen-on-Hard-Times Job: Run away from the father who wants to marry you? You still have to eat, don't you? Princess or not?
* "Fallen Petals", shipping mysterious villainess Cinder with perky, innocent Ruby, has gained a not inconsiderable following in the fandom.
* Fallen Princess Say'ri has them mention cherry trees and promise that they will go watch them bloom.
* Fallen Princess, she has to clean up nicely to be accepted by her beau's family and prove who she truly is.
* Fallen Princess who, in the previous episode, revealed that she worked a job to save money for college, doesn't appear in the episode where a million-dollar bounty is placed on Danny's head.
* Fallen Son: The Death of Captain America, Captain America dies. The tension comes more from the whodunnit angle and general Avengers infighting.
* Fallen States of America: The USA has grown weak and no longer qualifies as a global superpower, or may not even exist anymore.
* Fallen, teen jock Aaron discovers he was born half-human, half-angel. One of the clues is he knows (and speaks) all human languages without realizing it.
* Fallen, the cop Hobbes is hunting a demonic serial killer, and gets provoked into shooting the demon's latest possessee in broad daylight. He knows no one will believe him if he tries to claim demonic possession was involved—but he can claim self-defense since the man was pointing a gun at him, right? Nope, it turns out the gun was loaded with blanks, and the demon just possesses a bystander and testifies that Hobbes shot the man with no provocation.
* Fallen, there is a demon essentially free to take over people's bodies and use

them to commit murder. Apparently, the forces of Heaven are not concerned enough to show up and do something about it. There are some Catholic demonologists mentioned to fight the demons, but we never see this and the one who is shown in the film only gives the protagonist information on them.
* Fall From Heaven 2, the Doviello civilization has the option to upgrade their workers to (the Doviello equivalent of) Warriors.
* Fall from Heaven also make an appearance, including Buboes, the Horseman of War and Stephanos, the Horseman of Conquest... and, on top of them, the Avatar of Wrath, a colossal manifestation of concentrated anger and bloodlust. The overall god of war (and chaos), when armageddon isn't happening, is Camulos.
* Fall from Heaven and golems. The problem is that the crude golems they can make now are incapable of learning (i.e. gaining XP) on their own. Barnaxus is an ancient golem from the old Khrad'Ke-zun Empire, of which only the Luchuirp remain, who can teach himself new things and then pass it on to Dwarves and other golems. Their cave-dwelling Khazad cousins don't use golems.
* Fall from Heaven backstory has this typically happening with gods and particular elements of creation (represented in game by the different magic types.)
* Fall from Heaven features the Buggane, a type of demon who's preferred hunting style is to find a married couple when one of the people is away from home. It first impersonates the missing person all day, until it's in bed with the other spouse to kill them. When the distant spouse returns it does the same thing in reverse.
* Fall from Heaven has 21 different gods, each associated with a particular type of magic, as well as a way of behaving and a facet of the world.
* Fall from Heaven has a spirit magic user in the backstory who regularly did this.
* Fall from Heaven II; A zombie inherently on fire. Of course, whenever one of them perish, all enemy units in the vicinity are damaged, which makes the "PZ" the perfect bane of any army that cannot perform ranged attacks or are somehow immune to fire. To be fair, though, it's one of the only early-game advantages of the Sheaim.
* Fall from Heaven, Magister Cultuum fills this role, to the point of having a Great Sage named after him, an being quickly know to everyone on the Forums.
* Fall from Heaven reverses the usual fantasy conventions: The good gods are individually powerful but tend not to get along well, while the evil ones are all trying to twist Creation together just to make a point to the original Creator. They even run their afterlives (hells) together as a well-oiled machine to create twisted daemons, unlike the good gods whose afterlives are all disconnected.
* Fall from Heaven setting and backstory, the Elohim are a largely peaceful civilization, based around special ancient ruins, victims of wars, and such. Their worldspell matches this theme, by preventing enemy units from entering elohim territory for a certain amount of time. This can be used offensively, however, as units that would normally be needed for defense can be used to attack instead. In effect, the defending armies become the "peace vault" units.
* Fall from Heaven, the Orcs are human worshipers of a god, who were deformed when the god fell (thus becoming evil).
* Fall from Heaven the wizard Tebryn Arbandi created one out of Abashi the Black Dragon: the 3rd most powerful being in existance. One of those is a god.
* Fall from Heaven, with other random like werewolves and jinn thrown in for good measure.
* Fall Gelb (after the Belgian-Ardennes encirclements of the first phase that May). The June offensive to break through the badly-outnumbered French Army's staunch defenses in Artois and Picardy aimed to take Paris. After a gory slugfest with the French artillery, which matched the Germans' despite the French Army's 2:1 numerical inferiority, German mobile forces eventually ground through the French defenses and into the undefended spaces beyond them. After the encirclement of half of the remaining half of the French Army, and the capture of Paris, the French abandoned planning to withdraw to a national redoubt area in Brittany and sued for peace.
* Fall Guy: A designated scapegoat who is used by a criminal to take the blame for

the latter's crimes. May either be a (willing) accomplice who was fooled or manipulated by their partner-in-crime, or someone completely innocent who was in the wrong place at the wrong time.
* Fall Guys goes for five rounds, gradually eliminating players until the finale. If something happens to wipe out most of the contestants early on (typically through disconnects or Slime Climb, the only Season 1 game with no upper limit for eliminations), the game will pull a final round early so that the remaining players don't have to go through later games with fewer people.
* Fall Guys: Ultimate Knockout has the Slow Clap emote, sold for 3 crowns in the regular shop rotation. When activated, your Fall Guy stares and squints while doing a slow, sarcastic applause.
* Fall Guys: Ultimate Knockout have brand logos plastered all over the place. These brands include: BLAM Inflatables, WIG Industries, and EGG (yes, just "EGG"). The WIG Industries logo also appears at the end of Season 4's final release trailer. You can even have your Fall Guy be a walking billboard with the Ad Guy pattern, which adorns your guy with ads and logos.
* Fall Guys: Ultimate Knockout is dubbed "Fall Guys 4041", which sets it 2020 years in the future from when the season is released, which was in 2021.
* Fall Guys: Ultimate Knockout of some sort, but it gives no explanation for its content beyond that. Just slap on a wacky outfit and jump into a 50-to-60-player free-for-all tournament, orchestrated by... someone. It doesn't give any clues as to why all the competitors are bulky bean-people, either, though the fans have plenty of theories.
* Fall Guys: Ultimate Knockout, one of the possible final rounds is "Royal Fumble". In this mode, one player has a tail, which can be stolen by other players. Whoever has the tail once time runs out is the grand champion. This makes most of the round's duration unimportant, since there is no difference between keeping the tail for most of the game and successfully fleeing from everyone else for that long compared to just grabbing it near the end.
* Fall Guys: Ultimate Knockout sometime behave like this in obstacle courses, stopping just before the finish line and trying to prevent people behind them from finishing the course by holding them down or throwing them off the platform. This often results in the trolling players' loss, as they wait too long to cross the finish line themselves before people running past them fill the quota of players qualified in the given round.
* Fall Guys: Ultimate Knockout. The devs apparently didn't foresee how big the impact having the game be one of the free PS Plus titles would be.
* Fall-in Angel: A girl falling from the sky is what kickstarts the plot.
* falling all over each other to try to date her. In contrast, "Kaylee" is rather psychotic, and is fairly average-looking, being short with a heart-shaped face.
* Falling Anvil discipline for Dungeons and Dragons version 3.5 allows you to do a short-lived instance of this to your enemy to hit them with a lightning bolt. Several versions of this exist, ranging from the 2nd level maneuver "Unlucky Raincloud" and going up to the 7th level "Accursed Thunderhead".
* Falling Anvil version 3.0/3.5 contains three different maneuvers related to this, ranging from dropping a single banana peel near you from your hand, to causing banana peels to rain from the sky for thirty feet around you.
* falling asleep while crying and briefly contemplates on giving her a kiss until he decides against doing that.
* Falling asleep while suffering from hypothermia can accelerate heat loss due to lack of physical activity,
* Falling Chandelier of Doom: If a fancy room gets damaged enough, expect a chandelier to crash to the floor.
* falling deeper and deeper into nihilism with each session that appears in full at chapter's end.
* Falling Down a psycho; Michael Douglas' character uses the opportunity to make a stand against the fifth or sixth trivial thing that has pissed him off that day.
* Falling Down. His favorite possession is a used can of Zyklon-B, and he excitedly fantasizes about the number of Jews who were gassed.

* Falling Down) in a fast-food restaurant, his burger looks nothing like the one on the menu board.
* Falling Down, Martin Prendergast finally confronts the man who snapped and went on a rampage in an attempt to get home, trying to make him face up to what he's become.
* Falling Down. Unlike Bill Foster, who is on his violent rampage against the petty frustrations of modern society, Det. Prendergast tracks him down while constructively dealing with his own annoyances with empathy and maturity.
* Falling Down uses this as one of his excuses to get money from him, claiming to be a Vietnam veteran despite only being around 30 at most.
* Falling Down when D-Fence goes on one of these, expect the body count to start rising.
* Falling Down When the gangbangers' car crashes and they are killed or injured, their friend Angie (who is implied to be the girlfriend of one of them) races up to the scene, crying.
* Falling Free, a character tries to commit suicide this way. Fortunately enough, her friend got there in time and jammed the airlock shut.
* Falling Free when a girl specifically engineered for free fall (with a second pair of arms instead of legs) wonders how 'downsiders' can have sex without bouncing apart, since they have no lower hands to grip their lovers with. Her downsider lover explains that gravity has its uses. She also points out that condoms sure beat chasing bodily fluids around the compartment with a hand-vac.
* Falling from your bike (either in dirt cycling, mountain biking, BMXing, or even when riding on rough ground in some parts of town) can give weird injuries
* Falling Hare impersonation, asking the Gremlin "Which way did he go, George?", gets a response — which allows Bugs to collapse in the appropriate direction.
* Falling Hare, in which Bugs battles a gremlin which is seeking to sabotage the war effort, culminating in an imminent plane crash which halts inches above the ground because the plane — due to having a low-priority gas ration sticker — has run out of fuel.
* Falling Hare scream rapidly when they're distressed. And it's not so much "goofy shouting" as "blood-curdling shrieking."
* Falling Hare, the plane screeches to a halt just inches from hitting the ground.
* Falling Hare, with Bugs Bunny trapped in a plane which plummets down for a long time, with some hilarious takes of Bugs panicking and becoming sick to his stomach. It only stops just before hitting the ground because it runs out of gas.
* falling in and out of love with each other, often completely out of sync with the other, so they're never in the same place at the same time. After several failed attempts, they finally get back together for good at the very end of the show.
* Falling in Lamb was an Australian commercial from a few years back, advertising lamb. It was short-lived, though, possibly due to the number of calls to local theatres enquiring about the release date of this new romantic comedy.
* falling in love. May is playing the theme to "Romeo and Juliet" on a keyboard but stops abruptly when Clarkson slips and refers to the car as "him".
* Falling-in-Love Montage: A couple is shown spending time together as they fall in love.
* Falling-in-Love Montage he gets with several girls-of-the-week is him spontaneously buying a single flower for her while they're walking in the streets.
* Falling-in-Love Montage, Ted is seen taking care of Robin who is sick in bed. He leans in to kiss her, but Robin warns him that he'll get sick. Ted kisses her anyway and the scene cuts to Robin taking care of a sick Ted in bed, and Ted says that it's "totally worth it".
* Falling-in-Love Montage. When Simba gets out next to her and grins at her though, she smirks at him in amusement at his joke and ridiculous appearance... before shoving him back in the water as revenge and running off.
* Falling in Reverse. From the same band, the song "Bad Girls Club" gave us the line "Your love is like a drug, but it is not enough!"
* Falling into a gas giant planet as Jupiter, that has no solid surface but instead a global ocean of

* Falling into Jail: The bad guy is defeated by falling directly into prison.
* Falling into the Cockpit doing this to recover the eponymous unit from the Federation.
* Falling into the Cockpit in "Chuck vs. the Helicopter": according to Sarah, the helicopter controls in a video game that Chuck has played were based on the real thing.
* falling into this trope when erastes and eromenos was the social norm.
* Falling Leaves. Jeanne openly wishes that her daughter, Susan, had died instead of her favorite child, Franklin, a brat and a bully who died from bulbar polio contracted after gorging himself on unwashed strawberries. The resulting quarrel leads to Susan's disinheritance.
* falling off a cliff, making the U.S. from Joe's impact. The cartoon also ends with Sloppy Moe tickling Porky instead.
* falling on top of her accidentally to take his hand back. When Mio awakes a couple of minutes later, she is not particularly impressed by this, but admits it was her fault they ended up falling over in the first place.
* falling out of his wheelchair, just so a guy could sit down to eat his Angus Burger..
* falling piano, which came from the same art exhibit as the anvils, after trying to use Taylor as a hostage.
* Falling Sand Game 4.4, the original powder game, allows for its physics files (which are just text files) to be modified easily. A community has sprung up around modding the game.
* Falling Sideways is a hapless nebbish who was not prepared to deal with super-intelligent alien frogs.
* Falling Sideways, the super-intelligent alien frogs can take on human shape at will.
* Falling Skies) and Lourdes are students, and the latter is implied to be having an affair with Pope. Weaver is a crazy homeless person, but may actually be a defense created by Tom himself, as Karen appears as a police officer chasing him off.
* Falling Skies are humans who were forced to flee their homes when the aliens invaded. For most of the first two seasons, the 2nd Mass is accompanied by several hundred refugees whom they must safeguard at all times.
* Falling Skies, Ben falls for his older brother's girlfriend Maggie. It blossoms into a full-fledged love triangle when some of Ben's spikes are transplanted to Maggie in a last-ditch effort to save her life, creating a connection between the two of them.
* Falling Skies, Col. Porter tells Tom Mason that he is quickly becoming one.
* Falling Skies communicate with radio waves, which both they and the children they've Harnessed can detect.
* Falling Skies had Pope treat Sara to his best approximation of a candlelight dinner. Given how hard such things are to arrange during the late stages of an alien invasion, she was naturally charmed by it.
* Falling Skies, Hal reminisces about his old girlfriend "Rita" with Maggie while hiding in a car from patrolling Mechs.
* Falling Skies, has long white hair (except in shared dreams, when it's black). All the Masons besides her have black hair.
* Falling Skies. In the final S4 episode Tom Mason and Lexi face against the Espheni commander on his ship, the commander knocks down Tom and is more focused in burning Lexi, while his back is turned Tom stabs him with a poisoned syringe that can kill him.
* Falling Skies, it's revealed that Earth is the only inhabited planet in the entire Milky Way galaxy. Strangely enough, other galaxies aren't so lifeless.
* Falling Skies just pulled off this trope with a little kid in the role of narrator, recounting what he knows of the alien invasion to date while his crayon drawings are displayed.
* Falling Skies, obviously the larger system has broken down, but once they take the mind-controlling harnesses off the kids backs there doesn't seem to be much

effort to interview them about their experiences nor offer them counseling for what was obviously a very difficult experience. One is pretty much left to wander around the compound freely with a dazed expression.
* Falling Skies one of the things the invaders use to attack the survivors is a mass of spiders that seem to be able to infect someone, multiply inside their body and finally tens of them erupt from the victim's mouth. The victim is awake for much of this.
* Falling Skies, Pope seems to view the alien invasion mainly as a chance to kill things that can fight back without attracting any legal attention.
* Falling Skies saw members of the Second Mass trying to set up a memorial to their lost loved ones, and Tom Mason tries to convince Anne Glass to contribute something to help her deal with her grief over losing her family. She's both uninterested in re-opening that fresh wound and also busy trying to figure out how to torture a Skitter, but he persists, and finally, she snaps and smacks the memorial with her hand, which is covered in Skitter blood, leaving a bloody handprint on the memorial.
* Falling Skies specifically delays telling the father of her child that she's pregnant because she wants to go on a particularly dangerous mission with him.
* Falling Skies, starting with Season 2, the remnants of human civilization are living beneath the city of Charleston, South Carolina in an Apocalypse Bunker.
* Falling Skies starts out World War II gritty and gets worse, so that by the middle of the second season you wonder if anyone on the show can even remember what soap and running water look like. The obligatory "it was all a dream" episode is confusing because everyone is so clean they're largely unrecognisable.
* Falling Skies. The alien ships appeared in this manner, hovering over cities and not doing anything. The world governments refused to strike first, as they weren't sure about the aliens' intentions. Then the aliens made any attacks impossible by using EMP to shut down most complex technology on Earth and wiped out all cities, and a sizable percentage of the population.
* Falling Skies: The bug like alien race are the ones using the most advance tech, along with biological technologies.
* Falling Skies: the world's military has been devastated, and civilians are all that's left of any real resistance.
* Falling Skies, they have ravaged Earth, and enslave captured humans with harnesses. Their commanders love to gloat on how inferior humans are, and how superior the Espheni are. Then they started gathering children and placing them into reeducation camps, and later convert them into Espheni.
* Falling Skies. They not only invade and destroy a lot of Earth and humanity, they put children in harnesses that turn them into monstrous Skitters. And we aren't the first race they did it with. Subverted with the other alien races, who are pretty much in the same situation as humanity and later bring humans into their rebellion against the Overlords.
* Falling Skies Tom Mason is second-in-command to Dan Weaver of the 2nd Massachusetts. This relationship flips as the show develops, although it's quite natural and the two actually become better friends in the process.
* Falling Skies whenever the protagonists come face to face with an Espheni leader, they will gloat about their superiority to humans. However they redirect it to a human translator, as they don't speak English.
* Falling Skies, which then evolves into a battleground for other alien races working for or against humanity.
* Falling Stars. When your party consults a seer in regards to the Big Bad, she starts rattling something off. The BBEG notices her probing and kills her from halfway across the world to keep her from saying too much.
* falling to his death. Tsume reaches out his hand to try and grab him out of midair. But since Hubb has resigned himself to his end and has nothing else to live for, he doesn't even reach out, only smiling as he continues to plunge downward.
* Falling under the "desire to maintain a façade of authority" category is the principal of
* Falling Up that was the beginning of a story arc... then the band broke up. The

band reunited in 2011, but their album doesn't really continue the story line of Fangs.
* Falling Water, Burton has a dream about an overweight man being murdered in a restaurant. The next day, he's called in to deal with the sudden death of a silent partner of one of his big clients. The silent partner is, in fact, the same man he saw in his dream.
* Falling Water, Tess' mother thoroughly documented every supposed neurosis she had growing up, which may go a long way toward explaining how she ended up in a mental hospital for a time.
* Fallin' in Love (featuring the #1 hit of the same name), reached #82.
* fall in with a convincing villain. Later, when he experiences the villain's time machine, Yates comments that it would be nice to spend time in a "golden age".
* Fallion is implied to be the reincarnation of Shadoath's good-guy counterpart: as the Torchbearer, he has the power to undo her breaking of the True World. Given Shadoath's
* Fallocaust However, he lacks the pure muscle of some of his brothers, and several characters manage to incapacitate him by virtue of getting a lucky hit in.
* Fallocaust series can only survive in highly radiated areas. Although they can inhabit a born immortal and use their abilities to irradiate an area, it's also possible for an uninfected born immortal to absorb enough radiation in an area to kill them off.
* Fall of Cthulhu's mythos. Justified as the ones doing the snapping are usually not quite what you would call human.
* Fall of Cthulhu The Harlot is depicted as a rival and opponent of Nyarlathotep.
* Fall of Damnos, both sides think that the other is this, but only one's right.
* Fall of Deadworld, the Dark Judges use a version of their dead fluids to make people go kill crazy. The ones that best respond to the stuff become new recruits.
* Fall of Efrafa and its sequel. They disbanded after they had finished telling the story they wanted to tell.
* Fall of Equestria, usually having the caribou slaughtered wholesale.
* Fall of Liberty: Algonquin quickly becomes this as the plague spreads, with twenty meter high concrete walls being erected on the bridges and around the edges of the island, whilst LCPD and NOOSE units protect all of the bridges and the city interior from undead attack. It doesn't work.
* Fall of Liberty: The undead hordes are so large that anyone who attempts to fight them head on is quickly overrun or infected themselves. The main reason Niko and the gang manage to survive is because, when they face the undead, they are prepared to run rather than fight and die pointlessly.
* Fall of Netheril and the destruction of the cities by a plan meant to save them.
* Fall of Singapore. It had been boasted that Singapore was the best-defended city in the world, the armour-piercing shells of her heavy gun emplacements capable of punching through any ship the Japanese had to offer. However, Singapore was besieged from the landward side, and their anti-battleship defenses were wholly ineffective at targeting infantry. Percival had 100,000 troops on paper, but they were in no shape to continue fighting. Realising that their situation was hopeless, he surrendered. Only to find that the Japanese only numbered some 30,000 and their supply situation had been even worse. It was this event (among others in Southeast Asia) that inspired the acceleration of the decolonisation process - the European colonists were not, and never had been invincible.
* Fall of Starfleet, Rebirth of Friendship, and even then several defeats and countless civilian casualties ensue before they're finally able to get their act together.
* Fall of Starfleet, Rebirth of Friendship but at least he's honest about his evil, unlike Starfleet.
* Fall of Starfleet, Rebirth of Friendship, Dark Conquest decides to spend an hour screwing his now-headless corpse while waiting for Celestia to show up.
* Fall of Starfleet, Rebirth of Friendship. The lower grunts of Starfleet are made to lose, so that Lightning Dawn and his team can look like heroes. This has made it next to impossible to win against Dark Conquest, as well as why so many people lose

their lives in each battle.
* Fall of Starfleet, Rebirth of Friendship. This speech explains everything one needs to know about him:
* Fall of the Crystal Empire of Princess Celestia shows how much Celestia secretly fears Luna.
* Fall of the Crystal Empire the battle against King Sombra by Smashing through a stained glass window.
* fall of the Han dynasty and the rise of the Three Kingdoms because it wasn't accompanied by a catastrophic depopulation.
* Fall of The Hulks, Samson sacrifices himself to help drain the gamma energy from the hulked-out heroes before it kills them.
* Fall of The Hulks, the Intelligencia traps Bruce — and the other seven smartest men in the world — in a Lotus-Eater Machine in order to drain their intellects. Not all that surprisingly, Bruce is married to Betty, has kids, and has killed the Hulk.
* Fall of the R-System. His arrival to destroy the R-System a cult was making distracted and kept Ultear from brainwashing Jellal with a false ghost of Zeref.
* fall of the Soviet Union there was now only one power left on Earth.
* Fall of the Studio System in a desperate gamble to save it. It ultimately worked in Vogel's favor.
* Fall of the Studio System (the minors never had a problem with TV, since they didn't own theaters, and Columbia Pictures in particular jumped in head-first way back in 1951).
* Fall of very powerful and mysterious people. This line is later codified in-universe as a signal of major plot reveals through Qrow repeating Ozpin's question word-for-word when it's finally time to bring the main characters into the loop.
* Falloner becomes F'lon, Falarnon becomes F'lar, and Famanoran becomes F'nor.
* Fall, or Dodge in Hell is all about how brain uploading is developed as a route to life after death. After Dodge goes into a permanent coma, his will stipulates that his vast fortune be used to develop the technology, making him the first person to live in a digital afterlife. But things get complicated when new arrivals start to disagree on what direction that their digital afterlife should take.
* Fall, or Dodge in Hell to become the first inhabitant of Bitworld, a digital space he begins sculpting to his will. New inhabitants start joining and fall in line with his vision, but pretty soon the place gets filled with enough people that divisions and disagreements begin. Things start looking suspiciously Biblical.
* Fallout 1/2 animations were pretty insane. Blowing someone up with a shotgun could put a gigantic hole through them, disintegrating the arm and turning the torso into a crescent-shaped mess. It really has to be seen to be believed.
* Fallout 1 Limited Edition BB gun. It shares most of its stats with the regular BB gun... except for the ability to do 70 points of damage with a critical hit. Take into account that the weapon is silent (the only silent weapons more powerful with a crit are sniper rifles), lightweight, and has no Strength or Guns skill requirements to get maximum, that critical damage is not affected by weapon skill, and sneak attacks always being critical hits, and you've got an amazing weapon for a Courier with high Sneak but low Guns skill.
* Fallout, 200 years later, the Earth is starting to recover, but it's slow-going.
* Fallout 2. Afterward, he concedes that you must be the chosen one and gives you a chunk of himself as a gift. Just don't steal more.
* Fallout 2 allowed the player to bypass several levels of security in the Sierra Army Base if he had a high enough Lockpick skill to get to the personal elevator of the general who would have been in command of the base. A character could also bypass forcefields with the Repair skill.
* Fallout 2 allows players with a shovel to dig up graves. Beyond an odd few sidequest important ones, they give you the "gravedigger" reputation (bad).
* Fallout 2 allows you to become a prize fighter in the town of New Reno. Becoming the champion raises your fame in the town, as well as giving you a slight bonus to damage resistance and unarmed fighting.
* Fallout 2 also plotted to launch a space mission from San Francisco to found one

of these. This (doomed) effort ties into several end-game quests.
* Fallout 2,) and a plasma gun and melee weapon that are the most powerful energy and melee weapons in the game, respectively. Thankfully, the player can turn the Enclave base's turrets on him and gain the help of a nearby Enclave squad to help them out.
* Fallout 2 and confirmed that the remark of New Reno residents was merely a bad joke.
* Fallout 2, and give you the Alien Blaster — a powerful beam weapon. They came with photoshopped screenshots. There is no such location, but the Alien Blaster is available elsewhere. It is possible to talk to Cody and give him food, but he is very easy to scare off, making this rumor hard to disprove.
* Fallout 2, as its negative effects will never leave even though it's dead!
* Fallout 2 a Super Mutant named Francis challenges you to an arm-wrestling contest, and if you lose he drags you back to his house and has his way with you. You wake up the next morning with a ball gag in your inventory, people in San Francisco start mocking you, and if you're playing as a female with the Sexpert perk then all the sex dolls in the game get named after you.
* Fallout 2 by Renesco the Rocketman when you're looking for parts. After giving the password, you're asked for the second password - your only response is to cuss out the foreman for not giving you the second password. Renesco then says to relax, that there was no second password. Humorously, if you leave this quest on the backburner for too long, you can forget the first password too...
* Fallout 2 can be convinced to help the Chosen One defeat Frank Horrigan, in exchange for a ride off the Enclave Oil Rig (which is about to explode). Those that survive the fight with Horrigan escape along with the heroes, while the rest of the Enclave goes up in a mushroom cloud.
* Fallout 2, causing the player to take a hit to their reputation and receive a special negative title.
* Fallout 2, causing you to break the Water Chip and thus cause the events of the series.
* Fallout 2 despite seeming to be about 15, and can create drugs and Stimpaks for the player if given the right ingredients as well as perform Science checks for them.
* Fallout 2 does play with this however: Vault 15 is nothing more than a New Khan hide out full of rust and tetanus with the generator barely functioning after a meager 80 years of being abandoned. The Chryslus Highwayman however works after 164 years of rusting in a nuclear desert after a full repair, living up to its slogan "Nothing can stop a Highwayman" (granted it could use some upgrades).
* Fallout 2) earns not only some cash but also unlocks the option for the Chosen One (regardless of gender) to go on a date with her after beating the game.
* Fallout 2. Everywhere else, theft or assault is punished by random civilians pulling their guns and trying to shoot you.
* Fallout 2, feel free to unleash your fury on Mr. Post Nuclear Drill Sergeant Nasty.
* Fallout 2 for the first time he'll offer them a spiked drink. If your Endurance is too low and you lack the Chem Resistant trait, Myron will have his way with the player, who then wakes up with -1 Perception and says "Mee feel oogy now."
* Fallout 2, from ghosts to super-mutants to intelligent scorpions. But when (s)he investigates giant scorpion monsters that are kidnapping cattle at night, they turn out to just be a pair of cattle rustlers.
* Fallout 2 gave us Frank Horrigan, an enormous, mutated high ranking member of the Enclave, with a voice as deep as the ocean. He also fits the Badass criteria
* Fallout 2 gives us Marcus of Broken Hills, Marion of Redding, and Dumont of the NCR.
* Fallout 2, Goris wears a large brown cloak (claiming to hide a deformity when questioned) to disguise the fact that he is a deathclaw.
* Fallout 2 had the Sierra Army Depot and the Hubologist base. The Brotherhood bunkers in the Den, NCR and San Francisco might also count.
* Fallout 2 had the "Unwashed Villagers fighting a spammer" rare encounter, where

the aforementioned Villagers beat up an annoying spammer, Grim, who keeps whining and making absurd suggestions for the game. ("I want a tank!") Both the Villagers and the spammer are based on real-life forum members from back in the day, and the Unwashed Villagers were known for their positive contributions, while Grim was... not.
* Fallout 2, Harold asks you to bring a hydroelectric magnetosphere regulator for Gecko's nuclear power plant.
* Fallout 2 has a .44 Magnum Revolver that is available at The Den. This revolver can fire faster than the pistols you can find at the beginning of the game, and has more damage than the Desert Eagle as well. You can use it until up to New Reno, where there's the .233 Pistol, which has more damage. However, with the Fast Shot trait, you can shoot faster for one AP less. This means that you can fire the revolver three times with 9 AP. You can also upgrade the revolver to use a Speed Loader, which makes it reload for 1 AP. Cue The Chosen One shooting a revolver three times, then reloading it. All in one turn, if you maxed Agility to gain 10 AP. Now, if you get the perk Bonus Rate of Fire, you can fire it for 2 AP, which means that you can UNLOAD your chamber into a enemy (if you maxed Agility and took two levels of Action Boy/Girl to get 12 AP), then reload it and shoot it five times in the next turn. This makes the gun so powerful you can use it until you find a Gauss Pistol near the end of the game, which has the same rate of fire as the Magnum while doing massive damage and carrying twelve rounds for two turns of uninterrupted death. Revolvers really are Just Better.
* Fallout 2 has a boxing sidequest. The rules for winning a match are a little obscure, but death is definitely a possibility. Especially if you find the plated gloves and maybe pop a couple Buffout.
* Fallout 2 has an entire plot line that revolves around a group of humans that vehemently hates both. In addition, Super Mutants and Ghouls aren't remotely common in the NCR and most of both groups are still outright hostile. Once the exceptions started dying off, it is hardly implausible that the NCR started reverting back to viewing them more negatively as a whole.
* Fallout 2 has a number of these, including the "four slugs from a .44" example below.
* Fallout 2 has Metzger, the leader of the slavers in the Den. The first named human antagonist you come across (assuming you're a good character), but clearly small time compared to the families of New Reno, much less the actual main villains of the game.
* Fallout 2 has one of the deepest voices in video games. Justified, he's a huge super mutant.
* Fallout 2 have had their sanity shattered due to use of their stealth technology, and still wage war on non-mutants for various crazy reasons, even as their non-nightkin brethren are working to cure them of their afflictions.
* Fallout 2 he has these powers is never explained, but some psychics do exist in the other Fallout games.
* Fallout 2 However, they overlooked one G.E.C.K. which you can take to your tribe...
* Fallout 2 If he answers all three correctly, he is allowed to pass. However, if he answers the final question with a question, the bridgekeeper himself will be unable to answer, and thus will die (and drop his robes, which are equal to Combat Armor).
* Fallout 2: If you become Captain in Vault City, Sergeant Stark will ask for "permission to speak freely" and tell you that you don't deserve the job. Notably he'll say this even if you don't give him permission.
* Fallout 2 in around eleven minutes, by swiping a suit of enemy power armor and waltzing into their nigh-impenetrable fortress. This trope is also featured in the original, where you can wear robes and almost everyone in the Cathedral will assume you're one of them.
* Fallout 2 in having this incredibly elaborate temple only used for worthiness-testing next to your dirt-poor village. Then the trial features a scrap against another member of your tribe to prove your worthiness - using your fists. Difficult

if you've specced for guns during setup or worse gone for certain diplomacy traits unless you use an oddball way around it.
* Fallout 2: In the first town you reach after leaving home, you encounter a mentally stunted man who with great difficulty tells you to help safeguard some livestock. If your character has a very low intelligence score, you will be able to converse with him in very erudite grunting (the translation is given in parentheses), conveying fairly complex information.
* Fallout 2 is a direct descendant of the player character in the original game.
* Fallout 2 is a somewhat strange warrior who is guided by the spirits, if the Chosen One is a Good Karma character he can join his party. He gives spiritual advice for each location in the game.
* Fallout 2 is currently being translated to Brazilian Portuguese since 2004, and while there is no release date, it's quite certain that it's in a very advanced state.
* Fallout 2 is set a further 80 years after the first game, making Harold 189 when the Chosen One meets him.
* Fallout 2 is. Some party members even comment, "Hm. I feel that I've reach an arbitrary experience threshold and gained some new abilities," upon leveling up.
* Fallout 2. It also has town guards carrying as standard issue the rare G11 caseless weapons and the never-produced Pancor Jackhammer and H&K CAWS shotguns.
* Fallout 2, it shows that the vault dweller was male. The narrator also explicitly refers to the Vault Dweller with male pronouns in the opening movie.
* Fallout 2; it's possible to beat the game in less than half an hour, but even with the EXP you get from some of the late-game area quests being insane for a low-level character, you will likely finish the game severely underleveled compared to what sanity would dictate.
* Fallout 2 Marcus the Super Mutant. A former solder from the Master Army, who with a Brotherhood Paladin creates a town where humans, mutants and ghouls can live together. He later joins your party, if you're good.
* Fallout 2, one of the enemy groups you fight against is the group of tribals called "The Beastlords", who were mutated by radiation near the caverns where they lived and gained the ability to mind-control most animals near them, except humans and Deathclaws.
* Fallout 2 planned to tie up that dangling plot by including her with an explanatory backstory, but it was never realized due to the project's cancellation. The only way the story can genuinely be given closure is if you download the Restoration Project, which will add a quest where you can find Sulik's sister at a slavers camp and then free her as well as the other slaves.
* Fallout 2 play this trope straight in that they are essentially a large group of marauders, and by far the single most powerful tribe in their territory. That being said, it has been outright stated that the White Legs have no agricultural or hunting skills, and that they only know how to take from others in order to survive. Practically every single one of their endings sees them dying out within a year, either because they lack the skills to survive on their own or because their defeat at Zion sees them being set up on by another tribe. Some notes found in Powder Ganger camps along I-15 lampshade this by indicating that it has been realized by some members that the caravans are coming up the road less and less due to the constant raiding, and that the Gangers cannot sustain themselves this way. A large number of them have left before the Courier comes through, and can be found at Vault 19 later in the game.
* Fallout 2 provides the player with the option to marry either the son or daughter of a farmer, no matter what the main character's gender is (however, if you were "Separated"—i.e. if the spouse died—you could not go back to the town and marry their sibling). Additionally, several NPC characters were gay or bisexual, allowing for same-gender seduction, sometimes to provide an alternative way to complete a quest.
* Fallout 2, putting mirrored shades on actually gave your character + 1 bonus to Charisma.

* Fallout 2 roving bands of Yakuza can be found around New Reno and will attack the player if provoked. However, they don't appear to closely follow Bushido and will occasionally flee from combat and state it's better to be "a live coward than a dead hero".
* Fallout 2, Sergeant Stark will say this if you become Captain of the guard and tell you that he doesn't think you deserve the position. Interestingly he'll say so even if you don't give him permission.
* Fallout 2 series that can't be talked into either backing down or committing suicide. However, if you play your cards right, you can convince Horrigan's bodyguards to turn against him and reprogram the automated turrets in his chamber to attack him.
* Fallout 2 skill at the game is brought in, rather than the character's), but a high Luck lets you draw better cards.
* Fallout 2, some characters, - a fair share of the possible party members and the heads of most towns - have full voice acting and a 3-D pre-rendered face with close-up animation. The game's manual warns not to assume someone is important just because they have a face, or that someone isn't because they don't. That is mostly good advice, as the characters most likely to get a face are just the ones with the distinctive looks. In addition, it's often possible to determine which NPCs have some level of importance, either for a quest or simply the ability to converse with the player, by seeing if their description is different from most other NPCs.
* Fallout 2 specifically and maliciously started a rumor that made its way into several FAQs and countless forum discussions, by having some NPCs claim that you would have gotten 100% completion if you did action X once the game is over.
* Fallout 2" stage in your journey and well beneath Frank's notice, so he just tells you to beat it.
* Fallout 2 suits and toting over half their now depleted armory on your person.
* Fallout 2 tells several stories about himself that end with 'Everybody died'. One of your chat options is 'How did you survive?' He always answers "Didn't! Got killed!"
* Fallout 2, thanks to ridiculously high health, abject cowardice, and the aforementioned traits preventing many attacks directed at it.
* Fallout 2 that is the final area of the game far away from the only coastal city in the game, in a place likely to be the last location you find.
* Fallout 2, the change in tone will mirror your growing familiarity with the game.
* Fallout 2, the Chosen One destroys the Enclave and their Oil Rig base by sabotaging the nuclear reactor powering it, leading to a massive mushroom cloud in the ending cinematic.
* Fallout 2 the Enclave's oil rig explodes as you sail off into the night.
* Fallout 2 the hobo you can lend to early in the game, who will amazingly pay you back with massive interest when you return later).
* Fallout 2: The level 2 storage area of the Enclave oil rig is a maze with a puzzle with an electrified floor.
* Fallout 2, the prewar USA had death camps for Chinese-Americans during the Sino-American War.
* Fallout 2, the shadowy remnants of the pre-War government and its military-industrial complex, based in an off-shore oil rig.
* Fallout 2 this and still bicker amongst themselves like frellin' idiots to this day. Amen.
* Fallout 2, though in the turn based context it doesn't really matter that it's presented as a moving sprite.
* Fallout 2 too big for a Super Mutant and fully automatic plasma rifle.
* Fallout 2 trivia challenge. In the unpatched game, they are called Dumar and Standing Fist.
* Fallout 2 was absolutely brutal, and borderline impossible... unless you hack the turrets in his room and convince a squad of Enclave soldiers to back you with a high Science and Speech skill, respectively. After that, he can still kill you easily if you're not careful, but he'll go down fairly easily.
* Fallout 2 "Well, THIS would have been good to have at the beginning of the

goddamn game". (The game is not designed for it if you do, though. If you hack it in to your inventory, the game won't load properly. On the other hand, if you hack it into, say, being on the ground in front of the Temple of Trials, use it a few times, put it on the ground again, save, and then proceed...)
* Fallout 2 When the player character goes on a monologue about how frustrated they feel, they totally forget about the midget who's still stuck down where the treasure was and eventually wander off without getting him out.
* Fallout 2 where they've been temporarily displaced by NCR gold coins)are backed by fresh water - a very sensible resource to base it on in a planet-wide radioactive desert. Needless to say they're worth quite a bit more than modern dollars.
* Fallout 2 which requires you to retrieve someone's spleen which was surgically removed while they were unconscious; failing to return it results in them dying after an allotted time.
* Fallout 2 with them, you can tell their father about it, which causes him to die of a heart attack. You can also give John Cassidy a heart attack by giving him Jet or Psycho (both of which work by accelerating the body's systems, not a good idea when you have a heart condition).
* Fallout 2 you can actually stumble upon, and unfreeze, a soldier put into hibernation shortly before the nukes fell. He thanks you, tells you his story and melts into a pile of goo. The game tells you he "suffers from post-cryonic syndrome".
* Fallout 2 you can find a number of mysterious memory modules which claim to permanently boost base stats, if you figure out how to use them, they allow you to undergo powerful operations... that take weeks to recover from.
* Fallout 2 you can get a pre-war luxury car. It can fit six human-sized people (there's possibly a ghoul in there, but his size is that of a human) and a Super Mutant (twice as big as a human) in the passenger space, and a huge assortment of junk in the trunk (dozens of rifles, ten Gattling guns, thousands of rounds, a hundred rockets, two rocket launchers, four flamethrower, five dozen flamethrower gas tanks, and various kind of small miscellaneous items. How everything can fit in there is anyone's guess.
* Fallout 2 you meet Father Tully, a Christian priest. He is totally drunk, and your character can ask him how many fingers he sees... Of course he sees 6 fingers.
* Fallout 2: You start out in a tribe founded by the first game's protagonist. They have all the tropes associated with primitive tribes (spears, loincloths, face-paint), but they live in the post-apocalyptic future.
* Fallout 3.” He instructs you to go and make a little boy cry, and his true sadism is revealed in that he is displeased with you for simply punching that kid, but loves it if you break up his parents and make him believe that he’ll be sent away to live in a miserable foster home.
* Fallout 3 added the Krivbeknih (Necronomicon knock-off) into the mix, which you can destroy by pressing it against the obelisk, which absorbs the book and grows in power.
* Fallout 3 add-on "Mothership Zeta", you unfreeze a group of people from various eras because one of them has a space suit and someone needs to go outside the ship. Unfortunately, the astronaut died at some point and so you have to take his spacesuit for yourself.
* Fallout 3 adds the Mysterious Broadcast, which plays jazz and, you guessed it, blues.)
* Fallout 3 after a failed scientific experiment in 2027. Datamining of the game files returned nothing and Bethesda themselves confirmed that the theory was fun, but false.
* Fallout 3 (a gun that fires almost anything that lands under the "Misc" category in your inventory).
* Fallout 3, aka "Behemoth", which plays, as its name suggests, when you’re battling one of the five Super Mutant Behemoths.
* Fallout 3 all have a variation of the classic "Indian head" card that reads "Please Stand By" before loading the title card.

* Fallout 3; along the bog trail, there are fake Bobbleheads called "Schmault-tec Bubbleheads" whose descriptions mock the player's S.P.E.C.I.A.L. abilities.
* Fallout 3 also had this when the player returns to Vault 101, which is basically in a state of civil war. Whether you kill the new dictatorial overseer or resolve the situation peacefully, you still have to leave.
* Fallout 3 also has, depending on your karma, Talon Company mercenaries or Regulator vigilantes, both of whom seek to kill you for doing good or doing bad (though the Talon Company will always be hostile regardless of your Karma if they come across you or you enter their bases, the Regulators will only target you if you have bad Karma.)
* Fallout 3 also has one of these as its climax, when the Brotherhood of Steel finally attacks the Enclave. Especially its newest recruit, and we're not talking about the Lone Wanderer here...
* Fallout 3 also has the "Lucky Shades", a unique pair of sunglasses that gives you a + 1 bonus to your Luck while you wear them.
* Fallout 3 Also heard when you find her skeleton during the Punga hallucination in Point Lookout.
* Fallout 3, and Argyle saves Dashwood by ripping out her heart before she could kill him. Unfortunately, they were unable to stop the slavers from destroying the city, enslaving everyone, and killing Argyle after he and Dashwood were separated.
* Fallout 3 and different apparel and weaponry than the normal Mutants.
* Fallout 3, and in one of the solutions to the quest, you disable the floodlights keeping them out of Uptown, so that they massacre the Slavers.
* Fallout 3, and the natives were friendly enough to take an axe to a downed Air Force pilot stuck in a tree by his parachute. Two hundred years of nuclear runoff just put the icing on the cake.
* Fallout 3, and there may be strings of them on the ruined roads, ready to set each other off. It's a highly entertaining way to kill enemies, just be careful you're a good distance away from the fun.
* Fallout 3 and was widely believed to have been canceled, and ultimately wasn't released until 2008.
* Fallout 3 and will give you random stuff simply by talking to him, lamenting that he cannot give you more.
* Fallout 3, any Rock-It Launched junk aimed to the head could explode it (watch a teddy bear impact with critically explosive fun!). It was more common than with any other Big Gun, as the others would more often result in charred husk, complete dismemberment, or full body splatter.
* Fallout 3. Apparently, mirelurks can only survive and nest in irradiated water and die upon prolonged contact with fresh water.
* Fallout 3 are actually pretty spry, and some are just as lucid as normal humans, so the Lone Wander doesn't even have to act any differently than usual when wearing the Ghoul Mask to fool feral ghouls.
* Fallout 3 are also particularly odd as they were made with the expectation that they would gather a large mod community, meaning that any DLC released has to include a relatively significant amount of content in order to be worthwhile. After all, why buy horse armour DLC when the mod community can do an even better job for free?
* Fallout 3 are arranged in such a way that any normal person could climb over them. The player character cannot, however.
* Fallout 3 arrives are "Brotherhood paladins kill Super Mutants", "Raiders ransack caravans, burn villages and use victim's bodies as home decoration" or "Ghouls spotted and/or eliminated somewhere", seeing some change is noteworthy for everybody.
* Fallout 3 as Evil (further evidenced by the fact that you'll be rewarded for killing them if you have the Lawbringer perk).
* Fallout 3. Ashur's own armor has an identical color scheme, so it's possible he's simply exploiting local superstitions to appear as a "god".
* Fallout 3 avoids the issue entirely by not being set in an area where an ocean is easily reachable, and the only noteworthy body of water is a river that cuts

through the center of the map from northwest to southeast.
* Fallout 3; both games have "Brotherhood holotags" which are dog tags that are holographic.
* Fallout 3 built by the U.S. government during the Battle of Anchorage.
* Fallout 3 built for the Anchorage Reclamation, but kept out of battle due to problems with its power supply.
* Fallout 3 by passing a speech challenge. Once again, you do this by pointing out that his army is dead and his fortress is surrounded by power armor wearing American super soldiers.
* Fallout 3 came in a lunchbox designed like the one in the game (An item that in-game is used to build land mines), and came packaged with 1 limited edition bobblehead, which can be collected in meatspace as well as in the game world.
* Fallout 3 can call in reinforcements after a certain stage in the game and a random encounter shows two wastelanders discussing whether or not its spying on them whilst it hovers inbetween the pair.
* Fallout 3, carry shopping carts on their backs for the same purpose. The thing is the shopping carts the Behemoths carry are much larger than others; this is due to the Behemoth model being sized up to be more intimidating at the cost of not everything being scaled properly.
* Fallout 3 centers around the Troglodyte Degeneration Contagion. Most victims only suffer skin lesions, but the more severely affected lose their minds and become Wildmen, or worse, fully degenerate into Trogs. Nearly all children born in infested area become Trogs within a few weeks of birth, with the exception of Marie Ashur, the daughter of the slavers' leader, who has an immunity to TDC, offering hope for an eventual cure.
* Fallout 3 certainly averts the consequences part. Many areas of the game are hard to navigate without disturbing piles of old cans and other rubbish.
* Fallout 3 colony of ants the size of small dogs. You can help the underdogs win by killing the bus-sized enemy queen and injecting stimulants into the smaller ant's eggs (which helps somehow).
* Fallout 3. Consider how the interior of the caves are often shades of green, but that New Vegas's predominant color is brown....
* Fallout 3 details the incredibly complex and bizarre relationship between Butch Deloria, a leather jacket toting greaser barber, and Harkness, the chief of security in Rivet City who is secretly an android.
* Fallout 3 DLC: after getting captured by slavers and forced to scavenge steel ingots, the second primary quest of the DLC has you using all the equipment you gathered during your scavenge operation in pitfights against other slaves. The fight is to the death and at the beginning, the slavers dump several barrels of highly radioactive sludge into the pit to give you an additional incentive at winning quickly (before you reach 1000 rads and drop dead). There are three fights; winning the third will make the slavers impressed enough that you're freed from slavery and given all your stuff back.
* Fallout 3 DLC did allow for you to send in your allies if you wanted, seemingly in admittance that it was a silly idea.
* Fallout 3 DLC, in which Vera Keyes' dress (which increases barter, speech, and charisma as well as offering slight protection) becomes a tail coat with the same color scheme if work by a male Courier.
* Fallout 3 DLC of that name, you meet a woman named Catherine, who asks you to find here missing daughter Nadine there. Nadine turns out to be doing fine, having her own adventures and helping the Lone Wanderer with theirs a few times. Before you confront the ferryman late in the main story, you find Nadine has beaten you to it.
* Fallout 3 DLC with the wall map in the Citadel marking the locations of the remnant Enclave bases.
* Fallout 3 doesn't let you keep exploring after completing the rather short main quest, it's preferable to tackle as many sidequests as possible first and level up.
* Fallout 3 Dr. Lesko is attacked, he shouts a number of phrases like "science always triumphs!" and "I strike this blow for science!" while fighting.

* Fallout 3: Dukov. The post-apocalyptic ruins of Washington are the site of an epic Stalingrad-esque battle between the Brotherhood of Steel, super mutants and the Talon Company (later during the plot, the Enclave also throws their hat into the ring). And the retired Russian mercenary just sits in what once was a luxurious hotel, drinks to oblivion and boinks whores.
* Fallout 3, Eden, in a rant about the threats to the security of America, specifically singles out The Brotherhood of Steel, and the ghouls. If you know Fallout, but don't know of the Enclave (having not gotten far enough in Fallout 2), this will send up immediate warning bells that he's a villain — The Brotherhood of Steel has almost universally been portrayed as a force for good, and the ghouls are, despite looking like decaying corpses, ultimately no worse than normal humans.
* Fallout 3. Either kill Roy Phillips and lose karma, turn his fellow Feral Ghouls on the tower and lose karma, or arrange for them to live in the tower only to have them back-stab the residents later.
* Fallout 3 expansion are nearly at war with the eponymous town, and seek to tear down the condensers that keep settlements safe from the island's radioactive fog as an affront to Atom. Unlike the cultists on the mainland, you can join this faction and help them succeed.
* Fallout 3 expansion has claimed a pre-war submarine pen as its headquarters and has come into conflict with the other settlements on the island — they view the irradiated Fog that covers the land as a blessing from Atom, and the others' attempts to combat it as blasphemy. One way of dealing with them is to give the cult's leader the launch key to the nuclear sub stuck in the pen, and then convince him to fire its nuke so the Children may experience the glory of Division.
* Fallout 3 expansion "Mothership Zeta" has you team up with several cryogenically-preserved warriors on the alien spaceship: a military doctor from Operation Anchorage, a contemporary slaver, a wild west cowboy, and a samurai. And a little girl from during the Great War. You also would've had an astronaut, but he didn't survive the thawing process.
* Fallout 3 expansion pack, set in a VR simulation of the liberation of Alaska from the Chinese, is a squad-based military action shooter.
* Fallout 3 expansion Point Lookout, there is a quest that requires the player to equip a special pair of glasses in order to see the symbols on four pillars, which, when activated in the proper order, open a secret bunker. Without the glasses, the pillars cannot be interacted with.
* Fallout 3 expansion "The Pitt" is based entirely around starting a slave revolt scenario by getting yourself enslaved and undermining the operation from within.
* Fallout 3: Eyebot robots, have a defence laser but are usually friendly to the player character.
* Fallout 3 fandom, but made exactly the profits you'd expect from a AAA title by Bethesda.
* Fallout 3 features exploding slave collars that can be activated by radio or a device the player is given if they work for the slavers.
* Fallout 3 feature some of these in their respective game spaces. Or, more accurately, the post-apocalyptic remains of their structures.
* Fallout 3. For comparison, crippling an arm hurts accuracy far worse and a crippled leg can make melee enemies too slow to catch up with you backpedaling.
* Fallout 3 games have more reasonable subdued weapon effects unless you're using a powerful weapon, in which case you can do things like cutting people cleanly in half with just a short burst from your chaingun. If you take the aforementioned "bloody mess" perk, you'll be able to vaporize half a person's body with a pistol.
* Fallout 3 gives us Vault 108, which contains nothing but very aggressive clones. Notes left throughout the vault state that the first clone was fine, but copies made after that became more violent the farther they were from the original.
* Fallout 3 gives you the chance to wear at least two different types of dusters, both of which look badass.
* Fallout 3, Gob will give the player a discount if they treat him nicely since everyone else in the town (especially his boss Colin Moriarty) treat him like crap

for being a ghoul.
* Fallout 3 had the "Barking Lasers" hoax, which is a patently obvious joke, but took on a life of its own and spread netwide through fansites and Wikia. The origin is a two-frame animated gif which shows Dogmeat shooting lasers from his mouth, and this encouraged fans to expend hours of time and go to great lengths — up to and including killing Dogmeat — in an attempt to get him to use the Wazer Wifle.
* Fallout 3, Harkness encounters the Lone Wanderer, the protagonist of the game, who goes through in-game quests off-screen while the story takes place.
* Fallout 3, Harold's most distinguishing feature (a tree growing out of his head) has now mostly consumed his body, making him a face growing out of a tree.
* Fallout 3 has a better example, in the form of bobbleheads and books that raise a specific skill when grabbed.
* Fallout 3 has a Catholic church dedicated to St. Monica, a ghoul who is apparently the patron saint of the Wasteland.
* Fallout 3 has a Chinese spy sub that has to be entered to complete a side quest. The sub is still airtight after sinking over a century ago.
* Fallout 3 has a house in Minefield with two skeletons embracing on a bed, indicating they may have been lovemaking when the bombs hit.
* Fallout 3 has a number, including the Reservist's Rifle, Dave's hunting rifle Ol' Painless, the Blackhawk revolver owned by Agatha's late husband, Sydney's 10mm Ultra SMG, Ronald Laren's Kneecapper sawed-off shotgun, and Smilin' Jack's Terrible Shotgun.
* Fallout 3, has been brainwashed to unquestioningly obey whomever holds his employment contract. His doormat behavior doesn't extend to anyone else, though. Employers who antagonize him would be well advised not to fire him.
* Fallout 3 has Dukov's Place, a luxury building in the middle of post-apocalyptic Washington DC where its owner spends his days "eating, drinking, farting and screwing!"
* Fallout 3 has Liberty Prime stride purposefully towards the Jefferson Monument, crushing Enclave power armor troopers underfoot, vaporizing others with eye lasers, and tossing miniature nuclear bombs like footballs, all the while loudly proclaiming that death is better than communism.
* Fallout 3 has one called Our Lady of Hope Hospital located in Downtown DC. The place is swarming with Super Mutants, Centaurs and skeletons. Plenty of other hospitals, both permanent and temporary, abandoned and manned, can be found throughout the series. Many hold records/offer glimpses of the horrors of the period just before and immediately after the war.
* Fallout 3 has overcomplicated doors everywhere, a standard secure door folds up sideways and then the middle part sinks into the floor. Then there's the Vault doors, which light up and having a warning klaxon and spin when the open button is pressed.
* Fallout 3 has "Strange Meat", which turns out to be human flesh. Despite the squick factor, it has essentially the same effects as any other kind of meat: some health recovery, and your radiation points go up slightly. (The Cannibal perk allows you to eat the corpses of defeated humanoid enemies, but doing so lowers your Karma; eating Strange Meat has no Karmic effect.)
* Fallout 3 has Super Mutant Behemoths, and on the player's side, Liberty Prime.
* Fallout 3 has the Anchorage Memorial, a tribute to all the soldiers who pushed Communist Chinese forces out of Anchorage Alaska. One part of the Wasteland Survival Guide quest line requires you to visit the memorial to study the Mirelurk population living inside it.
* Fallout 3 has the AntAgonizer, a woman with a comic supervillain-themed costume and personality who can controls giant ants to "terrorize" the nearby town (although it's actually more of a series of show fights against her nemesis, the Mechanist).
* Fallout 3 has the Auto Axe (a modified concrete saw) from The Pitt, the standard Axe from Point Lookout, and the unique Dismemberer.
* Fallout 3 has the Enclave's Mobile Base Crawler, which is based on a space

shuttle transport crawler.
* Fallout 3 has the main character's Father, a scientist who wants you to stay in the Vault, while he goes out and about in the Capital Wasteland. It backfires horribly.
* Fallout 3 has the setting of the final mission (without the Broken Steel DLC installed) just kinda sitting there, looking inconspicuous. It's possible you'll wander in there, kill all the enemies, loot anything useful, then leave without realizing that you just made a later mission easier by doing so.
* Fallout 3 has the Talon Company Mercs, who pop up occasionally in the Capital Wasteland, usually fighting other factions such as super mutants or scavenging in pre-war tech buildings. If you play a good karma aligned character and finish the "Power of the Atom" quest in favor of Megaton, Mr. Burke will send them after you as well.
* Fallout 3 has the town of Arefu, located on top of an overpass and whose name comes from a traffic sign hanging over head reading "Careful" with the first and last letters worn out; Andale, an apparent reference to the real life town of Annandale and "The Pitt", located in the remains of Pittsburgh.
* Fallout 3 has the Tunnel Snakes, a bunch of thugs who pick you when you turn ten and the main character's best friend at age 16. It's fair to say there's more in the intervening years, but the game glosses over that.
* Fallout 3 has this most prominently with the Enclave Tesla and Hellfire armors.
* Fallout 3 has Vault 106, where the lone wanderer has hallucinations throughout the vault.
* Fallout 3 have an infamous glitch that sometimes causes them to flash-spaz, during which most shots pass through them without causing damage.
* Fallout 3 have a tendency to shout "Attack pattern (insert greek letter here)" when attacking the player. They then proceed to do exactly what they were doing before the order was given.
* Fallout 3 have the opportunity to lecture on him on proper experimental procedure.
* Fallout 3, heavily-armed hit squads will be sent after you if you gain a bad reputation. (Or a too good reputation). If you fast-travel to one of their spawning locations, they will appear in a scripted encounter and immediately open fire on you. If you're at a low experience level, your chances of survival are slim.
* Fallout 3, he'll leave with plans to start a new republic. Presumably one that's better and without people who get more votes than him.
* Fallout 3, Herbert "Daring" Dashwood ends up leading the slavers he escape from to Rockopolis.
* Fallout 3. He starts out as the voice supporting the Brotherhood of Steel, but later on he becomes the voice of the Resistance once the Enclave moves in.
* Fallout 3.) He's the protagonist's father, so badassery may be genetic.
* Fallout 3, however, is much more guilty of this. Washington D.C. is no longer completely obliterated, the Enclave was not completely destroyed when their West Coast base was nuked.
* Fallout 3 if he's let in, along with not giving a shit about anyone that's not him, he still has Good Karma as he's a "poor victim" of cruel racists who won't let a ghoul live in their hotel according to Three Dog. Since he has Good karma, the game penalizes you if you kill him after he's let in, if you're not sneaking with a Stealth Boy on that is.
* Fallout 3, if you arrange for the Ghouls to live in Tenpenny Tower, they slaughter the residents after two weeks.
* Fallout 3: If you explore Vault 106, an underground shelter full of insane dwellers who will attack you on sight, your vision will occasionally turn blue and you'll start to see visions of people you knew while living in Vault 101, including your father and best friend Amata. In one area, you'll fight a survivor cloaking himself with a stealth boy, while having visions of the Tunnel Snakes, a small gang of bullies from 101 that will come to his aid in the fight. After exploring the Vault for a bit, you'll learn that this is caused by psychoactive drugs that were released into the Vault's air filtration system 10 days after the main door was

sealed, which is also what drove the Vault's inhabitants insane.
* Fallout 3, if you followed through with the President's orders, there will be people in the clinics dying from the virus, and you yourself die if you consume too much of the FEV-laced water.
* Fallout 3. If you keep it, it is easily in the top-tier of melee weapons in terms of damage, only falling behind for lack of perks boosting its power.
* Fallout 3, if you purge Vault 101's water chip during "Trouble on the Homefront" and lie to the Overseer that the rebels did it, he stays behind in the vault to die.
* Fallout 3, if your head gets "crippled" from taking too many hits, (described on the Pip-Boy as a concussion) your vision will go slightly blurry, and there'll be an annoying ringing noise. It will also make it ever so slightly impossible to walk in a straight line (you'll drift left and right just a little bit). Luckily, it's easy to cure.
* Fallout 3 in all of gaming: The game teaches you how to walk because you are a baby, and as you grow from a newborn to an infant to a preteen to an older teen to a young adult, you learn to interact with things, talk to other people, use items, and (yes) use weapons.
* Fallout 3 infestation. You will find him dead in his house. Upon receiving the news, Bryan will say that he kind of already knew and is frankly too tired to cry.
* Fallout 3 in the Tranquility Lane simulation results in death via a pulse blast.
* Fallout 3 into battle that cover their faces, but off duty, many of them have no helmets or wear Recon Armor helmets that expose their faces.
* Fallout 3 introduces the "Chinese Assault Rifle", which is an AK-47 clone chambered for 5.56mm. This may be justified as Chinese infiltrators invading the continental United States during the war (it's confirmed that they were pushing into Alaska, and the L.O.B. Enterprises building where you find a unique version of the "Chinese Pistol" has terminals confirming they were working for the Chinese military).
* Fallout 3, in Underworld, there's the "Ninth Circle". It is run by Ahzrukhal, a charming, yet actually very evil, ghoul. He holds contract for Charon, a servant who you can own by either paying 2000/1000 caps or doing a little "favor" for Ahzrukhal...
* Fallout 3, in which the best description the Lone Wanderer can come up with for his/her own father is "middle-aged." Also, when the player has a bounty placed on them, it gives only their name, sex and race.
* Fallout 3 is an abductee recording, who's convinced that the aliens are going to eat him and screaming that he hopes they choke (unless they're the kind of aliens who just want to put him in some weird alien zoo. That might be okay.)
* Fallout 3, is a real base built for much the same purpose as Cheyenne Mountain.
* Fallout 3 is especially good for this because you can outright skip much of the main storyline if you know where to go, and it is possible to only fight one battle in the game.
* Fallout 3 is installed and a certain perk is taken, gains this form of immortality. Every time he is killed, he is reincarnated in a new body as Dogmeat's Puppy.
* Fallout 3 is installed, since without the purifier, the events of the epilogue can't take place, and the main characters are probably killed in the explosion anyways.
* Fallout 3 is often seen as one. After all, your player character goes from a teenager in a fallout shelter to being the hardened survivor of the wasteland.
* Fallout 3 is running around the ruins of D.C. two hundred years after a nuclear war and seeing what's still around and what's been reduced to ruin. Interestingly, the Lincoln Memorial is one of the least damaged structures in the Capital Wasteland although Lincoln's head is missing. You can get a quest to help restore it, though. The Washington Monument has steel rebar support inside of it, which is something the real world monument does not have: in the Fallout 'verse buildings were given reinforcement in expectation of a war with China. Though a big chunk is out of its iconic rotunda, the US Capitol, the meeting place of both houses of

Congress, is mostly intact. You can even enter the congressional chambers and walk inside the rotunda (which is now a battleground between Talon mercs and Super Mutants).
* Fallout 3 is so detailed: the developers know the area. Gamers who live in the DC metro area noticed and praised Bethesda for it. Of course, the player can also explore a (fictionalized) version of the Bethesda Studios offices in the game.
* Fallout 3 is spectacular even by the setting's standard, to the point where it's not even realistic. There is virtually no living plant life, to the point where all the topsoil is gone. There is very little surface water, and the Potomac is abnormally low and choke-full of mud.
* Fallout 3 is this, since it's aged more than 200 years. No horrible consequences, however, because it was hyper-processed crap made of artificial preservatives, sterilized by intense radiation. Unless you count consuming trace amounts of radioactive isotopes to be horrible consequences.
* Fallout 3. It creates a real-time tactical overlay that scans the threat, assesses various weak points and comes up with the statistical probability of whether the operator will successfully land any hits.
* Fallout 3. It is quite possible to be at full health but not full limb health as some methods heal regular health but not limb health (e.g drinking water). Other things heal limb health but not overall health. Healing a limb with a stimpak restores some overall health, but mostly limb health.
* Fallout 3, it made sense to save time where they could by reusing appropriate props.
* Fallout 3. Its Death Ray can be fired towards Earth and cause a massive mushroom cloud. Not to mention that the Lone Wanderer used it to blow away the other alien ship.
* Fallout 3. It's explicitly lampshaded, when her former owner notes that she 'loves whoever is holding her leash.'
* Fallout 3. It's hard to incite a slave rebellion if your fellow slaves think that nobody has ever successfully abolished slavery.
* Fallout 3. It's incredibly visceral getting headshots on Enclave soldiers in power armor. Then there's the official expansion, which adds a revolver that's even better than the Blackhawk, and another that somehow uses .44 ammo but fires pellets like a shotgun.
* Fallout 3 It would later be released as 15+ after a worldwide edit to remove the image.
* Fallout 3jet. Put simply, Ultrajet has serious and potentially permanent consequences on a human.
* Fallout 3 karma penalty), it's slightly easier to become "Good" than it is to become "Evil", and staying neutral is hardest of all, since it involves a kind of a balancing act of randomly being an a-hole just enough to keep you from accidentally becoming "too good".
* Fallout 3. (Knowing this also explains the psychopathic experiments of the Vaults - Vault-Tec was run by members of the Enclave, and was intended as a proof of concept that humans could survive under various, often torturous conditions (including isolation, radiation, artificially created caste systems, and so on) to later be used for space flight. Without this knowledge, however, most Vaults and their experiments will seem more like mad science run rampant than for an actual, if not completely justified, cause.) However, this backfires, as it's never really explained how the Enclave could exist in D.C. if they'd all been evacuated to an oil rig off the coast of California soon before the bombs fell.
* Fallout 3, leading them to undertake "holy" events that cause them to kill people in the name of "helping them". In Fallout 3, they start stealing bottles of the pure water the Lone Wanderer helped create and contaminating them with radioactive pollutants before giving them out to ignorant, innocent travelers, who proceed to die from radiation poisoning. In Fallout 4, one band who has settled on the island of Far Harbor is determined to destroy the devices that ward off the lethally radioactive mists from settled zones.
* Fallout 3, leading to situations where uttering the Z-word around normal Ghouls

is about as smart as removing the safety pin on a hand grenade and not throwing. In fact, calling a Ghoul a zombie is on par with using the N-word around black people. "Three Dog", the DJ of one of the Game's Radio stations called "Galaxy News Radio", uses a "Public Service Announcement" to point out that the intelligent ghouls aren't zombies and explains that they are human, but also goes on to say that the feral ghouls that live in the sewers and other dark places "are just mindless zombies, so kill as many as you damn well please".
* Fallout 3 look and act like a clan of blooddrinkers. They're a cannibal support group who drink blood to keep under control their urge to kill and eat people. If offered a cooperative alternative to raiding for blood, they will accept peacefully.
* Fallout 3: Many of the ghouls you can encounter in Underworld lived through the war and can tell what they can remember (frequently little) of the time before. Carol, the ghoul who runs the bar and eatery there, was born in 2051, twenty-six years prior to the Great War.
* Fallout 3 — people are no longer likely to be very concerned with paperwork. Hell, as long as you can shoot something reliably, most places will take you no questions asked.
* Fallout 3, meanwhile, has a whole questline about a party of mercenaries that was tracked down and slaughtered by an angry Deathclaw after they stole its eggs. Should the player choose to return the last surviving egg to the Deathclaw nest, another Deathclaw will jump in out of nowhere, cover up the egg, and then watch warily, letting the player character walk away unharmed.
* Fallout 3 Might be played straight with the more experienced Knights and Paladins depending on the difficulty level, and what kind of enemies they're fighting.
* Fallout 3: Moira Brown, Megaton's shopkeeper and tinkerer in science. She sticks out for being perpetually cheery and upbeat in a blasted post-apocalyptic wasteland.
* Fallout 3, Moira wants you to find a publisher, too. She cheerfully replies that won't be necessary. Guess what you had to do in one prerelease version of the questline.
* Fallout 3 Moira will eventually give you a chemical that was supposed to drive off molerats. Instead, their heads explode.
* Fallout 3, monsters of different species will fight each other, up to and including Albino Radscorpions killing Super Mutant Behemoths if they spawn near each other. On the other hand, the number of predators seems proportional to the player character's level— Giant Mole Rats seem to die out around level 15. This would also happen in random encounters in the previous titles- it was possible to run into a group of wolves fighting with some radscorpions, for example. It just didn't happen as often because the games didn't feature an open sandbox world and the various predatory critters tended to have specific parts of the map that they'd be encountered in- you wouldn't run into both mole rats and Deathclaws in the same area, for example.
* Fallout 3. Most indoor areas in both games function as either towns to restock supplies and sleep or as "dungeons" where the player fights enemies of a specific faction and finds loot. Each game also has a variety of skills that determine how good the player character is at nearly everything there is to do in the game, from talking to NPCs to using specific types of weapons.
* Fallout 3. Most of the vaults have logs and computers which tell you you're going through the same thing the occupants experienced, as well as the Dunwich Building, which has logs scattered throughout chronicling one man's descent into madness as he encounters exactly what you encounter.
* Fallout 3: Mothership Zeta has plenty of those, an original Samurai, a cowboy, 20th century army medic & more — all frozen, and some don't defrost that well. RIP, Mr. Astronaut...
* Fallout 3: Mr. Burke. While nearly everyone else in Megaton is a dirty, ragged-looking peasant, Burke is rather snazzy in his white suit, fedora, and tortoise-shell glasses. This ends up being because he’s not from Megaton, he’s actually from Tenpenny Tower, a skyscraper where the inhabitants live in luxury.

* Fallout 3 of Washington landmarks. The more recognizable monuments actually get less plot-critical appearances, and the climactic battle takes place in and around the less familiar Jefferson Memorial.
* Fallout 3, one can find audio logs detailing the experiments in Vault 92 aimed at using subliminal messages and infrasound to create obedient super soldiers incapable of feeling pain. The experiments were partially successful, with the test subjects requiring upwards of 20 bullets to put down, but also becoming violently unstable and eviscerating each other with their bare hands.
* Fallout 3, one of the amenities in the player's house in Megaton or Tenpenny Tower is a robot butler. In addition to various functions useful to the player, he tells jokes when requested.
* Fallout 3, one of the first quests is to decide if you want to set off or defuse an atomic bomb in the middle of a town. If you tell the town's sheriff about the individual who offers to pay you to set it off he will go to confront him and be shot in the back for his trouble (unless you save him, but this doesn't affect the game much).
* Fallout 3, one of the quests involves a rogue android who becomes self aware, and decides to escape from his masters. "Self determination is NOT a malfunction!"
* Fallout 3: One possible random encounter consists of the player stumbling into a raider gang performing a "beatdown" version of the ritual on an unarmored candidate, while they jeer and yell that "pain is your only friend". It continues until they notice the player, which causes them to attack as usual.
* Fallout 3, one quest features an escaped android who can be rebooted with a trigger phrase.
* Fallout 3; on the way to see the President in Raven Rock, it's very possible to mug an isolated Enclave soldier for issue weapon and armor. They don't react any differently, and your impersonation isn't lampshaded or handwaved.
* Fallout 3, otherwise it is quite easy to intimidate Mel into running away. If engaged in combat, Mel is a totally unarmed pushover.
* Fallout 3 pre-War Chinese infiltrators lurking in the ruins of Washington D.C.
* Fallout 3; Professor Calvert or at least his brain. It's pretty much the only way he can communicate to people.
* Fallout 3 requires that you maintain your weapon and armor conditions so that you can equip and use them effectively. A similar effect can be inflicted on enemies, as shooting their weapon enough time will cause it to have a 0% CND rating, making it unusable to them.
* Fallout 3. Sadly, neither model is particularly effective due to the game's handling of damage resistance.
* Fallout 3" scenario, and pleads to be put out of his misery. So whether you kill him but destroy the forest, or convince him his life is for the greater good of everyone else is all up to you and is one of many moral dilemmas the game puts you in.
* Fallout 3 seem more likely to get enslaved than males for obvious reasons.
* Fallout 3, she works with the Brotherhood of Steel to finish Project Purity. However, in the 10 years between games, she makes her way to the Commonwealth and eventually joins the Institute, which is where the Sole Survivor finds her. The Brotherhood's motivations for wanting her back hinges on the player's knowledge of this - otherwise, it seems like they threw a dart at a board of Institute scientists and chose her.
* Fallout 3 show that the water level has gone down significantly in the last 200 years.
* Fallout 3 side quest in both the Point Lookout expansion and the original game, respectively.
* Fallout 3's Keychain mod, which changed miscellaneous items being all in one place to grouping all the keys together.
* Fallout 3 smarter — the opposite is implied to be the case) with age. Super Mutant Brutes are younger and weaker than Masters, who are weaker than Overlords, who are weaker than Behemoths, who are the oldest. Not that this particular trait is not (explicitly) shared with their west coast counterparts.

* Fallout 3's merchants can somehow get their hands on more ammo, guns, Prewar boxed and canned food (that's still edible if slightly irradiated after 200 years) and in the case of Flack and Shrapnel more nuclear weapons. Some can even get their hands on Power armor.
* Fallout 3, so records were not replaced with tapes, CDs, and MP3s, but with holo-based cassette tapes the size of 45s.
* Fallout 3's The Pitt has the Hole, an irradiated Thunderdome-style arena in which the player must fight several slave opponents to regain his/her freedom and equipment.
* Fallout 3 stumbles through the Sacred Bog, seeing hallucinations of corpses of people he's met, fake bobbleheads, and a skeleton labelled "Mom." This culminates with a bobblehead proclaiming "Dead mother, life in a post-nuclear Wasteland and not a friend in it. Yeah, you aren’t exactly blessed" before a hallucinated Megaton bomb explodes.
* Fallout 3 (superheroes, to the embarrassment of the people of Canterbury Commons)
* Fallout 3. Surprisingly, they're quite civilized for raiders, and won't attack or backstab you unless you threaten them; they make good soylent pie and you're invited to stay for dinner every evening. You can end up befriending them if you're a cannibal or have a high enough speech stat, or just kill everyone except the two children and a crazy old man.
* Fallout 3's Vault 101 is an odd case. The vault was in originally in place to shelter people from the nuclear war raging overhead, but as generations passed, the motto became "Born in the vault, die in the vault." Eventually this led the people inside to believe that the outside world is completely uninhabitable. Your character quickly finds out that this isn't completely true.
* Fallout 3 takes place in the Commonwealth, features the Institute as major villains (unless you join them), has the Railroad as a major joinable faction, and prominently features synths in the plot.
* Fallout 3 takes this on a different course. It provides a few primary stats: body part condition (small health bars scattered over the target), chance to hit a specific part (percentages above those bars), and potential effect on enemy health (parts of the enemy's general health on the bottom will blink to indicate a full non-critical hit from your attack, it's up to the player to adjust accordingly for current conditions).
* Fallout 3 that needs taking down before it takes down the protagonists. The missions themselves are fairly middle-of-the-road— not as good as the best of the game's DLC packs, not as bad as the worst— but the ability to continue exploring the wasteland post-ending is a worthwhile addition.
* Fallout 3 that there is a tree growing somewhere in the Capital Wasteland. Following up on this, the Vault Dweller discovers a hidden grove of lush vegetation inhabited by a group of druids who worship a sentient tree, the result of an FEV accident. The player's actions affect whether the glade is left in peace, destroyed, or allowed to spread across the Wasteland as a New Eden.
* Fallout 3 that they're the actually guilty party, the player could be forgiven for assuming that it was actually a frame-up.
* Fallout 3, the Bloody Mess perk makes most enemies like this, especially with a head shot. Sometimes a body shot will do the same thing, but with even more exploding than normal (normally all limbs just fall off). Although this effect on its own might be enough to take the perk, the additional 5% damage with all weapons doesn't hurt.
* Fallout 3 the Brotherhood of Steel becomes one if you destroy the Citadel. The Regulators will hunt down the player if s/he has Evil Karma.
* Fallout 3. The developers said no reference was intended, but left the door open that such a reference could have been made subconsciously.
* Fallout 3, the featured ship has an area called 'steamworks' which is mostly filled with steam releasing pipes (there's also several "cryo chamber" areas with leaking coolant and evaporation).
* Fallout 3, the in-game radio show "The Adventures of Herbert "Daring" Dashwood and his Stalwart Ghoul Manservant, Argyle" ends on a literal cliffhanger, with

Dashwood dangling from a cliff edge, the citizens of Rockopolis trying to kill them, and the cave about to be overrun by slavers. Later on you meet Dashwood himself, but you don't find out what happens to Argyle unless you come upon a fairly hidden area that's not marked on the map. Turns out he never made it out of Rockopolis, he got killed in a cave-in.
* Fallout 3, their model is tweaked to be more reminiscent of mutated fish, including fins along their backs and arms and gills on their necks.
* Fallout 3, the Lone Wanderer can find bundles of pre-war currency(a hundred $100-bills). They go for about ten caps each, depending on Barter skill.
* Fallout 3, the majority of your enemies are some of the most despicable scum there is, which makes killing them very satisfying; but by far the most satisfying feeling is utterly annihilating Fiend or Legion encampments.
* Fallout 3, the Mister Gutsy model robots sound like soldiers who've been trained by R. Lee Ermey. In an obvious nod to him, a unique joinable one is named RL-3, or "R Lee" leetspeak.
* Fallout 3, the Mister Gutsy variants of the Mister Handy droids will quote directly from the "If I should die in the combat zone" cadence when they die.
* Fallout 3, the Mister Handy Bot is designed for domestic tasks but does have a large saw, which has countless misfortunes laid at its feet, like your ruined birthday cake. There was actually a military version made, "Mr Gutsy", who has a flamethrower and spouts phrases that sound disturbingly like parodies of classic "Soldier Hero" talk.
* Fallout 3, the number 2 scrawled on the walls of nearly every building with a heavy Raider presence.
* Fallout 3, the power armored soldier in Operation Anchorage who runs into the pulse field and dies is labeled a Red Shirt in the GECK.
* Fallout 3, the Q-35 Matter Modulator, as a unique weapon), as opposed to the classic Fallout "P-series" (like the Winchester P-94), which are now called "Plasma Casters".
* Fallout 3, the radio DJ Three Dog often broadcasts the latest news, which often feature the protagonist and his/her exploits. Every second time you do something outstanding (or horrible), Three Dog talks to you on the radio and says congrats or what the hell respectively.
* Fallout 3. There are many depressing apartment buildings that the player cannot access, and there aren't any raiders or mutants anywhere to be found, just dirt and crumbling buildings. This is very prominent in the DLC where the Player goes to Pittsburgh.
* Fallout 3 There are other locations around the game that seem to suggest a similar location, and "strange meat" can be found throughout the game.
* Fallout 3, there is a group that broke away from the Brotherhood of Steel because they believe that the leader has gone native. They call themselves the Brotherhood Outcasts. This came from the fact that the Brotherhood of Steel inside Fallout 3 is actually a part of the entire Brotherhood of Steel - their original mission was about advanced technology and preserving it, though the leader of the group became more heroic in his intentions and went out helping others, against the rather haughty technological-obsessions of the rest of the group. The Brotherhood Outcasts stayed loyal to their original mission.
* Fallout 3, there's a Chinese Propaganda radio station that broadcasts in Arlington Cemetery out of an old cannery that echoes this trope.
* Fallout 3), the Rock-It-Launcher, which is built from a vacuum cleaner (amongst other things) and can fire pretty much anything you find lying around, a rifle that shoots railroad spikes, a landmine (made out of a lunchbox, a cherry bomb, a sensor, and a few bottle caps) that's about five time stronger than ordinary landmines and has roughly the same firepower of a mini nuke as well as, of course, the Nuka-Cola Grenade that's made with turpentine, Abraxo cleaner and the radioactive variant of Nuka-Cola in a tin can. When thrown, it explodes in a giant blue fireball, with lingering radioactive damage afterward. There's also the series-wide pipe gun weapons, which are cobbled together out of various scavenged piping, lumber, bolts and springs.

* Fallout 3, the Sentry Bots can be reprogrammed via terminal to fight on your side, although if you hit any of them with friendly fire, they will all turn hostile once again.
* Fallout 3, the slaver town of Paradise Falls has a converted personal fallout shelter appropriately called The Box.
* Fallout 3, the Statesman Hotel. It is filled to the brim with Super Mutants, Centaurs, and mines. You can come here for an optional sidequest to save the Riley's Rangers.
* Fallout 3, the terminals in the LOB building reveal that the company is carrying out illicit weapons research for the Chinese, and the management fears the place inevitably being stormed by the government. A final email reading "MAN THE DOORS! THE FEDS ARE HERE!" is met with a snippy response about the company policy against using all-caps in emails.
* Fallout 3, they truly consider themselves and themselves alone to be the absolute master race, and who intended to kill off the entire population of America, who they perceive as "mutants." So their Putting On The Reich act becomes fitting. They also use overt imagery and rhetoric.
* Fallout 3, this is the basis of the Church of Atom, a cult that worships the "creative" power of nuclear bombs—they believe that every atom is an entire universe and the splitting of atoms equals the birth of whole new universes and, well, just don't let them near your nukes.
* Fallout 3: This was a particularly big deal for the PS3 version, as the DLC was released there later than the 360 and PC versions.
* Fallout 3 though, as the game doesn't account for the betrayal in the character's karma attribute.
* Fallout 3), though he insists that he's not a hairdresser, but a barber.
* Fallout 3. Though they all have a higher damage rating, they either have a high spread or low rate of fire.
* Fallout 3, though this is largely incidental to her role as a merchant; she doesn't quite build her sales pitch around it.
* Fallout 3 to dozens of enemies, no wonder fans love him. Meet Liberty Prime.
* Fallout 3 to start up Project Purity, got out. The backlash was more or less mitigated by later DLC, though due to not altering dialog the game still mocks the player as a coward for sending in a radiation-immune character to complete the task.
* Fallout 3 turns them into one of the many hostile factions in the game, spreading their faith with radiation guns.
* Fallout 3. Upon entering, painted arrows on the floor lead you to a pressure plate to deliberately set off so you can watch it go off (it includes a domino effect using a row of boxes of detergent and several small explosions) and get several goodies when it's finished.
* Fallout 3 ups the antes where Bloody Mess will sometimes cause surreal ludicrous gibs.
* Fallout 3 uses a row of boxes set up like dominoes to start a chain reaction. Battering ram hits domino boxes, last domino triggers pitching machine which knocks fire extinguisher into bear trap, setting off grenades and gas explosions that will kill the player if they're in the wrong place.
* Fallout 3-verse only seemed to arrive sometime after nuclear Armageddon.
* Fallout 3 was a decrepit old man prior to becoming the Overseer of Vault 112, and though life support systems in his Tranquility Lounger have kept him alive for over two hundred years, he's now terminally dependent on it. It's for this reason that Braun prefers to remain in the virtual reality scenario linking each of the Loungers together, where he can be as young and as powerful as possible - and torture as many people as he likes.
* Fallout 3 was banned in Australia due to a drug being named Morphine rather than the violence.
* Fallout 3 wears a pair of these. Which you can later steal from his house, provided you are crazy good with lockpicks (or have discovered cheat codes). Or you can just loot them off his corpse (which is probably the best option for anyone not

playing as a evil character).
* Fallout 3 (well, Autumn doesn't die but just walks away) in the main quest by pointing out that they've either already lost or that they can't even keep order in their own organization and have no chance at taking over the wastes.
* Fallout 3 when enemies detect you, and again when the area is cleared. Sometimes in the latter, scary stings are randomly heard out in the wasteland for no particular reason.
* Fallout 3 when injured American soldiers come out of the hospital, in underwear, in an Alaskan winter, and attack you with grenades. However, to balance things out, when you storm General Jingwei's camp, you see him executing American prisoners with his lightning sword.
* Fallout 3: When the game time-jumps from your 10th to your 16th birthday, you can hear your father telling you in a voiceover: "Boys and Girls have different... parts."
* Fallout 3. When working with Moira, you can give her "evil" answers when she asks how your exploits went. Popular answers include heavy radiation poisoning actually feels quite good, and is healthy for you, and that disarming a mine is surprisingly easy if you just step on it. Needless to say, the resulting survival guide ends up being a how-to guide for killing yourself.
* Fallout 3, when your character leaves his underground vault for the first time.
* Fallout 3 where a professor asks you to find an android. After asking around for the android, you are confronted by a group of people who specifically help androids to escape from slavery.
* Fallout 3. Which are filled with Feral Ghouls (read: slavering zombies that run really fast), mole rats (scarier than they sound) and psychotic, sadistic Raiders.
* Fallout 3, which will also attack the player if they stick around too long.
* Fallout 3, while not exactly soldiers the children who live in Little Lamplight are all well armed little nutjobs. You can even sell them guns, ammo, and drugs. And thermonuclear devices.
* Fallout 3 while suffering radiation poisoning to being able to heal yourself via cannibalism. The last such feat that can be taken causes the PC to VIOLENTLY EXPLODE when s/he hits critical health, without actually hurting herself.
* Fallout 3", while the latter considers it too great a deviation from Black Isle's original Fallout games.
* Fallout 3, who is native to the Capitol Wasteland, will tell the player that he lost his wife when the sought shelter in the old subway tunnels.
* Fallout 3 who launched the nukes that started the Great War and ravaged the Earth, for no other reason than to see what would happen.
* Fallout 3, who made the tragic mistake of not realizing that when several heavy, explosion-like sounds go off right next to you, you should probably move. Periphary text within the game notes that her funeral got canceled. Harsh.
* Fallout 3) who took up residence in a museum exhibit about the afterlife, hence the name and the giant stone skull over the gate. Many of the people and places in there have names relating to death and mythological interpretations of the afterlife.
* Fallout 3 who you can usually only get as a companion with high evil karma. Unless you use console commands, allowing you to be a moral exemplar with a sadistic female teammate.
* Fallout 3 will likely come across a stack of metro tickets on someone's desk, with a couple of pool balls on top - and considering that the Lone Wanderer is probably the first person to enter the building since the Great War, that means this stack has stood for a good 200 years. But pick up any of the other items on the desk and the venerable structure will surely crumble.
* Fallout 3 will react positively to the death of President Eden should the player kill him.
* Fallout 3, with the latter using the slow-mo kill cam for enemies as well as the player.
* Fallout 3 with the quest "You Gotta Shoot 'Em in the Head". A ghoul hires you to kill a bunch of humans who considers ghouls to be just like mindless zombies, and

specifically requests that you shoot them in the head or else you're paid less.
* Fallout 3, yet inexplicably has never done this to anyone else before.
* Fallout 3. You can actually recover your bottled Lump of Brain, though looking at the item fills you with "a terrible sense of loss."
* Fallout 3, you can discover the logs of a search party that went to look for a child named Cheryl, who they never found, and you only find one of the party members' corpses. Similarly, of the Brandice family that lived in Grayditch, you can only find the father's body.
* Fallout 3, you can find an emergency broadcast in an area stating that a child is sick, and the family is holed up waiting for supplies, having escaped some kind of disaster. When you find this little bunker, you realize it's a radio with an emergency message that's been playing on loop for an unknown amount of time. Judging by the skeletons in the room they may have been there since the war, two hundred years ago. You never really learn who the family was or how they got there either, and you never learn if they got the help they needed (although it's likely they didn't given they stayed in the bunker).
* Fallout 3 you can get a perk called "Solar Powered" which gives you massive stat bonuses in the daylight.
* Fallout 3, you can help the population of Big Town defend themselves from Super Mutants with guns, robots, mines, or even just hiding inside depending on what skills you have. However, you may find it more amusing to leave them to die.
* Fallout 3, you may buy the services of Nova, Megaton's good time girl, and those of Clover, a slave with a rather ironic fetish, regardless of your gender. This isn't even hand waved and there are no male counterparts. With the Black Widow perk you may also suggest a threesome with Ronald Laren with Sierra to get him to do what you want; this gets him killed.
* Fallout 3. You still get called out for it, though, due to the ending dialogue not changing.
* Fallout 3. You, yourself, qualify as well if you're the female version of the Lone Wanderer and spend up on Repair skill points.
* Fallout 4, a civilian who does nothing but bitch at you about how terrible everything is no matter how hard you've worked turning Sanctuary into the best settlement in the entire Commonwealth.
* Fallout 4 added Glowing Deathclaws, which glow green and deal radiation damage, Albino Deathclaws with very high health, and Chameleon Deathclaws which can change color.
* Fallout 4 add-on includes mutant seafood recipes such as Fried Fog Crawler, Poached Angler, and Gulper Slurry. Crafting one of these earns you the "Just Add Salt Water" achievement.
* Fallout 4 adds the T-60 Power Armor, a step above the T-51 armor that was previously used. It was only beginning to be deployed experimentally (one of the Vault's military guards is wearing a suit of this armor in the pre-War sequence) when the Great War happened.
* Fallout 4 a few centuries later, you might encounter him again, now ghoul-ified, and can even invite him to come live in one of your settlements. There's also the Cabot family, who live in a suspiciously nice house; through their questline you find out that they've discovered an anti-aging serum and are much older than even the Sole Survivor and the ghouls from the Great War period.
* Fallout 4. A few months after release, Bethesda released a patch that places an icon on the screen, telling you their job. This cut down on the really annoying tendency to assign settlers tasks when they already had one to do.
* Fallout 4; after a (staged) bar fight, date, and (genuine) rescue mission, he becomes much more confident and smooth on-air.
* Fallout 4 age, but at such a slow rate compared to ordinary people that it's ultimately negligible.
* Fallout 4, all clothing items have unisex designs, allowing cross-dressing of the player character.
* Fallout 4 allows the player to view "hidden Cappys" in order to decode a secret message.

* Fallout 4 allows you to become immune to both drug and alcohol addiction, letting you shoot up/drink every recreational chemical in the wasteland without consequence. Survival mode, does however add the potential problem of getting a disease from all the drug use.
* Fallout 4 allows you to build arenas and pit teams of NPCs against each other yourself once you have the Wasteland Workshop DLC installed.
* Fallout 4 allows you to build these with the Far Harbor DLC. They're not terribly powerful, but when scattered around a settlement they can prove occasionally hilarious if Raiders or other enemies attack.
* Fallout 4, all your companions will have reactions to you cannibalizing a corpse in their presence, and they're all hilarious.
* Fallout 4, alongside mole rats, in his canned meat. If the encounter with the settler who puts the Cannery on your map is any indication, it's enough to make anyone who eats it quite violently ill.
* Fallout 4 also has a "Pip-Boy Edition" much like the Survival edition above, with an updated Pip-Boy. This new model features a space for the player to put their cell phone, as there was a Pip-Boy Companion App that you can use with the game.
* Fallout 4 Also, the canon default names for the player in 4 are Nate and Nora for the husband and wife, and it's just easier to refer them as a collective "Sole Survivor".
* Fallout 4 and Curie, the (at least originally) robotic and ever-studious medical scientist in your company, can comment on all the varied statistics of the game.
* Fallout 4 and, if you removed his jumpsuit, he'll have this heartwarming and serious conversation in nothing but his boxers.
* Fallout 4 and itself. The Fog is often very thick and therefore shrouds the monsters that live in it such anglers (mutant anglerfish), gulpers (very big and very hungry mutant salamanders), fog crawlers (gigantic amphibious shrimp), and hermit crabs (who are so big they use tankers for shells). The Fog itself has a detrimental effect on the mind, driving them insane and turning normal people into the cannibalistic Trappers if they live that long, as well as being chock full of radiation from the Atlantic ocean (which made the monsters in the first place). The Fog is a natural occurrence though as of late is has been growing larger and thicker, blanketing the entire island in it. The People of Far Harbor (post-War Bar Harbor, Maine) believe that the Children of Atom (a cult that worships the atom as a god) has made it worse while the Children see it as a blessing for their faith. Regardless, people are forced to live in rings of fog condensers to save themselves.
* Fallout 4 and New Vegas has now become extremely useful material. However, your companions will still grumble about your insistence on picking up every "worthless" item you find, even after they've seen you using it to make high-tech weapons or turn a small shack into a heavily armed fortress. The sole exception to this is Piper, who instead complements you for your ability to figure out a use for all of it.
* Fallout 4 and regain their HP for a second wind. To compensate for the trouble of having to bring down their health twice, they will always drop a Legendary weapon or armor item.
* Fallout 4 and will be the player character if the player chooses to be male.
* Fallout 4, an excited fan sent Bethesda a box of real-life bottle caps weighing over 11 pounds with a tongue-in-cheek letter asking Bethesda if this would be an acceptable substitute for payment (for those who don’t know, bottle caps are currency in the Fallout universe). To his surprise, Bethesda then sent him an email accepting the "payment", and agreeing to send him a copy with the understanding that it'll only work the one time.
* Fallout 4: An unskippable moment shows you a closeup view of the Headquarters of the Brotherhood of Steel. It's quite small. It holds unlimited people and helicopters, depending on how you play the game.
* Fallout 4 are a loosely-connected faction of independent organized crime syndicates that all style themselves after Prohibition-era gangsters, wearing suits or suspenders and fedoras while using tommy guns almost exclusively in combat.

* Fallout 4 are an entire society of this, leaning towards the macabre, depending on the Player's interpretation and actions.
* Fallout 4 are the greediest of the three raider gangs. They dress rather smartly for a gang of spoiled misfits, their primary goal is simply to make as much caps as possible. Any material reward satisfies them, whether it's stolen or earned.
* Fallout 4 (as opposed to being betrayed and destroyed by the Lone Wanderer), as they have expanded into the Commonwealth. On another note, Megaton is mentioned to be expanding into its own city state, making it clear that the Lone Wanderer canonically didn't blow it up.
* Fallout 4 as slave labor and people snatchers, and waste time trying to crack experiments (the Forced Evolutionary Virus, intelligent machines, the use of teleportation) that previous game characters and factions already did better.
* Fallout 4. A stark contrast to everything else in the franchise, as their energy weapons and armor are sleek and clean-looking (and also less powerful than the bulkier, dirty Pre-War equipment they're derived from), while the Institute itself is very futuristic looking with clean white walls, decorative fountains, sleek doorways, and transparent walkways.
* Fallout 4, as the game is set in Boston on the East Coast, so the ocean is on the right side of the map.
* Fallout 4, as the Sole Survivor can found new towns across the Commonwealth, as well as shack up at Diamond City, the Castle, the Institute, the Prydwen, etc etc. Wandering, however, is always an option.
* Fallout 4. As you come to know her, she’ll tell you that her parents abused her until she was old enough to be sold into slavery. She would pickpocket the raiders that owned her when they were asleep until she had enough to buy her freedom, then she tracked down her parents and murdered them.
* Fallout 4, being exactly the same as one of the doors in both those series' famous door sequences.
* Fallout 4, being the descendants of US soldiers with a knightly theme, use the following system:
* Fallout 4, but mostly because he just wanted to see what happened. When you finally meet him, he's quite impressed.
* Fallout 4 by the main character. On a greater scale, there's also Kellogg, the man who killed your spouse and took your son; he lasts the whole first act. Like Benny, tracking him down is the first act of the game. After you deal with him, the Brotherhood of Steel arrive and the game really begins to escalate.
* Fallout 4 by the time you arrive. If you side with them, you can bring them back to their former glory.
* Fallout 4 can become General of the Minutemen barely 20 minutes into the game, though how much weight that title carries depends on how much asskicking you do on Minutemen behalf. Doubly so for the male player, who served in the US Army during the reclamation of Alaska in the pre-war world.
* Fallout 4 can cause enemies or even the player to survive decapitation.
* Fallout 4' change appearance, like Kremvh's tooth, a machete of eldritch nature with a misshapen blade that can be removed and added to another machete, even a legendary one, and Lorenzo's Artifact, a gamma gun with a unique muzzle piece. Then there are some legendary weapons that have a unique appearance, like Atom's Judgement, a super-sledge with several bottles of radioactive material rigged to the head. And then there are weapons like the silver machine gun, which is just a tommy gun with a one of a kind silver-finish.
* Fallout 4 Codsworth and Curie appear to be Mr. Handy/Ms. Nanny robots with higher-end robot brains, as many other such robots of the same model series are less intelligent than them.
* Fallout 4: Codsworth, when you first find him after leaving the vault, acts as if nothing at all is wrong. After talking to him some you can ask if everything is alright with him, at which point he breaks down telling you how he's tried to keep up the house despite all of the large problems.
* Fallout 4 companion, who has a voice that sounds like cinderblocks dragging across asphalt.

* Fallout 4 - completely indistinguishable from your standard organically-grown person unless you cut them open.
* Fallout 4 continues the tradition. In some cases, the Raiders go so far as to set up elaborate death mazes full of booby traps.
* Fallout 4 continues this trend by having a man impersonating Preston Garvey trying to con people out of their caps. When you encounter him, he can be told off by saying that you personally know Preston or that you are the General of the Minutemen.
* Fallout 4 continues this with the three faction-specific variants of The Nuclear Option (destroying The Institute for either the Commonwealth Minutemen, the Brotherhood of Steel, or the Underground Railroad) and the Institute's opposing version, Airship Down.
* Fallout 4 Darwinism and natural selection than most other self-proclaimed "Social Darwinist" villains in fiction.
* Fallout 4 decentralized, and some troops dont even listen to you or Preston. By the end of the game, they border on being a Libertarian style system of government.
* Fallout 4: depending on which Sole Survivor the player chooses - either Nate or Nora - the other is killed early on in the prologue. Most players don't let this affect their game much for a number of reasons (chief among them being the fact that most companions are romanceable, a feature missing from earlier games).
* Fallout 4 DLC, by building robots to work in your settlements but also outfitting them with advanced armor and powerful weaponry, in case those settlements get raided. You can even build a Sentry Bot, outfit it with laser gatling cannons and shoulder-mounted cluster bomb launchers, and then assign it to establish a supply line between your settlements. Cue distant explosions and screams as your "provisioner" pulverizes any threat in its path as it rolls across the wasteland, escorting a pack brahmin.
* Fallout 4 DLC, going from pre-war United States Army to post-apocalyptic raider gang leader.
* Fallout 4 DLC, he can be modded out with bigger guns and tougher armor, making him much more dangerous.
* Fallout 4 DLC is based on the real-world Bar Harbor, and was formerly called that in-universe, but part of the "B" on the sign" got erased, causing it to be mistaken for an "F".
* Fallout 4 DLC provides a single new questline which can be run through in an hour or two, and maybe an hour more to unlock all the crafting schematics. You'll probably make up that time toying with your new customisable robot companions, though.
* Fallout 4 DLC, you can capture raiders to your settlements and pit them with your pet Deathclaws.
* Fallout 4 does not help. Contrast to the other possible robotic companions below.
* Fallout 4 either likes or dislikes certain actions, which adjusts their hidden affinity value. At certain milestones of positive approval, the companion will speak to you, usually revealing more of their past. Once you reach 1,000 approval, the companion idolizes you, tells you how positive your influence has been on them, and you receive the companion's unique perk. Some companions have personal quests that you have to complete before their approval will plateau, and one can't advance beyond a certain limit until you complete enough quests for his faction. On the other hand, doing actions which the companion dislikes will cause them to scold you and, at low levels, they will threaten to leave, only reconsidering if you pass a difficult speech check (but only once: if you continue to do things they disapprove of, they'll leave and never return).
* Fallout 4 essentially expands on the Institute and the Brotherhood, with the potential to recreate the early United States with the help of the Commonwealth Minutemen (centered around Boston). Other than that, the largest settlements are Diamond City, Goodneighbor, and Bunker Hill.
* Fallout 4, Feral Ghouls are now able to play dead. This will probably take you by surprise when a cymbal monkey toy goes off and they all suddenly rise to attack.
* Fallout 4 for good and for bad. The faction most likely to use and abuse Radiant

Quests are the Minutemen where Preston tells you to go defend a Settlement/clear out a Settlement spot/deal with (feral ghouls/super mutants/raiders)/save somebody kidnapped/etc. While these quests are always there to help you level up they get really old really fast and some places are locked out from you until you reach a high enough level (such as having a lock/computer too difficult to unlock).
* Fallout 4 for immortality. He is responsible for all the prolific cutesy kitten/puppy paintings you see throughout the game... and he hates them and made them under an alias, despite them making him filthy rich.
* Fallout 4 For more mundane weaponry, the Pipe Revolver Gun uses .45 rounds, and can be modded into either a pistol or rifle, and acts as a powerful early-game weapon, before .45 rounds become widely available.
* Fallout 4 gives the Sole Survivor the opportunity to assist with the rebuilding of Liberty Prime.
* Fallout 4, Glory. Since several factions want the Railroad destroyed, it's possible for Glory to die in the course of the player completing the game's main storyline, and the group's leader Desdemona has dialogue sadly reminiscing about her. But if the player defeated the Institute with the Minutemen while staying on good terms with the Railroad, you can visit Desdemona afterward and hear her congratulate you on your victory, then mourn the "fallen," potentially while Glory is standing right behind her.
* Fallout 4 go down. If you have enough money to pay their price, they'll do anything, from raiding old pharmaceutical companies for experimental drugs to stealing eggs from a Deathclaw nest. One potential companion, MacCready, is a former Gunner who joined for the money, but grew so disgusted with their kill-happy ways he leaves them to strike out on his own. They are not happy with his choice.
* Fallout 4 goes ahead and just gives you a classical music radio station so you can make just about any situation in the game run on this trope.
* Fallout 4 grants access to howitzer-style artillery pieces you can build at your settlements. Once built and crewed, you can throw smoke grenades to paint areas for bombardment by any guns in range.
* Fallout 4 has an amusing twist: if one of your settlements is attacked, the settlers can't be killed by the raiders. They're just winded for a minute and then get back up and rejoin the fight. A stray shot from your own gun, however, is still quite lethal.
* Fallout 4 has a slightly rarer variant of this in Mr. Zwicky and Edna, Diamond City's schoolteachers. Zwicky is an old man, while Edna is a decidedly non-humanoid Miss Nanny robot who is obviously carrying a torch for her coworker. If you talk to her about it and advise her that "love conquers all," the next time you visit the city, you can watch Zwicky and Edna getting married in front of the non-denominational chapel.
* Fallout 4 has Cito, who was raised by "Ghoulrillas" (mutated version of gorillas) residing in the park's animal preserve.
* Fallout 4 has Grognak's Axe, which is a replica of the one used by the comic book character Grognak the Barbarian. In addition, it's possibly to modify tire irons to create Bladed Tire Irons, which resemble rusty hatchets.
* Fallout 4 has Gulpers mutant salamanders that get bigger and hungrier as it gets older, the largest of which can swallow a person whole.
* Fallout 4 has muzak on some elevators, such as the one to the Diamond City mayor's office.
* Fallout 4 has Nick Valentine, the private detective of Diamond City, who is noticeably an older model Synth in a society where Synths are feared; it's a testament to how good he is that most of the residents of the town actually think well of him. He also has the memories of a real pre-war detective named Nick Valentine, which later leads to a personal quest for him finding out what happened to one of the original Valentine's old rivals.
* Fallout 4 has seven "What Makes You S.P.E.C.I.A.L.?" videos aimed to explain the game's skill system to new players. In-universe, they're propaganda cartoons produced by Vault-Tec to help the population prepare for a nuclear apocalypse (although the writers at Vault-Tec would have had to be pretty prescient to know

that people and animals would mutate from radiation exposure, and that caps would become the main form of currency - among other things).
* Fallout 4 has the Anglers, mutated angler fish that hide in bodies of water to bait prey with their glowing lures, which resemble the glowing stems of local mutated plants. Their most notable mutation, besides their size, is their gain of humanoid arms and legs, although they walk with a more apelike than strictly humanoid stance. Being mutant animals, they're not too bright when compared to others on this page.
* Fallout 4 has the entire Cabot House questline fired off by one of their couriers being killed and his package stolen. You are sent to retrieve that package and deliver it to the Cabots.
* Fallout 4 has the fan theory that the Sole Survivor is a synth, meaning that at least some parts of the game, particularly the entire pre-war intro, must be false memories implanted in their programming.
* Fallout 4 has the legendary robots, randomly spawned variants that as well as being stronger will also detonate after being destroyed in a really dangerous blast. The timing of the explosion can be random and unpredictable, taking a long time to go off in very rare circumstances, causing a player waiting for the bomb to wonder where the kaboom went. The same thing happens with cars primed to explode.
* Fallout 4 has the Refreshing Beverage. It heals a huge amount of damage over a short period of time, Fully removes radiation, and cures addiction to boot. One dose can bring you from near death to full power in an instant.
* Fallout 4 has this as the main story's premise. Though whether or not the protagonist is public about his/her former life is up to the player.
* Fallout 4, has this happen to a raider Pip Boy shoots with a sub-machine gun. The raider laughs off his apparent lack of injuries, only for the bottle of Nuka-Cola he starts drinking to pour out of the holes in his body.
* Fallout 4 has two console commands to make it impossible for the player character to die. One of them (god mode) works by preventing the PC from taking damage; the other (immortal mode) doesn't prevent damage, but does keep the player's health from dropping to zero. However, a PC in immortal mode still
* Fallout 4 has various finishing moves for melee attacks. However, as the game has a much heavier emphasis on ranged combat, they're much less commonly seen. Many animals also have special animations where they'll execute a critically injured human to deal the finishing blow in a dramatic way, as do some robots.
* Fallout 4 has you run into a group of five people: Preston Garvey, Sturges, Mama Murphy, Jun Long, and Marcy Long. The four appear to have been running for a long time, and had a much larger group than the ragtag group of five left at the end. After helping them escape Concord, Preston can tell you about the minutemen, a huge plot regarding betrayal, the collapse of the minutemen, and so forth. Should you check the southern end of Quincy, you can also come across three gunners known as Tessa, Clint, and Baker. Killing them and reading the various terminals explains even more of the tragic events that led up to the five holing up in the museum you saved them from.
* Fallout 4 have a "Suicider" type. When they detect an enemy, they arm their mini nukes and charge, hoping to tank gunfire until they can blow up. If you kill one before it blows up, you can loot the mini nuke; if not, you loot nuclear material. If it kills you, you get an achievement the first time it happens.
* Fallout 4 having a voiced protagonist, taking Psycho turns your character from a vault dweller to a fucking war machine.
* Fallout 4. He lampshades this if you rescue him as a female player character:
* Fallout 4. However, after her creator and the entire Caravan were slaughtered by the Mechanists robots Ada is overcome with guilt and misery at the loss, at one point during the story admitted to the sole survivor how she's contemplated disabling her personality matrix, reducing her back to factory settings and in effect committing suicide as she doesn't know how to handle her emotions. The player has the option of either encouraging to do so or (through a speech check) arguing that as painful as it feels is she has every right to her life and can not give up all she is.

* Fallout 4. Human enemies simply close and lock sturdy doors to create barriers against raiders and assassins, however if the player's leveled up in lockpicking, then these locked doors mean nothing. This is even acknowledged and lampshaded in magazines the player can find, where the author wonders if hairpins are more effective than proper lockpicks.
* Fallout 4: if the Sole Survivor happens to be in Diamond City on December 25th, then there will be a Christmas tree and Christmas lights set up. It's about as close to a Christmas Episode you can get in an open-world RPG.
* Fallout4. If you don't like the rusty, unpainted look or the drab Brotherhood of Steel paintjob, you can use a Hot Rodder magazine to give it a hot pink paint job or get flames decals from the Atomic Cats.
* Fallout 4 if you have sided with the Institute or Railroad, or made enemies with the BOS while allied with the Minutemen with all hands on board. Including children.
* Fallout 4, if you refuse to work with Father in the Institute, kill him, work with the Railroad to liberate Institute synths, or work with the Brotherhood to exterminate Institute synths, you will be chased out and forbidden entry back into the Institute. The only way to re-enter at this point is by invading them in the end-game story missions.
* Fallout 4 includes a defictionalized Pip-Boy. If you install the Pip-Boy app on your phone, sync it to your game, and slot your phone into the Pip-Boy, you can actually access your in-game Pip-Boy from outside the game!
* Fallout 4 in favor of placing more emphasis on combat and exploration.
* Fallout 4 in the Wasteland Workshop DLC) is the only thing in the game that can kill settlers.
* Fallout 4 is a mutant who has heard about the "Milk of Human Kindness" and believes it to be an actual beverage.
* Fallout 4 is a veteran of the Sino-American war, who is married to a lawyer with a year-old son named Shaun. Then the bombs start falling.
* Fallout 4 is shown in deleted material (which can be brought back by mods) to have a streak of this, getting ready to defend a client that she knows is innocent of what he's being accused of.
* Fallout 4 is something of a mixed bag. While he is comparatively heroic for a Super Mutant and approves of acts of benevolence and selflessness, he's also the most brutish and savage of the companions and loves acts of violence and killing.
* Fallout 4 is to convince their leader to initiate "Division", AKA mass ritual suicide via a nuke in their base.
* Fallout 4 is under the impression that the game was a violent and deadly competition before the Great War
* Fallout 4 it misses your hitbox and passes harmlessly through your arm.
* Fallout 4 known as the "Great War" happened in late October, because just about every shell of a house still standing in the Commonwealth has Halloween decorations out.
* Fallout 4 leaves you a water gun that will short out his armor, thus temporarily disabling his invincibility.
* Fallout 4 (like saying that the audience would get attacked as well, hence the term “spectator sport”). Either way he decides he liked his version better.
* Fallout 4 lines, one of which houses an unfinished Vault that's been occupied by gangsters. There's also the Mass Pike Tunnel, which is part of the abandoned roadway network, but has the same hazards. Averted with the Third Rail, a nightclub established in the former subway station below the Old State House in Goodneighbor.
* Fallout 4. Make sure your settlement is well defended and fortified in case of emergency.
* Fallout 4, maxing out a companion's Affinity and completing their personal quest will grant you a unique Perk that persists even if that companion is not in your party. If you choose to romance that companion, resting on a bed while they are nearby will grant you a "Lover's Embrace" perk, which increases the value of experience gains for a limited time.

* Fallout 4 — and they are every free synth's worst nightmare, charged with hunting them down and taking them back to be "retained" by the Institute.
* Fallout 4 moment and realize she's better off going back home to her family.
* Fallout 4 must drink from an allegedly sacred spring. Upon doing so you are given a MASSIVE dose of rads and then things take a turn for the odd: Shadowy versions of the native wildlife begin appearing in your vision and a ghostly woman leads you across the island to your goal.
* Fallout 4, name brand junk has more/better components, so you'll get more springs and gears from a Carlisle typewriter than a generic one, more nuclear material and circuitry from Wakemaster alarm clocks than regular ones, etc...
* Fallout 4 never actually says "Another settlement needs our help." He gives the Minutemen radiant quests with various lines: "I got word of a settlement that needs our help," "I've heard of another settlement that's in trouble," and "Another settlement has sent word that they need our help."
* Fallout 4 of them smoking, and if you have a bar set up in any of your settlements, any settler has a chance of lighting up a cigarette in front of it.
* Fallout 4. One is a real, supposedly haunted swamp just outside of Boston that is basically uninhabited. The other is ground zero for the nuclear warhead that struck the area. Both are filled with very high level enemies and few, if any, places to rest. The Swamp itself is usually filled with dense foliage and a thick fog that makes it hard to see enemies. The nearby towns are mostly destroyed and overrun with synths, Gunners, and ghouls. The Glowing Sea has no friendly settlements (besides the Children of Atom by the Crater) and is basically a sparse, blasted hell in which an eternal storm grips the sky, massive hordes of ghouls move about, deathclaws nest, and in which even taking off your hazard suit for a few minutes can easily kill you. Plus, if you play on survival mode, the Glowing Sea becomes exceptionally tough, as now there is a good chance of starving or dehydrating, and there are basically no beds to sleep in.
* Fallout 4, one would suspect nuclear destruction of the world and the passage of 200 years would be enough to kill an insignificant character like the Vault Tech representative from the opening scene, but he turns up later alive and well as a ghoul.
* Fallout 4, on October 31, Diamond City will be decorated with Halloween decorations, and guards will complain about having to work on Halloween. Also, given that the nuclear apocalypse occured a few days before Halloween (October 23), many locations around the Commonwealth will have Halloween decorations up, especially if they have been untouched since the bombs fell (a detail curiously ignored in the previous games).
* Fallout 4, or nearly killed you during that skirmish with raiders, maybe they deserve to be in there.
* Fallout 4: Piper Wright, the writer of "Publick Occurrences", who goes out and finds stories, like:
* Fallout 4, plastic is one of the crafting materials the player can salvage. It's mostly used to build and upgrade energy weapons and other advanced technology.
* Fallout 4: Possible to achieve, if the player romances all romanceable characters, then sends them back to their normal base of operations or permanently settles them at different towns across the Commonwealth.
* Fallout 4 posts "railsigns" showing the locations of allies, dead drops, and other important things.
* Fallout 4, Preston Garvey appoints you as the General of the Minutemen citizens militia early in the game, should you follow normal progression and rescue him and his party at Concord. Towards the end, the Director of the Institute reveals he is terminally ill and makes you his apparent successor. Or if you go along the Brotherhood path, you get appointed Sentinel and commander of all forces in the Commonwealth.
* Fallout 4 Preston right there when you confront him... but Preston has no available dialogue for this.
* Fallout 4 prominently features Boston monuments such as the USS Constitution, Fenway Park, the Bunker Hill Monument, the Paul Revere Memorial, Faneuil Hall, the

Old North Church, and even Walden Pond. Somewhat justified in that only one nuke was aimed at Boston, and it missed and landed somewhere Southwest of the city, in a heavily destroyed and still-irradiated area now called the Glowing Sea.
* Fallout 4 promotional materials have included another Ink Spots song, "It's All Over But the Crying", and one action demo reel featured "Atomic Bomb Baby" by The Five Stars.
* Fallout 4 quest to be significantly more shocking than intended, since a named allied NPC that runs a store (storekeepers are also mostly flagged) can die during a combat sequence with no buildup or fanfare.
* Fallout 4 radscorpions have no small variants, and the weakest of them is at LEAST the size of a bear, and armored to boot. They can also now burrow and pop up right in melee range. And then you get a horrifying close-up of their high-def character models as they sting you in the face for a huge amount of poison damage.
* Fallout 4" Random raiders will occasionally complain about the song being stuck in their head.
* Fallout 4 rather than a suit of armor that you would equip from your inventory, so Ingram is always seen in a power armor frame to allow her to get around.
* Fallout 4" remarks, it's deceptively powerful as it can be charged multiple times to produce a single very powerful shot.
* Fallout 4, rocks these. It's the only thing that's consistent among his numerous disguises.
* Fallout 4's Contraptions Workshop DLC allows you to build your own Rube Goldberg devices.
* Fallout 4 series to feature actual mannequins hanging around the ruins of Boston. And if you get both 2nd Gen Synths and mannequins in the same area...
* Fallout 4's exploits to his leaders. Since the Railroad relies heavily on secrecy for its survival, his ability to lie like a champion is actually invaluable.
* Fallout 4's Final Judgement, a suped-up Gatling Laser wielded by Elder Maxson, is only obtainable once you initiate the penultimate main quest when siding with the Institute or Railroad, and just before you destroy the BOS airship. By the time of the subsequent final battle and/or epilogue, your stats and skills are probably high enough that you'll have little use for it.
* Fallout 4. Should you choose to activate it, it immediately becomes apparent why it was junked: it overheats rapidly, making it far less dangerous than the standard Sentrybots you can find throughout the Commonwealth and (should you choose to hack it) useful only for soaking enemy bullets in combat.
* Fallout 4, should you join the raiders of Nuka-World in taking over settlements in the rest of the Commonwealth.
* Fallout 4. Should you progress along the Minutemen quest line, Ronnie Shaw becomes this for all Minutemen.
* Fallout 4 shows that all of the Institute's androids, or synths, have a trigger phrase to reboot them. If the player gives Mama Murphy drugs, she tells them the code to deactivate a synth they have to kill as part of the main story. In addition, if the player sides with the Institute in the Battle of Bunker Hill, they are given the trigger phrases for a group of escaped synths in order to recapture them.
* Fallout 4's Mordor region, the Glowing Sea, which you must walk to and through to find Virgil in the main storyline, is in the far southwest corner of the map, has many craggy slopes to hike over, and is large enough that parts of it are outside the normal map boundaries.
* Fallout 4's Nuka World DLC adds bloodworms, meter long barbed worms that burst out of the ground and leap for your face.
* Fallout 4's ''Nuka World's DLC are a villainess example; They're roughly made out of 90% female raiders and also the most ruthless group in all of Nuka World.
* Fallout 4, so all their interactions with the rest of the Commonwealth involve either attacking or infiltrating them with Synths, without any wider plan or endgame.
* Fallout 4, so whether the troops ever actually reach the ground is debatable.
* Fallout 4 Special Rap, with each letter matching the letter of the associated

S.P.E.C.I.A.L. stat (Strength uses S, Perception uses P, and so on).
* Fallout 4 starts going up, she'll sometimes say this when you talk with her:
* Fallout 4's "The Silver Shroud" questline, you get to dress up like the titular vigilante hero from pre-War radio dramas and gun down some of the worst lowlifes in post-apocalyptic Boston, then leave patented Silver Shroud calling cards on their corpses.
* Fallout 4 subverts the trope. There are still copious amounts of "Junk" items present in the game world which, on their own, do little more than flesh out the game world. However, the new Settlement and Crafting systems allow for Junk items to be repurposed for their raw materials.
* Fallout 4 such as Mirelurk Killclaws, Albino Mirelurk Hunters, Mirelurk Deep Kings, a Mirelurk Queen, and a Super Mutant Behemoth.
* Fallout 4's Wasteland Workshop DLC allows the player to build their own arenas and pit their settlers and companions against animals, mutants, imprisoned Raiders, or even other settlers.
* Fallout 4's Wasteland Workshop DLC, you have the option arranging cage matches between captured enemies from the Commonwealth Wasteland. If you manage to tame them through the use of the Beat Wave Emitter, you'll find that most captured enemies grant a bonus to your settlement's defense rating. Yao guai and deathclaws grant the highest bonuses at 7 and 10, respectively. However, it's not unheard of players pitting yao guai and deathclaws against one another, only to have the yao smack the heads of the deathclaws so hard they turn to bloody chunks.
* Fallout 4 thanks to the character editor allowing you to change your body's appearance between skinny, muscular, and fat. You can create a very muscular woman who'll receive a lot of positive attention from any of the available romantic interests.
* Fallout 4 that this would only kill them, though there may be a few players out there that did so anyway.
* Fallout 4, the All Faiths chapel in Diamond City attends to its residents' spiritual needs regardless of their own religious beliefs.
* Fallout 4'', the Awareness perk allows you to view the damages resistances of any enemy you focus on in VATS, in addition to their health and status (which you can see by default).
* Fallout 4: The Ballistic Weave upgrades unlocked by doing sidequests for the Railroad make this a practical option, turning clothing such as suits or dresses into actual functional armor.
* Fallout 4, the Cambridge Polymer Labs sidequest locks you in the lab until either you find the correct components and synthesize the Piezonucleic Power Armor, or hack a Master-locked terminal. The lab's pre-war scientists suffered a similar fate when Director Jon Elwood-Wollum ordered a lockdown of the lab while the bombs were falling, and due to Willfred Bergman blocking access to the isotope components, were unable to complete the project and either starved to death or became feral ghouls.
* Fallout 4. The Commonwealth has two well-defended major cities (Diamond City and Goodneighbor), and in addition to the large amount of player-made settlements that can house up to 20 settlers, agriculture and trade are much more widespread compared to the Capital Wasteland. However, the amount of Raiders and Gunners (who are basically Raiders with better gear) still seems disproportionate at times: they inhabit every single ruined building in post-war Massachusetts that isn't already occupied by hostile mutants.
* Fallout 4, the current generation of synths are so human-like that there is no known test that can distinguish between them and humans (none that can be performed on a living subject, anyway). The player may encounter an organization that's trying to develop such a test based on psychological profiling.
* Fallout 4 The DLC also introduces a Raider group known as the Rust Devils, which create robots of their own to terrorize the Commonwealth.
* Fallout 4 the Enclave Advanced Power Armor Mk. 1 as being the finished production model of the pre-War X-01 prototype, as a way to have Enclave APA Mk. 1s without having to involve the Enclave.

* Fallout 4, the fate or whereabouts of the Lone Wanderer and of other characters, and the current state of affairs in the Capital Wasteland.
* Fallout 4 the fusion core (difficult without the Penetrator perk, which lets you shoot through obstacles) and cause it to go critical and explode, and replace it with a new one when you finish off the armor's former user. But in either case, the power armor will be considered stolen rather than looted, so you'll lose approval points with "nice" companions if you use it in their presence.
* Fallout 4: The Institute (basically MIT in post-apocalyptia) generally focuses on creating merciless cyborgs, making breakthroughs in science and technology with no sense of control for the social ramifications, and crushing anyone who could interfere with their work. They're considered the bad guys because even though they mean well and can be highly rational, they've cut themselves off from the Commonwealth and treat its people like toys. This includes testing the FEV on them and loosing any "failures" upon the Commonwealth as the Super Mutants. The head of the project sabotaged the lab because nothing was getting done, yet the CEO kept ordering him to continue with the project and turn the "failures" loose, without so much as even an observational capacity. They don't treat the synths they create any better than they do the people of the Commonwealth either.
* Fallout 4: the Institute fills this niche in the main game, with the Nucleus in Far Harbor, the Fizztop Grille in Nuka-World, and the Mechanist's Lair in Automatron.
* Fallout 4, the Minutemen and the Railroad both suffered this in their backstory. The former had it happen twice, first being chased out of The Castle by Mirelurks, then massacred in Quincy by the Gunners, while the latter were rooted out of the Switchboard by the Institute and forced to relocate to the crypts of the Old North Church.
* Fallout 4, the Minutemen you find in FO4 are reduced to a small group. Joining the Minutemen during the main quest allows you to retake the Commonwealth for the people, reestablish trade routes and stop the rest of the larger factions from messing with the people.
* Fallout 4: The Mission. And the battle can get even more complicated if an outside force like Raiders, Super Mutants, or a hungry Deathclaw get attracted by all the fighting.
* Fallout 4. Then, after completing Act 1's boss battle, the Sole Survivor emerges from Fort Hagen to see a giant airship and several Vertibirds flying around, announcing the Brotherhood of Steel's presence to the Commonwealth. While most companions are at least familiar with the Brotherhood (Danse and MacCready the most), Codsworth, the Sole Survivor, and any new player will be thoroughly confused.
* Fallout 4. The only downside to living in Diamond City is the constant threat of the Institute and their synths, but even then, the so-called "War for the Commonwealth" barely touches its largest settlement.
* Fallout 4. The original plan was to see how the upper-class of society would fare with being forced into a bare-bones life under someone unsuited to leadership. Some interview tapes found in the Overseer's office reveal that, after a long string of overeager and overqualified candidates, they settled on a surly hobo known as "Soup Can Harry", who ate Abraxo cleaner and believed the government likes to waste taxpayer dollars on "Illuminati Freemason sex parties".
* Fallout 4, the player character was assigned to Vault 111 on the day the bombs fell, only to be stuffed along with the rest of the sheltering citizens into "depressurization pods" that cryonically froze them as part of the vault's secret project to study the long-term effects of such technology. Two hundred years later all the other pods have failed, leaving this Sole Survivor to wander the post-nuclear wasteland.
* Fallout 4, the player witnesses this situation first hand. Jack Cabot is trying to talk to Edward Deegan over the radio, while the latter is engaged in a running gun-fight with a bunch of raiders. Edward even drops the trope name at one point before being forced off the air by the fighting.
* Fallout 4, the Prydwen airship serves this function for the Brotherhood of

Steel's Vertibirds.
* Fallout 4: The raiders occupying the massive boat graveyard Libertalia are actually former Minutemen who set up shop there after the organization collapsed. Originally they had intended to carry on their mission, but pretty quickly degenerated into raiding and extortion to survive.
* Fallout 4 the Railroad adopts this persona, especially the agent known only as “Deacon”. They use dead drops, safe houses, secret signs to provide information about areas, store weapon and supply caches for operatives all over, like to speak covertly and even use a sign and countersign to identify one another, even have their own equivalent of Q to make weapon and clothing mods and generally know a lot about the goings on in the Commonwealth. Ultimately subverted, as they aren’t an intelligence agency, they are actually a people smuggling operation looking to liberate all enslaved synths. Their adversary, the Institute actually has an even better intelligence gathering apparatus due to a long list of paid informants and synth doppelgänger double agents.
* Fallout 4, there exists a noodle shop run by a robot named Takahashi. He only speaks Japanese, and a software bug results in him only able to say one phrase ("Nan-ni shimasho-ka?") regardless of what anyone else says to him. Roughly, it means "What would you like (to eat)?" In addition, your companions all have unique reactions to Takahashi, although Curie, a multilingual Miss Nanny robot, will attempt to speak Japanese to him and say "Watashi wa Curie desu" ("My name is Curie").
* Fallout 4, there's a ruined town that you can find remnants of a Raider encampment in. They were wiped out when Super Mutants moved in. By the time you get there, the town is full of dead Super Mutants and live Deathclaws.
* Fallout 4. These storms will dye the sky in an ominous yellow haze, severely reduce your visibility, and radioactive lightning strikes will start poppin all over the place. Thankfully the radiation levels aren't high enough to be dangerous, but it's still not particularly healthy to be wandering around without protection; best course of action is to duck indoors until the storm passes. The Glowing Sea, meanwhile, is perpetually bathed in these storms.
* Fallout 4, the shoulders are now bulkier than ever. Especially the T-60.
* Fallout 4, the skill system was effectively gutted and merged (more properly replaced wholesale) with the perk system — meaning that this number was now bolstered by perks that were less "neat tricks your character can do" and more "things you have to pick up to ensure your character is competent." The intended message is "just imagine what kind of amazing tricks you can pull with so many perks at your disposal!"; in practice, between the small number of genuinely unique perks and the need for them to pull double duty, you won't be doing much you couldn't do in earlier games.
* Fallout 4, the USS Constitution can be found beached on top of two buildings, resulting from a failed attempt to fly it with rocket engines. There's also the FMS Northern Star, a stranded freighter populated by Norwegian-speaking ghouls.
* Fallout 4, the yao guai look every bit like the giant pissed-off mutant bears they are. Don't get near them without Power Armor, grenades, a good build, or all three.
* Fallout 4, this is how you destroy the Institute, which is hidden deep beneath M.I.T in the ruins of Boston, by putting a remote-controlled explosive in the sophisticated nuclear reactor their facility uses.
* Fallout 4 to the Castle after it's been retaken by the Minutemen, and he has this to say:
* Fallout 4, Travis of Diamond City Radio generally tries to report the news as is while remaining impartial (though he's generally supportive of the Minutemen overall) as well as usually dancing around the player's involvement in the events, but he's also hindered by the fact that he's a nervous wreck of a man. By completing his sidequest however, he becomes a better DJ and reporter and will report the news with more detail and confidence while still remaining mostly impartial.
* Fallout 4 we meet the Cabot family, still living comfortably in their pristine

mansion 200 years after a nuclear apocalypse. There are also the Croup family who have all been turned into feral postnecrotic humans. The Codmans living in the upper stands of Diamond City also count - with the snooty attitude to match.
* Fallout 4 when discussing his past; when he first arrived in the Commonwealth, people regarded him with caution, since synths were an unknown entity back then and people didn't fear them as the boogieman. People didn't really trust him until a young boy named Jim approached him.
* Fallout 4 when the bombs dropped. One of the rooms is a circular chamber with a spinning floor and about ten different doors, some of which lead to blank walls, others to staged "scenes" (like skeletons watching TV), and of course one leads to the next part of the area.
* Fallout 4, when you finally reach the ground your character will perform a superhero landing.
* Fallout 4 when you're describing the man who kidnapped your child and murdered your spouse to Nick Valentine. The only worthwhile descriptions you're able to give him is that he's a bald guy with a scar, which while seemingly a somewhat common description automatically leads him to him figuring out that you must be talking about Conrad Kellogg.
* Fallout 4, where most of the settlements in the Commonwealth have a comparatively modern and progressive culture, albeit still stuck in a state of scavenging to survive against the monsters and lawless band of raiders roaming the land. The various communities of the Commonwealth would actually have formed a secure and strong alliance and secured the region were it not for the interference of the Institute, a much more technologically-advanced organization that sabotaged attempts to rebuild civilization to avoid the rise of a rival power in the Commonwealth.
* Fallout 4, where The Institute is revealed as a post-apocalypse beacon of genuine scientific progress, but because of the plain LACK of diplomats, engineers, and psychologists (low charisma and luck stats), all that science is dedicated solely to the suffering of Boston - and the Institute personnel don't realize it.
* Fallout 4, where the meanest of monsters, mutants, and gangs reside.
* Fallout 4 which is not a Fedora like most examples of the trope but a Newsboy cap.
* Fallout 4, which is why said drug is has caused the Gunners to go berserk and kill each other.
* Fallout 4, while the player character is not particularly small, they'll still have this relationship with the permanently power armor-clad Paladin Danse.
* Fallout 4 while the rest of the park is filled with ghouls, mutant crocodiles, mutant ants and other radioactive/mechanical post-apocalyptic monstrocities.
* Fallout 4, who has also taken up the identity of a comic book character, will acknowledge the Sole Survivor as the Silver Shroud, allowing the two to engage in gloriously hammy exchanges.
* Fallout 4, who not only lacks empathy but disdains altruism. And one quest target is a runaway Synth who had his memories wiped, but when it came to starting his new life, he ended up joining and leading a Raider gang.
* Fallout 4, whose wife was torn apart by feral ghouls right in front of him and his son. He expresses regret he couldn't save her, and even wonders if it would have been better if the whole family had died together.
* Fallout 4 with them, though not enough to jeopardize an existing relationship in itself. And if you've dismissed her to flirt behind her back, Piper Wright uniquely has a scene where you can find her talking with detective Nick Valentine about investigating your infidelity, though this has no effect on your relationship with her. Interestingly, if you're in a relationship with both Piper and Cait, swapping one out for the other results in unique, flirtatious dialog that suggests that the two of them might also hook up. No other romanceable companions act this way.
* Fallout 4 with the Perfectly Preserved Pie, a random drop you can get from the Food-O-Matic machines. Unlike other pre-war food which is either sealed up in containers or reduced to mold dust, the Pie has been sitting in pristine condition exposed to the elements for 200 years. Understandably, several followers tell you

to avoid it.
* Fallout 4, with the player able to catch glimpses of her as they explore the house, read terminal logs from Zachariah about a disembodied female laugh he assumes is coming from one of his robots, and culminating in the player following her into the attic, where she'll giggle and run around a corner - but if the player investigates, they'll find a door with a brick wall behind it.
* Fallout 4 world, like the war with China. Then the robotic butler calls you back to the living room where the anchor reports that a global nuclear exchange has begun, right before a "Please Stand By" message chillingly appears. This is a good time to RUN!.
* Fallout 4 would be the Cannons; Railroad Heavies are often equipped with Gauss Rifles and Railway Rifles which can punch through a Brotherhood Knight's armour with ease, but aren't very well-armoured themselves, and they're few in number and don't really have the staying power to openly contend with the other factions.
* Fallout 4, you are given his rank of Paladin, apparently bypassing a whole lot of Knight ranks. And if you finish the game with the Brotherhood, you once again bypass a lot of Paladin ranks to be appointed Sentinel and thereby second only to Elder Maxson himself in the Brotjerhood’s command structure.
* Fallout 4, you can build your own Sentry Bots at a Robot Workbrench.
* Fallout 4 you can capture and tame Mutant Hounds to fight in a bloodsport.
* Fallout 4 you have to decide between annihilating a neo-militaristic crusader faction, wiping out a faction with misplaced priorities, or nuking a twisted yet enlightened faction. In three of the endings, your actions result in hundreds of idealists dead and Boston controlled by radical extremists of some kind. The only way to avoid this is to side exclusively with the Minutemen. Even if you side with them, they eventually realize the Commonwealth will only be safe if the neo-militaristic crusaders are gone for good, leading to a mission where you blow up their airship, presumably killing (among others) the dozens of children onboard.
* Fallout 4, you may have superhuman strength or be packing enough explosive firepower to personally re-enact the Great War, but you aren't getting through an intact chain link fence. Nor will maxed out Strength and Agility enable you to climb it. Boarded-up doors are equally unpassable. Notably, one house in Natick Banks has an attic level with a loot crate, but unless you have a jetpack, you can't reach it because of an Impassable Head High Beam blocking the stairs.
* Fallout 4. Your companions all have unique comments if you bring them to visit.
* Fallout 4, you take too long to get to the Vault and escape the nuclear explosion.
* Fallout 4, you will find a synth named Eve who refers to herself as a "personal synth", and can be flirted with. Considering the Institute operates under the assumption that synths aren't actually conscious beings (despite behaving as such) it's a pretty obvious application of the technology.
* Fallout 76 catapulted John Denver's "Take Me Home, Country Roads" to meme status overnight.
* Fallout 76, cheaters were banned from their account, and would only be given their account back if they wrote a 500 word essay on "Why the use of third-party cheat software is detrimental to an online game community".
* Fallout 76, despite the game being set not long after the war and two thousand miles east of the Brotherhood's founding base of Lost Hills. This is explained by the existence of a satellite that the Brotherhood managed to access, allowing them to establish bases as far as Appalachia. This doesn't explain the following:
* Fallout 76 features wendigo in the more dangerous areas of the map. One of the storylines of the main quest reveals that the wendigos of the Fallout universe are the cannibal variety.
* Fallout 76 has a handful of nuclear launch sites scattered around the Appalachian region. Resourceful and determined players can seek them out, along with the launch codes necessary to use the nukes, to bomb any part of the region into Kingdom Come.
* Fallout 76 has the Scorched, victims of a dangerous plague that eventually leaves its those infected as little more than irradiated ultracite statues. Until then, however, the Scorched are essentially akin to semi-feral ghouls, mindlessly

attacking any non-Scorched while possessing enough intelligence to use weapons.
* Fallout 76, in which the player can earn access to the Kovac-Muldoon orbital platform. Unlike in previous games, there's no limit to where you can aim the K-C or how many times you can use it, so craft some orbital strike beacons and go wild!
* Fallout 76: Meteorite iron swords can be acquired as a reward from an event, but aren't really much different than normal swords, being a Chinese Officer's Sword colored black with some useful but fairly minor special effects.
* Fallout 76 on its forum caused dissatisfied customers to hijack any part of the internet they could to decry the game.
* Fallout 76's compensation of 500 Atoms ($5 of in-game currency), Bethesda promised to ship out canvas bags.
* Fallout 76, that are gained from being overexposed to radiation. Like radiation poisoning, they can be removed with Radaway.
* Fallout76 that turns people and creatures infected with it into their monstrous servants. In combat they mainly attacks using echolocation systems that have evolved to fire damaging blasts of sound.
* Fallout 76 was heavily advertised with the statement "Every character you talk to is a real person!" This is a very polite way of saying "this game has absolutely no human NPCs in it." Sure enough, by far the most common criticism of the game was that twelve-year-olds in voicechat shouting racial slurs didn't offer much in the way of interesting character work.
* Fallout accessorize to look feminine: Lily wears a gardening hat and shawl, while Tabitha sports a pair of heart-shaped pink eyeglasses and a blonde wig.
* Fallout accidentally, screwing up quest triggers, and dying inexplicably. Dogmeat was especially bad, as it was a challenge to get his limited AI to avoid being fried by door lasers - to the point that the second game reveals he canonically died to one.
* Fallout aesthetics, bottlecap currency, Nuka-Cola, and mutants. (Funnily, Nuka-Cola isn't given any noteworthy spotlight in either of the first two games; it's pretty easy to go a whole playthrough without seeing anyone mention it.)
* Fallout, a group calling themselves the Minutemen are working to unify the numerous settlements around the Boston area.
* Fallout. All they achieved was creating the savage, dangerously uncontrollable Super Mutants, and a myriad of other horrors.
* Fallout. Almost every game has featured its unique power armor design on the box art.
* Fallout already, the Brotherhood fears something similar happening down the road.
* Fallout also shows an ad for a car advertised as being fully analog, with no computers, and costing "just" $199,999.99.
* Fallout and a handful of his followers, Professor Calvert of Point Lookout, and Mama Murphy.
* Fallout, and even a few people who bring justice to the wasteland by dressing up as ancient superheroes.
* Fallout and finds it best not to trust anyone until she is absolutely certain they're on the right side. Eventually it's proven to her that Ethan and his team are indeed trustworthy.
* Fallout), and he's come to serve as a mascot for the game series, as well.
* Fallout and laser weaponry that the Paladins use, or are warriors that serve under a Paladin.
* Fallout and partly because they've declined in power and want to keep from losing their stake in the world. Since Old World technology was what caused almost the entire planet to become a radioactive hellhole, who's to say how right they are to keep what they've found under lock and key.
* Fallout and the two-headed cattle and deer — are explicitly descended from normal animals mutated by nuclear fallout and lingering radiation, many others are eventually descended from experiments in biotech.
* Fallout approach and subtly plan genocide by detonating live atomic bombs and unleashing mass-killing viruses in the water will comfortably put you on the evil side of the scale without having to shoot a single guard doing it. The good side of

the scale tends to be a little more flexible, however, allowing you to both be a trigger-happy nutjob and an agent of various good organizations around while doing it.
* Fallout, armour was very popular both before and after the war, amongst individuals, companies, armies and police forces alike. Its effectiveness greatly depends on how improvised it is—you may not even feel a difference shooting the fellow in the boiled leather and shooting his unarmored buddy, but a good suit of power armor (which only the best equipped factions have access to) can make one near immune or at least highly resistant to most every day wasteland threats, including radiation. Non-powered combat armor also tends to be on the larger side, consisting of rigid plates and pads resembling sports gear.
* Fallout, atomic cars and domestic robots. All computers have monochromatic monitors and run on vacuum tubes instead of transistors.
* Fallout at the end of the game can be entirely avoided with a sufficiently high Science/Engineering skill, your selected Perks or background give you unique dialogue options, and so on.
* Fallout before disagreements with Steven Jackson caused Black Isle to terminate their license and create their own SPECIAL system.
* Fallout, being set in a future southern California and future northern California and southern Oregon, respectively, have maps justified like this.
* Fallout, being some sort of badass is about the only way to enjoy most of your natural lifespan.
* Fallout Bibles would recognize "good catch" as his standard response to a coincidence or minor detail pointed out by a fan that he actually likes the implications of.
* Fall Out Boy, about two people who have broken up but continue to sleep together to sate their physical and mental desires.
* Fall Out Boy album with a DVD featuring all of their videos, with commentary. The general consensus places it in the mid-to-low quality range.
* Fall Out Boy (and features HTF versions of the band members as well).
* Fall Out Boy are this. They were still close during the band's hiatus and Pete Wentz was the best man at Patrick Stump's wedding.
* Fall Out Boy decides to climb halfway out of the car she's driving to sing her verse with the wind dramatically blowing her hair. Meanwhile, we see Patrick desperately trying to control the car from the passenger seat.
* Fall Out Boy ends with the band being tied up in the back of a van and about to be set on fire.
* Fall Out Boy fans for putting their comeback single "My Songs Know What You Did In the Dark (Light 'Em Up)" in his "Worst Songs of 2013" video (it didn't help that he also called the band members "assholes"). He even referenced this in a few later videos.
* Fall Out Boy features Pete Wentz in some freak facepaint that makes him look like he has a large smiling black mouth full of teeth.
* Fall Out Boy find a very dead Pete Wentz on the beach. They contemplate calling 911 (and Jason Tate) and then decide to go to an amusement park with his corpse, take photos and then steal his jacket, wallet, and phone. Just watch it for yourself.
* Fall Out Boy Gabe Saporta made a Youtube video where he showed off a fake tattoo of a cat and said he got it because he was "also into cats."
* Fall Out Boy has a history of having incredibly long song titles on their albums. When their record label asked them to write songs with shorter titles, they instead refused & simply disemvowelled the title of one, producing "Thnks fr th Mmrs" from this experiment.
* Fall Out Boy has always had this effect on people to the point where even Pete Wentz has joked about it.
* Fall Out Boy has a really awesome long note in the middle of it, and it is glorious.
* Fall Out Boy. "I don't know where you're going, but do you have room for one more troubled soul..."

* Fall Out Boy is more remembered as a pop rock band than the sidekick of Radioactive Man from
* Fall Out Boy jeans". The song also includes references to "watching [a couple making love] from the closet" and "sleeping for the wrong team."
* Fall Out Boy. Many fans think that the quality of the albums are negatively proportional to how popular they are, which would mean essentially that they haven't done anything good since "Take This To Your Grave"...or "From Under The Cork Tree", if they're feeling charitable.
* Fall Out Boy. Scene cuts to teenage girls waiting for the picture to load slowly downward, before cutting away to said girls becoming outraged at his exposure.
* Fall Out Boy side-project. Five years after they formed, they became one of the biggest rock bands in America. Most of the members' original groups - Arma Angelus, Xgrinding processX and Project Rocket - are now only remembered, if at all, for being the bands that Fall Out Boy formed out of, while Racetraitor retained a devoted underground following that eventually helped spur a proper reunion in the 2010s, but was never a big name outside of hardcore and powerviolence.
* Fall Out Boy song "The Music or the Misery" references this trope in its first verse: "I got your love letters, corrected their grammar and sent them back."
* Fall Out Boy's video for "It's Gonna Be Me". The concept of the video not only allowed them to commentate on their status as "accepted underdogs" in the mid-2010s pop scene and give a respectful shoutout to one of the biggest boy bands ever, but also let them goof off with long time friend Demi Lovato and two-fifths of N*SYNC.
* Fall Out Boy, the bassist Pete Wentz is a vampire while the rest of the band are humans who all hunt vampires.
* Fall Out Boy the singer sings "I'm just a notch in your bedpost but you're just a line in a song", lamenting that he means so little to his former partner as to be nothing more than a tally in a list of their numerous sexual partners.
* Fall Out Boy. They also have a song entitled "Our Lawyer Made Us Change the Name of This Song So We Wouldn't Get Sued". (actual title: "My Name is David Ruffin... and These are The Temptations").
* Fall Out Boy were obviously the main influence on all of these bands, considering such gems as "Reinventing the Wheel to Run Myself Over", "'Tell That Mick He Just Made My List of Things to Do Today'" (an inexplicable quote from
* Fall Out Boy, where the singer spitefully tells his ex what she should do for Christmas and new Year's, and "Tell That Mick He Just Made My List Of Things To Do Today," where he basically tells her he hates her for breaking up with him for another guy and tells her to "stop burning bridges / and drive off of them / so I can forget about you"
* Fall Out Boy with their song "Sophomore Slump Or Comeback Of The Year".
* Fallout: Broken Steel is based on Joint Base Andrews (formerly Andrews Air Force Base).
* Fallout by Mister House. His technology managed to stop several of the bombs from falling on the area, but it wasn't working at a hundred percent; had the bombs fell one day later, the problems would've been fixed and he would've ended up in an even better position post-apocalypse. Should the player not ally with House, his work will be for nothing, at least from his point of view.
* Fallout called the Forced Evolutionary Virus that the US Government cooked up before the war — precisely how much each element is to blame is unclear, as there was a conflict between the creators over the matter.
* Fallout can also sell human blood and... ahem... strange meat to some of the above groups, although not usually producing it himself or herself.
* Fallout can be accessed with patient skirting of a waist-high fence, not that it really breaks the game at all.
* Fallout canon. However, all the remaining old material is still called Van Buren.
* Fallout canon — as shown in later games, the Brotherhood ends up somewhere in-between the good and evil endings.
* Fallout civil and political strife, as the Commonwealths viciously competed against one another and the federal government to promote their own interests above the others. The energy crisis, wars, New Plague, and political oppression only made

things worse. In the aftermath of the Great War, social and political organization would rarely exceed the community level.
* Fallout: clean water, the most valuable substance in the wasteland. They were also incapable of being replicated, thus no forgery and their mineral composition gave them a modicum of worth. Same case with bottle caps in the Capital Wasteland.
* Fallout-crisis by the 2050's that escalated into World War III. Society itself also never progressed much beyond the post-War period, with fashion, art, architecture and social mores frozen in the Red Scare-era.
* Fallout deems it non-canon), and at the end of the day no one really cared.
* Fallout DLC, the Courier destroyed the Divide by delivering an Old World package unknowingly containing detonation codes, causing the dormant missiles to explode in their silos.
* Fallout DLC you get captured and sent to one, which you eventually capture just as another tries to bring you down.
* Fallout, Eddie Winters, a Pre-War crime lord, underwent an experimental radiation regime months before the Great War. He's still kicking 220 years later. Other people got ghoulified the hard way — gamma radiation from nuclear bombs.
* Fallout encompasses California and some areas beyond) have far more resources to produce new supplies than they realistically should, and there are still a lot more usable items just lying around than there should be.
* Fallout. Energy weapons are highly accurate but are either weaker than conventional fire arms (laser), or strong but slow moving (plasma) and always a pain to find until mid-late game. Small guns are diverse but can break, jam or just plain miss a lot more and ammo is always scarce for big guns (which have the same issue as small guns, though pack a larger punch). Melee weapons are durable and can be strong (sometimes augmented with technology), always silent and with the correct armor you can close the distance with ease, and can be found on pretty much any raider, giving you a constant supply of spare parts, and while using unarmed is challenging at first it has some of the best perks for combat and several gloves with devastating effects. As such using any of them is viable and has its own strengths and weaknesses.
* Fallout: Equestria, after having a fight with Calamity, Velvet Remedy flirted with Littlepip to get back at him. However, Littlepip was wise to her plan and put a stop to it.
* Fallout: Equestria, and a sniper rifle that also sees alot of usage throughout the story. This is ignoring the grenades that she sometimes carries, or the Balefire Eggs she carried around for a while- the only reason she doesn't carry a launcher is because she broke the only one she ever found. And all of this is in spite of the fact that she is exceptionally small-framed. Not even halfway through the entire story, one of her companions even points it out-
* Fallout: Equestria and its derived works, there are constant references to the "megaspells" which destroyed the cities and ravaged the landscape. Some were missiles, some were bombs. As it turns out, the megaspells were not actually inherently destructive. They were merely frameworks to boost any normal spell to epic levels; Fluttershy originally filled the megaspells with healing and protection spells, then gave the designs to the enemy as a gesture of peace. Unfortunately, everyone else immediately realized there was nothing stopping them from using the megaspells to boost destructive spells to epic levels. Most of the world-ending megaspells were balefire bombs, a clear analogue to nuclear weapons, but some of the worst (like the one that hit Canterlot) were more subtle horrors.
* Fallout: Equestria, and Steelhooves brings down the roof so that they can escape the situation entirely.
* Fallout: Equestria) ascends to the throne. This produces the same effect as William the Conquerer being placed in control of Cold War era Britain: complete and utter ruin.
* Fallout: Equestria as Littlepip repeatedly encounters buildings, including a factory, a mad science lab, and a powerplant, with one major feature in common:
* Fallout: Equestria, at least 5 ponies have taken the title DJ-Pon3, in addition to the original.

* Fallout: Equestria at the end. After being repeatedly shot, stabbed, blown up, irradiated, and mutated she was just too broken both physically and emotionally.
* Fallout: Equestria, DJ Pon-3 acts as this as a reference to Three-Dog in Fallout 3.
* Fallout: Equestria doesn't want to see such a memory. Applejack ends up leaving for a meeting without settling the matter. Later, Steelhooves gives Littlepip another memory orb, and she asks him first if it's a memory of him having sex with Applejack.
* Fallout: Equestria - Empty Quiver, and a Type 2 Ka-Mi, an amphibious tank.
* Fallout: Equestria - Empty Quiver closely resembling the Avro Vulcan.
* Fallout: Equestria - Empty Quiver features even more, as while the EQUAD War Room is mentioned in an early chapter, it's later revealed that there's also a smaller War Room at the Vanhoover Air Base, as well as at Fort Maple. In both of the latter cases, people have to be reminded they can't fight in there.
* Fallout: Equestria - Empty Quiver features this as the destruction of a robotic dragon, courtesy of a 40mm grenade with the explosive yield of a mini-nuke. Your Head A Splode indeed.
* Fallout: Equestria - Empty Quiver, we have the XB/A-1 Valkyrie, an experimental delta-wing supersonic attack bomber capable of effectively flying indefinitely, vertical takeoff and landing, and carrying 5 tons of bombs meanwhile, with no less than four turreted tesla cannons for defense and two 40mm autocannons for offense. It was still in the process of being tested when the bombs fell, preventing its use and ultimately its mass production, making it the only one of it's kind.
* Fallout: Equestria - Empty Quiver, with the daughter and son of the leading couples. Don't think too hard about how two pairs of stallions had foals.
* Fallout: Equestria. Even computers seem to run on magic in these stories.
* Fallout: Equestria expect to be paid after, but griffons are normally infamous for never doing anything without negotiating a contract first, so the fact that they have faith that Littlepip will compensate them fairly is a huge sign of trust.
* Fallout: Equestria has Deadshot Calamity be the victim of this. Not only was it how he got his name, but his father hated him because of it.
* Fallout: Equestria has Killing Joke, a plant which specializes in this. Either it kills its victims directly in some ironic way, such as a zebra who said at one point she felt like her stripes were great wounds in her skin having her stripes becomes massive open wounds when touched by a vine, or it simply sets things up for a third party to cause it, such as turning a Hellhound who was about to kill some ponies into a pony. Said ponified Hellhound was then killed by the other Hellhounds who thought he was simply one of the ponies they were hunting.
* Fallout: Equestria has the Pegasi Enclave, which rules Cloudsdale with an iron hoof and which emerges from seclusion to conquer the Equestrian Wasteland as well.
* Fallout: Equestria has the war between the zebra and Equestria, which ended much like in the original Fallout (again, it's almost confirmed that the zebra fired first). We actually hear a great deal about what happened in the background of the war, but still almost never see a battle fought.
* Fallout: Equestria intended to save everypony. While each of them was host to a social experiment, they were not needlessly cruel, and the Overmares were given strict orders to shut the experiment down if there was a serious threat to the inhabitants. Unfortunately, that wasn't enough, and by the time the story starts nearly every Stable is a tomb. Some fell to simple accidents, some to side effects of the experiments. Stable 29, in particular, was controlled by an emotionless computer, and when the water talisman was damaged started killing off inhabitants to keep the Stable at a sustainable population level. At first they just looked like accidents, and by the time anyone realized the truth, the pony with the knowledge to override the computer was dead.
* Fallout: Equestria. It lives up to its name, and if its propertier, the ghoul Derpy Hooves, finds anything it doesn't sell, she will endeavor to correct that.
* Fallout: Equestria: Littlepip finds some journals from the war where an outside observer witnessed Steelhooves patrolling Zebratown, the only zebra settlement in an increasingly racist Equestria. Steelhooves saves a zebra from being raped by a

guard, then refuses her thanks because he hates zebras. He states multiple times that he doesn't care how much he hates zebras, it's still his job to protect them, so that's what he's going to do. He's better by the time of the story, but not by that much.
* Fallout: Equestria: Littlepip gets addicted to Mint-als, especially of the Party Time variety. By chapter 20, she gets over her addiction (unlike Pinkie Pie, who was also addicted to these), flushing down her remaining Party Time Mint-als (which were a lot, mind you) down the toilet.
* Fallout: Equestria. Littlepip notes the jokes would be stupid if they weren't so horrifying.
* Fallout: Equestria, next time they're ready for it. Stealth is the preferred method of dealing with them, but it's not always an option since they're often the ones ambushing her.
* Fallout: Equestria - Occupational Hazards) abundantly clear, within reason.
* Fallout: Equestria - Occupational Hazards. As one of the authors has an obvious fascination with Dr. Strangelove, this should come as no surprise.
* Fallout: Equestria - Occupational Hazards features the main characters stumbling across and subsequently taking a ten-meter long 81-ton land battleship from the basement of a vehicle testing facility. Mounting a turreted Equestrian Royal Ordinance 76.2mm gun firing 17-pound shells and traveling at the speed of slow, it's not really sugarcoated that they'd found a TOG II, albeit with some upgrades - least of all being a compact nuclear reactor in place of the diesel engine and 20mm autocannons for coaxial and hull secondary armament.
* Fallout: Equestria - Occupational Hazards features use of the CONELRAD broadcasting system repurposed as a general radio station, while leaving the automated emergency warning systems intact. These systems are triggered three times over the course of the story.
* Fallout: Equestria of overuse to cause it. More than pulling a muscle, it's like punching so hard you break your whole arm. Of course, it happens to Littlepip multiple times throughout the story. Between a propensity for danger and the fact that her only spell is basic telekinesis (meaning when she runs out of guns her only option is "throw something heavy at the enemy"), she tends to lose access to her magic at the worst of times.
* Fallout: Equestria once took nearly 2 days to authorize an assassination of the main character, which gave her the advantage in choosing familiar terrain. In one instance, a rescue mission for a downed Raptor was only carried out in time to rescue anyone because the crew mutinied instead of following protocol.
* Fallout: Equestria - Project Horizons: After Blackjack finally confessed to the barely sane ghoul Silver Spoon that she isn't Diamond Tiara, instead of mind-breaking feral-inducing trauma as Nurse Graves feared, she instead opts for this. She still sometimes calls BJ Tiara at times though.
* Fallout: Equestria - Project Horizons and with her weapons in easy reach. She isn't attacked, but she mentions she's ready for it.
* Fallout: Equestria - Project Horizons at one point there is an attack spell that appears to be this. It appears as some sort of distortion, and shatters bone without damaging flesh. Light would be distorted if the space it moved through was. Flesh is stretchy and can survive the fact that the angles on a triangle no longer add up to 180 degrees. Bone, not so much.
* Fallout: Equestria - Project Horizons, causing the Stable to become infected and break down into several competing tribes of hungry cannibals.
* Fallout: Equestria - Project Horizons, serving as a physical dumping ground for any and all unwanted emotions and thoughts.
* Fallout: Equestria - Project Horizons. She just heals the wounds and regenerates any missing parts, although disintegration causes her to regenerate as a small filly, and she has to eat a lot to grow back to normal size.
* Fallout: Equestria - Project Horizons. The required password appears on her computer screen: Thisisgonnahurt.
* Fallout: Equestria - Project Horizons with gusto, but when she's augumented, it really takes off. Bonus points go to when she's hit with an assassination attempt

and, instead, eats the knife.
* Fallout: Equestria, she is able to predict everything he might say and record responses in accordance; rather than seeing just one future dialogue, she is aware of every possible choice. She even coerces him into Pinkie-promising to never use addictive substances ever again, and responds appropriately when he accidentally sticks his hoof into his eye.
* Fallout: Equestria: Snowfall, the crystal ponies call noncrystal ponies "fleshies". The ghouls also call nonghouls "smoothskins". Nobody seems to get particularly offended though.
* Fallout: Equestria) so that her head could be brought back. We never find out whether she lived or died, though after she left, every pegasus that leaves the Enclave is branded with her cutie mark and given the label "Dashite", though many take it as a badge of pride because they're not as selfish and arrogant as the Enclave.
* Fallout Equestria: Starlight, after Radiant Star sees Pinkie's skeleton she feels obliged to give her a funeral.
* Fallout: Equestria: Starlight with saying how one can best help others.
* Fallout: Equestria: Steelhooves/Applesnack is on the wrong end of a Hellhound attack very early on in Chapter 39. This comes as a bit of a shock due to his status as a Canterlot ghoul, hence able to revive from most forms of damage. Turns out decapitation isn't something he can revive from.
* Fallout: Equestria, that's a glaring flaw; the enemy could just wait until the ponies brought some rain clouds in and attack then. By the time of the story, the Pegasus Enclave keeps the Wasteland constantly covered in clouds, meaning it's never an option at all.
* Fallout: Equestria, the Pegasus Enclave encourage homosexual relationships in order to keep population numbers down.
* Fallout: Equestria, the plan for defeating the Goddess. Notable in that this trope applies in-story as well; after coming up with the plan, Littlepip tells each member of the party their part in the plan and ONLY their part, and then has her own memories removed. The reason is that the Goddess is telepathic, and Littlepip herself will be facing the Goddess directly. Letting your opponent read your mind and figure out your plan would kind of put a damper on it.
* Fallout: Equestria. These were all developed over a few decades. Even hundreds of years after the apocalypse, with most of the technology lost, the scavengers in the Wasteland still have a higher tech level than the ponies before the war.
* Fallout: Equestria to have embarrassing food-based names such as Cottage Cheese and Butterbean.
* Fallout: Equestria. Ultimately, Littlepip's final argument against him is that he treats every single person in the Wasteland as a child who needs to be led around by the nose. People will never improve if he doesn't give them a chance to improve.
* Fallout: Equestria. Within a few days, she had slaughtered a raider camp, rescued some prisoners, basically saved an entire town, became friends with some of the most dangerous people in the Wasteland, and killed an insane pseudo-goddess. Her achievements only became more impressive from there. In fact, her achievements were so impressive that the Steel Rangers couldn't believe she was really an innocent Stable-dweller and thought she was a highly-trained commando from some hidden Ministry of Awesome black site.
* Fallout: Equestria: Xenith the zebra uses little to no contractions in her speech and usually talks in a more sophisticated manner than her comrades.
* Fallout expansion, are creole tongues descended from English. After several generations however, there's just enough English left to notice their origins but they're otherwise barely comprehensible. This is in stark contrast to their town-dwelling counterparts in the wasteland as well as more civilized factions like the New California Republic and Brotherhood of Steel, all of whom speak more or less the same English as Pre-War America.
* Fallout featured such lines as "Rabbit is reduced to a thin red paste" and "Thug explodes like a blood sausage".
* Fallout features the aptly named 'Deathclaws', genetically engineered killing

machines with claws the size of knifes. In each game they are one of the toughest commonly occurring enemies, and their claws can even be Macgyvered into one of the more deadly unarmed weapons in the game.
* Fallout features the Punga fruit, which the local tribals cultivate, worship, and trade.
* Fallout. For example, the United States forcibly annexed Canada to access better pathways to Alaska and engaged in a bloody war with every other country to secure the last oil field in the Pacific. The world itself was embroiled in the Resource Wars, a series of conflicts over shrinking oil fields that left Europe and the Middle East in ruin as the oil fields dried up and left the U.S. and China as the remaining powers.
* Fallout, for instance, allowing your tiny outpost to fleece an Elven caravan out of everything they own in exchange for one earring.
* Fallout, frequently breaking the fourth wall and referencing popular culture.
* Fallout game has guns in his chair, though it's not mobile. The guns are a common feature in many vaults (The Master employs his if you resort to hostility) as a last line of defense.
* Fallout games allow players to be male or female, any race they choose, and a bunch of other customization features as rudimentary as nose size. How could boxart get all of this represented at once? It doesn't; instead opting for pictures of an undefined character in power armor.
* Fallout games are usually aversions similar to the above Elder Scrolls example, as shops only have limited stock and money as well, meaning that if you're selling items to them, you could only sell them so much before they were out of money. They eventually do replenish both stock (unique items excepted) and funds over time, and later games allow you to invest in shops to permanently increase their buying power.
* Fallout games do partially avert this trope, although in a very subtle way involving the recoil: Although you can physically see them recoil back when shot, the energy weapons skill is based on your perception score, implying the recoil is so negligible that you only need to see your target to hit them. Contrast this with the small weapons skill using agility (your natural reflexes allowing you to better deal with the recoil) or heavy weapons using endurance (the recoil being so massive, you have to worry more about passing out from the shock).
* Fallout games had the Gifted trait, which essentially amounted to this trope. Gifted characters had the best SPECIAL stats in the game, and due to the importance of the stat, usually a very high intelligence value as well. The tradeoff was the ease of which everything came to the character turning him into a slacker — namely, fewer skill points per level (though from a gameplay standpoint, it was universally considered the best trait).
* Fallout-games have had have featured an anti-radiation drug called Rad-X. Much later, when a real anti-radiation drug was invented by Onconova Therapeutics, they dubbed it Ex-Rad.
* Fallout games have several settlements whose names are apparently derived from corrupted names and degraded signage:
* Fallout games, it's possible to take an at-creation trait called Skilled, that makes your character into one of these. You gain perks (miscellaneous, but potent benefits) less often but get a bonus to all your skills (medicine, gun skills, etc). It's generally considered inferior to its counterpart trait since skills are easy to raise and specialize in, but perks come only with level gains.
* Fallout games rewarded the player with extra gruesome death animations that would play some of the time if the player inflicted a large amount of damage in a single attack. If one gave the player character the special trait "Bloody Mess" during creation, the most spectacular death animations would always play when an enemy died. The full list of splattery animations is:
* Fallout games, the hero will have altered the face of whatever wasteland he/she happens to inhabit, for better or for worse.
* Fallout games, there exists Vaults 68 and 69. The social experiment of Vault 68 is 1 woman living among 999 men, whereas Vault 69 is 1 man living among 999 women.

* Fallout games, there is a perk (Living Anatomy) which gives you a bonus to medical skills, but also, due to your mastery of anatomy, raises your base damage against living opponents.
* Fallout games to depict the average human being as kindling in waiting. Flamethrowers in the first and second games give a kill animation fondly referred to among fans as the Burning Bitch Dance, while the later installments by Bethesda have given the various desert-wandering protagonists plenty of ways to demonstrate how flammable people are.
* Fallout games, where people tend to have casual danger dialog while getting hurt: You could imagine that "You popped a goddamn lung" was in fact said in a very serious way, but there's no way anyone could go "Crap, my eye's dangling by the optic nerve here" without it being a perfect example of this trope.
* Fallout games, where you gain extra XP and other rewards for succeeding at speech challenges. There are also perks that open extra dialog options with various characters.
* Fallout: Garl, the leader of the Khans raider group. His band has kidnapped the daughter of the leader of Shady Sands, the first town the player character encounters after leaving the Vault, bringing him into conflict with a good character almost immediately.
* Fallout getting nuked into oblivion from a (hopefully) safe distance.
* Fallout: Gigantic, radiation-mutated scorpions are a mainstay of the games.
* Fallout goo. Despite this, the goo or dust can still be looted for perfectly intact items (even armor).
* Fallout had the Glow, the Mariposa Military Base and the Brotherhood's Lost Hills HQ.
* Fallout had the Slag AKA Pale Folk underground community, with the inhabitants a group whose ancestors mutated to have pale skin, very sensitive eyes, etc.
* Fallout: Harold, a ghoul-esque mutant you can meet in The Hub, was 5 years old when the Great War began, and emerged from Vault 29 in 2090. The Vault Dweller encounters him in Oldtown in 2162. He'll tell you a little about his life in Vault 29 and what he remembers of the beginning of the war if you ask.
* Fallout has an example of this; to befriend some Raiders, you must execute two girls they have taken as prisoners.
* Fallout has "Plan C" which adds up to killing everything in the vicinity.
* Fallout has T-51b Power Armor, the uniform of the Brotherhood of Steel. Powered by a nuclear battery, it is said to be the most advanced military hardware ever fielded before the war.
* Fallout has the Great War, a two-hour war during which every nuclear-capable country in the world launched. No one knows who launched first, and given the state of the world afterwards it doesn't really matter anymore.
* Fallout has this gem if the player character stumbles upon the Thieves' Circle, makes it through a small gauntlet of traps and locked doors and engages in conversation with their leader Loxley.
* Fallout have a surprisingly high number of Ghouls in their gang, probably about 25% of the gang itself.
* Fallout have the pigrat as well. Also, the deathclaw is a mixture of Jackson's chameleon and various 'other species'.
* Fallout have various tools attached to the ends of their metallic tentacles, including buzzsaws and blowtorches, which can be quite lethal in combat. The military version, Mister Gutsy, has machine guns and plasma throwers mounted on its tentacles instead.
* Fallout. He gives the player a quest to steal a necklace from the head of the Water Merchants as initiation into the Guild, and if completed he rewards them with 3000 caps and an electronic lockpick.
* Fallout. However, Bethesda declined to continue working with Obsidian Entertainment in favor of in-house development.
* Fallout, including enemies, allies, and random passers by. Certain types of armor can also deflect bullets, injuring or killing unintended targets even when your aim is true. Stray shots can also provoke hostility from parties formerly uninvolved in

the conflict.
* Fallout, including two-foot-long Radroaches, Radscorpions that grow upwards of six feet long, Giant Ants, some of which breathe fire and others of which fly, Bloodbugs, who are giant mosquitoes that suck your blood and spit it back at you, and Stingwings, scorpionflies the size of birds of prey.
* Fallout increased damage) and Med-X (damage resistance). They have aftereffects and are addictive, of course.
* Fallout in later games with Nuka-Cola Quantum, a soda with experimental isotopes that glows a bright blue.
* Fallout In the third game, they're nicknamed "devil suits" in-universe, as the Enclave armor resembles, er, devils with pointed horns.
* Fallout) is a slide show of this for the major factions and a few main characters. While not every major character is covered, endings like that of Broken Hills (in where even the good ending has the town's uranium mine running out, causing the town to be abandoned) fit this trope to a T. Oddly enough, the player character is excluded from the montage.
* Fallout is between the Brotherhood of Steel and the Enclave, both of whom rely on superior technology and firepower to claim dominion over the Capital Wasteland.
* Fallout Is Dragons, and Doctor Tibbs, who uses his medical knowledge to heal, make drugs, and break ponies whenever he feels like it.
* Fallout Is Dragons as his modus operandi, but he'll just as easily dispose of them. So it's more of a rotating duumvirate than an actual duumvirate.
* Fallout Is Dragons certainly qualify, blundering their way through situations that would daunt most skilled adventurers.
* Fallout Is Dragons gives us Faceball, which is played with a decapitated head, two teams of three, has unexplained rules for scoring based on how the head lands, and the losers are only executed in professional leagues.
* Fallout Is Dragons has an interesting case of mutual Cool Big Sis with Aurelia, the magically aged up dragon, and Flotsam, the bomb-toting pegasus filly.
* Fallout Is Dragons has Craggy the baby Cragodile, who mostly chews on things.
* Fallout Is Dragons has yet to do this onscreen, he's never been seen with the same partner twice....
* Fallout Is Dragons is a common recipient of these. He has noted it's interesting to observe when he's not a recipient.
* Fallout Is Dragons is a flying music playing novel reading disco ball that occasionally explodes, created explicitly for this purpose.
* Fallout Is Dragons is a mix of all four types, though mostly type 4. Their leader, named Death, is a lich, and most of their members are living necromancers who use zombies in their raids; however, while they are raiders they don't seem to attack without need and Death has actually become something of a mentor figure to Xencarn, one of the player characters.
* Fallout Is Dragons is very happy with her adopted family. Aurelia is also an example, although she does grow weary of her adopted family's antics on occasion.
* Fallout Is Dragons: No matter the universe, this is Xencarn's default reaction whenever he encounters some variation of cat.
* Fallout Is Dragons. She serves as the team's moral core... and has no qualms about throwing grenades at her enemies, bowling for undead with explosives, or mining an entire dune to wipe out a raider encampment. Her best friend is a necromancer and together they pioneered the concept of Bombies, zombies loaded with explosives and sent after their foes.
* Fallout Is Dragons spent some time in Skyfall when his player wasn't available.
* Fallout Is Dragons will always, always, always try to talk others into doing the right thing. Even a pissed off dragon who is currently preparing its breath weapon.
* Fallout Is Dragons with non-magical cybernetic replacements after they were ripped apart in an explosion that also had an impact on his memory.
* Fallout is exiled from Vault 13 at the end of the game, since the Overseer believes he/she has been changed too much by the outside world.
* Fallout is home to a huge cast of characters. Some you interact with alive, others you find dead on arrival, and others you run into just as their own personal

story ends. It's not uncommon to come across the corpse of a person and wonder if they were just unlucky and got killed, or were in the process of their own journey.
* Fallout is the sledgehammer (and the super sledge, a pneumatic version.)
* Fallout kill them on sight and many humans treat them with fear and disgust. Others, such as Three Dog and the citizens of Megaton understand that the difference between them and humans is largely cosmetic.
* Fallout: Lanius, which got approval and support from both Obsidian Entertainment and Bethesda.
* Fallout leaves Colonel Autumn's fate unresolved if you let him walk out of the purifier. Was he killed or captured, or did he leave the Wasteland entirely?
* Fallout, live in a post-apocalyptic world where laws do not exist; hence, they are automatically legitimate gun factory/shop owners. They are notable in that they are the only (mentioned) source of factory fresh weapons available to buyers in the universe; the rest of the weapons you can buy is supposed to be salvaged from pre-war depots or tinkered together from rusty parts. The Enclave and the Brotherhood also manufacture weapons, but they aren't commercial organisations and keep their factory output to themselves.
* Fallout Lore: The Storyteller: "But that is a story for another day..."
* Fallout Lore: The Storyteller due to his genetic code being damaged by radiation when he went through the glowing sea.
* Fallout Lore: The Storyteller who appears in the Season 1 finale and a mini-story arc spanning two episodes in Season 2, is blown up with a Nuka-Grenade, which is a weapon powered by the very same special edition Nuka-Cola Quantum that he was threatening the Storyteller's life for.
* Fallout makes you this (somewhat). The first rank of it makes it so animal enemies won't attack you. The second makes animals attack enemies (except other animals, which they already do anyway making the 2nd rank practically useless).
* Fallout manages to sneak into the Thieves' Guild hideout, he's greeted by their well-spoken leader, Loxley. After some pleasant introductions...
* Fallout, many of the sidequests are helping people with their mundane problems, like picking up some paint for a handyman, helping an alcoholic become clean, help an insecure boy become more confident. Given that it is still a game, the problems get a fantastic twist but are ultimately still very mundane.
* Fallout miniatures game in 2019 and a separate pen & paper RPG using the 2d20 system for 2020.
* Fallout. Most of the jars were broken, even in the parts of the facility that escaped the bombing...
* Fallout), most prominently those based around the worship of the creation god Atum.
* Fallout narrating about the war. Even though the war is technically over, its lasting impact colors the setting throughout.
* Fallout, Natalia Dubrovhsky, has one, and it is on the female character by default since there's only one model for male and female player characters each.
* Fallout. Naturally, you get to shoot them, fitting this trope to a T.
* Fallout: New Vegas A Courier with a high enough Speech skill can talk down Ulysses from this destructive course of action. Ulysses then regards the Courier as someone with the "shadow of a nation, the hope of the people."
* Fallout: New Vegas add-on ''Honest Hearts." The entire reason the plot is in motion is because the White Legs tribe were given automatic weapons by Ulysses, as well as a huge store of ammunition and the knowledge of how to clean them. The White Legs never developed past a Stone Age level of civilization because they have no knowledge of agriculture, animal husbandry, or the other necessities of civilization. If something they stole or scavenged breaks, they just throw it out. Joining Caesar's Legion is the only way they have forward to survive.
* Fallout: New Vegas add-on Old World Blues has large posters on the walls to teach the alphabet, including "C is for Commie" and "D is for Dirty Commie".
* Fallout: New Vegas adds a radio station hosted by "Alan Morgan," a racist, pro-gun, right-wing Enclave supporter.
* Fallout: New Vegas, a Deathclaw can be seen running in a cave. When you follow it

you see its corpse and what follows is probably the first encounter with the Tunnelers, reptilian humanoids that hit as hard as Deathclaws, attack in packs, travel underground, and breed like rabbits.
* Fallout: New Vegas, a female protagonist is able to seduce Benny and bypass the security. From there she can either sleep with him and kill him, or just kill him as soon as they enter the room.
* Fallout: New Vegas: After Dr. Mobius delivers his terrifying broadcast from the Forbidden Dome, he caps it off with a cheerful "That is all. Bye bye."
* Fallout: New Vegas after she joins your party but at least she isn't depressed.
* Fallout: New Vegas A funnily multi-layered example in that he purposely uses "craziness" in his sales pitch yet is oblivious to the ways he's genuinely crazy.
* Fallout: New Vegas against Mr House, who doesn't know and wouldn't care anyway), and he can't do anything about it. He's very miserable about it.
* Fallout: New Vegas) against the NCR until the remainder decided the current plan was suicide and retreated against his orders.
* Fallout: New Vegas along with a host of new weapons. Notable entries include:
* Fallout: New Vegas, a low-Intelligence character has the option to "CHOP CHOP CHOP" a patient, which saves them through "dumb luck".
* Fallout: New Vegas also allows players to do this if they have a shovel in their inventory. No significant consequences are attached but what loot there is to be found is usually pretty mild (a few meds, some ammo, or maybe a damaged weapon)
* Fallout: New Vegas also featured music from the 50's and early but sticks with the theme by using a mix of old western songs and those by Vegas performers like Dean Martin.
* Fallout: New Vegas, although the latter case is fade to black), both are plot important place. However, the digital versions aren't banned.
* Fallout: New Vegas and are some of the nicest NCR soldiers if you are in good terms with the NCR. If you count destroyed units, the old American Army Riot Troopers had even spookier armor, with extra padding, glowing eye lenses, thicker armor, and black leather dusters that were hybrids of LAPD riot gear and US Army Mechanized Infantry uniforms.
* Fallout: New Vegas and a variety of noises can be heard that just raise further questions. Then again, its name is "Fisto".
* Fallout: New Vegas and how he'll learn about F.I.S.T.O. via trial and error. For the customers of course!
* Fallout: New Vegas and leaves the kitchen (as well as his recipes) to you so he can run off and cry.
* Fallout: New Vegas and none of them use profanity in a game where it is plentiful.
* Fallout: New Vegas and the devs subsequently patching those methods out.
* Fallout: New Vegas and the player is given the chance to either convince him that he truly loved Gabe or to simply see him as a test subject.
* Fallout: New Vegas, and think the NCR will be defeated by them soon.
* Fallout: New Vegas, and wants Vegas to be their Rome thus making them a true Empire.
* Fallout: New Vegas anything less than five dollar bills). Due to the NCR-Brotherhood of Steel war destroying the former's gold reserves, NCR has switched to water-backed paper money, explaining the change and lack of purchasing power.
* Fallout: New Vegas are reskins of the aforementioned mirelurk kings, and possess the same stereotypically finned, ichthyoid appearance. They also retain the mirelurk kings' powerful attacks and tendency to cluster in areas near water.
* Fallout: New Vegas are the New California Republic, a democratic faction whose lofty ideals are tempered by an aggressive expansionist policy and more red tape than you can shake ten sticks at. While natural for such a large organization, the inefficiency is one of the reasons the NCR has come to a stall in the game and gives plenty of work for the player character.
* Fallout: New Vegas are trapped in their hazmat suits, since the buckles rusted due to the toxic cloud.
* Fallout: New Vegas around it that hits harder than some of the toughest enemies

in the games.
* Fallout: New Vegas as a compromise by the makers between the serious post-apocalypse of Fallout 1 and the joking around of Fallout 2.
* Fallout: New Vegas as an example for the price of failure among his ranks.
* Fallout: New Vegas, as Boone mentions that it's "The only resort in New Vegas that no one wants to get sent to."
* Fallout: New Vegas, a semi-immortal robot who is loyal only to you (because only you can get into the building where he lives) and he commands an army of highly advanced kill bots with Wolverine-like healing factors.
* Fallout: New Vegas As long as you don't side with Caesar's Legion (which wants to oppress or kill everyone in the wasteland), whether or not you get the Golden Ending depends more on how you handled faction quests and sidequests than it does on whether you side with the New California Republic, Mr. House, or an independent Vegas.
* Fallout: New Vegas: As long as you're not too badly regarded by the NCR, you can easily sneak into Hoover Dam's facilities, including the turbine chambers, the armory, the offices, and the barracks without anyone even asking who you are or making you relinquish your weapons. If you so wanted, you could probably plant a few bombs and cripple the region (although there's no quest to do so).
* Fallout: New Vegas As the narrator says, getting to the casino is not the hard part.
* Fallout: New Vegas as well). Also, according to Ranger Andy in Novac, he suffered his leg injury by being caught off guard by a child (a Legion's slave) who was ordered to dropped a granade at his feet.
* Fallout: New Vegas, as well as the scorpions that caused it in the first place - all without being able to see properly.
* Fallout: New Vegas as well, but the process is perfected on them so they stay sane. You can even opt to leave your brain, heart, and spine behind and use cybernetic implants instead.
* Fallout: New Vegas, as you are fighting off the tribals that wiped out your caravan party, Follows-Chalk suddenly jumps into the fray. Unwary players with sniper rifles may accidentally shoot him, causing failure of the main quest.
* Fallout: New Vegas at first, and occasionally snarks when the Courier asks what he thinks is a dumb question, but he treats them with exactly as much respect as he is shown in turn. He is open and honest about his plans, trusts the Courier to make their own tactical decisions, and provides them with full access to a refurbished luxury hotel suite and cocktail lounge.
* Fallout: New Vegas at Hoover Dam (but then, the friendly NCR forces are just as tough, so it's not that big of a deal).
* Fallout: New Vegas. Averted pathetically with General Lee "Wait-and-See" Oliver.
* Fallout: New Vegas be associated with any particular group, but that doesn't mean that people won't recognize the Courier's badass status. Develop a high enough reputation with a particular group (especially the NCR), and rather than offering your services for hire, they'll beg you to help them out with their problems.
* Fallout: New Vegas became this after the Legion came to town. The former had its residents beheaded, crucified, or enslaved, while the latter was irradiated, turning the NCR troops stationed there into feral ghouls.
* Fallout: New Vegas because their poor attempts to imitate him ended up looking like insane gibberish.
* Fallout: New Vegas because they're constantly baked out of their skulls. But Cook-Cook, the Flamer-wielding rapist (and yes, those two do go hand-in-hand with him), is the only Fiend everyone in the Mojave hates by name and often will pay you for having killed. Caesar's Legion is also said to rape women, but this is mostly said in passing and takes a back seat to the slaving and mass murder.
* Fallout: New Vegas becomes another flickering ghost to haunt the ruins.
* Fallout: New Vegas being as big as their Capital counterparts — and unlike their cousins in the Capital Wasteland, they are still hostile to you even if you have the Animal Friend perk.
* Fallout: New Vegas brings back the Katana in the "Gun Runner's Arsenal" DLC and

it is still regarded as the king of one-handed melee weapons as it have a double critical rate, limb damage bonus, and has a special VATS attack that does 250% damage
* Fallout: New Vegas brings back the same model from Fallout 3 and introduces the new "Authority Glasses", a pair of aviator shades that seem to be a favorite of NCR Rangers.
* Fallout: New Vegas brings us the El Rey Motel. Every bit as ramshackle as the Statesman, but populated with angry drug addicts instead of Super Mutants.
* Fallout: New Vegas, but with a little smarts you can get the centurion to sing without even touching him, netting a better reward.
* Fallout: New Vegas by them for slaughtering their attack on Goodsprings.
* Fallout: New Vegas, Caesar's Legion is an army of mass murdering, raping marauders that's heavily implied to consist in large part of teenagers. If you go to the Legion fort, you can find boys training to be full-on legionaries, with the implication that they're going to be entering combat soon (which, considering even the industrialized NCR lets people sign up for active-duty at 16, isn't implausible at all). If you talk to the NCR general Chief Hanlon, he says that any legionary who survives 10 years is considered an exceptional veteran, as most die long before then ("life expectancy isn't long in the Legion; you live ten years in Caesar's army, you're a force to be reckoned with").
* Fallout: New Vegas, Camp Golf is set up in the ruins of an actual golf resort.
* Fallout: New Vegas cannot be permanently killed — they go unconscious and wake up when the fight is over. (Some extremely powerful enemies may avert this — for instance, the enemies at the Deathclaw Promontory can tear ED-E into scrap and make him vanish, although the game still thinks he's in your party.)
* Fallout: New Vegas), carbide teeth to add +15 to damage (chainsaws ignore armor so this makes a good thing better), and an alloy frame to decrease weight (from a rather hefty 20 to 12).
* Fallout: New Vegas character-specific Challenges (not required), hence exceeding requirements imposed by the game platform.
* Fallout: New Vegas come down on you like the fist of an angry god after ganking one of their butter knives. The only upshot this time is that they don't all assume you're going to steal whatever passes under your crosshair and constantly remind you that they can see you eyeing their stuff.
* Fallout: New Vegas confirms that they can "recognize your face and voice with advanced facial and auditory recognition technology."
* Fallout: New Vegas content and gameplay fixes to the Capitol Wasteland.
* Fallout: New Vegas, convincing him to withdraw the NCR (which should be simple enough if you're already capable of talking down Lanius).
* Fallout: New Vegas could count as one of these, as well as any of the raider groups.
* Fallout: New Vegas decide to push west. Pointdexter of the Misfits specifically joined the military with the goal of obtaining with a cushy desk job while performing as little as possible.
* Fallout: New Vegas delusional. Which considering the game opens with them miraculously surviving a double-head-shot, wouldn't really be that surprising.
* Fallout: New Vegas developers, but can also be played in real life since it uses a standard deck of 52 playing cards.
* Fallout: New Vegas/disintegrates them) or else the Major in charge of the bounties can't verify them and cannot pay you full price.
* Fallout: New Vegas DLC. After saving Christine from the immediate danger at the Big Empty and getting what he came for, Ulysses leaves.
* Fallout: New Vegas DLC. Before the bombs fell, the Sierra Madre was set up to broadcast a distress signal on its external radio antennas if something catastrophic happened. Unfortunately, since all the radios were set to broadcast music for the Grand Opening until after it was finished (three guesses as to what happened before the Grand Opening), the 'emergency' broadcast is still a broadcast inviting people to the Grand Opening Gala Event at the casino proper. Since the broadcast was designed to repeat until help arrived, this has led hundreds of

unwary explorers to their deaths over the years...
* Fallout: New Vegas DLC called the X-66 Hexcrete Archipelago, consisting of massive hexagonal structures made of concrete. Appropriately, they do nothing in the game other than look cool.
* Fallout: New Vegas DLC is centered around a scientific research facility named "Big Mountain", commonly abbreviated as "Big MT". The corruption of the name, coupled with its secluded location and the fact that people who tried exploring the crater tended to not come back led to it being known as "The Big Empty" in the Mojave Wasteland.
* Fallout: New Vegas DLC really exacerbates the issue. The DLC adds in a bunch of new weapons, many of which are unique, and ammo types to the game, none of which can just be found lying around and must be purchased. Often the player only has the wealth to use these weapons regularly when their weapons skills are so high that that extra damage you're buying is almost always overkill by that point, so even carting around some powerful guns is wasteful in the added weight alone.
* Fallout: New Vegas DLC that do things like making you move faster while sneaking.
* Fallout: New Vegas dlc, the Courier's brain along with their heart and spine are removed and replaced with advanced technology.Near the end of the story the player can choose to keep the implanted technology or have the organs returned with the help of a Auto-Doc Machine.
* Fallout: New Vegas DLC, who's prone to this due to having been programmed to obsess over washing mugs... for scientists who have long abandoned any activities that require mugs.
* Fallout: New Vegas DLC, you can find 'vending machines' which are actually matter conversion devices. These can be used to convert casino chips into food, medicine, tools or ammo.
* Fallout: New Vegas does he love to constantly reiterate what his name is during combat.
* Fallout: New Vegas doesn't bother to hide his condescension for... well, anybody and has a clear disdain for the other factions out to rule New Vegas. He is, however, a genius of several stripes, who not only earned his fortune before he was thirty but was also responsible for preserving what remains of Vegas through the nuclear apocalypse.
* Fallout: New Vegas, due to House's machinations the Mojave was spared the worst of the Great War, allowing for a lot of advanced technology to survive the collapse of civilisation. Later he would "civilise" three tribes into governing his casinos, while he himself maintained New Vegas' independence from NCR annexation by using his Securitron army to prevent any attempt to take over the Strip.
* Fallout: New Vegas, during the battle between the Brotherhood of Steel and the NCR at Helios One, the Brotherhood Elder Elijah deserted in the midst of the battle. As such, the Head Paladin Nolan McNamara was forced to take the position of Elder.
* Fallout: New Vegas), easily collect 2000 caps on the way for the entry check, and spend the rest of the game gambling at slots, roulette, or blackjack, sleeping in the casinos and buying marked up food from casino bars, until you run out of money. Just like real life Vegas.
* Fallout: New Vegas elements, but you can make you character stronger from absorbing radiation (though you still get sick from it).
* Fallout: New Vegas(especially disturbing when heard in the Divide), as well as reusing many from the first two games.
* Fallout: New Vegas-esque, ball-busting, credentials in the form of four campaigns against the Brotherhood of Steel during the NCR's war with them.
* Fallout: New Vegas. Even having your entire central nervous system removed and replaced with a Tesla coil has no effect on you, and having it put back in is optional.
* Fallout: New Vegas even lampshades this, referring to Oliver's "tactics" as Tunnel Vision. This is because his only move is to fortify the Hoover Dam with troops to prepare for an impending Legion attack and nothing else. He is apathetic to the situation everywhere else in the Mojave, even when the Legion establishes

itself in the Mojave and engage in regular attacks on the NCR to crippling effects (i.e. Searchlight, Nipton, Nelson, Forlorn Hope, etc.). To that and to the regular Fiend raids, Oliver maintains his orders to hold position and not pursue, even when it's clear how these are all affecting their supply lines and morale. Upon closer inspection, the NCR is so bogged down by this and everything else that they are unable to take notice of or respond to further sabotage attempts (into McCarran itself), the involvement of the Great Khans, the breakout of the NCR Correctional's inmates and the total unpreparedness of their troops that it becomes clear that the NCR would've been slaughtered were it not for the Courier's intervention.
* Fallout: New Vegas even less so, then again only the Legion hates Ghouls.
* Fallout: New Vegas, even though it was Hanlon's strategy that won the First Battle for Hoover Dam. On top of that, Oliver is so intent on a second, climactic battle at the dam itself that he seems blind to Legion raids taking place anywhere else.
* Fallout: New Vegas eventually clarified that the upgrade is meant to make it so that he'll only take orders from you, and not literally anyone who gives him one.
* Fallout: New Vegas every night. You don't get to do any of these, but you at least get its attention.
* Fallout: New Vegas expansion, Dr. Borous has set up the X-8 Research Center to look like his old high school, and rants over the intercom about his traumatic teen years.
* Fallout: New Vegas expansion. Everyone has an obsession that drives them to the Sierra Madre, and only in letting go do they find relief.
* Fallout: New Vegas expansion, he's clearly learned nothing from the experience.
* Fallout: New Vegas. Expansions to the game, can have you geting BAR automatic rifles, old police magnums, Tommy guns and .45 pistols.
* Fallout: New Vegas features a major battle over Hoover Dam, one of the last remaining sources of electricity in the wasteland.
* Fallout: New Vegas features an energy weapon based perk that causes any enemy killed with energy weapons to emit a small radius of high damage (capable of starting chain reactions if it kills another enemy, since it is also an energy attack). Capable of turning a group of weak enemies into a rather large explosion.
* Fallout: New Vegas features Borscht Belt style comedian Billy Knight, complete with an inexplicable New York accent.
* Fallout: New Vegas features Caesar's two lieutenants. Vulpes Inculta is the leader of the Frumentarii, who are scouts, infiltrators and saboteurs; he is responsible for most of the trouble the Legion is causing in the Mojave. Legate Lanius is the leader of Caesar's armies. It's heavily implied that after Caesar's death the two of them will fight for leadership, leading to the eventual collapse of the Legion as neither have what the other does.
* Fallout: New Vegas, female members of the Fiends gang dress like pole dancers. Your companions Veronica and Cass dress like they might have to work outdoors in a harsh climate.
* Fallout: New Vegas' final DLC adds an upgraded version of the Ranger Helmet which gives you night vision while crouching. The basic versions sadly only give you a bit of armor.
* Fallout: New Vegas for a model of eyebot that never was produced, specifically because it may be surveiling him.
* Fallout: New Vegas). From the same game, the generic "Anti-materiel rifle" is the Hécate II, a rifle designed and built only in France.
* Fallout: New Vegas get caught in the explosion, but a few broken limbs is worth the LOLs.
* Fallout: New Vegas gives us the Freeside Thugs; they seemingly do not understand the stupidity of luring someone in Power Armor and carrying a Machine Gun/Rocket Launcher/Orbital Death Ray into a "trap" they set, when all they have are pool cues and meat cleavers.
* Fallout: New Vegas had his tongue cut out by NCR soldiers, which explains his generally unintelligible dialogue.
* Fallout: New Vegas has a optional hardcore mode where you need to eat, drink and

sleep to stay healthy.
* Fallout: New Vegas has a tiny, barely-noticeable moustache that nevertheless manages the badass feat of being the only facial hair to ever exist on a ghoul's face.
* Fallout: New Vegas has Davison and his long-dead bull's skull called "Antler".
* Fallout: New Vegas has far less urbanized warfare going on, as the only heavily built-up areas are around New Vegas itself, and that area is well-secured by Mr. House's Securitrons and the New California Republic. Nonetheless, the ruined urban area west of Camp McCarren is overrun by the drugged-out Fiend raiders, and provides some fairly vicious urban combat if you go after their leaders and the Vault housing them.
* Fallout: New Vegas has log entries which pretty much give this exact excuse; the designers were programmers, not artists).
* Fallout: New Vegas has Michael Angelo, an agoraphobe responsible for the neon signs for New Vegas. Since he is incapable of leaving his workshop, he asks the player to take pictures of landmarks around the Mojave for inspiration.
* Fallout: New Vegas has Nightstalkers, the result of an experiment in splicing coyote and rattlesnake DNA.
* Fallout: New Vegas has one companion perk which causes certain items to glow when the player aims. Useful in some of the darker caves and buildings.
* Fallout: New Vegas has one guy near Goodsprings who begs you to save his girlfriend from mutant Geckos. Turns out there was no girlfriend and that the geckos were keeping him from looting a camp at the top of a hill. His mistake was assuming that he could get rid of someone who's just cleared out a hillful of Geckos.
* Fallout: New Vegas has Securitrons patrolling the Strip in New Vegas, and if one specific path is taken in a quest NCR soldiers will take up guard duty in Primm.
* Fallout: New Vegas has the background-only characters Sprtel and Wood, inventors of the Sprtel-Wood 9700 Gatling Laser. They were named after Scott Sprtel and Brian Wood, two victims of traffic accidents.
* Fallout: New Vegas has the Boomers at Nellis AFB. If you bring ED-E onto the base, one of the lines you may get while Boomers pass by you is them telling you they can "take care of that robot problem for you. Just sayin'". You can even get this line from the Mister Gutsy robots they have patrolling the base.
* Fallout: New Vegas has the Lone Wolf Radio trailer. A trailer full of radio equipment which holds little to no interest (the location designer confirmed it was added only as a nod to a personal anecdote) but unproved rumors about either a unique NPC wearing wolf pelts appearing there or the radio equipment diffusing children's screams, starting a quest to track and stop a serial killer, exist. Likewise, a rumor about a ghost at Nellis AFB (allegedly inspired by the story of a servicewoman who commited suicide while on duty there) or spooky noises and whispers in the Goodsprings Cemetery are not unheard of.
* Fallout: New Vegas has the town of Novac. The name comes from the motel that serves as the town's main building, where "NO VAC" are the only remaining letters on the "NO VACANCY" sign outside.
* Fallout: New Vegas has this capability. Killing his Securitron body just causes him to upload to another one. While theoretically you could kill him by tracking down and destroying every Securitron in New Vegas, they all constantly respawn so there's no practical end to them. Yes Man just comes right back, and cheerful and friendly as ever.
* Fallout: New Vegas has Vulpes Inculta, a spy who manages to beat the Courier to Nipton, The Strip, and The Fort, no matter how fast the Courier travels. He is involved in many covert operations, and it's implied that when you don't see him, he's wreaking havoc in NCR territory somewhere.
* Fallout: New Vegas has you encounter a NCR Ranger in disguise as he runs a sting on a crooked quartermaster. He reveals himself after you run afoul of him, forcing you to either turn in the crooked quartermaster, fast-talk the ranger, or just blast him.
* Fallout: New Vegas have stagnate pool of watery fallout that are signaled by

their noxious fumes; while the fumes don't do anything but the radiation will poison you.
* Fallout: New Vegas. He hopes to some day earn the call-sign Ace of Spades, but the Lieutenant in charge of his unit insists he's too green and needs to score more kills before he can call himself that, hence his current call-sign.
* Fallout: New Vegas, he joined the NCR military with the hopes of eventually landing a cushy desk job far from the action and otherwise has no real interest in being an actual soldier. In the quest to improve the Misfits, he suggests altering their records to make their squad look better but if properly trained or given a good pep-talk he's shown to be fully capable of being a competent soldier.
* Fallout: New Vegas helped put the town of Goodsprings on the map. The locals in return have a copy of the New Vegas box art framed in the walls of the Pioneer Saloon (the real-life counterpart to the Prospector Saloon).
* Fallout: New Vegas/helping them cheat on their test... Not so much).
* Fallout: New Vegas, if you manage to talk down Ulysses in the finale, he'll tell you that the Marked Men of the Divide will be coming in as part of his original plan to kill you. He'll then offer to team up with you to make a final stand against all of them.
* Fallout: New Vegas includes cryptic references to The Burned Man. He was lit on fire and thrown to the bottom of the Grand Canyon, but is rumored to have survived as a barely-human horror.
* Fallout: New Vegas. Including the DLCs and some more popular modules.
* Fallout: New Vegas indicates that it wasn't coming together quite fast enough.
* Fallout: New Vegas in general is a better example of this as your proficiency in a particular skill isn't just useful for its basic uses (e.g. science is primarily for hacking computers), but can be used to interact with the world at large (e.g. teaching people to synthesize drugs). This even even extends to perks. For example, having the Strong Back perk allows you to convince the Happy Trails caravan merchant that you can handle carrying larger load.
* Fallout: New Vegas in no way has a shortage of gay characters, but there is an example with Tabitha the Nightkin (human mutated into huge, hulking, blue monster that is also violently insane) and Rhonda the Mr. Handy robot (who has the same male voice as every other Mr. Handy).
* Fallout: New Vegas: In order to become a member of the Great Khans gang, you have to survive getting beaten to within an inch of your life. If you ask them to stop at any point, you fail. You are allowed to try as many times as it takes though. One NPC laments that he thinks he's just not fit to make it, as he has tried numerous times already, to which you can help him by letting him join the pacifist Followers of the Apocalypse.
* Fallout: New Vegas. In particularly buggy areas such as the area around Nelson, the player character can end up several dozen feet off the ground by skimming a cell edge. Some of the indoor areas, e.g. Vault 34's main floor, are also divided into sub-areas.
* Fallout: New Vegas instead. There are also golden versions found in the Lucky 38, which are improved versions of the regular thing.
* Fallout: New Vegas: In the Dead Money DLC, you and the other team members wear explosive collars rigged to go off if any of the others die. If you explain this to dissuade God (a hulking Nightkin) from killing you, he says he could just tear off your limbs and leave you on the ground, since he could probably get out of range before you bleed to death. Even after he joins you, he'll casually mention tearing off your arm and wear it around his neck.
* Fallout: New Vegas in the events of just about every DLC, the Courier never learns who he is until directly speaking to him in the final DLC.
* Fallout: New Vegas introduced different ammo types to the various ammunition-using weapons, among them anti-armor rounds. The rounds ignore the target's Armor Points when hitting, damaging foes directly, with a tradeoff for less damage overall.
* Fallout: New Vegas introduces the Confirmed Bachelor and Cherchez la Femme perks, gay counterparts to Lady Killer and Black Widow, as well as gay (Arcade Gannon) and

lesbian (Veronica Santangelo) companion characters. In fact, gay men have the most sexually implicit or explicit interactions in the game, as in addition to their own perk-locked content, just about every character that a "heterosexually active" (Black Widow perk-equipped) female PC can get is also available to a gay male PC.
* Fallout: New Vegas inverts this in a manner of speaking, as the "ocean" in question is actually just another river cutting off the southeastern-most portion of the game's world. While you can cross it, the only noteworthy location on the eastern bank is Fortification Hill.
* Fallout: New Vegas involves collecting the ears of Legion soldiers as trophies.
* Fallout: New Vegas involves traveling to Zion National Park with a caravan company. Your party gets slaughtered by raiders immediately after entering the canyon.
* Fallout: New Vegas is a member of the Circle of Steel, a hardline faction within the Brotherhood of Steel who task themselves with assassinating those who betray the Brotherhood or stray too far from its core tenets.
* Fallout: New Vegas is an underground arena with various mutant creatures that offers both creature vs. creature and creature vs. human fights. You can bet on fights, take part in one or search for creature eggs to restock the arena menagerie.
* Fallout: New Vegas) is a real-world device that some liken to a lightsaber. It essentially burns iron rods to create an intense stream of heat out one end, like a gigantic blow torch but much hotter. Granted they are much bigger than a lightsaber hilt and would require two hands to wield, but the stream to project has all the cutting power: they are normally used to cut through solid concrete and steel girders.
* Fallout: New Vegas is doing this on the picture displayed on his monitor. Since said picture is static, that means he's constantly making this expression.
* Fallout: New Vegas is done by the project director and lead designer, Joshua Sawyer.
* Fallout: New Vegas is explicitly named the insult comic. As a ghoul, he developed this talent dealing with the inevitable hecklers who'd rather make rude comments about his appearance than listen to his act.
* Fallout: New Vegas) is forced to help the insane Father Elijah loot the Sierra Madre casino with the help of three other NPCs, one of which has been trying to rob said casino for two centuries.
* Fallout: New Vegas is greed and what it costs those who can't overcome it. All of the main characters in it are consumed by one form of greed or another. Emphasized by the primary reward for beating the expansion pack: A shit-ton of extremely valuable gold...which weighs far more than you can easily carry. It is possible to get out with all of it, but extremely difficult, and if you don't get out in time it's game over.
* Fallout: New Vegas is infected by a parasitic fungus that mutates exposed humans into Spore Carriers, which spread the fungus further; some of the fungus has escaped as far as Zion Canyon.
* Fallout: New Vegas) is never explained, though it is all but stated that all the Think Tank have no idea what they're doing anymore and haven't for over a century and a half. The whole point of the DLC is to get your brain back which was misplaced by the Think Tank, though you can opt to keep your artificial brain if you want to, you just get different bonuses than if you get your brain reinstalled.
* Fallout: New Vegas is routed, you then have to deal with General Oliver, either through force or through diplomacy.
* Fallout: New Vegas is the king of this trope. Every time the player character kills him, he is just uploaded in another robot. This could go forever, making him one of the few immortal characters in the game. The same also goes for Victor, at least until you reach Vegas.
* Fallout: New Vegas is the one that asks what's on the NCR's flag. The answers to the other two questions, which ask what the NCR's original capital city and its most popular president are, are not found in game.
* Fallout: New Vegas is well maintained, you must be Brotherhood. If your armor is

all rusted out, you're probably just a scavenger that got lucky and found a functional suit in a cave somewhere. Guess where most, if not all non-faction power armor can be found.
* Fallout: New Vegas. It also includes the "Sierra Madre vending machine" a self-contained matter transformation device that has a holographic interface that displays the item being purchased.
* Fallout: New Vegas. It also secretly tracks a "History" stat with certain characters where if they're brought along to a few events/places they will initiate their personal quests.
* Fallout: New Vegas) it comes across as rather flat. Even his dialogue of when Benny and a female Courier "get busy" is unintentionally funny due to this. His "Hello" is more of a casual greeting and not a jokey comment during sex.
* Fallout: New Vegas. It is exactly the armor the person in the game cover is wearing.
* Fallout: New Vegas, it is now considered to be possibly the best of the Bethesda-Published Fallout games.
* Fallout: New Vegas: it never blows or billows the way you'd expect a coat to do, even in a Mojave sandstorm, and it also seems to be glued to the legs based on how it moves when the wearer walks.
* Fallout: New Vegas, just having a "Shunned" reputation with either of the major factions is enough for them to send hit squads after you. In the case of the Legion, the squad will run up to you at a certain location and announce "The Caesar has marked you for death!", and sometimes they immediately spawn hostile without warning. As above, they are psychic and will immediately all know of your wrongdoing.
* Fallout New Vegaskilled to the extent of being decapitated or otherwise dismembered. The easiest way to do this is to cause enough damage to knock them down, then pull a Boom, Headshot on them.
* Fallout: New Vegas, largely so the player can know to get to cover. Additionally Tiny Tots Mini Nukes launched by a Fat Man have a distinct whine to them, similar to Boomer artillery, which is why they have a face of a tiny tot screaming on them.
* Fallout: New Vegas lauding the sacrifices of the Republic soldiers and steeling them for the coming fight against the Legion. Then...
* Fallout: New Vegas leading Caesar's Legion founded it using knowledge he had found in the post-nuclear apocalypse regarding ancient Roman culture. They also use grammatically correct and correctly pronounced Latin.
* Fallout: New Vegas Lonesome Road gives the Red Glare: A scoped, fully-automatic missile launcher that can fire up to 13 rockets in less than 5 seconds.
* Fallout: New Vegas master plan is to eventually start a space program to colonize other planets.
* Fallout: New Vegas — though obviously only if you choose to play your character that way, but there are a number of situations that, with a sufficiently high Speech skill, you can talk your way out of without firing a shot.
* Fallout: New Vegas, meaning Caesar needs to take control of New Vegas in order to provide his fledgling empire with a place to see as a center of power.
* Fallout: New Vegas mentions several for the New California Republic. There's the NCR-Enclave War, The NCR-Great Khans War and the NCR-Brotherhood of Steel War. Each of the conflicts relates to at least one companion; Boone = Khan War, Veronica = Brotherhood, Arcade = Enclave.
* Fallout: New Vegas might even count as a subversion for some of the escapist aspects. Living in the NCR or New Vegas means you'll have to face a lot of the same trials you face in real life—paying bills, holding down a job, and so forth. It might not be as fast-paced as today, but it'd be comparable to the early 20th century.
* Fallout: New Vegas, Mrs. Abernathy will offer a discount on the items she sells if you bring her daughter's locket back from the raiders who killed her.
* Fallout: New Vegas much divisive reception which established an undeniable pattern of Bethesda rushing games out the gate before they were ready. As such, many fans look back on New Vegas with more appreciation, with many clamoring for

Bethesda to allow Obsidian another crack at the Fallout license.
* Fallout: New Vegas named Jason Bright. The Courier can point this out, and he'll admit that it is in fact his real name, and that he believes the fact that he now very much lives up to that name is a sign that he was chosen by a higher power to achieve great things.
* Fallout: New Vegas near the end of the Omerta quest line, with one of the mob bosses. On the other hand, it takes a pretty high Speech skill to get him to talk, so it might be a subversion.
* Fallout: New Vegas New Canaan, which was wiped out by a tribe affiliated with the Legion, with only a handful of characters escaping the community's destruction.
* Fallout: New Vegas of being a greedy soul who got tempted by the Sierra Madre's treasures. One of the possible retorts reads thus:
* Fallout: New Vegas of him torturing and raping prostitutes that the Omertas provide for him.
* Fallout: New Vegas of Mk1 armor. The Mk2 didn't into the final game, but was still included in the game's data files.
* Fallout: New Vegas of stealth, dodging speakers and holograms, and some platform jumping.
* Fallout: New Vegas of the faction will see through your disguise if you get too close.
* Fallout: New Vegas of you and your companions so that you don't try and betray each other.
* Fallout: New Vegas Omertas. They plot various schemes there, and it's implied that agents of Caesar's Legion also meet there.
* Fallout: New Vegas, (one below from the maximum) to point this out themselves.
* Fallout: New Vegas one of the final confrontations is with your own brain, which you must convince to rejoin you.
* Fallout: New Vegas, one of the options for the White Glove Society sidequest is to expose Mortimer as a cannibal. When he realizes that he won't be able to turn the rest of the society (who are reformed cannibals) back to the old ways, he declares that he'll build an even better society before running off.
* Fallout: New Vegas, one of the ways to deal with Pacer is to spike his Jet so that he gets a heart attack.
* Fallout: New Vegas. One terminal entry mentions that every employee was required to reread the company's sexual harassment and workplace behaviors polices, implying they were used just this way.
* Fallout: New Vegas, on the other hand, has the NCR Ranger Armor on it.
* Fallout: New Vegas . On the other hand, said owner is a kid and thus not very math-wise.
* Fallout: New Vegas, opposing factions will be hostile to you, regardless of your reputation with them.
* Fallout: New Vegas or reprogram a robot as the sheriff of Primm. That or have the NCR take the town under their wing.
* Fallout: New Vegas outlived his usefulness and is the only one who could possibly repair her beloved robot Rhonda (as well as being a useful repairman in general), to her frustration. If the Courier does not complete their quest, the two are still at it for a long time.
* Fallout: New Vegas. Papa Khan is so keen for vengeance against the NCR that he's willing to enter into an alliance with The Legion, despite their practice of backstabbing every tribe who sides with them, press-ganging all the worthy men into their military and enslaving or killing the rest. Regis will take control of the Great Khans if Papa is assassinated, and will agree to a truce with the NCR in order to aid them against the Legion. Papa Khan however can be convinced to break off the alliance if you convince enough of his advisers to speak out against the alliance or disgrace the frumentarii in their camp.
* Fallout: New Vegas picks up this policy from its predecessor. The game makes a point of this feature by including a quest where one can find a range finder in order to use a prewar superweapon, the ARCHIMEDES II. However, the player character needs to obtain said rangefinder from a child named Max who believes that it a toy.

Max cannot be killed in order to get the rangefinder off of his body, you must pay him a thousand caps (20 with a high barter skill), or pickpocket him. However, Max constantly runs so it is impossible to pickpocket him unless he is asleep.
* Fallout: New Vegas plays this straight with the Hoover Dam, though in real life many scientists have estimated that the Dam will remain more or less functional for thousands of years after it is abandoned, so indeed quite justified. The New Vegas Strip was also entirely preserved due to Mr. House's missile defense system shooting down any nukes aimed directly at the city (several did explode in the area surrounding Las/New Vegas, but damage to the city is minimal).
* Fallout: New Vegas plays this trope straight by having an actual Roman style fighting arena situated in Caesar's Legion's main camp where male characters can fight for glory and Legion fame. Female characters, however, cannot participate under normal circumstances. There's also The Thorn, a literal underground arena in the sewers under Westside where wasteland creatures are pitted against each other and human challengers.
* Fallout: New Vegas possible fourth endgame victor, can go either way as fitting your Wildcard nature.
* Fallout: New Vegas protagonists do. One of the earliest instances is when they rescue Deputy Beagle in Primm. Beagle starts talking like he's about to dismiss himself and leave the Courier to deal with the remaining Powder Gangers rather than do his job and provide backup. The Courier sets him straight by threatening to shoot him if he tries to run off. Later on, the Courier will find a group of NCR grunts harassing a Super Mutant refuge. The Courier scares them off by telling them that if they don't quit, they'll have to fight the Courier instead of the mutants. In the House and Wild Card endings, General Lee Oliver tries to invoke this trope against the Courier on behalf of the NCR, saying that the Courier's "pissing on the Bear". Pass a Speech check, and the Courier counters that they can order their upgraded Securitrons to attack the NCR embassy, or send the Boomers to start bombing the NCR's founding states. Oliver stands down immediately rather than gamble more innocent lives calling the Courier's bluff.
* Fallout: New Vegas purposes, night vision abilities work this way. In particular, using cateye (potent night vision drug) in very dark places will make everything heavily blue-tinted, which does make things easier to see, at least.
* Fallout: New Vegas quite this trope, despite being a prototype and much more powerful than its mass-produced cousins: it was the prototype to a series of combat-adapted eyebots that were scrapped in favor of Hellfire power armor, with the common eyebot being its predecessor rather than its successor.
* Fallout: New Vegas. Raider sadist armor has a pair of severed hands hanging off the hip, and the Merc adventurer outfit has a necklace of teeth.
* Fallout: New Vegas. Ranger Station Bravo's communications officer complains that the station is low on water but keep getting an ample supply of ammunition. Whenever he sends a request to communication headquarters at Camp Golf, they just send more ammo. True to form there are 17 ammo boxes full of rounds... and only a single bottle of pure water for four rangers. If you have good standing with the NCR you can ask Ranger Ericsen about the extra ammunition and she'll give 30 .357 Magnum rounds and a good amount of 5.56mm rounds.
* Fallout: New Vegas. Rape, pillaging, enslaving, and burning are standard procedure. Legionares despise weakness and will kill anyone who doesn't serve the Legion - soldiers, civilians, women, children, old people. What we call war crimes, they call tactical maneuvers. Their top field commander slaughters his own troops to keep them in line. Even Caesar himself, who is regarded as a godly figure by his troops and is trying to build a better world, is sadly aware that his Legion has yet to become more than just a horde.
* Fallout: New Vegas rejects and say things like "Ring-a-ding, baby" and "What can I do to make your stay the tops?" with completely straight faces. And it's hilarious.
* Fallout: New Vegas, REPCONN sold rocket souvenirs filled with actual radioactive rocket fuel, which kids mistook for Nuka-Cola, and subsequently developed a sickness called the "REPCONN Shakes". They subsequently unloaded their stock at the

Dino-Bite gift shop in Novac, where they sat for the next 200 years.
* Fallout: New Vegas require you to blow up the Brotherhood of Steel. Conversely, the non-House quest lines require you to either immediately kill House, or disconnect him from the mainframe and have him die a slow, horrible death from infection. For Birds of a Feather, you have to either kill Cass yourself or have her executed by Jean-Baptiste, precluding the completion of Heartache by the Number.
* Fallout: New Vegas, Robert House won control over the gambling-obsessed Vault 21 in a game of blackjack.
* Fallout: New Vegas says it's the most brilliant plan they have ever heard, the Bonny of the duo starts gloating about how they've got it all worked out, gradually noticing all the holes in the plan until she realizes they have no idea what they're doing and hands the gun over to you.
* Fallout: New Vegas says that all three tribes were originally intended to be racially mixed with no clear real world analogue, but the developers had trouble getting the tattoos and tribal paints to work on darker skin tones. (The White Legs' name comes from their practice of covering their bodies with white chalk as a primitive camouflage for the rocky white surroundings of their native area of the Great Salt Lake in Utah, not from being Caucasian.)
* Fallout: New Vegas series magnified. Lonesome Road is a road through a true apocalyptic wasteland while on a journey to discover your past and a final confrontation with the man who's had some involvement with all the other add-ons as well as your own history.
* Fallout: New Vegas set them up, is usually evidence in itself that Caesar's Legion is responsible for said corpses.
* Fallout: New Vegas's four expansions feature considerably smaller casts than the main game, and there's an abnormal number of characters who don't speak verbally, including Doctor 8, Christine, and ED-E. This was because one of the stipulations of the game's creation was an upper limit on how many voice lines they could record, and this gave them a lot more breathing room.
* Fallout: New Vegas shows cats in person. Considering that Mr. House only sees the outside world through his Securitrons, it's possible that he assumed cats are extinct because there's none in the Mojave wasteland.
* Fallout: New Vegas since its triggering will put down a Ghost Person permanently. Frying them into piles of ash with your Holorifle also works, though it requires a good amount of luck and/or stealth since energy weapons only turn enemies to ash if you kill with a critical hit.
* Fallout: New Vegas, since making a beeline towards New Vegas takes you through areas with enemies that are extremely tough for a low-level character; the roundabout route gives you time to level up before facing them.
* Fallout: New Vegas, singer Wayne "Mr. Las Vegas" Newton appears as Radio New Vegas' DJ, Mr. New Vegas.
* Fallout: New Vegas, so he merely shrugs it off. It's at least enough to make him give up on robbing the Sierra Madre Casino... and set his sights on the casinos of New Vegas instead.
* Fallout: New Vegas soldier fights? He'll begrudgingly agree but states that he's not going to bother checking his fire.
* Fallout: New Vegas, some female NCR troopers are bathing in a fountain on the Vegas strip. One of the securitrons surrounding the troopers makes a request...
* Fallout: New Vegas some of her family and realize she's just wearing a nondescript version of the scientists clothing.
* Fallout: New Vegas sometimes has a glitch where an NPC conversing with the player will twist their head in a circle vertically.
* Fallout: New Vegas, so that if the player tries to kill him, he gets back up, revealing him to be relevant to the plot.
* Fallout: New Vegas's Radio New Vegas features Frank Sinatra, Dean Martin, Peggy Lee, Marty Robbins, Nat King Cole, etc.
* Fallout: New Vegas started with you rescued from a shallow grave after being left for dead. When you finally catch up with the man who buried you, one of the

possible things you can tell him is that you dug yourself out of the ground to come after him.
* Fallout: New Vegas supermutant who protects the community of Westside from raiders. Marcus also returns, and is now the leader of a small isolated community of super mutants who simply want to be left alone.
* Fallout: New Vegas tabletop campaign. Although the version of Arcade in the game is less cynical than Sawyer, his didactic discussions of politics and ideology reflect Sawyer's own views and speech patterns. He was originally much more of an Author Avatar, but dialogue where he outright explains to the player why Caesar's plan is idiotic was cut.
* Fallout: New Vegas takes a similar tack, as repeatedly giving a follower the same instruction leads to snarking.
* Fallout: New Vegas takes place mainly in the Mojave, and outside of Vegas itself, mostly resides here. You can even take a perk named 'Cowboy' to make your .45-70 lever-action deadlier than a triple plasma rifle.
* Fallout: New Vegas terrified of them are Benny and his henchmen, who last saw the Courier being shot twice in the head and buried in a shallow grave.
* Fallout: New Vegas that can launch people over barricades even if they aren't dead.
* Fallout: New Vegas that caused the town's nukes to detonate in their silos. Halfway through the quest line, you have to launch another nuke to proceed, creating the "Courier's Mile".
* Fallout: New Vegas that focuses entirely on simulating low quality or badly damaged film, to make the game look like old Westerns.
* Fallout: New Vegas that infects living people and have made lobotomized people into psychotic zombies (or Lobotomites), a process that you barely manage to survive due to the bullet in your head from the beginning of the game.
* Fallout: New Vegas, the Courier asks this from Jane, Mr. House's female Securitron, after upgrading her to the Mark II software.
* Fallout: New Vegas. The Courier is the deciding factor, determining not only potential allies and ultimately whether the NCR or the Legion come out as victors or are both defeated by either Mr. House or The Courier him/herself.
* Fallout: New Vegas the Courier receives two invites, to work for the NCR and the Legion, both of which include amnesty for any crimes the Courier has previously carried out against these factions.
* Fallout: New Vegas The current Elder, Nolan McNamara, has similar beliefs but is hindered by his fear of the NCR and an unwillingness to go against tradition and commit outright heresy.
* Fallout: New Vegas, the death of any one character will cause a timed detonation of the others' bomb collars, including yours, except inside the casino, where it can only trigger yours while you're on the same floor as them. At the end, once you kill Elijah or he traps himself in the vault, it also triggers your detonation timer, and you only have about a minute to escape the basement before your head explodes.
* Fallout: New Vegas, the entire Happy Trails caravan is wiped out in a White Legs attack at the beginning of the DLC.
* Fallout: New Vegas, the entire side quest taking place in the White Glove Society relates to cannibalism and involves a bit of innuendo and occasional humor. And then there is the character "Cannibal Johnson" who isn't actually a cannibal (having gained the nickname from taking a bite out of a raider's heart in order to scare off the raider's buddies) but enjoys the effect of the reputation.
* Fallout: New Vegas, the Fiends serve as this to the NCR troops of Camp McCarran and to the Mojave as a whole. The player can accept bounties on their leaders that will end up weakening them and lead to their defeat in the epilogue. Notable because, unlike the other raider tribes in the game such as the Vipers, Jackals, Powder Gangers, Khans, Scorpions, and White Legs, the Fiends have very little in the way of backstory and no real reason for being so numerous. They're also one of the few enemy factions to respawn continuously.
* Fallout: New Vegas. The game later averts this with the "Three-Card Bounty"

quest, in which headshots are discouraged because the questgiver wants the targets' skulls intact so he can verify they're dead. There's also the "Center of Mass" perk that gives the player a damage bonus to shots aimed at the enemy's torso.
* Fallout: New Vegas The Legion represents conservative values taken to their logical conclusion (i.e. emulating the past), and not only do characters comment on what a bad idea this is, but the Legion also alienates a large amount of the population as a result.
* Fallout: New Vegas (the maximum is 10), and all of the scientists will marvel at your astounding genius. You can also convince him to accept "O" as his name by likening it to the "Oh!" of scientific discovery.
* Fallout: New Vegas themself (called the Courier) has one. You find out more about the past of your companions than anything about your own.
* Fallout: New Vegas, the Naughty Nightwear item boosts your Speech skill by ten points, leading to cases where you're trying to defuse a hostage situation, talk your way into a restricted area, or decide the fate of the entire Mojave Wasteland... while wearing a set of cheesy leopard-print pajamas or a skimpy negligee, depending on your gender.
* Fallout: New Vegas: The Nellis Air Force Base's population of explosive-loving Boomers traces its origins to Vault 34 and has a strict isolationist policy, enforced upon the outside world with artillery fire. The Boomers make everything they need inside the airbase, and only have one goal outside its walls. They are pretty ignorant of the outside world; while they have gathered some intel through binoculars, they're surprised that the courier even speaks the same language when they drop by.
* Fallout: New Vegas, the only station staffed entirely by female rangers, though no one comments on this fact.
* Fallout: New Vegas, the player character has their brain removed (and their spine and their heart) and has it replaced with a bunch of machinery that basically connects their brain to their body wirelessly. When you find your brain towards the end of the DLC not only does it have its own personality, but you can opt to leave it out of your head for the rest of the game. With a couple of buffs even. And it even gets its own mention in the ending, if you leave it there, based on your karma.
* Fallout: New Vegas, the player character who is shot in the head at the beginning of the game. You then have the option of saying this:
* Fallout: New Vegas. The player's actions can have Joshua and the tribals leave Zion for another Promised Land (which leads to Zion being polluted and despoiled by the White Legs), or fight off the White Legs to preserve Zion's natural beauty at the cost of introducing war to its (innocent) local population.
* Fallout: New Vegas: There are a few desk jockeys in the New California Republic Army:
* Fallout: New Vegas: There are a few "general stores" that sell most items, but in small amounts, but most merchants specialize in selling a lot of one thing: guns, medical supplies, food, liquor, are found in greatest quantities in specialty stores that sell only one kind of thing.
* Fallout: New Vegas, there is the failed barter check for asking Mr. House for higher payment for recovering the Platinum Chip:
* Fallout: New Vegas there's a shady-looking guy with a long coat hanging out near one of the casinos. If you approach him, he reveals that he's selling concealable weapons like knives and pistols for people who want to avoid having to go into the casinos completely unarmed, presumably carrying them under his coat.
* Fallout: New Vegas: The Rose of Sharon Cassidy, when explaining the NCR building a massive statue as part of a Mojave-sized dick-waving contest.
* Fallout: New Vegas: the sentient ghouls inside the factory really want to fix the rockets and fly away to a place they call "The Far Beyond".
* Fallout: New Vegas: The side-quest "Beyond the Beef" involves a cannibalism plot. One option to foil it is to create a substitute dish that tastes just like human — and after the speech at the banquet, you then expose Mortimer about the plot.

* Fallout: New Vegas The Stealth Suit Mark II is not an insecure love interest (it's a suit of armour with an A.I. personality and a female voice) but it talks like one:
* Fallout: New Vegas, they'll give you the gun, which is in perfect condition because Vance never used it. Note that the casino with the Vikki and Vance display is analogous to the real-life Primm Valley Resort, which has Bonnie and Clyde's "Death Car" on display.
* Fallout: New Vegas, this exchange happens when investigating missing refugees from Aerotech Office Park:
* Fallout: New Vegas, this happened four years prior to the game at the first Battle of Hoover Dam. The NCR feigned retreat from the dam into the nearby Boulder City, sniping at the Legion commanders the whole way. Once they were in Boulder City proper, the NCR sprung the trap: they'd rigged enough explosives to level the town, and all the Legionnaires within it. And they did.
* Fallout: New Vegas, this is what Richie Marcus's (Dr. Borous' High School bully) grades are listed as in the replica high school.
* Fallout: New Vegas though you have to be pure evil or comically incompetent to make it happen.
* Fallout: New Vegas to aid in mining, which is naturally also why they're all free now.
* Fallout: New Vegas to be lacking. Among the fans of the original games, reception was more positive.
* Fallout: New Vegas to come home, which turns out to be the path to The Divide.
* Fallout: New Vegas, to finish your delivery job. As it quickly turns out, this is when the real game starts.
* Fallout: New Vegas to offer you a job), this is played to the hilt for minor factions and independent NPCs until you do their quests, with the exception of the Powder Gangers (a gang of ex-cons turned raiders), who will alternatively send a messenger offering a ceasefire between you and their gang if you kill enough of them.
* Fallout: New Vegas to people looking at the files, Veronica's lines were disguised with player lines about a non-existent quest to get an accelerator involving two ghouls named Abraham and Monte.
* Fallout: New Vegas, turning them hostile, kill them in self-defense, causing infamy to be gained and other nearby members to attack you, until your reputation hits bottom and they are permanently shot at on sight. Even if you are only "shunned" by the NCR or Legion, they will send hit squads after you, and killing these will completely destroy your standing with them.
* Fallout: New Vegas up everywhere, funneling players who don't know how to get around them more or less down the same route. Once you actually get to New Vegas and its surrounding areas, the game massively opens up, the main quest picks up, and the entire thing generally gets a lot more enjoyable.
* Fallout: New Vegas uses a church bell ambient track near the Campana del Sol (the belltower where you trigger the gala event), appropriately.
* Fallout: New Vegas uses a version of this: If the player visits his "grave" he can find Distinctive Cigarette Butt and later in Boulder City he can find Distinctive Lighter. Both are unique items and can be presented as proof of Benny's attempt to murder you. Played somewhat more realistically, in that the person you have to convince isn't swayed by either piece of evidence alone, you need both to actually get him to believe you enough to let you snoop around Benny's pad.
* Fallout: New Vegas, using his expertise to cure one disease plaguing the Wasteland at a time, largely just because he can.
* Fallout: New Vegas: Veronica has a bit of this going on as well. She can even function as a mobile Workbench that lets you craft items on the spot.
* Fallout: New Vegas) view the inter-office romances and trysts, all of which involve such things as riding crops, egg timers, and various other odd objects.
* Fallout: New Vegas Vulpes' Centurion petitioned Caesar for the right to execute him for disobeying orders, but Caesar recognised Vulpes' cunning and tactical knowledge and instead had him transferred into the Frumentarii, the Legion's

network of spies, where he eventually became their leader.
* Fallout: New Vegas was a suit of armor designed to carry someone back to a home base when they were injured, and even defend themselves due to "learning" to fight from their wearer. Due to poor design, this meant that it was moving them great distances in a way near-guaranteed to exacerbate their injuries (and if the home base wasn't defined, then the suit entered a "wander" state and just patrolled aimlessly). Unsurprisingly, most users of the harness died in one, and by the time you find them, they're still patrolling, with the skeletons of their old users still stuck inside.
* Fallout: New Vegas was raped by a Fiend gang leader by the name of Cook-Cook after her squadmate was knocked out. Although she claims she's fine, her C.O. explains that she's getting progressively more unhinged. The player can convince her to see a counselor and treat her PTSD.
* Fallout: New Vegas wear masks that cover the lower part of their face. Their leader believes the masks give them a "mysterious allure" but all it does is make them creepier in the eyes of others.
* Fallout: New Vegas were developed. Including a hologram of the K9000 cyberdog gun.
* Fallout: New Vegas. When the DLC is installed, the player gets the message that because of the escalating war, the various weapon vendors are bringing out brand new stock, including weaponry, mods and ammo types.
* Fallout: New Vegas, when you first properly activate the Helios One facility, you get blinded for just one second.
* Fallout: New Vegas, where every adult NPC can be killed, though certain plot-important NPCs only appear in certain. Played straight with Yes Man and Victor, with the justification that as AI, they can simply jump between different Securitron units.
* Fallout: New Vegas where it instead means that you get 10% less experience points, but instead gain 5 experience points in every skill. Here it becomes a trait to cherish, as while it takes more time level up, a low level character with Skilled can be more effective than a high level character.
* Fallout: New Vegas, where Mr. New Vegas, the Radio host of Radio Vegas's news reports are generally news worthy. And the Courier is rarely ever mentioned by name, except for the one news story relating to him being shot in the head and recovering (which is what kicks off the game). Played straight in a few stories, such as the one relating to the Camp Golf rookies and their training scores.
* Fallout: New Vegas where, with binoculars, the player can spot Ulysses watching the player's progress through The Divide.
* Fallout: New Vegas, which are activated when it hears people talking about the Enclave or the Brotherhood of Steel.
* Fallout: New Vegas which commemorates US soldiers who gave their lives during the Yangtze Campaign against the Communist Chinese during the Great War, and Boulder City has a stone monument listing the NCR soldiers who died during the First Battle of Hoover Dam. If you shoot at it, a nearby soldier whose brother died there will get angry at you for disrespecting the dead.
* Fallout: New Vegas", which he knew you could only get from eating human flesh. Sure enough, when the person died, they uncovered corpses hidden underneath his home.
* Fallout: New Vegas, which is packed with enough horror to qualify and takes away all your previous items and gives you next to nothing in return.
* Fallout: New Vegas: While Boone and the rest of 1st Recon Sniper Battalion follow their orders to shoot any Great Khans fleeing Bitter Springs, the people trying to escape were the Khans injured, children, and elderly. This has affected all parties involved heavily and forms the basis of Boone's companion quest as he tries to come to terms with his actions. This can lead to him never getting over it and becoming a heartless assassin or killing his former CO Captain Gillies and himself, or making amends and waging a one-man war against Caesar's Legion or reenlisting with his old squad.
* Fallout: New Vegas who hates the notion of violence and thinks kindness to others

is the best path, believing that squad could work out better if someone could just gave them a good pep talk (he's right). He's also one of the tallest characters in the game as well as one of the stronger minor named NPCs (at 8 Strength, just shy of Super Mutant levels). Unlike others, however, O'Hanrahan is not from the South but rather from the rural parts of New California Republic.
* Fallout: New Vegas who plan to go on a crime spree through the New Vegas Strip with a stolen antique gun. With a high enough Speech skill, you can get them to abandon their plan, not by pointing out its flaws, but by telling them it's a great idea and letting Pauline figure out the rest herself:
* Fallout: New Vegas, whose strategy against Caesar's Legion is for one big ol' slaughter-fest at Hoover Dam, hoping that it'll be big and glorious enough to outshine Chief Hanlon's more tactical defeat of Joshua Graham.
* Fallout: New Vegas who took control of the post-nuclear holocaust Nellis Air Force Base.
* Fallout: New Vegas, who use high-end unarmed-class weapons, and to a lesser extent, Veteran Legionaries and Prime Legionaries, who have superior stats and weapons to the normal recruits.
* Fallout: New Vegas with a broken leg in Novac. If you ask him why his leg is broken, he'll say that it was because the Legion sent children as suicide bombers against him and his squad, knowing they'd hesitate to shoot.
* Fallout: New Vegas, with the addition of Hardcore Mode (ammo has weight, players must eat, drink, and sleep, stimpaks only heal over time, companions can die and crippled limbs can only be healed with a doctor's bag or the addictive drug Hydra), allows for its own inbuilt challenge. Many players have chosen to up the ante by restricting themselves to realistic carry weights (in the realm of 50 to 100 units of gear maximum) and sometimes realistic carry methods (such as only having one or two longarms and two one-handed firearms, and not carrying anything that couldn't reasonably fit in a rucksack). PC gamers, with access to mods, can increase this even more: realistic damage and armor values that make armor much more valuable and allow for the player and enemies to be taken down in a single good shot, purchasable backpacks for an in-game increase in carry weight, mods that add weight to all items (even money!), and even a hideously complex needs system that requires players to keep track of proper protein and nutrition intake as well as calories and hydration, follow their circadian rhythm and get the right amount of sleep at the right time of the day, and keep track of their levels of stimulants and alcohol in their system; it's even possible to suffer water intoxication from drinking too fast, or to put yourself in a "food coma" from overeating.
* Fallout: New Vegas, with the NCR facing off against Caesar's Legion. Depending on your actions, you'll either support one of the two or support a third party.
* Fallout: New Vegas, with the Think Tank removing your entire brain, along with your spinal column and heart and replacing them with cybernetic components. It's up to the player whether to put your original organs back or keep the robotics (both options offer their own stat buffs).
* Fallout: New Vegas would qualify. They lurch about as described due to their flesh being fused to their heavily stiffened hazmat suits.
* Fallout: New Vegas. Yikes. It takes a lot of work before he will talk about any of it.
* Fallout: New Vegas, you can attempt to convince a slave trader to give you a slave for free by mentioning that she has a dangerous disease. If you medicine skill is too low, your character will say that the slave has "vagina dentata", which will not fool the slave trader.
* Fallout: New Vegas. You have many ways to resolve the quest, and this version of the trope is one of those.
* Fallout: New Vegas you're going to sleep with him in order to get him vulnerable.
* Fallout: New Vegas. You're read a List of Transgressions and then comments that he's just messing with you before giving his list of things he's impressed with you doing.
* Fallout: Nuka Break, a testament to its tenacity as an ear worm. Although he can't remember what it was used for, leading the group to eventually decide that it

was some sort of religious expression, and they start saying "by Mennen" the way one would say "by God".
* Fallout: Nuka Break, Ben the ghoul is asked if he can remember anything from before the bombs fell, and all he can come up with is "By Mennen", though he can't remember what it means. The other main characters assume it to be part of a religious hymn, and start using the phrase similarly to "by God". Mennen is the company that makes, among other things, Speed Stick deodorant, which have "By Mennen" stamped on their packages, and many 80s and 90s ads for Speed Stick and its relatives had the jingle at the end (although since the company was acquired by Colgate-Palmolive back in 1992 the name's been gradually phased out from advertising).
* Fallout: Nuka Break has the protagonist originating from Vault 10, a Vault that was backed by the sponsorship of the Nuka-Cola corporation and made to test the Eat-O-Matic Food Dispensers made for Vault cafeterias. Combined with a complete lack of exercise equipment installed, the inhabitants grew overweight, with obesity being the social norm. The protagonist, nicknamed "Twig", was the least overweight, and therefore the most picked on prior to leaving the Vault. As a result, he is addicted to Nuka-Cola and takes "fatty" as a compliment.
* Fallout: Nuka Break: In episode 5, a character from the movie, Red, returns to the cast ensemble as a villianess.
* Fallout: Nuka Break wound up being the launch title for Steam Workshop.
* Fallout occurred, and none of it mattered. About a week later once the radiation had settled, Maxson led his men and their families to Lost Hills, where they established the first Post-War society.
* Fallout of them outside the Oil Rig at any time represents the most potent military force in postwar California outside of the Brotherhood of Steel or NCR.
* Fallout on). They also have the ability to reduce the enemy to a pile of goo with a lethal critical hit.
* Fallout passes through the area, Necropolis' ghoul population is wiped out by a Super Mutant attack, "leaving a truly dead city behind them".
* Fallout real food, but simply remain edible because they were irradiated to the point that no bacteria would dare go near them.
* Fallout returns to the East Coast Brotherhood, which in the 10 years between 3 and 4 has acquired an airship and become an autocratic cult of personality centered around their leader, Arthur Maxson, and are not nearly as charitable as they were 10 years prior.
* Fallout, right after the camera ends its long zoom-out from a black-and-white TV to a ruined living room and surroundings with The Ink Spots song, "Maybe."
* Fallout, scoring a critical hit with an aimed attack to the head may cause stunning, unconsciousness for several rounds, or death. If you're the recipient of the second and manage to wake up before your foes kill you off completely, you will have suffered no obvious loss from the trauma, other than hit points. There was also a perk that could be taken called Bonehead, which made you much more resistant to the effects of crits to your head.
* Fallout series allowed soldiers to become one-man tanks, but issues with power supply made mobility difficult, meaning that soldiers were stationed somewhere, hooked up to a generator, and left to kill as many Chinese as possible.
* Fallout series are sealed behind doors in the form of enormous steel cogwheels that are rolled along a track by a mechanical arm and then slid shut.
* Fallout series averts this one, though the echoes of the trope still linger. You start off being tasked with the major quest (Find replacement water chips, find a GECK) and nearly no clue where to head, and finding clues as to where to go is all up to the player. There is a trail of breadcrumbs leading between each area before finally reaching the end, but the player is by no means required to follow it.
* Fallout series can be reasoned with by players with high enough stats in certain areas (usually charisma or speech). While this often merely results in the antagonists committing suicide after realizing the error of their ways, this can also lead to a villainous character having a sincere change of heart, joining forces with the player character and ultimately surviving the game.

* Fallout series. Clicking on him produces only two floating text balloon statements: "I will help thee." and "I don't talk much."
* Fallout series didn't invent the transistor until the 2060s, just ten years before the War, so their advanced technology looks like it came out of a 1950's computer lab, despite having robots (regular and giant), nuclear-powered cars, energy weapons, and AI.
* Fallout series features a wide array of drugs, from Mentats that boost your brainpower to Jet, a stimulant extracted from Brahmin manure with severe withdrawal symptoms. Also Buffout (short-term boost to physical strength and endurance) and Psycho (increased damage resistance). The player character can become addicted to any or all of them; certain traits taken at character creation can affect how effective and addictive they are.
* Fallout series has the Big Book of Science. While it's a skill book, it only covers scientific matters. It's implied however that it covers everything from Biology, Chemistry, Computer Science, Rocketry, Mad Science, and so on. If it's scientific, it's in it.
* Fallout series has this in spades during Ron Perlman's opening and ending narrations.
* Fallout series is a self-generating map, GPS, scanner (with friend-or-foe recognition), geiger counter, inventory manager, health scanner, radio, and can store computer files. It is the perfect tool for a wasteland wanderer, but it was built for Vault dwellers who'd have little to no use for most of those functions. Presumably RobCo thought they were building a device for people who would actually be rebuilding human civilization.
* Fallout series is especially guilty of this, where many of the sidequests or just exploring the maps draws you away from the main story, to the point where the first two games put a time limit on the first major quest to keep you focused.
* Fallout series is one big deconstruction of mid-20th century society. In this alternate universe, America refused to move on to the 1970's for over a century, then was kept in 1950's stasis for over 200 years for reasons pertaining to the total collapse of society. What we see of past achievements of science from the atomic wastelands are disturbingly fascist and deluded.
* Fallout series is very gritty in some places, especially considering that it takes place in post-apocalyptic environment.
* Fallout series. It restores about 75 damage but the user incurs 9 points of damage shortly thereafter. A popular assassination technique is to apply a large number of Super Stimpaks to a benign target and then wait for the cumulative damage to kill them.
* Fallout series, it's mentioned that the US annexed Canada shortly before the Great War, and had a military presence in Mexico, ostensibly to protect its oil interests in the region.
* Fallout series not only is a throwback to 1950s sci-fi, it also have many parodies of that time period — such as a virtual reality '50s simulator with kids and adults repeating those same phrases at the beginning of the page. It also touches on the political aspects a bit, and what little information there is about the pre-Great-War world suggests that America got so bad becoming a radioactive hellscape is actually an improvement.
* Fallout series of games have numerous examples of this: nuclear war and subsequent collapse of society has left most of the world a barren desolate wasteland with deadly radiation occuring here and there. Despite the fact that there is little prey for them, giant versions of real critters like scorpions or even flies run around, seemingly attacking only the player character and never any other creatures.
* Fallout series. Sure, America, if not the world, is a post-apocalyptic wasteland full of radiation, disease and angry mutants that want to paint their walls in your brain splatters, but settlements are building and civilization is returning. The NCR, New Arroyo, Megaton, Rivet City for example. The DC wasteland has clean water, and Project Purity can be replicated (however the rest of America doesn't seem to really need it). And, hidden by those grimy orangey-grey clouds, is still a bright

blue or starry sky.
* Fallout series. Thanks to the presence of ghouls who were alive before the Great War, the Brotherhood of Steel and civilized territories ranging from towns to the New California Republic, the English used in the 2200s wasteland would be recognizable to a 2077 American. On the other hand, tribals like the ones in Zion National Park and those a certain Edward Sallow moulded into Caesar's Legion have developed various, unintelligible dialects based on English and whatever other languages said tribals' forefathers spoke.
* Fallout series, the Brotherhood of Steel are individually highly trained warriors who use powered armor, energy weapons and combat robots, which are all from a more civilized age. They are fewer in number compared to the raiders, mutants and NCR Army, but one Brotherhood Paladin is the equal of three to five (or for even less developed foes, ten or more) of the aforementioned. However, their inability to quickly replace lost soldiers was a major reason why they lost the Brotherhood-NCR conflict. A similar statement can be said for the forces of the Enclave.
* Fallout series, the two types of creature that are biologically immortal, Super Mutants and Ghouls, are both unable to reproduce. The former due to sterility as a side effect of FEV perceiving the 23 chromosomes in sex cells as "damaged" and "repairing" them by filling in the missing chromosomes, and the latter... radiation sterility and, well... rot?
* Fallout series, the USA had already annexed Canada and was invading Mexico with the goal of annexing it when the nukes started flying.
* Fallout series, this is generally the one factor held against the first game.
* Fallout series' Vault 69 had with in 999 women and one man. There is also Vault 68, with 999 men and one woman, but what happened within either Vault is unknown.
* Fallout series where the protagonists travel the Post-Apocalyptic Wastelands while saving the world.
* Fallout series, you can use target shots to aim at enemy body parts. Shooting the eyes or head lowers their accuracy, shooting the arms may prevent them from using certain weapons, and shooting the legs lowers movement speed.
* Fallout Shelter Fail — A bunker (often) intended to keep out radiation . . . doesn't.
* Fallout Shelter Fail: The shelter designed to save people from the apocalypse isn't up to the task.
* Fallout Shelter Fail: You fail at riding out the apocalypse in safety.
* Fallout Shelter game without shelling out a single penny. Even Mr. Handies, who used to only be obtained through microtransactions, can now be gained by completing objectives (and are unnecessary in order to progress anyway).
* Fallout Shelter, if you set up two dwellers to guard the vault entrance during a raider attack, they may have the same casual dialogue that they have while working anywhere else in the Vault. Three raiders are breaking into your vault, and they're talking about what their favorite pizza toppings are with guns at the ready.
* Fallout Shelter, Whenever you receive a rare dweller and yet you reached the 200 Dweller cap, up until the December patch, the only way to add them into the vault was to send unwanted dwellers to the wasteland and let them die. Now, you can just kick them out instead.
* Fallout" (short for "scavenger", a term for people who loot Pre-War buildings). "Scavanger" and it's Boston shortening are seen as derogatory so the term "Prospector" is the more polite term.
* Fallout simulation for 200 years and are incapable of survival outside of it.
* Fallout, since as someone intimately familiar with anatomy, you know where to aim to hit the vital points.
* Fallout's manual was definitely a Feely. It was spiral-bound and written entirely in-character: it described a simulator sold by Vault-Tec. The manual included a chapter on nuclear weapons and nuclear war so you could understand what your ancestors did to the world to make it so dangerous.
* Fallout somewhat in that Vault-Tec is portrayed throughout the manual as tending to cut corners and not being very knowledgeable about what they're doing.
* Fallout. Speaking to people multiple times will result in them saying different

things, and trying it on a Brahmin yields this:
* Fallout stands out, being the closest thing to an actual honest-to-God city in the series. Being built from the largely intact remains of the Las Vegas strip and getting power from the Hoover Dam certainly doesn't hurt.
* Fallout sterilizes those residents who aren't turned into Trogs or Wildmen (except for Ashur and Sandra, whose infant daughter is resistant to TDC). Ghouls are also universally sterile, although this is caused by radiation rather than a traditional plague.
* Fallout), Super Mutants will simply laugh and say that they don't have that weakness.
* Fallout's "Vault-Tec Workshop" allows The Sole Survivor to build Vault 88 into a functioning settlement, as well as ignore the Overseer's pointlessly cruel experiments.
* Fallout: Synth machines created by The Institute fall into several types of this:
* Fallout Tactics also featured a cult of Ghouls worshiping a nuclear weapon as a God, which they named Plutonius.
* Fallout Tactics' APC was one of the few vehicles that could carry your entire squad. And while it had no weapons itself, your entire squad could shoot out.
* Fallout Tactics as a joke weapon, even though it was manufactured in France and only during the war, which by the time the game takes place was almost 300 years in the past. It was also notoriously unreliable - it will not fire in the game.
* Fallout Tactics as the Midwestern Brotherhood established contact with the western branches in that ending).
* Fallout Tactics begins with an "orientation" for savages, conducted by a Paladin Nasty. Quotes don't do the delivery justice, and part of the humor is the expressions on the inductees' faces. Also, the complete contempt which with he says, "Welcome to the Brotherhood. Dismissed." The same voice actor also voices General Barnaky in the game. That voice actor? R. Lee Ermey.
* Fallout Tactics: Brotherhood of Steel goes beyond the Brotherhood's semi-religious emphasis on gathering technology and outright worships pre-War tech.
* Fallout Tactics: Brotherhood of Steel had the Brotherhood bunkers and Vault 0 which was simply the Cheyenne Mountain Complex coverted into an even larger facility.
* Fallout Tactics: Brotherhood of Steel. Nifty as enemies flinch and are stun-locked even from small damage, so even a huge mutant soldier can be cut down by one dude with a six-gun.
* Fallout Tactics. Depending on what kind of game you played, or whether you take up one or other offer or refuse it and just let the counter run down, the game ending changes.
* Fallout Tactics eventually gave the player access to a tank. Contrary to the trope name, most players probably never made use of it since there were very few things (and even less ammo) to actually use it on, but it was still satisfying as hell to use at least once.
* Fallout Tactics has a prototype Pulse Rifle that deals less damage and has a lower ammo capacity than the mass-produced version.
* Fallout Tactics has this as a potential character trait for Ghouls. They gain access to perks faster than regular ghouls, but they have a chance of taking damage for no reason other than DEATH!!!
* Fallout Tactics made this mistake) with "Pip-Boy", who is the redheaded pixie in the yellow and orange spacesuit, visible on the logo of the Pip-Boy 2000.
* Fallout Tactics. One of the weapons you can find? A water pistol. And then you start finding jars of acid in your travels through the Wasteland.
* Fallout Tactics, your squad of heavily-armed Brotherhood of Steel initiates will often have to take long detours in order to get around a couple of wrecked cars, a torn fence or a waist-high row of sandbags.
* Fallout takes away one possible slot to use its key for an entirely different mechanic instead).
* Fallout takes the player character through a VR simulation of the Anchorage Reclamation.

* Fallout-terraform the entire planet (or at least the DC area) into a state more capable of sustaining life and human populations.
* Fallout thanks to a tape recorder the mayor gave you, or just plain bugging his room.
* Fallout that are much more effective in combat than at housework. Small wonder it takes only a minimum of conversion to turn one into a "Mr. Gutsy" military robot.
* Fallout that fateful nuclear exchange started, nor who fired the first shot that kicked it all off. The world was already in a pretty tense state, with the US having just come out on top in a brutal war with China and most of Europe collapsing into quarreling nation-states, so there are plenty of suspects, but no one particularly cares about finding out who shot first; few are concerned with such historical information when they are fighting for survival everyday.
* Fallout that hides their faces, but they're closer to aloof than evil and aren't hostile to you unless you antagonize them.
* Fallout that it makes the Brotherhood of Steel and the Vaults look dirty in comparison.
* Fallout. The Automatron add-on adds Ada and you can create your own robotic companion at special workbenches.
* Fallout: The "bad ending" for Junktown has town villain Gizmo taking charge and becoming an untouchable crime boss, until he chokes to death on a iguana-on-a-stick.
* Fallout: The Board Game, a courier approaches the player character and may reveal they are a synth.
* Fallout, the European Commonwealth is clearly an analogue to the real world European Union, except it seems to be a much stronger military alliance rather than the Union's focus on economic cooperation.
* Fallout). The exception being Davison's group, who act as antagonists early on.
* Fallout the foremost of which is sentient and capable of conversation. The series gets on both sides of this trope, however, and also features feral dogs as enemies, as well as attack canines used by various factions.
* Fallout, the franchise boasts four main series games, three spin-offs, and a handful of other supplemental media.
* Fallout. The game doesn't stop you from wandering anywhere you like right from the beginning, meaning that you could end up encountering enemies that are far too powerful for you to handle. Once the XP and the ammo start rolling in, however, you can tear the world up at your leisure.
* Fallout. The game has a lot of fun if you use this on a female character.
* Fallout). The idea was that players could cook the stuff and get some pinto beans or an ear of maize to make into other foods, but the Courier could also just as easily stockpile several jars of Salient Green and chug the stuff straight, which provided more hit points and is more in keeping with the spirit of this trope.
* Fallout. The journeys changed Vault Dweller so much, he is no longer accepted in his home vault, even if he looks the same on the surface.
* Fallout, the Lone Wanderer can recruit a Mr. Gutsy named Sergeant RL-3.
* Fallout, the nuclear apocalypse occurring hundreds of years ago combined with the descendants of the current survivors mostly coming from multiethnic settlements that have long lost their previous cultural identities means that no one really identifies with prewar races and ethnicities anymore. This can lead to such situations.
* Fallout; the only thing to look out is that they are usually inactive and don't show up on your HUD radar until they wake up (though can still be detected by pressing the VATS button repeatedly while pointing at their direction). Still, they are a minimal threat since their acid spit does low damage, woefully innacurate, and can be easily dodged. They are found in Vault 22, Zion Canyon, and Big MT. There is a boss version called Dionaea Muscipula.
* Fallout: the player can stumble upon a fridge full of strange meat in Doc Morbid's basement (Junktown). Said example is downplayed because neither Doc nor his goons are going to eat the flesh, which is sold to the sleazy Iguana Bob as secret ingredient for his Iguana-on-a-Stick.

* Fallout, the player character must succeed at one such mission before being initiated in the Brotherhood of Steel, which involves retrieving a pre-war data disc from a heavily radiated military base. Of course, the character doesn't learn it is an Uriah Gambit until after s/he succeeds.
* Fallout, the player's body parts can be crippled. Crippled legs slow you down, crippled arms hinder your aim, a crippled torso reduces Endurance, and a crippled head causes reduced Perception, periodic vision blur, and ear-ringing.
* Fallout: The series explicitly works based not on actual science, but Science! of the 1950s. Nuclear powered cars and radiation causing giant bugs to pop up is just how things are supposed to work.
* Fallout: The various flying enemies throughout the franchise, such as bloatflies, cazadores, and stingwings never bother to fly above about head-level.
* Fallout, the Vault Dweller has become a legendary figure, and a household name, whose actions have changed the wasteland forever.
* Fallout they come from all sorts of sources, from monkeys to prisoners of war. In 3, they have feminine voice synthesizers.
* Fallout. They ended up working together to found Broken Hills, discussing the philosophies of their respective sides.
* Fallout, they were willing to cause global genocide to achieve its goals of wiping out communism and becoming the sole heirs of the planet.
* Fallout (thus playing this trope straight), but it destroyed human society, killed many of the poeple and created the nuclear wasteland the series is famous for. Even 200 years later, most major cities (like Washingtion, D.C.) are still chaotic ruins terrorized by outlaws and other ruthless types, though the New California Republic has apparently rebuilt most of it's territory.
* Fallout to all users shortly before they removed the games in late 2013 (although the rights were re-acquired a year later and the games were put back up — and priced accordingly).
* Fallout to make the battle better. If you go through it again it becomes a pretty predictable "Full power to weapons, reroute power to shields!" etc. Does feature a nice explosion at the end.
* Fall Out Toy Works: Taking place mainly in a cyberpunk version of Los Angeles, the comic focuses on a robotic toy maker called The Toymaker who is barely keeping his company, Fall Out Toy Works, afloat.
* Fallout (Transformers): Vortex has to download a human language after meeting Jazz and Thundercracker. Wildrider can also speak Russian, and speaks with a (technically fake) accent, due to having rather liked the Russian humans he stuck with for a while. Arcee can speak Chinese.
* Fallout trying to assert their own absolute authority over the people they help.
* Fallout universe has a fairly equal amount of female and male bandits, raiders, quest-givers and such. Justified in post-apocalyptic settings, really, since it would be stupid for society to waste any able pair of hands.
* Fallout universe has misconstrued pre-war information as some kind of religion.
* Fallout universe, the United States and China go to war with each other over the last bits of oil resources in the world, eventually resulting in the "Great War". Nobody knows which side started it and frankly, nobody cares. All that matters is that after the two countries started blasting each other with nuclear warheads, all the other countries in the world did the same, resulting in Earth becoming a radioactive cesspool in just two hours.
* Fallout uses this style for the Mr. Handy automata, to invoke the image of a British butler from old-time films.
* Fallout) usually discuss aspects of this trope in each town/person's ending. You killed the rampant raiders? Good now people won't be dragged off and killed. You didn't teach the lowly village about crop rotation? Half the village dies of starvation during a drought later and the rest disbands, scattering into the wasteland.
* Fallout: Van Buren project revolved around the B.O.M.B., one of two nuke-throwing death stations, still in orbit after 200 years, and still with its payload intact.
* Fallout variation, called "The Family" that gets their nourishment from human

blood; they can be convinced to drink it only from blood packs and cease killing other people, if so desired.
* Fallout; vault 69 was populated by 999 women and 1 man, likewise Vault 68 was the same, except with 999 men and 1 woman. The vaults were purposefully built social experiments of the cruelest nature, and were specifically designed to experiment on how much stress a society could take before the people broke down into civil war.
* Fallout 'verse has its share of good and evil scientists. Most "good" scientists adapt existing technology to try to rebuild civilization (such as the Project Purity and Rivet City teams). Scientists who use Forced Evolutionary Virus are depicted either as irresponsible or outright evil.
* Fallout was a descendant of a member of the Soviet Consulate in LA who was given an invitation to Vault 13.
* Fallout was the owner of the Junktown casino and boxing ring, operating several illicit side businesses while controlling the local gang calling themselves the Skulz and using them as muscle in assassination attempts against the town's mayor.
* Fallout weapons that kill a human or Super Mutant with a critical hit will melt all their flesh but leave bone and armor behind. Unusually for this trope, the bones fall apart completely.
* Fallout when a con artist pretends to kill some thugs to make himself look good. A sufficient Medical check will tell you that the thugs are just faking, even if their heads are detached.
* Fallout when he learns that the evidence checks out and all he did was for naught, and commits suicide and initiates his base's self-destruct mechanism.
* Fallout, where he's found begging for spare change in the slums of the Hub. And that's only his appearance in the first game...
* Fallout, where the 3D model would have been an in-game asset available to the player.
* Fallout where the player can tune into Three Dog's radio show for some easy listening while wandering the Capital Wasteland.
* Fallout, which had its own Cult of the Bomb and their resounding chant of "NRC! NRC! NRC!"
* Fallout (which has him turn up randomly to kill any enemies you targeted in VATS).
* Fallout, which seemingly happened sometime in the 1950's, and the big kaboom.
* Fallout While you may have encountered the odd soldier or Eye-Bot, this is when you'll be ducking for cover.
* Fallout, whose holodisks resemble old-fashioned Atari and Nintendo cartridges.
* Fallout, with its lack of hood or trunk cover (and don't even think about paint), the tragically damaged AI M.A.R.Go.T. (who states herself to be operating at 14% capacity), and the duct-tape-heavy skins of the Hunting Rifle in every last game.
* Fallout, you can talk to him to hear some useless last words before his head pops off. Satisfying!
* Fallout, you had to take a separate perk to have the computer mark your friends in green. Without it, you had to remember (or, in some cases, guess) who was on your side. Or you could just "check". If the game tells you "Ian", "Tycho", "Katja" or "Dogmeat", chances are good that they are friendly.
* Fallout you join the Brotherhood by ousting the current Elder in favor of a more traditional one, he orders you to kill the Van Graff family for selling wastelanders energy weapons. In Independent Vegas endings they continue to harass traders for technology, but are much more lenient if the player opts to go the NCR truce route instead.
* Fall Revolution Oh, and incidentally crushed most merely human governments and killed millions (and forcibly uploaded millions more) and trashed all serious technology in the solar system by hacking, EMP, or plain old computer viruses. This is the reason why AI/uploading transhumanism is quite definitely not allowed in the later books of the series. On the other hand, even the relatively bioconservative humans have biological immortality — the oldest is about 350 years old — and they'll take brain backups to be written into new bodies in case they die.

* Fall RevolutionTurns out that running your mind faster and faster means the real world just seems to take longer and longer to do anything. In the end, the entire uploaded civilization runs its course over an enormous span of simulated time, but only a few hours to human observers.
* Falls Count Anywhere - a match where pinfalls and submissions can happen in any location. As such there are no countouts by default and no disqualification is also added so that the participants can exploit their surroundings. Unlike a hardcore or street fight match, it's not uncommon for the action to spill onto backstage areas, outside arenas and even the actual streets (some promotions such as ECW and LLF have managed to halt traffic with these matches).
* falls count anywhere match, the camera man, to commentator Prazak's annoyance, became more interested in two nearby strippers performing. Homicide himself soon became more interested in them than Punk too.
* falls down and slaps people, and also has a penchant for inhaling melodramatically. Which is ironic, because Goldust was indeed named after the soap powder (albeit indirectly).
* falls during the NHL's Stanley Cup Playoffs over the salary cap. At the same time, Canadian viewership of the NHL playoffs are relative to how many Canadian teams remain...
* falls in love being together since he's the heir to a super-rich corporation and she's just a Japanese commoner.
* falls in love with Magdalena, the story's female protagonist, and has to break that promise.
* falls in love with Unicron when he accepts the Unmaker's offer to teach him how to free himself from Megatron.
* falls off a wall and into her garden, moving her to bandage a cut he gets on the way down. It becomes much more awkward for him when he realizes he's inadvertently trespassing in the royal palace grounds.
* falls on a lamp that then swings around into something, catapulting it into something else, until finally, a container full of liquid falls on Cassandra's wiring, destroying her
* falls out of his chest. While the other nations are freaked out, not only is he unconcerned, but says that this happens on a semi-frequent basis.
* falls over, and hits his head on a stone, which kills him. It's unclear if Elena telekinetically paralyzed his feet and pushed him down, or if Barry's feet got caught in some tree roots and he fell down by accident.
* falls victim to this trope the ship, obviously. At least one documentary has explosions producing sound effects in space, though probably for dramatic effect.
* falls victim to this trope when he starts to badmouth General Xinchub, only to have Massey point out that the general is right behind him.
* fall to Chaos while trying to use it thing, a Xanthite sub-sub faction (the Phaenonites) have outright betrayed the Imperium after deciding to take over mankind as the only option and were wiped out save a handful of survivors who kept it secret. The worst are probably the Oblationists, who are Xanthites who hypocritically enforce Monodominant beliefs on others, only believing those who took the Oath of Oblation being worthy of damning themselves for the good of mankind.
* fall to pieces can take photographs of him. This is to enlist Kiyone's aid in obtaining photographs of Yoruichi, who is washing naked underneath a waterfall. However, Ukitake managed to warn Yoruichi, who uses herself as bait to trap Sui-Feng... by pinning Sui-Feng to the ground while naked and soaking wet. What occurs next is off-page but it leaves Sui-Feng squealing suggestively while Kiyone turns beet-red and doesn't know which way to look.
* "Fall Weather Friends"... and then stands perfectly still laughing at Applejack as every other racer runs past her. Rainbow and Applejack do this back and forth throughout the race, ultimately tying for last place despite being the fastest runners in the group, all because they just couldn't try and run the race fairly.
* Fall Weather Friends" features a scene where Applejack cheats by kicking down a bucket harvesting maple sap, causing it to spill onto the trail and gluing Rainbow

Dash. It's unusually stretchy, requiring Rainbow to slingshot herself in order to snap the sticky sap.
* Fall Weather Friends" when Pinkie Pie goes off on a tangent about how grudge rhymes with fudge while the two are announcing for a race.
* Fall Weiss, the September 1939 German invasion of Poland. While the Capital was an important symbol and logistical hub, the primary concern was with preventing Polish forces from conducting orderly withdrawals into the interior of their country. Soviet incursions from Belarus and Ukraine prevented withdrawals to the national redoubt area of Galicia-Podolia provinces (in the foothills of the Carpathians).
* Falmer (Snow Elves)-like creatures who inhabit the ruins of the Dwemer cities in Skyrim to this day.
* false A character named Charles (often called Chuck) gets pregnant via virtue of a character Rittz' semen-stained toilet seat.
* False advertising has been a problem in mobile games since the tail end of
* False Camera Effects - A shot that looks as if it had been filmed on a set with an actual camera using an unusual lens or other camera trick.
* False Cause: Correlation does not imply causation, but here that is ignored.
* False Cognates are examples of words in different languages that independently mean the same thing and sound the same. They appear to be cognates, which are words with a related heritage, but they are actually completely coincidental. An example would be how many languages have the same word for mother, "ma" (probably as a result of that being a sound babies can make easily).
* False Confession: Someone confesses to a crime they're not actually guilty of, usually due to coercion by the authorities.
* False Convoy is distinguished from Optimus Prime by having red eyes instead of blue.
* False Crucible: A character is put through a grueling test that turns out to be fake.
* False Dichotomy: strawman argument where only one of two choices is right vs. one where both choices are wrong and the only "correct" answer is somewhere in the middle.
* False Dichotomy, when someone insists there are only 2 options to something when there actually are many others.
* False Face attempts to do this to Lady Blackhawk in order to infiltrate the
* Falseface slip on Detective Chimp's discarded banana peel in "The Golden Age of Justice!".
* False False Alarm: Thieves set off an alarm but convince the guards it's no big deal.
* False flagging of this sort happened (or was suspected to happen) all the time in those days. The infamous
* False Flag Operation: A group sends out covert operatives (disguised as members of an enemy/rival group) and stage a violent act, falsely blaming them as an excuse to declare a war against them.
* False Flag Operation: An individual or group pretends to be part of the opposing forces in order to attack them from the inside, to cause conflict, or to tarnish their image.
* False Flag Operation of suspects, each more nonsensical than the last.
* False Flag Operation: One side pretends to be the other side to provoke a war.
* False Flag Operation: Pretending to be the enemy to attack yourself to have an excuse to start something.
* False Flag Operations by German operatives designed to look like Polish aggression against Germany.
* False Flag Operations) during the battle. When faced with the one Clan that actually did prep-work for the battle (Clan Wolf), the Com Guard got trounced.
* False Flag Operation; their leaders would play two rival factions on the planet against one another, fueling them with reversed engineered alien technology and special weapons from ships they forced to crash into Chorus using their tractor beam until both sides killed each other off, allowing their employers to take full

control of the planet and all the alien relics therein. However, their last attempt was foiled when the ship tried to change course, jump to slipspace, and power down simultaneously, causing it to break apart on entry and leave some of its passengers alive. Said passengers are the Blood Gulch Crew, who not only complicated the attempted crash in the first place (purely by accident) but would also end up outing the Space Pirates scheme to Chorus and eventually the rest of the UNSC.
* False Flag Operation, the US government is getting more pressure to declassify files detailing US involvement in the massacre.
* False Flag Operation was the Mukden Incident of 18 September, 1931, in which the Japanese officers faked an explosive attack on the South Manchurian railroad to spark off the Manchurian Crisis.
* False Flag Operation where you attack civilian settlements with captured GDI equipment, and GDI has its funding cut during the investigation of that and other news stories (some completely fabricated by Nod-controlled outlets).
* False Friend: A character discovers that a person they believed was their friend actually wasn't and was only manipulating them to advance their goals.
* False Friend: A disloyal companion who is anything except for a true buddy, only befriending other people for selfish ulterior motives.
* False Friend: The only reason I ever hang out with you or tolerate your company is because you're just a gullible lonely sap, who I can easily manipulate to get whatever I want.
* False Friend: The only reason I ever pretended to be your buddy is because you're just a very gullible and useful idiot, who I can easily fool for my own personal gain.
* False Friend: They were only pretending to be your friend so they could manipulate you into advancing their scheme.
* False Hare", and the nephew busts open the closet door, with the iron maiden clamping down on the uncle. The nephew peeks inside, and only looks at the audience with a disgusted "Yeesh!" and a cringed look.
* False Innocence Trick: An evil being might have to fool people into freeing them by playing on their sympathies.
* False Innocence Trick: An incapacitated stranger feigns innocence to trick some poor sap into freeing them
* False Innocence Trick: A prisoner pretends to be a good person to fool others into freeing them.
* False Innocence Trick: A villain feigns innocence in order to set up the heroes for something nasty.
* false. In short, Sahjahn's meddling to try and avoid his fate created the circumstances that led to his fate being fulfilled.
* Falsely Reformed Villain: A villain who pretends to change their ways to further their latest evil plan.
* False Memories. What happened in that case is less "forgot until now" and more "was overwritten by something else until now".
* False Memory has his father's eyes. Literally. He seems to have some kind of twisted fetish for eyes and tears.
* False Memory. The villain has different trigger phrases for each person under his control, in the form of haiku. He speaks a name, the subject replies "I'm listening", then he gives each line of a haiku, with the subject giving a programmed response to each line in turn.
* False Memory, victims are programmed with two-step triggers: the name of a novel character, followed by a haiku. If the haiku is not recited for several seconds, the victim will become conscious again, with no memory of hearing the trigger or what they were doing immediately before. They will only respond to commands or statements; if asked a question (unless it is phrased as a command, i.e. "Tell me if you understand"), they will merely repeat it back.
* False Mirrors game, so it's justified. And still, Gengis's belt snaps at the last second, and he barely survives a 20-story drop with a measly couple of HP.
* False Profits": The Voyager crew tries to stop two Ferengi from exploiting the religious beliefs of a Bronze Age civilization.

* False Prophet: A religious figure lying to their followers for personal gain.
* False Prophet: They claim to be the messenger of God or the gods, but they're actually charlatans.
* False Rape Accusation— Someone accuses someone else of rape, even though that person is innocent.
* False Rape Accusation, Potiphar's wife, after failing to rape Joseph, tells her husband that Joseph raped her.
* False Rape Accusation: Someone accuses someone else of rape when it's obvious that they didn't do it.
* False Rape Accusation to coerce her lover into this in "Pandora" (though it's implied to be more about her husband's life insurance than love.)
* False Reassurance dressed as an Indian medicine man comes to Whit's End and prophesies to Connie, Eugene, and Lucy that Whit will die when four things happen that sound impossible:
* False Reassurance: I'm not going to mock you. You're doing a tremendous job at doing that yourself.
* False Reassurance: Someone tells the absolute truth, but makes it seem like they mean something else.
* False Romantic Leads died one way or another. The curse also affected Harmon "Harm" Rabb, Jr. too, but with the difference that only one of them died. And the one who died? Portrayed by the same actress who went on to play Mac in the rest of the series.
* False Roulette: A near-empty gun is fired over and over to cause fear that the next trigger-pull with discharge the only bullet—except, the gun is actually empty.
* false signal that locked up people's cable boxes and played a message that there was about to be a message from the White House, when actually nothing was happening. It was blamed on a bad code transmitted from a radio program.
* False Soulmate: If they were in a relationship, they usually end up being an ex by the end.
* False Soulmate: Realizing this person isn't 'the one' after all usually involves breaking up.
* False Soulmate: Someone is led to believe this person is their destined romantic partner, only to realize this isn't the case (often they'll end up with their true soulmate in the process).
* False Soulmate: Someone is led to believe this person is their love interest, only to realize this isn't the case
* False Soulmate: Sometimes they're revealed to be this because they don't return a character's love.
* False Soulmate: This person seemed perfect for you at first, but they later turn out to be a mismatch.
* False Start: It looks like you're finally gonna get the chance to confess your love, but something prevents you or you get scared.
* False Swipe Gaming and can 2-hit KO just about anything in Gen 5. However, it's inability to switch in safely, vulnerability to entry hazards, and low speed rendered impractical to use. And when Kyuruem-White was released and did everything Reshiram did but better, Reshiram was rendered unviable.
* False Swipe Gaming: Delibird took the spotlight for 2018's season greetings, where Kellen goes over its Christmas journey of learning to love thy neighbors (because otherwise the video would be nothing but talking about how bad Delibird was, and how it got worse and worse).
* False Swipe Gaming has done two of these where they analyze the viability of spooky looking Ghost-type Pokémon on the actual date. Specifically, they analyzed Misdreavus and it's evolution Mismagius in 2018 and Haunter in 2020.
* False Swipe Gaming: Some Pokémon didn't see play in higher tiers because others fulfilled the same role, but better.
* False Teeth Tomfoolery: Someone is revealed to be wearing false teeth.
* Falsettos, a sweet moment in the hospital between Whizzer and Marvin is interrupted by their friends, whose dialogue of increasing decibels is as followed:

* Falsettos. Immediately afterwards, the scene goes straight to Whizzer playing tennis with Marvin and collapsing.
* Falsettos is very intelligent for his age, but is unsure how to act in normal social situations and fixates on his interests (chess, for example). He is shown covering his ears and looking upset when his parents and Mendel/Whizzer get into arguments.
* False Utopia: A place which seems perfect but has serious flaws in actuality.
* False Utopia: A "utopian" setting that turns out to be anything but, usually with a horrible secret involved.
* False Widow: A woman lies about being a widow to explain why she has no husband.
* False Widow: A woman who claims she has a dead husband when really she doesn't.
* False Widow: The mother never returns to her home town. She lives among people who don't know her past (commonly staying with distant relatives) and passes herself off as a widow.
* Falskaar-verse, Ebony is a mined metal, not a form of wood) suit with ominous spikes.
* Falstaff is the foil to either Prince Hal's father, Henry IV, in the
* Fal who only acts nice to the protagonist in order to take advantage of his musical talents.
* Falx (two-handed): The Dacian Legionnaire-killer. This awesome weapon is long, and it's curved, but unlike most curved weapons, it is sharp on the
* Fame 2009 book on the series "Inside Fame on Television"; the writers soon regretted killing the Nicole Chapman character off.
* Fame and Misfortune, prioritizing their desired story over audiences getting and appreciating it.
* "Fame" as the background music, without realizing the song is not at all about luxury, but about how being famous is a bit of a drag.
* Fame, a TV show based on a movie. Followed later by a musical play. And a remake of the film. And a reality show.
* Famed actor and baritone Nelson Eddy died of a stroke while performing in Miami in 1967.
* Famed African pop singer Miriam Makeba had a heart attack and died while performing at a concert in Italy in 2008.
* Famed architect Frank Lloyd Wright accomplished the same effect by designing many buildings around his own height of 5'8". Tall people find them notoriously cramped.
* Famed Argentine author Jorge Luis Borges wrote powerfully on the benefits of blindness, asserting that he could now "see" the truths of the world more clearly.
* Famed aviator Douglas "Wrong Way" Corrigan: Denied permission to fly the Atlantic by the FAA in 1938, he took off after angrily declaring his intention to return home to Long Beach, California. He landed in Ireland 28 hours and 18 minutes later, claiming he'd flown the wrong way. Wrong Way Corrigan lived until 1995 and never once admitted that his transatlantic flight was anything other than an accident. Several fictional characters on this page were named in his honor.
* Famed drum and bass artist Spor (Jon Gooch) releases electro house and
* Fame did one for Michael Thoma, who played Mr. Crandall. The episode was called "A Tough Act to Follow".
* Famed in Story as one of the strongest trainers in the Orre region, to the point that while visiting Agate Village (one of the few safe havens from Cipher's influence), Team Rocket leader Giovanni is wary of taking him on.
* Famed in Story due to being born with magic powers and inherited immense wealth from his dead parents. Luz on the other hand has no innate magical ability and needs to learn an entirely new way to do magic, her desire to be a chosen one serves only to get her into trouble, she is initially accepted only by utter outcasts of society and needs to earn the acceptance of others, including her place at magic school.
* Famed Mimic Gogo. But if you do try to beat him the old-fashioned way, he'll get ridiculous stats, counter every hit with 9999-damage spells, and triplecast Meteor when he's at below a certain HP threshold. There's also a short timer on the fight,

and you die if you don't beat him before that. There are multiple ways of beating him, like bouncing Gogo's attacks back at him with Reflect or locking out his spells with Silence.
* Famed pro wrestling manager/booker/promoter/commentator Jim Cornette was doing a bit during Starrcade '86 where he was chased up a scaffold, then took a bump off it. However, the work order must have been sent wrong, and the 15 foot scaffold was built to 25 feet. Crockett decided he would do what skydivers do, and drop and roll when he landed. The fall was going to be aided by Bubba, who was going to catch him. He would fall into Big Bubba Rogers' arms, and they would both drop and roll to the left. Predictably, the relatively green Rogers' missed catching him, and Cornette blew his knee out. Or rather, in.
* Famed psychoanalyst Jacques Lacan, when faced with criticisms that his works were dense and difficult to understand, promptly claimed that he was
* Fame, Elisabeth finds herself in one of Leo's stories together with him, talking to his characters. When she asks him why, he simply vanishes from the story and leaves her in a world where no one knows who he his, and where as the author, he has full power over what she says and does. The straightforward explanation would be that she left him and he just included her in a later story out of spite, but more surrealistic interpretations are also possible.
* fame. Eventually he came out of his shell, after realising his viewers were laughing with him rather than at him.
* Fame. Music student Bruno argues with his instructor, Mister Shorofsky, that if Mozart were alive today, he'd be cranking out rock and roll songs, not chamber music and symphonies, because Mozart wasn't doing it to be "artistic", but rather just to put bread on the table.
* Famen, they sealed the deal with a kiss that sends sparks that could light up a 4th of July fireworks display.
* Fame, partly inspired by the fact that it filmed on the same soundstage where the 1939 movie was shot. (According to the cast, a last remaining fragment of the original yellow brick road was enshrined in the stage, and was shown to them with almost religious reverence.)
* Fame, Rosalie directly talks to her author Leo, but it's very clear that she's completely fictional, and that Leo is just inventing the dialogue for his own amusement. The distiction between fact and fiction is less clear with Leo's girlfriend Elisabeth, whose final chapter may or may not be just another story Leo invented after she's long since left him. It's even possible that all of the other stories in the novel are written by Leo too, and that only his own introduction chapter is "real". All of the events in the other chapters are hinted at as being things that are prominently on Leo's mind in his own chapter.
* Fame: The Episode "Street Kid" has Ms Sherwood giving Mister Shorofsky driving lessons, but she only knows how to drive an automatic and the classic car he bought turns out to have a four speed manual transmission meaning that all her lessons were useless because neither of can drive it at all.
* Fame Through Infamy: For some people, infamy is just the same as fame.
* Fame Through Infamy: Someone does something heinous just to get on the news and be famous.
* Fame where everyone believes that the new dancer is a Rich Bitch, with Tyrone even singing lyrics to that effect (I don't need no Rich Bitch/to tell me which/fork to use) only for her to angrily confide in him that actually, her dad is a limo-driver who drops her off on his way to work and that she's barely middle-class.
* Famicom against his coworkers for their unprofessional behavior, identifying them by name and blasting them for being chronically late for work, getting drunk, and being unproductive sex addicts.
* Famicom Detective Club comes from." In 2021, it was announced that the remakes originally thought to be Japan-only would actually be seeing international release that same year.
* Famicom Detective Club duology were released worldwide with the Japanese dub only.

* Famicom Detective Club fan translation in the latter half of the '00s.
* Famicom Detective Club gives you a compatibility check with heroine Ayumi Tachibana after the game's credits. The ratings score is dependent on your interactions with various characters throughout the game, including not just Ayumi, which could end up giving you a bad score if you just check through every interaction option.
* Famicom Detective Club has a two-in-one example. When the Ayashiro Family's tomb is finally opened with Genshin's permission, Akira Ayashiro is found to have been stuffed inside, with Kiku's corpse nowhere to be found. Examining this causes the protagonist to finally remember how he fell off Unakami Cliff and lost his memory in the first place: Akira attacked and threw him off the cliff.
* Famicom Detective Club is about the titular ghost that haunts Ushimitsu High School. The investigation into the ghost story leads to a series of dark secrets that the school is hiding uncovered, as well as the possibility that the ghost story itself might be more truth than legend.
* Famicom Detective Club regarding Ayumi refers to her as a "cute lil' chickadee".
* Famicom Detective Club series instead of the nameless male protagonist.
* Famicom Detective Club would eventually release internationally two decades later for the Nintendo Switch.
* Famicom Dojo has a talking NES named NESter, his son: a NES 2 nicknamed Junior, and his brother: a Famicom that speaks Japanese.
* Famicom or extra lives. The array of weapons Garfield can use are limited and inaccurate.
* Famicom were due to those colors of plastic being the cheapest at the time.
* Familial Body Snatcher: A common limitation for body snatchers is making them only able to inhabit a body of their relatives.
* Familial Body Snatcher: An entity that takes over the bodies of their own family/descendants.
* Familial Body Snatcher - when someone takes over the bodies of their own relatives.
* Familial Cannibalism Surprise: Serving one's enemy a meal consisting of their offspring.
* Familial Cannibalism Surprise: Tricking people into eating their own family members.
* Familial Cannibalism Surprise), who caught his brother Thyestes seducing his wife; he surreptitiously fed Thyestes the flesh of his sons at a banquet as punishment.
* Familial Foe: A villain who opposes a family from generation to generation.
* Familial Foe: The villain is the arch-enemy to an entire family, especially if they happen to be immortal.
* Familiar47's because they all knew what Rizz was doing to her and did nothing to stop him.
* familiar. But no, she is anything but horrifying. Instead, she is a cute and lovable bat the size of a chipmunk and in love with Dale.
* Familiar Faces, who drew obscure characters in the style of a completely different artist or show and challenged his viewers to figure out who they were. That collage of headshots that appears at the beginning of every video and looks like it was ripped from dozens of random fanart galleries? All his own work.
* familiar fighting moves series, which includes attacks from several other abilities. For most of the game, it's only available by beating a Master Hand or Crazy Hand miniboss, until you hit every big switch in the game to unlock the copy ability room.
* Familiar Ground: The horse. At first, only with the help of his paladin, but later he acquires it independently.
* Familia Romana takes most students a year or two to work through. Most of the book tells (in Latin) about events befalling a fictional Roman family. All of the events described in the book happen within a span of two days.
* Familiars have only one name. The majority of the fandom believe that Lieselotte and Liesearia have two names, but their shortened names, Lotte and Aria as well as

the collective name Liese are just nicknames.
* Familiar Soundtrack, Foreign Lyrics: A cover of a popular song in a foreign language, used to provide a sense of familiarity but also signify that they're in a foreign country or a character is from one.
* Familiar Soundtrack, Foreign Lyrics: A song plays that's a cover of a popular song, but in the characters' native language.
* Familias Regnant doesn't seem to be paid up; they face a lot of hot water for their insurrection before finally being exonerated and treated as heroes.
* Familias Regnant novel "Hunting Party" revolves around a futuristic country house party featuring a fox hunt as one of the entertainments. It's mentioned that real foxes went extinct long ago, so the foxes they're hunting were genetically engineered by mixing genes from several similar species.
* Familias Regnant series, standard enough to provoke in-universe comments on various combatants' proficiency.
* Familia Tipo about wearing an embarrassing clown costume at Wac Food.
* Familia Tipo, the children don't even reach the knees of the adults.
* Familia Tipo wears her hair permanently in pigtails. She's immature and bratty.
* Familicide. a notorious bug in epic spellcasting which allows one to build arbitrarily powerful spells for a small fixed cost. In any case, it's unlikely Rich bothered to come up with actual stats for the spell.
* Families, after which they are summarily defeated by Twilight and company.
* Families and his anti-Celestia propaganda group enjoy this status (in Canterlot, at least; they're not too popular in Ponyville). It doesn't help that he's spreading this propaganda right after a full-out invasion that Celestia, the royal guard, and even the Element Bearers failed to stop.
* Families contacting Chrysalis in a dream and ordering her to meet with an "associate" of his in order to plan his release. Meanwhile, relations with the dragons are now tense due to Garble's actions, and on top of that, several canon Season 3 events are alluded to (Trixie plotting her revenge, the reemergence of the Crystal Empire).
* Family Affair carried around a doll called Mrs. Beasley, which became so popular that Mattel produced Mrs. Beasley dolls for the mass market.
* Family Affair sees 15-year old Cissy wishing to join her friend Sharon as a Candy Striper at the local hospital. The minimum age for volunteers is 16, so Cissy needs her Uncle Bill to meet with the hospital administrator to give permission for her to work. Cissy nearly causes an incident when she brings an old woman a glass of water before surgery, but she makes up for her earlier misstep when she helps a pregnant woman on the maternity ward deliver a baby.
* Family Affairs villain Pete Callen murdered his wife's lover and framed his wife for the crime.
* Family Album, where a young man is seduced by an older actor and they have a blissful relationship for several months.
* family and does wind up being shot by Lucrezia at the end of the arc.
* Family, an Internet television show, features a polyamorous triad (V formation).
* "Family Appreciation Day" has Granny Smith tell her backstory. It notably involves her
* "Family Appreciation Day" helped significantly flesh out Granny Smith, a character used in mostly comedic scenes during certain episodes, cementing her status as a major supporting character.
* Family Appreciation Day": The older members of the Apple family are busy preparing to harvest Zap Apples, a magical variety of apple tree that only grows its rainbow-colored fruit, used to make Sweet Apple Acres' famous Zap Apple Jam, after a series of ominous signs (including a lightning storm and swarms of crows).
* Family Appreciation Day to be genuinely interested in her dad's speech about how his business succeeded, even while said speech left the rest of the class asleep.
* Family Bites by Lisa Williams. The son of a human father and a vampire mother (who subsequently married a male vampire at her family's insistence), Daniel can't fly (not that well-brought up vampires in this universe ever do), can be seen in mirrors unless he concentrates, and has slightly less powerful senses than his

relatives. He also has no craving for blood, and is actually rather squeamish about it, but has to drink some once every few weeks.
* Family Business: A business such as a store or a restaurant that's owned by a family.
* Family Business as three generations of crooks. Anticipating his grandson having to spend a year in jail, Connery tells him to find the biggest guy there and give him a beat down, and no one will bother him, and everyone knows the story is "He fell". At the end, it's Connery who ends up on a paddy wagon with a dozen others on their way to the big house. Someone gets mouthy, Connery clobbers him. When the cop opens the sliding window to the cab area and asks what happened, everyone says, in unison, "He fell."
* family business became a way bigger star than “Cowboy” ever was.) Others have decent careers but not to the degree of their heritage. Some show obvious talent, perhaps equal to or exceeding that of their parents, but because of either a lack of crowd reaction, bad booking, or longstanding feuds between a promotion's boss and said family, don't ever break the glass ceiling. On the other hand, some wrestlers aren't perceived to have their parents talent but are pushed to the moon anyway because of said family connection. And within kayfabe, it gets more complicated. If a promotion goes out of their way to mention a young talent's famous family connections and work it into storylines, it usually signals that the promotion has big plans for that talent.
* Family Business" Michael goes undercover as an arms dealer, and at one point it looks like his mark Ari Zamar has found him out. But then it turns out Ari just saw his girlfriend Debbie coming on to Michael('s cover ID) and got jealous. So Mike plays dumb and pretends Ari sent Debbie over to test him, congratulating him on his ingenuity.
* "Family Cat" has the Griffins adopt a cat named Pouncy much to Brian's displeasure. Naturally, Pouncy turns out to have sinister motives and plans to turn Meg into a
* Family Challenge once told him: "never let the contestant hold the microphone." He handed the mic to a five-year-old contestant who socked him in the head with it hard enough to make him bleed. He had to get stitches during the next break and spent the rest of the episode with a band-aid on his head.
* Family Challenge: The first Michael Burger episode paid tribute to the series' first host Ray Combs, who committed suicide in 1996.
* Family Channel) in 2014 after Bell bought out the company. The next year, DHX cut Family's ties with Disney, while Corus Entertainment launched a domestic version of Disney Channel.
* family company causing her mother to retreat into alcoholism and quit parenting. They've both had lonely childhoods, they just manifest their loneliness in different ways. Yang ends up apologizing for having made assumptions about Weiss's upbringing.
* Family Complex, and therefore never show romantic interest towards her.
* Family Complex Sakamoto family, is so handsome that everyone in his school treats him like a king, making him feel isolated from his peers. And since his wannabe servants are very overprotective towards him, girls are scared to come close to him.
* Family Complex, where his smile could bring everyone to their knees. However, every main character introduced in both series are just as attractive, and while these people are regarded as good-looking in-universe, they don't receive as much god-like attention as Harumi does.
* Family Compo, Masahiko frequently gets himself into situation where he needs to dress up as a girl.
* Family Compo: Misahako moves into his aunt and uncle's place and finds out they're both transgender via accidentally seeing their privates.
* Family Compo woman and man respectively. Sora gave birth to their now-adult daughter Shion, though he was initially reluctant.
* family connections picking a fight with the Tau because the crappy backwater planet they were on wasn't worth the effort, and is quite good at putting limited

resources where they can do the most good.
* Family d'Alembert universe, although it is fitted to some of the larger spacecraft, and artificial gravity boosting up to twenty-five gees can be selectively turned on in individual rooms of a dwelling or compartments of a ship. This becomes a major plot point in the climax of both the first and final novels of the series.
* Family Dog - Was co-produced between Universal, Warner Bros., and Amblin Television in the United States, Nelvana in Canada, and Wang Film Productions in Taiwan.
* Family Drama: A popular genre due to the importance of family values in Korean culture and how it's used to portray different types of families and intensify familial dynamics.
* Family Extermination: The killing of entire families especially the hero's loved ones is a major crossing of the MEH.
* Family Eye Resemblance, all the Volsungs have unusually bright, piercing eyes.
* Family Eye Resemblance: Family members may look different in other ways, but their eyes look alike.
* Family Feud (1988-94) recycled most of its set from the original Richard Dawson-hosted version (1976-85), including the giant board. Also, when Dawson returned for the 1994-95 season, they used pieces from a set that was originally constructed for when the Combs version taped at Opryland in 1993.
* Family Feud, a contestant responded to the question "Name a dangerous number [performed] at the circus" with "69".
* Family Feud (airing since 1976 on ABC {1976-85}, CBS {1988-94}, NBC {2008 specials}, and syndication {1977-85, 1988-95, 1999-})
* Family Feud, and the persistence of the Dawson and Combs eras in reruns has not hurt either.
* Family Feud, any time there's a question involving the elderly, invariably one of the answers will be "teeth".
* Family Feud). As it's rare for a team to get all the answers, the game often rides on whether the opposing team can steal those final-round points. Extra drama points if it's a family's fifth day, and they're playing for the car.
* Family Feud: Count on Steve Harvey to make a perplexed glance at the camera whenever someone gives a strange answer in regular play.
* Family Feud. Dawson drops face-first onto the floor upon seeing the number.
* Family FeudEEVES" is accepted as "BAKER" since it saw the letters in the correct order even if the answer is otherwise nonsensical.
* Family Feud episodes is when Steve will hear an outlandish answer from a contestant, mocking them on how ridiculous the answer is...and then it's on the board. Cue Steve just standing in shock before tearing up/throwing away the answer cards and storming off the stage.
* Family Feud got far enough for a prototype which is presumed to be lost.
* Family Feud had several of these over its various incarnations, but of particular note is the "almost celebrity" editions which had teams of celebrity lookalikes playing each other. Oddly enough, they still had to donate their winnings to charity, even though they weren't actually celebrities.
* Family Feud had the question "Tell me how old you think Ronald Reagan looks" and Richard Dawson guessed that he looked 74. At the time the episode aired — June 14, 1985 — Reagan actually was 74 years old.
* Family Feud in that its questions were formatted similar to the original 60s MG and used national surveys to cull answers (MG used previous studio audiences).
* Family Feud, in the rare event that neither team reaches 300 points by the end of the triple-score round, a Sudden Death round is played. Triple score is active, and only the #1 answer is on the board, for a question for which typically about 90 or more of the 100 surveyed gave the #1 answer; thus, the first to ring in and give said answer gets the 270+ points and will win the game.
* Family Feud is even worse. It uses a set that looks only superficially like the current one, music that only vaguely resembles the theme tune and doesn't even play at the right times, an obnoxious stereotypical-game-show-host-type guy, and has

some of the worst graphics Ludia's ever done. There's large periods of silence while the ugly characters (though at least you can use your Miis) perform overy-long and repetitive actions. They couldn't even get the show's graphics or sound effects right, and the reveal in Fast Money is done in completely the wrong way. At least the 2010 version was passable.
* Family Feud.) Later on, he wore a brace due to injuring his ribs in a car accident, and on one episode, asked contestant coordinator Caryn Lucas to host a question while he went to adjust the brace.
* Family Feud — which all use reconfigurations of the same studio in different ways.
* Family Feud more than enough to win with even if you lost on all of the others. (On the other hand, usually if the game gets this far, it means both teams are getting pathetically low scores on the other rounds. Normally, the double-point round is enough to determine a winner, but a team with a run of good answers can win even before that.)
* Family Feud of a Fast Money round, after the first contestant had given answers like "frog" to "Name an animal with three letters in its name" and "snow" to "Something that comes with a summer storm":
* Family Feud: One of the questions early in the 2013-2014 season asked was to name color of underwear a man buys "because it hides dirts and stains." Brown actually was the No. 2 answer, with black being the top response; FWIW, gray and blue were Nos. 3 and 4, respectively.
* Family Feud on GSN in February 2015, an ad for Activia yogurt was shown twice in a row.
* Family Feud question during the Richard Dawson era. "If you were arrested and could make only one phone call, who would you call?" The game-winning answer: the bail bondsman.
* Family Feud: Questions that include a euphemism for "masturbate" are asked on a regular (at times, seemingly daily) basis. One common example is to the question, "Name something a squirrel does with a nut," to which an answer was "scratches it." ("Nut" being slang for a part of the male crotch, and scratch being the "masturbate" synonym.) However, the answer came up once during the Richard Karn-hosted era, when during an NBA Stars special, a contestant answered "masturbate" to the question, "Name something a teenaged boy could do all day?"... and it got him two points!
* Family Feud quick to point out that while he does indeed have underwear in lots of colors, not a one of them is white.
* Family Feud retired families at $25,000 (later over $30,000 in the final season of the Richard Dawson version)
* Family Feud, Steve Harvey would frequently declare that "we" were going to Hell when contestants gave an inappropriate answer. Often, the answer would show up on the board anyway.
* Family Feud". The last round has Peter answering "Name Something You Sit In" with "Chair" and other variations of it repeatedly despite Lois already giving that answer seconds earlier, costing him the win.
* Family Feud, the Louie Anderson theme/cues are used no matter which era you pick. You only have 20 seconds to input answers, and you can only use the Wiimote to do so...an unforgiving, clunky setup that you can't change. The predictive text also helps break it; if your answer doesn't show up after two letters, 9 times out of 10 it's not on the board.
* Family Feud, two contestants misunderstood the question "Name a number that men exaggerate", after the first contestant said "100" the rather innocent second contestant said "69" much to the audience's mirth and Steve Harvey's chagrin.
* Family Feud was revived twice: first from 1988-1994 with Ray Combs (then a post-script season with original host Richard Dawson returning), then the current version from 1998 onward. The latter has been hosted by Louie Anderson, Richard Karn, John O'Hurley, and Steve Harvey.
* Family Feud was "What might you say to a cannibal to stop them from eating you?". One of the answers was "I have an STD".

* Family Feud (where he was a regular panelist) that it was the number one show in Guam.
* Family Force Five has a song named "Chainsaw". It's about how awesome using a chainsaw is.
* Family Fortunes, despite only two (usually) out of the ten contestants actually being stars...and even then, the "stars" are usually nothing more than average soap actors.
* Family Fortunes, the Big Money prize was £1500 for the first episode of the series, and in any episode where the prize had been won the week before, and £3000 in any week where the prize had not been won.
* Family Fortunes, whose family had not covered themselves in glory, once offered to buy the rights to that episode so it would never be shown — for £100. The producer had to explain to them that this fell somewhat short of covering the show's £38,000 costs.
* Family-Friendly Firearms: No real guns on kids' shows, but there's plenty of laser guns, phasers, and blasters.
* Family-Friendly Firearms: Replacing realistic weapons with more fantastic or less lethal ones.
* Family-Friendly Firearms: Used in a majority of American-edited anime and kids' shows.
* family-friendly Movies) are starting to be friends since they're both family-friendly animated comedies focusing on Family Relationships in Urban settings.
* Family-Friendly Stripper: An exotic dancer who always has the important parts covered.
* Family-Friendly Stripper: a stripper wears an elaborate and theoretically sexy costume that covers just about everything.
* Family-Friendly Stripper: Strip clubs and other sex establishments have the workers in relatively "innocent" skimpy clothes (usually a bikini) rather than being naked, topless, or in some kind of overt fetish costume.
* Family Game Night, for the first two seasons, awarded one "Crazy Cash Card" to each family at the start of the show, then an additional card to the family who won each game. Most cards were worth no more than $1500 or so (and generally only a couple hundred bucks), but one card, the Top Cash Card, is worth anywhere from $10,000 to $20,000. Thus, a family could lose all five games and still win the grand prize if the card they chose happens to be the Top Cash Card. (That said, both families keep whatever they won in their games, so at least a family who misses out on the grand prize in this manner still walks away with a great haul of their own.)
* Family Games, which prize accessible designs that involve and engage players as much as possible. One of the most popular of these is
* Family Goy" aired on October 4, 2009, despite the second half taking place on Passover/Easter.
* "Family Goy": From his upstairs window, Peter shoots a gun at his Jewish neighbor Mort Goldman while he is at his mailbox (a scene emulating an infamous scene in
* "Family Goy" had the moral of "It doesn't really matter what religion you are, because they're all complete crap."
* Family Guy 16oz steaks!. They then make fun of Joe for not being able to finish one.
* Family Guy, a baby like Stewie is compared to 5- and 9-year-olds, and they are the exact same height.
* Family Guy, a clip from a nature documentary is shown narrated by a stereotypical black guy. It shows a cheetah hunting down some prey:
* Family Guy, a contestant ponders the incomplete puzzle phrase "GO _UCK YOURSELF". After the complete phrase is shown as "GO TUCK YOURSELF IN".
* Family Guy: A cutaway gag shows Peter's head exploding after he eats half a fudgsicle in one bite.
* Family Guy, after Brian beat Peter at checkers, Peter took the checker board, put it in the car, drove the car off a cliff and shot at it until it exploded.

* Family Guy. After getting his hospital bill Peter cracks an angry joke at the receptionist if this was his bill or his phone number. She replies it actually is his phone number.
* Family Guy, after Lois snaps and goes on a rampage, Peter mentions that he put a homing device in her skull for such an occasion and uses a laptop to detect her location. Several dots appear on the screen, and Peter realizes he also put some in some squirrels.
* Family Guy, after Peter claims he'd sell his soul for fame, the devil finds out he already sold it...twice! He asks where he can find a lawyer. Pan to see everyone in hell raise their hands.
* Family Guy. After she says something particularly stupid, he hears someone snickering.
* Family Guy. After Stewie compares Brian to "aging supermodel Carol Alt", we cut to an old man shouting about her being mentioned on TV (and getting the name of the show wrong), and we see the trumpet sticking out of bedsheets in the other room and an old woman shouting "What?".
* Family Guy after the gang has been defeated by Joe after trying to re-cripple him Bonnie shoots at him several times trying to hit his spine one of her shots passes through one of his ears and out the other, despite blood and brain matter splattering on the wall this doesn't kill him like it should.
* Family Guy a generation of ancient Hebrews born and raised in Egypt) as stereotypical Ashkenazi Jews.
* Family Guy", a hatchet being marketed as a silly-ball, and a "Baby Heimlich Doll" with a built-in flamethrower.
* Family Guy" Also in the courtroom, where the courtroom audience goes "Oh, NO!" and the Kool-Aid Man comes crashing through the wall, "OH YEAH!" When the Kool-Aid Man realizes where he is, he backs out in embarassment. The Judge tells everybody to stop doing that, "'Cause the f*ckin' Kool-Aid Man gonna keep showin' up."
* Family Guy. Also played straight in "A Picture is Worth 1, 000 Bucks" when Peter tries to impress a high school classmate by claiming he grew up to be "Neptune, God of the Sea" only to find out that the real Neptune is playing at the same miniature golf course and doesn't appreciate Peter sullying his good name.
* Family Guy. Although she is (rarely) found working in a mansion, she is pretty creepy. If you don't think she belongs here, you're going to have to get her to leave yourself.
* Family Guy: A man tells his wife to imagine "a happy healthy baby boy at play. Now put him in a magic bubble and release him into the universe." When Stewie, in a bubble, rolls by, the man tells his wife to imagine Lindsay Lohan naked and doing a backwards crab walk. Later on, Lohan appears at Peter's door doing just that.
* Family Guy, an ad is shown for "Hasbro's Best Thing Ever" (a short of Silly Putty actually). Stewie, watching the commercial, enthusiastically shouts: "I want it!"
* Family Guy an angry mob of wheelchair users joined together to form "Crippletron".
* Family Guy ancestor: the very man who went to Africa and enslaved them.
* Family Guy), and a referee who fires a gun in the air to start a swim race.
* Family Guy), and empty it into the gutter next to Lois, thereby producing a puddle through which she can drive.
* Family Guy and ends up the "sympathetic" character, and his interactions with Carter generally end with Carter screwing him over.
* Family Guy and gives his son's identity away in an increasingly absurd fashion.
* Family Guy and gossipy housewife. A cat fight between Lois and the sensitivity coach snaps him out of it.
* Family Guy and guilt that he is somehow betraying Peter - and above all the realization he is in love with her - all combine to devastate his libido. While Peter has a last-ditch play to get her back, he is seen escalating a Viagra overdose, electric shock therapy, direct injections into his penis, and finally hitting himself very hard with a hammer. All to no avail.
* Family Guy, and has apparently put all of his kids in a coma while hiding it from his wife and not taking them to a hospital.

* Family Guy, and he kinda looks like a more cynical Snoopy. But there are many running gags based on the fact that he is, indeed, a dog, such as how he likes to chase his tail and sniff other dogs' butts.
* Family Guy and he looks up, saying "Oh my God..." just before a baboon lands on him and starts attacking.
* Family Guy and its power couple, Peter and Lois have apparently been reincarnated several times from the stone age to now. The most prominent are Nate Griffin and Lois' ancestor (meaning that in some way, Lois and Peter may be blood related), and Griffin Peterson and Lady Redbush (which may or may not have the same conspiracy).
* Family Guy and moves in with him, Brian buys Rush a whole new kitchen comprising of all American made appliances. Each one collapses, fails or explodes the moment Brian mentions them.
* Family Guy And no, that rant wasn't a joke on their part, they really meant it.
* Family Guy, and she's still one of the ugly girls including in the universe where everybody is attractive.
* Family Guy and then asks if they can cut that part out...and then goes on to say even more things about Chevy.
* Family Guy and the Silver Scissors at the Bulgarian Lady-Weiner Festival.
* Family Guy, and to a far more absurd degree. Gunshot wounds, arrows stuck in the shoulder, and stabbings are all just part of the territory. The only exception is the episode where Jesus returns and Stan has to battle demons to survive—he's decked with battle scars and lost a hand, replaced with a robotic clamp.
* Family Guy: An episode where Peter and Lois considered buying TiVo had the salesman fast forward through their argument to get to the point where they agreed. In the middle of the argument, Chris enters choking on something and Lois gives him the Heimlich Maneuver.
* Family Guy, an event which is so terrible to Peter as a father he's afraid it will cause "World War Five". Lois objects that there would have to be World Wars Three and Four first, but Peter dismisses this, claiming that "that's the beauty of World War Five, Lois — it's so intense it skips over the other two."
* Family Guy: Apparently, if you want to become a Supreme Court Justice, you have to stick a cherry in between your buttcheeks, run through a set of cones, and drop the cherry in a beer.
* Family Guy: A recurring plot with Meg. While she indeed has some friends — geeky losers, just like her — Meg clearly wants friends who belong to the popular group, including those associated with her arch-nemesis, Connie D'Amico.
* Family Guy as a joke, but ended up getting the part. Inevitably, this is referenced in a cut-away gag where Chris does an impression of Buffalo Bill dancing naked (and tucked back) in front of a mirror.
* Family Guy, as a jousting trainer for Renaissance Fair knights. His dialogue is given an appropriate medieval twist.
* Family Guy: As a kid, Peter asks a museum tour guide why the dinosaurs died out:
* Family Guy asides that play off the characters' metaphors. Occasionally, an aside doesn't happen, causing the character to flinch, "Oh? We're not doing one? Right?"
* Family Guy ask cast members about...the most mundane things, without ever touching on anything about the series, much to Stewie's consternation. One such question was "Does this look like dry skin or a rash?"
* Family Guy, asking him to save his dog from the pound with a rubber band, paper clip, and straw. He puts his eye out.
* Family Guy: A somewhat smaller example than the rest, but quite large for its scale — in one episode, Peter is in a sauna with Chris, when Peter notices... "Hey, that's not your leg!" The rest of the episode is about Peter trying to deal with penis envy (or something more like "penis shame").
* Family Guy) as payback for getting shot in the arm by him earlier on. Peter does survive, but he's left in a crippled state.
* Family Guy, as Peter was attempting to ruin James Woods as revenge for Woods stealing his identity.
* Family Guy as possible. At the end of the episode, the present version of Peter sits on the couch with Quagmire and his stag party friends from that episode, who

are also drawn first season-style.
* Family Guy (as seen when they have a bikini-clad woman attempt to catch hot dogs in her mouth to win a boob job). After Brian realizes what he's become and quits, the episode ends by showing that Cleveland and Quagmire have replaced them.
* Family Guy, as shown by an early episode where Peter is at odds with her tyrannical father in order to gain his approval, which he never does. She marries him despite her father's insistence that she doesn't really love him or his covert attempts to kill Peter.
* Family Guy as the other characters and generally doesn't seem to know the extent of certain actions.
* Family Guy a week later. Quagmire helps the Griffins out with the profits he made in his investment and the family manages to get back to where they were before the lottery.
* Family Guy: Back to the Multiverse to amass an army is because he "can't possibly allow a universe to exist without me in it."
* Family Guy because, according to Peter, “Christians don’t believe in gravity.”
* Family Guy, because of their universe-hopping device, Stewie and Brian become a real human baby and animalistic dog in live-action.
* Family Guy because they never picked him during the Q & A session at the convention. It didn't work out very well.
* Family Guy before being replaced by Mila Kunis. The episodes "Back To The Pilot" and "Yug Ylimaf", both of which involve time travel, brings back Lacey to voice past Meg (in the latter episode, Stewie lampshades it).
* Family Guy before her, and to make things worse, Paulson herself joins them in the booth because she was in a cutaway gag for that very episode.
* Family Guy, before its content became more gruesome and brutal, and before it went into avant-garde territory.
* Family Guy) beginning exactly three years after the events of the first episode mentioned at the beginning of that episode, which is September 27, 2009 (the episode's original airdate, so it would be September 27, 2012). However, the episode aired on March 17, 2013.
* Family Guy blatantly points out this trope when they have an episode of a random crime drama playing. With the main characters questioning who committed a crime, then nodding and pointing to the "With Special Guest Star Jimmy Smits" part when it pops up in the opening credits.
* Family Guy, Brian & Stewie visit a petting zoo. Brian places some animal feed in Stewie's pocket when he has his back turned, and this causes all the animals to chase after Stewie.
* Family Guy, Brian attempts this with a girl he fell in love with during the filming of a reality show by singing outside of her window. The thing is, she only pretended to love him during the taping of the show, and wants nothing more to do with him (he being obsessed over her and leaving her countless voice messages on her answering machine, to the point where he filled it up and bought her a new answering machine so he could keep leaving her messages). How does this end? With an answering machine thrown right at Brian's head.
* Family Guy Brian, being a dog, is scared of the vacuum cleaner. At one point Peter shoots the vacuum (for unrelated reasons); Brian comes in and sees the "dead" vacuum and says "whoever did this, thank you."
* Family Guy" Brian falls in love with an old woman who was a movie star in the 1930s. He convinces her to step outside of her house for the first time in years, and she gets hit by a car. As she is dying in the hospital Brian uses a pair of VR goggles (which had been set up earlier in the episode) to show her a virtual version of them getting married, having kids, etc. so her last moments would be happy.
* Family Guy. Brian finds that his ex-girlfriend, Tracy Flannigan, has let herself go to an extreme degree.
* Family Guy. Brian gets Super Speed and twice does the comedic version where he disappears briefly, then returns wearing the hat of the nation he just visited; he

also uses it to steal drinks at a bar.
* Family Guy: Brian goes out to dinner with his ex-girlfriend Jillian and her new beau. A waiter walks by and trips, causing him to drop his full tray, but Jillian's boyfriend catches everything with no problems. Wanting to one-up him, Brian then trips the next waiter who walks by and tries to do the same thing. He winds up covered in food and hurting the waiter's wrist (which Jillian's boyfriend 'fixes' with some fancy handwork).
* Family Guy. Brian has confessed his feelings to Lois (and in one instance at least to her husband, and Brian's best friend, Peter) on more than one occasion, but she always turns him down (it has been implied that she has always known of Brian's romantic feelings for her; ironically she seems oblivious to next door neighbor Quagmire's naked lust for her despite his repeated and shameless advances).
* Family Guy: Brian is considering becoming a teacher at Chris's school.
* Family Guy: Brian is going skydiving. Right before he jumps out, the instructor stops him and points out that he grabbed "the one with silverware" in it. He tosses Brian another parachute... that contains an anvil.
* Family Guy: Brian once received a Christmas present shaped like a wine bottle.
* Family Guy, Brian replaces Peter's I Can't Believe It's Not Butter with real butter, driving him insane.
* Family Guy, Brian the dog keeps forgetting about his superior sense of smell.
* Family Guy, Brian the family dog is unnerved to discover the owners of his late mother (who seemed quite nice up until that point) had her stuffed and converted into a coffee table.
* Family Guy, Brian tries to exploit this trope, boasting about his literary ambitions to make himself seem hip. However, as anyone who's been around him for longer than 5 minutes realizes, he cares only about his image, not about putting actual effort into writing. This is why he's never published anything.
* Family Guy". Brian tries to impress a recently-widowed mother (only referred to as "Jared's Mom") by putting on a magic show for her son, only to find out that she already has a boyfriend, Paul. They plan to base their whole relationship on this trope:
* Family Guy, "Brian Wallows and Peter's Swallows": Brian runs into door lock problems after yelling at Pearl; after getting the door open with her help, he calmly calls back his earlier outburst: "Oh yeah, and drop dead."
* Family Guy", Brian was doing community service for an angry, reclusive old woman and when he can't take it anymore he yells at her and tries to leave, but is hindered by her front door and its many locks. After she helps him get the door open, he gives her a very unconvincing "And, you know...drop dead," and leaves.
* Family Guy Brother Mentor to his older siblings Chris and Meg. He's shown more concern for his brother's and sister's welfare than their parents ever have, and tried to help them with their problems.
* Family Guy, but Carter wanted her to convert when they got married so he could get into country clubs.
* Family Guy, but ends with the narrator's cynical description of the toxic nature of their marriage.
* Family Guy but he doesn't disguise his voice at all, and yet everyone falls for it.
* Family Guy. But that song wasn't nearly as forgotten prior to its resurrection as "Surfin' Bird" was.
* Family Guy: "Buttscratcher". "Mmmmmmm BUTT-SCRATCHAAAAAA?? Mmm BUTT-SCRATCHAAAA!!"
* Family Guy buys a hut and a New York newstand and sets them up in his bedroom just to use this trope. He was in fact hiding in the bathroom.
* Family Guy by having a character come with some kind of setup like "This is worse than the time that..."
* Family Guy by having Brian, an erudite talking dog, freak out when Lois turns on the vacuum and chases him around the room with it. Similarly, he also has a fear of the sound of nickels rattling in a can, ambulance sirens, and helicopters.

* Family Guy by saying "No, you say hello to Muriel Goldman!", prompting Homer to reply "Who?"
* Family Guy, by the way. Usually, they are the victims of abuse of all four categories (well, all four for Meg, at least).
* Family Guy by toaster in the bathtub and becoming "Toaster Man" instead. He's shown conjuring perfectly toasted bread.
* Family Guy can have an effect on a viewers speaking pattern, but it seems "giggity" and "What the Deuce?" saw wider usage than just fans.
* Family Guy: Carl the clerk at a local convenience store is a stereotypical stoner who is more interested in talking about movies than doing his job. In an episode where both Meg and Chris get a job working at the convenience store, he promotes Chris over the hard-working Meg, because Chris also likes talking about movies. When Meg complains, he fires her.
* Family Guy Carter really doesn't want to spend time with his son-in-law. He gives this response when Lois asks if Peter could join him in a poker game.
* Family Guy", Chris admits to stealing $10 from Meg's room, Meg admits to stealing $10 from her mom's purse, and Lois admits to making counterfeit $10 bills.
* Family Guy Chris becomes an abusive alcoholic with anger issues and things are set back to normal after he's forced to quit after a heart attack.
* Family Guy, Chris becomes a witness in a robbery and anonymously sends the thief to prison; however, his identity is spilled to the robber twice by both Peter when he wanders into the wrong room looking for his son, and also by the FBI when they give the robber the Griffin family's new address in Dixie.
* Family Guy, Chris gets a pimple that's both sentient and evil. It's somehow able to hold a gun to Chris' head, threatening to kill him...despite having no hands (or appendages of any sort) to hold the gun.
* Family Guy Chris Griffin becomes infatuated with a tomboy he completely believes to be male, and after she kisses him he writes in his diary that he kissed "him," but didn't want a serious relationship. When she revealed herself to be a girl to the dimwitted Chris, they became a couple after some disbelief, exacerbated by the fact that Chris is incredibly awkward around girls but wasn't this time until the reveal.
* Family Guy, citing how he has been stuck on Bald Bull for the past four years.
* Family Guy, claiming he was discharged. It's ultimately revealed that he deserted and returned home after an explosion.
* Family Guy come to take Stewie away, Lois is enraged and wants to disprove their claims, which are immediately torpedoed by Peter's actions off-screen.
* Family Guy commenting to Col Sanders on how good it smells in there, only to be beheaded by Sanders.
* Family Guy. Conservatives, Christians, pro-lifers, and in general people who don't agree with the writers' political views get this treatment—which unfortunately affected the show's quality.
* Family Guy contains subliminal advertising of an cigarette company executive telling the viewers to smoke.
* Family Guy cutaway implies Ireland was this until the invention of beer.
* Family Guy cutaway, Peter is shown in combat in the jungle in full clown mode, including face paint. He tells the other soldiers "You guys are stupid. See, they're gonna be looking for army-guys."
* Family Guy. Cut to outside the house, and the guys yelling "Oh!!!" and Peter saying "What a jackass!"
* Family Guy dates a woman, expect this trope to happens. Justified due to Brian being a dog.
* Family Guy, Death comes to collect Peter, but sprains his ankle, so Peter is forced to take over Death's job while Lois nurses him back to health. Lois takes the opportunity to ask Death to spare her husband; Death agrees, but says "you've got to do something for me." Lois hesitantly begins unbuttoning her shirt, only for Death to clarify that he only wants her to get him a fruit cup from the kitchen.
* Family Guy, Death takes Peter back to the 1980s, where he makes it so that everyone sees Peter as he looked in the period, including himself when he looks at

his reflection.
* Family Guy: Deconstructed with Meg. Since everyone treats her like complete garbage all of the time she will fall in love with any guy that shows her any amount of kindness, sometimes to an obsessive degree.
* Family Guy" deserves special mention. Put briefly, Lois's father Carter Pewterschmitt lends Peter $5.00 (that he kept at the bottom of a jar filled with salt and razor wire) to publish Peter's erotic writings. Peter uses the $5 to make photocopies that he sells and credits Carter as publisher. One reader gets into a car accident when he decides to take his shirt off while driving and listening to a book on tape version, then sues Carter and sends his lawyer to his house to seize all of his assets because Carter is liable as publisher. In actuality, in the eyes of the law, it's the driver's own damn fault, and he can't sue anyone for his accident. Even if he could, moreover (and assuming they got past the skillful lawyers that a rich man like Carter no doubt could hire), you can't just seize people's assets in a civil case without lengthy legal processes.
* Family Guy developed a bad habit of doing this when the series switched to HD, with many episodes including at least one scene where the only motion by the one visible character is them blinking once in a while to remind you they're not a taxidermy or your TV's not broken, while off-screen characters spend minutes talking without getting any response from the visible character.
* Family Guy did a pep rally at a school for the deaf which became this very fast.
* Family Guy did a variation on this, with Peter's father-in-law punching him in the face through an e-mail.
* Family Guy did a variation that involved the entirety of Quahog being affected with this trope: On April Fool's Day, the newscasters mention that a black hole had suddenly appeared and that in a few hours the Earth was to be sucked into the black hole, only for it to be revealed at the last possible moment that it was actually a very horrible April Fool's prank, and Peter admitted that his children should never have been born during what he thought were his last few moments in life, and guess what happens for the remainder of the episode.
* Family Guy did this in an episode with Peter and Quagmire trying to pack pills into plastic vials. Peter's nose started to bleed and he passed out after swallowing several of the pills at once.
* Family Guy did this when Peter tried to buy a pair of used women's underwear from a vending machine. The machine mocks his use of a crinkled dollar in an Asian woman's voice.
* Family Guy: "Did you ever stop and think 'Wow, I'm married to that?'"
* Family Guy does anything altruistic for anyone, she is never reciprocated with any gratitude. Take the episode "You Can't Do That On Television Peter" for example. After Peter suffers a near-fatal attack in the sharp claws of a puma during his act on television, Meg uses her doctor techniques to save Peter's life. After Peter wakes up from his consciousness in the hospital, he refuses to thank Meg for saving his life, and no one else gives her any adulation for it.
* Family Guy doesn't hire anyone without a college degree. Mentioned later in "Jerome is the New Black" when Quagmire chews out Brian on everything that he hates about him, one of which is that Brian "...failed college twice, which isn't nearly as bad as your failure as a father..."
* Family Guy does this intentionally, as many of its gags are reliant on nostalgic pop culture references, particularly from the 1980s.
* Family Guy does this repeatedly with Brian towards Lois, which is ultimately reconciled after a fairly big fight.
* Family Guy done in zeroes and ones. Anne Sullivan tries to teach deaf and blind Helen Keller to say "water".
* Family Guy "Don't Be a Dickens For Christmas", Christmas carolers roam the streets, shuffling along like zombies while singing. They apparently "infect" anyone who gets too close, who then join their shuffling ranks as carolers. Quagmire and Joe quickly fell victim.
* Family Guy", drunken shenanigans by Peter leads Mayor West to raise the town's drinking age to 50.

* Family Guy during an appropriate moment with his father. They start when his dad says he loves his son only to stop when he adds that he doesn't like anything about him. Peter tells them to keep playing as that is the best he can probably get.
* Family Guy during the bridge listing events she's missed, including:
* Family Guy employs this with people, who tend to fall almost instantaneously while drunk or in some sort of humorous circumstance where a fall is imminent. Otherwise, physics is pretty normal.
* Family Guy ending with a friendly boxing match between Cleveland and Quagmire... after Quagmire slept with Cleveland's wife and ended their marriage. (Long story short, his wife started it after getting tired of Cleveland, who then tried to kill Quagmire in a chase, and is probably giving Quagmire a chance to fight back.)
* Family Guy episode, “Road to The Multiverse”, Brian and Stewie visit a parallel universe where a lack of Christianity allows the U.S. to progress technologically by a thousand years, though the arts had stagnated for a similar amount of time.
* Family Guy episode "Absolutely Babulous", Peter greets his family one morning with an owl on the shoulder, which he denies he stole from the Pewterschmidt mansion's enclosed owlery. After Lois asks Peter "What were you two talking about last night?" the owl hoots, prompting Peter to reply "Yeah, who?". This gag is repeated before Peter gets bored with the owl and decides he's returning it to the owlery.
* Family Guy episode "And Then There Were Fewer" lampshades the way this trick is used to maintain the anonymity of the one whodunit. "Why, it's you!" says the murderer's next victim to the camera. "The man or woman who's been killing everyone!"
* Family Guy episode "And Then There Were Fewer", the guests are searching the dining room where James Woods was murdered for clues. Someone leans on a bookshelf, which opens to reveal a hidden chamber... that turns out to be the laundry room. Further searching turns up another hidden room full of actual clues.
* Family Guy episode "Baby Stewie", Brian convinces Stewie that he'll lose his genius intellect when he grows older, so Stewie builds a machine to rewrite his DNA and keep himself smart. It instead reduces his intelligence to that of a normal 1-year-old.
* Family Guy episode "Baby, You Knock Me Out" has Deirdre Jackson, a female boxer who killed three of her opponents in the ring and planned to make Lois her fourth.
* Family Guy episode "Back to the Pilot" has Brian and Stewie travel back in time to the pilot episode of the show which was in 1999. While there, Brian warns his past self about the September 11th 2001 terrorist attacks and he prevents them from happening. When they return to the present they find the United States is now a blasted wasteland. In this timeline, without the War on Terror for popular support, George W. Bush loses his reelection, and proceeds to resurrect the Confederacy and trigger a second U.S. Civil War. Brian and Stewie then attempt to fix it but things keep going wrong until there are dozens of Brians and Stewies all gathering in the same spot in time. Stewie finally solves the problem by going back to just before their original selves arrived in the past and the forcing that Brian and Stewie to return at gunpoint before they have a chance to do or say anything. This results in the timeline resetting itself and the Brian and Stewie we've been following to be erased from existence.
* Family Guy episode "Back to the Woods", Peter and Brian try to search for Peter's wallet in a Chinese restaurant. Peter tries to get Brian to find it by forcing him to smell his ass (since that's where he last had it) and, despite the dog's initial disgust, he manages to pick up the scent and track it.
* Family Guy episode "Barely Legal", when Meg becomes obsessed with Brian:
* Family Guy episode "Big Man on Hippocampus," Peter gets amnesia, and acts like a bachelor. Lois eventually leaves him, and almost has sex with Quagmire; however, when she says she trusts him, he gets impotent from guilt and tries to "resuscitate" himself with increasingly drastic measures.
* Family Guy episode "Blue Harvest", Han Solo (Peter Griffin) claimed that the Millennium Falcon completed the Kessel Run in less than 12 parsecs. Luke (Chris

Griffin) then tells an astonished Han that parsecs are a measure of distance, not time.
* Family Guy episode "Boys & Squirrels" When Peter becomes too tall due to a chiropractic adjustment, Lois helps him shrink back to normal size by berating him. However, she doesn't stop in time and Peter ends up becoming only a few inches tall.
* Family Guy episode "Boys Do Cry" has Peter repeatedly blabbing to a cop when they're supposed to be on the run, but avoids suspicion by backtracking every time Lois nudges him.
* Family Guy episode "Boys Do Cry", Stewie is entered in the Little Miss Texas pageant as "Stephanie Griffin." The audience tries to chase him once his wig falls off.
* Family Guy episode "Brian In Love", Stewie enjoys an apple while making fun of Brian's feelings for Lois. Later on, in "Dammit, Janet!", Brian reciprocates while teasing Stewie for being in love with the titular Janet.
* Family Guy episode "Brian in Love", this is Stewie's response to Lois accusing him of peeing on the living room rug.
* Family Guy episode "Brian: Portrait of a Dog". Peter writes a letter: "Dear MacGyver, Enclosed is a rubber band, a paper clip, and a drinking straw. Please save my dog."
* Family Guy episode "Crimes and Meg's Demeanor" parodies this by attempting to do this trope right as the story is about to end.
* Family Guy episode "Da Boom", as mayor of New Quahog, Peter distributes jobs to the citizens. In one of them, he assigns an old woman to be part of the fire department, and this happens when the hose is turned on.
* Family Guy episode "Dead Dog Walking" has Lois admonish Chris for getting Stewie addicted to vaping, then is later shown smoking, which Chris calls her out on.
* Family Guy episode "Emission Impossible", Stewie and Bertram refer to each other as worthy adversaries.
* Family Guy" episode featured a guy who was only now succeeding at selling tumbleweed spouting "Y'all laughed at me!", now that nearly every other business in town has gone kaput.
* Family Guy episode "Foreign Affairs" uses this in a gag regarding "mime on mime" violence in Paris; One mime holds up another, his finger pointing like a gun. After taking his victim's wallet, he "shoots", causing a wound to appear in his chest. After the victim drops, the crooked mime "shoots" him in the head twice, blowing it to bits.
* Family Guy episode "FOX-y Lady" kickstarted with the Griffins throwing their old television away and replacing it with a new high-definition flat-screen after Peter becomes unsatisfied with the quality of watching Rhonda Latimer (which ends up backfiring). The flat-screen remains for the rest of the series.
* Family Guy episode "Go, Stewie, Go!", when Lois tries to sexually assault Meg's new boyfriend just as Meg enters.
* Family Guy episode "Hannah Banana", Brian and Stewie find that Miley Cyrus is actually an android. At Brian's suggestion, Stewie tries reprogramming her so Brian can have sex with her, but instead she goes haywire and starts running around saying "MILEY SMASH!"
* Family Guy episode "Holy Crap", conveniently docked onto the side of the house. The family uses it to escape when Peter's mother shows up needing a place to crash.
* Family Guy episode, "I Am Peter, Hear Me Roar," had a scene in which Peter admitted to Lois that he taped over Lois and Peter exchanging their wedding vows with a soft-core women in prison porno (not all of it; the porno cuts back to the wedding ending before anything explicit can be shown) and Lois realizes that she made a copy of the video (not knowing that Peter taped over the vow exchange) and sent it to her great-aunt who lives in a nursing home. Lois's great-aunt comments that the wedding is hot and an old man punches at his crotch to get his penis to "wake up."
* Family Guy episode "I Am Peter, Hear Me Roar" has Peter become feminine after taking sensitivity training. At first Lois is relieved, but soon grows tired of it

(and Peter ends up annoying all of his friends by calling them to chat).
* Family Guy episode "Internal Affairs", Joe and Bonnie have a falling out. After Joe tells Peter his first date took place at a strip club, Peter and Lois try to get the two to reunite there. Lois has lunch with Bonnie there, leaving Peter to bring Joe. He does that by calling the police and telling Joe there is a problem.
* Family Guy episode "Jesus, Mary, and Joseph!", Peter once took the lyric "Two turtledoves" literally and gave Lois a pair of genetically engineered doves with turtle shells for Christmas. After letting them loose, they flew around the living room erratically and the Griffins decided to spend that Christmas outside.
* Family Guy episode "Life of Brian" begins in a present day America ruled by the Native Americans thanks to Stewie traveling back in time and giving them automatic weapons.
* Family Guy episode "Lois Kills Stewie", when Lois assumes Stewie is dead after being caught in an explosion. He's not.
* Family Guy episode "Long John Peter", when the Griffins take Brian to the vet.
* Family Guy episode "McStroke" has an Italian guy tells Peter he is crazy for faking Italian.
* Family Guy episode "New Kidney in Town". Lois is pouring out Peter's supply of Red Bull when it causes a daisy to mutate, stop a car, claim "Official flower business" and drive off.
* Family Guy episode "No Meals on Wheels", Peter creates a "scarejew", a scarecrow in the shape of Adolf Hitler. He scares Mort Goldman away from his house with it.
* Family Guy episode "Not All Dogs Go to Heaven", Meg invokes Brian's canine instincts against his will:
* Family Guy episode "Oceans Three and a Half" sees Cleveland, Peter, and Quagmire, each demonstrate unique knowledge/skills in order to clear security checks and break into Carter's vault on Joe's behalf. Cleveland pulls off a perfect vocal impersonation of Carter and Peter is able to successfully guess the least attractive male name in the English language: Keith. Quagmire bypasses the penile identification scanner by sticking his penis inside it; he didn't match the shape, he just broke it.
* Family Guy episode "One If By Clam, Two If By Sea" has the guys storm the new British Drunken Clam in full Revolutionary War attire, spraying beer on all the patrons. How does the new owner get them to leave?
* Family Guy episode "Pawtucket Pete", Jerome's voice is deep enough that he's immune to the effects of the helium leaking out of Brian's parade balloon that Peter shot.
* Family Guy episode: Peter actually beats Lucy and makes her hold the ball for Charlie, and Charlie actually kicks it!
* Family Guy episode "Petergeist" has Joe Swanson open up a home theatre service and create his own logo, Joe Swanson Theatres, based on the flying Pegasus logo but replacing the horse with Joe himself.
* Family Guy episode "Peterotica": One of Peter's erotica writings mentions an alien's 'space-horniness'.
* Family Guy episode "Peterotica", Peter and Carter team up to steal Lois' wallet. Peter distracts her by riding a unicycle while Carter pickpockets her, followed by him shouting "Caw-caw! I got her wallet!".
* Family Guy episode "Prick Up Your Ears", the school brings in a PSA group advocating for abstinence in the most hyperbolic terms possible. Such claims include "Sex turns straight people gay and gays into Mexicans", "If you have sex, your penis will fall off, and land in another dimension, populated entirely by dogs, who will eat it", and "If you have sex, you're automatically in Al-Qaeda".
* Family Guy episode, Quagmire passes out after a rather lopsided drinking game. When he awakens later his face has "penus" written on it.
* Family Guy episode "Quagmire's Baby", Stewie creates less-than-intelligent clones of himself and Brian to act as assistants, only for them to become unstable when their bodies literally fall apart and collapse into fleshy gooey puddles.
* Family Guy episode "Quagmire's Dad," in which Quagmire's father is revealed to have had a male-to-female transition, aired on May 9th, 2010. In some countries,

that was Mother's Day.
* Family Guy episode "Road to Rhode Island", Brian goes to visit his mother, and he's shocked to see that not only she has died, but her stuffed body is used as a table. He ends up stealing her body and giving her a (more or less) proper burial.
* Family Guy episode "Road to Rupert", where Stewie gives his and Brian's dead camel a backstory.
* Family Guy episode "Road to the Multiverse" is sometimes believed by others that it WAS made by Disney due to realistically mimicking the animation style and throwing in some Disney references (such as a musical sequence about pies, making Brian and Stewie look cute, Lois like a princess, Adam West as a mouse, etc.) But to be fair, this sequence was outsourced to a smaller, lesser-known animation studio (it wasn't even animated in South Korea like the show usually is.)
* Family Guy episode "Saturated Fat Guy", PBS releases a documentary warning against obesity predicting that at some point in the future everyone will be overweight and drive hovercars. The cars are all barely above ground level and when one passenger gets out, her still-running vehicle immediately shoots up into the sky. This scares Lois into her making her family eat healthier.
* Family Guy episodes contained one). Brian and Stewie quickly grab a pair of top hats and cane and prepare to burst into song, only for Mort, who's had more than enough at this point, to interrupt them.
* Family Guy episode "Screwed The Pooch" hits all the notes in this tune: prostitutes, sleazy proprietors, crime, roaches, non-working switches, Murphy beds, insane residents, people on the run, America's Most Wanted, police raids.
* Family Guy episode "Seahorse Seashell Party", Brian is hallucinating heavily on mushrooms, and he stumbles across a naked Lois standing in a briar patch, who does one.
* Family Guy episode "Secondhand Spoke" has this happen to Peter when he starts smoking.
* Family Guy episode "Secondhand Spoke" starts when Peter tries to pick up smoking to get breaks at work.
* Family Guy episode "Spies Reminiscent of Us" has a gag where Stewie becomes one of these when he arrives in Russia.
* Family Guy episode "Stewie Loves Lois", in which Peter, who thinks he's been raped by Dr. Hartman after simply being given a prostate exam, embellishes his recollection of the exam in question to include the doctor laughing in a pitched-down voice and riding a carousel with what sounds like "Somewhere, My Love" playing in the background.
* Family Guy episode "Stuck Together, Torn Apart," Peter and Lois are advised by a marriage counselor to go on a trial separation and date other people after Lois becomes frustrated with Peter's jealousy over her having coffee with an old boyfriend. At first, Lois is supportive of the idea of a trial separation, but when she witnesses Peter on a date with Jennifer Love Hewitt it provokes her into a jealous rage. Because of that, Lois can finally understand how Peter can get so jealous, and the couple resolves to live with their mutual jealous natures.
* Family Guy episodes up to that point had included one). Brian and Stewie begin to sing, but Mort cuts the song short, yelling at them to shut up and just get in the time machine.
* Family Guy episode "Tales of a Third Grade Nothing", Peter, who was sent back to school to finish the third grade, tells his class about his childhood teacher Mrs. Wilson, whom he used to call "Mrs. Kill-son" because she had an abortion.
* Family Guy episode "The Big Bang Theory", Stewie fights his half-brother, Bertram:
* Family Guy episode "The Big Bang Theory", Stewie uses his time machine so he could go back in time and use the good comeback.
* Family Guy episode, "The Cleveland-Loretta Quagmire": Cleveland Brown begins to hyperventilate as he vows to kill Glenn Quagmire for sleeping with his wife. Peter grabs a plastic bag instead of a paper one, placing it over Cleveland's head and causing the latter to lose breath and pass out.
* Family Guy episode "There's Something About Paulie," Big Fat Paulie gets shot

with dozens of bullets but doesn't bleed at all.
* Family Guy episode "To Love and Die in Dixie", an old man in a rocking chair paints over the population number for the town of Bumblescum, amending the number by adding the Griffins to it.
* Family Guy episode "Viewer Mail No. 2 (Point of Stew)", Stewie attempts to stuff a Twinkie in Brian's tailpipe, only to have it shot back to his face and ends up on an unexpected ride with Brian.
* Family Guy episode "Welcome Back Carter", Peter ends up finding out that Carter, his father-in-law, cheated on his wife. Peter's friends convince him to take advantage of this knowledge and blackmail Carter. It works until Peter inadvertently lets the secret slip anyway.
* Family Guy episode "Welcome Back, Carter", when Peter catches his father-in-law with a woman (that's not his wife):
* Family Guy episode "When You Wish Upon a Weinstein" Lois tells her mother that she doesn't think she would be better off married to the chimp across the street no matter how well he's doing. At the end of the episode she tells Peter that just because the chimp makes more money that doesn't make him any smarter.
* Family Guy episode where Lois decides to become a model, Peter admits that he will "pleasure himself" to her modeling photos. Then Chris says he'll do it too, and no one says anything. But when Meg says she'll do it, everyone is disgusted and Peter gets so angry that he punches the wall and kicks Meg out of the house.
* Family Guy episode where Stewie's teddy bear is accidentally shipped away, and as a result he and Brian try to get it back.
* Family Guy episode with a Flintstones parody had Stone Age Lois (playing the part of Wilma) use the word "rockgasm" instead of "orgasm", at which point Stewie and Brian decided they had had enough of the Stone Age.
* Family Guy eposode "Ready, Willing And Disabled": while fighting during the night over the money, Meg, Chris and Stewie are occasionally seen only while there's lightning. And while most of the flashes show them fighting, one reveals them dressed and posing for an "old timey" photo.
* Family Guy era, some of which were openly bigoted (and Disney distanced himself from them once that came to light).
* Family Guy especially in the later seasons when he insists he's right about everything and pushes his beliefs to get everyone to take his side, and takes credit for ideas that weren't his in the first place and other times using them as an excuse in order to get into a woman's pants, as Quagmire put it:
* Family Guy-esque minigame based around the gag. Successfully completing it would get the player a power-up or other bonus.
* Family Guy-esque nightmare where he sees himself crawling on the ceiling of his room.
* Family Guy. Even after it's been sucked through a jet engine, or pounded into submission with a saucepan, or...
* Family Guy. Eventually, Homer loses his powers and grabs on to keep himself from falling to the ground. Still powered, Peter starts telling Homer what he'll do to him... then he too loses his powers, laments talking for too long, and falls.
* Family Guy). Every time he attempts something sinister, Brian, Stewie, and/or Peter can use his insatiable love of candy to lure him into some trap, and he never learns.
* Family Guy features a restaurant with a retro 1950s malt shop motif. Cleveland, being black, was not allowed to enter.
* Family Guy features Peter, as president of Chris' school board, about to give a speech that blames Lois for pornography that Chris found. Upon seeing Lois in the audience, Peter decides that he can't go through with it, throwing away multiple pages of notes and admitting that the entire thing was his fault.
* Family Guy features Peter just after having sex with a rhino. Peter asks the rhino "why wouldn't you look at me during?" The rhino just gets out of the bed and walks away, leaving Peter to cry by himself.
* Family Guy features Phineas and Barnaby, two sideshow strongmen who travel via penny-farthing and perform calisthenics to the new musical craze called "Jazz."

Peter also at one time tells Chris about his great-grandfather Turn-Of-The-Century-Take-On-All-Comers Griffin whom we see in a boxing ring with a kangaroo.
* Family Guy feature the Griffin family dancing up a flight of stairs lined by high-kicking chorus girls. For the first few seasons these were anonymous characters, but after a few years, they became recognizable as female characters from the show. A variation of the sequence in one episode has Peter lose his footing, fall down the stairs and land on one of the dancers, crushing her to death. Another episode has a dancer confront Peter out of character about an affair and claim that Peter is the father of her child; she is never heard from again.
* Family Guy" (featuring a segment called, "I Dare You to Crap Off Of That") had Peter being dared by Cleveland to poop off the side of a highway, onto another highway. Peter does so, and the poop lands on Lois' car, causing it to crash, she gives Peter a tonguelashing, pointing out that Stewie is now deeply traumatized from the car crash (even moreso with the attempts to wipe it off), and then calls the FCC.
* Family Guy for 8 hours. The following scene shows Peter assaulting a prostitute and jacking a car.
* Family Guy forcing the guests to stay there and figure out who the killer is.
* Family Guy. For example, when he falls down in one episode as a result of Peter stealing the wheelchair ramp in front of the Swansons' house, he turns down an offer for help, saying that he "needs to retain his independence". Somewhat justified in that he still is quite capable of getting around despite being handicapped.
* Family Guy for her only for him to fail, and the rest of the episode revolves around his lost intelligence. The shift of focus to him is lampshaded by an extra.
* Family Guy. For instance, Peter is committed for being friends with a minority and a crippled man. When Cleveland protests, he's declared insane for speaking up to a white man. Finally, Joe is committed and scheduled for euthanasia as he's crippled.
* Family Guy for Lois to play on their anniversary just so he can blow her off and go golfing with the guys. The final clue leads her back to where she started.
* Family Guy friend Penelope kills a kid that pushed Stewie by giving him a piece of taffy laced with superglue, which glues his throat shut and make him choke to death. Once he's dead, Stewie chimes in with simply "Don't push".
* Family Guy "Friends Without Benefits", Meg daydreams that she and a boy she's crushing on are the last two humans after the Earth is destroyed. The boy decides that they should repopulate. And the two of them start making out in their spaceship.
* Family Guy from Meg, which turns into this trope when they're rescued by Hugh Downs. It hits the fan when he plays a tape of the kiss on local TV.
* Family Guy gave birth. He, Peter, Quagmire, and Cleveland attempt to rob Carter's vault as their final act of desperation.
* Family Guy: "Gentlemen! We can rebuild him! We have the technology! But we don't want to spend a lot of money." Cue a cyborg Peter with a bucket for a leg, a TV for a head and... yeah.
* Family Guy, George W Bush loses his re-election campaign and instead ends up leading several southern states into forming a second Confederacy and seceding from the U.S. This spirals into a second Civil War and eventually reduces the East Coast to an irradiated wasteland.
* Family Guy Glenn Quagmire (during a test to see if some therapy to make him non-perverted worked) suddenly loses control and runs into the security room in a clothing store. There he takes notice of a woman having a heart attack in the changing room. He darts out of the security room and runs to her body and begins what appears to be CPR. However when the woman wakes up, everybody in the store cheers Quagmire for saving her life. Quagmire's response:
* Family Guy: Glenn Quagmire usually bobs his head when he's aroused by something.
* Family Guy, God gets pissed at Peter for creating a religion based around himself and starts attacking the Griffins with the ten plagues of Egypt, one of which sees Stewie's bath water turn into blood. While the rest of the family is freaked out,

Stewie is enjoying himself.
* Family Guy, God is shown full-body with, naturally, Mac Farlane's voice instead of the traditional deep bass. God is also depicted as every other stereotypical male; drunk, hits on the women, and loves to party.
* Family Guy got hurt." (As the parking valet's clothes come floating down from the sky in little pieces.)
* Family Guy guy?" Lois simply states that she represses such thoughts... and as it turns out, she has done so so often that she's developed a brain tumor. Death asks her this question verbatim after Peter asks him to elaborate on his previous sentence, even though he was obviously finished talking.
* Family Guy had an episode in 2001 where Lois begins fighting using "Tae Jitsu" because Peter runs all over her and doesn't respect her. Fast forward 9 years, and there's another episode where Lois becomes a boxer because Peter runs all over her and doesn't respect her.
* Family Guy had faded off into irrelevancy by the middle of the decade, and it was sparsely talked about in discussions surrounding adult animated shows.
* Family Guy had Lois attempting to dump a body in the river in order to protect her son Chris (who she thought killed the man, but in reality, he didn't). Things got complicated when a policeman came by, but Stewie handled the situation by sliding himself into the collar of the man's shirt and acting like it was his body.
* Family Guy had Peter Griffin and Mayor Adam West kicked out of the house naked. Peter admitted that "he lost a fight with his clothes".
* Family Guy had Stewie reminisce about the time he had Willem Dafoe living under his bed:
* Family Guy had Stewie subconsciously spelling "My darling Janet" with alphabet blocks. When he realizes what he's done, he knocks over the blocks, causing them to spell "I long for you." He knocks them over again, spelling "Ride that pony." He seems okay with that one, apparently not seeing the innuendo behind it.
* Family Guy had the entire family break out into an epic brawl after criticizing each other's faults. Ironically (or maybe not), this brought the family closer together.
* Family Guy had the family getting annoyed at a fly repeatedly failing to fly out of an open window.
* Family Guy, Hancock could be considered this, though the actual meaning is nothing out of the ordinary.
* Family Guy has a clownish complexion and put on makeup to make her skin look normal.
* Family Guy" has a criminal robbing a convenience store, but he's told that the cash register won't open unless he makes a purchase.
* Family Guy has a flashback in which Peter is teasing Bob Funland about his deceased mother with "Bob misses his mommy! Bob misses his mommy!"
* Family Guy has a hairless twin who lives in a storm shed in total darkness. When Peter goes to visit him at night, his hairless twin cringes and says, "Close the door, the moonlight burns!"
* Family Guy has a lot of incest between the Griffin family members. Peter/Meg, Meg/Chris, Chris/Stewie (which is also father/son since they were in the guise of Luke/Vader at the time), Lois/Chris, Lois/Meg, and presumably Peter/Stewie since Stewie has his Oedipal conflict reversed.
* Family Guy has a McDonald's Expy called McBurgertown, though the episode focuses more on the restaurant's inhumane methods of slaughtering animals.
* Family Guy has a miniature working pinball machine on the playfield, which is played by Stewie at key points during the game.
* Family Guy has a number of episodes of this type, with Peter starting some business or getting on with some scam. However, unlike a lot of shows, Peter's regular job is subject to periodic change; some of these seemingly one-shot job episodes, around season openers mostly, have stuck for years, so it's sometimes not completely obvious until the end of the episode whether he'll go back to his old job, stay at the new one, or be unemployed again and need to seek a job in later stories.

* Family Guy has a one-episode gag involving Peter Griffin's unnamed hairless twin, kept in captivity by family his entire life. At the end of the episode, the twin escapes and unconvincingly tries to replace Peter.
* Family Guy, has a sense of childlike fascination. It's justified by him being a year old.
* Family Guy has a variation in an episode when Peter blows up his hand through reckless use of fireworks, and one of his severed fingers lands in Herbert's yard. Peter tries to retrieve the finger but gets hit by a car as he crosses the road, Joe tries to assist him but falls out of his wheelchair, and Herbert's dog Jesse (who's back legs are paralyzed) sees the severed finger and decides he wants to eat it, leading to a scene of all three of them slowly crawling towards the finger and trying to be the first to reach it.
* Family Guy has been naked for a laugh at least once. Usually, it's Peter Griffin, whose gut hangs down low enough to cover his genitals. In one episode, they find out their neighbors are nudists, and most of the family ends up naked in an attempt to show acceptance. In a later episode, they run into the nudists at a KISS concert - wearing nothing but face paint and guitars, of course.
* Family Guy has Brian getting run over by a car and later succumbing to his wounds. Dampened by the fact that he is saved a few episodes later.
* Family Guy has Buddy Cianci Junior High and James Woods High School.
* Family Guy has Chris (their teenaged son) drinking a lot of energy drinks, like his dad. We see Peter try to milk a cow at super speed, causing its teats to catch on fire. A few seconds later, we see Chris running downstairs with his crotch on fire, with the obvious implication.
* Family Guy has done several cutaway gags, most notably one about hooking up with someone over Craigslist (a dangerous proposition even in the best case scenario).
* Family Guy has Joe buy a talking parrot. Peter immediately teaches it the word "cripple", much to Joe's dismay.
* Family Guy has Peter running to the bathroom at a high-school reunion, knocking down with ease everyone in their path. Patriots quarterback, Tom Brady, happens to see how well he fights off the people and puts him on the team.
* Family Guy has Peter skipping work to go to a baseball game. His boss was also at that ball game.
* Family Guy has Peter step into an elevator with one other occupant. The other guy starts sniffing with a disgusted look on his face. Peter's response?
* Family Guy has Peter's toy company taken over by a tobacco company. They produce a line of smoking babies that puff a cigarette and giddily announce "Tastes like happy!"
* Family Guy has Quagmire getting married to a woman who turns out to be insane and threatens suicide every time he tries to divorce her.
* Family Guy has Stewie kidnapping the head cheerleader so that Meg can take her place on the cheerleading squad.
* Family Guy has Stewie teaching piano (a missed note = electric shock). He also has a bassoon student hanging over a shark pit.
* Family Guy, has suicidal tendencies, reckless behavior, and anger issues, and has been noted to hear voices in her head. Chris, on the other hand, has displayed violent tendencies (i.e drowning a mouse in a puddle) and, like Meg, anger issues; at the same time, he displays some lack of comprehension and basic understanding, along with occasionally showing savant traits, such as artistic ability and vast knowledge of film.
* Family Guy has taken to this lately. While the most prominent example is Season 5's "Boys Do Cry", in which he dresses as a girl to escape a witch-hunting mob and ends up entering a beauty pageant during the Griffins' stay in Texas, he also dressed up in another episode and pretended to be Brian's girlfriend to spark jealousy on another girl. Men at the restaurant recognized his female persona, so he's obviously used it at least once before.
* Family Guy has the characters mentioning Meg's funeral. They cut away to a coffin being lowered into the ground...and then Peter runs in from offscreen, chucks Meg's body under the coffin and runs away yelling "Thanks, didn't want to pay for the

hole!"
* Family Guy has the Griffins visiting the Amish. Meg, who is behind a horse and is distracted by talking to one of the Amish, gets crapped on by a horse offscreen while the Amish man comments on it. Meg screams as the horse keeps shitting on her and it's implied she's completely completely submerged in horse crap when she stops screaming, which has the Amish man suggest to her that she should close her mouth.
* Family Guy has this mild subversion on the trope, between Brian and Stewie when Stewie plans to blackmail Brian:
* Family Guy hates Peter. When Peter brought up the idea of marrying Lois, Mr. Pewterschmidt tried to bribe Peter with a check for one million dollars to leave Lois alone forever. Peter, in his own awkward way, refused, tearing up the check.
* Family Guy have a similar gag in one episode while speaking on walkie-talkies. Stewie informs Brian that he has to end all of his transmissions with the word "over," which causes a misunderstanding when Brian actually ends a sentence with the word "over."
* Family Guy Have one of these every series or two, usually in their "Road To..." episodes, and one regarding the benefits of marijuana in episode "420".
* Family Guy having a strong presence. It was banned in Malaysia at one point, but the ban has been rescinded, although it now only airs in a heavily butchered form on satellite TV. According to one of the writers, the show did receive a short-lived Korean dub in South Korea before it got axed. Despite this, the show still has its animation outsourced there. Also, South Africa rescinded the ban some years ago, and is currently airing on FOX Africa via the South African cable provider DS TV. Taiwan had since lifted the ban and is currently showing on FOX Taiwan with dubs and cuts.
* Family Guy; he dons a jetpack, then dumps a fishbowl and puts it on his head.
* Family Guy He even has Chris come in and say hello, while taking over the beating.
* Family Guy He gets on the plane, but when he sees the other passengers, he has second thoughts, and finally says he can't do it when he sees a group of Girl Scouts singing "We like being alive. Oh, we like being alive..."
* Family Guy. He is a step forward from being just a regular Casanova - he is a pervert, victimizer, and rapist as well.
* Family Guy. He jumps up, breaks the light bulb, and gets his face cut on the broken glass. He screams in pain and forgets his idea. Then he remembers it. Rinse and repeat.
* Family Guy, he opens fire after Peter accidentally sprinkles paprika instead of talcum powder on him during a diaper change.
* Family Guy. He remembers when they had to housebreak it after it peed on the floor, including rubbing its "nose" in the puddle.
* Family Guy, he says they need to have an orgy. Cut to a shot of them piled on top of each other... and no one is horny.
* Family Guy. He suggests keeping the ghost on as mayor until they find someone else for the position.
* Family Guy. He then takes his position, "the butterpat", climbing on top of the pile and literally melting all over them.
* Family Guy: "Hey, that's way better than what I was thinking; I was gonna suggest we kill and eat the kids! You know...half-jokingly at first so I could gauge your reaction..."
* Family Guy himself is also the greatest Cloudcuckoolander in the show.
* Family Guy hints at an explanation, he returns the defective/failed ACME products for store credit every time.
* Family Guy hired by the company to stand next to Meg and make her look better by comparison. It is comically effective.
* Family Guy. His house is full of pictures of him, including one of him in a wedding dress.
* Family Guy his phone number, he starts off with 555. At which point Roy just tells him that if Richard doesn't want to give him his real phone number, don't lie.

* Family Guy. How about the episode where Lois becomes a lounge singer, or where she becomes a model (over the objections of Peter AND her father)?
* Family Guy, Hugh Downs gives a magic whistle to a random bystander after he (Downs) had single-handedly defeated a serial killer (he also gives the guy John Stossel's cell number, which is apparently just as good).
* Family Guy: "I can't kill him/her, not now, despite my years of attempting it."
* Family Guy: "If you were to cook any slower... why you wouldn't be cooking very fast, now would you?"
* Family Guy in 2005, after which the popularity of the series skyrocketed.
* Family Guy in a fake ad where the mother is trying to talk to the daughter about it. But all the daughter can recall are happy images.
* Family Guy. In another episode where they had become a reality TV family and Meg was kicked out of the family for being boring, Peter and Lois met her in this fashion, complete with offering her a cigarette.
* Family Guy, in an unaired cutaway gag from season 9, "Road to the North Pole".
* Family Guy: In a rare, emotional scene, Lois has to politely let down Brian by informing them that they are just friends and she doesn't want to cause problems between them, despite his growing interest for her.
* Family Guy: In "Baby Not on Board", Peter plays a Reveille on a bugle to get his kids out of bed and in the car for the family's big road trip, prompting a hilarious reaction from Chris.
* Family Guy In "Baking Bad" when told that he's donating his blood after believing that he was getting paid for it, he sucks the blood from his IV drip back into his body.
* Family Guy, in Brazil, is called "Uma Família da Pesada" (literally "A Heavy-Set Family", but the "da pesada"/"heavy-set" idiom in Brazilian refers to people who always get into crazy, potentially danergous situations).
* Family Guy: In "Brian Griffin's House of Payne", Brian meets with two network executives who look normal when facing front, but their profiles reveal they have extremely long noses.
* Family Guy: In "He's Too Sexy for His Fat", Lois constantly did this to Peter when he got surgery to become muscular and good-looking.
* Family Guy: In "He's Too Sexy for His Fat", Lois is watching a post-plastic surgery, more muscular than usual Peter walk away and Brian tries to talk to her.
* Family Guy in his spare time, which he gives to his students as prizes. Mrs. GeneSplicer also counts, since she got him some of the skulls as a birthday present.
* Family Guy: In "Killer Queen", Peter and Chris are sent to fat camp, where Peter quickly tries to establish himself as the "cabin clown". When the lamb he's riding on (as part of a joke about "going on the lam") cracks a joke of his own, Peter quickly tells him to stop.
* Family Guy in later seasons tends to use such things as rape and violence for comedy. In the episode "PTV", when Peter, Brian, and Stewie sing a song complaining about the FCC, some of the more "obscene" scenes from previous episodes are cropped and strung together in a short montage during the song.
* Family Guy: In "New Kidney in Town", Peter Griffin makes his own energy drink. One ingredient is a raw egg, including the shell.
* Family Guy: In "Ocean's Three and a Half", Carter does this to Bill Gates when he taunts him by saying he doesn't own a Zune and has an iPod "like the rest of the world".
* Family Guy: In one episode Lois overeats and Peter eventually finds that he likes sex with her more now that she's fat. So he literally keeps stuffing food in her mouth in one scene upon realizing finding that she's hotter fat.
* Family Guy. In one scene Chris asks her what kind of gifts boys have gotten for her and she describes imaginary gifts given to her by her imaginary boyfriend prince William before laughing crazily and running out of the room in tears.
* Family Guy: In "Road to Rhode Island", Stewie tries to wake up Brian while they're staying at a motel. After failing to wake him through other means, Stewie drags him into the shower and turns it on.

* Family Guy: In "Road to Rupert", Brian looks at a gorilla doll and says that if you buy one, they save a real gorilla in the wild...and if you don't, they'll kill one ("Boy, these guys are really playing hardball").
* Family Guy: In "Road to the Multiverse", Brian and Stewie visit a universe where Japan dominated the world after World War II.
* Family Guy) in "Stand Your Brown"; Peter is on trial for shooting Cleveland Jr., and his lawyer tries to get him out of it by producing a knife as evidence (even though no knife was involved in the incident).
* Family Guy instead of Peter's. He fears that it's the first step towards a life where all they do is sit at the table across from each other talking about Special K cereal.
* Family Guy: In "Stewie B. Goode", Peter gets Meg to crouch behind Brian so he [Peter] can push him into the pool. However, Brian walks out of the way before Peter runs over to him, and Peter ends up hurting himself and Meg.
* Family Guy: In the episode "Excellence in Broadcasting", Brian moves in with Rush Limbaugh and replaces several of his belongings with shoddy, American-made ones. He also got him a new cat that moos at him.
* Family Guy in the episode "Excellence In Broadcasting". Rush actually manages to convince Brian to change his political views and develop a new-found sense of patriotism. Brian moves in with Rush, and takes the liberty of replacing all of Rush's appliances with American-made versions. They all break catastrophically as Brian lists off what he replaced one by one, which includes: the toaster, refrigerator, dishwasher, stove, oven, coffee maker, coffee mug, fine china dishware, cupboard door hinges, light bulbs, ceiling fan, garbage disposal, faucets, Rush's man-bra, and his cat, which MOOS.
* Family Guy: in the episode "Mind over Murder", Lois prepares Peter's favorite meal with a candlelit setting in an attempt to cheer him up during his house arrest, but Peter forgot about the date and spent the entire evening building a bar in the basement leaving Lois waiting all night.
* Family Guy: In the episode "Patriot Games", Peter is signed by the New England Patriots to play center, but his antics force the team to trade him to a team in London. After challenging Tom Brady and the Patriots to a game and losing, he retires.
* Family Guy, in the episode where he made a giant golden Dig'Em statue and the town protests against this waste in taxpayer money.
* Family Guy in the episode where Quagmire falls in love with the Griffins' temporary housekeeper, Joan.
* Family Guy. In "The Fat Guy Strangler", Patrick tries to strangle Peter as he is saying "Nothing left to do but finish this sen-"
* Family Guy: In the first episode, Brian is seen urinating on a fire hydrant, though he goes by standing up like a human would at a urinal.
* Family Guy in the form of an overhead shot of Peter getting chased by everyone at the Million Man March.
* Family Guy: In "The Griffin Winter Games", Stewie trips while figure skating, causing him to bite off and swallow the end of his tongue.
* Family Guy in the last sentence. Of course, when things start going to hell a little later when the plane runs out of fuel halfway through the flight, he starts freaking out.
* Family Guy in them. Notably, unlike the other characters the other authors dislike, these characters were never shown with either redeeming traits or getting good fortune.
* Family Guy. In the only episode where he appears, he sees Peter sitting with his girlfriend and threatens to kill him if he sees him again in the Renaissance fair. He even hates Peter as much as telling him to leave the fair when the latter only came to watch the jousting competition in the stands.
* Family Guy: In "The Son Also Draws", Peter claims to be Native American to get the family car back from a casino after Lois gambles it away:
* Family Guy: "Into Harmony's Way" has an interesting variation of the two-person scream: Peter and Quagmire get freaked out by a bee and both start screaming, which

results in them finding out their voices make great harmony, setting the stage for the episode.
* Family Guy: In "Valentine's Day in Quahog", when Stewie returns from a time-travel trip in which he kissed a baby that turned out to be Lois.
* Family Guy inverts this with Chris, Meg, and Stewie. Meg is the eldest sibling, but she is constantly abused and bullied by Chris, who is the middle child. Stewie, being the youngest (and a baby) of the three, also abuses Meg but not as much as Chris and has made attempts to stick up for Meg on a few occasions.
* Family Guy involved a car with a GPS system, and one of its voice settings was "Yakov Smirnoff".
* Family Guy involves the TV transmitter getting destroyed, taking out TV for all of Quahog. This results in the following situation:
* Family Guy in which Peter gets fired and David Spade gets brought in to play his replacement, at a script read one of his first lines is, "the decade called, they want their object back."
* Family Guy in which Peter literally becomes friends with Jesus, and has since became a recurring character. He is much more laid back and prone to as much trouble as the main cast. One Christmas, Peter and the guys try to help Him get laid, because he tells Peter he's a virgin, but then they find out it's a scam routine of his and he was trying to get closer to Lois.
* Family Guy in which Stewie obliges Brian to bring the character of Snuggly Jeff back from the dead.
* Family Guy. Ironically, this trope is played straight with him in an earlier episode where he sings a song about how much he misses her since she spends too much time campaigning against his father for school president. Even getting an 'aww' from the audience before he blasts them.
* Family Guy is absurd from the first until the final frame, with appearances of fictional characters and creatures appearing alongside the cast.
* Family Guy is actually more human than most of the Griffin family, but he is a dog. When he visited his birthplace...
* Family Guy is adamant to point out there is no prize at the bottom of his cereal.
* Family Guy is an inversion. It was conceived as a direct-to-video movie shortly before FOX decided to renew the series a few years after its earlier cancellation. The movie was written in a way that it could split into three episodes, all connected to a main story arc, and shown on television.
* Family Guy is an old lady who behaves in a stereotypically grandmotherly way (fixing Dylan's sock for him, and reminiscing about how things used to be).
* Family Guy is good at this. One good example is the episode "I Dream of Jesus," which begins with lunch at a 1950s style diner, moves on to Peter becoming obsessed with a Trashmen song, and winds up being about the return of Jesus Christ.
* Family Guy is incredibly pompous with an over-inflated ego from his job as the anchor on the local nightly news.
* Family Guy is in the same vein as Hanks' earlier work and laughs uncontrollably at the line "I have AIDS".
* Family Guy is largely a way to cope with his failed relationship with Cheryl Tiegs.
* Family Guy is less prominent, etc. There are even a few dramatic and serious moments once in a while. Later seasons eventually managed to lose this goodwill, though, for a variety of reasons best listed on other pages.
* Family Guy is practically made of these. Every episode the viewers are nearly guaranteed a reference to when any of the Griffins or their ancestors did something that altered history in some way.
* Family Guy is seen playing darts with the boys at the Drunken Clam. His wife shows up, and they have one of their signature Big Ball of Violence fistfights. Quagmire gets sucked into it, then spat back out. His response: "What the hell? Did I just get laid?"
* Family Guy is so crazy he struck up a relationship with his hand and even tried to marry it. His other hand, however, rejected the proposal.
* Family Guy is this underneath his robes. In one episode we see him in normal

person clothes.
* Family Guy, it has also been attributed to alcohol abuse and mild mental retardation.
* Family Guy. It's made worse by how they both seem to enjoy it up until the reveal.
* Family Guy it's revealed that Brian (a talking dog) has a son with an ex-girlfriend; both of them are fully human.
* Family Guy, it turns out she's actually a robot created by Disney's Imagineers to be the next massive brand name to sell to teenage kids. When this is discovered Stewie is shocked, while Brian is intirgued, wanting some 'quality time' with the Cyrus-bot. Long story short, he accidentally switches her mode with a stupid-in-hindsight button that turns her default setting to killing all humans. A King Kong parody with Peter and Quagmire in a biplane follows.
* Family Guy it was made-up (or had something to do with Cleveland) because they can't imagine how they got away with it otherwise.
* Family Guy, it was spoofed as Pearl, the old singer, was shown in a documentary getting a meager sum of a couple thousand dollars a long time ago, "which is worth over $3 billion today".
* Family Guy: Joan is shown to be very sweet and she falls in love with Quagmire. The two were married, but when Quagmire mentioned the prospect of divorce, Joan does a complete 180 in her mannerisms and threatens to kill herself and Quagmire.
* Family Guy: Joe gathers his handicapped friends and together form a huge, mecha-like entity called "Crippletron''.
* Family Guy Joe gets a past life reading and finds out he was once an octopus. He thinks this is great until a shark swims past and bites off all his tentacles.
* Family Guy Joe got leg transplants and becomes un-crippled. He becomes more exercise-obsessed than ever, leading him to abandon his slothful friends for more active (and more annoying) ones, and finally separate from Bonnie. This ends when he and his friends got into a massive brawl and Bonnie tries to shoot him in the spine until he takes the gun and does it himself, causing him to once again be crippled (and humble).
* Family Guy). Joe says he could easily arrest Quagmire just for saying that, and that no matter how awful Jeff is, it's still murder. However, Joe ends up changing his mind once he sees Jeff beating up Brenda, and allows Quagmire to murder Jeff so that Brenda can be free.
* Family Guy, Joe sees the cop uniforms in his house and assumes that means that he's a stripper. Even near the end of the episode, he's still convinced of that.
* Family Guy, Joe Swanson of the Quahog Police Department gets into an argument with a state police officer over jurisdiction in the town after it's put under quarantine, who then argues with an FBI official over the matter. As all three of them are wheelchair-bound and are on the road, a crossing guard tells them that he has jurisdiction over all of them.
* Family Guy. Joe tells Quagmire Taylor Hanson is a guy, but Quagmire thinks they're joking until Peter backs up Joe's statement. Quagmire was not happy to learn this.
* Family Guy Kathy Ireland standee and buries it in the yard when it's ripped in half.
* Family Guy lampshades and inverts this. Peter imagines killing himself with a revolver and splattering his brains on the wall. Cut to reality, they're still in the bar.
* Family Guy". Later, when Quagmire's being chased by an angry Cleveland, he remembers the Mayor's advice and throws the banana at Cleveland. It bounces off harmlessly, they stop, look expectantly at the banana on the ground, and after a few seconds, the chase resumes.
* Family Guy; local pedophile Herbert wanted an ice cream truck and is shown driving one in "And Then There Were Fewer". In "Infernal Affairs", after Ernie the Giant Chicken steals his ice cream truck, he screams, "You bastard!".
* Family Guy, Lois asks Peter to stop the toad licking problem. Peter announces he has a plan, then we cut to Peter saying "And that's my plan," in the principal's

office of the local high school. The principal's response is, "What plan? You just came in here, sat down, and said, 'And that's my plan.'" We get a similar cut, and the principal now knows the plan. The problem is soon stopped.
* Family Guy. Lois came from a ridiculously wealthy family and could have hired a different gigolo every night, if she were looking for a hunk.
* Family Guy, Lois challenges everyone to keep their eyes closed in prayer lest they be gay. One boy does so anyway and comes in contact with a living mounted deer head. They start a romance.
* Family Guy: Lois Griffin is the target of a mob contract foiled by chance.
* Family Guy. Lois offering no sympathy (even if the reason was stupid) doesn't help matters. It gets so bad that every man starts thinking that Dr. Hartman had molested them and he loses his license.
* Family Guy, Lois starts talking about how together Peter and herself can accomplish anything, that Peter quickly changes into a meaningless rousing speech.
* Family Guy). Luckily, they're rescued by Joe before the room is completely full.
* Family Guy makes several jokes about this. ("Wow, Brian, it's moments like this that make me sad that you're gonna die fifty years before I do."; "Beer that never goes flat!...That means that this beer still won't be flat by the time that you're dead and we...you know...get a new dog to help the kids forget you.")
* Family Guy: Many episodes portray mainstream Christianity and Judaism as a scam, either in spot gags or as a main driver of the plot.
* Family Guy, Mayor Adam West is on trial for murdering an aide that was planning to blackmail him, and despite Mayor West being covered in blood during a press conference and the knife used belonging to him, Brian votes not guilty. Eventually, he is able to convince everyone that Mayor West is innocent and he is exonerated. The episode's last scene reveals that West was in fact innocent and that the murder was the work of a serial killer. One that cuts the Griffins' power...
* Family Guy, Meg asks her mom how she got blueprints for the D'Amico house.
* Family Guy: Meg becomes interested in Neil (who had been obsessed with Meg) only after she realizes he has a girlfriend.
* Family Guy: Meg Griffin does this in the trying to win an Emmy Award episode.
* Family Guy: Meg Griffin took it to parody levels in an episode where she went to prison for a few months.
* Family Guy, Meg is desperate for male attention, but even she wouldn't go out with Neil Goldman. She even use her internship on the local new program to make a segment about it.
* Family Guy, Meg's date turns out to be a black market dealer who takes her kidney. After spending the day together, they kiss and he gives the kidney back to her in a jar.
* Family Guy: Meg, the outcast and loser member of the Griffin family, refuses to date Neil Goldman, an equally geeky outcast of a classmate of Meg's whom Meg finds annoying and a clueless loser. Apparently, the butt-ugly Meg — forever wanting to have sex with desirable football hunks and other desirable young men — doesn't believe in "beggars can't be choosers." Tom Tucker even calls her on it in one episode.
* Family Guy: Meg threatens this in the middle of a rant to her parents about how terrible they are, saying that she's just gonna go upstairs and eat a whole bowl of peanuts. It has no effect on Peter and Lois because they don't even remember that she's allergic to peanuts.
* Family Guy. Meg unknowingly joins a cult trying to be popular, wherein the leader of said cult tries to initiate a mass suicide through... You guessed it. It doesn't go too well. Peter was there to interrupt Meg from drinking the poison while everyone else has drank their cup.
* Family Guy, Meg, working as a diner waitress, tells a lie about Stewie being her crack-addicted child so she could get enough pity tips from customers to buy a Prada bag. All goes well until the Social Services take Stewie away and puts him in a foster home (his addictive behavior to the diner's pancakes didn't help). Meg is then forced to trade her purse to get Stewie back.
* Family Guy mocks this to hell and back. In one episode, Peter finds out that he

has black ancestors, and everybody starts treating him differently. When a cop pulls him over for speeding, Peter is perfectly polite, and the cop doesn't act unusually until he remembers that particular little tidbit.
* Family Guy moments (particularly in the first RUN of the series, where they were more frequent).
* Family Guy Mort can hear is gibberish. He understands just fine when Peter talks about sales at others business's, just not his own.
* Family Guy movie features Stewie attempting to convince Brian to hit him so he can get money for a plane ticket from the tooth fairy:
* Family Guy movie is shown and a piece of Alderaan floats through space to come down on top of Princess Leia on the Moon of Endor, knocking her off her (ten-speed) speeder bike. Luckily for her, it was just a small piece, about the size of a baseball.
* Family Guy movies sold so well and got such a positive reaction from fans that they continued the series.
* Family Guy. Nobody else sees it and they all think that Chris is imagining it.
* Family Guy occasionally features characters wandering completely off subject to point out a double entendre to anyone nearby (such as the fact that the lead character's name is "Peter").
* Family Guy occasionally gives the main characters actual progression. There's the episode where Chris finally went to high school, several episodes regarding Meg's gradual aging (she was 15 at the beginning of season 1, and aged to 16 in a later episode of the same season, started another episode in a later season with her 17th birthday, and eventually aged to 18 by season 10), and another episode beginning with Lois' 41st birthday. However, it looks strange that Meg has aged somewhat normally while Chris only aged one year throughout the whole series.
* Family Guy occasionally pretends to be in a relationship, although none of her family members ever believe her.
* Family Guy occurs as a new mole is suspected to be a melanoma. In real life, this is a definite hazard of early childhood sunburns, though it might not develop for many years.
* Family Guy of hot chicks and a soldier diving into a pile of money. A disclaimer quickly notes your experience may differ but it works on a good chunk of the school anyway.
* Family Guy of taking pages from that show. One example is when "Homer the Moe" reused the same jukebox gag from "Let's Go to the Hop", only with more blood.
* Family Guy often depicts Chris and Meg eating "Generic Puffs", the decoration on the box being just the brand name on a white background.
* Family Guy of the cast attending the film's premiere, Peter notices the film has gone into intermission and complains that peed in his cup for nothing. Chris then tells him that he just kicked over his Coke.
* Family Guy of the swashbuckling movie, using the playground equipment to perform stunts.
* Family Guy, once during a cutaway gag with "that Persian woman in the attic", and again when Peter was trying to sleep on Cleveland's couch. The second viewer mail episode shows Stewie hearing it and dreaming about them as lumberjacks.
* Family Guy once masturbated in space. He later said that the inside of the shuttle began to look like a snowglobe after a while.
* Family Guy once shoved a toy up his nose. It poked his brain and he claimed that he forgot math as a result.
* Family Guy once swallowed his phone and dialed by punching himself in the gut. He was once put on hold and Lois told him to open his mouth so she could hear the song that was playing.
* Family Guy once took girl advice from his dad with predictable results.
* Family Guy. One episode had Chris being elected Homecoming King, much to everyone's surprise. Stewie and Brian suspect that the student body wants to prank Chris on homecoming night and that's why he was elected. However, after watching a local news segment, they realize the student body thought Chris was mentally handicapped and voted him Homecoming King to be nice.

* Family Guy, one episode involves the porn film "Quest for Fur" that Lois Griffin acted in when she was younger. At the end of the episode, the film is shown and features a pizza delivery boy that strongly resembles Stewie Griffin (who had been worried about being conceived during the filming of the porno). All this, despite the film being about cavemen.
* Family Guy: one of Peter's inventions flings Stewie into a tree, where he sees the Keebler elves plotting to "attack the Rice Krispies guys at dawn". Later, at The Drunken Clam, Crackle and Pop are seen speaking of the attack and mourning the death of Snap.
* Family Guy... only to have him freeze himself again after learning the Jews are still around.
* Family Guy on the red carpet. It takes one sentence from Bowie to turn Tricia from deadpan reporter to shrieking, leg-humping fangirl.
* Family Guy. On the show proper, Stewie uses it at the start of his one-man show, before being heckled off by a drunken Elroy Jetson.
* Family Guy or the like. With today's Stewie, this would no longer seem particularly surprising the way it did at the time.
* Family Guy over for dinner, Brian asks him to prove that he is Jesus. So Jesus instantly turns everyone's dinner into ice cream. And, at the request of Peter after the above incident, enlarged Lois' breasts.
* Family Guy: Paraplegic officer Joe Swanson is usually good at his job, but he has outright looked the other way many times when his closest friends – Peter, Quagmire, and Cleveland – break the law, even if not explicitly stated as such in the given episode. Instances include:
* Family Guy: parodied in the episode "Crimes and Meg's Demeanor", where Brian(who has a broken leg) watches the neighbors through his binoculars and saw Principal Shepherd drags a trash bag leaking out red liquid and he thinks that he killed his wife. Turns out his wife moved out and the red liquid was from the canned food he stole from the high school to make ends meet.
* Family Guy parodied this in a cutaway for "Hurry Up, Shrimp". While no particular guarantee is given, it's shown that apparently, the idea behind it is to get the shrimp delivered as fast as possible. They add a disclaimer that they're "not responsible for undercooked shrimp."
* Family Guy parodied this in an episode that also parodied Batman, where Space Ghost would "get a word" every time he shot something with his powerbands.
* Family Guy parodied this in an episode where the network wanted to reboot the show. One of the ideas is to do this, where Chris is the lead, he is married to Tricia Takanawa, and Joe lives with them. Peter and Lois are stated to be dead, while the rest of the family moved to Australia.
* Family Guy parodied this in one episode by having a commercial narrator ask someone if he'd kill a man for a Klondike bar (he does).
* Family Guy parodied this, with Mayor Adam West cementing over every grave in the cemetery... "You'll thank me when no one eats your brain. You'll thank me."
* Family Guy parodied this with Peter trying to invoke the trope by growing a moustache. Naturally, at least some innate badassness is required for the stache to actually work, and Peter does manage to rescue a guy from a burning building while wearing it. It gets burnt off in the attempt. While mourning his loss of facial hair, he ate so many hamburgers that he had a stroke.
* Family Guy parodies this in its "Mr. Saturday Knight" episode. Particularly memorable is the scene where the Black Knight shaves his beard while still wearing his helmet and cuts himself shaving like this.
* Family Guy parodies this in one episode. A family therapist tells the Griffins to write angry letters addressed to the other family members, but not send them. Naturally, Peter missed that last part of the instructions.
* Family Guy parody in the episode "Mr. Saturday Knight". On the DVD commentary, she claims she sounds "like shit".
* Family Guy parody "Something, Something, Something, Dark Side" Darth Stewie is talking to an underling, and suddenly notices that the underling is eating a piece of cake. "Cake? Where did you get cake?" "Oh, it's Gary's birthday, but I think

there isn't any cake left." (Quotes not 100% accurate, but that's the gist.)
* Family Guy parody: "We're evacuating into outer space where we have literally infinite directions to flee. However, we have decided that we'll fly directly towards the fleet of star destroyers."
* Family Guy. Peter always wins in his scrapes against Ernie the Giant Chicken, no matter how bloodied and disheveled he himself may end up in the process.
* Family Guy. Peter and his friends are this but the only one who stands out the most is QUAGMIRE.
* Family Guy Peter and his friends are trapped on what they believe to be a remote island. At one point, they decide to have an orgy, thinking no one will see. The next shot is of a cruise ship passing by the island:
* Family Guy, Peter and his friends set fire to an island to escape its prison. After flying away in a nearby helicopter, Quagmire laments on the destruction they caused.
* Family Guy, Peter and Lois agree to make out in one of the restaurant bathrooms. When Peter comes out of the bathroom thanking Lois, she says she didn't go in with him. The person who he made out with turns out to be a male clone of Lois, who sits at a table with a female clone of Peter.
* Family Guy, Peter and Lois formed a hippie-esque folk duo, A Handful of Peter, when they were younger and decide to revive it for a talent show. The problem being that that they get stoned out of their minds because they don't think they're creative without it. At the talent show they perform a song called "In God's Eyes We Are All Hot", but afterward we learn that they lost, and we see that their actual performance was nothing but atonal screaming.
* Family Guy: Peter and the Giant Chicken are both fully aware of their rivalry. However, since their fights have never been relevant to the plot of any episode, Peter's family are unaware of the Giant Chicken, so Peter celebrating the Giant Chicken's upcoming death in "Fecal Matters" is lost on them.
* Family Guy. Peter bought Meg a tank instead of a car. Brian and Stewie used it to destroy Superstore USA.
* Family Guy). Peter builds a multiplex in the back yard, then discovers that underneath is an Indian burial ground. He then finds an ancient Indian skull and uses it as codpiece. And then uses it to pee in. You'd think building a multiplex over an Indian burial ground would be enough to get him haunted for life, but noooo...
* Family Guy: Peter claims that he'd sell his soul to be famous. Cue a scene in Hell where Satan is pleased to hear that, only to learn that Peter's sold his soul twice already. Angry, he asks if anyone in Hell is a lawyer. Everyone raises their hands.
* Family Guy, Peter, Cleveland, and Joe get arrested for stolen valor. The judge sentenced them to join the marines, but reduced the service to US Coast Guard. Quagmire, who is a navy vet, joins them at the urging of Ida.
* Family Guy, Peter could play the piano only when plastered. However, it wasn't a straight example of this trope. They didn't suggest this idiosyncrasy was because he learned to play the piano while drunk. Instead, apparently without learning to play or practicing beforehand, he just inexplicably developed a talent for playing the piano that required him to be drunk.
* Family Guy, Peter doesn't want to tell Lois that he's lost his job, which leads to a Fawlty Towers Plot. First, he disguises himself as a lamp to cover up the fact that he's not at work when he should be. Then, when he applies for welfare and gets a much bigger check then expected by mistake, he covers that up by claiming he got a big raise at work. His lies come crashing down when Lois is handed the second welfare check by the postal carrier.
* Family Guy: Peter does this while making love to Lois with the end of the video Lois just made to get him to stop watching porn.
* Family Guy, Peter encounters the same bully who picked on him in his school days. He decides to beat him up after what he had done, but before he can do so, Chris beats HIM up and yells at him to stop bullying people.
* Family Guy Peter gains the ability to transform anyone he touches into a clone of

Robin Williams.
* Family Guy, Peter gets amnesia from a blow to the head. This amnesia is cured when the Giant Chicken clobbers him in the head with a rake. It's then immediately reinstated when Peter insults the Giant Chicken and the latter beans the former with a length of pipe. This is repeated multiple times. Peter suffers no ill effects, except for amnesia from every other bonk, which is reversed upon the very next bonk (fortunately, the Giant Chicken had an odd number of objects to strike Peter with).
* Family Guy, Peter gets a Snickers bar in a cutaway gag, and inside Stewie's time machine, Rupert has a Subway sandwich in his lap.
* Family Guy, Peter gets fed up with searching for a parking space at the mall and just drives onto another car, crushing it like a monster truck.
* Family Guy Peter gets obsessed with the song "Surfin' Bird" and plays/sings it nonstop, intentionally trying to annoy people with it.
* Family Guy. Peter goes into the IRS for his audit, expecting to be dragged over the coals. His auditor turns out to be a perfectly kind and friendly woman and in the end, Peter owes nothing, though unfortunately, was not receiving a refund.
* Family Guy: Peter goes to the Mafia's Don, since it's the Don's daughter's wedding (and the Don can never refuse a request at his daughter's wedding), intending to ask to have the price taken off his wife's head. Peter then gets distracted and instead asks for a piece of tiramisu.
* Family Guy Peter Griffin is named president of a cigarette company for the same reason.
* Family Guy, Peter Griffin is rather prone to this, one of the most notable examples being him repeatedly smashing the face of his daughter's tormentor, Connie D'Amico, into the glass of a fire extinguisher panel repeatedly.
* Family Guy, Peter Griffin once destroyed a rack of "terrible pharmacy toys" at Mort's pharmacy with a cannon (it was the episode where he decided to become a pirate) in order to prevent them being given as lame last-minute gifts.
* Family Guy: Peter Griffin once had this happen while riding on a motorcycle:
* Family Guy: Peter Griffin, though he usually think of some ridiculous thing he would spend the money on. In fact, in the very first episode, a computer error at the welfare office resulted in them getting a huge check from the government, which he used in part to build a moat around the house (to keep the Black Knight away, of course).
* Family Guy, Peter/Han is rewarded for rescuing Lois/Leia with a gift basket.
* Family Guy, Peter has just launched himself from a cannon. Cut to a living room:
* Family Guy, Peter has to become Death when the reaper twists his ankle. It's also told in another episode that Death inherited the job from his father.
* Family Guy. Peter immediately grabs a shotgun and stalks over to her boyfriend's house to force him to marry her. In response to Meg's protests?
* Family Guy; Peter initially can't find his pillow, but he was just lying on it. We then see a half-eaten sheep in his room trying to crawl to safety.
* Family Guy: Peter invites Mr. Weed, the owner of the toy company he works at, over for dinner. Weed chokes on a dinner roll (catapulted from Brian's mouth after Brian chokes & Peter gives him the Heimlich maneuver) and dies.
* Family Guy: Peter is riding a tricycle. Because of Peter's age and size, the tricycle breaks. Peter's mom is later seen putting a band-aid on Peter's bum and kissing it. Peter runs off with glee.
* Family Guy, Peter is so jealous of Joe's home movie theater that he decides to build an addition onto his house to create an even bigger and better theater than Joe's. Of course, this plot is quickly forgotten once Peter digs up an Indian skull and the real plot of the episode starts.
* Family Guy. Peter points out to Lois in the episode "Brothers & Sisters" that back when he and Lois first became a couple, hardly anyone felt that they made a good match — in fact, as Lois soon realizes, Carol (Lois's sister) was one of the few people to have supported the relationship from the very beginning.
* Family Guy. Peter presses a button clearly marked "Do Not Press This Button". A small Asian man walks up to him, bows then kicks Peter in the head.

* Family Guy, Peter recounts the story of his ancestor, Moses Griffin, who led the Hebrews out of Egypt. His Rule Number One: Shut the hell up.
* Family Guy, Peter's cut-away-battles with the giant chicken eventually form an arc, of sorts.
* Family Guy, Peter sends Lois on a scavenger hunt following this model to distract her while he plays golf on their wedding anniversary. She doesn't figure it out until the last clue, which tells her to go back to the start; there, she happen to run into Cleveland and Loretta, who tell her what's really going on. When Lois storms over to the club to find him, Peter admits he didn't expect her to make it this far before he got back.
* Family Guy, Peter's offered the chance to get a free boat, but he decides to take the Mystery Box instead, which merely contains tickets to a stand-up comedy show.
* Family Guy, Peter takes advantage of his new immortality to antagonize a bunch of drunks in a bar.
* Family Guy: Peter tried to teach Chris how to defraud the restaurant by planting a dead guy in the soup bowl. Unfortunately, Chris' prop hadn't actually died yet...
* Family Guy: Peter wears a comedically tight corset in order to ride a rollercoaster which he otherwise wouldn't be let on because he's too fat. Of course, since he hasn't actually lost any weight, he's still way too heavy and ends up breaking the rollercoaster, causing a crash that kills at least one child.
* Family Guy pinball has Brian the dog blowing and popping a bubble-gum bubble... from his rear.
* Family Guy pinball. The only changes were to the graphics and sounds; the layout and rules remained the same.
* Family Guy plans and has not attempted to profit from his time machine, teleportation device, weather control device, mind control goggles, or countless weapons, ray guns, and shrink rays. It seems he develops them purely FOR SCIENCE!
* Family Guy played for laughs and the police had to stop Meg from raping Brian. Kent once calls her a psycho after she attempts to trick him into raping a sleeping Chris.
* Family Guy played this as a joke, with the newest cop show, where the hardened cop got paired with a kid from the streets, a robot, and a couch To Fight Crime!
* Family Guy play it straight, or sometimes just plain parodied using the characters themselves.
* Family Guy", police officer Joe was initially against Quagmire's suggestion that they kill his sister's abusive boyfriend, since it would be murder. But when he witnesses the abuse for himself, his response is...
* Family Guy Presents: Laugh It Up, Fuzzball reveals that the creators were completely serious about it.
* Family Guy Presents: Laugh It Up, Fuzzball the same conversation happened with Dack's statement being taken for the metaphor you'd expect. In "Blue Harvest", we see Dack fly solo against a star destroyer and get nonchalantly one-shotted.
* Family Guy Presents: Laugh It Up, Fuzzball: "Wait a minute" (Fires blaster, cave rumbles), "Hang on a second" (Fires blaster again, cave rumbles slightly louder) "What's going on here?" (Fires blaster a third time) "Something doesn't add up..." (Fires blaster a fourth time) "Just a minute." (Fires blaster a fifth time) "Time out!" (Fires Blaster a sixth time) "This ain't quite right" (Fires blaster a seventh time, cave rumbles violently) "Oh now I get it, we should run!"
* Family Guy: Quagmire is often shown wearing a pair of leopard print briefs. This seems to emphasize his status as a sex fiend.
* Family Guy: Quagmire is revealed to be bald in one episode when he loses his toupee at a baseball game while fighting over a stray ball with Brian and the embarassing moment being caught on the jumbotron and ends up on the local news. He briefly tries to embrace his baldness and "bald culture", which apparently includes things like basement C.B radio and using a radar gun to catch speeding cars in the neighborhood, but everyone thinks he's become so annoying he decides to get a hair transplant from Dr Hartman and returns to his original personality.
* Family Guy, Quagmire makes this trope literal. His car has blow-up sex dolls in place of airbags, so when he crashes it results in this trope.

* Family Guy; Quagmire's bland living room turns into a fully-equipped bachelor pad with the press of a few buttons. In a later episode, there is a chase scene in his house in which every piece of scenery folds out into a bed when knocked.
* Family Guy, Quagmire teaches Chris pick-up lines but Chris delivers it poorly on a test subject.
* Family Guy: Quahog 5 News is frequently guilty of this trope, overplaying pop culture or non-news "news" while giving no attention to legitimate news.
* Family Guy: Quahog, Rhode Island is seemingly a suburb of Providence (with its skyline in the background), which has a modest metropolitan population of 1.6 million in real life, and a city proper of less than 200,000. Despite this, Quahog has an international airport, a subway system, and other "big city" features that even Providence lacks. Sometimes the small skyline resembles Providence well, other times it looks like a huge sprawling metropolis. Earlier episodes resembled the real-life area more (Peter Griffin even jumps off a skyscraper resembling one in Providence), whereas later episodes drifted apart from the real-life counterpart, where Quahog has a split personality between small town and bustling metropolis depending on the nature of the plot.
* Family Guy rapidly consuming a comically large amount of food at a buffet, including standing right by the serving tables instead of sitting down, while her hapless dietitian completely fails to stop her.
* Family Guy, reacting this way upon making a perfect bid in Contestant's Row.
* Family Guy reaction when Marge thinks he's talking about another movie.
* Family Guy" reveals he was poking this trope for fun, and actually has an American accent.
* Family Guy said it was one of the most vile jokes they'd ever gotten away with, and that was mostly because the censors assumed that the writers had made the term "Cleveland steamer" up and didn't know it was an actual sexual term.
* Family Guy says this before running up the stairs sobbing when his mother leaves Tom Tucker and needs to be consoled.
* Family Guy schtick, but they've been trying to bring it back recently.
* Family Guy "Screams of Silence: The Story of Brenda Q.", there is a scene of Quagmire, Peter and Joe witnessing Jeff beat Brenda in Quagmire's window, the beating being rendered in silhouette.
* Family Guy, Season 2, Episode 13, "Road to Rhode Island". Brian and Stewie have stayed the night at a motel, but their credit card was declined. The manager comes knocking...
* Family Guy sequence from Rocky IV). Which did nothing to help him study, as he and Stewie note a few seconds later.
* Family Guy", set on Valentine's Day, aired on January 7, 2018, due to pre-emption.
* Family Guy set themselves up to make out from their abortion episode that got banned from being shown on Fox.
* Family Guy, several Sting songs are incomprehensible except for a few words.
* Family Guy several times. The general rule of thumb has been that while everyone understands him, the older characters generally don't take his statements seriously or at face value, but this is sometimes subverted for a joke, too.
* Family Guy's famous chicken fights the chicken is killed three times yet he always returns for more. Within a single fight (the first) he is seemingly beaten to death, only to attack Peter again seconds later.
* Family Guy, she and Peter accidentally drive into and kill a homeless man. Peter, visibly upset, covers both their car and the man's corpse in gas and sets them on fire.
* Family Guy, she is super attractive - though she is still "one of the ugly ones" as everyone is gorgeous in this universe. There is also the episode where she gets a make-over and is upgraded to World Class beauty.
* Family Guy. She makes Peter look like a genius with her low intelligence but making up for it with her attractiveness. Her good-looking friends could be considered like this, too.
* Family Guy, she recorded dialogue for at least two more episodes but has yet to

decide what should happen to Angela afterwards.
* Family Guy", she states that if anyone from the outside world knew how he treated her, Peter would be in jail by now.
* Family Guy. She then decides to take advantage of his paternal instinct and uses him to get revenge on other students who've wronged her.
* Family Guy, she was trained in Karate and was manage to fight a whole bar of people.
* Family Guy, shortly after getting in touch with his feminine side from going to a woman's camp, Peter mentions "oh fudge, I broke a nail".
* Family Guy shorts starring Peter's ancestor, Black-Eye Griffin, all of which involve him getting a black eye from various objects, including a falling piano.
* Family Guy, showing a deBeers-style shadow-person commercial, at the end of which the female shadow's head slowly descended to suggestively near crotch level. The tag line was "Diamonds. She'll pretty much have to."
* Family Guy shows Peter visiting a huge secure underground vault where he hides his porn stash from Lois.
* Family Guy shows Stewie in a club full of hunky men all dancing shirtless with lasers and fog overhead.
* Family Guy shows that he's practicing in a mirror in his boss's office. His boss accepts.
* Family Guy shows the outside of the house far too often, usually after any sort of passage of time.
* Family Guy's "I Guess That's Why They Call It the Blues", a song about lovers who are far apart.
* Family Guy since nobody has yet mentioned this outside of that particular episode.
* Family Guy. Since the Cleveland Show is a direct acknowledged spinoff in Family Guy itself, the casts have interacted in the other show many times. American Dad and Family Guy both treat each other as shows within their own series, but at the same time have featured various character cameos for the sake of a joke.
* Family Guy's in-character commentary for the episode (in which he, in Peter's voice, explicitly says he did).
* Family Guy, singing about how owning a cellphone was status of great wealth and importance, having a home computer and the Internet was completely unheard of. Later, taking advantage of modern technology for the sake of jokes, everyone has a smartphone, the old tube TV was replaced by a Hi-Def LCD, the VCR was replaced by a Blu-ray player and TiVo, there was a three-part arc focusing on Brian and Twitter, Lois has a Facebook account, etc etc.
* Family Guy sitting in adjacent bathroom stalls... farting out "Dueling Banjos".
* Family Guy skit shows Peter going into the 'beyond' section of 'Bed, Bath, and Beyond' which is a black void filled with various floating formulas and the like...and the coffee mugs he was looking for.
* Family Guy's many cutaway gags, Cap'n Crunch wants a mob boss to order a hit on a rival cereal mascot for spreading damn lies! My cereal does not cut kids' mouths! ...with respect.
* Family Guy's motorcade when it blows a tire in front of the Griffin house. He does the exact opposite of what you're supposed to do in that situation, namely lifting entirely with his lower back instead of his legs and moving in a twisting motion, causing him to immediately throw his back out and need to be rushed to the hospital.
* Family Guy sometimes features cutaway gags with animate inanimate objects. One example has a bullet talking to someone on a smartphone while being shot up in the sky.
* Family Guy special parodies various moments in the sci-fi film but does not satirize it.
* Family Guy spends $150,000 of taxpayer money to discover why his plants absorb the water he pours them.
* Family Guy's Peter Griffin will cause random shenanigans just for a quick giggle, no matter what the outcome of it is.

* Family Guy's pilot was adapted into the first act of the first episode "Death has a Shadow". It is largely identical except that Lois has blonde hair, and she, along with Stewie and Meg, wears different colored clothing.
* Family Guy's Stewie uses Chris' stomach as a pole-vaulting landing pad.
* Family Guy" stance for laughs. The message of the episode as a whole was criticizing abstinence-only education that uses scare tactics. At the end of the show, Lois did give a nice speech where she told the students that they shouldn't have sex until they're ready. And if/when they do, to please 'use a condom'.
* Family Guy started out with deliberately irrelevant thriller-ish episode titles before abandoning them because no-one in the crew could keep them straight.
* Family Guy Star Wars special, Luke (Chris) tries to call Han (Peter) to tell him that he's going to the Dagobah System.
* Family Guy Stewie and Bertram end up in a playground war which ends when Bertram infects Stewie's side with chickenpox.
* Family Guy. Stewie becomes unbearably nice once he has a near-death experience, so much that he tells Brian a knock-knock joke that ends with "your friend, Stewie, and he'll always be there for you." Brian retaliates:
* Family Guy, Stewie breaks Meg's glasses because he hates to be watched while he sleeps. We even see how bad her vision is when Stewie does a vision test and holds an undetermined object (which appears very blurred out).
* Family Guy. Stewie can be this to both of them, although it is usually not as big of a deal because he's a baby. For example, Meg was only mildly annoyed when Stewie stole her gifts at her birthday party.
* Family Guy. Stewie concedes it might be but that was before...everything he did on his rise to power.
* Family Guy. Stewie evidently views him as... a big, muscular thong-clad man with a teddy bear head.
* Family Guy. Stewie falls in love with her because "she's all grown up," but she looks just the same as before.
* Family Guy, Stewie goes upstairs to give Lois and Brian some privacy. He then returns to sit at the top of the stairs, watching through the bars of the banister, munching snacks, and injecting comments like, "Oh, my God, no way!" and "Ooh, bitch, you got jacked, bitch!"
* Family Guy, Stewie invents a remote control that can travel to many universes, including one where Meg is hot, but still ugly compared to everyone else.
* Family Guy Stewie signs himself and Brian up for the military after Brian tries to get Chris out of a recruitment contract.
* Family Guy, Stewie's preschool puts on a play about Terri Schiavo, and Stewie plays the apparently coveted role of the plug that gets pulled.
* Family Guy: Stewie tries to have a tea party with Brian (even throwing his teddy bear Rupert away in order to get Brian interested) but Brian spends the whole time texting on his phone.
* Family Guy; Stewie wants the doomsday weapon, but can't get the auctioneer's attention, being only a foot tall. Eventually, the price falls to 'free' and nobody is seen bidding.
* Family Guy-style daytime talk show. When the show goes on commercial break...
* Family Guy-style prank in high school that made Joyce a laughingstock by revealing the latter did a porn in college, getting her shunned by the entire town. Lois pleads that she is sorry for what she did, but Joyce refuses to go back on her retribution.
* Family Guy subverts this and plays this straight, where most of the "As Themselves" are voiced by the core members of the voice cast. Occasionally, sometimes subtly, sometimes glaringly obviously, will an actual celebrity come to the show to voice themself.
* Family Guy subverts this trope when Peter detonates explosives outside a children's hospital, entirely destroying the building. No repercussions of the incident seem to occur, as is common in the show, until the very end where Peter is informed that the crime has been investigated and is taken to court.
* Family Guy's use of wipes: Peter decides to build a bar while under house-arrest

and says "I feel just like Tim Allen. I build stuff, and I have a criminal record." Tim Allen then snorts the screen up his nose through a straw.
* Family Guy tattoo. He then embarrassingly admits that he used to like Ziggy.
* Family Guy tells him "if you'll just sign this contract without reading it, I'll take your blank check and you won't not be not loving your new timeshare in no time."
* Family Guy tends to do this a lot, partially because one of its creators is Jewish.
* Family Guy that grew feet, uprooted itself, and went on a rampage. Then Peter tried to make his own Red Bull that included such ingredients as kerosene and ruined his kidneys, starting the actual plot of the episode.
* Family Guy that seemed to last minutes where they showed a house exploding from several angles, repeating each shot several times (including one with Stewie and Brian diving out of the way over and over).
* Family Guy that shows Neil Armstrong finishing up the filming of the moon landing, then walking out back of the studio to head home. A fan recognizes him and questions why he isn't up in space. Neil nervously tries to make up an excuse before panicking.
* Family Guy that they should have tried this again from the beginning.
* Family Guy that was hidden from the public. After she turned 40 and was going to be replaced on Channel 5 News with a younger host, James dumped her signified by her putting a candlelit fire out with her finger symbolizing their love burning out.
* Family Guy, the art and backgrounds progressive become more redefined and detailed, but at the cost of making the overall animation more lifeless and stiff.
* Family Guy The celebration ends when Brian grabs Lois's chest and she slaps him.
* Family Guy the cops try Good Cop, Mentally Challenged Cop on suspects.
* Family Guy, the creators were asked if they were prepared for a battle of wits between the two shows. They responded if the FG team did anything in response they would just let it slide, mostly because their production schedule is so much faster they would have too much of an advantage.
* Family Guy, the day after Peter runs into his boss at a baseball game after calling in sick.
* Family Guy the day he was "molested" by his doctor during a prostate exam, he imagines a Film Noir parody scenario with Dr Hartman laughing evilly on a carousel as he apprehends Peter.
* Family Guy, the Duke and the King are introduced trying to scam Huck and Jim with this tactic. They don't make a convincing argument, though...
* Family Guy. The episode after that was a fun Brian & Stewie plot.
* Family Guy. The episode aired on November 13, 2011, but it could still be on September 11, 2011 (as it was mentioned to be just 10 years after September 11, 2001).
* Family Guy: The episode "Don't Make Me Over" had Meg Griffin get a makeover that made her look pretty. She reverted to her normal self because it was too much work. Meanwhile, in the episode "Blind Ambition", Lois stops wearing makeup after Peter goes blind, revealing that without it she looks pale and wrinkled.
* Family Guy: The episode "No Meals on Wheels" has a short scene with Stewie tampering with a customer's food by getting a rat drunk, causing it to vomit on the food. The problem is that rats are physically incapable of vomiting.
* Family Guy: The episode "The D in Apartment 23" in which Brian becomes a pariah after posting a racist tweet, is based on the online shaming Justine Sacco suffered when she did the same. The tweet itself even is paraphrased from Sacco's.
* Family Guy, the Evil Monkey living in Chris' closet is a parody of this.
* Family Guy. The existence of a multiverse (whether a Groeningverse or a Fox Animated Universe) caused whether by Homer's time travel in one of the Treehouse of Horror episodes or by one of the many time travels that happened in Futurama has been proposed by some fans to explain the apparent inconsistencies.
* Family Guy. The family has just gotten a horse, and Peter has been collecting its semen and putting it in the fridge next to the milk. Stewie stares wide-eyed at his

cereal... then slooooowly puts the spoon back into his mouth.
* Family Guy the game and tries to brush the whole thing off by saying that the plane crash was just gas.
* Family Guy, the Griffins have a knock-down drag-out fight, trashing the entire house. Peter hits the wall and gets a picture of a horse stuck on his head, with his face poking out of the horse's butt. Lois starts to laugh. Chris and Meg stop hitting each other and come to see what is so funny. Brian and even Peter join in. Everything looks like it's going to work out—until Stewie clocks his mother from behind with a wooden chair, and the brawl begins anew.
* Family Guy, the MGM lion cub gets laughed at by his classmates when he wants to roar at an audience when he grows up. Soon, the lion is grown up and shouts "What's up now, bitches?!"
* Family Guy, the news had a Mime Weatherman. When he tried to communicate rain, Tom thought he was stating that "peoples' parents will throw fecal matter down on them from the rooftops." Until an angry glare from said mime set Tom straight.
* Family Guy, then they're both perfectly fine in the following scene.
* Family Guy, the peacock appears, doped up like Cosby's female co-stars.
* Family Guy, there's a meeting hall where one of the notices at a notice board was about a procrastinator's club meeting being postponed.
* Family Guy the Spoof Aesop is the rule, not the exception. It's hard to think of a single aesop that wasn't treated like a spoof by the writers.
* Family Guy, the thing with the Ferris wheel tearing free happens and they fight on it while it's rolling away.
* Family Guy the tobacco executive responsible attempted to do so in real time, but so obviously as to be impossible to miss. Are you smoking yet?
* Family Guy. The underlying reality of the show is deliberately tenuous anyway.
* Family Guy they are. Stewie responds by telling Brian "that is such a douche time-traveler thing to say".
* Family Guy, they lampshade this by having Brian wonder why they have a chalkboard in the middle of their living room in the first place.
* Family Guy, this happens to Peter every time he fights Ernie the giant chicken.
* Family Guy." This is because Peter admits he secretly wanted Lois dead after a fight, mentions taking out a life insurance policy on her right before she died, and photos of Lois being brutally murdered were discovered in his trash can. At his trial, Lois shows up alive and names Stewie her attacker, clearing Peter. It’s later revealed that this never happened and it was all part of a simulation made by Stewie at the end of the second part.
* Family Guy, though the couch and furniture often move around for the sake of keeping a wide number of characters on the screen at once.
* Family Guy to a terminal AIDS patient by having a barbershop quartet sing about his disease.
* Family Guy "To be continued" sign, complete with the ending music from the episode "Best of Both Worlds".
* Family Guy to come up and quietly state that he is used to it. Jesus and Vishnu also appeared in Seth MacFarlane's Comedy Cavalcade, in which Jesus boasted that Vishnu didn't have a birthday as celebrated as his (Christmas).
* Family Guy to do the voices of any of the characters he voices (Peter, Stewie, Quagmire etc) during said commentary. Usually with (hopefully tongue-in-cheek) threats of violence against whoever suggested it.
* Family Guy to draw him. The scene then cuts to Peter painting the naked construction worker.
* Family Guy to get Brian to admit the truth and be shooed off the set.
* Family Guy to maintain the status of the No Respect Guy in order to keep them happy.
* Family Guy toyed with this by having a Spanish character only speaking enough English to respond to Brian's first two sentences.
* Family Guy: Tricia Takanawa, Quahog 5 News' reporter who is Asian-American and speaks in a nasal, blatantly Japanese monotone. Her vocal qualities and placement in various situations are done to play up the "Asian enunciation of English"

stereotype.
* Family Guy triggers Lois' brother's memories of walking in on their mother's affair with Jackie Gleason (an event which put him into an insane asylum and turned him into a serial killer).
* Family Guy. Trying to give yourself superpowers leads to you becoming a super-villain, at best. He does at least stop the Griffins' rampage, since they feel guilty about his cancer.
* Family Guy: Trying to score a date with his crush, Death steps into her pet store to talk to her. The animals inside raise such a commotion that they can't hear each other.
* Family Guy?" Tucker looks at her and says "No, Diane, their insurance company. That's just stupid what you said."
* Family Guy, TV anchor Tom Tucker practices in front of a mirror for different ways of announcing a president's hypothetical assassination. One of his different methods is this.
* Family Guy. Unfortunately, Quagmire gets distracted by having sex with an airport staff and he misses his flight.
* Family Guy unless given very specific instructions not to. It also implies that any gay guy would be totally willing to have an 11-way with strangers. It would've been better if it were only Peter like this because it would make sense for straight Peter to want an 11-way with 10 ladies, but it's still pretty bad.
* Family Guy use cel-shaded CG for things like cars and moving backgrounds.
* Family Guy used to mutter his half of a conversation that apparently involved dining out with persons unknown, going by his comments such as "Mm, I only had soup, I don't see why we should split the bill evenly..."
* Family Guy, usually having the father, Peter, fail to get the lesson at all and say something inappropriate.
* Family Guy version, where the buttons on the console clamp the girl down and force her mouth onto his private area. Stewie (and especially Brian) learn that the hard way when they steal it.
* Family Guy' video for "Everything I Do (I Do For You)" in its entirety.
* Family Guy Video Game!, one of Brian's levels requires you to get by a trio of police officers by knocking a witch hat onto one of them, causing the other two to mistake him for a witch and set him on fire.
* Family Guy, "Viewer Mail #1". Peter is threatened by a man riding on a bus after Peter is granted his own theme music by a genie. The man asks him to stop the music. Peter tells him he can't, and the man threatens to break every bone in Peter's body. So Peter says "I wish I had no bones" out of fear. The genie, who is driving the bus, hears him and says, "Done," turning Peter into a boneless blob. Bizarrely, Peter is initially happy about this turn of events and laughs at the man.
* "Family Guy Viewer Mail No. 1" has a scene where, as his first wish from a genie, Peter wishes to see what
* Family Guy was actually cancelled by Fox, then brought back as a result of this trope.
* Family Guy was briefly ruled by Peter, who, among other things, randomly assigned duties from a "job hat" and not based on expertise.
* Family Guy was once caught with his hand down his pants at school. The principal punished him by ordering him to keep his hand down his pants all week. Boy, what a week that was!
* Family Guy was on hiatus. When Lois asks if there's any hope, Peter replies sarcastically that they might have a shot if all those other shows get dropped. Roll opening credits.
* Family Guy was originally created to do (but which it mostly dropped by its second season.)
* Family Guy was ruined because the audience kept shouting at her to sing their favorite jingles instead.
* Family Guy, was suffering from a hangover, and he ended up falling asleep at work. Note, he is a safety inspector at the Happy-Go-Lucky Toy Factory, which means

he was grossly negligent for sleeping on the job. He decided to try to keep it a secret, yet as his phrases indicate, he's doing a very bad job at trying to hide his being unemployed.
* Family Guy. Well, Lois wants to talk, but Peter sometimes is too interested in sleeping or watching TV.
* Family Guy were actually schizophrenics who hallucinated all their adventures.
* Family Guy. What little we saw of it consisted of a woman who was raped by her doctor, who then tells her in a very uninterested fashion that she has cancer.
* Family Guy, what's left of Stryker is a bowl of liquid, which Peter compares to soup.
* Family Guy: "What's that smell? Smells like sweat, anger, and shame!"
* Family Guy when, after having his sexuality altered by an experimental drug and returning from a reparative therapy camp, he is told by his temporary boyfriend Scott of an arrangement for his dream scenario: an 11-way.
* Family Guy, when, after Peter Griffin's epic fight with the chicken man, the camera zooms in on its unconscious form to see that it's still alive.
* Family Guy when Al Harrington's Wacky Waving Inflatable Arm Flailing Tube Man Warehouse and Emporium has a sale on Crudely Painted Not So Funny Plywood Cutout Folk Art. Like, over and over.
* Family Guy, when Bertram travels through time to murder Leonardo Da Vinci, Stewie and Brian warn him that doing so would result in the destruction of the universe and Bertram would be destroyed as well. For a moment, Bertram thinks about it and decides its worth it and kills Leonardo.
* Family Guy: When Brian accuses Stewie of getting soft, Stewie decides to maximize his evil side. It backfires, kind of: he ends up creating a separate, wholly evil Stewie. He isn't happy once he sees what the clone is capable of.
* Family Guy, when Brian and his roommate hear the O.J. verdict, have opposite reactions and pull guns on each other.
* Family Guy, when Brian goes to visit his mother and discovers that she's passed away; her owners had her stuffed and made into a table. Brian's horrified, while Stewie thinks it's hilarious.
* Family Guy, when Brian has to study for his exam, part of his training montage has Stewie catching him trying to read a steamy magazine while hiding it behind something else.
* Family Guy when Chris gets a pimple. It makes Chris vandalize a wall and destroy Mort's pharmacy, assaults his brain then holds a dermatologist at gunpoint. Though this was a crazy, talking pimple.
* Family Guy when Chris (Seth Green) works at the Quahog mini-mart, the conversations about movies with his boss, Carl (Jon Benjamin) were improvised.
* Family Guy whenever she has something important to say, variations include "Meg shut up" or "Meg please".
* Family Guy: When Glenn Quagmire was in an auto-erotic asphyxiation-induced coma, his sister came into the city to sing a song from his childhood, hoping it would wake him up. The lyrics were "Glenn Quagmire, please don't die of auto-erotic asphyxiation/Your friends want to go fishing with you."
* Family Guy. When he attempts to escape, he accidentally crashes into a pile of naked mannequins, then ducks into a surveillance room with full view of the women's dressing rooms. Fortunately, he ends up seeing that one of the women in the dressing rooms is having a heart attack, and rushes over to save her by performing something resembling C.P.R ("What the hell's C.P.R?").
* Family Guy when he falls down the stairs in "The Blind Side," all the middle fingers flipped off in defiance aren't blurred, you get to see how bloody Wilford Brimley blasting teen girls at the Teen Choice Awards really is in "Quagmire and Meg," and you get to see parts that were cut for time rather than content. But when Netflix removed the later seasons (seasons four to fourteen; and later the series itself), those are now exclusive to DVD.
* Family Guy when "he" kissed him) before finding out she was actually female, after which he sort of thought a romantic relationship would be okay, except he had too much trouble talking to girls, a problem which he solved by pretending he

didn't know she was female, thus subverting the trope - apparently he didn't really object to making out with a guy as long as other people wouldn't see it that way.
* Family Guy when Lois gets elected mayor during "It Takes A Village Idiot And I Married One" she scares Quahog's citizens into paying taxes needed to clean the local lake by bombastically declaring it's being used by Hitler and the Legion of Doom as their base of operations to plot Jesus' assassination. It then immediately cuts to the Legion of Doom with Lex Luthor demanding to know how Lois found out their plans.
* Family Guy when Lois goes to jail. There are pizza boxes and beer cans all over the floor, and Stewie's diaper is so full, he's dragging it around with him everywhere.
* Family Guy when Lois leaves him home alone to campaign for the school board.
* Family Guy when Lois used the neuralizer on Chris when he doesn't stop saying "boobies" after the Griffins visited the nudist family's house.
* Family Guy when Meg dumps a glass of drugged punch in a plotted plant. The plant droops as if unconscious, then another potted plant hops over to hump it while it's out.
* Family Guy, when on a South American island Peter gets $37 out of his wallet. This makes him the richest man on the island.
* Family Guy, when Peter and his father-in-law Carter visit Africa (due to Carter attempting to retrieve the money he lost in a Nigerian Prince Scam). They come across a village that's being held hostage by a brutal warlord, who says he's going to pressgang all the boy children as child soldiers. Peter is understandably horrified, until the warlord starts using "hamburger" as a punchline after everything he says, like standup comedian Alonzo "Hamburger" Jones, which makes Peter forget the monstrousness of what he's witnessing.
* Family Guy. When Peter bans cripples from his restaurant, they come together to form "Cripple-Tron" (which, ironically, can walk).
* Family Guy, when Peter discovered one of his ancestors on his father's side was black. While Peter did play his new-found "blackness" for all it was worth, it understandably wasn't visible, due to said ancestor living before the American Civil War. In any case, Peter's biological father later turned out to be a full-blooded Irishman.
* Family Guy, when Peter is running for the Quahog school board against Lois, he aired an attack ad against his own wife, using a boudoir photo Lois gave him as evidence of her immoral character. Cleveland, in a voice-over, apologizes to Lois at the end of the ad.
* Family Guy when Peter poses as a teenager and has a date with a high-school girl.
* Family Guy When Peter, Quagmire, and Cleveland make it into the vault, Joe tells Peter to grab the amount needed to pay the loan shark, but Peter decides to grab as much as he can as payback for Carter treating him like crap. Lois manages to tell Joe to not take the money because her father will hunt him down, and put him in prison if he goes through it, Peter is more hesitant, but puts the money back when Megatron yells at him. At the end, Carter doesn't find out about the attempted robbery, and Joe paid back the loan shark with money Lois got from her father. When Peter asks how she convinced him to help Joe, she tells him she lied and said the money was for a divorce lawyer. Peter thinks she's joking, but becomes worried when she silently gets up from the dinner table.
* Family Guy when Peter realizes the fatter Lois is the more turned on by her he gets.
* Family Guy when Quagmire says that he's been having so much sex lately that all that would come out if he tried to masturbate would be a little flag with the word "bang" on it.
* Family Guy when the Drunken Clam was sold to a British guy and then mysteriously burned down. The arsonist even frames Peter for this act. Lois even meets the insurance agent after he paid off the policy.
* Family Guy, when the experimental drug that temporarily turned him gay wears off in the middle of a group sex session. Also his shriek of acclamation when the drug first kicks in and Lois asks if he has turned gay. Also when his doctor performs an

intimate anal examination.
* Family Guy, when the Griffins inherit a huge mansion, Peter fully adopts a snooty rich attitude and mentions he has one of these. Lois tells him he doesn't, and he tells his conversation partners that he’s keeping it secret from Lois in case things don't work out.
* Family Guy". When the house is broken into, Peter arms himself with a baseball bat and goes to investigate. He comes across Meg in the hall and stares at her while she asks several questions about what is going on. He then whacks her and says, unconvincingly "Sorry, Meg, you startled me." She was not amused.
* Family Guy when the last game during a company picnic involved the employees being hunted by their boss, Mr. Weed. Of course in this case, he was just using tranquilizers and the object of the game was to be the last man standing. Peter wins as he managed stay on his feet despite being hit by multiple tranqs and only dropped after he was declared the winner.
* Family Guy, when Threepio (played by Quagmire) says in the asteroid scene "Sir, the odds of successfully navigating an asteroid field are two to one!". To which Han (portrayed by Peter) replies "Never tell me the o-oh... well that's not bad. Never mind, let's keep going."
* Family Guy when Tom Tucker is fired and told to turn in his moustache.
* Family Guy where Death goes on a date with a woman who works at a pet shop. She insists that there'd be no more wars if people were more like animals, and he says "What are you talking about? Animals fight all the time!"
* Family Guy, where exterminators act like action movie soldiers and try to kill fleas with firearms and grenades.
* Family Guy, where Fred is being chased by police. As he runs in place, the officers catch up to him and starts moving right when they're near him.
* Family Guy, where he seems to have actually forgotten Meg's name. He keeps running through the entire family's names until Brian tells him 'it's your son.' "Meg!"
* Family Guy where in a flashback, Lois is captured by criminals who demand a ransom of her rich father. They put her on the line. His response: "Now honey, you know family policy, we don't negotiate with kidnappers."
* Family Guy wherein Peter says "And I've learned something from this... ya know what, we've done this a billion times, so I'm just going to do the cadences" and the family just speaks gibberish (in the proper cadences, of course.) Followed by the obligatory laugh.
* Family Guy (where Japanese never surrendered in WWII, the Cuban missile crisis, etc.), while others were the characters done in different art styles (the Disney universe, Robot Chicken universe, political cartoon universe, blocky universe, etc.). There was even a short trip to the real world.
* Family Guy, where Mort Goldman is revealed to write these to different companies, demanding compensation for the most trivial things, such as the letter he's currently writing to Ritz Crackers just because some of the crackers in a box he bought were broken.
* Family Guy, where one of the detectives is interrogating a thief and offers this as an explanation, only for the thief to shut it down.
* Family Guy, where one of the inventions Peter comes up with when he takes over his father-in-law's company is the "African-American Heart Monitor". Instead of beeping, it plays a clip of a black man saying "Yeah, yeah, yeah"; in place of the familiar flatline sound, the voice simply says "Aw, he dead."
* Family Guy, where Peter has convinced others that he has healing abilities and is the Messiah.
* Family Guy where Peter is shown playing on an electronic piano and witnessed by a stock character, only for said man to discover that the tune is played automatically which results in him continuously calling Peter out for his supposed fraud occasionally throughout the episode. He appears once more to take his anger out on Neil Goldman after discovering his suicide attempt was a bluff. They actually named the character Holden Caulfield.
* Family Guy where Sagan's voice was intermittently dubbed over with a hillbilly

accent replacing the scientific explanations with religious ones.
* Family Guy, where Stan Smith is a devout Christian and there's the episode "Rapture's Delight", where the Rapture occurs.
* Family Guy where Stewie gets angry and strikes his stuffed bear Rupert.
* Family Guy where Stewie is kept awake by a gang of drug dealers in the motel room next door.
* Family Guy, which airs newer episodes following Disney's purchase of Fox:
* Family Guy which lampsahded several heist movie tropes featured a "super gymnastic Asian Peter" being delivered to a house.
* Family Guy, which makes him see everyone as torch-wielding Klansmen.
* Family Guy, while their own beliefs are presented civilly and without any kind of realistic flaws.
* Family Guy who arrests them on trumped up charges simply because Cleveland is black. When it looks like their stay in prison may be indefinite, the gang opts to escape on their own, back to Quahog. When they arrive, it turns out the police force followed them, only for Joe to reveal that he anticipated this and called in Quahog's police force. The episode ends when Joe gives a speech.
* Family Guy, who criticizes the book, getting Brian to accidentally admit that the book was a hack job. Maher then completely destroys his reputation (it doesn't help that Brian wets the floor).
* Family Guy, who is depicted as just having had sex with a guy and finishes by devouring his head, praying mantis-style.
* Family Guy, who just holds in his gut while he tries to intimidate troublemakers, but as soon as he exhales, his gut pours over his waistband.
* Family Guy (who plays Chris) and Chris defended him, while everyone else insulted Seth MacFarlane except Peter, Stewie and Brian (whom Seth plays). Another time, Peter insults the animators and as a result is animated very choppily in the next scene.
* Family Guy, whose son has Down Syndrome, caused a lot of controversy. Yet, the role of Ellen was played by actress Andrea Fay Friedman, who has Down Syndrome herself. Once Palin herself criticized the show, the voice-actress wrote an open letter telling Palin to "get a sense of humor", as seen on Palin's page on this wiki.
* Family Guy, who then shoves him to the ground and opens up a flap in the back of the suit. Cut to Peter, walking past his friends in a bruised suit and commenting "The back is all mashed potatoes now."
* Family Guy who they appear to be. Actually, he never comments on them at all, one way or the other.
* Family Guy" Wickenshire, a man who has this as his default living anatomy and is shown to be very effective in a gun duel as a result, especially compared to his onscreen opponent, the equally aptly named Sir Joseph Broadfront.
* Family Guy will be gone by the next scene, unless it's a plot point.
* Family Guy will often neglect to see something shocking, carry on a perfectly normal conversation and then snap back with his patented "WHAAAAAAAAAT?!?"
* Family Guy will sometimes play this role when some salty exposition is needed, though at other times he's as oblivious as the rest of the cast.
* Family Guy with a flat joke. The two comedians and Lois recognized it as unfunny, but absolutely everybody else in the show's universe thought it was the most hilarious joke ever.
* Family Guy with an old LP of Sherman's "Camp Granada" song, stomping out the door in a huff while claiming (in a stereotypical upstate New York accent) that there are many "old Jews out there" who still want to listen to it.
* Family Guy, with another fight between Peter and Ernie The Chicken that takes them flying towards space and destroying a station with one of the astronauts blowing up after sucked into space.
* Family Guy with it on; meaning he spreads shaving cream on the side of the helmet and shaves it off (and then curses under his breath when he cuts himself with the razor). Apparently, as with Man Ray above, his helmet is his head.
* Family Guy with Kiss Save Santa, because everyone knows "Pterodactyls can't stand

the screech on an electric guitar."
* Family Guy with Meg twice with both Joe's son and the nudist boy. She does get Neil but then drives him away when he proves annoying.
* Family Guy, with Peter watching the laundry being washed like a tv show. He even talks about Meg's shirt having an affair with Chris's socks and "how fun it is to watch rich people be naughty".
* Family Guy with the serial numbers filed off) and note that they are going to go to hell by the end of the day.
* Family Guy: "Yep, it's a Meg episode. Here's the clicker; nobody would blame you."
* Family Guy: You hear that? A girl solved a math problem. You know what that means? A WITCH!
* Family Honor: A character wants to live up to their family name, and bring credit to their family.
* Family Honor: Families with a huge degree of honor and respect expect their members to live up to it.
* Family: In the climax Talia kills Silver by dropping a helicopter on his head while he's in the middle of screaming "I'M GOING TO KILL YOU A—"
* "Family", is all about his guilt and trauma over the events; he explicitly blames himself for not being strong enough to stop it.
* Family Jr. (Originally a 24/7 version of the Playhouse Disney block) Launched as both a multiplex of Family and a French-language channel, now known as Télémagino. Its name was previously used for Family's own preschool block, before it became a Disney-branded block.
* Family: Kurt begins a relationship with Talia, but he refuses to save her criminal father Gio when he suffers a heart attack. It's implied they break up over this.
* Family Law, a veteran thief client begs Rex to help his son out of a robbery arrest as the kid is so dumb "he'll never survive prison." Rex looks into the lobby to see the kid honestly believing he can stuff a ten-pound statue under his shirt with no one noticing. The kid is accused of robbing a liquor store with a paper bag "disguise" which he kept lifting up to suck on a helium balloon to "alter" his voice and fled in his own car with a vanity license plate which he had reported stolen from himself. Incredibly, Rex is able to get the kid an acquittal by successfully convincing the jury that there's no way anyone could actually be this stupid.
* Family Law has Viveca upset a man won't rent an apartment to her because he hates lawyers after a bad legal experience. Viveca tries to sue for discrimination, arguing lawyers count as a "persecuted class". The judge sums up that she's heard scores of such jokes and cracks and that in all her years as a lawyer and on the bench, "I can only conclude...we brought it on ourselves." She then dismisses the case so as not to give people even more cause to make such jokes.
* Family Law not above handling some scumbag in court for a good payday.
* Family Law to call himself an old-fashioned shyster chasing a buck, no problem taking on a crazy client if it means a big payday and even bits like encouraging Viveca to move into a crappy apartment building as "those are gold mines for personal injury lawsuits." A running bit is the rest of the firm annoyed at his TV and bus ads making them all look the same way.
* "Family Man": An accident somehow switches the souls of an auditor and family man and a fleeing serial killer called "The Family Man",
* Family Matters. A boy genius who is still so clumsy and stupid, Carl is lucky to be alive and sane (most of the time).
* Family Matters active sex life (much to her son's chagrin), was physically active, and quite often ended up serving as the voice of reason in the family.
* Family Matters, after Eddie fails his driving test but takes a girl out for a drive anyway. A bread truck comes into his view, he panics, and he swerves right into his own house.
* Family Matters, after Laura and Steve can't look at each other when Laura walks in on Steve in the shower (this was after Steve moved in with the Winslows), Eddie

puts things into perspective for them:
* Family Matters: After Urkel strained himself while trying out for the basketball team, Laura gives him one as he then happily moans and contorts in reaction. Laura then scolds him not to make the noises, so he stops, but continues to silently mime the moans while still contorting, much to her annoyance.
* Family Matters all end up in the same Home Ec class. Urkel does not have the knack for it that he has for academics and ends up with a C, which causes him to freak out. Waldo, on the other hand, plays the trope backwards by getting an A and being shocked to the point of disbelief. It was his first A ever, see...
* Family Matters along with Steve where he plans to show off his transformation chamber along side several other inventors. A subplot involves Eddie and Waldo driving down there since there aren't enough plane tickets. At one point, after waking up from a nap, Eddie asks where they are, and Waldo says they're heading towards a place called "Canyada". Eddie looks at the map and realizes he means Canada. By the time they finally make it to Disney World, everyone is getting ready to leave.
* Family Matters and had no money to pay, he was grabbed by two lackeys and carried up some stairs to be ruffed up. They only make it up a few steps, before they have to back down the stairs, with a very angry Carl following behind.
* Family Matters, and he claims they're working. He's telling the truth: the woman is a fellow police officer, and they're meeting some crooks at that hotel room as part of a sting operation.
* Family Matters and Lt. Murtaugh are playing poker with each other, both using the "All I have is two pair..." line (Murtaugh first with kings, and Urkel later in the episode with tens).
* Family Matters and the Bushwhackers stop pulling their punches, looking to actually hurt them. That this would get them suspended at the least if they were the top wrestler in the company and related to the boss isn't brought up afterward.
* Family Matters and the two get into a scuffle at school, a teacher has the two settle their differences in the ring. Urkel winds up receiving a beat down… but the others who were threatened by the bully declare their intent to fight the bully after he finishes off Urkel, causing him to run off.
* Family Matters: An early, Urkel-less Season 1 episode sees Carl bring home a 1936 Ford police car (owned by the Chicago Police Department) he had hoped to drive in a parade. He specifically admonishes the others to not drive the car. Rachel disobeys him and damages the front fender of the car when she bumps into some trash cans. Rachel does what she can to repair the damage, but Carl finds out – the fender falls off the car, Rachel having improperly reattached it – when he leaves for the parade. He drives it that way in the parade, having no other choice, and returns to get his explanation.
* Family Matters as the offender though and the family likewise think Carl was being too harsh on Buddy. Then Buddy comes to the Winslow house to bribe Carl into throwing out the offense, which the rest of the family overhears. Needless to say, their giddiness at meeting him quickly turns into this trope.
* Family Matters A teacher frequently does this with a juice box, a milk carton, and an orange, thus revealing her increasing irritation with Steve Urkel, who keeps interrupting her, then has the unmitigated gall to chastise HER for interrupting him.
* Family Matters: At stage left was the living room, which included a stairway at the left. Upstairs were four bedrooms: The master bedroom, separates bedroom for Eddie and Laura (although it is speculated Judy shared with Laura when she was part of the show), and a bedroom for Rachel (this later became Richie and still later 3J's room). Back downstairs was the bedroom for Mother Winslow and a bathroom. At stage right was the kitchen, with small pantry/foyer at the back and a back stairway. The front door opened into the living room, while the back door led to the garage and alley.
* Family Matters - Carl "Cheapskate" Winslow didn't want to shell out $3000 for new living room furniture, so he bought a bunch of stuff from the police impound for about $300. Not only did it included a carpet with a tape outline of a body, it

also included a lamp with bullet holes in the lampshade. Everything was uniformly garish - think "pimp" crossed with a velvet Elvis.
* Family Matters. Carl is called upon by the prosecution to describe the many, many, many disasters Steve has caused at their house. On cross-examination, Laura establishes that Steve has always taken responsibility for his mistakes, and asks Carl why Steve isn't claiming this one.
* Family Matters Carl mistakenly throws out Harriet's aunt's ashes and replaces them with fireplace ashes.
* Family Matters. Carl, suspicious of Eddie's claim, simply gets angry at him for getting another ticket until he speaks to the cops who pulled him over. It turns out the one in charge is indeed a bigot while the younger one was just doing his job.
* Family Matters, Carl Winslow was more than ready to be Captain, but his superior decides to give the position to his Son. However, instead of an arrogant man, the New Captain is actually a nice guy who values the Carl's opinions on every matter. When Carl manages to defuse a nasty gang war, His new Captain says that he rather go back to his old position (as he was content with it), and have Carl take it, since he's proven he deserves it. Needing no further opinions, Carl was granted the promotion.
* Family Matters: Carl yells at Harriet for leaving her wedding ring on the kitchen counter because it could fall down the drain. To teach her a lesson, Carl takes the ring the next time Harriet takes it off to wash dishes. When Harriet comes to look for it in the kitchen, Carl gloats about finding it and while telling Harriet to be more careful, he accidentally drops the ring down the drain and spends the rest of the episode fishing it out.
* Family Matters centered an episode around a do-it-yourself home bathroom repair idea. Naturally, the toilet flusher ends up turning on the shower, the sink ends up turning on the bathtub, the bathtub ends up turning on the sink, etc.
* Family Matters comes into play here also—his behavior is considered romantic and endearing, but Myra and Myrtle' s identical behavior towards him and Eddie, respectively, is portrayed as the craziness it truly is.
* Family Matters concert tickets as collateral to ensure his date wish comes true.
* Family Matters, "Dog Day Halloween", a bank robber holds up a bank where Steve and Laura had gone to to get some funds before heading to a Halloween party. After a bit of a stand off, Carl infiltrates the bank as a Jamaican pizza delivery guy, allowing him to get the drop on the robber and save the day.
* Family Matters, Eddie dates the daughter of the owner of a chain of restaurants, a franchise of which he happens to work with. When he finds out, in Eddie's house, he immediately fires Eddie, and then has an argument with his daughter about her dating habits. Eddie tries to interject.
* Family Matters, Eddie is pulled over for driving in a white neighborhood. Carl doesn't believe it at first until he hears it straight from the two cops' mouths.
* Family Matters ended with Urkel finally getting his girl, Laura, when they share a kiss after Urkel almost dies in outer space.
* Family Matters enough to chain up the fridge, they also managed to confiscate his "secret" stash of snacks.
* Family Matters episode "False Arrest", Carl is confronted by Buddy Goodrich, a celebrity whom he'd arrested earlier in the episode for assault. Goodrich tries to talk Carl out of putting him on trial because he could simply have his assistant lie to the jury to counter any bad press that would come from the incident. Carl, of course, is having none of it:
* Family Matters episode had Urkel, Laura, Myra, Eddie, and Myrtle go on a talk show to work out their differences. After it eventually disintegrated into screaming matches, Waldo (who was in the audience) was the one to help them resolve their differences.
* Family Matters episode, Laura dreamed that Steve Urkel built an atomic bomb for his science fair project.
* Family Matters, episodes tend to feature the Winslow household primarily, and Mr Winslow (a police officer) tries to get him tossed out multiple times, instead of

locking his door.
* Family Matters episode "Words Hurt", Steve is put under a sleep-induced hypnosis so he can tell the Winslows why he's been sleepwalking and attacking Carl the past few nights, and a flashback plays as he tells them.
* Family Matters-feminine and pretends to cry until he lowers the price.
* Family Matters: Frequently used with Urkel when trying to fight someone bigger and meaner than he was. Most prominently seen in:
* Family Matters girls in the room when told the terms of acceptance — agrees!!! Laura finds out, is pissed and tells Eddie that his friendship with Urkel is more important than some stupid fraternity with a bunch of jerks. Eddie wises up and in the end quits the fraternity.
* Family Matters, going so far as to blame Steve's infatuation with Laura on Laura herself.
* Family Matters, Grandmama is injured during the game, so Eddie's partner steps out and Eddie and Steve play each other 1-on-1 for the last point, where Steve jukes right past Eddie for the winning layup.
* Family Matters grounded from everything until she can bring it back up.
* Family Matters had an episode where a school lab accident was blamed on Urkel. Through some convenient lawyer skills on Laura's part, she discovered the true culprit.
* Family Matters had an example when for some reason Urkel and his buddies had to infiltrate a convent while dressed as women. Pressed for a name, Urkel blurts out "Steee—fanie." Not Stephanie, Steefanie. He claims it's Lithuanian.
* Family Matters had a scene where Steve Urkel tells a passenger stuck on a train on Christmas Eve that she should feel extra Christmas cheer because she too is "great with child", only for the woman to say she's not pregnant.
* Family Matters had Aunt Rachel and her son Richie. Aunt Rachel left the show but somehow, Richie stayed around which meant that his mother was still around somewhere. She apparently was unable to make it to a number of important events.
* Family Matters had by now become an established part of the series. Urkel annoys the neighborhood once too often—he serenaded Laura with his "rendition" of Morris Albert's "Feelings"... late at night!—and is sent to a relative's house in the south to live for a few weeks, to give the neighbors time to get over their anger with the nerd. The Winslows rejoiced long and loud that they would have two weeks without Urkel... and then, as if on cue, in walks "Cousin Urkel"... the even-more-annoying southern-belle-wannabe Myrtle!
* Family Matters had Carl emptying the urn containing the ashes of his wife's late aunt, thinking the urn was a cookie jar that had been dropped in the ashes from the fireplace. When he realizes his mistake, he desperately fills the urn back up, but it likely contains as much fireplace ash as aunt Edna. (When copping to it, he calls the ashes "Aunt Presto-Log".)
* Family Matters had Carl trying to install a second shower in the house. Before his wife finally convinced him to call a plumber, he had somehow gotten the bathroom set up so that you turn on the shower by turning off the sink (simply put, he placed the shower's faucet upstream from the tee that divided between sink and shower).
* Family Matters had Eddie rooming with Steve Urkel. When it turns out Steve has been experimenting on explosive fruit and storing them in the fridge with the real food, Eddie gets angry, and Steve holds him off with "stay away or I unpin this apple!"
* Family Matters had the Winslow family hanging out at a bowling alley or somesuch, when Carl walks up with a tray full of food from the concessions. Several reach for the food and he responds with something like, "Oh, were any of you hungry?"
* Family Matters had Urkel and Eddie infiltrate a boot camp in order to convince an emotionally hurt Waldo to leave.
* Family Matters. Harriet fears Eddie and his girlfriend are sexually active after finding a romantic-sounding note from her. Eddie informs his father that the girl's mother is an alcoholic and that he had finally convinced her to attend an Alateen meeting.

* Family Matters. He even tries to start a fight with Carl Winslow when Carl approached him over parking in a handicapped spot. And when he's arrested, tries to bribe him to get out, but fails.
* Family Matters held a contest for young Urkel impersonators. The best four impersonators appeared in an episode where Carl dreams that Laura and Steve got married and had children (with another on the way). Some of the runner-up entries were shown as the credits rolled in the same episode.
* Family Matters, he surprises everyone when he takes a home economics course and proves a natural genius as a chef, to such an extent that in one episode he reveals he was trading recipes with Wolfgang Puck. His mom is a lousy cook, so he had to fend for himself.
* Family Matters. His uniform uses generic "Police Dept." shoulder patches and a generic oval badge rather than the CPD's distinct five-pointed star.
* Family Matters how bad he is. He also almost burned the house down trying to fix a toaster, and his birdhouse was condemned by the Audubon Society. Perhaps more poignantly, he also electrocuted himself trying to fix a lamp and would have died if Steve Urkel hadn't performed CPR to save his life.
* Family Matters: In "A Ham Is Born", Carl Winslow moonlights as a security guard at a movie studio where a police drama is being filmed. The movie director is annoyed at Carl's opinion of a film scene until Carl mentions his 20-year experience as a Chicago police officer. After Carl demonstrates the actual procedure for arresting criminals, the impressed director decides to cast Carl Winslow as the new leading protagonist of the film. Ultimately, Carl quits his career as a film star because he, as a married man, refuses to kiss the leading actress, even if it was only part of the movie storyline.
* Family Matters: In "I Should Have Done Something", Carl is depressed because it's the one-year anniversary of a hostage situation he responded to that ended with the hostage getting killed. Harriette finds him up late rewinding and replaying a news broadcast from that night where he was interviewed at the scene of the crime.
* Family Matters: In one Halloween episode, the beginning has Steve scare Carl with a prank involving spring snakes. Later on, Steve and Laura end up as hostages during a bank robbery and one of the robber's demands is for a pizza. A short time later, in comes a short fat Jamaican pizza man. When the robber opens the pizza box, spring snakes startle him and Carl (who was in fact the pizza man and used Steve's snakes) jumps the robber and takes him down. He thanks Steve for giving him the idea.
* Family Matters: In the fifth-season episode "Opposites Attract," Laura is the editor for the Muskrat Times (the Vanderbilt High School newspaper), and Urkel is a staff reporter.
* Family Matters: In the Season 3 episode "Making the Team," Urkel is demoted from the last man on the bench of a basketball team ... to water boy. However, when — during a game — every available substitute is injured and the team is down to just four players (and Eddie, one of the last players standing, reminds the coach that if he forfeits, he could be fired), the coach is forced to turn to the nerd. Urkel — prepared for the moment — doffs his nerdy clothes to reveal his uniform, and displaying amazing athletic ability, engineers an amazing comeback to win the game. (Jaleel White's real-life passion for basketball was later written in to several episodes about Urkel's "mysterious" basketball ability.)
* Family Matters is a Laura-sexual for most of the series, though he does get another girlfriend later in the series who ironically turns out to be Urkel-sexual.
* Family Matters is like this at times. For example, when Carl mentioned he knew a celebrity and Eddie said "get out of here!" in surprise, Waldo said, "You can stay, Mr. Winslow."
* Family Matters: Jaleel White, playing his signature role of Steve Urkel and (on occasion starting with the second season) his southern belle-wannabe cousin Myrtle Urkel. This was a case of Urkel also playing a female character.
* Family Matters, James Avery enters to everyone's amusement (both series were produced by Warner Bros.).

* Family Matters. Judy Winslow never really gets one, only a few subplots:
* Family Matters: Judy Winslow wears her hair in braided pigtails in Seasons 1 through 3. Every single Season 1 episode she has her hair in several braided pigtails with various colored ribbons and accessories, and many Season 2 episodes have her wearing this hairstyle. Seasons 2 and 3 she often wears the more traditional two (or three) braided pigtails. Her hair is only seen down twice in Seasons 1 through 3. Her final season before she disappeared she wore her hair down, including in her opening title credit.
* Family Matters, Laura dumps a boyfriend because he starts making fun of her brother the same way she does.
* Family Matters). Laura, who spent the entire time making rude and sarcastic jabs at him, suggests he go sleep in the bathtub. After being in the bathroom about a second, he runs back out and unloads on Laura for essentially being a total bitch to him.
* Family Matters: Lt. Murtaugh, an egotistical, thinks-he's-the-greatest-cop superior officer played brilliantly by Barry Jenner. More often than not, Murtaugh would bumble his way through a given situation only for his subordinate, Carl Winslow, to handle the situation correctly and save their hides. Two other episodes highlighted serious mistakes made by Carl's other fellow officers:
* Family Matters, Maxine receives a poorly-written and poorly-addressed "Dear John" letter from Waldo.
* Family Matters means of manipulating the price should they choose to use it.
* Family Matters, more and more viewers started to look at him in a less sympathetic light.
* Family Matters Myra are both brilliant girls in their own right (although Myra is much more similar to Steve, personality-wise). He eventually ends up with Laura.
* Family Matters on gun violence, Laura's friend is shot in the arm as soon as Laura attempts to buy a pistol; in another, Laura buys a fake ID to go to a male strip club with her friends. It just happens to be on the same night her aunt and grandmother drag her mother to see the revue.
* Family Matters sequences. Steve Urkel would inevitably bring one in to test (with Carl Winslow the unwilling test subject more often than not) and no matter how sound the premise, it would inevitably malfunction and cause bodily harm, property damage, a mess, or some combination thereof.
* Family Matters status, and was later even added to the cold opening in 4 of the first 11 episodes.
* Family Matters "Stefan Urquelle", and kept escalating until Steve traveled to outer space! In fairness, Steve Urkel being the harbinger of these changes was likely incidental, but the down-to-earth family sitcom nevertheless ended with genetic engineering, cloning, and teleportation being regular elements of the plot.
* Family Matters: Steve Erkel got hit by lightning three times in one episode, one incident of which implied the lightning hit his umbrella.
* Family Matters: Steve regards Laura Winslow as the most beautiful girl in the world (as do several of the other boys who show interest in her), remaining in love with her to the point of obsession throughout the show's duration.
* Family Matters: Steve's lie detector has the added feature of giving Carl an electric shock if he doesn't tell the truth. After Carl and Steve work out the issue they were having, Harriet decides to take the opportunity to ask Carl how many women he was serious about before her, resulting in him being continuously shocked.
* Family Matters, Steve throws his hands up and triumphantly declares "Hell has frozen over!"
* Family Matters. Steve Urkel eavesdrops on Laura from the hotel room directly above hers, immediately hearing a seductive male voice that he believes to be Laura's date in her room. A couple seconds later, the voice proceeds to talk about dog food — Laura was watching TV by herself, and the voice was from a dog food commercial playing on the TV.
* Family Matters: Steve Urkel has an unrequited love for Laura. Myra has a love just as great for Steve, but Steve doesn't really reciprocate, because any love he

has for Myra is always limited by the fact that he make it painfully clear that he values the possibility of a romance with Laura more than any more attainable relationship with his girlfriend who actually loves him already.
* Family Matters: Steve Urkel pines for Laura throughout most of the series and gets taken advantage of quite often. Eventually he sees this and even accepts that this is his role. But only for Laura.
* Family Matters: Steve Urkel spends the entire run of this sitcom aggressively trying to win Laura's affections even though she is repulsed by him. His perseverance pays off in the end.
* Family Matters Steve Urkel who is treated like a fungus for most of the show's run but he eventually does end up winning Laura's heart.
* Family Matters's "What a Wonderful World"... for all of one episode, before switching to an original tune.
* Family Matters takes place firmly in the real world in its early seasons, but after Steve Urkel is introduced, has a number of science-fiction plots revolving around his inventions.
* Family Matters that Carl just buys all of his furniture in bulk now. But after he shows it to Urkel, the backups all get accidentally destroyed.
* Family Matters: The first appearance of Stephan Urkelle was a self-absorbed prick who couldn't care less about Carl's friend getting shot. However, as Steve began modifying and perfecting the formula to create him (Boss Sauce), Stephan becomes a suave and kind-hearted gentleman. Essentially, a cool and slightly less intelligent version of Steve.
* Family Matters: The Mighty Weenie has its workers don hats with hot dogs on them. When Eddie is promoted, it's explicitly said that now he gets to "take off that stupid hat".
* Family Matters. The one time it was played seriously was the Season 3 episode "Words Hurt", where Carl kicks out Urkel absolutely totally for real, leaving Urkel crushed and Carl berated for his callousness.
* Family Matters: The sixth-season episode "Sink or Swim," where Urkel's ability to pass physical education — and graduate from high school — rides on his ability to pass a simple swim test... and (predictably) the nerd can't swim. But Carl can — and this naturally leads to plenty of comedy.
* Family Matters This did, however cause Carl to realize that Steve simply needed not to think about what he was doing, so he had Laura fall in and pretend to be drowning. Steve jumped in and tried to rescue her.
* Family Matters to wonder just how he found that out, not to mention realizing that he must think about that every single time he opens his locker.
* Family Matters trip and not the warm weather activity that Eddie was hoping for. The combination of freezing conditions as well as Steve tagging along and catching all the fish makes Eddie miserable and he and Carl start arguing, only to be interrupted by the ice on the lake beginning to crack.
* Family Matters, ubernerd Steve Urkel loves to polka and plays the accordion.
* Family Matters, Urkel does this to Myra to get her to move away from his transformation chamber.
* Family Matters: Urkel, in response to some insult or threat from Laura: "Ha! Yesterday you said [more severe version of Laura's line]! I'm wearin' you dowwwwwwn, baby!"
* Family Matters: Urkel is about to step into the shower when he goes to get a loofah from his room. In the meantime, Laura steps into the shower herself, even though the water's already running, and sure enough...
* Family Matters: Urkel is the captive of a man impersonating Carl's partner. Carl hears him talking through the door and not giving the standard reply of, "Not if I see you first," when he says, "See you later." Carl baits the kidnapper by sliding money under the door that he doesn't owe him and breaks it down when he comes to get it, then apprehends the felon.
* Family Matters: Urkel saves an electrocuted Carl with CPR, he remembers to get a CPR mask out of Carl's first aid kit, preventing any mouth contact. However, true to the trope Carl revives with no apparent problems and returns home from a check-

up at the hospital that same night.
* Family Matters, Urkel's time machine appears to run on San Dimas Time; in the second episode in which it appears, Urkel and Carl are trapped in the past, with Harriet back home in 1997 wondering where they had run off to.
* Family Matters, Waldo is sent to prison in the fictional country of "Santo Porto" for trying to steal treasured artifact: A cheesy "I Heart Santo Porto" salsa bowl, technically the oldest bowl in the country. Carl and Urkel spend the episode trying to break Waldo out of jail until they're told that his bail is only $30 in US currency.
* Family Matters, Waldo takes Richie trick-or-treating and comes home with the wrong kid who was wearing the same Spider-Man costume as Richie.
* Family Matters was a toddler in the show's first season. By the second season, he's at least four or five.
* Family Matters was this with Laura Winslow. She would treat him like dirt, but he still clung on to her. But after she started appreciating all the good things, that he would do for her, she eventually started seeing him as a good friend. They would even become a couple in the last season of the show, but several fans wonder if that really was a good idea…
* Family Matters. When a criminal's brother attempts to kill Steve, he disguises himself as Carl's partner hoping to gain access to the hotel room he and Steve are hiding out in. Carl says "see you later", the man says "okay"...and Carl immediately knows what's going on because his partner would have said "not if I see you first".
* Family Matters when a friend of Steve's is getting married. As the bride walks down the aisle, she encounters an ex, who happens to be the ceremony's piano player. He invites her to grab some coffee, and she happily accepts. Despite her being female, for once, it's portrayed as an incredibly cruel and selfish thing for her to do—her ditched would-be groom tries to throw himself off the roof of the church afterwards. Fortunately, the cop sent to talk him down happens to be an ex of his.
* Family Matters: When Carl is asked to testify during an in-school "court session" about Steve's destructive tendencies, the only positive thing he can say is, "... I still have my health!"
* Family Matters when Carl's boss, Commissioner Geiss, leaves his parrot, Andre, with Carl for a couple of weeks. During that time, after being irritated by the bird, Carl says his boss is an idiot right in front of it. Fortunately, Carl doesn't get in trouble when he learns that Geiss's wife already taught the bird to say that. However, the Commissioner lands himself in a pickle of his own when he calls his wife a pain in the butt as he and the parrot are leaving.
* Family Matters, when Carl sees Steve holding a bird whistle, he's skeptical about its effectiveness in attracting birds. At Steve's encouragement, Carl tries it out. Several seconds later, a flock of birds fly above them and leaves a massive amount of droppings in their wake. Steve and Carl are unharmed because Steve holds an open umbrella over both of them, but Carl's car, which is parked outside, isn't so lucky.
* Family Matters when Harriet's boss Nick is invited to play poker with Carl and his friends.
* Family Matters, when Laura accidentally causes Steve Urkel's car to break down, Steve glares at Laura as she says, "Did I do that?"
* Family Matters, when video evidence convinces everybody on the jury except Steve Urkel, who figures out that it was edited to put the defendant's face on the real perpetrator's body.
* Family Matters, when young Richie is annoyed at having to wear a suit:
* Family Matters where Carl bought his wife a trampoline because she had complained that she needed a way to exercise more, but then she got upset that he must think she's fat. It blew over once Carl apologized, mentioned that he sometimes struggles with his weight too (throughout the entire show he's clearly much more overweight than she is), and suggested they both use it and just have fun with it instead of worrying about whether it produces weight loss or not.

* Family Matters where Carl had a dream in the style of an old Western movie. After each Scare Chord, everybody in the saloon looked around to try and find where the chord came from.
* Family Matters where Carl Winslow gets shot in the butt and ends up in the hospital next to Steve Urkel who'd just had his appendix removed, unfortunately for him.
* Family Matters, wherein Steve, Eddie, and Waldo are infiltrating a convent. Don't ask.
* Family Matters where she and Steve are an elderly married couple. A running gag during this scene is that sitting down and getting up is a 5-minute production, complete with grunts and bones cracking.
* Family Matters, with a L-train in a Christmas episode. Steve eventually teaches the grumpy passengers the true meaning of the holidays and they make a make-shift tree.
* Family Matters with the police force and arrests him. As it turns out, the killer replied to Carl with a simple, "Yeah, see ya," letting Carl instantly know it wasn't him.
* Family Matters works at Mighty Weenie and he wears a hat that has a hot dog on top.
* family members, and the planned murder of a bunch more. This gets him disowned and executed.
* Family of Choice: A group of friends are so close to one another, that they treat each other like they're related by blood.
* Family of ChoiceA group of unrelated characters decide to replace their missing family bonds by committing to always support each other as family.
* Family of Choice: Unrelated characters treat each other as though they were family.
* Family of Choice: When a group of characters who've been disowned by their own families decide to be each others' family instead.
* Family patriarch James Richards ("Grandpa Jim," Elly's father), a widower who had suffered a stroke earlier in the 2000s that left him unable to talk or care for himself, lives to welcome the birth of his fourth great grandson James Allen. In early 2010, at age 89, Jim — who had other health issues late in his life, including several heart attacks — dies peacefully in his sleep, his second wife, Iris (who had been his caretaker) at his side.
* Family Pinball table was not only genericized but slightly altered in layout.
* Family Plots (2004) (US; A&E Network show about a mortuary in San Diego)
* Family Portrait of Characterization: A family portrait tells us something about the members.
* Family Project, Chunhua gets a free piece of candy on the street as an advertisement and gives it to Tsukasa. Tsukasa trades it for a pack of cigarettes. He gives the cigarettes to a guy on the street and gets a 5000 yen gift certificate. He uses that to pay Masumi's debt at some store or another, and she gives him thirty lottery tickets, enough for three tries at a game. Chunhua tries three times and eventually gets a personal computer worth 300,000 yen. Lampshaded.
* Family Project has a tendency to either teleport into the screen or somehow sneak into the attic and from there gain access through to the bathroom ceiling to make sure he is present at any events he feels he should be at. Or at least to cling upsidedown to the bathroom ceiling. It's not exactly clear how he does strange things like this and is chalked up to the fact that he is pretty insane.
* Family Relationship Switcheroo for the child when the deception is discovered.
* Family Relationship Switcheroo: Not really used anymore since premarital sex and childrearing out-of-wedlock has become more accepted in the real world.
* "Family Remains" of their mother/sister by their father/grandfather, which led to the mother/sister killing herself out of shame and the twins killing the father/grandfather out of rage. They then hid in the walls of the home to avoid detection but emerged to kill anyone who tried to inhabit the house.
* "Family Resemblence", a bonus email included on one of the Strong Bad Email DVDs, featured Pom Pom and his hypothetical family doing a commercial for Jurvy

Skat, "the classic game of Oh-No-You-Don't", that riffs on ads for family board games.
* "Family Reunion chooses to remain aboard the flying Imperial dome rather than escape, calmly looking out over the city with a look of pure fury and hatred on her face seconds before the dome explodes.
* "Family Reunion" is about as lighthearted as it gets in the Dark World arc: before meeting the Apple/Pie family to
* Family Reunion, Scooter's twin sister Skeeter at one point pranks Miss Piggy by putting a sign reading "wide load" on her back.
* Family season video. Darby uploaded the episode to his YouTube account in 2015.
* Family: Silver Odysseus is hoping to incite a gang war that will engulf the city between his brother Gio, the current Don of the Odysseus family, and Cane, an up-and-coming gangster.
* family sitcom based on star Jim Breuer, so instead the two auditioned for O'Halloran's Dante. Neither got the part, and a no-name actor who looked nothing like O'Halloran was instead cast as Dante for the failed pilot. O'Halloran and Anderson have both gone on record saying they don't regret losing the part.
* Family-sized flying carpets are advertised as an alternative to cars in the
* Family Skeleton Mysteries), and at least one of the people attending McHades Hall.
* Family Skeleton Mysteries called, but the roommate had answered and told him Georgia already had a boyfriend in the vain hopes of winning the guy for herself. This, among other things she confessed to, left Georgia too ticked at the other woman to do anything more than hang up on her. Repeatedly.
* Family Skeleton Mysteries: College professor Georgia Thackery and her ambulatory skeleton friend Sid find themselves in this role in the first book, and keep it up.
* Family Skeleton Mysteries: Deborah is apparently afraid of inflatable arm-flailing tube men and the feel of rubber bands.
* Family Skeleton Mysteries: Despite lacking eyebrows (or flesh), Sid the skeleton is somehow able to give off the impression that he's doing this, as seen in book 2.
* Family Skeleton Mysteries: In the first book, Georgia asks her reporter boyfriend Fletcher about Dr. Jocasta Kirkland, and if he'd ever covered a murder. A while later, Dr. Kirkland's dead, and Fletcher's covering the story. Georgia notes the bizarre coincidence, and says that "I wish I'd asked you if you'd ever interviewed an English instructor who'd won a multimillion-dollar sweepstakes."
* Family Skeleton Mysteries: Madison Thackery quite happily refers to herself as one.
* Family Skeleton Mysteries raise a child by herself. But Sid was willing to believe in her, and his encouragement helped her self-confidence and allowed her to believe in herself again.
* Family Skeleton Mysteries series. He's the titular skeleton, with no memory of his pre-death life, but he and best friend Georgia, a live English professor, make a very good detective team.
* Family Skeleton Mysteries: She's a college adjunct who teaches English. He's an ambulatory skeleton. They solve murder mysteries.
* Family Skeleton Mysteries: Sid's is apparently to be there for Georgia, since she needed him and still does.
* Family Skeleton Mysteries: Sid the ambulatory (and friendly) skeleton has encountered a few, who sense there's something inherently wrong about him.
* Family Skeleton Mysteries: Sid the ambulatory skeleton can disassemble and reassemble himself as needed. In book 2, he learns how to do it from longer distances.
* Family Skeleton Mysteries: Sid the ambulatory skeleton, who's generally cheerful and loves to make bad jokes.
* Family Skeleton Mysteries: The first three books were released by the Berkley publishing company under their "Berkley Prime Crime" imprint before the author switched publishers to Diversion Books for #4 and on.
* Family Skeleton Mysteries: The Thackery family has long theorized that Sid, the titular family skeleton, is either a really skinny zombie, or this trope — a

ghost haunting his own bones. Main protagonist and narrator Georgia Thackery prefers the latter theory.
* Family Skeleton Mysteries Treasure Hunt, does this to almost everyone he meets, including himself. Among others, he refers to his son Brownlow "Brownie" Mannix as "College Boy" and Charles Peyton as "Britannica". Several of his carnival employees also go by nicknames he gave them, including Stewpot, Soda Pop and Gameboy.
* Family Skeleton Mysteries: Twice in book 2, Georgia is having a friendly chat with Adam McDaniels, and his older (and less mature) son Adam Jr. manages to interrupt both times - first by honking the horn on their car outside, and later by just snorting in disgust at their interaction.
* Family Skeleton Mysteries), who'd mailed himself to her new temporary address.
* Family's orders, then threaten Kurt (a black cop) for sleeping with her, though Talia intervenes to stop them. While it was initially a one-night stand, Talia and Kurt eventually grow closer together.
* "Family": The coach had raped one of his students in the locker room and seemed to be about to molest
* Family: The comic opens with Kurt accompanying a more seasoned cop during a police raid on a Family warehouse. He knocks Kurt unconscious when he decides to just go in guns blazing, but is almost immediately killed himself when the presumed-to-be-dead Silver Odysseus appears to blow up the building.
* Family Theme Naming: A family whose names share something in common (apart from their surname).
* Family Theme Naming is more common (such as the Apples, who are all named after apple cultivars or dishes, and Pinkie Pie's relatives, who are all named after types of rock), when family names are used at all. Although there are plenty of exceptions, there are also noticeable naming trends within the three tribes of ponies:
* Family Theme Naming, it also means "one who is victorious" Fitting for a live-stream gamer with a competitive streak in various aspects of life.
* Family: There's a send-up to the iconic shot when Talia meets with Kurt at a bar.
* Family Ties, Alex also did the Christmas shopping at a gas station and his family ended up getting presents like motor oil and a car air freshener.
* Family Ties. Alex becomes attracted to a music student he's tutoring. While this forces him to admit that he's no longer in love with his girlfriend Lauren, he realizes that the other girl isn't "The One" either and ends things with both of them.
* Family Ties: Alex fills in as coach for a single woman named Donna during Lamaze class in the Keatons' living room. He later, in typical Alex fashion, goes way over the top and becomes obsessed with his impending "fatherhood".
* Family Ties Alex had a college radio show playing old music from the Thirties and Forties.
* Family Ties. Alex has one of these, when Ellen leaves to get engaged. The only thing is Alex and Ellen hadn't yet dated at this point. He was dating her roommate, but was falling in love with Ellen.
* Family Ties Alex is roped into working a volunteer shift for a call-in crisis line. When he ends up taking an actual call from a teen who is suicidal, he goes into a panic and has no idea how to help. Frantically he searches through his written guides for something to say. When the caller demands to know if he's reading out of a book, he denies it... but then he gives himself away irretrievably.
* Family Ties: Alex learns a tough lesson on journalism ethics in Season 1's "Big Brother is Watching," when he uncovers a cheating scandal involving his sister, Mallory, and most of the popular students/athletes. Despite an admonition by the advisor not to publish the story with the names, Alex feels obliged to do so ... and he loses his job as a result. Alex adamantly defends his stance, but Steven tells him that while he was correct in publishing an unflattering story, he was unfair by publishing the names of the students involved, none of whom had had their due process yet.
* Family Ties: Alex P. Keaton was a business suit wearing Republican teenager born

to hippy parents.
* Family Ties and his parents even told her he was "willing to take a make-up test".
* Family Ties, Andrew is born late in season 3 and is played by twin babies (Garrett and Tyler Merriman) in season 4, but at the start of season 5 he's suddenly being played by a then-five-year-old Brian Bonsall, who then stays for the duration (seasons 5-7).
* Family Ties asks for a beer. He takes most of the six pack and hands one back.
* Family Ties by portraying a 9-year-old serial killer who was abused by his original parents. In real life, he became a failed rockstar, drug addict, and eventually a fugitive of justice.
* Family Ties: Dad Steve puts down "zoquo", Greek for water sports. When Alex is accused of hoarding the U's so nobody can use a Q (which doesn't make sense; a normal Scrabble set contains only one Q, which already would be in "zoquo"), he puts down "ushnuu".
* Family Ties due to her flower child background, and in general is a very kind-hearted and warm person.
* Family Ties, Elyse plays "Those Endearing Young Charms" on guitar during a pledge break at her husband's PBS station. The guitar doesn't explode during the key notes; instead, Elyse goes into labor.
* Family Ties England gets drunk in a bid to recover from Scotland and Northern Ireland leaving the Union and winds up at Wales's house at three in the morning. Once he's let in he clings onto Wales and says:
* Family Ties finds himself attracted to women who are the ideological opposite of him - while his best friend, Skippy, is the intellectual opposite of him.
* Family Ties franchise but otherwise hasn't done anything high-profile since.
* Family Ties had a guy getting ready for a date with Mallory by asking Alex for tips. Alex (who apparently was genuinely trying to help) proceeds to give a bunch of chauvinistic advice (starting with ordering for her and getting worse from there). Naturally, it doesn't end well.
* Family Ties has several of these — Skippy was the nerdy one, Nick was the punk one (well, TV-punk).
* Family Ties: "It's My Party" — an episode that aired during the summer of 1987, even though it was produced during the fourth season) — sees 14-year-old Jennifer in a funk in making friends, and bored with her unspectacular one. Pining to be one of the popular girls, she falls in with a group of snobbish rich girls that seem to be the most popular. Instead of being "cool" they prove to be a bad influence on Jennifer, as she skips school, stays out past curfew and begins disrespecting her parents. It's only when her friends try to host a beer party at the Keatons, and they also press their luck by trying to make her spurn her friend, that these aren't the friends she wants to have, and is best off with that nerdy, unspectacular friend. (And truth be told, the "cool" girls likely weren't that popular at all, and that Alex's hinted-at advice — be yourself — is advice well taken.)
* Family Ties led to "Mallory" becoming a popular girls' name, even though it was almost completely non-existent prior to the show (and was basically a last name adopted into a first name). Unlike "Madison", which came about under similar circumstances, "Mallory" died out quickly after the show ended.
* Family Ties: Mallory is frequently portrayed as a space cadet and average (at best) student who posits that there may be "special verbs for dead people" since they don't "do" anything. However, she is clearly a very talented fashion designer who nearly beats Alex in the PBS scholarship contest of her own accord.
* Family Ties, Mallory makes a mistake and her father says to her, "You're grounded until further notice." She looks at him like he's crazy, and says, "You can't ground me, I'm over 18!" Her father looks at her mother in stunned realization that she's right. "Darn, that worked so well when she was younger."
* Family Ties: neighbor boy Skippy has an unrequited crush on Mallory.
* Family Ties. Out of all of the Keaton family, he's the most studious and even has a choleric, Type A personality to boot.

* Family Ties. Quite naturally, his response has managed to alienate certain fans of the show. The speculations have arose during the 2006 US elections, where Michael J. Fox (who played Alex P. Keaton) was lobbying for the legalization of ESCR. Furthermore, Michael J. Fox has also given his input on Alex P. Keaton's current political leanings (and place of residence).
* Family Ties Republican who dreams of working on Wall Street when he grows up.
* Family Ties reveals that one of Alex's most beloved boyhood playthings was a box, which he called "Ba-ba".
* Family Ties sees Alex's nerdy best friend Skippy getting a kiss on the cheek from Mallory, on whom he's always had a crush. He says he'll never wash that cheek again, to which she replies, "Then you'll never get kissed again."
* Family Ties, Skippy's recruiting officer also serves as his drill sergeant, with an appropriate change in demeanor and volume. When Skippy goes AWOL due to his inability to cope with basic training, and the sergeant tracks him to (of course) the Keaton household, he tells Skippy that he could have him court-martialled and jailed. Then he reverts back to "nice guy" mode and informs Skippy that he's merely discharged and goes on to commend him for at least having the guts to try.
* Family Ties: The third season episode "Auntie Up" features Mallory's favorite aunt, Trudy Harris, dying of a heart attack in the living room. Mallory is deeply saddened, but the family is preoccupied with a garage sale at the house (for Alex's fraternity); a wake is held at the Keatons on the same day as the garage sale, and naturally hilarity ensues. Eventually, everyone is able to take Mallory seriously when she speaks up at the funeral and delivers an emotional eulogy.
* Family Ties to realize these guys aren't his friends. Alex is so disgusted that he quits the fraternity and tells the guys to take a hike. (And yes, as the fraternity president found out, Skippy was much smarter than they realized, as he tells them he sees them for who they are.)
* Family Ties where Alex plays chess against a Russian is an interesting case. They actually got many of the details right, including the use of the chess clock. But the presence of live commentary in the same room was more than a little silly, Alex's whole moral dilemma for the episode is created by ignoring the sealed-move rule for adjournments, and of course, for some reason, the Russian who suddenly decides he wants to lose can't simply do so by resigning.
* Family Ties) which operate as a stimulant, in an attempt to handle the stress of scholastic life. He eventually crashes, missing the big exam that has been the build-up of the entire sequence.
* Family Ties who moved onto bigger things.) Since the character is never even mentioned again, the audience is left to wonder if he ever got over his problems, or is laying drunk in an alleyway somewhere.
* Family Ties, with Alex P. Keaton. The first is where he gives very unhelpful (and sexist) advice to Mallory's French tutor, Jeff. He's a little more helpful with Skippy, until he himself falls for Skippy's love interest.
* Family Tree: Luba comes from Moldavia, which is treated as Ruritania. She frequently discusses bizarre beliefs and customs from her home country.
* Family Values Miho rollerbladed after a car, hitched onto the bumper, then climbed into the trunk without the mobsters knowing it.
* Family Values. She even intimidated one mook into killing his own brother.
* "Family Values" takes place in January 2003, by which time household robots are becoming common.
* Family Values Villain: A bad guy who believes in good old fashioned family values.
* Family Values Villain: A villain who believes in traditional family values.
* Family Values Villain: A villain who cares about setting a good example for children.
* Family Values Villain concerned with their families and "doing what's right."
* Family Values Villain: The villain cares about things being family-friendly.
* Family Values Villain: The villain still has traditional morals like those of a parent.
* Family version of Toontown is where the Warners were born and raised.

* Family Versus Career: Female characters have to choose between being valued for their relationships and being valued for their actions. Relationships often win out.
* Family, Wakko’s burping talent is revealed when Yakko gives him soda during a trip to the supermarket. He surprises Yakko and everyone around him by loudly belching. He then belches "Mary Had A Little Lamb" and "Hello I Must Be Going".
* family whether he can come and Homer says "Sure!" reflexively. D'oh!
* family, which dramatically changes the events of the previous 40 or so episodes.
* Famine, goes on profanity-laced rants, her people skills are sketchy at best, and her demeanor (horrified to nonchalant or hateful to loving in the blink of an eye) jumps all over the place, to the point where a teacher wonders if she is a junkie or suffering from some kind of premature PMS. Oh, and there are bits like this:
* Famine) makes a mental note to fire the cook because he's singing "Love Me Tender" to himself and it's clashing with the franchise-mandated canned music.
* Famine, one of the leaders of the Four Horses raider gang. Which, given that the Four Horses were introduced as antagonists, is really saying something.
* Fam: In episode 4, Shannon's neglectful, irresponsible father is said to wear Axe body spray by his ex-wife.
* Famitsu, the famous Japanese video games magazine which began as far as 1986, was spunoff from a column in LOGiN, a Japanese PC gaming magazine that began only a few years earlier. LOGiN would ceased publication in 2008, while Famitsu is still ongoing to this day, having amassed over 1,500 issues and still counting.
* Famke Janssen), much to the displeasure of his three parents. Christian seduces her in an effort to get her to stay away from Matt and immediately deduces she used to be a man (and later describes her as "the goddamned Hope Diamond of transsexuals").
* Famke Janssen (this also makes her a little taller than Tye Sheridan, who plays the teen version of Cyclops).
* Famke. Ruth, the youngest of the three, adores her oldest sister and even schemes to fix her up with a boyfriend.
* Famous 5: On The Case version of her father Quentin, as the eccentric scientist whose discoveries sometimes lead to the Five's cases.
* Famous actors, singers, and other well-known personalities being hired to tell the stories of normal customers, in their characteristic styles. The more memorable ads from this campaign feature
* famous ad campaign premieres, presumably due to Harper's prominence in that show.
* Famous Ancestor, mimicking the rivalry Terezi has with Mindfang's descendant Vriska.
* Famous Ancestor: Someone whose coolness comes from the fact that they have, well, a famous ancestor.
* Famous and macabre example: when the Chinese army attacked UN forces in Korea in the brutal winter of 1950, they surrounded the elite and famous US 1st Marine Division. Faced with utter annihilation, the division's officers rallied their men by vowing to get everyone out, including the wounded and the dead. Their convoys coming down out of the mountains, depicted in newsreel footage and several movies, reveal how brutal the fighting was and how determined they were to achieve that symbolic goal: their trucks and jeeps are festooned with frozen corpses wrapped in blankets and body bags.
* Famous British football manager turned commentator Ron Atkinson said, referring to Black French player Marcel Desailly: "He is what is known in some schools as a fucking lazy thick nigger." Although transmission in the UK had finished, his comment was broadcast to various countries in the Middle East. He had to resign from his job.
* Famous case from the 1980s: a notorious slumlord was sentenced to live in one of his own buildings. Yup, Joe Pesci's
* Famous Commodore 64 designers Jonathan Temples and David Temples are most well-known for their work on
* famous expert will solve your supernatural problems (and the occasional mundane case). And if it's an especially heinous criminal, Jules will happily give him a

horrible death.
* famous fall for it. It's one of the quintessential scams also because, like all good scams, preys upon the unsavoury characteristics of the victim (greed and unscrupulousness) in a way that if you fell for it you'd be deeply ashamed to confess it.
* Famous, Famous, Fictional: Naming famous real-life people or things, only to have the last one be of fictional origin.
* Famous Fred, Fred's owner initially thinks he's a female, but she looks at his crotch and says, "No, let's name him Fred."
* Famous Friends Subway ad insert comics from 2011, when the possibility of getting a sandwich distracts Black Manta from his actual plan.
* Famous in Love as Rainer is told that, as 20, he's legally forbidden from doing a stunt. However, he says he's really 23 as his mom, Nina, insisted on having him be younger when he started out in the business.
* Famous In Love, Nina Devon tells son Rainer that his father was a stuntman she had a fling with and died before he was born. In reality, Rainer is the product of an affair Nina had with producer turned studio chief Alan Mills who is also unaware of the truth. On a trip to China, Alan is surprised to find Rainer suffers from the same motion sickness he gets and had once had a drinking habit. When Rainer wants to do a stunt, Alan says he's only 20 but Rainer says he's really 23 and Nina just "aged me down" for his acting career. He mentions his father meeting his mom on a movie, Alan not remembering his "dad" but clearly how he and Nina were involved at the time. It pushes him to get a DNA test and confront Nina.
* Famous Italian tenor Luciano Pavarotti had often performed together with fellow Italian soprano Mirella Freni, and it helps that they were childhood friends who grew up together in Italy. Not only have the two performed together, but they've recorded albums and done concerts together.
* famous LiveJournal review points out, Mike employs sex workers for a lot of tasks: as translators, infiltrators, assasins, etc, but he always winds up acquiring an entire harem of barely-legal women for sex.
* Famous luchador and Catholic priest Fray Tormenta was inspired to wrestle to support his orphanage by two wrestling films in Mexico,
* Famously, 5'11" Boris Karloff wore platform boots and a tall headpiece to appear a towering stature as the Monster in
* famously announced that they observed neutrino particles moving faster than the speed of light, and adjusting for this technical problem revealed that the neutrinos never broke the light-speed barrier after all. The error is understandable given the complexity of the equipment involved, and the scientists should be given credit for being cautious about their "discovery" from the start.
* Famously, a Private Snafu cartoon late in the war about the importance of not blabbering too much about military matters when on leave was later pulled when the joke (Snafu telling his date all about a secret new bomb that could level an island) came a little too close to describing the then-underway
* Famously, Bill Withers' "Ain't No Sunshine" features a verse consisting of 26 repetitions of "I know" before "I oughtta leave the young thing alone"; this was originally a placeholder for lyrics to be written later, but the other musicians he was recording with insisted it be kept in. (Given that these musicians included such 60s luminaries as Stephen Stills and Graham Nash of
* famously deducted points because the controls were too good and thus the game was "too easy".
* Famously. Despite his defiant proclamation after being released, Picard admits that, towards the end, he really started to think that there were five lights.
* Famously done by Principal Skinner in "22 Short Films About Springfield" when he has Superintendent Chalmers over for dinner:
* Famously, during the McCarthy era in the USA, the FBI had many of its members infiltrate the Communist Party USA, or convince Communists to turn informer. It was estimated that, at its peak, approximately
* Famously happened during the Albigensian Crusade against Catharism in southern France. Asked by a soldier how to tell the difference between Cathar heretics and

good Catholics, the
* Famously, he once sent a telegraph to his wife: "Am in Market Harborough. Where ought I to be?" She telegraphed back, "Home."
* famously incorruptible to people trying to bribe him, and he also knows that local merchants offering discounts or free goods for watchmen isn't really altruistic; it's an attempt to get the watch on their side. Regardless, Vimes considers it too petty to get worked up about, knows that the free or discounted stuff the watch gets from merchants is a perk of the job and that attempting to curtail it would wind up with the watch up in arms. He's even willing to consider that maybe a tiny fraction of the merchants are just sincerely showing their gratitude.
* Famously inverted from the opening line: inability to support a wife is the
* Famously, Islam forbids the consumption of pork, dog meat or alcohol (the word "haram" means "forbidden"). However, in desperate situations (e.g. no other source of nourishment is available), then a Muslim is permitted to consume any of the aforementioned in order to survive. Refusing to do so to the point of dying is viewed as a
* Famously, Judas Iscariot given how he almost immediately regretted his betrayal of Jesus to the point of
* Famously, magician James Randi would expose scammers since early in his career, and continued to do so even after retiring from the stage. He is probably better known today as a skeptic rather than as an illusionist. He has exposed many psychics and faith healers as frauds. The most notorious one is probably Israeli "psychic" Uri Geller, who tried to sue Mr. Randi for libel several times. All of those cases were lost or dismissed, save for one in which
* Famously mentioned in Wouk's "The Caine Mutiny" where (right after "Navy way") the captain appends "and my way. On this ship, things will be done my way." It does not end well.
* Famously Mundane, Fictionally Magical: Something which exists in real life has supernatural features in fiction.
* Famously, when zombie-siege Sole Survivor Ben is shot and killed by the posse that mistook him for one of the undead.
* Famous-Named Foreigner: A character foreign to the writers who is named after a famous person from their country.
* famous of advantages to being beautiful, famous and wealthy that makes people who have these things whining about them particularly insufferable to people who don't.
* Famous playwright August Wilson openly defied this trope in his life and writings. Specifically, Wilson was against the idea of colorblind casting and stated that to deny the reality of race when writing or planning a show was to (pun intended) whitewash history. He refused to allow white actors to play any part he had written for African-Americans (although he did allow a Chinese production of his play
* famous references this, with Major General Stanley rattling off his knowledge of a variety of fields, only to get to his military expertise, of which there is none to speak of. The implication being that he owes his position to excellent performance in officer school, despite having no actual military experience, something that was rather common at the time.
* Famous romance-novel-cover model and sex symbol Fabio did a stint advertising
* famous Sal & Richard prank call. While calling a public access television show, the caller asks the panel if he can "ask that fat white bitch a question". One of the male panelists responds with "She's not white!" after they cut the caller off.
* Famous saying by some 19th-century Russian general: "A bullet sometimes misses; a bayonet never does." A similar saying is from Generalissimus Alexander Suvorov, who lived in the late XVIII - early XIX century: "Bullet is foolish, bayonet is bold".
* Famous singer, Dave Clark, became so obsessed with fighting the ageing process that his surgery has left him looking like some kind of
* Famous Studios — the rather racist "Japoteurs" (rarely included in

compilations), the somewhat less offensive "The Eleventh Hour", and two where Superman battled the Nazis.
* Famous Studios shortly after its inception; his name was removed from the completed cartoons he directed such as "No Mutton Fer Nuttin'".
* Famous Studios short "The Ski's the Limit", a Swiss cheese factory has a mouse serve as its cheese taster. The mouse cuts a slice, swallows the larger part, and stamps "OK" on the smaller part.
* Famous Swedish soprano Birgit Nilsson was born on a farm in rural Sweden but had a real talent for singing from a young age. After a not-so-successful debut in von Weber's
* Famous warrior turned axe crazy antagonist Mina Loveberry has this along with an
* famous "zombie apocalypse" weapons that would suck in a real zombie apocalypse. According to this article, katanas are best suited for quick draw — something totally useless against zombies — and are way too fragile and high-maintenance to be of any use in a survival situation.
* Fa Mulan disguises herself as a man by making her hair shorter and wearing a soldier's outfit so that her disabled father won't have to go.
* Fanaa to stand in for the Indian bits of the Himalayas (!). As weird as it sounds, according to the producers, this was a cost and logistics saving measure.
* Fana is one of the strongest members of the Eye of the Midnight Sun. Her Flame Magic lets her unleash incredibly destructive fire and she's implacable and merciless towards the ones she loathes. Gaining her hatred is an easy action.
* Fanart Central, in its role as the fanart equivalent to Fanfiction.net.
* Fan Art character, Me-Mow the tiny cat assassin, was introduced to the Land of Ooo in her own self-titled episode.
* Fanart depicting the canonically annoying-but-harmless Kankri Vantas of
* Fan Art in order to write a good summary for the fanfic and make it easier to search for. Then, good parodies of fanfics are harder than they seem, and for little gain: they can be painstakingly researched on what cliches to include, what the fandom usually groans at, etc.
* fanart into a guy who regularly kidnapped children and gushed about how they were 'cute.' The conversation was more or less sunk after that.
* Fanartists have taken advantage of Youmu's ability for shippy purposes, since she's a
* fanart of him was introduced, and the walls of his room were completely covered in movie posters—and that Lord English fanart was one of the posters.
* Fanart of Sauron, the title character, tends to avoid the "black and hideous" phase of his physical incarnation, or else interpret it as "evil
* Fan-art often portrayed Wonderbolt stallion Soarin as having exact same cutie mark as he does with his flight suit on. This eventually became canonical in the season 2 finale where he can briefly be seen without it.
* fan art potential, being far and away artists' most popular subjects. Similar body structures coupled with various elemental themes (and vulpine cuteness) mean they're easy to draw and provide great breadth for creativity.
* fanart shows Buster and Babs in a trench coat. They're using this disguise to try to escape from Elmyra. Buster seems fully confident this plan will work, while Babs is giving some kind of uncomfortable look, which could mean a number of things...
* Fan Art tells a lot! It got parodied in the episode "The Ring", where they point out that most girls for the Jonas Brothers (or any boy band for that matter) just go to their concerts to look at them rather than listening to their music.
* Fanatec Porsche and the Fanatec CSR wheels have a clutch pedal, and a $50 accessory is a 6 speed H-pattern stick shift. The first time you use it, you'll be grinding through the gears trying to find fifth or reverse. Have fun accidentally throwing your $800,000 Ferrari into first gear at 180 MPH!
* Fanatical monomaniac computers were one of the most frequently re-used
* Fanatical Purifiers, Devouring Swarms, and to a lesser extent, Determined Exterminators will tend to force allies among their neighbors. Considering that making these rivals is about all the peaceful interaction you have with them, and having similar rivals actually helps other empires become friendlier to you, this

opens up a lot of potential for defensive pacts and allies.
* Fanatical Purifiers have the potential to be befriended this way if you save them from their own annihilation.
* fanatical reverence use them when given half an excuse. They're considered the ultimate Wild Card, to the point that even the NCR and the Legion are scared of going up against them.
* Fanatic is a rare version not associated with shadows, darkness, or evil magic. Instead, she's a glorious, radiant angel, blazing with divine light...who sees part of her duty as striking fear into the hearts of the wicked. If the wicked are not shitting themselves eagerly enough, she will teach them fear. With flame and sword.
* Fanatic Purifiers DLC it is possible to create a Fanatic Purifier empire that originated on a Tomb World.
* Fanatic's Sacrosanct Martyr and her Prime Wardens variant's power involve hitting herself with radiant damage in order to do things. She has a bit of healing to offset it, plus armour that stops her dying and resets her health to 10. For bonus points, her most damaging one-shot scales based on how much punishment she's taken.
* Fanatic tends to take risks with her HP and rely on her life-restoring armour and access to healing effects to avoid this being lethal; Sacrosanct Martyr and her Prime Wardens version's power, in particular, reduce her HP in exchange for damage output or free plays/power uses, and another card of hers lets her discard 3 to deal damage equal to the health she's lost — one of the few cards that can deal over 20 damage in one shot without any buffs at all, but only if she's on the edge of death.
* fan-based "red pants" memes/artwork/etc and he admitted to seeing them on the Internet, Tumblr promptly went crazy, to the effect of "Oh my God he KNOWS! Hide!"
* fanbase his egomania that had caused everyone so much grief, thanks to his own fanbase, who find a shirtless half-demon who incessantly insists that no one understands him appealing.
* Fanboy and Chum Chum) are in one car at once. The roof has magical stretchiness to accommodate.
* Fanboy and Chum Chum episode "Cold War", Fanboy eats Lenny's nachos while talking to him on the phone.
* Fanboy and Chum Chum episode "Fangboy", Dr. Acula does this when Fanboy tells him he's a vampire.
* Fanboy and Chum Chum episode "Little Glop of Horrors". The titular glop served by the new lunch lady was so awful that the utensil used by one of the students dissolves.
* Fanboy and Chum Chum: Fanboy can open the top of his head at will whenever he wants. It's prominent in one episode when he loses his brain.
* Fanboy and Chum Chum: Fanboy's weeks of unbathing caused his own stench to animate his hand under the name of Stinks. It had mushrooms for eyes, and had the personality of a mobster.
* Fanboy and Chum Chum gets filled with helium, right as he's about to punch the titular characters. He notes that it's VERY hard to sound threatening with his voice like that.
* Fanboy and Chum Chum has the Rattleskunkupine, which Fanboy describes as "half rattlesnake, half porcupine, all skunk".
* Fanboy and Chum Chum have lowkey outfits, but their hats have big Frosty Freezy Freezes on them.
* Fanboy and Chum Chum. His brain is evidently not subject to the laws of gravity, because it stays in mid-air while he is falling.
* Fanboy and Chum Chum: In "Attack of the Clones" when Cloneboy and Chum Clone (the clone counterparts of the boys) taste the Frosty Freezy Freeze, we get a reenactment of the "brain freeze" sequence from the opening theme.
* Fanboy and Chum Chum in a world of wacky and over-the-top characters.
* Fanboy and Chum Chum, including claiming that Fanboy and Chum Chum are his "elf servants", not human friends. Sigmund later suggested buying them, for the price of Kyle returning to the Milkweed academy for wizards (which he has been expelled

from) and Kyle agreed - at least until he learned that Sigmund intended on blowing them up. After that, he admitted to not being as high-achieving as he painted himself at first.
* Fanboy and Chum Chum: In one episode, Fanboy gets an idea bulb, but it burns out. However, Chumchum fixes it by walking up invisible steps with a new lightbulb, and replaces the burned out one with the new lightbulb.
* Fanboy and Chum Chum: In the first episode, Chum Chum does this when Fanboy revives him with an Ice Monster Bun Bun.
* Fanboy and Chum Chum it's revealed that after Fanboy sneezed on another student's placement exam, rendering it illegible, she was sent back to kindergarten.
* Fanboy and Chum Chum. Later in the episode, when he and Chum Chum are trying to figure out how to get a dollar, he exclaims "We've got to THINK!", after which Chum Chum leaves the screen for a second to return with Fanboy's brain and places it back in his head. Throughout the episode, there's no difference in the brainless Fanboy's behaviour from his brain-equipped self (but he does make up a plan once he has his brain).
* Fanboy and Chum Chum. Let's see, now - she has a shrine dedicated to him and has repeatedly attempted to kidnap him. She fails mostly because of Fanboy, who's always protecting Chum Chum from her. So far, there were two episodes in which her uses of Fanboy's distraction/handicap to take Chum Chum away became a major plot point.
* Fanboy and Chum Chum. Many episodes end with the characters turning into things, suffering a fatal accident or revealing a dark secret about someone, but by the next episode with no explanation, everything is completely back to normal.
* Fanboy and Chum Chum says he's a preteen wizard, putting his age between 9-13, yet he sounds like he's at least 18-25.
* Fan Boy And Chum Chum: The boys wear superhero costumes that include tighty-whitey briefs on the outside. They always dress like this, even in public.
* Fanboy and Chum Chum: The Dollar-nator is a robot built by Fanboy in the future, sent to the past to help the titular duo out of jams. Not much else to do with The Terminator besides having a thick Austrian accent, imitating the speak patterns of Arnold Schwarzenegger.
* Fanboy and Chum Chum: The title characters were clearly meant to be this, but aside from wearing superhero costumes and occasionally being seen reading comic books, they don't exhibit typical fanboy behavior. Oz, their acquaintance and the owner of the local comic book shop, is a textbook example.
* Fanboy and Chum Chum they can cut the fun finger in half so they can both eat it.
* Fanboy and Chum Chum was gaining some attention), the show suddenly boomed in popularity, and it gained a dedicated - if a bit niche fandom.
* Fanboy and Chum Chum, "Wizboy", begins with wizard Kyle giving a rather drastic and realistic grand entrance. No student in the class seems to catch on except for Fanboy and Chum Chum, who cheer excitedly.
* Fanboy and Chum Chum: Yo is so genki, she can appear in two places at once.
* fanboy Dr. Felger does a spit-take when Major Carter announces to him that they'll work together on his new project.
* Fanboying and saying to each other, "Look, it's Safe Drivers Save 40%!"
* Fanboys also had a lot of issues with the dressing of the comic book store, as several post-1999 books are shown on the racks in the distance. One particularly jarring bit is a copy of the final Tag & Bink comic, which satirizes the entire Prequel Trilogy.
* Fanboys before it got turned into an actual Hollywood picture (with typical Hollywoodifacation, of course).
* Fanboys: Eric and Linus are taking out their frustrations with each other in the form of an argument about whether or not Luke and Leia were attracted to each other before the Episode VI reveal. As Linus leaves he yells back, "They were siblings, you sick bastard!"
* Fanboys for a real-life fan before the latter's death of terminal cancer in 2015.
* Fanboys. He absolutely loves his job and a number of comics shows him cracking some kind of joke just before getting to the actual reaping. He has a pet cat who

died of a bullet to the head, and he loves showing off how getting it to smoke a cigarette will make smoke come out of the wound.
* Fanboys himself turns up to secretly give the group the schematics to Lucas's mansion, provided he not be connected to it in any way.
* Fanboys. Hutch leaps through the closing blast-door-style hatch of Skywalker Ranch's memorabilia room, then reaches back through just before their diamond-shaped opening scissors shut to give the finger to Lucas's security guards.
* Fanboys they are shocked to find that his contact is none other than William Shatner.
* fanboy who successfully duplicated the accident after years of painful treatments in order to use Barry's old treadmill to go back and hang out with him.
* Fanchon the Cricket: Fanchon is full of energy, running around everywhere. She rolls around in the grass and splashes through the stream. She dances with her own shadow. She's so energetic that she can't just sit on a wooden fence, she has to bounce up and down on the beam while she sings.
* fancomic and demonstrates this trope quite nicely with a little spin to include condoms as well.
* fan-comic, she clings desperately to Eridan and screams about how she's going to die.
* Fan Community Nicknames: Nicknames given for the fans of specific franchises.
* Fan Convention costume that had the audience rolling on the floor laughing.
* Fan Convention: Places where fans gather to engage in their hobbies.
* Fan Conventions outright ban modern law enforcement and military costumes for this reason, even if the costume has some intentional liberties with the design.
* Fan Conventions, particularly the larger ones, often outgrow their venues, resulting in having to move to larger venues to keep up with demand or limit how many attendees can be in the venue at any one time. San Diego Comic-Con has had this issue for decades, resulting in a cap on how many tickets can be sold, while Anime Expo started having to enforce building maximum occupancies in 2013. Both conventions use the largest possible venues in California (the San Diego Convention Center for SDCC and the Los Angeles Convention Center for AX).
* Fan-Created Offspring: An OC who is descended from one or more canon characters.
* Fancy Apartments allows the wearer to form a link with the title building. However, it is apparently very difficult to manage.
* Fancy Apartments causes a mirror to distort the image of any person reflected in it. It's apparently rather disturbing.
* Fancy Apartments, Fancy Apartments itself is a living building, able to change its shape, know what's going on inside it, shield itself, repair itself... You know, the standard magic building package.
* Fancy Apartments features Tisa, who usually looks like a short girl, but can change form into an eight-foot jinn.
* Fancy Apartments has a number of short outtakes in the back of the book, mostly just comedy and pop-culture references.
* Fancy Apartments, the heroes are directed by the main villian to the roof for the final confrontation.
* Fancy Apartments, who hams up any line he can. It's hard to tell if that's his nature, or if he just likes being dramatic. Oddly enough, he still seems a serious threat despite it.
* Fancy Camping: When someone on a camping trip carries so many of their city comforts with them that you have to wonder why they even went at all.
* Fancy Dinner, with Wendy borrowing a fancy dress, taking her hair out of pigtails, and using makeup. Her dinner companion doesn't even recognize her at first. In context, his surprise may have a lot to do with the fact that she looks older—like a young woman rather than a child—than she does in her usual clothing.
* Fancy Feast cat food is a repeat offender. Delicate portions of delicious looking meat are served in a crystal goblet to a fabulously white longhair cat which deigns to leap (in slow motion) off its personal chaise lounge where it has been sunning in what appears to be a Mediterranean villa. After a few bites it

licks its lips and stares solemnly at the camera as if to say "I am a cat and I am richer than you."
* Fancy Free (see below), has a similar premise that can be summed up in two stage directions: "Enter Three Sailors" and "Enter Two Girls."
* Fancy hissatsu moves for the robos are practically almost necessary due to the coolness factor. Just look at
* Fancying himself the CEO of Fontaine Futuristics, the extravagantly deranged Dr. Gilbert Alexander in
* Fancy Island, according to an old newspaper seen in the Fancy Island archive page, was once an amusement park that was abandoned when the caretaker disappeared, and then became haunted by the many spirits and monsters of the game.
* Fancy Nancy book “Poison Ivy Expert”, Nancy thinks she knows what poison ivy looks like and can avoid it while gathering flowers for her teacher. She’s wrong and though the teacher is unharmed, she gets a nasty case.
* Fancy Nancy Christmas special "Nancy And The Nice List" aired on December 14, 2018. Nancy's voice actress, Mia Sinclair Jenness, turned 13 that day.
* Fancy Nancy episode "Nancy's Looth Tooth" has Nancy lose one of her baby teeth, specifically her front tooth, the day before picture day at ballet class. She then tries to hide the fact that her tooth is gone. The ending also shows Grace doing the same since she lost her tooth, and Bree loses hers as well.
* Fancy Nancy episode "Nancy's New Friend" introduces Lionel's cousin Sean, who has autism. He's voiced by George Yionoulis, who's also autistic.
* Fancy Nancy had a birthday, too. She even has the song sung in French!
* Fancy Nancy in this style, complete with the use of old-timey detective slang.
* Fancy Nancy, Nancy causes the overflowing bubbles variant when she does the dishes after taking over Mrs. Clancy's chores when she has a cold.
* Fancy Nancy , "Nancy's Ooh La La Spa", a Mother's Day episode, aired on July 20, 2018, while "Nancy's Favorite Grandpa", a Father's Day episode, aired on April 26, 2020. These are the only cases of this happening due to the other holiday episodes airing in their respective months.
* Fancy Nancy, Nancy's Uncle Pete is voiced by supervising director Jamie Mitchell.
* Fancy Nancy : Teaches kids about French culture, with a dash of fashion.
* Fancy Nancy the Musical, Nancy is cast as a tree in a ballet, despite the show having an underwater theme.
* Fancy Pants Adventure a needle scratch plays when a giant rabbit grabs Fancy Pants Man's ice cream cone while he's holding it triumphantly over his head.
* Fancy Pants Adventures, not only do Squiggles heal lost health, collecting 100 of them gets Fancy Pants Man an extra life.
* Fancy Pants Adventures who is always ready to save the day and protect Squiggleville. He has also proven to be incredibly selfless and will not hesitate to risk his life to save the day. Fancy Pants Man cares deeply about those close to him; this is displayed when he continuously tries to rescue his sister from being kidnapped by pirates, even after she sends rude notes to him and throws him in the Princess Pirate Ship dungeon.
* Fancy Pants is definitely fancy (as one of the richest and most influential unicorns in Canterlot), but like most ponies he doesn't wear pants.
* Fancy yourself a fan of fighting games? Then you must have played a
* Fandalorians, specifically for fans of Boba Fett and the Mandalorians in general.
* Fandango and won Season 4. Debuted the new Fandango gimmick in 2013. The peak of his career was when he and his entrance theme spawned a small dance craze called "Fandangoing". Now is back on NXT.
* Fandango as Fandango rebound as one-half of Breezango the Fashion Police with Tyler Breeze, while Summer was released in 2017.
* Fandango first debuted he refused to wrestle against anyone unless people pronounced his name right (Fahn-Dahn-Gohh, not Fan-Dang-Oh). He even corrected the ring announcer after he had taken a savage beating!
* Fan Dan Go where a male character, Zephyr, has candyfloss pink hair, while his female compatriot, Sarin, has sky blue hair.

* Fan-Disliked Explanation: A YMMV for when an ambiguity is resolved, but the audience dislikes the resolution.
* Fan-Disliked Explanation: The fans dislike an attempt made at explaining something because it ruins the unexplained thing's ambiguity or mystique.
* Fan Disservice: A male informant is fitted with a wire in his groin area (maybe because the detectives found him a pain in the behind and wanted to give him something to really complain about). The fitting takes place behind a closed door but we hear his complaints when the tape starts to pull at his pubic hair. He is later shown to be walking funny.
* Fan Disservice: It would be conventional fanservice, except the situation is too unpleasant or the person in question is too ugly or cruel for the scene to be considered sexy.
* Fan Disservice: Something that would conventionally qualify as fanservice is made deliberately unsexy by how gross and hideous the person looks or the circumstances are.
* Fandom: A group of people who like something vs. a group of people who dislike it.
* fandom contains groups such as the now-disbanded Burned Furs and Improved Anthropomorphics, anthropomorphic enthusiasts who believe the community has been corrupted with many of its members' obsession with risqué media, and promote a "cleansing" of the fandom to a more pure, unadulterated state. Unlike many of the above, they aren't usually taken seriously, and their attempts at changing the fandom generally don't have much impact.
* Fandom-Enraging Misconception as many people unironically compare Pokemon battling to dog or cock fighting.
* Fandom-Enraging Misconception: Getting basic facts about a work wrong will seriously piss off the fans.
* Fandom-Enraging Misconception: If you don't want to piss off the fans, make sure you don't get the basic facts about the work wrong.
* Fandom-Enraging Misconception: Make this mistake as a casual viewer, and suffer the wrath of the fandom.
* Fandom example: At least on this wiki, it appears as if the use of the term "White Devil"
* Fandom has also long speculated that someone could obtain Zeno's powers by drinking his blood, the same way Zeno gained them by drinking the blood of the Yellow Dragon God. Mizari later declares this is his intent in regards to not only Zeno's powers, but Kija's and Jaeha's as well. Zeno sets the record straight: this would not work, and he knows this for a fact, because soldiers have been doused in his blood and animals have eaten his flesh, and all of them died anyway.
* Fandom has booted the "reception wikis", several language versions of Uncyclopedia, the Random-ness Wiki, most humour/joke wikis other than UnAnything, and several
* Fandom Heresy: If you disagree with a viewpoint most other fans have, the rest of the fandom will turn on you.
* Fandom Heresy: The majority of a fandom get angry over one fan having an unpopular opinion about the franchise.
* fandom, in which Kirito is stuck playing as his little sister's avatar in the death game for years.
* Fandom Lifecycle) by fiercely dedicated and very militant fandom cores. These games often experience a resurgence whenever a new game in the series is announced as fans replay them in anticipation.
* Fandom, meaning that it's almost impossible to tell if someone's in on the joke or not.
* Fandom Nod to the "Joel vs. Mike" debates that raged over the Internet when Hodgson first left the series, debates that still go on to this day over a decade later (despite the fact that Hodgson and Nelson are good friends).
* fandom popularity is what ended up giving him a much greater role in future installments.
* Fandom Rivalry alone get along well, due to sharing a few actors and juicy

crossover potential.
* Fandom Rivalry: A rivalry between the fandoms of two different works.
* Fandom Rivalry between it and Halo is all but guaranteeing a mountain of Fanfic.
* Fandom Rivalry entries for being too casual-friendly and not as exciting to watch competitively as their favored game.
* Fandom Rivalry: In Byzantium, brawls between followers of different religious leaders were an everyday occurence, as were running fights between suporters of different chariot racing teams.
* Fandom Rivalry - In which one fandom hates another fandom, and vice-versa.
* Fandom Rivalry of the sites. However, at the time Tumblr was a relatively new and niche website most well-known for its hipster and fashion blogs run by 20-somethings. While Tumblr still has a strong fashion blog fanbase, the image of the website has changed drastically. It's more associated with political, LGBT, and fandom blogs run by young teens joining those 20-somethings on the site.
* Fandom Rivalry: The fandoms of two different works do not get along well.
* Fandom Rivalry: The fandoms of two different works don't get along well.
* Fandom Rivalry: Two different fanbases don't get along with each other.
* Fandom Rivalry: Two different fandoms hate each other, and may attack each other online.
* Fandom Rivalry wants the animators to take their time animating and producing the episodes.
* Fandom-Specific Plot for ASOIAF fics, with the White Walkers succeeding in bringing the Long Night and destroying Westeros, and various characters being sent back through time through various means (the Old Gods, the Three Eyed Raven, etc) in order to try and avert this from happening.
* Fandom-Specific Plot: For some reason, fan fiction loves using those particular plots.
* Fandom-Specific Plot is Harry being framed for murder and sent to Azkaban.
* Fandom-Specific Plot's fanfics is that Harry gets framed for a murder, and either runs away to find out who did the framing or gets sent to Azkaban, in which case he will either escape to find the truth or has to stay in Azkaban until someone (normally Voldemort) reveals it was all a frame-up to drive Harry apart from the Light side.
* Fandom-Specific Plot that the protagonist has an opposite sex twin that's part of the adventure, though you only play as one twin.
* fandom to be African-American and a throwback to the 70s. He's both an homage and a parody of a common Blacksploitation cinema archetype.
* Fandom VIP canonically look like McKay's designs (notably, South looking completely different, Wash being blond rather than brunet, and Maine being bald instead of ginger) causing some grumpiness in the fandom. However, Wyoming actually looks pretty close to McKay's design.
* Fandom VIP, Elizabeth Marmalade, appears in Arc 3 with her permission.
* Fandom VIP extrapolations from canonicity or pure fanfic, without any disclaimer being put in. It's still possible to find older Who fans quoting some of this stuff as canonical.
* Fandom VIP Stephen Briggs's birthday is Patrician Day), but it is certainly the case that any statement he made on alt.fan.pratchett (which rarely discusses the actual books) will be treated as a bit more significant than if J. Random Poster said it. Half of them would still disagree with it, because they're a bloody-minded bunch (again, taking on his mindset!) but they'd do it in a more measured way.
* fandom, which are far less ambiguous (and the exploding relays were removed entirely).
* Fandorin also has a related one where he sums up the evidence with "(Statement). That is one. (Statement) That is two," and so forth, but this is usually part way through while he is still considering hypotheses.
* Fandral the Dashing is reckoned as the best swordsman in the Nine Realms - which, considering he's a
* Fandral the Dashing of Asgard, though he rarely gets the chance to show it.
* Fan Dumb as Huge Fans clash over little details any casual observer would not

care about. With time and guidance many Huge Fans adjust to the climate of TV Tropes and become helpful tropers. Those who do not adapt generally move on to fandom-only wikis where they can be with like-minded editors. A few specimens, however, become very frustrated instead of adapting and become Destructive Types.
* Fan Dumb either, where they know it exists but choose not to; something like an example I've found in Real Life:
* Fan Dumb. Everything from what qualifies as a "world title" to how seriously wrestling should take itself. The fact that wrestling draws upon the framework of a sport while actually being entertainment creates a lot of this thinking, since fans often try to see some kind of order or hierarchy that doesn't exist.
* Fan Dumb himself, and is trying to inflict this upon his fans so they'll grow up and do something better with their lives.
* Fan Dumb, in which they assume all fans of a work to have the same negative stereotypes and viewpoints.
* Fan Dumb or whatever else can be adored) to the exclusion of all else, and anyone who doesn't do likewise is wrong!
* Fan Dumb. Scarily enough, the faction that does this is the self-proclaimed "militant" Nanoha/Fate shippers...
* Fan Dumb: The members of the fandom who give the rest of the fan base a bad name due to their idiocy and other bad traits.
* Fan Dumb theme tune) is a cover of Rod Stewart's "Faith of the Heart".
* Fanedit consistent without time-travel retcons removing the classic trilogy from the timeline.
* Fanfan la Tulipe to marry her. He escapes the wedding ceremony and engages in the French army.
* fan favourites from the very start of the show, and the two achieved the highest score in their first instant restaurant by a very large margin. Unfortunately, the fared rather poorly in their next challenges, and were sent to Sudden Death in their second People's Choice Challenge, where they were eventually eliminated for losing the Cook-off against Queenslanders Rob & Dave.
* Fan Fic (although this is Justified; he's, effectively, an advanced robot).
* fanfic, and tries to read as much as he can. He just asks that the writers don't go to the bad-fic schmoop levels of "A Special Truce".
* Fan Fic: A story based on a work of fiction written by a fan of the work and posted online.
* Fanfic author Saphroneth has professed a particular appeal about fantastical elements being applied towards space travel. In the
* Fan Fic based on his life in each one, and at least one of the characters is guaranteed to be a fan.
* fanfic, Buster and Babs do this to attend a formal so Babs could meet Burt Badger and get a part in his new movie. At first, Babs was on top, but Buster kept complaining about how much the high heels were hurting his feet, so Babs generously traded places with him for a while; they eventually swap back.
* fanfic by Blade Redwind is the epitome of this trope, questioning-his-sexuality and all.
* fanfic, each chapter begins with a passage from a (fictional) historical text that places the events of the story in a historical context, showing a world where history is changed after Hiccup Haddock and Toothless destroyed the Green Death and brought about peace between humans and dragons.
* Fanfic fanfic, partly because of the similarities in the character types (Doc and Hardison, Nathan and Zach, Shane and Spencer).
* Fanfic Fuel: Unexplained details in a work that tend to inspire fan fiction.
* Fanfic Fuel: Unexplained elements in canon that are frequently exploited in fanfiction.
* Fanfic Fuel. Why is the Fortune Teller at Termina shocked when he takes it off?
* fanfic, has it in the Kashyyyk chapter. The entire party is holed up in Jolee's cabin for the night. Bastila notices the sleeping arrangements of Kairi (Revan), Mission, and Carth with dismay.
* Fan Fic in an example without identifying the fic's parent work (if it's not

obvious from the fic's title itself).
* Fanfic involved this trope, as a fundraiser for Pentagon 9/11 victims and their families. Someone who thinks they're hot stuff- check. Someone bid on by rich, horny old lady - check. Thought it's obvious the author is a big Daniel fan.
* fanfic in which a twist in the prophecy results in Voldemort being finally slain - at the cost of Harry being cursed with immortality.
* Fanfic is also prone to having the recurring police or similar characters lampshade the
* fanfic, Nicole's room is filled with empty soda cans and messy clothes.
* Fan Fic one band he's been promoting is talked about on the radio in the store, he begins to trash them.
* Fanfic/Out of Luck Has Lynn do this by undoing her ponytail. This is done out of shame as it was her actions and belief in so-called luck that cost her EVERYTHING. Her family. Her brother. Her popularity. AND her honor plus pride. Her ponytail was a symbol of how arrogant she became and the result of said pride.
* fanfic, plays with this in chapter 29 when Wedge Antilles, who had been talking to Han Solo before, calls out to Luke as he's getting out of his cockpit that "The hero of the Battle of Yavin is here". Luke looks around innocently and then jokingly asks, "Chewbacca?" Han, despite not expecting the "quick wit", still manages to be amused by the remark.
* fanfic, Principal Kelly moans that he's trapped in China with a gargantuan idiot. Said idiot, Fred Dukes of the Brotherhood, promptly looks around in confusion.
* Fan Fic refuses to use it. Not necessarily because he hates it, however, but because it would be hard for other people to say it due to him being foreign—can you pronounce a name with a tilde in it?
* Fanfics tend to use this for Hinata, often to get her together with Neji (and potentially as a way of explaining why
* Fanfics that try to remain remotely like the original plot tend to go with the basics of Lelouch and Nunally hiding in Area 11, Lelouch meeting C.C. after Kallen's truck crashes and Lelouch making a contract with C.C.
* fanfics, wherein the Brotherhood boys (and Wanda) wind up going out to a movie store; naturally, their antics get them kicked out, but they swipe a bunch of movies and food while they're at it. Afterward, as they're driving away, Wanda (in the front passenger seat) yells at Toad (who's in the back) to watch his hands when she thinks he's trying to grope her. It turns out to be Fred (who's also in the back), who apologizes and explains that he was trying to get the package of gummy worms she had unknowingly sat on.
* Fanfictasia-style, but Lara Croft stops Indiana Jones from running, just letting it pass overhead them on its ramp. She then wonders why he didn't do that in his movie, but Indy testily answers that's because the boulder is rolling toward the exit, and that it'll be blocking it and imprisoning them inside if they don't run after it.
* fanfic that is based on the premise of a Council exploration ship discovering humanity in 2034—hours before humanity lands on Mars for the first time.
* fanfic, the radioactive spider who bites Peter Parker is female, which results in Peter not only gaining spider powers, but turning into a girl.
* Fanfiction author Khaosomega gives his self-based OC Jet Brazie a series of
* Fan Fiction cliche to have Ash be one of these, destined to wield Aura and command Legendaries.
* Fanfiction Dot Net. Turns out that it's quite popular to ship Mitchie Torres with Alex Russo. This is due to their actors real life relationship, as well as feeling each of their personalities would play off well with each other. They also feel that they would fill a similar dynamic to that of Alex/Justin.
* Fanfiction gives Vegeta enough long-lost siblings to populate a galaxy (and then some).
* Fanfiction had been shipping Mulan and Aurora due to the amount of
* Fan fiction in general can be a late-arrival spoiler. If someone new to the fandom starts looking, they may be surprised by summaries that give away important

plot points.
* Fanfiction in the late 1990s, despite having been in existence since the 1800s.
* Fanfiction is fond of using Fuu as a catalyst for Type 6 (as a), Type 9 (as a), Type 11 (as b) or Type 12 (as b) situations to get the guys together.
* FanFiction.Net has had to explicitly ban "rewriting names of characters/locations of one story in order to upload to multiple categories" (although this only concerns the most blatant version of this trope).
* FanFiction.net used to carry a particularly irritating one starring an extremely loud and irritating fly, which you had to "swat" by clicking on it. Ingenious, in an anti-social sort of way, but not really conducive to making people want to buy whatever it was they were selling.
* FanFiction.Net website, clicking a button at the bottom-left of a page allowed you, by default, to post a review. A newer version moved the review button to the bottom-centre of the page, while the default setting for the button at the bottom-left adds the currently-being-read story to favourites. You can see how a veteran used to the older version of the website might trip over it.
* Fan Fiction, on the other hand, loves to take a somewhat more cynical approach to the battling aspect.
* Fanfictions and fanart often gave Celestia an evil alter ego similar to Nightmare Moon. The name of this character varies, but popular versions include Nightmare Sun or something involving "Daybreak."
* fanfiction, Simba and Nala do this to rescue Zazu from the hyenas. They sneak into the elephant graveyard using a hyena pelt so they can pass as a hyena themselves.
* fanfiction, the main pups stack up on each other wearing a trench coat and fedora and attempt to rescue one of their adopted brothers. In the disguise, it was Lucky on top, Cadpig in the middle, Rolly on the bottom, and Spot not participating.
* fanfic, Tod and Copper do this to try to get Chief out of the pound.
* Fanfic Tropes, Roddenberry more or less thought of it as great free publicity.
* fanfic where Yoruichi and Sui-Feng end up getting married and conceiving a child together. The fic takes a chapter out to go into all the metaphysical detail of how that is possible (especially as Yoruichi was adamant that she did not want Sui-Feng growing any extra appendages to get the job done).
* fanfic which tells of the many sexual exploits of Sonic the Hedgehog as he has sexual encounters with a different woman from a different TV show, video game, cartoon, etc. in each chapter.
* Fanfiktion.de") was forbidden due to a company which produced sunglasses under that name threatening to sue the website. Cue the fury of many, many Avatar fanfic writers, who had to change their stories.
* Fan Film and film in a gravel quarry outside Ipswich, Queensland. Some background shots for the bluescreen were eventually filmed in Sturt Stony Desert.
* Fan Film and put a lot of effort into making the film look good, in order to help sell the satire. Even Saban themselves fell for it, which led to the film briefly getting taken down for copyright infringement.
* Fan Film, Aquila, the leader of the Cursed Earth outlaws, is by far the most dangerous member due to his vast telekinetic powers, which is presumably also the reason why he's in charge in the first place. When the rest of his gang is quickly picked off by the lizard creatures, he initially manages to hold them off repeatedly before numbers take their toll.
* fan-film (as evidenced by paying attention to the stock market ticker in the test film accessed by clicking the top quarter of the ring: "Largest single collapse in history since Black Mesa"), but the whole thing eventually fell through, and it was never revealed what was actually "in the box".
* Fan Film is intentionally a queer allegory. She's different from others but doesn't realize it at first. After recognizing it, she becomes more curious about it and wants to explore it more. Kimber is also bisexual in the film.
* Fan Film (that, and it was his idea and he bankrolled it). They don't show Frank with a gun as is typical of his appearances, but he does sneak in a line that is all but a dead giveaway.

* Fan Film", the severed head still sings his part: "Heads roll for Deadpool!"
* Fan Film with the ESK-1 Esky Droid (which keeps the beer cold as well as having handy legs to carry it to you), the W.B.R Barbie Droid (a barbeque on caterpillar tracks), and the LG-0 Bouncer Bot (used to defend pubs from attacking Sith Troopers).
* Fan Freak" is also a huge fangirl to Akira, refers to her as "Akira-senpai", and even follows Akira around.
* Fanfreluche, a living ragdoll who would read fairy tales to the audience and enter the book to change the plot and alter the ending.
* Fang, a guy with a spider for a head has Kitten as a girlfriend and they once are shown
* Fan Game, each of the bachelors and bachelorettes have sexualities. Some are straight, some are gay, and some are bi. Depending on your gender and their sexuality, you can woo them or not.
* fangames are lousy with Piranha Plants. And all other classic Mario enemies for that matter.
* Fang and Vanille. Nothing is exactly stated, but Fang's heavy concern for Vanille and her readiness to take on the world if it meant to protect Vanille, just made their interactions a little subtext-heavy. Same with Vanille, who went out to find Fang, after being separated from her earlier on. Whether it's intended as
* Fang blossoms are flowering vines whose blooms hide fang-lined mouths. Smaller, younger specimens limit their predations to small animals; ones left to grow unchecked eventually become large enough to swallow humans whole.
* Fangbone!, although it makes a few minor changes and some significant expansions upon the source material. Notably, the books' author Michael Rex works on the show as an executive producer and was a concept artist, giving him far more involvement in the cartoon's production than most authors of kids books do.
* Fangbone! and returned to the channel with zero fanfare before ending on a cliffhanger.
* Fangbone! and still-separated parts react to the presence of him or his minions. Fangbone and Bill witness this firsthand in "The Field Trip of Mayhem" when Drool is blown to pieces, only for his head to talk back to them.
* Fangbone! as the voice of Twinkle-stick and wrote the episode "The Ball of Clobbering".
* Fangbone! as they're called in Skullbania). Naturally, this inspires Venomous Drool to send out a dentist monster called Toothsbane to fight him, a ghoulish humanoid creature that transforms people into teeth that it then places inside its gum-lined mouth.
* Fangbone! books, adding a much larger cast of characters and building upon the setting of Skullbania. Notably, Venomous Drool is actually a much more prominent character in the show than he was in the original books.
* Fangbone! books) has a tendency to do this due to the oddities in how Skullbanians talk compared to humans. The most prominent example of his unusual speech is how he tends to say "X's Y" as "Y of X" (for example, he calls Bill's mom "Mom of Bill").
* Fangbone! (Fangbone can break rocks with his head without flinching).
* Fangbone!, Fangbone's homeworld, Skullbania, has three suns. Even weirder is that unlike out Solar System, the suns revolve around the Earth instead of the other way.
* Fangbone! has the episode "The Kat of Munching" where Fangbone and Bill eat fudge made from the pixels of Munchie-Kat. The fudge was supposed to give you a magical nice sweet feel and scent.
* Fangbone! has the episode The Kat of Munching where Fangbone and Bill eat fudge made from the pixels of Munchie-Kat. The fudge was supposed to give you a magical nice sweet feel and scent.
* Fangbone! has the Hound of Hounding, a shadowy demon dog with horns and glowing red eyes that appears to (and can only be seen by) those who are wracked with guilt, relentlessly tormenting them and feeding on their guilt until it is powerful enough to consume them.

* Fangbone!: In "The Ballad of Meh", Fangbone attempts to defend his friends from a roadside wave with a sword, having mistaken it for an aquatic demon. His friends still end up getting soaked.
* Fangbone!: In "The Duck of Always", Bill has a nightmare where he gets an F minus in 'World Saving'.
* Fangbone!: In the episode "The Pitch of Black", Venomous Drool brings his own shadow to life and sends it to attack Fangbone and his classmates while they're out camping.
* Fangbone!, simply going with the idea for the sake of grossout humor. The show goes into greater depth about this, with episodes like "The Breaker of Oaths" and "The Keeper of Toe" giving actual explanations as to the origins of the Toe of Evil.
* Fangbone!: Skullbanians like Fangbone himself are big believers in this. This is well demonstrated in the episode "The Polluted Light of Destiny", where Fangbone sees a Skullbanian omen of death in the night sky (actually a trick by Venomous Drool) and actually starts preparing for his own death as he believes he will be slain at the hands of the legendary Moonbear of No Tomorrow (including leaving the duty of Toe-Keeper in the hands of Bill).
* Fangbone! Third Grade Barbarian fantasy world) having difficulty getting used to the peaceful customs and modern technologies of suburban North America.
* Fangbone! when Fangbone becomes addicted to the game, and Munchie-Kat proceeds to drive Fangbone crazy with its endless demand to be fed.
* Fangbone! who fight together to prevent Venomous Drool from getting his evil magic toe back, taking down all sorts of monsters and other Skullbanian villains.
* Fangbone! who live to fight monsters, go on quests, and attain glory in battle. Most of their customs and traditions involve fighting or violence in some way.
* Fangbone!, who was so bloodthirsty she was abandoned by her entire clan for constantly picking fights for the sheer sake of it and now roams Skullbania on a constant search for the strongest opponents to defeat in battle.
* Fangbone! work together to fight Venomous Drool's monster and other forces of evil. Fangbone even refers to Bill as his "battle-brother".
* Fang could also qualify. She's aloof, cold, and snarky to everyone except Vanille. In her own words "I'll tear down the sky to save her."
* fang enlarges slightly and a short gold and black horn grows from the center of her forehead.
* "Fanger" is also used for vampires, while "fangbanger" is used for either people in some sort of relationship with a vampire or just generally anyone sympathetic to them (by the more fanatical detractors).
* Fangface so it won't bite him. Eventually the fish man is arrested and the shark, thoroughly confused by the experience, returns to the sea.
* Fangface to convince the alien vanguard that the Earth is full of contagious diseases, and that a full-scale invasion would be a very bad idea.
* Fangface would transform whenever his human form saw the full moon... or a photograph of it... or anything which vaguely reminded him of it. The reverse transformation was similarly triggered by the sun. Or any other sun-like image.
* Fang from the same game was initially conceived as a sexy male character, but eventually became a sexy female character (letting them desexualise Lightning, which they wanted to do). As a result, she ended up
* F.A.N.G. has him chase a female scientist and kill her this way. Her melting isn't shown onscreen as the scene cuts to black, but all that's left of her afterwards is a puddle of purple goo, with F.A.N.G. nastily licking some of it.
* Fangirl example mentions, have a sizable number of real-life shippers.
* Fangirl. Girl admits to wanting to sleep with a male celebrity, complete with fanart? That's cute, since girls are innocent and childlike, never sinister or dangerous. Guy admits he wants to sleep with a female celebrity, complete with fanart? Creepy stalker who needs to stop fapping to girls he will never have.
* Fangirls. A news report on his kidnapping even describes him as "the young man known to his fans simply as Harry".
* Fangirls: As can be surmised from the title, all of the teenage characters are

fangirls: obsessed fans of Harry, the lead singer of the boy band True Connection.
* Fangirls, Brianna has this reaction to the 'joke' Jules' boyfriend texts about the abduction of the lead singer of True Connection ("One down, four to go"). Even though the joke is in extremely poor taste, she is even more upset about Jules pretending to find it funny.
* Fangirls Catherine. Her father is never mentioned, and it is obvious that he has never had a role in his daughter's life.
* Fangirls, Edna lists (in song) all of the items she has in her backpack that will allow she and Harry to go on the run together.
* Fangirls, Harry does not endear himself to Edna when he addresses her as "Emma".
* Fangirls Harry, she shouts out the first thing to enter her head, which is "I'm naked!". This confuses her mother more than anything else.
* Fangirls, Lily starts describing how a crush is perfectly named because it feels like your internal organs are being crushed. However, she attempts to elaborate with another analogy about being a dental floss dispenser, only for them to get mixed and she winds up describing having her intestines drawn out through her belly button.
* Fangirls, Lily threatens to cut Harry's kidnapper's eyelids off with a set of toenail clippers.
* Fangirl somehow makes it work to become one of the most popular wrestlers in NXT.
* Fangirls opens with a scene of Edna and Harry escaping from the police and running away together, which is then revealed to be part of Edna's fanfic.
* Fangirls 'Salty Pringl' is only ever identified by his online handle.
* Fangirls, this is 14-year old Brianna's biggest insecurity. During the "What If This is It?" number, she describes herself as "flat as a pancake" and declares she is "too old to not have tits".
* Fangirls to being a loony fan towards the end of act one when, unable to attend the concert, she concocts a scheme to abduct Harry; convinced that he will run away with her once he realises how much she understands him.
* fangirl that she never realized he was the protagonist of a comedic puzzle-adventure game.
* Fangirl, who gushes about how well the author writes. Cath decides not to break the news to her, but quietly relishes the praise.
* Fang of the Sun Dougram is more or less Che Guevara with an eyepatch. Not surprisingly, he's the show's local avatar of the god of Badass.
* Fang of the Sun Dougram pilots going AWOL to avenge the deaths of their comrades. When command orders them to retreat, the older one cuts off the radio saying that this is personal.
* Fang of the Sun Dougram, this role is split between Professor Samarin and Dick Raltaff. Samarin is the leader the liberation movement, but is especially close to the protagonist and his team, while Raltaff is more of a mentor.
* Fangorn Forest had a pretty bad reputation, probably due to the Ents' (a race of ultimately benevolent, though still dangerous,
* Fangs & Fins, first cousins James and Arianna are forced into an arranged marriage.
* Fangs And Frights where his head should be, which seriously unnerves him.
* Fangs But No Fangs, included the short comic "A Horror in One." The comic followed the gang as they contended with a wolf-monster who appeared at the horror-themed "Golf Wolf Mini-Golf Course," all while Freddie competed in a mini-golf tournament.
* Fang ThpeakMispronouncing [s] as [θ]. In fiction, this is common with vampires or other fanged characters.
* Fan Hater: A person who doesn't only dislike a particular work, but also has it in for anyone who likes the work they dislike.
* Fan Hater, in that they hate both the work and the fans of that work. If they hate just the work, it's the latter trope.
* Fan Hater, there is no such thing as Fandom. There is only Fan Dumb.
* Fan Hater: You're a fan of this crap? You're a loser who needs to get a life!
* Fanhunter (an army of comic-book fans, otakus, geeks, gamers, nerds, roleplayers,

etc.).
* Fanhunter comic there's Belit. She keeps her badassery even after giving birth to John and Erika.
* Fanhunter: Father Merrin uses bibles, signed by Mike Tyson and Jet Li for extra "oomph", as throwing weapons with a force stated to be akin to a Stinger missile.
* Fanhunter introduced the generic character of the "Ninja Granny" (original: "Ag? ninja"; later concretized in at least one individual), who supposedly learned ninjitsu in some Age Concern course, kicking the players' collective ass and them intending them to eat her "coqrettes" (original "cocretas" instead of "croquetas").
* Fanhunter's author, Cels Piñol, appears in the comics as Cels Denbrough, a fanpire (sort of a living dead who eats comics, movies and so, given that he hasn't read/watched them previously). Kicks as much butt and is as butt-kicked as every other character, and though he's one of the protagonists, he doesn't steal the spotlight.
* Fanhunter the role-playing game, Fanhunter troops sometimes use captured mutants as "hounds" ("psicario", a portmanteau of psy- preffix and "sicario", Spanish for minion). To prevent those mutants from running away and from turning against the troops, the Fanhunters use one of these.
* Fanime, period. A lot of time and effort is put into videos that few people will ever see, and the whole production is often written and animated by one person.
* fan-made sequel has 324-florazine iodase (street name "stardust"), which is a regulated but legal antidepressant for humans, and an illegal drug for several alien species.
* FanMadeStuff fan video "Guy Fawkes vs The Joker". However, they got next to no following out of it, with almost all of their other videos having around 20,000 views at best. The only exception is the behind-the-scenes video for their fanmade ERB, and even that one didn't come close to the ERB's success/notoriety.
* fan-made tribute movie...). Better yet, the last scene on the reel is when one actor (a black guy) accidentally gets his lip busted open and comments on the scenario, which makes everyone die laughing:
* Fan Myopia: Assuming that a work being popular automatically means everyone is familiar with it.
* Fan Myopia: Assuming that everyone is familiar with the works you like.
* Fan Myopia: Fans assume that everyone's familiar with the works that they like.
* Fan-named counts, although personality-wise he's almost more of a male fangirl.
* Fan Nickname: A nickname that fans of a work give to one of the characters.
* Fan Nickname: A nickname to a work or a character from it given by the fans.
* Fan Nickname Automatic Caption "steven magnet" below him (YouTube captions tend to be hilariously wrong and nonsensical at times).
* Fan Nickname, because Wargaming.net and PAW are actually cross-merchandising.
* Fan Nickname before that, taken from the in-universe Centauri deity.
* Fan Nickname for Fluttershy's vampire bat form, is very popular in the fan fiction. This is ignoring the fact that Fluttershy was turned into it accidentally and the process was very traumatic for her and friends but she does willingly turn back into this form in a dream in a later episode.
* Fan Nickname for players that focus more on combat then healing when playing as the Medic. As mentioned earlier, this isn't always a good thing, and can frustrate your team if you're not healing them often enough.
* Fan Nickname his game, which has a bad tendency to happen when his team needs him most (see: the playoffs), he stops pucks about as well as a block of Swiss cheese.
* Fan Nickname: Many abbreviations for common terms among fans, including:
* Fan Nickname: Many famous opera singers have a designated title or nickname, mostly referring to their singing skills, but also as a variation of their name as well.
* Fan Nickname of D&D 3.75 it unsurprisingly also has humans as the Jack race. They gain a +2 bonus to one stat of the player's choice, making humans as viable as any race in their field. Half-elves and Half-orcs were modified to make them Jack races as well. Bards and Inquisitors are both Jack classes, with Bards receiving upgrades to make them much more useful than they were in D&D 2-3. Bards in

D&D 1 worked in a completely different manner.
* Fan Nickname of "Palm Tree" (or sometimes "Aloe") for their default form's long spiky wild hairstyle. It’s also colored green in both anime adaptations.
* Fan Nickname show purposely drew attention to the psychopathic level of glee seventeen-year-old Shinichi took in working out the method and motive for the messy instant beheading that happened on the roller-coaster behind him. Being a kid again and having to avoid the showing off that has been his whole life seems to render him slowly more human. Although his desensitization remains extreme.
* Fan Nicknames was popular at the time news covered famine in Ethiopia.
* Fan Nickname that had been used by the fans since the character's introduction.
* Fan Nickname to be able to find a book on anything anywhere. She has a rule book for a "goof-off", for example with Spike claiming that Twilight has a rule book for everything.
* Fan Nickname "Trollzyn", in no small part due to the "thank you" letter from him to an Inquisitor that appears on his character sheet.
* Fan Nickname, which was from Eric O'Grady's perspective. Officially though, the character's name is Ragnarok.
* Fanny and Alexander, when Fanny, Alexander, some other kids, and the maid have a pillow fight on Christmas, complete with a pillow exploding into a cloud of feathers.
* Fanny dislikes the idea of Mary marrying Edmund because she's in love with him herself and because she thinks Mary is not good enough for him.
* Fanny: Marius and Cesar's English friend are talking about Cesar's bosomy girlfriend.
* Fanny: Marius climbs into his bedroom window to try and hide the fact that he didn't sleep at home. Unfortunately for him Fanny's mother Honorine already caught them together.
* Fanny Price in her first major act of independence and defiance refuses to marry the despicable Henry Crawford because she does not love him and knows what's
* Fanny Squeers to Nicholas, because she's ugly, ill-tempered, and the daughter of Wackford Squeers, who abuses the children in his care.
* Fanny, the Millington sisters are half-Filipina, originally from Manila
* Fanny: Used multiple times to make Leslie Caron look just that much more beautiful.
* Fan of the Past: Characters in the future have a fondness for the things of the past.
* Fan of the Past: Some people in the future will have nostalgic feelings for the past.
* Fanon and enslave and/or destroy all other species. In-series, however, only Zim himself seems to have this direct hatred of other species - the other Irkens seem to be merely acting out of a desire for power and a sense of superiority.
* Fanon and his "accidents" are intentional, calculated screw-ups designed to save the world from a madman without losing his best and only friend.
* Fanon, brought him back to life, and resolved never to use his power lightly again. Although he did do it to a fig tree (God hates figs?) in the Gospels.
* Fanon Discontinuity: Fans choose to ignore episodes or installments of the series that they dislike.
* Fanon Discontinuity, something about the work that is not a misconception but an actual fact. Fandoms are usually embarrased by those ones and try to ignore them, so they get pissed when someone criticizes the work because of them.
* Fanon Discontinuity, so there is ample room to re-write what happened to the SDF-3.
* Fanon Discontinuity: The fandom disapproves of an installment in a franchise enough that fans pretend that it's not canon.
* Fanon Discontinuity: When the fans choose to ignore episodes or installments of the series that they dislike.
* Fanon. Even though he demonstrates his ability to swear, among other things, several times (at least in some translations.)
* Fanon evidence in canon to support the idea that trolls are hermaphroditic

(though there's just as much evidence that they're not), but most of the details are left to speculation, probably due to the fact that most of the cast is underage.
* Fanon: Fans come up with their own interpretation of information that the official canon ignores, glosses over, or doesn't explain in detail.
* Fanon: Fans' interpretation of details not explained or shown in the actual work.
* Fanon: Fans' interpretations of what isn't confirmed within the work or by the work's creators.
* Fanon guesses that the "disturbing attraction" incident led the Project to fine-tune the connection between Al and Sam so it wouldn't happen again.
* Fanon. However, Mandy barged back in the Shay loft to stay there overnight in one of her episodes. When Carly asked her how she entered with the door locked, Mandy replied, "But not all your windows are."
* Fanon initially, but as they are forced to be together they become friends and gradually fall in love with each other. When someone finally figures out how to end the bond, one of the following things usually happens: Either they have already figured out that they are in love and they choose to stay bonded, or they are in denial, end the bond, realise that they miss each other and re-bond.
* Fanon involving characters who knew her have never mentioned anything bad had happened to her.
* Fanon is that every time he loses a piece of himself, it eventually grows into another Wolverine.
* Fanon made a comment about 'roaring manga fireplaces' shortly after his introduction.
* fanon name gained popularity due to crows being considered harbingers of misfortune and death, the creators only stated they adopted the name because they liked it.
* Fanon Naomi is usually portrayed as only using Otacon's affections to further her own goals.
* Fanon never states that there are three Magi, never even gives a definite number, and doesn't specify that they were male. It also doesn't specify that the fruit Adam and Eve ate was an apple, and doesn't refer to Mary Magdalene as a prostitute.
* Fanon often posits Yuuka and Flandre to be insane mass murderers (or at least, the latter would be if unleashed), from Yuuka's genocide jokes in Mystic Square, to Flandre's stated-but-nebulous insanity and destructive power. Koishi also gets this treatment on occasion from doujin artists who believe reading a subconscious can drive one to insanity.
* Fanon of their respective countries' people, culture and national identity, not any political entities. They die when their culture fades away and no one identifies with them anymore.
* Fanon, Picard frequently swears in French (something he actually did onscreen, if only rarely).
* Fanon's fourth season used both ideas, with both Elsa and the Snow Queen appearing. And the Snow Queen is quickly revealed to have been Elsa's aunt.
* Fanon simply said it was wrong to assume Rainbow Dash is a lesbian simply based on stereotypes.
* Fanon tends to portray this as the major driving force for Yukari and Yuuka, but canon doesn't particularly back this up. In Yukari's case, canon holds that she spends most of her time simply sleeping.
* Fanon that Cinderella and the Baker will probably end up together and about 90% of the fandom ships them.
* Fanon that Ginger, the Asian Fireside Girl, was Stacy's little sister (probably due to there not being too many other Asian people in Danville). The season 4 premiere "For Your Ice Only" officially made this the case.
* Fanon: The fans' interpretation of stuff not depicted in the work itself.
* fanon, the Holmes family were county squires, Sherlock and Mycroft must have an older brother, or else Mycroft would be the squire and would therefore be maintaining the estate up in Yorkshire. The development gag is that Baring-Gould named this brother "Sherrinford"; Doyle originally called Holmes "Sherrinford

Hope".
* Fanon The Room of Requirement has also been known to fulfill this purpose.
* Fanon, this can happen - a lot of fandom members tend to assume everybody is on board with their fandom lore, the running gags, the personalities invented (and accepted) by them or have read all the popular fanfiction recommendations. This can lead to some new fans wondering where on earth this is coming from.
* Fanon though, that it counts down Kanda's lifetime and belongs to a curse.
* Fanon to prevent confusion and other potential issues from taking the kayfabe too far.
* Fanon usually portrays "normal" Earth Ponies as the shortest lived race. Unicorns are usually the longest-lived of the main three races while pegasus are the middle ground (though they have a high mortality rate so many don't make it to old age).
* Fanon Welding: A work that is considered to be set in the same universe as another work by most fans.
* Fanon Welding: Fans believe Show X and Show Y are secretly canon to one another.
* Fanon Welding: Fans believe Show X secretly shares the same continuity/universe as Show Y.
* Fanon Welding: The author never said his work shares a continuity or universe with another different work, but the fans believe so.
* Fanon: What fans of a work claim happens in the story and/or setting, regardless of what the author says.
* fanon when one thinks about just how much bigger the US is than the UK...
* Fan outcry at Batman being drawn with a pointed chin was so great that it was squared off starting in the fourth season.
* Fan-Preferred Couple among fans due to the circumstances that gave rise to the pairing becoming canon.
* Fan-Preferred Couple as a whole, as their romantic drama completely dominated that season.
* Fan-Preferred Couple, but by season four onwards and especially season five, their popularity dwindled due their relationship becoming stale.
* Fan-Preferred Couple: Fans choose to ship the characters they want to be together, even if the official canon has them hook up with other people instead.
* Fan-Preferred Couple. It's hinted in the 5th and 6th seasons that there is some Green-Eyed-Monster on Dr. Clarkson's side. In the end, Mrs. Crawley chooses Lord Merton.
* Fan-Preferred Couple: It won't happen even though some people are rooting for it.
* Fan-Preferred Couple sides of things, the actresses who play Lola and Mattie — Annie Briggs and Sophia Walker, respectively — get this as well, though it's not as ubiquitous as Negovanman is. Again, a ship name exists: Wriggs.
* Fan-Preferred Couple: Viewers become emotionally invested in a romance you're not writing (probably in lieu of the one you are).
* Fan-Preferred Couple (who Gwen was also starting to become friends with).
* Fan Pro adds a new batch of characters every week, with at least 1000 total having been confirmed. One of the goals of the fandom is to break the world record for the largest amount of characters in a work.
* fan reaction than anything that actually happens in the game, but for some reason, an alarming number of naughty
* Fan re-dubbed clip-shows, originating from god-knows-where, are generally referred to in their respective forms and themes by the originators of them. Examples include:
* Fan regard for works set after the original graphic novel are even
* Fan Remake and he hasn't changed a bit. Even his super special attack magnifies his...personality by having him slap his ass and hip thrust several times, dealing massive damage to all enemies on screen all while the background is turned pink and with hearts.
* Fan Remake but every attempt seems to have been canceled due to time restraints and other commitments, and every website from the developers seem to be lost.
* Fan Remake is a little better about this, since escape pods are treated as cargo on the scanners and the game has an in-built bounty / insurance reward system for

delivering captured/rescued pilots. It's still an option, though.
* Fan Remake. Kissing Valanice won't break the spell, leaving Graham to resort to another method to break the enchantment.
* Fan Remake, Muzak plays inside a restroom on Vohaul's asteroid fortress. A tinny version of the Monolith Burger theme also plays outside the entrance to the titular restaurant nearby.
* Fan Remake: Sort by categories of enhancements working from the original engine and assets, engine recreations using the original assets and complete remakes like Black Mesa/DFMod/Starry Expanse?
* Fan Remake takes this trope and runs with it in Xen, the aliens' home base. Much of their technology seems to an equal mix of mechanical parts and living materials.
* Fan Remake, the librarian won't let you take any books, but will choose a book for you to read. She ends up picking a book about whatever place you're going to have to explore next to advance the plot.
* Fans! (a comic which itself focused on fans of various sci-fi/fantasy shows) played with this concept when it introduced the character of Tim the Fanboy, a geeky stereotypical 'fanboy' who was a near-obsessive fan of the main characters. Unfortunately for them, once he realized that they weren't perfect, he felt betrayed and in turn betrayed them to become the 'fan' of a psychopathic time-traveling warlord who was doing her very best to wipe them out of existence.
* Fans! actually turns out to have included both terrible interviewees and the actual candidates who end up selected, most of whom perform the job well.
* Fansadox, a parallel universe that can be entered into through either science, magic or a combination of the two.
* Fans!, Ally and (world-class martial artist) Rumi, like this: "One of them is one of the most amazing fighters I've ever seen, and the other one is Rumiko Tanaka Oberf!" Note that he's not disparaging Rumy, but acknowledging the strength of Ally, a seasoned chain-fighter who succeeded in beating back a life-threatening disease and her own darker side.
* Fans!, Ally loudly announced that she would be studying for her nursing exams with death metal playing on her iPod, while Rikk and Rumy were together in the bedroom.
* Fans also often wonder what, exactly, happened when Danny first gained his powers, and in the month after that, since the show more-or-less skips over those things - the
* Fans also want to know who killed Brian. The creators jokingly claim it was Justin Bieber.
* Fans and Authors argue about the Three Sphere Cataclysm. Some feel that making it too cosmic runs the risk of causing the pre-cataclysm era to be fundamentally unrelatable as a storytelling medium. Others feel that letting her destroy 90% of just raw landmass isn't grand enough for a newly-minted horror. The deepest fan-theories hold that she annihilated Creation's Dynamic Link Library (its card catalog), thus making it impossible for anyone in the world to feel like the world as a whole makes sense... which, granted, is the one thing she would've coveted over the purely physical parts of reality.
* Fans and critics both criticized the absurd increase in chart density in
* Fans!), and we found out his unabbreviated name was Timin, whereas the other Tim is presumably a Timothy.
* Fans are probably never going to see an adaptation of the Jinchuu arc of
* Fans!. As of two or so years of the revival, all three relationships are still doing well (although Will and Shanna have had some stumbling blocks).
* Fans! aspect of his personality (helped along by one of the fans deciding it would be a good idea to sleep with him) and becomes a romance novelist instead.
* Fans assumed that the four-winged Great Blue Windrunner, from the 100 million years AD segment, was inspired by
* Fans!), but the author has acknowledged that Tim wouldn't have escaped on his own, and he has to be awakened by the others.
* Fans!), but when he wakes up in his chair, he promptly takes it as one rather than accept the idea of life after death.

* Fans came to the consensus that Rich used to have a lisp before his Squip made him work past it. This never received any nod in the Off-Broadway run, but it became canon once it moved to Broadway - at the end of the show,
* Fans can't seem to determine whether Eevee is supposed to be a fox, cat, or some sort of small dog. It doesn't help that its evolutions can have either canine and/or feline traits.
* Fans credit this with Taco Bell's creation of the Crunchwrap Supreme, as it is very similar in concept to the naco. Taco Bell would also introduce Diablo sauce in black packets much like the ones on the show.
* Fans decided that among Hans's many brothers there must be at least one set of twins. The
* Fans don't even need to make them themselves for the bloodlines of
* Fan Sequel decides to take Nikki out of commission so she can take her place as Juliet and kiss Neil, leading to this exchange...
* Fan Sequel has quite a few references and nods to quite a few of the works set later in the series' timeline, both of the overt and the more subtle variety:
* Fan Sequels Yoshiki, Yuka and Satoshi all wound up dead after their visit to Heavenly Host. Ayumi and Naomi both suffer from survivor guilt, each with added complications.
* Fan Sequel), the titular judge writes a report to his superiors stressing that there isn't enough food being brought in to the capital Chang-An. The administration promptly takes action and... decides to exile a large fraction of the capital's population (decided by lottery, using family names) to a town hundreds of miles away. The judge is given responsibility over the convoy, but soon figures out the route was planned to have as many people die on the way as possible (confirmed when the Empress has some noble families added to the list as they might be politically dangerous to her). He does what he can to save as many as possible, which is made even worse when they finally arrive and it turns out no one expected that many people to get dumped on a town mostly used as a resort for noble families.
* Fan Sequel where D The Superior (the Emperor) calls Gospel of Luke "Baby idiot".
* Fanservice and how a series should never rely on it to gain viewers. Because at the end of the day all you've done is objectify and humiliate a human being.
* fanservice. Anytime the main character activates her powers she changes from a slender teen into an adult version of herself with massive breasts. So any top she's wearing gets torn to sheds.
* fanservice are given more agency and direct action scenes in the arcs they were introduced in.
* Fanservice - but if there's more of one than the other, you can bet the opposite gender will be annoyed.
* Fanservice Characters: Characters and characterizations where fanservice is a major aspect.
* Fanservice Costumes: Clothes or outfits where fanservice is the primary aspect.
* Fanservice Cover: Boost sales by putting fanservice on the cover of your magazine.
* Fanservice Extra: A minor character who exists solely to provide fanservice.
* Fanservice Extra: A minor character whose purpose is to provide some fanservice.
* Fanservice Faux Fight: Characters engage in a playful fight for the sole purpose of fanservice.
* Fanservice feel between "this character is objectified and I should not like her" versus "I find playing as her to be empowering," it makes one suspect that there's an actual gamer or two on the writing staff.
* Fanservice for their omission). Has a touch of realism in it — real nudist organizations often have a pattern of children dropping out as they enter adolescence, then returning in middle age after they become comfortable with their bodies again.
* Fanservice in lingerie or swimsuits, whose voluptuous figures were photographed by eager soldiers, painted on the noses of aircrafts or tattooed on sailors' bodies. The decade also gave us bikinis in 1946.

* Fanservice in the company did things start changing, reportedly with much kicking and screaming from the boss.
* Fanservice itself generally refers to anything put into a work specifically to please its fans (a scene between two fan-favourite characters for instance) - but it's most commonly associated with titillation or sexy stuff.
* Fanservice, making moves look more impactful. It is for this reason that a lot of women—and even men too—will wrestle with their hair down.
* Fanservice, making underwear based on its characters is remarkably odd.
* Fan Service Model footage STARDOM chose to promote her with. As the years have passed, STARDOM has mined from SHIMMER and its two spinoffs SHINE and RISE fairly heavily, and the reverse is definitely true, as SHIMMER fans have gone onto rate matches based on how well they measure up to whatever is happening in STARDOM.
* Fanservice. Now, it's unlikely most fans expected them to follow through (this was basic cable, after all) and they did not; they pixelated the Divas' "nudity", which was actually them with flesh-colored underwear.
* Fanservice, of course. Because nothing turns people on more than water! Sometimes it's a way to get away with a nude scene without being too erotic.
* Fanservice Pack: A character that becomes more fanservice worthy over time.
* Fanservice: Put a hot girl or a hot guy in front of a product and you've got a winner; for both sexes.
* Fanservice reveals (through Jibril) that Flügel people's wings are filled with erogenous zones.
* Fanservice shows that, yes, the assassin duo take showers with their guns within reach.
* Fanservice shows up, one of them says: "They've got all the bases covered with this one."
* Fanservice spends most of his screentime sensually removing his clothes for no reason at all.
* Fanservice's relationship with a terminally-ill child at the hospital.
* Fanservice than practicality. Sure it's sexy - as Sanya remarks on seeing her, 'sometimes I love this job' - but Lea shows its effectiveness by having her servant shoot Susan. The bullet is flattened and Susan doesn't even feel it. It also lets her turn invisible at will.
* fanservice way of looking out the window from her chair is to sit on her knees, which would be impractical on a swivel chair.
* Fanservice with a Smile: Women who work at a restaurant while wearing sensual attire.
* Fanservice-y that was added in a patch covers more and is less provocative.
* fansessions that have sprung up, it can be argued that Paradox Space itself is a shared universe, albeit one where only the creator has official rights to it.
* Fans everywhere create their own Ghostbusters files, ranging from the 50 states to some foreign countries (though a few make sure to put a disclaimer on their website that they cannot do paranormal stuff exactly like the movie).
* Fans! fetus emerges, leaving Rumy exhausted but physically unharmed.
* Fans frequently assume that Kimber's name is a shortening for "Kimberly". Her name is just "Kimber", which a real but obscure name.
* Fans gave ONI somewhat of a pass when they were fighting to save humanity from extinction at the hands of the
* fans gets a steady flow of hate mail for his first video, in which he bashed a genuinely good game for fun.
* Fans! gives us Will and Shanna, and (in the Badass Threesome category), Rikk, Rumy and Ally.
* Fans! had a short where Tim wakes up to find that he's the only person left on Earth. Two aliens offer him a series of female human clones modeled after people from his memories, so he can repopulate the world. The story ends with Tim finding out that 1) this is not earth 2) he's a clone too and 3) this was all the aliens' experiment to breed humans.
* Fans! had a tendency to try and monopolise Will's attention while practically rubbing it in his face that he wouldn't get anywhere with her, to the point where

she at one point showily rejected him in front of everyone only to also showily start flirting with someone else in his presence. Unfortunately, this ended up backfiring on her, since his friends — who, since she was deep down rather lonely, she'd also started to think of as her friends — bluntly pointed out that they didn't like her very much as a direct result of this cruelty, and when she did try to seriously pursue him (albeit still more for her own narcissistic reasons than a genuine interest in him) he eventually overcame his initial feelings and rejected her for someone else, leaving her alone.
* Fans had been wondering for forty-three years whether or not the Doctor and the Master had a thing going on. 2014 finally revealed that, yep, they have a thing going on. What
* Fans! had its Fantasmagorical Integration Board, or FIB, whose theoretical purpose was the defense of the world from destructive forces. Initially antagonists, then untrusted allies, then antagonists again, then... and so on. Largely a sort of over-arching sendup of this concept and all related ones. Most notably, "Miller" and "Sully" were agents, and "The XYZ-Files" was a way for them to cover their tracks using fiction. They were semi-sympathetic, which was exactly what their "first" leader wanted. It's easier to get away with things when they like you.
* Fans had long speculated that the reason Goten and Trunks were able to become Super Saiyans at such a young age was because their fathers had already achieved the transformation by the time the two were conceived.
* Fans had mused over the possibility that not all of the Pinkie clones from
* Fans had repeatedly commented on how young pegasus pony Scootaloo never flies on-screen, some wondering if she could at all. In second-season episode "Ponyville Confidential", a nod was made to this where she frantically flaps her wings while falling out of a tree, but still lands in the mud. Eventually, "Sleepless in Ponyville" shows her in real danger due to not being able to fly, and the fourth-season episode "Flight to the Finish"
* Fans! had the villains remove all written language from history, resulting in worldwide illiteracy and an inability to communicate by writing.
* Fans! had this strip involving Rikk, Aly and Rumi eating pot-laced brownies. "Don't do drugs, kids, or they might impair your ability to enjoy drugs later in life!"
* Fans! has a confrontation with his abusive wife murdering father after he gets sprung from jail as part of a greater conspiracy against him and his friends. To add insult to injury, after Will beats the bastard into the ground, he gets shot full of bullets by FIB agents, and then his corpse gets pistol-whipped by Will's girlfriend Shanna.
* Fans! has this in spades. It's surprising that the villains don't use it against him more often.
* Fans have attempted to do the most complicated logic gymnastics possible to try and reconcile the various bits of backstory for the Constructicons that were revealed throughout the course of the G1 cartoon. Season 1 claims the group was created by Megatron on Earth within the timeframe covered by the cartoon. Season 2 posits that they were benign Decepticons (as in, not inherently evil) who were friends with Omega Supreme before the war, but were captured and brainwashed by Megatron to serve his cause. Season 3 shows them as being present
* Fans! have been seen engaging in some light bondage on occasion, with Aly as the dominatrix.
* Fans have noted that, the way Accelerator's powers work, he could be a
* Fans have plenty of fun writing for the nations, with all the history between them.
* Fans have produced countless third-party maps and mods for all three
* Fans have theorized that Artorias' injury is the only thing that makes him feasibly beatable by players. Fighting him with a functional shield arm and his darkness-nullifying shield
* Fans have tons of jokes about Sonic which essentially revolve around him spamming his "You're too slow!" taunt over and over.

* Fans! helped along in no small part by the sexual tension between the two romantic rivals themselves.
* Fans in the U.S. really don't like Kenzo Suzuki, or KENSO as he is known in
* Fans! Later, when she's no longer pretending to be closeted, she's still pretending to be a mundane, but she has started watching classic science fiction late at night. Katherine agrees to be Shanna's "beard," this time giving her an excuse to be with the fans she won't really admit she likes.
* Fans!. Master Kana's training of Rumy involves making her do chores around the house. When she finds out she's just being used, she attacks Kana and they start fighting. During the fight, Kana reveals that he was trying to make her angry, so she wouldn't hold back while they fight.
* Fans!: Meighan secretly hired Julia to the staff of Station 13, a company she co-founded with Tim and Guthrie, largely to get Tim and Julia together.
* Fans! (notably the whole of Book 5) centered around a power-object called the 23-Sider, an RPG die with 23 identical sides. When the 23-Sider was formed in Book 5 it warped reality.
* Fans of Argentina's football teams also have some. For example, Boca Juniors: Bosteros (manure handlers) or Xeneizes (a word from Genoese dialect that refers to people from Genoa
* Fans of British radio star Terry Wogan are either TOGs (Terry's Old Geezers/Gals) or TYGs (Terry's Young Guys/Girls). There are also a number of other terms no longer in widespread use, such as TWITs (Terry Wogan Is Top).
* Fans of General Mills cereals Count Chocula, Boo Berry, and Franken Berry might not remember that they had another "
* Fans of Glee fanfic writer Caitlin (also known as "Keitorin Asthore" or "redbullandcupcake batter") refer to themselves as "Cake Pops". They also refer to Caitlin herself as "Mama Cake Pop".
* Fans of his bass player Tommy Joe Ratliff call themselves Badgers after an old hairstyle.
* Fans of historically successful NFL franchises typically get viewed this way by other fans.
* Fans of Jim Lee's X-Men run have suffered this as well, as his last couple of issues of X-Men have never been published, leaving "Mutant Genesis" with major cliff-hangers as far as the Mojo/Longshot storyline.
* Fans of Jiraiya deny that he died, despite the fact that he was impaled through the chest repeatedly, lost copious amounts of blood, had emotional flashbacks reflecting on his failures and accomplishments in life, transferred his knowledge of the enemy to a frog messenger for Naruto, and sunk to the bottom of a lake while his vision faded to blackness. The fan rationale? It was just one of his shadow clones (even though those would disappear after even
* Fans of many BBC shows have a common saying that goes similar to "BBC: 15 ACTORS, 8 PROPS, 3 SHOOTING AREAS, AND ONE STORYLINE".
* Fans of Marvel and Mortal Kombat are getting along with the point of some
* Fans of Matt Fraction and Kelly Sue DeConnick are extremely close with each other, which is rather fitting given that the two are married in
* Fans of most iconic demonic heroes from four biggest American publishers -
* Fans of Real Ales / Craft beers /IPAs know that said beers often vary greatly in taste. Some of them have particularly strong flavors and it's not uncommon to say it tastes like piss, especially if the aftertaste is salty and bitter.
* Fans of Stanford University's sports teams will not hesitate to loudly and frequently remind you that their team is the Stanford
* Fans often point out one of Pat's last sketches, in which Pat tilts her head back slightly when kissed, as evidence that the character is a woman. This was unintentional by the actress, Julia Sweeney, but she decided that Pat was officially female for this reason.
* Fans often tend to complain at the 'dead crowds' on WWE television. The seemingly uninterested crowd are in fact very animated but the sound is just not being captured. If you watch fan footage recorded on someone's phone from the crowd, the noise is deafening. WWE just doesn't mic up the crowd because it runs

the risk of people's personal conversations being broadcast on the air among other things. So the only time you'll actually hear a lively crowd is if they're screaming insanely at the top of their voices.
* Fans of the Broadway Musical are also unaware (or at least don’t acknowledge) that in
* Fans of the Chicago Bears still hold blame on kicker Cody Parkey for missing a field goal that would have won a 2018 NFC Wild Card playoff game against the Philadelphia Eagles. Parkey's kick had hit the left end of the goal post and then bounced off the crossbar, and the play ended up earning the nickname "The Double Doink." What is often overlooked, however, is that the ball had briefly grazed the fingers of Eagles defensive lineman Trayvon Hester, and it was later ruled a blocked kick. Nevertheless, Parkey was treated as Public Enemy #1 in Chicago until the Bears released him in the offseason.
* Fans of the Critic may be surprised to see that in the character's first ever appearance, he is commenting on the first live-action
* Fans of the Denmark men's national team have chants in their own language, but perhaps their most famous is in English—"We are red, we are white, we are Danish Dynamite!"
* Fans of the Empire are often called the 501st Legion, after Vader's personal army (the largest
* Fans of the English dub will likely imagine the characters in those voices; Dan Green as Atem, Eric Stuart as Kaiba, Megan Hollingshead as Mai Valentine, Greg Abbey as Tristan Taylor etc.
* Fans of the first two games were unpleasantly surprised by this one turning bodies of water more than ankle-deep into deathtraps, surprising because in the first games, not only could master thief Garrett swim, it was
* Fans of the franchise tend to focus on one of the series' many Godzillas. Some fans play the games to explore the vast worlds. Other fans want to do
* Fans of the Los Angeles Dodgers (based in L.A. proper) and the Los Angeles Angels (based in and formerly representing Anaheim) are completely comfortable in each other's presence, even in Dodgers vs. Angels games, due to their close geographical proximity leading to both teams' fans visiting the other team frequently. It also helps that they rarely play each other, due to being in opposite leagues.
* Fans of the newer actors may be familiar with the words "Fantastic" and "Geronimo!"
* Fans of the San Diego Padres absolutely hate the Dodgers, bitter at how Dodgers fans have a habit of traveling en masse to San Diego for games and often nullifying their home-field advantage, as well as how the Dodgers are simply their closest geographical rivals in general. Unfortunately for them, their hatred can never be reciprocated, as the Dodgers tend to save all their hate for the Giants, their ancient enemy.
* Fans of the show often try to build their own bots at home—unfortunately, most of the assorted household goods and novelty toys used to build the bots are no longer manufactured and go for
* Fans of the show took the show-wide colour-theme-naming and ran with it to
* Fans of TNA wrestling were so disgusted with how matches were booked, that some fans started "Fire Russo!" chants, aimed at writer
* Fans of Yahtzee often express virtually the same opinion: That because he's principally an entertainer, the content of his reviews cannot be criticized because he's "joking".
* Fans! once had a character perform in a musical adaptation of the Book of Leviticus.
* Fans! once programmed a spaceship the size of a 2' cube to engage in evasive atmospheric entry, dodging all enemy fire on the way down, then taunted an otherwise invulnerable foe to walk directly under it just as it slammed into the earth (all while being just outside the blast radius).
* "Fan Song" - for the search radar for the SA-2 and SA-6 among others.
* fans outside America (or at least some outside Nixon's generation) Vice

Presidents.
* Fans! over the course of the story. However, Feddyg even comments on the resemblance, in a way that makes it clear there's no connection between them.
* Fans!" part of it; the other part is laying the smack down on the pursuers.
* fan speculation about Western/Eastern name order, until Volume 4 confirmed that he goes by his surname.
* Fans Prefer the New Her: A character's makeover is treated as a bad thing even though the fans like it vs. the makeover is treated as a good thing even though the fans don't like it.
* Fans Prefer the New Her: A character's makeover or change in appearance is hated in-universe but fans think it's preferable to how they were before.
* Fans Prefer the New Her: This character physically changed for the better, according to audiences.
* Fans refering to "Yuan-Tiffany" gave the yuan-ti her name, though she was
* Fans referred to him as Pantskat combines a shirt and pair of pants in the Alchemiter, he gets a pair of absurdly long pants. And at another point, Karkat self-deprecates spectacularly about wearing pants hiked up to his armpits as punishment. And then, when Karkat's ancestor is finally shown, he is indeed wearing pants hiked up to his armpits as punishment. Said pants become holy relics of his followers.
* Fans say the decision to make Greedo shoot first in the "Special Edition" version of
* Fans!, secretly loyal to the time-traveling conqueror General Maximiliana. But "Jesse" is still his core personality, and while Jesspin is imprisoned by AEGIS, "Jesse" is secretly using Jesspin's mind and body to further Rikk Oberf's plans for the future. When Jesspin tells "Jesse" that no one will know he isn't a traitor, "Jesse" smiles and says, "That's what will make this fun. I do my best work in the dark."
* Fans! secrets for another four, until the heroes take them over, too.
* Fans shipped Harry Styles and Louis Tomlinson and nobody thought much of it. Then all public contact between the two suddenly stopped and they awkwardly denied it a few times. Now the fans have
* Fans showing their support of wrestlers by throwing streamers during their entrances is a tradition that goes back at least to the founding of
* Fans speculated that despite being consumed by James Heller at the end of his boss fight in
* Fans!'s plots was to go back in time and insert more instances of this trope into fiction — thus making all of humanity stupider as a whole.
* Fans! story as a donation drive incentive, but found he had so many ideas for new stories and characters that he and artist Jason Waltrip instead relaunched the webcomic entirely, picking up five in-universe years from the previous storyline. This relaunch lasted until 2012, when Campbell once again felt the story had reached a suitable ending.
* Fans! surfed through several bodies in order to avoid dying of old age. At one point, Will Erikson allowed Fitz to swap bodies with him in order to insure Fitz' loyalty to Rikk and AEGIS. Fitz is currently inhabiting the body of a fire-breathing dragon and loving every minute of it.
* Fans suspected every major class update of being the Spy update since Goldrush, on the assumption that Valve would "disguise" it as another class's update (since, after all, that's exactly what the Spy does).
* Fans tend to forget that Marlin is supposed to be middle-aged and instead humanize him as a handsome, red-haired, young-looking father. Some give him greys but he's usually younger.
* Fans tend to think that Nidoking and Nidoqueen are a strange combination of a rabbit and a rhino. In reality, they're based off of the kaiju
* Fans then began theorizing there were more than six villages per region and we just never saw the rest.
* Fans theorized that this was why Whitebeard was called "the World's Strongest Man". Obviously, someone's going to rise to his level and beat him in battle, most

likely the main character or a future
* Fans!, this trope backfires. Feddyg captures Hilda and replaces her with a duplicate controlled by him, ultimately sending it to kill Rikk; Hilda, instead, causes it (apparently her) to shoot itself in front of him, who's already anxious about the new program. Might have thought that one out better.
* Fans throwing money has become a protest means if the grievance is over the millions, possibly billions, being sent around as sports has become such a massive industry.
* Fans!), Tim ends up married to Julia. In a conversation between Guthrie and Meighan, it is more or less revealed that Meighan had hired Julia (an old friend of hers from college) for the express purpose of setting her up with Tim.
* Fans translated the gravestones of Anna and Elsa's parents as bearing the names "Agdar" and "Idunn". It was initially unconfirmed if those were their names or just placeholder names, but eventually
* Fan Sub: A foreign work is unofficially given translating subtitles by fans.
* fansubbing groups often release Gag Subs of their current anime projects. (Example: Dattebayo's "You Have Been Trolled" subs...)
* Fan Sub: There aren't any subtitles officially available in a country, so viewers write their own.
* Fans! were bisexual. This is probably because there's no shortage of gay and bisexual characters in the rest of the cast. It's also his word that outed Guth, after a half-joking comment followed by an off-panel discussion.
* Fans were called on to decide the fate of a key character and voted via 1-900 number.
* Fans were not happy with the explanation given for why the old Digimon could no longer reach Ultimate for multiple reasons, mainly because it felt like an excuse to
* Fans were quick to notice that if Danny had the opportunity to return to the living world two weeks after his Cyberman body was killed, similar means could be used to resurrect any other character killed in the episode.
* Fans were under the impression Luna's turn into Nightmare Moon was purely the result of her giving in to her own feelings of being overshadowed and under-appreciated by the ponies of Equestria, in line with the opening narration of the show. The IDW comics however would explain that it was an outside source that was the cause of the transformation, having taken advantage of this feelings rather than Luna herself deliberately turning against Celestia. When these events were finally shown it was kept ambiguous whether Luna was in full control or not, and showed that Nightmare Moon's "reign" lasted for about an hour at most consisting of a very brief fight between her and Princess Celestia before Nightmare Moon was defeated and banished. Overall, fans found this underwhelming to say the least, felt the show's detailing of the events
* Fans who grew up watching certain Disney shows aimed at Younger ones with a
* Fans who have studied the Discworld Mapp in detail and/or used it for plotting fanfic have pointed out
* Fans who read into series extensively note the positioning of Rufus when he emerges from Ron's pocket when Kim is around.
* Fans will occasionally invent names for forms and techniques to fill in gaps left behind in official information. One such example: fans tend to refer to the base forms of
* Fans will often associate Nanoha as a lover of strawberry and cream based deserts and foods even though there is little to no evidence of this matter.
* Fant4stic's assets, including the cinematic rights to the Fantastic Four. Thus, Fox's attempts to keep the rights out of Marvel's hands were all for nothing.
* Fantadroms began and ended with a shot of Indrikis (the show's main character) sneezing, for whatever reason.
* Fantadroms features a shapeshifting cat robot named Indrikis as its main character. Receklite, one of the show's secondary characters, is also a cat robot with this ability.
* Fantadroms is entirely composed of this. The extremely bizarre visuals are

further accented by the lack of dialogue (in order to cross language barriers) and the near-constant synthpop soundtrack.
* Fantadroms lacks dialogue of any kind, but the show's characters do make sounds such as gasps, laughs, etc. Justified, as the show was made to be understandable to everyone around the world without dubbing the show into other languages being a problem.
* Fantaghirò is actually a monster's mouth, and the rose is its uvula. The cave even gave its name to most translations.
* Fantasia 2000 also appears during the commentary for his segment, "Pomp and Circumstance", but his input is less than helpful.
* Fantasia 2000, Donald and Daisy spend their voyage on Noah's Arc believing the other has drowned in the flood, leading them to stare mournfully at all the other animal couples around them.
* Fantasia 2000, Donald wears a red robe while Daisy wears a blue one.
* Fantasia 2000, each of whom thought the other had died, reunite when they both reach for the same locket.
* Fantasia 2000 includes a dedication to executive producer Roy E. Disney (who had lived to see the movie premiere in theaters, but died about 11 months before it came to Blu-Ray).
* Fantasia 2000 moment. The two combined are nearly enough to give the viewer a heart attack.
* Fantasia 2000 on the Ballerina, and tries to kill her lover, the Tin Soldier.
* Fantasia 2000 on the Ballerina. He's quite frightening and cruel in his attempts to kill the Tin Soldier.
* Fantasia 2000, or a commercialized trainwreck brought down by cheesy celebrity appearances? It is an ongoing debate among Disney fans.
* Fantasia 2000 takes a little kid's scooter (one of those home-made Depression era deals, basically a box with roller skates and a couple of planks), but at least has the decency to pay for it first.
* Fantasia 2000. The artwork was inspired by New York caricaturist Al Hirschfeld, whose cartoons chronicled the Broadway scene for the New York Times theater section.
* Fantasia 2000, the Rhapsody in Blue segment utilizes this to an even greater extent, being more directly based on Hirschfeld.
* Fantasia 2000, the spring sprite seems to reach safety after scrambling up a tall tree, but the Firebird rises back into its bird form and towers over her.
* Fantasia 2000: "The Steadfast Tin Soldier" features the titular soldier, a music box ballerina, and a jack-in-the-box, all inexplicably alive.
* Fantasia 2000: This occurs to the man in the diner during the "Rhapsody in Blue" segment.
* Fantasia 2000. To say this trope was fully into effect at the time of the release is putting it mildly. Even Roy Disney asked that viewers not take it as the same art piece the original was intended to be.
* Fantasia, admitting the result was unfinished bordering on unplayable.
* Fantasia, all of this was actually cut from the final version of the film, and as a result, all of this was replaced by a scene where the entire Earth gets lashed by earthquakes before finally being flooded by a massive tidal wave caused by a solar eclipse.
* Fantasia, also the most well-known segment, somewhat for this reason, probably more due to Mickey Mouse as the apprentice.
* Fantasia, and may even have indirectly contributed to the Ghetto as we know it.
* Fantasia, as a stripe of varying width, just out of sight past the edge of the frame.)
* Fantasia as its final segment. Among the many, many damned souls that fly at their master Chernobog's beckoning one can easily the ghosts of his devotees, there are witches that use their ghostly brooms in a perpetuation of what they did in life.
* Fantasia, Bacchus comes in riding a tiny unicorn-donkey (which the animators called Jackus), both tipsy from drinking wine.

* Fantasia boarding the ark and turns to the audience with a baffled expression.
* Fantasia: Chernobog, the Slavic dark god, in the "Night on Bald Mountain" segment.
* Fantasia during the "Dance of the Hours" segment. Ben Ali Gator is chasing Hyacinth Hippo, who hides behind a column that is far too narrow for her to hide behind. Ben runs around the column a couple of times but can't seem to find her, until she comes from behind and tramples him.
* Fantasia. Each of the animated segments is produced to correspond to a piece of existing music.
* Fantasia, especially the glorious coke-bottle scene done to Ravel's "Bolero".
* Fantasia Faust, an iron golem under a permanent all-senses illusion (it looked like a sexy woman) was sent to attack the
* Fantasia has it that the entire "Dance of the Hours" section is meant to suggest a performance by an amateur ballet company, i.e. it might have funny moments due to the dancers' limited skill, but isn't being played for laughs.
* Fantasia, Hyacinth Hippo yawns, and the camera focuses in on her uvula before zooming out as she closes her mouth.
* Fantasia: Mickey Mouse hacking the enchanted broom to bits in "The Sorcerer's Apprentice" is done this way. As originally planned, we were to have seen this moment played out right in front of the camera. It was restaged in silhouette specifically to make it less scary.
* Fantasia movie tries to kill the titular soldier because the ballerina loves the soldier and not him. Luckily, he doesn't succeed.
* Fantasia" or "the centaurs". Additionally, its unique nature makes it pretty much the least known of the five Golden Age Disney films.
* Fantasia Otome Game Series, who much prefers to be called the Demon Lord.
* Fantasia: Pictured above is Chernabog. Appropriately enough, his name means "Black God".
* Fantasia: Requiem of the Abyss, Faye jumps into the line of fire to save Cyrus and Valen from certain death.
* Fantasia -- Requiem of the Abyss, Valen's confession to Cain was like this.
* Fantasia returning to sleep as a procession of churchgoers with lanterns walk by while Franz Schubert's "Ave Maria" plays, signaling the restoration of order and the triumph of good over evil. Many children found this disappointing, preferring the energy and excitement of the diabolical revelry to the pious solemnity of the final scene.
* Fantasia. She's a female centaur who is drawn like a black caricature (wide lips and a body like a donkey) and acts as a servant to the white-featured centaurs. She has been removed from the movie since the 60s, but she has her share of fans. There is rather a lot of fan art depicting her as a little more realistically drawn and unsubmissive.
* Fantasia, starring a dancing troupe consisting of ostriches, hippos, elephants and crocodiles.
* Fantasia's version accompanying the dancing ostriches and other animals.
* Fantasia: The battle between the Stegosaurus and Tyrannosaurus Rex could never have happened, given that the species were separated by 20 million years at the very least. That's not to mention a few anatomy errors of both. But no one's complaining. Wicked music, great animation, incredible synchronization? Sit back and relax.
* Fantasia, the magical "robot" broom Mickey made to do his chores for him turns out to be uncontrollable.
* Fantasia. The narrator informs us that the demons and ghosts are celebrating Walpurgis Night.
* Fantasia, the peak of the mountain itself is if formed by the demonic Chernabog's enormous folded wings.
* Fantasia. The snowflakes at the very end of the "Nutcracker" segment were actually filmed in live-action with the animated sprites composited on top of them, evoking the same kind of jarring contrast, thus providing a case of Conspicuous Live-Action.

* Fantasia, though not officially regarded as a package film, basically fits the format in that it consists of multiple unrelated segments tied together with narration.
* Fantasia Times has its main trio Andi, Sera, and Scarlett, who brought all the crossover characters together in the first place.
* Fantasia to come and be filmed as a model for this scene. They photographed him in his cape to capture his movements, flourishes, facial expressions and signature hand gestures to bring their Satan to life.
* Fantasia was banned but then recut on initial release to remove the Rite of Spring part, which a censor believed "gave an entirely materialistic view on the origin of life" (most likely because said scene focuses on the Big Bang, something that would have been at odds with traditional Catholic beliefs). It has since been released entirely uncut.
* Fantasia was considered to be a pachycephalosaur, which explains its oddly-shaped head.
* Fantasia was finally released in 2000, sixty years after the original.
* Fantasia, when the host introduces the sequence based on "The Nutcracker Suite", he mentions that Tchaikovsky, the composer, did not consider it his best work, while it is unquestionably the most popular of all his compositions.
* Fantasia would later borrow some elements of the originally planned sequence for the Keyblade Graveyard final battles.
* Fantasista Doll masters to even leave their cellphones. They cannot walk too far from their masters without vanishing back into them (though the distance can be increased with cards.) There is a verbal contract with mutual master/doll obligations, though the actual relationships between them vary.
* fantasista (roughly, calling someone a "daydreamer" in a derogatory fashion) twice. By Nami in Enies Lobby, and by Perona in the Whereabouts stories.
* Fantastic Aesop fairly well and the Astral Drops are not used at all for the rest of the season, though more likely because of Nerissa's ability instead of the girls actually learning their lesson.
* Fantastic Aesop: The story has a moral or lesson that isn't really applicable to real life.
* Fantastic Aesop: Viewers mock your Aesop because it has no real world application (e.g. "Never stop time to save your love interest.")
* Fantastic Alice, most of which would be pointless if you don't know the references.
* fantastically complex underground structures. You think this one is impressive then the largest one know, under Hokkaidō, has an area of roughly 2.7 square kilometers.
* Fantastically Indifferent: Magic? Monsters? The supernatural? Eh, whatever.
* Fantastic Arousal: A humanoid alien-type creature gets sexually aroused if someone touches a place that's neither human anatomy nor their privates.
* Fantastic Arousal: A humanoid alien-type creature gets sexually aroused if someone touches a place that's neither human anatomy, nor their privates.
* Fantastic Beasts’s take on the character (though most agree he got better as the films wore on).
* Fantastic Beasts and Where to Find Them. A cop tries to claim the destruction at Kowalski's apartment is the result of a gas leak, only for all the witnesses to berate him and point out the lack of gas's scent. One man steps up to say that they all saw a magical beast cause the destruction, but before he can, Newt casts a spell over all of the witnesses and they suddenly agree that it was a gas leak that caused everything.
* Fantastic Beasts and Where to Find Them: Although the end of the film jumps ahead one week, the rest of it takes place over two days.
* Fantastic Beasts and Where to Find Them, a magical beast gets loose and bites a non-magical citizen, leaving a former wizard cop to furiously question Newt Scamander, the owner of the beast. Newt tries to reassure her that the bite is mostly harmless and lists off a series of minor symptoms of the bite, until he stutters and tries to avoid the subject before being forced to list the last

symptom: shooting fire from the anus.
* Fantastic Beasts and Where to Find Them and several dozen of wizards completely makes it impossible to mind wipe every No Mag in New York... Until Newt remembers that a specific potion he has has an Obliviate effect and a thunderbird can create storms.
* Fantastic Beasts and Where to Find Them assert that the wizarding world is real, and these books are magically copied (with a foreword added by Dumbledore) from real books from Hogwarts. Complete with graffiti written in the margins by Harry and his friends, no less.
* Fantastic Beasts and Where to Find Them but have acknowledged that he did exist.
* Fantastic Beasts and Where to Find Them, crop circles are caused by Mooncalfs doing their mating dance in fields of wheat.
* Fantastic Beasts and Where to Find Them describes Crups, wizard-bred dogs that resemble Jack Russell Terriers except for their forked tails, which are hypersensitive to Muggles.
* Fantastic Beasts and Where to Find Them describes Lethifolds, which look like shadows but are actually just very flat black creatures.
* Fantastic Beasts and Where to Find Them, Dodos are actually magical creatures who used their powers to avoid Muggles after the Muggles started hunting them. Only the Muggles still believe they are extinct.
* Fantastic Beasts and Where to Find Them for Harry. As a result, a lot of people expected one to show up in the final books of the franchise, probably as a weapon used by Voldemort, but it never featured until a decade later in the movie of the same name (see above).
* Fantastic Beasts and Where to Find Them. Given that it was Grindelwald who was impersonating him and he did it by using transfiguration and not polyjuice potion, it’s hard to imagine he’s alive somewhere.
* Fantastic Beasts and Where to Find Them had a sub-plot about Jacob getting dumped by his fiancée Mildred (played by Sinead Matthews) cut entirely from the final product. However, Matthews is credited for her role in it.
* Fantastic Beasts and Where to Find Them he has a blazer with a sharp red piping, a waistcoat with contrasting lapels, and scorpion tie pins with jeweled eyes. Also, spats.
* Fantastic Beasts and Where to Find Them, he showed up to present his arguments wearing nothing but a hat, which turned out to be a dead badger.
* Fantastic Beasts and Where to Find Them is interrupted by what appears to be an ominous wind and sound emitting from the pipe organ in the balcony of the event space. What comes out of the pipe organ is much worse than ominous music.
* Fantastic Beasts and Where to Find Them is said to consume the brains of its prey, although Newt's are tame enough not to do so to the opponents it overpowers.
* Fantastic Beasts and Where to Find Them is set in a subway like this in New York. Being set in the 1930s, it feels creepier than a modern subway, too.
* Fantastic Beasts and Where to Find Them, is set nine months afterward in 1927. Subsequent films are expected to take place between the year 1927 and 1945, the year of Grindelwald's defeat.
* Fantastic Beasts and Where to Find Them; it's revealed that her organization actually descends from magical Loyalists from the Revolutionary War.
* Fantastic Beasts and Where to Find Them mentions the Nundu, a gigantic leopard-like creature whose mere breath causes a disease bad enough to wipe out entire villages, and the Fwooper, a bird whose song causes insanity.
* Fantastic Beasts and Where to Find Them, Newt Scamander saves Tina Goldstein from being executed. She has since been friendlier to him, and canon establishes that they will get married.
* Fantastic Beasts and Where to Find Them, seems to be the magical equivalent of an animal control expert.
* Fantastic Beasts and Where to Find Them, setting several zoo animals free.
* Fantastic Beasts and Where to Find Them, several characters use it as a verb.
* Fantastic Beasts and Where to Find Them, Snape claims the kappa is found in Mongolia; one of Harry's notes has the sentence stating that the kappa is Japanese

underlined and a scrawled "Snape hasn't read this").
* Fantastic Beasts and Where to Find Them. Some fans are excited, others would have preferred if it just stuck to cool animals.
* Fantastic Beasts and Where to Find Them, some of the animals escape and cause trouble.
* Fantastic Beasts and Where to Find Them starts with a montage of papers covering the fight against Grindlewald.
* Fantastic Beasts and Where to Find Them stating being in New York, his creatures are in danger being surrounded by the most dangerous beasts of all.
* Fantastic Beasts and Where to Find Them; The Augurey's mournful cry was once believed to foretell the death of whoever heard it (in reality, they were predicting rain). The entry goes on to mention how several wizards suffered fatal fear-based heart attacks after hearing an unseen Augurey's cry.
* Fantastic Beasts and Where to Find Them: The film is set in December 1926 exclusively in New York City. Some of the tropes associated with the era are featured and given magical twists, what with Queenie being a flapper and a visit to a wizarding speakeasy.
* Fantastic Beasts and Where to Find Them: When Newt tracks his niffler down at a jewelry store, it first tries to pose as a display dummy. He isn't fooled.
* Fantastic Beasts and Where to Find Them when she finally gets through to her.
* Fantastic Beasts and Where to Find Them when they realized they were being hunted. Apparently, the Ministry of Magic decided not to allow Muggles to become aware that the Diricawls still exist, as the belief that they had hunted them all to extinction led to them becoming more environmentally conscious.
* Fantastic Beasts and Where to Find Them where many shady characters hang out, including Tina's informant, Gnarlak.
* Fantastic Beasts and Where to Find Them who suffered abuse at the hands of her violently anti-magical mother, is a prime candidate for Obscurial-hood. Well, everyone might think so, but the Obscurial is actually her older brother, Credence. He managed to survive as long as he did because his magic was so insanely powerful that it kept him alive despite his Obscurus.
* Fantastic Beasts and Where to Find Them with a Niffler, a magical creature resembling a platypus that can hide a nigh-unlimited amount of riches inside its pouch. When Newt catches one inside a bank vault he divests it of hundreds of pounds of gold and jewelry by this method.
* Fantastic Beasts franchise, in particular in the first film, whose long bangs highlights his great shyness and solitary behaviour, especially as he also avoids eye-contacts most of the time.
* Fantastic Beasts, Grindlewald, because he can’t. He also fights Grindlewald himself in the climax of the first film. He also looks Grindlewald directly in the eye when he won’t do it with anyone else.
* Fantastic Beasts, is nine years younger than his brother Theseus. The actor who plays Theseus, Callum Turner, is eight years younger than Redmayne.
* Fantastic Beasts like him. They're both dark haired half-bloods and she was in her school's equivalent to Gryffindor.
* Fantastic Beasts series is a huge fan of this trope so far - nearly every character gets their own. There's Newt's off-grey and blue coats, Tina's grey one in the first film, and then her badass black leather trench in the second, Queenie's pink floor-length, Jacob's brown one, Grindelwald's black, the leather trench coats of the Aurors, Dumbledore's corduroy number, Seraphina Picquery's black coat with the bedazzled thunderbird insignia on the back, and the velvet and leather long coats of Grindelwald's acolytes, namely Vinda Rosier, Krall, Carrow, and Abernathy.
* Fantastic Beasts stating his character Newt Scamander has Asperger's Syndrome and he portrays him as such, but due to Autism Spectrum Disorders not being recognized at the time the series is set, there is no official diagnosis.
* Fantastic Beasts: The Crimes of Grindelwald, American Queenie has a breakdown in the middle of Paris because she’s being drowned out by a cacophony of gibberish she can’t understand because it’s in French and not English.

* Fantastic Beasts: The Crimes of Grindelwald and his editing team had to make the tough call to prioritize plot over exposition and characters to work within the runtime.
* Fantastic Beasts: The Crimes of Grindelwald film was converted into a Parisian backlot.
* Fantastic Beasts: The Crimes of Grindelwald, Grindelwald clings to the underside of the carriage that is supposed to be taking him to Europe to face punishment for his crimes.
* Fantastic Beasts: The Crimes of Grindelwald in his hunt to kill Credence. It's later revealed that he literally has to kill Credence (or so he thinks) because of an unbreakable vow he made with his father to avenge his mother or he will die. He thinks Creedence is Corvus Lestrange V under a fake name. Corvus's father raped his mother who then died giving birth to his (Yusuf's) half-sister, Leta. His father made him vow to get revenge on the one person Leta's father loved, Corvus. Once Leta tells him that Corvus is long dead and therefore the vow is null and void, he joins the good guys in fighting Grindelwald. He doesn't even feel any ill will toward Leta.
* Fantastic Beasts: The Crimes of Grindelwald is pretty much an Apocalypse.
* Fantastic Beasts: The Crimes of Grindelwald, Leta Lestrange tells Newt and Theseus she loves them before she attacks Grindelwald to buy them time to escape.
* Fantastic Beasts: The Crimes of Grindelwald—something Rowling even confirmed with unreleased concept art!
* Fantastic Beasts: The Crimes of Grindelwald: Newt Scamander is enamored with how Tina Goldstein's eyes are like a salamander's. There's also him digressing a bit when he notices how narrow Tina's footprints are.
* Fantastic Beasts: The Crimes of Grindelwald, there was another character listed named Sebastian who doesn't appear in the film. Although it's also speculated that it might have been a code for Newt's brother Theseus since there was apparently a scene between the two of them as teenagers that didn't make the cut.
* Fantastic Beasts: The Crimes of Grindelwald: The sequel to the above. It takes place (mostly) in Paris in September 1927. The era's tropes are given less emphasis, with the time period treated more as incidental than it was in the previous movie.
* Fantastic Beasts: The Crimes of Grindelwald would just wonder why a nebbish scientist is the main pivot of the conflict and not the actually-relevant Dumbledore. This was already a bit of a divide in the first film, which had wacky scenes of Newt rounding up magical critters being intercut with scenes emphasizing Credence's abuse.
* Fantastic Beasts. The upcoming, untitled third film is doing some aerial filming in Vietnam (rumored to be standing in for China) but is using sets once again for Rio de Janeiro and Berlin. This is justified as these places don't look the same today as they did in the 1920s and '30s.
* Fantastic Beasts, which is a fictional guide with nothing resembling a plot.
* fantastic cadets' uniforms. It is also responsible for training officers of the US Space Force, which is part of the Department of the Air Force and does not have its own academy.
* Fantastic Caste System, and he didn't care how much suffering he was causing. It's clear that what made Sisko such a good emissary was the fact that he didn't want to be emissary, and thus he couldn't abuse his power because he was too reluctant to even acknowledge he had it. Similarly, Worf thought Martok would make a good chancellor because he refused to seek the position, even though he could have taken it.
* Fantastic Caste System, and legitimized by an official state religion. The Killiks are run by a hive mind. The Chosen are dominated by the warlord-conqueror Nuso Esva, with racial and religious allusions suggesting that any beings of other species are considered inferior (though the groups he pressures or tricks into his alliance aren't initially aware of this). The closest thing to a free society outside of the "known galaxy" may be the Chiss Ascendancy, but even their government is dominated by Ruling Families suggesting an aristocratic rather than

democratic arrangement.
* Fantastic Caste System: A society divided into very different and distinct cultures, and nearly always lacking individual freedom to move between them.
* Fantastic Caste System in the hopes of earning money and status, as is the case with players who pick the "Dwarf Commoner" origin.
* Fantastic Caste System in the setting, and there's many remarks made to the effect that a person with a Crest is inherently a lot more dangerous than a person without one, with factions engaging in human experimentation to empower their crests. In gameplay, Crests provide fairly minor benefits, almost all of which are dependent on luck (i.e. a 10-20% chance to get in an extra attack, or a 10-20% chance to not spend a use of healing magic). The practical difference between a unit with a crest and one without is very small.
* Fantastic Caste System. It is the proper term for lower caste people with darker colored eyes (compared to lighteyes), but it is also frequently used as an insult by lighteyes speaking down to darkeyes. The polite version is supposed to be "darkling," but it's rarely used and just comes off as patronizing.
* Fantastic Caste System. Later it turned out to be an integral part of their society with castes strictly enforced. Very early on, though, the hierarchy was portrayed much more casually, with Sollux even being unaware of the order the colours go in.
* Fantastic Caste System, not as important. At least one time on record the Jackals attempted to sterilize the Grunt population due to incidents involving the Grunts accidentially infringing on and destroying Jackal eggs in their nesting grounds, which led to at least one Grunt Rebellion as a whole.
* Fantastic Caste System of the troop and Moonlight being of the lowest rank. They fell in love but the rest of their troop didn't agree. During the war that broke out as a result, Sunrise was killed and Moonlight later died of a broken heart. Since then inter-rank pairings have been banned amongst baboons.
* Fantastic Caste Systems, and other thoroughly nondemocratic systems of government. It's downplayed in that, again, some of the human worlds are nondemocratic as well.
* Fantastic Caste System: Social classes are ingrained in the setting.
* Fantastic Children could be considered as a mystery at first. However, as time went on, the work brought other genres into the mix such as adventure, coming of age story, mystery, tragedy, history, fantasy, and romance. There's a bit of science-fiction too.
* Fantastic Children features an example. The people of Greecia have the power to travel to the land of the dead. They can reincarnate themselves and live several lifetimes. They can even put a soul into a mechanical body. Yet they're still a monarchy. They're ruled by a senile and slightly insane king to add extra insult to the injury.
* Fantastic Children fits this perfectly and it's even a large part of the plot. He seems to eventually accept to live with it. The guy she picks is a good guy and all, but it is still a bit of a downer.
* Fantastic Children has this trope. The Greecians bodies are capable of assimilating technology, they can even locate the souls of dead Greecians and humans and beam them back into their respective bodies. What do they fight with? Swords. What do they wear? just about anything medieval. Also, the planet of Greecia is a monarchy. King's word is law, even if it leads to the main problems in the series and makes everybody suffer in the long run. Yep.
* Fantastic Children, Wilhelm Conrad Röntgen was an alien, sort of.
* Fantastic Comedies feature only one fantastic element, with the rest of the setting being fairly realistic.
* Fantastic Comedy: A comic work, usually a sitcom, with minor but central fantastical elements.
* Fantastic Contraption). The fact that you can save and share your contraptions for others to watch in action helps quite a bit.
* Fantastic convinced the NCR to give him a job fixing an advanced power plant through this trope:

* Fantastic Drug: A fictional drug that appears in a sci-fi or fantasy-based story; also sometimes referred to as a designer drug.
* Fantastic Drug, also known as Halfling Cheese, mind cheese, and cheeeese. To humans it's a rather unpleasant dairy product; to halflings it's the most powerful narcotic imaginable.
* Fantastic Drug that can "make you feel nothing". It's also an item that can be used to give any character temporary, but ridiculously potent stat boosts. The downside is that anyone who has used Joy will get withdrawals if they don't take the drug frequently, which will make them practically useless outside of using magic attacks or support. To make things worse, Joy is a very scarce resource. Some party members, like Brad, Dick and Queen, come with Joy addiction and will have withdrawals regardless of whether you feed them Joy or not.
* Fantastic Fauna Counterpart: Either a made-up species that behaves like a certain real species, or an extant species that behaves like another, more familiar species.
* Fantastic Fighting Style story "The Adventure of the Empty House", 1903.
* Fantastic Four #1 and was only later localized (for a time) in the Bermuda Triangle, but it more frequently linked to the Godzilla mythos (Marvel once published a Godzilla comic) and thus localized near Japan.
* Fantastic Four (2005) also has this. Johnny has been trying to master flight ever since he got his powers (with no one really believing he can do it), when Doom fires a heat-seeking missile at the Baxter Building he leaps off the edge to try and lure it away and right before he splatters all over the pavement he finally nails it.
* Fantastic Four (2005), Ben Grimm's fiancee silently indicates that she can't love a seven-foot-tall mound of sentient orange rock by taking off the engagement ring he gave her and setting it on the pavement before walking away. To further twist the knife, Grimm's fingers are now so thick that he can't even pick up the discarded ring.
* Fantastic Four (2005), but only because her powers have switched with her brother Johnny's, and her clothes instead burn off.
* Fantastic Four (2005) had several action scenes that were in the trailers but removed from the movie itself.
* Fantastic Four (2005): Mailman Willie Lumpkin (the first time he played one of his own characters).
* Fantastic Four (2005) met Cash Warren on the set and one year after the second film came out, she got married and had three children.
* Fantastic Four (2005) movie begins with Reed and Ben visiting Victor Von Doom to get funding for Reed's experiment; the two pause to watch as a gigantic statue of Doom is being erected outside his offices.
* Fantastic Four (2005) movie, the Human Torch flies next to the plane in which the rest of the Fantastic Four is flying, annoying the Thing. Yes, you read that right, the Fantastic Four were flying on an ordinary, mundane plane. Johnny had told them, "I don't fly coach."
* Fantastic Four (2005) movie, when Reed reaches out to catch a glass Sue knocked over, and discovers his powers this way.
* Fantastic Four (2005): Reed invents a machine that removes The Thing's powers and makes him look normal. He later uses it to get his powers back to fight Doctor Doom but the idea of using the machine to give other people superpowers or having The Thing change back and forth before and after missions is never brought up.
* Fantastic Four (2005), Reed runs into his ex-girlfriend Sue when he asks his old friend Victor, who Sue works for and is currently dating, for a favour. This causes some tension and old feelings to resurface and continues to grow when they get their powers. Eventually, Reed and Sue would reconcile and become engaged at the end of the film.
* Fantastic Four (2005), Reed's stretching power first reveals itself when Sue knocks a bottle of wine off a table and he reflexively extends his forearm — by about three feet — to catch it before it can break.
* Fantastic Four (2005), the Human Torch shielded a young girl from an explosion.

Because of his fire abilities, the blast didn't harm him.
* Fantastic Four (2005): to no one's surprise, as the crate carrying von Doom's remains is shown departing, there's a hint of life.
* Fantastic Four (2005) was wearing a costume made of basketballs. Doctor Doom also suffered, with his iconic metal mask looking like cheap plastic and his armor and green robes being replaced with a green overcoat worn over business slacks.
* Fantastic Four (2005) when he's lamenting on the Brooklyn Bridge over his mutation.
* Fantastic Four (2015) as a point of reference. Unfortunately, Trank was not interested, and he lost enthusiasm for the story once the team got their powers in the second act. Because of this, the shooting script lacked a third act, and 20th Century Fox had to hastily cobble one together during reshoots.
* Fantastic Four (2015) barely took the time to set up Reed and Sue as the iconic couple from the comics. Instead, they dwelled on how Ben Grimm, friends with Reed since childhood, helped him reach the scholarship he'd always dreamed of, how Ben (and not Reed's parents) helped Reed move into the Baxter Foundation, how Reed could not consider deploying the teleporter without Ben there, the list goes on. The emotional peak of the movie is when Reed abandons Ben (specifically Ben) in a government facility to save himself from being experimented on... and Ben's reaction is not that unlike a scorned lover. Deleted drafts of the script had Ben consider enlisting in the army once he realizes Reed is moving on with his life and forgetting him. Uh...
* Fantastic Four (2015) example. The movie was screened for critics a mere two days before it was released in the United States. However, the movie was intended to be premiered in several regions before then - which did not have screenings for critics either. And then the international premieres were delayed until after the United States premiere, which essentially means that the movie was only screened for critics at the eleventh hour, at which point it might as well not have been screened for them at all. The online embargo lasted until two days before the release date and the print embargo lasted until the release date. The movie was unsurprisingly savaged by anyone who saw it, critic or not.
* Fantastic Four (2015) is driven by Victor, Reed, Johnny, and Ben going on a drunken transdimensional trip to Planet Zero, where they mess around with a strange substance that gives them their powers. Sue doesn't go along on the trip — she's just there when they get back and gets splattered by the substance.
* Fantastic Four (2015). One of the most detested changes to the source material is changing the Thing's catchphrase of "It's clobberin' time!" into what his brother says before beating him.
* Fantastic Four (2015)". On the Fantastic Four themselves, human Ben Grimm is a lot smaller than his counterpart in the comic, and Johnny Storm has been given a race lift, no longer the blonde Caucasian in the comic.
* Fantastic Four (2015) opens with Reed as a kid trying to build his quantum teleporter and befriending Ben Grimm. We then cut to "seven years later", where Reed and Ben have finally got the thing to work.
* Fantastic Four (2015) was shot mostly on a sound stage in Baton Rouge, Louisiana, with exterior shots of the city used to stand-in for New York. They even brought in authentic-looking New York buses to try and add to the illusion.
* Fantastic Four #32, he tells his children Sue and Johnny not to be sad, as he'll finally be reunited with his beloved wife (who'd been killed in a car accident years earlier).
* Fantastic Four #511, the Fantastic Four go to meet God, and find Jack Kirby at his drawing board.
* Fantastic Four #527: Ben Grimm experiences a significant windfall, and rushes off to do this, so he can send the picture to Bill Gates (The Other B.G.). Bill wonders why the Fantastic Four sent him a picture of the Grand Canyon.
* Fantastic Four #91-93, the robot gladiator Torgo leads a gladiator revolt on the Skrull controlled planet of Kral, after the Fantastic Four arrives to rescue the captive Thing from the gladiator pits.
* Fantastic Four. A better example would be Johnny Storm, who's even MORE of a

dumbass and has no higher learning backstory (he got his powers in high school). Yet on one occasion he was able to sum up a chain reaction streaming from unlocking unstable molecules and think of a way to contain the problem. Again, sharing living space with the smartest man in the world helps.
* Fantastic Four: A dire situation that required Ben and Johnny to get from Earth to Reed and Sue on Mars was mentioned to take too long before Reed explains he developed "space folding" technology that drastically cuts transit time. They use it in a later arc to travel to a different galaxy within hours.
* Fantastic Four against the shared threat of Onslaught, declaring, "In the words of my dearest friend, It's Clobberin' Time."
* Fantastic Four against the Thing years later, when Alicia and the Thing start dating.
* Fantastic Four also being released concurrently focusing on the non Fantastic Four members of the Future Foundation.
* Fantastic Four, and, as one might guess based on the above, Battlin' Jack Kirby becomes the ever-lovin' blue eyed thing!
* Fantastic Four and makes a set of gear to replicate their powers. They end up regaining their powers confronting Doom with the aid of Daredevil.
* Fantastic Four and smashing his alarm clock to bits when he went to turn it off. The next panel would usually show him tossing it onto a pile of similarly smashed clocks.
* Fantastic Four, and so they give him the artifact, which leads to their victory.
* Fantastic Four, and they spend several years trying to find a way home.
* Fantastic Four and was villainous the first time and relatively benevolent the second time.
* Fantastic Four, and without her its pretty obvious the team wouldn't be able to do that.
* Fantastic Four animated series, where Frankie deliberately tries to use her powers to find Galactus suitable planets to devour that don't hold any sentient life, saying that she could never live with herself otherwise.
* Fantastic Four are involved in an ongoing escalating prank war with each other.
* Fantastic Four are the nemeses of the respective heroes because they start out as being a certain way and, due to their differences with the hero, grow to hate them and eventually focus on them. Doom, on the other hand, is a supervillain who branches out to become an enemy of every single Marvel superhero out there, but every single thing he does can be eventually traced back to his hatred of Reed Richards.
* Fantastic Four, as ruler of Latveria, enjoys the head-of-state version when on official visits, but he's fair game when visiting on other occasions.
* Fantastic Four assassinated, only to die of a heart attack one day later." Dr. Doom mentions that the "for want of a nail" theory of time travel is a lie spread throughout the timestream by Kang to prevent the emergence of rival time-travelers.
* Fantastic Four as the Hitachi Virtual Storage Platform helps thwart the data slowing efforts of M.O.D.O.K. and the corrupted data monster Datazilla.
* Fantastic Four, at the beginning of their superhero career defeated a group of Skrull spies. Reed Richards brainwashed them into becoming cows and retaining that form for life. The milk from these cows affected a small dairy town named King's Crossing, causing the inhabitants to develop shapeshifting powers and become paranoid and insular. The Fantastic Four, via a girl Johnny Storm was dating, ended up investigating the town and neutralizing the threat.
* Fantastic Four attitude clashes with his own morality and sense of family.
* Fantastic Four, a villain known as the Over-Mind telepathically took control of Mister Fantastic. This caused Doctor Doom to team up with the FF to try to defeat the Over-Mind.
* Fantastic Four because the production company didn't have his TV rights.
* Fantastic Four. Black Panther lures the Fantastic Four to his hidden jungle hideout and hunts them down one by one, basically 'playing the villain', and only when he's finally defeated does he reveal that he's actually one of the good guys, and that he was just hunting them to test himself before going up against his

archnemesis, Klaw. After Black Panther makes it up to them with a grand welcome to his kingdom, they all play baseball together. The Thing pitches, Johnny swings a Vibranium Bat, and Mr. Fantastic catches the ball - 30 feet up in the air. As for the Invisible Woman, she trips up her husband to give the mere mortals a fighting chance...
* Fantastic Four both had different costumes that accommodated their powers and past costumes while Reed and Susan Richards had identical suits with their chest emblems slightly different. Their children had gender-based uniforms.
* Fantastic Four briefly dated a villainess from the future known as Psionics. Johnny Storm also dated (and eventually married) a Skrull named Lyja who impersonated Alicia Masters (Ben Grimm's longtime girlfriend). Arguably, as this was all part of a plot and the Torch didn't know who she really was, this may not count. But the two later revealed that they had indeed developed strong feelings for each other.
* Fantastic Four called "Central City". It took a few issues before it became established that their adventures (as well as most of Marvel's other superhero comics) take place in New York City. Today, of course, stories set in New York are arguably Marvel's trademark, so it's hard to think of the series taking place anywhere else.
* Fantastic Four called "Dreadface." She's spent most of the last twenty years in comic book limbo.
* Fantastic Four can afford to use this as his modus operandi, since he's smart enough to pull a master plan that would take anyone else days to draw up out of his ass at random, or cobble together an interdimensional continuity de-snarler out of a handful of kitchen utensils.
* Fantastic Four cartoon, Ben has passed the (ahem) torch of alarm clock abuse to Johnny Storm, who keeps melting his.
* Fantastic Four cartoon, Johnny was afraid this had occurred when he kissed this foxy redhead and she immediately burst into flame. Turned out she had some kind of mutant power she'd repressed due to accidentally burning her house down as a child.. Then played straight when she got extra powers from Galactus in order to become his herald.
* Fantastic Four cartoon, Puppet Master takes one last stab at ultimate power and imagines ruling the world, complete with montage.
* Fantastic Four co-creator Jerry Siegel wrote a couple of issues as "Joe Carter"
* Fantastic Four comic book had the "hero won't fall for it but the villain is right" version. Reed captures Doom, who points out that Reed has sacrificed far more than it's worth to take him in.
* Fantastic Four comics, a common way of depicting that Shit Is Getting Real would be to depict the normally clean-shaven and fastidiously neat Mister Fantastic as becoming increasingly unkempt and unshaven as he spends longer and longer in his laboratory trying obsessively to find a solution to the team's current problem. This has been downplayed in recent years as the creators have updated his image to just show him growing and keeping a beard (likely to spare him the hassle of having to remember to shave), though he still normally keeps himself neat and tidy.
* Fantastic Four comics and cartoon is a trickster-like alien who can turn into all kinds of crazy things. In an episode of the 90's series titled "Hopelessly Impossible", he turns into Galactus, Lawrence Limburger, Hulk, Lockjaw, and a Ninja Turtle.
* Fantastic Four comics. Applicants included an overweight cabbie in a bird suit ("The Osprey") and Captain Ultra, whose strength, flight, and gullibility made him a shoo-in... Until he fainted in the presence of a lit match.
* Fantastic Four comics, she's dating the hulking but gentle robot Elektro; it's very cute.
* Fantastic Four comics, who doesn't much like having a superhero team in his building but can't evict them.
* Fantastic Four comic. The Watcher actually picked him up and brought him into space so both he and Byrne could watch the trial of Reed Richards.
* Fantastic Four costume was a failure that fans and critics alike hated; even the

biggest fans of She-Hulk and Power Girl don't see Sue as the type.
* Fantastic Four, Denny's came out with a bacon cheeseburger called "the Thing". Not only does it have nothing to do with the movie, Ben Grimm (a.k.a the Thing) is Jewish, and bacon is the least Kosher thing imaginable.
* Fantastic Four, Doctor Doom captures Reed Richards by freezing him in ice, then sadistically bends his fingers the other way. Luckily, they don't snap off, but Reed groans in agony.
* Fantastic Four: Doctor Doom once had his hands crushed by The Thing. As as a result, he hates Ben Grimm almost as much as he hates Reed Richards.
* Fantastic Four does this now and again as well. Justified in that his powers are to stretch his body to any length, and width.
* Fantastic Four, during their conflict with Hyperstorm. Some characters were stranded in the past, and others continued their actions in the future. A change of plots said "Meanwhile... if the word makes any sense in this context...".
* Fantastic Four each correspond to one of the four classical elements. Johnny Storm is Fire and Ben Grimm / The Thing is Earth, of course. Reed Richards is fluid like Water, and Sue Storm can become invisible like Air.
* Fantastic Four, especially as the two of them share an incredibly advanced intellect.
* Fantastic Four, especially when it comes to getting three square meals apparently.
* Fantastic Four, everything is changed when — a team member dies, there is a huge change to the team roster, a relative of a team member shows up from another dimension, or Doctor Doom does something totally different this time and never brings it up again.
* Fantastic Four. Feedback and sales were positive enough for them to "graduate" to their own ongoing series, starting in October, 1961. It lasted to 1967.
* Fantastic Four filled with elevator music enticing the player to take a nap instead of continue playing.
* Fantastic Four finally used it to return to his home planet Galador.
* Fantastic Four first season had done the story a disservice, and sought to adapt it right this time.)
* Fantastic Four for aid. After defeating the Sphinx, Galactus decided to dish out a punishment by sending the man back in time to ancient Egypt just before he gained his powers and force him to live out his entire life over again. It's hinted the Sphinx was trapped in this loop, unable to tell anyone what was happening and, despite all his attempts, unable to alter his fate. That is, until a woman's attempt to rewrite reality managed to break him free of the loop.
* Fantastic Four for that particular side of Marvel, it's usually him.
* Fantastic Four for the first time, it was clear that they had no way of defeating an omnipotent cosmic being. Instead, Johnny was sent to retrieve the Ultimate Nullifier — that most infamous of comic book asspulls — to cow Galactus into leaving Earth.
* Fantastic Four fought the Wizard (faked it using advanced tech he invented) and Miracle Man (faked it using mass hypnosis).
* Fantastic Four: Frequently forgotten is that Susan Storm knew and had a thing for Reed Richards since he was a college undergrad… and she was 13. At least one writer since then has retconned this in their version of the Four's backstory, explicitly ditching this element and establishing their first meeting as occurring when the two of them are both in college and at around the same age.
* Fantastic Four gain their powers in the 2015 film is implied to be this, as rocks and fire from Planet Zero get into the pods of Ben Grimm and Johnny Storm, respectively, as they're being teleported back to earth, whilst Sue Storm (who didn't go on the mission) accidentally gets caught in the blast radius as the teleporter comes back.
* Fantastic Four had a 50 Foot Whatever make Iron Man a sandwich, thinking he was actually an ally from way back when. The sandwich he made? It was two walls, a tanker truck, and a radio tower needle thing.
* Fantastic Four had five Rembrandts. Then he had one burned because he didn't like

it.
* Fantastic Four had issues dealing with his entry in a super-powered wrestling federation in both the FF series and his own self-titled series. This federation is called "Unlimited Wrestling Federation" and he is an undefeated champion.
* Fantastic Four has a future version of Namor and Black Panther coming to the present for some reason or another. It's revealed that Reed's devotion to his work would eventually drive his family away from him, culminating in Susan running off with Namor (as she's been on the verge of doing before). Reed takes this news calmly, then shoots Namor in the head. In this case, he suspected, but did not know for certain, that this was a plot orchestrated by Doom, and that the future Namor and Black Panther were robot impostors. Reed based his decision on "well I can't believe Doom solved that external power supply problem for that type of force field so Namor and Black Panther must be androids holding the power supplies." He was so certain Doom couldn't have solved a problem he couldn't even from decades into the future that he was willing to risk killing what was possibly the real Namor to prove himself right. Presumably, he shot the Namor android because he'd care a lot less about Namor dying if he turned out to be wrong.
* Fantastic Four has recently learned that her invisibility powers are simply the ability to manipulate light waves and thus she can use this to change her appearance.
* Fantastic Four, has sometimes been a victim of unwanted public nudity, usually just narrowly avoiding complete and utter humiliation by turning invisible.
* Fantastic Four has the newly flame-powered Frankie Raye bursting into song. Johnny interrupts her with a kiss, mainly because the next lyric is considered inappropriate for a kids' show.
* Fantastic Four has the Yancy Street gang, a band of jerks who love to play pranks on the Thing and make his life miserable.
* Fantastic Four, has this happen. It's only a minor inconvenience, though, and she goes around as a ghost for a while before eventually resurrecting herself.
* Fantastic Four has this with Tommy able to shape-shift into animals.
* Fantastic Four have relatively simple costumes; their opponents generally do not.
* Fantastic Four have written; the highlight was a war between Doctor Doom and an impostor who believed he was Doom, in which both assembled teams of supervillains to fight on their sides. Once the real FF are freed, and Aron and his fakes vanquished, Franklin Richards goes to find "Harkness" to help fix the FF's now bad public image.
* Fantastic Four), he meets the (slightly goofy but also rather adorable) local Parisian superhero team, Les Heroes de Paris, including the Phantom Detective, a ghost who haunts the Louvre until the day he can solve his own murder. Ben pokes fun at him for just hanging about the Louvre all day and calls him a layabout, to which he responds "The dead have a right to lay about, Monsieur!"
* Fantastic Four, he uses what appears to be a table-stand-washer from the model house he's building. Though to be honest, he seems to have planned it and it could have been an actual engagement ring that had just been hidden there for convenience.
* Fantastic Four. His fear of rejection mostly stems from self-loathing due to his appearance, and early encounters before his fame took off.
* Fantastic Four, his fellow Avengers and his clone Kaine know who Spider-Man is under the mask.
* Fantastic Four. His teammates too, although they can pass for ordinary people in a way he can't.
* Fantastic Four his transformation he counted (albeit in a less extreme way). He's not called "the Ever-Lovin' Blue-Eyed Thing" for nothing.
* Fantastic Four: Human Torch, Invisible Woman, and The Thing are fighting a horrifying monster. The following exchange occurs:
* Fantastic Four. Hyperstorm was sent to a dimensional void with Galactus, who returned. Hyperstorm was never seen again. In six chapters of five thousand words or more, describe Jonathan Richards growing up in his own timeline before becoming a villain, how he returns from the dimensional void, what he plans to do in modern

day, how he defeats the X-men and the Fantastic Four at the same time, and how he fights in ridiculous energy battles versus Rachel Summers, Hope Summers, and maybe Nate Grey, or Vulcan, he hasn't done a whole lot lately. Just like KRPBLRRR BLRPSHKRR like explosions everywhere.
* Fantastic Four: In issue #232, the titular super-team faces the villainous Elementals of Doom. One of them, Fire, is a sentient, vaguely-humanoid flame.
* Fantastic Four in short order and attempt to either kill or enslave all humans, starting with him.
* Fantastic Four in the second movie, where Johnny asks Ben about the details. Ben is not amused.
* Fantastic Four in the two-part premiere "The Origin of the Fantastic Four".
* Fantastic Four into such a device: They thought they were living idyllic normal lives in a place called Liddleville (though Reed was tormented by Doom himself in the guise of professor Victor Vaughn), when in fact their minds had been transferred into miniature clones of themselves, and the town was an intricate scale model.
* Fantastic Four: Invisible Woman shamed Ben Grimm into piloting the ship during the first issue. She was also told to distract many of the Silver Age male supervillains. After Psycho Man temporarily turned her into Malice she used her knowledge of Reed and Psycho Man's personalities to track him down and take revenge on him. When Dr. Doom stole the power cosmic from the Silver Surfer, she tricked him into flying into outer space when he couldn't. During the Civil War, she spied on Reed. As any real chessmaster/manipulative bastard/guile hero would tell you, the greatest achievements in theses tropes is to make certain that your opponents don't realize you are a social expert.
* Fantastic Four in which Magneto forms the X-Men when Charles Xavier dies. The story builds intriguingly as Magneto draws mutants to his side, who would normally be either X-Men and Brotherhood members in the regular continuity, taking out other superhumans in the name of protecting mutantkind - and it ends with Galactus destroying the Earth, because the Fantastic Four were dead and thus unable to stop him. Writing for the Marvel Appendix page, Mikel Midnight sums up the main problem:
* Fantastic Four is a petty, vindictive, murderous tyrant whose grudge against Reed is based on envy and a mistaken belief that Reed was responsible for scarring him. Despite being far worse than Reed and far less aware of his flaws, a segment of fans view Doom in a more sympathetic and heroic light than Reed.
* Fantastic Four. It was phased out in favor of a captured Skrull starship.
* Fantastic Four, Katie Power from the future tells Katie Power that Franklin Richards was her first boyfriend; young Katie insists that "boys are gross" but future herself calmly tells her that, in a few years, she'll change her mind.
* Fantastic Four kept his mother in the dark about being a villain. He even explained that he changed his name when he became a criminal so she wouldn't find out.
* Fantastic Four likes to describe himself as "The Living Death That Walks."
* Fantastic Four: Lilandra's reaction to Reed Richards saving planet-devouring Galactus.
* Fantastic Four main manners of death this trope describes: cutting, crushing, popping, and internal blockage.
* Fantastic Four, making it arguably the most blatant example of "radiation = magic" in comics.
* Fantastic Four — enough that she could successfully infiltrate the FF! This hasn't really been mentioned since, but logically means that not only were Reed Richards and Ben Grimm in love with identical women, so was Johnny Storm, in one storyline... and the woman looked exactly like his sister!
* Fantastic Four miniseries, "Isla de la Muerte" (Island of Death), has the superheroes coming to Puerto Rico to deal with the Chupacabra.
* Fantastic Four much more than the outline of what he's wearing anyway). Generally only Reed is guaranteed to stick with the original outfit. Makes sense since he's the one who designed it.
* Fantastic Four never get their powers. As it turns out, this has absolutely no

bearing on their ability to kick Mole Man's ass.
* Fantastic Four, notably for copying the grounded yet campy tone of Raimi's films and changing the character Doctor Doom into a Norman Osborn knock-off.
* Fantastic Four of the storyline, using his motto, but the Thing, annoyed Spidey's going this route, grabs him by the back of his shirt, lifts him aside, and psyches up his godchild his own way.
* Fantastic Four of the team wears less clothing, even if she's a Big Girl.)
* Fantastic Four: On Earth-98570, Reed Richards gains superpowers from the Nazis and becomes head of their party. On Earth-76611, Nazi access to vibranium wins them the war.
* Fantastic Four. One of his inventions was the "Methuselah Treatment", which has extended everyone's life expectancy into centuries.
* Fantastic Four., over two-thirds of the population). Meanwhile, while the Persians were conquerors and slavers they were conspicuous for how they tolerated the customs and institutions of the peoples they conquered — their general policy was that as long as they paid proper tribute to the empire and didn't rebel, their conquered states could self-govern, maintain their traditions and beliefs, and generally go on much as they had before being conquered. This is generally believed to have been a major contributor to the success of their empire, as it tended to make rebellion a much less attractive proposition than it might otherwise be.
* Fantastic Four. Part of it comes from the fact that they don't have to talk down to each other — smartest men in the world and all that.
* Fantastic Four Popularity Power in action - the Star and Strips logo must be a reality breaker.
* Fantastic Four reasons that kids and teens in the sixties bought Marvel Comics, taking the company from perpetual number two to a legitimate rival for DC Comics.
* Fantastic Four received their powers as a result of exposure to space-radiation.
* Fantastic Four, Reed has made good financially, and Sue is wearing one heck of a giant, shiny rock.
* Fantastic Four: Reed Richards is generally considered the most competent and effective leader and scientist in the entire universe and the Four's adventures generally are all about their adventures and inventing and exploring somehow always saving the day.
* Fantastic Four, Reed Richards often turns his super-elastic body into a human parachute when he needs to save himself and his family from a fall.
* Fantastic Four, returning the titles back to their former glory with very popular creative teams.
* Fantastic Four: Rise of the Silver Surfer an astronaut with all the education and training that would entail.
* Fantastic Four: Rise of the Silver Surfer as he hovers above the planet, having a snack. This would at least strip away Earth's atmosphere with the shock wave or, far more likely, just disintegrate Earth entirely. But no, the Richards/Storm wedding goes off as planned.
* Fantastic Four: Rise of the Silver Surfer has a gag where paparazzi photographs Johnny Storm while he's kneeling in front of Ben Grimm and holding a bouquet.
* Fantastic Four: Rise of the Silver Surfer mentions Rigel III as the previous planet eaten by Galactus.
* Fantastic Four: Rise of the Silver Surfer mothership times a hundred, plus whatever damage you would expect from having huge, miles deep holes buried in the planet's crust.
* Fantastic Four: Rise of the Silver Surfer: Reed Richards and General Hager butt heads over how to stop the titular Silver Surfer from destroying Earth. Hager makes it clear he has little respect for Reed (it's mentioned the two knew each other in high school and didn't get along back then either), and even goes as far as recruiting the far less trustworthy Dr. Doom simply because both of them can't stand Reed. Hager ultimately pays the price for his foolishness when Doom kills him to get the Surfer's board.
* Fantastic Four: Rise of the Silver Surfer shows friction between Reed Richards

and General Hager. Hager berates Reed for not being at his beck and call to design something to catch the Surfer, Reed lets Hager know when he's making destructively stupid decisions. Note that in the comics, Reed was a WWII vet, which is mostly ignored today.
* Fantastic Four: Rise of the Silver Surfer sitting in a rotating chair with LCD screens on its armrests in a room where the walls are covered with larger monitors. Shame so little of it was shown, as it looked rather cool.
* Fantastic Four: Rise of the Silver Surfer spinoff, which never happened.
* Fantastic Four: Rise of the Silver Surfer, Sue threatens Dr. Doom by informing him she has the ability to create a force field inside of someone and then expand it until the person explodes (an ability well within the range of her comic counterpart, see above).
* Fantastic Four: Rise of the Silver Surfer, the Critic accidentally messes up the title this way:
* Fantastic Four: Rise of the Silver Surfer, the London Eye breaks down and has to be rescued, although it had more to do with the Silver Surfer destroying the surrounding area than just a random failure. While the London Eye is not quite a Ferris Wheel but an observation wheel (its gondolas are motorized), it's similar enough to count.
* Fantastic Four: Rise of the Silver Surfer, they decide that the only way to get the Silver Surfer's board back from Dr. Doom is to use The Human Torch's new "powers" to combine all their abilities to allow him to fly, but also be as strong as The Thing, and be invisible so he can sneak up on Doom. It works perfectly and he gets to within 2 feet of Doom. But rather than just knock him out, he has to say "To quote a friend, It's clobbering time." thus blowing the cover and starting a drawn out battle... all while the Earth is about to be destroyed. Great priorities there.
* Fantastic Four: Rise of the Silver Surfer This creates the following problems:
* Fantastic Four: Rise of the Silver Surfer to transfer and even accumulate superpowers. It causes no end of trouble for the group before helping them to save the world.
* Fantastic Four (Romantic) while Reed Richards represents the Enlightenment.
* Fantastic Four run, a shrink-rayed Ben is combing the Baxter Building's air ducts for an alien bug. Reed, talking to him via intercom, keeps cracking up over his "little helium voice" and asks him to say "It's clobberin' time."
* Fantastic Four's black and white costumes from a few years back were clearly aiming at a Genius Bar aesthetic.
* Fantastic Four sculptures of people the FF have met just by hearing them described.
* Fantastic Four's Fantasticar are able to separate into mini-vehicles each of the Four can pilot.
* Fantastic Four's Human Torch was this back in the Silver Age, when he was a student around the same age as Spider-Man, and the quartet's youngest member.
* Fantastic Four's "In The Hills, The Cities" (see Literature, below).
* Fantastic Four, so he mainly uses the Cosmic Control Rod to halt his aging. The other powers the Rod possesses also make him generally very difficult to hurt or kill by other means, too.
* Fantastic Four's original uniforms consisted of a sky-blue suit with a white circular badge featuring the number 4 on the chest. The second one, intruduced during John Byrne's run, wasn't much better: dark blue, but with white gauntlets and boots, and with a similar bullseye badge. Oh, and the only members who did not wear this exact uniform are the Thing and She-Hulk — who instead wore cut-down versions that showed as much of their brightly coloured skin as possible.
* Fantastic Four's run, Petunia (she prefers 'Penny') was revealed to be his uncle's second wife and an attractive woman about the Thing's own age.
* Fantastic Four's story arc "Planet Skrull" revolves around a group of Skrulls enslaving a whole planet and Reed Richards' family sparking a successful rebellion.
* Fantastic Four started the Future Foundation, they started wearing white spandex with black piping, as did their pupils- that included Spider-Man (though he only

wore it when appearing specifically in that title, presumably giving him a chance to air out his standard red-and-blue).
* Fantastic Four starting in issue #101, he maintained a secret identity in his home town of Glenville — the inhabitants of which knew his sister Sue was the Invisible Girl, but ostensibly don't know who the Torch was (the four schoolmates who do know who he is are now out-of-town graduates who were sworn to secrecy). #106 had him discover that everyone knew who he really is, after all, they just respected his privacy.
* Fantastic Four stories, she's the girlfriend of shrunken-giant-robot Elektro. It's very cute.
* Fantastic Four story had an ancient artifact called the Resurrection Stone which had to be retrieved for contrived reasons. It was in two parts, one would animate the body (but leave it a soulless husk) and the other would replace the soul (in an inanimate body). The people who used the two pieces are also driven completely insane by using them.
* Fantastic Four story involved the team witnessing alternate universe versions of themselves. In one, set in an Elizabethan milieu, Chamberlain Grimm announces, "Milady, 'tis the clobbering hour."
* Fantastic Four story, "This Man... This Monster!", featured another Changeling (must be something with the name), though quite different from the X-Man. This mystery man steals the Thing's powers simultaneously turning himself into a rock monster and returning Ben Grimm to his much-desired human form. While assisting his hated rival, Mr. Fantastic, with his experiment - a portal to the Negative Zone - "The Thing" sacrifices himself to save Richards after realizing that, for all his jealousy at Richards, Mr. Fantastic was a selfless individual and that the Changeling has been the one who had never done anything helpful with his life.
* Fantastic Four story when a middle aged milquetoast has the mutant power of omnipotence… but being a milquetoast, he always caves to other’s needs and therefore, never realizes he had it... in that issue, Earth is devastated by a gravitational pulse from Ego the Living Planet, and when he sees the Fantastic Four flying into space to deal with Ego he assumes they're fleeing Earth and he wishes things were as they were before, his power burns out in the process of reverting Earth to how it was prior to the attack (although it doesn't recall the FF).
* Fantastic Four, Sue was always more or less Reed's Number Two, but it was a role she rarely had to play. Then Reed was killed off for a couple of years, and during that time, Sue had to step up to become team leader. This became a part of her personality and changed the team dynamic a bit. Reed still calls the shots (and Sue prefers it that way), but when he's absent, she'll easily take charge.
* Fantastic Four Susan "Sue" Storm was this to her brother Johnny when they were growing up.
* Fantastic Four switches bodies with Reed Richards. When Reed escapes the prison Doom had him in, he visits Alicia Masters to ask for help. She immediately realizes that it's not the voice of Mr. Fantastic.
* Fantastic Four that took place during the second season, as the ToyBiz execs disliked the fact that the new FF costumes did not look like the ones featured in the show's action figure line.
* Fantastic Four. The ending shows Jack-Jack has highly variable superpowers (among these, setting himself on fire like the Human Torch), and Franklin Richards, the child of Mr. Fantastic and the Invisible Woman had very ill-defined but vast superpowers. Even their costumes and name (Fantastic/Incredible) are similar. Their villain, Syndrome, is a somewhat more rotund Doctor Doom, a villain whose primary superpowers are simply being so good at super-technology that his super-suit is more powerful than the family combined. Syndrome also has Doctor Doom's 'petty grudge blown WAY out of proportion' motivation for his enmity as well.
* Fantastic Four. The first issue of Mark Waid's run, is just one example.
* Fantastic Four, the Four and the Avengers try to rescue Central City which had been encased in a black dome. Iron Man goes inside with the panel showing him entering and exiting in virtually the same instant. Tearing off his helmet, a bearded and ravaged Tony Stark talks about how he almost exhausted his energy and

food packs and demands to know why no one came after him. Told he was gone less than a second, he's stunned as to him it was almost three months.
* Fantastic Four. There's only time to send one of the Inhumans to rescue Reed, who's stuck in the Negative Zone; Black Bolt chooses Triton, the merman, because space is like an ocean.
* Fantastic Four, the team's phone number is revealed to be, aptly enough, 555-4444.
* Fantastic Four: The Thing once befriended a robot named Torgo from the planet Mekka; Mekka's organic population had died out in a disaster long ago, but their robot servants had survived and gone on to build a civilization of their own. Torgo and Ben were both prisoners of the Skrulls at the time, and became friends while trying to escape.
* Fantastic Four, the U-Foes, are named after the member whose idea it was to get bombarded with cosmic rays in the first place: Simon Utrecht, alias Vector. It's important to note, though, that this was Ironclad's idea.
* Fantastic Four. The Ultimate Version has no such powers, instead relying on an "anti-assassination" suit which allows him to duplicate the powers of any superhuman within a thousand mile radius. He is beaten by a human Ben Grimm who had no powers for the suit to duplicate.
* Fantastic Four: The villain Molecule Man has the power to transmute anything into anything else and telepathically control his creations, and yet he's only a minor villain because he lacks imagination, intelligence, and a killing instinct. If he was actually competent he'd be one of the biggest threats in the world.
* Fantastic Four), they gave him a custom variation of their new mostly white uniforms, bearing a large spider symbol instead of the Future Foundation's three block logo.
* Fantastic Four", though oddly not emphasizing that they shared a writer and producer (Simon Kinberg).
* Fantastic Four (though the shot itself is fired offscreen). Despite this, there's no blood or wounds of any sort on the corpse.
* Fantastic Four to the team to replace Johnny, who had specifically named his old pal Spidey for the position in his will, bringing Doctor Doom and Mister Fantastic's time traveling father along for the ride and becoming a sort of superhero think tank. This new series ended up being well received.
* Fantastic Four, usually of the semi-derogatory kind: "Stretch", "Stretcho", "Rubber Head", "Big Brains", "Professor", "Doc", "High Pockets", etc for Reed; "Match-head" "Matchstick", "Bic-head", "Flame-Brain", "Hothead", "Sparky", "Firefly", etc for Johnny. He always calls Sue by the pet names "Suzy" or "Suzy-Q" however, possibly since she's the one who pisses him off the least.
* Fantastic Four villain Diablo (who was living proof that it was) at first thinking he was some sort of illusionist like Mysterio. (Of course, seeing as most scientists tend to universally regard alchemy as a "fake science", it was hard to blame Peter, someone who had studied biochemistry and other physical sciences most of his life.)
* Fantastic Four villain Ivan Kragoff/The Red Ghost has this ability. Like Shadowcat, he can float to avoid the falling through the floor problem. While he is intangible, he doesn't have to eat or breathe for a very long time. He can make parts of his body be intangible, so he can carry objects while staying relatively safe.
* Fantastic Four villains the Mole Man and Kala (both rulers of subterranean realms, incidentally) have had a relationship that has been rocky and tumultuous. They have been married and divorced more than once, and Kala has betrayed him at least once. When last seen, they seemed to have reconciled, at least for now.
* Fantastic Four villain, the Hate-Monger, has a purple costume with an "H" on it, but his hood is suspiciously cone-shaped, and he spreads bigotry wherever he goes, using a combination of rhetoric and mind-control rays. Only natural, since he's (a clone of) Adolf Hitler.
* Fantastic Four Vol. 1 #241. Several Russian scientists end up this way, mystifying Reed Richards. Explained later; the Big Bad has vast cosmic powers and

just simply likes disposing of malcontents this way.
* Fantastic Four was being mind-controlled by Psycho-Man into becoming the murderous Malice, Reed was able to free her from Psycho-Man's control by berating her (and even slapping her across the face) in order to make her hate him, however briefly.
* Fantastic Four were stuck in space thanks to the Baxter Building being launched into space (and then blown up) Reed Richards had Sue, who was keeping them all alive with her forcefield, open up a very small hole in said field. It let a little of their air out, but very slowly—and helped them get back to terra firma.
* Fantastic Four, when everyone holds a birthday party for Franklin, his hyper-intelligent sister Valeria says, "Happy birthday, Retard." After the party, when mysterious stranger approaches Valeria to give her some cryptic warnings, Val recognizes him as an adult Franklin from the future and tells him, "Happy birthday, Retard."
* Fantastic Four when he becomes a member of the team, mostly because Ben Grimm is deathly serious.
* Fantastic Four, when Johnny asks how Ben and Alicia manage a physical relationship, joking that he doesn't want to learn that she died under "a rockslide." All Ben is willing to say is that they have some arrangement worked out.
* Fantastic Four, when the FF testify at a congressional hearing, a bunch of mentally-manipulated D-grade villains enter the room, dressed in trenchcoats and hats, and attack them.
* Fantastic Four where Reed and Sue Richards do not want to give their children up to Child Protective Services. They realize how dangerous their lives are, but they also believe they are the only ones capable of protecting the children. They make a deal with the CPS agent to announce on TV that they had given up the children, but the safehouse location was secret. In less than a few hours, the undisclosed safehouse was destroyed by rockets; the children had never been moved and were allowed to stay with their parents.
* Fantastic Four which scarred his perfect face. Taken even further in some versions of his origin, where the scarring is fairly minor, but he insists on putting on his famous mask before it's finished cooling, due to his need to "conceal" the imperfection.
* Fantastic Four, who used to be a star football player in high school. He became fast friends with the intellectual Reed Richards, a.k.a. Mr. Fantastic, once the two of them met in college.
* Fantastic Four, who usually are having relationships with each other.
* Fantastic Four with a fake Ultimate Nullifier. After Galactus left, the Watcher, who was bound by his code of ethics to never interfere with other living beings, revealed that he had telepathically entered Reed's mind to prevent Galactus from sensing his plan, claiming he was simply observing the event from Reed's point of view. As he left, he added "Can one help it if one's mere presence brings about a more desired outcome? Can one?"
* Fantastic Four, with Johnny claiming that he was a huge fan of the original Torch as a child. It was even implied that Johnny's subconscious desire to be like his idol may have somehow influenced his transformation into the new Human Torch way back when the Four first got their powers from the cosmic rays. This had never been brought up before in any other comic, and in fact, when the Human Torch met his Golden Age counterpart back in the 60s, he seemed to have absolutely no idea who the hell he was.
* Fantastic Four, without being particularly bothered by the theological implications of it as far as the reader gets to see. Teaming up with Thor, Hercules, and Wonder Woman has rarely if ever influenced heroes' beliefs, even if they get to visit Asgard or Thymescria and learn that, yes, there really is something supernatural to them.
* Fantastic Four, without getting beaten or captured once. While this was arguably justified by Wolverine being given additional support by HYDRA (such as being teleported in and out on top of his targets, or given supplementary weapons), the

key word is "arguably".
* Fantastic Four) - with the most significant of these decisions being their lack of dual identities. One popular in-story explanation implies Reed does so to not make the others, especially Ben Grimm (for whom keeping a secret identity is basically impossible), feel ashamed of their abilities.
* Fantastic Four with the rival Kree Empire, later because they've managed to make enemies of Earth's many superheroes). They normally keep their victims alive just in case they might be useful in the future.
* Fantastic Four: World's Greatest Heroes about being the Thing and depressed at being left out of the team. He still manages to save the day before returning to normal.
* Fantastic Four: World's Greatest Heroes as he was about to attack Johnny.
* Fantastic Four: World's Greatest Heroes", a shrunken Reed desperately tries to get Alicia's attention when she comes over for a date with Ben. She thinks she hears him, but then passes it off and leaves.
* Fantastic Four: World's Greatest Heroes Ben Grimm watches it from home. Then it goes back to when Reed is about to try another way to turn the Thing back into Ben Grimm.
* Fantastic Four: World's Greatest Heroes breaks a nail and is somewhat upset over it...
* Fantastic Four: World's Greatest Heroes does a rather impressive one upon seeing the large crowd of Negative Zone bugs after Ben's energy pack.
* Fantastic Four: World's Greatest Heroes, Dr Doom sends the Baxter Building into space. Reed has to fly it like a spaceship, using Doombots as thrusters, before crashing it into the Latverian Embasssy. Most of the building's residents are terrified by all this, but one dotty old lady wants to do it again.
* Fantastic Four: World's Greatest Heroes", Dr. Doom unintentionally creates a Doombot which can think and feel. HERBIE, the computer Reed created to run the Baxter Building, also seems neurotic enough to qualify, but Reed himself dismisses him in favor of the Doombot as not a true AI.
* Fantastic Four: World's Greatest Heroes episode "Impossible", this is one of Impossible Man's major characteristics.
* Fantastic Four: World's Greatest Heroes giving a flaming thumbs-up".
* Fantastic Four: World's Greatest Heroes has one with each member of the team making the team's symbol, a four in a circle.
* Fantastic Four: World's Greatest Heroes", HERBIE frantically reminds Susan, Ben, and Johnny of this rule, alleging that "the universe could implode!... or something" if it's not followed.
* Fantastic Four: World's Greatest Heroes, Johnny causes some of their problems by burning something, or messing with Reed's stuff, and ends up unleashing a giant inter-dimensional insect.
* Fantastic Four: World's Greatest Heroes — it's clobbering time!"
* Fantastic Four: World's Greatest Heroes," Reed Richards refuses to believe Diablo's magic is anything more that sufficiently advanced technology until he defeats Diablo and yells "HA! TAKE THAT MAGIC!".
* Fantastic Four: World's Greatest Heroes Reed Richards starts asking questions like "Do you remember when we first met? Was it... five hundred years ago? On the moon? Remember, you flew up there in your bathtub?" and "I always loved your wings, Mrs. Smith. They're so white and fluffy. Would you show them to me, please?"
* Fantastic Four: World's Greatest Heroes series, but they're drifting that way.
* Fantastic Four: World's Greatest Heroes, subverting what would have otherwise been a Heartwarming Moment where he apologized to Ben for all the crummy stuff he'd done to him in the past.
* Fantastic Four: World's Greatest Heroes tells him that Ben's own bad luck will prevent this. Sure enough, a giant alien invades moments afterwards. And just to cap it all, Ben forgets to tape the game, preventing him from watching it later.
* Fantastic Four: World's Greatest Heroes that water from her sink once attacked her.
* Fantastic Four: World's Greatest Heroes: The penultimate episode, "Doom's Word is

Law", ends with Doctor Doom getting caught in an explosion. It isn't clear whether or not he survived. While Johnny does mention Doom as if he were still alive in the final episode "Scavenger Hunt", one can make the argument that Johnny simply wasn't aware that Doom was killed.
* Fantastic Four: World's Greatest Heroes There is a sound of screeching tires, honking horns, and Ben yelling, "Hey, I'm landing here!"
* Fantastic Four: World's Greatest Heroes this, commenting on "how far she's fallen."
* Fantastic Four: World's Greatest Heroes", this is discussed by the Thing.
* Fantastic Four would would have gladly died rather than leave Sue and Johnny behind, the entire universe is about to be annihilated and without Reed, the others along for the ride — Thor, Iron Man, and Ms. Marvel — would have no chance in hell of saving it.
* Fantastic Four. (written by the same dude), they really, really worked very, very hard at it.
* Fantastic Foxes, the Korean Gumiho is, unlike the Japanese Kitsune, traditionally depicted as a vicious man-eating fox that uses its guise of a beautiful human maiden to get men alone so it can feast on their livers or hearts. The Chinese Huli Jing is also sometimes portrayed this way, but feeds on spiritual energy rather than flesh.
* Fantastic Fraulein Mumor., being a Japanese MMORPG, was bound to have this eventually.
* Fantastic Fruits and Vegetables: Peculiar fictional fruits or vegetables.
* Fantastic Fruits and Vegetables: Produce with strange and unusual properties.
* Fantastic Honorifics: This culture uses unusual manners of address to show status.
* Fantastic Legal Weirdness: The presence of the supernatural interacts pretty weirdly with legal processes.
* Fantastic Max where FX was able to carry Max on his shoulders, despite the fact that he's a little bit smaller than Max.
* Fantastic Medicinal Bodily Product: A creature has a bodily product, such as blood, spittle, etc. that has healing properties.
* Fantastic Medicinal Bodily Product: A creature's body part has healing properties.
* Fantastic Mr. Fox: All swear words are efficiently replaced with "cuss". People in the audience who catch on shouldn't have any trouble deciphering the uses of "cluster-cuss" and "cussin' with their heads", for example. In the background of one scene, "CUSS" is written in graffiti on a wall.
* Fantastic Mr. Fox, all swear words are replaced with "cuss", including the graffiti.
* Fantastic Mr. Fox and Mark Gustafson, this is notable in the fact that the film's cinematographer mentioned that Gustafson spent much more time on set working on the animation and with crew while Anderson would direct scenes by e-mail and therefore felt that Anderson's credit shouldn't have been as high as it was)
* Fantastic Mr. Fox and perhaps also the film's unusual visual style and introspective nature. It is also a stop-motion film, which, despite a growing number of them, have typically had a harder time with families than 2D animation or 3D CGI.
* Fantastic Mr. Fox, Ash wants a bandit hat like Mr. Fox, Kylie, and Kristofferson, so he cuts eye-holes in a tube sock and wears that on his face.
* Fantastic Mr. Fox can be seen in the background for a full minute before he makes his presence known.
* Fantastic Mr. Fox doesn't eat any solid food at all, drinking gallons of fiery, home-brewed, alcoholic apple cider.
* Fantastic Mr. Fox ends with Mr. Fox and his family dancing in the supermarket.
* Fantastic Mr. Fox film by the way). This is then averted near the end of the movie when the rat villain gets shocked: He actually dies from it.
* Fantastic Mr. Fox, Fox chooses to ignore his real estate agent's advice not to move into Boggis, Bunce and Bean territory. However it wasn't because he lived

there that they hated him, it was because he stole from them.
* Fantastic Mr. Fox. Fox is more surprised that Kylie is eligible for a Titanium card.
* Fantastic Mr. Fox have most of the stereotypes associated with the animals: Fox is clever and cunning, Mole is shy, Badger is aggressive (as a lawyer should be), Weasel is sneaky, to name a few.
* Fantastic Mr. Fox... "If what I think is happening, is happening, it better not be."
* Fantastic Mr. Fox is actually older than his unbearably perfect cousin Kristofferson but he otherwise fits the character trope with his resentful ill temper. However, he dramatically matures in the story and becomes a nice kit at the end.
* Fantastic Mr. Fox of Mr. Fox and his companions infiltrating the farms in "bandit hats". (He bought them for 40% off from a newspaper ad at the beginning of the movie.)
* Fantastic Mr. Fox. So when Bunce sarcastically asks if Bean has another idea to catch the titular fox, Bean says he can't hear him. Thus, Bunce has to shout into his ear.
* Fantastic Mr. Fox the animals are hiding out underground while the farmers guard their main escape route, and find it's actually quite comfortable. They decide to stay. "The farmers sat around the hole, watching. As far as I know, they are still sitting there."
* Fantastic Mr. Fox, the animal school's official sport is Whackbat, an incomprehensible game similar to baseball and cricket played with a flaming pinecone. A sequence of the game in play features animals hitting the pinecone, running around in random directions, and spinning in place.
* Fantastic Mr. Fox, the eponymous fox and his wife have a conversation next to a mineral deposit that appears to be diamonds (or some other equally shiny gemstones). The foxes ignore this because, well, they're animals.
* Fantastic Mr. Fox, the farmers and the animals each send the other a cut-and-paste note. Neither side understands why, because they already know each other's identities. Fox even signs his name.
* Fantastic Mr. Fox This is only a partial example of this trope as the song is actually sung by schoolchildren, and is not used ironically. Mr. Badger even invokes it in order to dissuade Mr. Fox from buying a house next to said farmers.
* Fantastic Mr. Fox, though he doesn't just flip over the table; he destroys just about everything in his office.
* Fantastic Mr. Fox voices the Weasel who sells the tree home to Mr. Fox.
* Fantastic Mr. Fox: With Bean when he has a temper tantrum and trashes the inside of the trailer.
* Fantastic Naming Convention: People in this culture have names in an unusual format.
* Fantastic Naming Convention, the wolves of the Packlands are named after a trait the elders observe in them. One of Swift-Pad's litter-mates is Giggle-Snort, who would love to forget that he was named for the noise he made when he was first being groomed as a pup.
* Fantastic Nature Reserve, and his cell is lit with red starlight as he would have had on Krypton, sapping away his powers. He only gets them back when he makes his way into a cell holding a dodo... with artificial sunlight.
* Fantastic Nature Reserve: A park or reserve where magical, alien, or otherwise fictional creatures live.
* Fantastic Nature Reserve: A zoo, wildlife reserve, or other home for supposedly extinct or mythical creatures.
* Fantastic Nature Reserve. Much of the world was once like Gensokyo, but now aside from a few persistent stragglers all those mystical beings are either extinct, or endangered and confined to one small region.
* Fantastic Nuke making the flashiest, most powerful Explosion she can. She has no other spells, no other abilities, and only enough MP to cast ONE Explosion. Because of this, she is absolutely useless as a mage most of the time.

* Fantastic Nuke relatable to any audience, and invoking the destruction of nuclear bombs, regardless of what makes them, instantly gets across that this is a weapon above the setting's norm.
* fantastic of this trope) — there's a scene where the protagonist is looking into a bathroom, and Adams spends several paragraphs describing the contents of the room, the paneling on the walls, the scuffs on the floor, and so forth, in intricate detail, only to end with "There was also a large horse in the room, taking up most of it."
* Fantastic Planet by Stefan Wul. That it's never been translated into English, well, didn't help.
* Fantastic Planet: Draags notice that humans (whom they call Oms) can speak and imitate their speech, but they doubt that Oms are actually intelligent. They treat Oms as pets and pests.
* Fantastic Planet has the protagonist being chased by a personal rain cloud. It was being controlled by his Draag owner, and even zapped him in the face with lightning.
* Fantastic Planet is hardly G-rated, the film abounds with drug imagery, drug effects, hallucinatory other-worlds — and yet, no real drugs.
* Fantastic Planet, they're essentially hairless, blue-skinned, red-eyed humans.
* Fantastic Planet, this was the method used by the giants to exterminate the little people.
* Fantastic Planet was a collaboration involving various French and Czech companies.
* Fantastic Planet. Young Draag Tiwa makes a housepet out of an Om named Terr, who also narrates parts of the story.
* Fantastic Race Weapon Affinity: When a fictional species or culture strongly favors the use of one type of weapon.
* Fantastic Racism and a comically incompetent government. The one time a character does get to argue with wizards, it's the Prime Minister of the UK, who is bewildered at how badly they've been managing the war with Voldemort, and it's pretty clear that he's got a point.
* Fantastic Racism and argue that races considered as "inferior" are often sacrificed. Romantic works argue that man's natural ability to love will always triumph over man's tendency for hatred and prejudice.
* Fantastic Racism and disgust toward the kind of she might have thought they were having.
* Fantastic Racism, and thus has to conduct the ever-increasingly difficult tests in order to prove, quote, "humanity's worth".
* Fantastic Racism and thus would have no experience with Earth's history of racism.
* Fantastic Racism apparently built his entire academic career out of this (and taunting Sisko in particular).
* Fantastic Racism as you can get without them actually running around with swastikas.
* Fantastic Racism being subjected to prejudice by humans (the lyrics in the trailer include "treated like a worthless animal", to make it clear the song is about them). This ends up spoiling, or at least strongly hinting at, the fact that Blake is actually a Faunus disguised as a human, which is a twist revealed in the second-to-last episode of Volume 1.
* Fantastic Racism, but a seriously bad aesop as it seemed to imply it was wrong for a kid to work for an allowance).
* Fantastic Racism, but they point out that he has it easier than them because he's royalty and has lots of money.
* Fantastic Racism courtesy of the tyrannic Principal Kelly) after Jean Grey is exposed as a telepath, she has all of her achievements revoked and is banned from the soccer team because Kelly insists that she used her mind reading to get an advantage (although in reality in the few episodes where her abilities have been explored, it's been shown that it would have been more like playing while having a very loud set of headphones on her head that she can't remove or shut down, but

again, Kelly's a racist asshole).
* Fantastic Racism... diverted at "air-breathers", i.e. normal humans.
* Fantastic Racism gets referred to as a "filthy genie" by Jorgen, just like he was in the cartoon. Meanwhile, he regularly refers to fairies as "wand-wavers."
* Fantastic Racism has plenty of these. Some of the most common include "rockhounds" for the people of Rock, "toad" and "reptile" for Bone (or at least Femur), "hothead" and "lavahead" for Fire, and "ice fleas" & "insects" for the people of Ice.
* Fantastic Racism: Hatred of non-humans by humans, hatred of humans by non-humans, or hatred of one kind of non-human by another kind of non-human.
* Fantastic Racism. He's still snarky in a friendly, playful way, but definitely un-broken.
* Fantastic Racism. His massive army was quickly routed, allowing the Faunus to win not only the day but ultimately the war. Now, he is remembered as nothing but a failure, used as an example of why battlefield intelligence is vital.
* Fantastic Racism in a cocktail of vileness concocted by Skeeter and Malfoy and his cronies.
* Fantastic Racism in a whole kingdom of magic users. And they happen to have a cautionary legend about someone who borns with no magic will be destined to destroy said kingdom and everyone on it. So they're more or less indignant that the one they're supposed to slay in order to stay alive also happens to be royalty, which they can't legally do anything about without either being executed or incarcerated for life.
* Fantastic Racism in the comics was a prevalent feature as the comic left its goofy roots.
* Fantastic Racism in the series, and are particularly close to Dumbledore.
* Fantastic Racism of one or more of the original 800 warriors with which the program began. Similarly, given that only Bloodnamed warriors are included in the breeding program and the politicized nature of Trials of Bloodright, "best" is often synonymous with "most politically connected."
* Fantastic Racism, particularly as, by the time the story begins, it is expected Quirklessness will disappear altogether within one or two generations. One of the first things we see Bakugou do in the series is goad the Quirkless Midoriya into killing himself, on the logic that he might get lucky and come back with a Quirk.
* Fantastic Racism: People in this culture are racist for unusual reasons.
* Fantastic Racism.) Perhaps mercifully, this has since been quietly buried.
* Fantastic Racism rather than limiting themselves to real dangers or even investigating enough to know a mad archmage from a hedge-witch with a power set revolving around brewing the perfect cup of tea.
* Fantastic Racism, she is reinstated as Hogwarts headmistress and openly supports Voldemort.
* Fantastic Racism), so some monsters (the ones who know what humans look like) will attack you on sight. That, and some monsters genuinely don't realize that they're putting you in danger; Vulkin, for example, mistakenly believes that the lava they shoot heals people.
* Fantastic Racism the government has taken a more active stance in the superhuman world.
* Fantastic Racism threw a hard wrench into this by introducing the Hrothgar as a playable race, who are completely anthropomorphic cat men, yet the story doesn't change at all to acknowledge the fact that Hrothgar fit pretty much every description of beastmen (except for having a primal they worship and being less verboise than your average person), and you face no more adversity on your path to becoming a worshipped hero than a more human character would.
* Fantastic Racism to carry potentially deadly weapons with them everywhere they go that can sometimes fire without the carriers even pulling the trigger.
* Fantastic Racism to go around. One such example is that soldiers will often leave the bodes tied to the ground face-up, spitting in the face of traditional face-down burial which allows their souls to move on properly.
* Fantastic Racism toward Muggle-born Wizards. This would lead Slytherin to leave

Hogwarts forever.
* Fantastic Racism uses two distinct terms for Neosapiens: "Sape" as a slur, and "Neo" as a neutral descriptor. It's also notable that "Terran" is used by many Neosapiens on either side (both Marsala and Phaeton use it) to refer to non-Neosapiens, as Neosapiens are engineered from human DNA and are thus human as well, yet you'll hear non-Neosapiens (on either side) refer to themselves as "human".
* Fantastic Racism, who was raised on Avalon where humans and gargoyles live in harmony. She also hopes more than is wise or reasonable that her mother Demona can change or be redeemed.
* Fantastic Racist, a murderer, a terrorist, and eventually a traitor.
* Fantastic Radiation Shielding — A fictional means of deflecting radiation.
* Fantastic Rank System: This culture's military uses a fictional system of ranks.
* Fantastic Science: Someone who studies the fantastical elements of a work (e.g. a biologist who studies dragons).
* Fantastic Slurs: Slurs aimed at people who are discriminated for their species rather than their ethnicity.
* Fantastic Slur than spiders, especially the Warriors and the Tankers.
* Fantastic Terrorists: Extremist militants whose goals and ideology are in some way motivated by conflict and prejudice between fantasy races.
* Fantastic: The existence of sentient extra-terrestrial life, and the far-ranging implications it brings with it, could be a center pillar of the work.
* "Fantastic Three" when the Funk Brothers decide to retaliate against the bullies with pranks, this is Abbas' (wac's) prank of choice.
* Fantastic Time Management: If someone is pressed for time, they use time travel as a solution.
* Fantastic Underclass: The lowest level of a fictional social hierarchy, consisting of races or species who are despised and oppressed by their social superiors.
* Fantastic Vermin: Magical, alien, or otherwise otherworldly everyday pests.
* Fantastic Voyage cartoon had Guru, "master of mysterious powers". He wore a turban and had the mandatory slightly lower albedo. Yeah.
* Fantastic Voyage, characters mention that the political maps have changed over the years. The maps used to show "Us" (and allies) as a pure pristine white and "Them" (and their allies) as a deep, brooding, bloody red, but now both sides are depicted in pastel shades. It's also implied that the political ideologies have drifted closer together.
* Fantastic Voyage episode "Revenge of the Spy". When Lisette Clochard shows up, she and Jonathan Kidd start flirting with each other. Doctor Erica Lane (who has a crush on Kidd) turns and gives the camera an annoyed look.
* "Fantastic Voyage" Plot by not shrinking Ren in order to get into Stimpy's body and help him, but by enlarging Stimpy through bike pump inflation.
* "Fantastic Voyage" Plot: Curing a sick person by shrinking and entering their body to confront the germs.
* Fantastic Voyage that is sabotaged, and the only source for parts to fix it is the radio.
* Fantastic Voyage: The science team that shrinks down to enter a human body and remove a blood clot.
* Fantastic Voyage, the shrink ray room had hexagons all over the floor. The ship rose up on one of them once it got small enough, so that it could be shrunk one more time, and then readied for insertion into the guy's body.
* Fantastic Voyage , the shrunken crew escapes via the patient's tear duct after the sub is destroyed.
* Fantastic Voyage, The Watson is secret agent and former combat swimmer Charles Grant. Asimov's version makes him a bit less of a dunce; on occasion, Grant can actually figure something out from his general knowledge of human anatomy, instead of needing the knowledge spoonfed to him.
* Fantastic Voyage: White blood cells are mentioned but not seen until near the end, antibodies make an earlier appearance.
* Fantastik Plastik characters are pre-Pop Funko characters that were given Pop

designs.
* Fantasy also has Wulfric the Wanderer, a champion of Chaos with the unique ability to force anyone to duel him one-on-one, allowing him to take out heroes not suited for melee such as wizards, or even just weaker heroes who would normally want to avoid fighting him.
* Fantasy Americana: Magic, fantastic creatures, and figures of folklore lie in the wilds of North America, just beyond the reaches of civilization.
* Fantasy Americana: The wilderness of North America as a fantasy setting.
* Fantasy artist Robin Wood's "Theory of Cat Gravity": The sun has gravity in spades. Cats lie in the sun to absorb gravity. Cats then lie on their owners, using the stored gravity to pin them in place. This is why it's so hard to bring yourself to get up off the couch when a cat is lying on you.
* Fantasy author J. Robert King was once the most prolific author for the
* Fantasy Battle Grom found a veritable army of loyal followers flocking to his banner. Grom led one of the most successful WAAAGH!!!s in recent history, ravaging the Empire and successfully invading Ulthuan before Grom disappeared.
* Fantasy Bishoujo Juniku Ojisan to and he actively admires Tachibana's ability to befriend almost anyone.
* Fantasy Bishoujo Juniku Ojisan to ever fallen for a woman before Tachibana became one, generally found women repellent, and had very strong feelings towards Tachibana specifically.
* Fantasy Bishoujo Juniku Ojisan to: Jinguuji is level 70 at the start of the story, already in a much higher level and much more powerful than any being they find (the next strongest person they find is level 52). Whenever there's a physical challenge, he can easily cheese through it.
* Fantasy Bishoujo Juniku Ojisan to: Subverted. Tachibana is supposed to take this role, as his only skill is to charm others into doing things for him and his main stat as he levels up is luck, however, he tends to be too hot headed and impulsive to actually pull off this role.
* Fantasy Bishoujo Juniku Ojisan to: The heroes chosen by the fantasy world's gods have a mark on them identifying which god they are associated with. The Goddess of Love left her mark on the back of Tachibana's neck, marking him as her chosen one. Jinguuji, brought along with Tachibana, does not have such a mark since he is technically Tachibana's weapon/champion, not the goddess's.
* Fantasy Bishoujo Juniku Ojisan to to avoid causing chaos everywhere he goes.
* Fantasy Bishoujo Juniku Ojisan to: When salarymen Tachibana and Jinguuji are sent to another world by that world's Goddess of Love to be its heroes and, in the process, turns Tachibana into a girl, they upset the goddess enough that she places a curse on them. Immediately after, Tachibana and Jinguuji are resisting attraction to one another, prompting to assume that's the curse. However, Tachibana soon realizes that the goddess never actually specified what the curse was, Jinguuji tends to ignore women generally and greatly favor Tachibana even before all this, and it's later revealed that Tachibana can passively charm people, meaning that they could simply attracted to one another, and the curse is something else entirely. Tachibana is reluctant to face that idea, however, so he never seriously tries to confirm it.
* Fantasy Character Classes of some kind, though this is not a necessary element. If it's not a game it may still feature some of the character archetypes that inspired the modern classes.
* Fantasy Character ClassesThe most common character classes in a medieval fantasy setting.
* Fantasy Conflict Counterpart, 1879, with two fictional cities standing in for France and Germany.
* Fantasy Counterpart, and most dwarfs ignore the Campaign for Equal Heights as politely as possible.
* Fantasy Counterpart Appliance: For putting certain anachronisms in fictional settings that primarily resemble certain time periods, but aren't meant to fully represent said time period accurately.
* Fantasy Counterpart Culture. Amestrian-by-birth Roy Mustang also has black hair

and eyes. Combined with his noticeably Asian appearance, this has led to some (unconfirmed) fandom speculation that his family may have roots in Xing.
* Fantasy Counterpart Culture, and thus came from a culture which no longer exists.
* Fantasy Counterpart Culture: Cultures on non-Earth worlds that are similar to real ones.
* Fantasy Counterpart Culture Elemental Bears coalesced from the ice and snow that makes up their homeland.
* Fantasy Counterpart Culture for Renaissance Italy), the Tarot is a key tool used by the Fate Witches as part of their magic.
* Fantasy Counterpart Culture Ga Buidhe decides to disobey her master Ga Jiarg and kill the protagonists, intending to protect him and her people against them despite his willingness to negotiate. When she fails, she tells the protagonists that she's willing to pay with her life, until Ga Jiarg arrives and says that, despite her disobedience, her death isn't necessary.
* Fantasy Counterpart Culture Gallia is also located in roughly the real-life location of Lithuania (part of the USSR during World War II), rather than in central "Europa".
* Fantasy Counterpart Culture has the largely European-flavored (though apparently California-dwelling) Califans conquered and ruled by the pseudo-Aztec Huitzils.
* Fantasy Counterpart Culture, human cultists of the god of murder and the barbaric descendants of people trapped there when the swamps formed.
* Fantasy Counterpart Culture is Indian and Swiss. Of course this is possibly intentional, as all of them are 'Sands' — illegitimate children born in Dorne — so they could be mixed race in universe (we only learn they all have different mothers).
* Fantasy Counterpart Culture — Holy Roman Empire and medieval France.
* Fantasy Counterpart Culture Native Americans, the Quadlings are harder to pin. They generally have dark skin and red hair isn't unheard of either. They also live in the swampy marshes of south Oz.
* Fantasy Counterpart Culture of any single country and the Prebysterate deliberately obfuscating details about their origins leave their ethnicity ambiguous.
* Fantasy Counterpart Cultures have a vastly different geography from our world, so that Everworld-Vikings regularly raid Everworld-Aztecs, Everworld-Africans, and apparently Everworld-Asians; this results in many new people entering the Viking society as slaves (who may gain freedom and work their way up) or from mixed marriages between Vikings and captured women. Their king, Olaf Ironfoot, is actually black.
* Fantasy Counterpart Culture suggests that foreign affairs (ie spying on the bloodsucking ghosts) is the purview of the Department of Despicable Necessities.
* Fantasy Counterpart Culture - the real Byzantine Emperors had a Varangian (Viking) Guard.
* Fantasy Counterpart Culture who suffer from "the Crave" — an uncontrollable lust for blood and war.
* Fantasy Counterpart Religion: Religious mythologies loosely inspired by anything from the real world.
* Fantasy Counterparts and all. Add to that hamster wheels with lasers, and it should be pretty clear that they fit into this spot too.
* fantasy counterparts, come with plushies. Usually, cows or chickens.
* fantasy counterparts; they're referred to as the "Brides of Khaine" (he's the elven god of murder).
* Fantasy Fliers. Since they are often used as mounts, but can fly alone, acting as predators, prey, and enemy troops, this game could fit all the above categories.
* Fantasy Flight Games seems to love ascending memes in its line of 40K spin-off
* Fantasy Flight Games they contain actually requires. This makes the boxes stack neatly on the shelves with other games, but it also means that a game consisting of two decks of cards, a handful of counters, and a rulebook takes up a 12" x 12" space on your shelf.
* Fantasy Flight's 40K roleplaying games usually have some variant disadvantage

that does this to characters —
* Fantasy Flight's. As well as rules for running bounty hunting focused missions.
* Fantasy Folk. A Fishmen artifact can slowly change its user into a Fishman.
* Fantasy-Forbidding Father: A parent strongly dislikes their child pursuing their dreams because it clashes with what they see as a path towards a successful future.
* Fantasy-Forbidding Father: A parent who is entitled to control every aspect of their children's lives.
* Fantasy-Forbidding Father: Parents show disapproval of their children pursuing goals and dreams they do not see as practical.
* Fantasy-Forbidding Father: Some parents will go to insane lengths to keep their kid from something they consider a waste.
* fantasy girlfriend to the biological imperatives "he" programmed into herself.
* Fantasy Gun Control happens because the empire has no interest in developing technology that can make its military obsolete, but gunpowder cannons are common on ships and coastal defences. Most of the stories involve the fringes of society, such as criminals in outlying regions or frontier military men, all of them in decidedly unheroic roles.
* Fantasy Gun Control: You'd better learn how to use a bow, Mack, 'cause that gun's just gonna click.
* Fantasy. He combines a few traits from Nurgle and Tzeentch, being a malevolent schemer who encourages the spreading of plague and destruction by his followers. He even takes Slaanesh's spot as the fourth major Chaos God following Slaanesh's capture at the hands of the Aelfs, but the other three Gods despise the Horned Rat as a venemous upstart and non-Skaven Chaos worshippers spit on him and his "gifts".
* Fantasy Hero, a person who wishes to join a king's warband must challenge a current member to a fair and non-lethal fight. Winning doesn't guarantee acceptance (a king can turn down a person who won the fight, but is known to be dishonorable), but losing guarantees rejection.
* Fantasy Hero, the ancestors of the Tualans were refugees hunting for a new homeland. Once they decided to settle in Tuala Morn, their leader scuttled their ships as a sacrifice to the sea gods, thanking them for their aid.
* Fantasy Hero, the Tellat Empire fields units mounted on "battledons" — take a rhino, make it 50% bigger, and add extra horns, claws, and bad attitude. Meanwhile, the Hazarians look almost normal with their knights in plate armor riding giant wolves.
* Fantasy High. He's a ruthless pirate who fully admits he'll go straight to Hell when he dies, and has killed and robbed countless people with zero remorse. But he fiercely loves his son, doting on him and encouraging him every step of the way, and is a genuinely outgoing, cheerful kind of guy. He treats his son's friends as part of his family immediately upon meeting them, and takes it upon himself to give them some training when he realizes they don't really know how to fight or defend themselves. He even handles it with good grace (more or less) when Fig politely calls him on some thoughtless (but completely unintentional) sexism.
* Fantasy High repeatedly flirts with Adaine, despite her making it very clear from the beginning that she's not interested and finds his come-ons to be gross rather than charming. At one point, she even privately asks Fig and Kristen to make sure she's never alone with him because he makes her so uncomfortable. (Though this could be just as much because she doesn't trust herself not to hex him in retaliation.)
* Fantasy Island (2020) a construct formed as part of Melanie's revenge fantasy
* Fantasy Island (2020), J.D. and Brax have their hedonistic fantasy interrupted when they are taken hostage by a gang of heavily armed men wearing creepy rubber masks. J.D. is only able to describe them to the soldiers in terms of the masks they are wearing (devil, clown, pig, etc.).
* Fantasy Island (2020) so that his brother can be brought back to life and leave the island.
* Fantasy Island (2021): Isabel extorts Edmund Walsh to not only keep his mouth shut about Rachel being the true author of the Agnes books but also pay her more as she has future knowledge of the fact he's kept a mistress and has children with

her, saying she'll tell his wife otherwise.
* Fantasy Island (2021): Isabel tells Rachel she "read her book one-handed" and they flirt about this afterward.
* Fantasy Island (2021) (queer female main character, coming out story, LGBT acceptance, lesbian supporting characters, queer female romance)
* Fantasy Island (2021): Rachel Coldwater, a 19th century writer, had to publish under an assumed name and use her husband as the official author, as her books could not be published by a woman.
* Fantasy Island (2021): Ruby kept her attraction to women a secret for over fifty years, but her loving husband Mel realized this long ago (he knew she'd been in love with a "friend" of hers). He's completely accepting of this, and hopes that she will be free to live out her sexual orientation on the island, if Ruby wants that.
* Fantasy Island (2021), who is pansexual, played Isabel, a young woman who's a huge fan of Victorian author Rachel Coldwater, traveling into the past where they get into a romance.
* Fantasy Island (2021), with Mr. Rourke's grand niece Elena now running things.
* Fantasy Island. A guest will be given an item from ice skates to a riding crop that gives them a boost to live out being the star they always wanted to be. After they win the big competition, Roarke will reveal these were just random items he had lying around with no magical powers and all they did was allow the guest to believe in their own talents.
* Fantasy Island, a guest will decide they fit their fantasy world much better and become a "permanent resident" of the island.
* Fantasy Island) and logical a rich man like Roarke could pull these off with a cast of actors and special effects. Starting in season 2, it became clear these people truly were being sent back in time, physically transformed, or thrust into fantastic circumstances, and Roarke may well not be human. By the later years, the show didn't even bother hiding this was truly magic to the point an episode could open with people rendered invisible and Roarke and his aides simply accepting it as normal.
* Fantasy Island belongs to the window dresser Francis Elkins. He fancies the mannequin Courtney and wants her to be alive. Roarke invokes the myth of Pygmalion and gives Francis a talisman of Aphrodite to channel the goddess's life-granting power. Courtney's love matches Francis's, but she is woefully naive of the human experience. Among others, she tells other guests that she was born at Bloomingdale's, that she's six years old, and makes it sound like she has a disconcertingly active sex life. At a fashion show on the island, she finds three friends of hers on display: Mindy, Sally, and Sybil. Courtney uses the talisman to bring her friends to life too. Francis takes care of the lot of them, earning their affection when he promises he'll take them to his next job and not let them be thrown out in favor of the new, faceless models. Soon enough, the weekend ends and the mannequins revert to a lifeless state. Francis is happy to have had even a short time with Courtney, and he's even happier when Roarke introduces him to Ms. Wilson, ostensibly the woman Courtney's form was modeled after.
* Fantasy Island called "What's the Matter With Kids?" features Steve Allen and Jayne Meadows as husband and wife Child Psychologists.
* Fantasy Island child. Unusually for this kind of story, whilst the man learns the usual moral of appreciating how hard women have it and to accept children for what they are (being completely fine when he gives birth to their fourth daughter), the woman is also shown learning that the "father" doesn't exactly have the pregnancy period easy, even though they don't carry the baby.
* Fantasy Island featured a female ventriloquist whose dummy came to life and threatened to pull a similar switcheroo.
* Fantasy Island, guilt-ridden bounty hunter Paul Henley's fantasy is to be killed, so that he no longer feels remorse for the deaths he caused. So Mr. Roarke sends Henley on a hunt on the island, with a beautiful young companion named Michelle along for the journey.
* Fantasy Island had a B-plot that involved two kidnappers trying to ransom Tattoo.

He and Mr. Roarke are both quite familiar with the Red Chief story, referred to above, and Tattoo is roughly child-sized...
* Fantasy Island had studied at the Beaux-Arts in Paris and exhibited his paintings.
* Fantasy Island. In the end, he opts to go back to his life, and he then makes it his personal mission to send the jock to college.
* Fantasy Island is a guest wanting to relive a period in history they have romanticized. Nine times out of ten, they swiftly discover "the good old days" are not what they imagined.
* Fantasy Island "Jungle Man/Mary Ann and Miss Sophisticate" one of the 2 "fantasies" involves a female ventriloquist whose dummy is taking on a life of its own, at the ventriloquist's expense.
* Fantasy Island: Matchmaking is often one of Mr. Roarke's goals in setting up a fantasy. Take one female guest, take one male guest, and you'll have true love by the end of the week. Often enough, by the end of the episode, you'll have bride and bridegroom go off into "da plane" together at the end.
* Fantasy Island's blood with the vampiric abilities and appetites he received, although Mr. Rourke intervened before the "Fatal" part of this trope could play out.
* Fantasy Island, the boy says that his hero's best superpower is the "reset button" on his video game, which allows him to return from death and undo all his mistakes — which is how the boy undoes all the trouble his wish has caused at the end of the show.
* Fantasy Island, which Roarke takes and hands to his assistant, happy to lose the bet once more.
* Fantasy Island, which was filled with the requisite roughneck personality types, only with women playing the roles.
* Fantasy Island with the two old actors who used to star in a cop show together, their characters had an informant they used to rough up when they wanted information. When they get stuck in a real-life version of the show, the informant shows up with a massive grudge against them for the way they used to treat him.
* Fantasy. It helped that film-making technology had advanced to a point where stories such as this could finally be presented in all their monsters-and-magic glory.
* Fantasy Kaleidoscope an official installment of the series that tends to draw people to it.
* Fantasy Keepsake, only to find an item proving the adventure was real.
* Fantasy Kitchen Sink, a super hero team reimagined as a US military task force. The style was soon adopted by the mainstream Marvel titles, and also by DC Comics.
* Fantasy Kitchen Sink: Every kind of element from every kind of fiction shows up at one point or another.
* Fantasy Kitchen Sink is overflowing with obscure and unusual references. The author wisely chooses to weave most of them into the background and leave the most complex and unwieldy connections in the (substantial) footnotes.
* Fantasy Kitchen Sink's battles are getting more and more desperate and Hellboy's grip on hope (and by extension his humanity) is getting frayed by his increasingly strong doubts about his ability to keep screwing destiny, which hang an ominous, lengthening shadow of malaise on the setting. We'll just have to wait and see where Mignola takes the story.
* Fantasy Kitchen Sink superheroes and nobody says boo. The closest they come is having these supergods occasionally inspire (small, fringe) worshippers.
* Fantasy Kitchen Sink) superhumans fighting alongside and against each other, and often going into space.
* Fantasy Kitchen Sink, whose sheer adorability is enough to make anyone smile.
* Fantasy Life and, in the process, lost his anniversary gift for his wife Ruby.
* Fantasy Life, becoming one of these is but one of the goals you can strive for. If you succeed, King Erik will jokingly admonish you for stealing his wife and daughter's hearts.
* Fantasy Life has living carrots, radishes and ginger plants. They're fortunately

among the weakest enemies in the game.
* Fantasy Life ideal... though in reality, with the exception of named characters, the average paladin is well-meaning and loyal, but none-to-bright and somewhat easily frightened.
* Fantasy Life, one of the places where fish can be found is the desert's sand. There are also some that live in lava.
* Fantasy Life: the seventh mystery of Castele is that Castele has only six mysteries.
* Fantasy Life, when you confront King Erik and his court about the letter you received (on cute apple-patterned stationary), he immediately tells you that he has an important meeting about eggs, while his top scholar Hughes then begins "analyzing" that the throne room is rather hot.
* Fantasy — but Garrett learns during the series that the Dead Man was about as energetic when he was alive.
* Fantasy Metals. Ebony is a real life type of wood. Quicksilver is another name for real life mercury. Corundum is a real life type of crystal. Glass is...well, real life glass. In this universe, all function as metals which can be formed into ingots and used to forge weapons/armor.
* Fantasy Mission Force (who was rumored to have ties to organized crime syndicates).
* Fantasy of Utter Ridiculousness after the Scarlet Devil Mansion's library is destroyed, turns out to be this.
* Fantasy of Utter Ridiculousness a group of fairies are transformed into giants by some wind-borne magic powder. It doesn't increase their threat level all that much, however; they still get thrashed just as easily by the story's protagonists as they would by Reimu or Marisa.
* Fantasy of Utter Ridiculousness: Alice is gifted with a scarf early in the Extra Stage. Several times after, she gets distracted enough with its quality that several conversations fly right over her head.
* Fantasy of Utter Ridiculousness and attacks from the games in question, not using any patterns from Phantasmgoria of Flower View. Following her battle with Megas, she takes note of the increasing number of powerful figures that have been making themselves known and finally decides to get with the times, starting with her hair.
* Fantasy of Utter Ridiculousness and destroying her library while cackling madly. This provokes Patchouli into trying to stop her from doing so, despite the fact that such a thing wasn't likely to happen.
* Fantasy of Utter Ridiculousness and the teamwork needed to resolve the incident... and it's there that she's finally able to figure out how to get everyone out of the fight alive.
* Fantasy of Utter Ridiculousness by cheering whenever Seija Kijin gets hit in the face by something.
* Fantasy of Utter Ridiculousness, Coop gifts a Nintendo expy to Kaguya alongside several stacks of games. While this action was well-intentioned, Eirin notes that an overemphasis on technology would lead to magic's decline and Gensokyo's eventual cessation, so she had to make some sort of sacrifice to allow Kaguya to stave off her boredom.
* Fantasy of Utter Ridiculousness degenerates into a drawn-out argument, the topics of which range from Marisa's thieving tendencies to Reisen's memetic "useless little bunny" status.
* Fantasy of Utter Ridiculousness. Despite all the damage that Megas has been dealing Yuuka over the course of their fight, her clothes are barely even phased. Jamie is quietly disappointed at this.
* Fantasy of Utter Ridiculousness: Due to all the damage it caused during its first sojourn through Gensokyo, Megas has become known as "The Destructive Sentinel" to most of its inhabitants by the time of the Extra Stage. Only those who've met Coop personally, such as Alice or Patchouli, refer to the mech by its real name.
* Fantasy of Utter Ridiculousness fight against Suika Ibuki. In a twist on the above justifications, Megas's placement in Gensokyo was the fault of the Watatsuki sisters; Yukari's involvement was accidental at best.

* Fantasy of Utter Ridiculousness for a gigantic puppet or a statue given life. Considering the low tech level of Gensokyo and Coop's control of Megas, it was a fair assumption to make on their part.
* Fantasy of Utter Ridiculousness has a blast when she's fighting Megas. Of note is this bit while she's charging up the Double Spark:
* Fantasy of Utter Ridiculousness. Lampshaded by Reimu to Kiva, pointing out that fights in Gensokyo have started for far less.
* Fantasy of Utter Ridiculousness. Nothing that Megas's crew can throw at her does more than temporarily slow her down, and it takes extreme measures on Reimu's part for any meaningful damage to be done to her.
* Fantasy of Utter Ridiculousness of water. A minute later, the fairy flees screaming from the room after being subjected to the "scary eyeball gap lady's" wrath.
* Fantasy of Utter Ridiculousness past enemies keep gravitating towards her. On the other hand, Yuuka wants nothing to do with Coop after her defeat and vacates the area after the situation is straightened out.
* Fantasy of Utter Ridiculousness, Patchouli immediately screams Marisa's surname while drawing out each syllable.
* Fantasy of Utter Ridiculousness post-ending scenes, it's suggested that Coop and Suika have one of these later, this time taking place in an unknown location and refereed by Yukari.
* Fantasy of Utter Ridiculousness, Reimu reveals that there's a provision in the Spell Card rules for this. At least four people with no set alliances with each other need to agree to a fight, and it has to take place in open air so that there's enough room to dodge the sheer volume of danmaku that would result. One Spell Card is allowed per combatant, and the winner is the last one left standing.
* Fantasy of Utter Ridiculousness Reisen and Kiva. Reisen has no real fondness for humans as a species, while Kiva has much bigger things to be concerned with. As Reisen notes after meeting her, though, their respective backgrounds as soldiers had a fair number of similarities; that and Kiva's ability to show respect where her companions couldn't made it easy for the two of them to get along.
* Fantasy of Utter Ridiculousness: Reisen has this reponse when Eirin gives her some herbs and spices from the kitchen to take with her, shortly after she'd just gotten done reassuring her subordinate that Reimu wouldn't turn her into rabbit stew for not safeguarding Megas's crew.
* Fantasy of Utter Ridiculousness She doesn't hold it against Coop, thankfully.
* Fantasy of Utter Ridiculousness's Jamie trying to put the moves on Patchouli Knowledge. Her familiar's attempts to spell it out for her crash and burn at the end of the Extra Stage, when she gets her own such Ship in the form of the Jersey City junkman Goat.
* Fantasy of Utter Ridiculousness, so why should they be surprised that magic's prevalent?
* Fantasy of Utter Ridiculousness, Suika Ibuki accuses Coop—and Megas by extension—of stealing her prized sake gourd. Not knowing who she was or what she was talking about, Coop denies it and rebuffs Alice when she tries to warn him that it wasn't an ordinary little girl he was dealing with. This prompts Suika to super-size herself and punch Megas away from her, followed by her reciting the trope name almost word for word:
* Fantasy of Utter Ridiculousness that depicts her destroying the Scarlet Devil Mansion's library.
* Fantasy of Utter Ridiculousness: The Alternate Ending was initially supposed to be a non-canon "What If?" scenario, as the author had intended for the previous chapter to be the story's true conclusion and had no intention of writing more. Eventually it was incorporated into the story's timeline via the Extra Stage, if only as one of a series of bad dreams Patchouli was having.
* Fantasy of Utter Ridiculousness. The former's a Chessmaster par excellence who never stops thinking about Gensokyo's safety, and the latter is her ghost princess best friend who trolls her even during completely serious moments.
* Fantasy of Utter Ridiculousness, the loud rock music blaring from Megas during

its fights is hinted to have been Mystia's inspiration for forming Choujuu Gigaku years later.
* Fantasy of Utter Ridiculousness. The second is Yuuka's Double Spark; it was already a powerful attack in its own right, but after she was scaled up to Megas's size, the resulting beam becomes large enough to be seen from space.
* Fantasy of Utter Ridiculousness: This exchange takes place in the middle of a conversation that was going nowhere:
* Fantasy of Utter Ridiculousness: This happens to Momiji when she makes the mistake of looking at a heavily amplified Double Spark from clear across Gensokyo, illustrating a severe drawback of telescopic vision.
* Fantasy of Utter Ridiculousness: Upon waking up from a nightmare about a giant Marisa raiding her library, Patchouli immediately screams her name in anger, drawing out each syllable. Another scream comes much later when she reaches her Coop-related breaking point.
* Fantasy of Utter Ridiculousness While most of those watching the fight between Megas and Yuuka are doing so with some sort of trepidation or anxiety, Yuyuko's treating the whole thing like a night at the theater.
* Fantasy of Utter Ridiculousness: While Patchouli is venomously chewing out Remilia near the end of the story for sending her out on a fool's errand, Flandre is snacking on the strawberry-flavored ice chunks created by Megas's clash with Suika.
* Fantasy of Utter Ridiculousness with little in the way of physical strength, the act of doing so effectively wrecks her arms and leaves her unable to speak coherently for several minutes, likely due to sheer pain.
* Fantasy of Utter Ridiculousness: Youkai in Gensokyo tend to be this by default as long as they're not facing someone like Reimu. Specific examples include:
* Fantasy of Utter Ridiculousness, Yuuka was sorely tempted to rampage after losing to Coop, never mind the fact that doing so would mean an "extermination" of the permanent variety courtesy of Reimu. It's only after receiving some sunflower seeds and learning the truth about the fight's trigger that she calms down enough to leave quietly.
* Fantasy Pantheon: An invented set of deities for the culture to worship.
* Fantasy Quest, a shark appears out of nowhere and attacks. It's particularly bizarre because every other threat in the game comes from mythological creatures.
* Fantasy Quest game, the narration turns into full-out parody, challenging you to "absquatulate with the Golden Cufflink of Fire"...
* Fantasy Quest game with the Golden Cufflink of Fire. You never learn precisely what it does, and the villain who possesses it is a bit of a joke.
* Fantasy Quest turns out to be sad indeed, mostly from his lack of a nose.
* Fantasy Quest, you can break the curse on a man trapped as a dog by feeding him. This serves mainly as mad mockery; the dog appeared in the first game, you had no option to feed him, and now he's retconned as a man still bitter about your earlier indifference.
* Fantasy seekers derive pleasure from immersing themselves in a realistic world and pretending to be in another time and place. They enjoy well-crafted and consistent worlds, and dislike anything that breaks their immersion, whether it be nonsensical or self-contradictory world-building or excessively "gamey" mechanics.
* Fantasy Sequence of the legend of Batman has heavier linework and lots of solid black shadows.
* Fantasy Strike, let alone play through one, without being disconnected due to the large number of new players. The issues were fixed two days later.
* Fantasy Strike mechanics such as invincibility frames and frame advantage are color-coded:
* Fantasy's werewolves are known as skinwolves. Rather than the phases of the moon, their transformation is based on carnage, with the wolf form bursting out of the the human's skin. Once the wolf-man has gorged itself, its insides collapse and the human form has to fight its way out of the loose wolfman's skin.
* Fantasy universe. It pretty much single-handedly allowed the High Elves to push back a huge Chaos incursion early on in their history. Too bad it also drove the

first Elven king murderously insane, placed a curse on all his descendants (which causes them to become fanatically obsessed with obtaining the sword every decade or so), and caused his illegitimate son to break off and form the Dark Elves, probably tied with the Skaven as the most loathsome and horrible force in the world and still warring with the High Elves to try and reclaim the sword.
* Fantasy Video Games: A game that features magic and mythology in a supernatural setting.
* Fantasy. What exactly they do with them is never explained, although one Ruloi telepathically tells Copper in the third game that "We need vessels."
* Fantasy World Map. Authors typically revise constructed worlds to complete a single work in a series.
* Fantasy World MapNo Fantasy setting is truly complete without this handy visual aid.
* Fantasy World Map: The author has detailed the geography of the world.
* Fantasy writer Michael Scott writes romance novels under the name Anna Dillon.
* Fantasy Zone), they took the multi-screen concept of the original and simplified it into a dual world concept.
* Fantasy Zone was ported to the NES by Tengen in the US, but by Sunsoft in Japan. The Sunsoft version sports graphics that are a bit more colorful but also a bit more cramped. Its music may be more accurate in its bass line, but the Tengen version's music sounds more complete overall. For some reason Tengen reduced the number of targets per stage from eight to six.
* Fanta Zero somehow gets away with having the words "Zero Sugar" right above the disclaimer "Contains naturally occurring sugars".
* Fantendo Playing War kills his way through the entire 41 chapters, though it is necessary.
* Fantendo possessed many ARG elements and was frequently updated during its heyday.
* Fan theories do not belong on the Nightmare Fuel page under any circumstance. No matter how much evidence they have to support them, don't add them until they've been officially confirmed. In the meanwhile, take them to
* Fan theories have it that the scouters used by most of the alien species in Frieza's employ also double as translator devices (though this would fail to account why Frieza can speak to someone like Krillin, neither of whom wear a scouter, and can still be understood).
* fan theory, it renders all the previous Fantastic Aesops pointless and moot.
* Fantine is driven by her love for Tholomyes and later Cosette. She lives in awful conditions and prostitutes herself to provide for Cosette, and eventually dies when she learns she won't get to see Cosette.
* Fantine is fired, ostracized, forced into prostitution, forced to sell her hair and teeth, nearly raped, nearly arrested, and
* Fantine is noted for her beauty and particularly her long, angelic golden hair. She is presented as the model of motherly virtue, and at the beginning of her transition to
* Fantine loves Tholomyes and assumes he will care for her and Cosette, only for him to abandon her on a whim. She then trusts the Thenardiers to look after Cosette for her, and they mistreat Cosette and extort an outrageous amount of money from her until she ends up a prostitute and dies from tuberculosis.
* Fantine's friends and lover pre-factory worker days are completely absent in the musical; the lover only gets a mention during "I Dreamed a Dream" to explain why Fantine has a child.
* Fantine sings "I Dreamed A Dream" after she's fired from the factory in the stage version. In the film "Lovely Ladies" happens first and Fantine sings it when she's in despair after becoming a prostitute.
* Fantômas (1913, Gaumont): There was another one made in the United States in 1920, which is now lost.
* Fantômas, a pair of kids disguises as Fantômas (with a large black cloak) to give a scare to their dormitory supervisor.
* Fantômas, from the series of French pulp novels written by Marcel Allain

and Pierre Souvestre (and later by Allain alone after Souvestre's death) starting in 1911.
* Fantômas in Italian comics. Tellingly, among the many names given to Paperinik in translations are Fantomiald (France), Fantonald (Norway), and Phantomias (Germany).
* Fantômas — Crime fiction series based on the eponymous novel character. 5 films between 1913 and 1914, 7 more between 1932 and 1966, bringing a total to 12 official films.
* Fantômas movie adaptations. Usually, he's also the cause of death.
* Fantômas sometimes left behind his cards (at least in the French movie adaptations).
* Fantômas, the inspector is staying at a Scottish castle. He wakes up in the middle of the night and sees a body hanging in his room. He runs out screaming. By the time he comes back with a crowd, the body is gone, prompting this trope. He next night, he prepares a camera on the nightstand. Once again, he wakes up to find a hanging body. Being smart, he snaps a picture and then runs out screaming. He does, however, make the stupid mistake of leaving the camera, allowing Fantômas to substitute it for an identical one with a picture of the room with no body.
* Fantômas, the villain of his own series by Marcel Allain and Pierre Souvestre, is one of the more brutal examples of this. One of his defining features is always appearing in various disguises and then getting rid of the persona through faked deaths, explosions, and mass murder. The same is true of his rival the Inspector Juve, sans the death count, who uses an equal number of disguises to try and bring Fantômas to justice.
* Fantômas to take the form of a dog to go unnoticed, but something went wrong with the process. At the end of the story it changes into an eagle instead, this time more successfully.
* Fantomah, Woman of the Jungle, created by Fletcher Hanks, who also created Stardust below, is an apparent blonde Caucasian
* Fantoma Mura, Yurei no Jinja, and This is Something in Something Else also have the same gimmick.
* Fantomcat had Lindberg the pigeon who was terrified of heights and usually refused to fly.
* Fantomcat had one episode written by Lorelei King, as well as other episodes written by Jimmy Hibbert and Rob Rackstraw.
* Fantomcat had one named "Touché" that could respond to his beck and call.
* Fantomcat: In Episode 6, "The Mind Leech", Vile the Bluebottle attempts to get a secret formula from Professor Oliphant with the titular object, but he ends up getting his shopping list instead. Needless to say, Marmagora is not happy.
* Fantomcat one of the main villains was a giant, green widow spider named Marmagora.
* Fantomex and Psylocke hooked up as part of the long-running romance subplot in Rick Remender's
* Fantomex's nervous system externalises itself as a UFO-like techno-organic ship called E.V.A.
* Fantomex (Weapon XII) and Huntsman (Weapon XIII) were both created from nanotechnology. While Fantomex was intended to be a poster boy for a
* Fantomius once pulled one better: planning to get arrested he wore his face-covering silk mask over a mask of his true face
* Fantomius story reveals that the costume of the Phantom of Notre Duck was copied from one of his ancestors, a terrifying tax collector. The costume is still creepy in modern times.
* Fantöm by himself, when the challenge was intended for a team of at least four players.
* Fantozzi: after being informed that he has only a week left to live, Fantozzi decides to indulge into all the things he really wanted to do before dying. One of them was "willingfully make a clamorous fart in a crowded elevator" (included squicked out people looking at him and him nodding in respons as if to say "yeah,

it was me, so what?")
* Fantozzi and thus the target of every kind of humiliation, abuse and disasters, akin to a live-action cartoon. He literally can't even die, since he has been kicked out of Heaven, reincarnated against his will, and cloned in a near future.
* Fantozzi features the titular character, an office clerk so unlucky that he almost always has a raincloud following him when going on vacation! This has become known as "nuvoletta dell'impiegato" ("clerk's cloud" in Italian). Notably, the one time he is lost at sea and lacking water, the raincloud appears and rains... two meters away from the boat.
* Fantozzi, one gag in the sixth movie has a group of purse snatchers on motorbikes waiting in ambush for people to leave the post office with their retirement money, using a number system to determine whose turn is.
* Fantozzi (one of the many) one of the characters is so near-sighted that once he's guided by a blind man. Partly subverted because the blind man manage to lead him to the right place.
* Fantozzi's cloud is really affectionate to him: when Fantossi died, his Clerk Cloud took care of raining on his funeral service, providing suitable atmosphere.
* Fantozzi, the eponymous protagonist and his friend Filini try to rob the internal bank of the 'Mega-Company' they used to work for before retiring. Not only they need the help of the bank's director to pull it off in spite of their own imbecility, but they're later robbed of the loot by the Mega-Director of the Mega-Company, who noticed them prepare and ordered to let them pull it off to take the money himself (with the bank being refunded by the insurance).
* fan trailer used the original song. It was featured on Kotaku and even the studio's PR team were slightly disappointed that they did not think to use that song to promote the game.
* Fan Translation: A foreign work has fans add unofficial subtitles translating the dialogue and text to their native tongue.
* Fan Translation has Yu intentionally call Satan "Satin", among other wrong names.
* Fan Translation have Angela in your party, she'll tease Duran by pretending to assume that this is the reason why.
* Fan Translation, Hermana is localized as being this. Most are reasonable shortenings of the other characters' names (Luke for Luca, for example), except for Spada, whom she calls Spud.
* Fan Verse: A fanfiction writer does several fics for the same fandom taking place in the same continuity as each other.
* Fan Verse. This, combined with attempts to crackdown on the incestuous content, all but made it one of the most popular AUs in the fandom.
* Fan version of SRK himself). The fan (a lookalike who is locally noted for staging impressions of the actor's films) goes to dark and dangerous lengths to try and impress the actor in question, and after being rebuffed, goes to extraordinary lengths to try and discredit him by assuming the actor's identity.
* Fan Vid) do not belong on this index since they do not use original footage. Fan works with original live-action footage do.
* fanvid fan-vid portrays Jim as Cinderella's crappy boyfriend who flirts with other girls and doesn't take her seriously. She ultimately ends up leaving him for Eric.
* Fan Vid is hit hardest by this, and can be anything from a pre-teen to an adult. This has the side-effect of causing depictions of Angel to be even more varied than those of everyone else, and causing her to be paired with nearly any character imaginable in romance-based videos since she could plausibly be the same age as them.
* fanvids are "remastered", it usually means this. Usually done by the original editor, when they obtain superior copies of the source material and/or superior technology with which to edit videos (for example, making a jump from VHS to digital or from basic editing software to fancy, expensive software).
* FanVids's "A Thousand Years" is that it's about one half of this trope singing about meeting the other in her next life.
* Fan Vid: These also started, often by manually syncing a song to crude edits on a

pair of VCRs.
* Fan Vid "title sequences" for TV shows where the titles for one show are done in the style of another show:
* Fan Vid will cause the music used to get a lot of hits on Youtube as well, with a lot of users with pony avatars showing up and commenting (and other people complaining about them doing so.)
* Fan Wank along with a picture of Anno, whenever the fandom discuss the more ambiguous parts of the series.
* Fan Wank: As early as 44 AD, Stoic philosophers were complaining about obsessive fans who argued over literary trivia like "how many rowers did Ulysses have?"
* Fan Wank, a then-middle-schooler added quite a lot of thought in it as well. Later more elaborate explanations, by fans but endorsed officially, of the special powers of Newtypes are also explained by Minovsky particles (using already existing properties of the particles).
* Fan Wank games don't cause additional timelines. Other than the obvious, that is.
* Fan Wank is that the mansion is riddled with secret passages only accessible by Wesker and this is one of them.
* Fanwank is that Wolfram lost his chance to decline, and Yuuri can't back out since he already swore to never take it back. Their marital state is pretty much in limbo.
* Fan Wank that have little or no relationship to what actually occurs in a work.
* Fan Wank, though such debates can descend into extremely ugly or even outright dangerous territory depending on the people involved, as both parties tend to be inordinately fond of dragging it into real life and making it personal. Doxing incidents are common, as are campaigns of orchestrated harassment and attempts to get people fired from their jobs or cost them clients or professional contacts (if they are self-employed), and it can and sometimes does escalate into full-fledged attempts to cause physical harm.
* Fan Wank website; there was an Insider article both describing the practice an encouraging it.
* fan wiki) — she looks like a simple (albeit very pink) lion centaur, but she has leopard spots going down her back as well.
* Fanwork Ban: A creator bans fanfiction and/or fanart based on their works.
* Fanwork Ban: The creator forbids fan-made content of their work being made.
* Fanwork Ban. They tend to mostly be writers, and the type of fan work they tend to mostly ban are fanfics.
* Fan Works as a whole tend to avert this trope, since there is really no limit to the media used (It can be as short or as long as the writer wants) and the authors are free to do just about anything they want with the characters. Indeed, many fan works update one chapter/episode/etc. at a time, so if a work hasn't been finished yet, it can be hard to say how long it will be even if you see a table of contents.
* Fan works in general are made under the impression that the people viewing them are familiar with the source material(s). This can especially be a problem for fan works based off of
* Fan works pairing up Asriel and the first human, which would also be a case of
* Fan Works that have Four's "siblings" stuck in his head giving him a poor reputation of someone who constantly talks to himself, tends to space out at random times, and suffers from mood swings.
* fanwork tosses a young Cirno into the air to keep her out of harm's way while she fights a monster. Twice.
* Fan Work, who has an axe to grind with his publishers, and has no real basis in reality).
* Fan writer Jurnees Jakes has a tendency to give one-shot and referenced characters in
* Fanyus track down the brands he wears and uses, buys up merchandise that he sponsors/has his face on, so on and so forth. Anything that he's seen using sells out at an incredible speed.
* Faora Hu-Ul does not take Superman's might, combat skills, and fighting experience seriously, and she wastes time gloating instead of finishing him off at

the first chance. When he flies away, Faora doesn't bother chasing after him because she is certain that "not a single person on Earth can avoid becoming the helpless victim of [her] master plan. And that includes Superman!" Meanwhile, Superman was taking steps to completely foil her plans.
* fapping, and knocks. Chris tells him to go away, but he barges in anyway... and finds Chris playing with a paddle and ball.
* FAPP: In the lands controlled by the prudes, anybody who is caught having sex or masturbating is either forced to join the military or imprisoned for life. Guards regularly invade the homes of non-nobles to make sure that they are not masturbating. Non-nobles are also forbidden from conceiving children without permission, and must be unconscious during the process so they cannot get any pleasure from it. The only reason why they don't execute sex criminals is because everyone in the world is immortal.
* FAPP (NSFW): This RPG actually has very detailed rules for bizarre sexual Mutations/Mods and how they effect encounters.
* FAQ of the comic, as the Comic Irregulars want to be able to make one themselves after the comic is completed.
* FAQ: Unit Specialist/Guerrilla. They produce as many gwiffons and megalowiffs as possible to gain unmatched aerial superiority. Jillian eventually makes up for her otherwise lacking ground units by allying with the Western Giants.
* Faraday attempts to change the past, and apparently manages it once with Desmond, and Desmond apparently does change the past a few times...but both of them just coincidentally manage to have 'swiss cheese memories', the existence of which can be linked to their time travel, so smart money said
* Far after Murfy's farewell, there is an incindent which tricks Globox into some overthinking. In effect, our friend starts claiming he's a masterpiece of 3d animation, commenting on other games as well as his very own
* farahavars; the fravashi has the same "Assyrian" look as the angels of Byzantine iconography. Speaking of whom, the Assyrians depicted both gods and devils with four wings in a "fairy" or "butterfly" configuration.
* Farah Black. It's not entirely clear what psychological issues she's dealing with, but there are some there. She tends to immediately put all the blame on herself regardless of circumstances and is pretty paranoid, although considering the fact that a body-swapping cult is involved, the paranoia is appropriate. Some of her mannerisms and insecurities also suggest that she may have an autistic spectrum disorder or some kind of social anxiety disorder.
* Faramir and Éowyn probably experienced this trope, since he had some Númenórean blood (and some elven blood from Mithrellas), and despite being 12 years older than her, he could have outlived her by several decades. We aren't given a date of death for Éowyn, but Faramir lived well into his second century and it's extremely unlikely Éowyn lived nearly that long - or is it? Eowyn's grandmother was Dunedain
* Faramir, Boromir, Imrahil and young Denethor all fit this trope. Actually, the Dúnedain of in general are tall and dark with a little elvish touch.
* Faramir often dreams of the fall of Númenor, which happened an age ago.
* Far and Away, after Joseph and Shannon talk about their ideal futures.
* Far and Away: In the 1890s, Joseph's use of speed and agility to sidestep and dodge in a bare-knuckle boxing match is treated as a novel style that other boxers, accustomed to simply standing still and pummeling their opponents, have never seen before. In reality, boxers began learning this style about 100 years before the events of the film, when the undersized Daniel Mendoza reigned as the heavyweight champion of Britain in the early 1790s and began training others in his "scientific" approach.
* Far and Away, Joseph and Shannon are forced by circumstances to share a room in a whorehouse for months, due to it being the only room they can afford together and not be shunned (because they're Irish immigrants).
* Far and Away, Joseph and Shannon have an odd but touching scene where they confess their love. Meanwhile, it snows outside the home they're taking shelter in.
* Far and Away: Due to Shannon's wealthy upbringing, Joseph feels

inferior. So, he tries to become somebody he thinks she would find attractive, somebody rich and classy. This only makes her annoyed with him, because she liked how different he was from the people she knew growing up.
* Far and Away: The entire whorehouse can tell that Joseph and Shannon aren't related by blood.
* Far and Away, the entire whorehouse knows that Joseph and Shannon aren't "brother and sister."
* Far and Away. This film in particular is a sore spot for many Irish people, given how legendarily bad the former's accent is. Some of it was actually filmed there, ironically enough.
* Far and Away, when Shannon loses everything, Joseph and Shannon have to take up rent in a whorehouse for a long time. There's only one bed, which she gets, of course. However, after an argument their first day there, he uses her pillow for the night and fluffs it up a little just to annoy her.
* Faraway Dream, by Jane Flory. Seafarers Safe Harbor for Orphans is run by Mrs. Dempey, who is physically abusive and lazy.
* "Far Away Eyes" by The Rolling Stones sounds every bit like a country song, complete with pedal steel. The song is the B-side to "Miss You."
* far away from Hyrule to prevent someone like Ganondorf from ever coming to power again.
* Far Away From Us by Michael Uspensky, King Solomon convinces some brigands that "life is futile and is full of sorrows and is pointless to carry on", whereupon they (the brigands, that is) wholeheartedly agree and stab each other. The Hero then inquires if the trick could be repeated with a whole army. The king is uncertain.
* Farbanti and its still-flooded districts also feature prominently in
* far better fate for him than a simple death. Later on, you can hear about how Sidonis eventually turns himself over to C-Sec out of guilt.
* Far better than becoming a Witch and being eventually killed by other Magical Girls, indeed.
* far better than Slipknot on radio, mainly due to having been much more active, especially in the 2010s, than Slipknot. In fact, four out of the five number one rock hits that Taylor has been involved with (the exception being his 2020 solo single "Black Eyes Blue"), and both of his visits to the Hot 100, have been Stone Sour songs.
* Far Beyond The Stars is set in the 1950s, where everyone... well, guess.
* Farbot: Insane/crazy. Rygel is fond of this one, usually regarding
* far, but adopts a disdainful view of romance, calling it "Nothing but trouble".
* farcast a fork of their ego if they absolutely have to have a real-time conversation. QE comms are mostly used by spies or to contact the few exosolar colonies that have been established.
* Farcast is an entire year of fanwank, where the author set out to see if he could produce a year's worth of material for the setting just to see if he can.
* Farce, all of which are screamingly funny provided the cast is on their toes.
* Farce of the Penguins, but they couldn't get the rights to use footage from that film.
* Farce of the Penguins implies that all of the characters are aware that they're in a documentary, featuring scenes such as Marcus telling the sound track director to change from stock music to hip-hop because if he's gonna be walking 70 miles, "the track best be bumpin'," and a few characters talking to or full-blown arguing with Samuel L. Jackson, the narrator.
* Farce of the Three Kingdoms all characters know that they are in a book, and frequently refer to past events by chapter, and lampshade the various tropes and cliches. The narrator also steps in as a character on several occasions.
* Farce of the Three Kingdoms, although Guo Jia and Big Xun usually manage to keep him on track.
* Farce of the Three Kingdoms, and Cao Cao refuses to acknowledge that Chapter 68 ever happened.
* Farce of the Three Kingdoms and rampant idiocy are exaggerated and lampshaded.

* Farce of the Three Kingdoms and the fully human Lady Wang. Besides the freakishly long arms and hair that resembles tentacles, he mostly looks human, although he reverts to his father's language occasionally when upset. His brother You on the other hand looks exactly like any other human.
* Farce of the Three Kingdoms are "In which practically everybody dies" and "In which everyone who didn't die in the last chapter dies." Most of the original characters die much earlier - inevitable, given that the book spans nearly a hundred years.
* Farce of the Three Kingdoms are replaced with something vaguely similar, but silly.
* Farce of the Three Kingdoms are usually referred to as "redshirts." Their survival rate is... poor.
* Farce of the Three Kingdoms at best, and makes several idiotic mistakes.
* Farce of the Three Kingdoms, but the narrator has photographic evidence of him getting completely wasted at the office New Years' party.
* Farce of the Three Kingdoms Cao Cao apparently has a subscription with Deus Ex Machina Services, Inc.
* Farce of the Three Kingdoms Cao Cao finds Chen Lin's anti-Cao Cao propaganda hilarious after his initial shop, and ends up giving the man a job.
* Farce of the Three Kingdoms, Cao Cao threatens to execute Chen Gong for doing this. When he has time to cool down, though, he changes his mind.
* Farce of the Three Kingdoms. Cao Hong even shouts "Leeeroy Jenkins!" when charging at one point.
* Farce of the Three Kingdoms characters generally refer to past events by chapter. They are all fully aware that they are in a book, and occasionally argue or bargain with the narrator.
* Farce of the Three Kingdoms Deng Ai that required him to give a known double agent command of Shu's supply line and place said double agent between the main army and their home base. This ends exactly well as one would expect.
* Farce of the Three Kingdoms, everyone mocks the poor souls whose names look silly transliterated into English. He Man is well-known, but there are also He He, Lady Wang, and Dong Tuna. No-one believes Quin Quington's name is even real.
* Farce of the Three Kingdoms. He'll abandon his family at the drop of a hat, avoid fighting at all costs, and burst into tears whenever things go wrong.
* Farce of the Three Kingdoms He refuses to stop fighting Wei, even as he fails time after time and bankrupts the country.
* Farce of the Three Kingdoms He's generally being completely sincere.
* Farce of the Three Kingdoms Historically, it took less than two decades for the Sima princes to start fighting for the throne.
* Farce of the Three Kingdoms How Mi Heng mispronounced his name is not explained, but it was probably "Cow Cow".
* Farce of the Three Kingdoms is a hypocrite at one point or another - but even in that cast, Shu manages to make it their Hat.
* Farce of the Three Kingdoms is forged and blithely reveals plans aloud in the middle of the enemy's camp.
* Farce of the Three Kingdoms is the only one who could possibly be described as "sane." Zhou Yu is far from sane, but he's the only character to point out that the hero/villain premise is absurd, and the first to react appropriately to Liu Bei.
* Farce of the Three Kingdoms. It helps that he's half of the only healthy relationship in the book.
* Farce of the Three Kingdoms. Liu Bei only named himself Emperor because he thought the real Emperor was dead! He would never depose another Liu, especially not Qi, or Zhang. And he will definitely give Jingzhou back to Sun Quan.
* Farce of the Three Kingdoms Liu Bei tries to enforce his name taboo for a while after his coronation as "First Emperor." No one pays the slightest attention.
* Farce of the Three Kingdoms. Occasionally lampshaded, as lists of characters might be compressed to the relevant ones and "forgettable guys."
* Farce of the Three Kingdoms orders Wei Yan to lead Sima Yi into a minefield (without informing Wei Yan that it's a minefield). Both survive due to a freak

rainstorm, and Wei Yan is not amused.
* Farce of the Three Kingdoms Played for laughs, as quite a few things he does during the southern campaign are much worse, but the only thing that gives him pause is blackface.
* Farce of the Three Kingdoms plays almost every death for laughs, so the suicides are included. Characters who commit suicide are usually trying to impress the death scene judges, so they're either overly melodramatic or done with almost no provocation. Dead characters also tend to argue with the judges to get a better score.
* Farce of the Three Kingdoms, saying that he had completely logical (albeit still evil) reasons for doing so.
* Farce of the Three Kingdoms steals it from Cao Cao's effects in order to use it to legitimize Liu Bei.
* Farce of the Three Kingdoms. The judges do at one point outline a scoring system, but they don't seem to stick to it very closely. It mostly boils down to points for style, with elaborate forms of suicide generally scoring high. There is, however, such a thing as trying too hard.
* Farce of the Three Kingdoms the justification Dong Zhuo gives for executing ex-Emperor Bian: He was writing mildly emo poetry.
* Farce of the Three Kingdoms, the narrator occasionally shows up to deliver exposition, explain morals, interrupt the exciting bits, and occasionally sing.
* Farce of the Three Kingdoms The others, who didn't know what he was up to, are horrified, and even Zhuge Liang feels the need to make excuses.
* Farce of the Three Kingdoms The rare occasions when he actually does something sensible are considered remarkable.
* Farce of the Three Kingdoms). They set themselves on fire, create incriminating paperwork for no good reason, and couldn't act more suspiciously if they tried. Naturally, they all get caught very fast.
* Farce of the Three Kingdoms (though the story being what it is, that's not a high bar). Dian Wei is this to Cao Cao at first, and also the Xuns and Guo Jia. Liu Bei has Zhuge Liang, and Sun Quan has Zhou Yu.
* Farce of the Three Kingdoms to be a Han loyalist, and Liu Bei's self-serving pretense is... flimsy.
* Farce of the Three Kingdoms, to calm down some spirits, the characters are told they have to sacrifice a black ox, a white goat...and a few humans. No biggie.
* Farce of the Three Kingdoms when he's trying to recruit Zhuge Liang. It actually works.
* Farce of the Three Kingdoms with even important characters who have been around for decades disappearing unceremoniously. Usually this is lampshaded, and the other characters' biggest complaint is that their friends and/or enemies missed out on entering the death scene competition.
* Farce of the Three Kingdoms with his manila envelopes, although several characters suspect he's just being dramatic.
* Farce of the Three Kingdoms with vaguely-defined powers - but one of his officers points this out to him, and he produces water very easily.
* Farce of the Three Kingdoms, Xu Shu is fooled by one that is supposedly from his mom.
* Farce of the Three Kingdoms Zhong Hui mails him home as a punishment, mostly to annoy Deng Ai.
* Farce of the Three Kingdoms, Zhuge Liang spins a completely implausible story that Cao Cao's motivation for invading the South is his obsession with the Qiao sisters. It isn't, but Cao Cao turns out to be rather creepily obsessed with them.
* far contains more than a hint of this trope (that he was learning medicine making at this point and had seen some nasty prenatal complications already did not help).
* Far Country has stated repeatedly that the intention is to keep the game about different human empires fighting, not to make it a humans vs aliens game.
* Far Cry 2 and not terrorists, considering they're only doing it for money.
* Far Cry 2 are far more torn up than the original's (Itself torn up) in a reflection of their darker subject matter.

* Far Cry 2 features a central African conflict that has a few parallels with the Sierra Leone Civil War (severe human rights violations, blood diamond funding) and the Angolan Civil War (outside profiteers, including at least some from Cuba and South Africa).
* Far Cry 2 fires animal tranquilizer darts that cause both instant sedation and thus are lethal.
* Far Cry 2. Hidden throughout the world, you can find one and use it until it degrades and explodes (unless you glitch it into repairing itself with a standard AK-47).
* Far Cry 2 in favor of the actual sequels. They prefer MGSV's tactical and systemic encounters and sandbox over the more casual, Rambo-esque power fantasies and comparatively railroaded approach to the open-world formula of the later Far Cry games. The similar themeing also helps; both games set in brutal desert warzones, collecting the odd Blood Diamond, and sometimes making use of a more fleshed out version of the "Buddy" system.
* Far Cry 2 is full of arms dealers. In addition to the Jackal and the player's armorer, there's quite a few other arms dealers who are the targets of various missions. Even some of the playable mercenaries are stated to have histories in gunrunning.
* Far Cry 2 it in-game by claiming you're a disposable asset that nobody knows about. In reality, even when working a mission for one side you will be attacked by both sides. Constantly.
* Far Cry 2, Josip is 48-years-old and a heavy drinker, but still described as a man "who will break you in two."
* Far Cry 2 lets the first half's semi-auto MS16 rifle do the same damage per-shot as the second half's full-auto ACE).
* Far Cry 2. Of course, nothing about their ideology is spelled out for certain, and they're all but identical to their enemies, the Alliance for Popular Resistance (implied to be monarchists and military elites).
* Far Cry 2 or deduce from their rhetoric. One faction even uses a Communist red star in its iconography but denounces the other for being communists.
* Far Cry 2, the main enemies of the game are members of two PMCs, augmenting the local forces of each faction. The APR hired American PMC MacGrudder-Powell, while the UFLL hired Bastion UK.
* Far Cry 2 the PKM without the accuracy upgrade has so much recoil that you'd get better range with a shotgun. The real PKM fires slowly enough that even a moderately-long burst could be kept on target with less effort than the player in this game needs.
* Far Cry 2 through the knuckle and into the palm. Yeah, this game is kind of horrific like that.
* Far Cry 2, which means that someone in your information chain is either screwing up big time or having one over on you.
* Far Cry 2, your character is infected with malaria at the beginning of the game. Every so often during gameplay, your vision will thusly go all sickly yellow and faded. The only way to fix it is to take pills to suppress the disease; you get the medicine through special side missions.
* Far Cry 3 after every time they rescue one of the protagonist's friends. Each flashback shows a little bit of what the group was up to at a bar in Bangkok, which was supposed to be their last stop on their vacation, before the DJ that Jason befriended told them about a little-known island where they could do anything they wanted...
* Far Cry 3 although the island in Far Cry 3 is obviously pretty far from known civilization.
* Far Cry 3 and are likely being tortured, raped and/or sold into slavery as we speak...but who cares about THEM? You've got animals to hunt, outposts to liberate, radio towers to find, screw around on jetskis and hangliders...
* Far Cry 3, and their equipment and tactics are a cut above that of both your native allies and the pirates you've been fighting for most of the game.
* Far Cry 3 are trying to bring insanity and/or death upon those who set foot on

them.
* Far Cry 3, a then-prominent gun-focused YouTube personality who fell by the wayside in the mid-late 2010s after the rise of other gun channels and a slew of legal troubles that effectively killed the channel.
* Far Cry 3: Blood Dragon, and finishes it off by grabbing his crotch.
* Far Cry 3: Blood Dragon, and seemingly post-processing added lasers. The cutscenes are meta-fictional by way of low resolution pixel art as was standard in video games made in that era.
* Far Cry 3: Blood Dragon, and synthesizer scores to help invoke the tone of both while you tear up the Tron-line and cyborg filled island.
* Far Cry 3: Blood Dragon by pressing the melee button without any enemies in range. He can even alternate hands if you do it fast enough.
* Far Cry 3: Blood Dragon, in that cheesy, over-the-top 80s sci-fi kind of way. Everything bleeds neon, lessening the impact, but gore is still copious.
* Far Cry 3: Blood Dragon is a reincarnation of 80s sci-fi action movies, stuffed to the brim with manliness, explosions, meta humor and one-liners. And neon, lots and lots of neon.
* Far Cry 3: Blood Dragon is a veteran of it). Considering it escalated all the way to worldwide nuclear annihilation, it may as well have been a World War.
* Far Cry 3: Blood Dragon is set in an alternate-timeline 2007 where cybernetics and war are more common, plus culture hasn't progressed past the '80s.
* Far Cry 3: Blood Dragon loads to a logo sequence done in an 80s style, complete with VHS scan lines and a superimposed play symbol.
* Far Cry 3: Blood Dragon movies of the 1980s, and 80s pop culture in general.
* Far Cry 3: Blood Dragon played by Michael Biehn. He is hunting down an army of evil cyborgs led by his fromer commanding officer in a neon Tron-like covered jungle island with robotic T-Rexes.
* Far Cry 3: Blood Dragon, released in 2013, is set in a dystopian, post-apocalyptic 2007.
* Far Cry 3: Blood Dragon (released in 2013) parodies this trope. "The year is 2007. It is the future."
* Far Cry 3: Blood Dragon releases a powerful death ray that drains your health when fired.
* Far Cry 3: Blood Dragon says this word for word as one of his phrases when you use a sniper and shoot an enemy in the head.
* Far Cry 3: Blood Dragon tags, tracks, and identifies enemies and animals.
* Far Cry 3 - but they can still be blown up with less effort by targeting their fuel tank.
* Far Cry 3 by announcing that the plot was a satire. No one believed him.
* Far Cry 3, either with your own incendiary weapons or by shooting theirs, usually results in having him chase after you on fire until he burns to death.
* Far Cry 3 follows a similar trend. The main character, Jason Brody, is a virtual cypher, with the only real information about his past and relationship with his girlfriend showing up in the first few missions. Meanwhile, the supporting cast includes a villain who plays up the "definition of insanity", a tribal queen who alternately seduces and sends you on quests, a kooky survivalist with suicide vest-wearing monkeys (if you bought the DLC) and plenty more mysterious side characters.
* Far Cry 3 German - while he he was raised there, his parents were Americans and he himself was born in Texas.
* Far Cry 3 Has you fight pirates and privateers with everything from pistols and rifles to flamethrowers and grenades but one of the best weapons in game is a recurve hunting bow, despite the fact that it can be hard to aim it. Justified because it is completely silent, you can recover the ammo from enemies and it is designed to bring down tigers and other large predators. For similar reasons stealthily killing your enemies with your machete is often much better than picking them off with silenced firearms: you don't have to worry about people realizing they're being shot at, it doesn't use ammo, take downs are an insta-kill and there are a variety of upgrades allowing takedown to be used in a variety of situations (such as jumping on enemies, booby-trapping them, killing heavies etc.)

* Far Cry 3. He used to be Rakyat, but then there was an "incident" and he joined up as Hoyt's second-in-command. Vaas is usually an unstable crackhead, but whenever he's within ten yards of his boss, he suddenly develops some kind of respect for authority and an indoor voice. Yeah, Hoyt is THAT terrifying.
* Far Cry 3, Hoyt Volker was supposed to be the sole main villain. Then Michael Mando auditioned for the minor character "Lupo". He didn't get the part but they were so impressed by the audition that they decided to scrap Lupo and create an entirely new character for Mando to play, one which took over all advertising and even the cover of the game, and is still agreed to be one of the best villains of the franchise: Vaas Montenegro.
* Far Cry 3 is almost comically brutal. By choosing to side with Citra, you slice the throat of your girlfriend, younger brother, and all your other friends before making love to each other. Shortly after the deed is done, Citra stabs you in the chest, having obtained the seed of "the ultimate warrior", and you basically have killed your friends for nothing.
* Far Cry 3 is... not a normal place. While the island itself never does anything other than sit there, multiple characters insist that the island "calls" to people. Even those who don't believe it will admit that the island does a spectacular job of attracting a single type of person: unfettered, dangerous, vicious, and just a little bit unstable.
* Far Cry 3. It's not clear if the developers didn't understand what a privateer is, or the word is meant to be an in-universe euphemism, or if the developers just decided to misuse it because they thought it sounded cool.
* Far Cry 3 knife that replaces your normal machete. Unsurprisingly, it is more than just a normal sword: it does double damage, meaning it's easier to chew through the later-game super mooks with.
* Far Cry 3 the drugs you can take in the cave are a distinctly different shade of red from the rest of the bowl.
* Far Cry 3. The "Heavy" enemies wear high-grade bulletproof masks that take entire clips to shoot off, while the Flamer enemies have even more armor and are immune to fire. This makes them extremely hard to snipe, but the Heavies don't cover the backs of their heads, and both enemies can be susceptible to a simple Takedown if you select a specific Heavy Takedown skill.
* Far Cry 3, the in-game Survival Guide jokes about it once you receive the parachute after getting to the second island, stating that you should "make sure to watch out for the bags of pots and pans disguised as parachutes."
* Far Cry 3. there's a sidequest called "Faces of Death" in which you take pictures of dead pirates for a man named Nero to show the people of Badtown that there is hope. When you complete the mission, he can't stop proclaiming that they're beautiful and finally says he has to "analyze them in private".
* Far Cry 3, this happens nearly every time Jason has to jump to continue exploring, such as when jumping in the radio towers.
* Far Cry 3" to inspire sheer unadulterated terror among that sort of crowd. Even if your reputation is low, foes tend to panic if they find a body and fail to find the killer.
* Far Cry 3 use knives as close combat weapons when they're not using guns.
* Far Cry 3. Vaas' obsesssion with catching Jason and breaking him amplifies it.
* Far Cry 3, when Jason unjams a cell tower the shops will give him weapons for free.
* Far Cry 3, which represent a knife fight. If your reactions are fast enough, you can probably beat him on the first try. If not, it's a matter of learning the pattern. However, there is a big set-piece battle and a couple of cutscenes still to come before the end of the game.
* Far Cry 3 You'll be spending most of the game exploring the Rook Islands, shooting mooks and being nibbled on by the local wildlife, but we also have:
* Far Cry 4, a demonic deity from the traditional religion and mythology of Kyrat (the fictional country where the game is set in).
* Far Cry 4, Ajay is at one point kidnapped, stripped naked and forced to fight in an arena against tigers and Royal Army troops. You can even briefly get a glimpse

of his penis. It makes his eventual victory all the more badass.
* Far Cry 4 and get less than you would from killing them with a regular-sized gun or especially a bow. Grenade launchers in particular can completely rip apart any living thing smaller than a rhino with a direct hit.
* Far Cry 4 and if you choose to back him he makes an effort to bring back ALL the ancient customs, including the extremely cruel and barbaric ones.
* Far Cry 4, but are so overtly magical that it is hard to believe that aren't really magic (unless the hallucigenics are just that strong and are everywhere).
* Far Cry 4, but in his defence, his underlings really do make some spectacular screw-ups, most prominently failing to check a prisoner for cell phones. His exasperated response:
* Far Cry 4 but not particularly bothered by this) and by implication accepts openly gay members in his organization.
* Far Cry 4 can set these bears on neighbouring enemy soldiers just by throwing meat in the right spots.
* Far Cry 4, down to having the same A.I. coding, weapons, stats, and animations (although some enemies have been given new moves, e.g. machete fighters now having throwing knives and chargers throwing smoke grenades).
* Far Cry 4 has Longinus, a former African warlord turned preacher who is also an arms dealer for the local resistance movement.
* Far Cry 4, he himself admits that was just an excuse to keep doing what he wanted.
* Far Cry 4 in charge of northern Kyrat, are implicitly stated to be foreign mercenaries, mostly of Chinese origin.
* Far Cry 4 is briefly kidnapped and forced to fight there to earn his life and freedom back, though afterwards he may return to continue killing people and beasts with his own free will.
* Far Cry 4 Lakshmana, explain several revelations about your family that would have come very late in the game otherwise, and allow you to spread your mother's ashes, completing the game without having to fire a single bullet.
* Far Cry 4 shares a few traits with Dharmic religions and at the very least seems derived from Hinduism, which isn't surprising given it's located in the Indian sub-continent.
* Far Cry 4. Since Kyrat has no real infrastructure, they receive no real training or uniforms, with some soldiers wearing civilian clothes, and the ones who do wear uniforms look sloppy and disorganized at the best of times. As you progress in the story, many soldiers desert.
* Far Cry 4 that he brought to play. You can make the elephant grab the nearest soldier with their trunk and slam his body into the ground. Or ram the elephant into a car with enough force to kill everyone inside.
* Far Cry 4 the local eagles hunt by carrying a live animal up high and then dropping it to its death. Though they don't try this with humans (merely swooping down and clawing viciously,) they are apparently strong enough to carry a struggling mountain goat.
* Far Cry 5 addresses this by having the player actually deal with Seed for good.
* Far Cry 5 and one (or more) of the Seed siblings get together. Mostly applies to the female Deputy and Joseph, Jacob or John, but sometimes Faith is involved and sometimes the Deputy is male instead.
* Far Cry 5 as her son, and she brings her own helicopter with heavy-artillery guns into battle against the Project at Eden's Gate.
* Far Cry 5. Aside from some new weapons and mechanics (including RPG-style scaling to make the enemies damage sponges) most of the game is essentially the same, with new characters largely replacing older companion characters.
* Far Cry 5 as their second favorite in the official series. Appreciating it's more open structure, emphasis on emergent gameplay, and return of buddies.
* Far Cry 5, both versions can be taken wholesale if you don't want to risk getting shot at, at which point they can be looted at any time thereafter once the player gets where they're going. You don't even need to abandon them after looting them, you can just re-raise the ramp and keep going.

* Far Cry 5: Cheeseburger the bear does not eat cheeseburgers. He got the name from when he was a small cub abandoned by his mother, and survived by scavenging in the dumpster behind the local burger joint. However, when the local wildlife centre got a hold of him it turned out the burger-based diet had given Cheeseburger "the diabeetus", so he was quickly weaned off cheeseburgers and put on a strict salmon diet to get his blood sugar under control.
* Far Cry 5 engage him in close quarters combat to take him down for good, which means you're forced to bolt from cover to cover to avoid his bullets while also shooting your way through a platoon of his goons. As of the game's release, he's the only character in the entire franchise to have this sort of immunity.
* Far Cry 5 into the bodies of his flock and then cuts off that layer of skin while the victim thrashes around in pain. It's a twisted purification ritual. During the course of the campaign, he also does it to you, the player character.
* Far Cry 5 is set in the cultist-controlled mountain valley of Hope Springs, Montana. It's a weird place.
* Far Cry 5: Jacob Seed believes that humanity has become soft in the modern age and that the strong should subjugate and cull the weak.
* Far Cry 5, John Seed’s idea of purging sin is to tattoo a victim’s sin on their skin, then cut their skin off. During the final part of his chapter, he’s already done it to Pastor Jeffries and then does it to Nick, with Nick’s sin being Greed and the PC’s being Wrath.
* Far Cry 5, Pratt's coworker, evidently to demonstrate how thoroughly broken and submissive he's become.
* Far Cry 5 right after for proper closure for the setting and characters.
* Far Cry 5's but ruined to reflect it taking place in the post-apocalypse.
* Far Cry 5's older brother and militia leader, is particularly insistent on this.
* Far Cry 5. The biggest examples are Faith's Angels, living zombies addicted to the bliss.
* Far Cry 5: The memorable opening scene has the main antagonist utter a similar phrase.
* Far Cry 5 where his son went insane and had to be put down, he finally sees what he's been doing is wrong, and he either gets killed by his chosen one or has to live with the guilt.
* Far Cry 5, who's otherwise nice and cuddly, can butcher any cultist on the player's command.
* Far Cry 5, Willis appears again, and goes even further into unlikeable territory by once again abandoning the player once they do what he asks. But this time players can shoot him after they complete his mission and leave him for dead.
* Far Cry 6 below and lets you choose the gender of the protagonist but their name always remains "Dani Rojas".
* Far Cry 6 plays it straight again with its logo in the trailers and box art being mostly pristine but changed from bright white to a burnt orange with scratches and smudges going through the letters and number.
* Far Cry an entire DLC is centered around getting to play as the villains of the third to fifth games.
* Far Cry damage when shot there. Their real weak point is, common-sensibly enough, their head.
* Far Cry dials it back, however, as the starting Webley revolver has low power, a slow rate of fire, and a slow reload, and the returning .44 Magnum doesn't get its long-barrel option... as well as being held away until the point where you can simply skip it and go straight for the even better Desert Eagle.
* Far Cry Dr. Krieger who developed a mutagen that enhances every organ in the body but turned the subjects into ultra violent killing machines — the Trigens.
* Far Cryed from American to German, as per the nationality of its director and the actor playing Carver.
* Far Cry from the game's previously tactical combat against human mercenaries.
* Far Cry games, you can use rocket launchers as makeshift flame-throwers to kill enemies who are trying to ambush you with the backblast if you don't want to blow yourself up with the warhead by shooting them directly. Of course, it's entirely

possible to burn yourself to death by firing while crouched, or against a wall.
* Far Cry has a metallic sound when an enemy spots you or an alarm is triggered.
* Far Cry has this in spades. While your character (Jack) is made of tinfoil in gameplay (you can't drop more than a few feet without suffering massive damage; you'll die after being hit with a handful of bullets — which forces you to always use cover), he becomes much more acrobatic and resilient in the cutscenes. At one point, Jack is thrown out of a helicopter hundreds of feet in the air and lands without a scratch, but falling three stories in-game will instantly kill him. Better yet, in a later cutscene, Jack is shown diving over a console to avoid a hail of bullets (something he can't do in-game).
* Far Cry in an interview that he was in it because Uwe Boll is apparently a very pleasant guy to work with as a director.
* Far Cry, in the second level, a lifeboat is hanging from the top of a beached carrier. A lucky shot from the lower deck of the carrier can break the chains, dropping the lifeboat into the water and skipping the section on top of the carrier altogether.
* Far Cry, it's actually a set of binoculars; they not only incorporate a shotgun mike to pick up conversations, but also isolate the frequency of the transmitter on the mooks so that you can track them on the radar.
* Far Cry: New Dawn, smoke grenades can be used to break enemy sight lines to allow for a safe(r) retreat. Using three of them actually unlocks an achievement. Special enemies like Scavengers and Enforcers also use smoke grenades with abandon against you.
* Far Cry: New Dawn, where not only does that game's hero defeat the villains there, but also finally deals with the previous villain.
* Far Cry Primal burned her son Krati alive for rebelling against her. She now fears Krati will return from the dead to seek revenge on her, and keeps his body on display with a stone mask over his face.
* Far Cry Primal is a rare female example, strolling around with both breasts on display, covered only with blue paint.
* Far Cry Primal, Jayma taunts Takkar by shooting an arrow between his legs, narrowly missing his groin.
* Far Cry Primal, Karoosh's headbutts are surprisingly violent: the first time, he literally staggers Takkar, the second time, he knocks him over (though Takkar gets even with him by Karoosh by grabbing his ankles and pulling them out from under him).
* Far Cry Primal of the Izila, has a small line of ritual scarification crossing the bridge of her nose, appropriately for someone with a vaguely Afrocentric appearance.
* Far Cry Primal, Takkar the caveman's hunting party is attacked by the Bloodfang Tiger, who kills two of his friends effortlessly. Takkar runs up to the Bloodfang Tiger and sticks a spear in its ear, but the Tiger just shrugs it off and lashes out at Takkar.
* Far Cry Primal than sewing up his stomach wound. Granted, he's somehow healed again by the time Takkar reunites with him, but still...
* Far Cry Primal, the Izila tribe practices human sacrifice, and various sites where they do it can be found around Oros, including one that looks like an intact Stonehenge.
* Far Cry Primal wear skull masks and helmets, and they all tend to wear bones for armor.
* Far Cry Primal. Wogah smugly urinates all over Takkar, not realizing he's a fellow Wenja. From that point on, Wogah addresses Takkar as "Piss Man".
* Far Cry remake of the first game, are rendered in Ubisoft's own proprietary Dunia Engine.
* Far Cry, seeing the veins in your arms turn dark is how you find out that you've been exposed to the mutagen.
* Far Cry series are fueled by valuable black market products: mutants, blood diamonds, slaves, and LOTS of drugs.
* Far Cry. The level "Rebellion" showcases it best, when Jack has to go through

battle sites between the Trigens and the Mercs, and can be targeted by both if he doesn't wait for one side to be wiped out.
* Far Cry. Valerie accidentally fires a grappling-hook at the helicopter that is flying above the car that the main character Jack is driving. The helicopter then starts carrying the car when it goes over a cliff, and once the cable holding them together is cut, it flies up on the helicopter's main rotor and sends it crashing down.
* far different from the 1996 one. The four schools that joined in 2021 are all from Texas, previously home to two WAC members, and the 2022 entry is from Utah, also home to two pre-2021 members (with one of them less than an hour's drive from the newcomer). And even though the revived WAC football league started with single-sport members in the very non-Western states of Alabama, Arkansas, and Kentucky, those schools are only in WAC football to give it enough members to qualify for an automatic bid to the FCS playoffs, and will leave once their home conference starts its own FCS football league.
* Far different than most of the honorable sword-on-sword fights you see in films set in Medieval Europe, most fights were far more
* Far disguised as Elan (made easy given that they're identical twins), with Elan in jail on Nale's behalf. Zz'dtri disguises themselves as one of Tarquin's aides during the Order's time in the Empire of Blood (so that they can reveal themselves along with the rest of the Linear Guild). Lastly, in a bizarre case of Enemy Dressing as the Enemy, Tarquin disguises himself as Thog because he considers Thog to be too much of a loose cannon, but they can't let on that it's really Tarquin fighting them.
* far distant past, and whatever society and culture he belonged to has long-since died out.
* Far earlier, in the first series, Fireheart's sister Princess is a kittypet who is curious about Clan life but wouldn't want to live that way, and who makes one or two comments on how Fireheart doesn't look like he's getting enough to eat. By the end of that series, she's become a hysterical worrywart terrified of the forest.
* Far earlier, in the "I can Fly" arc, Dr. Lee realized Tip was bullshitting her:
* Far East Asian Terrorists: Ruthless militants from a country in East (or Southeast) Asia.
* Far East Asian Terrorists: Ruthless militants from a country in East/Southeast Asia.
* Far East Asian Terrorists: Ruthless militants from East/Southeast Asia.
* Far East Movement 200. Today they're commonly regarded as a one-hit wonder for "Like a G6".
* Far East Movement's "Like A G6" apparently resulted in people demanding to be able to fly in a G6, which Gulfstream Aerospace has not made, as they were still producing the G4 at the time of the song. They eventually got their wish in 2013 when Gulfstream released
* Fare Thee Whale, after they've exposed Plunder and Blight's scheme, she tells them "I'm proud of all of you".
* Farewell, a famous poem by Chilean poet Pablo Neruda, is about sailors that keep relationships like this, kissing girls and then leaving, and doing it again until their ships sunk and they die.
* "Farewell (Happiness Will Always Be A Cigar Named Hamlet)" was the company's last cinema ad, and as such featured people stuck in sticky situations humming the familiar Hamlet jingle, "Air on a G String".
* Farewell My Concubine by Chen Kaige features several scenes set during the Cultural Revolution.
* Farewell, My Queen: Sidonie is about to have sex with Paolo when she is called by the Queen.
* Farewell, My Queen: The Queen is implied to be in love with Gabrielle de Polignac, who is ungrateful to her. Sidonie Laborde is implied to be in love with the Queen, who sends her on a suicide mission to protect Gabrielle de Polignac.
* Farewell to Life the Way We Knew It: In hindsight, the all-girl band The Misfits aren't that surprised that their groupie fangirl Clash is a lesbian.

* Farewell to Life the Way We Knew It: It's mentioned that, due to the high unemployment rate, many people hang around bars, even in the morning.
* Farewell To Lochaber. In a variation, the singer claims to go to war to earn honour, so that he can become worthy of the woman he loves.
* Farewell to the King fits this trope to a T. Nick Nolte, playing a marooned US soldier evading the Japanese, is captured by natives on the island of Borneo. He is saved by tattoos he had gotten in a drunken stupor in the Philippines, which the natives consider to be marks of a God.
* Farfel the dog, the ventriloquist dummy mascot for Nestlé back in the 1950s and '60s, would end his familiar jingle (N-E-S-T-L-E-S/Nestlé's makes the very best/chaaaw-klit) with a "chomp" sound. This was because Jimmy Nelson — who performed him — was nervous during the auditions, causing his sweaty hand to slip off the mouth control. The executives liked this so much they they kept it in ever since, even when
* Farfetch'd, which has exactly two things going for it: a personal item that greatly increases its chance of getting a critical hit, and the fact that it looks cool. The personal item really doesn't matter, considering its stats are so bad that it will still be a weak hit even with a critical, and that's if it can survive long enough to hit anything. In the original
* far-flung, poorly managed, guerrilla-laden) representing the stranded German settlers and garrison personnel.
* far. Frequently, it would be introduced that "Primes" represent some kind of higher lineage, with Optimus either being part of a dynasty or a straight-up reincarnated deity.
* Far from Heaven as well. She tries to comfort him by saying she doesn't care and that he's "all man", but it doesn't quite help.
* Far from Heaven coming the following year. To this day, Focus remains as Universal's indie division, and still distributes movies that become Oscar contenders and box office hits.
* Far from Heaven: Julianne Moore's character rushes to the train station to say goodbye to Dennis Haysbert. He sees her at the platform but makes no move to get off the train and go to her. The train pulls away from the station with the two of them looking at each other, then Dennis steps back inside the train as it rolls down the tracks.
* Far from Heaven. The score is by Elmer Bernstein, who composed music for several famous films in the '50s.
* Far from Heaven things would have been extremely controversial). The fling is over before it can even begin, thanks to both of them being aware of the disastrous ramifications.
* Far from Home, pirates use high-intensity flares in missiles so as to take the heroes alive.
* Far From Home, Rose manages to regain a body by taking possession of an emerging Rose Quartz soldier.
* far from recommended. The Concepts are divided into Alicorns, who are Nature's Order, and the Draconequui, who are Nature's fury. Among the Alicorns are the Princesses Celestia, Luna, and Cadance, and among the Draconequui is Discord.
* far from the first case of such a thing happening of peoples' eyes to the fact that, despite being in direct violation of Youtube's ToS, Youtube will happily turn a blind eye to blatant violations, as long as your videos bring in a lot of viewers and thus ad revenue.
* far from the first time that sort of thing has happened. It's probably best to expect people supporting these kinds of bills don't know what they're talking about.
* Far from the Madding Crowd when Bathsheba, as a prelude to asking her employee and former suitor Gabriel Oak for advice about her love life, offers to help him sharpen his shears. She doesn't hold them right, though, so he takes both her hands in his as he shows her how to hold them against the whetstone, holding them longer than necessary until she tells him to let her go.
* far from the only objective; coordinated attacks over the course of a few hours

(all at local dawn) basically swept Allied forces from the Pacific in a single stroke, including taking the US territory of the Phillipines and eliminating American air power in the Pacific with it.
* Fargate has one of these as their home system. As these aliens possess no apparent mechanical technology but are the masters of biological manipulation, the entire double-layered Dyson Sphere is grown organically. It looks very fleshy.
* Far Gate with DNA-shaped pink and blue strands coming out from the middle.
* Fargo: Actor Allan Dobrescu has cerebral palsy, as does his character, Charlie Gerhardt. Similarly, Mr. Wrench, a season one antagonist and fan-favorite character, is a deaf hitman played by deaf actor Russell Harvard.
* Fargo, are not saints either. Weff is on the Fadda Family's payroll who stifles investigations into their activities, while Deafy is a bigoted Mormon who is very brutal towards criminals, if his story of his handling of Italian gangsters in Salt Lake City is true.
* Fargo: Bear Gerhardt has a voice that could shake the fillings from your teeth. He also proves to be the most formidable Gerhardt brother.
* Fargo begins with the camera panning over a mountainous area (previously unseen in the series), followed by a wrecked snowmobile and a frozen lake with a hole in the ice. This foreshadows the fate of a main character.
* Fargo, but Emmitt is two years older than Ray. Ray is a balding, shifty, and bitter parole officer barely making ends meet. Emmitt is a handsome, enormously successful, "parking lot king of Minnesota". The resemblance the brothers have to one another becomes a plot point in episodes 4 and 5, Ray is able to impersonate Emmitt by shaving his mustache and donning a convincing wig in order to get into Emmitt's safety deposit box. Then one episode later, he and Nikki ruin Emmitt's marriage by sending Emmitt a sextape of themselves that's meant to be blackmail, but inadvertently is first discovered by Emmitt's wife.
* Fargo, Ed Blumquist is mistaken for a hitman nicknamed The Butcher, when in fact he's a fairly unremarkable man who happens to be a butcher's assistant by trade.
* Fargo Faulty Towers Plot is about a dozen deaths, all of them a product of the crooks' violently poor impulse control, and Lundegaard ends up in jail.
* Fargo Grimsrud is caught in the act of disposing of the body of his double-crossed partner, Showalter, via wood-chipper.
* Fargo has several deaths that are very underplayed/somewhat comical, with much more focus being placed on the survivors and their reactions than on the deaths themselves. This series is also by the Coen Brothers, who have a couple of other examples listed under "Films" above.
* Fargo. Her melancholy husband keeps house and paints ducks for a hoped-for Post Office commission.
* Fargo: In a philosophical conversation with Nikki, Paul Marrane urges her to overcome life's suffering nature and "deliver a message to the wicked."
* Fargo: In season 2, Karl Weathers, the sole lawyer in Luverne, has been summoned by Lou to the police station to act as counsel for Ed. He goes despite the fact that he spent most of the night drinking and is extremely tipsy. After talking with Ed, Karl leaves the station just in time to see Bear Gerhardt and a posse of his men arrive with the intention of storming the station to free Charlie Gerhardt and lynch Ed. Karl runs back into the station and pushes a bench in front of the door to barricade it. The door is made out of glass AND it opens outward so the barricade is completely useless but Karl is too panicked and too drunk to realize that. Lou instantly recognizes that the station is indefensible and their only option is to distract the Gerhardts and sneak Ed out through the back.
* Fargo: In "The Heap", Ida mentions that when Vern was courting her, he gave her a bouquet of poison ivy. Which he picked himself.
* Fargo in the pilot; while attempting to warn off an inquisitive traffic cop, he suggests that poking into his affairs will not end any better than attempting to chart such seas.
* Fargo is a classic example. He is a demented psychopath who is completely apathetic and taciturn throughout the movie, even when he is committing cold blooded and often graphic murder.

* Fargo is an almost mute character, though he is also a demented sociopath.
* Fargo is a raging misogynist in addition to being a power-hungry, impulsive psychopath. He beats his wife and daughters and views his mother as being incapable of taking over the family business. He waxes poetic about the greatness of males and the weakness of females to a would-be victim.
* Fargo says it's based on a true story, but the Coen brothers revealed that they just said that to mess with the audience.
* Fargo Season Four plan to help out Zelmare's sister with her debts is to rob the Cannon Limited, a mafia bank that targets Kansas City's black population, unaware that the Cannons are the same people to whom Zelmare's sister owes her debt in the first place.
* Fargo Season One: Don Chumph attempts to blackmail Stavros Milos, even though he doesn't have any blackmail material. Chumph reasons that someone as rich as Stavros must have some skeletons in his closet. Malvo quickly hijacks his plan. He also inexplicably asks for an incredibly specific amount of money, the exact amount he calculates he'd need to found the business he wants to start.
* Fargo Season Three. And Maurice, the ex-con Ray hires to steal the stamp, really stands out:
* Fargo's GD personnel file contains the phrase "inappropriately pushed button" 37 times.
* Fargo shows that even the morally ambiguous are not exempt when they dabble in crime.
* Fargo sounds like he's desperately trying to explain to his father-in-law that his wife has been kidnapped, but stumbling over his words. It turns out he was just trying to find the right way to sound worried before he actually picked up the phone.
* Fargo, then shoots the waitress. Mundt recovers and manages to stab Rye in the back with a knife from the table before he is able to finish her off. The waitress, badly wounded, tries to flee the scene as Rye steals the money from the cash register to make it look like a robbery, but Rye hears her opening the door, follows her out into the parking lot, and shoots her in the back. He's then distracted when he sees the lights of a UFO appear overhead. Wandering out into the road to investigate the lights, he's suddenly struck by Peggy Blumquist, who drives off with Rye stuck in her windshield. State Trooper Lou Solverson and his father-in-law, Rock County Sheriff Hank Larsson, end up being the primary investigators on the case.
* Fargo, there is a shot of a polka band poster in a teenager's room. It's not as much a comment on the teenager, as much as one on Minnesotans in general being dorky, or at least square.
* Fargo. The second season is even further removed from the movie, and has little to do with the first, although some characters appear at younger ages.
* Fargo the stories are spread over a large Midwest area consisting of Minnesota and the Dakotas. They are shown in a perpetual state of winter, and the area attracts an unseemly amount of gang violence and brutal crime. It also attracts flying saucers and an assassin implied to be the Devil himself, and contains a bowling alley that may be a portal to the afterlife.
* Fargo to be based on actual events, but in reality it's not even loosely based on anything that actually happened. Though the scene with the wood chipper being used to dispose of the body was inspired by what happened to murder victim Helle Crafts, except it was her husband who forced her body through the wood chipper. That case was the first one in Connecticut where a murder conviction was secured without a body (because only several ounces of body was ever recovered).
* Fargo to gag, tie him to an exercise wheel, and stick an unloaded shotgun in his hand which is then pointed at the front door. He draws the cops' attention by firing a rifle at some cars outside, leaves, and then a tripwire makes the rifle fire more once the SWAT team arrives. When the team enters the front door, the light is in their eyes, so all they see is a silhouette of a man holding a shotgun. Since the exercise wheel keeps him propped up even after being shot, the entire unit shoots continuously for several seconds until they can see he's dead.

* Fargo to the cast certainly helped). The season is still divisive, but much more well-liked than at the beginning — with "Who Rules the Land of Denial?" being seen as one of the series' best episodes.
* Fargo, tries and fails to repair the washing machine himself. His wife belittles him for it, the argument escalates, and he murders her.
* Fargo until we see a flashback wherein a character discovers the money that was hidden in the snow at the end of the film.
* Fargo" Virgil takes a shot at Ed, but it misses and ends up hitting Charlie, knocking him out.
* Fargo was a kidnapping of his wife arranged by Jerry Lundergard as a scheme to get money out of his father-in-law to pay off his gambling debts. The hired kidnappers were just supposed to kidnap Mrs. Lundergard, take her to a cabin at a fishing resort, and wait for Lundergard to get the ransom money, which they would split. Unfortunately, Lundergard forgot to put a license plate or an in-transit certificate on the car he gave the kidnappers, which causes them to be stopped by a state trooper, who looks inside the car when he hears the kidnap victim making noises, and this causes one of the kidnappers to impulsively shoot him in the head. Not only that, but a car with a teenage couple witnesses this, so they have to be murdered, too. So an arranged kidnapping scam turns into a triple murder, from one screw-up after another.
* Fargo, when one of the Kansas gangsters coming to attack the Gerhardts fetches a longbow out of the trunk of his car (bragging "Anyone can fire a gun - the longbow is an art.") only to be the first on the receiving end of a headshot (with a gun).
* Fargo when the cheerful, domestic, heavily pregnant policewoman Marge joins her partner at the site of a homicide and starts to gag — then, when the morning sickness passes, continues calmly assessing the crime scene.
* Fargo When two criminals break into the Lundegaard house to kidnap Jean, she flees into the bathroom and locks the door. The kidnappers break the door and find a seemingly empty bathroom and an open window. Jean is actually hiding in the shower; she only gets caught because one of the kidnappers lingers in the bathroom to disinfect a cut on his hand.
* Fargo, where pregnant Brainerd police chief Marge Gunderson keels over and seems about ready to vomit while looking at the bodies of the two bystanders Gaear Grimsrud shot to eliminate any witnesses to the shooting of the state trooper, but it quickly passes and she dismisses it as morning sickness.
* Fargus, he would then refuse to take you to the Dread Isle, resulting in a similar ending.
* Far Harbor DLC takes you even further up north to Mount Desert Island, Maine where the mysterious Fog has resulted in even more dangerous creatures such as the Gulpers (giant and gluttonous mutant salamanders) and Fog Crawlers (giant mutant shrimp) as well as the presence of the Children of Atom cult who worship it as a holy symbol of Atom.
* Far Harbor's Wolves and Fog Ghouls are mainly cosmetic variations of the main game's Mongrels and Feral Ghouls with little statistical difference. Mirelurks also have a powerful "Bloodrage" variant that can also spawn in the Commonwealth at high levels.
* Far Harbor, you can convince High Confessor Tektus to either walk away (if you're replacing him with a Synth double) or to talk him into blowing up his cult with the nuke in their base.
* Far Harbour, enormous bipedal salamanders and giant, monstrous arthropods such as hermit crabs that use abandoned trailers as shells and two-story tall Fog Crawlers (once some sort of shrimp), all thanks to the radioactive fog shrouding the Island.
* Faria, townspeople often drop accurate hints about things they should have no reason to be concerned about, like how many statues are in the nearest tower or what the boss's weakness is.
* Faries also play with this a bit in that they can't actually die permanently, making sending them into otherwise suicidal situations feasible. Otherwise, they're at the bottom of the
* FAR if she didn't look like she had a man's face pasted onto her body.

* Farinelli: A film based on the life of Carlo Broschi, whose stage name was Farinelli, a famous 18th century castrato and regarded as one of the best opera singers of all time.
* Farinelli. At one point he deliberately holds it long enough to give Haendel a heart attack.
* Fariña, a book by journalist Nacho Carretero documenting drug dealing cases in Galicia in the '90s, was seized by court order after a former mayor mentioned in the book sued Carretero for damages. That very week, the book became a bestseller on Amazon Spain and the premiere episode of the TV series based on it — which was not affected by the court order since the judge considered the script of the series was unknown and the airing date was uncertain — was promoted for a preview release.
* Farin Urlaub has a song titled "Phänomenal Egal", which narrates the singer's phenomenal indifference the singer feels towards his girlfriend.
* Farin Urlaub. He's sitting with his girlfriend in their garden and wait for said apocalypse. Just when the morning has come and he thinks to live for another day...
* Fark community is to utter this after making or laughing at a particularly tasteless joke. It has become ubiquitous enough that most people don't even bother to say it, just "One ticket, please" or request a window seat. At least one commenter has requested the "bitch seat" (sitting between two other passengers), reasoning that on any plane or bus to hell, every seat is a bitch seat.
* Fark, despite being already self-sufficient thanks to its traffic generating scads of clickthroughs, has recently started offering T-shirts with the joke headlines and tags for stories featured on the site.
* Fark has, along with such categories as "Interesting", "Cool", "Asinine", "Scary", and "Weird", a category named "Florida".
* Fark has the same division, created when they offered, for $5/month to be able to see the links that weren't approved for the main page. Folks started submitting links which they specifically didn't want on the main page, just to be able to use the comments sections like a forum (Fark does not have a formal "forum", just a mass of rejected links). From that mass, the TotalFark community was born.
* Fark has turned it into a new meme: its filter replaces "first (to) post" with "Boobies" and "first comment" with "Weeners", and if the post actually was first, adds twelve hours to its time stamp, thus pretty much guaranteeing it will be the minimum post (last post in Fark filter).
* Fark is (apparently) particularly vulnerable to guinea pigs, or, as they call themselves, TEH PIGZ.
* Fark often contain links to items such as "The most amazing picture/video of (extremely specific object or event that you aren't likely to see ever again) you'll see today."
* Fark, often posted in celebrity death threads. On January 26, 2016, when Vigoda died for real, Fark made their banners black and white in his honor.
* Farlaine the Goblin because he is listed as "Anonymous" in book listings. The very few times he refers to himself, he uses "J" and nothing more. The creator said it because he wants people to focus entirely on the comic.
* Farlaine the Goblin was originally published anonymously, but the author finally settled on a pen name "Pug Grumble" after a few years because he realized not having a name made it difficult for people to follow up on new books in the series. Also, he goes to comic conventions and more and more started requiring some sort of name before they could be given a table space.
* Far less consistently, but still quite often, the monster of the week had some connection to Time Travel, even the giant spiders from
* far lesser version than is common in the setting, as the debris were small enough to "only" take out city blocks instead of killing the entire planet.
* far less likely to be targeted by others and they will most likely take your word if you accuse someone. If you establish yourself as a reasonable, decently friendly person, earning people's trust becomes a lot easier.
* far less severe than what an adult would suffer going through a similar motion. With their low mass due to this trope, they just can't impact the ground with

enough energy to cause more than minor damage (admittedly, being low to the ground and having less time for gravity to accelerate them downward is a factor as well). Small children are also likely to be able to do exercises like pull-ups without any training or effort, as the strength-to-mass ratio is much more favorable than for adults fully grown.
* Farley Claymore later ends up diving through a window overlooking the lobby (three floors up) while trying to flee from the Shadow, notably after the Shadow
* Far: Lone Sails, the desert the protagonist is riding through was obviously a dried up ocean, in the end they finally make it to the coastline and, it's implied, are rescued by a ship.
* Far longer than that, especially for the First Brood. The Dragonsong War has been raging for a thousand years by the time of Heavensward, but for Nidhogg, it may as well have started yesterday. And Tiamat
* Farmageddon: A Shaun the Sheep Movie before the film was finally released stateside.
* Farm Boy monsters, and merely arranging for a proper transportation to come get him would take at least half the time the expedition is supposed to last anyway. Add the twenty-something days the boat will need to get there, and the transportation might as well be used to pick up the whole expedition crew once their mission is complete.
* Farmboy Oscar is forced to get involved with the fight against Salem and the Grimm at age 14.
* Farm Boy: When the hero is just a simple peasant from the countryside.
* Farmer Al Falfa builds this kind of robot to help out with his work in the
* Farmer Boy, Almanzo is egged on to lick a pump handle, but knows better than to rise to the bait.
* Farmer Boy, so much description is given to Almanzo's mother's formal parlor — so elaborate her children are not even allowed to set foot in it — that when the children spend a week alone in the house, it's difficult to see Almanzo's throwing a tar brush at his sister and hitting the parlor's brocade-papered wall as anything but inevitable.
* Farmer Boy the last teacher who'd worked in that area), the fact that that whip is clearly being used as a weapon in that scene makes it pretty disturbing later on when nine-year-old Almanzo expects to be whipped with it for getting stove polish on the nice parlor wallpaper. We already knew from earlier that Almanzo's father whips his sons with actual whips, but that thing is described as being fifteen feet long with a lead-weighted handle that can kill an ox.
* Farmer can barely speak English in the movies; thus, most people who saw the pictures first are surprised to learn that in the books he speaks a variety of languages, including at least one non-human one (Ape or "Mangani" — his "native tongue"). His talent in this area may exceed Doc's; by the end of the second book, after only a year or so around other humans he has mastered French, English, Arabic, and the language of his adopted African tribe, Waziri, roughly in that order.
* FARMER ENDS 'BATH' PARTY AT MIDNIGHT: Likes Nature, But Prefers to Sleep; Clothing of 40 is Confiscated.
* "Farmer Guy" had a cow disguise himself as a human this way, and was mostly flawless until Peter got wise.
* Farmer in the Sky already in the 1950s; the extraterrestrial pioneers grow beards because the depilatory cream, imported from Earth, is hideously expensive.
* Farmer in the Sky, and the first two expeditions to Venus died to the last man".
* Farmer in the Sky, Bill doesn't understand why Gretchen would get upset when she comes over to help him work and he immediately mentions they should also ask her sister to help. "Women are funny". When he is injured and she visits him in the hospital, "...[she] could hardly talk, which isn't like her".
* Farmer in the Sky, Bill Lermer meets the captain of the shuttle up from Earth, who mentions having been "captured by pirates". Bill doesn't challenge him, but thinks he's spinning a yarn. But when Bill tells his father about the encounter,
* Farmer in the Sky, Bill Lermer's father explains why they have an engineer along

in space, when the engine is a radioactive torch that can't be shut off in flight.
* Farmer's Daughter after she's been knocked up by a porn star. Presumably it was more acceptable to their audience than mentioning AIDS as a reason why you should practice safe sex.
* Farmer's Daughter sees a frog and hopes that if she kisses it, the frog will turn into a handsome sheep shearer. The frog does change accordingly, but then when he kisses her, she turns into a pint of beer.
* farmers, descended from criminals who'd been sentenced to the "humiliating" task of growing food. The Wyrwarfs, tired of being treated like riffraff, voiced their discontent by threatening to withhold food from the other clans: if the clans refused to acknowledge farmers as equal to miners and artisans, they could huddle down deep with their trinkets and eat rocks.
* Farmers in modern developed countries have to know how to operate everything from tractors, which can have three gear sticks and all kinds of attachments, to combine harvesters, trucks, ancient rusty utes, (pickups) motorcycles and then operate and maintain all the seeders, cultivators, sprayers and other complicated machines. Optional extras are horses, light aircraft (ranging from ultra-lights to crop-dusters to helicopters) and
* Farmer's Insurance has a series of commercials showing some of the more bizarre things they've covered. One of these is referred to as a "Truck-cicle". We see a reenactment of the incident which shows two men ice fishing. One of them parks his truck on the ice and climbs out with a massive drill, implying he causes the truck to break through the ice by improper drilling. Instead, he puts his foot through the ice while carrying the drill and causes the truck to break through from the crack that forms from that.
* Farmers note that the personalities of chickens vary from breed to breed; some breeds are docile, but others are notoriously aggressive and all of them have hierarchies within the flock, which is why we have the phrase "PECKING order." And while they're pretty benign omnivores normally (you can feed them a wide range of insects, grain, and table scraps), they're also known to catch all sorts of small mammals/reptiles that wander into the coop. Meaner chickens can get carried away with inter-flock hierarchies and will often pick on their lower-ranking members.
* Farmer Weathersky, the hero meets three very similar witches, one at a time, each using her nose for a different task, commanding animals of a sort vaguely related to that task, and providing some of those to the hero.
* Farmgirl and Goodwitch mourn Dark Lady's passing in the artwork for Kozmourning in the
* Farming and domesticated animals are often brought up together as if they presuppose one another or "naturally" arise together. As a matter of fact, they don't. The dog was domesticated long before any crops were and societies in Oceania and the Americas had domesticated a wide variety of crops and only a handful of animals if that (llamas, guinea pigs and sorta-kinda turkeys), because those were all they had. The fact that the old world contained so many domesticable animals caused many diseases to jump from humans to animals and back in the old world but not the new world. The result when Europeans happened upon the Americas was devastating and not entirely understood until the 20th century. On the other hand some of the real life
* Farming has done this for plants as well. Selective breeding over thousands of years has created fruits, vegetables, and grains that are
* farming kind, not the flower kind!) and for a reason probably tied to the curse, a prison, inside it. And it's located in an island far from most civilization areas (in fact, this is considered one of the most remote dungeon in the game) which can make you wonder why would anyone need an abbey this big when there's not many people around.
* Farming Simulator 2013 is surprisingly popular, not for the game itself but for its hilariously broken physics engine.
* Farmington Tales having to wash her hair is Kaylee's excuse when Floyd mentions that Manny's been thinking of asking her out. When Floyd comments that he hasn't even told her what day Manny mentioned, she replies that whatever the day, there'll

be a lot of hair-washing and ironing going on.
* Farmington Tales the quest-giver states that she gets so lonely while jogging that she drew a face on her water bottle and called it Bob.
* Farm Of Souls: You run one of these. But it's okay, because you're being scored on how happy the souls you harvest are.
* far more. But Kakarot talks Broly out of killing Paragus. The sight of the Super Saiyan, the legendary scion of the Saiyan race, talking about mercy, causes Paragus to realize he was still following ways of the failed King Vegeta despite no longer serving under him and admit Broly deserved better than to live under him. After parting with his son, Paragus leaves his old villainous ways behind.
* Far more common than you'd believe. In a fight, you're always telling an observant opponent what you're about to do through body language. Whether you're going to throw a punch, a kick, or a really complicated technique the movements of your body are broadcasting exactly what you're going to do. The industry term for this is "telegraphing."
* far more complex and difficult than any other enemy in the game, even including the overworld bosses, and are the only overworld enemies that use more than one type of weapon at a time.
* far more detailed. The characters have a far larger variation of poses and angles which allow for more fluid animation. Scenery is also much more lush and detailed, near nothing like the original layouts that were very much made to look like the original pilot's cutout style.
* far more entertaining to try and stay ahead of the gliding bomber it was refueling). The practice mostly went out of fashion with the introduction of both jet-powered transports and the turboprop engine (itself being a relatively small turbine engine turning a large propeller).
* far more obscure song than "Did I Shave My Legs for This?", which only got to #25.
* far more often than expected, and by July 2018 it had to suspend service when it ran out of cash. The company had to institute a slew of new and constantly changing rules to curb its large user base such as requiring pictures of ticket stubs and surge pricing, and eventually limited users to three tickets a month and only supporting 5-6 titles a day with major releases blocked out for several weeks.
* far more personal connection to the bad guys than Ichigo does, and some of their stories play out while Ichigo is otherwise occupied before the focus switches back to Ichigo for the final battle. Hitsugaya's history of unusual power at a young age and having to cope with the alienation it causes is even parallel to that of Aizen's: the difference between them being that Hitsugaya came through the other side having found a place, friends and allies, whereas Aizen felt so alienated, he turned his back on everyone and the world instead.
* far more sinister example would be from "Phineas and Ferb Get Busted":
* far more sinister. Hakuoro turned the remaining humans (most have died in an implied cataclysmic war) into blob monsters, although to be fair they killed and dissected his wife and child first.
* far more success) before the start of the game, as seen in a Memory Prism flashback. Afterwards, she notes he's much friendlier than she assumed at first. It suggests that his rescues are out of genuine concern, despite all his flirting.
* far more user-friendly than before. Other than that, gameplay was mostly the game as the MS-DOS version.
* Farm Planets — If a Planet City is lucky, there will be another planet in the same system which is dedicated entirely for food production. Most of these are like a giant version of an American Midwest wheat farm. Complete with hicks. Technology level may range from highly advanced (in which case they are often largely automated with a population as low as hundreds or thousands) to feudal.
* Farm-raised pink salmon are often fed red food dyes to turn pink (wild salmon eat shrimp, which colors their meat; farm-raised salmon is usually fed cornmeal and fish meal, resulting in a white meat). Undyed salmon advertised as such is probably just a question of time.
* Farmville 2 lets you earn a sweetheart to help on the farm, who you eventually

get engaged to and marry. You are allowed to choose either sex as your partner, and have a family with him or her.
* Farmville can hold up to 40 animals when fully expanded. This is reasonable for rabbits and other small creatures, but gets ridiculous with horse paddocks, cattle yards, and especially zoos, which can be stuffed full of 40 elephants.
* Farmville (especially in a non-critical light). The game was marketed at people outside of the "hardcore" gaming audience, so most players only play the games without discussing them.
* FarmVille (where the canopy is literally a tiny galaxy hovering over the branches, and the fruit seems to be stars) and countless others. If you can think of it, there's probably a tree that grows it.
* Farndale Avenue plays are a series of supposedly amateur productions that always descend into (actually carefully choreographed) chaos. At least once in each play, the production's harried director, David, will emerge from backstage to try and get things back under control. In the original stagings, David was played by the actual director and co-writer David McGillivray.
* Farndale Avenue plays, each presented as a production by the disaster-prone Farndale Avenue Dramatic Society:
* Farndale Avenue running gag where, somewhere around the beginning of the second act, the leader of the amateur dramatic society will remark to another character that she noticed a significant number of people leaving during the intermission. She always comes up with an innocent interpretation and never realises that they're being driven away by the awfulness of the production.
* Farnese and Serpico show many of the difficulties of families that are related by blood but struggle to understand each other. Farnese was neglected by her father and behaved outrageously as a cry for attention, while Serpico was the bastard son of a nobleman and a serving woman who resented his mother for controlling him and his father for abandoning them. Farnese and Serpico grew close from growing up together
* Farnese, during her messed up phase as a Holy See official, engaged in the occasional bouts of self-flagellation.
* Farnese's role as the figurehead of the Holy Iron Chain Knights is to investigate reported miracles for the Holy See... which directly translates to "burning people who don't believe or don't believe enough in the Holy See's religion at the stake."
* Farnham Fables. Although Fredrick is OK with playing with her while escorting her back to her mother, he will refuse to do so while at the bus stop out of fear of this trope happening: it's a much more public area, and passersby could easily get the wrong idea if they saw them.
* Farnham Fables opens with the player controlling Cally as she looks around the castle. Once she encounters the King, the story proper begins, which is framed as King Farnham telling her a tale about an adventures the princes had.
* Farnham Fables' third episode, Theresa accidentally stumbles upon the escaped manticore in her classroom, and is absolutely terrified of the creature. When her brother Vincent picks her up to bring her to safety, she is shown tightly hugging him. It's not quite the "leaping into his arms" variation since he's the one who picked her up in the first place.
* Farnham Fables to treat a sick fox, then give it Gloria's skirt, which they found in the woods, so it can track her scent to a hidden clearing.
* Farnham Fables, we have Winona Edison and her older sister Wendy, who love each other very much. In Episode 2, when Winona suffers a bout of depression, Wendy comes to cheer her up by painting her nails while listening to her talk about her day.
* Farnham Fables Wendy and regains her sunny disposition for the rest of the episode.
* Farnham's Freehold, Farnham's daughter mentions to him that, of the three men she's been stranded with, he's the one she'd prefer to father her child (if she weren't already pregnant just now). Her dad is completely undisturbed and in fact flattered by this.

* Farnham's Freehold takes place in the aftermath of a version of World War III which utterly wrecks Western civilization.
* Far North reflects that they should have known she wouldn't be the last.
* far) of minutes it takes to complete it, he won't survive long enough to get it off, and the longer it takes him to find and convince others to help, the longer the Bomb will take to complete.
* Farouk of Egypt), and filched a sword from his brother-in-law, the Shah of Iran. He thus obtained the unenviable nickname, "The Thief of Cairo." He was overthrown in 1952.
* Far Out, Brussel Sprout, a book of Australian schoolyard rhymes, contains this one:
* Far Out, Brussel Sprout!, a book of Australian schoolyard rhymes, has a version of "Twinkle, Twinkle, Little Star" that replaces the last two lines with:
* Far-Out Foreigner's Favorite Food: A foreigner picks out a favourite food.
* far out into the Local Group The rings themselves are 10,000 Km in diameter which is almost the same diameter of Earth. The original twelve were even larger with diameters of 30,000 Km.
* far outlive any facility or structure that contains it on the process.
* far out of his way to do things in character that he would never have done as himself. When he was disguised as Tony, he chain-smoked cigarettes, never turned down a free drink, and ate red meat without blinking an eye — all guaranteed to shock anyone who knew that it was Andy Kaufman (a fairly straight-edge vegan) behind that mustache.
* Far Out Space Nuts: NASA janitors try to return to Earth after an accidental launch.
* Far Out There. Come December, the comic shifts from updating twice a week to updating daily to squeeze in as many Christmas comics as possible.
* Far Out There. Further evidence suggests that most homes or ships only have one.
* Far Out There has a series of Voting Incentive comics titled "The Killer Station of Deadly Doom".
* Far Out There is often accused of being this, though the author denies it (He claims he just wanted Ichabod to LOOK like him to for cosplaying purposes)
* Far Out There that not only re-imagined the character to be more sympathetic, but also drastically changes the details of Pattie and Layla's falling out.
* Far Out There that the cast could have a ship of their own if Ichabod wasn't too lazy to buy one.
* Far Out There though there are plenty of genetically manipulated humans who might as well be aliens.
* "Farquaad" was also used as a way of getting as close as possible to "fuckwad".
* Far Rainbow, the Charybdis are truck-like machines that "suck up" thermal energy, specifically the energy of the Waves. Their "funnels" are repeatedly compared to the mouth of the mythological monster they were named after.
* Far Rainbow, who only get together as they are about to be annihilated
* Farrell's, a chain of old-time ice cream restaurants, had a huge banana-split sundae called the "Pig's Trough", served in a dish resembling a wooden trough. If one person could eat it all, they would receive a badge or banner reading "I made a pig of myself at Farrell's".
* far-right extremist he wrote, which he emailed to over a thousand people before setting out on his rampage, wound up a seminal influence on the more radical and violent elements of the far right, particularly those who rejected political activism in favor of "direct action", with a number of mass shooters in the 2010s citing Breivik as an influence and in turn influencing others.
* Farsala Trilogy could never defeat them that they fail to listen to intelligence reports or gather an army beyond the (very small) elite fighting class.
* Farsala Trilogy. Despite Kavi's best attempts to find any lies in Patrius' claims, Patrius is completely open about every single aspect of being a spy and what will happen to Farsala if the Hrum win the war.
* Farsala Trilogy, Garren orders this done to Kavi. What makes it particularly horrifying is that, as far as torture goes, it's relatively tame, but relentless.

* Farsala Trilogy, had his hand badly scarred by a deghan as a child, and it still pains him as a young man.
* Farsala Trilogy in that he never actually shows up — the person everyone believes is him is actually an ordinary man named Fasal.
* Farsala Trilogy is that their folded steel blades ('watersteel') can cut through the Farsalan weapons, though with their superior numbers, much smaller egos, and much greater brains than the first line of Farsalan defenders they hardly need them.
* Farsala Trilogy launch an invasion they're all dead within two chapters.
* Farscape aboard an elderly Leviathan without the fuel to reach any planet. The Leviathan is eventually boarded by salvagers looking to harvest valuable nerve tissue and they try to kill John so he can't reveal the location.
* Farscape, Aeryn says that the Sebaceans stopped worshipping gods after their goddess killed everyone on seven Sebacean worlds for fun.
* Farscape Aeryn Sun is a Rebel Mook (former Peacekeeper, the main villains) although later characters like Crais and Scorpius have similar roles.
* Farscape, Aeryn Sun is the first Human-like female that John Crichton meets after his travel through the wormhole in the premiere. Naturally, they end up together.
* Farscape. A feature of her species, apparently — the women have white hair and the men have black hair.
* Farscape, after Crichton and Chiana are left behind on Rohvu, Chiana freaks out when Crichton reveals that he knows for a fact there were at least two D’Argos left behind on Rohvu that are now dead, and he’s sure that he saw another Chiana in the escape pod before it left.
* Farscape: Alas, poor John Crichton learned to kill in order to survive the Uncharted Territories. He also went pretty crazy, though whether it was the killing, the utter weirdness, the many, many aliens who decided to stick things in his brain and swirl it around a bit, or some combination thereof is anyone's guess.
* Farscape all Scarrans were larger than most other bipedal races, but Emperor Staleek did appear appreciably larger still. Oddly enough, and despite his brutality on occasion, he also appeared to one of the more intelligent and reasonable Scarrans that we saw as well, so one would guess his size was not as much of a factor in actually choosing him as leader, but still was apparent.
* Farscape also features budongs, natural creatures that can grow to the size of a small moon. In one episode Talyn gets swallowed by one.
* Farscape A malevolent, powerful supernatural being who had reached a non-corporeal form and possessed considerable spiritual powers, Maldis gained strength from the life forces of others' pain and death and as a result used his abilities to encourage negative emotions such as fear, anger, hate, and pain in his victims.
* Farscape, a murderous creature kills two people and literally crashes Christmas dinner at John's dad's house.
* Farscape, and a detachable one to boot. Moments later, the airlock itself is thrown out, taking her with it.
* Farscape, and asks Scorpius, who has been dogging him for years, if he really wants to see the weapon. Scorpius, for his part, is more than happy to get to begging if it means the culmination of his life's goal.
* Farscape and backslid a couple of times, he never seems to lose his nasty streak.
* Farscape, and based on diet. Eating a rare flower (which grows commonly on Earth, to our hero's dismay once he learns how important it is) makes Scarrans more intelligent, and coincidentally look more human.
* Farscape), and Commandant; exactly how those relate to each other is never really clear. Special Forces seems to have it's own rank structure, with a single squad containing a Captain, two Lieutenants, and the only two Sergeants ever seen on the show.
* Farscape, and for the princess to become queen she must be able to produce an heir to the throne. He gets out of it by allowing them to use his DNA to artificially impregnate Katralla and then suggesting that they simply tell the people that the man she's really in love with is John Crichton, since no one but the royal family knows who Crichton is anyway.

* Farscape, and in the miniseries, while working with the heroes to fight the galaxy-conquering Scarrans, actually come off as heroic. The Peacekeepers are actually a specific culture, albeit one that dominates the rest of their race; the vast majority of Sebaceans are just people.
* Farscape and is looking for something—anything—to destroy. He fixates on a repair drone, then we see D'Argo from the drone's perspective as he punches out its lights. Cue static.
* Farscape (and raped by one female villain), and is subject to a surprising amount of topless, rear-angle and crotch-level camera shots.
* Farscape and return to the future. Unfortunately,the best alternate they managed to create still led to a group of peaceful women and children being horribly slaughtered, when they'd survived in the original timeline.
* Farscape, and the general look of their cities is minimalist and angular. The main building in all the establishing shots is a futuristic pyramid.
* Farscape and things are revealed, though some of them remained mysterious throughout the series.
* Farscape, an experience that began with D'Argo saying, "Crichton! There's no one else aboard! There's no one else aboard! There's no one else aboard! There's no one else aboard! There's no one else aboard!"
* Farscape. Another good chunk is his tendency to spout off pop culture references to a group of aliens who'd never even heard of his species, so that a lot of what he said to them was incomprehensible babble. A good example occurs mid-Season 2 when Aeryn is giving John a flying lesson:
* Farscape. Anyone in close proximity to him will start speaking in a high-pitched voice.
* Farscape arc "Look at the Princess" - Rygel becomes the secretly good advisor to the evil queen.
* Farscape, as a hybrid, does not need a Pilot to communicate. Instead, he has a direct neural link to his commander that can be used by any species (presumably.)
* Farscape: As Bialar Crais is forced to recall events on the memory probing chair operated by Scorpius, the screen shows Crais snapping his executive officer's neck when she found out that he was committing barratry.
* Farscape, as Crichton finally makes it back to Earth in the middle of a season, rather than in the series finale as might have been expected. Fortunately, by the time this happens the premise of the show had expanded enough that there were still plenty of stories to tell.
* Farscape. A Sebacean-Scarran hybrid, his body chemistry was literally at war with itself; Sebaceans become delirious and risk death if they get too hot while Scarrans constantly produce massive amounts of heat, and so Scorpius required an extensive cybernetic cooling system (including rods inserted into his brain) just to maintain a functional condition. Enemies who learned of this weakness frequently tried to take advantage of it to kill or disable him.
* Farscape, a sort of brainwashing "re-education" method used on malcontents in her society.
* Farscape, as others routinely scare her or injure her specifically for that. But when someone hits on the bright idea of handcuffing her, she makes with the scream, and the cuffs are no more.
* Farscape as well, where the fact that he and Jackson's actor Michael Shanks resemble each other was brought up a few times). They worked out their issues and eventually married and had a child.
* Farscape at the conclusion to an unpleasant romp through sexual interrogations.
* Farscape. Averted in "Nerve"; when a Peacekeeper base has a reactor meltdown, its commander is the first to head for a Prowler to escape (he's not the only one; Durka kills a junior officer and takes his uniform in an attempt to escape the destruction of the Zelbinion).
* Farscape bears a remarkable similarity to the Steyr ACR, sans magazine and wrapped in tin foil.
* Farscape because, while he knows that the Ancients put wormhole knowledge in his head, he isn't able to unlock that information himself for a few seasons. This

leads to Scorpius chasing him across the universe and mind-probing him to figure out information that John is still trying to discover himself.
* Farscape. Before he can answer, she knees him between the legs then falls to the ground, clutching her knee. The Scarran looks down at her and says, "Yes. But they're not external."
* Farscape between Crichton and Chiana thanks to her distinctive form of speaking. "I would love you...to come with me, but..."
* Farscape between herself and the human John Crichton, labor to birth takes an incredibly long time—about half an hour at most.
* Farscape, Braca, declares her to be unfit for duty and has her arrested.
* Farscape. Briefly lampshaded at the end when a shaken Crichton asks Aeryn if she's actually a woman (which she is).
* Farscape but definitely cuckoo old woman who likes playing with potions) is introduced to the series, D'argo (who as an alien should not be aware of this trope) suggests burning her.
* Farscape, but it's hard to say exactly which attribute it is that draws people to John Crichton. It's probably a mix of all of the above, and a just general lack of what to do without him.
* Farscape but she only ever reaches sonic pitch when she's actually upset, afraid, in serious pain, or all of the above—not because she can't do so normally, but because she honestly doesn't think to use it under most circumstances. It gets to the point that when the power goes out and Aeryn wants to perform some emergency welding, she actually has to break Jool's thumb to get anything useful out of her. Thankfully, in her final episode on the show, she appears to have learned her lesson: she uses her scream to melt her way out of a pair of handcuffs.
* Farscape (But then why aren't they just translated into units Chrichton/the viewers can understand?)
* Farscape, but there are far more examples of mixed units throughout the series.
* Farscape, but they do exist. Our heroes salvage one in "PK Tech Girl", though it breaks the very next time they use it.
* Farscape. By far the most extraordinary were the True Ancients, who had power to control minds, open wormholes, and in the case of at least one, "wrap time around his little finger."
* Farscape by the last season, which acknowledged how he had outgrown his immaturity.
* Farscape. By the time Crichton and crew show up, M'Lee is starving, to the point that she needs to deplete her remaining calcium stores to have enough sanity to talk reason to Crichton instead of ripping him open and feasting on his bones.
* Farscape, captured Soviet soldiers were regarded as traitors to the Motherland, and those who survived German captivity were punished when they came home.
* Farscape cartoon has him pulling this trick by sliding the sight forwards on D'Argo's shotgun. An angry D'Argo swaps the barrel round, only to shoot himself a second time. Exactly like Wile E Coyote below.
* Farscape, causing an identical reaction in D'Argo, who doesn't enjoy it as much as you'd think.
* Farscape centers around Chiana running off after hearing of the death of her brother to join a group of children who either jump to their death in a sort of trial (which is usually timed to coincide with the birth of a baby) or die of long-term radiation exposure. Crichton figures out that the caves they live in magnify the radiation exposure so they can live normal lives if they move to the surface.
* Farscape. Chiana doesn't like being groped by Rygel in "Bone to be Wild".
* Farscape: Chiana's Commitment Issues lead her to cheat on D'Argo with Jothee, D'Argo's son.
* Farscape, Chiana tries to convince Crichton to try this strategy on Aeryn: "You gotta go fast with the body, slow with the soul." He doesn't go for it.
* Farscape. Claudia Black commented that the crew was so used to seeing she and Ben Browder rehearsing for their kissing scenes that no one paid attention to them while they made out on set.
* Farscape. "Commander" is apparently the rank he achieved as an astronaut for IASA

(international expy of NASA); his crew members continue to use this title for him throughout the show. Even though it's not really a military rank, it sometimes comes in handy during their many, many encounters with hostile military forces.
* Farscape conquerors). Nebari "Host Ships" are, apparently, the scariest spaceship out there (trivially overpowering Command Carriers), but we never see one over the course of the series.
* Farscape costumes started out pretty racy already, and eventually evolved into All Fanservice All The Time.
* Farscape Crais was drafted as a boy along with his doomed younger brother — he was actually raised on a farming colony, by a clearly loving father.
* Farscape Crichton comes across as a lunatic constantly spouting nonsense.
* Farscape, Crichton hits on this trope as a way of fooling the Scarran heat probe, which forces people to tell the truth. For example, while disguised as a Peacekeeper defector, he tries to get access to his captive Sebacean girlfriend by propositioning a Sebacean nurse, and he gets caught by a Scarran:
* Farscape, Crichton jumps between a spaceship that is about to explode and one that isn't. He doesn't have a spacesuit, and he prepares himself by hyperventilating to oxygenate his blood. He jumps, closes his eyes, and adds additional propulsive force by firing a blast rifle. He survives with little more than skin capillary damage, but it's not a pleasant trip—the first thing he does upon arriving safely is start screaming in pain.
* Farscape, Crichton misses various things from Earth which he is unable to acquire in space such as chocolate, milk and jeans. Also, you have to go to Earth if you want to get your favourite DRD some WD40.
* Farscape" Crichton, who clearly knows he's dealing with an idiot, ups the bid to 80/40 to calm him down.
* Farscape: Cycles are Earth years, solar days are Earth days, arns are hours, and microts are seconds. It is never mentioned why alien species on the other side of the galaxy would base their time units around the relationship between Earth and its sun, especially before they ever learn about Earth.
* Farscape. D'Argo and Aeryn continually get frustrated at John's lack of familiarity with technology they'd taken for granted their whole lives and generally view him as completely useless. However, his own ingenuity and pluckiness end up saving the day very frequently.
* Farscape, D'Argo and Chiana were shown to have growing feelings for each other and are implied to become intimate at the end of "Out of Their Minds", but it isn't until Crichton walks in on them having sex in "Look at the Princess Part 1" that it's confirmed.
* Farscape: D'Argo's Qualta Blade was used by his grandfather to repel invaders after they ran out of modern weaponry.
* Farscape, D'Argo (who can survive in the vacuum of space for 15 minutes) and Crichton (who is in a damaged suit) are stranded when Crais jumped away with Talyn.
* Farscape: Despite his efforts to stay below the radar (to avoid the various bad guys who want him dead), Crichton and his exploits still become well known...and blown way out of proportion
* Farscape did an episode where Crichton started hallucinating everything happening in a Looney Tunes Coyote and Road Runner type of cartoon.
* Farscape died because her actress developed health problems due to the makeup they used, as well as several other outstanding issues.
* Farscape director Rowan Woods plays an acting role (rather more than a cameo) in the episode "John Quixote" as the fat male Zhaan-impersonator. Woods also had a cameo in "A Human Reaction" alongside production designer Ricky Eyres and actor Anthony Simcoe (who normally plays D'Argo but appeared without his extensive prosthetics) in a scene where Crichton steps into the men's room at a bar.
* Farscape discuss how Zenetans rely on pheromones to tell which gender is which.
* Farscape, "DNA Mad Scientist" had a highly intelligent alien doctor who was always performing experiments on aliens to increase his powers.
* Farscape due to her habit of speaking like this when she tells John Crichton: "I would love you...to come with me, but..."

* Farscape duplicates. Sikozu is also revealed to be a kind of bioloid.
* Farscape, early attempts by Scorpius at manned wormhole travel leave the unlucky pilots oozing out of their cockpits in the form of red sludge.
* Farscape episode "A Bug's Life" features an "intellant virus"—a highly infectious virus that takes over the mind and body of the infected.
* Farscape episode "A Constellation of Doubt". The episode is intercut with a documentary they intercepted from Earth about the alien members of the Moya crew who visited. A lot of it involves people being very xenophobic and showing only the worst of human nature, but Noranti redeems us (sorta):
* Farscape episode "A Prefect Murder", Aeryn is turned into one via a mind-controlling bug. There's also a subversion: after being bitten. John pieces together what's happening just in time to hand over his weapon and leave the area.
* Farscape episode "Crackers Don't Matter" has a highly amusing Hate Plague, causing several characters to become obsessed with ensuring their fair share of crackers, to the point of barricades and gun battles.
* Farscape episode, "Crackers Don't Matter", revolves around the crew going slowly insane defending their stacks of tasteless crackers, the only food available on the ship.
* Farscape episode "Different Destinations", with Jool, Pilot, and Chiana watching the Planet of the Week progressively deteriorate as John, Aeryn, and D'Argo stumble around in the past.
* Farscape episode features the characters thinking time moves faster on a planet below them when Aeryn returns from it old and with a granddaughter, only to discover that their ship is stuck in an area where time moves more slowly. They eventually have to starburst (hyperspace jump) backwards out of the time bubble, leaving them with no memories of the experience except an instinct to avoid the bubble from now on.
* Farscape episode, John uses a sort of night-vision monocle over one eye, which you would have thought would be impractical due to lack of depth perception. In another episode the crew all uses similar devices in a firefight; Aeryn's breaks down and the fight is over by the time she gets it working.
* Farscape episode "Kansas", Chiana gets the idea that this gesture is a friendly greeting and shows it off to a few people.
* Farscape episode "Liars, Guns and Money", the bank robbery planned and executed by the Moya crew is so they can buy D'Argo's son, who is about to be sold into slavery; however, just to keep the few morally-upstanding members of the crew from getting troubled, the bank Stark chose to rob is actually used exclusively by criminals to hide their ill-gotten gains.
* Farscape episode "Out of Their Minds" begins with this, just so the viewers get what's going on immediately, by blending the voices of the two people involved. Later in the episode, though, the characters have all reverted to the body's voice, with each actor just using the other's body language and vocal patterns (or trying to).
* Farscape episode "Revenging Angel", Crichton and D'Argo touch hands apologetically through one of Moya's windows (and Crichton's spacesuit).
* Farscape episode "Revenging Angel" was a tribute to the classic Warner Brothers cartoons. Naturally, character picking on John Crichton winds up with his leg in one of these.
* Farscape episode "Scratch 'n' Sniff" follows a variation of this trope in which it's revealed that the bulk of the episode is a recounting of events by John Crichton to a disbelieving Pilot, and is presented in such a way that the actual accuracy of the account is left ambiguous.
* Farscape, episode "Scratch 'n Sniff", though some question exists as to whether they were Imagine Spots or flashbacks.
* Farscape episode "Thank God it's Friday, Again" Rygel eats a root that makes his bodily fluids explosive. In one scene he pees a green stream off the side of a bridge that bursts into flame when it hits ground.
* Farscape episode "The Choice", recurring villain Xhalax Sun leaps from a balcony rather than wait to painfully bleed to death after being shot.

* Farscape episode "The Flax", John and Aeryn have to depressurize and then repressurize their spacecraft with only one working spacesuit between them. The solution: stop John's breathing with a Peacekeeper poison and then resuscitate him with CPR! And his only complaint is that the poison hurt more than Aeryn told him it would.
* Farscape episode "Through The Looking-Glass", Crichton realizes an extradimensional being is trying to communicate with the crew rather than hunt them when he recognises that the talon slashes that it makes in reality are the first few successive prime numbers.
* Farscape episode "Through the Looking Glass", Moya enters starburst without enough energy to finish the task. She gets stuck halfway and split across four partial dimensions that are interconnected through localized rifts. Crichton eventually makes contact with a "gatekeeper" from outside the universe whose job is to repair breaches, and tries to help him navigate Moya out.
* Farscape especially at earlier time slots - prime episode was "Out Of Their Minds" with every fake swear word and scene cut out, losing about 20 minutes.
* Farscape, especially for the first two seasons. Most of his more badass moments are due to dumb luck and bluffing.
* Farscape, especially in the episodes "That Old Black Magic" and "Rhapsody In Blue". All in all, Delvian priests have a worrying tendency to turn to the Dark Side, for as they train for purity and gain more control over their abilities, they become more vulnerable to darker impulses; if they succumb to these, they will very quickly go insane.
* Farscape existed in it's world almost immediately, but for the most part treated them like other sci-fi treats psychic powers so they don't usually stand out too much. The main exceptions are the episodes where the crew goes up against the evil wizard Maldis, where it suddenly turns into a straight-out fantasy story. Maldis deliberately using a gothic aesthetic in-universe doesn't help.
* Farscape fame is infamous for these, accompanied by his black gums and needle-sharp teeth.
* Farscape filmed entirely in Australia, including Earth scenes that were supposed to be located on the Florida Space Coast. For all that the beaches are decidedly different, upper middle class tract housing can evidently be pretty similar in both places.
* Farscape; for effect, the camera tilted as she did so. She's more than a little insane at that point in the series.
* FarScape, for much of its run, which is odd considering how often the show mentions time passing. In the first episode, D'Argo's age is given as 30 cycles (young for a Luxan, which means he married very young — a plot point). Everyone else's age stays mostly vague. Chiana is often stated to be "a kid" compared to the others, and acts as though she's in her late teens/early twenties. John's age can eventually be inferred as about 30 when he joins Moya, since he's old enough to drive in 1986 and was presumably born in 1969 or 1970.
* Farscape for one of them, treated with all the gravitas due to the death of the main character of the series, despite the fact that there's still a John Crighton running around.
* Farscape For this reason it's most often used as an emergency escape rather than a regular mode of travel.
* Farscape from side to side while looking at someone. This started out as Gigi Edgley's way of trying to see through the restrictive black contact lenses she had to wear but eventually became a character trademark.
* Farscape fulfill this rather nicely. They hunt down the main protagonist for two seasons under one crazy commander after another for what amounts to being in the wrong place at the wrong time. And then things get worse.
* Farscape gives the warring Skarrans and Peacekeepers exactly what they'd wanted from him for years: a wormhole weapon. Then when they realize that what they got was a self-feeding black hole that was now rapidly closing on them and not about to stop until it ate the whole galaxy, the guns fall silent... because they couldn't help but stare at this huge and still growing nightmare and seem insignificant and

mortal by comparison.
* Farscape give us Shadow Depositories; privately-held banks that service the criminal scum of the Uncharted Territories. Their security measures are every bit as good as the top secret, maximum security military bases of any of the warring stellar nations.
* Farscape goes into Starburst, they get pretty blue (or in Talyn's case, yellow) glowy lines all over them.
* Farscape go into horrendous unrecoverable comas if their body temperature gets too high (and at levels that would be on the high end of tolerable for most other races, too), making deserts, low fevers, and oversized bonfires potentially deadly. Given just how badass Aeryn is when not suffering heat delirium, it might count.
* Farscape had a couple of these, including a time-stopping cloud that was hardening to encase the ship in permanent stasis, and an entire section of space, even more remote than the Uncharted Territories, called "Tormented Space", which the crew of fugitives resorted to hiding in. Of course, you could also count that wormhole John went through in the first episode to get the series rolling.
* Farscape had a device that "twinned" the target, creating a duplicate that was perfect in every way. Exactly how it worked isn't precise — it have been a subatomic-particle-by-particle reconstruction rather than genetic memory—but the memory and personality were identical.
* Farscape had an odd way of upping the ante each season while making old villains "join the team". First season had Captain Bialar Crais pursuing the protagonists with his one warship. At the end of the first season, Crais is usurped by Scorpius, a rival commander of the Peacekeeper force, and Crais becomes an increasingly trustworthy ally over the next two seasons. By the start of the fourth season, Scorpius is on the outs due to being spectacularly humiliated by the heroes and the machinations of the more politically powerful Commandant Grayza, so he starts to hitch rides and help out the heroes, although he remains much more evil than Crais. The fourth season then does a switch half-way through and makes the evil reptilian Scarrans the main bad guys, supplanting the Peacekeepers for top evil.
* Farscape had a sentient virus who could only infect one host at a time. It was double-tricky to catch because it drugged its victims so that afterwards they didn't even know they'd been possessed.
* Farscape had a subplot of Crichton's twinning. Although in this case, neither one was a copy or original exactly. Crichton really was just duplicated/"twinned" into two identical Crichtons (they play rock-paper-scissors and draw some 100+ in a row). The episode where this occurs explores the trauma involved in the concept in some depth; being twinned just once is shown as quite traumatizing, and most of the people encountered in this episode are hopelessly insane after having lived through being twinned and having their twins killed multiple times.
* Farscape had IASA (International Aeronautics and Space Administration), an International Agency of Fiction.
* Farscape had the Zenetan pirates, as well as the Sheyangs. The first were humanoids with well-armed, sleek little ships and an energy-draining capture net called the Flax. The Sheyangs were fireball-breathing frog-like creatures with lots of plasma cannons.
* Farscape had VR "game blobs". Dying inside of the game only returns you to the start of the level. The real problem was getting out of the game, as the exit trigger had been sabotaged. Chiana does mention, though, that brain damage resulting from the games is not unheard of.
* Farscape has Aeryn pregnant throughout the final season, although for a time in the Miniseries wrap up the baby is carried by Rygel. The baby is born in the miniseries (after making its way back to Aeryn).
* Farscape has a few examples. Peacekeepers look down on "techs" as inferior because they spend their time fixing the ships and weapons instead of fighting with them. In one episode a planet called Litagara is featured, which is run by lawyers. The 5% of the population that aren't lawyers are treated as second-class citizens.
* Farscape: Has a number of examples, especially Zhaan's unnamed lover, who she murdered when he became a Quisling for the Peacekeepers, and Volmae in "Thank God

It's Friday... Again", again for the Peacekeepers.
* Farscape has a scream that can literally melt metal. This is often used to amazing effect by other characters.
* Farscape" has Crichton discover a holoimager recording of Moya's original escape which reveals that Aeryn's presumed-dead ex-lover Velorek- the Peacekeeper responsible for Pilot being bonded to Moya in the first place- actually helped arrange the escape by providing Rygel with the appropriate access codes. Talking with Pilot, Crichton learns that, just prior to the escape, Moya was scheduled to be taken to a Peacekeeper base where she and Pilot would have been subjected to brutal treatment as part of an attempt to find new ways of controlling Leviathans; Velorek intercepted Rygel's escape plan by providing him and Pilot with the necessary access codes (the codes Rygel would have received would have actually destroyed his cell), Velorek even disabling the control collar himself rather than D'Argo destroying it as appeared in the show. At the conclusion, Pilot and Crichton agree to keep the truth secret, as Pilot feels it would shake up the crew's confidence in their own abilities to learn that they had assistance from a Peacekeeper in their first major cooperative effort (as well as Crichton privately not wanting Aeryn to know that Velorek is still alive).
* Farscape has differing accounts of what went down before Talyn blew up one of their ships, they decide that everyone must be lying and trying to cover each other's asses, and thus are all equally fit for the death penalty.
* Farscape has "Distillate of Laka" which helps take the edge off of John's Aeryn issues… when he doubles the dose.
* Farscape has far less stalking than most examples, John being blackmailed into marrying Katralla because he is the only male they have found who can give her healthy children definitely has hints of this trope. It comes even closer when it is revealed that Katralla is pregnant via test tube (and completely without John's knowledge) at the end of the trilogy.
* Farscape" has John Crichton argue with the US government over access to Moya and her crew. John wants the advances he's brought to be for the benefit of all humanity, but the US wants to gain an edge over Earthly enemies (John missed 9/11). John's father Jack Crichton, the Director of Extraterrestrial Affairs, initially agrees with the government but eventually changes his mind.
* Farscape" has John Crichton finally demonstrate the full destructive power of a wormhole weapon, summoning into existence an expanding black hole that destroys a planet depopulated by Scarran death squads and gradually eats the warring Scarran and Peacekeeper fleets. John threatens to allow the black hole to devour everyone present, himself included, unless the Scarrans and Peacekeepers agree to sign a peace treaty.
* Farscape has Pilot, an alien who is physically bonded to the living ship Moya. Pilot literally cannot be separated from Moya for very long without dying and he was initially treated as little better than a slave by the crew. Still, he considers himself fortunate and is happy to live that way, with his relationship with the crew improving after they learn more about the circumstances under which he was bonded to Moya. Although Pilot and Moya were basically forced together at first to facilitate a Peacekeeper plan, Moya's current crew help him form a more natural link with her, explicitly choosing a situation where they will have more limited control of Moya while the bond is re-established in favour of Pilot having a more genuine bond with her that they all feel he deserves.
* Farscape has shades of this character early on due to her military training that advocated against feeling pain or showing emotion. It is commented on in "Twice Shy" when each character's strongest trait was amplified: Scorpius says Aeryn is colder than usual.
* Farscape has two-thirds of a normal humanoid face, while the other third is a shimmering golden energy mass with telepathic properties, normally hidden beneath a leather mask.
* Farscape have a "Starbust" ability that takes them to a semi-random location, it's usually used as a means of escape.
* Farscape have in their pockets? Her species is under Scarran domination, so

naturally they have to use Scarran currency.
* Farscape have reached high positions), and their design aesthetic is an equal mix of Nazism and the Soviet Union in its short-lived early Modernist phase.
* Farscape have several classes of ships from fighters to capital ships of various types. Assorted other ships show up over the course of the series.
* Farscape. He fully intended to go through with it to avoid death by Scorpius, though Aeryn is not amused.
* Farscape, her character played this trope throughout their season-spanning romantic arc.
* Farscape. Her main method of learning information or negotiation generally involves a laaarge helping of extremely blatant flirting/sexual propositions. Upon meeting Crichton's 13-year old nephew, she is shocked to discover he's still a virgin (although this was mostly because the way the girls his age were dressed gave her the wrong impression; finding out 13-year olds are considered children but they were still dressing to attract male attention squicked her out).
* Farscape he's alright as long as he's recovered within about 15 minutes. He later voluntarily goes out into space with only a breathing mask.
* Farscape he's perfectly capable of fending for himself (and saves her ass plenty of times), but you do not mess with John and get away with it, at any stage of their relationship.
* Farscape. He's still terrified, but not nearly to the extreme you'd expect.
* Farscape, he used this particular power to provoke fear and rage from his victims, which he would then feed on.
* Farscape he was doing most of the time and his victories were pretty much just plain blind luck with zero planning whatsoever.
* Farscape him into giving up this info, though this is only because Crichton will not countenance simply cooperating with Scorpius and giving him the wormhole technology peacefully.
* Farscape hinge around energy belts, which protect their wearers against energy weapons, but leave them vulnerable to things such as bullets, rocks and falling into a pit of lava.
* Farscape. However, after dosing himself with a stimulant to resist Grayza's pheromones, Crichton suggests that the next round involve bondage: as a result, Commandant Cleavage is left tied to the bed, humiliated and seeking revenge.
* Farscape, humans are lacking compared to a great many species, especially in terms of life spans. However, this is not played completely straight, as humans have a much greater heat tolerance compared to Sebaceans. Furthermore, at least some of these superiorities may not be natural, as Sebaceans have greater eyesight and lifespan (though not heat resistance), and yet they are implied to be the descendants of humans.
* Farscape, if a Delvian's eyes turn red, be moving in the other direction. It means they're going insane.
* Farscape image was actually a cover for sentient-being trafficking and forced prostitution. At some point, however, it was decided that the episode was coming out as heavy-handed, self-righteous, and boring, and it was decided to turn it into a gonzo comedy episode instead.
* Farscape. In addition to being very attractive with well-displayed breasts, she also secretes a chemical from a gland between her breasts that literally hypnotizes men into doing her bidding.
* Farscape, including D'Argo being given a potion that made him dance. The dance music (and flashback) is brought to an abrupt halt by Pilot saying—
* Farscape in need of supplies (in "Thanks For Sharing" for example), it's not because they're short on money, but because their reputation has scared potential traders off.
* Farscape. In one episode, instead of talking things out with Crichton and letting him comfort her, she pounds a punching bag until it's stained with her own blood. Ow.
* Farscape in pain, the Scarran informs her that they do have them, but they're not external.

* Farscape in the series is Ka D'Argo, a widower with a son around Chiana's age.
* Farscape inverts the trope. In "Fetal Attraction", handsome John Critchton hits on a much older Sebacean nurse with access to Aeryn. However, she's suspicious and only relents when he throws in a cure for a disease running rampant on the station as well. That being said, he played the horndog well enough that, when he's captured, he's able to bluff a species that is mildly psychic that the reason he took Aeryn is because she was prettier than the nurse and he was planning to have sex and babies with her... which was technically the truth, but not the whole truth.
* Farscape involves a sentient virus who can take over the body of any intelligent being. Because nobody knows who the virus is inhabiting, at one point at least five or six people have guns pointed at each other, often weaving between targets. Crichton exploits this, using the situation to keep everyone in one place while he ferrets out who is currently infected.
* Farscape, in which case they share the Leviathan's lifespan of 300 cycles. This isn't usually addressed in-series, though, with the exception of the time Crichton found out he was going to be turned into a statue for 80 cycles.
* Farscape is a heavy fighter/dropship hybrid operated by elite commandos. It has a large hatch on the bottom from which troops can egress. They seem to be used most often as boarding craft, scouts, and personnel transports.
* Farscape is half-Sebacean, half-Scarran, and most of villainous actions are due to his seeking to aid the Sebaceans against the Scarrans by getting whatever technology he can.
* Farscape, is killed off by a single punch to the head. Which makes him explode... somehow.
* Farscape is pushed, however, it's hinted that Aeryn (who'd briefly entered Crichton's body) did some checking out of her own.
* Farscape is set against the backdrop of rapidly rising tensions between the Peacekeepers and the Scarran Empire. There's even a superweapon arms race analogue of sorts in the form of wormhole technology, which both sides are eager to acquire and only one man in the galaxy knows the secrets of. The war finally turns hot in the miniseries.
* Farscape is symbolized by his abandonment of his IASA civvies and taking up of a Peacekeeper long black coat.
* Farscape is very intelligent, although her knowledge is mostly book smarts with little practical experience, but so annoyingly self-important that the rest of Moya's inhabitants can barely stand her.
* Farscape it can be assumed that Kaarvok was correct. However, the multiple-clone degeneration is used in the episode Kaarvok was introduced in, specifically in the form of the feral, degenerate remains of the crew of the ship he'd been imprisoned aboard. Apparently after "twinning" the twin of a twin and so on a certain amount of error did emerge.
* Farscape. It replies that they do, but they're on the inside, and obviously well-protected.
* Farscape." It turns out that Scorpius has the ability to see the heat signature of others, so he could tell Crichton wasn't Sebacean. How often this trope works depends on how merciful the writers are at the time. In "Liars, Guns and Money Part 1," Crichton and Aeryn knock out a couple of guards in the middle of their bank heist, but are ambushed by more guards before they've even finished pulling the clothes off. Crichton flees with a half-hearted "Uh... they went that way!" to the new arrivals.
* Farscape, John and his alien princess bride are turned into fully conscious statues so they can observe the workings of the Senate until it is time for them to begin their reign. The jealous prince chops Crichton's head off in an attempt to render him unable to rule. The head is still able to talk (via magic headsets) until it is successfully reattached.
* Farscape: John Crichton, as played by Ben Browder, has an absolutely astonishing talent for looking at Aeryn Sun like she's his Earth, moon, and stars all at once. Cue swooning fangirls - and swooning Aeryn.

* Farscape. John Crichton enters a door after hearing Chiana say, "Yes!" in response to whether he can come in, only to quickly walk out again on finding she's actually having sex with D'Argo.
* Farscape: John Crichton is the main character and generally speaking, the most heroic and idealistic of the Moya crew (although the idealism gradually fades away as time goes on).
* Farscape: John Crichton lives for the Indy Ploy, which is fortunate, because the Uncharted Territories throw monkey wrenches into plans every damn time. Near the end of the series, D'Argo wonders why things never go smoothly, to which John replies, "Murphy's Law."
* Farscape, John fails to resist Scorpius, gives up and tells Aeryn he's going to turn himself in. Aeryn knocks him out.
* Farscape: John impersonates a dead Peacekeeper officer in a bid to infiltrate a Peacekeeper base and save Aeryn's life. It... didn't go so well.
* Farscape. John is instrumental in keeping the group of strange aliens together, his strange human perspective uniting them in a way none of them alone could have. Zhaan also gets a lot of credit in the Heart department.
* Farscape, Jool gets hit in the eye when an alien explodes and has to wear an eyepatch for a while. Her actress, Tammy MacIntosh, really did injure her eye and couldn't wear a contact lens for a few weeks. The eyepatch covered up the fact that Jool's eyes suddenly didn't match.
* Farscape kiss, it could sort of still count as an Almost Kiss because they are always either interrupted or Aeryn freaks out.
* Farscape known as a Leviathan, named "Moya"; an initial conceptual design for which greatly resembled a whale, complete with eyes. The actual production version was much more "spaceshippy", though her silhouette is still suggestive of a humpback. Many of Moya's sound effects are also reminiscent of whale song.
* Farscape leads a fighter squadron through a planetary ring in order to strike at the rear of the Scarran battle fleet. Plausible (not the thicket) in that radiation would keep the squadron's approach masked from enemy sensors.
* Farscape look like yellow Roombas with a pair of eyes on stalks and a retractable tool arm. Crichton taught one to chirp the 1812 overture.
* Farscape loved ending season finales with some or all of the main characters in some kind of mortal danger.
* Farscape makes the Leviathan Rohvu male rather than female; however, this change can be easily explained as the crew of Moya just assuming that Rohvu was female and nobody corrected them because they either didn't care or weren't in a fit state to do so.
* Farscape: May not have been referenced, but you can bet Aeryn was thinking this when John and Crais were arguing over who should be in control:
* Farscape—causing John (and the audience) to realize that she's actually trying to learn English (and to fervently wish she'd stop.)
* Farscape: Melissa Jaffer joined the regular cast in Season Four as Noranti after playing two guest parts in different episodes of the second season: the older version of Nilaam in "Vitas Mortis", and the voice of the female Pilot in "The Way We Weren't".
* Farscape morphing Aeryn). Thanks to Crichton having a semi-lucid dream while in a coma, and Scorpius is not amused at being turned into a Looney Toon with anvils dropped on his head.
* Farscape. Most of the crew are shrunk and one complains that it shouldn't be possible. Another tells her that it's better to think of a solution than to complain that what just happened isn't possible.
* Farscape: Moya flies into a "center halo", a space mist where time doesn't exist. When Aeryn, and later Crichton, leave the mist, they age years on a planet below while those onboard Moya experience the passage of mere days. Eventually, the crew figures out how to exit the mist and get back to a time a few minutes before they entered it, negating the aging effects on Crichton and Aeryn.
* Farscape: "My name is John Crichton, astronaut..." He also prefaces by saying "For the 89th time!" There had been 88 episodes up to that point.

* Farscape, naturally does, and spends the following scene (in a courtroom, no less) spectacularly tweaking out.
* Farscape: not impossible to remove, but if it ever is he suffers dangerous heatstroke very rapidly, as his screwed-up hybrid biology makes him unable to control his body temperature if he exerts himself even mildly.
* Farscape: Not so much a mystery as a scientific puzzle, but while John tries to figure out how to save Earth from the Scarrans at the end of the regular series, Aeryn tells him not to beat himself up over it. Because of the way she phrased it, he gets an idea for a solution, kisses her, tells her to "Never change!", and runs out. Aeryn gets a half-pleased, half-bemused look on her face.
* Farscape, of all people (though as a last resort against a superior enemy). After the Charrids invaded their space (devouring more than a million Hynerian children in the process), Dominar Rygel IX ordered endless waves of suicide attacks against the much more capable Charrid forces. As the grievous war took its toll on the Dominar, he eventually decided to lead one such wave. This strategy eventually proved successful in driving the invaders out of Hynerian territory.
* Farscape on a random planet nearby. Because clearly there is only one bar on the entire planet which they could have visited if they had been there, which, thankfully, they did not.
* Farscape. On a show that's canceled. Luckily, there was enough fan pressure that a TV miniseries, the Peacekeeper Wars, was eventually made and tied up the remaining loose ends.
* Farscape"), on behalf of a chip in his head. Towards the end of the series the clone becomes more of a confidante and sounding board than anything else, however.
* Farscape once ganged up on Pilot and forcibly amputated one of his arms, so they could sell it to a scientist. They rationalized this action because Pilot's species can regrow lost limbs. Another member of his species on a different ship was actually used as a replenishable food source for this reason.
* Farscape, once used her Starburst capability (basically an interdimensional FTL drive) to ignite the Caesium fuel trail of a malfunctioning Peacekeeper Marauder, resulting in the Marauder's destruction.
* Farscape one episode has the crew travelling back in time to Earth through a wormhole. They arrive on Halloween, and Rygel gets hopped up on sugar, acting a bit like a crack/speed addict.
* Farscape on John's part. Then a few episodes after that, it turns out that Crais really did spare her life.
* Farscape) on the series start making passes at him. At one point, John finds himself ambushed by his mother in a pink negligee.
* Farscape opens with John getting shot into the middle of an old school dogfight.
* Farscape, or even the writers. Most notoriously, he's been quoted as claiming that he thought Scorpius's revelations about his abusive childhood in "Incubator" were totally made up to make John feel sorry for him.
* Farscape. Other members of her species can understand unfamiliar languages as easily as everyone else.
* Farscape over. He asks if Scorpius really wants to see the weapon. Scorpius, for his part, is more than happy to get begging if it means the culmination of his life's goal.
* Farscape) paint a wormhole on a brick wall, which works fine for him but causes his pursuer to crash into it like Wile E. Coyote.
* Farscape Peacekeepers were initially created to act as a neutral peacekeeping force by powerful aliens in the far distant past. A planetary ruler can hire the Peacekeepers to protect their planet, but they can also hire them to enforce their will on your own people. So the Peacekeepers run an empire by proxy, while ostensibly protecting everyone.
* Farscape performs the Misfit Mobilization Moment by pointing out that Scorpius is using the bank as a base of operations, and offering them whatever they can find in the vault as payment. Unfortunately, though the crew manages to escape relatively unharmed, all but one of the mercenaries are killed in the attack.
* Farscape pilot with an implant in the base of the neck that connects their

nervous systems wirelessly.
* Farscape. Played with in one of the alternate realities shown in "Unrealised Reality". John Crichton was born on an Earth that had been taken over by the Scarrans centuries ago, the remaining humans apparently the product of Scarran interbreeding. While the Scarrans are brutal toward species they consider threats, or to be of some value, humans were apparently not much of a threat, so long as the Scarrans kept them confined to Earth. John's father claims that the admixture of Scarran DNA has been beneficial for humans in the long run; in exchange for losing their personal freedom, they are now healthier and enjoy longer lives. John, however, was unhappy because the Scarrans denied humans permission to explore space.
* Farscape, quite a few times. On one occasion John drops a bomb down a shaft after activating it, knowing it will probably kill them all:
* Farscape Quite simply, Crichton knows so very little about the region he's arrived in, more often than not, his successes are due to the fact that he just doesn't know when he's been beaten... and his own personal traits.
* Farscape rants at/about Zhaan may or may not qualify, depending on whether the phrase is any more widely used than by him. Many characters refer to him as a "slug" when they're particularly angry with him, and a one-shot villain calls him a "slime toad" and "slime finger".
* Farscape. Rather than use Earth time measurements, they use space equivalents- an "arn" is an hour, a "microt" is a second, and (once or twice) a week is referred to as a "weeken". However, on many occasion someone will mention a length of time known as a "Solar Day"- which is supposed to be one day. This may seem odd considering nobody on the show (short of the main character) has ever even heard of Earth and the term "Solar" refers to Earth's sun, Sol.
* Farscape. Rygel and Chiana are locked in an airtight tube while the air is purged from the ship; naturally the lecherous Rygel uses this as a chance for some groping. Although a lot more than just groping went on, judging by the following exchange:
* Farscape, Rygel hails chocolate as the greatest food of all time, and becomes addicted to the stuff.
* Farscape. Rygel overcoming his greedy tendencies, D'Argo leaving his Qualta Blade in her coffin, Crichton cutting a lock from her hair...
* Farscape: Rygel XVI, deposed Dominar of the (interstellar-spanning) Hynerian Empire, makes frequent references to servants and slaves in his royal court. Humorously, when visiting Earth, he states that if Earth is to be remembered for anything, it will be for the quality of our manual labor.
* Farscape's Ancients, the ones who gave John the wormhole information.
* Farscape Scarrans are high-ranking politicans and military officers, though some are happy acting as torturers and secret agents.
* Farscape (Season 3's "Green-Eyed Monster" and Season 4's "John Quixote") were written by Ben Browder.
* Farscape: See John. See John have a fight with a large empire. See John strap a nuclear bomb to his chest and walk into their headquarters as a diversion. See John Win.
* Farscape seems to have gone out of its way to ensure John Crichton never has any competition. Aeryn's potential lovers meet a variety of crappy fates:
* Farscape" sees SG-1 and Crichton meet and learn that their wormholes are actually part of the same NSW. Carter and Crichton speculate that the Stargate network basically controls the wormholes and keeps the travellers on a fixed route in the same time and universe where the 'wild' wormholes encountered by Crichton require more careful navigation to prevent time travel.
* Farscape segment was a blipvert featuring every episode of the series. Careful frame-by-frame examination actually reveals that one episode from the series isn't represented. This was likely not intentional.
* Farscape's first season, Crais continues to wear his captain's uniform throughout Season 2. By the third he has discontinued wearing it until his death in the penultimate episode of th eseason. When going to his Heroic Sacrifice he dons his

captain's uniform once more.
* Farscape, she begins to see all of the cruelty and horribleness of the Peacekeeper way of life. By the time she's around Peacekeepers again, it's clear she no longer agrees with them in the slightest.
* Farscape, she continues to regularly kick metric tonnes of ass, especially when a certain child is involved.
* Farscape, she says they can't act on it because emotional attachments distort one's judgment. This also becomes a plot point in season 4 when John and Aeryn have to hide their relationship because Scorpius would eagerly exploit John's weakness: his love for Aeryn and their unborn child. Unfortunately for them, Scorpius isn't fooled...
* Farscape. She starts out seeming a bit sinister but really she's just trying to do the right thing. Her coolness mostly stems from her willingness to do crazy things like dance naked (while disguised as a sexy young woman) to distract guards from the rest of the team and her genuine desire to take care of the crew on Moya.
* Farscape: Sheyangs made prominent use of Plasma Weapons on their ships; several other species did as well, and handheld plasma weapons were mentioned on occasion.
* Farscape (shot in the chest, then jumps from a starscraper) at the end of the same episode.
* Farscape: Sikozu was in every way designed as an upgrade to Jool, who was originally created as a replacement for fan favourite Zahn. But where Jool was a stuck-up, spoiled princess whose main feature was a scream that could melt metal (yes, really), Sikozu was more of a frustrated genius coping with being surrounded by crazy people, which made her all the more sympathetic, despite her abrasive personality.
* Farscape. Some characters do claim to have actual magic or psychic powers, but a technological mishap also caused the crew to swap bodies.
* Farscape, so very much. The first episode features him getting his ass handed to him by Aeryn; it doesn't really stop. Doubly amusing as John's a pretty buff guy, all things considered.
* Farscape's Peacekeepers used black and red in their uniforms and décor.
* Farscape specifically so everyone will be paying attention to her and not him.
* Farscape's Rashomon episode "The Ugly Truth" features most of the crew on a disc like prison-thing.
* Farscape's Rigel recounted the tale of how his people used massed kamikaze attacks to drive off a race of invaders who'd killed a billion of their fellows and were eating their young.
* Farscape, Stark split his and Crichton's shared prison cell in this way, with some slightly creepy ranting, which became something of a feature of his character. "My side, your side" was his catch phrase, used in a number of contexts.
* Farscape started with a "Previously On" recap consisting entirely of a few frames from every episode of the series.
* Farscape starts off as a penniless band of escaped prisoners. They even come close to starving. However, after robbing the alien equivalent of Fort Knox, they're more or less flush with cash for the rest of the series. It doesn't hurt that half the time the traders they come in contact with don't survive to collect their fees.
* Farscape strongly implying that they did. A conversation between John and Aeryn in Season 2 confirms that they did for the viewers who saw the edited version of "A Human Reaction".
* Farscape taking into account his body armor. Scorpius even compliments John on remembering this fact.
* Farscape: "Taking the Stone" opens with a distraught Chiana trying to talk to John Crichton, who blows her off because he's busy. After Chiana runs away to a nearby planet, the crew discovers that she'd just learned that her brother had died and was looking for someone to comfort her. To his credit, Crichton does feel bad about dismissing her once he realizes what she wanted from him.
* Farscape, telling him that Crais (another unwelcome suitor who Stark hates) is better than he is because Crais admits to himself that he wants to have sex with

her and doesn't kid himself that he's "saving" her or deeply and unselfishly in love.
* Farscape than themselves (such as robbing a Shadow Depository—an underworld bank where pirates and other criminals store their ill-gotten goods—to finance the rescue of D'Argo's son from slavery).
* Farscape that the aliens spoke in accents different than his own. And since many of alien species, unlike the people of Earth, regularly make contact with other aliens and travel to other star systems, it makes sense that their accents are more similar to one another than to a human from Earth.
* Farscape that threatens to destroy the entire universe (getting as far as destroying all the bad guys' warships before it's stopped.)
* Farscape: The attitude behind the assumption that plants are fair game for mistreatment is discussed by Crichton (a human) and Zhaan (a humanoid plant.)
* Farscape the cyborg Kaarvok had a habit of removing the brains of his victims with a straw- which would them be fed into a slot in his head.
* Farscape: The destruction of Scorpius' command carrier featured orchestral music and Ominous Latin Chanting.
* Farscape. The dysfunction was written in from the start, and much of the increasing craziness was a result of the writers testing just how far they could push the boundaries.
* Farscape, the enormous and well-built Ka D'Argo (6'5) has a close relationship with the short, slender Chiana (5'7).
* Farscape, the explanation given by Crichton at one point as to how a ship equipped with 'hetch drive' is able to travel faster than light is that "Einstein was wrong" which, for a bit of handwaving, is actually quite clever.
* Farscape The four-season plot line (well, seasons 2-4, the miniseries, the last five episodes of season 1) play much better in marathon format.
* Farscape. The good news is that knocking the wearer out automatically detatches the gauntlet, thus making sure that they can be disarmed without being dis-armed.
* Farscape - the heroes are all on the losing side all the time. Even their wins can't be considered as wins, more of a just-barely-managed-to-stay-alive-one-more-day situation. It's so bad that you might actually get pissed at the show for constantly making them lose.
* Farscape", the indigenous people worship the Hynerian Dominar who left them on that planet, and since Rygel's a descendant of their "god" they bow down before him on sight.
* Farscape, the level-headed pacifist undergoes an abrupt personality shift for several episodes, becoming violent and short-tempered until she can find a way to recenter herself.
* Farscape The living ship Talyn (who is himself a cyborg) forms a telepathic link with his captain by way of a cybernetic interface implanted at the base of the captain's neck. It's less for navigation than a instinctual need for a captain due to his native biology with a healthy dose of genetic engineering thrown in.
* Farscape, the "Look at the Princess" trilogy. The wedding itself is completely on purpose (though John was REALLY forced into it by the bride's mother giving him an impossible choice.) However, he didn't realize that by kissing the princess and being found genetically compatible with her, he would be expected to marry her (since her DNA had been poisoned so no one else was compatible with her.) Damn those alien politics.
* Farscape, the lovely and deadly Aeryn Sun. Who immediately beats the crap out of him.
* Farscape: the main character is an astronaut from the US, blasted to a faraway region of space.
* Farscape them if they want to be married, they say yes, and he declares them married. Then Aeryn gives birth and they shoot their way out. Whew!
* Farscape. The mini-series actually fixes this, and manages to make this event relevant, even answering significant questions the show never dealt with.
* Farscape: The Moya crew sure qualifies. Certainly it's a very screwed-up Band Of Brothers, but it's still a Band Of Brothers. Pilot and Moya in particular are the

first to feel this way, but as the series goes on, they get closer and closer until eventually their one rule is "look out for the family, at all costs."
* Farscape, the Nebari are ruled by a force known as "The Establishment", who advocate a rigid system of order where the individual sacrifices his freedom and conforms for the greater good. Those who refuse are mentally modified into happy slaves, blissfully serving the order. Oh, and they also have a lovely plan to make the entire universe this way.
* Farscape; the occasionally glowing "veins" are actually the segmented parts of their faces which they can split open to reveal their empathic organ (one wonders where they keep their brains?).
* Farscape. The only cure for this is for the wound to be repeatedly pummelled to stimulate the blood flow and cleanse the poison - whereupon the black blood turns transparent and runs clear until the wound heals.
* Farscape, the Peacekeeper agent Jenavian Charto has a stiletto blade concealed in her wrist.
* Farscape the Peacekeeper Command Carriers belong in this category, being armed with batteries of anti-ship Frag Cannons and possessing a large complement of Prowler fighters and Marauder troop transports.
* Far Scape The Peacekeepers (and therefore the human character who has borrowed their uniform as casual dress) wear DM boots, or biker boots. Presumably someone invented motorbikes at some point, but Docs?
* Farscape "The Peacekeeper Wars" is blatantly designed to appeal to her boyfriend Scorpius's fetishes.
* Farscape the "Plakavoids" (Plokavians) in Season 2's "The Ugly Truth", whose faces appear to be melting off their skulls.
* Farscape: There was the girl who ate bones. And Scorpy's girlfriend who liked to eat eyes. Especially blue ones.
* Farscape, there were several Gods, or at least "Sufficiently Advanced" aliens that qualified as God-like beings, revealed during the course of the show: the first encountered was Maldis, an intangible vampiric entity with supernatural powers that verged on reality-warping- including the ability to eventually return from death, if given time. Next higher-up were the Ancients, beings from another plane of existence whose control over space, time, and wormholes gave them God-like abilities; their ambassador created an entire pocket dimension for use as a meeting ground between him and Crichton. Finally, at the highest end were the Builders - as exemplified by Kahaynu - the actual Gods of the Leviathans (like Moya) who were responsible for giving souls to the living starships, making them perhaps the most genuine example of Gods in the entire series. On the more human end of the scale, there was Crichton himself, who, while certainly no God, demonstrated God-like powers when he finally unleashed the Wormhole Weapon, which was so powerful it destroyed an entire planet, and would have continued expanding until it destroyed the entire galaxy, and perhaps even the entire universe, if what Crichton said was true.
* Farscape: The second season episode "The Way We Weren't" climaxes with Crichton and Aeryn making a full-frontal charge on Pilot in order to regain control of Moya. Aeryn has a tear lingering on the very lip of her eyelid during the entire charge. Partially justified as this is one of Claudia Black's signature acting talents.
* Farscape. These enable characters from different cultures to understand each other with ease, including the human Crichton. Notably, some of Crichton's sayings (such as "fed up") don't translate properly, leading to some confusion. According to the series (though this is sometimes forgotten; see below), anyone that has translator microbes can understand anyone else - whether or not they have them. (In "Self-Inflicted Wounds", the crew encounter the Pathfinders, who have never made contact with the other species. The crew understands them perfectly, but before one of the Pathfinders is injected with translator microbes, none of them understand "the differing voices.")
* Farscape, the simulations of John Crichton's son and daughter are played by Ben Browder's children.
* Farscape they both claim it was because of oxygen deprivation and a stressful

moment. They also used the stress excuse for the first time they slept together.
* Farscape, they can't wrap their heads around the idea that anyone else could remember things differently than the way they actually happened.
* Farscape, they didn't really want to go back. Of course, it's left rather ambiguous whether all of that actually happened or if they just got drunk and started a riot; Pilot believes the latter after poking a number of holes in the story.
* Farscape they frequently reference ships flying on a "Stealth Vector", presumably flying on the other side of planets and other large objects as often as possible. It rarely, if ever, works: hiding behind something only prevents things on the other side detecting you, and you can't see them either so you don't know if they changed course for some reason and are about to turn up where they can see you.
* Farscape: They started out with uniforms, and the lower ranking troops continued to wear uniforms, but for anyone with the rank above Senior Officer or Lieutenant the rule seemed to be "As long as it's made out of red and black leather..."
* Farscape. This is more a meta case of being enforced by narrative restrictions than the show's universe, though.
* Farscape, this is portrayed as a particularly nasty act that D'Argo is ashamed of once everyone comes to their senses.
* Farscape, though a few have used it to read the surface thoughts of others.
* Farscape though he is, Rygel is actually a competent and ideal ruler for a race of Hynerians.
* Farscape, though it's not the future, is frelling full of this type of dren. Chiana's such a tralk, but everyone thinks with their mivoks around her. Isn't it the draddest? It does get a little fahrbot sometimes, and sometimes you wonder what the yotz people are talking about, but you'll get over it after an arn or two... What the hazmata am I saying!
* Farscape, though it wasn't so much "ten minutes in a closet" as "several hours in a wrecked transport pod".
* Farscape three-parter "Look at the Princess" is full of this. Despite endless comments about how tight the security is in the lead-up to the Royal wedding, the various protagonists and antagonists have no problem carrying out various kidnappings, assaults and assassination attempts on each other. Partially justified since the members of the royal family were in on some of the kidnappings and assassination attempts to begin with.
* Farscape titles that were originally intended simply as production placeholders (in particular "PK Tech Girl" and "DNA Mad Scientist").
* Farscape to fit in with the episode, and overall turned out incredibly well, especially since the savings allowed them to produce some of the most elaborate season finales ever made for a tv show.
* Farscape to grumble about it. One of the commandos has some alien fur attached to his custom leather uniform. In another episode, the Peacekeeper Captain Crais is shown to have several stuffed heads of Hynerians in his "lavish" quarters. But knowing Crais, these could easily be torture-trophies.
* Farscape torturing Grunchlk by implanting him with a mind control device and forcing him to bite off his own fingers.
* Farscape tropes, but becomes a Slasher Movie once its primary bad guy appears.
* Farscape two-part episode "Self-Inflicted Wounds", and Oo-Nii in another two-parter, "What Was Lost".
* Farscape two-part story "Nerve"/"The Hidden Memory" initially involves Aeryn needing a nerve graft to save her life after an injury she got in the previous episode.
* Farscape use a paralyzing gas. Scorpius notes that they use this on subjects they wish to dissect... while they're still alive.
* Farscape used synchronizing bracelets for a few episodes involving negotiations.
* Farscape uses "wanted beacons", which show holograms of the criminals (usually Moya's crew) with narration explaining the reward for turning them in. During the first season Aeryn finds one that contains a hidden message from Commander Crais offering her amnesty if she turns in the rest of the crew. Aeryn knows that the

promised "honorable retirement" actually means being executed and doesn't take the offer.
* Farscape, using translator microbes which are capable of translating seemingly everything except cusswords and units of measurement.
* Farscape villain Maldis has many separate identities and names; these include Igg (a street-corner jester), Haloth (a benevolent old wizard) and Kyvan (a dealer in trinkets).
* Farscape vocabulary as a special feature, which makes fun times for anyone wanting to confuse the Hezmana out of their friends.
* Farscape was an astronaut for IASA — the replacement for NASA. (NASA was happy to let the show use their name, but wanted to review the scripts; ridiculous, as they were only relevant for the first ten minutes of the entire series. Hence, IASA was born. As Browder says, "IASA, You-asa, My Ass-a."
* Farscape was an unhinged fundamentalist terrorist trying to suicide bomb any ships or space stations that passed through what she felt to be a sacred area of space. Played with, in that the episode makes it clear that she’s just a nutcase and an extremist, who is depicted as rather pathetic and annoying at that.
* Farscape was produced in Australia, a large percentage of the cast have some variation of an Aussie accent.
* Farscape was supposed to have a five-year plan, but got canceled last-minute right as the fourth season was wrapping up, leaving the final episode on a huge cliffhanger. Fortunately they were able to produce a two-part miniseries finale not long after, but it represents an abbreviated version of what the fifth season was intended to be.
* Farscape we could witness Ka D'Argo's Qualta blade, which was a pretty impressive sword. Until he held it differently and made it a Qualta rifle!
* Farscape. When Aeryn is captured by the Scarrans and tortured for information, she is injected with truth serum (from a massive syringe): the drug merely lowers her resistance to questioning while also causing physical pain, disorientation, and eventual unconsciousness. After several rounds of torture and several lies, she finally tells the truth- though by then, she's barely able to speak coherently.
* Farscape when a Luxan priestess needs D'Argo's help to perform her death ritual, but chooses instead to make herself younger when she realizes how strong he is. Turns out she was actually sensing and stealing Moya's life energy.
* Farscape when anyone other than D'Argo tries to operate Lo'la. The ship requires D'Argo's DNA to function so it's...messy for someone else to use it.
* Farscape, when Crais and Crichton are forced to fight each other by Maldis, Crichton makes it clear to Crais that his brother’s death was an accident. Maldis then shows Crais an image of Crais’ brother’s death, and Crais goes straight back to trying to kill Crichton, ignoring all of Crichton’s attempts to reason with him.
* Farscape, when Crichton tries to convince Pathfinder Neeyala to help save Moya instead of her research vessel, offering to return her to her home planet. Neeyala coldly refuses, explaining that returning home without her ship and its precious data would be punished with her execution, the execution of her family, and the families of her crew.
* Farscape. When John Crichton finally gets back to Earth he asks why his previously open-minded and egalitarian father has such a paranoid and hardline attitude on sharing alien technology with other nations. His father replies simply, "September the 11th." Crichton, having seen a lot worse, isn't impressed with this view.
* Farscape when John is hiding in the walls from the bad guys who can hear his heartbeat and breathing. His shipmates start speaking loudly in various alien languages to give him time to escape.
* Farscape" when Pilot and Aeryn swap bodies; where Pilot had trouble adjusting to Chiana and D'Argo's bodies the last time he experienced such a switch, the residual Pilot DNA in Aeryn allows Pilot to get a better understanding of her body.
* Farscape when the action cuts between one of Crichton's hallucinations and what's happening in real time.

* Farscape: When the ancient Hynerians stranded their Acquaran subjects on their jungle planet, they designed the device that produced the anti-technology force field on the planet to look like a primitive stone statue of a royal Hynerian. From the Acquarans' perspective, the ancient Hynerians were Precursors, despite not being "sufficiently advanced" themselves.
* Farscape when they finally get back to Earth in season 4. It's a combination of the world changing (his father points out 9/11 as a reason why countries can't cooperate the way John wants) and John being a completely different person due to his travels. This is partly why he leaves with Moya again, the other part being that Earth is in danger if he's there (and even when he's not, it turns out).
* Farscape When told about this, several of the show's actors agreed he was a God and were declared to be honorary Monjonians. I am not making any of this up...
* Farscape", where Crichton recognizes it beforehand. "Somebody is gaslighting me!" This was actually the second or third time it had been done to him (depending on if you count Maldis who made it completely blatant), although the first where driving him nuts was the actual intent.
* Farscape, where D'argo and Sikozu, in the midst of a riot between her species and the Charrans, progress by going up to a guard pretending that he captured her, and immediately punching him in the face. Then going to the next guard and doing the exact same thing, word for word.
* Farscape, where John and Aeryn do this across one of Moya's grates as they're about to be separated from each other.
* Farscape where John escapes Scorpius by singing "The Star Spangled Banner" to drown out the influence of Scorpius' neural clone.
* Farscape, where the doubled Crichton(s) play rock-paper-scissors over and over again, in complete silence, hoping to not tie with each other and prove they're not identical.
* Farscape, whereupon the three main female characters appear and offer to fulfill his sexual fantasies.
* Farscape whether this was due to actual vengeful spirits, or to the team psychic Zhaan using her powers to teach him a lesson.
* Farscape, which had intelligence and personality, but could only communicate via the Pilot.
* Farscape which show holograms of the criminals (usually Moya's crew) with narration explaining the reward for turning them in.
* Farscape: While the team does try to lay low most (well, some) of the time, they do have a tendency to take detours whenever a distress beacon is sent out or they see someone being mistreated. More often than not, said interference tends to bite them in the ass...hard.
* Farscape: While your mileage may vary on how evil the Peacekeepers are as a whole, they are often the bad guys and they are quite diverse. Mixed gender battle groups, plenty of female officers, a rainbow of colors (including several not found in humans)...pretty much the only thing they don't allow are non-Sebaceans (Scorpius is VERY special).
* Farscape, who even used the same red-white-black color scheme. Their enemies, the Scarrans, are even worse. They view the Peacekeepers as inferior, making them the Nazis to other Nazis!
* Farscape, who regulates most of Moya's functions and serves as the intermediary between the ship and her crew. So, while not a direct embodiment of the ship, Pilot still fills the role of Spaceship Guy in the story.
* Farscape. Why don't they allow advanced wormhole technology? Because intelligent life as it is (and as a whole) is so hostile and competitive that in taking out their enemies they'll just take themselves with it. Trouble is, said knowledge is locked up inside Crichton's head, and the Peacekeepers know this, so he's been spending the better part of four cycles evading them and basically telling them, "You do NOT want this!" When the Scarrans join the party, he has to tell them the same thing.
* Farscape will be able to melt metal with her screams or mystically survive molecular dispersement.

* Farscape with Aeryn in pursuit. He taunts her that while he has been trained to fly jets in a planet's atmosphere and gravity, Aeryn has not.
* Farscape with a plan to rob a "Shadow Depository", effectively a bank for criminals, to secure funds to save D'Argo's son Jothee from slavery.
* Farscape with every character, but interestingly zigzagged near the end of the first season when Aeryn was stabbed. The episode closed with John saying how lucky she was that the knife missed her heart. It seemed like a very conventional case of not quite dead. Then the next episode subverted this when Aeryn revealed that the wound had done internal damage, and she was probably going to die soon.
* Farscape with his wormhole research. First he learns how to enter and fly in wormholes, from there he becomes an expert on discovering them when they open, then he learns to make wormhole weapons, the first can destroy a single ship by putting one opening in front of the ship and another in the corona of a star. The second and final wormhole weapon of the series is a black hole which nearly destroys the armadas of the two most powerful empires in the known galaxy. While this is happening Criton claims that the black hole could potentially destroy the entire galaxy.
* Farscape with John and Aeryn that they remark on it in the DVD commentary. In "The Flax", John lands on top of Aeryn after the ship has a collision, prompting her to say "Comfortable? Can I get you a pillow?"
* Farscape. Without watching everything up to that point, the reference is completely lost and the true power and impact of the moment would not be comprehended by the viewer.
* Farscape. With the planet extensively mechanized, actual physical labour has become so unnecessary that utilities workers make up less than 10% of the population... and because of the stigma attached to professions outside legal work or law enforcement, utilities are uniformly treated like scum.
* Farscape wrapping up the series. 'Scapers also sent in boxes of crackers (for the episode "Crackers Don't Matter"), but since this was close to 9/11 it was a serious hassle for the network to screen that many packages, so instead they started sending in postcards made from cracker boxes.
* Farscape, Zhaan painting a portrait of Rygel symbolises their increasing friendship, despite their huge personality and moral differences.
* Farscape, Zhaan pulls this on Aeryn. Aeryn stands there shocked while Zhaan starts saying how she loves the whole universe.
* Farscape, Zhaan's people have no nudity taboo, and she finds it amusing that other cultures do.
* Farscape, Zhaan stumbles back when a retrieved bank vault (moving at high speed) stops mere inches from her face. This is greatly amusing to Natira (the bank supervisor), who doesn't flinch as she knows exactly where the vault will stop.
* Far Sector: In the City Enduring "That sky's not real. Each day, the city builds a new composite sky image from its citizens' imaginations." However, there is a single moment during the day when the image stops and you can see the actual sky and the red sun.
* Far Sector: Jo's hovering butterfly wing inspired green light construct shades.
* Far Sector: The City has the means to rewrite biology using engineered viruses, called "meatware", that only the @Ats can code.
* Farseer, Burrich tries to repress signs of the Wit in Fitz because he himself is trying to hide that he has the Wit.
* Farseer Macha's entire character was pretty much re-purposed into a
* Farseers can bend fate to bless their own units and doom their enemies, eldritch storms and literal mind rape as a psychic attack, spears that return like boomerangs once thrown while capable of piercing even the heaviest tanks in the game... This while running around on the field of battle, in spite of being several thousand years old.
* Farseer trilogy consists of hanging the victim over running water, chopping them up, and burning the pieces to make sure they're dead. It's also not really needed, Fitz's return from the dead notwithstanding.
* Farseer Trilogy is adored by the people. The people who've never met him, at

least.
* Farseer trilogy, royal children and sometimes lesser nobles are named for virtues: Chivalry, Dutiful, Patience, etc.
* Farseer trilogy, Verity, the second son of the ruler of the Six Duchies, has an Arranged Marriage with the only daughter of the ruler of the Mountain Kingdom. The arrangement gets off to a very bad start.
* far sexually explicit series that air in the US with the TV-MA rating, yet in Canada get only a 14A (and in Quebec a 13) rating. It's not uncommon to even come across TV-MA shows with a PG rating.
* Far Side cartoon in which a bar fight is happening in an old Western saloon. From the speed at which people are running out the door/being thrown through the window, it's implicit that there's a pretty tough guy inside. Well, his bear is parked outside among the horses.
* Far Side comic features a penguin slipping on a banana peel in the middle of a vast plane of ice.
* Far Side comic features a surgeon in love. But, being a surgeon, instead of a heart symbol it is represented by an anatomically correct heart.
* Far Side comics, insects watch "Return of the Killer Windshield", worms watch "Beak 2: Just When You Thought It Was Safe to Go Back into the Topsoil", potatoes watch "masher" films, and bottles of ketchup watch some kind of ketchupy slasher film ("Don't worry, Billy. They're just actors. And that's not real ketchup.")
* Far Side, Gary speculates that this dream stuck with him far more than it did with his brother.
* Far Side in his old age discovering that "kemosabe," the "honorific" that Tonto uses when talking to him, means "horse's ass."
* "Far Side" Island: A tiny island in the middle of nowhere housing a single palm tree.
* "Far Side" Island, where he is greeted by a cheerful ventriloquist... and his panicking dummy, who desperately tries to warn the newcomer of his ventriloquist's cannibalistic tendencies.
* Far Side panel, of all places: A group of mobsters are discussing the location of their new hideout in a pet shop full of parrots. "Alright, let's repeat the address a hundred times or so to make sure we all get it."
* Far Side strip has a dog pointing a device at a mailman which measures the subject's level of fear.
* Far Side strip shows a massive tanker ship with a crazed looking pilot and a tally of small sailboats on its side.
* Far Side strip that had a detective surveying a rhinoceros with a knife in its back and the caption: "Blast! Up to now, the rhino had been my prime suspect!"
* Far Side" The man in question is twice the size of everyone else, with three eyes and a trunk.
* Farsight himself became one to the soldier caste of the Tau because of his defection — to his successor, Commander Shadowsun, in particular. Her first act upon receiving his position was to go to a statue of Farsight and blow it up in front of her soldiers, to demonstrate that a new regime was now in play.
* far smile on and starts talking about how their daily chemical scrub symbolizes rebirth, and — Cue Ivanova's "Yeah, no" expression.
* Far Star Summer School Falguni makes it clear that what has been foreseen is next to impossible to change.
* Far Star Summer School is particularly happy to have recently gotten a plant familiar, which Madam Karrisa notes in a meeting with the school’s teachers, is a healthy if unconventional familiar.
* Farta the Troll loves her masochistic counterpart, Eryi the Fairy, in
* "Fartbreak Hotel" has Francine feeling burned out on her routine and unappreciated by her family. When they begin complaining about a small change in the usual dinner, she calmly explains that she had been indulging a fantasy where she didn't have to put up with their petty complaints and clean up after them
* Farthingized English is odd but comprehensible, unlike that of the Venusian from the far future whose society has painstakingly excavated scraps of literature from

ruins and reconstructed "langue Earthly" without realizing that that the scraps are not all from a single language.
* Farthing Wood book, White Deer Park is colonized by rats. The initial settlers soon become a horde that threatens even the larger carnivores. Several characters are bitten to death by swarms of rats.
* Fartillery to keep enemies at bay. Supposedly based on descriptions of the European bison (also known as the wisent).
* farting at once and flooding the stadium with gas. Naturally, the Iraqis take extreme offense to being defeated with chemical weapons:
* Farto, a fusion between a Farfetch'd and a Ditto. Also doubles as a
* far too amiable — eventually heterosexual when the Master regenerated into a woman.
* far too brilliant for the rest of Olympia, and thus gained rather poor social skills and a mild obsession with perfection. When he joined the Great Crusade, his Iron Warriors were quickly shoved into the thankless job of siege warfare, with thousands of Legionnaires being fed to the meat grinder so other Legions would get the glory of actually taking the planets. Peturarbo grew resentful of his brothers, especially Rogal Dorn and his Imperial Fists (who got the job Peturarbo wanted, that of building forts and palaces instead of knocking them down), and joined Horus since he seemed to be the only Primarch that gave a damn about him.
* Far too many spooks and spies to list, due to the necessity to keep a quick wit and a nature for deceit, have reputations as pranksters. One notable intelligence officer was Reginald V. Jones, who was the driving force in the radar countermeasures battle during
* far too young to have achieved such a rank and appears to be in charge of the insurance company, rather than anything to do with the Navy.
* far too young to remember the United States of America, he still holds their ideals closer to his heart than any other loyalties, and wears "the Old World Flag on his back."
* Far to the North she teases her Saengorian sister-in-law by saying "This one is almost as tall as I am, there's hope for you Southern girls yet." Junuka later comments on how Kelu has "legs like a horse" when she's running through the snow.
* Far to the North takes in what they think are starving refugees. They turn out to be a band of slavers who quickly turn on their hosts.
* Far Trader one possible adventure is the yearly race to bring the "loam truffles" from the planet where they are grown to a posh court.
* Farworld, Marcus is about to "save" Farworld, but will really end up destroying it. Unable to see past his own glory, he prepares to use the whole world's magic — and Kyja whispers "no" before passing out from blood loss.
* Farworld sees the dark circle kidnap Dew in order to trade her for Kyja, who is a 'guest' of the water elementals.
* Farworld series place value on an object because of its craftsmanship. An old boot holds equal value to an expensive necklace (or at least, they are judged against each other based on craftsmanship, and not the obvious value), where a lump of gold is just a shiny rock. While this much is understandable, they go on to confound the other characters as well as the reader when they show that they would rather throw a 'valuable' item back into the water than give it to someone without compensation, regardless of whether or not they were ever going to keep the objects.
* Far worse, however, is the polite kindness that the system shows its victims while pushing them down into despair and death.
* Far worse is the Archmage Miathan's perverse lust for Aurian once she "matures" upon the return of Forral into her life. While he's been raising her to be a
* Far worse than Hogatha, it was enough for her to want to deny all of creation what she had once had.)
* far would, as the often-improvised enhancements can be quite temperamental.
* Faryl Atheron, a Dunmer in Windhelm, works at a Nord farm and complains of his fellow Dunmers' "harping about injustices."
* FASA. A paragraph details how the air ducts can be used to move around the ship.

* FASA summoning time travelers and would-be conquerors of all stripes.
* FASA. The game a was a simple cardstock game which was supposed to lead into an Advanced RPG but the rules proved to be confusing or simply broken and it was cancelled.
* fasces (see below for its relationship to France) as its symbol: a double-bitted axe with red-white-and-blue blades and a marshal's baton as its handle.
* Fascinating Eyebrow: Arrogant or bemused characters raise an eyebrow.
* Fascinating Eyebrow: A superior character is (condescendingly) amused, and thus raises a single brow.
* Fascinating Eyebrow is one of Agent Scully's trademarks. She would usually eye down Mulder for his crazy theories. It was known among fans simply as "the look".
* Fascinating Eyebrow. Ponyboy, the main character, tries to imitate this trick without success.
* "Fascinating tales of mystery by the master of science fiction." —
* Fascination, letting latent attractions come to the surface, Miles and Keiko never show any attraction to anyone other than each other. Lampshaded at the end of the episode when Miles tells Keiko that he wasn't among the affected.
* Fascist, but Inefficient: Autocratic governments may promise to bring order and stability, but they ultimately fail to even accomplish that.
* fascistic (the White-Gold Concordat) on the Empire which served to destabilize it further leading up to the events of the game.
* Fascist Italy de-naturalized anyone found "unworthy of Italian nationality", e.g., exiled dissenters.
* Fascist Italy police to do the actual job, and it never officially existed.
* Fascist Italy, though many Blackshirts might have indeed been black shirts, and the trope was named after them.
* Fascist Italy too had its very own calendar, in which 1922 marked the year zero; therefore, 1936 became XIV E.F. (that is, the fourteenth year of the "Fascist Era"). Remnants of this calendar can still be seen on the façades of many public buildings throughout Italy.
* fascist regime by granting greater freedoms to women evidenced by them joining the military.
* Fascist regime where it comes from and its original meaning (was a Roman symbol of "strength in unity")-it's just that Mussolini became too much associated to it.
* Fascists' Bed Time: A curfew has been imposed. Nobody is allowed to go out for a certain period of time!
* Fascists' Bed Time: A curfew is enforced where everyone has to be home and in bed by an unreasonably early time.
* Fascists have been known for their anti-intellectual rhetoric and support for traditional values (Romanticism), but also support loyalty to the state and discipline (Enlightenment) which is fair since modern fascism began as an attempt to co-opt the features and forms of socialist organizations of the past and present, including loyal partisan identity, strong ideological coherence and efficient organization. Conservative parties were not as effectively organized and ideologically coherent in the past.
* Fashionable Asymmetry: the bias cut look, the angled necklines and the off-balanced hats make them fashionable.
* Fashion and lifestyle magazines published in the United States (like
* Fashion Assault is every bit as stupid as one would expect from the title.
* Fashion-Based Relationship Cue: What you wear indicates whether or not you're in a relationship, and can also signal who/what you're into sexually.
* Fashion Designers are gay or bisexual, but many of them are and fashion being a famously gay-friendly business, various designers have developed a LGBT following over the years.
* Fashion Designer: Someone who creates new clothing for the latest fashion trends.
* Fashion Designer's videos can barely go about his day without getting himself or his employees injured, but is nonetheless passionate about his craft - to varying degrees of success.
* Fashion Dissonance: Clothing, hair and makeup once seen as stylish look strange

to modern audiences.
* Fashion editor Carrie Donovan (aka the Old Navy lady) always wore black with pearls and glasses.
* Fashion Forward Risha decides to start her own clothing boutique because none of the ones she's visited in Hollywood have non-petite sizes.
* Fashion MagazineThe fashions they cover usually are luxuries more than everyday clothes.
* Fashion model Ana Sofía Martins for the European Portuguese dub.
* Fashion Model: Attractive people, usually women, who have to pose in photos while wearing the fashion designer's clothes.
* Fashion Model one onto her photos, in order to avoid accusations of over photo-editing!
* fashion reporter Suzuki St. Pierre persona in order to succeed in the fashion industry.
* Fashion satire prints: While exaggerations are pretty much the cream of the crop in satire, there was a time when mocking the fashion trends of the era were commonplace in every editorial from the late 18th century up until the early 20th century. It was easy for the cartoonist to sideline political issues with the excesses of popular culture of the era, and fashion was no exception. It was a time when cartoonists lavishly ridiculed the gigantic wigs and frou-frou styles of the late 18th century, the contrastingly plain yet slutty sheer muslin gowns of the Regency era, the gigantic hoopskirts and bustles and frills of the Victorian era, and the overly wide hats and very narrow skirts of the 1910s. And all of the prints showed shorter hemlines for comedic effect. It wasn't until the 1920s and the 1930s put a halt to these prints due to the influences of film and fashion photography putting in a realistic look of the fashions, and due to the simplicity, the lack of supportive undergarments, and actual shorter hemlines removing the need for ridicule and exaggerations on editorial prints.
* fashion sense stalls at the point of time they, the vampires, first died. Dated clothes trumps weirdo magic-sense. There are a lot of vampires for whom this wouldn't work. At all.
* Fashions Never Change: Anything set before the twentieth century has the characters wear generic clothes for their time period as opposed to nuanced fashions existing.
* Fashions of 1934 came slamming down, and Hollywood films wouldn't show the female navel again for decades.
* Fashions of 1934 includes a scene with a "slave galley" on a stage set, filled with half-naked chorus girls, all wearing platinum blonde wigs, smiling beatifically as they row.
* Fashion styles are a whole category of mispredictions, but one of the more obvious is that no one is using two ties, quite the opposite, ties are nowadays falling out of favor in all but the most formal occasions, let alone office environments.
* Fashion Victims, a story about a female clothes salesman whose son falls for his rival at work.
* Fassad is both very fond of bananas and rather careless about where he discards the peels.
* Fass or Vome kill the other, certain parts of the map will be covered in blue (if Vome died) or orange (if Fass died) sludge that will cover the edges of your screen and periodically induce a shortened version of the above Magnetic effect.
* Fast Acting Integrated Tactical Headquarters. They're a ZAFT special ops unit that only answers to Chairman Durandal. While they're not the Chairman's bodyguards full-time, they do end up protecting him during the Armory One attack and serving him during the Battle of Messiah.
* Fast & Furious 6. Dom struggles to get Letty to remember him and get her back on the team.
* Fast & Furious 6 has Vegh, one of Shaw's henchmen, who drives a heavily modified vehicle designed to ram and flip-over other cars.
* Fast & Furious 6 results in a final battle against Owen Shaw and his crew on

and around his getaway plane to save Mia.
* Fast & Furious 6 with Roman's private jet brandishing the words "IT'S ROMAN, BITCHES!" on its rudder.
* Fast & Furious, Dominic and Brian are searching for Campos, the leader of a narcotics gang. Only near the end do they realize Campos is actually the man who pretended to be his assistant.
* Fast & Furious had Dom and Bryan trying to outrun Braga's henchmen while trying to deliver Braga himself to authorities across the Mexican border.
* Fast & Furious has a variation. Braga needs another driver for a drug delivery and holds a street race to determine who gets the position. Brian and Dominic both enter to be that other driver with Dominic winning by running Brian off the road. Later, Brian gets one of Braga's regular drivers arrested on a trumped-up drug charge which sidelines him long enough for Braga to require that position to be filled as well. Since Brian finished second in the street race, he's chosen.
* Fast & Furious has Brian explaining himself after it emerges that Letty was his informant.
* Fast & Furious: Spy Racers", allof the cars are weaponized. There's a giant pneumatic fist that comes out of one's grill, paintball shooters, sawblades on Layla's car, and so forth.
* Fast & Furious: Spy Racers has a chrome version of the Universal logo as a radiator emblem, which then rotates to reveal the DreamWorks logo on the other side.
* Fast & Furious: Spy Racers is defeated, Frostee broadcasts an old video clip to her brainwashed minions where she says "Stop the fighting! It's time to dance!" So they do.
* Fast & Furious: Supercharged, after the protagonists dedicate a large amount of time telling the riders to shut off their cell phones in order to avoid their location getting traced by the ride's main villain, it turns out that Roman forgot to turn off his cellphone, a goof that launches the ride's main conflict.
* Fast & Furious: Supercharged, all of the helicopters in the ride's climax immediately explode upon crashing.
* Fast & Furious: Supercharged, as it turns out that one of the riders is actually in the witness protection program, and is therefore wanted by the main villain. This results in the protagonists having to take on the villain and his forces in order to protect the witness.
* Fast & Furious: Supercharged, Hobbs happily displays his huge gun to an FBI agent.
* Fast & Furious: Supercharged. One of the riders is actually a crime witness under protective custody, and the leader of an international crime syndicate is after them, kicking off the ride's plot. The Hollywood version is part of the Studio Tram tour. The Orlando version is standalone, and takes the trope more literally; the ride vehicles are 'party buses', and the innocents on board are heading to an after-party celebrating Dom Toretto's latest win.
* Fast & Furious: Supercharged opened at Universal Studios Hollywood, Agent Novak's dialogue towards Roman Pierce was more aggressive, with Novak telling Roman to "get down on the ground" while holding him at gunpoint. Novak's dialogue was later softened to have him just say "Don't move" to Roman, in response to the many police brutality controversies occurring around the nation at the time.
* Fast & Furious: Supercharged, the live hosts of the two pre-shows are named Pat and Jamie.
* Fast & Furious. Though disappointingly, the only action she really gets to do in the film is very briefly firing at some SWAT team members at one point.
* Fast and Furious 7, who died in an auto accident in November 2013, while production was still underway.
* Fast and Furious of Matt Trakker and having a more serious storyline. The IDW Hasbro Wiki even calls it "The biggest example of Critical Dissonance ever", with a link to this page.
* Fast and the Furious series has neon lights all over the body. Of course, they

need extra batteries to keep them glowing.
* Fast Attack CraftVariant of the Patrol Boat, FAC are heavily armed ships, often with anti-ship missiles or guns. They maintain the speed, agility, and low cost, but retains the fragility and lack of endurance. Because of their speed and weaponry, they can outmaneuver Capital Ships while posing a major threat. Then again, they're not likely to survive a direct hit from escort craft.
* Fastball is based on a news story from 1997 about an elderly couple from Salado, Texas, who disappeared on their way to a local event being held in Temple, and were later found dead at the bottom of a 25 foot cliff just a few miles outside of Hot Springs, Arkansas (more than 500 hundred miles from their destination). Lead singer Tony Scalzo was inspired to write lyrics about a presumably middle-aged couple who just got fed up with their lives and reality, and abandoned their children and everything else for a chance to find paradise. The refrain still makes it clear that they've reached Heaven, but their ghosts can still be seen wandering.
* Fastball's "The Way" starts with a series of radio snippets, eventually reaching the lyrics. After the first few lines, the radio effects drop and the song switches to the music proper.
* Fast Break, D.C. (Harold Sylvester) admits to Coach Greene (Gabe Kaplan) that he has unusual feelings for his (ostensibly male) teammate Swish. In the climactic game, Swish unwraps her breasts and hits the court. D.C. is relieved.
* fast by their weapons being rather fast-firing and (for the bikes) powerful enough to take down any vehicle;
* Fast Color: At the end, Ruth and Lila escape in their truck, on the way to Rome where they'll connect with other hidden women who have superpowers.
* Fast Color: Bo's mother tried to stop her being with Ellis. They carried on anyway and had Ruth.
* Fast Color: Bo's mother tried to stop her from being with Ellis, but by then Bo was pregnant.
* Fast Color: The central rule of the family's superpowers is that they can only turn things to dust and then back to normal. They can't repair anything that was already broken before their powers touched it. The one time Lila tries to fix a broken window with her power, it promptly shatters to pieces again.
* Fast Color: The word "superhero" is only said once, when Ruth chides Lila for suggesting they use their powers openly.
* Fast Color: This is the main ability of Bo, Ruth and Lila, along with other women in their family. Bo and Lila both demonstrate an ability to mentally "unmake" objects then put them back together. Ruth can't control hers at all to begin with. At one point, Bo reduces the guns of some government agents to dust.
* "Fast": Complete a level while the monsters are faster than normal.
* Fast Eddie has no plot to speak of, Eddie simply run around, collects prizes and avoids Sneakers.
* Faster has the protagonist driving off into the sunset, pursued by police cars.
* faster. It is not uncommon to find "X" routes that are far from express.
* Faster, Old Guy tapes the murder of Driver's brother and his gang on behalf of a dirty cop. Cicero says that the tape of that murder was found when they busted an illegal hardcore video ring. The tapes Cicero and Cop find in Old Guy's apartment indicate that he has been making and distributing snuff tapes in the intervening years.
* Faster, one of Driver's targets, Old Guy, is an elderly serial rapist and serial killer.
* Faster, one of Driver's Targets, Old Guy, is indicated to have raped several girls on camera before killing them.
* faster players will testify to how much harder the game is without a shield until you get your dodge roll timing down.
* Faster, Pussycat! Kill! Kill! (1965): Campy road movie by Russ Meyer starring big breasted women and nothing more explicit than that.
* Faster, Pussycat! Kill! Kill! At least that was during a knock-down, drag-out fight though. She uses her entire body, and it takes her several seconds to accomplish.

* Faster, Pussycat! Kill! Kill! case of this, where a band of female murderers plans to rob an old man with two dim-witted sons living alone on a rural farm, only to find the menfolk to be more than a match for the women in terms of malignancy.
* Faster Than a Kiss pre-book. It's explained that Fumino and her four-year-old brother are orphans, and are tired of being passed around to relatives. She and her teacher end up in a quick spat where she challenges him and says, "Then, can you marry me and take care of us?!" He takes her seriously and they end up married. As the book progresses, they both grow to seriously fall in love with each other.
* Faster Than a Kiss's Fumino lost her ring for a short time, much to her distress.
* faster than his brain. To atone, Williams financially compensated his fellow comedians every time he realized he had inadvertently borrowed their work. Thanks to this the world of stand-up comedy bears him no resentment.
* faster than light. But they never worked very well and no one wanted them around, so people stopped using them fairly quickly.
* Faster-Than-Light Travel and instead depended on sleeper ships for their entire two million year reign and never encountered any aliens for nearly their entire history and dismissed what artifacts they found of their own precursors as hoaxes. They attempted to exterminate the first alien species they met, the Jabbardeeni, who advanced rapidly and wiped out the Yuht within ten years.
* Faster-Than-Light TravelAny situation where you can cover more distance than a light particle would in the same time.
* Faster-Than-Light Travel are woozy and vomiting from "cryptosleep sickness." If you want to escape the rimworld by building your own spaceship, you'll have to research and construct enough ship cryptosleep caskets to preserve your colonists while a shipboard AI pilots them to a new home.
* Faster-Than-Light Travel have gravboats, which speed up the fleet during FTL and slow down enemies in battle. Other ships added in the expansions include freighters, q-ships, patrol craft, starbase constructors, and propaganda ships.
* Faster-Than-Light Travel in the late 5th millennium) has caused much knowledge to be lost. The average lifespan has fallen to about 200 as a consequence.
* Faster-Than-Light Travel, messages have to be relayed by couriers, so courier ships are a common sight.
* Faster-Than-Light Travel race. A ship that enters grimspace without a jumper will inevitably be lost. Trouble is, grimspace progressively eats jumpers' brains, which eventually causes them to die while jumping (they essentially leave their mind behind in grimspace). It's called Navigator Burnout Syndrome.
* Faster-Than-Light Travel: Spaceships that can move faster than light.
* Faster-Than-Light Travel: space travel is limited to sub-light speeds and is difficult, time-consuming, and expensive.
* Faster-Than-Light Travel: The limit being broken, is the speed limit of the universe, the speed of light.
* Faster-Than-Light Travel usually just accelerate to FTL, unless they're traveling through a wormhole, or the ship is a Leviathan using Starburst.
* Faster-Than-Light Travel. Well, sort of. The main body of the ship is an old missile, which is pretty much beyond the realm of your average homemade invention, but Lily mentions that "it took me six months to scrounge up enough titanium just to build a four-meter cockpit."
* Faster-Than-Light Travel. Without it, you can't really go anywhere other than the Solar System, which, aside from Earth, is made up of some fairly unattractive real estate.
* faster than the eye can see, at least until the threat of main characters suffering the same fate really sets in.
* Faster than the Speed of Love, is celebrated by a book club for the mentally challenged. (In a deleted scene in the same episode, Peter was among the people who likes Brian's book.)
* faster than Wrath control over his abilities, he'd be nearly invincible; his fighting style basically amounts to flailing around at his targets.
* faster that the fast-talking was by accident. Apparently he keeps it up and edits the pauses out, because it's funnier that way.

* Faster, The Evangelist was the sole survivor of the Driver's hit list since the Driver spared him out of forgiveness. The Driver was also the sole surviving member who took part in a bank robbery 10 years prior to the film.
* Fastest Gun in the West has meant that far more people are familiar with the Waco Kid's scene in the film than with the source material.
* Fastest Gun in the West: The guy who can put hot lead in people faster than others.
* fastest of all dogs, so fast he escapes death. The Earth-Dog thought he had lived long enough but all her attempts at killing him failed. When it looked like she had finally gotten Lightning, the Sky-Gods saved him and let Lightning live with them. Whenever lightning strikes it's because Lightning is teasing Earth-Dog by running fast.
* Fastest Thing Alive: A superhero with super speed who is acknowledged as being faster than everyone else.
* Fastest with the Mostest", Wile E. Coyote tries to blow into a balloon for his latest plan, only for the air to shoot back and inflate him. He desperately grabs the nearest object — a bomb — to stop himself from drifting away but just winds up carrying the bomb as he floats up. Then he deflates and finds himself high in the air, still holding a bomb. Whoops.
* Fast Five, a Brazilian crimelord who rules his domain with violence.
* Fast Five, Dominic Toretto and Brian O'Connor assemble a team to rob drug kingpin Reyes completely blind.
* Fast Five entails a chase where two muscle cars are dragging a vault filled with 100 million dollars through the streets of Rio. As they weave and turn the vault naturally does a lot of collateral damage to property, including going through a bank window in the middle of the day. We even see a woman standing right in front of the bank in the cut before the vault hits it.
* Fast Five, every Rio civil police, military police (PMERJ), or Brazilian Federal Highway Patrol (PRF) cruiser or officer we see, except for Elena, is dirty since they are all on Reyes' payroll to protect his money. Too bad for them, it cost them either their cruisers or their lives once they met Toretto and his team.
* Fast Five, full stop. One safe dragged behind two automobiles nearly leveled downtown Rio! In fairness, though, they drive the safe through a clearly occupied bank.
* Fast Five had the crew trying to outrun Reyes and the police on his payroll while towing a vault with his money across the streets of Rio.
* Fast Five introduces Jack Sparrow and his crew robbing a bank by having a bunch of horses dragging a giant safe, but end up taking the whole building along with it.
* Fast Five pull one early in the film, stealing three cars out the side of a train carrying them.
* Fast Five, the guys have an impromptu four-way drag race after "acquiring" some police cars. Roman takes off before the others... and still loses.
* Fast Five, they got what they deserved for betraying the police code for greed. Only Hobbs comes close to apprehending Dom in the film.
* Fast Five, they use two cars and a chain to slide a container into a truck.
* Fast Five to destroy the cars the corrupt police are using before the crew escapes.
* Fast Five, which is set entirely in Brazil, is almost exclusively a clash of American gangsters and American cops - both sides have exactly one important non-American character in their midst.
* Fast food chain Jack in the Box has Jack, a man with a clown-head who is both mascot and
* Fast food chains are often accused of using this trope as a way of disguising their products' ingredients:
* Fast food companies and other "junk food" distributors have been facing increasing criticism for advertising products toward children. Some groups and individuals advocate banning "Happy Meals" and similar food combos to "protect the children." True, parents are usually the ones buying that food; but fast food

places
* Fast Food Freedom Fighters movie. It was done in 1994, part of the early 90s mini-boom in anime gag dubs made by fans who were sick of watching Pinesalad and Corn Pone at every convention.
* Fast food menu items are based around meats like beef or chicken that used to be expensive before intensive agriculture, but fast food restaurants use meat that is of comparatively low quality.
* Fast Food Nation, noting that McDonald's entire plan is to make the job so simple and brainless that they can teach a new employee in 15 minutes, making any given employee totally expendable.
* Fast Food Smoothie, in which each contestant chooses a fast food value meal (sandwich, fries, ketchup, apple pie, soda) to throw in the blender.
* Fast food-themed parody cover band Mac Sabbath are more popular and recognizable than the band they were spun off from, shock rock band Rosemary's Billygoat.
* Fast Forward. A skit parodying Uri Geller had him eventually resorting to an oxy-acytelene torch to get the spoon to bend.
* Fast Forward; he then reverts to normal speed to build up enough force to break the chair.
* Fast Forward involved Brent and Barry being asked to a market a product that consisted of fat, sugar and unidentified radioactive isotopes. They decided to sell it as a children's ice confectionery. Upon being told it eats through wood and plastic, they decided to make that a selling point: the only icy pole on a metal stick.
* Fast Forward season of the series; the turtles find the journal that Cody Jones had used to learn about them. Once the temptation to read it becomes too great, they read a series of entries centered around each of the turtles. Donatello's entry (much to his horror) states that, after an accident in deep space, his brain is placed into a robot known as the Serling unit. Fortunately for the turtles, it turned out the journal they were reading was a fake prepared by Splinter and Cody when they knew the turtles couldn't resist reading it.
* Fast-forward to 1992. Elliott had left Melling Racing after the 1991 season to join iconic team owner Junior Johnson in his #11 Budweiser Thunderbird
* Fast Forward to Reunion: The main plot resolves with characters going separate ways, the ending skips to future to when they eventually reunite.
* Fast Forward to ReunionThe main plot resolves with characters going separate ways, the ending skips to future to when they eventually reunite
* Fast-forward to Season 6 when Sansa arrives at Castle Black, she glomps Jon as well, which is indeed a very heartwarming moment after the hell that both siblings have been through. It’s also worth noting that the two never interacted onscreen together up until this point in the show, and their interactions are only seen in past memories the two have of each other and their family in the books — though they and their family were separated very early on in both the television series and the books.
* Fast forward to today. The SoCon still operates, but dropped to the second level of NCAA Division I football, now known as FCS, in 1982, and is clearly a "mid-major" conference. The SEC and ACC, by contrast, are two of the so-called
* Fast Forward" when a machine that brushes his teeth and puts shaving cream on his face comes to life where he thinks he can get the privacy to read a newspaper.
* Fast Forward, where Skippy would keep finding himself in more and more bizarre situations, such as "Skippy and the Exorcist," "Skippy and the Drug Cartel" and "Skippy and the Nuclear Bomb."
* Fast hero + starting occupation with Treat Injury as a class skill + Surgery feat. For all the gunslinger out there.
* fast. In one episode, Marco chooses to stay behind in the Neverzone to clean up a mess he made; Star is on Earth for less than five seconds when Marco returns, talking about his years of adventures.
* fast It's unclear whether the unsub knew about this habit specifically, but she was killing men who failed to live up to her romantic ideal, so it's very possible that finding the camera set her off.

* Fast Karate for the Gentlemen once had a podcast entited "Not in my SPACE Jurisdiction", about Cyber City Oedo.
* Fast Lane dealt with one of the Buddy Cops' father's old profession as a counterfeiter as a part of an infiltration job.
* Fast Lane episode "Mighty Blue". When officers Van and Deaq confront a criminal gang, one of them reveals herself as an undercover police officer to save them.
* Fastlane to assume the position for frisking, for example (turns out he got a gun from a contact).
* Fastlane was canceled midway through its Friday run due to skyrocketing costs for each episode (more than $2.6 million per episode)., and ended on a cliffhanger.
* Fast Patrol Ships (formerly known as Pseudo-Fighters). They can carry devastating armament, but their shields are paper-thin. The rules even refer to them as "eggshells armed with sledgehammers." PFs with Warp Booster Packs gain extra warp-engine power, which they can
* Fast-penta also removes its subject's inhibitions, making them voice whatever is on their mind. So when Ekaterin is under fast-penta, she talks about her sexual curiosity about Miles, to his embarrassment.
* fast talking, is a very good warrior, capable of fighting off a few large mechas, all while on top of a speeding train.
* fast-talking, slurred and heavily-accented speech (which he called "Porky's Butthole").
* fast. This was not because they were morons or somehow Lacked Moral Fibre (LMF), but because they wanted to actually be able to receive information from and command their men. Away from a telephone-exchange, the force any one man could receive information from and give orders to within the space of a minute was limited to less than a hundred metres and about that number of men (men spread out to decrease losses from artillery fire). It was not unheard of for it to take twelve hours to physically carry a message across five kilometres of contested battlefield, and if a General wasn't in place to 'phone the artillery up and give them new orders based upon that information as and when he received it, then friendly fire and/or massive losses inevitably ensued.
* Fast Times at Buddy Cianci Jr. High", Stewie had to "animate" a corpse to fool a cop, before Lois had a chance to chuck it into the river. He posed as his head and moved the rest of the body. As a result, he managed to have an entire conversation with the cop, even convincing him that he was colleagues with his cousin.
* Fast Times at Ridgemont High, after getting fired from All-American Burger for swearing at a customer, Brad takes a job down at a "Captain Kidd's Fish and Chips," where he has to wear a full pirate outfit with tricorner hat and even (his boss reminds him as leaves to make a delivery) a plastic sword.
* Fast Times at Ridgemont High and taking off her top ... until he is interrupted by the very object of his lust.
* Fast Times at Ridgemont High, another Amy Heckerling high school film (see above), was turned into a forgettable short-lived series that was stripped of all the R-rated content that made the film a classic.
* Fast Times at Ridgemont High, Brad works at two fast food restaurants. At the first one, he is fired after being forced into an argument by an overly demanding customer; at the second one, he quits in the midst of a delivery ... which he was required to make while wearing a pirate uniform.
* Fast Times at Ridgemont High follows a group of high school students over the course of one year as they all grapple with issues of impending adulthood.
* Fast Times at Ridgemont High has in its brief mention of Christmas a Mall Santa dealing with a wet lap from a child peeing in his pants.
* Fast Times at Ridgemont High has Jefferson's car, a gift from a college football recruitment programme, get thoroughly destroyed when a Quaalude-addled Jeff Spicoli takes it for a joyride with Jefferson's brother.
* Fast Times at Ridgemont High" indicator on the door! She's flattered because she thinks he was thinking about her, when in fact he was thinking about her mom.
* Fast Times at Ridgemont High is a goof-off whose teacher says he has wasted eight hours of class time over the past year.

* Fast Times at Ridgemont High is broadcast, a cashier at a fast-food restaurant is mad at the customer who has become somewhat demanding because the meal is supposed to be "100% guaranteed", so he says, "If you don't shut up I'm going to kick 100% of your ass!" When the film is broadcast, it's changed to "100% of your face," and the customer complains because of his comments. Later his boss asks him "Did you use profanity or threaten this customer?" Since he didn't use profanity, they should have deleted that line from the manager's comments (or at least shorten it to "Did you threaten this customer?" Even if the cashier didn't use profanity, he still threatened the customer by saying he was going to kick him in the face).
* Fast Times at Ridgemont High pretty much hit every High School trope.
* Fast Times at Ridgemont High. Upon seeing Specoli entering the American History class, one student comments "That guy's been stoned since the third grade."
* Fast Times at Ridgemont High was initially released in Australia for its theatrical release with an R18+ and two seconds of cuts for underage sex. Modern-day re-releases have received an M rating completely uncut.
* Fast Times at Ridgemont High, where Jeff Spicoli (Sean Penn) wore his Vans black-and-white checkerboard slip-on shoes.
* Fast Tony is an armadillo that has a beak and retracts into his shell like a turtle.
* Fasttrack is listed as having enhanced smell and hearing to distinguish him a bit from fellow speed aliens.
* Fast-travelling between the Institute and the rest of the Commonwealth will only take one minute in-game
* Fast Tunnelling: Characters who can dig unnaturally fast, or just unrealistically so.
* F--: A student manages to do so poorly that they receive a grade that goes way lower than what the education system would allow in real life.
* fast), who, depending on the game, can combine together any of the aforementioned features. These elite Elites (heh) also shoot faster and more accurately than their lesser comrades, and are much dodgier to boot.
* fat, Aegon's weight actually caught up with him. By the end of his reign, he was so morbidly obese he could not rise from his seat, which was covered in his feces. His arms were rotten and infested with "flesh-worms" (i.e. maggots). The maesters tried to give him the milk of the poppy, but it could not alleviate his pain, and he died at the age of 49. The septons considered his fate a judgment from the gods.
* Fat a farmer's dog, livestock, tractor, pitchfork and wife all spontaneously inflate for no given reason.
* Fatah provides large financial incentives for Palestinians to kill Israelis, which they will pay to the attacker's family even if the attacker dies. However, they also provide incentives to survive, get caught, and be put in an Israeli jail for a very long time, zig-zagging the trope.
* FATAL also claims that the medieval diet consisted almost exclusively of bread and beer, completely omitting the critical nutritional role played by legumes. The importance of legumes is mentioned in the very first page found when searching "medieval diet" on Google. The equipment section lists prices for food, again completely leaving out legumes of any sort.
* F.A.T.A.L., although there, it's not so much "Perversion Potential" as it is "Perversion: The Game".
* Fatal Attraction, after Alex bluntly acknowledges the sexual tension between them, Dan calmly declares, "Let's get the check". The next scene is of them going at it in her apartment.
* Fatal Attraction, after going steadily crazier and crazier regarding protagonist Dan Gallagher, attempts this near the end, breaking into the Gallagher family home and trying to kill his wife Beth.
* Fatal Attraction Alex snaps this at Dan when he tries to give her the brush-off.
* Fatal Attraction falls in love with somebody who turns out to be the enemy.
* Fatal Attraction: Fed up with Alex's crazed behavior, Dan finally goes to the police... on behalf of a "client" who wants an ex to stop harassing him. It's pretty obvious the cops don't believe him.

* Fatal Attraction is based on the short story "Diversion" by James Dearden.
* Fatal Attraction is probably one of the most memorable depictions of stalking on film, and it subverts this trope in terrifying fashion.
* Fatal Attractions effectively "gave out" after he was stable, and took months to start working again.
* Fatal Attraction. She becomes increasingly unhinged following her one night stand with Dan, and threatens to kill herself if he should leave. It all culminates in her boiling the family's bunny and attempting to murder Dan's wife.
* Fatal Attractions in another attempt to regain what she thought was her father's adamantium (as she long believed that the process used to graft the adamantium to Logan's bones were what her father used), only to be surprised at how weak Logan is and that his adamantium is gone. She decides to leave the battle and wait until Logan is better to exact her revenge.
* Fatal Attraction situation with a co-worker at the Harness & Hoe Insurance company. Dave found this claim hilarious.
* Fatal Attraction slits her own throat to try and make it look like the man she'd been dallying with had done it to get rid of her.
* Fatal Attraction stated that she regards Alex Forrest as having borderline personality disorder.
* Fatal Attractions, the X-Men are forced to leave Avalon in a modified Blackbird when their final fight with Magneto prevents them from teleporting out. As the Blackbird was not designed for space travel at all, Bishop and the other X-Men are forced to try to keep the plane in one piece while keeping Wolverine stable thanks to the damage caused by Magneto stripping the adamantium off his bones. As Jean is one of the X-Men up in the plane, Cyclops even references her encounter with the Phoenix.
* Fatal Attractions was attacked by her pet tigers because she could no longer afford to feed all of them and had to resort to scrounging for roadkill.
* Fatal Attractions: Wolverine decides to leave the X-Men temporarily as he tries to figure out what to do while his body mends.
* Fatal Attraction. The original suicide ending has been shown in Japan.
* Fatal Attractor: A person who tends to attract admirers that are no good for them (if not outright dangerous).
* Fatal Attractor: Repeatedly falling in love with immoral or mentally unwell people.
* Fatal Attractor: This character always seems to fall in love with evil/mentally unstable people.
* Fat Albert and the Cosby Kids)) – not to mention the strong commentary from two of the other inmates about not having any rights or freedoms, and the strong probability of lost opportunities once released – is enough to convince the gang to stay out of trouble and the hell away from people like Rudy's buddy, who got them in trouble in the first place.
* Fat Albert and the Cosby Kids: A 1970s cartoon that teaches life lessons to kids.
* Fat Albert and the Cosby Kids: a big cloud of dust with the occasional head, arm and leg projecting from it.
* Fat Albert and the Cosby Kids. According to the other Cosby Kids, it's because the animators never had reason to actually draw him a full face.
* Fat Albert and the Cosby Kids as the series creator and the voice of the title character.
* Fat Albert and the Cosby Kids cartoon: Fat Albert enters a cooking contest (he's the only male entrant, which was the point of the episode). His attempt at a cake is a disaster: He uses the wrong ingredients in the wrong proportions, and so on. Of course, he wins anyway.
* Fat Albert and the Cosby Kids episode where Albert and his friends are given a tour of a maximum-security prison, and several of the inmates hoot and holler as they see the juveniles, making remarks about wanting them to enter their cell so they can have their way with them. Afterward, when their friend Larry is sentenced to prison (for grand theft auto), the boys make a dark remark about what Larry is about to endure.

* Fat Albert and the Cosby Kids, his singing voice is provided by Michael Gray. Neither voice sounds anything alike.
* Fat Albert and the Cosby Kids: In "Lying", the gang leap into a muddy river to practice alligator wrestling only to wind up wrestling each other because no one can see anything in the muddy water.
* Fat Albert and the Cosby Kids In the first episode, the gang decides they want to start a band. They go to a music store, pick out a pile of instruments, hear how much it will all cost, then ask the counterman what they can get for the amount they have. He shows them a single drum mallet. (The rest of the episode shows how they improvised instruments — except for Rudy's guitar — from junkyard stuff, and proceeded to play them on every subsequent episode as well as the opening titles.)
* Fat Albert and the Cosby Kids: In "The Stranger", Fat Albert and the gang are backing away from Donald's cousin Betty but back themselves into the janitor's closet instead of their classroom: not even noticing till they shut the door and all of the brooms and mops fall on them.
* Fat Albert and the Cosby Kids: In "The Stranger", Fat Albert, Weird Harold and Rudy are playing a game in the classroom that involves Fat Albert and Weird Harold throwing blackboard erasers at Rudy's face while Rudy attempts to block them with a textbook.
* Fat Albert and the Cosby Kids: In "The Stranger", Rudy throws a tomato at Fat Albert, only for Albert to dodge and the tomato hit the principal instead.
* Fat Albert and the Cosby Kids. Lasted from 1972 to 1984 in the original format, plus 1984 to 1985 in first-run syndication.
* Fat Albert and the Cosby Kids: Pretty much the entire plot of "Lying" where a pal of the gang's recently returned from Florida starts telling tales about his exploits down there that rapidly spin out of control.
* Fat Albert and the Cosby Kids purpose. In essence: The gang is given a terrifying tour of a prison after they are caught in a car a friend — who had run afoul of the law many times before — had stolen. Needless to say, the tour makes the right impression on the kids.
* Fat Albert and the Cosby Kids revealed that Rudy took home economics instead of gym because he loved to cook.
* Fat Albert and the Cosby Kids, starring Kenan Thompson as the lead character and used a plot in which a depressed teenage girl ends up summoning the characters from the cartoon into the real world.
* Fat Albert and the Cosby Kids the kids are trying to figure out how to handle a classmate named Suede Simpson, who everyone tries to avoid because he never bathes. Fat Albert was elected to tell him but just could break it to him. Finally, Russell flat out tells him he stinks and no one wants to be around him.
* Fat Albert and the Cosby Kids where Dwayne ignores a school assembly talking about heart attacks and how to respond to them. This comes back to haunt him when a street bum he's venting his frustrations to about the inanity of school assemblies – the bum agrees – suddenly clutches his chest and collapses. Fortunately, the other Cosby Kids, who were nearby, had paid attention, hear Dwayne yelling for help (and had also witnessed the heart attack), and are able to help save the bum's life by calling 911 and performing CPR ... all while a stunned, shaken Dwayne can only watch.
* Fat Albert cartoon had the Junkyard gang confronting a White supremacist group called the Double Cross, their insignia being two X's. This episode subverts things somewhat in the sense that Hitler, the Nazis, Swastikas, and the Holocaust are explicitly and constantly referred to in the course of the episode. Even in the allegorical Brown Hornet segment, Hitler was still mentioned by name.
* Fat Albert come to life and step out of their animated, 1970s inner-city Philadelphia world to help a teenage girl, Doris Robertson, deal with the challenges of being hated.
* Fat Albert film, Fat Albert is given a car made out of trash from the junkyard to drive his date, subverted in that it's powered by two of the Cosby kids.
* Fat Albert movie has an inversion. Fat Albert and the gang start out as cartoons,

then become live-action when they jump through the TV screen.
* Fat Albert of clothing, but he states to the clerk that he's broke. The clerk angrily collects all the clothing back.
* Fat Albert serves as one of these in the Halloween episode, he was trying to catch the target regularly but it didn't go smoothly.
* Fat Albert, the characters tell the audience to sit back down as the movie isn't over yet. However, they're clearly addressing a film audience, calling out "you in the back", so it doesn't have the same effect if watched on DVD.
* Fat Albert: When Fat Albert goes to pick up Laurie and Doris, Bill says they need to ride "in style." That ride turns out to be a hodgepodge contraption made up of parts from the junkyard, powered by manual peddling. As Albert starts the car, Bill sits under the hood with Mushmouth and he makes engine noises as Mushmouth sings with his new voice.
* Fatal Chase: Among the film's main antagonists, a married couple, the wife dies in this manner from being decked out of a tall window.
* Fatal Contact Bird Flu In America a pandemic already, because the definition of pandemic doesn't actually include death toll in the criteria, just how much it's spread and how hard it is to stop it from spreading further. The fact that it's spread just about everywhere but proven no more lethal than the regular flu is probably why a similar movie doesn't exist for it.
* "Fatal Contraption" because it was a throw-back to Joe's earlier work in animation before
* F.A.T.A.L. detailed results tables for all sorts of encounters. It's most notorious for having rules that governed every orifice a horny male could possibly insert himself into, with females whose ages ranged from 99+ down to... infant.
* Fatale fame) places a horror spin on this trope which also serves to make the femme fatale in question more sympathetic; it's implied that she's supernaturally cursed to forever remain young and beautiful, and the spell also works to cause men to fall hopelessly in love with her to the point where it leads to their own ruin. It's clearly established that she hates her life and the effect that she has on men, but can't escape it.
* Fatale is actually a man who took up the Madam Fatale disguise in order to find his long-lost daughter. Why he kept the disguise after he confirmed that his daughter was gone, we're not sure.
* Fatal familial insomnia is an illness that leaves the victim physically incapable of sleeping. The lack of sleep results in increasingly severe psychological symptoms, rapid weight loss, dementia, and eventually, death. There is no cure.
* Fatal Family Photo: Someone gets killed after showing a photo of their family.
* F.A.T.A.L.), features the memorable line from Jason Sartin, "Remember, folks, Darren's a professional, and we're reviewing on a closed course. Don't projectile vomit blood at home!"
* Fatal Flaw: A flaw that the character wrestles with on a consistent basis.
* Fatal Flaw bad idea to do so. Some of these return as tragic call backs in "The Laws of Gods And Men" when the likes of Ser Meryn and Maester Pycelle use these snide remarks as testimony against him in his regicide trial, acting as though they were legitimate threats and actions, rather than the humorous quips they really were.
* Fatal Flaw comes back to bite him in the ass because by the time he gets serious it is already too late.
* Fatal Flaw feel empathy, but she "discarded her own humanity" in order to become the "perfect king". When she actually reconnects with her humanity, she doesn't take it well. The fact that her reign ended so tragically made her come to the conclusion that she simply was not meant to be king, and someone else should've taken her place.
* Fatal Flaw. He's overly sensitive to his reputation as "just Ben's lackey", and is quick to fly off the handle if someone accuses him of riding off Ben's coattails. This was even worse in middle school, where he got involved with the wrong crowd after they appealed to his strength.
* Fatal Flaw. He will always put his friends' lives ahead of anything else, and is

willing to do anything to save those he cares about, whether that be his friends in the 501st, his spunky padawan, his beloved wife... or the kind old man who always gave him advice when he needed it.
* Fatal Flaw is to call into question whether you're a true dragon in the first place.
* Fatal Flaw or stubborn, or so good and persistent such that fixing his mistakes destroys him.
* Fatal Flaw Protagonist Lloyd Irving, at least, knows when too far is too far, and wants to make sure everyone can live in peace.
* Fatal Flaw speed and does what he can to use counters to his benefit.
* Fatal Flaw tendencies as a result. In season 5, he ends up dumping Rory because he feels he doesn't belong to Rory's glamorous world. In his last appearance, he tries to make Luke insecure as well, telling him that both Gilmore girls want more than a simple Start Hollow guy.
* Fatal Flaw that ensued when Grindelwald attacked Aberforth. Dumbledore learned his lesson about how he shouldn't be trusted with power that his own brilliance could bring from this but Snape never did.
* Fatal Flaw, where he shows this trope twice, and both times cause Chell to be genuinely pissed off at him:
* F.A.T.A.L. for being raped and prostitution is accepted and common. The author flip-flops between saying it's "controversial humour" or that this applies to all of Europe for all of its history because of one book about prostitution in 1400's.
* Fatal Forced March: Characters are forced to make a dangerous and likely-deadly journey on foot through hostile territory.
* Fatal Frame 2: Deep Crimson Butterfly you also have the ghost hands that have a random chance of attempting to grab Mio's wrist while trying to pick up an item. Overall, they don't do any damage (except for one fast, darker hand with slash marks on it, but can be easily shaken off) and it's actually minor. But put in conjunction with the entire mechanic and having to re-zoom after avoiding the ghost hand...
* Fatal Frame" and, just to make him even creepier, he has a particular interest in taking children as his victims...
* Fatal Frame can take pictures of spirits, which are not normally visible. It can also sap the spiritual energy of hostile ghosts (probably inspired by the aforementioned belief that cameras stole a person's soul), with the power of each shot depending on the film used. In the first game, a hostile spirit would be exorcized if defeated enough times, but later games dropped this: a hostile spirit can only be warded off, never permanently defeated.
* Fatal Frame designs of her Japanese appearance were removed. However, this re-design went over so well, it became the official design for the Xbox port and further appearances.
* Fatal Frame features Himuro Mansion for the first game and the Mansion of Sleep for the third. Both are big. Both are spooky. Both are designed to make sure you never come out again, dead or alive.
* Fatal Frame fits this trope, at least as it was advertised outside of Japan. The cover of the game-box proudly says "Based on a true story" on the American and European version, and the tale that follows has a young Japanese girl searching a haunted mansion for her missing brother, battling ghosts with a magical camera, and slowly uncovering a mystery that stretches back hundreds of years and involves vengeful ghosts, dozens of innocent victims, sacrificial rites, star-crossed lovers, creepy dolls and trying to hold shut the gate to hell. To much confusion as to whether Himuro Mansion was real or not. There was a debate going on about it for awhile until it was revealed the inspiration for the setting of the game was in fact many places and Himuro Mansion did not, in fact, exist for real. Unsurprisingly, the Japanese version makes no pretense of being based on anything but urban legends.
* Fatal Frame games using only the weakest film, and it's even harder if you don't upgrade your camera.
* Fatal Frame has a handful, though there's a particularly scary one in the third

game that has to do more with where you find it.
* Fatal Frame has quite a bit of this. Why do ghosts have to get close if you want to inflict maximum damage? Because it's scary.
* Fatal Frame has this with the "Sleep Priestess" song sung by the four young handmaidens.
* Fatal Frame II, as you're in a ghostly haunted house. Lampshaded by Markiplier:
* Fatal Frame II: Crimson Butterfly and she was incapable of rescuing her sister.
* Fatal Frame II: Crimson Butterfly in the Osaka underground passage. Despite the rocks being large and looking sturdy enough for a teenager to climb over, she refuses to do so.
* Fatal Frame II: Crimson Butterfly, Mayu says this to Mio when she is locked in the repentance cell. She will also say it if Mio runs too far ahead of her.
* Fatal Frame II: Crimson Butterfly where if you go in, the door just locks itself and going into first person view, you realize that the walls have "help me!" written all over in either blood or scratched in with fingers. Looking at the door, you also realize that whoever was trapped in there has tried to claw their way out and open the door with the bloody clawmarks left behind.
* Fatal Frame II has ghosts that grip on the twins and attempt to drag them away. They mostly appear on the bridge that connects to the Kurosawa residence and, even though Mio can photograph them to make them go away, they only appear as hands phasing through the bridge. The first installment also had ghostly hands coming out of the floor, but they were extremely rare-to-see entities.
* Fatal Frame III. After having a dream about a ghost encounter in the attic, the protagonist can go downstairs and open a closet, at which point her housemate's cat will leap out.
* Fatal Frame III involves her appearing at some random location near you. And if you aren't looking clearly away from her at this point, she will laugh at your health bar depleting.
* Fatal Frame III: Rei, Miku and Kei travel into the House of Sleep when they dream. If they lose all their spiritual health in the dream-world, they are confined there forever; leaving nothing in the physical world but a bunch of scorch-marks.
* Fatal Frame III: The Tormented, and proclaims the same about a somewhat wide gap between rooftops. When playing as the male protagonist, they can be easily moved.
* Fatal Frame III: The Tormented (easily the largest of any single one of the Fatal Frame houses) and very easy to get lost in.
* Fatal Frame III: The Tormented on this trope. Any person suffering from guilt over having survived, while their loved one died, gets lured and trapped into the Manor of Sleep.
* Fatal Frame III: The Tormented separate at the beginning of the game. As the story progresses, however, things such as the photographs taken in the manor and even the manor's ghosts begin to appear in the waking world.
* Fatal Frame III: The Tormented. The main antagonist Reika wears only hakama, but she's covered in tattoos and out of focus, so it's not exactly taughty to see her. It is, however, terrifying.
* Fatal Frame III, those who die from the Tattoo Curse vanish into an ashen outline.
* Fatal Frame II / Project Zero 2 has a couple of places where the twins have to stand on pressure pads to unlock certain doors. Seeing as the village had been completely cut off from modern technology it's rather out of place to the general rural-rustic style.
* Fatal Frame II, since it's a viable conclusion to the story and even suckier than the already depressing regular (and canonical) ending.
* Fatal Frame II's trailer, one can see Mio running as fast as she can to rescue Mayu, and damned if it wouldn't be nice if she could run that fast in-game!
* Fatal Frame II usually ends with a fight against "Rope Man" (a.k.a. the Kusabi). However, on Nightmare difficulty on the PS2 of Fatal difficulty on the Xbox, you fight Sae Kurosawa after him, and get a different, somewhat happier ending. The Wii Remake allows the player to fight Sae at any difficulty, as long as several

conditions are met.
* Fatal Frame in Normal Mode and getting the canon ending you unlock Hard mode with a bonus ending. And you can reload all of your cleared games, including the Easy Mode ones. When you reload a cleared game you get to keep ALL power-ups, documents, items, and other stuff you collected in the previous game. And there is the bonus costumes....
* Fatal Frame in the form of a camera upgrade. If you photograph every ghost in the entire game, which at best can be completed early through a second playthrough, the Zero function makes the game ridiculously easy — rather than have to spend time charging each shot, your camera stays at full charge all the time. It's basically the equivalent of upgrading from a flintlock rifle to a minigun. Oddly, this isn't the hardest upgrade to get; the reward from getting perfect scores in battle mode is much more challenging and virtually useless, since you're limited to equipping only one upgrade at a time.
* Fatal Frame is all about using a camera to detect and banish ghosts.
* Fatal Frame is represented by a filament that glows blue when a ghost is nearby... or orange if the ghost is hostile. The glow increases and decreases based on how close the ghost is and whether or not you're facing them.
* Fatal Frame IV has no enemies or ghosts. Unless you take a good long look at one of the eyeless mannequins in the center. The head will TURN TO YOU and open its eyes, revealing yellow demon eyes. If you try to look at it again, it won't do it anymore. It is a common scare in the games to have a doll turn and look at you if you look at it through the camera. However, they only do this once, and the instant you lower the camera, they're back in their original pose, leading some gamers to wonder if they're just imagining things.
* Fatal Frame IV is only available in Japan. However, a group released a patch that runs from the Wii's SD card slot using Riivolution, instead of directly patching the game (since the developers stated that they don't want to promote piracy). Though people have figured out how to do it anyways using their files.
* Fatal Frame IV: Mask of the Lunar Eclipse at the face will suffer the same fate.
* Fatal Frame IV: Mask Of The Lunar Eclipse. He seems to take it rather calmly.
* Fatal Frame IV: The late battles against the Utsuwa (Vessel) and Kanades (Accompanists). The Utsuwa is on her own, but she likes to teleport frequently and attack randomly. So unless you get the Evade function down pat, she'll be hell to fight. The Kanades are worse, though. There are five of them and they team up well; four of them are likely to remain in your field of vision and distract you long enough, so the fifth one can easily attack you from below.
* Fatal Frame likewise came to Xbox as a "Director's Cut" with similar enhancements, in addition to the option to play the entire game in first-person perspective.
* Fatal Frame: Mafuyu chose to remain with Kirie at the hellgate and willing to leave his sister behind because he wanted Kirie to never be alone again.
* Fatal Frame: Maiden of Black Water has the Interlude, where there are only some non-hostile spectral echoes for photo-op, some notes to collect, and NO hostile ghosts to confront. The episode ends with the player-controlled protagonist heading back out to Mt. Hikami, where the plot picks up again.
* Fatal Frame: Maiden of Black Water, making them both sacrifices to appease the Night Spring. Which "bride" he ultimately chooses determines his ending in the game.
* Fatal Frame: Maiden of Black Water, notices that he talks in his sleep when he has nightmares and deduces that his nightmares may be the reason this trope applies to him, and one of her journals ends with the question: "Are the women he's dreaming about really that frightening?"
* Fatal Frame. Oh, and he's fully invisible too. And he can't be pushed back with a critical shot like every other ghost can be so he's ALWAYS coming towards you without stopping. Again, being invisible, you can't see him but rather HEAR him, unless you get a shot of him fading in and out quickly while looking through the camera, which is the only real way to defeat him.
* Fatal Frame one of these being the reason the area you are in is haunted. In

order:
* Fatal Frame ritual gone horribly, horribly wrong. It's like a follower of an Abrahamic religion having to fight his or her way through an entire village of Satan-worshippers.
* Fatal Frame scarier, as it alerts the player that something is happening, but doesn't break the suspense.
* Fatal Frame series almost always involve some failed ritual releasing an evil, corrupting presence known simply as the "Malice" or the "Dark".
* Fatal Frame series tend to cause radios, tape players, televisions, telephones or other kind of electronics to act up.
* Fatal Frame. Specially effective with the handmaidens, since they are singing about skinning and impaling people in a monotone, almost entranced tone of voice.
* Fatal Frame stated that the two of them are related, though how this is so has not yet been made clear.
* Fatal Frame. The second installment features a few children who aren't even aware that they've died yet, and continue their game of hide and seek. Then they drag Mio into it if she happens to encounter them. It also features Crimson Kimono, the only ghost not killed by the Darkness or anything caused by it, but instead by either terror or starvation, and who had the unfortunate opportunity to watch the slaughter from her favorite hiding place.
* Fatal Frame VI: Vengeance; for starters, Miku Hinasaki married a man named Shuichiro Kobayashi and had two daughters, one of whom is Sumiko's friend Minako.
* Fatal Frame VI: Vengeance: In chapter 5, the mere presence of Ayumi Oshiro makes the room so cold that Sumiko's breath becomes visible.
* Fatal Frame VI: Vengeance: The entire reason Sumiko comes to the Watanabe Shrine is to solve the mystery of the Disappearance of the Watanabe Three in 1984.
* Fatal Frame, with the overarching story being the protagonists getting trapped in haunted villages and slowly piecing together what ominous events created the various horrific ghosts that will kill them cruelly and painfully if they catch them.
* Fatal Frame, your only weapon in the games, which seems to steal energy from the ghosts until they can no longer materialise (as opposed to capturing them, since they have a habit of turning up again later).
* Fatal Fury 2 is "Street Fighter 2 with some Fatal Fury 1 elements tossed in", as well as four-button layout instead of SFII's six-button layout, though.
* Fatal Fury 2, Special, Garou: Mark of the Wolves is on top of a train.
* Fatal Fury 2 The New Battle. Krauser lifts Terry Bogard up by the head and Terry's immediate reaction is to try to pry Krauser's hands off (To be fair Krauser also threatened to crush his head) His second attempt is to kick Krauser in the face, which is blocked. Finally, Terry knees Krauser's elbow, finally forcing him to let go.
* Fatal Fury 3, in which Chonshu telepathically taunts the player, saying that he's not interested in someone who had to struggle so hard against Yamazaki and that he'll gladly meet up with them again in the future once they improve themselves.
* Fatal Fury after finding and destroying the scrolls so that their power could never be used against him. Once more, Terry and Geese square off at the top of Geese's tower, and once again, Terry defeats Geese. This time, however, Terry tries to save Geese from falling, only for Geese to defiantly refuse and allow himself to fall.
* Fatal Fury: After Geese Howard killed Jeff Bogard, Jeff's sons became martial artists to eventually kill him back.
* Fatal Fury already has a nearly spherical torso, and he can inflate himself with air during at least one of his attacks.
* Fatal Fury always carries a knife around wherever he goes. Just try not to get too close to him.
* Fatal Fury and its sequels introduced a second plane which characters could jump to to avoid attacks along the two-dimensional plane.
* Fatal Fury, as his eyes glow yellow whenever he meets up with an evil character. Indeed, fans often use Kim's "evil sense" as a way to determine whether or not a

character is truly a villain. His son Jae Hoon also follows suit, and sometimes labels someone overconfident but not completely evil like Gato... EVIL!
* Fatal Fury (as Terry, Andy, and Joe officially were "Team Italy" that year), though the venue is only limited to that area of Italy.
* Fatal Fury, before the fight starts there's dead silence... and then, in the background, Terry Bogard's pet monkey jumps on the "Play" button of a boombox. At that point "Big Shot" starts up.
* Fatal Fury, Billy Kane, is treated like a friend more than an employee, and he even treats his minions to drinks on occasion.
* Fatal Fury by grabbing Geese's hand as he falls from Geese Tower. Geese just smiles and pushes out of Terry's grip, letting himself fall to his death.
* Fatal Fury, even though both it and SFII were in development at the same time.
* Fatal Fury, has a nasty scar on his back, received when he was thrown off the top of Geese Tower. He shows it off in his intro pose.
* Fatal Fury; he'd become bored after beating so many challengers that he finally decided it was time to fight the best in the world. Rugal Bernstein also hosts the tournament in '94 for the same reasons, but unlike Krauser (who is brutal in the ring but a nice guy otherwise) he just wanted to stroke his ego and maybe add a few more statues to his...collection.
* Fatal Fury. If it weren't for his... excessive pride, he wouldn't be stuck to the pavement like a mancake right now.
* Fatal Fury. It works but afterwards leaves her so weak from the strain that she can barely move.
* Fatal Fury: King Of Fighters), he raises Geese's orphaned son Rock, apparently to keep him from going through the same process.
* Fatal Fury, Mai Shiranui is said to be this to Hokutomaru, who refers to her "Mai-neechan" ("Big Sis Mai").
* Fatal Fury, Mai Shiranui's birthday falls on January 1 - New Year's Day.
* Fatal Fury OAV ends this way after the two of them have exhausted each other with their ultimate attacks.
* Fatal Fury), results were similar for Terry as they were for Hero entering November 2019.
* Fatal Fury series anymore and is pretty much just there to appease older fans. Some have even feared that SNK would kill off Blue Mary since unlike Terry who used to be a main character Mary was always a secondary one. That and Terry's girlfriends have a tendency to end up dead (in the anime, anyway). Fortunately that hasn't happened yet.
* Fatal Fury series. Appears to be quite a multicultural place, possibly justifying how so many people there master several martial arts from around the world.
* Fatal Fury series, where he was responsible for repeatedly saving Southtown by defeating the likes of Geese Howard, Wolfgang Krauser, and the Jin Twins, among others.
* Fatal Fury. The boyfriend in question is deceased, though how was not elaborated on.
* Fatal Fury took over, however, she lowered the pitch and now Mai sounds way better.
* Fatal Fury, when Geese shows up halfway through the film to show us his RAGING STORM...and then is absent for the rest of the movie. Sequel time? Nope, they never made another.
* FATAL. Hall answered criticism of this mechanic with anecdotes about nursing sourced to "some females I knew in college".
* F.A.T.A.L.. Hall certainly "did not search with vigor" if he missed those references. Let's not even go into the "mythologically accurate" claim.
* F.A.T.A.L. has armor (or armor pieces) "of agelessness", which slow down the wearer's aging by a factor of ten, but it all catches up when removed.
* F.A.T.A.L. has this as the eponymous spell, which destroys the universe. The spell can be cast as a random effect of a spell miscast. Given the kind of game it is, this is arguably a mercy.
* Fatal Hearts, most of the romance options for the female protagonist are male,

but your female best friend is canonically in love with you and can get together with you in one ending.
* Fatal Inertia or shot and attached to an opponent's craft, sending them into a wild spin.
* Fatal injury to the spleen tends to play out this way, as it's a highly-vascular, notoriously-delicate organ which can slowly bleed out into a person's abdominal cavity over several hours.
* Fatal Injury Underreaction when Warren unintentionally shoots her through the heart after trying to kill Buffy. She has just enough time to frown in confusion and say "Your shirt," when seeing the blood spatter on Willow's blouse before collapsing and dying.
* Fatal Instinct: Both Ravine's unfaithful wife Lana and released convict Max Shady plot to kill him on the same train ride. Lana ends up shooting Shady by mistake because he also wears Ravine's trademark blue suit.
* Fatal Instinct hangs onto the underside of a vehicle while it drives along. When he gets out, it's revealed that friction with the roadway wore through his clothing, exposing his buttocks.
* Fatal Instinct has a life insurance policy that only pays out in full if he dies from being shot with a pistol, falling out of a northbound train, and landing in a river. So his wife comes up with a plot to do just that so she can cash in and elope with her lover.
* Fatal Instinct. Lana Ravine explains her plan to murder her husband to her co-conspirator lover by using a tabletop map as well as an audiovisual presentation. When her lover asks how long she's been planning this, she claims it only just came to her.
* Fatal Instinct, Lola Cain does this to Ned Ravine after he calls her a "sure thing".
* Fatal Instinct. Lola Cain turns and looks at the audience after Ned Ravine turns her down.
* Fatal Instinct, Ned Ravine has a closet completely filled with identical blue suits. He asks his secretary which one he should wear. The secretary responds "The blue one".
* Fatal Instinct. Ned reads the entire business card of Le Hot Club out loud, pronouncing every word slowly and solemnly, including the phone number: 555-5555.
* Fatal Instinct, Ned's wife is cheating on him with her auto mechanic, who has been working on fixing a car that hasn't left the driveway in months. Ned just thinks he's screwing her in the financial sense, racking up huge labor costs while doing no actual work.
* Fatal Instinct. Occurs twice: once when Laura Lincolnberry punches and breaks the cookie jar, and again when she shoots Lola Cain and Lana Ravine at the same time.
* Fatal Instinct, secretary Laura Lincolnberry explains the situation in great detail to her boss Ned Ravine.
* Fatal Instinct: The headline for Lana Ravine's trial is introduced this way until Lola Cain yanks it out of the air.
* Fatal Instinct, the protagonist's wife and lover conspire to kill the protagonist to collect his life insurance, under highly specific circumstances which which will invoke a triple indemnity clause (Namely, he has to be shot with a pistol, fall out of a north-bound train, and land in a river).
* Fatal Instinct. While Ned Ravine is searching his house for intruders he opens the medicine cabinet in his bathroom and discovers his cat inside it. The cat jumps out yowling.
* F.A.T.A.L. is an enforced aversion - in that game, high Strength stats in female characters cause equal penalties to Charisma. So, even if technically some spectacularly high STR and CHA roles could make a character an Amazonian Beauty, she'd be considered even more attractive if she wasn't Amazonian.
* F.A.T.A.L., it probably comes down to whether you will say "please" and "thank you" when raping someone or not.
* F.A.T.A.L.. It's just a matter of time before something tragic happens in a F.A.T.A.L. campaign (as always).

* Fatality, one of the most difficult disc sets along with T2's Maximum set, features a high boss in the form of Xeus MX, which is Thor on steroids, thus in the same league as D2 and Cypher Gate in difficulty. Like other Maniac performance sets, the prerequisite involves playing two specific songs. In this case, they are AD 2222 and Angel. Like other similar charts, Angel's MX chart is designed to push players beyond human capabilities, with (glitch-laden) tiring repeaters being its primary challenge. Many consider this to be HARDER than Fatality's Low Boss (Supernova).
* fatal Low-proof beers or wines are safer (and far less irritating) but even then only in the amount of a standard oral drink and not with someone who is already drunk—and the practice is not advised for anyone who isn't into the aforementioned forms of erotic play to some extent.
* fatally mauled while giving a presentation for students at a circus show in Alexandria on Dec 2, 2016.
* Fatal MacGuffin: Achieving this Macguffin can be hazardous to your health.
* Fatal MacGuffin object which kills anyone who dares to touch or use it.
* Fatal Method Acting: An actor ends up dying during production of the work.
* Fatal Method Acting: A performer dies suddenly during their performance.
* Fatal Move where an evil mob boss tortures someone for information by removing their fingernails and teeth.
* F.A.T.A.L. qualifies, and it doesn't even compare to the game. Although in the case of the review, it could be argued that it succeeds, though the game not so much.
* Fatal Racing proudly embraces this. You can even self-destruct by turning on engine damage and running a gear below your top gear.
* Fatal Racing, yet it's still all supposed to be a competition with major manufacturer sponsorship.
* Fatal Reward: A person's promised reward for doing as they've been asked turns out to be death.
* F.A.T.A.L. rules about rape, if you're reading this, Hall) trying to take the moral high ground over a couple guys who listed hitting yourself in the scrotum with a tack hammer as an activity preferable to playing FATAL.
* F.A.T.A.L.'s creator Byron Hall claims that the game is absolutely historically accurate—when he's not claiming that some hideously offensive magical item was included for controversial humor. In practice, "historically accurate" in this case means that he just looked up stuff that people used to believe at one point or another, and treated it as though it's actually true.
* fatal shooting that apparently inspired the classic folk song "Stagger Lee" happened on December 25, 1895 in St. Louis.
* fatal shooting with a prop gun made his portrayal of a musician who was shot to death and came back from the dead for revenge very poignant. The scene in the movie where Eric Draven was killed was heavily edited to change it from an explicit view of Draven being shot to a fast cut of Funboy firing a gun at him, but it couldn't be removed completely because it was the basis of the movie's plot. (Part of this was pragmatic, of course, to hide the double's face.)
* Fatal Terrain is under Chinese bombardment when USN and USAF assets show up.
* Fatal Terrain, the Chinese try to paint themselves as righteously resisting the warmongering of America and actually succeed for a while.
* F.A.T.A.L. that's a good thing) and at worst you lacked an anus so hard that there were less assholes in the world because of your mere existence.
* F.A.T.A.L. that the spell of the same name, which kills absolutely everything in the world, is this. Oh, and it's possible to cast it by accident when you miscast an entirely different spell.
* FATAL upon which you might like to base your own highly realistic RPG: Flies have four legs. Men have more teeth than women. Oh, and the brain's purpose is cooling the blood - it's the region around the heart that's responsible for thinking.
* F.A.T.A.L. whatevermancy skills, ranging from gleaning information off of staring at the clouds to telling the future from someone's droppings (of course).
* Fat and Proud: I'm proud of being fat and I'm not afraid to flaunt my fatness!

* Fat Bastard calls his "Willy/willie", "Mommy-Daddy Button" and "Nuts".
* Fat Bastard, this is just as painful for Dellinger as it is to Machvise.
* Fat Bastard traits being played up more so he comes across as merely a lovable jock who, as the biggest and strongest member of the main cast, always looks out for his friends and has their back when the going gets rough. Granted, with each reboot and run of the series he has gotten less mean in general, but even then “Movie Gian” is memetic for how much of an utter bro he is in contrast to his usual self in the series, and in the original manga specials these movies are based on this was already the case.
* Fat Bastard who regularly breaks through solid stone; he's probably the strongest human in the series. He wears purple overalls.
* Fat Bastard who stabbed a toddler to death, by feeding him to a bear.
* Fatboy Slim, but by the duo Mighty Dub Katz, one half of which was Norman Cook, better known as Fatboy Slim.
* Fatboy Slim features a late-model Hawker Hunter painted in US Air Force livery, possibly to represent an F-105 Thunderchief. The resemblance from most angles isn't bad even if their performance isn't remotely comparable.
* Fatboy Slim has vocals taken from the song "Take Yo' Praise" by Camille Yarbrough, but the "should" starting at 0:32 is digitally treated to last for a whopping 46 seconds!
* Fatboy Slim". In fact, the final version of the script is a single line: "Blow stuff up."
* Fatboy Slim's only Top 40 entry wasn't "The Rockafeller Skank", but rather "Praise You".
* fat, but also a subversion for being a very good horseman, swordsman and stellar military leader for most of his life and reign.
* Fat Butt and Pancake Head couldn't control his hand, got Affleck spooge all over him.
* "Fat Butt and Pancake Head": For a report on Cultural Diversity, Cartman chooses to do one on Latinos in the arts with the help of a Jennifer Lopez hand puppet. Later, at the mall, the puppet gains autonomy and insists they make a music video, which launches the hand puppet's musical career. Ben Affleck falls in love with the Jennifer Lopez hand puppet (whom he thinks is actually Jennifer Lopez), and strikes up a relationship with it (and they both have sex). Then the REAL J-Lo shows up to protest the hand's authenticity. When things get out of control, the hand reveals its real identity by removing "her" hair and, in a male voice, making a confession that she is not 'Jennifer Lopez', but 'Mitch Connor', a con man who has been moving around from town to town. He apologizes to Ben for playing around with his love and states that he will die because he has recently consumed a cyanide pill. After the hand "dies", Cartman is left in control of his hand again. What makes the entire situation funnier is that everyone besides Kyle thought Cartman's Jennifer Lopez hand puppet was really
* Fat Buu does this in the anime flashback when Kaioshin first introduces him, exterminating all luminosity from a galaxy by destroying its stars.
* Fat Buu turned Dabura, the King of the Demon Realm, into a cookie and then ate him, destroyed a city by breathing at it and turned dozens of humans into clay and used that clay to build his own house.
* Fat Buu who is a near endless well of power, endurance, and is able to regenerate. He is also the least skilled of all the Buu forms. He can't even sense energy and gets his ass beaten when fighting someone near or above his power such as Evil Buu, Kid Buu, and Super Saiyan 3 Goku.
* Fat Camp: A summer camp where parents send overweight kids to diet and to get off their butts and go outside.
* Fat Comic Relief: An overweight character whose purpose is to provide humor.
* Fat Comic Relief: Overweight characters are used for comedic effect.
* Fat Dog Mendoza is initially such a bad salesman he couldn't sell water to a man dying of thirst in a desert, in contrast to Fat Dog selling ice to Eskimos.
* Fate also does this at the end of the first season, but it's made clear that she and Nanoha would see each other again and the first episode of

* Fate also does this sort of thing when he fights Negi, leading to some
* Fate and Erio had a loving family, and complete knowledge of their origins long before the series even began.
* Fate and his eternal opponent (and personification of this trope), the Lady (i.e. Lady Luck).
* FATE and its sequels, every quest monster and uniquely-enchanted item has a randomly-generated name and/or title.
* Fate and Nanoha had a rematch in the supplemental materials as well. After the first season, it seems Fate won when she's going all out, rather than fighting half heartedly.
* fate and prophecy it's still unclear whether this trope or the more fatalistic one will come true in the end.
* Fate and Signum, who first became friends back when Fate was just 9 while Signum... looked and acted to be around 19 but is actually
* Fate/Apocrabridged lead his interlocutor to scream in exasperation that he has no idea how it works either.
* Fate/Apocrypha, after the theft of the Greater Grail, Darnic spread word of the mechanics behind it, prompting the start of a slew of Subcategory Holy Grail Wars, none of which were remotely close to the true power of the Grail. None have managed to summon more than five Servants at a time, and at least one Subcategory Lesser Grail detonated.
* Fate/Apocrypha. Astolfo is left laughing about even on the following day. Even funnier is that Jeanne has the True Name Discernment ability, which lets her figure out any Servant's identity, meaning there's no reason she SHOULDN'T have known Astolfo was a guy from the start. To quote Sieg on the matter:
* Fate/Apocrypha Astolfo's gender). Here's the exchange between Astolfo and Sieg about it the following day:
* Fate/Apocrypha as well. Eventually, all that power causes his body to warp into a humongous blob with multiple heads and limbs. There's a limit to how powerful he can become this way, and when it is reached, he explodes.
* Fate/Apocrypha: Atalanta has lion ears and a tail, likely a reference to how in her myth she was eventually turned into a lion.
* Fate/Apocrypha by acting far more effeminate while also throwing in more reminders that he is, in fact, male.
* Fate/Apocrypha definitely doesn't apply here since she is treated as a despicable person.
* Fate/Apocrypha. Despite his morbid use of magic, he's actually a pretty decent guy.
* Fate/Apocrypha differently than most homunculi in the franchise, including mechanical parts for one).
* Fate/Apocrypha has Astolfo, Paladin of Charlemagne, who has long, pink hair in a braid, a penchant for rather androgynous clothing, a high-pitched voice, and the personality of a spunky teenage girl. He is also a guy. In-story, the only one who seemed to not realize this was Jeanne d'Arc, who freaked out a bit upon running into Astolfo coming out of the shower. Astolfo himself occasionally likes to mess with people by playing up his gender ambiguity, and is noted to not care particularly much about gender differences.
* Fate/Apocrypha, he can become a vampire. Semiramis says that she had nothing to do with the Hanging Gardens of Babylon, but can summon and control it because so many people believe she built it.
* Fate/Apocrypha is a burly, cigarette-smoking, shotgun-wielding, leather-clad necromancer who looks like he'd be more at home in a biker gang than fighting in a Holy Grail War.
* Fate/Apocrypha isn't really affected by such sights due to his emotional development.
* Fate/Apocrypha: Jeanne d'Arc is the deuteragonist to Sieg's protagonist. Saber of Red/Mordred and her Master Kairi Sisigou are the tritagonists by virtue of being the most developed Master and Servant of the Red Faction and joining Sieg and Jeanne's side to fight the true enemy.

* Fate/Apocrypha: Kairi Sisigou offers Mordred a handshake, but she cheerfully hi-fives his hand instead, causing Kairi to look slightly annoyed.
* Fate/Apocrypha, Mordred and Kairi Sisigou get separated during their fight with Semiramis. Kairi tries to use a Command Spell to make Mordred teleport back to him, but Semiramis explains her magic can prevent it from working.
* Fate/Apocrypha, Nazi Germany intervenes in the third Holy Grail War after Darnic informs them about the existence of the Holy Grail and convinces them to try and acquire it with his help. Wehrmacht commits a full scale invasion of Fuyuki city and defeats The Three Families as well as the Imperial Army that tries to stop them. After the war ends inconclusively, Darnic stabs the Germans in the back and steals the Greater Grail for himself.
* Fate/Apocrypha, Ruler's usual civilian outfit, which is supposed to be a school uniform, exposes her entire back when not covered by her jacket. This also reveals the Command Spells (think magical tattoos) on her back.
* Fate/Apocrypha: Subverted with Shakespeare. Despite being summoned as a Caster, in life he was exactly what history recorded him as: An excellent writer, but nothing more. He had no knowledge of magic or connection to that world. He is famous enough that he still qualifies as a Heroic Spirit, and the Grail gave him a large power boost when he was summoned. He is by far the weakest Servant and spends most of the War recording the events as a story, but he is at least theoretically capable of fighting another Servant.
* Fate/Apocrypha to King Arthur aka Altria Pendragon, she actually admired Altria and was happy when she learned she was her child. However, Altria rejected her as her child, but not as a knight, and rebelled against her. Also, she still mentally a child since she is an aged up homunculus created by Morgan.
* Fate/Apocrypha. To prevent outside interference from disrupting the duel, time freezes for everyone except the combatants within the Duel Field, only resuming when a victor is declared.
* Fate/Apocrypha writer, Yuichiro Higashide, also did the scripts for its anime adaptation.
* Fate, appropriately, gets to choose for herself the time of her service and the identity of her successor. She also, unlike her colleagues, gets to return to life when she retires, instead of passing on (leading to one character, over the course of the series, being recruited as Fate, serving time, retiring, living out her life, and then getting recruited as Fate
* fate are all outside Fate, and people from those places don't have a destiny. Even then, though, their destiny may be written in samsara, and lesser beings from the Wyld may be ensnared in fate simply by entering Creation.
* Fate are magical cats defending their human burdens from monsters. One ability you can acquire for your cat character is essentially this.
* Fate Averruncus can use water to teleport (Evangeline and Kotaro use shadow instead).
* Fate Averruncus did this to multiple people in his first appearance in Kyoto (
* Fate Azure Destiny and the Sirens. Just like the Mages Association have no idea about technologically advanced Shipgirls, Azur Lane and the Sirens have no idea about the Mages Association or that magic exists.
* Fatebane frequently chooses a bizarre out-of-box-thinking way of getting out of seemingly impossible situations in
* Fate/Black Dawn: As in canon, cooking is the one thing that Shirou takes pride in. There are a lot of other things he's great at, but cooking is a battlefield he refuses to ever lose in. In medieval Britain, he doesn't have very good materials to work with, but Morgan and Mordred are quickly enamored with his cooking, and the castle staff swear he used magic. This might be a reference to how a lot of the world considers British food to be terrible.
* Fate/Black Dawn, but in the sequel, Morgan mentions that he gets a lot more violent when he's jealous, which she enjoys.
* Fate/Black Dawn: Half-sisters Arturia and Morgan could be twins, the main difference being that Morgan has long hair and enjoys being cruel, while Arturia is pretending to be a man and emotionless.

* Fate/Black Dawn looking out for him. Early on, he notes that Morgan's lips aren't quite matching up with the words he hears.
* Fate/Black Dawn: Mordred to Shirou, immediately and shamelessly. She lived under the thrall of her abusive mother Morgan until Shirou showed up, protected her from Morgan, cooked food for her, play-fought with her, and dragged Morgan into being a decent mother almost on accident. Since Mordred was so young she just assumed Shirou was her father, but once she got older and understood the difference she didn't care. She also trained in his fighting style and became a master archer, unlike in canon where she used a bastardized self-taught version of Arturia's sword style.
* Fate/Black Dawn: Morgan views her body as just another of her weapons, albeit one that's more fun for her to use. On the first night of the tournament, she was planning on taking Shirou to bed and is extremely annoyed when he gets called away without even noticing that she was trying to seduce him.
* Fate/Black Dawn: Shirou walks in on Morgan naked, then immediately blushes and leaves. She finds this exasperating, since (in addition to trying to seduce him) she actually does need to talk to him. She is amused at how quickly he jumps to apologies and trying to appease her, and notes that this sort of thing has probably happened to him before.
* Fate/Black Dawn smiles, and it kills Shirou when he sees her displaying all the emotions of a statue. He is delighted when he does actually make her smile, if only briefly.
* Fate/Black Dawn: Sometime before the start of the fic, Shirou finally realized that Rin and Sakura were in love with him. He refused their advances as he didn't think it was fair to them that he was still in love with Arturia, who was lost. Rin apparently didn't take this well, and became bitter over time.
* Fate/Black Dawn: When Shirou officially meets Mordred, he immediately and instinctively shields her from her mother's wrath, despite knowing that this will ruin what little he's built up with Morgan. Shirou wryly notes that he's still the same stupid kid he always was.
* FateBlack Reflection: Kakolethros' Μηδέν (pronounced Midén, Greek for "Zero") is a stream of spiritual energy and mana that it fires fom its mouth. Although it bears a resemblance to the Cero used by Menos-class hollows, it's outright stated that it doesn't pack anywhere near as much of a punch due to Kakolethros' origins. Despite this, the technique is acknowledged as being a serious threat to a normal human or a magus.
* Fate/Cero has Berserker's (Lancelot) reaction to Lancer's (Diarmuid) pun.
* Fate Core are good at things. They aren't bumbling fools who routinely look ridiculous when they're trying to get things done—they're highly skilled, talented, or trained individuals who are capable of making visible change in the world they inhabit."
* FATE Core known as the "Transmigration Heresy" which does believe that eidolons are reincarnations of their progenitors.
* Fated Feather, Yote relentlessly teases friend and foe alike (even during moments of high drama), and the beginning of Chapter 7 suggests he does it just because he enjoys getting a rise out of people.
* Fate did this in the first season of the show during her second appearance, appearing as a black silhouette with Alucard-style glowing yellow circles.
* Fate does this to Precia. Pretty much no one can blame her at that point.
* Fate double-length episodes. The second season was 13 episodes, all standard length this time.
* Fate Drives Us Together: If two people keep encountering each other, it means they're meant to be together.
* Fated,. There's no reason to think it works by the same rules as reality.
* Fate DxD AU: Ritsuka Fujimaru lists the women in Chaldea in love with him besides Mash Kyrielight.
* Fate DxD AU. Whenever he fights someone wielding a holy sword, he goes berserk and attacks the sword over and over again, even though his summoned swords always break against them, causing him to lose. Ritsuka Fujimaru points out that swordplay

is about attacking the opponent's body, so Kiba could have won if he just bypassed the holy sword and stabbed the wielder, but he can't get over his hatred and keeps doing this in later fights. Realizing Kiba won't change anytime soon, Ritsuka provides him with Black Keys, which are durable enough to stand up to holy swords to give him a chance at survival.
* Fate DxD AU: When the Demon Pillar Flauros meets Diodora, he thinks Diodora is so pathetic that killing him is a waste of energy.
* Fate DxD AU world, but the spell for summoning Servants doesn't, because the Throne of Heroes doesn't exist there.
* Fate ends with Shiro and Saber fighting Kotomine and Gilgamesh, respectively.
* Fate, especially after Type-Moon started putting their other works on the backburner to promote it.
* Fate/Extella: The Umbral Star, Cu Chulainn gives Elizabeth a verbal beatdown about her singing. It was harsh enough to bring her to the brink of tears.
* Fate/Extella: The Umbral Star happened as well, but given the nature of that game, Hakuno and their Servants have forgotten about it.
* Fate/Extella: The Umbral Star operates on the fact that conflict must be happening in order to create possibilities for humanity and the protagonists by proxy; timelines where no conflict is happening and ergo nothing to challenge the protagonists or humanity are designated a waste of space and are permanently deleted from the multiverse.
* Fate/Extella: The Umbral Star, you have Bond Levels with the servants. Not surprising, given the franchise's visual novel origins. You raise Bond Levels by selecting the correct options in dialogue events and completing side-missions. Reaching certain bond levels will unlock bonuses, such as alternate costumes or gameplay items.
* Fate/EXTRA (acting rough, talking like a sailor and heavily drinks) that her crew refer to her as a man, otherwise they don't feel manly themselves.
* Fate/EXTRA and its sequels focus on a world in which magic died out but was replaced by manipulating an ancient, alien supercomputer known as the Moon Cell. The Moon Cell is such a ridiculously advanced and powerful machine that its effects are indistinguishable from magic from the perspective of modern humanity.
* Fate/EXTRA and killed it with her bare hands by strangling it to death, simply because she wanted to reenact the story of Hercules vs the Nemean Lion.
* Fate/EXTRA asks your character where yours is, expresses envy that it's on your hand, and admits to you that his is a tramp stamp.
* Fate/EXTRA as she originally planned. The boyfriend realizes the full implications of what they've gotten themselves into much sooner, while the girl remains cheerful, optimistic and sunny.
* Fate/EXTRA CCC and melt them into data for her to absorb and devour.
* Fate/EXTRA characters and concepts. The fact that two ex-ATLUS employees worked on the developing team doesn't help.
* Fate/EXTRA clearly remember and are still in love with their Master Hakuno, Tamamo specifically.
* Fate/EXTRA, corrupt nun Kiara invites you to join her sex cult. You can decline because she's evil, or because you're not into older women.
* Fate/EXTRA, Gawain is distressed when he cannot take his sword into the mixed bath with him, since he would be unable to protect Leo.
* Fate/EXTRA, is a Caster-class Servant. A representative of children's love for the genre, the Moon Cell thus recognizes the genre itself as the "Hero of Children" and makes a Servant that mirroring its Master's adoration to it. Its Matrix; descriptions of identity, skills, and Noble Phantasm, and its dialogues are written in nursery rhyme.
* Fate/EXTRA is a concert hall. Apparently, it's based on an incident from her life where she attempted to build a theater just so people could listen to her; when they started leaving, she locked them inside.
* Fate/Extra Last Encore, the purpose of the Moon Cell is to observe and record the entirety of human history.
* Fate/EXTRA, Meltlilith acts this way towards Passionlip; Meltlilith is verbally

abusive and callous to Lip as she only could only protest weakly at her.
* Fate/EXTRA Noble Phantasm being a spell capable of reality-altering power. The only reason he's defeatable is that he's not trying to win: he's just fighting on behalf of a wretched soul to show that soul some compassion and kindness.
* Fate/EXTRA: Saber Nero tells the protagonist tales from back when she was alive and an ordinary human. In one, Nero once fought a lion in an arena naked and killed it with her bare hands. Strangely, none of her subjects were impressed by this feat, and when the protagonist hears this story, they only pay attention to Nero saying she did it naked.
* Fate/EXTRA, Servants with the Imperial Privilege ability can temporarily copy the skills of others. The only limitations are that they have to sincerely believe that they can perform it (Nero can't copy someone's cooking skills because she's never learned how to cook).
* Fate/EXTRA states that she's just a normal girl in terms of physical prowess. She's not even heavily skilled in melee combat by normal, real-world standards. Doesn't stop her from physically striking iron-bodied servants that can move faster than sound and actually hurting them.
* Fate/EXTRA the class for herself. Since then, there have been two other characters who qualify: Ganesha/Hinako and Kiara, who is heavily implied to have essentially stolen it from BB.
* Fate/EXTRA). The description says that it takes all of the player's restraint not to eat the masterpiece bento themself, despite knowing how much the ruby is needed. Sakura's regular bento are the best healing item in the game, restoring all health and clearing all status effects. There is no Shirou in this game, so Sakura has taken the "supreme chef" role completely.
* Fate/EXTRA when Gilgamesh fights Elizabeth. He uses an "ability" that instantly strips himself nude aside from his jewelry and a glowing censor light. His nude form leaves Elizabeth babbling and unable to fight, and when Gilgamesh strikes a pose she's outright defeated by him.
* Fate franchise has gone on to feature a startling array of gender-flips of real, fictional and mythical people, some with in-universe justifications (or excuses), some without.
* fateful decision, a choice, and how they answer determines whether or not there is a story.
* Fateful Findings. At one point, finding out his friend has taken his own life, he cradles the body and delivers a truly epic dull surprise moment as his tone of voice sounds more like a tired parent who just found out his kid still hasn't cleaned his room.
* Fate/Gamers Only: During the first Halloween event, Rikku prepares to respond to Kiyohime calling her her husband by saying that her wife is Mash, but cuts herself off before she can finish saying her kohai's name. Mash gets disappointed because she was interested in finding out what Rikku's type was, but Dr. Roman assures her that she doesn't have to worry.
* Fate/Gamers Only flips Mash and the protagonist's relationship from having Mash object when she notices other girls advancing on the protagonist to having Rikku act possessive of Mash when she notices certain behavior from those around her. When Nero expresses interest in Mash's abilities, Rikku drags Mash away and declares "Mine", and she later holds up Orion at sword point for admiring Mash.
* Fate/Gamers Only hasn't eaten since she got thrown into a battle simulation when she came to Chaldea.
* Fate/Gamers Only: Kagetora makes a background appearance in the first GUDAGUDA event, when she'd made her first in-game appearance with the fourth GUDAGUDA event.
* Fate/Gamers Only: Rikku calls El-Melloi II "Sensei". According to the author's notes, Rikku didn't even notice that she called him that the first time, but "He's just so much like that one gruff teacher that the students love because he's actually a good teacher that she called him that automatically." El-Melloi thinks to himself at one point that he'd like to protest being called "Sensei", but decides that it sounds "natural" coming from Rikku.
* Fate/Gamers Only: Rikku decides to fast forward to the end of the first Halloween

event (despite Dr. Roman saying she can't fast forward reality), and the dialogue of everyone encountered between where she stopped and the end of the event is rendered as "high speed chipmunk noises".
* Fate/Gamers Only: Rikku's specialty, often explaining concepts about the Servants the cast meets and their relation to the setting, such as explaining why Cu could be summoned as a Berserker.
* Fate/Gamers Only: Rikku wears the top from the male version of the True Ether Mystic Code as opposed to its midriff-showing female version during Orleans to avoid this, much to Da Vinci's disappointment. When entering Septem, Rikku finds that Da Vinci swapped the male top out for another version in eye-searing bright colors to encourage her to wear an outfit with a midriff, which doesn't work until Nero forces her into the alternate outfit after being convinced by Da Vinci that Rikku lacks confidence to want to wear it.
* Fate/Gamers Only that fills her with holes, and Rikku threatens the judges of Medb's beauty contest at gunpoint to give her a higher score than Medb as payback for her setting up Mash to be humiliated.
* Fate/Gamers Only: The strain of Rikku summoning a Servant without support from Chaldea or the Grail near the end of Septem results in her blacking out.
* Fate/Gamers Only to tell him she's no lord, they're not allies, she has no treasure, and she would be a disappointment for him to kill. Mash thinks it's harsh, but Rikku's not taking any chances.
* Fate games give you the option to play this trope straight, letting you retire a character who's completed the game's challenges and pass one possession of your choice down to a new-made "descendent".
* Fate Genesis and a bunch of seemingly magical animals fighting in the streets.
* Fate Genesis mask from the high school's drama club and wears along with her normal battle dress to protect her identity. Notably, this only fools those who don't already know Saber is a Servant.
* Fate Genesis Rin doesn't believe that technology is capable of keeping up with magic. Each time Eggman's creations continue to keep up and show up magic, she grows more and more frustrated.
* Fate Genesis, this is how Knuckles pays Caster back for her deception and his imprisonment- by slugging her so hard she goes flying away from her safe spot and into the labyrinth that acts as her lair.
* Fate Genesis with an act of the 2nd True Magic- and have trouble accepting that it can be done with a machine. In chapter 9, Eggman briefly kidnaps Rin and sticks her in a cell that drains her Prana, and Rin is forced to realized that in the Segaverse, there's probably a shorter gap between magic and technology.
* Fate Genesis with his step-sister. Being robots, Orbot and Cubot just delete the memory from their minds, but Shinji isn't so lucky, leading the two villains wondering why Shinji is throwing up in the bathroom and showering excessively.
* Fate/Grand Carnival premise. Case in point, the first OVA had the elimination of servants from Chaldea in the form of the Olympics.
* Fate/Grand Order about this. Romulus-Quirinus' father is Mars, but due to a legend that says his father was Hercules, he's able to use a version of Hercules' Nine Lives attack as if he was raised and taught by him, and he says the Servant Hercules feels like his father even though he still remembers Mars as his father.
* Fate/Grand Order - Absolute Demonic Front: Babylonia, the goddess Ereshkigal takes over the goddess Ishtar's body at night. She pretends to be Ishtar to learn about the main character. However, when she sneezes her true appearance can be temporarily seen.
* Fate/Grand Order absorbed what was left of his ego, leaving them in complete control of their own body and full of memories from a timeline where they recklessly and destructively pursued their own pleasure, and full of enough demonic power to repeat that same hedonistic ambition.
* Fate/Grand Order. A few notables are Aŋra Mainiiu, Fergus mac Róich, and the Caster version of Gilgamesh.
* Fate/Grand Order agaisnt Lostbelt Odysseus. Bartholomew Roberts sacrifices himself to get Orion into firing position against Lostbelt Artemis. Hector destroys

himself in order to tank the first shot from Lostbelt Artemis, quickly followed by Mandricardo doing the same to stop the second shot. Paris and Apollo become the arrow Orion uses to shoot down Lostbelt Artemis, but all three used up all their magical energy to do so. Achilles is killed by Lostbelt Chiron. Jason is left bleeding out as he tells Fujimaru to go on without him as he and Chiron sink along with Lostbelt Poseidon.
* Fate/Grand Order, and extremely potent skills that excel at keeping him alive. Solo Cu runs are a common type of challenge, and one can find countless videos online of him soloing all kinds of bosses.
* Fate/Grand Order, and he decides in his capacity as a Ruler-class Servant that the details of these things are knowledge no living human should ever be burdened with knowing.
* Fate/Grand Order, and is mortified over how it sounds coming from somebody else.
* Fate/Grand Order), and some seasonal versions of popular servants have Noble Phantasms and attack animations that can crack some laughs and chuckles to the player.
* Fate/Grand Order and then stomping on the opponent. (This is generally considered a good thing, because this means its animation is about two seconds long.)
* Fate/Grand Order, and the protagonist has to somehow create a natural narrative contrivance to explain his absence. And to top it all off, they're on an incredibly tense time limit of only having a few days to actually wrap anything up, otherwise they haven't resolved the film director ghost's wish to finish a movie and retrieve the Holy Grail they're hunting for.
* Fate/Grand Order Antonio Salieri's Noble Phantasm is to concentrate his hatred into a symphony that assaults both mind and body.
* Fate/Grand Order are prone to black sclerae, particularly those who are incoherent or nonverbal due to Madness Enhancement: Heracles, Caligula, Darius, and Lu Bu. Subverted with Asterios the Minotaur, who is fully talkative and childish more than insane.
* Fate/Grand Order are under a curse of separation that prevents them from reuniting. When he finally finds her in the America chapter, he collapses from his wounds and she ends up giving her life to save him. The Grail War's summoning system normally prevents them both from being summoned at the same time as well, though Singularities are strange enough affairs that they can be summoned at the same time. On a meta level, players have been waiting for Sita to be introduced as a summonable Servant so that the two can be reunited and she finally was in 2020... in the arcade, which Rama isn't part of.
* Fate/Grand Order, as they're usually shown as chivalrous knights who may take satisfaction from honorable duels, but fight with higher goals in mind.
* Fate/Grand Order at the end, EMIYA uses more Projected weapons, etc.).
* Fate/Grand Order, Bedivere is blindsided to the point that he completely fails to register the chocolate for a good half a minute before freezing mid-sentence, insisting that this can't actually be happening, and turning into a stuttering mess so flustered that he almost forgets to give the protagonist the gift he had prepared for them.
* Fate/Grand Order before settling on another female body. Needless to say, trans and non-binary fans raised some eyebrows.
* Fate/Grand Order behind them all is defeated; but some time later, 4 smaller Singularities pop up and the protagonist has to fix them too.
* Fate/Grand Order bring your starting roster to 0 HP, she's pretty clearly a walking talking indicator of how screwed you are if you don't get the item. Naturally, the playerbase took this as a challenge, and discovered that it was indeed possible to beat her—the fact that most such fights tend to last the better part of an hour should probably be indicative of how difficult it is to outlast her.
* Fate/Grand Order, but in their unique Lostbelt (timelines that have severely diverged from the main one and resulted in human progress being halted) Zeus managed to defeat said entity and the Pantheons proceeded to further upgrade their starship bodies.

* Fate/Grand Order, but she has no tongue and thus can't actually taste anything. She was able to become such a skilled cook by judging the amount of nutrients, studying various preparation methods, and then observing other people's reactions when eating her food.
* Fate/Grand Order crashes the party and bites the super chimera in half.
* Fate/Grand Order crossover, the game's managed to avoid these problems, though during particularly popular or intense events the game can sometimes have intermittent connection issues as the now-gargantuan userbase DDoSes the servers and their ISP by fiat; Summer 2017 was a good example of this. This currently only applies to the Japanese version as the Chinese, Taiwanese, and American versions have all displayed a lot more stability, if only because they have fewer players on their servers and the Japanese version tends to be used as the "measuring-stick" for what precautions should be taken with the other ones.
* Fate/Grand Order die, only the main servant remains to do the challenge.
* Fate/Grand Order different copies of the real Saber doing a terrible job of pretending to be someone else.
* Fate/Grand Order: During the 2017 Dead Heat Summer Race event, James Moriarty, master criminal, instantly melts when he meets Frankenstein and joins her in the race so that he can be her father. Whenever he starts acting up, all she has to do is call him "Papa" and he falls back in line.
* Fate/Grand Order: During the Summer 2018 event, Lancelot buys a bunch of doujinshi from Mash's group. He's only tanned and wears a pair of glasses, yet Mash is unable to recognize to him. It's possible that he used For Someone's Glory to cause this effect, since For Someone's Glory is a Noble Phantasm that allows him to make him unrecognizable to other people.
* Fate/Grand Order. During the Valentine's events, several female Servants admit to going to Boudica for help with their chocolates, which suggests her skill extends to foreign foods as well.
* Fate/Grand Order), each of which has their own distinct voice actor.
* Fate/Grand Order, especially if it takes form of a shiny big metallic horse.
* Fate/Grand Order. Even before then, however, getting them to a certain Bond Level will give them an Interlude that will often upgrade a skill or their Noble Phantasm.
* Fate/Grand Order fanbase due to the gameplay similarities between the games, and both being distributed by Aniplexa.
* Fate/Grand Order five-star you'll get, assuming you get one of those 1% instances. Needless to say, "RATE-UP IS A LIE" remains a fairly popular curse in the community.
* Fate/Grand Order for research purposes. Ironically, after he went to visit Mauna Kea in the middle of a blizzard on the first day, he got a fever and was not allowed to leave the hotel for health reasons for the entire trip.
* Fate/Grand Order." For the moment it seems she's been canonized as just "Mash."
* Fate/Grand Order franchise, which is revisited for the following Halloween event.
* Fate/Grand Order goddess girlfriend Artemis instead, while Orion is turned into a teddy bear.
* Fate/Grand Order has an odd one occur in the middle of the second Lostbelt. The tense atmosphere of the meeting between Chaldea's crew, Ophelia, and Scathach-Skadi gets pulverized when Napoléon loudly introduces Ophelia as his fiancée, confusing the hell out of everyone involved. Turns out he proposed to her when they first ran into each other, during his first infiltration into Scathach-Skadi's castle, and took her dumbfounded silence as a "yes".
* Fate/Grand Order has one of the classics, The Queen of Sheba, show up. She never actually gets a chance to interact with King Solomon on-screen, but it does show that she has an obvious crush on the man and wants to protect his legacy. However, there isn't any confirmation that she was really married to him or not (as her profile mentioned it's just a Ethiopian folklore), or if her crush is actually caused by her Spirit Origin being affected by that story.
* Fate/Grand Order has two kinds of magical energy utilized by Chaldea for its economy.

* Fate/Grand Order her and smells her lover Sigurd's scent. She concludes Altera must have slept with him and angrily attacks her. Altera and Mash realize that Brynhild smelled Siegfried's scent on Altera and mistook it for Sigurd's, since the two men come from similar myths. And the reason why Altera has Siegfried's scent is that she had married Siegfried's wife Kriemhild. They try to explain this to Brynhild, but she won't listen, so they are forced to beat her into submission.
* Fate/Grand Order in a baseball cap and gym clothes. She is a Mysterious Heroine of Justice wearing a space exploration uniform!
* Fate/Grand Order: In Asterios the Minotaur's backstory, he eventually managed to find the exit to the Labyrinth, but he was so guilty about all the people sacrificed to feed him that he went back into the Labyrinth and decided to wait until a hero would come and slay him.
* Fate/Grand Order in gameplay. Unfortunately, she also has a 19th-century knowledge base and habits, and is under a curse that makes her obsessively want to keep everyone in perfect health. As a result, leave her to her own devices and she will throw someone into quarantine over a case of the hiccups and employ amputation as her first resort for every physical ailment. It doesn't help that she considers "the patient is dead and therefore not sick anymore" to be a more acceptable result than leaving them sick.
* Fate/Grand Order in order to decisively defeat Sefar, and this allowed them to survive with their technology intact. Over the millennia, they continued advancing their tech, so in the present day Olympus (which is apparently situated below Atlantis) has become a very high-tech city, and yet both the gods and humans there still wear togas.
* Fate/Grand Order in particular for invading her land, killing her people, and raping her daughters, really wanting to kill Nero. It turns out that Nero's generals committed those attrocities without her knowledge, and when Nero found out, she was horrified and had the generals punished.
* Fate/Grand Order: In the "Murder at the Kogetsukan" event, the protagonist Ritsuka Fujimaru gets his consciousness sent into another person's while he is dreaming. While in control of the person, Ritsuka has to solve a murder mystery, but it is complicated because he sees everyone as one of his Servants. This leads to misunderstandings because the people's relationships do not always match their Servant counterparts.
* Fate/Grand Order in the past, accuses her of trying to become an otome game protagonist.
* Fate/Grand Order. Ishtar says besides Rin's small breasts, she's gorgeous, and shows off by wearing a skimpy outfit.
* Fate/Grand Order is meant to take place in real time as each year progresses, but the regional and lapse of time differences between each server has led to their own mini-canon on when it actually started.
* Fate/Grand Order is openly suspicious of who he really is. Despite this, the group pretty much does everything he says until the very last minute.
* Fate/Grand Order is the result of such an attempt, and her personality is so horribly mangled compared to the real Jeanne that many of her allies feel compelled to comment on it during the Orleans chapter. Dantes later attempts to provoke her the old fashioned way, and that too fails because Jeanne is just too nice to be angered. In her NP rank-up interlude, Mephistopheles tries to corrupt her through a test. It doesn't work either. Her third interlude reveals all past three interludes have been Jeanne Alter's attempts to find any darkness in Jeanne, and the best she found is Jeanne would rather not be burned at the stake (a rather mundane thing most anyone would want to avoid).
* Fate/Grand Order it does, manages to keep Nemo as Indian. Portrayed as a little boy that can clone himself, mind, but still.
* Fate/Grand Order. It is also because nobody is aware of their time traveling adventures, so the Mages Association thinks they haven't done anything significant and are a waste of resources.
* Fate/Grand Order itself that star characters from a series that parodies the rest of the Nasuverse, and frequently hangs lampshades on both.

* Fate/Grand Order, Jeanne Alter comments this is the ultimate result of every Avenger: their curse prevents them from ever letting go of their hate, even if they've completed their revenge, even if it takes an eternity: they will continue to hate, aware of the sheer, horrible pointlessness. As such, death is the only thing that can release them.
* Fate/Grand Order last forever is meaningless", and escalates further to "since humanity can't last forever, there's nothing wrong with me destroying it so I can recreate humans as an immortal race."
* Fate/Grand Order logo, except that it says "EDISON 19th CENTURY" instead and the signature music intro gets cut off after the first three notes.
* Fate/Grand Order: Lü Bu's legendary horse Red Hare is eventually summoned as a Servant. Red Hare gains the ability to speak, and comments that he was an ordinary horse before the summoning.
* Fate/Grand Order: Many of the Events love to reference fandom jokes and discussions.
* Fate/Grand Order Many of the Servants you can contract with will fall in love with you, to different extents, if you bonded with them (i.e raised their bond points) enough.
* Fate/Grand Order, Medb is confirmed to have a weakness to being struck in the head by a thrown cheese, as this was how she died in legend. When you try it, however, she kicks the cheese away, and announces that she's used her time on the Throne of Heroes to train for exactly that. After an animation update, her new Buster-style attack is reacting to a cheese that comes flying at her, and kicking it at the enemy.
* Fate/Grand Order move in. But the vibes, and especially the mysterious nature of everything that happened before the protagonist arrived, are a little spooky.
* Fate/Grand Order Napoleon, who is a fellow Archer-class servant in the game.
* Fate/Grand Order oldest Divine Beasts in the franchise and so powerful even the gods would be wary of trying to fight.
* Fate/Grand Order on the village that is sheltering the heroes. Realizing that if they do nothing, everyone will die, Spartacus tells Ritsuka to command him. Ritsuka uses a Command Spell to order him to jump. This strengthens him enough to leap up and shatter the meteor at the cost of his life.
* Fate/Grand Order. Other periods pop up in the main story, mixed up during the 3rd Epic of Remnant Shimousa, and focusing mostly on the Heian Era in Lostbelt 5.5 Hell Realm Mandala: Heian-Kyo.
* Fate/Grand Order permanently), leaving more mundane debuffs like Attack/Defense Down to do their work.
* Fate/Grand Order possesses Mash Kyrielight to save her life and turn her into Servant Shielder. But since he's a prick and thinks the heroes' struggles are not his problem, that's as far as his generosity goes. With a few exceptions, he refuses to communicate with Mash, teach her how to use his powers, or even tell her the name of their Noble Phantasm. She is forced to figure it out on her own. Fortunately, she manages to activate her Noble Phantasm on instinct to protect Ritsuka.
* Fate/Grand Order, Queen Medb is obsessed with Cu Chulainn because he's the only man who she cannot seduce.
* Fate/Grand Order Quick teams. Waver, on the other hand, does not support any specific team composition, as all his skills merely provide regular boosts to damage, defense, and NP charge. However, this also means that while he isn't as good as any of the above in their specific team composition, he also fits into any team composition, because there isn't a team in the game that doesn't want what he provides.
* Fate/Grand Order rare Servants, they just tend to be some of the strongest and most popular units.
* Fate/Grand Order reveals that the prime version stored in the Throne of Heroes does in fact remember everything; it's just that whenever a new version is summoned from the Throne, their memories are "filtered" to ensure conflicting memories don't affect their performance. That said, particularly powerful memories tied to

different emotions (especially love) are more likely to stay intact.
* Fate/Grand Order revere Him greatly too, but it's unlikely that they literally met Him in person, unlike Martha.
* Fate/Grand Order: Ritsuka Fujimaru was a teen living an ordinary life who had no idea the supernatural existed. Then Ritsuka is discovered to have magical potential and is abducted by the Chaldea organization to be a Master of Servants to stop the Incineration of Humanity. Ritsuka needs a crash course in magic and summoning and starts their first adventure completely confused, but gradually adjusts.
* Fate/Grand Order. She assumes a downed zombie is dead and approaches it, only for it to revive and kill her.
* Fate/Grand Order, she's a fictional version of what's already a fictionalized character, making her existence tenuous enough she can't sustain the existence of a Servant.
* Fate/Grand Order, some characters react as if you are poking them annoyingly when you tap them in the My Room screen. For instance, Alexander says it tickles, and Zhuge Liang complains that you're playing with his hair. However, they just do it randomly, rather than after too much tapping.
* Fate/Grand Order sorts of dangerous scenarios or shenanigans without paying any sort of attention to their safety (emphasis on all). So as long as they remember to shanghai Mash, they can cut loose without fear. ...or pain.
* Fate/Grand Order's tasks is to prevent the cosmos from "correcting" your presence in eras prior to your birth, which is why they panic every time the connection lags or drops (which is often).
* Fate/Grand Order "Stella: The Lone Meteor" is an AoE nuke that does immense damage but also immediately kills him. As a low-rarity Servant, this makes him useful as a cheap way to clear through trash mobs.
* Fate/Grand Order such a big research project, as well as getting away from her sisters' bullying for a while.
* Fate/Grand Order, Summer, Halloween and Christmas events), chances are they're this. Even if some of them can be serious, they're often underscored with their more funny behavior and/or being the butt of jokes. Many of those Servants are variants of existing, non-gag Servants, and they're played in more lighthearted ways. Despite all that, most of them are powerful fighters in their own right.
* Fate/Grand Order, Takeuchi has expressed a lot of love for Sakata Kintoki.
* Fate/Grand Order territory, her songs coming off more as screaming too loud. That said, her Grand Order profile implies that her lack of success is due to her selfishness at wanting to become an idol; if she ever were to sing for someone else's benefit, she'd enjoy much more success.
* Fate/Grand Order that she knows all about the "secret" folder he has on Chaldea's servers and will delete it if he doesn't behave himself.
* Fate/Grand Order. The heroes use a high tech device with a holographic display to communicate with Dr. Roman. Cú Chulainn is amazed and says their magic is impressive.
* Fate/Grand Order, their final ascension artwork leaves very little to the imagination on what their relationship is. Also, their Noble Phantasm's title is Bond of Lovebirds, and one of them is incapacitated/killed, the other is also incapacitated/killed. Blackbeard even refers to them as "The Yuri Couple."
* Fate/Grand Order: The protagonist is surrounded and fawned over by the greatest heroines in mythology and history, all of whom have their own varying levels of clinginess, yet it's Mash Kyrielight, the female lead with the most screen time, who is the most infamous for this. As Mash will usually tag along with the protagonist everywhere, she'll be the first to butt in when she feels like a female Servant is getting too friendly with her Master, which happens often.
* Fate/Grand Order. The "rate" of time between the two realms always fluctuates, although time would usually pass slower in the real world.
* Fate/Grand Order, there are two examples caused by the same incident: The protagonist is initially taken off the mission for being inferior to all of the other potential Masters in addition to falling asleep during the initial mission briefing. Meanwhile, Chaldea's Head Medic Dr Roman slacks off in their room and has

a conversation with them, allowing both of them to dodge an explosion in the control room that leaves all of the other potential Masters in critical condition and kills everyone above Dr Roman on the chain of command, leaving him in charge.
* Fate/Grand Order, the standard Chaldea uniform will include pants for males, but skirts and tights for females (with an extra strap on the shirt under the breasts). Between the optional costumes for the two protagonists, female Ritsuka will often have skirts, shorts, crop tops or dresses.
* Fate/Grand Order. Under normal circumstances, Servants with Divinity are not allowed to become Grand Servants because they are supposed to be the greatest pure human warriors, explaining why Heracles (a demigod) is not a Grand Servant. It is possible for them to lose their title for whatever reason and be replaced.
* Fate/Grand Order uses the Holy Grail to hold a concert at her castle.
* Fate/Grand Order was, as they were a fan), they don't know anything about history and mythology, so their companions have to fill them in. In battle, they are good at strategy and using their Servants' strengths to their fullest.
* Fate/Grand Order. When you summon them to add them to your team permanently, they join at level 1 and require a metric ton of investment just to bring them up to par with their guest-star selves. This is somewhat justified, though: the protagonist of the game is a very weak Master, and when they switch sides, the Servants tend to now be running off your pitiful mana reserves instead of whatever was fueling them before.
* Fate/Grand Order, where Miyu in a summer event doesn't believe that ghosts exist... Even though Servants are spiritual beings that require mana to physically manifest, making them super powered ghosts in a way.
* Fate/Grand Order), where the unique currency is "Artorium", which is just the ahoge common for all Saber-knockoffs.
* Fate/Grand Order which put him front and center. Thanks to an engaging plot and being well-written and well-developed as a character, Bedivere's popularity exploded overnight. He is one of the most popular characters in the game (albeit still a long ways off from the astronomical popularity that Jeanne Alter and Ereshkigal enjoy), and his tale is being adapted into a pair of movies releasing in 2020.
* Fate/Grand Order, William Tell's crossbow has a laser sight and stock from a 21st-century assault rifle. He mentions that he wants to keep up with weapons technology from after his time, even though it's not necessary for him as a Heroic Spirit with perfect aim.
* Fate/Grand Order, with a Quick-type focus and some very helpful support skills.
* Fate/Grand Order, with her being added here as a promotional tie-in. However, the latter game got delayed by almost a year, so FGO ended up being her "first" appearance.
* Fate/Grand Order with it because she believes it can. Mandricardo's Noble Phantasm, Rêve de Durandal, will only activate and allow him to wield the weapons Durandal or Durindana if he truly believes he is worthy of them. Nero's skill, Imperial Privilege, allows her to copy any skill she sees as long as she believes she can do them.
* Fate/Harem Antics: After Rider crushed Zouken Matou under rubble and then Assassin killed him, his grandson Shinji becomes terrified of the two and goes into hiding, paranoid that they will come after him next and praying that they don't find him. He's hiding for nothing, as those two barely, if at all, noticed him, and they certainly don't give him a second thought.
* Fate/Harem Antics: Archer/Francis Drake normally wields guns and cannons, but she has a boarding axe for melee combat.
* Fate/Harem Antics as Shirou isn't really one to denote a "favorite".)
* Fate/Harem Antics: At the Archery Club, Shirou puts his arms around a girl to correct her archery technique. She blushes while he is completely oblivious.
* Fate/Harem Antics. For specific examples, Gunner/Oda Nobunaga and Temptress/Elizabeth Bathory are both less than five feet tall and have the bodies of children, but their opponents quickly learn they pack a lot of punch in hand to hand combat and should not be taken lightly.

* Fate/Harem Antics girls in his harem. Now it's a matter of the story reaching that point.
* Fate/Harem Antics, he notes that being able to keep up with Sakura means he can keep up with anyone.
* Fate/Harem Antics: In an omake, Gunner/Oda Nobunaga battles Gilgamesh, who dismisses modern humans as weak and worthless. Nobunaga says while individually humans are weak, by working together, they were able to do wonders like go to space. Such a talent for innovation is worth defending.
* Fate/Harem Antics just in time to summon two swords when Angelica Ainsworth was about to kill him.
* Fate/Harem Antics: Kirei Kotomine drinks when he fails to steal Bazett's Servant, and again when he is forced to team up with his estranged daughter Caren, who endlessly trolls him.
* Fate/Harem Antics: Once Saber becomes the new gym teacher, she makes the students run drills like in her old army. Several students complain that she may be hot, but she's a demon. She also trains Shirou in swordsmanship by kicking his ass until he can defend himself.
* Fate/Harem Antics: Servant Ruler/Saint Martha tells her Master Taiga Fujimura that they are not supposed to interfere with the battles unless a rule of the Holy Grail War is violated. Taiga says that if Shirou, Rin, or Sakura are hurt, no power in the universe will stop her from helping.
* Fate/Harem Antics: Servants are way faster than ordinary humans and do this a lot. For example, when Lancer attacks Shirou's home, Shirou tells Sakura to get behind him and prepares to defend her. Lancer suddenly disappears from their sight, then is behind them and grabs Sakura.
* Fate/Harem Antics: Several characters have this reaction when they witness Berserker/Raikou's power.
* Fate/Harem Antics). She ends up as the third person in Shirou's harem, after she kidnaps him and takes him to her castle for some "alone time."
* Fate/Harem Antics: Shirou Emiya is sent a dream of Archer EMIYA's memories. In the memory, EMIYA takes down a group of Dead Apostles and arrives in time to rescue a little boy they were planning to eat. EMIYA became happy that for once in his life, he managed to save someone.
* Fate/Harem Antics: Taiga Fujimura was in love with Kiritsugu Emiya back when he was alive. After his death, she becomes attached to his son Shirou. Her grandfather Raiga says he can tell she now has feelings for Shirou, while she becomes embarrassed and desperately claims that's not true.
* Fate/Harem Antics: The entire fic is about Irisviel, who is trapped in the Holy Grail but in full control of it, deciding to use the upcoming Holy Grail War to get her son Shirou a harem. All the existing plots and plans promptly get derailed as Iri makes sure all the Masters and Servants besides Shirou are female. Specific examples are:
* Fate/Harem Antics through sex is a thing when it comes to exchanging mana. Then it's Shirou's turn to blush when he realized he just accidentally propositioned Rider, which is nothing compared to their reaction when Sakura unexpectedly agrees with the idea.
* Fate/Harem Antics: When Shirou meets Shielder in her civilian clothes and glasses, he doesn't recognize her until she speaks.
* Fate/Harem Antics: While Bazett is summoning Lancer/Scathach, Kirei attempts to backstab her, but Irisviel stops him by inducing a heart attack on him. He just falls over in pain and doesn't even lose consciousness, then Bazett and Scathach treat him and call a doctor.
* Fate has also shown these tendencies; claiming that everyone are just soulless puppets, etc.
* Fate has giant spiders as monsters. They're no longer present as you progress to deeper levels of the dungeon.
* Fate. He also used magic, of course, but in the world he lived in this was hardly a superpower.
* Fate/hollow ataraxia: Ayako Mitsuzuri's little brother Minori has a crush on

Sakura Matou and is jealous of Shirou Emiya for having Sakura's affections. After a talk with him, Shirou finds out Minori doesn't know anything about Sakura and just likes her because she is pretty and he has an image of her being perfect when in reality Sakura is far from it.
* Fate/hollow ataraxia, becoming much more confident in herself, as well as much more intimidating. Shirou even states she has become much more like her sister, Rin.
* Fate/hollow ataraxia, Child Gil uses his Noble Phantasm, Sha Nagba Imuru, which lets him see perfectly into the future and know all of the steps to reach the best outcome, to cheat at cards.
* Fate/hollow ataraxia, it is briefly mentioned that Gilgamesh is the only person who knows how to cook hydra meat, which is incredibly toxic, and turn it into a meal.
* Fate/hollow ataraxia ...Maybe. What's dream and what is real can be difficult to separate.
* Fate/hollow ataraxia, Sakura has no way of knowing that Rider really is attracted to Shirou, but she fears Rider will 'steal' him away anyway.
* Fate/hollow ataraxia. She made a mistake that turned the city into a location where all realities are possible and sort of merged all the routes plus various universes we didn't see into one. She's off at Clock Tower at the start of the game to make up for this mistake.
* Fate/hollow ataraxia, Shirou and Rin discuss Saber's dragon-affinity, and wonder if she has a genkirin, a part on her body that, if touched, will cause Saber to lash out. Shirou has an imagine spot of Lancer bumping into Saber, which causes her to run him down on a lion-shaped go-kart.
* Fate/hollow ataraxia, so the cops would be on her side for this. She had completely forgotten about that. Of course, it was blatantly obvious from the start that Souichirou wasn't cheating on Caster, so the whole thing was unnecessary.
* Fate/hollow ataraxia, Souchirou was awestruck by Caster's beauty the instant he met her, although during this meeting she had fallen on visibly leaf-strewn earth and rain was coming down.
* Fate/hollow ataraxia summoned. When Shirou mentions that some riceballs she ate had octopus in them, this is her reaction.
* Fate/hollow ataraxia: The game mentions (but does not show) a time that Rin and Shirou, now a couple, decided to make use of one. It didn't turn out well, due to just about everything that could possibly go wrong going wrong, including the power and heat going out in the middle of their stay.
* Fate/hollow ataraxia: The Noble Phantasm of the Assassin summoned in the Third Holy Grail War turns the target's brain into gunpower with a touch to the head, which explodes with enough force to obliterate the upper body.
* Fate/hollow ataraxia, there's a scene where Issei and Shinji Matou pretty much squabble like children for Shirou's attention.
* Fate/hollow ataraxia, there were some pretty hefty implications that there was only one Avenger: Angra Mainyu. Later stories introduced many more Avengers.
* Fate/hollow ataraxia the shampoo, but when a magician who doesn't know how to use it gets some on his skin, he starts feeling very, uh, itchy.
* Fate/hollow ataraxia Well, Assassin had a small role anyway. The latter two probably get smaller roles because the game as a whole is lighter in tone and they were two of the darkest characters.
* Fate/hollow ataraxia with Lancer. Unlike the other Servants who are similarly temporally displaced from their origins, Lancer only superficially blends in. He's completely unable to understand why Shirou might have issue with Lancer trying to sleep with teenage girls, is ready to kill people that Shirou thinks are his friends at any time, and seems to feel that anything he can take from their actual owners is his.
* Fate Ingens Cor, Assassin picks up one of Archer's missed poisoned arrows and stabs herself. The poison weakens her a bit, but she quickly recovers and gloats that the poison will never affect her again.
* Fate Ingens Cor: the fourteen-years-old Luna Lovegood and her Servant Caster -

middle-aged - have a very friendly relationship, with the girl being genuinely curious about his original time period and the Servant happily telling her everything about nature magic and how lucky he was in his marriage.
* Fate Ingens Cor when she lays eyes upon him. Thankfully, he has not been summoned as a mindless killing machine this time.
* Fate instance of a legendary or historical figure being the opposite of their recorded gender.
* "Fate" is often used as the name of the setting itself (as opposed to other
* Fate is something of a weird example, due to the fact the change is that there
* Fate is the most prominent user. She starts with an energy scythe in the
* Fate/kaleid liner PRISMA☆ILLYA before becoming one and believes that all Magical Girls have to be able to fly. Miyu, on the other hand, can't imagine herself flying and thus can't fly.
* Fate/kaleid liner PRISMA☆ILLYA featuring cat's ears, tails, and paw gloves and slippers.
* Fate/kaleid liner PRISMA☆ILLYA franchise, started its anime adaptation with a 10 episode season. Then the second season got split into two cours, each one 10 episodes long. The third season is 12 episodes long.
* Fate/kaleid liner PRISMA☆ILLYA, gets close enough to slap him across the face, and it actually stuns him.
* Fate/kaleid liner PRISMA☆ILLYA, Gilgamesh attempts to withdraw Vimana from the Gate of Babylon, but is unable to find it (his treasury having been split in two and divided between himself and Angelica). He casually tosses out a number of legendary treasures while rummaging around for something that might be useful in the situation.
* Fate/kaleid liner PRISMA☆ILLYA, Illya and Miyu hide and ask him to cover himself out of shame. His response?
* Fate/kaleid liner PRISMA☆ILLYA, Illya has a crush on her adopted brother Shirou, even at one point kissing him in a dream. Shirou is completely oblivious to any girl's feelings, including hers.
* Fate/kaleid liner PRISMA☆ILLYA, Illya is a major fan of various magical girl anime, then becomes one herself. However, she doesn't enjoy being one at first, as she understands the difference between admiring them on TV and actually being in life or death situations. She later accepts her calling because it allowed her to meet her best friends and she wants to help and protect them, plus being able to fly is a nice perk.
* Fate/kaleid liner PRISMA☆ILLYA: Illya is taking a bath at night when she notices something strange in the sky. She turns off the lights so it will be easier to see through the window. Shirou assumes with the bathroom light off that nobody is inside and steps in, embarrassing them both.
* Fate/kaleid liner PRISMA☆ILLYA, Illya makes an unopened soda can in her hand burst when she sees Kuro flirting with Shirou.
* Fate/kaleid liner PRISMA☆ILLYA, Illya seems to be fond of these at the ends of story arcs. But even her Dynamic Entries are no match for her mother Irisviel, who jumps a Mercedes Benz 300SL "Gullwing" into the scene!
* Fate/kaleid liner PRISMA☆ILLYA, Luvia shoves Miyu out of a helicopter in an attempt to get her to fly. It doesn't work and she hits the ground hard. Fortunately, Sapphire was able to shield her body with magic, so she wasn't hurt.
* Fate/kaleid liner PRISMA☆ILLYA, Miyu straight up tells Illya and her friends that she only likes Illya and doesn't care about them at all.
* Fate/kaleid liner PRISMA☆ILLYA of all things! Or rather, anything that resembles a maid...
* Fate/kaleid liner PRISMA☆ILLYA often tries to do something inappropriate with him. Irisviel scares the crap out of him by threatening to castrate him if she catches him trying to do something with them.
* Fate/kaleid liner PRISMA☆ILLYA OVA involving a dance contest, the stereo plays the opening theme song.
* Fate/kaleid liner PRISMA☆ILLYA regarding the supernatural, unless someone decides to reveal their secret to them, it is unlikely they will ever be able to

connect with Miyu the way Illya has.
* Fate/kaleid liner PRISMA☆ILLYA's turn into a straightforward magical battle series.
* Fate/kaleid liner PRISMA☆ILLYA style fanservice (albeit not to the extent to what they're implying even if there's still extremely uncomfortable bits to get through). In fact, Russia has a strong stance against works they deem Lolicon.
* Fate/kaleid liner PRISMA☆ILLYA: The alternate Earth is running out of Mana, which will eventually make it uninhabitable. Julian Ainsworth comes up with a solution that involves sacrificing Miyu to the Holy Grail so that they can make a wish for humanity to be able to survive. The heroes rescue Miyu, and Illya proposes that they work together to find a different solution that doesn't involve sacrificing anybody. Julian angrily refuses and attacks them, calling them evil for opposing him. As Miyu's brother explains, Julian refuses to admit he could be wrong and wants to get sole credit for saving the world so that he can become a legend.
* Fate/kaleid liner PRISMA☆ILLYA the entire family to keep them from using their daughter Illya as a tool in the Holy Grail War. That's why the Holy Grail Wars stopped suddenly in this timeline.
* Fate/kaleid liner PRISMA☆ILLYA, the Miyuverse Shirou Emiya gets sent to the world of Remnant. Yang Xiao Long bares a resemblance to his enemy Angelica Ainsworth. Even though he objectively knows they are different people and Yang's personality is completely different from Angelica's, he can't help but feel slightly hostile to Yang.
* Fate/kaleid liner PRISMA☆ILLYA: This is the reason why Kiritsugu Emiya and his wife Irisviel von Einzbern raised their children Shirou and Illya without any knowledge of magic, to give them a normal life away from the often dangerous and cutthroat magical society. Illya ends up getting involved anyway, but Shirou is still oblivious.
* Fate/kaleid liner PRISMA☆ILLYA version of Shirou going through a bleak storyline with as much if not more suffering than Heaven's Feel.
* Fate/kaleid liner PRISMA☆ILLYA. When he and Chloe take her on, they move to attack with Triple-Linked Crane Wings, the perfect attack of heroic spirit EMIYA that cannot be defended against, knowing that Angelica's only viable response is to again fall back on Flash Air. Indeed she does and as she moves in for the kill she realizes she's lost track of Chloe at which point Shirou's look of shock changes to a knowing smirk as Chloe attacks her through the floor and gives him the opening he needs to truly land the attack and defeat her.
* Fate/kaleid liner PRISMA☆ILLYA: When the Miyuverse Shirou Emiya shows up, Illya mistakes him for her brother, the Shirou Emiya from her own universe. They start to run towards each other, only for him to run past her and embrace Miyu, his actual sister.
* Fate/kaleid liner PRISMA☆ILLYA, where Rin and Luvia faceplant into a bog and Illya and Miu transform to fish them out. During the entire sequence you can hear Rin and Luvia struggling for their lives in the background while the girls undergo the lengthy transformation and when it's done Rin and Luvia appear to be lifeless and motionless in the muck. When pulled out Rin asks why they took so long to rescue them.
* Fate/kaleid liner PRISMA☆ILLYA, who would have used her as a tool.
* Fate Kaleid Prisma Taylor: Lisa uses this to trick Taylor into letting Lisa pay for a new outfit for Taylor. Taylor later refers to it as having been "duck-seasoned".
* Fate Kaleid Prisma Taylor Taylor should have made people more open minded.
* Fate: Kill: A one-sided example. Akame becomes obsessed with one-uping Selka and impressing Shirou by killing more enemies than Selka. Leone eventually puts a stop to it by pointing out she is acting crazy and judging by how Shirou attempts to avoid fighting and minimize casualties, her actions would not impress him.
* Fate: Kill: Shirou helps Lubbock walk when he is injured and Lubbock becomes really grateful. Their interaction looks really gay to everyone and Selka and Akame (who have crushes on Shirou) become jealous of Lubbock.
* Fate: Kill: This is the general reaction everyone has whenever Shirou uses his

powers. For example, when he uses Reinforcement on everybody's clothes, and Akame demonstrates her sword cannot penetrate them, everyone is stunned and asking how he did that.
* Fateless One's, is implied to have feelings for the protagonist, partly depending on your dialogue choices. The closest she'll come to actually admitting that, however, is to say that she has "more important things to do than love" if you pass a very difficult persuasion check right before the final boss fight.
* Fate/Long Night. Brandon Stark chops off her arm before the disease can spread to her body.
* Fate/Long Night, Queen Nymeria Martell's Bloodline Relic, called "Unbowed, Unbent, Unbroken", causes the battlefield to experience the sweltering heat of the Dornish deserts. As a native of Dorne, it doesn't really bother her, while her opponents will quickly become exhausted and thirsty.
* Fate/Long Night, Robert Baratheon is a lot smarter than he looks, but if a matter doesn't involve fighting, feasting, or fucking, he doesn't care about it.
* Fate/Long Night: The Stranger's Champion helps Zouken Matou realize how his obsession with immortality has ruined his life and cut him off from his loved ones. Zouken seems to consider it for a few seconds, then angrily declares his goal is all that matters.
* Fate/Long Night: The Stranger's Champion munches on a bucket of popcorn while spying on the protagonists and being entertained by their antics.
* Fate/Long Night: When Robert Baratheon is summoned as Illya's Servant, he eventually says that he was in a loveless marriage to Cersei Lannister and had to put up with his evil little shit of a son Joffrey. After he died, he learned that all of his children were actually born from an affair Cersei had with her own brother Jaime. Robert says he does not regret his life and will not change it with a wish because he truly loved his other children Tommen and Myrcella.
* Fate/Long Night: When Shirou says he's never had a girlfriend in his life and that he finds Nymeria scary instead of hot, Brandon asks if he's a "sword swallower".
* Fate/Magnus Bellum severely wounded had he not been given an added defense) and she can be quite clever in battle (such as throwing trees at Arash to distract him so she can get close to him), but she lacks any real skill in swordsmanship. This becomes a notable problem when she fights more masterful swordsmen like Siegfried and Arthur or more skilled fighters like Chiron and Arash.
* fate ninjas of reality and stands above everything else. They also have a unique Background related to having a martial arts teacher.
* Fate/Nuovo Guerra, but Beowulf and Benkei (in Primus) and Ajax (in Secundus) certainly take the cake.
* Fate/Nuovo Guerra come from Arthurian romances or the Matter of France, the best example would probably be Sir Roland. Sir Gawain is a special case: his devotion to Chivalry eventually led to Camelot's downfall, as he refused to call for Lancelot's help for the Battle of Camlann.
* Fate/Nuovo Guerra features Celestina Barbieri, who uses her wind magecraft to boost her sword's effectiveness, along with reinforcing her body. There's also Kosviel von Einzbern, who uses her family's alchemic expertise to craft superior bladed weapons for her personal use.
* Fate/Nuovo Guerra has her Servant, Attila the Hun, who for some reason does household chores. She also has a straighter Battle Butler in her butler Klaus.
* Fate/Nuovo Guerra' has it, and so does her father (both are summoned as Saber-class Servants too). The latter's profile even lampshades it.
* Fate/Nuovo Guerra have some expertise with this kind of magecraft, particularly the spell Perunic, which creates a large tornado that shoots lightning bolts at the enemy. They also use it to accelerate metal objects magnetically, ala railgun.
* Fate/Nuovo Guerra is heading toward this way, what with the infinite servant, master and magus slots.
* Fate/Nuovo Guerra, it was said that Archimedes was actually a magus, and the legend about him using mirrors to burn a Roman fleet was actually a heat beam spell that he created, the Heliocaminus.

* Fate/Nuovo Guerra suffers a rank-down for all of his stats, in addition to any damage bonuses they have against him.
* Fate/Nuovo Guerra. The Fifth Grail War results in the destruction of Fuyuki City, prompting the Einzberns to start a new Grail War elsewhere.
* Fate/Nuovo Guerra the very existence of the Edelfelt Sisters Lumi and Lempi.
* Fate/Nuovo Guerra to boot. He also happens to be the national hero of Spain, and a heroic spirit capable of superhuman feats.
* Fate/Nuovo Guerra" who didn't like how a girl was getting all that booty and kicking all that ass.
* Fate of a Man) is a film about a Russian soldier's experiences in various German PoW camps—and it is a very dark story, since Germans were far more brutal to their Russian prisoners in World War II than they were to prisoners of the western Allies.
* Fate of Cthulhu in question is either severely delayed or is defeated by humanity).
* Fate of Cthulhu is a Fate Core system about time-traveling operatives from a future journeying back in time to prevent the coming of the Old Ones and the apocalypse.
* Fate of Cthulhu sent back from an altered future to stop them from doing whatever they do.
* Fate of Flames, meanwhile, a similar anti-phantom device was installed in the Pont Saint-Michel bridge near the center of the city, the bridge being chosen for symbolic reasons as the site of a violent massacre committed by phantoms.
* fate of her first husband, Ben Parker. Just in case you thought the Parker romantic luck was restricted to Peter.
* Fate of the Forty Sixth has its Guild soldier admit that Alexander Brukov is the most dangerous and powerful soldier in the world. He never fights, but his presence and ability to talk down foes lead credence to his status.
* Fate of the Jedi: Abyss while facing two highly skilled attackers simultaneously, despite having been weakened for several weeks. And when lightsaber sparring with his own son Ben, no slouch despite his youth, Luke defeats him without taking out his lightsaber for a very long time, and at the start doesn't even have to take a step.
* Fate of the Jedi are ugly, because it's all a matter of perspective.
* Fate of the Jedi, despite said leader's smear campaign, people in-story still realize that Luke is one of the biggest heroes and forces for good in the GFFA.
* Fate of the Jedi. Fearing that her immortal family would abandon her once she became old and decrepit, she drank of the Font of Power and bathed in the Pool of Knowledge. Doing so gave her immortality and incredible powers, but mutated her into her current form. Her family abandoned her in disgust.
* Fate of the Jedi has an inversion: Because of it being released either after or around the same time as the Legacy era comics (which has Luke Skywalker as a force ghost), several fans were speculating that Luke Skywalker might end up dying by the end of this book series. However, he did not.
* Fate of the Jedi. He's to keep away from Jedi temples and train no one for ten years, or until he can discover why Jacen became what he did. His teenaged son Ben decides to come with him.
* Fate of the Jedi is an ancient Sith Meditation Sphere that carries on the goal of its order to restore Sith to power.
* Fate of the Jedi Kenth Hamner meets his end trying to stop the Jedi Council from launching their StealthXes. As a result, he ends up falling off a catwalk and is saved by his opponent, Saba Sebatayne. Instead of accepting surrender, Hamner continues to try and stop the launch, knowing full well that Saba can't support him and protect the StealthXes at the same time. Saba chooses the latter option.
* Fate of the Jedi, Luke's son Ben Skywalker fights Sith Lady Vestara Khai several times and then a mutual attraction begins. Luke lampshades the parallel.
* Fate of the Jedi Mandalorian efforts to break into the Temple, and events in the series have essentially shown the galaxy that Mandalorians are evil.
* Fate of the Jedi series, Admiral Daala is voted in as the Galactic Alliance head

of state. However, she pretty much ruins everything with her obsession over bringing down the Jedi, believing that they are the source of all of the galaxy's problems and willfully ignoring the fact the entire galaxy is crumbling around her due to her inept leadership, and draconian policies, such as sending her Mandalorian enforcers to stamp out dissidents.
* Fate of the Jedi series, a reporter on a world with legalized slavery wins a slave from one of the locals. She proceeds to interview him on camera, then frees him on the spot and hires him on as a member of her film crew.
* Fate of the Norns: Ragnarok: an eternal winter has set in, the end of the world approaches, and Viking society collapses: cue lots of civil wars for what's left.
* Fate of the Norns: Ragnarok, but if the runes are not with you, they might very well appear on the battlefield and kick the crap out of your party instead of helping you.
* Fate of the Norns: Ragnarok go out of their way to out-badass each other, notably in the "murder" department. The other have sired great heroes, such as Sigurd (Fafnir's slayer), Beowulf, etc.
* Fate of the Norns: Ragnarok it, the divine intervention will benefit your opponents!
* Fate of the Norns: Ragnarok live in a time when every little problem or power struggle escalates very quickly. As a result, people in power have to be able to kick a lot of ass if they want to stay (case in point: King Erik BloodAxe murdered almost every single one of his brothers to keep his place).
* Fate of the Norns: Ragnarok of pre-Ragnarok Midgard is to die gloriously in battle in order to be resurrected as an immortal warrior, to drink and fight every day until the end. Needless to say, the world is full of Blood Knights.
* Fate of the Norns: Ragnarok, two identical runes of power used too close to each other have their effects nullified.
* Fate of the Norns: Ragnarok: Various spells can blind friend and/or foe. Some immortal warriors can notably create giant pillars of fire, dropping from the skies, burning and blinding their opponents.
* Fate of the World, a single icon of a sprout emerging from the soil is used on the event card for promoting Green politics in a country. It is fitting, as the most hopeful futures usually require a globally green outlook.
* Fate/Parallel Fantasia, False Assassin's main weapon is a knife. It's not actually the weapon she's most skilled with, but rather the weapon which is most closely associated with her legend.
* Fate/Parallel Fantasia, False Assassin's Noble Phantasm is a prosthetic arm which grants her the ability to grasp spiritual bodies from a distance.
* Fate/Parallel Fantasia has "All Evils of This World", the curse which has corrupted the Grail and transforms any Servant exposed to it into their Dark form. The increased power is accompanied by the twisting of their minds, though True Rider finds that she's able to resist to an extent when False Avenger's attention isn't focused directly on her.
* Fate/Parallel Fantasia, Luvia and False Lancer steal an empty police car to get around for a bit before ditching it. Since the keys are missing, False Lancer points out she can drive it thanks to her Riding Skill, but she doesn't know how to hotwire it, so Luvia starts it with her magic.
* Fate/Parallel Fantasia, Shinji attempts one on Rider when he gets angry, but he just hurts his hand on her nigh invulnerable face.
* Fate/Parallel Fantasia: The final battle has the heroes charging down a tunnel to try to reach the Greater Grail. True Avenger stays behind to hold off False Avenger. Rin, Luvia, and Bazett stay behind to hold off False Berserker. False Saber stays behind to hold off True Rider. False Archer stays behind to hold off False Lancer. True Saber and True Archer stay behind to hold off True Berserker. False Caster stays behind to hold off Gilgamesh. Finally, Shirou alone reaches and battles Kotomine.
* Fate/Parallel Fantasia, this is briefly contemplated by False Caster when she realizes that Servants are only copies based on information recorded in the Akashic Records; meaning that if she found a way to return to her own world, she might find

another version of herself still there, one with a better claim on being the "real" her. She ultimately decides to carry on and try not to worry about it.
* Fate/Parallel Fantasia, this is the power of False Archer's Noble Phantasm, Faust Buckler. It turns out to be less useful than expected, since if she touches an enemy (such as by attacking them), they become unfrozen along with her.
* Fate/Parallel Fantasia, when Shinji meets Bazett, his inner thoughts reveal he thinks she's ugly because of her huge muscles.
* Fate/Prototype, and you could theoretically have them both on the same team.
* Fate/Prototype are locked out of their ability to use their Noble Phantasms. Trespassers are also subjected to a noxious poison that cripples Servants and kills humans in two seconds.
* Fate/Prototype brings us Archer: his twin swords join to form a bow, yet the arrow fired from the bow itself is nothing more than a targeting beacon for a magical version of this trope.
* Fate/Prototype, Saber says that Ayaka Sajyou looks exactly like Vivian, the Lady of the Lake.
* Fate/Prototype, she was traumatized and blocked out these events. In the present, when Ayaka summons Saber, she doesn't remember him while he remembers her.
* Fate/Requiem, Erice Utsumi is very hostile to the heroes because she doesn't understand what they are doing and thinks that they enslave Servants. When she sees Voyager working for them, she goes berserk and thinks they stole him from her, not knowing he is a different version of him. When she later finds out Chaldea's mission to save the world, she apologizes.
* Fate/Requiem. Her blood is highly toxic to Servants and can absorb and dissolve their spirits, making her well suited to killing Servants. Servants who are Divine Spirits like Nzambi are immune to the poison, but the blood can still injure them.
* Fate/Requiem: This causes a stir when Erice Utsumi is revealed to be the daughter of the Servant Izanami and a human man, with several parties wondering how it is possible.
* Fate/Requiem: This story is set in a futuristic society. When a class is taught about the moon landings, Koharu F. Riedenflaus thinks it is a hoax, as she highly doubts the primitive 1969 people could have possibly developed the technology to go to space.
* Fate/Requiem: When Erice Utsumi was a small child, her grandmother gave her a haircut, but accidentally nicked her ear with the scissors. She has a scar from it.
* Fate/Requiem: When Nzambi attacks Koharu, she disappears from sight and then is right in front of her.
* Fate/Requiem: When Voyager smiles, Erice Utsumi compares it to a shining star or a window straight to the heart.
* Fate Revelation Online, Cuvie facetiously calls one of Agil's spells Heat Hawk. Agil is shocked that Cuvie knew the name.
* Fate Revelation Online: Diabel realizes that they are entirely reliant on the game [Menu], with the private messages, auto-mapping, HP and MP bars, and so on. Normally that wouldn't be a big deal, since they're inside a video game and there's no reason to suspect that these features will be disabled. But then a patch removes the [Items] tab of player inventories for "realism," and Diabel realizes that if the [Menu] disappears then their entire society will instantly break down. Just to start with, they have no backup system for messaging people, and yet they're spread over dozens of floors and thousands of square miles. Diabel quietly starts a think-tank to look into backup plans just to be safe.
* Fate Revelation Online Diabel spars with Shirou so the latter can make him a sword. When Diabel arrives to pick up the sword, Lisbeth, having recently had a discussion about a Diabel/Shirou pairing, completely misinterprets them discussing the spar.
* Fate Revelation Online Griselda's guild is on a horror-themed quest and need to locate an NPC in a small town. Schmitt protests mildly when they decide to split up as it feels like asking for trouble.
* Fate Revelation Online: Shirou is explicitly nicknamed this, due to his rampant heroism in the early days of SAO. He even gets an appropriate white jumpsuit and

mask made for him.
* Fate Revelation Online. Shirou's official name is changed to [The Sixth Ranger], and Illya's becomes [The White Witch].
* Fate Revelation Online). While most are meant to give tell funny anecdotes and give some insight into character motivation, some do provide meaningful backstory.
* Fate route: In the most tearjerking way, Shirou has to part with Saber and life moves on.
* Fates accusations aimed at Soleil's supports with a male Corrin (in fairness, the former's bisexuality is not well-conveyed in the original and really only comes up during their S support), which were at least partly responsible for the chain being completely rewritten for the English release. Another was that the ending of Revelation changed if the Avatar was married to Azura.
* Fate's adoptive brother, Chrono, being an Admiral who commands a ship like his mother once did, is noted in the Sound Stages as being away from his children fairly often.
* Fate saves Nodoka and the others from one of his clones and allies. It's a The Only One Allowed to Defeat You.
* Fates Collide, after hearing Weiss Schnee's description of Ruby Rose, Nero insults Ruby and calls her immature. Weiss warns her only she is allowed to talk about Ruby that way.
* Fates Collide: Archer makes fun of Cu Chulainn for losing a fight to a little girl like Ruby Rose. He protests he was winning until he got blindsided by her flying locker, but Archer tells him not to make excuses.
* Fates Collide, Astolfo's friend Bradamante angrily says Ruby should have been the one to die.
* Fates Collide crushes a cup three times: when she finds out Ren's new roommate is a girl, when she sees her, Kiyohime, for the first time, and when Kiyohime declares Ren will be her boyfriend, not Nora's.
* Fates Collide: During a party, Glynda Goodwitch smiles while she is dancing with Vlad. When Medea sees it, she is happy that Glynda is finally relaxing and having fun.
* Fates Collide: During a sparring match, Bazett Fraga McRemitz hits Mercury Black so hard it breaks his prosthetic leg. She is surprised to discover it was artificial, and he asks if she is insane because that much force would have completely destroyed a real leg.
* Fates Collide: During a sparring match, Henry Jekyll uses his knife to reflect sunlight into Emerald Sustrai's eyes.
* Fates Collide: During a sparring match, Yang Xiao Long manages to set Bazett Fraga McRemitz's jacket on fire before Bazett beats her.
* Fates Collide: Gilgamesh uses his money to skip classes he doesn't like.
* Fates Collide in this story. Victor blames Fran for his wife dying while giving birth to her. He abandoned her but eventually decides he'll never get closure for his wife's death unless he kills her. Fortunately, he fails.
* Fates Collide, Jaune Arc gets angry when his sister Jeanne and Edmond Dantes have a chat. Jaune confronts him and orders him to stop flirting with his sister. Edmond is incredibly shocked and protests that they were just talking, but Jaune clearly doesn't believe him.
* Fates Collide: Mercury Black constantly gets beaten up by everybody, usually Gilgamesh, and ends up losing one or both artificial legs. Then he manages to win Round 2 of the Grand Order Tournament, outlasting all his opponents, including Gilgamesh.
* Fates Collide: Mordred, Cleopatra, Nitocris, and Tomoe Gozen (who are all girls) wince in sympathy when Yang hits Astolfo in the groin so hard it breaks his pelvis. Achilles, Robin Hood, and Ren wince when they are told about this. Later, Jaune winces too.
* Fates Collide: Nero sees Ruby Rose as her rival and vows to defeat her for having the power to summon roses, which she believes should belong to her alone. When she finally confronts and challenges her, Ruby has no idea who she is, and pays more attention to her other opponents Cinder and Amakusa.

* Fates Collide: Penthesilea is obsessed with defeating Achilles. When Yang Xiao Long manages to beat Achilles in a fight, Penthesilea gets angry and vows revenge on her for taking her dream.
* Fates Collide reveals that her student Neo started wielding Medb's sword Caladbolg. Similarly, Astolfo sacrificed himself and in the sequel, his friend Charlemagne started wielding his lance the Trap of Argalia.
* Fates Collide: Robin Hood looks like Roman Torchwick. Neo does a double take when she sees him, while Emerald Sustrai wonders why she is attracted to him, since she hates Roman.
* Fates Collide: Ruby Rose is very happy to meet Astolfo's Hippogriff and Medusa's Pegasus.
* Fates Collide: Siegfried is a handsome, tall, and well-muscled warrior. Jeanne shows Jaune Arc and Pyrrha Nikos pictures of back when he was just a scrawny kid.
* Fates Collide: The RWBY characters often confidently stand still, believing their Aura will protect them, only to find out the hard way Noble Phantasms are powerful enough to wound them.
* Fates Collide, weapon fanatic Ruby Rose spits her milk into Jaune's face.
* Fates Collide: When Ruby enters the room and sees girl's clothes in the closet, she assumes her roommate is a girl. She is extremely shocked when she enters the bathroom without knocking and sees Astolfo out of the shower.
* Fate Series, actual gods start appearing, from the Mesopotamian Ishtar and Ereshkigal to the South American Jaguar Spirit. It should be noted that the gods are far more powerful than Heroic Spirits, and have to limit themselves by borrowing the body of a human in order to participate in a Holy Grail War.
* Fate Series demonization with the “Innocent Monster” trait, with several spirits appearing as inhuman villains who may have no resemblance at all to the people they were in life, because that was what public opinion imagined them to be.
* Fate Series has plenty of examples, several of whom were actual knights of the Round Table.
* Fate Series in order to destroy other magi's Magic Circuits and render them useless.
* Fate Series: In the Clock Tower, it's obvious to anyone who cares to look at the evidence that the Tohsakas and the Edefelts are recently related, something both families will vehemently deny. The story behind that started when the twin Edefelt sisters went to Japan to participate in the Third Holy Grail War, only to lose. Because only one of them would be allowed to inherit the Edefelt's magic crest, the two were expected to fight to the death so that only the stronger of the two would return. The older sister returned, but with only half of her magic crest, claiming her sister's half had been destroyed in their battle. In reality, the younger sister was rescued by the Tohsaka heir, who later married her, and added her half of the magic crest to the Tohsaka's magic crest, granting her son and granddaughter the jewel magecraft that the Edefelts were well-known for. In the modern day, Rin and Luvia resemble reach other and use almost identical magecraft, yet maintain the history that Rin's grandmother was an unknown European woman, and that Luvia's grandmother survived the Third Grail War while her younger sister didn't.
* Fate Series is so fast and so strong that actual fighting techniques are nearly worthless against him, as all the fancy parries and stances in the world won't help against someone who strikes faster than you can react and shatter your weapon with a single blow. And that's before you consider the fact that he's nearly immune to normal attacks, has twelve lives, and becomes immune to any attack after it kills him.
* Fate Series magecraft, but that rule also works in reverse; new applications of magecraft become possible as technology advances, and given enough time and technological advancement magecraft could eventually replace the old art of sorcery.
* Fate Series of Russia). These trees are planted by the new villains and the resumed "defunct" timelines threaten to overwrite whole human history, so our heroes travel around the world to destroy them; however, they're faced with the

dilemma of having to end the lives of the Lostbelt inhabitants, but they're encouraged by one of their Lostbelt allies to continue fighting for their world's future, no matter the cost.
* Fate series of visual novels, games, light novels, etc. Interestingly enough, even to most of the Mage's Association itself, the war is mostly something of a rumour, and only higherups or people who do their research are fully aware of it.
* Fate Series Oh, and the magus who summons them generally has an absolutely 0% chance of ever being able to beat their Servant in combat, though there are a few exceptions.
* Fate series, Saber's family - which includes Vortigern, Morgan, Mordred and the Orkney siblings - has also been revealed to be this, arising from the family's conflict over whether Britain should remain in the Age of Gods or enter the Age of Man.
* Fate Series: Servants are spirits that don't age and can't die unless they run out of Mana or are killed via violence. They cannot have children with each other or with humans under normal circumstances.
* Fate Series: Since this series is about summoning historical and mythological beings to fight each other, this would be necessary.
* Fate series tend to do this quite a bit with some of the historical/mythical figures, most likely due the overwhelming success of Saber. Ironically, Nasu initially cringed at the idea of turning Saber female.
* Fate Series, the few fictional characters in their universe qualify:
* Fate Series until he decided to name it Ea. However, when he attacks with it, he calls the attack "Enuma Elish", presumably in homage to his best friend Enkidu, whose own ultimate Noble Phantasm is called Enuma Elish.
* Fate Series, which is notorious for gender bending various male historical figures and characters, keeps the names of the people/characters, so in this series male-looking names are absolutely no hint as to which sex the character is. The only, sole exception to this is Arturia, the iconic female King Arthur, with her male prototype design being named "Arthur" instead. As a result, you get a cast full of female characters named such things as Francis, Jack, Hassan, Mordred, or Nero, and people don't really question it. Though there's no shortage of actual male characters and female characters actually based on female historical figures/characters.
* Fate Series with something called "Quantum Time-Lock", which occurs every hundred years or so. The branches that are cut are those that strayed too far away from the "trunk of the history tree", i.e the correct history.
* Fate's family is specifically shown to be Erio and Caro, lacking Nanoha and Vivio, so the debate rages on. Then again, while Vivio suggests that she should give Fate and her children some space while they spend time as a family, Fate, Erio and Caro think doing so is unnecessary.
* Fate's followers Homura and Shirabe try this look to impress Fate in Volume 0.
* Fates for all three games, with characters being able to support, marry, and have children. The main difference here is that children are now locked to their fathers instead of their mothers, with the only exceptions being Azura's son Shigure and the Female Avatar's son Kanna. An A+ rank has also been added in some cases, and achieving A+ or S support ranks allows characters to share classes.
* FATE specifically allows this whether or not the character has already rolled the skill at a baseline level, both because there can be in-story reasons to hide their skill and because it's more fun not to have to worry about it.
* Fate's relationship with Nanoha in the first two seasons; the third season toes the line. Post-
* Fate/Starry Night, Archer carries an injured Ritsuka away from Mt. Enzou like this until Jack insists on being the one to help her mommy. Ritsuka is glad that no one is around to see him get carried like a princess by a little girl.
* Fate/Starry Night: As the only one able to breach the wall of mud preventing other Servants from entering Fuyuki, Jack is entrusted with a bulging bag of Saint Quartz and various useful magical tools and artifacts for Ritsuka to use.
* Fate/Starry Night for Lancers like Scáthach, Ritsuka uses a spear made by

Proto Cú Chulainn to protect himself against a swarm of bladed wing worms along with Jack.
* Fate/Starry Night. He even forgets that he's bleeding out until he starts feeling lightheaded partway through the fight.
* Fate/Starry Night, he's interested in seeing what kind of person he is and what kind of Servants he'd summon, letting him live and defending him from Archer.
* Fate/Starry Night is "long sword man", Xuanzang is "crybaby lady who calls Mommy her disciple", Medea is "funny toy-making lady", and so on.
* Fate/Starry Night, Jack's killer instincts kick in when confronted with innumerable mud copies of Ritsuka, her thoughts filling nothing but the thought of, "Dismember. Dismember. Dismember. Dismember. Dismember. Dismember. Dismember."
* Fate/Starry Night, Lancer takes a shine to Ritsuka after learning of their shared tutelage under Scáthach. Although they're technically enemies, Lancer helps Ritsuka out numerous times, while Ritsuka promises to summon someone strong for him to fight.
* Fate/Starry Night, Ritsuka and Shinji are aghast at Shirou's method of turning his nerves into temporary Magic Circuits while tearing into him for his stupidity. Ritsuka then gets up to forcibly open Shirou's Magic Circuits to prevent him from killing himself.
* Fate/Starry Night, Ritsuka is normally able to contact Chaldea for information and navigation. But having dreamed himself into another world, he has no ability to contact them, and they're only able to send him Jack with a package of Saint Quartz and tools.
* Fate/Starry Night. Shirou refers to Berserker as "Hercules", but Ritsuka corrects him, as Hercules is a romanization of the original Greek "Heracles".
* Fate/Starry Night: Shirou serves Bazett tea. Even though the tea is still boiling hot, she drinks the whole thing in one gulp. Everyone is baffled, while she doesn't understand what the big deal is.
* Fate/Starry Night, the "Jack's Adventure" sidestories are narrated from Jack's perspective, as she's describing how she got to Ritsuka in time to rescue him from Berserker. The story ends with her cheering about how she found him.
* Fate/Starry Night while uppercutting one of Medea's Dragon Tooth Warriors.
* Fate/stay night. After the opening movie and starting the game proper from the menu, it goes back to the first day, this time from the Protagonist's perspective.
* Fate/stay night agree, his next idea of how their relationship would go would be making her drink the 'black mud' from the cursed Grail, destroying her mind and giving her a physical form.
* Fate/stay night. Also, despite doing the deed three times during the Grail War, Sakura does not become pregnant.
* Fate/stay night, and all the other surviving kids were taken in by the church and converted into living mana batteries for Gilgamesh.
* Fate/stay night, and begins to take measures to fix this deficiency.
* Fate/stay night, and due to that reason Arthuria never blamed Guinevere nor Lancelot for their romance and was forced to take action against it by her enemies.
* Fate/stay night and has a Servant so brokenly strong that she's still a match/superior to any of the other Servants except Berserker and possibly Lancer.
* Fate/stay night and is every bit as associated with that. (Of course, it's the same character saying it in both cases.)
* Fate/stay night, and is working on many more. There are even voice patches for the former two, which rip the audio from the PS2 version (that you have to provide, of course). Mirror Moon also helpfully provides links to distributors who will sell the games to you.
* Fate/stay night, and it's not even really magical, but it damn well works.
* Fate/stay night and potentially gets an awesome girlfriend and a chance to study magic properly.
* Fate/stay night and speculation that Rin can heal from serious injuries by covering her in grave soil.
* Fate/stay night. And they're adorable. Kohaku loves to cook, Saber loves to eat; and they both understand wanting to live their lives over.

* Fate/stay night and will likely be seen in the Illya route if it is ever released.
* Fate/stay night, an endless, barren landscape littered with swords. It's the basis behind all of his techniques - all of the weapons he recreates come from this world of his, which is representative of his lifelong conflict between ideal and reality.
* Fate/stay night) anime adaptation averts this by writing her into an original plot.
* Fate/stay night apologized for taking his place as heir and showed pity for displacing him. Any other action would have been fine, but pity enraged him.
* Fate/stay night Archer takes a blow from Saber in the Fate route, significantly weakening him for the rest of the story. This prevents him from carrying out his original plan but isn't enough to stop him from taking several of Berserker's lives during his last stand.
* Fate/stay night are technically familiars due to possessing the same type of contract, but the scale is vastly different. A Servant is a legendary hero or villain with even the weakest having powers far beyond all but the most powerful mages or vampire lords. Due to their immense power, they are placed into classes that reduce their burden and are further supported during the Grail War by the Grail itself.
* Fate/stay night: As a rule of thumb, all Servants are immune to attacks that are not at least indirectly magical in nature.
* Fate/stay night as they burrow back to the Throne of Heroes that it originated from.
* Fate/stay night, at his adult height, Shirou (5'6) will tower over the main heroines, especially 5'1 Saber (who's the shortest Servant by a full head at least).
* Fate/stay night, attacking from all directions to overwhelm his opponent.
* Fate/stay night! Badassery aside, it's not a true longcoat; it's actually a pair of sleeves and a long battle-skirt-thing. Looks damn similar, though.
* Fate/stay night because she has more magical energy than she could ever possibly use no matter what and can summon up apparently infinite giant freaky monster things if she has time. Is also the avatar of all the evils in the World.
* Fate/stay night begins with a prologue narrated by Rin. After this, the main game begins with Shirou as narrator. Some scenes are even repeated from his perspective.
* Fate/stay night.) Berserker, on the other hand, has the power to be killed 12 times before he dies, and comes back instantly without any adverse effects. This is supposedly a huge difference from mere quick regeneration. Not to mention, it then makes him permanently immune to whatever killed him after he regenerates.
* Fate/stay night boost (and Servants are almost always very, very strong to begin with).
* Fate/stay night. Both are fairly important due to their absence, the former more so than the latter.
* Fate/stay night, but as he's stuck in one place the entire time, he has to wait for people to come to him.
* Fate/stay night but the strategy is essentially suicide) and projection in general.
* Fate/stay night, but this grudge reaches extreme levels fairly quickly.
* Fate/stay night can get like this. Especially prevalent in one scene in "Unlimited Blade Works", where Shirou can warn Lancer to stay away from Tohsaka, to which she keeps desperately denying that she and Shirou are in love, while Shirou just smirks and doesn't deny anything, and Lancer laughs his ass off at Rin's reaction.
* Fate/stay night can summon one of these. Kind of a strange example, in that it's theoretically an actual physical shield that a warrior might carry — but it's a legendary weapon that can deflect anything and he can summon it as a magical ability, so it works out to be more like deflector shields.
* Fate/stay night, Caster is able to wield spells from the Age of Gods that vastly outstrip the raw firepower of modern day magecraft. Due to possessing the ability

to use Divine Words lost to humans in the present, she can perform incredible feats with a single word when it would take entire teams of modern-day magi chanting for several minutes to do the same.
* Fate/stay night clean all by himself, with only one of his younger female classmates coming by to help. The sweet granddaughter, despite being sweet, is no help, instead sponging off of him to devour his great homemade meals. Shirou also maintains an income by fixing up the Yakuza head's motorcycle and keeping up with three different part-time jobs. In times of need, however, Shirou can ask for a maid from the Yakuza head to keep his house in order.
* Fate/stay night (corresponding to the prophet), follows it to its inevitable conclusion.
* Fate/stay night. Despite finding many of these girls attractive, it rarely occurs to him that any might feel the same way about him, such that Rin and Sakura have an especially hard time getting him to notice their feelings in their respective routes.
* Fate/stay night. Do NOT, just do NOT get her angry. Be prepared to be killed, er, I mean, amazed.
* Fate/stay night Due to her personality, all she really does is go rather cold and quiet whenever Shirou's being friendly with another girl.
* Fate/stay night. During several "strategy meetings", his allies reprimand him for his usual response of "let's just go and do it".
* Fate/stay night, ending only when he died of natural causes. He is understandably resentful of humanity.
* Fate/stay night ends up denying him everything he ever wanted from his participation in the Grail War.
* Fate/stay night, enjoys cooking, cleaning and making tea. Not that he really gets the opportunity to do so more than ten minutes into the game or so but...
* Fate/stay night. Even a battle to the death between magi and their Servants can be interrupted by the need to eliminate a witness.
* Fate/stay night even confirms this trope was what they were going for when they made him.
* Fate/stay night, even the other students at their school notice it, mentally including Issei as part of the harem surrounding Shirou.
* Fate/stay night. Even though it ends the route absurdly without any real conclusion, it is referred to only as an "End", the only ending with this note.
* Fate/stay night features Gilgamesh, the most powerful heroic spirit in existence and the first and greatest king of history, who happens to be 2/3s God. His ego is so gigantic it might just suffocate you if you are in proximity of Gil, if he even allows you to look at him. Ultimately his pride serves as his downfall in all 3 routes, but if he was actually willing to go all out, he could take on every creature in the world´s powers combined. He is so arrogant that he rarely even wields his endless array of weapons, he SHOOTS them at you, and only wields his actual weapon Ea against worthy opponents (the ones we have seen so far are Saber, Shirou after Gil got put on the defensive, Fate/Zero´s Rider and a town´s worth of evil spirits).
* Fate/stay night. Finally, he complied and just to make damn sure we know he's gone, they dropped a pile of rocks on him.
* Fate/stay night for all of her knightly aspects Saber's hatred of losing is probably second only to her hatred of bad food. This is shown most prominently during her day out with Shirou and Rin in the Unlimited Blade Works route where the three of them try their hand at a batting cage with the caveat of not using magical energy. It becomes apparent that without it Saber is, in fact, the weakest of the three and spends time afterwards rather grumpy.
* Fate/stay night for Archer. Berserker drips manliness as well, but of the more brutal type.
* Fate/stay night. For a 'yippee, destruction and fire!' variant, watch the activation of his best Noble Phantasm.
* Fate/stay night for the poor. And roflstomp everyone because that combination is essentially all powerful. And yes, they are all most definitely capable of stand

alone. It's too bad the story ends before she can go through with it and the sequel eats continuity for breakfast.
* Fate/stay night for the winner. The Tiger Dojo session afterwards can't bring itself to chastise Shirou too much because he did his best.
* Fate/stay night, Gae Bolg works on this principle. It's a weapon that reverses causality: instead of the attack puncturing the heart, the heart is punctured and THEN the attack lands.
* Fate/stay night good and would be an excellent challenge normally, he's just not the sort of opponent that Lancer is suited to fight. He recommends sniping him instead. Boooooring.
* Fate/stay night got a wish. And this repeated for the next two centuries.
* Fate/stay night has a backstory that is a major plot point for the story, the protagonist's entire motivation for existing (at least in the beginning), in fact. Most of the routes have his backstory as a point of major inner conflict for him over his ideals and his reality.
* Fate/stay night has Archer with white hair and gray eyes as a borderline example similar to Hanyuu. A more straight example is Sakura, who has lavender hair and eyes; and Shinji and Issei, who both have blue hair and eyes.
* Fate/stay night has a small crush on Tohsaka at the start of the story, though he only knows her public persona. However, when he gets to know her better and sees both her good and bad sides, he only comes to appreciate her even more, though they may not end up together. Interestingly, she had a small crush of her own on him.
* Fate/stay night has Berserker, who wears only an armored kilt and cuffs. Though it's not fanservice in this case, because being summoned as a Berserker gives him a monstrous appearance.
* Fate/stay night has cases of this as well, such as when Saber seriously attempted to convince Shirou to let her go with him everywhere, including school, so she can protect him (note that she considers full body armor as casual dress).
* Fate/stay night has spent her entire life suppressing her emotions, so her feelings for Shirou leave her confused and angry. She realizes that he's important to her, but it takes a while for her to figure out why.
* Fate/stay night has the Hound of Culann (see 'mythology') with blue hair, Archer with spiky white, Rider purple rapunzel hair and Gilgamesh looking like a DBZ reject.
* Fate/stay night has the protagonist (who can be either male or female) being able to bond with and later romance a Servant of their choice, Saber (Nero), Caster (Tamamo-no-mae) or Archer (Nameless). The last one is less overt than the others however.
* Fate/stay night has this reaction whenever Shirou puts himself in danger. Makes a lot of sense, since she is essentially his bodyguard and he's less than cooperative with her efforts to protect him.
* Fate/stay night has three routes focusing on different enemies, with different plans that were barely referenced in the earlier ones.
* Fate/stay night has Zouken Matou, a twisted, vile piece of work hideous in both body and mind.
* Fate/stay night have been obscured in the pages of text, and the voice-acted version hardly saved them. This was impatiently Lampshaded by Shirou's internal monologue in the final arc: "Doesn't he ever shut up?"
* Fate/stay night, he admits it's more form than function and is difficult to move around in, and that's why he's classed as an Archer.
* Fate/stay night Heaven's Feel Normal End has a depressing example that flashes through the rest of Sakura's life in Shirou's home after he dies at the end of the Grail War, constantly waiting for him to come home.
* Fate/stay night: Heaven's Feel, Shirou and Shinji charge at each other to land this type of punch. Shirou wins.
* Fate/stay night: Heaven's Feel, Taiga Fujimura did this when she was helping Shirou practice kendo, which made him blush.
* Fate/stay night. He can also regain a life once a day. However, extremely strong attacks can take away multiple lives at once.

* Fate/stay night He gets better during the events of the Unlimited Blade Works route.
* Fate/stay night helps their family members avoid getting attached to them, since Irisviel already looked like a full grown woman and had a daughter of her own by the age of 9.
* Fate/stay night her enemies who have almost no chance of fighting back.
* Fate/stay night. He sees her as a treasure to add to his collection, and makes his desire to have his way with her very clear.
* Fate/stay night. He starts the game with at least four girls crushing at or potentially interested in him to some degree or other (Sakura being the most obvious, plus Rin, Ayako and possibly even Taiga), and as the Grail War goes on both Saber and Rider. Though she probably doesn't quite fall for him, even Ilya at least seems to find him charming or interesting in some way (though if it's mostly in the 'big brother' sense), and Caster (a declared man hater) expressed respect for him. And Issei seems to be gay for him too, just to top it off.
* Fate/stay night his mind overloads and he temporarily loses all senses. However, Shirou can apply Structural Grasp to plenty of other objects that were "merely" made by gods; Ea, however, was forged from the unlivable hell that was the earliest days of the earth and predates the very concept of "Sword" — it can only be called a sword because the world has no term for what Ea is other than "Ea". And in a setting where age=power...
* Fate/stay night "I am the bone of my sword/My body is made of swords."
* Fate/stay night if he really knows what he's getting involved in. He's also outraged at Archer's rather pragmatic view of civilian casualties.
* Fate/stay night if she made sure Kirei was really dead, and had she made sure to check the body?
* Fate/stay night: Illyasviel "Illya" Einzbern once resented her father, Kiritsugu Emiya, because he seemingly abandoned her and took it out on Shirou Emiya. Once she learns the truth, that being Kiritsugu didn't know she was alive and that her caretakers kept him from seeing her, Illya softens up and becomes more amicable.
* Fate/stay night in all three routes, with Shinji joining them in Unlimited Blade Works.
* Fate/stay night. In other words, whether or not it is a stable time loop is less important than the fact that it could be.
* Fate/stay night in pursuit of a goal she doesn't believe is actually possible. It's not helped along by Kuzuki's incredibly emotionless behavior.
* Fate/stay night: In the 2006 anime adaptation of the Fate route, Shirou teaches Saber how to cook this way.
* Fate/stay night. In the anime, this is replaced by Gilgamesh summoning swords from his Noble Phantasm, the Gate of Babylon, so that they block the path of Saber's swings, a method much more visually appealing than just having him stand there and take it.
* Fate/stay night: in the Heaven's Feel path, Shirou and Kotomine have to quickly escape from a castle. Kotomine jumps out the window, and Shirou, after a moment's hesitation, follows. Problem is: they're on the eighth floor, and Kotomine is a very experienced magus who knows how to soften his landing. Shirou barely avoids crippling physical damage (he notes it's a miracle he didn't break anything), and afterward all his companions are staring in wonder at what a colossal idiot he is.
* Fate/stay night. In their case it's genetic, since Einzbern homunculi are descendants (or, more appropriately, clones) of Lizleihi Justica von Einzbern, who had the same white hair and red eyes. They also carry parts of her personality and even memories.
* Fate/stay night introduces himself formally on initiating a duel, though he doesn't insist Saber identify herself.
* Fate/stay night in-universe, as even most of her students call her Tiger (despite her hating the nickname).
* Fate/stay night inverts this. Taiga (Shiro's legal guardian/aunt figure/moocher) teaches his class at school, but she's the one who gets embarrassed when they act too familiarly there. Shiro- not being your average teenager- is pretty chill about

it.
* Fate/stay night is driven by his belief that the best humans will survive and be worth ruling.
* Fate/stay night is identified as a sign of his twisted, distorted view of the world pretty much right off the bat. What this really means, though, and the extent to which his distortion reaches, is only fully revealed in the latter routes.
* Fate/stay night is not an advisable course of action. But you HAVE to do it or you get a bad end.
* Fate/stay night isn't around to play with you, particularly in the Heaven's Feel Route. Said route also has Shirou sit down on a bench to contemplate whether to save the girl or save the world.
* Fate/stay night. Issei "Blushes Like Mad Whenever Shirou So Much As Looks At Him Funny" Ryudou has a fairly obvious crush on him.
* Fate/stay night it as part of his own sadistic impulses, given how he unbuttons his collar and breathes heavily while eating it.
* Fate/stay night It becomes more typical retrograde amnesia later on.
* Fate/stay night. It is classified as an ANTI-WORLD noble phantasm, the most powerful in existence.
* Fate/stay night It's almost a little jarring seeing how quick on the uptake he is in Heaven's Feel.
* Fate/stay night. It's already been recorded in history, and anything that happens during the Holy Grail War cannot prevent that from happening on her own personal timeline. Somewhat subverted in that the point was never to prevent her from dying, but to let her live life to the fullest before her death.
* Fate/stay night, it's practically his shtick that he can't pull off any impressive victories unless he's been rendered three-quarters dead first.
* Fate/stay night, Jack the Ripper's Master Reika insists on cooking meals for Jack. Jack gets confused and points out she doesn't have to eat, but tries it and enjoys it. However, Ruler actually has to eat because she is possessing a woman named Laeticia's body.
* Fate/stay night Kischur Zelretch Schweinorg is known to be a vampire, one of the most powerful beings of the Nasuverse, and the only user of the Kaleidoscope, the operation between parallel worlds. He is also known to be a prankster. This is why Zelretch is considered as one of the biggest troll of the Nasuverse, along with Kotomine Kirei, even if you never see him.
* Fate/stay night, Kogil serves this role. Of course... he's the younger version of Gilgamesh, who as we know is more than a little messed up.
* Fate/stay night. Kotomine makes the plans, Gilgamesh calls people mongrels and swordspams them to death. Or doesn't. He helps if he feels like it, anyway.
* Fate/stay night. Lancelot fell in love with Guinevere and seduced her almost on accident because Guinevere had no defense against such things. Arthur forgave Lancelot, but Mordred was able to take advantage of the problems this caused to stage a rebellion and bring down Camelot.
* Fate/stay night. Lancer, Rider and Archer have it too, but nowhere near as powerful. Archer compensates for this by using his own duplication magic to provide himself with Noble Phantasms that buff his resistance.
* Fate/stay night leans more towards Stoic, but her dealings with Shirou tend to throw her a little out of whack.
* Fate/stay night Luvia gets more and more angry when Rin and the narration repeatedly insult her Swedish heritage. Mostly because she's actually Finnish.
* Fate/stay night makes his formal appearance in the war like this (the former on a wall, the latter on a lamppost), because even standing on the same ground as lesser heroes is an insult to him.
* Fate/stay night, making them impossible to control and having exorbitant mana drain on their masters; Berserkers are usually just as dangerous to their own controllers as to their enemies.
* Fate/stay night, meaning every time he projects he causes himself brain damage. His memories and ability to concentrate go pretty early, and no-one notices.
* Fate/stay night mentioned above, many of the heroic spirits have a backstory in

their previous life that definitely falls into this category.
* Fate/stay night (needing various ingredients and a specific formula) and the Holy Grail War (the battle between the seven Servants, until their souls fill the system and allow to summon an all-powerful wish-granting machine. At least in theory).
* Fate/stay night. Needless to say, Angra had essentially no useful powers to speak of, and the Einzberns lost the Grail War almost immediately. This also had the unfortunate side effect of shoving an embodiment of evil and hatred (albeit a very weak one) inside a nigh-omnipotent wish-granting device, and screwing over just about everyone in the process (including leading indirectly to the Einzberns dying out).
* Fate/stay night Nevertheless, he makes damn sure that everyone else is okay before he passes out from blood loss. He's so self-sacrificing it actually pisses off Saber, who thinks his heroics border on suicidal.
* Fate/stay night not only sharing his bed, but clinging to him very tightly. Rin is not amused when she hears about it.
* Fate/stay night of the world before Heaven and Earth were separated, before hurling the enemy into the rift. Unfortunately, while the visual novel's artwork of this attack is fairly awesome, the animated version is just a cheap-looking blob of semi-transparent red.
* Fate/stay night opens up with this. It introduces the plots and manipulations of all the antagonists of FSN, and then the narrator calmly declares:
* Fate/stay night or just near him, Taiga will end up greeting them and chatting for a bit. After a minute or two she generally blows up.
* Fate/stay night Other than that little mistake, it seems the idea is 'do what you can with your own ability, and accept your own failures if it doesn't work.
* Fate/stay night outright states that he only exists to make everybody around him look good.
* Fate/stay night own literally everything in the world, and due to the way magic works in this 'verse (making new things is unspeakably difficult, but making inferior copies isn't that hard), it's quite likely that everything of worth is based on things he used to own, so he's actually got a pretty good case for owning everything. So when he claims everyone else are just low-born thieves who need to be punished, he's not doing it out of greed, but out of a simple (albeit outdated) understanding of property rights. He's actually quite magnanimous with his treasures, and is more than willing to lend any of them indefinitely to vassals who ask for them.
* Fate/stay night really shows it off, in her casual attire. It's not so apparent in her school uniform, which has a much longer skirt.
* Fate/stay night received quite a bump in quality for its final two episodes. Compare the fluidity of Saber's fight against Gilgamesh to the fights against Rider or Berserker, as well as the detail and intensity of her facial expressions.
* Fate/stay night reveal that if Shirou hasn't forgotten the question, he's reluctant to ask.
* Fate/stay night. Rider explains that Pegasus actually survived all the way to the modern age, so he is now as powerful as a dragon.
* Fate/stay night: Rider is 172 cm tall and notably towers over all the other female characters, as well as a few males like Shirou and Shinji. She has a large bust, wears a revealing outfit, and is considered a beauty by Shirou.
* Fate/stay night, Rin Tohsaka can often be found doing this, usually in response to something Shiro said.
* Fate/stay night route, it's so effective that it even prevents Illya from using a Command Spell to teleport Berserker to her location.
* Fate/stay night route, Rider kicks Shirou out a window, but he uses a Command Spell to teleport Saber to his location and she catches him. Of course, if the player is dumb enough to have Shirou say a long speech to summon Saber instead of the simple, "Please come, Saber!", Shirou will splatter on the ground mid-sentence.
* Fate/stay night, Saber rarely smiles for herself as she always smiled for others. So when she gives a genuine smile in the Fate route, Shirou couldn't help but feel warm after seeing her smile.

* Fate/stay night seems to exhibit a form of this, as well, gaining form and intelligence by eating the hearts/bodies of his opponents.
* Fate/stay night see.) This also applies to the visual novel, as the prologue starts with the scene where Shirou meets Saber and then flashes back a few days to show the first few days of the story from Rin's perspective.
* Fate/stay night, she ends up the Servant of another person who epitomizes this trope, Shirou.
* Fate/stay night, she is summoned by Rin Tohsaka instead of Shirou, leading the two falling in love.
* Fate/stay night. She's also clearly not herself, and the rest of the route consists of Shirou and (eventually) Rin trying to save her from the darkness that is consuming her.
* Fate/stay night, Shirou accidentally summons Saber as his servant in the Holy Grail War, falling in love with her at first sight, although he doesn't recognize his own feelings at first. Because of the botched summoning, Saber cannot draw magical energy from Shirou the usual way, and is running out of energy for fighting, or even simply maintaining her existence. Rin figures out a way for Shirou to give Saber energy by having sex with her, and Saber agrees to do it out of necessity, but as the war goes on Shirou confesses his love to Saber and tries to persuade her to stay with him, while she wants to keep their relationship strictly contractual because that would conflict with her own mission. By the end of her route, however, Saber tells Shirou that she loves him in return.
* Fate/stay night Shirou adopts her into his home, much against the wishes of the more pragmatic Rin and Saber.
* Fate/stay night: Shirou Emiya and Rin Tohsaka are both shocked to learn the other is a Magus. In fact, Rin gets insulted that due to Shirou's lack of magical education, he had no idea the Tohsaka family is famous in the magical community, and that Magi living in Fuyuki City are supposed to register with the Tohsaka family.
* Fate/stay night. Shirou goes through training every night in magic that nearly kills him and terrifies anyone who sees it. This is, in fact, because he is really bad at practicing. It does essentially nothing for him. Another subversion comes in his sparring with Saber, where she points out that there's no way he can really hope to learn anything in such a short time so she'll just teach him to sense killing intent and get used to battle so he reacts better.
* Fate/stay night, Shirou mentions early on that lately he's been getting this feeling for Sakura.
* Fate/stay night's house for 2 years and is completely smitten with him, but due to her completely non-existant self-esteem, she absolutely cannot let him know how she feels.
* Fate/stay night shows up very briefly mucking about in the Prologue. Kuzuki also shows up briefly in the first day of the Fate route, and wouldn't go on to become important until halfway through the UBW route.
* Fate/stay night show that she can weaponize the wind sheath to release gusts of winds, miniature tornadoes, or even a massive explosion of air with enough force to oblierate rock and metal.
* Fate/stay night. Some fans argue that "Altria" is canon, while others say that it should be given no more credence than El-Melloi II being styled "Load" instead of "Lord."
* Fate/stay night sometimes and sad girl in the snow, because it's one of the big clues to Shirou that her cheerful act is mostly a facade against being hurt anymore. Apparently, every Holy Grail War in Fuyuki has taken place in winter. You know some people love that grail.
* Fate/stay night speaks only in an old and respectable Japanese dialect.
* Fate/stay night, specific Heroic Spirits can be summoned if one has an appropriate catalyst, which consists of something associated with the hero in question, or something from their legend. This includes things like one of their weapons, a piece of their clothing, or a fossil.
* Fate/stay night spend half the story on life support he proves much more

egalitarian, and even with Saber he stops around the time it becomes apparent they're gonna be fighting together regardless of her condition.
* Fate/stay night's Sakura is prominent in the first few days of the Fate and Unlimited Blade Works routes, before fading away to the status of an afterthought. She returns full force for Heaven's Feel, though.
* Fate/stay night's three scenarios lead to radically different Final Battles:
* Fate/stay night story), or his longtime friend (a horror story about protecting loved ones from the evils of the world).
* Fate/stay night. Subverted. Shirou stumbles upon two Servants fighting, and one of them races to kill him due to the Holy Grail War's "no witnesses" rule. He's mostly dead when someone saves his life.
* Fate/stay night suggesting that Tohsaka is the descent of a vampire.
* Fate/stay night superhumans, can move and fight faster than the protagonists can actually see. The most extreme example would be Saber going Mach 13, headfirst-leaping four kilometers in a second (she had help). Lancer, the fastest Servant, is so fast his movements were a blur even to another Servant, and a single back 'step' moved him about fifty metres.
* Fate/stay night's, which allows him to match up against Servants but quickly overwhelms his mind and body.
* Fate/stay night Taiga suddenly flips out and demands to know what Rin is doing there.
* Fate/stay night take place at roughly the same time, from the points of view of Rin Tohsaka and Shirou Emiya.
* Fate/stay night that explains their skills, stats and abilities, even how many turns an area spell lasts for.
* Fate/stay night that had greater magic and technology compared to modern humans. After spending ten years in the modern era, he has come to see the present world as corrupt and weak, and wants to use the Holy Grail to create a disaster that would leave only the strongest humans left, with himself to guide them.
* Fate/stay night: The adopted son of a mage is forced into a seven-way battle for the Holy Grail between mages controlling resurrected heroes of myth and legend. A Heroic epic focused on Shirou and his companions.
* Fate/stay night. The best example is probably the choice leading to "Unlimited Blade Works": If Shirou recalls Saber before she slashes Archer, Archer is left unharmed and capable of participating in the Grail War at full strength. This in turn boosts Rin's position in the war, making her a competitor to Shirou instead of someone forced to rely on him as an ally (and also makes Ilya not notice Shirou). Thus, "Fate" and "Heaven's Feel" get locked out because everything begins snowballing from that decision
* Fate/stay night. The disturbing part is that due to the way magic works, there's a good chance he's right.
* Fate/stay night. The famous "Unlimited Blade Works" poem that he had supposedly written about himself even carries a message that is very similar in nature to the "He who fights monsters" quote itself (if you manage to decipher its incomprehensible language that is). It tells the story of a man who spent his whole life in an agonizing pursuit through self-sacrifice, to become the hero of his ideals, until he one day realized that it was an ideal that could never be met, that evil would always persist, that all his sacrifices had been in vain, and that he had ultimately only managed to turn himself into a killer without a cause. He was just another part of the evil in the world that he once had thought he was fighting. The man who wielded swords had thus lost his identity to the point where there no longer was a man, there were only his weapons. He was "a man made of swords".
* Fate/stay night. The length is pretty inconsistent, at times appearing waist length and at one point when running up a building it trails a good two or three feet below her.
* Fate/stay night, the main human characters get a happy ending while several hundred innocents die (off-screen) during the scenario.
* Fate/stay night: The most natural style of Emiya Shirou, so natural that he was

able to become proficient at it by simply watching Archer use it in battle.
* Fate/stay night. The necessity of destroying the Grail makes this moot.
* Fate/stay night, there are three potential winners, each of whom can be seen as the First Girl. Sakura is the first girl introduced in the main storyline, the girl Shirou first met chronologically and also the first girl to show obvious interest in Shirou (who is, of course, completely oblivious to it), Rin is the first female character introduced and the first we get to see interact with Shirou because the prologue is from her point of view, and Saber is the first girl seen on-screen and heard as the second image in the Novel is of her.
* Fate/stay night. There is also Archer's famous "I am the bone of my sword..." speech, which he seems to do to activate Unlimited Blade Works (though it often takes most of the battle to recite the entire thing).
* Fate/stay night, the Servant class Berserker is defined by the class trait "Mad Enhancement". In exchange for their sanity and access to skills requiring a clear mind, the Servant receives significant boosts to all physical parameters.
* Fate/stay night, the words used in spells do not have any power of their own. Rather, they are used as a form of self-hypnosis which makes it easier for mages to activate their Magic Circuits in a consistent way.
* Fate/stay night. They meet again in the last episode, which clearly takes place after they had both died.
* Fate/stay night. This is kind of explained by the Root pulling them out of our traditional sense of time, and holding them in a kind of suspended animation between each Summoning.
* Fate/stay night (though no less arrogant) version of him that is a very capable king to his people.
* Fate/stay night, though there is no indication that she takes any part in the family business.
* Fate/stay night threw her into a forest during a blizzard as a test, he changed his opinion and went to rescue her. They bonded further as he stayed by her side through her recovery, and they ultimately got married.
* Fate/stay night Tiger Dojo, the hint section between deaths and routes, Taiga, Illya and sometimes Rin address the player.
* Fate/stay night to have fun and instead what he should be doing is more training that nearly kills him every night.
* Fate/stay night, True Assassin wears a white mask to conceal the fact that he doesn't have a face.
* Fate/stay night). UBW has Tohsaka leaving you to be killed by Archer while she goes ahead without you to stop Caster (also very difficult to get). HF has the Shadow eating you if Sakura isn't attached enough, Illya will also come after you if you don't meet her a few days earlier in the route, and if you choose not to unseal Archer's arm, Shirou will stab Sakura (and get killed by Rider) much further down the route (all of whom can easily happen if you're not careful). All of these, needless to say, are bad ends that kill you. You get scolded for these in the Tiger Dojo, especially the first.
* Fate/Stay Night: Ultimate Master. He still is considered a major threat, but most of his fights aren't that one-sided.
* Fate/Stay Night: Ultimate Master into a hulking armored being with heat vision.
* Fate/Stay Night: Ultimate Master. She finds the concept of aliens from distant planets to be utterly ridiculous.
* Fate/Stay Night: Unlimited Blade Works Abridged example of this trope. Rather than hitting her for Archer nearly killing him, Shirou suggests to Rin that he apologizes for the above event. While Rin complies, and genuinely, nonetheless, it doesn't stop her from throwing shade at Shirou for his actions during said event.
* Fate/Stay Night: Unlimited Blade Works Abridged: Rin interrogates Shinji and at first calls herself the "Bad Cop" and wants Shirou to be her "Good Cop". After seeing that Rider was killed, she tries again, only calling herself "Bad Cop/Worse Cop". She scares him by firing a Gandr near his head and saying Worse Cop wouldn't miss.
* Fate/Stay Night: Unlimited Blade Works Abridged: Rin reveals she set up 68

magical booby traps to try to kill Shirou. A few seconds later, she grudgingly admits it was 69 traps, but she didn't want to sound crass.
* Fate/Stay Night: Unlimited Blade Works Abridged: Rin Tohsaka admits she likes Shirou Emiya because she can use her looks to get any other boy to obey her, but he doesn't.
* Fate/Stay Night: Unlimited Blade Works Abridged: Subverted when Caster captures Shirou and ties him up with magic threads. When Caster reveals she has been draining the life force of the townspeople, an enraged Shirou declares his righteous fury will allow him to break his bonds and take her down. He fails to break them, and Caster says no matter how he talks tough, he lacks power.
* Fate/stay night [Unlimited Blade Works] begins with a double-length episode from Rin's POV that leads into her involvement in the Holy Grail War, followed by another double-length episode from Shirou's POV. This is then followed by Rin and Shirou going to meet with Kotomine, and things only pick up when Illya and Berserker attack.
* Fate/stay night [Unlimited Blade Works], but he's too proud to take it out until it's too late.
* Fate/stay night [Unlimited Blade Works] does this twice. First to Shirou and, moments later, to Rin.
* Fate/stay night [Unlimited Blade Works], falling leaves land on Assassin's sword and split on contact.
* Fate/stay night [Unlimited Blade Works] favor twin shortswords over bow and arrow, suspects that Rin was mocking him in saying this.
* Fate/stay night [Unlimited Blade Works] first season Limited Edition includes a soundtrack CD, booklet, novel, illustration and wall scroll. The second season Limited Edition includes a soundtrack CD, drama CD, booklet, illustration and wall scroll.
* Fate/stay night [Unlimited Blade Works] for future use. Part of the series is about him trying to figure out how it works with some mentorship from Archer.
* Fate/stay night [Unlimited Blade Works], Illya said this when she's dying.
* Fate/stay night [Unlimited Blade Works] in the heart a short time later.
* Fate/stay night: Unlimited Blade Works movie was less a movie in its own right and more a montage of scenes from the game. It managed to keep most of the major scenes and plot points, but at the cost of cutting out almost all characterisation, backstory, the main love story between Shirou and Rin and all the segues, not only making it amazingly jarring to watch but also almost completely incomprehensible to anyone who isn't already familiar with the story.
* Fate/stay night [Unlimited Blade Works]: Saber really sucks at baseball because she keeps holding and swinging the bat like a sword instead of a bat, causing it to miss the ball every time.
* Fate/stay night [Unlimited Blade Works], Shirou, Rin, and Lancer agree to team up. Lancer offers his hand to Shirou, who ignores it and keeps talking (or didn't notice the hand because he was looking at Lancer's face). After a few seconds, Lancer pulls his hand back.
* Fate/stay night [Unlimited Blade Works], Tohsaka tells Shirou that they're going on a date. His first response is "Oh, you and I are going on a date." After a second or two it zooms in on his face as he screams "WAIT, WHAT!?"
* Fate/stay night uses the stairs on Ryuudou Temple to give himself an advantage against other Servants attempting to enter.
* Fate/stay night-verse are explicitly referred to as master swordsmen, and all of them are different.
* Fate/stay night via his willpower and purity. By contrast, Shirou (who is at his most idealistic in this route) was very nearly killed by a brief exposure to a tiny, tiny fraction's worth of the same.
* Fate/stay night, was adopted by the magus Kiritsugu after his parents (and other immediate family members) died in a fire. After Kiritsugu also died, Shirou remembers the six years they spent together as the happiest time in his life.
* Fate/stay night were also summoned in this manner, and it's more noted upon there as well.

* Fate/stay night were rated TV-14. This is rather surprising, considering that all other companies that released both the anime and the Unlimited Blade Works movie rated it as TV-MA (as both have pretty considerable amounts of blood, gore, and violence).
* Fate/stay night, when an attack on the school leaves almost all the students in a near-death state, Tohsaka is horrified and is visibly fighting back nausea. Shirou, on the other hand, calmly inspects the students and determines they're not dead... at least not yet. Tohsaka demands to know how he can remain so calm in this situation, and Shirou replies that he's seen lots of corpses before, which disturbs Tohsaka even further.
* Fate/stay night When Shirou finds that his ideal and way of life are distorted after being challenged about them by Rin, he logically realizes that his processes are wrong. However, he also decides that he won't listen to her warning, because:
* Fate/stay night, where he's summoned as Archer, he gets to demonstrate his incredible skill and become one of the most dangerous Servants.
* Fate/stay night, where Shirou's first experiments with projection result in the entire left side of his body falling asleep and some troubles moving around and doing things that evening.
* FateStayNight, which many characters are capable of, but MAGIC, the primal, mysterious force of magic — Assassin's just good enough to pull it off.
* Fate/stay night, which modern humans are physically incapable of pronouncing.
* Fate/stay night, while the Heaven's Feel route is focused on him learning to overcome it.
* Fate/stay night who gets first-person P.O.V. scenes, and plays a major role in every route of the game (unlike the other villains and supporting characters, Kirei included, whose role may be significantly downplayed).
* Fate/stay night, who is shown enthusiastically studying modern maps and atlases in preparation for "conquering the world".
* Fate/stay night: Within the whole series, this role is fulfilled primarily by Saber and Rin, with Saber as Betty and Rin as Veronica.
* Fate/stay night with no concept of morality, she will toy with Shirou while pleasantly torturing him.
* Fate/stay night (with the exception of Illyasviel, who was conceived and born naturally) are this, being copies of the original homunculus, Justeaze, and as they're effectively her reincarnations she occasionally speaks through them.
* Fate/stay night. Yes, it avoids a horrific Bad End, but at the time you have no way of knowing that, so choosing that option on your first playthrough without having read a walkthrough has many aspects of this.
* Fates, the Spear Fighter and its promotion are this, which is fitting as lances/naginatas are this among the physical weapons. Oboro, the main playable Spear Fighter, enforces this, with the majority of her growth rates lying in the 50-55% range.
* Fate/strange fake: A few civilians witness True Rider in action, but assume from her outfit and horse that she is a performer promoting a store.
* Fate/strange fake as he does despite actually being absolutely terrible at magecraft.
* Fate/strange fake, but other than Waver Velvet, not many have heard of her.
* Fate/strange fake: False Lancer/Enkidu is vulnerable to diseases because a disease killed him in life. Gilgamesh notes that this makes False Rider/The Horseman of Pestilence, a personification of disease, a very dangerous opponent for Enkidu.
* Fate/strange fake has many examples. False Caster is addicted to the Internet and equipped a SWAT team with pseudo-Noble Phantasms, and the Mob has access to wizards.
* Fate/strange fake. He says he didn't resist arrest because he didn't want to risk Ayaka getting hurt and he respects the police who were only doing their jobs. He declares he will stay in his cell until sunrise, but is forced to escape with Ayaka early when the police station gets attacked.
* Fate/strange fake in a magazine. But a year later, the game is actually being

made.
* Fate/strange fake, Lord El-Melloi II concludes the ringleaders behind the True and False Holy Grail Wars in Snowfield want to do this, cheapening the miracle of the Third Magic into mere magecraft by mass-producing Holy Grail Wars.
* Fate/strange fake-producing bacteria, intending her to become this trope for the Servant they intended to summon. The plan went down the tubes the instant the comatose Tsubaki summoned her own Servant.
* Fate/strange fake: Saber tells his new Master Ayaka Sajyou that they are partners now and he will protect her. He offers a handshake to seal their deal, but she slaps his hand away because she does not want to be involved in the Holy Grail War.
* Fate/strange fake: The Japanese Ayaka Sajyou is contacted by Filia who orders her to travel to Snowfield, Nevada and participate in the Holy Grail War. Ayaka only speaks Japanese, so Filia casts a spell on her to allow her to speak and understand English.
* Fate/strange fake: True Archer, who has been corrupted into hating anything to do with the gods, hates his deific name, Heracles, and prefers to be called his obscure, original name, Alcides. He wants to use the Holy Grail to erase the name Heracles from history.
* Fate/strange fake: When False Rider traps several people in its Reality Marble, which is basically another dimension, Flat Escardos is still able to call Lord El-Melloi II on his cell phone.
* Fate/strange fake who cheerfully goes about the Holy Grail War in hopes of making friends with every Servant. He's also an astonishingly talented magus who can rewrite meticulously laid defensive wards in four seconds simply by touching a building and flooding it with his magical energy.
* Fate/strange fake, who decides to grant her request by spreading disease and dragging the souls of the victims into the dream.
* Fate/strange fake who shares Ayaka's name and face (though Prototype Ayaka is a brunette and this Ayaka is a blonde). The other characters find out Prototype's Ayaka is in Romania oblivious to the events of Strange Fake.
* Fate/Sunny Order: After being freed from brainwashing while in Jasonland, Cu Chulain tells Emiya and Robin that his real problem wasn't with the brainwashing, but the execution. Cu was brainwashed into thinking he was King Cyzicus (Medea's father), but he thinks a more effective method would have been to make him believe he had to attack his former allies. Instead, an artificial personality was implanted and kept him from fighting at his full potential.
* Fate/Sunny Order, Artoria tries to argue to Medea that, despite Mordred, she still qualifies as a good parent since she helped raised Ritsuka and Kana. Cue both of them crashing into Medea's temple and fighting because Kana encouraged Blackbeard to become an Otaku... and Artoria encouraging their fighting skills.
* Fate/Sunny Order, it's revealed that years ago, Ritsuka and Kana Tohsaka found Kaleido Ruby, who activated with blood from a cut on Ritsuka's hand and turned him into a magical girl. While Shirou was able to free his son from being a magical girl with Rule Breaker, it left Ritsuka still as a girl. The family had to wait for two weeks for Zelretch to turn their son back to normal, due to Ritsuka's girl body being made from aspects of multiple female counterparts.
* Fate/Sunny Order story of Chaldea, ranging from Attila's obsession with cute to Kana turning Blackbeard into an otaku.
* Fates Warning - "Firefly" (it's ambiguous, since it could just as well be applied to a romantic relationship, but the message of the song is definitely "you entered my life and made it better, and then you left it; we're our own people and neither one of us had any obligation to stick by the other, and while I want you to do what's best for you and won't stop you from leaving, it's going to leave a void in my life and I can't claim that it's not going to hurt")
* Fates Worse Than Death future where, among other things, homosexuality is perfectly normal. One of the sourcebooks makes mention of artificial wombs that allow male couples to reproduce and a finger tool that converts epithelials into sperm cells for lesbian couples.
* Fates Worse Than Death them. Instead, most soldiers and mercenaries just make do

with weapons slightly more advanced than we have today (with some build in electronics), while Intelligent Guns are reserved for the best of the best of the corporate elite squads.
* Fate System Toolkit from the same Storms; either can be used standalone in a given campaign, but they can also just as easily be combined and then potentially used by a single character given suitable investment.
* Fate Testarossa is another super prototype in a way — she was
* Fate Testarossa is a prime example. A lot of her issues stem from this.
* Fate Testarossa's Bardiche can also become a Cool Sword when it assumes its
* Fate the events to make her seem more like a straightforward monster.
* Fate The GM has the option of giving the players a "Climactic Dilemma" where they have to choose between two unpalatable options to resolve the horror. If the group attempts a third option to avoid both bad choices, the difficulty is automatically raised by three to four points and failure brings much greater consequences than normal.
* Fate, there is a group of spells classified as charm magic that allow you to summon up to six monsters to temporarily fight for you.
* Fate, the stars of the fake anime, are understandably displeased by this development.
* Fate: The Winx Saga), and the United States' Young Blood Productions.
* Fate: The Winx Saga, as a Mind Fairy one of Farah Dowling's powers allows her to move objects such as opening and closing doors and throwing a Burned One across the room in battle.
* Fate: The Winx Saga, Farah Dowling is able to see memories and tried to use this ability on Beatrix.
* Fate: The Winx Saga has the ability to control light with which she can create and multiply spheres of pure light, create rainbows or northern lights in her hands or emit rays of light that can blind permanently. Later she becomes able to use light to make herself invisible.
* Fate: The Winx Saga. His only role is being Musa's love interest. We learn virtually nothing about him except for the fact that he is Terra's brother.
* Fate: The Winx Saga. In the live action has very light brown skin and some features that do seem East Asian or possibly Middle Eastern mixed with Caucasian. Her actress Elisha Applebaum is part Singaporean and Ashkenazi Jewish.
* Fate: The Winx Saga is an earth fairy and his power is moving through solid matter.
* Fate: The Winx Saga, Musa's interest in Sam and general softening is marked with her hair being worn down more often.
* Fate: The Winx Saga, Sky's the only one Stella tells about her abusive mother, and the incident with her previous roommate.
* Fate/type Redline: Archer shoots a Nazi officer in the face, which destroys the top half of his head.
* Fate/type Redline: Kanata Akagi is a boy from 2020 who gets sent to 1945 and caught up in a Holy Grail War. He meets a girl named Tsukumo Fujimiya and they blush around each other, until he realizes she is the younger version of his grandmother.
* Fate/type Redline: Kanata Akagi was born with magical powers, but is completely uninterested in improving them and prefers to live a normal life.
* Fate/type Redline: Sakura Saber, Okita Souji, is introduced as very stoic and serious and scares Kanata Akagi by quickly killing an attacker. When they introduce themselves, Okita gives a smile which really affects Akagi.
* Fate/type Redline: The story is set near the end of WWII, when many of the Japanese are weary of war and advocate surrendering to the Allies. When one of the military commanders starts to think of surrender, Major Magatsu has him assassinated. He claims the factions talking surrender did it, angering his troops and ensuring they won't surrender anytime soon.
* Fate/type Redline. When he gets sent to the past and dragged into a Grail War, he annoys his companion Tsukumo Fujimiya by knowing nothing about Grail Wars or Servants. Due to his normal life, he is completely unprepared to deal with violence

and death and quickly panics or freezes up.
* Fate Undetermined: Ongoing fandom efforts, meaning success or failure can't be yet determined. Whether a work can be considered this or a "fail" depends on how intense and lengthy the fan campaign is, and if the studio or network has made an official statement in response.
* Fate-verse even incorporates this into their summoning: they may be summoned with powers or appearances lifted from common interpretations of them rather than their actual legends.
* Fate Victor's second attempt of Frankenstein was appropriately named Eve.
* Fate voice actresses armed themselves with canons, it was to come down squarely on the side of NanoFate.
* Fate (which just so happens to be the previously-mentioned MMORPG spinoff reimagined as a mobile game), it's obvious that this a franchise that's not going anywhere anytime soon.
* Fate Worse than Death Apep/Apophis is said to have swallowed some gods or human souls whole. They're still aware in there, and about once a night someone beats up Apophis enough that they can stick their heads out for a short time... before he recovers and swallows them again. They never actually escape.
* Fate Worse than Death followed some relatively lighthearted introductory chapters and served as a wake-up-call for both the audience and the main characters.
* Fate Worse than Death. He makes the best of it, but his bedside manner is, well...
* Fate Worse than Death in the dub), it serves as a light-hearted episode where Mai duels a movie star to decide if she'll marry him or not. The Marik plotline is literally not mentioned once in the entire episode (at least in the dub, can't speak for the Japanese version), but is picked up again in the next one.
* Fate Worse than Death in the end. Since his soul was still split apart when his physical body died, he could not pass on to the afterlife. He remains trapped in limbo as a stunted twisted thing, presumably forever.
* Fate Worse than Death once upon a time, because there was literally nothing other than desert and the sea. Virtually everyone were nomads. Some could sustain themselves through pearl hunting, but it was rather unprofitable.
* Fate Worse than Death: Originally, this referred to rape as being worse than death, but now it's a blanket term for anything that's considered worse than death.
* Fate Worse than Death: Someone suffers a fate so horrific that death doesn't seem so bad in comparison.
* Fate Worse than Death that the Reavers would visit on them if they took the ship.
* Fate Worse than Death: Undeath in general is often depicted as this.
* Fate Worse than Death used by the demons creates harmful "smut" that can pollute their aura, but the demons transfer this to their familiar instead.
* Fate Worse than Death, which does explain his tendency to focus on other para humans.
* Fate Worse than Death: You can suffer one of them anytime, anywhere.
* Fate/Zero ahead of her. Kiritsugu predicts his actions will eventually result in her death, but she accepts this and wants to help him realize his ideal.
* Fate/Zero airing on the anniversary of his historical incarnation's death) were coincidence.
* Fate/Zero, all the Knights that debuted or were talked about in that singularity undergo character updates in chapter 10, leading Gareth to become a girl and Galahad to fuse with Mash (who is fused with his power in the game). While Merlin is able to turn Galahad back to normal, he can't do the same to Gareth because she doesn't mind being a girl, especially since she can become Gawain's favorite little sister instead of competing with Gaheris for the role of favorite little brother.
* Fate/Zero along with Irisviel, who she had true loyalty to. But even in arcs where Saber is bound and/or corrupted by magic, she still has an overriding protectiveness of Shirou.
* Fate/Zero, an anti-unit type weapon that is said to be the counterpart of the legendary anti-fortress sword Excalibur, increases all Berserker's attributes by one rank and has special dragon-slaying properties, with the only downside being

that it seals both of the aforementioned Noble Phantasms while it's activated.
* Fate/Zero and a horde of ghouls on it and risking it to cause another vampire outbreak he immediately shot down the plane.
* Fate/Zero) and the prose snaps straight back to normal once Irisviel realizes the mind-trickery and overcomes it with her innate magical resistance.
* Fate/Zero, and they end up paying their debts in several gruesome ways.
* Fate/Zero are, by definition of their nature as Heroic Spirits, people who are well-known for the historical events they were a part of in life before being summoned by the Masters.
* Fate/Zero as a major theme is how the descendants of the Fourth War's participants inherited their parents' powers, conflicts, curses, and ideals.
* Fate/Zero: As he dies, humiliated, driven to almost kill the woman he loves, having failed to save the child for whom he entered the Holy Grail War, Kariya Matou hallucinates that he succeeded in saving both Tohsaka girls and has escaped with Aoi... as he's being devoured by his father's insect familiars.
* Fate/Zero, as Waver entered a deadly magical war solely because he hated Kayneth and his teachings immensely and wanted to prove him wrong.
* Fate/Zero attitudes who wear armor and use swords, and Gilles is completely insane, so it's a pretty forgivable mistake.
* Fate/Zero begged him to kill her before she lost control, which eventually caused a catastrophe, and he couldn't do it.
* Fate/Zero: Briefly discussed. Most Magi use familiars, which leave a magical trail so they can be detected. However, Kiritsugu also uses normal cameras attached to bats as they do not leave a presence nor can a camera be tricked with magic like the brain of a familiar.
* Fate/Zero, due to being spiritual beings that can temporarily assume physical forms.
* Fate/Zero Emiya Kiritsugu simply levels the entire building with explosives.
* Fate/Zero familiars are briefly mentioned as well as bringing up a certain disadvantage: Magecraft can easily be used to trick or fool one with illusions, so Kiritsugu attaches cameras instead as they are not so easily fooled. Caster also fights entirely through the use of summoned familiars, though they're actually bound to his Noble Phantasm instead of him.
* Fate/Zero. Granted, his ending and last couple of actions aren't exactly very heroic, but yea, the motive was good.
* Fate/Zero, has Sir Lancelot, who, having been summoned in the Berserker Class, is angry all the time, and, having tired of Camelot's manners, swears a lot.
* Fate/Zero. His life is one of the most tragic of the entire Fate series.
* Fate/Zero. His shared Reality Marble is something like a reminder of the world from when he was basically king of the known world. It summons his entire army as low class Heroic Spirits, even his horse. This basically terrifies all the other Heroes when they find out about it, as it's EX ranked and, well, it's an army made of total badasses. It's also used to prove a point: Namely, Saber made a shitty king since she never inspired true loyalty no matter how good of a person or warrior she was.
* Fate/Zero in her game of origin, but is more in her element here...which means terror and tragedy for the residents of Fuyuki. To put it simply, she starts her reign of terror by devouring every patron of a bar and just gets worse from there, dictating much of the plot through her ruthless actions.
* Fate/Zero In it, Kotomine is still more or less a good guy, though all his mental issues are still present. While the war is going on and Servants are going down, Gilgamesh is needling Kotomine towards realizing what he is and descending into villainy.
* Fate/Zero in life, his Noble Phantasm consists of that army, which was full of all manner of warriors that have now been upgraded to Servant status. While none of them are individually all that impressive by Servant standards, they are still superhuman warriors and could defeat any mortal soldier with ease, and as a massed army, very little can stop them.
* Fate/Zero is almost always dressed like a 19th-century riverboat gambler.

* Fate/Zero is twice as long as the others, and mainly consists of the participants in the Holy Grail War delivering exposition about the war and preparing to summon their Servants.
* Fate/Zero, just Caster's shadow tentacles reach out and grab him before it cuts away, but what we do hear makes it clear how horrific a death it was.
* Fate/Zero, Kiritsugu Emiya becomes one of these after, as a child, witnessing the kind of horrific effects experiments carried out by magi can have. He became known as "The Magus Killer", known for combining magic and mundane weapons and specializing in killing magi, though he would target anyone who was causing harm to others. Interestingly, he became a killer out of a desire to be a hero... his idealism clashes rather heavily with his job, a fact that is central to his characterization.
* Fate/Zero: Kiritsugu Emiya's Origin Bullets can be compared to silver bullets, as they are specifically designed to kill mages. Those who survive being shot by an Origin Bullet will be left crippled and are unable to use magic ever again thanks to their destroyed magic circuit. The Origin Bullet becomes more effective the more potent the target is in magic. The number of Origin Bullets however is relatively sparsed, as they are made out of Kiritsugu's own rib, thus he cannot simply reproduce new Origin Bullets whenever he wants.
* Fate/Zero made between the other Master-Servant pairs. Most but not all fics also have the various Servants disagree to varying degrees with Saber's wish assuming she's one of the ones not replaced.
* Fate/Zero Mages have obsession with 'the elegance of the ancient age', and this is exactly why Kiritsugu uses guns against them to great effect. Screw duels of honor by spirits of champions, I have guns!
* Fate/Zero) manages to ward off Gilgamesh's "Gate of Babylon" using a spear in one hand and a sword in the other.
* Fate/Zero may not see himself as a villain, but deliberately uses methods he knows to be both pragmatic and villainous. In his perspective, there is no such thing as a noble war, and that chivalry is the greater crime for perpetuating war by glamorizing it, rather than ending fights with merciless and abrupt execution and leaving survivors with no taste for war.
* Fate/Zero) out of the way in the first episode. The second season is a normal 12-episode season.
* Fate/Zero proper is quiet on the homoerotic tension between some of the Masters and their Servants, the Einzbern Consultation Room shorts are anything but.
* Fate/Zero quietly shoves Tokiomi Tohsaka, Rin's father and the guy everyone expected to be a very serious contender, to the side and Kotomine takes his Servant.
* Fate/Zero reveals he could have included that in his magically binding contract.
* Fate/Zero" series makes his likelihood of dying horribly and tragically 170%.
* Fate/Zero. Several of the passive skills and stats listed there also come into play in the plot.
* Fate/Zero's Lancer has a Noble Phantasm called "Gae Dearg", a spear that can penetrate any magical defenses and disrupt thaumaturgy as long as it is in contact with the source of the spell.
* Fate/Zero's respect and is the only surviving Master who is better off at the end of the war than he was at the start.
* Fate/Zero stating that it is more efficient than magecraft). One of the protagonists uses this for maximum effect, complementing his comparatively poor magecraft with sniper rifles and landmines.
* Fate/Zero stretching this about as far as adult human proportions can go, with Alex having about two feet (55 cm, to be exact) and 80 kg (176 lbs.) on Waver.
* Fate/Zero summoned by Caster, or Berserker consuming and commandeering a state-of-the-art expensive jet fighter in mid-air.
* Fate/Zero That silver lining is the direct catalyst for its sequel bringing the tragedy to its final closure in the sequel.
* Fate/Zero, the British Waver Velvet finds himself unable to understand the Japanese Taiga Fujimura, because neither of them can speak the other's language.

Waver gets around his issue by having his Servant, Rider, act as an interpreter.
* Fate/Zero, the resident psycho master and servant tries to use half dead people's scream as instruments by pulling out their instruments in set chords and mashing their fingers on them. It does not work.
* Fate/Zero. This also is coupled with a wavering quality of either the animation, integration, or both.
* Fate/Zero, this trope is both apparent frequently and weaponized by Assassin/Lupin. The most apparent use of it is between Assassin/Lupin and Zenigata as usual and weaponized against honor-bound Servants like Lancer.
* Fate/Zero, though supplementary material points out Gilgamesh would be able to overwhelm him if his strength and speed wasn't enhanced by being Berserker.
* Fate/Zero to catch a bullet doesn't mean your body is tough enough to prevent harm.
* Fate/Zero to ensure the destruction wouldn't spread. He lives by a harsh code of utilitarian ethics- killing the few to save the many. His ultimate goal is world peace, and he is willing to do anything to achieve it. As he himself says:
* Fate/Zero tries this in the Grail War. He makes offers to the other Servants to join his army of world conquest, with no takers, and suggests that they simply debate and decide who deserves the Grail more that way.
* Fate/Zero turns out to really enjoy video games, much to his Master's surprise.
* Fate/Zero until the Holy Grail War happened. Their contrasts had little, if anything, to do with their tragic ending.
* Fate/Zero was executed, he began to doubt God, believing God would have saved her. To test Him, he began to commit atrocities like murdering children, believing that if God was real, He would have intervened. He never experienced divine retribution and was instead arrested and executed by greedy people who wanted his land. He concluded that God either isn't real or is lazy and doesn't deserve worship.
* Fate/Zero. Waver's embarrassed by it, but Rider tells him that he has nothing to be sorry for: "If there were any man who could witness this and not react, I would punch him in the face."
* Fate/Zero Waver stole the catalyst needed to summon his Servant and entered the war in hopes to prove that his low-birth status didn't hinder his skill in magic.
* Fate/Zero, which he likes to read. In fact, he enjoys it so much he'll even have other people read it out loud to him during battle.
* Fate/Zero, which still obscures his appearance to other people and hides his status and parameters. While the audience are able to see his appearance, the characters only see a "black thing" and they cannot grasp his shape. Once For Someone's Glory is deactivated, characters who knew him in life are instantly able to recognize his armor and identity.
* Fate/Zero, who wanted to descend into madness after the mess that he made in his lifetime as a knight.
* Fate/Zero with professional expertise. Berserker, as an incarnation of a knight, also gets this ability, and uses it to skyjack a fighter jet.
* Fat Flex: A fat character tries to look buff by pulling up their belly fat.
* Fat, French and Fabulous: After a joke about the failure of Enron, "Maybe if we started making jokes that have punchlines that come after 1997, we'll start doing better."
* Fat, French and Fabulous, Canadian serial killer Alan Legere escaped from prison using a TV antenna he hid up his anus to fight off the guards. Presumably, he removed it from his anal cavity first, but it's much funnier to imagine him attacking the guards with it still sticking out of his ass like a bee stinger.
* Fat, French and Fabulous, despite having an unambiguously feminine name and no apparent problem with feminine pronouns, makes frequent references to herself using ambiguous or explicitly masculine terms, creating a question mark around her gender that is never fully clarified.
* Fat, French and Fabulous eats, she apparently spent the entirety of the Phantom of Heilbronn episode doing shots of Compliments ketchup.
* Fat, French and Fabulous episode on Famous Last Words, which begins with the tale

of James D. French, a convicted killer who supposedly said "How's this for a headline? 'French Fries.'" to journalists present shortly before his execution by electric chair. (French definitely wanted to die, and did evidently make the quip to a reporter, but not as he was literally being marched to the chair.)
* Fat, French and Fabulous has a few notable cannibalism discussions, including this gem:
* Fat, French and Fabulous has multiple theories about the disappearance of Maura Murray, including that she eloped with Bigfoot. "Wake up Sheeple! They've got three children!"
* Fat, French and Fabulous has the following description of radium jaw, a malady caused by the body incorporating radioactive substances into the bones instead of calcium after a victim ingests radium:
* Fat, French and Fabulous', involving a disturbed solider having a pretend tea party with the bodies of the fallen.
* Fat, French and Fabulous, Janel accuses Jessica of being far too into cannibalism as a topic and that eventually she's going to start offering recipes, to which Jessica responds that she has a cannibal cookbook close at hand. Not because she carries it on her person, no, she was just recording near the kitchen today.
* Fat, French and Fabulous, Janel fears that her entire life since middle school has been a dream after the Columbia Marching Band starts chanting lines from the horrifying public access television show commonly inflicted upon Canadian children, Téléfrançais.
* Fat, French and Fabulous, Janel mistakes Denmark for the country Dutch comes from.
* Fat, French and Fabulous. Janel, one of the hosts, is particularly skeptical of American military adveturism, as she herself works with veterens.
* Fat, French and Fabulous: Janel's interpretation of WWII double agent Garbo's motivations in offering his services to both the Germans and the British. "Shits and giggles? Shits and gigs."
* Fat, French and Fabulous looks a hell of a lot like the modern international bio hazard sign.
* Fat, French and Fabulous may or may not have psychic powers. In any case, she's oddly good at guessing highly specific information. "What? I was right? I was just being asinine."
* Fat, French and Fabulous older women, especially Queen Elizabeth Windsor:
* Fat, French and Fabulous, on a episode about serial killers Burke and Hare, when Janel clarifies that she is not impressed by the number of victims they killed in the space of a year, merely surprised.
* Fat, French and Fabulous, professionally as a psychology student, personally as a True Crime podcaster, and romantically as a connoisseur of underweight social rejects in trench coats.
* Fat, French and Fabulous: Some of the best last words come from people about to be executed, because they have a clear expectation that they are about to die and have time to consider what they want to say compared to someone who dies in an accident.
* Fat, French and Fabulous', "Statistically, the average person has slightly less than two legs." Statistics are fun when you don't use them properly.
* Fat, French and Fabulous suggest a smoothie made of raspberries, spinach, and snake venom, based on the fact that it's safe to drink snake venom so long as it has no way of entering the blood stream, such as a stomach ulcer.
* Fat, French and Fabulous, the poor are not unlike horseshoe crabs and the purpose of a robust social safety net is to flip them over and thereby put them back on their feet.
* Fat, French and Fabulous: This may have been the case between the Papin sisters, who suffered from shared psychosis.
* Fat, French and Fabulous, which features a talking pineapple that lives in a dump.
* Fat, French and Fabulous: "You have probably seriously considered throwing a human child down a storm drain on numerous occasions."

* Fat, French and Fabulous: "You're probably the only person I know who would use the phrase "provenance of their wares" in casual conversation." "Nevermind in the context of grave-robbing, at fucking all."
* Fat, gluttonous and lazy Don Fernando is cynically made leader of the expedition and Emperor in the New World in
* Fat Guy Stuck in Internet, bounty hunter Chains responds to Gemberling's story of a hard childhood with his own (nonsense) which he calls "I was a teenage Draculur" where he gets beat up by nerds, among other nonsense.
* Fat had a pop group parodying Girls Aloud by the name of "Gurlz Banned".
* Father Alexander Anderson of the Vatican's Iscariot Section XIII fights vampires, ghouls, and Nazis with ridiculously sharp bayonets that he blesses before combat. Not only does he keep a seemingly endless supply of bayonets on his person at all times, he also carries a very long, bayonet-lined, exploding chain that utterly destroys whatever monster he's chosen to hunt that night. According to
* father, although it has less to do with their socioeconomic differences than Terry's criminal record.
* "Father & Son Game" takes place at some point after the early 1990s, by which time
* "father" and consider each other siblings. Greed/Envy has a decent following.
* father and creator song "The Mechanical Girl" proceeds to grow to seven times her size before putting her flamethrowers and rocket launchers to work in destroying his kingdom.
* Father and Daughter, hugging his daughter goodbye and then rowing into the ocean in a rowboat, never to be seen again. Eventually the shallow sea coast is drained and made into a Dutch polder. Decades later, when the little girl is now an old woman, she walks out onto the polder and finds her father's rowboat, half-buried in sand.
* Father and Daughter, rowing away in a rowboat, never to return. The shallow sea coast is drained and turned into dry land, a Dutch polder. Decades later the girl, now an old woman, finds the boat and lies down in it. She wakes, and sees something. She goes running off, and ages backwards into a young girl again. She runs up to her father, looking as he did all those decades ago, and embraces him. It's implied that they reunited in death.
* Father Anderson is a priest, but he clearly gets off on violence. He's every bit as gleeful over the prospect of fighting Alucard, to the point where a deliberate interruption is considered a "mood killer". He's also very much turned on at the fact that Integra was just about to charge head first into an impossible fight, leading to the page quote.
* Father and his creator, van Hohenheim. Their original forms were destroyed along with Xerxes, and Fahter made them artificial ones. Both of them are more akin to hundreds of thousands of souls walking around in a humanoid shell than actual humans.
* Father and his Homunculi enjoy blowing up people regardless of how helpless they are), but he believes violence is the only way to solve philosophical disputes; whoever is alive at the end of the day was right.
* "Father and Son" is by Cat Stevens, not by Ronan Keating or Boyzone.
* Father and Son is known for getting lost quite a bit. She apparently has no way of knowing where she is or how to get back. When he meets his uncle (his mother's brother), he learns that getting lost runs in the family.
* "Father and Son", originally by Cat Stevens, who appears on the cover under his current name, Yusuf Islam.
* "Father and Son" portrays both the Enlightenment, with the rational, restrained father, and Romanticism, with the passionate son who feels restricted by his father. Since the son seems to be a more sympathetic figure, the song is decidedly Romantic.
* Father and son team Motonari Mori and Takakage Kobayakawa are shown to be so prodigiously talented that they can hold their own against Hideyoshi Toyotomi Hideyoshi himself.
* father, and this is considered a serious breach of etiquette, whereas taunts

about mothers are understood to be kidding.
* father, a rocket launcher, a rapid-fire plasma rifle, and the BFG-9000, plus plentiful ammo for all of them - double that if he finds a backpack along the way. And come the sequel, he still finds room in his arsenal to squeeze in the Super Shotgun too.
* Father Balder is even worse. He's first introduced chatting to Cereza, who is sitting in his lap. He then applies lipstick to her lips, before assimilating the child into his chest. The rape-factor is made worse with the revelation that
* Father Balder subverts this during a cutscene by slowing down time, taking the bullets and then repositioning them back at Bayonetta's face.
* Father Brown against themself, then relying on Father brown to realise this evidence was planted, and then uncover the second more subtle set of clues planted to implicate someone else.
* Father Brown: An Egomaniac Hunter does this to Father Brown at the end of "The Lair of the Libertines".
* Father Brown: A slightly crumpled, shambolic and mild-mannered Roman Catholic priest, Father Brown's greatest strength, both as a priest and as a detective of crime, is his love and understanding of other people. He's not there to judge, but to save souls.
* Father Brown: At the end of "The Penitent Man", a filthy and soaking wet Flambeau comes across a pair of picnickers who are skinny dipping. Flambeau steals the man's clothes, and his car, as he escapes.
* Father Brown. At the start the engagement is treated very much like a business, with Robert casually giving Joan his grandmother's engagement ring saying that she can have it resized. As the story goes on we see Robert becoming impressed by Joan's intelligence, and later he is shown to be quite kindhearted. It doesn't hurt that the couple can commiserate about not meeting their parents expectations. By the end, with the scandal that follows the affair at the center of the episode, Lady Malmort is resigned to the fact that the deal is dead but Joan clearly isn't going anywhere.
* Father Brown, because the reason he did it was that he had learned his friend had committed a murder years ago and gotten away with it. By making him out to have committed this murder, he was attempting to ensure the friend would still go to the gallows.
* Father Brown episode "The Alchemist's Secret," Father Brown and his old friend Professor Hilary Ambrose investigate the alleged hiding of an alchemical formula to turn lead into gold, supposedly hidden in a secret chamber at Ambrose's university. There is indeed a formula hidden there, but it's actually for concentrated, weaponized version of the plague that was tested on a nearby village, wiping said village from the map.
* Father Brown episode "The Shadow of the Scaffold". This is discovered when a finger bone with a ring on it is discovered in the stomach of a pig being prepared for tripe.
* Father Brown: Father Brown and Mrs McCarthy visit a underground bar for crossdressers in "The Missing Man". Father Brown works out what sort of club it is fairly quickly, but Mrs McCarthy remains in the dark.
* Father Brown Father Brown bites his tongue at the actual tip-off, but this trope comes into play in the big reveal at the end.
* Father Brown, Father Brown (the series detective) meets and bests a thief named Flambeau, who, because he wants to atone for his crimes (Brown having stopped him from going down the slippery slope when he was going to frame someone for his crime), then assists Father Brown in solving crimes by providing information about how professional criminals work.
* Father Brown, Flambeau says 'shotgun wedding' would be an understatement to describe the circumstances of his marriage. There may have been actual guns involved, but he does not elaborate further.
* Father Brown: Happens to Father Brown in "The Wrath of Baron Samedi" when he is drugged with a poison that lowers his heart rate to the point where he appears to be dead.

* Father Brown has a remarkably high likelihood of being one of these.
* Father Brown in an abandoned mill. When it is revealed what is happening, one of the guests — a pompous, bullying autocrat — demands that they find a way out and orders everyone to search. When a freight elevator is found, he shoves his way past the others to be the first on board. However, the killer has anticipated his actions and the lift is rigged to crash straight into the basement, killing him.
* Father Brown: In "Sins of the Father", the murderer hypnotises one of his patients into going into a trance whenever he hears a particular piece of music and killing whoever is playing it, and then sends the sheet music to the man's son to practise for a music competition. He did not foresee his patsy later coming on someone else playing the same piece of music.
* Father Brown insists that she'll die before allowing her husband to divorce her simply because he doesn't want to watch her drink herself to death, mere minutes before she's killed in a scuffle with another person.
* Father Brown: Inspector Sullivan does this to escape in "The Owl of Minerva"; clinging to the underside of the van that is supposed to be transporting him to prison.
* Father Brown: In "The Chedworth Cyclone", Roy Tomkins, a washed up boxer and rival of Jed Cornish - the 'Chedworth Cyclone' - is found dead. Father Brown is drawn into the shady world of London Boxing promoter and racketeer, Denis Nelson, who is involved in illegal betting, fixed fights, and blackmail. Jed, suspected of murder, is arrested and then bailed into the care of Father Brown who uncovers Jed's secret love for Nelson's girlfriend. She has lured a town councillor into a compromising position so Nelson can obtain a boxing venue. Father Brown has to uncover the murderer, ensure a fair fight and break Nelson's hold over everyone.
* Father Brown: In "The Crimson Feather", Bunty goes undercover as a burlesque dancer.
* Father Brown: In "The Crimson Feather", the initial suspect is found kneeling over the body of the week with blood on his hands. He flees when discovered. It is later revealed that he had found the body and was attempting to put pressure on the wound.
* Father Brown: In "The Curse of Amenhotep", the killer attempts to dispose of Father Brown by sealing him inside a sarcophagus.
* Father Brown: In "The Dance of Death", Bunty's current beau (who is blind) takes off his tailcoat and puts it on her (she is wearing an evening gown) after they have a blazing row in the garden.
* Father Brown: In "The Daughters of Jerusalem", Father Brown is laid up with a broken leg. He solves a series of murders from his bedroom with Mrs McCarthy, Lady Felecia and Sid doing his legwork for him.
* Father Brown: In "The Daughters of Jerusalem", the Women's Institute is supposed to be watching a film on the educating orphans in Swaziland, only for the film to turn out to a hardcore porno.
* Father Brown: In "The Face of the Enemy", an old flame of Lady Felicia's — who may or may not be a Soviet spy—attempts to persuade her to leave her husband and run away with him.
* Father Brown, in the Father Brown stories of G.K. Chesterton. He says that the understanding of human nature gained by a priest is all of the training one needs to be a detective.
* Father Brown: In "The Great Train Robbery" a pair of train robbers create a red signal to stop a train, and disconnect the private carriage attached to the rear of the train. When the train pulls off, they board the left behind carriage to steal the owner's jewels.
* Father Brown: In "The Jackdaw's Revenge", the murderer does this in an attempt to trick Father Brown into shooting Bunty. She uses a light to blind Father Brown as he enters, and has Bunty trussed standing behind the light, while she is tied in a chair with a bag over her head.
* Father Brown: In "The Jackdaw's Revenge," the murderer kidnaps Bunty and threatens to kill her if Father Brown does not resign from the priesthood.

* Father Brown: In "The Kembleford Dragon", the body of Kembleford's stationmaster is found stuffed inside a steamer trunk.
* Father Brown: In "The Labyrinth of the Minotaur", an aristocratic family are keeping their mentally defective son hidden away inside their manor to avoid scandal to the family, albeit in very comfortable quarters. While not directly connected to the murder, the secret does serve to muddy the waters and make the truth harder to find.
* Father Brown: In "The Lair of the Libertines'', the doctor shoots the fez off Cryus's head, which serves to show the viewers how heedless of others safety the doctor is. For the rest of the episode, Cyrus's fez has a neat bullet hole in it.
* Father Brown: In "The Last Man", a vital cricket match comes down to three balls left and six runs to win. The opposition bowler deliberately bowls a ball at Kembelford's star player's head to knock him out.
* Father Brown: In "The Last Man", the arrest of the new captain of Kembleford's cricket team for the murder of the team's fast bowler, and a suicide the year before in the cricket pavilion and a match against a rival village to determine the ownership of the cricket ground finds Father Brown consoling the victim's mother, solving a murder involving blackmail, playing cricket and watching Lady Felicia as the last man of the innings.
* Father Brown: In "The Owl of Minerva", Father Brown and Inspector Sullivan are cornered by the murderer and another member of the conspiracy, only for the other member to turn out to be an inspector from Special Branch who arrests the murderer.
* Father Brown: In "The Owl of Minerva", Inspector Sullivan is framed for murder. After breaking out of gaol, he is forced to team-up with Father Brown and his associates in order to clear his name.
* Father Brown: In "The Paradise of Thieves", the murderer gained access to the bank vault by having himself shipped in inside a crate supposedly containing pieces of art.
* Father Brown: In "The Scales of Justice", Father Brown asks if the evidence presented in the trial is still in the courthouse, only for Bunty's barrister to tell him that it would be completely unethical to tell him that what he he is looking for is in the Storeroom D at the end of the corridor. He then gets up and walks away, 'accidentally' leaving the key lying on the bench.
* Father Brown: In "The Shadow of the Scaffold", Father Brown has three days (as authorities wait for the results of her pregnancy test to come back) to solve a murder before the woman convicted of the crime hangs.
* Father Brown: In "The Standing Stones", a group of villagers plan to sacrifice an innocent in order to end an outbreak of polio.
* Father Brown: In "The Standing Stones", the local police sergeant who is aiding the investigation turns out to be the leader of the cult responsible for the murder.
* Father Brown: In "The Time Machine", a girl spikes her sister's water bottle in an attempt to cause her to lose a race. Unfortunately, this act coincides with her sister keeling over from a dose of strychnine.
* Father Brown: In "The Tree of Truth", Bunty claims to have laryngitis and communicates with Mrs McCarthy by a series of pre-prepared signs, having already predicted everything Mrs McCarthy is going to say.
* Father Brown: In "The Truth in the Wine", a sergeant took over the identity of a colonel with whom he shared a hospital room. Realising he was dying, the colonel asked the sergeant (who had no family) to take over his identity and return to England to fulfill his dream of turning the family estate into a vineyard. Not having been home to England in decades, he was confident no one would spot the substitution and coached the sergeant on everything he would need to know.
* Father Brown: In "The Two Deaths of Hercule Flambeau", Flambeau disguises himself as one of the Maltese Guard so he can spy and learn the combination of the safe.
* Father Brown: In "The Two Deaths of Hercule Flambeau", jewel thief Flambeau disguises himself as a priest using a cassock that he stole from Father Brown.
* Father Brown is climbing a ladder when the top rung comes away and they fall off (non-fatally). It is later revealed that her son had sawn through the bottom rung

as a practical joke: expecting for it snap as she stands on it and for her fall over. However, she placed the ladder upside down.
* Father Brown is killed when the killer removes the safety catch from his pistol. This causes the firing pin to shoot out backwards when he fires the pistol, hitting him between the eyes.
* Father Brown meaningful, sort of, but not the way this trope does it.
* Father Brown mystery stories, the criminal gets rid of a policeman by convincing everyone at the house that the man is actually in costume for a pantomime show. He beats up the cop while the audience laughs at the slapstick comedy.
* Father Brown she and Edward, who had fallen in love with each other, flee Britain with forged passports. Father Brown, having satisfied himself that Jia-Li was truly repentant for killing Gerard, turns a blind eye to their escape.
* Father Brown she had been stabbed with. He claims he had pulled it out thinking he could save her.
* Father Brown short story. In the beginning, a young man is telling the story of a murder case where, he claims, his dog told him when the murder took place by howling, and who the murderer was by barking at him. Father Brown thinks about the story for a week, and then tells his own interpretation to the young man. This interpretation is based on having the dog acting entirely as an animal, it points to another person as murderer, and it is of course the correct one.
* Father Brown stories, the detective-priest observes that nobody ever notices people who are meant to be there...
* Father Brown story "The Blue Cross", Father Brown leaves a trail of odd events for the police to follow; every time the policemen ask someone if they've seen something unusual, they're quick to remember the peculiar actions of the priest.
* Father Brown story "The Mistake of the Machine". Father Brown is introduced to a Psychometric Machine that measures the suspect's pulse, and is rather scathing of the idea, saying American scientists must be great sentimentalists to try and prove things from heart-throbs. He proves his point when a man is accused of murder based on his pulse rate when the victim's name is mentioned, and Father Brown is able to demonstrate another reason for this.
* Father Brown, that leaves permanent scars and permanently crippled the hands of one boy.
* Father Brown: The audition montage in "The Tree of Truth", which ranges from the unsuitable, to the terrible, to the misguided (one man is auditioning for the role of Prince Charming, which is played by a woman).
* Father Brown. The bike explodes, barely missing incinerating Lady Felecia and Mrs McCarthy.
* Father Brown: "The Blast Of The Book" revolves around a book that is reported to drive anyone who reads even a few words of it to self-destruction.
* Father Brown, there is a general impression that Flambeau is younger than the little priest.
* Father Brown: "The Resurrectionists", a pair of lovers turn out to be cousins who never knew that their parents were siblings.
* Father Brown: The robbers in "The Great Train Robbery" who abduct Mrs McCartney and Lady Felecia to cover their getaway soon regret it. The two women are soon directing their behaviour and dictating the ransom note.
* Father Brown to bring up most of a note he had written and then torn out and sent to the War Office.
* Father Brown to knock out Kembleford's star player with a cricket ball to the head. Kembleford already being a man down, Lady Felecia goes in as last man, and hits a six on the final ball.
* Father Brown wait staff can do it. He would have gotten away with the silverware, if Father Brown hadn't heard Flambeau switching from one gait to another (hence the title) and put the pieces together.
* Father Brown who has a deeply hidden secret that he may be being blackmailed over as the antagonist of the story. It's revealed that neither is the antagonist, James McNabb is just a stage magician and entertainer who has been practising in secret to protect his tricks, and Mr Glass doesn't actually exist (his fiancee just heard

him practising juggling and saying "Missed a glass".
* Father. But even so, he's displeased with the Holy Crusade's and Maxwell's actions, claiming that such arrogance, bloodlust, and genocide is an affront against God.
* father, Charlotte becomes fearful of him and isn't too sad when he dies.
* Father Christmas, bearing a sword and shield for Peter, a bow for Susan, and a vial of healing potion for Lucy. (Edmund doesn't get anything, because he isn't there at the time ... though this is his own fault.)
* Father Christmas: "Blooming Christmas!" Later made into a TV animation with the voice of Mel Smith.
* Father Christmas can be a pretty scary figure in some places in Europe. Traditionally, he appears at Christmas Eve parties and tells bitsy kids he can see their souls. He has actual naughty and nice lists (actually provided by the mothers) and reads these off in front of everybody. So a stranger is telling the whole world things you didn't think
* Father Christmas's wife complained about there being a children's book where a character was "performing an act of personal hygiene" and demanded he remove the panel and apologise. He didn't— and he hung the angry letter in his own lavatory.
* Father Cornello. As a religious leader controlling the city of Lior, he's the first major foe the Elric brothers face, but he's only a pawn of the Homunculi with a fake Philosopher's Stone.
* father-daughter relationship he and Marceline used to share. He once offers to hug her after she confesses she cares for him... and promptly attempts to kiss her. She shoves him away and yells disgustedly "Ugh, not like that!"
* Father Dowling Mysteries episode had Father Frank Dowling being the defending counsel in such a situation.
* Father Dowling Mysteries: Father Dowling is a priest whose clerical duties somehow always lead to crime-solving as well.
* Father Dowling Mysteries knows how to hotwire a car. That's because of her youth in a rough neighborhood.
* Father Dowling Mysteries was Frank having to deal with his twin brother, Blaine, a con artist who often posed as his priest brother for scams. The two are arrested together while dressed alike as Sister Steve is asked to figure out who's who. She asks Frank what a patron told him in confession and Frank says he can't repeat it. Steve knows it's him as Frank would never break the sanctity of confession, even to save himself.
* Father Dyer is played by Reverend William O'Malley S.J., a real-life Jesuit priest.
* Father Elijah fits the player and three other characters with explosive collars in
* Father Elijah, the final boss of Dead Money, is pretty easy to kill in combat alone (plus you can hack a terminal to cause the turrets in the room to shoot him). The hardest part of the fight is escaping the vault after your bomb collar's detonation sequence is activated, since you have 60 seconds to go back the way you came (even though the entrance is 20 steps away, but is blocked by a laser barrier). However, you don't even need to fight him in the first place. As soon as the door opens, you can start your escape, and by the time Elijah realizes you tricked him into coming into the vault and starts the 60 second timer, you'll be less than 10 seconds from the elevator (which is a one-way trip, trapping Elijah in the vault forever). Of course,
* Father Elijah, the former Elder of the Mojave chapter of the Brotherhood of Steel, ordered his chapter to hold a power plant against the NCR, despite being vastly outnumbered, simply for the sole purpose of trying to find a hidden superweapon of some sorts. His tactical incompetence is primarily because he was not trained as a Knight or Paladin (being a Scribe who was promoted for his technological genius) and because he was also a
* Father Elijah, who still has the looks of (and attempts to compose himself like) a Brotherhood of Steel elder as he used to be, complete with robes and gauss rifle.

By the time the Courier meets him in the Sierra Madre, he's too far gone to ever be reconciled with the Brotherhood.
* "Father Faces Life" accuses an obstetrical term of being a euphemism:
* "Father, forgive them, for they know not what they do." (Luke 23:34). Granted, it was for malice they crucified Jesus. They just didn't understand the
* Father, Forgive Them killed the victim, and were present at the time of death, and had the means to do so.
* Father Gabriel accidentally unleashes the horde and gets his own church overrun.
* Father Goose, he calmly slaps her back, and she dissolves in tears and runs away. The second time, she slaps him, he slaps her back, she slaps him back ... cut to Trevor Howard, reaction to the news that they want to be married.
* Father Goose. He led the rather prim woman to believe she did dance naked with a lampshade on her head.
* Father Goose Miss Freneau thinks she's been bitten by a poisonous snake (she wasn't), and Mr. Eckland gives her whiskey to ease the pain. She wakes up the next morning not remembering anything.
* Father Goose while being strafed by the Japanese. The wedding night isn't any better.
* Father himself qualifies. Despite his incredible power, he never actually develops any alchemical techniques of his own, only countering or mimicking the abilities of others. Tellingly, a person’s
* Fatherhood episode "The Birds, Bees, and Bindlebeep" ends with Norma announcing to Arthur that she is pregnant with their fourth child and Arthur freaking out about it, but because of the show's abrupt cancellation, the story was never concluded and the child's gender was never revealed.
* "Father Hugh and the Deadly Scythe": The eponymous priest decides which of three suspects killed a man with a scythe by observing which scythe a group of flies, described by Father Hugh as the creatures of
* Father, I Don't Want to Fight: Refusing to embrace a warrior culture because it's not in you.
* Father Intintola seems to lust after her ziti almost as much as her, and when Janice wants to impress her new husband Bobby Baccalieri and his kids, she steals Carmela's lasagna to pass it off as her own.
* father. It's made pretty blatant that Toyama was sexually abused by his father as a child, and even though he's a big, tough gangster now, his father still manages to extort sexual favours from him from time to time.
* Father, I Want to Marry My Brother: A child expresses an innocent desire to marry a family member.
* Father, I Want to Marry My Brother: A child expresses an innocent desire to marry a family member, oblivious to the incestuous context.
* Father, I Want to Marry My Brother: Little kids telling adults they want to marry a sibling.
* Father Jacques Hamel was a Catholic priest in Normandy who was murdered in 2016 when his church was attacked by Islamic terrorists. His last words he said to his attackers were "Be gone, Satan!"
* Father kills everyone in Amestris besides Ed, Al, Hohenheim, Izumi, Roy, May, Pride, and Greedling. Of course, it happens at the end of a chapter in a series known for cliff-hangers, so not all of them stay dead.
* Father Knows Best, convinced his family is pulling a sitcom-style deception to keep him from going hunting.
* Father Knows Best have similar "rose-tinted" reputations. They do not attract the same level of disdain, even if the latter has fallen into relative obscurity.
* Father Knows Best — Sometimes, the considerable trouble he has with his MG Midget, which a salesman refers to at one point as "the English Edsel". When told it's in average shape for a Midget, the same salesman's response is "That bad, huh?" In six years, it gains 42,000 miles on its odometer, 20,000 of which come while it's attached to the back of a tow truck. Later on, some of the cars that his oldest son looks at (and in one case, actually buys) also qualify.
* Father Knows Best was cancelled by CBS after its first season. A letter writing

campaign got the show picked up by NBC the following fall.
* Father know where he has failed but has been too arrogant to admit it and to change. And considering that Greed, being made from his own substance, actually respected humans and whose true desire was to have friends, that's true.
* 'Father' Lamont in "Milord", who poses as a priest in order to abduct girls for a porn and snuff film ring.
* Fatherland, based on the Robert Harris novel, posits the same "Nazis Have Taken Over Europe And Are Now Engaged In A New Cold War With The Americans" world as the novel, though with a few changes (the point of divergence being a failed Normandy invasion rather than a more successful Caucasus Offensive) and a more hopeful ending for the protagonists.
* Fatherland. But ultimately it's up to an American journalist to make the awful truth public.
* Fatherland detective discovers the truth about the Holocaust after investigating a series of murders and suicides (the government officially claimed that Jews and other Holocaust victims were being resettled in Eastern Europe).
* Fatherland ends with March trapped in a standoff at the former site of Auschwitz, surrounded by Gestapo agents. As he draws his weapon, he imagines Charlie successfully managing to deliver the evidence to the US, though even he admits it's an unlikely possibility.
* Fatherland - German police officer Xavier March and reluctant SS police major is also, or has been, a Kapitan zur See in the Kriegsmarine - one of Doenitz's U-Boat commanders. Also applies to the book.
* Fatherland (rephrased): "Cut a clearing in the forest of your mind, the trees are just waiting to reoccupy it."
* Fatherland the Gestapo chief Globus sends the cadet Jost to the Eastern front, after Jost witnessed Globus dumping the corpse of a former high-ranking Nazi official into a lake.
* Fatherland. The original purpose of such accounts is also touched upon - the Gestapo is said to be particularly suspicious of people with them.
* Father Llymic is hurt by light, so his coming is heralded by the sun (as well as all magical and mundane light) dimming, until it goes out completely and the Father arises.
* Father Malius gets shot with a harpoon gun and flies through a window in
* Father Maxi is this in some episodes (most notably "Do The Handicapped Go To Hell?"). However, in others (such as "Red Hot Catholic Love"), he's more grounded and reasonable.
* Father Mulcahy has a famous episode where a patient refuses to talk with him because he has no field experience since he was the camp chaplain. Mulcahy asks Col. Potter if he could spend some time on the front to fix that, but Potter refuses saying that no commander nowadays will tolerate having a soldier in the field who is forbidden by regulations to fight. Regardless, Mulcahy sneaks away anyway on an errand with Radar to the front and has a memorable experience having to perform an emergency tracheotomy under enemy fire with Hawkeye guiding him on the radio. As a result, the patient is impressed that the Padre had now just enough battle experience for any front line soldier to respect him.
* father, not her mother. She goes so far as to buy her mother a shirt with a label "in French":
* father of Book One's main villains Zaheer is a fan of his writings).
* Father of the Bride (1991)) has a fit that results in incarceration over the fact that hot dogs are sold in packs of eight and hot dog buns are sold in packs of ten (it's actually the other way around in most cases).
* Father of the Bride (1991). His assistant Howard Weinstein also qualifies.
* Father of the Bride (1991) the titular bride's little brother pretends he's going to do this, much to the horror of his parents and the wedding coordinator, as the banister has been decked out for the wedding. Earlier in the film, Annie had done this as her father came home, and a flashback of his establishes that she's been doing this since childhood.
* Father of the Bride (1991). Turns out he gave it to her because she loves banana

milkshakes and the blender was supposed to be great for those.
* Father of the Bride, Stanley, the father, desperately tries to fit into his old tuxedo. He just barely manages it, although Ellie observes that the button will put someone's eye out if it comes loose. Then when he's trying to open a window his tuxedo coat splits down the middle.
* Father of the Bride titular father Stanley has to deal with his daughter Kay getting married and his feelings of empty nest syndrome and separation anxiety. But there isn't a bad guy.
* Father of the Pride aired on December 28, 2004, 3 days after Christmas and almost a month after Thanksgiving.
* Father of the Pride are both antagonists for Larry, the former being both personal and in business and the latter only being in business.
* Father of the Pride episode "Larry's Debut and Sweet Darryl Hannah, Too", Siegfried makes Roy pay a swear jar after hearing him mention Queen Nefertiti, most likely because part of her name sounds like "titty".
* Father of the Pride episode "The Lost Tale" was not finished when the show got cancelled, and thus is included on the DVD in animatic form.
* Father of the Pride episode. When the family "gets" an HDTV, they find they can actually read the disclaimers. Larry then wonders what "anal leakage" means.
* Father of the Pride flopped so badly was that the humour was too raunchy for children but at the same time too unsophisticated for its intended adult audience.
* Father of the Pride: In "Sarmoti Moves In", Sarmoti hides his poker winnings in the rectum of his zebra rug.
* Father of the Pride: In the Original Pilot, Sarmoti slaps a female co-star named Ginger on the butt. In "The Lost Tale," Lily gives one to him as a sign that she has humbled him.
* Father of the Pride is known for this type of behavior, especially towards Larry. He even likes to jeer at others, including Hunter.
* Father of the Pride, predators eating civilized prey can take up the plot of entire episodes.
* Father of the Pride Sarmoti tells his girlfriend that he was raising Hunter himself so that she thinks Sarmoti cares about someone other than just himself.
* Father of the Pride, Sierra has a rebellious, stuck-up personality and Sarmoti is extremely rude and insulting towards Larry (despite saying in one episode that he still loves him and the whole family no matter what).
* Father of the Pride: Though usually viewing Hunter as an Annoying Younger Sibling, Sierra has moments where she actually gets along with Hunter.
* Father of the Pride torches and pitchforks, they decide the symbol of mob justice is ... rocks.
* Father of the Pride, which concerned the home-lives of Siegfried and Roy's pet lions. Notable for having some of the highest production values ever seen in an animated series - so high they made the show ruinously expensive to produce, resulting in its cancellation.
* "Father" or "Papa" to Jasmine and other people call him "Your Majesty" or variants to him and "the Sultan" when talking about him. A deleted scene referred to him as Hamed, but no name actually made it into the movies or series.
* Father Remington's exorcist uniform includes an odd skirt-like cape around his pants when, combined with a jacket, somewhat mimics the effect of a badass greatcoat.
* father, Sam Shepard. He took that form again once to take away her soul and ease her pain at the beginning of the second game.
* Fathers and Sons because Bazarov as a true nihilist does not believe in absolutely anything and logically never does anything in the public field. Because why should a nihilist even try? He also works as a doctor and as such does good to people professionally.
* Fathers and Sons by Ivan Turgenev: Arkady is at first interested in Madame Odintsov, but eventually goes for her younger sister Katya.
* Fathers And Suns, despite it acting like he's operating a DVD or Blu-Ray player.
* Father's angry face in the season 1 finale, where it suddenly turns demonic and

shows a mouth full of sharp teeth. This is the only time we see his mouth when he's wearing his shadow suit.
* Father's apparent body is actually a container for a small amorphous blob-like creature which can't survive outside its container.
* Fathers Are People Too, an attempt by him and his neighbor to install a light fixture in the basement. They make two critical mistakes in the process: first, they forget to turn off the power before removing the old fixture (leading to the neighbor standing in the middle of the room with a melted screwdriver in his hand), then they do the wiring wrong, causing the upstairs lights to turn off when the downstairs lights turn on. Fortunately, both of these problems are successfully fixed in the end.
* Father's attemps to remake the multiverse, and destroy the Fourth Wall.
* Father's Day (2011) the very act of fathering a child (that is, impregnating a woman) makes you a target for the Father's Day killer.
* "Father's Day" any Time Lords any more, there's no one to prevent such things from happening. This may explain why no flying killer time monkeys appeared during any serial with a title of the form "The [number] Doctors".
* "Father's Day" by the appearance that her husband a) fathered a child when he was about twelve and b) gave her the same name as the baby they currently have together.
* "Father's Day" by the Doctor for saving her father from his death, just one episode after the Doctor kicked someone off the TARDIS for trying to change history for personal benefit, just as she did.
* Fathers Day deals with a President having a nervous breakdown and section 4 kicks in, so the Vice-President takes over. Then the President recovers and returns to resume his office, but the Vice-President argues that he's unfit to command. Then it comes down to who has the popular support, who does Congress want, and ultimately who will the Army obey.
* "Father's Day": Disruptions in time cause the interior of the TARDIS (which is, of course, bigger on the inside than on the outside) to vanish, leaving only the police box shell. No, don't ask how this makes sense. At least it makes more sense than the original idea: it was supposed to FALL APART.
* "Father's Day" establishes that some points in time can't be changed (known as fixed points, they are usually major historical events but they could be more personal ones) without causing disaster, but other points are in flux and can be changed to varying degrees.
* "Father's Day" further clarify this: you can change the future all you want... unless you know it. Once you know something is going to happen, you can't change it, even if somebody who doesn't know still can.
* "Father's Day": The driver who killed Pete Tyler is named Matt in the script.
* Father's Day versus Mother's Day: Both are intended to be celebrations of the good things parents do and appreciation for them. However, Father's Day is also used as a rallying cry against
* father, since her partner was the one who conceived and bore their daughter.
* Father's Quest: A father goes to rescue his child from a danger, being lost or kidnapped.
* Father starts as a proper battle, with heavy artillery and alchemy attacks flying left and right, and ends with Edward beating Father senseless with his bare fists.
* Father Stone is also this. Answers every question with a deadpan "No, I'm fine" even when he's
* Father Ted, after Ted offends the Chinese community of Craggy Island, his attempts to prove to them that he is not a racist meet with increasingly more extravagant failure.
* Father Ted: "And Crilly if you try to bullshit me like that again, I will rip off your arms."
* Father Ted and Dougal go on a caravan holiday, they are terribly excited at the size of the caravan they've borrowed, but discover that it's not theirs, it's just so big it's totally concealing the shed-sized caravan they actually got.
* Father Ted, and of course the Crane of Death, which is a park bench suspended

from a crane (so-called because a chap was killed on it the year before).
* Father Ted are always on the verge of throttling each other. When one of the priests enters, they often turn a stabbing motion into a warm embrace. (Not a word swap so much as a gesture swap, but the same idea.)
* Father Ted are an Irish take on this trope - a married couple who utterly loathe each other but who live in a Catholic nation where divorce was illegal up until the 1990's and which even today is loaded with social stigma and religious sanction. They have no choice but to pretend to be happily married in public - especially in front of the local priests.
* Father Ted: A variation on this occurs. Ted has been called in to bail out Father Jack and Mrs. Doyle, but claims he doesn't have any money and that they'll have to spend the night in the cells. Dougal starts trying to get his attention, but Ted brushes him off, assuming Dougal is trying to "remind" him about the money he won earlier in the episode. After a few seconds of Dougal repeating "Ted...", Ted snaps and hands over the bail money, going on a rant about how the police were once friends of the church, and how Dougal has made him look a complete eejit in front of real people.
* Father Ted best priest in the country and Dougal...floats towards the screen, looks puzzled and turns around to leave the way he came.
* Father Ted, Bishop Brennan comes to visit because Father Jack has been sleepwalking naked. He also has a fear of rabbits. In the closing moments, he wakes up in bed to find Father Jack, naked, next to him, and surrounded by rabbits (which Ted and Dougal are trying to remove).
* Father Ted: Bishop Len Brennan immediately after being kicked up the arse.
* Father Ted, but others criticizing it for being very slow-paced and relying on the same main joke over and over — with "Hell", "Are You Right There, Father Ted?" and "Kicking Bishop Brennan Up the Arse" being the more usual contenders for the show's best episode.
* Father Ted. Craggy Island can be viewed as a leper colony for the Irish Catholic Church's bad bargains. Father Ted Crilly is posted there for theft and embezzlement. Father Dougal because of the incident with the nuns at Blackrock. And Father Jack for being... Father Jack. Periodically other priests with personality issues join them. And their bullying, lecherous, supervisor, Bishop Brennan, is not much holier either.
* Father Ted drinking but never dies — even after drinking floor polish, toilet cleaner (once drank a bottle of Toilet Duck), and a whole bottle of illegal sleep medication. He is apparently only sober every twelve years.
* Father Ted ends with Ted abandoning his move to America, destined to stay on Craggy Island forever.
* Father Ted episode "Competition Time", celebrity Henry Sellers is shown asking one of these to a quiz show contestant:
* Father Ted episode "Grant Unto Him Eternal Rest", when Ted discovers Father Dougal isn't sure he believes in an afterlife, he asks "Dougal, how did you enter the church? Was it like, collect six crisp packets and become a priest?"
* Father Ted episode "Kicking Bishop Brennan Up The Arse" he also doesn't realise that Ted has just kicked him up the arse until he's in Rome at an audience with the Pope, at which point it dawns on him and he goes running out.
* Father Ted episode "The Passion of Saint Tibulus", the film for which the episode is named is a (subtitled) French arthouse film which the Catholic Church has banned for blasphemy but which is showing on Craggy Island due to a legal loophole. Father Ted and Father Dougal go to a screening ostensibly to protest the film on behalf of the Church, but afterwards, they are more concerned with trying (unsuccessfully) to make sense of it.
* Father Ted, every time Ted calls Father Larry Duff's mobile phone, the distraction always causes Larry to suffer a horrible misfortune, often taking the form of an accident that would kill a normal person. He always turns up alive somehow, ready for the next misfortune.
* Father Ted, Father Jack repeatedly exits the parochial house by jumping through the window, whether it's fleeing in terror from a nun or just because he can't be

bothered to use the door. Subverted when they install the Plexiglass. The window remains undamaged as Jack bounces to the floor.
* Father Ted features Ted and Dougal sneaking around after dark in a "rest home" full of sick and/or demented priests; the inmates all loom out of the darkness spouting deranged gibberish, except for one poor guy who enunciates quite clearly: "I really shouldn't be here!" He is of course left to his fate.
* Father Ted From their perspective it is directly below his nose. This combined with his wave gives him the appearance of doing a Nazi salute. After they decide to leave in anger Ted starts ranting about how they can't even be bothered to listen to his side of the story but from their perspective he now not only has a tooth-brush mustache but his angry face and hand gestures look very much like he is mimicking Adolf Hitler's public speaking style.
* Father Ted had a spoof ad for a priests' chatline that was a dead-on parody of a real-life ad for a gay chatline.
* Father Ted has a cannibal tribe about to throw Father Ted into a volcano. When he asks them to consider converting to Catholicism, they answer (in perfect English) that they disagree with his stance on contraception (it turns out to be a dream).
* Father Ted has been uploaded to YouTube onto the Dead Parrot channel.
* Father Ted has Bishop Brennan storming the house with his cape billowing excessively behind him after he recovers from a shock and realises that Ted kicked him earlier.
* Father Ted has it that Joan is no longer considered to be her real first name.
* Father Ted has several Death cards. The fortune teller lampshades that this shouldn't be possible, since there's only supposed to be one Death card in the set.
* Father Ted have cheated when he spelt out "useless, priest, cant, say, mass".''...
* Father Ted ("Hell") starts with the village idiot entrusted with an articulated tanker to deliver "Craggy Island's largest ever consignment of raw sewage" for processing. "This button opens the door, this one releases the sewage." This is not mentioned again until the very end of the episode, where he stops to pick up Ted and Dougal. Guess what happens.
* Father Ted helped this view). The creators have confirmed that the character is actually asexual and the joke is that the character is too enthusiastic about the quite normal behaviour of the young people.
* Father Ted homage). The other character responds that he thought the Catholic church thought it was inherently wrong, leading Ted into an embarrassed ramble where he suggests it must be fun to have boyfriends if you're a man ("not the... you know... but the nightclubs and the general rough and tumble of homosexual activity") and that the Pope "says things he doesn't really mean — sure we all get things wrong. Even the Pope."
* Father Ted, in which Ben's companion Brendan is wearing a pair of shorts on his head.
* Father Ted is usually very, very slow to get a joke, naturally enough. In "Speed 3", when he temporarily takes over the milkman's job because the milkman was sacked for having affairs with his female customers, some of said customers greet him at the door, and he is oblivious to their horrified reaction. Until he wakes up in the middle of the night, after the end credits, and realizes:
* Father Ted is visibly uncomfortable around women except for Mrs. Doyle or older nuns, and shows genuine fear when he believes a strange woman may have entered the house. It's implied that a fear of women was his primary motivation for entering the priesthood, as he's shown to be uninterested in the tenets of Catholicism, and effectively an atheist in his personal beliefs.
* Father Ted. Jack drank floor polish which only brought about the symptoms of death including lack of pulse, rigor mortis, decomposition...
* Father Ted, judging a wet t-shirt contest (where his job seems to consist of staring and growling "more water") and, in a flashback, convincing a class of teenage girls in a nunnery to take their tennis lessons topless... This is just the tip of the iceberg, too.
* Father Ted know who the mysterious but over-friendly guest is, and is too

embarrassed to admit it.
* Father Ted — Goal for the priests (well, Ted at least): get sent to a parish not on the island. For Ted this would require him to replace the money that was "just resting in [his] account".
* Father Ted — writing what he wants on a banner that covers most of the parochial house.
* Father Ted, Mrs. Doyle wins a date for tea with her idol, TV heartthrob Eoin McLove. When she meets him, she begins shaking uncontrollably, then goes rigid as a board and falls right over on her arse.
* Father Ted needed a chart to tell the difference between dreams and reality.
* Father Ted of all places. Still mentioned a few times, though. Father Jack once made a class of teenage girls in Catholic School do P.E. without their tracksuit tops, however. His horrific molester-face whilst this goes on is clearly meant to invoke this trope.
* Father Ted - of all shows - used this at least once with native Glaswegian Clare Grogan playing Niamh Connolly, an Irish radical feminist pop singer.
* Father Ted often wears a soccer jersey for pyjamas, emphasizing his characterization as an eccentric manchild.
* Father Ted: Once, Father Ted tries to explain to Father Dougal the difference between cows that are small and cows that are far away.
* Father Ted once had Dougal finish a phone call by simply dropping the handset and letting it fall to the floor as he walked away.
* Father Ted. Once when an even more loathsome priest than Jack moved in and started blaring jungle music 24/7, meaning the characters had to talk in signs, with Mrs. Doyle offering a cup of tea -followed by a large stack of signs saying "Go on, go on, go on". Another where the house was bugged had Ted communicate to Dougal that they needed to talk in signs, with Dougal's first sign being simply "What?"
* Father Ted says that Frank Kelly always had to eat alone when on set because the make-up that was used to transform him into Father Jack was disgusting enough to put the rest of the cast and crew off their meals.
* Father Ted seemingly spends his entire life sleeping when he isn't drinking or yelling obscenities.
* Father Ted, she was rejected for being too young and pretty (McLynn was in her early thirties; Mrs. Doyle was a middle-aged widow). She supposedly showed up for another audition with a bad cold - and got the part.
* Father Ted so any use of the word "What?" by him is this by default. He does seem to play it up when pretending to be deaf, though.
* Father Ted. Some time later, a member of the group spots him in a pub and attempts to intervene with his drinking, only to get hospitalized in the process (resulting in this trope).
* Father Ted stage musical has been announced that will be set after the series ended with Ted somehow becoming pope.
* Father Ted started airing (1995), divorce was still illegal in Ireland.
* Father Ted stint as the Craggy Island milkman results in a lot of suspiciously hairy babies.
* Father Ted, surprisingly enough, consistently does exactly that. This is a justified example though, as Brennan has a title (Bishop) and a correct form of address (Your Grace) and Dougal is his direct subordinate.
* Father Ted, Ted and Dougal are trying to hide a huge amount of rabbits from Bishop Brennan, who's terrified of them:
* Father Ted, Ted calls a convent to request the services of a nun to help him and his fellow priests keep their Lenten vows. They put him on hold, with "Ave Maria" as the background music. Cut to the convent, where we see that the song's actually being sung live by the nun he'd been talking to.
* Father Ted, Ted concocts a plan involving a remote-controlled wheelchair and a pair of fake arms.
* Father Ted, Ted finds himself standing in the exact position required to make a square bit of a dirt on the window look like a Hitler moustache, to the

consternation of the Chinese family who were invited over specifically to prove that Ted wasn't racist.
* Father Ted, Ted mentions a priest called Matty Hislop who, despite being allergic to cats used to carry a kitten with him and "sniff it from time to time". His reason for doing this was that he was part of a religious sect that involved self-punishment.
* Father Ted, Ted needs to hold a raffle for a prize that isn't his to give away, so he rigs the draw by giving Dougal the winning ticket. Dougal remains oblivious after the number is called several times, responding only when Ted addresses him directly.
* Father Ted, Ted reminds one of the island women of the time her husband tried to make his own tea and burnt down the house.
* Father Ted, Ted tells a visiting priest that Dougal doesn't take the sun very well when he travels. A series of pictures shows Dougal with a lobster-red complexion in front of the Taj Mahal, the Vatican, the Leaning Tower of Pisa, and even the Eiffel Tower.
* Father Ted. Ted uncovers a betting scandal revolving around the 'King of the Sheep' contest. As he walks out of the tent where the contest is being held, Dougal remarks 'One thing though, Ted. If Chris has been disqualified, does that mean we don't get the money you bet on him?'
* Father Ted. Ted would ring Father Larry Duff for advice, always at the most inconvenient moment, leading to Father Larry meeting such fates as driving over a cliff, being trampled by a herd of stampeding donkeys, or (the very least of his problems) missing out on the jackpot prize in a TV game show by having his concentration broken.
* Father Ted that the "diagram" consists entirely of the text "WE PUT THE BRICK ON THE ACCELERATOR".
* Father Ted that they composed), is about a boy who sits in his room writing love songs while his peers are out chasing girls.
* Father Ted: The Annual All-Priests Five-a-Side Over 75s Indoor Football Challenge Match.
* Father Ted the Pope aside and immediately heads back to Ireland to return the favor.
* Father Ted the priests and the baby would have gotten up to, but stops when Dougal reminds him it wouldn't be funny.
* Father Ted the task of guarding the corner flags from theft during a football game. Predictably, he struggles with this.
* Father Ted, the title character boards a lift while waiting for his turn to perform. On board the lift, the character hears a supposedly obscure B-side to a previous contender. Recognising it as a track he had secretly planned to plagiarise for a backing track, he panics, pressing at least one of the buttons frantically.
* Father Ted, the titular character has Father Dick Byrne. The two constantly get into ridiculous one-upmanship contests, not realizing how similar they are; one episode ended with a split screen of their two households, with identical action going on on both sides.
* Father Ted, they can't understand it), and their protest is, for the most part, utterly perfunctory and reluctant. But the sight of two priests standing in front of the cinema — even if they're clearly bored and the cinema doesn't open for several hours — is treated as an "official" condemnation from the Catholic Church, which makes the film the most popular in the island's history.
* Father Ted, though not with a married couple. The priest's housekeeper Mrs. Doyle goes on a night out for the first time ever, so Ted and Dougal try to make tea and end up setting each other on fire.
* Father Ted thought to be a Wallbanger. Many also felt that the Catholic Church in Ireland was portrayed in a bad light. Gleefully parodied with their protest of an obscene film which only makes the film more popular.
* Father Ted to have this exchange where every idea Dougal has is stupid. The one time he has a good idea and Ted agrees, Dougal is quite insistent that it is a bad idea and that "you just haven't thought it through."

* Father Ted tried to use this to convince the inexplicable Chinatown on Craggy Island that he wasn't a racist. Unfortunately, he only had a slide projector, so he just clicked back and forth as quickly as he could from a slide of himself to one with "Not a racist" written on it.
* Father Ted was based on a real life example. RTÉ allegedly selected an inferior song for the 1994 contest so they wouldn't have to face the daunting (and financially crippling) task of hosting a third consecutive contest. Not only did "Rock 'n' Roll Kids" win, it became the highest-scoring song in Eurovision history up to that point.
* Father Ted, was washed ashore on Inisheer (off the West Coast) after a bit of what locals call "soft weather" in 1960... Indeed, it has moved again once or twice over the decades, when storms are heavy enough.
* Father Ted wears a lampshade in one episode - not out of drunkenness, but to impersonate a stereotypical Chinaman. (How was he to know that there were three Chinese people observing him through the window?)
* Father Ted were shot in Ireland. (However, the studio interiors - and audience - were in London).
* Father Ted. When Dougal remarks that he hasn't seen it, Ted replies, "Not a lot of people have, Dougal, so it's probably a bad reference."
* Father Ted: whenever a bishop is shown they're always "bishoped to the nines" (as described by writer Graham Linehan). In reality, Roman Catholic bishops wear clothing similar to the average priest when not taking part in services.
* Father Ted: When Father Jack sobers up for the first time in years in "Cigarettes, Alcohol and Rollerblading", he looks up at Ted and Dougal and asks "Where are the other two?"
* Father Ted, when Ted and Dougal are trapped in a cave with Noel and his youth group. Of course, Noel's silly and overly positive behaviour starts driving everyone nuts and reaches breaking point when Noel makes a few joking comments about eating Tony, one of his group members.
* Father Ted where Ted goes off on a rant about the good old days when the police would cover the Church for any wrongdoing.
* Father Ted where Ted rings Father Larry Duff and interrupts him in the middle of doing something that requires unbroken concentration.
* Father Ted, which is in roughly the same place has about 200 inhabitants. No word on how many of those are priests). There is one constant: it has no west side. "It just broke loose during some bad weather and floated off."
* Father Ted with Bishop Brennan, whose cape somehow grow in size when he gets pissed.
* Father Ted worked up the courage to kick Bishop Brennan up the backside. It actually works, until Bishop Brennan discovers this gigantic photo of Ted doing it that Dougal had been told to have commissioned.
* "Father Time" had Timmy and his fairies travel back to the 1970's. Timmy found out a young Bill Gates was Cosmo and Wanda's godchild. Cosmo and Wanda met their past selves but nothing bad happened from it. When he was back in present time, a future Timmy showed up with
* Father to His Men Whitebeard just hugs his “foolish son” and forgives him immediately causing Squard to cry.
* Father Tucker had his eyes turn red whenever he got angry, which was usually when he threatened the children he molested into keeping quiet about his actions by claiming they'd go to Hell if they squealed on him.
* Father Tucker. He takes this to the extreme, raping not only children but also infants. One episode reveals that he is the most prolific pedophile in the history of mankind, with 6,473,210 counts of pedophilia.
* Father Tucker playing the role of Ralph Wolf and Mother Superior serving as the stand-in for Sam Sheepdog.
* Father Tucker short "Come Let Us Adore Him" ends with Father Tucker going straight to Hell for molesting Baby Jesus. He simply sniffs his thumb and states that it was all worth it.
* Father Tucker short "Death Do Us Part", it is implied that Father Tucker intends

to have his way with the corpse of Mikey Fitzsimmons, a boy he molested and beat to the point of sustaining mortal injuries in order to cover it up.
* Father Tucker short "Judgment Day", newspapers frequently spin in with headlines describing Father Tucker's crimes.
* Father Tucker short "Like Unto Sheep" has the title character's usual child-molesting antics hindered by a nun named Mother Superior.
* Father Tucker shorts, none of the adults at Father Tucker's church ever do anything about his molesting of children and aren't the least bit suspicious by the fact that children he's been trusted with tend to turn up bloodied and bruised.
* Father Tucker short "Truly He Has Risen", Father Tucker forces Jimmy to keep quiet about his molesting him, claiming that he'll go to Hell if he rats him out. Jimmy's father asks him why his ass is bleeding, to which Jimmy replies by bursting into tears and lying that he fell down the stairs.
* Father Tucker, with his child-molesting shenanigans more often than not being played for dark laughs.
* father was a student of Mr. Boynton's mother in elementary school. The elder Mrs. Boynton then suggests her son marry a woman his age.
* father was incapable of feeling love, only seeing her as an asset, shipping her off to her mother's parents when her presence became a burden. Her mother was better, but thanks to her mentally and physically fragile nature she could never really give her the affection and attention she desired.
* Father was unable to find enough living alchemists who have survived that, as required for his Evil Plan.
* Father with one after he punches a hole through his chest. Ed manages to destroy Father's Philosopher's Stone with said punch, giving a hole for all the souls that made the Stone up to escape through.
* Fathom: Both factions, the Blue and the Black, keep switching between global domination and exterminating all humans throughout the series.
* Fathom comics had one of these in testing, based on a recovered fighter from the race the titular character was from. Semi-F-14ish with variable wings, but mounted with a forward sweep design.
* Fathom Events also did a Zula Patrol event which lasted only 70 minutes long.
* Fathom features a great white shark accompanying the game's killer mermaids.
* Fathom has a rare undersea version, where three friends scuba diving off the coast of Bermuda run afoul of a school of deadly sea nymphs.
* Fathom In the event that the Surface Dwellers ever gave them a reason, this network could have obliterated every city on Earth several times over! They also had a secondary function of being spy satellites.
* Fathom: Kiani has recently reunited with her younger sister and they are under frequent attacks by Admiral Maylander, who believes them to be enemies of America. Kiani keeps sending Anika off to guard the village while she fights, then when Admiral Mayhab brings out his latest weapon, hydrophagic engineered soldiers, Kiani says that "both of them are needed" to fight this new threat.
* Fathom measures in at 175 cm, is lithe and curvaceous, and is usually clad in a bikini, tops.
* Fathom, the divers' female companion can only sit in the boat and watch the waters uselessly while her friends are being attacked by deadly mermaids.
* Fathom using her unique biological traits/heritage, intellect, and personal outlook to maximize her abilities beyond all known limits. If Aspen wants to move all the oceans and alter the weather simultaneously, it happens!
* Fat Idiot. Mr. Fitzgerald is scarily on the ball when it comes to parenting, and seems to be a very authoritative and strict person, despite his size - which, given what the Fitzgeralds are like under their shells, may not be indicative of his weight anyway.
* Fat Idiot series. As put by Mr. Chow, "It's funny because he's fat!"
* Fatimas's computer systems to control most of its incredibly complex operations so the main pilot can focus on moving it around and using the weapons. They usually sit in a completely different cockpit, though, with the Fatima in the head and the "Headdliner" in the torso, though the really humongous Jagd Mirage mechs are

equipped with a two-seater cockpit.
* fat lady sings." And, famously, "I never said most of the things I said."
* Fat Larry's Band were a funk dance group whose one crossover hit was "Zoom", a slow ballad.
* "Fat Mac" .950 JDJ is more or less a man-portable cannon. It is .95 caliber and is the size of a large child. The muzzle flash alone could kill you. It is somehow classed as a hunting rifle. What the commissioner could possibly be hunting with the thing is unknown but presumably, they're after the devil. If you don't want to click the link, imagine the page image as a bolt-action rifle instead of a wave-motion gun.
* Fat Man and Little Boy from the blastwave when he's watching the first successful test of a nuclear weapon.
* Fatman to kill Fatman. The storyboards for the unfinished episode can be seen on the show's DVD.
* Fat Men From Space has a dental filling that can act as a radio receiver.
* fat or extremely masculine looking women play her, but with a choice of actress, she becomes more attractive.
* Fat people who are otherwise as average in eating and activity habits as their thin counterparts may come under attack by individuals or groups who make fun of them or stereotype them as lazy and gluttonous as a misguided attempt to motivate them to adopt healthy habits. Unfortunately, this may crush their self-esteem so much that it prevents them from doing so in the first place as they see no reason to.
* Fat Princess: 'Rotund' may be how the titular princess(es) are depicted, but unless you keep that cake coming they'll slim down very quickly, making it all the easier for the opposing team to carry her off.
* Fat Princess supporting them is pretty much an unstoppable juggernaut.
* Fat Princess, The Worker can damage enemies with his ax that's normally used for building, repairing and resource mining. Once upgraded, he can throw bombs as well.
* Fat Princess: While not actually a King or a Queen, the eponymous princess... er... is plump in all places.
* Fats Domino by Blue Suede Heartstrings, who is based on Elvis Presley, with Blue himself believing that Black Domino sings "better" than him and hates how much of the praise Black Domino deserved went to him instead.
* Fat Sean and Little Cripple has Fat Sean dumping a bucket of cold water on Little Cripple's face while he's asleep.
* fat-shaming meme at Bert’s expense on Twitter which ended up becoming so big, the two began a weight-loss competition. It lead to some fans of either particular comedians to get angry with the other and bash them ruthlessly, failing to realize that the two are actually best friends.
* Fatso a man who is struggling with his weight. The story is a not-at-all disguised take on DeLuise's own struggle with obesity.
* Fatso Burger, Eric's temporary job in season 1, is mediocre, he has a silly outfit, and his boss is embarrassing. He's afraid to quit because his hardass father Red wants him to learn responsibility and all that stuff, even though his girlfriend and mother both try hard to get him to quit. Eventually he does quit, and Red doesn't mind.
* Fatso. To help take his mind off Lydia going missing, Dom goes to get Chinese food for everybody on poker night, though the fact that everybody's order comes from the same restaurant Lydia favors only intensifies Dom's anquish, and on the way home, he tries to console himself with the food. By the time he finally makes it home, both of the large paper bags are full of empty Chinese containers, which he places in the trash, before sneaking back up to his room.
* Fats Waller continued playing and recording music until his death in 1941.
* Fats Waller: Fine pianist and singer but chiefly memorable for writing great songs, some of which ("Honeysuckle Rose", "Ain't Misbehavin'") are so standard it's almost ridiculous.
* Fattening the Victim: Feeding a victim in hopes of making them fatter.
* Fattening the Victim someone or something until they've gotten plump enough to be

cooked and eaten.
* fat the characters and invited them to make guest appearances at virtually every major sporting event for the Bears, Bulls, and Cubs; similarly, Michael Jordan and Mike Ditka, both the biggest stars in Chicago at the time (Jordan as a player for the Bulls and Ditka as the Bears's coach), made appearances as themselves in sketches.
* Fatti maschii, parole femine, which (from an archaic form of Italian) literally translates as "Manly deeds, womanly words". (The state government prefers a less literal translation, "Strong deeds, gentle words".)
* Fat Tony causes a rival mobster's car to go out of control. It crashes into a vinegar truck. Then a baking soda truck crashes into them both. As the mobsters's car starts filling with foam, the mobsters look at each other and shrug, saying "This isn't so bad". Then a TNT truck crashes into the mess and blows everything up.
* Fat Tony dies and is replaced by his cousin Fit Tony, who lets himself go after the pressure of the job gets to him and becomes Fat Fit Tony, then just Fat Tony.
* Fat Tony generally doesn't receive any punishment for his actions, except in a select few episodes. Come "Donnie Fatso" and Fat Tony suffers a fatal heart attack after discovering that Homer is a police informant, and is replaced by his cousin for the rest of the series.
* Fat Tony's club and caused Fat Tony a lot of trouble with a fellow crime boss. The mobsters do everything they can to make Bart look like the mastermind and make themselves look innocent, and it looks like Bart is going to go to jail until Skinner himself interrupts the trial and proves Bart's innocence. As it turns out, the reason Skinner disappeared was because he became trapped under a large pile of newspapers while cleaning out his garage. He was stuck for several days before he managed to free himself.
* Fat Tony (the one who used to be Fit Tony) was once a juror and had an accountant head his "legitimate business" for him.
* Fatty Arbuckle is the earliest known instance of the joke, and it was repeated many times in his later films.
* Fatty Arbuckle. While the male actors weren't necessarily ugly, they usually had things like exaggerated make-up, oversized clothes, and dorky antics.
* Fatty Bear is never shown, both the interior and exterior of their house has the generic suburban structure.
* Fatty Bear's Birthday Surprise you must go to the refrigerator for cake ingredients. Also present is a covered container with a green slime monster inside. If you click on the seemingly innocent container the creature will raise the lid, look around, and go back down.
* Fattypuffs and Thinifers is set in an underground world where people are divided according to their weight, which is deliberately stupid in the first place. When the book begins, they are in an uneasy truce in a war over something, which is never made clear, to do with an island in the sea between their countries. At a hopeful peace conference, the Fattypuffs insist on calling the island "Fattyfer", while the Thinifers demand it be called "Thinipuff". And so the war resumes over the name of an island (of course, neither side asked the natives for their opinion). In a happy ending, the reconciled Fattypuffs and Thinifers agree to call it "Peachblossom Island" instead.
* Fat Upper Pussy Area by asking him "Do you have a buttfor?" Except Ryan doesn't fall for the trap... partly because he was savvy enough to spot a trap, and partly out of genuine confusion.
* Fat Walda is one of the very few pleasant Freys shown so far, and the only member of the Bolton family to show Sansa some sympathy during Season 5. This, coupled with the fact that she's pregnant, makes you wonder how long she will survive. Not long, actually; Ramsay murders her and her newborn baby in "Home" by having them devoured by hounds.
* Fat Walda with Roose Bolton, although he did get to choose which wife he wanted. It was more 'arranged' from her point of view than his. In the books, Fat Walda was actually ecstatic about the arranged marriage, and fully aware that he chose her to

get his weight in silver as a dowry - she was outright
* Fat, which satirises the current obsession with obesity, rather than the obesity itself. The main characters are a man who is genetically predisposed to put on weight, in a culture that tells him this is his fault, and a woman who the same culture has made dangerously anorexic.
* "Fatzcarraldo": When Homer can't find any restaurant to his liking (as the majority is switching to health-based foods):
* Fauda has an Israeli Army Mista'arvim unit conduct operations against HAMAS.
* Faudo has a massive drill in his small intestine to grind down whatever is there.
* Fauji at the Commando school intended for officers only. Narayanan is the more loud in-your-face version, while Rai speaks softer, but will dole out the harsher punishments. That said, those harsher punishments are reserved mostly for his younger brother.
* Faulkner play..." was written as a filler verse with the intent of replacing it later on, but the writer never replaced it before the song was released.
* fault milestone one as she is completely incapable of feeling any emotion.
* Faults: After failing to scam the hotel with a reused meal voucher, the protagonist returns to his room and starts packing everything he can get his hands on, including stacks of toilet paper and even the battery from the remote.
* Fault, when Ren gets into an argument with Yang, he brings up how their actions are causing more harm than good. However, Yang downplays the situation and accuses him of pushing people away. She then later dismisses his concerns as 'brooding', refusing to even consider any of the points he brought up in their argument.
* Faulty equipment created the distinctive guitar "fuzz" effect on Marty Robbins's "Don't Worry." This inspired many subsequent artists to tinker with their own amplifiers to try to reproduce it, which in turn eventually led to the invention of fuzzbox pedals.
* Faunus are generally Ishvara followers. They believe that Mother Devi created humans first, but she was unsatisfied with their uniformity. She then creates Grimm but was unsatisfied with them and abandoned them. Mother Devi finally created the Faunus, who came in numerous types and were all so different. Over time, the humans came to hate Faunus because Mother Devi preferrred them.
* faunus have several slurs against them, such as "fur-licker" and "lizard brain", depending on what type of faunus they are. The term "faunus" itself was once a slur because faunus saw themselves as individual species, not one big species. Nowadays, it likely serves as an equivalent to the term "Negroes" in America during the 20th-century.
* Faunus throughout history, resulting in at least one Faunus Rebellion, where Faunus night vision proved itself a decisive advantage. After the Great War, they were granted the small continent of Menagerie as their new homeland, ending open conflict (but not either the racism, or the festering resentment).
* Faunus to team up with the highly racist and human Roman. When Team RWBY run across the villainous hideout and attempt to thwart the plot, Yang is rescued from certain death by the intervention of a mysterious masked woman who appears through a portal just long enough to save her life and disappear the way she came without a word to Yang. At the end of the volume finale, Yang comments on being so exhausted that she's looking forward to a good sleep. The stinger reveals Yang walking through the school grounds towards the masked woman in a surreal, dream-like sequence. The woman removes her mask, revealing that she's almost the spitting image of Yang, except for her hair and default eye colour. The stinger ends as the woman informs Yang that they need to talk. In Volume 3, the woman is confirmed to be Yang's mother, Raven Branwen, who abandoned Yang as a newborn baby for what reason, Yang doesn't know.
* Faunus, Tyrian is a sadist capable of turning the tables on the unwary, even when seemingly captured and helpless.
* Faust: As part of his deal with Faust, Mephistopheles becomes Faust's permanent companion and servant. In other words, he is Faust's familiar. He usually takes human form, but he appears as a black dog at his first meeting with Faust.

* Faust at the Princess Theatre in Melbourne, Australia in 1888. His ghost reputedly haunts the theatre.
* Faust. Back then they were the Standard (i.e: Big) Hunting Dogs, not the smaller prissy dogs we think of today.
* Faust end with Faust's demise, the method in which he goes often differs. Originally, Faust is allowed until he finds a moment of satisfaction. Eventually, that moment comes and he dies on the spot. Others simply end with Faust being taken to Hell by the demons he trafficked with. The 1994 movie ends with Faust being struck by a car.
* Faust: First Part of the Tragedy, Faust, an old man, has a disastrous relationship with Marguerite, who is in her late teens. However, due to a rejuvenating potion, Faust has the appearance of a young man, and Marguerite never learns his true age.
* Faust: First Part of the Tragedy, Greta's brother used to boast of her virtue and feminine perfection until she started an affair. Then he calls her a whore and tells her to start charging all comers. Okay, so he's mortally wounded and understandably bitter when he says that bit, but still!
* Faust has stated that, in her opinion, Celestia raised Spike growing up, not Twilight. The episode "
* Faust herself has this to say about the fandom for her own show: "I'm a big girl. When stuff gets too icky I just find something else to do."
* Faust. He spoils Faust's desire to have sex with Gretchen in a particularly unpleasant way, by arranging for Gretchen's mother to walk in. Gretchen's mother has a heart attack and drops dead.
* Faustian Rebellion decides to show the Devil where he can stick it. Forcefully.
* Faustian Rebellion: Someone uses power granted to them by another person to then rebel against them.
* Faust is possibly the granddaddy of this trope. Although he has been presented in different lights, Christopher Marlowe depicted him as the most learned scholar on earth but so hungry for more knowledge that he sold his soul for it. Once this happens, instead of doing anything intelligent, he hits the pope with a fish. It makes sense in context.
* Faust: Love of the Damned: After John Jaspers refuses to aid the villain's plans, he has Jaspers captured and buried alive in an open grave.
* Faust: Love of the Damned by unbuttoning his shirt and then eating him alive in front of everyone.
* Faust: Love of the Damned: During the ritual to summon the Homunculus, M pulls an albino snake out of his mistress' abdomen before forcing it down the throat of an honest cop that he brainwashed to follow him.
* Faust: Love of the Damned: It turns out that "M" had possessed Jade's father in the past to molest her as a child, in order to indoctrinate her so "M" could later impregnate her as an adult with his demonic spawn. She can only recall traumatic flashes of a faceless man having his way with her.
* Faust: Love of the Damned: John Jaspers dies in the process of defeating the Devil, which required nullifying the contract that kept him alive.
* Faust: Love of the Damned: M has a framed photograph displayed on his desk in his office where he's shown buddying up with Adolf Hitler, and another implying that he was behind the accident that killed Princess Diana.
* Faust: Love of the Damned, since he also saved her from the bad guys before they fall into each other's arms.
* Faust: Love of the Damned: We're shown a framed photograph in Mephistopheles' office where he's seen shaking hands with Adolf Hitler just in case the viewer might still be confused that he's supposed to be evil.
* Faust: Mephisto seeks to drive Faust into depravity to win a bet with an angel.
* Faust of the Aztecs), are first welcomed with a tribute, but then the trouble starts.
* Fausto was found adrift on the Atlantic Ocean with a mummified body in the engine room. It had gone missing two months earlier while covering a short route in the Canary Islands.

* Faust proclaims that he is "Part of that Power which would The Evil ever do, and ever does the Good."
* Faust, the rather serious choice to summon the Devil must take place at a crossroads. (As noted below in the Mythology section traditional European folklore holds that evil spirits or Satan must be summoned at a crossroads.)
* Faust VII, quite drastically - in his fight against the main character, he insisted it be held on a Western (Christian) graveyard, where the dead were not cremated, so he could use their skeletons to launch a mass attack at our protagonist. On top of it, he carried his deceased wife's skeleton under his clothes and used it as a secret weapon.
* Faust was first published in 1808. Part II (a sequel in all but name) was released in 1832 (24 years).
* Faust was originally written for a London production. Its words ("Even bravest heart may swell") were in English, and only subsequently translated back to French.
* Faust with the archangel and now has dominion over the earth. The archangel holds otherwise, saying that one word has broken Faust's contract with Mephisto, won the bet for the angel, and saved humanity from Mephisto's rule. The film ends with a zoom in on the single word: "LIEBE."
* Fauve. The mine appears to be asbestos, and there are pools of standing water in the bottom of the pits, and the asbestos and the water make a sucking mud that plays out just like this trope.
* Faux Action Girl: A female character is said to be strong and badass, but never demonstrates any such ability in situations where it would be useful for her to do so.
* Faux Action Girl: Alice is supposed to be tough, but she gets beaten up an awful lot.
* Faux Action Girl, but in practice the latter boasts of his own prowess and his shortcomings are entirely due to his ego and cowardice, while the former is shilled by her compatriots and her inadequacy in combat carries the implicit message that a woman is too weak and too emotional to fight.
* Faux Action Girl, but she never shows her chops. Male characters being "actified", they only rarely fall prey to this.
* Faux Action Girl, but she proves to be too weak to fight real battles.
* Faux Action Girl: Less common nowadays, but some works tend to have heroines who are either blatantly lying or in deep denial when they insist they can "take care of themselves", or suddenly become incompetent and helpless whenever the plot needs the hero to intervene.
* Faux Action Girl, respectively, despite having none of their ability.
* Faux Action Girl with Lili despite her strong and promising start to the series.
* Faux Adventure Story: A story promises adventure but doesn't deliver.
* Faux Adventure Story: A story promises adventure, but doesn't deliver.
* Faux Adventure Story: A work of fiction that may involve superheroes and their related tropes, but significantly downplays or removes any action-adventure elements.
* Faux Affably Evil: A villain's affable nature is just an act and does nothing to change the fact that they are a horrible person.
* Faux Affably Evil, but it might not be obvious just by talking to them.
* Faux Affably Evil characters can become this when they cross the line.
* Faux Affably Evil: Evil character with a nice, friendly façade vs. good character with a mean or "evil" façade.
* Faux Affably Evil: Hello, my dear enemy! Would you kindly say your last words before I happily kill you in a very painful way?
* Faux Affably Evil. However, over the course of the series, the Prof and Scumspawn manage to reform him somewhat; he's still evil, but he's closer to this trope.
* Faux Affably Evil or, if that fails, say the magic words: "I don't get it."
* Faux Affably Evil: Somebody's friendliness is a completely fake mask designed to hide how cruel and twisted they really are.
* Faux Affably Evil: The villain's still a bad person, their politeness is merely an act.

* Faux Affably Evil: They act superficially kind and polite, but it's just a cover for their cruel and wicked personality.
* Faux Affably Evil, Voldemort oh-so-casually lies that "He was killed as he ran away, trying to save himself while you lay down your lives for him." And this trope probably also figured into his manipulation of Quirrell.
* faux-Catholics. Strangely enough, they tend to be rather rich and well-educated... in the occult.
* "Faux Chapeau": Dee Dee convinces Dexter to market one of his inventions as a hat, but it ends up causing the wearers' heads to swell up. At the end Dee Dee reveals that she also used another of his inventions as shoes, and there's a long line of people with swollen feet banging on their door.
* Faux Death: A character is in suspended animation and mistaken for dead.
* Fauxdian Slip: You can't—I mean should—see what this page is all about.
* Faux Documentary: A film done in the style of a documentary recounting fictional events.
* Faux First-Person 3D: A way to simulate 3-D graphics by arranging 2D elements into a perspectivical picture.
* Faux Interracial Relationship: A couple appears to be in an interracial relationship, but it later turns out they're actually the same race.
* Faux Interracial Relationship: A couple appear to be in an interracial relationship, but it later turns out they're actually the same race.
* Faux Interracial Relationship: Died out due to better attitudes on interracial marriages.
* Faux Interracial Relationship: They initially seem like a biracial couple, but then they turn out to actually be of the same race.
* faux-mongolian raiders, they take pride on their lack of attachment to conquered lands and self-sufficiency, but still see the necessity of their shepherds and their smiths, who have a measure of social respect within the clans.
* Faux Pas. Dusk is furious — no one had better mention this trope.
* faux pas episode when she contradicts Ed's tactical plan and subsequently misses the first hint he tries to give that she's out of line. Sam has to signal to her to back down.
* Faux Pas has a little icon of a dog dish labeled "Randy" (the name of the fox main character) which links to a donation site.
* Faux Pas, Myrtle the hen is so addicted to soap operas that she goes catatonic without them. The cats use her to play "living statues".
* Faux Pas substitutes for Randy from Green Mountain Studio Animals for a luxury car commercial in strip #357. The producer tells the cosmetician Essie that "Randy" is a male fox, and she needs to work her makeup magic to transform "him" into a vixen. Essie needs only a cursory look at Cindy to report "This is a girl fox." Pleased at this development, the producer tells Essie to take a bonus out of petty cash. Cindy looks at Essie as if to ask, "Are all humans this clueless?"
* Faux Pas the cats have a running pool. They had to close "Myrtle does something stupid" because no one would bet against it, and when they heard that she was planning to visit the zoo they made bets on which of the animals (all of whom hate her) would eat her. And when word got around that Cindy was pregnant they began to accept bets on the number and sexes of the kits.
* Faux Pas when the animals attempt to make themselves understood by whichever humans presently have control over their lives.
* Faux Pause was a long-forgotten Game Show Network original series that took a laughably obscure game show, paused it at certain points and has the cast give it the MST3K treatment.
* Fauxreigner: A foreigner is really someone pretending to be from another country.
* Fauxreigner: An apparent foreigner is actually someone pretending to be a non-native or a different nationality from the one they actually are.
* Fauxshadowing than the horrific body horror in his history. This may be the result of how a lot of Red XIII's planned material was cut. It might also be a character choice, as upon witnessing his grandfather's death, Red XIII responds

with giggling denial.
* Fauxshadow, where a development is repeatedly hinted at but never gets a payoff at all.
* Faux Symbolism Imagery that doesn't actually symbolize any theme in the story.
* Faux Symbolism, since it tends to throw in names from dozens of mythologies without always drawing meaningful parallels to the myths. However, due to the nature of the series's cosmology, even the meaningless symbolism has meaning, since it ties into the theme of how myths are misremembered and misinterpreted as they fade over time.
* Faux Symbolism: When a trope seems symbolic, but closer examination reveals that it makes no sense.
* Fauxtastic Voyage: Characters are promised a trip around the world, but is tricked and doesn't experience a real trip.
* Fauxtivational Poster, made Adobe realize this marked potential and led to the release of the much more affordable Photoshop Elements line.
* Fauxtivational Posters, including one with "some kinda whale... in space..." on it.
* favoring her tradition of being a fighter. This neglect goes as far at one point as to not realize he had more than one son. Eugene's epitaph even reads "Devoted Husband, Mighty Wizard, Passable Father."
* favoring the child of the opposite gender because they had no prior expectations to disappoint.
* Favorite Atomic Hero claim their name was the result of "a rather involved drinking game" - they were originally billed as Static,
* favorite food like many people have, but later the love for that food is brought up all the time and the character becomes enamored with it to the point of addiction.
* favorite pastimes of the fandom, so arguably every twist or reveal will have someone going ''Well, fancy that, folks — it would appear my views on the issue have been apt all along."
* Favorite Son adopt this as his mantra after surviving an assassination that succeeded in killing Nicarauguan leader Col. Octavio Martinez.
* Favorite Tropes: Anything related to their fandom, typically something very nerdy and possibly obscure.
* Favorite Tropes: Overlapping tropes, contrasting tropes, index and supertrope pages with many well-described outgoing wicks to route traffic through.
* Favorite Tropes: Tropes that used to be full of smut and dirty words that are now full of ***ing asterisks.
* Favorite Tropes: Whatever shows up in their shows, usually simpler,
* Favors for the Sexy: A beautiful character (usually female) compels those around them to pamper them or give them things.
* Favor the Bold" Sisko and Martok take turns sending fake distress calls to lure Dominion ships into ambushes.
* Favourably used in the flying fish riders filler arc who continually use the term "formation", in conjunction with other pun words. The catch being that formation in Japanese can sound like "pervert" which Franky thinks is always referring to him.
* favoured son, including Konrad Curze, Alpharius and Mortarion, who ended up supporting his rebellion.
* favourite, although Rooster Teeth's official statement as of Volume 6 was that fans should "wait and see" how the two will turn out). By volume 8 it hasn't been confirmed but it's obvious that CRWBY is going somewhere with this pairing: there's been massive amounts of ship tease and the voice actors and crew often discuss the pairing. Also Blake has been confirmed to be bisexual.
* favourite Bat-daughter how he dotes on her giving Cassandra her own Batcave, expects her to eventually take his place as Gotham's protector, and generally showers her with praise. Though subverted when Barbra points out multiple times how Bruce projecting onto Cassandra i.e turning her into another version of himself is very screwed up.

* Favourite Tropes: Any that seem plausible enough to actually happen.
* Favourite Tropes: Anything that isn't locked, or pages with regular tropes, but wrong namespaces (Like Characters/AtLeastIAdmitIt).
* Favourite Tropes: Anything to do with imagery, and anything with an illustrative image.
* Favourite Tropes: British English, Useful Notes On (insert home country here)
* Favourite Tropes: Generally the Works pages of their favourite shows / books.
* Favourite Tropes: In addition to the page of their show/book/game, they're a bit
* Favourite Tropes: Metatropes (all the better for use in the Playing With Wiki), Crowner tropes. Any trope without a Playing With Wiki entry.
* Favourite Tropes: Ones connected to issues of nationality. The calmer type even likes those that are less than complimentary about their country (for example,
* Favourite Tropes: Only those that are already in existence and well established
* Favourite Tropes: Popular ones with few examples, where it's likely that their favorite work won't have an entry.
* Favourite Tropes: The newest, most interestingest ones. Lives to say, "Wait, we seriously don't have this already?"
* Favourite Tropes: The ones with the cleverest, least intuitive names
* Favourite Tropes: Those that don't end up in the Trope Repair shop.
* Favourite Tropes: Well-organized tropes with nicely broken up descriptions and right-aligned images.
* Favourite Tropes: Whatever tropes and works have anything to do with whatever issue they happen to support.
* Favouritism Flip Flop: Changing your opinion of an idea depending on who proposed it (e.g. hating a suggestion by the intern but loving it when hearing it from the boss).
* Favouritism Flip Flop: Changing your opinion on something just because someone else has a different opinion.
* Favre is the more memorable example because, well, it's Brett Favre, but the touchdown that gave the Packers that last-second win actually involved two examples of this trope. Two plays earlier, the Packers' best receiver, Sterling Sharpe, made a huge catch to set up the touchdown but fell on the ball and broke multiple ribs in the process and had to come out of the game. Sharpe was replaced by Kitrick Taylor, an unremarkable receiver who had bounced between various NFL teams for half a decade and had never scored an NFL touchdown — until that day, that is, as Taylor caught the game-winning touchdown pass from Favre. It would be the only touchdown of Taylor's career.
* Favre pulled the same stunt during his last four off-seasons with the Packers. But because no "official" announcement was ever made by Favre himself, it didn't get nearly as much coverage outside of Wisconsin. This was partially due to the assumption that the writers who reported his retirement were just opportunistic local guys trying to get some cheap publicity... but also because jerking the Packers organization and his loyal fans around was thought to be
* Fawcett Comics, periodically revived for nostalgic reasons and generally underused because top priority always goes to the original DC properties.
* Fawcett Crest cover is a man with unusual eyes, indicating that it is intended to represent Andrew Martin.
* Fawcett's (and later DC's) character Captain Marvel Jr. looks about 12 and has a spindly physique, but thanks to the
* Fawful over the course of three games. He also speaks in Engrish and uses hilariously clumsy metaphors and similes. He's so entertaining and yet so terrifying at the same time that he made quite the impact on the fanbase.
* Fawkes and is the only companion who will express approval at randomly murdering civilians. He is also quite dumb. At the same time, however, he keeps his murderous tendencies in check, only lashing out if fighting alongside the Sole Survivor or if attacked. He can even be left in a settlement without the Sole Survivor's supervision, and he won't ever attack the settlers, and can even perform mundane tasks in the settlement (although he'll be bored out of his gourd and complain about it).

* Fawkes suggests poisoning Ron in his sleep after he makes a particularly crass remark to Hermione.
* Fawlty Towers. About halfway through Basil says "Yes... say no more..." but the inspector just ploughs right on until he reaches "... and two dead pigeons in the water tank."
* Fawlty Towers. A few are so awful they actually manage to get the viewer on Basil's side.
* Fawlty Towers") and gets all indignant and defensive. When he hears from his wife what the psychiatrist was in fact asking about, he rushes out with a plastered-on grin and starts babbling about how he thought he was talking about walks, not sex! NO, vacations! and coming off much worse than he started.
* Fawlty Towers) and practically never has the patience to make sure Manuel actually knows what he wants.
* Fawlty Towers. Basil (6'5") towers over his extremely petite wife, Sybil (5'3.5"). Meanwhile, John Cleese towers over his extremely petite (then-)wife, Connie Booth (5'4").
* Fawlty Towers, Basil and Sybil appear to have nothing but contempt for each other; however, Sybil gets very upset, when she thinks that Basil is pursuing a guest in "The Psychiatrist", and Basil frantically tries to prove that he isn't.
* Fawlty Towers, Basil calls his wife Sybil things like "my little piranha fish" and "my little nest of vipers" in a tone that mocks the sweetness with which people call others by actual affectionate nicknames. Sybil doesn't seem to notice or care.
* Fawlty Towers: Basil Fawlty himself is occasionally guilty of this. One example that comes to mind is when he tricks a deaf guest into turning her hearing aid all the way up — and then shouts as loud as he can directly into it.
* Fawlty Towers: Basil Fawlty once mistook a guest's breast for a light switch as he was trying to turn on the light from the other side of the door. Naturally, Sybil walks in at just the right moment. Later in the same episode, Basil accidentally gets his hand covered in black paint just before he leaps out of a storage room intending to catch a girl who he believes has snuck into the hotel to spend the night with a male guest. He doesn't catch the girl he's expecting, but he does grab the same female guest from earlier, and he has just planted a black print of his entire hand on her breast. Once again, Sybil comes along just in time to see Basil's unfortunately placed hand print.
* Fawlty Towers, Basil frantically rummages in a large cardboard box, flinging vegetables across the kitchen.
* Fawlty Towers, Basil pretends to have a shouting match in the kitchen with Terry the chef, to pretend to Mr Hamilton that Terry is working.
* Fawlty Towers": Basil spends a good part of the episode trying to get food from a restaurant to his hotel, only to have it destroyed at the last minute. The main problem is that the cake isn't even what he ordered (duck). When he goes to pick up the replacement, one of the waiters accidentally switches it with a Bombe Surprise, which he digs through once he finds out in an attempt to somehow find the missing duck.
* Fawlty Towers Basil towers over Sybil (he's 6'5" and she's 5'3") but she still easily terrorizes him.
* Fawlty Towers, Basil tries to justify to two customers why another customer had just been given veal when Basil has just said that the veal is off. He claims that the veal is "veal substitute".
* Fawlty Towers, Basil tries to tell Manuel to shut up, who is only too eager to confirm his understanding.
* Fawlty Towers being prime examples) is based on this sort of thing, although the three examples are set about it in different ways. Basil Fawlty comes up with an explanation that is even more unbelievable than the truth, Bean just pretends nothing is happening, and Bertie Wooster gets too nervous to explain.
* Fawlty Towers. Casually insulting one another, both face to face and behind their backs, Sybil does seem to appreciate even these acerbic exchanges. And Basil does occasionally try to do something vaguely nice, such as remembering their wedding anniversary (but of course, gets a dangerous kick out of making her believe he has

forgotten until the last moment:)
* Fawlty Towers, climaxing in a memorable Hitler impression. This is so well-known that "Don't mention the war!" is a common phrase in the UK and Australia.
* Fawlty Towers contact the papers with a lot of anecdotes about Sinclair. All of these accounts suggested that Cleese was not too far off the mark; if anything, Cleese had actually downplayed how irritable Sinclair was. His widow kept silent after that.
* Fawlty Towers did it quite a bit. At one point, Manuel was semi-conscious in a laundry hamper with one arm sticking out and this exchange occurs:
* Fawlty Towers, embodies this trope. Despite being generally rude and sarcastic, he comes across as an otherwise sympathetic character who is always scheming to get himself out of a minor jam but only succeeds in making it increasingly worse.
* Fawlty Towers episode 'Gourmet Night' Basil insists on fixing the car himself despite Sybil's orders, resulting (of course) in the car being unfit for use when he most needs it. Also the methods of the cowboy builder O'Reilly in 'The Builders', whose slogan is "no job too cheap".
* Fawlty Towers episode, "The Builders", Basil apparently receives a telephone call from the professional builders. Sybil is not fooled; she goes into another room to discover Polly providing the other end of the call.
* Fawlty Towers episode "The Germans," Manuel practices several English phrases he knows, including "I can speak English; I learn it from a book." Unfortunately for the Major, he sees a moose head while Manuel is behind the counter, leading the mystified Major to think that the moose head is speaking (and that the "book" note somehow explains everything).
* Fawlty Towers episode "The Kipper and the Corpse". While nobody actually attempts to puppet the corpse itself, the entire episode is devoted to attempting to conceal the fact of the man's death from the other guests in the hotel.
* Fawlty Towers episode 'Waldorf Salad' Basil refers to an antagonistic man who has just walked in as 'rubbish' to a woman he has just met. She then introduces him as her husband.
* Fawlty Towers" has Basil taking revenge on a man who he believed to have been a hotel inspector throughout the episode by hitting him with custard pies while Manuel pours cream into his briefcase.
* Fawlty Towers" has the doctor walking into the dead man's room and seeing Basil Fawlty jumping up and down and crying, "Oh, joy! Oh, I'm so happy!" Of course, the real reason Fawlty was so happy was that the kippers the man had been served with his breakfast were out of date, and he had just learned that the kippers were untouched, making it not his fault.
* Fawlty Towers he subsequently speaks to them. It's subverted here: the Germans are never cast as Nazis (and find the constant references upsetting to the point Basil's actions reduce one of them to tears), but are just trying to enjoy their holidays in peace.
* Fawlty Towers", he suspects a young couple of sharing the same room together despite his rules on keeping unmarried people separate. He even tries to spy on them to catch them red handed.
* Fawlty Towers how irritable Sinclair was. His widow kept silent after that.
* Fawlty Towers: In "Communication Problems" Basil is trying to give Polly the name of a horse he won money on (Dragonfly), since she's holding it for him and they have to quickly convince Sybil that she bet on the horse instead. Sybil knows the name, so Polly needs the right one. Basil makes flapping motions and points to Sybil, because he refers to her as a dragon sometimes, but Polly incorporates other "pet" names first, leading to "flying tart" and "birdbrain". (She does get it eventually.)
* Fawlty Towers: In "The Germans", Manuel accidentally starts a fire in the kitchen. He tries to beat it out, but sets fire to his oven gloves, and spreads the fire round the kitchen. For extra irony, the hotel was about to conduct a fire drill at the same time. When filming this, his actor Andrew Sachs was badly burned, and was paid compensation.
* Fawlty Towers) In the same conversation, Basil instructs Manuel to call a nearby

bearded man "a hideous orang-utan", which had the desired effect of Manuel being punched, even though Basil could not do this over the phone himself.
* Fawlty Towers: In "The Wedding Party", Basil Fawlty twice catches his guest Mr. Lloyd hugging women who aren't Mrs. Lloyd. He tries rather awkwardly to keep Mrs. Lloyd from finding out. The two women are actually Mr. Lloyd's stepdaughter (Mrs. Lloyd's daughter) and a family friend of the Lloyds, and the hugs were perfectly innocuous.
* Fawlty Towers is a stripped-down version of this - notably, without any innamorati.
* Fawlty Towers, it's still considered one of the most influential sitcoms of all time.
* Fawlty Towers: Major Gowen appears to leap to the defence of the hotel when a dissatisfied customer is chewing out Basil Fawlty.
* Fawlty Towers — the sign saying Fawlty Towers is rearranged to say Flowery Twats, Flay Otters, Fatty Owls, Farty Towels, Watery Fowls and Warty Towels.8
* Fawlty Towers", Miss Tibbs has been locked in a wardrobe, and starts moaning and screaming. Polly and Manuel groan and sing to hide the noise.
* Fawlty Towers: most episodes started with a shot of the hotel sign on which letters would be skewed, missing, or humorously rearranged. Each week was different.
* Fawlty Towers, of all people, was apparently in Korea: when he threatens a guest with "I've killed men!" his wife adds "He was in the Catering Corps. He poisoned them." He also claims to have shrapnel embedded in his thigh that gives him problems, although the pain flares up at surprisingly convenient moments.
* Fawlty Towers of the sign's letters being rearranged to spell things like "Farty Towels" and "Fatty Owls."
* "Fawlty Towers" Plot: A lie held up by more lies that eventually implodes.
* "Fawlty Towers" Plot: A lie is told which must be propped up with more lies before everything cannot be sustained and goes crashing down.
* "Fawlty Towers" Plot: Someone tells a lie, then other lies must be told to convince people the lie is true, but then it's revealed as false as it becomes too ridiculous.
* Fawlty Towers rant at the guests. Outside it is pouring with rain, and he very soon comes back in, smiling genially.
* Fawlty Towers: Sibyl Fawlty. A combination of the Machine-Gun Chuckle with a Donkey Bray finish. According to her husband, it sounds like "somebody machine-gunning a seal".
* Fawlty Towers, the Greatest Sitcom Ever, for American audiences, always failing spectacularly. In order, these attempts were:
* Fawlty Towers", the original ending was that the late Mr. Leaman's twin brother arrived, greatly upsetting Basil who thought he was the guest and had been pranking him. Cleese realized that at some point the man would have to catch on that his brother was dead, which would ruin any comedy.
* Fawlty Towers. The problem is further exacerbated because the woman is hard of hearing, and doesn't have her hearing aid turned on "because it runs the batteries down." Basil tries to convince her to turn it on, but she can't hear him, so he tries to write down the words "turn it on," but then remembers that she can't read without her reading glasses, which, as per the trope, are on her head.
* Fawlty Towers They actively hate each other, but stay married and even share a bedroom, if not a bed. According to Basil in one episode, they even "go for a walk" together two or three times per week; however, he was very possibly making this up just to appear "normal" to the psychiatrist he was talking to, and it emphasises that he cares more about the status of being married than who he is married to.
* Fawlty Towers thought this was more fun than calling them "Father", "Mother", "Man In Restaurant" or "Boy Complaining About Chips".
* Fawlty Towers" to a group of German guests, then proceeds to invoke the trope while talking with them himself.
* Fawlty Towers to call for a taxi, he argued with Cleese and took his time calling for the cab. Cleese was fascinated by what he described as "the most wonderfully

rude man I'd ever met" and called Connie Booth down to experience it, and the rest is history.
* Fawlty Towers: Two batches of 6 episodes apiece, produced several years apart, for 12 episodes total
* Fawlty Towers: When the public health inspector has finished assessing the hotel he lists all the problems he found:
* Fawlty Towers would sometimes perform these when Mr. Fawlty got mad and started pushing him around.
* Fawn and the Mysterious Trickster, Fawn pranks Beck by dressing up as her and pretending to be her reflection.
* Faxanadu are yellowish, as opposed to the more pink-colored Red Potions.
* Faxanadu He shared some facial features (not to mention the wardrobe) of the singer, but with blue skin. Well, his face was blue. Everything from the neck down was white.
* Faxanadu revolved around Elves vs. Dwarves, although it's because the dwarves had gone psycho and turned into demons.
* Faye Dunaway has made few public appearances, rarely gives interviews, and overall gives little insight into her personal life.
* Faye Dunaway, such as refusing to work with a certain wig maker, insisting no one look at her while she delivered her lines (and having scenes re-blocked so that characters would be facing away from her if they were in the same frame) and refusing to wear old age makeup for a scene set in the future.
* Faye invokes this trope successfully and captures the Teddybear Bomber as a result.
* Faye is the only character in the game with a support bonus having a negative impact on her stats, being that if she is near Alm she has a reduced chance of avoiding an enemy attack. Faye has a huge crush on Alm, to the point of it
* Faye is this towards Sam, teaching her to weld and make mixed drinks.
* Faye Kellerman, Cindy is kidnapped by Tropper who is taking her to the woods to be killed. Cindy keeps herself from panicking out of fear she'll soil herself. When Tropper stops the car, Cindy realizes she's going to die and wets herself.
* Faye Kellerman's Peter Decker is a tough, cool police detective with a ginger moustache (which eventually turns gray).
* Faye, meanwhile, calls her left boob, which is a bit saggier than the right, the Underachiever.
* Faye's drinking habits make her friends fear that she's an alcoholic, though she improves with therapy and some healthy relationships.
* Faye's funeral. Notably, the POV for most of the panels is from inside the coffin as the surviving characters say their goodbyes.
* Faye Valentine appears at first to be calm, collected, and manipulative. However,
* Fay Weldon's parents named her Franklin Birkinshaw (but started calling her Fay almost immediately). One can
* Fazal Din, an Indian soldier in WWII, managed to get himself run through in a bunker with a Japanese officer's sword. The weapon penetrated all the way through his back. Rather than dying like most mere men, Fazal proceeded to rip the sword out of his chest and went on to slaughter pretty much every soldier in the bunker holding the very same sword. He continued to give orders to his men until he died hours later.
* Fazil Iskander, about a guy famous for his jokes. He had a friendly competition with his neighbor about who's the best horseman. So, on his deathbed he admitted the neighbor was better, and asked him to leap over his coffin on his horse three times before it's closed. The funeral showed everyone who was the best horseman... once the horse refuses to jump.
* Fazil Iskander's works, which are mostly centered around a remote Abkhazian town. The most prominent example is that of two extremely close families, where one allowed a couple of minor breaches of local etiquette, which led to a person from one family killing one from the other... it ended up with the last member of one family keeping the last member of the other as a slave. He couldn't marry to

continue the line, since no one would give his daughter to a slave-owner, and couldn't release him due to an oath. It continued that way for about twenty years. Then the slave murdered the owner and starved to death himself, unable to remove his chain.
* FBA Meeting. Things take a turn for the awkward when a group hug causes them to merge into a single giant bonfire.
* F) Be completely or largely inexplicable, and the discrepancy between the different parts of their personality
* FBI Agent Frank Drew who hunts master criminal The Eel around the globe. None of the characters were deemed popular enough to reuse in later stories.
* FBI Agent is sent to Los Angeles in a slimy attempt to intimidate the local cops. This falls flat on its face when Hoover (the main character—an LAPD homicide detective—, not the FBI director of the same name) and the Chief immediately call it out for what it is, and Hoover later ambushes the FBI agent to beat him up. Then he drags the guy out of the federal building they're in and points to a line on the floor to tell him where his jurisdiction ends.
* FBI agent John Connolly was involved in helping mobster James J. "Whitey" Bulger get away with his crimes for as long as he did. Colin Sullivan in
* FBI agent Joseph Pistone successfully infiltrated the New York mafia as a jewel thief named Donnie Brasco (see Live-Action Film above for the movie based on this case). While undercover, he formed close friendships with two mobsters and had conflicted feelings when the time came to reveal himself as a law enforcement official. Ultimately, this would become a subversion, as having to deal with the day-to-day brutality and lack of any basic humanity among mobsters led Pistone to despise almost all of the criminals he was working alongside.
* FBI agent Kay Daniels proves she's good at this too. When a banker for a crime cartel shows up to make a deal, she realizes his suit is Brooks Brothers, not the fancy European suits the man wears and figures out it's Cameron in disguise.
* FBI Agent Kim Evans is by all appearances an idealistic Good Cop, but is (reluctantly) willing to commit crimes, obstruct the investigation, and outright murder witnesses when ordered to do so by the director of the FBI, supposedly for The Greater Good (although it turns out most of her crimes were the result of her being misled by the director, who's the cartel's mole).
* FBI agent Norman Jayden and police lieutenant Carter Blake respectively from
* FBI agent Paul Ballard's rather famous for his lack of police decorum in
* FBI agent Raye Penber chides his fiancee (who used to be an agent as well) for getting too interested in his case in
* FBI Agent Ray Nadeem. Once the syndicate is taken down, Fisk has an inmate on his payroll named Jasper Evans shank him nonfatally and make it look like he's been branded as a snitch within the prison walls. He also arranges for Evans to be quietly released from prison so that no one can question him. Nadeem, seemingly convinced of the danger, pushes for Fisk to be moved to the penthouse of a Midtown hotel that he owns through a bunch of shell companies.
* FBI Agent Robert Hanssen, one of the most damaging moles American counter-intelligence has ever had. Sold information to the USSR that resulted in the deaths of many agents and defectors over a two decade period. At one point, Hanssen was tasked in his counter-intelligence work
* FBI agent Robert Hanssen, who sent enormous amounts of intelligence to the Soviet Union and later Russian Federation during a career as a spy that lasted over twenty years, was at one time head of a task force charged with ferreting out the suspected mole in the FBI—himself. The film
* FBI agents is the only one on the team to consistently wear a suit throughout the show. He only takes off the jacket when he switches it out for a Kevlar vest. And in a handful of very early episodes, Derek Morgan played this trope before opting for more casual dress.
* FBI, and as such work for the US federal government. They're so underfunded that most other anomalous organizations consider them a joke.
* FBI: "Crossfire" see's Bell and Zidan dealing with Cole Cooper, a former decorated Army Ranger who had a mental breakdown following his girlfriends death.

With the assistance of his ward Kofi, Cooper went on a killing spree attacking area's associated with his old life. Killing three people in Park Avenue shooting, then six more at his old apartment building, then a police officer, with his final target being a church planning on massacring the Parishioners. Despite Bell's efforts to talk him down, he was shot by a police sniper.
* FBI Director James Comey was fired based on a memo from Deputy Attorney General Rosenstein which does this heavily. Immediately after a reference to Comey's July 2016 press conference where he announced that he would not seek charges against Hillary Clinton, the memo quotes many former White House officials saying that Comey's "decision" was a mistake and showed bad judgment. Most of those people were not referring to that press conference, but to Comey's later decision to announce the finding of more e-mails, which was widely believed to sway voters away from Hillary in the final week of the campaign. That was the official reason, anyway. According to Comey he was fired for unrelated reasons and the whole affair is now the subject of multiple official inquiries.
* FBI — Federal Bureau of Investigation. US Federal Government police and counterintelligence.
* FBI: Most Wanted", Barnes encounters Sandra Coates, a woman she was involved with when working undercover with NYPD, and takes up with her again to get an 'in' with Cleo's gang.
* FBI: Most Wanted", Cleo's planned big score is to knock over a rival gang's stash of drugs and cash.
* FBI: Most Wanted" climaxes with a duel between Lt. Weitzen, who is picking off FBI agents from his hide, while Clinton scans the scene through his sight, looking for anything which will allow him to get a fix on Weitzen's position.
* FBI: Most Wanted", Doug Timmons' car gets rear-ended by a drunk driver and a passing cop stops to investigate. When the cop goes to look in Doug's busted trunk, Doug panics and shoots the cop and then the drunk driver. Investigating this crime puts the FBI on the trail of a planned massacre.
* FBI: Most Wanted. He says that the manhunt for Doug is drawing too much heat and they should postpone their plan. The leader Mike refuses and tells Earl that he is either in or he's out. When Earl announces that he's out, Mike orders Dog to shoot him and Doug promptly does so.
* FBI: Most Wanted in exchange for getting his brother moved to a prison closer to their invalid mother. When Cleo discovers this, she coldly puts a bullet in the back of his head. The final scene of the episode shows Jess making good on his promise.
* FBI: Most Wanted", Lt. Weitzen is highly decorated sniper famous for his ability to become 'invisible'. When he snaps, he chooses his victims to send a message, but dispatches them in a totally dispassionate way.
* FBI: Most Wanted", Sandra, a nurse's aide, is stealing anti-seizure meds from the hospital where she works for Cleo, who has epilepsy and, as a wanted felon, cannot risk visiting a pharmacy.
* FBI: Most Wanted Subverted in the episode "Silkworm". An FBI agent turned traitor pockets a cyanide pill moments before he's captured. Rather than swallow it, he drops it in the cup of the agent driving him. The poison kills the driver, causing the car to crash, and allowing him to escape. Also, turns out he got it from a Russian spy he captured, who apparently never got the chance to use it either.
* FBI: Most Wanted to happen to raise a younger generation who are terrified and easily controlled.
* FBI: Most Wanted. When Cleo discovers this, she coldly puts a bullet in the back of his head.
* FBI: Most Wanted" who sentences Denise's 16 year-old son to 20 years in prison for a first offence, while giving the white boy involved in the same crime probation.
* FBI Special Agent Frank Lundy was this to the titular character in Season 2. Dexter even uses the term himself after
* FBI Special Agent Randal considers God to be malevolent and this world to be Hell in

* FBI Special agents Clayton and Archer while interrogating the protagonist in a Yemeni prison in the film
* FBI turncoat Robert Hanssen was caught this way. After several US agents had been captured and executed by the Soviets, the Bureau knew they had a mole on their hands. No one suspected Hanssen, however. He was even tasked with finding the leaks for a time. Eventually a communique between Hanssen and his handlers was intercepted, but there was no way to tell who the mole was —until an agent recognized a racial slur the mole made as something only Hanssen would say.
* FBI video game, or that they came after hours to collect the data from the console.
* FC Barcelona, defeating Real in both competitions. Needless to say, Barcelona's fans were very satisfied by these results.
* FC Barcelona needed either a win or a score draw to advance to the 2009 Champions League final. After Chelsea took the lead 10 minutes in, the result didn't change until the third minute of stoppage time, when the
* FC De Kampioenen has also been made into a successful children's comic book series whose success has in fact surpassed many other comic strips in Flanders and even the length of the original TV sitcom it was based on.
* FC De Kampioenen: This comic strip is based on the popularity of the Flemish sitcom of the same name and the last comic strip launched in Flanders to still sell in enormous quantities. It has even survived the original sitcom which has now been cancelled in 2011. Despite being a huge bestseller, critics who consider the creator’s other works to be much better loathe it.
* FCEUX, an NES emulator, features Lua scripting. Lua scripts can directly modify the game's variables. They can also accept user input. The result:
* F Chords. That only lasted a few months, with F Chords put on hiatus for two years and the commentary indefinitely.
* F Chords was reborn in 2011 with the intent to repurpose it into an office comedy, but within a few months, he realized that, since he changed his mind about ending Starslip, was still running chainsawsuit, and not only doing Blamimations season 2 but adding a live action Kris and Scott/Scott and Kris show to PATV (not to mention getting married), he had to put it back on hiatus directly after the first story arc.
* FCM Char 2C, outclassing and outweighing any other tank of its time.
* (F.D. Roosevelt!) explains how they remain immune because they're allowed access to Weishaupt's wonder herb, namely cannabis.
* FE10, and then it depends on whether the player recruits them or not. It gets to the point where they're willing to betray their friends and principles just for their country, which is plainly in the wrong.
* Feanor is an angry, self-centered, murderous jerkass with absolutely no restraint or self-control. He has been known to hate people because they approved of an idiom shift he detested.
* F.E.A.R. 2: Armacham Corporation pulls off one of these to hide their culpability in Alma's release.
* F.E.A.R. 2 feature a fairly realistic thermal imaging mode which, while not amazingly useful, is at least interesting to look at.
* FEAR 2 fires slow-moving energy balls that can kill almost anything nearby in one hit, but then dissipate after moving only a few meters. Its intel document acquired by picking the weapon up for the first time makes note of this, stating that the pulses "destabilize violently" after a short interval.
* F.E.A.R. 2: Project Origin DLC shifts the focus to one of the Replica soldiers some time after they're reactivated.
* F.E.A.R. 2: Project Origin has a blink-and-you'll-miss-it reuse of the first game's "AT-14" pistol in the final level. The burst-firing ASP rifle also shows up, model unchanged, in multiplayer.
* FEAR 2: Project Origin is undergoing surgery to awaken his Harbinger powers, he has a hallucination in which demonic creatures in surgical uniforms claw and hack at his flesh.
* F.E.A.R. 2: Project Origin, main character Michael Becket also never speaks. If

he could speak and report his findings to his squad, quite a few of their problems would have probably been avoided.
* FEAR 2 twice as long as the game expects you to. Intel is also kept between playthroughs.
* F.E.A.R. 3. The only way to heal damage is to get out of the area the Creep is lurking in.
* F.E.A.R. actually shows why they only speak with filtered voices, as it turns out their "natural" voices sound like harsh, guttural, inhuman growling. Friendly NPCs also get this if you're beyond a certain distance from them while they're saying something.
* Fear Agent it is hard to keep your ship and jetpack shiny when you are the last survivor of a monster-hunting group from Texas with alcohol problems.
* F.E.A.R.: all matter in the corpse but the bones will vaporize, leaving behind a charred skeleton.
* Fear & Hunger it's possible to appease Sylvian, the goddess of love and fertility, by sexual intercourse with a willing partner, fusing the player and the other party into a being known as the Marriage which has higher base stats.
* Fear & Hunger Soul stones can be found whilst exploring the dungeon. The player can harvest souls from fallen enemies and party members which bestows special effects upon the stones.
* Fear & Hunger, the player character and their party are susceptible to losing their limbs from enemy attacks. Losing an arm means that you can't wield two-handed weapons or a shield, while losing both legs reduces your speed to a crawl.
* Fear & Hunger, there are enemies which are capable of attacks that can infect the limbs of your party members. While green herbs can cure those infections, bonesaws can also deal with them and should be used as a last resort.
* fear and hatred that contrasted sharply with the more ambivalent feelings to the 'restrained' and 'uptight' British.
* Fear and Laughter in Burbank", they were unaware of Yakko's fear, even though Yakko asks his siblings what they thought of him. Yakko's fear is likely to be brought up again in Season 2 where Yakko, Wakko, and Dot go deeper into their own fears.
* Fear and Loathing in Las Vegas and his friend Oscar Zeta Acosta, whose real-life drug intake during the period was mostly likely only embellished slightly.
* Fear and Loathing in Las Vegas and his lawyer consumed most recently.
* Fear and Loathing in Las Vegas, and the stockpile of drugs Raoul Duke and Doctor Gonzo have in their car:
* Fear and Loathing in Las Vegas, a night of drug binging results in Duke waking up to find his hotel room completely trashed and his friend Dr. Gonzo completely freaking out in his own drug haze.
* Fear and Loathing in Las Vegas, because, by Thompson's own admission, the original draft was too incomprehensible to be published without editing.
* Fear and Loathing in Las Vegas has Rauol Duke's traveling companion, the 300 pound Samoan lawyer Dr. Gonzo. He's greedy and self-indulgent, and spends most of the book out of his mind on drugs. He also gives terrible advice, which mainly consists of advising Duke to do drugs and break the law. He's based on the real life antipoverty and Latino rights lawyer Oscar Acosta, who was about as wild as Gonzo, but dedicated his life to more worthy causes.
* Fear and Loathing in Las Vegas in that he was based on a real Mexican-American attorney, who Thompson was using as a source for a story, and the whole point of going to Vegas was to keep quiet that he was talking to Thompson.
* Fear and Loathing in Las Vegas is using audio from the anti-drug law enforcement movie-in-a-movie on his answering machine and calls Depp's answering machine to prove it — and Hunter times it almost perfectly to sync up the film and the machine.
* Fear and Loathing in Las Vegas offers the opportunity to be one of these for only two bucks. Another fifty cents for a voice message! "Yell whatever you want, they'll hear you! Remember, you'll be TWO HUNDRED FEET TALL!" (In the movie, the barker in question was played by Penn Jillette.)

* Fear and Loathing in Las Vegas: Raoul Duke and Dr. Gonzo's every.single.room.they.lived.in. Full stop.
* Fear and Loathing in Las Vegas Raoul Duke uses a great one amidst his generally meandering internal monologue:
* Fear and Loathing in Las Vegas: Raoul Duke was with his attorney Dr.Gonzo (who may have been Samoan) to cover the Mint 400 motorcycle race. However, upon arriving in Vegas Duke and his attorney Dr.Gonzo (who may have been Samoan) found it to be imperative to get to the bottom of the American dream by any means necessary. (Including fraud, forgery, liberal drug consumption, and bribing maids to act as moles for hotel drug cartels)
* Fear and Loathing in Las Vegas. The Great Red Shark is arguably the fourth biggest character (behind Raoul Duke, Dr. Gonzo, and Drugs).
* Fear and Loathing in Las Vegas, the main characters threaten and terrorize (but don't, and may not really intend to, physically harm) a young male hitchhiker.
* Fear and Loathing in Las Vegas. Upon seeing that it says "Backdoor Beauty?", the waitress (apparently a former prostitute) throws a fit.
* Fear and Loathing in Las Vegas was originally just going to be a straight series of articles covering a motorcycle race in Las Vegas, before becoming the weird, wacky, genre-defining whatever-it-is that it became.
* Fear and Loathing in Las Vegas where Raoul and Dr. Gonzo attempt to enter a casino whilst utterly spangled on ether.
* Fear and Respect that was set to be ready for a 2006 release. But despite having much buzz (such as a cover story in Game Informer and the announcement of a film version that would also feature Snoop Dogg), Midway canceled the game due to a crowded market.
* F.E.A.R., and was quickly discontinued with all the servers shut down forever.
* FEAR apparently looming, according to Fettel: "A war is coming. I've seen it in my dreams. Fires sweeping the Earth, bodies in the streets, cities turned to dust. Retaliation."
* Fear banner scrolled across the bottom of the screen, which stated that she was experiencing a high-voltage/low-amperage shock was proven to be medically harmless.
* Fear Before the March of the Flames have "Taking Cassandra to the End of the World Party," with lyrics referencing someone predicting a catastrophe while being ignored with the chorus, "No one listens to the damned."
* Fearbook, a catalogue that arrives in the mail convinces people to kill others or themselves.
* Fear City: Matt used to have a thing with Loretta before they broke up. He wants to give it another try, but finds out that she's already involved with another stripper. Which makes it really convenient when said girlfriend becomes one of the killer's victims!
* Fear City: Nicky is in a relationship with one of his strippers, but it's apparently a loving one. She also says to him that she doesn't expect any special favors because of the way it will make her look to the other girls.
* Fear City: The killer cuts off the fingers of his first victim with a pair of scissors.
* Fear City: The main character Matt Rossi is still haunted by his accidental killing of an opponent in the ring, which led him to quit his career as a boxer.
* Fear City: When Detective Wheeler interrogates Rossi, Rossi insults him by calling the police officer's mother a whore. He gets decked in the face for this.
* Fear City: When Rossi finally tracks down the killer just as he's about to kill Loretta, he uses his boxing skills to engage the martial artist in a one-on-one fight. They're pretty evenly matched until Rossi eventually gets the upper hand and doesn't stop until he's beaten him to death. Lt. Wheeler, acknowledging that Rossi ultimately did a good thing, lets him off the hook for it.
* Fe, are closer to traditional fair folk, kidnapping animals and otherwise inflicting malicious mischief upon the forest.
* feared, and deliver simply grotesque amounts of raw damage with every blow.
* Fear Effect 2: Retro Helix had a character's nightmare featuring one of these.
* Fear Effect 2: Retro Helix. They are invincible and can paralyze you if they hit

you.
* Fear Effect. Choose the wrong vent, and the players are treated to a cutscene where Glas enters what he assumes is a safe vent... only for the rotary fan to suddenly activate and cut him into half from the waist.
* Fear Effect. "Fear Effect" refers to the gameplay element in which your character's health and vulnerability are affected by fear. "Retro Helix" refers to a type of DNA that is connected to EINDS, an AIDS-like disease, in the game.
* Fear Effect had your character crushed while trying to climb an elevator shaft and reduced to a smear of blood on the wall.
* Fear Effect. His 2 cut scenes consist of nothing but a bunch of lame come-ons directed at Hana, much to her disgust. One gets the feeling if they weren't in a crowded room, she'd have shot him.
* Fear Effect is an odd example: It used special textures to fake the look of cel-shading, but the characters weren't actually lit by anything. While it uses a completely different technique from cel-shading, in execution it looks identical.
* Fear Effect itself has 3 possible endings, with every character dying at least once in two of them. On hard, however, all 3 survive.
* Fear Effect more nonstandard game overs (usually from failed sequences), but there's simply too many to list.
* Fear Effect Notably, this is one of the few cases in video games where the trope affects not only the plot but the gameplay; Glas is, naturally, unable to dual-wield his weapons after that point.
* Fear Effect revolves around the dealings between the demons of the Chinese Hell and the crime syndicates of a near-future Hong Kong.
* Fear Effect. Right before the final battle the player must decide who is correct and that choice will determine the final scene of the game. If the player decides innocent it will turn out she is innocent, if the player decides she is lying it will turn out she has been lying throughout the whole game. So in essence the girl is paradoxically telling the truth AND lying throughout the story until the scene when the player makes their decision.
* Fear Effect series had, in addition to all sorts of different enemies trying to kill you (humans, robots, zombies, ghosts, demons, etc.) but also a ton of hazards and traps, and even instant death scenarios that could be triggered by making the wrong decision.
* Fear Effect Soon after Deke himself enjoys the sight, which Hana doesn't appreciate.
* Fear Effect: The games make it clear that there is a Chinese version of hell and a Chinese version of the Devil called The King Of Hell. However, there seems to be no heaven or God - unless the island where the Eight Immortals (who don't seem to do much of anything) live at counts.
* Fear Effect, the game takes place at or around Christmas, before ending just after New Year's has started.
* Fear Effect. The second game strongly gives off this message, if the things the Eight Immortals say are anything to go by.
* F.E.A.R. ends with the protagonist being extracted aboard a helicopter with a couple of NPC teammates. The helicopter suddenly lurches and Alma is seen climbing aboard an instant before the game cuts to the credits.
* Fear Equation uses these as a means of indicating whenever the omnipresent fog is attacking your passengers by manifesting any recent nightmares they claim to have had. The effectiveness of said attack depends on what defenses have been constructed.
* F.E.A.R. Extraction Point) had "Descent", its longest chapter, set in a Subway system (along with some storm drains).
* FEAR: Extraction Point will result in an Alma scream that shakes the room.
* Fear Factor (of all things), years after the network ran it into the ground with constant celebrity editions. The revival aired briefly in the 2011-12 series before being re-canceled.
* Fear Factor required the participants to drive a car up the ramp of a moving truck as the last part of the challenge. Inside the truck was a ramp that would

flip the car and send it flying out the side of the truck for a spectacular movie-style ending.
* Fear Factor Unsurprisingly, NBC outright refused to air the episode that included this stunt (the revival was recanceled at the end of its episode order anyway).
* Fear Factor was completely insane. They had stuff like mango flavored gummy candy shaped like sheep eyeballs and cola-flavored gummy cockroaches coated with icing so they crunch when you eat them.
* Fear Factory, Burton Bell's car, which has just been wrecked, explodes when he returns to it.
* Fear Factory, earlier albums were based on a continues storyline about a futuristic war between man and machine; machines being the villains. Many of their songs at the time had the machine leader giving it's commentary on wanting to wipe out the human race.
* Fear Factory. In fact, most of their lyrical content is about struggling against the dangers of technology and surviving it.
* Fear Factory is a concept album with a story that is like a cyberpunk version of 1984. The liner notes even fill in the gaps between the songs, tying them even closer together.
* Fear Factory — according to Burton C. Bell, Robinson had sold the album to Roadrunner, who in turn released it when the band broke up one album short of their contractual obligation with the label.
* Fear Factory's Digimortal album is about a society which creates clones of people, and transfers their soul and memories into them to prolong life. Includes at least one song from one of the clones in question.
* Fear fear they may induce. This often results in cowering, psychological paralysis, terror or even madness.
* Fear features a mission briefing at the beginning of the game from the protagonist's point of view. During the briefing, you're introduced to the main allies and the source of your abilities is more or less explained. It ends up ultimately unnecessary.
* Fear-feeding/fueling entity Parallax' Power Rings, which give abilities similar to a Green Lantern's but are usually given out to people "able to inspire great fear".
* F.E.A.R. form to a teenage one. This makes absolutely no sense plot-wise and seems to be solely so you won't have to face down and eventually shoot a little girl — even one that's already dead.
* Fearful about what Amara will do to the world, Castiel invites Lucifer into his vessel.
* Fearful Passages, adventure "Armored Angels". Professor Powell's notes give information on his plan to open a gate to the planet Yuggoth. The last page of his diary give a horrifying account of the invasion of Mi-Go and a Dark Young of Shub-Niggurath through the gate.
* "Fearful Symmetry" had a gorilla who had been taught painting and sign language, and was making pictures of alien spacecraft. She was more communicative than most human examples, explaining it (as best as she could) using sign language.
* Fearful Symmetry: Identical combatants with identical attacks will cancel each other out.
* Fearful Symmetry — The trope is named for a line from William Blake's poem "The Tyger", which has nothing to do with the trope.
* Feargal Sharkey of The Undertones has a good one: "You Little Thief". With lyrics like, "How does it feel to make a grown man wanna die", it definitely qualifies.
* FEAR gets this reaction from a lot of people because it was a legitimately tough game which could kill you quickly if you were careless. It wasn't derided for being too hard at the time of its release, but the reactions of newer fans brought in from the much easier 2nd and 3rd games are very much along the lines of this trope, and are often very shocked to discover that they can go from full health and armor to dead in a few seconds against normal enemies.
* Fear God & Dread Nought: "Shore Battery Critical Hit results: Admin Building:

A support building associated with the battery, but not vital to its function, has been destroyed. If enough paperwork is destroyed, the battery's efficiency may actually improve."
* F.E.A.R. goes for this. One of the highlights of the first game was an extended sequence where you couldn't be sure if the man taunting you was a hallucination or in the room with you, and doors you were trying to flee through seemed to move away from you. It ended with a dive into a pool of blood that left you standing beneath a gore-soaked ceiling. In the first expansion to F.E.A.R, there was a very memorable sequence where the player tries to open a door at the end of a hallway. Finding it locked, you turn around to see that the hallway you had just came down had transformed into the entrance way to an asylum.
* FEAR has a sparse soundtrack, but sometimes major set-piece battles have great dramatic music swell to emphasise them. If the player is killed during them however, the BGM slows and stops in a comical fashion.
* "Fear Her" Chloe Webber, possessed by an alien, has the power to trap people in her drawings. The people in those drawings sometimes move around.
* "Fear Her" died a year before the events of the episode, but still has an impact thanks to a supernatural drawing made of him by Chloe and the alien possessing her.
* Fear Her in her wardrobe that she's terrified of. He turns out to be a drawing representing her (dead) abusive father.
* "Fear Her": Isolus normally have company in the billions, all mutually sustaining each other with their love, so when one ends up isolated and deprived it goes around the bend.
* "Fear Her" Notably, in a flashback to before the trouble began, there are far less drawings on the walls.
* Fear Her": Rose gets this way with a cat she encounters. The Doctor initially assumes she's talking about him, and visibly sours up when he realizes she isn't.
* "Fear Her": The Doctor quiets an argument between several people by yelling "FINGERS ON LIPS!"
* Fear Her", the girl's drawings both come to life, and draw people into them.
* "Fear Her": While Rose is talking to a council worker who's dealing with cars that are breaking down on the stretch of Dame Kelly Holmes Close where kids are disappearing, the Doctor enters the scene having been caught snooping in Tom's family's yard trying to figure out what happened to Dale Hicks (who vanished there):
* Fear, Inc.. After he leaves, Ben says "This has fucked things for us, hasn't it?" as Ashleigh storms off to the bedroom.
* Fear, Inc. being chased through a high rise carpark. She reaches her car and thinks she is safe, but when she starts the car she hears voices on the radio saying her pursuers know exactly where she is. Then she is garotted by someone hiding in the backseat.
* Fear, Inc. ends with the eponymous company receiving a phone from a new client, implying that the cycle is about to start over again.
* Fear, Inc.. The operator who takes her call places her on hold—complete with inappropriately jaunty hold music—as the psycho advances.
* F.E.A.R. in design. The sequels allow the player to hijack powered armor and wreak havoc on the enemy.
* Fear Inoculum in the slightest — and that, by saying so, he expected to get inundated with dislikes and negative reviews (He was right).
* Fear Island one of the girls is snared as she runs in fear through the trees.
* Fear Is the Appropriate Response: I'm the hero! But I'm too scared to fight!
* F.E.A.R. is the ghost of a psychic left to die in the psychic blocking chamber after she was drugged into a coma and forced to give birth to children to be used in a clone army project. So understandably she is PISSED. She wipes out an ENTIRE Delta team squad in three seconds by turning them into bloody skeletons. So the player is kinda over his head there.
* Fear is the Key the protagonist has taken a woman hostage. They hide out in a hotel where he offers her a chance to clean herself up. At first she indignantly refuses, then suddenly changes her mind. Realising what she's thinking, he goes and

waits outside the bathroom window for her to crawl through it, then marches her back inside.
* Fear Is Vigilance are basically limited to three: male, female, and Marcy in disguise. Everything else is palette swapping.
* Fear Itself and some trolls that virtually destroyed Broxton and Asgard(ia) got moved to the moon for safety reasons.
* Fear Itself and the new Power Man and Thunderstrike. The story was clearly meant to build momentum for a new teen superhero team featuring the characters, but it never got off the ground.
* Fear Itself and turns out that the protagonist was a zombie all the time.
* Fear Itself", a stray drop of blood unwittingly opens a portal to let a fear demon possess a house.
* Fear Itself Claude Mellor consumes parts of his victims in order to assume their forms. It works.
* Fear Itself. Commercial breaks take the audience out of the action and remind them that they're just watching a TV show, which kills the mood (and horror's all about mood).
* Fear Itself heavily favored the cruel twist ending route during its short run:
* Fear Itself he started screaming at Odin and the other gods, yelling that if they wanted a sacrifice he'd give them the "only thing he could give worth anything": his sobriety, by taking a huge swig of alcohol.
* Fear Itself in order to convince Steve Rogers to become Captain America once more, as well as to allow Bucky to deal with remaining Winter Soldier-esque sleeper agents without any trouble. How? A well-placed Life Model Decoy and the Infinity Formula did the trick.
* Fear Itself: The Home Front starred Jason Strongbow, the American Eagle, and involved rising hostility between the Navajo at the local reservation and the (mostly white) people in the surrounding area. Eventually strange Native American spirits start committing nightly raids on the town, but American Eagle exposes them as white townspeople trying to drive up anti-Native sentiment.
* Fear Itself to sit on it. He's been gone from this plane of existence so long that even among the demons themselves it's a common belief that he doesn't actually exist.
* Fear Itself", when he and Anya are trying to rescue the Scoobies from a haunted house that has sealed itself shut:
* Fear Itself, who was similarly transformed into Angrir, Breaker of Souls, and whom Thor had just taken down.
* Fear Itself" with Gachnar the fear demon. A horrendous demon of evil who is 6 inches tall.
* Fear: It's possible the word "no" was dropped to avoid confusion with athletic apparel company No Fear.
* Fearless (2006) sets up Hercules O'Brien like this, but in fact, it's subverted. O'Brien may not have Yuanjia's fancy moves, but his western-style boxing utilizes his massive upper-body strength in a very effective way.
* Fearless books, although Gaia does not recognize this about herself.
* Fearless Dawn sprinkled on top). It's a cartoonish comic about a heroine in a skimpy costume who fights Nazis and demons.
* Fearless Defenders to do with any of the prior incarnations of the group other than having Valkyrie as a member.
* Fearless Fly, knocking off the title character's glasses not only renders him nearly blind, but removes his super powers as well. Naturally, you can count on him losing his glasses once per episode.
* Fearless Fool: Pffft! I ain't scared of that thing! I'll take on it no matter how stupid it is of me!
* Fearless Fool: The character routinely gets into these situations because he's just too dumb to know better.
* Fearless Fosdick) would often be ventilated by flying bullets in the course of his adventures, and left resembling a Swiss cheese by the end of an episode. Nevertheless, he always recovered from his "injuries":

* Fearless grav lance more practical. Hemphill didn't get a chance to explain this to Honor until years later.
* Fearless if all of this wasn't balanced out by her life sucking on a number of levels.
* Fearless Infant: Yikes! This situation's so scary but the baby isn't even flinching!
* Fearless, Laura Klein gives CPR to her husband Max after eating a strawberry. During this, we see flashbacks of Max's experience in the past plane crash while at the same time, during CPR, we see a bit of drool from her mouth when she's desperately is trying to revive him.
* "Fearless Malph": Ralph admits to having literally every phobia in the book. The episode centers on Ralph becoming fearless through hypnotic suggestion.
* Fearless, one of the opponents Huo Yuanjia fights uses a form named "Tiger Claw" that involves him scratching h is opponent with his bare nails. Apparently, he can slowly rip your shirt if you let him get close enough.
* Fearless series had a side character named Zolov, an old Russian chess player who repeatedly referred to Gaia as "Cindy", due to his Alzheimer's disease.
* Fearless, there's a recurring character named Zolov, an old Russian man with whom Gaia frequently plays Chess. Zolov suffers from Alzheimer's Disease and is stubbornly convinced that Gaia's name is Cindy (she's long since given up trying to convince him otherwise). He also beats her every time they play, which is an impressive feat, considering that Gaia's skill level is equivalent to that of an internationally-ranked Grand Master.
* Fearless, the Whistler, X-17, never speaks, she only whistles nursery rhymes. Quite creepy.
* Fearless Undead: Characters who are undead and have no self-preservation instincts.
* Fearless Undead: Undead creatures with no sense of self-preservation.
* Fearless Undead: When the (re)animated dead have no concept of self-preservation.
* Fearless were spent and closed to point blank range to eliminate them.
* Fearless, who dies after being poisoned during a match. Notably, Tanaka realizes this and has Huo declared as the victor, and the latter succumbs to his injuries seconds later.
* Fear, Loathing and Gumbo on the Campaign Trail '72 body armor so worthless that soldiers just discard it in the middle of battle, a rifle that jams worse than the Vietnam-era M16, you name it. The situation is so bad that Soviet leader Nikolai Ryzhkov initially believes the intelligence reports to be propaganda by the KGB until it's confirmed by President Mitterand.
* Fear, Loathing and Gumbo on the Campaign Trail '72, by contrast, was seen as promoting a conservative message of wholesomeness, the free market, and American values. Of course, this backfires once people start seeing the villainous Henry Potter as representative of the far-right corporate plutocrats running the US; posters of the President's face with "Potterville" written across them start popping up at protests around Christmas.
* Fear, Loathing and Gumbo on the Campaign Trail '72, he passes several of these edicts. Anyone with ties to the outside world is deemed an enemy of the revolution and executed. That includes people with Chicken Pox, anyone who speaks a foreign language, and even anyone with a hint of literacy.
* Fear, Loathing and Gumbo on the Campaign Trail '72 was sick and tired of creating racist propaganda. There's also an in-universe 1984 film.
* Fear, Loathing and Gumbo on the Campaign Trail '72, with plans to merge the two comics universes under the DC banner.
* F.E.A.R. longer), they are currently more popular on the mainstream rock/metal market than them due to being a newer act.
* Fear—The last thing you want to do is piss this person off by telling them they can't join in. Similar to this is:
* Fear No Evil, the teenage Antichrist actually killed a fellow student in a game of dodgeball.
* Fearnot afraid of said spider (which he then promptly kills), and in fact teases

him about fearing such a thing.
* "Fear of a Bot Planet" has Fry remarking on how small entire planets can appear when you're flying through space, at which point a Saturn-like planet that appeared to be off in the distance is revealed to actually be about the size of a large bug when it hits the ship's windshield like one.
* Fear of a Bot Planet" parodies the B-movie tradition by having a robot couple making out in a car say things like "It's okay to let our guard down, even for a moment!" before being attacked by a "scary human".
* "Fear of a Krabby Patty" had a variation, where an overworked SpongeBob develops a fear of Krabby Patties, and sees Mr. Krabs and the customers as them.
* Fear of Clowns duology has a disorder that causes his eyes to appear almost completely black.
* Fear of committing this trope played straight and just one of this girl's issues with her new job. Averted by the girl who's been there a while.
* Fear of Flying, Isadora and her husband Bennett go to a conference in Germany, where Isadora starts having an affair with Adrian. It's strongly hinted that Adrian is interested in Bennett as well—the narrative comments on it several times—and at one point, it's implied that the two men slept together.
* Fear of Pop playing in the background - if you tune out the dialogue and focus on the music, it becomes apparent that it's just a ludicrously sped-up recording of "Brick" by Ben Folds Five.
* Fear of the Flesh disc, this clip is found by highlighting "Promotional Materials" under the Extras subheading and then pressing right.
* Fear of this happening causes some communities to go to extremes like x-raying the kids' candy. Of course, some parents choose a more low-tech solution like not letting the kids eat anything that's clearly homemade and making sure none of the store-bought candy looks like it's been tampered with.
* "Fear of Wages" has two thousand cans of sake explode, possibly because everyone present believes them to be nitroglycerine. "1985" has a desert just randomly explode, possibly because
* fear or mistrust will usually have to earn their respect by besting them with their own special skill.
* Fear, Paxton Fettel is occupied over a labcoat's body. He looks back at the camera to reveal the blood smeared around his mouth.
* F.E.A.R. Perseus Mandate with Alma's hostile apparitions and absolutely nothing else.
* F.E.A.R. Perseus Mandate with a skewered mouth. They may have legs, but those are never seen because scarecrows reside in black pools from which they emerge only to drag victims into. Steve Chen is killed by the first scarecrow encountered.
* F.E.A.R.: Project Origin, using her psychic powers to literally make him fall in love with her. The only way to save him is to kill him.
* FEAR quickly catch on to just how serious the supernatural shit they are dealing with really is, and by the middle of the game they're accepting the presence of psychic phenomenon and undead ghosts.
* Fear Sengar becomes his tribe's Weapons Master based on his skill with the sword and, at the start of
* Fear series are full of blood trails, but they are usually not relevant, as there are monsters and corpses everywhere else as well.
* FEAR series, the Power Armor and Elite Power Armor units you fight usually use energy shields. Also the Phase Casters and Commanders in the third game.
* FEAR's later levels have three-for-alls between the F.E.A.R. and Delta Force units, the Replicas, and ATC's rent-a-cops.
* "Fears of a Clown" shows that Bart will stop a prank if Marge is in danger of becoming a victim.
* Fearsome Critters of American Folklore. Asides the famous rabbit-deer known as the Jackalope, there's also:
* Fearsome Critters of American Folklore: Various creatures from non-indigenous American folktales and legends.
* F.E.A.R.'s Replica Soldiers depend on a psychic commander for their orders and

become completely inert when the commander dies.
* Fear starts in an elevator stopped halfway between floors, and it looks like Becket should be able to climb out onto the upper floor, but the game physics don't allow him to.
* fears that "snitching" on the rest of Team Captain America would make him a Betrayer Barry but a lawyer explains to him he'd be a combination of Innocent Isaac and Obedient Obadiah, citing that the other rogue Avengers are criminals and it's every citizen's civic duty to report crimes to the authorities.
* Fear Street book "The Rich Girl" has Sydney and Emma finding a bag of money. They decide to hide it but then friend Jason starts acting up, and the girls end up killing him. When it looks like Jason is coming back from the grave, Sydney starts to snap and finally has a total breakdown to land in the mental hospital. At which point, it turns out that Jason is alive and he and Emma did all this to get rid of Sydney so they could get the money for themselves. But when they try to spend some, they find out that while some bills are real, the vast majority of it is fake play money. The book ends with Emma rocked to realize she destroyed her best friend for a "fortune" that doesn't exist.
* Fear Street. Deena and Jade spend an evening doing prank calls, but then call the home of a woman who's being attacked by her husband, and overhear her grisly death. The two girls fear that the husband will find out who they are, but then feel compelled to bring him to justice when the wrong man is arrested. In the sequel, the girls start receiving threatening phone calls and fear the killer's trying to get them even though he's supposed to be in prison.
* Fear Street has a scene where the main character, Amanda, digs through the belongings of the villain, Lilith. Amanda at one point muses that even though Lilith is horrendously evil, she does have great taste in shoes.
* Fear Street (horror film trilogy based on the 1990s book series of the same name, the central figures of the trilogy are two lesbian teenagers, each film centers around either a lesbian relationship or an implied lesbian relationship, subject matter includes queer female romance, homophobia, LGBT acceptance, LGBT youth)
* Fear Street in revenge. His son put a 100-year stop to the curse by burying the family's cursed relic...only for one of the Goodes' descendants to eventually chase down his great-great-great-granddaughter and slaughter her family, kicking up the cycle yet again. It continues into present day.
* Fear Street is an anthology of 100+ standalone novels - barring the occasional sequel or trilogy - that nonetheless all take place in the same town, allowing characters and locations will recur over multiple books. Some of the most fully realized characters never starred in their own book, but had minor appearances in enough books to make up for it.
* Fear Street: Phoebe Yamura is a Straight-A student and is also the head cheerleader, showing some impressive acrobatic talent on the field.
* Fear Street Sam's boyfriend is one for her, and she's concealed her attraction to Deena for some time.
* Fear Street series. Teens dying horribly, being possessed by evil — and it's all going on for centuries.
* Fear Street, the first actual senior to die was Danielle Cortez. She only appears in a few pages and doesn't even receive the courtesy of a yearbook entry until the sixth volume, which is three books after her death, but the fact remains that she dies on the very first day of the new school year, which sets the mood for the rest of the school year. Her death is the harbinger for the rest of the seniors who die throughout the year.
* Fear suits or Elite Powered Armor suits that essentially serve as walking light tanks. Finally, there's robotic units in the form of light "Mech" units which are small bipedal walkers about as tall as a human.
* F.E.A.R.s, which can dual-wield the triple-shot rocket launcher available in the game. Do the maths, that makes a total of six rockets every time the Power Armor attacks. It's its only attack, but damn, it's not like they need another one.
* Fear the Dark is a terrorist organization of HMHVV infectees, mostly vampires and banshees.

* Fear The Dark Unknown: If Chloe cannot escape the grip of the undead Grandmother, she will be eaten while visibly wriggling to get free.
* Fear The Dark Unknown: One room in the Beresford Mansion has a room with the ceiling practically covered in corpses.
* F.E.A.R. Then pack a Particle Weapon or a deranged psychic... like Alma.
* FEAR, the Point Man is being interrogated by a pair of Armacham troops, up until the point that that Paxton Fettel waltzes into the room and possesses one of them. As soon as he does so and attacks the other guard, the Point Man produces a small knife he'd hidden up his sleeve and cuts the zip-tie around his wrist, then kills the guard Fettel is possessing.
* F.E.A.R., the protagonist is supplemented (twice) with Delta Force squads, who are very quickly killed (twice). The first group of three are slain by Alma near the very start of the game, and the second group of two are instantly shot to death by Replica soldiers as the helicopter carrying them to the Armacham building lands.
* F.E.A.R.), there are times when hitting a car in any way, be it gunfire or punching, will immediately cause it to explode. Since it doesn't happen consistently, it could possibly be just a bug.
* FEAR, there is a point where the player must shoot the lock off a gate, but in doing so they ignite a a burst gas main, causing a massive fireball that they must then outrun. Irritatingly, the lock cannot be blown up with explosives or shot off from a distance, and the explosion cannot be triggered by firing a weapon close to the main.
* Fear the Walking Dead: Alicia and Naomi scavenge for supplies in a water park that has been overrun by walkers. Things get dicey.
* Fear the Walking Dead characters, Alicia is the only character to not be asphyxiated by lack of oxygen. She even has enough air to fight off a zombie when the others start to turn.
* Fear the Walking Dead's Victor Strand is a gay man who does not have any stereotypical gay mannerisms other than very refined tastes.
* Fear the Walking Dead takes place in the aftermath of (albeit thousands of miles away).
* Fear the Walking Dead, the actress who played the undead Gloria gave an interview to Comicbook.com in which she believed that "everything started with Gloria". The site and many other news outlets, including Metro Newspapers, Hitfix and fansites, took this to mean that Gloria was the first walker ever created (Patient Zero), and ran stories to this effect. However, Gloria is not the first walker in the series - in the pilot, Tobias tells Madison Clark the morning after Nick's encounter with Gloria that he has heard reports of the dead coming back to life in five states, showing that the dead were reanimating before Gloria was infected. Yet, this hasn't stopped some fans from still believing this to be the case.
* Fear the Walking Dead through its sealed mouth either, and Dwight destroys it in the nick of time as it opens its jaw wide enough to bust the stitches.
* Fear the Walking Dead: Travis is revealed to be Maori, like Cliff Curtis, the actor playing him. However, he's apparently American-born or spent most of his life in the US since he has an American accent.
* Fear the Walking Dead: Virginia's Pioneers spread around propaganda videotapes pretending to be a charitable society of do-gooders encouraging survivors to seek out their help when in reality they're a pitiless and brutal empire.
* Fear the Walking Dead, when a large horde of walkers are invading the military base, the walkers knock down a watchtower with two guards on it. When the guards try to get back up, they were already surrounded by the walkers and they start eating them.
* Fear the Walking Dead, where it becomes apparent that the military lost because they (or at least the National Guard in LA) were incompetent and evil. A recording played in a much later episode indicates that for some reason, the National Guard and regular army started fighting each other in the middle of this too.
* Fear They are both forced to watch each other go through their fears by their captors. They break free and make sure the circus wizards pay for everything they did.

* Fear to Tread, Horus peels off Erebus's face and waves it in front of him.
* fear toxin, he starts seeing images of his father calling him "a disgrace".
* F.E.A.R. universe it seem super reactions can be gained though a certain procedure, but given what happened afterwards...
* FEAR vanishes early on in the game. Although he continues to appear as a ghostly figure from time to time, his eventual fate is left unknown.
* Fear was found by one of the cult's monks and he used his identity to have the cult bring him hundreds of victims to consume during the Great War.
* Fear, when David goes crazy and tries to get into the Walker's house.
* Fear where the Point Man goes from kneeling on the floor with three men pointing guns at him to killing all of them before they can react.
* Fear, which is itself banned for its dark, disgusting humor) was banned after a profanity-laden and set-destroying performance.
* F.E.A.R. your first encounter with Alma, sorta, is after you open a gate and walk back to rejoin your squad you find that they have been skeletonized, you also get a replay of exactly what happened as well, and it's the first inkling you have that something is amiss. You spend the rest of the game being terrorized by her and almost getting killed by her.
* "Feasibility Study": An alien disease causes anyone infected to gradually petrify.
* Feast are described as having 'claws like Ginsu Knives'. and they can easily tear apart humans.
* Feast begins with James finding Winston all alone as a puppy and adopting him.
* Feast, but she has a kid to feed, so whenever Bossman is stoned and horny, it's time to bend over his desk and "take a meeting".
* Feast cast are indeed an assorted bunch of jerks, time that would otherwise be wasted introducing their personalities is supplanted by a quickie on-screen caption for each, and the film does not take long to get to the killings.
* Feast films, we never find out exactly what the monsters are. All we know is, they like eating things and raping things.
* Feast II: Sloppy Seconds has a scene where one of the monsters rapes a cat, treated as a throwaway gag.
* Fea's toad familiar tries to do a costume switch of his own, with sharp false teeth and a spiked leather collar, but is told by Fea not to be ridiculous.
* Feast of Goblyns had a doppppleganger playing a pipe organ during an evil religious service.
* Feast of Legends is an RPG made by Wendy's meant as a commercial for their products in a Tabletop Role Playing Game form, but the camp levels are through the roof, if you aren't laughing at the commericalism you'll be laughing at the
* Feast of Legends. Rules include getting buffs for eating Wendy's products and debuffs for eating food from their rivals.
* Feast of Winter's Veil, "Greatfather Winter" can be found in Ironforge and Orgrimmar, with both versions simply being surly actors hired by the goblin cartels commercializing the holidays.
* Feast tries to believe her way out of terrible situation after terrible situation.
* Feast, Winston the dog isn't happy when his owner's new girlfriend tries to improve both their eating habits and the flow of junk food Winston is used to turns into Brussels sprouts.
* Feathered dinosaurs, especially those that sank into public consciousness as
* Feathered Dragons: Dragons depicted with feathers on some or all of their body, most often on their wings.
* Feathered Serpent: A snake or snake-like creature with feathers and/or avian wings.
* Feathered Serpent: A snake (or snake-like creature) with feathers (or feather-like projections).
* Feathered Serpent Hualpa led essentially every intelligent and/or supernatural creature in the tattered remnants of the Amazon basin — including the remaining native tribes, sympathetic metahumans, nature spirits, Awakened animals

of numerous sorts and a host of lesser dragons — in an outright invasion of Brazil, which, in a world still trying to understand what magic was, was woefully outmatched and fell in short order. Hualpa then established the nation of Amazonia, set strict anti-pollution laws, made it very clear that deforestation wasn't going to be a thing anymore and limited dense urban settlement to the preexisting coastal cities. Amazonia then went on to conquer most of northern South America, establishing the same laws there as well.
* Feather Fingers: The feathers on a bird's wing function the same as human fingers.
* Featherine by deciding to kill someone and promising to write how she did it later on.
* featherless" a lot, usually in crude reference to some part or other of the male genital.
* Feathers and Fire: A Republic fleet officer tells Atreus the captain of his caught smuggling can't be prosecuted because that guy was operating in Hutt space where the Republic has no authority.
* feathers are affected. Done properly, it is like cutting fingernails; it doesn't hurt and the feathers will grow back.
* Feathertop" deals with a scarecrow who is given the illusionary appearance of a human. He knows he's not a human, but it isn't on his mind when the townsfolk respond with such awe at the sight of him. When, inevitably, he is confronted with his own appearance by a mirror that pierces right through the illusion, he is horrified and ends his life.
* Feathertop. Distraught, Feathertop returns home and throws away the pipe to end himself. Mother Rigby respects his choice and puts him in her garden as he was meant to.
* Feathertop", the title character is a scarecrow with a pumpkin for a head who, due to a witch's spell, is made to appear as an elegant nobleman. When he first goes into public, adults are praising him, but it's mentioned that a small child "keeps babbling about a pumpkin" (and a dog cringes and howls). Later, Feathertop sees himself in a mirror and realizes he's not human and can no longer live with himself.
* feats like hitting the ball right into the opposition's hand shows that losing can actually be more impressive than winning.
* Feats or spells. Clerics in 3rd and 3.5 Ed can do it with the right domain choices, if available (Destruction + Strength. A smite that already has a good bonus getting an
* featured a falling piano, naturally. Other variants included falling trees, rocks, coconuts, etc.
* featured, almost sounds comedic. And despite the fact that Marley did write a lot of love songs: he is also best known for his social commentary, which is overshadowed in "No Woman, No Cry" by its message of love.
* Featured in a hilariously done safety message skit in one episode of
* Featured in an old "Canonical Famous Last Words List" (the character's background precluded him from knowing which of two parts "throw it" should refer to).
* Featured in a story about vegetables. Lines such as 'This plan is half-baked!', 'We shall launch a Spud missile' and many others that are forgotten featured.
* Featured in the clip for Rompin' Ronnie Hawkins' remake of his own classic "Mary Lou" (shown when we get to the part about the "crying shame").
* Featured in "The Three Strikes Job" with Eliot becoming a catcher for part of the con so that they can steal the ballpark and the team.
* featured Old Snake dressed up as Santa Claus and Sunny and Otacon dressed up as elves.
* featured on the PS3 box art and has a page on the police archives (accessible if you use the computer in the police vehicles), so there are rumors that she's in the game.
* Featured spots in popular music (i.e. "Song X" by Alice feat. Bob) exploit this. You take a popular or respected artist and put them on a lesser known or just

slightly less popular artist's song (
* feature film, a ladder falls towards a group of cops, who then line up so that each one fits neatly through the rungs.
* Featureless Plane of Disembodied Dialogue: Dialogue with no indication of what the characters are doing besides talking to each other. Often has few (if any) dialogue tags.
* Featureless Plane of Disembodied Dialogue - Skimping on backgrounds when the focus is on the conversation.
* Featureless Protagonist Guardian taunts the player, and by the extension the Avatar (or other way around) through their computer monitor.
* Features a few, especially since ethnicities aren't confirmed. Warly was one of the first dark-skinned characters in the monochrome cast, but still has a washed out appearance in-game with quotes that pepper in French. After being added to Don't Starve Together in promotional material he is seen with both his hair and skin noticably darker. He is generally speculated to be black or mixed-race due to that and his facial features.
* features aliens from the planet Rooskie who are turning the inhabitants of other planets into "Communist Mutants" and serve the "Mother Creature", who drinks irradiated vodka.
* features a Loki who gained cat ears and a tail by falling through the void. (He also gained a cat-like mentality, which is the focus of the story.)
* Features a lot of "technomagical" technology, all reversed-engineered from ancient Sirian technology. Two of Sam's magical weapons are his
* features a mysterious man on the boat, which raised more than a few eyebrows from fans.
* features an insane asylum on the 3rd floor. Unfortunately, while abandoned by any semblance of normal people (if insane people can really be called normal), it is now happily inhabited by zombies and other mutant freaks.
* features an outside view of a corner diner in a big city and several late-night patrons. It is quite often referenced in other media.
* features an overly long Renaissance-style musical introduction to the game "Would You Rather," with host Scott Aukerman admonishing any guests who try to speak over it to "shut the fuck up."
* Features a plot hole the size of a semi in one story arc where a gunman walks down a crowded Japanese thoroughfare, calmly gunning down literally
* features a quartet of kid heroes who set out to rescue their fathers who've been enslaved by an evil warlord.
* features a second cousin couple, Prince Saphir and Princess Serpentine. Their fathers are first cousins.
* features a second cousin couple. Rosanella's father and Mirliflor's father are first cousins.
* features a supposed terrorist group using Everything Is An Instrument as their weapon of choice.
* features a traumatised soldier from the Vietnam War — played by Liverpool native Luke Anthony Jr.
*), features a very similar dinner (renamed "Tom Hawake's Bar") with four characters in the same spots wearing different clothes. The two characters sitting behind the counter in midground are replaced by Tintin and a woman he's apparently dating. The owner is replaced by a woman wearing a cowgirl outfit. Also, there's a cab in the street.
* features a zombie apocalypse where zombies grow stronger the more pollution there is.
* features cute, lovable, intelligent robots that humanity wants to wipe out, just because the robots don't want to be slaves.
* features horizontal scrolling, parallax viewing, background changes, and in some cases sound effects and animations.
* features Kat, whose parents and brothers all have superpowers. She has... pink hair. She also has experience in ballet, gymnastics and karate from when her parents tried to prepare her for potential powers. She also has the experience of

being around other heroes so that she is uniquely qualified to babysit for other heroes superpowered kids.
* features Loaders, a robotic enemy class with an uncommon yet logical weak point—their joints.
*) features Matou Sakura attempting to laugh wickedly as one of the evil stepsisters. The stage directions note that she "actually sounds like someone who is PLAYING IN A SUNLIT FIELD with a group of KITTENS."
* features mock brand names and logos on nearly every page, with often dirty jokes.
* , features or mentions virtually every decent female professional wrestler of the 2000's.
* features snowflakes in its card artwork and is WATER Attribute. Also, its flower, which is a cactus flower, is the only of this family's flowers capable of blooming in Winter due to the climate differences of a desert environment.
* features such a pursuit between Wayne the Goblin, Sam and Frodo inside Mt. Doom — with a cameo from the Scooby Gang.
* features technology powered by a combination of gears, steam, and mystical glyphs.
* features the Ninth and Tenth Doctor experiencing this while being held captive. The first two chapters have him asking his captor for assistance.
* features the personifications of Order and Chaos. Order wears white and Chaos wears black, but don't let the colors fool you; neither of them are what you might call "good".
* features this prominently. It's not stated exactly how old Fluttershy and Midnight are, but it's more than enough difference to qualify.
* Features this, though whether or not it's intentional is debatable — the art noticeably shifts depending on how many characters are in a scene. In a scene with only one or two, or even a small handful, the art is of quality comparable to Disney. However, in scenes with many characters present, like when Kairel is trying to get everyone organized right after they get on the Ark, and Xiro completely ruins her efforts, the designs quickly become comparable to a toddler's scribbling.
* Features this trope regularly in a very plausible way. The series has loads characters who are too old (Barristan Selmy, Syrio Forell) or too thin (Loras Tyrell) to be considered "strong" but are extremely capable fighters, usually because they are both naturally skilled, very well trained, and unusually brave. This is realistic since there is no use being a bag of muscle if you are clumsy, untrained or just too weak-minded to hold yourself on a battlefield or in another life-or-death situation. In other words, being strong and resilient may make you a good soldier (since much of soldiering is enduring months of underfeeding, sleeping in camps, forced marches, exhausting work and generally horrible life conditions) but it does not automatically make you a good fighter. (The reverse is true: many a
* features, very prominently, a sailing ship capable of space travel as a plot point.
* features very simple and obviously recycled animation. It makes a very poor job of hiding the fact that Jim, Judy and Captain Smith's limbs are on different cels from their bodies in several scenes.
* features), with the former usually thought to have recorded it first. Vaughn Monroe was actually the first to record it. To be fair, his version was stuck on a B-side and the arrangement, while quite pleasant, is rather forgettable compared to the Chordettes' creative knee-slapping arrangement.
* featuring an American couple. However only the girl Lauren is played by an American (Kendal Evans). The boy Frank is played by the British Bobby Calloway.
* Featuring a superpowered Amazonian race of Gems, it's no surprise that
* featuring the late Princess Diana clad in their undies. On the 13th anniversary of her death, no less.
* featuritis could render a more recent version impractical compared to an earlier one that was deft and focused in its design, or perhaps the developers behind the original software moved on and the quality of future versions suffered as a result of their design philosophies clashing with that of new staff in charge of a

project, or a drastic change in design direction makes transferring to a new version more of a hassle than it's worth, sometimes newest versions actually cut useful features because of perceived unpopularity...
* Fe, being spotted by a Silent One spells doom for the furry protagonist unless they quickly get out of sight. Also, certain bodies of water are home to a fish that immediately swallows Fe whole if they fall in.
* Febold Feboldson ("Western Scientists") is all about this. Petrified forests having petrified gravity, feeding fish iron rich food so you could harvest them with a magnet, literally cutting fog with a knife and burying it under ground; they've got it all.
* February 13 (the day before Valentine's Day) is "Galentine's Day", a holiday originating from an episode of
* February 15, 2000: In a game against the Philadelphia Flyers, Brodeur launched the puck into the other side of the ice. The Devils took a delayed penalty before the Flyers retook control of the puck. On the way out of their defensive end, forward Daymond Langkow was checked by a Devils forward, and accidentally knocked the puck toward his own empty net as he tried to keep his balance.
* February 17, 1986: Garfield does it to try and impress Arlene. As soon as she says "You may dispense with the vanity", he drops it.
* February 1939 cover has a sleek silvery spaceship that had crashed into a desert. You can tell it crashed based on the white smoke from holes, including one tear along the side and a slightly malformed front.
* February 1943), but they kept fighting because they couldn't see a way of ending the war without losing face. So the war continued for another two and a half years until the atomic bomb placed them in a situation where they could no longer pretend that they still had a chance.
* February 1976: "The Sweetest Gift"/"Tracks of My Tears." Again, released to both country and rock radio stations, "The Sweetest Gift" — with Emmylou Harris providing backing vocals — got the nod early on at country radio, but it wasn't long before the pop side "Tracks of My Tears" (covering Smokey Robinson & the Miracles) earned its keep at country radio and (depending on the chart) made the top 10 or stopped just short.
* February 1st, 2007. "Okay, we're gonna walk through the airport and see if we can find anything funny. The word "choate" is funny."
* February 2015, Mr. 450 defeated Phenomeno BJ for the World Wrestling League Americas Title with help from Escobar and Joe Bravo, only for them to turn on him while Negrín brought out a referee and demanded he count Joe Bravo's cover after they were done with 450.
* February 29 revolves around a mysterious killing related to an urban legend of a ghostly murderer who strikes every four years on Leap Day.
* February 6, 1998: Jon orders from a drive-thru and asks Garfield what he wants. Garfield answers, "One of those [order] boxes right next to my bed!"
* February Revolution, NKVD), which existed 1936-41. It was during this period that the secret police agencies first got involved in foreign intelligence, as well.
* February: Valentine's Day, red and pink and heart-shaped everything.
* Fecal Matter was a short-lived punk band from Aberdeen, Washington that only lasted a single year from 1985 to '86. After that,
* Feckik: Ass(hole). Another of Rygel's favorites. Then Chiana threatened to shove something up Rygel's feckik if he didn't do what she wanted.
* Federal Express changed its name to FedEx, and even stated in the commercial that announced the change that it was because "that's what you call us anyway".
* federal governments. Canada is an unusual variant in that many of its founding fathers originally wanted to merge all of the British North American colonies into one single big colony and erase all the provincial borders, although they settled on a federal system due to the protests of some of the representatives from the Maritimes, and even moreso the protests of Lower Canada/Quebec.
* Federalist Papers, a series of parallel essays, published under the pseudonyms "Cato", "Brutus", "Centinel", and "Federal Farmer".
* federal prosecutor for retrial, since the use of the national park means the perp

also broke federal kidnapping statutes.
* "Federation" but was removed because it sounds too optimistic and not climatic enough for such a decisive part of the game.
* Federation Diplomacy seems to consist of sending two diplomats to discuss things in a patronising manner, then holding the talks on a massively over-armed starship in orbit above one of the party's homeworld.
* Federation fails, and they try to rebuild their powerbase in our universe. They get several things right, but are surprised when several major things that happened to our universe just didn't happen in theirs. The subversion lies in their belief of recruiting the heroes of OUR universe to help them at any cost, and the main characters treat them as important as any other person. However it's hard to say if this really counts, because aside from one main female characters' alternate counterpart who is so radically different they don't even know it's her until the end of the game, the rest of the alternate universe characters are all people that don't exist in the main universe, or at least have never appeared in story there. It's hard for the main characters to write Axel off as "oh it's just an alternate Axel Almer" when they don't know of any other Axel Almer.
* Federation identification, with Starfleet headquarters and most primary Federation facilities on Earth.
* Federation of the Hub has the ComWeb, a Federation-wide email system.
* Federation of the Hub stories, Pilch comes from a culture where people only have one name.
* Federation of the Hub story "Trouble Tide", a symbiotic lifeform gives mammals the ability to survive in the deep sea. When they return to the surface, the extra structures it grows are converted to body fat. That works fine for the seal-like native lifeforms, but it leaves the story's human protagonists so dangerously obese that they need days of surgery and months of dieting to recover.
* federation of the various Minbari clans, with at the top at least two oligarchical councils with three representatives of each of the three Minbari castes (Warrior, Religious and Worker), the highest of which, the Grey Council, wields effectively absolute power (the Council of Caste Elders mostly serves to deal with matters not important enough for the Grey Council).
* Federation players can play as Klingons with the reasoning that they'd rather
* Federations expansion allows you the "Void Dwellers" start, where your species has three settled Habitats and the largest one orbits a shattered planet (presumably their home world). You also get a bonus to food production on Habitat farms and the technology to build more, and you can access the rare technology to upgrade them. The only downside is your species gets severe penalties for colonising actual planets.
* Federation star charts are apparently based on this trope as well. Earth is located in Sector 001. Of course, this is a
* Federation/Starfleet headquarters is on Earth, they seem to consider all the other territory in the Federation, and any opposition they might put forth, to be negligible.
* Federico Fellini has plenty surreal comedy situations during the whole film.
* Federico Fellini is literally dwarfed by 7'7" Sandra Allen, the world's tallest woman at the time.
* Federico Fellini is older than all of these films and has characters discussing the set-up of scenes (they are trying to make a movie) and said scene is the very same scene we're watching. A lot of Fellini's films fit actually.
* Federico Fellini (which is co-written by him), shows how directors see writers. Directors will come up with fantastic ideas and characterization but the writer will tell him it's not as interesting as he thinks, it's too cliche, and it makes zero psychological sense. Eventually Guido has a fantasy of the writer being hanged.
* Federico García Lorca and plays dealing with sexual repression and oppression of women.
* Federico García Lorca is mainly about this topic: a woman who wants a child but can't get pregnant no matter what.

* Federico García Lorca prospect, and the waiting has left her too tired to even protest, only lament over her lost years and opportunities.
* Federico García Lorca, the Bride runs away with her cousin's husband, AFTER she gets married to another man.
* , Federico goes to wake up his younger brother only to find him abed with a naked, quite handsome young man and immediately draws the only logical conclusion — as time-traveling shenanigans are a mite far-fetched for anyone. Quite sweetly, the entire family is okay with Ezio being a sodomite in spite of the strongly homophobic context of the Renaissance.
* Fed Exed to you, and you put them in the incubator and they hatch in a suitable time frame.
* Fedka the Convict, psychotic murderer and robber, who acts as paid muscle for Verkhovensky's gang in
* fedora on a potted plant, which he dubs "Planty the Potted Plant". It not only defeats him, but is made an agent of OWCA at the end of the episode.
* Fedor Emelianenko match, he got up and went on to win the fight in less than a minute. When asked how he managed to recover so quickly from such a harsh throw, Fedor explained, "It didn't affect me. I train to fall great distances." In reality, with some training, flexibility, and luck, professional MMA fighters can avoid significant damage from attacks that appear to be quite serious.
* Fedor Emilianenko vs. Kevin Randleman. Fedor got hit with possibly the most perfect suplex in history, impacting the mat with all of his own weight plus all of Randleman's weight directly onto his spinal column. Fedor showed no reaction to it at all, and less than a minute later he'd managed to grab Randleman's arm in a hold and made Randleman tap out.
* Fed to Pigs kills his uncle's spying courtier that tries to eavesdrop on Amleth's conversation with his mother, then cuts the body to pieces, boils it, and throws it into a sewer for pigs to eat.
* Fed to the Beast: Feeding people to either monsters or man-eating animals.
* Fed to the Beast: Killing someone by handing them over to a monster or dangerous animal.
* Fed to the Beast: Serving up your enemies as a feast for a hungry animal or monster.
* Fed Up by Jessica Conant-Park and Susan Conant features a fight at a wedding reception over a video camera which contains footage of the wedding and incriminating evidence between a camera operator, a producer, and the bride's best friend.
* Feebas is stated to be a very common Pokemon that flocks in stagnant ponds and is often ignored by trainers due to its ugly appearance and low stats. When it was first introduced, it may have been the
* feeblemind reduces the victim's intelligence and charisma to 1, makes them unable to use magic or use magic items, and they can't understand languages or communicate in any way. The only thing they can do is recognize people they care about and fight instinctively. In effect, they become a wild animal. The spell can last indefinitely, unless cured, or the victim succeeds an intelligence save (which is hard, since they now have a -5 modifier in intelligence).
* Feed. A cop investigates a fetish website wherein obese women are held captive, force-fed, and raped while the site participants bet on how long they'll live.
* Feed, as Shaun and Georgia find they're in the middle of a bunch of zombies:
* Feed by Example: The animal or baby you're feeding won't eat, so you eat their food to show them how.
* Feed by M.T. Anderson, having essentially an internet hookup directly into your brain lets you look up anything instantly, so no one ever bothers to really learn or remember anything, becoming imbeciles with the attention span of gnats.
* Feed, during part 3 Titus and Violet visit a Filet Mignon farm. The meat is grown in the same way as plants are, complete with a maze made out of beef. There is also mention of mutations in the growing process, creating things like hearts, eyes, and horns in the meat.
* Feeder did something similar as Placebo for the "Just a Day" music video.

* Feeder's "Just A Day" was originally the B Side to "Seven Days In The Sun", before it appeared on the Gran Turismo 3 soundtrack, from which it was released as a single in its own right. It ended up becoming a huge hit.
* Feeder some missing B-sides is a good showcase of the bands's productivity early in their career.
* Feeder's single "Seven Days in the Sun" did well on the UK charts (peaking at #14) and was pretty well-received. However, its B-side "Just a Day" became a major fan favorite, so much so that it was later released as its own single—and managed to chart 2 spots higher than its former A-side!
* Feed Features an instance of this. Characters are able to live the memories of their friends and family via the titular devices. Titus' father allows his family to relive a boating trip he took for business purposes. The problem? He saw an attractive co-worker and got very aroused. Made worse when you consider that his entire family was able to sense it and feel what he felt.
* feeding all Creation into the mouth of Oblivion and resume something approaching a mortal life, their Resonance will build until it erupts and risks destroying any emotional connections they've managed to make with the world of the living.
* Feeding Frenzy 2: Shipwreck Showdown, a lugubrious, green alien called the Intruder lurks in the seas, with the intention of colonize the entierity of the Earth oceans. It is up to the local fauna to take this extraterrestrial down.
* Feeding Frenzy eat you. Add mines, mutant fishes and pelicans to the mix and the entire ocean becomes one giant deathtrap.
* Feeding Frenzy games, sharks are some of the biggest threats to the player. The final boss of the first game even is a giant great white shark. Goliath in the second game averts this, though, as it is a playable character (although the other sharks in the game still are out to kill you).
* Feeding Frenzy: Mr. Plinkett is killed when his reanimated wife breaks free of her cage and pulls his head off.
* Feeding Frenzy: Mr. Plinkett is ultimately revealed to be killing people to harvest their organs and rebuild his family from their parts.
* Feeding Frenzy plays this for comedy with a bit of lampshading that there weren't very many characters of importance to begin with. After escaping from the villain's clutches at the end of the second act, Christine cries, "Everyone's dead! Kyle... some girl I made out with at a frat party... that guy."
* Feeding Frenzy: Shipwreck Showdown, during the several levels where the playable fish can jump out of the water, there are items occasionally flying around the stage while attached to balloons.
* Feeding Frenzy: The elderly and crippled Mr. Plinkett is introduced as a john for a much younger prostitute. He demands that she prove herself by licking his cane suggestively while he mutters creepy comments.
* Feeding Frenzy: This trope is the major point. Eat small fish, become large fish, and avoid the even larger fish while doing that. Most levels have non-edible fish larger than your maximum size, or something else capable of killing you (mines, birds and clams) but in several levels you get to be top dog of the seas once you eat your way to the top of the food chain.
* Feeding is also a very good way of winning over an animal, especially a domesticated one.
* feeding to carnivorous critters may make a quip about "staying for lunch/dinner/breakfast".
* Feed is set in a world where people can have tiny computers implanted in their heads. Advertisments are then pumped directly into their brain.
* feed Kurumu's clone clone breaks free, he throws a soldier to her to save his own worthless hide before dialing up the others and telling them to send ALL of their henchmen down to try to contain her.
* feed on souls, but are notoriously picky eaters — they disdain those of common people as bland and uninteresting and prefer the more textured souls of experienced heroes, but especially delight in preying on the souls of powerful evil creatures.
* Feed, Senator Ryman tells Shaun and Georgia he'll talk to them about the matter

the next day, after he breaks the news to his wife and then, as he puts it, "get very, very drunk".
* Feed, smothered his obese mother when he was a child. He's locked into a cycle of repeating the same murder as an adult.
* "Feed The Birds" is changed from a lullaby in the film, to a duet between Mary and the bird woman as she personally takes the children to visit the bank.
* Feed the Cat: None of the cats' genders are revealed; the only clue is that they're all ginger and eighty per cent of ginger cats are toms.
* Feed the Cat, where the cats say, "Reoowww!" as they fall happily offscreen when they get fed.
* Feed the fire. Break your vision. Throw your fists up. Come on with me. Feed the fire. Break your vision. Throw your fists up. Come on with me. Feed the fire. Break your vision. Throw your fists up. Come on with me. Feed the fire. Break your vision. Throw your fists up. Come on with me. Feed the fire. Break your vision. Throw your fists up. Come on with me. Feed the fire. Break your vision. Throw your fists up. Come on with me. Feed the fire. Break your vision. Throw your fists up. Come on with me. Feed the fire. Break your vision. Throw your fists up. Come on with me.
* feed the Gigashadow, the last survivor of humanity's deadliest enemy, the Insects. In the final TV movie, the entire population of the League of 20,000 Planets was harvested for their flesh.
* Feed the Kitty", Marc Anthony pretends to be rabid to scare off his owner in order to save Pussyfoot, but she just scolds him for wasting her whipped cream.
* Feed trilogy by Mira Grant- they cured cancer and the common cold, but the two viruses that were engineered to do the curing mutated together, and that virus turns people into zombies.
* Feed world simply don't do but that a working reporter needs to be able to cope with.
* Feel Good: David mentions once that he's partners with a man. This is a surprise, given he showed no sign of being gay before.
* "Feel Good Inc.", "Dare" and "Dirty Harry" add live-action to the mix (with guest stars
* Feel Good: In Season 2 it's revealed Mae had been sexually abused by men. This is the cause of her drug addiction and PTSD, although she acts quite casual about it at first.
* Feel Good: Laura loathes her birth name Lava, and won't answer to that. Her mother starts calling her Laura after they reconcile.
* Feel Good: Mae can't get an orgasm, and mentions she should go see a doctor about it, but doesn't. In the last episode of the first season, it's indicated she's finally managed to climax.
* Feel Good: Mae Martin is the main character, who co-created and co-wrote the series as well.
* Feel Good: Mae Martin plays herself on the series, which is loosely based on her own life.
* Feel Good: Mae's very butch style gets her mistaken for a man sometimes. This is later complicated by the fact that Mae realizes she's nonbinary. In the final episode, she comments happily on the fact that people tend to call her "sir".
* Feel Good: Nick, a black guy who owns the club where Mae performs and once let her stay on his couch, is the only man of color in the main cast.
* Feel Good (nonbinary bisexual main character, likely bi female supporting character, lesbian supporting characters, gay supporting characters, queer female/nonbinary romance, coming out story)
* Feel-good or soft content stories (scientific or medical breakthroughs, new movie or TV or album releases, etc.) are notorious for playing up any "Canadian connection" that might exist, even in the most peripheral way.
* Feel Good people simultaneously (both men and women), while asking for George to join them (she declines).
* Feel Good: The first episode shows George and Mae flirting, kissing or undressing while in Mae's room to show their building romance over time.

* Feel Good: The series is heavily based on Mae Martin's life, including living in England as a Canadian expat, plus her drug addiction, gender and sexuality. Still, the rest is fictional.
* Feel Good: The series revolves around Mae's difficult relationship with her girlfriend George.
* "Feel Good Time" is kind of an odd case, as the original version was never officially released: It was written by Beck and William Orbit for a scrapped collaboration-heavy Orbit solo album, but it became a hit when
* Feelie. Based on the already-cute-as-a-literal-button Yoshis from the game, many media outlets have remarked Nintendo has outdone themselves with these little guys.
* Feelies, it is revealed that King Dimwit Flathead made every Thursday into "Birthday," on which everyone had to give him presents.
* Feelies set in 1938) was a matchbook with a vital clue. One reviewer mentioned accidentally using the matches and throwing away the matchbook before solving the game.
* Feeling bored, Wade tells Cody his mother has fleas so Cody will chase him away.
* Feeling Oppressed by Their Existence: This group never did me any harm, but I hate those bastards anyways because, why not?
* Feeling Oppressed by Their Existence: Those tropers have never done me any real harm, yet I hate their damned guts anyways.
* Feeling Pinkie Keen", Pinkie Pie's "Pinkie sense" makes her twitch all over — in anticipation of a "doozy" happening soon — and this includes her spontaneously inflating very briefly.
* Feeling Pinkie Keen" showed her as a mailmare with a thing for muffins.
* Feeling put down by rivals at a high school reunion, the gang put on a fantastic dance routine set to George Michael's "Freedom." The camera then cuts back to show the reality, that the dance is a complete mess of flaying limbs and stumbling. Leaving, the gang mutter about no one liking their dance.
* Feeling quite proud that in Italian that was if possible made more grating by having Venkman state triumphantly: "We came, we saw, we totally raped its ass!"
* feelings, as you call them, can get in the way of big cash pay offs? Bwahahahaha!"—spoken by a divorce lawyer (not the Blue-Haired Lawyer) to Manjula, in the episode where she found that Apu was cheating on her.
* Feeling Through is billed as the first film to feature as a lead an actor who is deaf and blind (Robert Tarango)
* "Feel It" has "What's she gonna look like with a chimney on her? What's she gonna look like with a chimney on her? What's she gonna look like with a chimney on her? What's she gonna look like with a chimney on her?"
* Feel No Pain: When the no-sell is the result of the attack not being felt by the target.
* feels factual. Colbert uses the term to lampoon politicians and pundits who say what they want to be true rather than consult facts.
* feels that approaching a potentionally dangerous enemy just to get his hands on some rare All-Might merchandise is worth it.
* Feel the Magic or its sequel have any kind of distinguishing facial characteristics, aside from one instance, each, of a beard and a mustache.
* "Feel the Pain," which has them playing Urban Golf all over Manhattan.
* Feelup with the power to touch at a distance. Three guesses what he was witnessed using his power to do and the first two don't count.
* Feeno counters & points out that Beemo & Wally’s houses won’t stand up well to bad weather (
* Feersum Endjinn is set in a giant castle-like structure which used to be the Earth terminal of a space elevator.
* Feet-First Introduction: The first thing you see of them is one or both of their feet, and then the camera goes up and up and up until you can see their face.
* Feet In Smoke. It starts out in the Horror territory and swiftly dives into Comedy after Jeremiah and his family learn his brother will live, which is where the episode in question ends. This is Lampshaded by the Author
* Feet of Clay, a golem turns itself in and confesses to a murder. Colon is

ecstatic when the golem also confesses to every unsolved crime in the city. Carrot demonstrates the problem with this by getting confessions to things that never happened.
* Feet of Clay (although she briefly considers Lucinda). In her case, the similarity is part of the point: "When you've made up your mind to shout out who you are to the world, it's a relief to know that you can do it in a whisper."
* Feet of Clay, a "no. 23" is "Running Screaming At People While Drunk And Trying To Cut Their Knees Off".
* Feet of Clay appears, he's cranky, groggy, half-baked and cracking up.
* Feet of Clay. A vampire over five hundred years old, he was in charge of Ankh-Morpork's heraldry. As Vimes points out, from a vampire's point of view this is much like following the pedigree of one's pets.
* Feet of Clay Because they can move much faster than one might expect, golems can communicate this way at more or less normal talking speeds, even with complex messages.
* Feet of Clay Captain Carrot is writing home and struggles to find something positive to say about Nobby, eventually settling for "is still Nobby, only more than he was."
* Feet of Clay, Carrot is teaching Angua Dwarfish; when she tries to show it off to Cheery, she accidentally says "small delightful mining tool of a feminine nature." Carrot just thinks she's incorrect, because dwarves look the same genderwise. One of the earlier books explains this.
* Feet of Clay, Cheery told Vimes that he smokes Pantweed's Slim Panatellas - not through alchemical expertise, but by reading the packet on Vimes' desk.
* Feet of Clay: Dorfl the golem comes into the Watch building partway through the book and confesses to committing the crime they had been investigating. Carrot, suspecting (correctly) that Dorfl is turning himself in to protect the real criminal, tests him by including incorrect details:
* Feet of Clay exit, but once the smoke clears we can see her running off.
* Feet of Clay!" Footnotes explain that the words in question meant "yeast bowl" and "town hall." The joke is upped when Captain Carrot, dwarf by adoption, patiently explains, "Now, now, Mr Ironcrust. We don't practice that punishment in Ankh-Morpork." with the footnote adding: Because Ankh-Morpork doesn't have a town hall.
* Feet of Clay for which he might need "a special shampoo." When one barman is informed that Nobby is a Peer, he assumes it is used in the verb sense rather than the "-of the realm" sense.
* Feet of Clay gives a rioter "a friendly smile. That was to say, her mouth was turned up at the corners and all her teeth were visible."
* Feet of Clay, his conversion remains firmly hypothetical. (Part of it being, of course, that while the co-worker in question clearly doesn't believe in the specific details, he's also clearly serious about finding out, if only for the chance to get into a reasoned debate about the subject.)
* Feet of Clay in front of Lord Downey, then say that it's a dangerous substance. When it's revealed to be sugar, Lord Downey yells "You said it was dangerous!" Vimes says "Right. Eat too much of it and see what it does to your teeth!"
* Feet of Clay is apparently consistent with usual Discworld standards of orthography.)
* Feet of Clay isn't there and be stunned by the ensuing existential crisis.
* Feet of Clay, is that this is his conception of the city of Ankh-Morpork, where millions of individual "cells" more or less function as a united whole - with Vetinari running the brain.
* Feet of Clay. It didn't take long for Cheery to point out that an arsenic spoon would dissolve in soup almost instantly.
* Feet of Clay It's still there in later books, and Moist wonders if it's some sort of symbol. It is said that 'there's always the axe' - a reminder that if somebody goes too far in a quest for power, somebody will always be there to take up the axe.
* Feet of Clay — "some villains are obliging enough to lock you in a

warehouse with enough equipment to build a fully functional armoured car".
* Feet of Clay, one character mentions that she was good at sewing, so she tried to join the Guild of Seamstresses.
* Feet of Clay on the Patrician. Taking over security at the Patrician's Palace, Vimes covers an avenue of approach to the city ruler's sickroom—the dumbwaiter—by having a heavily armed dwarf riding in it.
* Feet of Clay rats are described as sometimes breaking into the Dwarf Bread Museum, losing most of their teeth in the process. Cats often hang around, as the rats are a bit stunned after taking a bite of what is basically a slab of semi-edible concrete.
* Feet of Clay, regarding how different sizes of animal would end up after a given fall of about two stories — a spider wouldn't notice it, a mouse would walk away, etc.
* Feet of Clay: The death of a palace maid's grandmother → solving the otherwise-unsolvable poisoning of the Patrician.
* Feet of Clay, the line: "We can rebake him. We have the pottery." And they do. Subverted, the character wasn't alive to begin with or at least had no biological components. And he only got one improvement, though it was very significant: the power of speech.
* Feet of Clay, the Patrician summons Commander Vimes to his office. He notes that in the course of investigating an attempt to poison Vetinari, Vimes has managed to infuriate all the important figures in the city, and therefore he clearly has no choice but to increase the man's wages.
* Feet of Clay, the proprietor of the Dwarf Bread Museum is hit over the head with a loaf of bread (this is more serious than it sounds; dwarfs make bread to last, and not necessarily to be edible). His ghost laments to Death what a terrible waste this was... as there's now a dent in the bread's crust, and he said that since it's one of the exhibits.
* Feet of Clay there's a footnote about people with weapons named after them, and how they attract rumours that they were killed by their namesakes, beginning with the more-or-less historical Joseph Guillotin and ending with William Blunt-Instrument.
* Feet of Clay). The second is repeated arsenic poisoning of Lord Vetinari. Vimes, Angua and Cheery discuss these at a late stage of the novel, and it becomes apparent that it's surprising they actually managed to track arsenic in any meaningful way. It gets used all over the city for all kinds of things - rat poisons, paints...
* Feet of Clay, the vampire Dragon King of Arms (whose long life grants him a certain perspective on these things) reflects:
* Feet of Clay, the villain's response upon being told that his plan to poison the Patrician killed several innocents (including a child) is "Were they important?" Carrot is extremely disappointed to hear this.
* Feet of Clay, the Watch figure out that it's possible to heal a golem with spare clay and a stint inside a kiln.
* Feet of Clay they've apparently got the budget for slightly more standardised gear (Detritus is mentioned as having traded in the battle-elephant armour for something at least made for his own species) but there seems to be no rule against buying your own kit if you can afford better than standard-issue.
* Feet of Clay treasures letters he received saying "We were SURE it was the wallpaper, you bastard!"
* Feet of Clay tries to forget his troubles is drinking, but all it does is make him even more depressed. He does manage to make an awesome drunken speech (and drunken collapse) though.
* Feet of Clay when a man claims to be a good friend of the Commander of the Watch to intimidate the watchman he's talking to, who is in fact Commander Vimes. As a bonus in an earlier letter to Vimes the same man claimed to be a good friend of the Patrician, an unlikely claim to anyone who knows the Patrician. As Vimes does.
* Feet of Clay would probably keep attacking even if it became nothing more than floating dust.

* feet. She is frequently used as a classic example of a hard impact with hitting the wall, or what happens when the human body hits the absolute limit of endurance.
* feet. While not stolen from another animal, it is still a freaky thing to do.
* Fefe Dobson" centers around the shenanigans that occur at one of these facilities.
* Fefe Dobson wrote songs for an unreleased second album in 2007. Two of the songs from the project were made famous by
* Fe, Fe must ascend to its head via the trees on its body in order to learn the deers' language.
* Feferi in the process. To be fair, though, both of them are suggested to be fairly attractive in-universe.
* Feferi is one of two characters in the entire series not to be scared to death of the Noble Circle of Horrorterrors— she was raised by one, after all, so her reaction to them is basically that of a
* Feferi really doesn't understand why Jade (along with most of the readers) was so freaked out by the
* Feferi's dreamself got cut in half by Jack Noir shortly before the destruction of her session's Derse. Tavros' dreamself (on that session's Prospit, which fares no better) is soon afterward revealed to have been slaughtered in the same way.
* Fefians are blob creatures whose blood has different properties depending on what part of the body it comes from, and possess a
* Fegelein, no blood is shown at all, though the rest of the movie has lots and lots of blood.
* Fegelein. While he looks and acts human, the fact that he can survive and/or come back from just about anything, combined with how downright bizarre many of his antics are, raises some serious questions...
* feghoots. (And given him the realisation that "Where there's a whale, there's a Y".)
* Feghoots ends with him having to explain to a man that his fiancée and his best friend have just eloped. Frank attempts to explain this in several different ways, but the man's mind is just incapable of grasping the concept. Finally Frank works out that the only way he can comprehend the message is if it is expressed as a nautical metaphor.
* Feghoot who ate Bob after buying a bunch of Fresca from him. As the leader explains, "Bob tastes good with Fresca." Horrified, Steve inquires about what exactly the cannibals ate from Bob's body: "You mean you ate his eyes? His legs? His heart?" And so on. The leader explains that yes, all those body parts taste good with Fresca too. Finally:
* Feigning Intelligence: An intellectual is really a dumb person pretending to be smart.
* Feigning Intelligence: An stupid person that pretends to be smart in order to impress people & fails at it.
* feigns friendship with nearly every contestant, up until they out live their usefulness and he betrays them, he does have an unusual handle over animals.
* Fei is a personality built on top of Id and the Coward (the original personality). Id is able to access the memories of the Contact, which Fei is only able to do near the end of the game.
* Fe: In an early quest, one of the Silent Ones who stole the giant bird's eggs gets killed by a bear-like creature, then you can lure it using the bunch of berries in its cave to the main Silent encampment for an achievement. Later on, deer or other large animals may be utilized to take out Silent One patrols.
* Feist, two indie folk songs that managed to make the Top 10 in the US after appearing in iPod ads. Brazilian electro-indie band CSS' "Music is My Hot, Hot Sex" only made it to #63 after appearing in an American iPod ad, but this was still the highest charting placement by a Brazilian artist on the Billboard Hot 100 since Sergio Mendes had a top 10 hit in 1983.
* Feisty Pets, created by William Mark Corporation, is a line of cute-looking stuffed animals whose faces turn monstrous when squeezed.
* Feitan has his own creepy brand of this, as he wanted to torture Gon slowly and

held him down from behind, and combine it with how he reads books by Trevor Brown (to paraphrase from the wikipedia article, the guy draws surreal doll-fetish kiddie-torture-porn).
* Fei Yen Ver. HD. The other is Mazin Emperor G, the long-awaited upgrade to the Great Mazinger.
* Fela Kuti openly protested the Nigerian government in his music. It brought him in a lot of trouble. He was arrested several times and beaten up by soldiers who rampaged his house.
* Felarya, after all). Herbivores do exist as well, such as the duiker, but the vast majority of life forms are carnivorous.
* Felarya has this trope, with a slight twist. The world is a dimensional plane which randomly connects to a sun, switching suns at, it seems, equally random intervals. Denizens wake up now and then to find a different sun in the sky — and a different night sky once the sun goes down.
* Felarya is another fictional setting where it is rarely wise to explore such cavern mouths, since the ambush predators tend to be of sufficient size.
* Felarya you to kill you as opposed to, say, creating a wind tunnel to suck you up from over a hundred yards away. It's amazingly creative. However, if you're not a voreaphile, the sheer number and creativity of ways you can suddenly find yourself in something's gut make it scary, not sexy.
* Feli believes she is destined to be with Lemres and also becomes less than happy if anything comes between them, despite Lemres not seeing her in a romantic light.
* Felicia Day is marked by energetic smiling, bobbing, and annotating.
* Felicia Hardy's parents had their names changed: her father went from "Walter Hardy" to "John Hardesky" and Lydia Hardy had her first name changed to "Anastasia".
* Felicia has a humorous win quote against Deadpool: "No, I don't care how much catnip you have, I'm not getting into the car with you!" How you interpret this one is up to you.
* Felicia or Flora are this for a male Avatar, since when he was taken captive and locked away in a fortress, so were the two sisters. As a result they were among his only contacts as a child, and he can marry Felicia on all three routes and Flora on
* Felicia Pearson had never acted before Michael Williams saw her in a nightclub and invited her to the set to test for Snoop. Before that, she had lived much the same life, getting involved in drug dealing in her teens (which she still did even after she was on the show, until she knew she'd like doing it) and serving a prison term for a murder she insists was self-defense
* Felicia, Sorceress of Katara novella "The Last Homely House of Honeypot Bruin" there is a scene where Felicia and Benja Bruin are watching an army of ghosts walk past. Benja is scared nearly to death, Felicia makes popcorn.
* Felicity. As a result, the WB introduced an order that no young stars on their shows could make major hair changes without permission.
* Felicity as of season 6, when she adopts Oliver's son, William. Furthermore in season 7 when she has a baby of her own with Oliver.
* Felicity, a to-that-point relatively tame romantic drama about college life, the main character began to wonder whether or not she'd chosen the right man in her life. So her friend cast a spell that sent her back in time a few years. No, really.
* Felicity, Felicity is dating David, a guy that her boss, Javier, doesn't trust. When David stops by the coffee shop while Felicity and Javier are talking, Javier makes an arch excuse to walk away.
* Felicity Floo Visits the Zoo, Felicity runs around patting the animals and even shouts, "Guess who!?" to the zebra. Oddly enough, she's meant to be sick.
* Felicity Floo Visits the Zoo, Felicity seems unusually active for a flu-ridden kid as she goes around petting the animals, even saying, "Guess who!?" to the zebra at one point.
* Felicity Floo Visits the Zoo looks anywhere between two and nine. She wanders around the zoo seemingly on her own, but seeing as she's sick, maybe she wandered off without her parents noticing.

* Felicity gives it something of a twist: he's a dormitory RA and talks to the other RAs about his problems as if they're the problems of one of the students in his building, who's been asking him for help. The others aren't fooled for a second, but let him think they are.
* Felicity in which it was intimated that all the series regulars were actually trapped in a magical universe within the box.
* Felicity is surprised to learn that Laurel gardens. Laurel inwardly muses that she, and indeed most members of Team Arrow, have really never asked
* Felicity is the token black female main character and best friend of main character Felicity. While a relatively positive representation, she's isolated as a woman of color in a way contraindicated by the incredibly diverse composition of both New York City and NYU's populations.
* Felicity Jones, Felicity Jones returned to play Ethel presumably because she was now at college and didn't have to worry about her sister embarrassing her.
* Felicity Jones talks about the difficulties of working with cats on the show. It was incredibly difficult to make it look like the cats weren't trying to claw the actresses' faces off.
* Felicity Jones to boot. It's implied that her high marks and vast knowledge come from having ridiculously high standards to live up to.
* Felicity Merriman and Elizabeth Cole, and even more so in the movie.
* Felicity Smoak has admitted her distinctive blonde is dyed several times, and is seen with dark hair in a flashback to her college years.
* Felicity Smoak is hauled in for questioning after Detective Quentin Lance discovers she's been helping the Hood. On being ushered into the interrogation room, Felicity refuses to take a seat, only to meekly sit down when Quentin shuts the door loudly.
* Felicity Smoak's hair is dyed pink as a disguise from Ricardo Diaz in the Season 7 premiere of
* Felicity, the title character has been sneaking out at night wearing her chemise and some breeches she stole from Ben, her father's apprentice. When Ben walks in on her in only her chemise, they're both mortified and he has to turn around until she is finished.
* Felicity was humiliated repeatedly over the course of an entire episode over her decision to have sex with love interest Noel, including one Planned Parenthood employee's condom usage demonstration with a hilarious red plastic penis.
* Felicity was increased after production had wrapped. The original finale resolved the existing storylines and gave a brief synopsis of the characters' lives for the next two years. The extra episodes, rather than simply being written to take place and be aired before the finale, instead created a new five-episode arc set after the two year fast-forward, in which Felicity magically travels back in time to the beginning of the season in order to make different choices. The show had never included fantasy elements before, and the whole arc, while interesting, felt undeniably tacked on to an otherwise finished product.
* Felidae a cat killing off specific cat breeds that he deems 'unworthy' of existence. It's explained more thoroughly in the book.
* Felidae are perhaps the most twisted animation ever created. Those dreams are just freaky, specifically the one involving Gregor Mendel giggling demonically "EXPERIMENTS WITH PLANT HYBRIDS!" while putting on some kind of twisted marionette show using the decomposing corpses of gutted cats, with their entrails as the marionette strings.
* Felidae, "European Shorthair" is used as a synonym for "Domestic Shorthair". In the 1980s, this was commonplace. However, since then, "European Shorthair" has become known exclusively as a breed, while "Domestic Shorthair" is a fancy term for "mixed-breed/moggy cat".
* Felidae. For example, Felicity in the book is a Russian Blue, but she doesn't fit the Breed Standard in the film (being long-haired instead of short-furred).
* Felidae Francis later meets another cat but according to the books, it was a noncommittal sex-filled fling.
* Felidae, Francis says this when Bluebeard comes to his house for the first time.

* Felidae has to climb a tree. Since it's snowing in that scene, he slips on the bark and nearly falls, but he keeps climbing.
* Felidae is a 1994 animated film that had Disney-esque style but also showed cats getting decapitated, having sex, and being thrown around like puppets by a 90ft Gregor Mendel.
* Felidae is able to use a computer... but they still do normal cat things like hiss, have random sex, and, in the case of Bluebeard, urinate on things to mark their territory.
* Felidae is a crime story told from the viewpoint of a talking cat. Therefore, Preterius' ravings aren't as nutty after all.
* Felidae. It was even aired on a German TV channel which advertised it as being a children's movie; people who believed the ads were rather surprised by the gore and cat sex.
* Felidae novel has an old cat named Deep Purple believe himself to be above "such sultry things", and the same holds true in the original German dub. But the English dub kind of avoids this by Bluebeard explaining that Deep Purple was just too old to mate anymore.
* Felidae series about a cat whose owner moves to a new town. There, Francis discovers a series of mysterious murders involving the local cats.
* Felidae, when Francis is running away from some cats chasing him, he runs out on a plank balanced by a heavy sack. You can tell this plank is going to fall because it's drawn on a cel, rather than painted like the rest of the background.
* Feliks, Net & Nika and the Third Cousin is easily the scariest book in the series.
* Feliks, Net & Nika can be detected by drop of temperature they cause. It's not much - 3 degrees at most - but it's enough for main characters to track ghosts with strategically placed thermometers with Bluetooth.
* Feliks, Net & Nika, just punches through whenever he wants to enter someplace.
* Feliks, Net & Nika ones like Golem. There are dozens of AIs that work in data analysis, management or similar positions and it's just the public who don't see them too often.
* Feliks, Net & Nika series, the alternate-reality Polish Empire never invented TVs. Why? Because they project the image on *The Moon* and transmit the sound through megaphones.
* Feliks, Net & Nika. Their house is full of more or less useful gadgets, multiple functions are performed by robots, and basement is stuffed with things that don't work. Mr Polon works in government top secret tech center where he programs rockets and Feliks built huge humanoid robot called Golem when he was 15.
* Felinae subfamily, so they are big small cats, or small big ones), sometimes portrayed with rosettes and no stripes.
* Felinae, which means they are closer to domestic cats than those two.
* Felina is a lieutenant, but lacks any insignia to distinguish her from Enforcers of other ranks.
* feline. All the X series have increased the 'standard' super soldier boosts to reflexes, stamina and strength in addition.
* Fel-I.N.E. between Newt's parents finding the Engineer's bomber to the USMC's arrival.
* Feline Therapy Place For My Anxiety And I’m Starting To Wonder Where The Cats Are?
* Felinoids - the Gnactic Space Federation (a military leader is a Felinoid).
* Felipe Contepomi (Argentina), Jannie du Plessis (South Africa), and Jamie Roberts (Wales) are all qualified medical doctors. As was 1970s Welsh great JPR Williams—though in Williams' era, it wasn't all that uncommon for rugby players to be degreed professionals, as union (as opposed to
* Felix & Oscar: A New Look At The Odd Couple in the 21st century.
* Felix and Mildmay were separated as kids and raised in very different environments. Hence Felix is an arrogant, charismatic, extremely powerful wizard with the speech and bearing of an aristocrat, while Mildmay is an awkward, self-

effacing, functionally illiterate cat burglar who looks and talks like a street thug. They also have elements of
* Felix and Sunset Boulevardez aren't much better, as Felix is every bit as lazy, sexist and jerky as Oscar and Sunset does nothing but belittle and assault Felix like Trudy does to Oscar. (Unlike Oscar and Trudy, however, the show
* Felix and Sunset Boulevardez. He's short and overweight and she is a beautiful
* Felix Baumgartner) kept the record for longest freefall duration (Baumgartner was trying to break the speed record; he did so, hitting mach 1.25).
* Felix Castor, a militant and officially excommunicated group fighting the return of the undead, partly by using the undead themselves, or any other means available.
* Felix Castor: An exorcist rather than a detective by trade, but he usually ends up having to solve some mystery or another.
* Felix Castor makes frequent use of a Cossack-style greatcoat, citing the carrying capacity that's necessary for the tools of his trade as a freelance exorcist.
* Felix Colgrave's work follows this pattern, with surreal, warped figures and animation.
* Felix comes out, he mocks the Reds and Blues for buying his "charismatic mercenary with a heart of gold" act.
* Felix does this when he hears of a man who calls himself "Sharkface".
* Felix Drachner appears to be a Chekhov's Gunman who still waits to fire, but his hand is seen in dozens of places separated by miles.
* Felix favors combat knives alongside his other weapons. He uses them up close and also throws them.
* Felix Gaeta continued to serve as Baltar's presidential aide even after the Cylons arrived, in order to act as
* Felix Gomez series of novels are about a vampire who is a detective, but the drama comes mainly from the near constant danger his investigations put him in, rather than from angst. In fact, one of the plot points of the first book was Gomez recognizing that he needed to overcome the angst because it was impeding his survival.
* Felix has difficulty expressing emotions, a near-single-minded focus on swordfighting, and a self-admitted dislike of making eye contact when talking.
* Felix has no impulse control and a gigantic temper, often behaving like a mean-spirited, bratty toddler and prone to throwing tantrums when he doesn't get his way and when his pride is bruised. This probably has a lot to do with the fact he's an actual psychopath.
* Felix in Hollywood meets Chaplin in Hollywood and strikes the same pose and walks like him, all while twirling his tail like a cane.
* Felix is revealed to be this after spending Season 11 and the first half of Season 12 pretending to be a good guy. When he betrays the others, he goes on an angry rant declaring that pretending to be a good guy and that being the BGC's friend was sickening, and now they will suffer and die for forcing him to go through that.
* Felix Leiter, Bond's ally in the CIA, is almost always in this role, sometimes hints are dropped that his adventures are even more exciting than Bond's. In
* Felix Mendelssohn, and he played a pivotal role in the Bach renaissance of the early 1800s.
* Felix Mendelssohn's "Spring Song" has probably been heard and remembered more from old cartoons than from the concert hall or recordings.
* Felix, on the other hand, knows exactly how beautiful he is and frequently uses this to his advantage, but even he draws in a few unwanted admirers while he's just minding his own business, including several women (
* Felix Out of Luck (1921), a despondent Felix the Cat is trying to shoot himself with a pistol—but misses.
* Felix's '90s house hit "Don't You Want Me" gained resurgence in the UK after being featured in a famous 1997 ad for Blackcurrant Tango.
* Felix Salten enjoyed writing from the perspective of woodland beasts:
* Felix's outmatched. It also causes Locus to turn against him in the end because Locus realizes that Felix knew he couldn't cope with the trauma of war and went out

of his way to keep Locus under his control by not letting him do so. The reason for that? Locus was the better soldier.
* Felix the Cat and pokes the "reflection" with its stinger, causing the Felix suit to blow up and give the game away.
* Felix the Cat cartoon "Instant Money", Rock Bottom is trying to get into Felix's house because Professor's counterfeited money was pouring into Felix's house due to a mishap on Rock's part. Felix slams the door in his face and immediately begins barricading the door to his house. Unfortunately, he left the window open, so Rock Bottom gets inside and helps Felix build the barricade until he realizes Rock is right behind him.
* Felix the Cat cartoon "Master Cylinder Captures Poindexter", Master Cylinder has hijacked a meteor and has sent it hurtling towards Earth, with the impact site being Professor's lab and the intention being to destroy the Earth. Felix and Poindexter take the Flying Saucer to it and try to reverse its path with Poinsy's Atomic Jet Pusher, but Master Cylinder steals the device and kidnaps him, escaping and leaving Felix for dead, pinned to a rock by a detachable claw while the meteor continues hurtling towards Earth. Felix manages to break free, and ties Poindexter's flying saucer to the meteor to redirect it towards a crater and inside the moon, where it explodes harmlessly.
* Felix the Cat cartoon "Penelope the Elephant", Rock Bottom kidnaps a lost elephant from Felix that he intended to return to her Rajah for a 50,000,000 bakshee reward. Rock Bottom makes it there ahead of Felix, but to the former's shock, it turns out the reward money is worthless—50,000,000 bakshee is only worth 10 cents in American money. He's so flabbergasted at this outcome, he angrily throws the meager award aside and goes into shock, while Felix gets the last laugh.
* Felix the Cat cartoons, "Detective Thinking Hat", Felix becomes a junior G-Man and ends up tracking down and bringing in Rock Bottom.
* Felix the Cat cartoons mirrored American attitudes of this era such as Prohibition era in "Felix Finds Out" (released in 1924) and "Whys and Other Whys" (released in 1927) and flappers appearing in "Felix Strikes It Rich" (released in 1923). In some cartoons, Felix performed a rendition of the Charleston which was popular in that era.
* Felix the Cat cartoon where he and the Professor are launching themselves from a cannon:
* Felix the Cat character Vavoom was a cute little Eskimo fellow who could be called upon to make a Sonic Attack by saying his name. Walls would shatter. Mountains could be tunneled through if he said his name repeatedly.
* Felix the Cat, ends with Master Tom (Felix) gassing himself because his girlfriend has given birth to dozens of kittens.
* Felix the Cat extensively (even working on a cartoon series based on him prior to creating Felix) and realized how important it was to get this kind of expressive acting into drawings. While the cartoons do employ speech balloons for the characters to talk, a lot of the personality is conveyed through the broad, hammy poses and animation.
* Felix the Cat Felix plays this trait up even more; in the opening of "The Goose That Laid the Golden Egg", Felix is handing out gold coins by the bucketful to the local poor, thanks to the help of his golden goose and her endless supply of golden eggs. And when the goose gets kidnapped by Captain Kid, her eggs are the last thing on Felix's mind — he's genuinely concerned for her safety, and he even tries to put up a fight against the pirate before he captures her.
* Felix the Cat game, collecting 100 disembodied Felix heads will grant you an extra life.
* Felix the Cat, he never owned the rights to his own creation, and was never once recognized as the creator until very late in his life, with Felix being considered and marketed as Pat Sullivan's character—and even though Pat Sullivan claimed before his death that Otto is the owner of Felix, Sullivan's estate secured the rights to the character while Otto worked on the comics. Eventually, Otto's assistant and friend Joe Oriolo would inherit the franchise, and the franchise today is owned by his son, Don Oriolo.

* Felix the Cat in animation, in the episode "Felix the Ghost Breaker"(1923).
* Felix the Cat. In "Felix Turns the Tide", he works for (or lives with) a Deli shop owner, and joins up with the army in the same cartoon. In "Felix in Hollywood", he lives with a starving actor and eventually gets a job as an actor himself. In episodes that star Poindexter like "Felix Babysits", the Professor hires Felix as a babysitter, and in other episodes even hires him as a lab assistant. In "Stone Age Felix", he's briefly seen holding an office job, but in episodes like "Detective Thinking Hat" and "The Invisible Professor", he acts as a private detective. In an episode of Twisted Tales, Felix works as a pizza delivery boy.
* Felix the Cat is a nomad, frequently travelling all around the Earth, and he doesn't have a consistent place of residence or job in any of the series. This is especially prominent in the original silent cartoons.
* Felix the Cat is never made clear, with the ambiguity of it most notable in the Trans-Lux television series, where he is depicted as living on his own and being trusted by the Professor to look after his nephew Poindexter, but is occasionally referred to as a kid.
* Felix the Cat John Canemaker's Felix book summed up just how frugal Joe Oriolo was forced to be on the show;
* Felix the Cat limping along on merchandise as of this writing, even though the last attempt to revive the show ended in 2004.
* Felix the Cat Live! of the previous continuities, and portrays Felix the Cat in live action costume.
* Felix the Cat — Oldest and longest running animated cartoons series. 182 animated theatrical shorts since 1919, a 1950s TV series and one 1992 animated feature film.
* Felix the Cat: One of the oldest, most iconic and enduring cartoon characters of all time. Yet, how many people under 30 have ever seen one of his cartoons of the silent era? Apart from that: how many people could actually tell you anything about Felix's personality, or his supporting cast? The reason the series even remains known is simply by the power of inertia since the series is so firmly rooted in the public consciousness and animation culture.
* Felix the Cat reboot announced in 2013 was meant to do this for the franchise, albeit while mixing in Flash elements. It ended up canned for unknown reasons.
* Felix the Cat robot who lives on the moon, and the occasional encounter with friendly aliens.
* Felix the Cat short "Felix Saves The Day" has characters running up real buildings. It also features real shots of trains and people watching baseball.
* Felix the Cat shorts have sausage strings in them, as well as anthropomorphic sausages.
* Felix the Cat technique and has inspired the style of many cartoons after their debut in 1919.
* Felix the Cat: The Movie—the Duke didn't have access to the Dimensporter technology that allowed Felix to travel into the dimension, so how could he have possibly known about or seen the Master Cylinder in Felix's universe? It's particularly glaring as the writers could have just as easily not had an alternate universe at all and, if they even felt the need to explain "Oriana" in the first place, simply had it be a different country which Felix traveled to.
* Felix the Cat: The Movie. Felix believes that it was the power of good in the book that did the job.
* Felix the Cat: The Movie for the army, and it reacted adversary to the book's gold binding. Felix believes there may have been more to it than that.
* Felix the Cat: The Movie has Felix use his magic bag of tricks to hide from some foxes, only for the foxes to mark their territory on Felix's bag. While no urine is visible, it's obvious what the foxes were doing because they hike their legs near the bag and Felix is seen angrily wiping his bag when the foxes leave.
* Felix the Cat: The Movie , the Duke used floating cubes with spotlights shining out of them as a sort of observation device to support his army of mechanized cylinders.

* Felix the Cat: The Movie when you realize that Felix the Cat Productions Inc. just happens to be located in New Jersey. Rural New Jersey, no less.
* Felix the Cat the problems with the movie are present in the first two minutes (hyperactive animation, too much noise, bad lip synching, and bad sound mixing drowning out half the dialogue):
* Felix the Fish, the mascot of Big Fish Games, was concealed in one of the
* Felix. Then Tucker decides to have his team 'capture' Felix to prove they're ready for a rescue mission.
* Felix turns out to be a case of this, with false compliments designed to twist the knife.
* Felix Unger was a minor character in Neil Simon's play "Come Blow Your Horn" before becoming half of
* Felix, who we thought was a good guy, is not only more psychotic than Locus, but he is on the same side as him (that is to say, neither the Federation or the New Republic).
* "Feliz Navidad". Dear god, "Feliz Navidad". The entire song is composed of sixteen words repeated ad nauseam.
* Fell Asleep Crying: A character cries for long enough to fall asleep.
* Fell Asleep Crying: A character cries from loneliness long enough to fall asleep.
* Fell Asleep Crying: Being so sad, depressed and lonely that crying themselves to sleep is the only thing to do. Crying and sleep may soothe them.
* Fell Asleep Standing Up: An exhausted character falls asleep standing up, yet doesn't fall down.
* Fellbats are "small" (bird of prey-sized), expendable, and attack in large groups, used to harass and "tarpit" units.
* fell down dead. No one present seemed confused or even surprised by this, including the guy who's studying to be a doctor. Apparently, in their universe, this is normal cardiac behavior.
* Fell dropped a piece of organic tomato into a victim during the autopsy, took it out and ate it despite Fell's repeated assertions that he would shoot him if he did so. The Coroner just replies that it was organic and he'd have to go out of the city to get another one.
* Fell. Fell is horrified, but the coroner just says that because it was an organic tomato he'd have to go out of the city to get a new one.
* fell from the ninth floor of a building as a baby in spite of it all.
* Fell guy putting razors into grocery produce was probably dangerous with a banana in his hand.
* Fellini's Casanova) experiences when having sex. It wasn't until Fellini shot the scene of Casanova and the nun that he began to sympathize with Casanova's inability to love, giving him the character of the mechanical doll and the dream ending.
* Fellini was reacting to this by emphasizing the personal and incorporating psychological imagery influenced by Jung. In 8 1/2, a neorealist repeatedly derides the Fellini stand-in for talking about women rather than social problems.
* Fell in Love With a Girl 8 Years Younger, a story about two co-workers with an age gap. Currently on hiatus.
* fell into despair, which allowed the Daemon-sword to fully possess him, completing the former hero’s fall to Chaos.
* fell into the cockpit, but continued to fight of his own free will as a part of the military afterwards, and is only 16 in the sequel.
* fell into the CORE and was scattered across time and space, with nobody being aware of his presence afterwards. Even those who knew about him (except perhaps Sans) were erased. Only data-miners have been able to find out about him in a complicated Alternate Reality Game
* fell mood will murder other dwarves to make artifacts from them, including dwarf bone armor. Similarly, immigrant dwarves might arrive with jewelry made from the bones of creatures they've killed.
* Fell Off the Back of a Truck: Stealing something or buying something stolen and claiming it fell off a truck.
* Fell Off the Back of a Truck: The law assumes that most reasonable people would

raise an eyebrow at items purchased far under market value, or under surreptitious circumstances. If you had reason to believe that something was stolen, and went ahead with the purchase anyways, "I didn't know it was stolen" would not be a successful defense.
* fell off when the holes rusted out, often before the car was even ten years old.
* fell on his trumpet between sets, bending the horn, and Gillespie had no choice but to continue the show as-is. However Gillespie so enjoyed the unique sound that resulted, that he commissioned the Martin Band Instrument Company to have one professionally made in this configuration, and played on "bent trumpets" by a number of different manufacturers for the rest of his life. Although uncommon, there are still manufactuers making "bent trumpets" to day.
* fell out of the sky and smacked Pearl's head into his armor, giving him a nosebleed. Pearl's response? Panicking and lighting his armor on fire. (Based on the crew's remarks, Pearl has in fact been injured a number of times — but he flips out the same way each time and apparently has no lasting memory of the episodes.)
* Fellow Ala Iridia member Overmaster also has this problem having problems of getting around to
* Fellow Avenger Thor as well, in contrast to the usually clean shaven comics counterpart.
* Fellow comic book author Edgar P. Jacobs died while working on the second part of "Professor Sató's Three Formulae", the last volume of his
* Fellow Dahar Masters Kang and Koloth — with the help of Jadzia Dax — defeat the albino's army with little effort in
* Fellow Hall-of-Famer Steve Yzerman. He was the captain of the Detroit Red Wings for 20 years (a record), led them to 3 Stanley Cup championships and his jersey was retired
* Fellow house robot Shunt would find itself humiliated further, getting itself knocked out by Tentoumushi, which sawed off Shunt's weapon and rendered it unable to move. It is thus far the only house robot to fall to a competitor lighter than the heavyweight class.
* Fellow Man of a father-in-law, and she is pushed so far by him that she eventually chops him down. After that, she proceeds to chopping firewood.
* Fellow New York station WPIX used to have their own holiday tradition as well, running 12 to upwards of 25 hours of
* Fellow officers at the LAPD didn't think much of traffic cop William Earnest Leasure, so much so that he was nicknamed "Mild Bill".
* Fellow professor and friend Larry Fleinhardt once called him "a talented theoretician with an ego problem."
* Fellow punk Nadine gives one of her proudest middle fingers to Finn after one of his usual bouts of
* Fellowship, and any of their Elf-made weapons stun non-elves with electricity instead of burning them.
* Fellowship dwarves who come equipped with powerful but dangerous explosives), and Stoneborn (naturally-tough dwarves who can render themselves immovable as long as they're standing on solid ground).
* Fellowship everyone is. Harry objects to not being assigned Gandalf, until it is explained that Sam is the real hero of the story. And there's a throwaway line about a certain person being Boromir—said person later betraying the group.
* Fellowship killed. If by 'killed', you mean turned-into-a-giant-flaming-evil-red-eyeball, then SURE, you betcha he was 'killed'!"
* Fellowship of the Raven, Ireena finds herself totally distracted by Ezalor, a Sun Monk who never wears a shirt. Only one member of her party managed to notice that during their first conversation her gaze was locked fully on his bare chest and abs.
* Fellowship of the Raven Ivan and Riki, with Yevgeny intentionally choosing this method of death due to how painful it is.
* Fellowship of the Raven. Strahd sees through it in an instant and tears the Baron's heart out before crushing it and feeding his body to his vampire spawn.

* Fellowship of the Raven was of this type, amounting to Groucho Marx glasses on what was still obviously a humanoid dragon, but after some assistance from her boyfriend Ivan the second attempt was actually pretty convincing.
* Fellowship Of The Ring. Gandalf observed "Then it was late in coming". (Worth noting since he also has prophetic dreams.)
* Fellowship Of The White Star event "Web of Lies" has a creepy cat lady whose pets are cat and dog-sized spiders that act like cats and dogs. Hilariously creepy.
* Fellowship seekers enjoy the camaraderie among both the characters and the players themselves. They enjoy working together as a team, getting together with friends, and the feeling of being part of something larger than oneself. Their fun can be ruined by secrets, backstabbing, or anything that turns party members against each other.
* Fellowship, the "Finish Them" move covers all ways of incapacitating an enemy, including using Wisdom to show an enemy the error of their ways and forge a Bond with them, making them an ally.
* Fellowship: The Heir playbook represents a heroic noble who has joined the fight to defeat the Overlord. Born leaders, their core stat is Wisdom and they have the ability to negotiate for free room and board from the rulers of other lands, and to order around many types of non-hostile NPCs (as long as you don't endanger them with your orders). They gain other abilities, depending on whether they come from a kingdom of Great Builders (allowing them to analyze architecture and engineering to find out how to fix or sabotage it), a Lost Line of Kings (allowing them to reroll one die once per scene), Stalwart Defenders (making it easier for them to Overcome powerful enemies, or attacks that threaten someone they have strong Bonds with), or Forgotten Lands (they gain a unique ability that they can temporarily sacrifice to avoid being wounded).
* Fellow Spider-Man villain Mr. Negative feels no one can approach him when it comes to evil
* Fellow superhero Purple Quetzal also asks her if she's awake in Spanish earlier in the story.
* Fellow super-soldier Bucky/the Winter Soldier also possesses these skills, and uses them to mentor
* Fellow Tobacco company Lambert and Butler preferred to advertise with magazine ads and posters featuring stock photos of two men talking to each other with speech bubbles. As a result of the 2003 ban, they released
* Fellow Travelers: Tim and Fuller's romance is the center of the book.
* Fellow winners Kisha & Jen get lost behind all the big personalities in Unfinished Business, and only get snippets of airtime prior to the last four legs.
* Fellow X-character Nathan Christopher Summers is sent into the future as a baby and later comes back (roughly the same age as his grandfather) as
* Fell Seal: Arbiter's Mark’s Holy Magic as a secondary skillset.
* Fell Seal: Arbiter's Mark, a late-game boss can use teleportation magic to warp one of your units into another unit’s space, killing the latter and heavily damaging the former.
* Fell Seal: Arbiter's Mark, axes are the strongest type of one-handed melee weapon, but they inflict penalties to the wielder’s Defense.
* Fell Seal: Arbiter's Mark that the player can recruit into their party.
* Fell Seal: Arbiter's Mark). There’s also the Reaver class’s Bloodlust passive, which makes them hit harder as their health gets lower.
* Fell Seal: Arbiter's Mark. The secret Lich class can do the same thing.
* Fell Seal: Arbiter's Mark: The secret Vessel class specializes in summoning powerful magical beings for attack and defense. Other classes have the various “Locus” spells, which conjure an elemental creature to attack a single target.
* Fell Seal: Arbiter's Mark which includes a playable cameo from Black Sigil's hero, Kairu.
* Fell Seal: Arbiter's Mark you can encounter giant beetles called Bzzerks on some maps.
* Felonious. No one calls him that. Not even his daughters, his wife, or his mother

(who calls him "Son"). In the third film, his twin brother Dru also calls him "Gru", even though that's Dru's last name as well (making him Dru Gru).
* "Felonius Monk" was based on the massacre of several monks at a Buddhist temple in Arizona during a robbery in 1991.
* Felony Misdemeanor: An insignificant misdeed is treated as if it were a serious crime.
* Felony Misdemeanor: It doesn't matter if what you're doing doesn't seem like it's evil, you're still a horrible person.
* Felony Misdemeanors, causing the jail to expand in size. When they arrest Man Ray and an old woman he was talking to at the laundromat, the jail explodes.
* Felony Misdemeanor: That minor infraction you committed was worthy of harsh consequences.
* Felony Misdemeanor: Their reaction to a minor offense is ridiculously excessive.
* Felony Misdemeanor: Treating a minor offense as if it were an inexcusably horrid crime.
* Felony Misdemeanor: Treating a relatively harmless misdeed as if it were a serious crime.
* Felony Misdemeanor, when a mild offense is punished or treated with severity.
* Felony Misdemeanor: When a minor crime is treated like a serious offense.
* Felony Misdemeanor: When something that isn't really that big a deal is treated as utterly unforgivable, although the punisher may cross it for real if he takes it too far.
* Felony Murder, fleeing to his home country in the middle of his trial, with the cooperation of his country's embassy. When confronted, the ambassador points out that the clan leader has been arrested in his native country, and the New York DA's office has done his country a great favor by bringing forward all that evidence, which could not be gathered in his native land due to his political power, but now that they have absolute proof of his guilt, and they can charge him with drug trafficking, which, unlike New York's Felony Murder law, allows for the death penalty.
* Felony Murder: Laws which deem someone's death caused by another person committing a felony crime to be first-degree murder.
* felony murder So, killing witnesses or intervening cops after someone dies, are crimes of no significance to the criminals, since they're already eligible for the maximum anyway. This is one of the reasons such laws are criticized (and have been abolished in certain jurisdictions), plus the fact that it's held to negate individual responsibility (for instance, assuming one member of a gang kills someone when it isn't part of their overall plan, or it's accidental as mentioned earlier). In some particularly egregious cases there have been felony murder convictions for the fact that a cop killed one of the perpetrators while the heist went down.
* Fel Orcs, who achieved their state by drinking a demon's blood, have glowing red eyes.
* fel reavers and souls. The Legion's machines are based off ancient Eredar technology, or Nathrezim technology, so non-fel versions of most machines also exist. The Exodar, Arcatraz, Mechanaar, Botanica, Vindicaar and Netherlight Temple (and Turlayon's ship) are also crammed chock full of magitech gadgets.
* Felse Investigates, which is a solo outing for George's wife Bunty, who unravels a criminal conspiracy after accidentally discovering a corpse in a car boot.
* Felsic Current, reveals that it's actually the character of Viakel himself who does not know the difference between the two words, being a relative neophyte to machinery.
* Felt.) Among other things, he once fired a drummer for having curly hair.
* Felt: Former guitarist Maurice Deebank revealed he is autistic in a 2018 interview.
* felt her relatives were much too selfish and greedy to inherit her fortune.
* Female Agents: Eddy is given the choice of helping the operatives or being shot on the spot. He immediately agrees to help.
* Female Agents: Louise. She is introduced methodically killing several German

soldiers as one and later tries to kill Heindrich this way too.
* Female Agents: The last scene is Louise lighting candles in a church for the fallen, as she had promised earlier.
* Female Agents was inspired by actual female operatives with the SOE, especially Lise Villameur (née De Baissac), on whom Louise is based.
* Female Agents work of wireless operator (because it didn't look suspicious for a woman to stay at home all day, whereas a man would be out working) or courier (because women were less likely to be searched, or rounded up for forced labour in Germany).
* Female Angel, Male Demon: Angels are often portrayed as females because positive attributes such as kindness, refinement, and mercy are associated with femininity.
* Female Angel, Male Demon: Demons are representations of unexamined evil. Why are they evil? No reason, just made that way. Due to this, they are often portrayed as male. Also, note that this falls into the trap that negative emotions like anger are inherently masculine.
* Female Angel, Male Demon: The tendency for angels to be female and demons male when paired together
* Female Angel, Male DemonWhen works assign gender roles to these sides.
* Female: Atarka (red and green), Dromoka (green and white), Kolaghan (black and red)
* Female Australian Wood Moths are so large (for a moth—wingspan up to 25cm/ 9.8", weight of 30g/1oz) that flying is difficult. They have
* Female bears and tigers: if cubs are attacked, they fight at +2 to hit.
* female bodyguards) hanging bound and gagged from the ceiling after being subdued by the Judge.
* Female bronies are sometimes called "pegasisters". This term also predates
* Female Buus unlike their male counterparts have voluptuous builds and way cuter than the fat male-Buu, they're so attractive they give the female Saiyans a run for their money and males in game express their attraction towards them.
* Female cats are this to their humans. The reason they bring their owners dead or half-dead animals? That's what cat mothers do to their kittens to feed them and teach them to hunt. The cat is trying to raise her human.
* Female children are often aborted in some regions of China and northern India, depending on local culture. Where this is impossible, such as in some of China's rural regions, baby girls are sometimes simply murdered after they are born. There are laws against this on the books, but they are either not enforced very rigidly or ineffective at curbing this. The cause is social mores that make male children more valuable — "girl babies don't count." The
* Female children are rare among the Nac Mac Feegle. These girls become Keldas, leaders of Nac Mac Feegle clans. The fact they're a lot smarter (and saner) than most of the men helps too.
* female clones guest (who was a master craftsman when the Tribunal ascended some 3,000+ years ago) is up for debate.
* Female: Corporate boss Allison aggressively pursues her employee, engineer Jim Drake. He kind of turns a blind eye for a while but when she keeps pushing he finally says "I'm a man, and I prefer to do my own hunting."
* Female Deng Yuting as males Doctor H. (in all seasons besides Season 6), Kalo, Lightbulb Jr., and Lele.
* Female dreaming of male example: Nanoha dreams of Yuuno via telepathy in the very first episode of
* female driver ever lived. Has done around 20,000 laps of the Nürburgring Nordschleife, and crashed "many times, can't count actually". This being a circuit that's 13 miles around which there continues to be fatalities on a yearly basis. On Top Gear she blew past motorbikes and sports cars...in a VAN. Which halfway around the lap "got no more ABS". And they say Danica Patrick is making headlines...
* Female Dwarves are actually quite common in dwarf settlements and for the most part look like short, stout women of average attractiveness. However, among the player base they are quite rare (perhaps in part due to the fact they are just plain looking compared to other races). Lore mentions bearded women that are

considered quite beautiful among dwarves, however, none are shown in game.
* Female example (her title ought to be Bloody Wonder): Nellie Lovett, from
* female example, Kim comments that she wanted Ox to tune down his affections for her.
* Female examples include Darcy and Jane ogling Clint's arms (the latter's in a relationship, not dead), Carol developing
* Female example: the song "Sovay", which provides the page quote, in which a woman tests her lover by dressing as a
* Female Exile, and still has a cross of hero-worship and romantic feelings when it comes to the Exile...
* Female fashion magazines and general female magazines feature enough sexily dressed women (especially in the ads) and attractive female celebrities to attract straight men who usually won't admit to flipping through them to ogle all the hot women in them.
* female fetuses have been aborted more often than males and newborn girls are sometimes killed or abandoned. This is especially common in rural areas where traditional social norms may be the only safety net for the elderly. It is significantly less common in wealthier urban areas, where women have much greater access to education and jobs and their contribution to the household is viewed more equitably. The rural shortage of women has made it increasingly difficult for young men to find wives and has sometimes resulted in internal and international human trafficking because families are willing to pay substantial sums for a bride, consenting or not. The Chinese government has been working to raise the status of female children and end these practices but attitudes change more slowly than laws.
* female form wore a girl's uniform as a disguise. He only wore a uniform normally in flashbacks, when he was at his old boys-only junior high.
* Female Gaze: Arousing female audiences by focusing the camera on male anatomy.
* Female Gaze: Arousing female audiences by focusing the camera on the male anatomy.
* Female Gaze: Scenes where the camera focuses on the male anatomy to entice female viewers.
* Female Gaze: The passive attributes of men are emphasized for the pleasure of (usually heterosexual female) viewers. This allows for male characters having some physical sexual value.
* Female General and Eldest Princess is an original Chinese web serial novel set in a fictionalized and embellished version of Tang Dynasty China.
* Female General and Eldest Princess with a good wife. When she rejects them outright and instructs her servants to ignore them, the matchmaker guild takes offense and starts spreading unsavory rumors about her, which are only cleared when Wangyue lets slip that her heart already belongs to an Imperial Princess.
* Female genital mutilation of potential complications, and every last one is horrific) is exceedingly common, and underreported. The idea is that the parts removed are 'male' and a girl is cleansed by their removal.
* female had to say it for him. So are quite a few of his fans, which is why "Benaddicts", "Cumberbabes" and "Cumbercookies" (since all together they make a "Cumberbatch") are becoming increasingly popular.
* Female harpy eagles catch live prey like sloths and monkeys up to 20 pounds. Theoretically they could carry off a small child, but there's no record of them actually attacking humans.
* Female!Hawke has a moment like this if you're romancing Anders: you can tell him that, if the Templars come for him, they'll have to go through you first.
* Female hosts of Texas Tummy Twisters, a repulsive parasite that takes root in the stomach and creates a significantly distended gut, can often be mistaken as being simply pregnant, and sometimes may be compelled to claim that they are by their parasite in order to disguise what's actually happening.
* Female hysteria The trope became discredited after women finally got fed up with being told that their problems were all either "in their heads" or made up for attention, and faded from fiction at about the same time.
* Female Igors, known as Igorinas, are every bit as svelte and beautiful as their

male counterparts are deformed, hunchbacked, and misshapen. Handwaved by the fact that Igors of both sexes are crazy-talented at all forms of surgery, including cosmetic, and as Igors are devoted followers of "tradithion" it is probably that male Igors remain ugly because male assistants to
* female." Later books have gone into some detail about the smaller and more decorated, but still functional, pickaxes carried by openly female dwarfs, as though they might do a spot of mining on the way to a soirée.
* Female lead Rin Tohsaka is like this as a consequence of her Magus upbringing, though it's not nearly as severe as most examples. She admits to
* female-led is acknowledged through a bust with his likeness, as well as a minor appearance by his son Daniel Ramis.
* Female Liu Hongyun as males Happy S., Careful S. (post-Season 1), Doctor H. (in Season 6), and Headmaster Tele.
* female mercenaries who are dressed up in all-black suits and gloves.
* Female Minks e.g Wanda and Carrot are more curvaceous and humanoid than the male Minks but can still be dangerous beasts when the time calls for it.
* Female Misogynist: A woman who hates on other women/buys into sexist attitudes about her gender.
* Female Misogynist: I dislike women, despite having XX chromosomes as well.
* Female Misogynist: There are some tomboys who antagonize feminine women.
* Female monks like Avatar Yangchen only shave the front half of their head to show their forehead tattoos, still awesome.
* Female names usually begin with T followed by an apostrophe: examples include T'Pol, T'Pau, T'Les, T'Lar, T'Planahath. Notable exceptions include: Saavik
* Female Nerds still occasionally feel treated like yetis or fetishized in unrealistic ways by their male counterparts.
* female night-bombing corps flying old wood-and-canvas biplanes. The engines would be turned off while over enemy lines, adding a healthy dose of paranoia to the stress of being bombed.
* female ninja bodyguard of the mob boss. As she lunges at you, you simply toss a heavy object at her, at which point she falls down and you can just walk up to her and finish her off.
* Female Ocampa are shown to give birth from their backs, which means their genitals are located on their backs.
* Female Ocampa go through "Elogium", a puberty-like stage where they can successfully conceive a child (in a growth on their back), but it only happens once. Also leads to a very large bit of
* Female-oriented franchises usually play this trope straight, with loads of merchandises ranging from decorative keychains, apparels, figures, to housewares. This also applies to male-oriented series with a sizeable
* female over the various problems she has, including a private but deep-down fear that she will "go bad" again and try to kill John. In fact, this fear and the conflict in her programming is a defining element of her character. It is mostly internalized and she doesn't talk about it, except very occasionally when she contemplates issues about suicide, or when she asks Sarah if she's like a bomb waiting to go off.
* Female Perversions, portrayed as a quite natural counter-reaction to her desperately oversexualized aunt's creepiness.
* Female Perversions, the main character's sister gets arrested for shoplifting. She can't pay the fine/bail, so she is kept in jail. Because of this, she risks missing getting her doctorate, tarnishing her academic career.
* female pirates than them, especially her second husband whom is not really heard from after the marriage. Presumably, he survived the wedding night, but...
* Female player characters can seduce a number of female bar patrons for blood, and they could also have sex with a female vampire character, just as the male player characters could. There's a single instance in the early part of the game where male vampires could seduce a male NPC for blood, but you had to have a fairly high charisma stat early on for it to work. Also, if your charisma is high enough, the prostitutes give quite the discount to female PCs, with the logic "Mm, I don't

get to do women often..."
* female-presenting sexless alien is a frequent victim of slapstick. Pearl and Garnet get it occasionally as well, though not as much as Amethyst.
* Female Prisoner Scorpion, all in black, which contrives to be very feminine without being overtly sexy.
* Female Prisoner Scorpion is belted, with a large, ornate gold buckle.
* Female Prisoner Scorpion series, is very quiet. She says little in the first film (one of her lines is "you talk too much"), but the second is her most sparse; she's onscreen for most of the 92 minute runtime, but says only eight words across two sentences. By contrast, Yuki in the first film seems to be literally mute.
* Female rangers, though as of 2015 there have been female graduates from the training.
* Female recruits usually don't go through this, though a few military academies, while not
* Female reindeer are often portrayed as being antlerless, while males retain theirs all-year long. deer species to have that quality), and that only castrated males will retain their antlers even in the winter.
* female releases the Mu Aqua, you can clearly see a clash of pink and blue.
* female sailor to same sailor admiring herself after choosing her wedding dress.
* Females Are More Innocent, and their evil actions will be blamed on a male villain who “made her do it”. Truly evil female characters are incredibly rare compared to truly evil male ones.
* Females Are More Innocent: Females are portrayed as being more innocent than males.
* Female sexuality: Since the dawn of time, humans have been cycling through the ideas that
* Females. Girls in the trilogies shape the actions of others and the stories also takes a look at how girls get an unfair treatment in the Pokémon world. In fact,
* Female Shakesperian characters are mostly played by Adam Long. This is
* female singer, does quite a few covers of Len songs, leading to a recursive example of this trope.
* "Females is Fickle" — There's a reason the cartoon in question is called that. Olive's pet goldfish jumps in the sea, and she makes Popeye go in after him. After he goes through a lot of trouble to get him back, Olive decides the fish would be happier freed and tosses him back in the sea. Enraged, Popeye throws her into the sea as well. Females is fickle, indeed.
* Female soldiers are rare, but still present in the game though mostly on the Stormcloak side, while the Imperial Legion has Legate Rikke as its most prominent female member. There also plenty of female bandits and Forsworn.
* Female Space Marines) due to a supplement which states that Space Marines are explicitly all-male.
* Female spiders of certain species prefer to mate with males they are already familiar with. Some particular orb weaver males will find an immature female and move in next door, so to speak, in an attempt to pull this off.
* Females reproduce by splitting into four children; two sets of male-female twins respectively referred to as cos, who are genetically ideal mates for each other. The children who are not cos to each other are referred to as brothers and sisters, but the same terms are generally not used to refer to cos, probably to avoid implying that the relationship between cos is
* female superior or someone who is notably older. So you may just be trying to be polite, but accidentally imply they seem far older than they are!
* Female tank crews for nations even though only the Soviets used them in real life.
* Female Tars: Women Aboard Ship in the Age of Sail by Suzanne J. Stark gives several examples of women who joined the British Royal Navy in disguise (as well as exposing a few frauds). Includes a detailed autobiography of Mary Lacy, who served as a seaman and shipwright for twelve years.
* female, though in the original texts they are always referred to as male,

possibly just for convenience sake because there is no clear reason why they would even have a gender anyway. Except in the specific case where they are mentioned that one group of angels has "the loins of men" and who took "wives of the daughters of man." Beyond that, no other mention is made or needed, and several angels are described in ways that are decidedly not humanoid.
* Female Titan's identity being Annie Leonhart was predicted by the majority of the audience due to
* Female!Tom Riddle/Voldemort and Female!Draco crop up sometimes, though not as often.
* Female Tourists, who are captured into slavery: "You may well be annoyed to find how little your new owner pays for you, but this is the Management's way of protecting you from rape, beatings, and other hardships."
* Female Transfiguration 101: Ginny once knocks Ron off of his broom because he would not stop complaining about her and Hermione making out in public all of the time.
* Female Tropes: How the Gender Dynamic Metatropes manifest for female characters.
* Female Twi'leks are almost all slender and attractive... and given to wearing next to nothing when out in the galaxy even though they're from a world that's hotter than Tatooine. Even the ones who
* Female Unfezant are claimed to be better flyers than their male counterparts (possibly as a nod to how the long flashy tails of some real male pheasants
* Female versions are much rarer, but there are a few: Doll-i'-the-Grass (Denmark), Nàng Út (Vietnam), Maria como un Ajo (Spain), Finger-joint (Egypt), and a Cinderella figure named Ditu Migniulellu (Corsica).
* female versions of the main DCU's heroes and villains, and male versions of its heroines and villainesses. This is a world where the Amazons of Themyscira had greater influence on society's advancement, to the point that women were given more freedom and helped shape Earth's future.
* Female V has Judy. She's the only romance option for female V you meet in the game's story and have to work with in multiple missions. Johnny will mention that he can see "the way (Judy) is looking at (female V)" and that it makes V feel all "mushy inside" (Johnny and V share a body, so he can feel their feelings). Judy also has the most content post her romance arc, often texting V and sending her trinkets for her apartment. She's also the only love intrest, other than Panam,
* Female villains in fairy tales often fit this trope. The wicked stepsisters in "
* Female Voice 1, going by the number of movie references, is evidently a film buff. She's basically living out a gangster version of
* female warriors records that the Amazons eventually met their match in a band of Scythians, removing the need for this custom.
* female werewolf pack, who transform into their true forms by peeling off their human skins.
* female when she tries to drive Igor's huge delivery truck. Igor has to get a member of the camera crew to drive it.
* female will let you choose who gets to be with you at the end, for both genders.
* Female wrestlers in general are a case of attempts to exploit this trope working to the detriment of the medium. In many cases, pro wrestling companies, recognizing that many guys were watching the women's matches for the sexy catfights, have dropped all pretense of their women's divisions being about athletic competition in order to use them to supply as much
* Female Zoras are generally depicted with mammaries. It's hard to miss in Ruto's
* Fem Bot female alter-ego for use with an image inducer or in Tony Stark's new virtual reality program.
* Fembot, female (piloted) robots have breasts, which are used as giant missiles and gatling guns respectively.
* fembot give a man an atomic wedgie before beating him up for smudging the windows of the car on display.
* fembot prior to EDI transferring, Trainor expresses her desire to have sex with Edi's voice.
* fembots count. As do female full body cyborgs, including the lead character, The

Major (Motoko Kusanagi). The difference being that the former are still AIs which aren't truly intelligent, while full body cyborgs are basically human brains in android or gynoid (or, in at least once case, a box on wheels) bodies. The tachikoma also share a lot of the tropes associated with the archetype, despite the fact that they have tanks for bodies.
* Fem Bots, while the movie has them all as motorcycles they are individualized with different unicycle-themed robot modes and weapons.
* Femen is known for having their women activists appear bare chested with slogans written over their bodies. Naturally the nudity attracts much attention in the press.
* Femforce, a comic book superheroine named Thunderfox is brought into the regular world, and became a Femforce member for several issues.
* Femforce (and ally of the Nazis) Fungi launches a poison gas attack on an army camp just outside of Washington, D.C., using toxic spores known as 'Green Mist'. It is this attack that brings the founding members of Femforce together for the first time.
* Femforce, Dragonfly and Jet Girl both wear skintight bodysuits. Dragonfly's is black with a white chest insignia, while Jet Girl's is gold, which limits its usefulness for actual stealth.
* Femforce is as much known for how little clothing she wears as she is for her alliances with various dark gods and demons.
* Femforce officer who is sent back in time to the 21st century to prevent the corruption that is taking over planets in her time from ever beginning.
* Femforce: Stormy Tempest is an Interplanetary Police Officer sent from the 26th century to the present to prevent a corrupt system from taking over planets.
* Femforce that gave Joan 'Ms. Victory' Wayne her powers also caused her to stop aging at 27. As a result, she appears to be about the same age as her daughter Jennifer 'Rad' Burke.
* Feminine Intuition is that men dismiss women's equal (if not superior) intelligence as mere "intuition".
* Feminine Intuition": While the chief robopsychologist and a prototype robot with important information about nearby habitable exoplanets are being transported via aircraft, they're hit by a meteorite. Because of how improbable it is, the characters speculate as to whether some higher intelligence orchestrated the meteor strike to keep Earth from learning about their alien neighbors. The odds against this happening are so astronomically high, they're compared to the odds of guessing the location of exoplanets to colonize in the first place.
* Feminine Mother, Tomboyish Daughter: A mother is more traditionally feminine than her daughter, which may cause conflict.
* Feminine Mother, Tomboyish Daughter: A tomboy has a conventionally feminine mother.
* Feminine personifications of countries and cities were especially popular in the 19th century. Here are a few examples from Germany:
* feminine. This doesn't stop him from being attracted to her once she grows her hair out though. By high school, the attraction disappeared over time as Nitori became increasingly masculine looking.
* Feminine Women Can Cook: Girly girls really know their way around the kitchen.
* Feminine Women Can Cook: Making food is women's only acceptable proactive ability, often suggested to be somehow innate to femininity.
* Feminine Women Can Cook: Women have to be able to cook to prove they are "feminine".
* Feminine Women: The woman is a supporter of equal rights for women and sees no reason why that should stop her from displaying feminine traits.
* Femininity Failure: An unfeminine character who tries to be feminine but can't pull it off.
* Feministas adopt one that involves a two-fisted double-breast-pat-and-salute.
* Feminist Fantasy: A story which is about a woman, or women in general, who are major characters making things happen of their own agency and volition and saving the day under their own power (likely literal "superpower").

* Feminist Fantasy: Fantasy and sci-fi stories with strong female protagonists, often exploring themes around female empowerment and equality etc.
* Feminist Fantasy was even established to cover all these types of things.
* Feminist Frequency at play where Anita appeared to have taken footage from other YouTubers without crediting them. Although she released another series of videos in 2016, she soon ended the project and it was rebranded as a non-profit podcast. She later revealed that the corporate sponsorship they had benefited from in the beginning had lost interest and withdrawn their funding.
* Feminist Frequency in the videos). In another interview, she was asked about those who criticized her work, and simply responded with "I don't have critics; I just have harassers".
* Feminist Frequency: People complaining about the videos brought more attention to what was otherwise a small video series covering widely available discussions.
* Feminist Frequency talks about this sort of character design in the episode "Ms. Male Character".
* Feminist Frequency that Anita's arguments also seem to back-handedly slut shame and generalize all sex workers as either victims or objects.
* Feminist Frequency the Smurfette Principle, and even has a few additional complaints to make in relation to it.
* Feminist Frequency: Web series analyzing the representation of women in media. And inspired by this very website.
* Femme Fatale (2002) but rather to an altercation between Bardo and a hoodlum who takes too many liberties with what she wishes to offer him. Pool plays a central role there, with the cue as a weapon and the pool table as the pedestal both for a striptease gone wrong and where the reward-sex takes place.
* Femme Fatale: A beautiful yet scheming woman who knows how to exploit her good looks against gullible men.
* Femme Fatale and had all the men literally fighting for and throwing themselves on her.
* Femme Fatale: A sultry, highly attractive woman who tries to seduce someone's love interest.
* Femme Fatale (blue being the color of Thatcher's Conservative Party).
* Femme Fatale, for example) were less unreliable and more faithful to the Maximals.
* Femme Fatale - indicating that it was already a trope by the time the Epic was written down.
* Femme Fatale is a very attractive package overall, but the film pays especial attention to her legs. She wears outfits designed to showcase her legs, and one scene has her stepping out of the shower to answer the phone where she is shown only from the thighs down.
* Femme Fatale, Ishtar — and a hero who is somehow smart enough to recognize her as such!
* Femme Fatale opponent, so he pulls a reach-around mid-fight and finds that she's biologically male.
* Femme Fatale: Sexy and enticing... but is she really telling the truth?
* Femme Fatale. She has all the surface characteristics but is a genuinely nice woman who loves her husband.
* Femme Fatale: She's hot, she knows it, and she's not above using it to further her aims.
* Femme Fatales... or they want him dead if he won't be their boy toy.
* Femme Fatale Spy being tested, but she passed the 'galvanic skin response' thanks to the product.
* Femme Fatale Spy = only the first two words "femme fatale" are French.
* Femme Fatale Spy: Sexy, but she might seduce you to tell secrets to your enemies.
* Femme Fatale tried to seduce a group of construction workers, one of which is so taken by the woman that he loses control of a concrete saw and ends up slashing the woman in half.
* Femme Fatale was a lesbian looking for her lover. Unfortunately, Addotta tends to be rather unfunny, so the trope was played more or less straight, making it more

awkward than amusing to listen to.
* Femmegasm: June, in a rare female variety. Most people don't find monkeys with a large amount of distressingly long, thick body hair attractive, which means her attempts to get laid pretty much always end in rejection.
* Femmegasm Pembroke the dragon. However, Shelly and June come back near the end.
* Femmegasm referenced this trope in response to a negative review from the Bad Webcomics Wiki:
* Femme Kabuki) are motivated to improve their lives and work honestly.
* Femme Noir A sexy P.I. solves mysteries in a shady neo-noir fashion.
* FEMM is a duo chronicling two sentient mannequins sent into society to liberate other mannequins from human oppression. Mannequins begin to suddenly disappear all around Japan...
* Fem Myror Arfler An Fyra Elefanter). When the series premiered in 1973, nearly all children's shows produced in Sweden had a highly (nearly always Left-wing) political or social realistic overtone, commonly concerning capitalism and the Vietnam War, with many scenes that would be considered shockingly mature for a program aimed at children today. Then this series dumped down, nearly as an antipole against that kind of show, with its glamorous furnishings and carefree tone. Therefore, it was at first met with severe criticism, as many denounced the show as over-polished and unnecessary. 40 years later, the series is still watched and beloved by young audiences who are learning to read and count, while its contemporaries with their deeply political and somber tone are largely forgotten.
* Femonade', 'all men are bad', 'all transsexuals are men subverting women') taken to an unsustainable extreme. Comments against the blog consist of trolls trying to outdo each other, although including the occasional poster who is not in on the joke and would seem to believe it to be real.
* Fem!Shepard and damn near any male team member could be said to have this dynamic; even if Shepard is
* Femto viciously raped Casca, who was pregnant with she and her lover Guts's child at the time. The baby was at first developing as a normal human in the womb, but when the fetus came in contact with Femto's demonic essence, it became deformed
* Fence has Bobbi who likes dressing up in girl's clothing including hair decorations.
* Fence: LGBT sports series; the two main characters are gay/queer and the vast majority of supporting characters are male and either gay or queer. Subject matter includes queer male romance.
* Fence Painting: The modus operandi of the West African trickster Anansi the Spider. It eventually backfires on him.
* Fencer Of Minerva. The back of the DVD box was rated 16 and up. At least some of the DVDs when played would warn of explicit content and state that no one under 18 could watch it.
* Fences are understandable. Fences that a paper airplane cannot go over, not so much. Especially since the best places to launch the airplanes are always blocked by fences.
* Fences too much about being "well-liked" by others, but doesn't care nearly enough about responsibility or work ethic; one of Troy's defining traits is that he doesn't care at all about whether people like him, and he drives away most of his loved ones in his search for money and respect.
* Fencing and kendo masks invoke this trope, partially for practical protection, partially for the psychological factor: people instinctively hold back against one another, especially people they know, when using weapons. Hiding the face eases this discomfort, and allows them to go all out against each other.
* Fencing master Nedo Nadi won five gold medals in the 1920 Olympics. He held the record for most gold medals won in a single Olympic games for 68 years, having won gold in every event he entered.
* fencing wire from the early 80s (the ad being a homage to the 'Man With No Name' movies).
* Fender is placed on one and is able to escape before getting chopped to pieces and thrown into a furnace. However, it's a little embarrassing when he loses his

original bottom half and has to do with one more suited for a female.
* "Fenders" where slavery, demon-summoning and necromancy are widely accepted, and Anders is an apostate mage whose entire life has become defined by a war against the Chantry's system of virtually enslaving mages to prevent things like Fenris's home from springing up anywhere else; most of their in-game interactions consist of them verbally tearing each other to shreds. Despite this, there are people who ship them.
* Fender was a generic name for any electric bass guitar for a time in the '50s and '60s. The company made its name with its Precision bass before introducing its iconic electric guitars like the Stratocaster.
* Fenella Woolgar (1989) series twice as of 2010) as Agatha Christie was made at Tennant's suggestion.
* Feng Ling Yu Xiu, and some members of a performing troupe who serve as minor antagonists.
* Feng Ling Yu Xiu is mistaken for a boy in the first episode, much to her chagrin.
* Feng Ling Yu Xiu: The animation for the fourth episode is noticeably smoother in the fourth episode than the third.
* Feng Ling Yu Xiu: Where Feng Ling'er can be fairly abrasive and has more of an attitude, Bai Yuxiu is mild-mannered and polite. However, Feng Ling'er has been shown to be more cautious than Bai Yuxiu in dangerous situations.
* Fengshen Yanyi, a certain Bi Gan was coaxed by Daji to have his heart removed. Thanks to Jiang Ziya predicting the whole thing, he was given a charm and some instructions to counter his death. Bi Gan carved his chest open, pulled his heart and then, walks out the palace without looking back. He manages to survive like that until somebody said that no one can live without a heart. He then collapsed and died on the spot.
* Fengshen Yanyi became gods during the legendary period during the rise and fall of the Shang Dynasty.
* Feng Shui 2, features Pop-Up Junctures, temporary portals to other places in time. Unlike the four established junctures, the Netherworld portals leading to pop-up junctures only stay open for a limited time, and thus there is a very real chance of getting stranded in another time if you don't make it back to the portal before it closes.
* Feng Shui Abominations are assumed to have had this little bit of nastiness shorted out.
* Feng Shui adventure, "Baptism of Fire", opens with one of these, with the heroes fighting off a vicious gang that has come to shake down the owner of the establishment.
* Feng Shui against named characters, Both Guns Blazing, to lay on the hurt using two swords or other melee weapons.
* Feng Shui allows a supernatural creature to resurrect after being killed.
* Feng Shui and are resistant or flat-out immune to many effects that instantly fell Mooks.
* Feng Shui and now work with the few humans of 2056 that are immune to the influence of Chi as the Jammers.
* Feng Shui, and often sees use with characters like Killers and Thieves (though any character type can get stuck with this).
* Feng Shui and use different combat rules to enforce their scrub status.
* Feng Shui are animals that managed to become humans (or their offspring, in later Junctures) because being human offers better opportunities. However they fear magic since it may cause them to revert to animal form, which spells the end for the character as far as playability goes. In other words, they've all become "real boys", and just want to avoid going back.
* Feng Shui are based on the seductive ghosts of Hong Kong cinema. They're quite prone to falling in love with mortals.
* Feng Shui are Buro-created superzombies that are markedly more intelligent than the non-infectious zombies that they create. Only five of these things exist in 2056, and if just one of them gets loose, it's Zombie Apocalypse time, particularly since the Necromantic Implanter, an arcanowave device that every corpse factory is

equipped with, can be used to turn regular zombies into more corpse factories.
* Feng Shui, are doing it all for the sake of the dream of their leader, Battlechimp Potemkin. The Battlechimp's dream is a world without chi, a world where humanity can finally be free to make their own decisions without being influenced by whoever has the most feng shui at his or her command. In order to do this, Potemkin wants every Feng Shui site in all the major junctures and the Netherworld blown sky high, no matter what form the site takes or how many innocent people will be killed in the process, or, indeed, what the long term consequences will be if he should actually succeed in destroying the world's chi.
* Feng Shui are repeatedly destroyed by the evil forces that they oppose, but they keep being reformed by new members.
* Feng Shui (as well as forcing you to prevent others from doing the same) in favor of elaborate deathtraps and other Bond villain-style ways of toying with your prey.
* Feng Shui based in the Netherworld who hunt down and kill those whom their Mother Superior deems to be deserving of the respite of death from the suffering the Sisters believe life to be. Those whose names end up on the Rolls of Mercy and are targeted for "deliverance" often aren't so keen on dying.
* Feng Shui). Despite time travel being involved, any changes you make to the past are likely to result in cosmetic differences in the present, at most. That is to say, killing Hitler's ancestor in 1850 would result in little more than some other short, bombastic dictator causing trouble in Germany. Even massive changes to the timeline (which are only possible by having control over Feng Shui sites) will result in the same people being born, but filling slightly different roles, similar to a different character played by an actor with limited range.
* Feng Shui. Given the dangerous nature of such technology, most Robot Limbs can be found on Abominations, the altered demons that the Buro uses to fight its wars. If you have the Jammer supplement "Gorilla Warfare," you can instead start off with a set of regular hardtech Robotic Limbs as a Hardware schtick, which is favored by many Jammers who won't have any truck with arcanowave gear.
* Feng Shui has a secret war that spans at least four different junctures in time, along with the Netherworld that connects these junctures, each with their own different factions vying for the power to remake human history in their image.
* Feng Shui has a similar concept known as Dragon Lines (or Dragon Breath/Veins/Pulse, depending on the source and translation), vessels through which the planet's
* Feng Shui has the highest starting Martial Arts and Chi scores of the whole archetype list and five Fu Schticks, and though he only starts with a Body score of 4, his Unique Schtick allows him to use unarmed attacks to wallop characters with 10 base damage (equivalent of Body 8 or 9). You just know it's a bad move to mess with him.
* Feng Shui has this as a Creature Power called "Conditional Escalation," which temporarily gains you a point in one of your stats each time a particular condition is meant (getting hit with a gun, a fu power, a successful spell, taking a certain amount of damage, causing a certain amount of damage, etc.)
* Feng Shui have set up one of these in 2056, run by the Bureau of Tactical Management (or the Buro in short). The population is kept in line through powerful feng shui, though there are still pockets of resistance around the world. There's also one major area that is immune to the influence of Chi and where technology more advanced than ancient weapons just doesn't work, watched over by the Vikings.
* Feng Shui includes among its factions the Jammers, which are intelligent cybernetic monkeys and apes working in concert with the few humans immune to the influence of Chi. Their aim is to destroy every feng shui site in existence so humanity can be "free" from the "tyranny" of Chi, something which may have very bad consequences for the world.
* Feng Shui, individuals on the losing side of the "Secret War" often suffer this fate. They don't cease to exist, but rather find that the world as they know it has suddenly changed all around them, no one other than themselves (and other time travelers) remembers their version of reality, and they themselves have no past in this new version of reality - no family, no home, no friends, no identity - because

they never existed in it to begin with.
* Feng Shui, in keeping with Hong Kong action movies, uses this trope fairly frequently. Gun-using characters can use a gun in each hand with no penalties at all, and can blast off on mooks with both guns blazing with little problem. But against named characters, the only way to increase damage when using two guns is to buy up the Both Guns Blazing gun schtick, which doubles the base damage but allows the victim to subtract twice his toughness against it.
* Feng Shui, in keeping with the action/comedy genre, actively advised this as a way of resolving disputes with recalcitrant players. If one person adamantly refuses to go along with something, Gilligan Cut to him going along with it anyway.
* Feng Shui is like this. The Ascended are particularly ruthless in this regard when it comes to their Pledged pawns.
* Feng Shui master wants you to do or say, the magical ward that he put on you will make your head go kaboom. A very nice example of this is what happens to any Poison Thorns your characters interrogate (which can only be done through magical compulsion because of their fear of this) in the adventure "Baptism of Fire," which features an evil Lotus sorcerer as the main villain.
* Feng Shui much harder for the players to manage — although if they have a decent Feng Shui site and are reasonably clever, they might just pull it off.
* Feng Shui, naturally, since it's based on action movies, especially Hong Kong ones.
* Feng Shui: Not a few Killers, Spies and other characters in the game.
* Feng Shui's 2056 juncture are how the Buro keeps its eye on its citizens. The watered-down "environment-safe" insecticides common in 2056 don't do dick to them, but the ones in the contemporary juncture, which are obviously banned by the Buro, do a bang-up job on them.
* Feng Shui's 2056 juncture, are nearly always some flavor of this, barring the one or two good ones who wind up becoming PCs. Some of the cops in other junctures aren't much better, especially if you have the Ascended as your enemy.
* Feng Shui's 2056 juncture, people of different races getting together is the norm, as are homosexual relationships. Same-race relationships, on the other hand, are considered "racist" and are rather frowned upon.
* Feng Shui, sacrificing her neighbors and loved ones in order to bring her material fortune.
* Feng Shui. Since magic is a Bad Thing for the Ascended (as it's the only thing that can revert them to their original animal forms), they have a vested interest in keeping the existence of magic and the supernatural in general unknown or discredited to mere mortals.
* Feng Shui: Specifically supernatural adventures in the Contemporary juncture.
* Feng Shui's various fu powers allow a martial artist to do a variety of effects, like setting someone ablaze with your fists, creating a blade out of pure darkness, stopping bullets, and making spectacular flying leaps.
* Feng Shui takes place in a universe where robot monkeys coexist with sorcerers and demonic creatures.
* Feng Shui takes place in four eras (AD 69, 1850, 1996 and 2056) as well as the timeless realm outside of time, the Netherworld. These four eras are connected by various portals, and are synchronized to each other.
* Feng Shui that doubles as a Kill Sat. In the adventure that features it, the players have to forge an alliance between all the other factions in order to commandeer a space shuttle, take over the Fist of Shiva, and use it to destroy the Buro-controlled 2056-era Vatican in order to wipe out not only a powerful Buro feng shui site, but also to stop the Buro from using their new Transworld Maglev Network to make the site the most powerful in the world and warping the world's chi to an unimaginable degree.
* Feng Shui that lead to different junctures in the past, present and future.
* Feng Shui: The Ascended are a classical example since the only thing that can revert them back to their original animal forms is magic and they are not very willing to undergo that.
* Feng Shui, the By-the-Book Cop is usually a Karate Cop. He may bend the law to

serve higher justice, but only if he has no other choice.
* Feng Shui: The Path of the Brilliant Flame fu path essentially gives you fiery kung fu powers. And fire is one of the most common Blast powers that a sorcerer can use.
* Feng Shui to capture enough feng shui sites to cause a Critical Shift and evict the world's previous rulers, the Four Monarchs, to the Netherworld by pulling history out from under them. Because magic is the only thing that can revert these transformed animals back to their natural forms, one of their driving goals is to suppress magic, relying on the media and scientists to discredit those who try to prove that magic is real, and Pledged hit squads to kill known sorcerers and supernatural creatures. It doesn't exactly help that most sorcerers and supernatural creatures tend toward the evil persuasion themselves.
* Feng Shui to claim that a particular ability their player bought with XP was something they knew how to do all along. As the book explains, "Action heroes pull this one all the time."
* Feng Shui to fall in love with past and future incarnations of love interests, or vice versa.
* Feng Shui to seize control of the flow of the world's chi and the reigns of power with it.
* Feng Shui type, and the Maverick Cop being the rule-breaker. The 2056 juncture has its own little twist on this particular genre, the "buddy cop romance". These movies basically take the homoerotic elements that Buddy Cop movies often have and carry them to their logical conclusion.
* Feng Shui understands the need for dakka. The Autofire rules give you increased damage at the cost of an AV penalty for every three three-round bursts you throw out, and the biggest automatic weapons give you a reduced Outcome needed to put down mooks, with the biggest of the bunch being the Buro Hellharrower from the corebook and the cyber-mounted Minigun from "Gorilla Warfare," the Jammer sourcebook. Plus there are many Gun Schticks that address those in need of More Dakka, among them Both Guns Blazing and Carnival of Carnage from the main book, 10,000 Bullets and Bullet Storm from "Golden Comeback," and Who Wants Some from "Gorilla Warfare."
* Feng Shui unpleasant things about the dystopia of 2056 (equal parts capitalism gone berserk and Stalinist repression) is the awful vatfood. Side note: protein-based bio-plastics have replaced the petroleum version, and almost everything a person living under the Buro uses is disposable. Meaning the bowl and sporky-thing-that-can't-be-weaponized you eat with might just be better nutrition and flavor than the actual food.
* Feng Shui. Use it too much, and you start mutating into something horrific and run the risk of becoming an abomination, one of the altered demons that the Buro uses to fight its wars.
* Feng Shui uses this trope in order to explain how superficial shifts (changes to temporal events that don't involve capturing Feng Shui sites) work in the setting. If you killed Hitler in the 19th century hoping to keep Nazism and its various atrocities from going down, it would not work, because somebody else would simply take Hitler's place.
* Feng Shui, whose character classes are based on character tropes, naturally has one for "Ex-Special Forces".
* Feng Shui whose powers a whole lot of people (those who don't want her dead anyway) want to use for their own ends.
* Feng Shui, with the right Schticks, can create a character like this. The Leaping Storm fu path in particular is based on Wuxia and specializes in high-flying swordplay.
* Feng Shui won't work: "It's only good for hurting people and wrecking stuff." Which is almost an inversion.
* Feng Shui. Woos can use pretty much any schtick out of the books, though Both Guns Blazing, Carnival of Carnage, Slow Mo Vengeance and others are primarily used by them. Quick Draws, as per the name, generally buy up lots of Fast Draw in order to act ahead of everyone else in a given sequence.

* Feng Shui, you're doing things wrong. The Jammers even have it as their battle cry: "BLOW THINGS UP! BLOW THINGS UP!"
* Feng Wei is shirtless in his shaolin attire, which is weird since flashbacks show that his fellow students wore one.
* Fenian raids. And the Connaught Rangers, an all-Irish regiment of soldiers serving the British Empire in India, defected almost immediately upon hearing news of the Irish War of Independence. Moral of the story — do not piss off the Irish.
* Fenix, who you get to control both before and after gets almost killed.
* Fennec Foxes. They're much smaller than most foxes and have ridiculously oversized ears.
* Fennecs make sounds that can sound like something between a solid squeal and a screeching monkey. The scary part is they make this noise when they're
* Fen Quest, a noble is about to visit Fen's tribe and he fears a rival tribe may try to frame them for offending the noble. He voices his concerns to his brother Zizi, who recounts the last such incident:
* Fen Quest: Bolk suspects this when Fen is sent on a mission with absolute-bottom-of-the-barrel soldiers, immediately asking Fen if he's angered the acting commander. The matter is never brought up again, so it's possible she simply only trusted him with ultra-expendable troops at the time.
* Fen Quest, everyone has only a given name. Even among knighthood and nobility that add titles and honorifics, family names don't seem to exist.
* Fen Quest happy with this, and set a huge bounty (for the average farm worker it's forty years of income) on his head.
* Fen Quest is accidentally stung after months apart, they determine she still has enough resistance to survive unaided, but will nonetheless get gravely ill without an antidote.
* Fen Quest: It's mentioned early in the Mausoleum campaign that if there aren't enough volunteers for operations to clear an anomaly, lots will be drawn... and only actual volunteers are eligible for death benefits.
* Fen Quest: Sir Zall praises Fen and the rest of his squad for their discipline, lamenting that too many of his knights are eager to "prove themselves" even if it endangers their mission. There's a bit of situational irony in this, as Fen started off as a barbarian warrior but ends up a better soldier than "civilized" knights.
* Fen Quest: The force led by Grand Helm Knight Zall in the Mausoleum campaign consists entirely of knights, without any of the cannon-fodder "pawns" that comprise the bulk of the army. This also seems to be, more generally, the role of the Assassin's Branch, which focuses on killing high-value targets while other branches make sure they're not crushed by numbers.
* Fenrir are likely the two best examples, as they are feared long before the apocalypse goes down, have established rivalries with the gods, and take the two strongest gods (Odin and Thor) with them when they go.
* Fenrir did this with every chain the Aesir used on him, except for the ribbon Gleipnir. It looked like any other ribbon, but was made from impossible things — the sound of a cat's footfall, the beard of a woman, the roots of a mountain, the sinews of a bear, the breath of a fish, and the saliva of a bird. Therefore, it was unbreakable.
* Fenrir Greyback, a minor villain from the later books, has the added bonus of being
* Fenrir Greyback's obsession with kids (his tendency to bite them, which turns them into werewolves, and then kidnap them and raise them to hate normal wizards) has been interpreted by a lot of the fandom as pedophilia. His remark about
* Fenrir laughs when Harriet thanks him for wiping the blood from her face.
* Fenris claims that Tevinter is still operating this way. He claims that this means all of the magisters practice
* Fenris count, too. In fact, if Fenris tries to apologize for breaking up with Hawke in the second act, one of Hawke's lines is "I understand. I always understood."
* Fenris for similar reasons; he's a literal escaped slave trying to cope with the

absolutely
* Fenrisian Wolves (which can grow to the size of an APC) are far more intelligent than actual canines because they're descended from genetic experiments that helped humans survive the arctic conditions on Fenris.
* Fenris is an amnesiac fugitive ex-slave whose former master is heavily implied to have sexually abused him.
* Fenris of the same game spent the entirety of his life, as far as he remembers, as a slave to one of the horrifically evil Tevinter Magisters and only recently escaped. As such, he has difficulty relating to other people at best, plus a lot of rage issues, especially with mages. This is most evident with his often hostile interactions with Merrill.
* Fenris's former master is a politically powerful Tevinter magister named Danarius. This is the only name known for him, despite his high status in the Imperium. (According to the
* Fenris tends to lapse into Tevene (his native language) if he's upset.
* Fenris to join them with Bethany present in the group. Bethany will answer his suspicions with a joke about going crazy and murdering everyone, to which Hawke will reply "not now.".
* Fenris, whose black, spiked armor matches his personality, results in an innocent, happy go lucky Hawke followed by their extremely stoic and imposing boyfriend.
* Fenspace as they can, due to the latter having chosen to go through their own transformations.
* Fenspace except for seeking asylum in near-Earth orbit instead of Russia.
* Fenspace fans who went through the trouble of sculpting a rather large asteroid into a mushroom shape so that they could build a replica of the anime's space fortress.
* Fenspace in Fenspace are definitely sapient and capable of meaningful consent.
* Fenspace: Unreal Estate, chunks of land that have been handwaved to be mobile and occasionally spaceworthy, have a presence in the post-'Wave Solar System.
* Fenspace where the leaders of all the important factions get together and hammer out treaties and international laws and other serious government-type stuff in between panels and screenings. It sounds ridiculous to most people back on Earth, but somehow it seems to work.
* Fenster's reaction to the words he was given in the lineup scene of
* Fenton Crackshell-Cabrera, who is likely in around his early to mid 20s, has become really good friends with Huey, who again is a pre-teen. Unlike Dewey and Launchpad, who get along super well by both being total goofballs, theses two get along well due to their scientific skills being able to help each other out, whether that be with Gizmoduck tech, or helping out with smaller projects. It's shown in
* Fenton Crackshell/Gizmoduck, with his super-human (er, duck) ability to count vs. extreme ditzy moments such as thinking Scrooge wanting his assets liquid meaning he should dump his money in a lake, probably also counts.
* Fenton Craskshell (Gizmo Duck) is literal-minded. Scrooge wants Fenton to liquidate his assets, except that he puts all of Scrooge's money in the lake.
* Fenton isn't the only one in the episode with grand romantic gestures. To declare her love for Gizmoduck, Robotica first paints R Loves G on Scrooge's money bin. Later, she attempts to destroy the money bin (and kill Gandra Dee) in an anguished declaration of love.
* Fenton later buys Gandra Dee a two-story cake "with chocolate frosting, marshmallow topping, and aluminum siding."
* Fenton was the first boy to express interest in Lindesfarne...and what's more, the first to not care that she had quills (proving it by presenting her with a waiver absolving her of any liability). They eventually married and have a daughter.
* Fenway Park. It's the only one in MLB, but it's literally never happened as long as anyone can remember.
* fenyo_n is a Japanese promotional character artist for modern-era Dragon Ball

products, such as
* Fe. Other than the achievement, there's little to no use for it by this point, since you've pretty much seen everything there is to see.
* Feral (2017) disease will lay dormant in its host body until sundown. When that happens, the virus activates, turning its host into a vicious bloodthirsty savage.
* Feral (2017): Jesse's entrails are exposed when the creature attacks him. Said creature then pulls out a handful of said entrails.
* Feral Child anyway, it doesn't actually affect her characterization much.
* Feral Child Genie was isolated in a room like this, tied to a potty chair during the day, and bound in an enclosed crib with metal screening at night.
* Feral dog packs can discern when one of their number is acting oddly due to rabies infection, and quickly expel the sick animal from the group or abandon its company.
* "Feral Friends" has SpongeBob and the Bikini Bottomites turned into realistic sea creatures by
* Feral Friends the instant it dawns on them that they are nude in public).
* Feral has Char, the main character who uses magic to creat carbon sheets, creates a blunderbuss that can be ignited by a fire rune, and jetpacks powered by magic. He's been compared to Tony Stark by fans.
* Feral humans be killed in other ways. They can starve, they can asphyxiate, they can be electrocuted or blown up. But it takes serious trauma to the brain or upper spine to be sure they're dead without those more elaborate methods. They are tough, don't feel pain, and any wounds stop bleeding by themselves in a hurry. A severed head will be conscious and responsive for several minutes before dying. They can certainly be hurt to the point of needing medical attention, cybernetic parts, and a long time to heal, though, and cured humans taking severe injuries sometimes revert back into ferals.
* Feral is his universes equivalent. He creates weapons and armor using both modern metalworking and blacksmithing techniques and his world's version of magic. Later he reveals a crude blunderbuss and a stink bomb he's created, as well as other tools.
* feral man in leopard print, or to the beaches in the Mediterranean and the South Pacific where they would bask their fair skin to the sunlight.
* Feral mean that he isn't dangerous, as he's dangerously competent at fighting and sabotaging, but he isn't as big of a threat as he could be because he's not willing to slaughter anyone in his way.
* Feral orks are orks who don't have access to the advanced technology of their less backwards brethren, such as forcefields, teleporters, or spaceships. Leaving them alone is a very serious mistake, as you may soon find squiggoths and steam-powered gargants on your doorstep.
* Feral runs on this. While magic does exist, 'wizard' may well be the same as 'scientist', with use of scientific thought and processes throughout the story. The story takes place after its worlds creation of the printing press, and it's stated multiple times that its creation is more important than anything other device. Char, the main character, uses science and magic to create armor and weapons, including a blunderbuss whose gunpowder is lit by a fire rune.
* Ferals focuses on a breed of very violent and strong werewolves that do not appear to have any restrictions on when they can transform. While they are certainly not mindless, they do seem prone to unquenchable bloodlust and cruelty while they are in wolf form. They fall closest to the dire wolf flavor of lycanthropy, except perhaps with a gallon of steroids thrown in for good measure.
* Ferals: Lydia's mother Velma concealed her feral abilities from her daughter so that she could live the normal childhood that Velma was denied in her youth.
* Feral TV Cancelled after one episode due to all the lampshades selling out, including those on set. The boss then announces that he now has a load of bananas and pyjamas, which require a programme to be created to sell them.
* Feral Vampires: If the story contains vampires, they're probably this.
* Feral Vampires: Savage vampires who behave more like stereotypical zombies, rather than the more intelligent and sophisticated kind of undead monsters.

* feral with lust, and has to be knocked unconscious by Koala to prevent her from completing her stated intention of sexually ravaging Cross right there on the table. Then Koala admits she's only somewhat less aroused and attracted than Sandersonia was, and quickly gets him to change the topic.
* Feral worlds are often recruiting grounds for Space Marines, the inhabitants of which often describe the marines as "angels". To them, the marines are demigods who, once in their lifetimes, comes to take those few strong and worthy to join their immortal ranks. For the marines, the reason they only come "once a lifetime" is because most marine chapters are forbidden from mass recruitment and because the entrance "exam" often kills most of that generation's fertile males. They're also viewed as Angels because they often descent onto a planet by drop pod or thunderhawk transports.
* Feral World: The Ferals were once ordinary humans until a mysterious virus mutated them into savage, mindless beasts.
* Ferazel's Wand wear full-length cloaks with the hoods always up, shadowing their faces except for two features: large, vaguely human eyes, and a snout like an anteater. They're the good guys, though, as signified by the fact that their cloaks are a wide variety of colors rather than the generic black.
* Ferb: Actually, you'll be 88 and a half."), and the comet can be seen every 73-and-a-half years, placing her age at 15 at the time of the episode (88-73=15).
* Ferb enters this in "Vanessassary Roughness" after a platonic peck on the cheek from Vanessa, the subject of his
* Ferb is represented by rectangles. His body is shaped like one if you don't count his nose, and rectangles appear in the background almost as often as triangles.
* "Ferb TV" is this is for every supporting character. Phineas and Ferb only appear at the very start and very end.
* Fer-de-Lance is a 1974 TV movie about a submarine trapped on the ocean floor with escaped poisonous snakes running loose.
* Fer-de-lance when Maria Maffei goes to Wolfe to ask him to find her missing brother, she tells him that she has over a thousand dollars saved up, and that if he finds Carlo alive she will pay him all of it, but if Carlo is dead, she will pay less, because "First [she} will pay for the funeral." Wolfe not only considers this perfectly reasonable, he commends her for it and says she is "a woman of honor".
* Ferdinand as the bulls, except the titular character, hone their skills to be chosen as the bull to fight the matador.
* Ferdinand Foch's deserves mention here for capturing the spirit of this example so well.
* Ferdinand has similar growths to Sylvain, trading some Defence and being a
* Ferdinand horses on the fence's other side. They win after the horses stumble against each other and get shocked on the electrified fence.
* Ferdinand is energetic, has a short attention span, and has a tendency to go over the top to get people to like him. He also has a borderline obsession with outdoing Edelgard.
* Ferdinand Magellan's Astrolabe which allows the user to go back 24 hours in the past but creates an Enemy Within.
* Ferdinand Magellan triggered a mutiny early on in his famous circumnavigating voyage by sternly disciplining two crew members for sodomy, which, while in accordance with the law, was highly unpopular with the crew.
* Ferdinand Marcos}. In any case the Filipino army had no tanks in its inventory at the time - they had phased the lot of them out by the '70s.
* Ferdinand Marcos that incompetence and the lack of political will in the previous administrations resulted the current state of the country and people who were born after EDSA became cynical and disillusioned on the price which the revolution left for them.
* Ferdinand Marcos was once accused of taking part in a politically motivated assassination. Long story short, he represented himself and won. He became the President of the Philippines before implementing martial law and becoming a dictator. He was removed from power following the People Power Revolution (also

known as the EDSA revolution) in 1986.
* Ferdinand Marian, the actor who portrayed the titular Jewish villain, remained haunted by his participation in
* Ferdinand of Aragon and Isabella of Castile are well-known to American schoolchildren as the Spanish monarchs who bankrolled
* Ferdinand, takes his handicap as a sign of weakness and resigns himself to his fate, but Ferdinand convinces him that there's more to life than fighting and manages to save him from death.
* Ferdinand tends to place a palm to one side of his head when talking,
* Ferdinand: The title character is an enormous and intimidating bull who wants nothing to do with bullfighting or any other kind of fighting. He would much rather go look at and smell pretty flowers, and feels much happier as the pet of an adorable little girl than in an arena.
* Ferdinand, Valiente has an animated imagination sequence in which he envisions himself as a strong bull capable of defeating the matador and several banderilleros.
* Ferdinand von Aegir, a nobleman quite fixated with his status, avoids contractions and often uses uncommon words.
* Ferdinand, were just some of the factors that led Disney to close down Blue Sky in 2021.
* Fereldans love their mabari hounds. In fact the Fereldans are often more upset about the implied insult to their dogs than anything. Orlesian nobles will also use "turnip" as a slur against Fereldans.
* Ferelden is in southern Thedas and is considered the south border of the civilized world. But all the other northern countries, specially Orlais, think Fereldans are only one step above savages and only a bad day away from reverting to barbarism.
* Ferengi, all while the constant chant of "TRUCKS TRUCKS TRUCKS TRUCKS TRUCKS TRUCKS TRUCKS" plays in the background.
* Ferengi also can be baffled by the fact that most other societies aren't impressed by financial conquests, which they liken to military conquests. Most of the rest of the Galaxy is a post-scarcity society, but the concept of scarcity is a deeply sacred part of Ferengi Culture. And while most cultures do have some concept of money, most really do not care much about it. (Case in point, Klingons still have currency trade for goods and services, but they view using economics to ruin a rival to be underhanded and dishonorable. The accusation of such resulted in one offender being outcast from Klingon Culture. Using economics to buy military might to ruin a rival is much more preferable.)
* Ferengi also tend to have only one name, generally one syllable, with no surname.
* Ferenginar, the Ferengi homeworld, is a class M planet that's home to virtually constant, planet-wide torrential downpours, due to weather control technology and the Ferengi's preference for rainy days.
* Ferengi, not the profit. Other Ferengi are too afraid of him to show any disrespect.
* Ferengi Rule Of Acquisition #34: "War is good for business." However, rule #3
* Ferengi selling off the deceased's body would be an admission that the person literally had no worth.
* Ferengi society is all capitalists all the time and finds little they don't charge. They use latinum as a currency, a substance that cannot be replicated. Given that the Ferengi do trade with the Federation and run businesses in Federation spaces (such as Quark's bar on Deep Space Nine), it seems likely that the Federation and its citizens do buy and sell goods and services with them.
* Ferengi, with the majority being able to kick ass whenever required.
* Fererro Rocher chocolates, whose advertisements somewhat iconically portrayed a distinguished butler circulating through a formal embassy party with a silver tray full of the gold-wrapped candies. The commercial voiceover began, "The Ambassador's receptions are noted in society for their host's exquisite taste that captivates his guests," and included a party guest saying, "Ambassador, with these Rocher,

you're really spoiling us!" A particularly silly case of Up Marketing for sure, because someone with a hankering for the confection can usually find it near the checkout counter at their local gas station or most any store with "Mart" in the name.
* Fergal Devitt became Prince Devitt when he went to Japan, as opposed to say, any delusions about his royalty, though he may in fact have those as well. Prince only has one r in it, so the Japanese fans could remember how to say it, but they seemed perpetually confused about how to say Fergal.
* Fergal Devitt in 2013. Joined NXT as Finn Bálor in 2014; he then became the longest-reigning NXT champion in history and the inaugural WWE Universal champion.
* Fergal Devitt who may or may not be just a product of his own imagination.
* Fergie as a solo artist is a similar case. She had three #1 hits; if you guessed two of them were "Glamorous" and "Big Girls Don't Cry", you're correct. Most people would probably guess the other #1 was "Fergalicious"; it's certainly better-known than "Glamorous". However, it actually fell short at #2 behind Beyoncé's "Irreplaceable". The other #1 was "London Bridge", her debut single which did not have as much staying power. will.i.am, however, averts this, as his highest charting song "Scream & Shout" is
* Fergie is not to be called "Stacey". To seal the deal, she changed her legal name to Fergie Duhamel in August 2013.
* Fergie kills her love interest when she accidentally throws him out the airlock of her spaceship.
* Fergie's "Big Girls Don't Cry" is about a woman telling her lover that "I'm gonna miss you like a child misses their blanket," but she still has to leave him so she can "get a move on with my life." The lyrics suggest that despite how devoted they are, they've really been nothing more than little kids playing house, and she needs to get out and learn to stand on her own two feet.
* Fergie's psychopath stripper character in the music video for "Beautiful Dangerous", with Slash. Not only does she succeed in drugging him, tying him to a bed, and all that junk, but also kills him at the end with her knife!
* Fergus McDuck and Downy O'Drake, Scrooge's parents, are an interesting example. Both are some of the few characters to be canonically confirmed as dead (Scrooge receives a letter informing him of Downy's death while in Klondike, causing him to have a breakdown, and Fergus'
* Ferguson, Missouri: The fatal shooting of African-American teenager Michael Brown by police officer Darren Wilson, and the subsequent nationwide unrest it sparked.
* Ferguson's previous number two, Steve McLaren, also struggled with management for a time (culminating in the England debacle).
* Fergus Reid is a wisecracking, cool-as-ice badass whose straight-man persona riffs off the outlandish situations he finds himself in. He's also barely hanging on psychologically, occasionally breaking down into screaming tears as he laments that his entire life has been dedicated to violence and nothing ever seems to go his way.
* Fergus's ability to wield the Beo Sword implies him to be the son of Beowolf, a character from Genealogy.
* Fergus was explicitly chosen as their king after he led the other clans to victory against invading Vikings, and whether it's evil monster bears or invading armies, he takes care of it. Even the toddler triplets are crafty tricksters capable of distracting an entire castle. The other clan leaders and their heirs are also shown as being pretty battle-happy, especially against each other.
* Ferid Bathory. He has done some incredibly horrendous acts in the past,
* Ferid's attitude towards Yuu, Krul, and Mika carries serious rape undertones. Made worse in chapter 46 when he
* Ferid seems even more interested in Yuu and Mika because neither is going to take his crap or flirtations towards them sitting down.
* Ferisae, who handles PR and owns the official Mexican Twitter for the show (Miraculous Mexican), has made OCs expanding on Astruc's historical Ladybugs and

Cat Noirs.
* Fermata the main character and first-person narrator possesses this ability, which he uses to undress various women.
* Fermat's Last Theorem. His original attempt at a proof, during the formal checking, was found to have an error in one particular area. Wiles spent nearly a year trying to work out the error but was having no luck, even with help from fellow mathematician Richard Taylor, and was thinking about giving up when he had a sudden revelation regarding two of the mathematical techniques he was trying to employ and how they could shore up each other to provide the key to working out the error. This led to the revised proof which was accepted. Wiles was quoted as saying that he was so gobsmacked by the realisation that he stared at his notes for a good 20 minutes and kept coming back to his desk throughout the day to make sure that everything was still there and not just a figment of his imagination.
* Fermat's Last Theorem. In 1637, he stated tantalizingly in his commentary for a book that he had figured out a proof for a theorem, but there was not enough space in the margin for him to explain. He never did, and left no notes about it. It took 358 years of stumped mathematicians until it was finally figured out, in 1995. (It was solved using mathematics which hadn't been developed yet during Fermat's time and goes on for hundreds of pages, leading some to speculate that Fermat may have just decided to leave something to annoy future generations, or that he realized his proof wasn't correct, as there is a nearly-correct proof that is short.)
* Fermat's Last Theorem stymied mathematicians for over 300 years and was finally solved using mathematics unavailable during Fermat's own time. Famously, Pierre de Fermat noted that he already had a proof for it, which the margin was too small to contain. That the eventual proof involved mathematical principles that wouldn't be codified until the 20th century casts some doubt on this claim.
* Fermat's Last Theorem was indeed proven in 1995—but it was done using advanced mathematical techniques invented in the 19th and 20th centuries of which Fermat could not have known. Fermat's original "truly marvelous" proof remains a mystery—though there is reason to believe that if he had indeed discovered a simple proof, he later realised that it was flawed, abandoned work on it when the flaws proved irreparable, and then disposed of the workings some time before he died.
* Fermat's Last Theorem. While French admits that this is probably a big deal for a mathematician, the message has no commercial value to him as a space trader. In fact, in all his millennia of travel, he has only intercepted about two dozen interstellar messages, as sending them requires putting up a powerful relay satellite in orbit as well as maintaining it for little or no return. As such, the various human worlds are isolated with an occasional space trader passing through every half-a-century or so. Of course, given that aging has been eliminated in this 'verse, it's entirely possible for a planetbound person to meet the same space trader who comes back 200 years later.
* Fermat's Room: Hilbert corrects the other characters' grammar when they write on the chalkboard, adding accent marks (particularly over the letter "o").
* Fermat's Room on the group of scientists. The only way to suspend the deadly trap is by solving mathematical riddles.
* Fermented soy literally smells like sweaty feet. It tastes about the same, too.
* Fermez-là! review show. The hammer features prominently in a few sketches, like when he tested "Is the elevator worthy?"
* Fermilab recorded similar results during at least one experiment in the 1990s but that one never got much press because the neutrinos only appeared to be going faster than light by such a tiny amount that it was considered to be within the less advanced equipment of the day's acceptable margin of error.
* Fermion SP to unlock Fermion SP, so getting there in the first place will leave your HP at a very, very bad value.
* Fermi Paradox: Given the large number of stars and planets in the visible universe, it is likely that a number of extra-terrestrial civilizations exist. But why haven't we found any?
* Fermi Paradox. If this is true, uncounted billions of civilisations are depending

on us not nuking ourselves or sinking back to pre-industrial levels. No pressure.
* Fernald, a.k.a. "the hook-handed man." is arguably even better, since even the Baudelaire kids fall for his disguises. And he doesn't even have to take off his hooks to do it, he just hides them.
* Fernanda Figueiredo, who played the lead role of Sailor Moon in the
* Fernandel as the protagonist chases and searches the closet all over the country.
* Fernando, during which he's informed that the man he's talking with may be his father.
* Fernando Oliviera, the black-market transplant surgeon, wets himself as he shoots a zombie.
* Fernando Oreste Nannetti. He also did over 1600 illustrations on paper. 20 years after his death he was given the Civic Merit award from the city of Volterra. He has inspired films and popular songs.
* Fernando Pessoa, said to be the greatest Portuguese poet of modern times, wrote a long poem about Hadrian mourning for Antinous, with Antinous' youth and the sexual aspect of the relationship made very clear.
* Fernando Ramos da Silva was a young street urchin who starred in the Brazilian crime classic
* Fernando's attempts to have Emilia shut down the meeting group for the parents of missing children start involving a threat to put a bullet in Emilia's skull.
* "Fernando" was originally supposed to be a flamboyant dance number sung by Donna to entertain her guests, but it was cut as it did not move the story along. However, Donna hums a bit of the song to herself as she fixes up the taverna just before "Mamma Mia".
* Fern Brady announced on her Twitter that she was diagnosed as an adult.
* Ferngully review, kicking the shit out of each other, breaking off to have a pillow fight, then fighting each other again. Though the Chick started it by throttling him.
* FernGully: The Last Rainforest: A goanna sings an entire song to a shrunken Zak about how he is going to eat him.
* FernGully: The Last Rainforest.(although that one is also now owned by Disney after the Fox purchase)
* FernGully: The Last Rainforest an ambiguous-on-details-but-very-real thing going on.
* FernGully: The Last Rainforest, Batty Koda was a victim of this. It left him unbalanced mentally (unless he was always like that) and with a malfunctioning sonar.
* FernGully: The Last Rainforest has a laugh at the end of his extended song that ends with a dry cough. Can be seen as a satire, but actually justified, as Hexxus is the embodiment of pollution.
* FernGully: The Last Rainforest has a moment between Batty Coda and Zak when the former is looking for sympathy, but only wants it to be sincere; Zak tests his resolve.
* Ferngully The Last Rainforest has never seen fire or flames. When the human Zack flicks a lighter, Krista is enthralled. As Zack admires the interior of their grotto, Krista tries touching the flame, which burns her hand. Rather than redness and swelling, though, Krista's fingers develop a glow that transfers to Zack's fingers.
* FernGully: The Last Rainforest has two Brazilian Portuguese dubs: the original in 1993, and the second in 2014.
* FernGully: The Last Rainforest is a frequent target of mockery of the early 1990s enviromania craze; few realize that it was based on an Australian children's novel.
* FernGully: The Last Rainforest — fruit bats fly perfectly well, but they have a lot more trouble landing than most other bats. Although they rarely face-plant into the trunk the way Batty does.
* FernGully: The Last Rainforest, so it's literally his purpose for existing in the first place.
* FernGully: The Last Rainforest. the main fairy flies in the smog monster’s mouth to defeat him from within.

* FernGully: The Last Rainforest, who for ages was sealed into a tree, and was released when the tree was cut down.
* FernGully: The Last Rainforest, Zach falls into the logging machine's windshield and slides down as his coworkers watch.
* FernGully: The Last Rainforest ("Zack and Crysta's Adventures in the Rainforest"), but Brazil only uses that as a subtitle instead of the "The Last Rainforest".
* FernGully: The Last Rainforest, Zack carves Krista's name in a tree with his pocketknife, to her dismay.
* FernGully: The Last Rainforest, Zak offers a handshake to Crysta. Unfamiliar with the concept of shaking hands, she just sticks her hand out at Zak's face.
* Ferngully: three or four free claws with one finger holding the wing. Most obvious in the rap.
* FernGully, we have the Leveler. It's a bulldozer, a tank, a tractor, and an automated factory all in one. It has two huge arms with giant claws for hands, chainsaws on its "elbows", and a "mouth" with backwards-facing "teeth" that pull unfortunate trees inside it, all topped off with a control room that looks like a single wide cyclopes-like eye. Basically, it's a monster of a machine.
* FernGully who has fans and people who cheer for him and want him to win).
* Fern Michaels series, then you will most likely get the following response, word for word:
* Fernswarthy's Letter probably sets some kind of record, starting out as the great (but senile) wizard excoriating his pupils for digging up his body, meandering into a reminiscence about the last kid who bugged him, segueing from that to a friendly letter to someone away on vacation before finally, yes, ending with a grocery list.
* Feroz's Ban with an entire world in a bottle, to represent the magical seal placed by the Planeswalker Feroz around the Homelands.
* Ferran Adria—based in Barcelona—is another molecular gastronomist (gastronomer?), and also very good at making odd combinations of ingredients work as a dish: his restaurant, elBulli was consistently ranked as the best in the world for several years running (nevertheless, it closed in 2011, as it had somehow managed to operate at a loss since 2000). Adria thinks of his style as deconstructivist. The Kellogg's paella (Rice Krispies, shrimp heads, and vanilla flavoured mashed potatoes) is a good example of what he does.
* Ferrari is a complex case when it comes to people modifying their vehicles. Most of the time they do allow certain user modifications to their vehicles; otherwise, the Italian sportscar maker has been known for putting heavy hammers on modifications that diminish their brands, or even replicas of their cars. Due to certain modifications that violate Ferrari's policies, some famed owners have been banned from getting
* Ferret And Parrot, who gets all of his information from old tabloids that are used to line the floor of his cage.
* Ferrets. They're the 3rd most popular pet in the US, yet you seldom see them in the media and laws and regulations prohibiting their ownership abound. Some animals, such as raccoons, are considered wild animals (even if born in captivity) and not possible to tame properly after a year or two, and as such, some states allow them as pets, and some don't. In Russia, however, there are no laws against it, so raccoons are surprisingly popular pets (as evidenced by all the Russian YouTube videos on them).
* Ferris Boyle, whose malicious greed hardened him to Victor Fries begging to keep his wife alive.
* Ferris Bueller's Day Off), and has done so by blatantly exploiting the good will of everyone around him.
* Ferris Bueller's Day Off as he tries to beat his family back to his house.
* Ferris Bueller's Day Off, at least one student sleeping in Ben Stein's class has a visible trail of drool on his desk.
* Ferris Bueller's Day Off auditions (he didn't make the cut that time), and cast him based on that performance. What followed was what is considered to be one of the most soulful, enduring portrayals in Hughes' oeuvre.

* Ferris Bueller's Day Off: Cameron does this in response to Ferris' suggestion that they take the miles off his dad's Ferrari by driving home backwards.
* Ferris Bueller's Day Off: Cameron's scream when he realizes how much mileage is on his father's Ferrari when he and Ferris pick it up from the garage.
* Ferris Bueller's Day Off dated after appearing in this film together. The actors who played their parents, Cindy Pickett and Lyman Ward, met on the film and were married for several years.
* Ferris Bueller's Day Off, Edie McClurg (School Secretary) pulls like three pencils from her fluffy curls and goes back for another! This wasn't a special effect — the actress and director, between takes, wondered how many pencils she could hide in her hair... apparently the answer was "more than 4".
* Ferris Bueller's Day Off features the title character leaping through several suburban backyards to beat someone else home; after dashing through a yard with two ladies sunbathing, he walks back and introduces himself.
* Ferris Bueller's Day Off: Ferris Bueller demonstrates using his synthesizer keyboard to make fake coughing sounds by playing "The Blue Danube".
* Ferris Bueller's Day Off, Ferris catches a foul ball. It's shown on the Jumbo and national TV, and Principal Rooney just misses it while searching arcades for him.
* Ferris Bueller's Day Off, Ferris offers to do this for his friend Cameron, who had just destroyed his father's Ferrari in protest of his father loving it more than his family, but Cameron refuses to let him.
* Ferris Bueller's Day Off: Ferris's sister complains that her brother can get away with anything, and their parents will believe him. Since her brother is Ferris Bueller, she's right. On the other hand, Ferris wanted a car, which she got.
* Ferris Bueller's Day Off has this during Ferris and Cameron's argument after Cameron dupes Rooney over the phone.
* Ferris Bueller's Day Off have been written depicting this scene, with varying outcomes.
* Ferris Bueller's Day Off. He ends up with a busted nose courtesy of Jeanie and an extensive collection of bitemarks from the family Rottweiler.
* Ferris Bueller's Day Off is a classic example. It's not clear how much hustling he does in the day to day, but he's apparently well-liked by all the cliques at school and has worked out scams on his parents and school down to an artform.
* Ferris Bueller's Day Off is popular, funny and rich. He has a hot girlfriend, does whatever he wants, and pretty much everything works out perfectly for him.
* Ferris Bueller's Day Off: Looks like we'll never know how Cameron's "little chat" with his father went, despite all the post-credits scenes.
* Ferris Bueller's Day Off: One arrives at the Bueller household in the form of a nurse while Jeannie's looking for Ferris.
* Ferris Bueller's Day Off said the reason Cameron doesn't wear a Chicago Blackhawks jersey is because Cameron's grandfather in Detroit used to take him to Red Wings games.
* Ferris Bueller's Day Off scours the city looking for Ferris Bueller to punish him, despite the fact that (in this case) he does have an excused absence according to his parents, thus meaning there should be nothing Rooney can do.
* Ferris Bueller's Day Off several times throughout the film, Ferris gives a few silent acknowledgments to the audience.
* Ferris Bueller's Day Off: Starting with an extreme close-up of his screaming mouth, the shot pulls back to the car, then the block, the city of Chicago, and finally the planet Earth to punctuate Cameron's reaction to reading of the odometer of Cam's father's Ferrari.
* Ferris Bueller's Day Off that Ferris is a slimeball who manipulates people for his own enjoyment while acting noble: "I may be evil, but at least I'm not full of crap!"
* Ferris Bueller's Day Off to bring him down and imprison him in yet another year of high school.
* Ferris Bueller's Day Off, until the end, when he tells the audience to go home, the show's over.
* Ferris Bueller's Day Off when Cameron has his screaming moment when he notices

how much mileage is on his father's Ferrari after he and Ferris pick it up from the garage.
* Ferris Bueller's Day Off when Ferris and Sloane realize he saw Sloane stark naked while she was changing into her swimsuit, and enjoyed every minute of it. Cameron's ensuing hysterical laughter led to further dunkings by Ferris.
* Ferris prepares one to answer the intercom if anyone rings the doorbell at his house. The responses are keyed to the intercom, so he gets around the awkward pauses, and his responses are vague enough to work for nearly any prompt. The plan falls through when the principal keeps ringing the doorbell, cycling back to the first message and betraying the ruse.
* Ferris Wheel Date Moment: A couple has a romantic moment on a Ferris wheel.
* Ferris Wheel Date Moment: A couple have a cute moment on the ferris wheel.
* Ferris Wheel Date Moment to distract Tweek from his worries about North Korea. Unfortunately, it doesn't work.
* Ferris Wheel of Doom: A Ferris Wheel breaks away and rolls like a tire.
* Ferris Wheel of Doom: When you see a Ferris wheel, it's either going to start collapsing, or break free and start rolling away.
* Ferrite, also a fanfiction creation, is a cursed human from the Silver Millennium who keeps being reincarnated throughout history until he finally meets up with the Sailors in
* Ferrovie Autolinee Regionali Ticinesi". Many locals find this just as amusing, as most Swiss speak English.
* Ferrox version of Ferrox was in development. That project was eventually shelved two years later.
* Ferrus Manus, Primarch of the Iron Hands, believed that reliance on cybernetics weakened one's willpower and wanted to find a way to remove the living steel from his hands that gave his legion their name. Unfortunately, his marines didn't catch that and despise their flesh as weak, replacing it with cybernetics as they advance in the ranks.
* Ferrus Manus was notably against his sons engaging in cybernetic enhancement, believing that you should rely on your natural strength. Ferrus Manus was born as a ten-foot demigod with bulletproof skin, who could fight monsters bare-handed as a child, and the only reason he
* Ferry Corsten. Besides his real name, he has used the names System F, Moonman, Albion, Gouryella (collaborating with Tiesto), Veracocha (collaborating with Vincent de Moor), and a few others.
* Ferry Corsten remix of Apoptygma Berzerk's "Kathy's Song (Come Lie Next to Me)" is more recognized than the original.
* Fertile Blood: When blood is spilled onto the ground, life (usually plants) sprout up from it.
* Fertility returns in second edition as a Purview, though most of the nature theme has gone to the new Wild Purview. Doesn't mean Fertility is useless, though—the sample text describing it has a Scion give a minotaur lung cancer.
* Feruchemy as she usually multi-tasks by practicing her English while mostly immobile, and she works hard at physical conditioning when she isn't preoccupied meditating.
* fervently denying any kind of attraction. Then go straight back to denying everything when Kano appears and calls them "love birds".
* Fesarius" was a gigantic starship the size of a small moon, composed of a sphere made up of smaller spheres of various sizes and colors. At least one part of this ship could break off as a smaller command vessel. It's possible that the ship was composed entirely of smaller vessels to the aforementioned one, clustered together and sharing power.
* Fe's collect-a-thon gameplay (trading pink crystals for new abilities) and low-polygon graphics are throwbacks to N64-era 3D platformers.
* FES, Metis has no weaknesses or resistances, and has an assortment of strong physical, ice and wind skills. Her only downfall is her lack of decent support skills.
* Fess Parker's name appears in Frontierland as the proprietor of a Coonskin cap

company. In the Magic Kingdom's version of Tom Sawyer Island, Harper Goff, one of the major designers and planners of the parks, is immortalized in Harper's Mill.
* Fess series has Fess, a powerful magician and skilled warrior, who saved more than just one world... and yet treated as a wayward child in his homeland, the Valley of Magic. And not without reason, since Valley is inhabited with powerful magicians and skilled warriors, to whom Fess is no match.
* Feste also gives a lengthy, confusing speech when Olivia accuses him of growing dishonest:
* Festen, the receptionist Lars and Helene's boyfriend Gbatokai are portrayed by Lars Brygmann and Gbatokai Dakinah, respectively.
* Feste, on the other hand, has his Medium Awareness vary drastically by production.
* Festering Fungus: Fungi that parasitize and grow in living creatures, often to horrible effect.
* Festering Fungus: Parasitic fungi that grow in and on other living beings.
* Fester's Quest, it's odd to market "you have only one life and go back to the beginning of the game if you die" as a feature.
* Festigal message. Naturally, the song got negative reviews all around.
* Festival allows the player to purchase the function after taking a picture of all ghosts in the game, something that requires at least two playthroughs.
* festival dedicated to it, and has become a trendy food ingredient), and other edible plants that aren't typically cultivated.
* Festival of Fantasy were both temporarily removed in direct response to the incident.
* Festiva was from a race known as Pie Folk, and Star and Moon are part of them.
* Festivus" and an aluminum pole appears on the left hand side of the results page.
* Festivus is a non-commercial alternative to Christmas invented by author Daniel O'Keefe. When O'Keefe's son Dan wrote a version of Festivus into the
* Fesxis is an eldritch shadow spirit that possesses Sebastian during the
* Fesxis' personal code is to protect her host through any means necessary. Even if this means sacrificing lives or other unethical acts. Since she's non-corporeal most of the time, this manifests as her giving brutally pragmatic advice to Sebastian that he doesn't want to follow.
* fetches Prelude: the players start going through life, noticing really weird things, scary critters just outside of the reach of their perception. Surprise! All the players are fetches, and the "evil creatures" are their real, changeling selves, come to finish them off.
* "Fetching" by Salmon Pink has Krypto the Wonderdog dragging Tim Drake to a horny but embarrassed Conner Kent.
* Fetch me the [X], such as the Tartan Paint, the Sawdust Fire Extinguisher, the Dehydrated Water, a Pack of Fallopian Tubes, or the Left-Handed Screwdriver.
* Fetch me the [Y] for an item they have precious little of themselves.
* Fetch QuestA subquest unimportant to the actual plot which must be completed to continue.
* Fetch Quest off the beaten path, but the end result is the best weapon for Mario and the best armor for Peach.
* Fetch Quest: Saga of the Twelve Artifacts is divided into eight elements, each with a patron Seraph: Light, Shadow, Fire, Water, Wind, Earth/Nature, Ice, and Lightning. Furthermore, each person in Bideogamu has an affinity for one of the eight, although Light and Shadow are very rare.
* Fetch Quest: Saga of the Twelve Artifacts. She's also a doctor wannabe!
* Fetch Quest: Saga of the Twelve Artifacts "the Lucky", she almost immediately goes back to being this.
* Fetch Quest: Saga of the Twelve Artifacts, when she gets the gift of a cane sword from her father, the King of Strife.
* Fetch Quest, Solomon had to collect the four mystic shotguns to activate a powerful EMP bomb.
* fetchspawn are Unfettered both metaphorically (having no concept of or interest in remorse and morality) and literally (locked doors open for them, chains fall off

of them).
* FETCH! with Ruff Ruffman is a recurring character and in his debut episode runs the episode as a LARP. Because it's a kids show however there's no physical conflict, just a series of logic puzzles (which are also often featured in real LARPs)
* FETCH! with Ruff Ruffman takes the form of an animated game show run by Ruff, while the scenes with the contestants are live-action. Contestants are often instructed to do science or geography-related tasks.
* FETCH! with Ruff Ruffman, the kids are sent to the island of Dogtopia/Catlantis, where cats and dogs used to live in harmony until a civil war broke out between them. They use their clue finding skills to solve the mystery of what caused the conflict, eventually finding that both sides blamed each other for a horrible howling that was terrifying everyone. On a smaller island nearby, the kids find the answer: the howling was caused by evil vacuum cleaners living there.
*). Fet-Fruners battles giants, evil kings, and regressive gender norms. Towards the end of the story, the hero upsets a wizard who casts a spell: if the offending party is a woman, turn into a man, if they are a man, turn into a woman.
* Fe, the otherwise silent Silent Ones emit a blood-chilling shriek when they sight the eponymous protagonist.
* Fethry respectively in the same exact stances. When Dewey realizes this, he's dismayed to realize that he's the Uncle Donald of the group.
* Fetish and was beating up Kobald with it, and one of the commentators said, "I'd pay to have her do that to me."
* Fetish-Fuel Future: An author writes a future or alternate universe where their fetish is normal.
* Fetish: Getting turned on by something that isn't really normal for one's culture. Many perverts have them.
* fetish involving sitting in pies while wearing a costume and crying) for a rich client. That would be embarrassing enough, but unfortunately for poor Daniel, the policemen ask to see the videos as proof, so he has no choice but to actually make such a video.
* Fetish Retardant: An attempt at arousing the audience instead comes off as off-putting.
* Fetish Retardant: A sex scene, or something that would normally be sexy, turns wrong.
* Fetish Retardant: Disinterest or disgust at something meant to arouse.
* Fetish: Someone is sexually attracted to something considered unusual.
* Fettecke (literally 'fat corner', it was made of 5 kilograms of butter) was destroyed nine months after Beuys' death by a janitor who cleaned it up.
* Fettes Brot has the chorus "Bettina, wrap up your boobs". The song was inspired by the outfit of the host in a late night, call-in TV game show.
* "Fettuccine, linguine, martini, bikini" (things that you can use the Graty for)
* Fetuses have to be protected from the mother's own white blood cells.
* Fetus Terrible: Don't think I can't hate you right from inside the womb because I sure as hell can!
* Fetus Terrible: Raising young to be just like your nightmarish self.
* Feud, a better actress who was not considered as beautiful. Joan at this point in her career is in her fifties, struggling with alcoholism and alienating everyone on set with her behavior. It's noted that she's always been like this, but now that her looks are fading and there are younger stars ready to take her place, they no longer have as much incentive to put up with her.
* Feudal and Feral Worlds are Primitive, being former colony worlds which regressed to either agricultural or stone-age levels.
* Feudal Future: Aristocracy and monarchy will make a big comeback in the future.
* Feudal Future is rare, available manpower is restricted, and strategic mobility is king) than due to technological ones.
* Feudal Future it after the conventional military was defeated would be a nightmare due to the ensuing insurgency.
* Feudal Future seem to have a subtle version of this relationship going, with

Kircheis serving Reinhard at least partly due to a childhood promise he made to look after her little brother in her absence.
* feudal houses features a mechanic called feud score that regulates family feuds. Feud score is created through spying, attempted assassinations, military attacks, insults, and other hostile actions. Attacking another house without the proper feud causes you to become a renegade and, theoretically, an instant pariah.
* Feudal Japan's samurai made this a morbid tradition. The Code of Bushido makes avenging your master/teacher/father a core duty, for things like cutting him down in battle for example. As samurai tend to teach the family business to their kids, as it were, the result was often blood feuds stretching across generations, each side believing itself to be the heroic, righteous, and honorable party while the other side the vile villains without self-reflective irony. This also comes with a dash of
* feudal Japan stand-in, and Celtic cultures, with most place names, as well as the names of its royal family members, being German.
* feudal Japan, though with less direct conflict among nobles; high-ranking military leaders can often have greater power than planetary lords.
* Feudal Japan whom referred to him as "Heaven's messenger" since he was attributed with performing certain miracles.
* Feudal systems, especially in Europe, almost always involve families or Houses with heraldry that follows a universal format.
* Feud, Bette Davis uses her star power to bail out Victor Buono after he gets busted during a raid.
* Feud creator Ryan Murphy over her portrayal in said series not long after hitting the century mark.
* Feud Episode: An episode about two characters, usually friends, fighting each other.
* Feud Episode: An episode centered on two friends fighting each other, but reconcile in the end.
* Feud Episode: An episode where friends temporarily have a falling out.
* "Feud for Sale" focuses on a salesman character, who had previously appeared in several episodes, trying to dupe semi-recurring characters Abner and Ewalt.
* Feud generally speaks in a sweet and pleasant tone of voice but the meaning of her words are anything but.
* Feuding Families: Families who despise each other to the point of actually going to war.
* Feuding Families in Westeros, and supported different sides in the Blackfyre rebellions, Aegor spending much of his life trying to put a Blackfyre in the Iron Throne, and Brynden taking extreme measures to prevent this.
* Feuding Families one another to the point of being openly at war with each other.
* Feuding Families: Those families must perish for their crimes against us!
* Feuding within families often happens because of this. Say a parent claims that their child-in-law intends to move away with said parent's son/daughter, they will eventually do so, because the parent had been making life unbearable to them as a result.
* Feuding wrestlers can often come across as this. However, a special mention must go to
* Feuersnot, Kunrad punishes Diemut's rejection by magically banishing fire from the town until she gives herself to him.
* Fëanor and his younger half-brother Fingolfin. Fëanor is a ruthless, arrogant jerk whose actions end up cursing the Noldor and threatens Fingolfin when he thinks they will usurp his place as their father Finwë's heir. Fingolfin is more honourable and heroic and wants to reconcile with his brother.
* Fëanor has his over the course of several years due to a combination of manipulation, jealousy and anger issues, but the single defining moment is when he lets his anger and jealousy for his brother Fingolfin get the better of him and puts his sword to Fingolfin's chest and threatens to kill him.
* Fëanor: Just told Melkor F#@+ you! to his face, died after facing an army of Balrogs. His body set aflame by the passion that inhabited him.

* Fëanor's third son Celegorm to the oldest son Maedhros. Celegorm is a notoriously cruel Elf, who is possibly the worst of his brothers, showing himself prepared to engage in kinslaying, trying to force Luthien into marriage, and urges Fëanor's sons to wicked deeds. Maedhros comes across as more reasonable and though still an
* Fëanor, the mightiest elf that ever lived, made the Simarils, jewels so beautiful that
* Feven's "Dom tio budorden" ("The Ten Commandments") is a hiphop song like this, parodied as "Svensktoppens tio budord" ("The Ten Commandments of Svensktoppen"; Svensktoppen being the main radio chart in Sweden) as a dansband song, which is the type of music most featured there.
* Fever 2, a light bulb appears above Amitie when she thinks of a way to get Arle back to her home.
* Fever Cabin is in an old hunting cabin therein, trying to survive five nights until a group of survivors comes to get them.
* Fever Cabin trying to survive five nights against undead hordes that get stronger as time progresses.
* Fever Crumb and has a less rational and more mythologized understanding of history. One notable example is a play Fever helps put on that dramatizes the tale of mythical hero Niall Strong-Arm, who, at the behest of Mad King Elvis, steals Apollo's fiery chariot and uses it to woo Diana, Princess of the Moon. Fever herself, having a scientific mind-set, of course realises that the whole story must be mere fairy-tale, with no possible connection to any real history at all...
* Fever Crumb: In one scene, Fever encounters "...celebrants in robes and pointed hats whirling and clapping and chanting the name of some old-world prophet, 'Hari, Hari! Hari Potter!'"
* Fever Dream Episode: An episode that focuses on nightmares or hallucinations brought on by illness.
* Fever Dream Episode: Nightmares or hallucinations caused by fever take up a whole episode.
* Fever Dreams after Light saves L from his plan and gives up on being Kira, L dumps him because he fears their relationship is corrupting the investigation:
* Fever Dreams redeemed because he's done too many terrible deeds in the past for that, but he can be considered to have been rehabilitated.
* Fever Dreams when L lets Light back into his presence, Light has to work hard on focusing on the murder case L has given him instead of on L.
* Fever, he can be fought either by reaching Accord on the Hara Hara route without continuing (while ensuring that Fever mode is used either less than four times or more than twelve) and defeating her or by continuing with a multiple of 7 when defeating her.
* Fever Pitch. In both cases, the female lead starts falling for the male lead, who completely changes personas when Arsenal/the Boston Red Sox season starts.
* Fever Pitch's character Ben from signing away lifelong season tickets to his team. Although she is carted off at the end, field security allow a few moments for them.
* Fever practicing on a punching bag. True to the series, just because he's simply training doesn't mean it can't be challenging, especially the second stage near the end of the game.
* Fever Series are low-caste Unseelie which hunt at night and drain their victims until there's nothing left except clothing and the dehydrated remains of whatever they couldn't eat.
* Fever series both canonically use anti-aging magic to remain young and dialogue referring to their ages is deliberately vague as to what that age actually is, making it hard to ascertain their true ages. Lemres is described as a senior in school but it is also implied he and Accord are old friends, while Accord is a middle school teacher.
* Fever Series by Karen Marie Moning the Fae are definitely not cute or charming. At all.
* Fever Series can see through any Fae's glamour. It's just one of the reasons

they're so eager to kill her.
* Fever's HaraHara course, after defeating the second-to-last opponent, if you have entered Fever less than 4 or more than 12 times, or used an amount of Continues that is a multiple of 7 (0 included), instead of fighting Popoi, you will fight Carbuncle. Defeating him will unlock the character for Free Battle mode.
* Fever. The characters don't even have official names; they're referred to in the credits as "Uh... These guys?" And on top of all that, the music is in 3/4 time instead of 4/4 time like most of the other songs in the game.
* "Fever" was originally a 1956 R'n'B hit for Little Willie John, but Peggy Lee's jazz version has been the default template for covers since 1958.
* Fevre Dream. At one point, his rival Joshua York argues that Damon isn't really evil, because deep down, part of him is still just a wild animal that can't imagine survival without killing weaker animals.
* Fevre Dream has a moment of this kind, when Damon Julian offers Abner Marsh to stay aboard the ship as a captain. Worth notice, Abner does not actually reject the deal because running a ship full of vampires is wrong, but because he realizes Julian is trying to manipulate him in order to break Joshua's spirit.
* Fevre Dream is frequently described in unflattering physical terms, as opposed to Damon Julian's dark handsome looks.
* Fevre Dream, there's a vampire who's found a way of surviving without drinking blood, and he's travelling around gathering up other vampires and persuading them to make the same lifestyle change.
* Fevre Dream, thousands years old vampire Damon Julian, is killed with a point-blank headshot. From both shotgun barrels.
* FEV thrown in too) that allows them to absorb and even heal from it, specifically the Glowing Ones who see radiation as being "comfortably warm". Feral ghouls are ghouls that have lost their minds over the years as the higher functions of the brain is not preserved as well as the rest of the nervous system.
* Fewer crew are generally required for each platform, meaning you can have more platforms for them to operate, or dedicate crewmembers to other duties.
* Fewer people are around on the streets at night than during daylight hours, so it's less risky for criminals, ranging from robbers to murderers, to prey on unsuspecting folk going back home after a long day of work or school, or going out for a leisurely night walk; even if there are a few witnesses, the cover of darkness makes perps way harder to identify accurately. These guys are far less likely to go for "hard targets": suspicious and well-aware people such as those using a flashlight to walk in dark areas are harder to sneak up on. Criminals typically look for victims, not challenges.
* Fewer people still may be aware that the Hellfire Club was a real thing, albeit not necessarily evil, but rather a series of 18th century gentlemen's clubs that took a satirical and ironic view of society and religion. Calling themselves "devils" and engaging in mock ceremonies that mostly just involved alcohol and pranks,
* fewer tampons in a box. This resulted in a drop in sales, and Tampax had another "New and Improved" going back to the old quantity. So for those of you keeping track at home, two improvements = no change.
* fewer than eight arms, even though "octopus" is Greek for "eight-footed".
* Fewer will realize that their only Top 10 hit on mainstream rock was "Back to the Shack" in
* few friends and allies, but ultimately even they are either killed or abandon him, and everyone else... His father and sister despise him, the court finds him repulsive, and the common people call him things like "twisted little monkey" and very unjustly blame him for all the problems of the realm. Absolutely nothing works out well for Tyrion in the long run, even though he's very clever and is one of the few characters attempting to be heroic. Perhaps due both to his misfortune and his considerable wit, however, he's among the most popular POV character among fans and even the author himself.
* Few have suffered so much from the inescapable hands of Fate as the Aesir, the Norse pantheon. The doom of Ragnarok is so prevalent in their prophecies and

mythologies, that their leader, Odin, pretty much spends all his thought and time doing two things: Looking for a way to avoid it, or making everything work out fine in spite of it. No success on the former, but potentially promising results on the latter. Key word being "potentially".
* Few if any fans really believed Joe Carroll was killed off in the first season finale of
* Few of his enemies are obsessed with revenge against people who wronged him like one of his oldest, Adrian Toomes, the Vulture. The whole reason he
* few people have heard it to begin with references as the song progressed. Not even sure the original track still exists:
* Few people manage to hold their own against Lord Tywin Lannister, and he shows a certain respect for each of them in return:
* Few people remember it these days, but the same dynamic played out in the
* Few people who aren't fans of flamenco music (or even those who are) can name any other song by Los Del Rio besides "Macarena".
* few recolors are rather atypical in that they usually represent completely new characters who just look similar to the old ones, as opposed to old characters in different colors (which, conversely, tend to be slow sellers).
* Few remember when Kyle Reece told Sarah Connor that "There is no fate but what we make for ourselves?", in the first
* few seconds is excellent at training them to remember obstacle courses.
* Few things are more cloyingly stereotypical than jewelry commercials — particularly those for engagement rings — but
* fey as long as their chosen domain remains under the influence of their magic.
* Fey couldn't do magic at first, and kept accidentally firing off hobgoblins — the psychedelic squirrel hobgoblins wrecked her whole school. Phase at first couldn't keep from changing density, couldn't control his strength when he was extra-dense, and couldn't keep from sinking into the floor when he was intangible. At first, Generator could only cast a single PK charge into an inanimate object for a short while. They've all gotten much better at it.
* Fey in general in the game are like this, but especially nymphs. One edition states that wildlife love them
* Fey is a Divine beauty due to her glamour that she can't turn off although she would be at least world class without it.
* Fey is allergic to cold iron and synthetics; yes, she can be given a nasty rash by your spandex costume. Blacklight is weak to bright light. And Fractious has OCD and Generalized Anxiety Disorder, so she can be stopped by dirt, dust, pollen, mud...
* Feynites Aftermath but in someone who can actually respect and care for him.
* Feynman also claims, in his memoir, that most of the safes still had the default combination. When he told his superiors about this obvious security risk, their response was to institute policy to 1. Change All The Combinations and 2. Keep Feynman Away From The Safes.
* Feynman's second day at Cornell, he went to the housing office to look for a place to stay. They told him "Listen, Buddy, the room situation is tough. In fact, it's so tough that believe it or not, a professor had to sleep in the lobby here last night." He replied, "I am that professor and I'm not keen on doing it again."
* Fey (who has a female spirit in her head helping her to become feminine) is an example of the justified version of the trope.
* Fey Winds: Four ricochets for a possession gem dangerously close to her brain.
* Feywinds has this. she's a fox turned girl and fox age doesn't equal human age so she looks early 20s but is actually not anywhere near that. she acts accordingly though with a childish but quirky personality and can be very naive. She looks like an adult, age wise is a child but has the mentality of a girl in her mid to late teens, albeit a clueless one. Though the author of the comic has said she likes us to not think about how old the character actually is.
* Fez are of glorious example of this trope, as most characters claim that they are afraid of the owls. They are even somewhat worshiped. This might be because they are able to see all three dimensions by rotating their heads, unlike the majority

of the game's characters.
* FEZ fame quit the games industry a short way into development of "Fez II", as a result, years of rage and insults being hurled at him, with Marcus Beer's remarks being the final straw. It should be noted that certain developers and journalists who saw first-hand what he was put through by the gaming community tend to be amazed he held on as long as he did. Phil was very vocal about slinging vitriol and seemed to almost encourage it coming his way, seeming to feed off the trolls. At some point, though, it seemed to hit a tipping point, and he lost all interest in dealing with the drama. Unfortunately, one can't just turn the internet off like that, and it never stopped coming in, leading to overload and total disillusionment.
* Fez, Gomez and all the other characters do not wear any clothing. Except for a fez, obviously.
* Fez has several glitchy elements to represent the world coming apart.
* Fez reads, when translated, "Please send help. Trapped in a fez factory." Though downplayed given it's written on a stone pillar and not a fez.
* FF 12, it's also a city where ancient machine relics are dug up and examined.
* FF12's also has a mark called the Vorpal Bunny, but it just takes the genus' "bat" status
* Ffangs the Vampire Bat and the Kiss of Truth, the newly-human titular character's sister is kidnapped, and he sets off to rescue her, with the last line being "(The adventures of Ffangs will be continued in the next book)". The sequel was never written.
* FF by hacking into an online database so that they win free concert tickets that were meant to go to winners of a contest. By replacing the real winners, they end up in a prime position to heckle Darla Deering, the singer performing at the show (who they hate).
* FFFBI about New Delhi getting new binumerical street signs (that does come in handy in teaching the agent Hindi numerals) that ends with the line "Bystanders agreed with India Inquirer reporters that it was indeed a slow day for news."
* FFIV. He's the incarnation of hate given form after the man behind the curtain dies.
* F.F. refuses Jolyne's offer to take the Foo Fighters disc when she dies, on the grounds that even if it were inserted into something else, it wouldn't be her..
* FFS, I Believe in You: In the sequel, as Zola Province is located very deep beneath the sea, and is consequently very dark and unsuitable for most forms of lighting, the zoras living there make use of captured bari — bioluminescent jellyfish-like creatures — for illumination.
* FFS, I Believe in You: In the sequel, Murchadh and Uisdean used to be fairly close friends, when they were children, before Uisdean's increasing megalomania and obsession with power drove them apart and eventually forced Murchadh to join the rebellion against him.
* FFS, I Believe in You: In the sequel, the unpopularity and tyrannical rule of the Mormaer have caused an armed insurgency to form against him in Zola Province, resulting in a rapidly escalating conflict that the main characters find themselves drawn into.
* FFS, I Believe in You: In the sequel, the Yiga call for a parley with the Gerudo, claiming to have been left purposeless by the Calamity's defeat and Kohga's death and to want a truce, but this is simply a ruse to attempt to ambush Riju.
* FFS, I Believe in You: Lightning being as deadly as it is to the zora, Farosh the lightning dragon is quite easily the most dangerous being alive insofar as they're concerned. Despite this, Sidon can't help but be entranced by the dragon's terrible beauty when seeing it for the first time.
* FFS, I Believe in You: Lizal is translated as this in order to represent it being a very archaic language from the perspective of the zoras, resulting in the lizalfos using ornate turns of phrase, poetic metaphors and flowery language that wouldn't be out of place in a Victorian romance.
* FFS, I Believe in You: Played for drama with Uisdean in the sequel. When he and Murchadh were children, they were playing in Jabu Orkú's presence and

Uisdean was pushing around and bullying Murchadh, resulting in Orkù giving him a warning nip on his hand. This was a fairly minor bite that only resulted in mild scarring, but because Orkù is the zora's living god, the Province's people took this as a profound condemnation of Uisdean's ability to rule. In turn, Uisdean became obsessed with this injury and developed a seething hatred of Orkù as a result, leading to his eventual descent into tyranny and his attempt to assassinate the god-whale.
* FFS, I Believe in You: When Link and Sidon encounter Doomsnarl, the old lizalfos king, he turns out to still believe that that he's alive, and is extremely surprised when Gerald explains to him that he is, in fact, undead.
* FF the Yancey Street Gang hack their way into getting all the tickets for Darla Deering's concert and pelt her with vegetables and eggs because they think she's trying to replace Ben Grimm.
* FFVIII's, the reasons for Squall's silences become increasingly more apparent as the game goes on.
* FFX-2 - Brother towards his cousin Yuna - but exploring it is not particularly popular.
* FFX-2. The first game plays it straight, ending on an uplifting note, but the sequel introduces serious consequences to the first game's heroes' actions.
* FFX again, Lulu's hair is waist length but tied up high and in braids. Presumably, her hair must be longer once it's let down.
* FFXI The only real reason to follow the directions is because crafting is so goddamn hard in the first place, people are willing to do nearly anything to sink just a little less time and money into it.
* FFXIV. Appropriately, the promotional material for the expansion features the Dark Knight job prominently.
* FG-42 early model small arm and it had been designed to combine the machine gun and rifle into one unit small enough to be carried by a paratrooper (it was as short as a modern AK-74, but had a 50cm barrel and fired full-power 7.92x57 ammo). Most of its cool features proved useless: it was too light to keep steady when firing full-automatic (half the weight of a BAR), too awkward to aim at distant targets (it was much shorter than a rifle), had too small a magazine for use as a machine gun, needed expensive alloys, and it could not mount a true bayonet, only a metal spike instead of it.
* FG generator can configure a specific stage with a character of your choice, being attached to one stage in Arcade Mode instead of having a random stage as default.
* FG's portrayal of British accents can get decidedly ropey: in a historical flashback, the Bronte sisters speak with Cockney acccents.
* Fhi Fan is a Taiwanese male model whose only acting credit is Shuichi in the
* Fi: All of Can's romantic relationships eventually fall into patterns of abuse and manipulation. Some women, like Sıla, are lucky to escape relatively unscathed. Duru and especially Billur, on the other hand, are far less fortunate.
* Fiamma of the Right why he had to go through all the theatrics of his overly complicated plan when he is already. Touma then punches him out.
* fiancé at the time). McGoohan was uncomfortable performing love scenes and tended to avoid them throughout his career.
* fiancée and Andy was Bloom's childhood friend in Gardenia, but it is Sky and Bloom who end up together.
* Fiasco Fiasco playsets, it's entirely possible for it to end up in broad comedy, clumsy, short-sighted backstabbing, and general disaster, and Cthulhu may well not be anywhere near as major a threat to life and sanity as whatever just came up on the Tilt table.
* Fiasco for the schadenfreude of it, and if you're not all about that schadenfreude, you would not be playing Fiasco. Additionally, many scenarios have endless ways to bring the dead back if there are supernatural forces or mad science at work. Finally, you could always just look at the relationships and role of your late character and play out NPCS doing terrible, no-good things that develop out of the death of your character. Dying can be surprisingly liberating.

* Fiasco is "The Ice", set in the (fictional) McMurdo research station in Antarctica. There is no predefined plot, but as the game's title suggests things there are expected to go badly and fast.
* Fiasco movie", and cites several of their films listed above as inspiration.
* Fiasco, the expedition's crew includes a priest, who's portrayed positively.
* Fiasco), with character creation making the players define their relationships with each other and their final goals, and then making it difficult for them to reach those goals without tossing somebody to the wolves.
* Fiat Grande Punto advert from 2007, also aired in the UK, had a colourful city where every building bounces up and down to the music like bars on a equaliser. We even get to see what happens to the people inside two of them.
* Fiat had a new car that they intended to market towards unmarried working women. To target this demographic, they used a direct mail campaign by making a list of 50000 career women, and writing each of them an anonymous, personally addressed "love letter" full of stalkerish lines like "I saw you on the street and knew we were made for each other", that in no way mentioned their car or indicated that it was a marketing campaign. When droves of frightened women filed police reports, believing that they were being stalked, Fiat came clean and cancelled the campaign, which apparently would have included sending a series of similar letters to the same women, which would eventually reveal themselves to be advertisements.
* Fiat owns: Ferrari, Maserati, Alfa Romeo, Lancia, and Abarth, as well as being the sole member of the Chrysler Group LLC, which includes Chrysler, Dodge, Jeep, Ram (which was previously part of Dodge), and Mopar.
* Fibber McGee and Molly, a succession of them would drop in at 79 Wistful Vista to chew the fat with the Mc Gees.
* Fibber McGee and Molly had a character named Horatio K. Boomer, a con man and suspicious character, but still a friend to Fibber and Molly. At each of his appearances, he would claim to have the very thing that Fibber (or someone else) needed and rummage through his pockets, producing various items, but never the one required. After that, he'd state, "What do ya know, no <item>", and be on his way.
* Fibber McGee and Molly: In addition to Molly always calling her husband "Fibber" (for good reason), Fibber had nicknames for many of the other characters:
* Fibber McGee and Molly series), was played by a Caucasian male named Marlin Hurt.
* Fibber McGee and Molly's Myrt, who was never heard, but always got sidetracked telling Fibber the latest gossip and never put the call through
* Fibber McGee. Like Roberts he retired after the film was released, though in his case due to old age rather than a change in profession.
* Fiberglass (fiber-reinforced plastic): Though the registered trademark is FIBERGLAS, held by Owens-Corning.
* FIB). Finally, you have the military with long-range assault rifles and which will show up on tanks.
* Fibonacci sequence (1, 1, 2, 3, 5, 8, 13, 21...) appears just as much in nature as Phi (which makes sense seeing as they're related).
* Fibrodysplasia Ossificans Progressiva. The fact that this is an irreversible and often slow process makes it far worse than any of the fictional examples listed above.
* fic, a recovered Azula's firebending has weakened severely. Zuko takes her to see the Sun Warriors in hopes of getting it back, and this happens when he's trying to explain why he brought her to their island; Zuko hadn't known for sure that there was anything wrong with Azula's bending, as such, but her angry denial that there was anything the matter with it confirmed that something serious was going on.
* fic, depicts Jaune's evil split personality as being physically stronger and more martially skilled than him. Despite sharing the same body.
* fic featuring Severus Snape and Hermione Granger. Not your usual time-loop story, in large part because, as the author notes, the effect is a physical response to a magical accident, and not an attempt to dispense cosmic justice or teach a lesson.

* fickle crybaby tries to undo some of the effects by adding realistic flaws to an older child. In the first episode, she is easily conned by a woman into giving her $1000 thinking it's for a record deal, in another she completely buckles under pressure when she has to juggle an audition and a spot on her language team, she's shown to resent how the others look on her as perfect as well as sometimes acting rudely towards Angelica.
* Fick, which means "fuck". And they most likely left the "s" out, because "Wicks" would sound like the German word for jerking off.
* FICON (FIghter CONveyor) Project: Putting an F-84 fighter inside the bomb bay of a B-36 and using the former to deliver a tactical nuke. Got a few flights in before the U-2 came along and the B-36 became obsolete. Determined to be an idea that worked better in theory than in practice.
* fic, portrays the first manifestation of a wizard's magical talent as something akin to this trope.
* Fics in which the characters eat the author's favourite meal are quite common, and often not particularly problematic, but see the above mention of Pepper-Jack Cheese - it doesn't work when the food is not accessible or there would be other reasons for the characters not to eat it. For example, there was once a
* Fiction 500: A character manages to be wealthier than is possible in real life.
* Fiction 500Characters who have absurdly unrealistic and uncountable amounts of wealth.
* Fiction 500 throughout and decries her family's descent into greed and self-indulgence.
* fictional account of Al Capone's gang going to war with the Chicago police.
* Fictional Colour: A color appears in a work that doesn't exist in real life.
* Fictional companies Matsumoto Fishworks and Tamarabuchi Heavy Manufacturing Concern combined to create
* Fictional Companies Wiki: Fictional companies, businesses, and brands in works of fiction.
* Fictional Constellations: An invented set of constellations perceived in the night sky.
* Fictional Constellations: Constellations invented to flesh out a fictional world or culture.
* Fictional Counterpart a Shakespearean actor, though not a very good one.
* Fictional Counterpart of the Philippines instead, with stand-in place names as well as people names. The specifics of Madame Ybarra's country of origin don't appear to be terribly essential to the story except as supporting comic relief, so historical or geographical accuracy was probably not a going concern.
* Fictional Country: A fictional nation-state in an otherwise real-world setting.
* Fictional Country: A made-up nation-state which was created for storytelling purposes.
* Fictional Country: A made-up sovereign nation-state which has been inserted into an otherwise-identical map of the real world.
* Fictional Country of real-world nations, or at least allegories for real-life international politics.
* Fictional Creatures Wiki: A work in progress wiki documenting every fictional creature that is not an alien.
* Fictional Disability: A character is handicapped in a manner that doesn't exist in the real world.
* Fictional Disability akin to HIV/AIDS. Lupin's lycanthropy forces him to need many special accommodations just to live day to day, such as a potion he has to take for the rest of his life, or the more elaborate quarantine Hogwarts had to set up for him as a child.
* Fictional Earth: An alternate counterpart of our real planet, which features (radically) different political and/or physical geography; up to and including completely unrecognizable continents and oceans.
* Fictional Earth: An alternate version of the planet Earth with completely different geography from real-world Earth.
* Fictional Earth: It's got one sun, one Moon, the same weather and climate and

flora and fauna, it's probably still called Earth, but it's a different world.
* Fictional Earth: Same name, mass, Sun, Moon, etc., but a completely different world.
* Fictional example: "Vault Boy", the wavy-haired boy in the vault-dweller jumpsuit who serves as the smiling figurehead for Vault-Tec in
* Fictional exposes on well-known TV characters, such as revealing that
* Fictional fast-food brand "Amigo Tacos" is used as a throwaway name in an early episode of the anime
* Fictional Geneva Conventions are a bit different in fantasy/science-fiction settings.
* Fictional Geneva Conventions on population centers whenever they start to lose.
* Fictional Greetings and Farewells: These friendly greetings and farewells can be found in works.
* fictional, he - among other things - aids Eiffel with the design of his tower, advises Anton Chekhov to write Three Sisters rather than two, and inspires Marconi to invent a wireless telegraph after accidentally breaking down his telegraph poles. Oh yes, and he also invented the light bulb, dynamite, etc. (but arrived at the patent office a minute after Edison and Nobel, respectively).
* Fictional Holiday. In some cases, the holiday may not have a canon date, and the fandom just deduced when the most logical date would be.
* Fictional Holiday: The characters celebrate a holiday that doesn't exist in the real world.
* Fictionalization IV, has a similar mishmash of things from various fantasy tropes as well as superheroes, mecha, and other tropes from sci-fi.
* Fictionalized Death Account: A historical figure's death happens much differently from real life.
* Fictionalized Death Account: A work of fiction changes how a real person died.
* fictional martial art called "moong fu" to prepare and takes on the wrestler in the same arena as in "Sumo Momo".
* "fictional" — but all he does is tear off his gray mustache, then take off his white hat and wave it around wildly as the store around them collapses like a cave-in at a mine shaft.
* fictional memoir ends as the titular character invades Persia. The rest is told in diary entries and field dispatches, which become increasingly harried as the campaign goes south.
* Fictional Mystery, Real Prize: That board game I played really helped me get my hands on the real prize I want! It's all mine now! I guess fiction can turn into a reality after all!
* Fictional Painting: A work that focuses on an fictional in-universe painting.
* Fictional Political Party: A made-up political organization which participates in a real-world government.
* Fictional Political Party: A political organization that only exists in-universe instead of real-life.
* Fictional Province: A fictional province/state/county/etc. set within an otherwise real country.
* Fictional Province: A province, state, or other sub-national region of a real-world country which only exists in-universe.
* fictional religious text called "The Book of Mozilla". Doing this in some versions of Internet Explorer, meanwhile, gets you a (false) Blue Screen of Death. And doing this in Pale Moon, a fork of Firefox, gets you a note of thanks to the original developers — and a lament at how Firefox was allowed to suck.
* fictional series with the tagline "So easy a caveman could do it," with the real series following the cavemen offended by it. They somehow got their own sitcom, though it was quickly cancelled. Notably, the caveman has been in GEICO commercials for years, but without re-telling the original joke or using the slogan. Unless one were familiar with the original ad, they'd have no idea why a hairy guy keeps getting offended at the mere mention of GEICO.
* Fictional uncertainties aside, Flashman certainly serves as a splendid Gump, as his career spans virtually every notable conflict in the world from the First

Afghan War to the Boxer Rebellion (though sadly his author died before recounting some of Flashman's highest-profile adventures, e.g.
* Fictional United Nations: A government of governments, mediating between nations.
* Fictional United Nations and willing to work together for the greater good.
* Fictional United Nations predicts "the Parliament of man, the Federation of the world".
* Fictional Video Game about a time-travelling cyborg trying to escape the police.
* Fictional Video Game has a creepy playground level, inhabited by children who turn out to be wolves. Ender has to kill them to proceed.
* Fictional Video Game is set has a quite complicated one between the Sources, the game world's gods:
* Fictional Video Game standing right next to them is baffled, wondering what a "Enpeecee" is.
* Fictional Video Game. The series begins with her starting work at the company that makes it.
* fictional wars between North and South Korea series as a way of promoting freedom of speech.
* Fictional Zodiac: Inventing new zodiac and horoscope systems to add depth to a world different from ours.
* Fictional Zodiac. The signs and their months are: Morning Star - The Ritual, Sun's Dawn - The Lover, First Seed - The Lord, Rain's Hand- The Mage, Second Seed - The Shadow, Midyear - The Steed, Sun's Height - The Apprentice, Last Seed - The Warrior, Heartfire - The Lady, Frostfall - The Tower, Sun's Dusk - The Atronach, Evening Star - The Thief, and 13th Sign - The Serpent, which is easily the most alien of the bunch. It is said to be formed of "unstars" and travels in a somewhat predictable motion around the sky, having no month of its own but taking over one each year.
* Fiction As Coverup: Hiding the truth in plain sight by calling it fictional.
* Fiction Fixers: Alice in Wonderland are about reversing changes in the books caused by an agent of the Illiterati.
* Fiction Isn't Fair: Disregarding vs. following what would happen in the real world
* Fictosophy was made in less than a week just to have something for April Fools Day.
* Fictosophy with Tom's shenanigans. The only one who's okay with it is Shannon, who also happens to be the manager.
* fic where Shiro ends up having to give the talk to not only Allura and Coran (who have no idea how the human reproduction system works), but also a surprisingly-naive Keith, after Pidge gets her first period and they assume she's been horribly injured.
* Fiddler becomes this as the series goes on. He starts out as a member of Whiskeyjack's squad and is said to have joined the army together with the latter. After technically deserting at the end of
* Fiddler on the Roof and asks: "Where do they think they are? America?"
* Fiddler on the Roof, and by extension the rest of her family, for most of the rest of the play.
* Fiddler on the Roof, and later to let second daughter Hodel marry activist Perchick even though his ideals often contradict Tevye's traditional mindset. But when third daughter Chava falls in love with Fyedka, a non-Jew, he decides that's a bridge too far, and disowns her when he learns that she's gone behind his back to marry Fyedka.
* Fiddler on the Roof and they'd never met until they were reciting their wedding vows. After evading for awhile Golde finally admits that yes, she does love him and he responds in kind. If done well, these two can outshine all the young couples as the cutest in the show.
* Fiddler on the Roof at the thought of having a son-in-law his own age, but thinks that Lazar has been married, and is proven to be a good provider and non-abusive, is a mark in his favor. Tzeitel, on the other hand, is angry, but less because she thinks Lazar would be a bad husband for her and more because she already has a

boyfriend she could have been married to already, had he simply grown a pair and asked Tevye before Lazar got the chance.
* Fiddler on the Roof both because they need to find a man to please the parents and so that they will not be alone.
* Fiddler on the Roof, especially by Tevye, including once as a way to save face after he finally gave his blessing to one of his daughters after she married a Gentile.
* Fiddler on the Roof has both a Dream Ballet and a ballet to explain a dream.
* Fiddler on the Roof has two songs in bed: one where Tevya explains his dream to his wife, and the second when he asks his wife if she loves him.
* Fiddler on the Roof. In the song "Sunrise, Sunset", the older characters come to terms with a young couple getting married. "Is this the little girl I carried, is that the little boy at play? I don't remember growing older, when did they?"
* Fiddler on the Roof. It was to have been sung by Tevye in the final scene, but its gallows humor tone didn't go over with preview audiences. One of the other removals, the rejected opening number "We Haven't Missed a Sabbath Yet", has lyrics for a tune that ultimately remained in the score only as set change music.
* Fiddler on the Roof, Motel tells Tevye that he and Tzeitel, as children, "gave each other a pledge" that they would marry each other. (They still want to marry, but tradition requires that Tevye, as Tzeitel's father, approve the marriage; his mention of the pledge is part of his attempt to convince Tevye to give his permission.)
* Fiddler on the Roof notes that Jews laugh because if they didn't, they'd have to cry.
* Fiddler on the Roof originally began with a timpani piece playing over the United Artists logo.
* Fiddler on the Roof scouted locations across Eastern Europe but finally settled on Yugoslavia (largely because they couldn't get permission to film in other countries).
* Fiddler on the Roof, Tevye has acquiesced to his two oldest daughters' unconventional marriages during inner monologues that follow a pattern: Reason why not, on the other hand, reason why, on the other hand, reason why not, on the other hand — okay, you can get married. So when the third daughter shows up with a Christian husband and the same inner monologue starts again, we have hope. But instead, this happens:
* Fiddler on the Roof: the constable and Tevye. Despite one being a Cossack and the other being a Jew, they both show respect to the other and treat each other well, having a friendly chat every once in a while. When the constable receives orders to perform a pogrom in the village, he is obviously uncomfortable with the idea and warns Tevye in advance out of respect for their friendship.
* Fiddler on the Roof the daughters want to marry the men of their choice: a poor tailor, a revolutionary, and worst of all, a gentile, rather than have Yenta the matchmaker choose.
* Fiddler on the Roof The practice was to keep marriages within the Jewish community, but the musical points out that this is why the system fails.
* Fiddler on the Roof there is Yente, the (professional) matchmaker, who fails to make any successful matches in the story.
* Fiddler on the Roof to Motel, a poor tailor, and wants to keep it. Tevye, while not liking the uneducated Lazar, originally goes along with the arranged match. However, after a passionate appeal from the young lovebirds, he ultimately decides Tzeitel's happiness matters more than the traditional wedding arrangements.
* Fiddler on the Roof, when Hodel hears that her fiancee Perchik has been arrested and sent to Siberia, she goes there to be with him.
* Fiddler on the Roof, with the Cossacks' invasion of the wedding as the turning point.
* Fiddler on the Roofzaaaaaaar" in "L'Chaim (To Life)" - with said actor usually holding it until the audience starts applauding. It is also not uncommon for betting to be going on backstage about when said actor will pass out.
* Fiddlestick's ultimate lets him barge into the fray with a horde of seriously

damaging flesh-eating crows, usually followed up by a barrage of everything he has left. One of the more popular ways to gear him up is to set up towards the most devastating dynamic entry possible.
* Fiddling with his bowtie before embarking on a course of action and/or after arguing with someone.
* fidefortitude, tired of all the many sports events, imagined them all stuck in one event: the fuckening. All sports are played at the same time on one field. All players must abide the rules of their own game, except if two players from different games hold hands: then they swap rules as long as they do.
* Fidel Castro aligned himself to the Soviet Union once he found out the Americans tried to get rid of him, and install a puppet regime, which led to the Missile Crisis of 1962 that almost led to nuclear war.
* Fidel Castro, believes that Batista must be brought down through guerrilla warfare, and are in favor of both labor and land reform. Ultimately, the urban movement agrees to join with Castro after their attempt at a general strike is put down.
* Fidel Castro, Daniel Ortega, Augusto Cesar Sandino, and Farabundo Marti in Central America.
* Fidel Castro. Despite the small size of the explosion, the fact that its point blank makes it instantly lethal as most of the foe's face is burnt and destroyed.
* Fidel Castro incompetent as Batista's (and Castro was supported to the hilt by the Soviets while the Americans left Batista out to dry), that rebellion was steadily crushed over the years and faded into historical obscurity.
* Fidel Castro: Leader from 1959-2008 (as Prime Minister from 1959-1976, then as President from 1976-2008).
* Fidel Castro. They weren't quite amused... He was once asked an inane question at a party and spoke for FOUR HOURS without stopping. Dear god man...
* Fidel Castro were legion. Whether all of them actually occurred is anybody's guess, but due to their sheer number, some of them must've been real. Castro of course died peacefully after retiring from decades of power, having outlived many, many of his would-be assassins.
* Fidel Castro, who willingly sides with the Soviets through Dragovich, hands Mason over to them without a thought, and allows access to his country to them for the latter's
* Fidelity Test: A character tests their spouse's faithfulness to them.
* Fidelity Test: Testing your lover to see just how faithful they are to you.
* Fidget spinners have been around since 1993, but didn't start to gain mainstream acknowledgement until 2017. They were used by teenagers to cope with psychological stress, and to better pay attention in class. Due to them causing more slacking in classrooms than focus (in no small part due to
* Fido, although she's kept like that deliberately by his owner, in a world where zombies are kept as slaves, you can imagine why.
* Fido, but the dog is replaced by the family's pet zombie. They presumably named the boy "Timmy" just to set up that joke.
* Fido depicts an alternate reality where zombies have been domesticated by collars that suppress their urge to feed. However, Bill Robinson hates them even though the titular zombie is shown to be capable of compassion even when his collar malfunctions.
* Fido), Helen empties a gas can inside the bullies? clubhouse and sets it on fire with their corpses inside it. She then tells her son to forget everything he just saw her do.
* FidoNet is a network that connected the early BBS systems with forum messages and email using a store-and-forward system to cut down on phone bills over connecting to other systems directly before the internet saw wide use outside of academia. It's also how modern SMS messaging works for reliability.
* Fido' real-life pregnancy was written into the film, where her character mentions being pregnant, and the husband commenting that he can't afford to pay for another funeral.
* Fido, which occurs in an alternate 1950s that is in the heyday of a zombie post-

apocalypse. The zombies have been tamed into domestic servitude by a control collar. This is possible because zombie bites do not cause a change. Billy Connolly plays the eponymous character, one of the most charismatic shambling corpses ever shown on the big screen.
* Field Commander does this with both sides, while A.T.L.A.S is a more humane "You need a Medal of Honor and some sort of task that makes you a damn badass" to become a grunt, Shadow Nation's training of their appropriately named fodder is rather inhumane, cooped up in tiny cells being fed food devoid of nutrients, it turns their men to insane bloodthirsty beasts as a result, and their division commanders do not treat their men well even after they are sent out to the field.
* Fielder's Choice, Zach falls asleep somewhere, and Philip carries him up to his room and pulls the blanket over him.
* fielders - many cricket fans have seen shots that looked like they were certain to go for four stopped by spectacular saves from a fielder. South Africa's Jonty Rhodes was particularly well known for this.
* Field Grey: Played straight. Bernie and luscious young Melba, whom he is escorting out of Cuba, get a hotel room for the night. Bernie says that he'll sleep on the floor, but Melba says the bed is comfortable "and there's room for two." Sex follows.
* Field Grey's request for transfer to a front-line unit because Bernie, born in 1896, is too old. Bernie tells an interrogator that by 1944 there was no such thing as too young or too old for the German army, which is why Bernie found himself fighting alongside teenagers and grandpas as part of the last-ditch defense of Konigsberg in early 1945.
* Field Marshal and Chief of the Imperial General Staff, the highest position in the British Army.
* Field Marshal Bill Slim reported on the "helpfulness" of British civilians in Burma early in World War II. His best example was of a man he asked for help buying horses:
* Field Marshal Douglas Haig, whose primary battle plans consist of ordering the British soldiers to leave their trenches and walk very slowly towards the enemy, which had already been tried 18 times unsuccessfully.
* Field Marshal Gebhard Leberecht Prince Blücher in many ways behaved like a "typical" hussar officer; he lost huge amounts of money gambling and injured himself while participating in a horse-race at age 72, but he was also highly successful leader of operations involving all arms.
* Field Marshal Kutuzov is old and fat, but he is a great leader, respected by absolutely everybody in the army, who, eventually, defeats invading Napoleon armies.
* Field Marshall C.G.E. Mannerheim. He joined the Imperial Russian Cavalry in 1882
* Field Marshall Kliment Voroshilov. But you may be excused for thinking that his performance was deliberate, for his incompetence was so epic as to be almost indistinguishable from treasonous malice.
* Field Marshall Konrad von Hoetzendorff few things keeping him from losing the entire war for his country was the fact that on the other side, the leadership (a slew of Russian aristocrats and Luigi Cadorna) was even worse. On the few occasions that it wasn't, such as against Alexei Brusilov in Autumn 1916, his competence was on full display.
* Field Marshall Sam(ji) Hormus(ji) Jamshed(ji) Fram(ji) Manekshaw of the Indian Army. Each of the "ji"s are honorifics appended to his actual name as a mark of respect from both military and civilian government officials who had the opportunity to work with him.
* field marshal Mikhail Illarionovich Kutuzov) and he started to get splitting headaches from its use. It also contributed to the myth that he was one-eyed.
* Field Marshal Radik Gradenko, whose own incompetence leads to the endangerment of the Iron Curtain project as well as the inability to capture the Allied Chronosphere; Albert Einstein is also able to slip out of his grasp, all of these due to his own strategic blunders.
* Field-Marshal Slim was affectionately called "Uncle Bill" by all ranks of

Fourteenth Army. Nobody would have dreamt of referring to "Uncle Bernard" in the same way.
* field medics for the Royal Nymian Marines to help fend off the superior numbers of their attackers during the War of the Magi.
* Field of Blades surrounded by gears/flames. Yeah, Archer has issues.
* Field of Blades: Swords stuck in the ground to represent the casualties of a war.
* Field of Dishonor, a man insults Honor to the face of her boyfriend, and when he gets punched in the face, challenges said boyfriend to a duel. This was of course, all an act, as he was paid to kill both Honor and her boyfriend, using the legal dueling code as a cover.
* Field of Dishonor but because she is not completely amoral, she agrees to a compromise verdict that spares him from a death sentence. The fallout of the trial leads the the remaining plot of the novel.
* Field of Dishonor. Due to random "luck of the draw" when a computer selects the court martial board, half of the admirals on the panel judging the trial are in thrall to Young's father, Earl North Hollow, whether due to personal politics or blackmail. This results in Young being found guilty on four of six counts but with no agreement on the other two; he's dishonorably discharged but not sentenced to death.
* Field of Dishonor example, people who end up across a dueling field from her tend to wind up leaving the field in a body bag.
* Field of Dreams, by having the character build a race track in his cornfield. In the end, it said "Professional driver on a closed cornfield." Later they changed it back to "closed course."
* Field of Dreams has an inversion: the protagonists are on their way home when they pick up the hitchhiker, and they take him home with them, rather than to a destination of the hitchhiker's choice. An added twist: the ghost is a younger version of someone they've already met ...
* Field of Dreams has Dubuque, Iowa filling in for most of non-Fenway Park Boston, and Galena, Illinois filling in for Chisholm, Minnesota, both being within a 50-mile radius of the farm that served as the Kinsella home.
* Field of Dreams, in that the Iowa cornfield is supernatural and mysterious, but it's awe-inspiring, not scary.
* Field of Dreams, most people remember that it's Ray Kinsella who has visitations and dreams from a ghostly Voice saying "If you build it, he will come." But Ray is not the only one visited—his wife Annie also receives psychic dreams (it's upon realizing that they shared a dream that the two realize that Ray needs to travel to Boston), and later, their daughter Karen reveals that she too has been hearing prophecies, as she accurately predicts how the baseball field Ray built will summon others in need ("Daddy, people will come!"). The final shot of the film shows a truly massive line of cars lining the highway on the way to the Kinsella's farm, suggesting that hundreds of people have been hearing the Voice calling to them.
* Field of Dreams Shoeless Joe Jackson is confused about finding himself in a baseball field after he died.
* Field of Dreams, Terrence Mann (played by James Earl Jones). He was actually J.D. Salinger in the book, but as you can imagine, that changed pretty quickly (Salinger threatened to sue if he was featured in any adaptation of the novel).
* Field of Dreams, when Ray introduces his brother-in-law Mark to Terrence Mann:
* Field Of Innocence: Before she died, Lu Ten's mother, Colonel Kei Rin, was one. She was such a feared soldier that the Earth Kingdom army had a 'flee on sight' order for her.
* Field Operation Manual for early Panzerfaust had a two-line stanza on every page, forming a short poem mimicking popular children's rhymes.
* Field Postcards sent by soldiers to their loved ones during World War I contained nothing but a series of basic statements that were scratched out to leave a coherent message. To censor sensitive information, anything that was added to the card other than the multiple-choice answers was destroyed.
* "Fields of Honey" and "Two-Tone Town" are also suspected of being this; the

latter even lampshades the show's eventual replacement (with "ACME Oop!", a.k.a
* "Fields Of People" was originally written and performed by American art-rock group Ars Nova, however, their career flopped so badly that the people who know of the song most likely have only heard the version performed by British pop group The Move.
* field sprites, from hair length and outfit to eye colour. Considering Cecil's menu portrait and other designs, the field sprite seems more likely.
* Fiend Folio. Hags and other evil magic-users build them as guardians, binding evil spirits within ordinary scarecrows to bring them to life. The same spirits also grant scarecrows the ability to cause those who look into their eyes to become paralyzed with fear.
* Fiend Folio, have this as a racial trait. If they are captured or pinned down for more than 10 rounds, they dissolve into a puddle of poison.
* Fiend Folio. If they are captured or pinned down for more than 10 rounds, they dissolve into a puddle of poison.
* Fiend Folio introduces the scarecrow monster, which is a humanoid made of sticks with a carved jack-o'-lantern for a head.
* Fiend Folio. Killmoulis live in areas where grains and other types of food are prepared (like a kitchen or gristmill). They secretly help out with the work and eat large amounts of food (such as grain and flour).
* Fiend Folio supplement. The berbalang can go into a trance and send a projection of itself out onto the Astral plane to hunt for a human being to kill and eat. While the projected form is active, the berbalang is helpless and can be easily killed. If its astral form is killed, the berbalang has a 75% chance of dying from system shock.
* Fiend Folio. The Flail Snail is described as a "silicon-based mollusc".
* Fiend Folio: The khargra is a monster from the Elemental Plane of Earth. It normally "swims" through solid rock looking for metal ores to consume. If it encounters creatures with metal items (e.g. armor and weapons), it will leap out of the surrounding rock and bite the items in an attempt to eat them.
* Fiend Folio, there were the Kaorti. These are hive dwelling humanoids that were introduced to the Prime Material Plane from the insane nightmare plane of the Far Realms. The Kaorti aren't just evil, they're minds are otherwise so alien that if an enemy reads their minds — they risk a chance of going insane.
* Fiend Folio. The vision monster can cause aging in any creature that sees it, at a rate of 1-10 years per minute of observation.
* Fiend Folio (who only eat the brains of their victims and leave the rest to the grimlocks).
* Fiendish Codex II. Combine the two and you get a supercharged Hellfire Blast usable at will.
* Fiendish Codex II notes that most evil people are egotistical— they don't look at lemures or dretches (bottom-of-the-barrel devils and demons, respectively) and think that will be their afterlife. They think they'll shoot to the top of the infernal hierarchies immediately. In addition, resurrection magic doesn't generally leave the revived with memories of where their soul ended up, so nobody has firsthand information as to what happens after you get killed.
* Fiendish Freddy's Big Top 'O Fun, in the tight Rope Act. If you lose your balance, the acrobat grabs hold, and Freddy picks the fingers one by one. Although Freddy sometimes speeds up the trope by smashing the hand with a hammer.
* Fiendish Schemes, Dower is almost raped by a mechanical simian known as Orang-Utan. Turns out his father was hired by a very jaded noble to make a mechanical orangutan that was extremely fierce to make good sport in hunting and also to be a sexbot that would fuck him with its giant iron penis that had its own steam-engine for more pushing power. The noble died during their first bout of sex and an unlucky workman finds out the Orang-Utan is still active. After getting sodomized by the sexbot, the worker is held permanently in an asylum for ranting about getting buggered by a steampowered ape.
* fiend setting in particular there are a lot of tieflings and aasimar in Mulhorand and Unther, since those nations were ruled directly for centuries by avatars of

their gods (imported versions of the Egyptian and Sumerian pantheons) who frequently took human concubines.
* Fiendship comics has Queen Chrysalis and the Changlings use this tactic to ransack a kingdom.
* Fiends of the Eastern Front doesn't stop him, and getting decapitated by a propeller only slows him down.
* Fiends of the Eastern Front: Hans realizes that the Romanian soldiers his company are partnered up with are vampires when he notices that they have no reflections in the water.
* Fiends of the Eastern Front: The German soldiers are depicted as regular conscripts, with no mention of any Nazi affinities.
* Fiends of the Eastern Front: When Hans is turned into a vampire, he is immediately struck by a lust for blood and attacks a group of nearby Russian soldiers.
* Fiends of the Eastern Front: When the Rumanian vampires begin to hunt their former German allies, Hans buys them some time by throwing a grenade onto a frozen lake, preventing the vampires from following them until it freezes over again.
* Fiends of the Western Front; the vamps help Germany win the war, and they get all the commies, wounded, and POW's they can eat.
* Fiend Without a Face had invisible brain-like creatures that sucked the brains out of the skull.
* Fiend Without a Face, Major Cummings (Marshall Thompson) gets an axe from... somewhere, and uses it to kill one of the brainlike "fiends" after it gets Melville.
* Fiend Without a Face, the other survivors hurriedly board the windows up. This holds them off for a while, allowing the armed Air Force officers to shoot at them through the gaps the boards, but eventually the fiends just use their prehensile spinal cord "tails" to pry enough of the boards loose so they can get in.
* Fiend Without a Face, the producers had one of the brain creature puppets displayed in a glass case at the theater. It was even rigged to wiggle around, and they claimed it was a real surviving "fiend" from the movie that had been captured.
* Fiend Without a Face: The title critters puncture people's skulls and slurp out their brains and spinal cords "like an egg," leaving behind the empty-headed corpses.
* Fiend Without a Face: The titular "fiends" are initially invisible monsters that, when revealed, are actually slimy crawling human brains that brains strangle victims with their spinal cords. While not in jars during the events of the film, one of the "fiend" puppets was displayed in a jar at a movie theater during the film's premiere.
* Fiennes played a Hungarian at least twice, both from the same era: in
* Fierce Creatures' breasts. After thoroughly making a fool of himself, he apologizes for his "Freudian slit... er, slut... slot!".
* Fierce Creatures Rollo Lee is constantly being caught by Willa in embarrassing and seemingly lurid situations (such as being caught in a shower with half-dressed and nubile young lady zookeepers, a sheep wandering out of his bedroom, etc). They all have perfectly innocent but very convoluted and unlikely explanations.
* Fierce Creatures, Rollo loses it and gives his zoo's employees a scathing critique of their new corporate owner:
* Fierce Creatures: Rollo reaches backwards for a piece of paperwork without looking. He... well, he misses the paper, let's say. Willa takes it in stride.
* Fierce Creatures takes place almost entirely at a zoo, so naturally they take advantage of it.
* Fierce Creatures, the boss is shot through the head by accident and a scheme is quickly set in place to make it look like a suicide in front of some of his colleagues involving the dead man's son impersonating him. This worked particularly well as the father and son were both played by the same actor, Kevin Kline to be exact.
* Fierce Creatures winds up in a closet with a half-naked girl and a live sheep.
* Fierce, however, when she shows up in Clark's living room wearing nothing but a

bikini, the following exchange occurs...
* fiercely protective of their offspring was lampooned, where the cartoon had a tired office worker absent-mindedly stepping into an elevator between a mother grizzly and her cub. (She seemed docile in the scene as shown, but according to the caption, what was about to happen would not be pleasant.)
* Fierna, the nominal ruler of the fourth layer. She's an embodiment of
* fiery accident in 1998, where his Ferrari spun out and hit an already spun-out Porsche, creating a fantastic fireball and sending him rolling across the track. The first one on scene was another racer with a fire extinguisher to put out his flaming car. Safety marshals arrived over ten seconds later to extract him and take him to a waiting track van (not an ambulance) to go to the medical center. For reference, he spent 90 seconds from impact in his flaming car, long enough that his visor melted and caused facial scarring when he was laid on his back that required plastic surgery to repair.
* Fiery Redhead because they love each other. As Ygritte is fond of pointing out, he knows nothing.
* Fiery Redhead ex-guerrilla fighter with little respect for any rules but her own.
* Fiery Redhead normally wears her hair in two noticeably stiff braids. She lets it down whenever she's sleeping or grooming, and it looks much softer and prettier.
* Fiery Redhead: Some tomboys commonly have red hair to fit their aggressive and temperamental demeanors.
* Fiery Redhead the grunts of the villain team even causally hang out in his café? When the reveal happens, most players are instead shocked that it's meant to be a reveal at all.
* Fiery Redhead, the latter is incredibly calm. Both sisters are tattooed and very compassionate when they want to be.
* Fiery Redhead. The only difference is that she's doing out of free-will than anger. She also loves abusing Wayne and considers him her best friend because she only mildly dislikes him.
* Fieseler Fi 103 not a suicide weapon, at least post-World War II the claim was that the pilot was supposed to bail out once the Reichenberg was lined up on its target. Never mind that the canopy would catch on the pulsejet intake when the silly thing was parked on the ground, so the odds of getting it jettisoned at 500 MPH aren't exactly good (and there wasn't room in the cockpit for both a pilot and a parachute anyway.)
* Fiesty Pets, which look like harmlessly cute animals at first, but when you squeeze their backs they bare their fangs and scowl.
* Fievel asks "Are we there yet?" as the ship they're on crosses the Atlantic for America.
* Fievel Goes West only wears a shirt and dress, but no undergarments.
* Fievel's American Tails devoted an episode to this trope, where Fievel is forced to babysit his little sister Yasha, who then escapes and gets into trouble.
* Fievel's American Tails's film, Tiger is a friendly cat that is one of Fievel's (a mouse) best friends in a town full of mean cats. This becomes even polemic at some point as Fievel's parents do not fully approve the friendship.
* Fievel's American Tails, the show was quickly cancelled after 13 episodes.
* Fievel was voiced by a girl in the Brazilian Portuguese and French dubs of the first movie, but by a boy in
* Fievel was voiced by two different girls in the Latin Spanish dubs of the movies (Laura Bustamante for the first two which were dubbed in Los Angeles,
* Fi. Even after getting fired from her magazine, she never lets up her pursuit of Can Manay's darkest secrets.
* FIFA (best described as a FIFA propaganda film) to get out of a "financial hole".
* FIFA has had a soundtrack of popular contemporary music, including one of these.
* FIF also used backmasking themselves to hide nonsensical messages. On
* FIFA mods aren't restricted to PC, and can be made for Playstation 2 too, with certain specific editors.
* FIFA Soccer. Not for nothing has one EA executive been reported as describing FIFA as "a license to print money".

* Fifa Soccer: The commentators tend to do this after you score goals or when there's a general lull in action, where they start commenting on things like player or team performance or throwing trivia at you.
* FIFA World Cup, and ended with a missed penalty kick in the penalty shootout in the final by Roberto Baggio, which won Brazil the World Cup.
* FIFA World Cup draw, Netherlands manager Bert Van Marwijk asked a JFA representative if he had seen Japan's manager Takeshi Okada. The JFA representative was Takeshi Okada.
* FIFA World Cup, England fans arrogantly decided to get tattoos reading "It's coming home" when the England team went against Croatia. As you'd expect on this trope page, England lost 2-1.
* FIFA World Cup, one comedian managed to get into a FIFA press conference and threw money at him before security could intervene.
* FIFA World Cup qualifying. A firework fell in the field. The Chilean goalkeeper fell to the pitch with an apparent injury to his forehead, and play was suspended. Later it was discovered the player created the injury himself, with a razor blade hidden in his glove. Chile was banned for eight years, and the keeper for life.
* FIFA World Cup uniforms for some national teams. Particularly for Brazil, Spain, and the hosts themselves, the USA.
* FIFA World Cup was Brazil's coach on the 2014 Cup, Luiz Felipe Scolari.
* Fifi and McNulty. In the song "Uptown Fifi", they go for a walk, and Fifi is shown with hearts coming from her head, and she's described as "hot to trot", but the official description of the song describes them as "friends". They're also only puppies, meaning that if they were dating, it'd be a literal example of
* Fifine - Eventually Fifine and company find proof of the existence of humans, only to discover that they are all the descendants of uplifts. Animals were uplifted to be the companion to the last human child.
* Fifteen And Pregnant, the reconciling couple of Cal and Evie are lying on the family's porch swing as he massages her feet.
* fifteen division championships (including winning ten in a row, making the Patriots the first NFL team and only second American professional sports team to pull that off - the first was the Atlanta Braves in baseball).
* Fifteen Hours the protagonist: he is part of a recon team on the field of the day's battle, led by an officer looking for an easy medal. Things go horribly wrong, most of the team being killed by scavenging Orks.
* "Fifteen Million Merits" depicts a dystopian future where people are continually bombarded with advertisements while doing pointless work to buy pointless stuff, with an ersatz
* Fifteen Million Merits", where people live underground, having to ride exercise bicycles to generate energy, while television literally rules the society.
* Fifteen Minds's case, the title was only revealed in the Tumblr tags.
* Fifteen minutes can save you 15% or more on car insurance. Everyone knows that.
* "Fifteen Minutes of Shame" has Meg tricking the family into appearing on Diane Simmons' talk show to expose their dysfunctional ways. Ultimately, this is parlayed into them getting their own reality show about their lives that ends with them being replaced by celebrity versions of themselves.
* Fifteen Minutes of Shame", Meg tricks the family onto the Jerry Springer-like talk show.
* Fifteen to One, producer William G. Stewart did the hosting duties with the intention of hiring a proper host once the show was greenlit. The network was sufficiently impressed by his performance (and his grasp of the game's somewhat arcane rules) that he was kept on as the actual host.
* fifteen-year-old daughter is the mother of the youngest child, who's two years old, and covers up the pregnancy by saying that the daughter and mother are visiting their aunt in Michigan.
* Fifteen year old Wendy is also cool with the twins, but the one she really bonds with is Dipper. While this is helped by Dipper having a not-so-subtle crush on the teen, even after giving him the
* fifteen-year run, several episodes where recycled from early ones, with just

names/places/assignments changed. Examples include "Oil Well that Ends Well" and "All that Glitters" (a oil/gold deposit is "found" from Hyde Park) as well as "How Now Brown Cow?" and "Ballet Nuisance" (a cow/pig is mistaken for an important foreign person).
* Fifteen years ago, the indebatably undead vampire Evangeline stalked Nagi, who got sick of it and cursed her to remain on the Mahora school grounds for a few years, but forgot to let her out before eventually disappearing ten years ago. In the present, she attacks his son Negi out of irritation, but eventually ends up getting treated somewhere between his primary teacher and a potential love interest. Later on, Negi learns a
* Fifteen years before the events of the first book, Robert Baratheon led a rebellion that ended the Targaryen dynasty after the already married Prince Rhaegar disappeared with Robert's fiancee Lyanna Stark.
* fifth best television episode of all time, the only pilot in the top ten.
* fifth book after going on the run for an entire year to escape Death Eaters bent on capturing a traitor.
* fifth book is trying to wrap herself up in the memories of her tragically cut short relationship with Cedric Diggory by latching onto the person who was closest to him when he died. However, they had barely shared anything close to real conversations, and the relationship is ended about three-quarters of a way into the book.
* fifth book. This is likely due to the fact that in the wizarding world knowledge actually equals power and Dumbledore has had plenty of training time.
* Fifth Brother's design was taken directly from an unused piece of concept art that was drawn for
* Fifth Bureau assassin who was left marooned on Kostroma when Daniel and Adele blew up the Alliance forces there.
* Fifth Business priest Father Blazon amuses himself in his old age by acquiring and reading books that the Church had banned, to the consternation of his nurses.
* Fifth Business story; instead, he (according to Liesl) is destined to be the vital supporting character to everyone else. Strictly speaking, the hero of the story is the successful, handsome Boy Staunton, but the narration only checks in on him now and again.
* Fifth Column Nationalist Sympathizers within the city would form a "Fifth Column" and help him take the city. Given that the city held for over 2 years, this example was ineffectual at best.
* fifth-dimensional imp, so he gave himself a more viable weakness; tricking him into saying his own name backwards sends him back to his dimension for a month. This not only gives Superman a fair chance, but makes Mxyzptlk actually work for his pranks and schemes.
* Fifth Edition altered things so Wizards and Clerics have different strengths and weaknesses in regards to Necromancy. Clerics and Wizards now gain
* Fifth Edition easier and/or stronger, and let warriors bypass enemy resistances while also gaining some of their own. Finally, the advantage-disadvantage mechanic simplifies buffs quite a bit. Spells still allow for a greater deal of narrative agency, but stacking multiple area-of-effect spells and gigantic buffs on top of each other is no longer possible. So while this trope is still present in 5e, warriors and wizards are much closer in power than before.
* Fifth Edition hammers the trope a little harder by giving dwarven characters automatic proficiency with hammers, axes, and the player's choice of metalsmithing, stonemason, or brewing tools. So Monks or Rogue are likely to be the only classes that see a dwarf not running around with such weapons since the class features don't really use either very well. On top of that, the Mountain Dwarf subrace also gives automatic proficiency with light and medium armors, so in the event that you want to play a
* Fifth edition has "Oathbreakers" instead of Blackguards, and has the Oath of Vengeance and Oath of Conquest for less heroic standard paladins. The Oath of Conquest in particular has a strongly
* Fifth edition has the Oathbreaker, a Paladin subclass that is flavoured as a

Fallen Hero, turned to evil. It has no such prerequisites beyond reaching the third level of Paladin (the normal point for a Paladin to pick their subclass), so presumably those first three levels are intended to be their
* Fifth Edition introduced the "Oath of Redemption" Paladin, which emphasizes that the path to redemption for evil-doers can be an arduous one, and that they should be given help along the way. The tenets
* Fifth edition introduces the "Oath of Redemption" Paladin, who strives to pull a
* Fifth Edition simply treats items like characters in terms of armor class and hit points.
* Fifth Edition's main Monster Manual tends to feature mostly evolved or created creatures that would in fact attack you or at least challenge you (if good/neutral), but as far as adventures go, it's a bit of a throwback to the earlier editions, so unusual traps abound.
* Fifth Edition's massive damage rule says that if a player character's hit points are reduced to 0, and the remaining damage from an attack is at least equal to their maximum HP, the character instantly dies. There's also a few spells like Disintegrate which prevent normal resurrection spells from working by completely reducing the target's body to ashes, preventing Raise Dead from working.
* Fifth Edition thankfully dials this back, but it still allows you to recover an amount of damage rolled on one or more of your hit dice during a short rest (which can only be done with the DM's approval at safe points). You can't recharge your hit dice until you get a long rest, but by then you'll probably have accomplished a goal and be healed already.
* Fifth Formers at St. Clare's features Felicity Ray, a talented violinist whose parents forced her to participate in a very difficult music exam, just so that she could have the distinction of being the youngest person to earn its certification. The poor girl is so stressed out that she's verging on a nervous breakdown and started sleepwalking.
* fifth game not occupied by Mil, the spawn point, or the two humans has a Prinny on it — and if you start a fight here you can easily win just by throwing any of the Prinnies to set off an explosion chain that would do Michael Bay proud, at the likely cost of not being able to use the unit you dispatched for the rest of the Item World expedition.
* fifth game to boot. Thankfully, said NPC is invincible and runs straight for the designated goal point at top speed, so all the player needs to worry about is getting the player-controlled character to safety.
* Fifth Generation gives us Final Gambit, which has the user sacrifice all of its remaining HP to cause the same amount of damage to the enemy. Because of its nature, it is best used by Pokémon with high HP.
* Fifth Harmony and Lauren Jauregui (Camren) together even years after Camila left the group. It got to the point that Lauren said it made her uncomfortable.
* Fifth Harmony's "Work" was released a month earlier. Tellingly, the word "work" is repeated much more often in the refrain than the full phrase "work from home".
* Fifth Harmony (the former in the US version, the latter in the UK version). That's not all, they both consisted of five solo artists who were put into a group after getting rejected, they both finished third, became the most successful act from their respective country's show, and they have similar shorthand names (5H and 1D).
* fifth have issues against supervillains like say, Killer Croc and Bane.
* fifth major version of Windows (assuming you consider 98 to be "95.5" and ME to have not existed at all), it's the first version that was unambiguously a complete operating system in its own right (versions prior to 95 were basically just graphical shells running on top of MS-DOS, and even 95 and 98 needed to boot to MS-DOS briefly as part of their loading process).
* fifth movie has supposedly lifted all sea curses. What this means for the future of magic and the franchise remains to be seen.
* Fifth Place: Ririka - An employee at the Ijincho branch of Hello Work; through her, Ichiban and his party can apply for new jobs, change jobs, and select outfits.
* Fifth problem: jobs held by non-working-age persons would not count. Thus, the

70-year old physician or lawyer who still hold a job would not be counted, nor would the 17-year-old military member.
* Fifth Quarter, one character keeps himself alive this way by jumping to the body of his killer just before he dies. After figuring it out, he makes a habit of it and lives for several centuries jumping from body to body.
* fifth revival season assassin Ashi crosses paths with the spiritual descendants of the freed teenagers. They still remember their predecessors' encounter with Jack from over fifty in-universe years ago, and Ashi learns the "dance" from them during the encounter.
* fifth season, which is a self-contained story that is not in the same continuity as the original cartoon or IDW's previous ongoing comic continuation that lasted 20 issues.
* fifth volume, Supergirl underwent a -thankfully short-lived- emo teen phase, after which she strives to be the kind of hero worthy of her family crest. Unfortunately, her attempts to help everyone are wearing her out. In Issue #34:
* fiftieth, spends about a chapter on a cricket match between the Cheldon Boniface team and the Doctor's Invitation Eleven.
* Fifty Feet of Trouble has Pilar O'Heaven, a literal 50-foot woman and pinup.
* Fifty Feet of Trouble is a classic noir riff: world-weary detective in a world that hates him. He's also the last human detective because almost everyone else in the world is some kind of monster.
* Fifty Feet of Trouble, the blob monster Gelatin Keyes knows lots of jokes and delivers them with the proper energy. The problem is that he never matches the setup to the right punchline.
* Fifty Fifty 1992: Jake Wyer and Sam French are both these. Of course, they both come to believe in the cause they are fighting for.
* fifty-foot flagpole. Peter, in turn, is eager to put the old blowhard in his place.
* Fifty mode) and (with the help of the beloved ruler who was overthrown by said dictator and the CIA guy who hired them) win (they do get seriously wounded by the dictator though).
* Fifty Shades Darker if Ana and Christian had just called the police, instead of trying and miserably failing to deal with the problem themselves.
* Fifty Shades Freed, it's revealed that Ana and Christian have a two-year-old son with red hair — who looks exactly like the toddler version of Christian that Ana has been imagining and daydreaming about post-coitus for the past three books.
* Fifty Shades Freed. When Anastasia describes Christian as "a man of honour" who "treat(s) people well", Dan slots in a montage of Christian lying to her about getting rid of a loaded handgun, throwing tantrums at Ana over tiny, insignificant things and openly describing himself as a sadist who gets off on punishing women who look like his birth mother, then ends with a repeat of the "you treat people well" line just to underscore the absurdity.
* Fifty Shades Of Black gets her fair share of beating from a malfunctioning elevator.
* Fifty Shades of Grey (2015): Movie adaptation of the best selling erotic novel.
* Fifty Shades of Grey, Ana repeatedly feels jealous when other women flirt with or even check out Christian, but he's so in love with Ana that he scarcely notices the mere existence of these women. Christian feels the same way about virtually every man who has ever been in Ana's presence, but she is equally devoted to him.
* Fifty Shades of Grey. Anastasia has instances where she's thinking that, if she has a 'regular' relationship with Christian, he will eventually denounce his BDSM ways and want nothing more than 'vanilla sex', as he called it.
* Fifty Shades of Grey, a trilogy of erotic romance novels published by Polish author Blanka Lipińska which contains the same themes and concepts, in addition to being adapted to the big screen.
* Fifty Shades of Grey: Before meeting Ana, Christian's family believed he might be gay as they'd never seen him with a woman. Even Ana spontaneously asks him if he's gay during their interview. He's actually just very private about his intimate relationships with women because he's into BDSM and doesn't want it getting out in

public; Ana is the first woman he's ever been serious about so he's far more open about their relationship.
* Fifty Shadesof Grey: Christian Grey has this mindset. Buying the publishing house where his then-ex Ana works, bribing a senator to ensure a crate gets shipped to Darfur, involuntarily committing an unstable former submissive and buying Elena Lincoln's ex-husband's business for the sole purpose of bankrupting him as revenge certainly count, especially since most of these would have either not been possible or would have gotten him thrown in jail in the real world.
* Fifty Shades of Grey, Christian Grey starts as a successful businessman who doesn't do romance; he's only interested in dominant/submissive relationships. However, after proposing such a contract with the protagonist Anastasia Steele, he's willing to commit himself to a "vanilla relationship" with her.
* Fifty Shades of Grey, Christian Grey was 15 when one of his mother's friends and a fully adult woman took him as her sexual submissive in an S&M relationship that lasted several years. He denies that this was rape, and the heroine is jealous instead of disgusted when she meets his rapist, but in any case, it was statutory rape. Considering his inability to differentiate between consensual sex and rape in the relationship with Ana, it is highly unlikely that this sexual abuse didn't affect him negatively.
* Fifty Shades of Grey. Christian says he wants Ana to be "on first-name terms" with his "favourite body part", but he never actually mentions what he calls it.
* Fifty Shades of Grey community that interpret some of Christian’s behaviour to be stalking and abuse of power, rather than part of a healthy BDSM relationship. Hate from the BDSM community counts as periphery. Despite the BDSM themes and scenes in the novels the BDSM community is not the target audience. Its target audience is consumers of fantasy romance novels.
* Fifty Shades of Grey dedicates a large amount of page time to fawn over Christian's hotness and sex appeal from Ana's twitterpated POV.
* Fifty Shades of Grey don't have much in common with Meyer's Edward and Bella; it's very hard to imagine the Edward Cullen who stayed a virgin for over a century and stridently opposed sex before marriage being into BDSM.
* Fifty Shades of Grey fanfic before it was changed to an original story.
* Fifty Shades of Grey fans naturally get along, considering the former started life as the latter's fanfiction.
* Fifty Shades of Grey for its "sadistic" and "unnatural" content. It's also been banned in Kenya, Indonesia, the United Arab Emirates, Cambodia, Papua New Guinea and India, for unspecified reasons. Interestingly, the novels are not banned in UAE, and can be displayed quite prominently in bookstores, including, of all places, Abu Dhabi International Airport.
* Fifty Shades of Grey he will say that the actor Jamie Dornan is #NOTMYCHRISTIAN (i.e. not a good choice to play the role of Christian Grey in the film).
* Fifty Shades of Grey. However, at the start of the next book, Christian tells Ana he's changed and wants her back to have a 'vanilla' relationship. Even though it's been a mere five days and Ana has no proof of Christian's claims, she takes him back almost instantly.
* Fifty Shades of Grey. However, she doesn't like the idea of having her character cuss, thus invokes this trope by having Christian telling Anastasia "I don't make love. I truck. I truck hard."
* Fifty Shades of Grey. However, this hasn't stopped each film from being a huge financial success.
* Fifty Shades of Grey: In the books, Ana describes Christian Grey as being so smoking hot, and having such a commanding presence, that just being in the same room with him turns her knees to water. Jamie Dornan, who plays him in the film, is certainly not unattractive; however, the way he's styled in the movie - especially the decision to have him clean-shaven - tends to make him look boyish rather than devastatingly sexy.
* Fifty Shades of Grey is meant to have a happy ending, but many would argue that marrying and starting a family with a controlling abuser is NOT a happy ending.
* Fifty Shades of Grey is one of the first openly erotic novels to break into the

mainstream and to be marketed as upmarket populist literature, occupying the top shelves of high street bookshops.
* Fifty Shades of Grey it's a scarily accurate depiction of cult indoctrination.
* Fifty Shades of Grey it spawned. Several groups have problems with the content. Reviewers criticize the poor writing style, BDSM practitioners dislike it for getting their fetishes wrong, feminists say it normalizes abusive relationships, and conservatives dislike the explicit sex. It got so much hate, TV Tropes had to lock both the main page and YMMV page.
* Fifty Shades of Grey made $571 million at the box office (against a budget of $40 million) and is the fourth-highest grossing romance film of all time.
* Fifty Shades of Grey mask she wears in episode five and the rope dress in episode 8. On a similar note, many wondered who decided to put Yennefer in unflattering makeup (especially the eyeshadow), as it doesn't suit the actress.
* Fifty Shades of Grey mocks Grey's business calls by saying that if you saw someone in real life talking like that, you would assume that there was nobody on the other end of the phone, and probably that they didn't really have a job at all.
* Fifty Shades of Grey of detractors. Both the books and films were profitable and they're well-known in pop culture by now, but more out of infamy than widespread popularity.
* Fifty Shades of Grey rape-y vibes, and might be a sociopath. This has not gone unnoticed by the detractors.
* Fifty Shades of Grey sequel, Darker: Right after Anastasia accepts Christian's earlier proposal, they make out in the shower and continue in the red room.
* Fifty Shades of Grey style books. Many actual Amish people aren't amused by this, since the authors are typically not themselves Amish and they feel it portrays an inaccurate version of their lifestyle that's actually a mouthpiece for evangelical Christian values, especially around concepts of sexuality and salvation, that they do not share.
* Fifty Shades of Grey style, however. It's just that the subject matter and production is completely different from what she normally does. It was also unusual in that its success was fueled by digital downloads and streaming whereas most of her previous hits were predominantly radio hits (it literally held the World record for the most streamed song in a single week — until Wiz Khalifa broke it with "See You Again").
* Fifty Shades of Grey the book has any kind of aesop the movie, with added focus on the actual character interactions (plus whatever nuances the actors put in), can be easily interpreted as "BDSM is awesome, but you should get into it gradually and don't rush with contracts and hardcore practices, or it will destroy your relationship."
* Fifty Shades of Grey (the latter of which is redlinked due to not fitting the 5P standards on This Very Wiki). It is ultra-rare for animation in general to be worse and what is worse is quite often not released in France to begin with.
* Fifty Shades of Grey they're the happy, emotionally healthy couple in contrast to Christian and Ana's constant drama.
* Fifty Shades of Grey took a lot of heat for toning down the book's more outre elements, including getting rid of the book's awful internal narration, particularly the infamous "Inner Goddess" bits, entirely. Turns out that when you try to make this story more respectable, there's nothing of interest left.
* Fifty Shades of Grey trilogy ends two years later, where Ana and Christian are playing with their son, Teddy. Ana is six months pregnant with a daughter whom they plan to name Phoebe. It is also mentioned that Kate and Elliot are married and had a daughter, Ava.
* Fifty Shades of Grey. Twenty-one, naïve, and so virginal she never even masturbated before meeting Christian Grey.
* Fifty Shades of Grey was not shown in some cities in the Philippines. That didn't stop the movie from being a box office hit and illegally downloaded on the web.
* Fifty Shades of Grey well regardless. But when the narrative was presented from the perspective of the man doing the stalking and the abuse, these things became impossible to ignore and hurt critical and commercial reception.

* Fifty Shades of Grey. When edited for publication, it remained 89% identical to its former self.
* Fifty Shades of Grey with a controlling nature towards his sub/girlfriend Ana, with strong undertones of gaslighting.
* Fifty Shades of Grey with Elena, he admits that he fears that Ana will choose the baby over him.
* Fifty Shades of Grey world of BDSM, and critics as a whole despise it.
* Fifty Things That Made the Modern Economy, with Tim Harford saying that they came from a man with an idea that revolutionised economics. After some lengthy passages about Gillette's socialist utopia, where there's one publically-owned company that makes everything and people only need to work for five years in their life, Harford admits that it wasn't that one.
* fifty thousand Dothraki led by one Khal Temmo. Only six hundred Unsullied were left alive after the battle, but Khal Temmo, all his sons, and his bloodriders were dead, and the remaining Dothraki all cut their braids and retreated in shame.
* "Fifty thousand people used to live in this city. Now it's a ghost town."
* fifty thousand Shermans. Shermans did quite well against the more common Panzer III and IVs since they were closer to its weight class than the heavier Tiger and Panther. Plus, much of the Sherman's more powerful upgrades were delayed either due to reliability issues or crew ergonomics issues, or looked over by the troops on the ground as unnecessary at the time. However, once the upgrades had their kinks worked out and were implemented Shermans became far more effective against German armor.
* Fifty-three years later, in the 2014 National League Championship Series, Travis Ishikawa hit a 3-run walk-off home run to lift the Giants (now in San Francisco) over the St. Louis Cardinals and send the Giants to their third World Series in five years.
* Fifty years later, this seems to be the case with the young "hero" Alpha, gaining superpowers by accident, instantly becoming a media darling... then cheating behind his girlfriend's back, emancipating himself from his parents and forcing Spidey (whose fault it was that he
* Fifty years prior Little Ricky became a character as the result of Desi Arnaz and Lucille Ball not wanting to trick-shoot the show to hide the latter's pregnancy.
* Fig cries these in "Stroller Derby" after throwing a tantrum about not wanting to go in her stroller because she's a big girl.
* Figgs & Phantoms is a pink palm tree, which its lone resident insists is coral, not pink.
* Figgs and Phantoms, Mona Lisa Figg sometimes stood on her midget uncle's shoulders to create the "Figg-Newton Giant" so they could "inconspicuously" move books her uncle felt deserved more attention from the bottom shelves of his and his partner's store to the top shelves where more people would notice them.
* Figgs and Phantoms, Mona Lisa Figg unthinkingly requests a book by its title and (racist) subtitle while speaking to a black librarian.
* 'fight' against Vergil, Lucy grows increasingly enraged as he cuts down more of her Celestial Spirits. In response he points out that she is the one sending them against a clearly superior opponent, and that if she doesn't want them to get hurt she should grow stronger herself.
* fight (and injures, and maims, and mutates) with one. Case in point: Riku's liver. Firecracker. Surgical implantation.
* Fight City is about as short as you're going to get. "It's a city, and they fight."
* Fight Club: All over the place, and in fact it's an important part of the plot, since much of the conflict may stem from the Narrator's sexual confusion. The phallic imagery gets so out of control that at many points it's not even imagery. It should be noted that the subtext was taken down a notch in the movie.
* Fight Club? A major theme is how random people in the support groups pair up to cry on one another. Of particular note is the narrator being paired up with Bob, a former bodybuilder who has 'bitch tits' due to steroid abuse; it doesn't matter to the narrator after discovering how good it feels to cry.

* Fight Club: an attempt to see how far he could push Homoerotic Subtext and not offend the manly men who read it.
* Fight Club and screenwriter Jim Uhls. It's a masterclass in how to adapt a novel.
* Fight Club, a popup appears that reads "You are about to break the first (and second) rules of Fight Club. Publish anyway?"
* Fight Club as she leaves the Paper Street house. "Gotta get off...gotta get off...gotta get off this merry-go-round..." Marla Singer is quoting from "(Theme from) Valley of the Dolls" — not strictly an ironic nursery rhyme but considering what happens to the women of the film, appropriate.
* Fight Club. Because she's English, she didn't know that "grade school" is the American equivalent of "primary school" and was quite shocked about the line afterwards.
* Fight Club challenges an entire club to fights at the end of the book, and bites off half his tongue when hit with an uppercut.
* Fight Club, complete with a revolting bathtub and water faucets that spew out brown water.
* Fight Club do this, in order to show that the narrator didn't live his life, but lived the life he was told to live.
* Fight Club. Durden points out the "cigarette burn" marks indicating when film reels should be changed in a movie. There also his interesting... habit of splicing single frames of pornography into family-friendly films (and the film itself). In the original theater release reels that particular reel was actually cut about 5 minutes short so the mark he pointed out (which was actually extended by a few frames for effect) was actually marking a real reel change.
* Fight Club features one with the narrator, Tyler and Marla. Although things start to get... Complicated.
* Fight Club features the quote "Tyler wanted marla, marla wanted me and I wanted Tyler". Although things get skewed in the third act as certain things unravel.
* Fight Club had a woman finding a condom in her clam chowder (after it came back from being reheated) and the incident traumatized her so badly that she can't eat soup, seafood, and has even had problems with intimacy.
* Fight Club has an interesting variant. The Dust Brothers included a record scratch in the score of the film. The opening theme starts out as one song, record scratch about 3 seconds in, and then a totally new song takes its place.
* Fight Club has the main character going to support groups for people with terminal diseases (even though he doesn't have one), because he finds that witnessing their misery allows him to sleep. It stops working when he encounters Marla, who does the same thing. Of course, it's more obvious that she's a fraud when she attends a support group for a condition that is impossible for her to have had: Testicular cancer.
* Fight Club have talked about turning the movie into a musical, and were only about 50% joking when they did.
* Fight Club, he kisses Angel Face on the mouth, accompanied by a voice-over line about jealousy. Later, as the Narrator, he beats Angel Face to a pulp, remarking, "I felt like destroying something beautiful."
* Fight Club holds hands with his love interest while watching a few corporate buildings blow up to The Pixies' "Where Is My Mind".
* Fight Club is a masterful example, as Edward Norton's unnamed narrator befriends and starts Fight Club with Brad Pitt's Tyler Durden, anarchist and soap salesman. As Durden begins to raise an army of committed nihilistic followers, the narrator becomes less and less comfortable with the direction of the movement. After Tyler Durden disappears at the kickoff of a coordinated act of domestic terrorism, the narrator hunts desperately for him, only to be told that he is Tyler Durden himself. The revelation changes the tone of previous conversations in the film, notably the inception of Fight Club — what was a brawl between the narrator and Durden that attracted other participants becomes the narrator/Durden beating himself up, rousing the curiosity of others. And Durden's intense sexual relationship with Marla Singer coupled with the narrator's open contempt for her; what were the actions and reactions of two separate characters take on a different

light when you know the characters are the same person, and Marla's confusion and hurt at the narrator's scorn makes more sense. In the end, the narrator shoots himself through the cheek, "killing" Durden by demonstrating he was willing to kill himself.
* Fight Club is a social commentary/philosophical drama/black comedy/surreal-psychological mystery-thriller/crime action film in which the real fighting is only used as way to highlight the message of the film. It has to be seen at least two times to be fully enjoyed.
* Fight Club is done for drama rather than comedy; Marla is a depressed alcoholic who goes to support groups because they're the only way she can feel anything. She's less a villain and more a tragic figure.
* Fight Club is narrated by Edward Norton's character, to mimic the book's first person narration.
* Fight Club is: you do not talk about Fight Club. The second rule of Fight Club is: you DO NOT talk about Fight Club."
* Fight Club, it tells you you're wasting your life freeze-framing DVDs to read it.
* Fight Club: Lou's Bar is where the first in-universe fight club appears. It's also implied that the owner, Lou, has ties to organized crime.
* Fight Club. No surprise, given that she is played by Helena Bonham Carter.
* Fight Club opens with a close up (cellular level) of how the human body sweats before zooming out to show Edward Norton with a gun between his teeth with a voice over saying "People are always asking me if I known Tyler Durden". The rest of the film from then on is a recap of the last year or so of his life to how he ended up in that position.
* Fight Club, sabotaging restaurant food is one of Tyler Durden's pastimes, which leads to this trope for the unfortunate customers.
* Fight Club, she delivers one that manages to be both flat and epic at the same time.
* Fight Club so brutally it's barely recognizably human, and most of his teeth are gone.
* Fight Club sometimes slips into this, both in his narration and his dialogue in the film.
* Fight Club' song "Where Is My Mind?", which was played over the climax.
* Fight Club: The first rule about Fight Club is you do not talk about Fight Club!
* Fight Club the idea that the same women who paid to get rid of the fat would now pay him to return it.
* Fight Club. the members all had this as a "homework" assignment. Cue hilarious montage.
* Fight Club, the members of Project Mayhem use bird seeds to draw a huge flock of pigeons to a Mercedes Benz dealership. The next day all the cars are covered in poop.
* Fight Club The Narrator mentions he lives in a high priced apartment for urban professionals with thick concrete walls and floors:
* Fight Club, the narrator ultimately rejects Tyler Durden's hyper-romantic goals, though the denouement is radically different in the film and movie.
* Fight Club, the unnamed main character ("Jack" in the script) is trying to get Marla to leave the support group he's attending. He tells her, "Look, I can't cry with a faker present." Marla replies "Candy-stripe a cancer ward. It's not my problem."
* Fight Club. This was subtly parodied in the book, but lampshaded like a mofo in the movie.
* Fight Club, three or four times with Tyler Durden, and once at the end of the movie with a...male body part. (It was earlier mentioned that editing single frames of porn into movies was just one of Tyler's weird hobbies.)
* Fight Club: Tyler Durdan moonlights as a projectionist, so there are a few meta gags about cinema.
* Fight Club: Tyler Durden has the motivation, but not the methodology. He believes society and rampant consumerism are stagnating human development. Rather than combat this with mad science, however, he plans to force humanity to "evolve, and

let the chips fall where they may" by crashing the global economy.
* Fight Club, Tyler Durden likes to use a lot of nihilist-sounding rhetoric:
* Fight Club: Tyler pulls Marla into a corner in a hallway to escape the paramedics, but instead of kissing her, he does a bit of an awkward dance to pass the time.
* Fight Club, Tyler tells the Narrator when they first meet: "You have a sick desperation in your laugh."
* Fight Club visited all sorts of support groups for problems he didn't have, as did Marla. He reacted to other's trauma by finally relaxing enough to sleep. When Marla ultimately forces him to leave the groups out of humiliation, he and Tyler found Fight Club.
* Fight Club, where to join the club, new members are expected to fight on their first day. However, subverted in that it really doesn't seem to matter whether they win. It's all about the fight.
* fight Dante. So, Dante's cutscene power overrides Yamato cutscene power. He is just that good.
* Fight Dracula: The story's premise is about the hero fighting Count Dracula himself.
* fight each other in the possessee's body. Fortunately for everyone involved, both vessels are extremely strong and capable of handling the stress.
* fighter ace Ahti Laitinen (10 kills) was shot down 17 July 1944 and his Bf 109G went down in flames. He was reported to have been killed in action. Miraculously, he had survived and was taken as a prisoner of war. His family thought he was dead and published his obituary in local newspaper. When Capt. Laitinen returned from captivity 1945, he later added his own obituary on his pilot's scrapbook.
* Fighter aircraft have many types of often colorfully-named maneuvers — the Thach Weave, the Pugachev's Cobra, the Split S, etc.
* Fighter aircraft usually fight in pairs, the wingman covering the leader.
* fighter bombers, which pelt the enemy capital ship from all angles with torpedoes.
* Fighter has a flashback to his teacher, Vargas, reciting the Jabberwocky poem. Young Fighter calls him out on making up words.
* Fighter has not only survived repeated stabs to the brain with only temporary ill effects (one of them actually
* Fighter himself could also be considered a victim of this trope. Initially, he was simply
* Fighter himself has survived several stabs to the back of the head courtesy of black mage and it isn't likely he's ever felt a thing. Hell, he even had one used as a lightning rod to channel a Lightning Spell directly into his brain. That particular spell actually INCREASED his intelligence instead of dealing any damage whatsoever!
* Fighter in the Wind over how much he was into Korean patriotism, as he joined the Japanese air force and took a Japanese name and citizenship voluntarily.
* Fighter is an absolute savant in swordplay, but it mostly comes from innate talent which he never bothered to improve upon. A personification of Sloth tries to get Fighter to realize the folly in this and rely as much on his mind as on his skill. Fighter kills Sloth with his swords because his brain told him that'd be faster.
* Fighter is indisputably a capable fighter, but early strips have him flashing back to tuning out his mentor and he later undergoes a "Trial of Sloth" that makes it explicit he's well below his actual potential. (He gets confused at the highfalutin words being tossed around and finally slices up the avatar, claiming that "[his] brain told [him] this was easier".)
* Fighter is probably the closest of the cast to fitting the exact wording of this trope, his solution to all problems is to
* Fighter-Launching Sequence included a shot of pilots running down a passageway to their ships while red lights were flashing for a red alert, even with routine, previously planned missions where there was no need to rush.
* Fighter-Launching Sequence (in that they can be done a lot faster in fiction than

in real life)
* Fighter-Launching Sequence — If you want to show off a dogfight, sometimes it's just that much more awesome watching the fighter jets take off first.
* Fighter-Launching Sequence: Seeing planes, space fighters, and other similar vehicles, take off into battle.
* Fighter pilot and defector Victor Belenko wrote that oftentimes jet fuel would be dumped and nonexistent flight plans and reports created so that the crews could swipe the alcohol.
* Fighter pilot have special suits and catheters that X-Wing and similar cockpit-only ships' pilots could have equivalents to to go #1 while flying
* Fighter pilots vs ground attack or bomber pilots also has this dynamic. Fighter pilots behave more like warriors, living for the dogfight, measuring their self worth by how many dogfights they've won, and often feeling a sense of kinship even with enemy fighter pilots who have been successful. This is best illustrated by the sheer amount of respect Baron Richtofen got, even among American, British, and Commonwealth fighter pilots (who gave him a burial with full military honours, with attendees actually
* fighter planes and tanks) and artillery gunners will often paint the national markings of the enemy they've destroyed onto their vehicle or howitzer.
* Fighters and mid-sized ships such as the Drazi Sunhawk are used to harass larger capital ships, while the larger capital ships serve as both battleship and fighter carrier roles. Gunships like the Whitestar are essentially flying cavalry ships built to match (or outgun) traditional (and larger) battleships as well as being nimble enough to outmaneuver even fighters.
* Fighters and other small, sublight ships (which are usually civilian freighters, transports, and military and civilian shuttles/small transports), can make use of jumpgates to cross interstellar distances through hyperspace. This only works with fixed points, I.E. jumpgates, since the fighters and other small craft typically have no onboard Jump Drive to open up their own jump-point or re-enter normal space without a gate. Some of the smaller capital warships, most notably the somewhat fighter-like Drazi Sunhawk (one of the smaller alien warships), also lack onboard Jump Drives and most rely on jumpgates. This means that in the B5 'verse, where gates are an option, a carrier vessel can deploy fighters over interstellar distances. Most smaller (non-fighter) space vessels in B5 that aren't big military warships are also reliant on jumpgates.
* Fighters are football sized craft that are piloted by telepathic cats. They are armed with thimble-sized photonuclear bombs to fight
* Fighters are this compared to Barbarians, though this is a rather relative comparison. Fighters have slightly fewer hitpoints, move slower, and can't use
* Fighters Destiny, at only one point (out of the seven needed to win the match); a conventional knockout is worth three.
* Fighters Destiny has a clown character, and there's a cheat you can use which turns him into a werewolf.
* Fighters Destiny lets you unlock Robert, the dummy from the game's Training Mode. He has little comboing ability and most of his moves are slow and heavily telegraphed, making him a very difficult character to use effectively.
* fighter, she's inexperienced. In her final battle, she gains a massive power boost that grants her strength, speed, and durability on par with Rainbow Dash, as well as telekinesis and control over the weather. Rainbow Dash notices she's flapping her wings in an inefficient way and making mistakes like flying against the wind instead of with it. Add in Charisma's inexperience with her new powers and Rainbow manages to get the advantage.
* Fighter's History and being a generally smoother and better-playing game, enough to earn it a cult following still playing it in tournaments as of 2019.
* Fighter's History considers it to actually be a tribute and not a 'direct copy'.
* Fighter's History is a judo user who started doing it when she was 3 years old.
* Fighter's History series has him get dragged off to another tournament by a man with a funny mustache, with him predictably protesting with "You gotta be kidding! Hey, get me outta here!" The SNES port changes Mizoguchi's dialogue to "I will try

my best! Let's go!", but still depicts Mizoguchi getting dragged off.
* Fighter's. In fact, he's probably worse since he's not even literate.
* Fighters play the Warrior to the Knight's Soldier. The former fights out of passion and might serve a Lord out of
* Fighter survives a freefall by using his Knight abilities to block the ground. Fighter's "explanation" is that since he can block all sorts of
* fighters, which has five ion cannon turrets. Each individual turret is less powerful than the single gun of an ion frigate, but when all fired at a single target they are devastating, and enemy strike craft are in for a nightmare. This time the technology remains but with modifications: the ion platform has four small ion cannons on twin turrets and can hit both strike craft and capital ships. The ion frigate returns to the single weapon in spinal mount, but outguns the ion platform by a decent margin, and the battlecruiser has four ion cannons in twin turrets, each cannon outgunning the frigate.
* Fighters without faster-than-light drives are the exception, rather than the rule; they are usually either old designs predating the days of easy travel, made explicitly to
* Fighter tends to invoke this in everyone around him. A prime example comes when he manages to somehow win "Drownball" (a sport parodying
* Fighter, you will encounter TWO duels which provide an example of this trope. First time is a duel which you have to pass in order to be accepted to the Fighter's Guild, where you are encouraged by the guild to kill your opponent, yet are able to spare him. Second time is the swordfight with Khaveen, in which you knock his sword from his hand and can either finish him off or allow him to pick his sword. Khaveen will knock your sword as well, and will not hesitate before hitting you. It does take him some time to do this, though.
* "Fight Fighters" features Rumble McSkirmish, a video game character from the eponymous fighting game,
* fight fire with fire by engaging into a new contract and defeating the devil.
* fight for Decepticon leadership between Megatron and Shockwave. The fight ends when Shockwave attacks with a water tower, short-circuiting Megatron (to be fair, Megatron's body was covered in open wounds at the time).
* Fight for the Last Bite: Characters squabble over the last piece of food.
* Fight for the Last Bite: Two or more characters compete for the last morsel of food.
* Fight Fur Your Right to Party: Music videos that center around parties.
* fight his way out of the underworld each and every time. One story had a girl's soul tag along (without his permission) so she revived too... except an ancient evil also tagged along in her, causing her to turn into a monster who kills her family.
* Fighting Across Time and Space: Characters fight or chase each other while teleporting across different locations.
* Fighting Across Time and Space: Characters fight or chase each other while teleporting through different time periods.
* fighting alongside him during the same war while their son was elsewhere on the front lines.
* Fighting American of Cap, which in turn led to Marvel taking legal action against Liefeld.
* Fighting and beating Al-Cid plays this trope straight. Al-Cid is a pretty strong opponent, but when he joins your party, he comes in several levels lower than he was when you fought him previously.
* fighting and injuring 33 Lan elders, stood against the Jin Clan at the end of the Sunshot Campaign.
* fighting a recreation of his father in the final match of the tournament. He could have had it magically healed, but he decided to keep the scar for sentimental reasons.
* Fighting a scam religion forms the main plots of books eight and nine of
* Fighting a Shadow: An effect one might feel from trying to fight someone with spare bodies.

* fighting a war, but he's fuming over the assets conflict - where he notes that she's even taking their dog. "It's not even her dog!"
* Fighting a Warlock generally means that you end up killing them, going home, taking a shower, making a sandwich, and dying while eating it.
* Fighting Back Is Wrong: An Aesop about bullying isn't about "fighting fire with fire" and should be solved in a better way.
* Fighting Back Is Wrong: Trope associated to bullying but also applied here.
* Fighting Back Is Wrong: Trying to fight back makes you just as bad as the aggressor.
* Fighting Back Is Wrong: When fighting back against a bully or delinquent it's considered a bad thing and the person can be punished or reprimanded for it.
* Fighting Back Is Wrong: When the victim fights their bully is seen as a bad thing that goes against them.
* Fighting Down Memory Lane: A character uses their opponent's memory as a weapon.
* fightingest squad of the fightingest company of the third-fightingest battalion in the army."
* Fighting Fantasy alchemists trying to build monsters out of bits of corpses.
* Fighting Fantasy a shabby zombie-like being that, when hit for the first time, splits into six parts, all floating around and attacking independently. Thus leading to a long, frustrating fight, as each time you won an attack round you randomly roll to see which part you hit, and if you hit a part you'd already disabled the hit is wasted.
* Fighting Fantasy. At the conclusion of the duel, Sturm ends up getting sucked out through the ship's windows to his death.
* Fighting Fantasy, at which point he ends up bailing the funeral by slicing and slashing his way through the mourners.
* Fighting Fantasy". Averted for those gamebooks taking place on the other two continents, the Old World (which mostly feature the kingdoms near the northern and eastern coast) and Khûl (which usually take place near the southern coast).
* Fighting Fantasy, being set in the Middle-Eastern inspired Land of Kallamehr, have a fight scene where the player battles two opponents on a flying carpet while trying to maintain their balance. It's as complicated as it sounds.
* Fighting Fantasy believe "what" is the password, and let you pass without a fight.
* Fighting Fantasy books make silver weapons the only ones capable of harming ghosts.
* Fighting Fantasy books wearing scary-looking faceplaces as part of their attire.
* Fighting Fantasy books will award you non-standard game overs for going into tunnels and caves without a light (many of which chastise the player for their foolishness).
* Fighting Fantasy. But then played almost straight in the fact that it is indicated that there are a great number of faceless nameless redshirts available in your crew for horrible things to happen to (if you play well — in a way that won't get your identified personnel killed) and that you and your crew repeatedly, if such things happen, suffer a critical giving-a-shit failure.
* Fighting Fantasy, can have this happening to you when you're infiltrating the lair of the kaiju-like giant monster, the Gargantis. You can choose to have yourself lowered into its lair from a pit — at which point the Gargantis will suddenly grab you from below and chomp you into half from the waist. Bon appetit...
* Fighting Fantasy) capable of summoning skeleton warriors as mooks to deal with the players.
* Fighting Fantasy, deals with the typical "Car breaks down during a storm" and your character is trapped in a giant mansion filled with zombies, demons, other monsters, devil worshipers and many cliches like a hunchback. Interesting is that if you encounter too many jump scares, your character can literally die of fright.
* Fighting Fantasy elements, with dice as randomizers. This series popularised the gamebook genre in the UK, and many other well-known series were the result of other publishers trying to emulate the series' success.
* Fighting Fantasy featured a flying metal horse, which was owned by the Wizard of

the Lake. He gives you (the PC) a ride on it.
* Fighting Fantasy features a demonic cult that carries out human sacrifices. One of the illustrations in the original edition of the book depicted cultists ready to sacrifice a nude woman upon an altar; this got yanked in subsequent printings.
* Fighting Fantasy features two monsters: one with a wolf's head and an ape's body, the other precisely the reverse.
* Fighting Fantasy, fighting against an evil coven of witches and warlocks that are trying to free a powerful demon from its mystic prison. The reader can even encounter a supposed witch-burning, although the young woman about to be burned is actually innocent, and the warlock is actually the inquisitor who's about to burn her, having framed her as a way of throwing suspicion off himself.
* Fighting Fantasy four-parter, have EVERY spell being cast at a cost of health.
* Fighting Fantasy frozen by your father, an immortal tyrant, having attempted to oppose him and was subsequently punished for your actions).
* Fighting Fantasy gamebooks and the RPGs based off them, monsters like Stone Golems and Crystal Warriors cannot be harmed by edged weapons and must be destroyed with maces or warhammers.
* Fighting Fantasy gamebook series pulled a similar trick with its own versions of the mind flayers. To get around the TSR trademark, Ian Livingstone called his equivalents "Brain Slayers."
* Fighting Fantasy gamebooks possesses such a temper, having murdered a number of the retainers provided to her by Azzur, the lord of Port Blacksand.
* Fighting Fantasy gamebooks published in the United Kingdom have the reader collect all sorts of strange odds and ends, most of which seem to have no possible justification for the adventurer taking them along. Naturally, those seemingly useless items end up being just what the reader needs to get him- or herself out of trouble, or otherwise make an enemy easier to defeat.
* Fighting Fantasy gamebook "Starship Traveller", the captain can get captured by aliens and cloned as an attempt to capture the ship for themselves. Fortunately, on a successful dice roll you can imprint certain traits on the clone that will make your crew realize what's going on.
* Fighting Fantasy has a few examples where your playable character gets thrown into an arena of death:
* Fighting Fantasy has dammed the river past his fortress. The final battle of the book can be avoided by destroying the dam while he's on it, causing him to be destroyed by the water.
* Fighting Fantasy has the Demonic Servants, gaunt, almost-skeletal humanoids clad in dark robes often found serving demons and evil overlords all over the world. So gaunt, actually, that they istantly die if you manage to land as much as two consecutive blows on them. Since they usually have low SKILL scores, they tend to go down easily compared to sturdier monsters.
* Fighting Fantasy) have Hellhounds as minor encounters. Their flaming breath have a 1/3 chance of injuring the player every attack round.
* Fighting Fantasy: If you meet a bear in a gamebook, it's likely going to attack you.
* Fighting Fantasy is one of the few entries where the player character is a ghost; slain by a cultist at the beginning of the adventure, after returning home from a three-year crusade, the player spends the entire story uncovering the truth behind his death and avenge himself eventually, while saving his kingdom from the forces of evil.
* Fighting Fantasy Legends. In this video game, your character does throw the Hag into the sewer, but in this adaptation there's also a giant venomous snake in the area and it attacks the Hag until there's only one survivor.
* Fighting Fantasy made of rock), and its outcome is as useless as you'd expect.
* Fighting Fantasy?" moments when people realize that it can understand them and is trying to communicate.
* Fighting Fantasy monster. When it wanders into the town of Coven, people take one look and run for cover. It can then go shopping, to the utter bewilderment of the storekeeper who accepts its coin.

* Fighting Fantasy occasionally gives you chances to pick up bottles containing magical genies to help you out. Although instead of granting wishes, most of the time they would restore your SKILL or STAMINA instead.
* Fighting Fantasy of a Plague-ridden post-apocalypse. The protagonist is on a mission for the local gov't, so he's given a tricked out car that's armor-plated and carrying machine guns, missiles, oil sprays and spike canisters to deal with his enemies.
* Fighting Fantasy series, and more often than not you'll end up randomly opening a door and be greeted by a small legion of undead foes.
* Fighting Fantasy series of gamebooks, were two continents on the world of Titan.
* Fighting Fantasy series of gamebooks, with plenty of monsters roaming the labyrinths either by chance or by choice.
* Fighting Fantasy series of standalone novels further fleshes out this trope when the dwarf Kagand explains to the dwarf Stubble (who comes from another world) that, while dwarves and elves have slain enough of each other in wars over the centuries, they actually live in harmony in places like Darkwood. This is a mild form of culture shock to Stubble, as the dwarves and elves on his own world have a deep-rooted dislike that goes back centuries.
* Fighting Fantasy. Some are even mightier than plot-relevant villains!
* Fighting Fantasy sorcerer who blended a number of unwilling humans with fish. They tend to be solitary, cruel, and hostile to humans, attacking them with tridents when the humans intrude on their territory or simply to steal the humans' riches.
* Fighting Fantasy starts with you (the titular magehunter), your newly-crowned lord and the villainous Mencius landing on an unknown world. While you struggle to even understand the natives, Mencius has been granted by the ruler a enchanted tower in the capital by the time you face him. There is some justification, as he mentions the magic-rich world has amplified his powers and he might have known of the place beforehand.
* Fighting Fantasy, staying in the Abyss to allow everyone else to escape. Steve Jackson felt that the player should get a massive reward for winning, and so the ending was changed to one where they get godlike powers instead.
* Fighting Fantasy that are quite dangerous in combat... but they are terrified of rodents, especially mice. This is explained as an ancient superstition coming from the legend of Suthis Cha, the Lizard God, who choked to death while trying to eat the Mouse God Karreep.
* Fighting Fantasy: The elderly wizard Gereth Yaztromo often fulfills this role in the gamebooks, most particularly those by Ian Livingstone, explaining the latest evil threat before asking the reader to try and solve it. The reason he can't do it himself, of course, is because he's just too old.
* Fighting Fantasy, the final boss has Skill 9 Stamina 12 — the stats of a typical mid-tier enemy.
* Fighting Fantasy. The first one the player meets explains that he doesn't want to see his entire race destroyed, just as the PC, a human, would not want to see all humans wiped out.
* Fighting Fantasy: The Jib-Jib is basically a ball of fluff the size of a cabbage that runs around on two cute little feet. It also has a shriek that can be heard over a mile away and its default reaction when frightened is to start screaming, in hopes that either this will frighten away whatever threatens it or that an even bigger nasty will show up to eat whoever set off the Jib-Jib.
* Fighting Fantasy, the PC is a monster, and so gets to kill several adventuring parties in the early part of the book. If they choose to investigate the corpses, they find some shiny metal disks, but can't imagine what purpose they might serve and so throw them away.
* Fighting Fantasy (where the dungeon had been remade after someone had beaten it once), only for his hated brother to turn the tables on him, offering the champion anything he wished on top of the gold, correctly guessing that what the champion wanted was revenge against Carnuss, and promptly killed him.
* Fighting Fantasy where the hero could encounter the Menagerie of Monsters.

* Fighting Fantasy, where you can venture in a cavern infested by all manners of monstrous arachnids, including a literal spider-wolf horror and their queen, the vaguely humanoid Arachne.
* Fighting Fantasy will have you battling enemy starfighters in space combat.
* Fighting Fantasy, you play a Space DEA Agent investigating a leak in shipment of Space Drugs.
* Fighting Fantasy you start the adventure with a cursed bracelet that kills you once it has glowed 14 times.
* Fighting Fantasy, you went from being a slave to a forced contender of the annual Trial of Champions, where you must compete with five contenders in a deadly dungeon filled with monsters.
* Fighting Fantasy, you will have to fight the massive, fleshy tongue of some unknown monster that sticks out of the mouth of a face-shaped doorway. Said tongues can constrict and throttle you in an attempt to kill you, but their stats are both quite low and slinks away upon being slashed enough times.
* Fighting Fantasy: Zigzagged. Some Fae creatures are friendly, if shy and reclusive (sprites, woodlings, and pixies), while others are malicious pranksters who enjoy stealing from humans (leprechauns), and still others are actively evil and try to kill any humans they meet (spriggans).
* Fighting Fear with Fear!, Ash slipped off Team Rocket's Gliscor Bot, causing him to fall into a canyon, but is caught by his newly-evolved Gliscor (which can only glide, rather than fly). Uniquely, Gliscor also doesn't have enough time or distance to pull out of the dive once it catches Ash either, rather, it uses it's tail like a spring to safely absorb the impact, (a skill that it had been working on earlier in the episode.)
* Fighting Fire with Fire album includes percussion from a snuff can and a hubcap.
* Fighting Foodons gives us this show, where the fighting monsters are actually food recipes come to life. A talented chef can make better Foodons, and even empower them using power toppings. The most skilled such chefs are actually termed Dish Wizards.
* Fighting Foodons's first episode has this exchange as the team tries to get the Meal Cart outside of a prison.
* Fighting Foodons: The ending song of the anime series reveals the planet everyone is on to be shaped like a bowl.
* Fighting for a Homeland: Group of people fight for ownership of a land to claim as their home.
* Fighting Force Has Ben "Smasher" Jackson who looks strong and IS strong. His attacks do the most damage out of the 4 characters.
* Fighting Force has much more overt similarities to SOR, such as Hawk looking like Axel), but Sega pulled the deal after disagreements with the developers over what platforms the game would be released on, and it became its own thing.
* "Fighting for survival in a shattered world… The truth is her only hope"
* Fighting for the Faith regularly plays this for laughs with their "standard warning."
* Fighting for the Future, Weiss' nightmare in "Shadows, Part 7" implies that Salem killed everyone in the previous timeline and that she was the only one who survived.
* "Fighting for truth, justice, and the last slice of pizza." —
* fighting Fugaku Uchiha during the clan's insurrection, and while he survives, he's forced to step down as Hokage, naming Jiraiya his successor. Jiraiya is reluctant at first, but ultimately accepts if only to prevent Danzo from seizing the position.
* Fighting Game (although in Asura's case, the latter two are replaced by his Burst and Unlimited Mode Gauges).
* Fighting Game arcade joysticks were considered the top of the line product for serious players, and if you bought anything else, you might as well just throw it in the garbage. Of course, the reason MadCatz's sticks are considered good is because they are fitted with Japanese Sanwa parts, which might be getting a bit meta...

* Fighting Game, a search for information on how to use the characters often ends with a plenitude of spoilers, which may not be major (fighting game) but it can ruin the satisfaction that figuring it all out near the completion of the story provides.
* Fighting Game Community while SonicFox laughed his loss off and congratulated GO1 for his win, later raising his hand in front of the crowd to cement the amount of respect both have for each other.
* Fighting Game game before, would find Shao Kahn this across the different installments. His taunts run in a pattern, which give fighters easy hits. Shao Kahn on the Game Gear is especially easy, as he has half the life of a normal contestant, and his attacks don't do any more damage than a normal fighter. Considering Kintaro can be beaten with simple strategy, one can play the game wondering why Mileena wasn't made the final boss.
* Fighting Game, grabbing an Egg power-up briefly turns you into Pojo.
* fighting game made has at least a few of its characters using fictitious martial art forms, such as:
* Fighting Game... on the ground. If he's thrown or launched into the air even once, he becomes almost completely helpless.
* Fighting game pro IFC Yipes has a whole stable of memes associated with him. He's best known for screaming "IT'S MAHVEL, BAYBEE!"
* Fighting games have existed since before the Atari, dating as far back as Sega's
* Fighting Games. Here, the Beat (generally written as a "!" or "-") is used to either allow the opponent to fall into a more advantageous position, or to let the combo meter reset. In both cases, it counts as a delay in the combo due to the player's lack of action, but the same combo as the opponent is generally incapable of acting.
* Fighting Games. Incredibly helpful to make 3D martial arts maneuvers look authentic to have an actual martial artist recording said maneuvers. Granted, there's some problems if the move's mapped onto someone drastically different from the attacker or defender, but adds a little verisimilitude.
* Fighting games in general lean heavily on this one but Yoda and Darth Vader are in
* fighting games in particular has a strong Wuxia vibe (the setting is very Eastern-themed, despite being developed entirely in the United States) but this was subsequently stripped away in later games.
* Fighting games is of relevance, describing the ability to read your opponent's mind.
* Fighting Games often have scantily-clad women among the cheering mob that stays in the background of stages.
* Fighting Games, the things that happen vary from game to game, or even from instance to instance, though it's never Flynning.
* Fighting Games where some characters get different costumes, but others remain the same.
* FightingGames, where the mindset can usually be broken down to "Daigo Umehara (Japan) vs Justin Wong (USA)".
* Fighting Game, the 21st-century fighter Rancid uses a chainsaw as a weapon.
* Fighting Game. The newbie player may actually win a few rounds against an experienced player this way just because they managed to mash up enough buttons to pull off a series of moves to stop their opponent while the experienced player is frustrated since they can't find an opening to attack in or block against all the spammed attacks. Not all fighting games fall under this and some may have counters against players who randomly mash buttons.
* Fighting Game, this is how the character Shadow died - her organization realized she wanted to turn against them, and thus "gave" her a trip off the 100th floor of their headquarters.
* Fighting Game. Using hacks, you could play as (or against) him, but his only attack is shooting hearts and he tends to glitch a lot.
* Fighting Game with straight punches as if they are all equally strong.
* Fighting Game would later refine, forming yet another distinct style for the

genre.
* Fighting Game. Yes, the grand finals for a UMvC3 tournament was decided over a round of Bomberman.
* "Fighting Ire With Fire." James uses pictures of Team Rocket's past exploits to demonstrate why they always lose.
* "Fighting Jack" Churchill of the British Army, who not only carried a bow and arrows and sword with him into combat during
* Fighting JC, who has been released with different colored robes, and different tattoos. Some people have described it as Jesus Christ, reborn to kick some Zombie ass, given that Fighting JC was released as part of a line dealing with the survivors of a Zombie Apocalypse.
* Fighting Leaf has a sidekick called Husky the Wolf who is a talking wolf puppet.
* Fighting Leaf loses his temper when he sees someone or something upsets him.
* Fighting Leaf swear at all in his reviews. He tries to be as kid-friendly as possible because of the types of movies he reviews.
* Fighting massive creatures in games isn't anything new, however, after
* Fighting Masters is its basic gameplay, and the fact that, for a fighting game, it lacks combos and strategy, even for a game from the 90s. No matter which character you pick, or which character you're up against, you end up doing the same thing over and over again: All you have to do is stun your enemy, grab him and slam him hard into the ground; rinse and repeat till he's down for the count.
* Fighting Monsters isn't revealed until several chapters in, when it becomes a twist that she, the first superhero, is a woman.
* Fighting Opera HUSTLE, and was seven years older than his mother, Yinling The Erotic Terrorist.
* Fighting Opera HUSTLE but moved really slow. Bigfoot would move a lot faster though if someone poured ice cubes on him.
* Fighting Opera HUSTLE. He also wore a Mardi Gras mask and was called "An Joe"; it's HUSTLE, just go with it. The joke, evidently, is that everybody knows Yoji Anjo (a semi-notable figure in Japanese wrestling) is not American and never lived in the United States.
* Fighting Opera Hustle Monster army where well known professional wrestlers brainwashed and turned into monsters.
* Fighting Opera HUSTLE saw Monster Bono accidentally kill his mother, Yin Ling the Erotic Terrorist.
* Fighting Opera HUSTLE to dethrone them. Unfortunately, not every woman excelled, as Kenzo Suzuki's wife Hiroko will admit.
* Fighting Opera HUSTLE used her feminine wiles in her matches and could beguile entire arenas with just her sexy poses. Her Tokyo Sports popularity award indicates the latter was not purely kayfabe.
* Fighting Opera Hustle would expand its members by brainwashing regular wrestlers and then turning them into monsters too, such as turning Sonjay Dutt into Monster J, Steve Corino into Monster C or in the case of extant ones, more monstrous, such as MONSTER Naoya Ogawa.
* Fighting Opera HUSTLE Zeuxis surprisingly proved she could draw without a partner on a large stage.
* Fighting Panda: A panda could take you out with some simple kung-fu moves!
* Fighting Pretty Foxgirl (美型妖精! 大混战!)
* fighting Raoh. And Mamiya did not act upon hers because she knows Yuria is the only woman Kenshiro loves/
* Fighting Series and uses it in situations that don’t even make sense:
* Fighting Series or gore in a horror movie must be especially disturbing or gruesome by the work's standards to be Nightmare Fuel.
* Fighting Series to guess a way to defeat Miki by imitating a local train:
* fighting skills probably dealing with assassination attempts that Ling says are common for people in such position, makes you mature fast.
* Fighting Spirits. Considering that the game also occasionally uses Christian mythology and even real people as the basis of some Personas, however, it's

possibly intentional.
* Fighting Spirit trainee Kris Rex got trash thrown at him after his very first appearance in Valkyrie Women's Pro (the fans weren't too interested in seeing a man, much less one that wanted to hijack the show)
* fighting style is causing physical pain to his opponents. Among his most prominent techniques include traversing or cutting his opponents with his hand.
* Fighting Talk, which airs every Saturday morning during the football season on BBC Five Live. More competitive than most examples, it features four panelists; usually sportspeople, comedians or journalists, discussing topical sporting news with points awarded for good punditry and passion as well as comedy.
* Fighting the Elder Dragon, Ryu cannot transform due to specific wards placed in the room to prevent Myria from spying.
* fighting. They don't let up until Lord Umbra parades out his greatest beastie... at which point Trixie just remarks that he must be compensating for something.
* Fighting Vipers feature Kumachan and Pandachan, two happy bears that have no connection to anything. Neither have animation frames, so they fight like balloons.
* Fighting Vipers played with it, as all of its stages were walled off, but a sufficiently strong blow would send the opponent right through the wall and out.
* Fighting Vipers were rated T for their original Saturn releases. Their 2012 re-releases bumped them down to an E10+ rating.
* Fighting with My Family a favor and call her father to let him know she hung out with him. Her father doesn't believe it's him, and says he has to have the worst Dwayne Johnson impression ever.
* Fighting with My Family with 10-year-old Paige (AKA: Saraya) and her 12-year-old brother Zak arguing over the TV.
* Fighting Your Friend: A video game has a boss fight where the player has to battle a person explicitly on their side.
* Fighting Your God: A character decides their divine authority is their enemy.
* Fighting Your God: The gods above want to boss me around? Screw them, I do what I want!
* fight in US uniforms, just use them for sneaking around purposes. The tribunal might have wanted to press the issue, but considering how many examples there were of US troops doing the same thing, they declined.
* Fight Knight: In the sand area, all the upper floor "out of bounds" sand tiles cause you to sink to the lower floor, but the rest of the sand only sinks when you step on specific tiles within two tiles away from the stone faces, which immediately Turn Red and cause you to sink. Being constantly aware of where you can step and where you can't is a vital part of solving what is effectively one big navigation puzzle, and later you need to figure out which tiles to step on to deliberately sink yourself to reach certain blocked-off lower floor areas you can't reach otherwise.
* Fight Like a Card PlayerThe story has almost nothing to do with cards, but a lot of the gameplay revolves around them.
* Fight Magnet: Wherever the hero goes, someone always wants a piece of him.
* Fight next to a city and you'll be able to see it almost entirely on the battle map. Fight near the ocean with a fleet nearby, and you can see the ships on the edge of the map, in the background. Fight next to one of the Wonders and you'll see it in the distance. Fight a battle in Sicily, and you'll see Mt. Etna spewing smoke on the horizon.
* Fight Night: Champion, a (real) 400lb boxer/wrestler/MMA fighter. The game does not use his real name ('Butterbean' is used as his last name and he has no first name, though you can hear the ring announcer say it), and he is among the lowest-rated boxers in the game.
* Fight Night: Champion for many rounds can result in this, as both players will have reduced stamina by that point. Even more so when there are two players that have been spamming punches and wasting stamina.
* Fight Of Animals is a large spray of water that visually resembles the Kamehameha.
* fight off the Many, or does it merely fuel his willpower by its psychological

relevance to him?
* Fight Of Gods has also become banned in Thailand for featuring Buddha as a fighter in the game.
* Fight Of Gods runs on this concept. You can play as various deities from different mythologies and religions and then clash with each other.
* Fight of the Living Dead. 10 famous YouTubers are trapped in a location where they need to survive for three days, trying to complete missions without getting killed by zombies.
* Fight of the Living Dead. It’s only after a few people have died that they realise they need to work together. After this only Vitaly remains a selfish coward.
* "Fight or Die, toward the end of Season 7, sees Walker, Gage and Trivette pose as hardened inmates (former two) and a guard (Trivette) to bring down an underground prize-fighting ring, where the warden and a corrupt promoter are forcing inmates to fight for their lives in mixed martial arts-type matches.
* fight over Robin Sherbatsky and have this eloquent and well reasoned debate. Ted even suggests taking her name for his own.
*) fights an entire shinigami squad and two captains both as revenge for his fellow hollows they slew and to protect Raptor, an adjucha who was leading them. After White and Raptor escape, the latter asks the former to eat him, acknowledging himself as "just a stepping stone on [White's] path to greatness", only asking that White use his power to destroy the shinigami.
* Fight Scene Failure: In film or show, a fight scene disappoints viewers for being so easy to see that it's fake.
* fights Cinder purely using an illusion of herself, and is even able to cloak a small airship to make it appear as an entirely different one.
* fights, defeats, and humiliates Tully, the werewolf who first mauled him, then comes home, he talks to Mitchell.
* fights hard against Kieri's group, giving Kieri herself a wing injury, breathing fire at her, and slashing her across the cheek.
* fights. He's stated to die in Episode 30 and be succeeded by an even worse commander.
* fights in the grand old Hollywood tradition: you can dodge-roll to avoid being hit and flip tables to use as improvised cover.
* Fights In Tight Spaces is out of the fight, and the appropriate spaces are often marked with skulls just as a reminder; it offers a convenient way of dealing with counter-focused opponents and minibosses. It makes a lot of sense with some maps: throwing someone off a prison walkway is obviously going to make it hard to participate in the rest of the fight, and there's nothing saying the prison transport isn't in-motion during the fight (which would make being thrown out probably fatal). It makes a bit less sense when you shove someone out of the door of a public restroom or tattoo parlor and they immediately pass out rather than just turning around and coming back in again. Some levels will even reward you for throwing two enemies out of the arena.
* Fights Like a Normal: A hero or villain prefers to fight with weapons or just their bare hands despite having superpowers.
* Fights Like a Normal: Has superpowers, but prefers to fight without them. Whatever reason they may have, it shows that they have the normal fighting skills down pat in addition to their powers.
* fights off a tiger. Another similar story: an elderly couple were walking in the woods when the husband was attacked by a cougar. His wife beat the hell out of this mountain lion with a branch about as big as she was and stabbed it in the eye with a pen, causing it to leave her husband alone and flee. Investigators later found the cougar's battered carcass.
* fights" Perfect Cell and is simply backhanded a few hundred feet backwards into a mountain. He inexplicably survives (Piccolo suggests Cell didn't want to waste a single drop of energy when he was about to fight Goku).
* fights to save the prince of a planet he had to tend for and threatened that he'd knit a sweater out of his organs if it happened again because "EATING BABIES IS

NOT! COOL!" Not to mention that he is super strong, very angry and all around BADASS.
* fights users, with their post modern magick taken from different regions of the world.
* fights with her bare hands that can only be equipped to Ayla. The Valor Crest not only gives her a 50% counterattack rate when hit, but it boosts her critical hit rate. Now, imagine the possibilities of combining that with the Bronze Fists.
* fight that will give you the right fics, D'Artagnan has been wearing shackles for several months, and for some of that time, he's wearing versions with dull spikes inside. He has scars for the rest of the series.
* Fight the Future, one of Syndicate suggests that instead of killing Mulder, they must "Take away what he holds most valuable. That with which he can't live without." with the next scene showing Scully staring off into the horizon. True to form, Mulder doesn't hesitate to save her, even when it includes going to Antartica and breaking into a top-secret space craft.
* Fight the Future) seems to have been a joke played on the actors. It was finally released 10 years after the movie came out, presumably in anticipation of the 2008 movie, which naturally caused fans to squee and faint dead away. When interviewed about this deleted scene, Frank Spotnitz said that "Nobody ever called 'cut'" and so the scene proceeded as is. There are definitely other takes of the hallway scene in which David and Gillian are clearly messing around and hamming it up for the camera, however.
* Fight to Survive: Characters struggle to survive a perilous situation.
* fight to the death then tell you the truth if you try to press her to tell you what she saw.
* fight valiantly against the aliens whenever they abduct them in Jesse's) who return home more traumatized by their abductions than by the war itself.
* fight, when Beavis, pushed beyond his limits by Butthead's constant mistreatment of him, experienced such an explosion of "The Rage" that he split into four separate personalities: himself, Cornholio, Carrotjose, and Rutabagajuan. These four "maniacs" proceeded to give Butthead the beatdown of a lifetime.
* fig leaf. England arrives for the games and begins protesting France's shamelessness ("YOU FORGOT TO CLOTHE YOURSELF!"), especially when France tries to take England's clothes off for him.
* Figment has the Sound Sprites, who create objects from sound. Because of this, they prize aural perfection and speak entirely in alliteration to reflect this. Anything and anyone that doesn't communicate in this manner is considered imperfect/cacophonic, a source of bad audio, and must be imprisoned.
* Figment has the young Dreamfinder and Figment falling into the imaginary realm through an unstable dimensional portal created by his Mesmonic Convertor device.
* Figment to reflect this. Anything and anyone that doesn't communicate in this manner is considered imperfect and a source of bad audio and must be imprisoned.
* Figment when reading his dialogue. If you are familiar with the original ride, it's easy to hear either Chuck McCann or Ron Schneider's voice when reading Dreamfinder's dialogue.
* Fignon later pushed an idea through to management, that the final stage wouldn't be an ITT, and that the general classification would be safe by the time they reached that final stage.
* Fig of the party, and uses these skills to advance the cases they're on, being very good at pretending other people, with a strong Deception bonus and clever usage of the spell Disguise Self.
* figuratively and literally) and tries to punch him in the face to calm himself down, only for the Slayer to catch his punch and respond in kind with his own. Qrow even finds it bemusing that the Slayer didn't let Tai punch him.
* Figure 17 Tsubasa & Hikaru, biomechanical battle suit Hikaru starts living with Tsubabsa, so in order to avoid awkward questions about where she came from, DD modifies the memories of Tsubasa's father to make him believe that he had twin daughters all along and that Hikaru was simply living elsewhere with an aunt.
* Figure 17 Tsubasa & Hikaru derived from a broken Figure, who can still revert

to Figure form when necessary. The aliens D.D. and Oldina also use Figures to fight.
* Figure 17 Tsubasa & Hikaru environment, it might be purely mental.
* Figure 17 Tsubasa & Hikaru fall under this trope, being as their tentacles are in all cases their primary means of defending themselves.
* Figure 17 Tsubasa & Hikaru "Figure" after protecting Tsubasa in a battle. Hikaru becomes Tsubasa's artificial twin sister.
* Figure 17 Tsubasa & Hikaru has 13 episodes, but is somewhat unique in that each episode is 45 minutes long, and one episode was shown each month during its first airing. As such, the anime takes significantly more time exploring and developing its characters, has a gentler pace, and animation and art that's practically OVA quality.
* Figure 17 Tsubasa & Hikaru is considered nothing more than a particularly weird, atmospheric light show after attempts to investigate turn up nothing.
* Figure 17 Tsubasa & Hikaru plays this completely straight, although there is strong continuity as well. By the end of the series the monsters don't even look different from each other — they just get slightly upgraded powers. This does become less prominent as the plot goes on, however, as emphasis shifts toward Tsubasa and Hikaru's relationship, with some episodes not featuring a Maguar at all, and others being dedicated to particularly large and important, multi-episode fights.
* Figure 17 Tsubasa & Hikaru Slice of Life, Magical Girl, Sci-fi, Horror (dude gets impaled in the second episode, framed alongside such stories like performing a school play written by one of the children). Contains a lot of drama that would alienate children of the protagonist's age yet still deals, very realistically (despite the aliens), with issues a child could struggle with.
* figure Dumbledore had Harry live with the Dursleys was so that he could be protected until his 17th birthday from Voldemort by the charm Lily had unintentionally put on him when she died protecting him. The only way this charm could work was if he called the place where Petunia (Lily's only living blood relative) lived home. This is also the reason that Harry is not allowed to spend entire summer breaks with the Weasleys and must go home each summer.
* Figure It Out can get slimed as well if a panelist guesses the "Word of Honor", the word in the puzzle most critical to guessing the player's secret.
* "Figure It Out" was Royal Blood's only Top 10 hit on Alternative (peaking at exactly #10), but that changed when 2020's "Trouble's Coming", despite radio conglomerate Audacy (then known as Entercom) ordering their Alternative-formatted stations to NOT play the song, peaked at #8. Considering "Trouble" was shut out of significant radio markets due to the block order, it is unlikely to become better known than "Figure" to Alternative listeners.
* Figure skater Evgeni Plushenko was forced to withdrew only minutes before performing short program at the 2014 Winter Olympics because he aggravated his chronic spinal injury, in which the steel bolts implanted in his spine from the recent surgery
* Figure skater Nancy Kerrigan's reaction on Jan 6, 1994 when an assailant hired by the ex-husband of her rival Tonya Harding struck her above her right knee with a retractable baton.
* Figure skater Tonya Harding's then-husband Jeff Gillooly hired someone to attack her rival, Nancy Kerrigan, with a metal police baton. The extent of Harding's own involvement remains debatable.
* Figure skates are wider and longer than Hockey skates, and are only curved at the front, which also has a series of sharp spikes, or picks, built into it for jumping, while the rear is straight and extends out further. Figure skating boots are lighter, and typically don't have as much ankle support, especially on the front, to enable the leg to bend forwards more, being designed for long, graceful motions and jumping. The pick at the front limits a skater's options and the overly wide blade makes higher speeds difficult to achieve.
* Figure skating. Many of the techniques involve spinning. There's specifically a required

* figures out that the scenario is most likely a dream, but remarks "I wish it wasn't, though." He promptly gets this wish, too—by waking up.
* , figuring that he'll latch on to the first person who shows him affection.
* Fiji. A contestant won the car and traded it in exchange for a promise. The contestant who received the car broke the promise, resulting in the original winner's elimination and his progression to the final round...where his actions had so disgusted the rest of the players that he was immediately on the wrong side of the first unanimous victory in the history of the series.
* Filbrick, Stan and Ford's father, does not suffer any comeuppance for the abuse of
* Filching Food for Fun: Stealing someone else's food as a prank or a petty revenge, done mainly because of the thrill and excitement.
* Filching Food for Fun: Stealing someone else's food because of the thrill and excitement.
* Filch's cat Mrs. Norris, who has an uncanny knack for finding students out of bed and alerting Filch.
* File explorers: Linux uses a downwards triangle (▼) to indicate ascending sort, the idea being it's an arrow pointing in the direction you read for alphabetical/chronological order, but Windows and MacOS use a chevron (^), the idea being it's a representation of going from smaller to larger values. Unfortunately since triangles vs chevrons are normally a stylistic choice, switching to and from Linux will have you confused as to why the indicator is pointing "backwards".
* Filemón has one of his own in a chapter in "¡...Y van 50 tacos!".
* File paths get more specific as you to left to right, while domain names get less specific. URLs make it this especially difficult as they use both systems at the same time. This is frequently exploited by scammers and phishers as most people aren't aware of this and thus will assume that a website purporting to be from a company like Google is legit if the URL is "google.{rest of url}" because the first domain is Google, when in fact the opposite is true; a legit Google URL would be "{rest of url}.google.com."
* File Room.org.) Cox spelled it "Citybank" and made the logo an eight-pointed starburst (instead of the real four-pointed one). (Citibank still called the university president, threatening a lawsuit, and he ordered them taken down. They were moved to the university's Art Department Gallery.)
* file statements of possible losses from lawsuits should it be considered reasonably possible that they may lose the case. However, once they do so, their own statements are used against them as evidence of their "obvious" guilt and they usually lose the case shortly afterwards.
* "Filet of Soul" is a fairly straightforward horror story about Dexter and Dee-Dee being haunted by the ghost of their pet goldfish.
* File Under Miscellaneous, anyone who doesn't fit the (white) norm gets surgery to fit in.
* Filia fight like this, having a symbiotic relationship and Filia not being able to control Samson.
* Filia. Filia is also a downplayed, female version; she has a very heavy midsection (chubby abdomen, large breasts, big thighs, and muscly forearms) but has legs so spindly its a miracle they can support her in the first place. What makes it stranger is that they fight as a team, and most of their strongest attacks are kicks.
* Filia has a symbiote living in her hair named Samson, and he zigzags between mutualism and parasitism: while they do work together in combat, Samson has a tendency to take control of Filia in some of their moves, and it's hinted that
* Filia Ul Copt will start dropping aspects of her disguise (such as revealing her tail) when she's emotionally strained.
* Filibus Filibus "saves" Leonora from a staged abduction. (It's left ambiguous whether this was a goal of the rescue or an unexpected side effect.)
* Filibus of the title has an airship stocked with a handful of silent, deadpan, completely indistinguishable crewmen.
* Filibuster Freefall: A work starts off neutral at the beginning, but at some

point, the author's personal opinions and feelings take over.
* filibustering, is good to work for too. Every assistant or secretary he's had went away better for having been hired.
* filibuster, where the "monster" in question is a bill that a legislator wishes to block. The record in the U.S. is held by Strom Thurmond (R-SC), who rambled on for more than 24 hours to block the Civil Rights Act of 1957.
* Filibus: When Leo Sandy declares his love for Leonora, she totally friend-zones him.
* Filipina actress Erika Chryselle "Erich" Gonzales. Her name, however, is pronounced as "Er-Rich," as opposed to "Eric."
* Filipino band Kiko Machine released a self-titled album where a handful of its songs are homages to several classic shows that aired on Philippine TV in
* Filipino comedian, rapper, and singer Michael V is best-known for his novelty songs and literal English-to-Tagalog or Tagalog-to-English translations of popular songs. But in 2016, he went completely serious in the upbeat, yet relevant song "Dapat Tama", his parent TV network GMA's official song for the 2016 Philippine presidential elections.
* Filipino comedian Rene Requiestas was one of the country's top-grossing comedy acts owing to his gaunt, nearly-toothless appearance. Rene was often cast as sidekicks or as
* Filipino comic book artist Gerry Alanguilan (who inked Superman: Birthright) has a self-published work called
* Filipino drag comedian Tekla, along with fellow comedian Donita Nose (not to be confused with the similarly-named actress Donita Rose), got a major career boost following Tekla's appearance in
* Filipino eskrima (also known as arnis, kali, or escrima) systems teach users how to fight with a variety of two-weapon combinations, including twin sticks, stick and dagger, whip and dagger, and twin knives. In all combinations, both weapons are used to attack. The style is also noted for its use of a "live hand", wherein a fighter
* Filipino families today are guilty of naming their children with such names as Krizalyn and Johndex. And their names are written on their
* Filipino film studio Regal Entertainment has uploaded a number of films from their back catalogue for free on their YouTube channel, perhaps as a way to one-up pirates who would upload inferior (and more often than not those with watermarks of whichever warez group released said films) versions online.
* Filipino horror and fantasy movies tend to reflect the local manifestations of Catholicism, including Christianized animism.
* Filipino jeepneys are notorious for trying to fit in as much passengers as possible. If the city's rules don't allow them to get away with putting people on the roof, they will stuff the internal benches (even if it means people are "sitting" on an area that's a few square inches large) and the floor.
* Filipino "King of Comedy" Dolphy has been doing this way before Tom Hanks with roles in "Gigolo" in 1956, and as a gay character in the comedy-drama "Facifica Falayfay". It has been noticed that through his experience in starring in different mediums of entertainment, he was granted the insight of how a comedian can use his strengths to play various characters and how malleable emotions can be when you have to find different ways of cracking jokes to be filled with as much zest as when it was first shown.
* Filipino Mythology, devoured the other six one by one until Bathala (the androgynous omnipotent creator of everything) punished him severely.
* Filipino rock band Weedd was, by nature, a band of 16-year-old high school boys who drew their influence from the '70s hard rock their dads most likely listened to. But their only mainstream hit was the faux-reggae "Long Hair", a novelty throwaway about how teachers in their school didn't like long bangs and "undercut" hairdos, as was the style in the mid-'90s.
* Filipino senator and presidential candidate Miriam Defensor-Santiago gained notoriety for eloquent use of English in her speeches during her political career. It has since been part of her public image, and despite being often parodied for

being too complicated for the average Filipino to comprehend, she takes said parodies in stride and was very much alright with it.
* Filipino singer Sarah Geronimo is a product of a national singing contest, and she simply wanted to use her talents to raise her family from poverty, starting her career at just the tender age of 14. However, her mother Divine meddled too much into her affairs, holding her finances hostage just to get the other children a better life and even pressuring her not to have a relationship with another man. This constant meddling culminated in February 2020, with Sarah (then 31 years of age) marrying her long-time boyfriend, actor and former car racer Matteo Guidicelli, keeping their ceremony a secret from her intrusive mom. But the lid blew over, as the so-called
* Filipinos often make whips with handles from a stingray's tail-barb (naturally called
* Filipinos' resentment towards Japan gradually began to fade away as younger generations became more willing to forgive their former invaders. In addition, they provided an alternative to the predominance of Western shows as well as reflecting elements of Japanese culture that are similar to their own.
* Filipp Kirkorov. According to him, the three of them were in an elevator, when a couple of obviously provincial visitors entered. The ride down was totally silent with the couple staring at the three celebrities. Just before exiting, the guy smiled and pointed at Galkin, telling him that he looks like the original the most, leaving Kirkorov and Pugacheva in shock.
* Filippo Tommaso Marinetti was fond of serving gastronomic delights such as salami soaked in coffee and eau de cologne.
* filk, from Leslie Fish's "Landing Party Blues" to "Redshirt's Lament":
* Filk Song and treated no more seriously than Scotty and Chekov's drunken parking violation.
* Filk Song are the ones who think the things in the games are real, while the gamer knows them to be harmless fantasy. It ends with the line:
* Filk Song by Diana G. Gallagher. She makes a good point and gives another good reason (in addition to the existing ones) for restraints.
* Filk Song describes a few misadventures of someone who never heeds that advice.
* Filk Song — the singer picked up the Necronomicon, summoned Cthulhu, and had sex with him.
* Filk Song that parodies the phenomenon: "There's a bimbo on the cover of my book".
* Filk Song) was found "with five partners, each of a different world and sex".
* filled her underwear with as much gunpowder and nails as she could the English just being "crass and indolent race, unlike Germans or Scots."
* Filled of crap though it may be... only to having glimpses of her former self.
* filled to brawl all through the audience area that would normally be filled with people. Mankind won the WWF Championship by pinning The Rock using a forklift and a pallet (hey, his shoulders were down) and this match was never used again (due to the prohibitive cost-usually a promotion will later sell tickets for later matches in that same arena and show the empty seats to them on a screen or something...or just use an arena they own).
* filled with it, as is Azazel, who gave humans fashion and metal-working in defiance of the Almighty. They were cast out of Heaven and joined Satan in the angelic rebellion because of it.
* filled with unlabelled keys forcing them try every single one. By the time they finally get back inside their dinner is ruined.
* Fille Fatale, but not for the reason most people think. It's often a sign that somewhere along the line she (or he) was sexually abused. (As people have begun to get more of a clue about the prevalence of child/teen molestation, they're more likely to remember this.)
* filler anime, Kenshin pretty much steals a horse after he gets thrown out of a train by thieves and uses it to catch up. The horse fit here to a tee and was kinda... infamous in the fandom for it.
* Filler antagonist Saiko Intelli also fills this role during the Provisional

License exams thanks to a
* Filler any manga development while waiting for the main plotline to advance, so it would frequently feature off-duty antics or extended flashbacks for minor characters. Ikkaku, Yumichika, Yachiru, Matsumoto, Don Kanoji, Kon, Ichigo's sisters, and Hitsugaya all have at least one episode dedicated to them in some way.
* Filler Arc anime, Seto Kaiba's adoptive father Gozaburo Kaiba originally had the virtual world created for his biological son Noah after Noah was hit by a car and left permanently disabled.
* filler arc created by the Big Five to trap Kaiba and keep him from firing them. Then Yugi, Joey, and Mokuba go in the game to free him.
* Filler Arc had planned for the manga to end after Queen Beryl was defeated, but eventually agreed to continue it. They had to wait for Takeuchi to write enough of the next arc though, so they created the Doom Tree arc to fill time.
* Filler arc that he would rather duel for fun than to save the world.
* Filler Arc, the Straw Hats minus Zoro (who was captured first) are forced to do this. They are eventually picked out as fakes when the commander gets reports of suspicious unknown Marines, (Usopp and Robin), cooks (Sanji and Luffy), doctors (Chopper) and nurses (Nami) are making trouble around the base.
* Filler Arc Uryu. But when Uryu fights him, he inexplicably overlooks a chance to strike a killing blow and the artifact temporarily restoring his powers breaks, leaving it to Ichigo to finish the battle.
* filler arc was insanely powerful, but Goku caught the flaw in that there was a long prep time and a long execution time, giving him a chance to sneak in quickly.
* filler art commenting on how terribly they used to dress after finding an old magazine with them on the cover.
* Filler bit of the anime has Gohan, to his surprise, run across a movie being made about his superhero alter-ego, the Great Saiyaman. The director mistakes him for Saiyaman's stunt double, and Gohan, being Gohan, decides to go along with it. Until he realizes it's getting late and he still has to visit Krillin, so he flies off.
* Filler character Lily Enstomach is a giant, but she has eaten a Devil Fruit that allows her to shrink in size at will, so the trope is naturally invoked when she returns to her true size.
* Filler character Pikkon, which is fitting since he's based on Piccolo. His demeanor breaks several times as he fights Goku during the Otherworld Tournament.
* filler episode featured a villain that was fairly clever at averting this: instead of making the water himself, he pulled it out of the wet dirt ground.
* filler episode has a villain who isn't satisfied just doing this — he holds a funeral where all the attendants have to just stand there while the guy in the casket is screaming his lungs out and pleading for his life. Raiga would recall the "good memories" they shared and "forgive" them for betraying his trust... before proceeding with the burial.
* Filler has the Detective Boys fall into a river, which causes Mitsuhiko to start flailing around and panicking. He has to be told that the water isn't that deep.
* filler. He chases the thief naked and manages to scare him into dropping Goku's clothes, but the thief escapes with the Dragon Radar.
* filler he happily and melodrmatically claims that the singer's spirit has come to take revenge for her own strange death.
* Filler) helps them with the "test run" of the song; his actor is also a well-known singer.
* filler implies they too want to break the seal between the two worlds.
* Filler in the show. Ichigo beats up a monster, but a rival school beats her school at a gymnastics competition, Retasu saves a boy she has a crush on, but he proposes to another girl, and so on...
* filler. Ranma catches the MacGuffin, Akane catches Ranma's hand and a convenient branch on the side of the cliff.
* filler, sinking ships for him in exchange for eventually being cured. After Naruto convinces her to see the error of her ways and defeats Amachi, Amachi reveals that he planned to dissect her when he was done with her, and the group takes her back to the village so that Tsunade can return her to normal.

* filler standards), the arc was at least as long as the Soul Society Arc.
* Filler Strips character Yelling Bird, whose only purpose is to yell obscenities at the author.
* Filler Strips, Torg eventually gets fed up with Pete doing them to take a vacation and does his best to force him to make an effort to draw them anyway. It doesn't work.
* Filler the characters were inside a virtual-reality video game. Joey was battling the arena's champion in order to win a card they needed to get across a desert—the champion turned out to be Mai, and when he explained the situation to her she decided to quit fighting and just order the Harpie Lady to snag the card from its display with her Rose Whip.
* Filler. The writers only have 11 minutes, so they need to get right to the good stuff.
* Filler, Uub, and he's introduced in the very last episode. He does get an expanded role in GT, but like everyone else who's not named Goku, he's useless.
Every other significant human character and essentially all of the people in crowd scenes appear to be white. Even Tien, whose name, attire and background would imply the equivalent of Chinese ancestry, looks very white.
* Filler Villain and has a creepy fondess for young girls. Like Thaegan he is more just a byproduct of the Shadow Lord's evil, and wasn't born into it.
* Filler Villain and violently grabbing him to stop him from struggling against her.
* Filler villain Dartz possesses magic more ancient and powerful than most the Egyptian Magic on which the series' actual mythology is based, is powerful enough to duel the Pharaoh and Kaiba to a standstill and defeat the latter, one of his henchmen defeats
* Filler Villain does the same thing. As the ruler of the Virtual World, Noah is able to enforce all of his Deck Master rules, frequently calling out his henchmen, The Big 5, when they either a) cheat in duels or b) attempt to leave the Virtual World without having first won a duel. Yet during his matches against Kaiba and Yugi/Yami, Noah cheats repeatedly, using Kaiba's brother as a shield against his attacks. When he's actually beaten by Yami, he steals Mokuba's body despite not having won a duel, and tries to escape into the real world, something he himself forbid The Big 5 from doing.
* Filler Villain Fuka. She makes quite a few suggestive comments to him and tries to kiss him while ignoring his personal space but we mustn't forget that she's actually just a living head of hair and that when she tries to kiss Naruto she's literally trying to suck his soul/chakra out.
* Filler Villain, specifically states to himself after Usagi runs away after he failed in his attempt at wooing her that "Every time she runs away it only heightens my determination to win her over..."
* Filler Villain to both him and her brother. Her love for Mamoru is part of the reason why she hates Usagi.
* Filler Villain which his father had been protecting just for the money it could get, and cheerfully boasts about the act.
* Filler) watching Freezer's last transformation and fighting with Goku, commenting on how great and powerful he was and confusing the hell out of Gohan, Krillin and Piccolo.
* Filler: When whole chapters/episodes contribute absolutely nothing to the main plot and are only there to make up the word count/screen time. Happens most often in television series rather than films or books, particularly adaptations of ongoing print media series that must be produced at a slower rate than their television counterpart.
* filler) Zanpakuto Strange Tales Arc, the spirit manifestations of Ruri'iro Kujaku and Kazeshini are constantly shirtless.
* Fillia's because she wished to become the Skullgirl. Miss Fortune narrowly avoids it: just as she's about to make a wish she realizes that this trope is in play and opts to destroy the Skull Heart, instead.
* "Filling Out My Death Note"'s "Cleaning Out My Closet" Whole series spoilers and

amateurishly done but the lyrics are funny as hell.
* Filling the Silence: When it logically should be quiet, but sound or dialogue is added in to fill in the silence.
* filling the spot of a disgraced Ocean Master in The Light with extremely powerful and dangerous weaponry.
* Fillmore! are the Safety Patrol's best officers and the best of friends.
* Fillmore! at one point describes an X-shaped cookie as being "X-Middle-Schoolicious!" She subsequently manages to get away with "snackabacktacular!"
* Fillmore! between opposite gender leads but Fillmore's partnership with Ingrid is strictly professional and platonic.
* Fillmore! by uncoupling the engine of a miniature train from the carriages, leaving Fillmore behind him. However, he stands up to gloat and takes himself out as the engine enters a tunnel.
* Fillmore East, June 1971 has two tracks, "What Kind Of Girl Do You Think We Are?" and "Do You Like My New Car?", where some groupies deny being groupies, despite all evidence to the contrary.
* Fillmore! episode "Immune to All But Justice" featured a counterfeit baseball card ring.
* Fillmore! episode involved an undercover operation into a corrupt Girl Scout troupe run by an ex-Safety Patrol member.
* Fillmore! episode, "To Mar A Stall", one of the school's bathrooms has been vandalized and the Safety Patrol are gathering information about the crime scene. As O'Farrell steps up for a photo, he steps on a lever, spraying Tehama in the face. The following ensues.
* Fillmore! episode "To Mar a Stall". While investigating vandalism in the girls washroom, O'Farrell starts going on about how much nicer it is than the boys and that it has air freshener. He then starts trying to identify the scent. (Much funnier than it sounds.)
* Fillmore! felt the kiddie target demographic didn't get all the 1970's references (and believed that it mattered whether the kids got all the references or not).
* Fillmore!, Fillmore "accidentally" ruins a rude suspect's soufflé by popping an inflated paper bag.
* Fillmore!, Fillmore and his dad strategize about which foods to eat to get the most value for their money. His mother even chastises Fillmore that it's all a normal person can eat and to not eat the poor owner out of business.
* Fillmore!". Fillmore and Ingrid are cornered by a pair of thugs on top on a high diving board. They look at each other, and then turn and jump off the board into the pool.
* Fillmore!: Fillmore is discussing a case with an old friend who's one of the witnesses, and he mentions that 4000 counterfeit baseball cards are still missing. She tells him not to worry, because "it's not like four thousand Cal Ripken cards are gonna just disappear." Fillmore realizes that she must have the cards because he never told her what player was on them.
* Fillmore! (Filmore is saved by an erupting model volcano clearly labelled "Mount St. Cliche").
* Fillmore-Graves blow up Max Rager's corporate headquarters in order to hide evidence that the massacre that happened there in the Season 2 finale was zombie-related.
* Fillmore! had all the safety patrollers hanging out at Ingrid's house. O'Farrel is eating raw cookie dough out of a carton that the others remark is decades old. Ingrid goes on to recite the ingredients from memory and reassures him that the dough contains enough preservatives to outlast the Sphinx.
* Fillmore! has the lead protagonists Fillmore and Ingrid of Safety Patrol. One's an ex-hood turned good, the other's a outcast from another school, they fight grade-school crime!
* Fillmore!: In "A Forgotten Yesterday", Fillmore is on a jetski in X's lake, and almost crashes into a buoy mounted with a sign that reads "Watch Out For Floating Signs"
* Fillmore!, including the Hannibal Lecture from the serial graffitist.

* Fillmore!: In "Codename: Electric Haircut", Fillmore is able to cut through his bonds with a CD that fell on him when he was being tied up.
* Fillmore!: In "Codename: Electric Haircut", one of the cheerleaders has the habit of spelling out her emotions. A former cheerleader assuming a new identity later give herself away by spelling something out during routine conversation.
* Fillmore!. In it, Fillmore consults with Randall the Vandal, who is kept in detention permanently, in order to gain insight into the mind of the mystery vandal 'Stainless'.
* Fillmore!: In "Masterstroke of Malevolence", Fillmore and Ingrid slide under the closing security door in the museum as they chase after Leo.
* Fillmore!: In "Next Stop: Armageddon", Fillmore chases the perp of the week across the roof of a miniature train.
* Fillmore!: In "Of Slain Kings on Checkered Fields", Checkmatey gets away from Ingrid by going to the bathroom, turning on the shower, and climbing out the window.
* Fillmore!. Interestingly, the episode ended in a rather positive note for fans with the girl declaring that a book was a promise to the fans, and the author broke it.
* Fillmore!: In "Test of the Tested", Ingrid uses her library card to spring the lock on the equipment storeroom in the basement of the gym.
* Fillmore! involves a crime that takes place during the magic act at the school talent show. While working on the case, Fillmore tries to figure how the trick at the finale was done but kid who did the trick keeps shaking his head no. At the end it's implied he really did do the trick through magic.
* Fillmore! is described as "Isn't trained to use a stapler" when Fillmore assigned him as a bodyguard.
* Fillmore! is one given the way he eats, dresses, and acts, but is a rare non-anime and manga fan example, as his interest in Japanese culture is more towards its traditions akin to the Western Otakus of the 19th and early 20th century as opposed to modern ones.
* Fillmore! is usually good at avoiding these, the episode about standardized tests went a wee bit overboard. One of the recurring dialogues of the episode is that standardized tests are not only ineffective but are damaging and counterproductive for more creative children (Ingrid noted a boy who was terrified of the test was also an amazing inventor "but that doesn't show up on the S.A.T.T.Y.9") and for others who do not test well. Although the points about "bad test-takers" are actually pretty valid, the constant reiteration of the observation reaches Author Tract levels when pretty much every child who takes the test either gripes about how pointless it is, or the children who actually want to take the test are depicted as rather neurotic overachievers.
* Fillmore!. It turned out that the victims of various bullies had decided to fight back, but they swapped targets so that each of them would have an alibi when the bully they had reason to hate was targeted.
* Fillmore!: Not even diplomatic immunity can keep you safe from Cornelius Fillmore.
* Fillmore! potter who proclaims that she couldn't have graffiti'd the school bathrooms:
* Fillmore! takes a lot of inspiration from 70s buddy cop shows, not that any kids noticed. More specifically, those made by Quinn Martin Productions.
* Fillmore! The author is shown to be jaded and dismissive of her fans, only still involved with the series due to contractual obligation. Her fans call her out on this attitude, citing that she at least should respect them enough to provide them with a coherent, satisfying story.
* Fillmore!: the ruination of the train convention in "Next Stop: Armageddon".
* Fillmore!. They have a deep bond with each other but there are no hints of romantic attraction.
* Fillmore! thinks he can get a parrot to testify as a witness, but it just squawks and bites him. The rest of the Safety Patrol ignore him as he continues to try even after the case is solved.

* Fillmore! uses the instrumental opening to "Das Uber Tuber" by Ookla the Mok.
* Fillmore! was a ventriloquist. It made things difficult for Fillmore an Ingrid to find him in a crowded attic, as he was throwing his voice so they couldn't easily locate him.
* Fillmore!, when a suspect took the heat in exchange for the real culprit's help getting his sister into school politics.
* Fillmore!, when Fillmore and Ingrid are interrogating an artist suspected of doing graffiti:
* Fillmore!. When the Safety Patrol decides to stop him anyway, they point out how they have other ways to make him stop abusing his power without turning him in.
* Fillmore!, where the school safety patrol infiltrates an illegal "smoit" (basically box-tops) casino.
* Fillmore!, which follows the adventures of a middle-school safety patrol.
* Fillmore!, with George Stephanopoulos once again informing children watching to get a parent into the room.
* Fillmore!, with X Middle School having its own mini-golf team who treats the game as seriously as professional golf.
* Fillory allows non-monogamous marriages for its rulers; they may take one husband and one wife.
* fill up your ceremony with arcane gibberish and dribbly candles, why did you even become a wizard in the first place?
* Filly Funtasia. 2018 saw Guangzhou Huamai Animation Studios and B-Water Animation Studios taking over where the other two studios left off, and the show would then be completed for the next year.
* Filly Funtasia for the show was back in 2013 and still continues to be to this day. However the show did manage to gain itself a sizeable enough fandom for such a rather obscure series, and the fandom has its places to communicate to each other, including a news site about Filly Funtasia-related stuff.
* Filly Funtasia, starting in October 2013. 4chan certainly helped with its popularity as well.
* Filly Funtasia was announced in 2012 but its release kept on being pushed back. It was due for a 2014 release that never happened, although slowly throughout the years, it was revealed that the show was still in production. Not so shortly after it was announced that it would come out in 2019, the show would finally premiere March 11 on an Italian channel, Frisbee.
* Film/2012: The tremor and fissure opening at the super market causes many car alarms to go off.
* Film/3Iron, also by Kim Ki-duk, share a romance through the entire film without ever speaking a word.
* film adaptation, "Another Op'nin', Another Show" and "Bianca" are not sung, but can be heard in instrumental versions. (Arguably, "Bianca" deserves to be cut, having originally been written to spite the original actor playing Bill, who obnoxiously demanded an Act Two showpiece.)
* film adaptation beyond the basic premise, he didn't think that the filmmakers butchered the story he wrote. He even stated that Jurgen Warmbrunn, the only character who made the transition from the book to the movie, was "pretty spot on" from how he imagined him.
* film adaptation depicts this in vivid detail in the Jerusalem scene, where they not only cross over the wall this way, but submerge a bus under a literal wave of zombies.
* film adaptation far-fetched to have the said Neo-Nazis be a bunch of wealthy businessmen, led by an Austrian billionaire, who hope to provoke a nuclear war between the USA and the Russian Federation in order to pave the way for their takeover.
* film adaptation for the film's failure both with critics and at the box office.
* film adaptation, Fred is accidentally referred to as Mr. Flagstone. The original name for the show was The Flagstones.
* film adaptation has Sean Connery's character constantly talking about how Japanese culture is superior to the West, and a Japanese takeover of a large

American corporation sits at the heart of the plot. The story also portrays powerful Japanese businessmen as shadowy, decadent and corrupt.
* film adaptation, he returns to his room where he finds Mr. Crepsley sitting in the corner flipping through a magazine, and Crepsley casually comments "Interesting... I thought they had this on the Internet now."
* film adaptation. In the comics, the character is always hidden in shadows, but if you've paid for Samuel L. Jackson, you've got to show his face.
* Film Adaptation (Live-Action): An index of live-action movie adaptations.
* film adaptation of, the novels' Dr. Klaus Villars — a white, bearded, German-accented, classically Freud-reminiscent psychiatrist — becomes Dr. Claudia Villars, a female Black-American played by Alfre Woodard.
* film adaptation saw Linda Hunt play the museum director Anne Cuthbert, a character who, in the original novel, was a man named Ian Cuthbert.
* film adaptations that he would typically wear other rubber masks over.
* film adaptation stripped away most of the book's land-bound subplots and condensed the climactic shark-hunt to a single voyage.
* film a horror or witchcraft movie in Ireland due to laws against practicing witchcraft or the supernatural.
* Film/Alien was dubbed in Hungarian twice. The first dub was made by Syncton Stúdió in 1994. The second dub was made by MAHIR Film Kft for Magyar Televízió in 1995.
* film and Rurouni Kenshin: The Legend Ends, both adapting the manga's most famous storyline, The Kyoto Arc.
* Film at 11!", and the battle cry "Destroy Unicron! Kill the Grand Poobah! Eliminate even the toughest stains!"
* Filmation Although in both cases, it was more a matter of getting the villagers to work up the courage to defend themselves than actually training them.
* Filmation (and other characters on his shows) under the name Eric Gunden; Erika Lane, who shares music credit on the show, is also Scheimer (taken from his children's names). Similarly, the Yvette Blais who has music credit on numerous Filmation series is actually Ray Ellis (who often used that pseudonym - she was his wife).
* Filmation around 1964, but due to the funding running out they were forced to put it aside, with the studio becoming busy producing Saturday Morning shows. Eventually, in the early 1970s, they finally received enough funds to finish the film. It premiered in 1974, a whole decade after it entered production.
* Filmation ask him, but he declined because he felt other people could do his younger voice better than he did).
* Filmation claims that Mongo's gravity is a bit lighter than Earth's, so humans are stronger there than on Earth. Flash mentions this to encourage Dale when she has to jump across a wide gap to safety.
* Filmation episode "A Devil of a Time", Superboy does both Smoke Outs and Smoke Ins (with magnesium pellets) while masquerading as the Devil.
* Filmation episode "The House of Doom". The Atom uses one of these to fling himself after an escaping henchman's car.
* Filmation episode "The Pernicious Parasite". When the Parasite drained power from a person, the sound effect was the Martian heat ray firing.
* Filmation episode "The Space Beast Round-Up". An alien ship in trouble enters the Earth's atmosphere. The captain orders that all non-essential equipment and cargo be jettisoned so they can lose weight and gain altitude. Unfortunately, the cargo includes three dangerous alien creatures, and it's the Teen Titans' job to retrieve them.
* Filmation following their PAL transfers, with the intention of releasing them in Europe only rather than in America. Hallmark was reportedly open about their disdain for the Filmation library and were said to have reacted negatively to fans of these shows when questioned by them.
* Filmation founder Lou Scheimer would voice characters on several shows from said studio, mainly for budget reasons.
* Filmation have the ability to gather seawater into a hard ball and hurl it at his

underwater foes. It could knock them off their seahorses. Aquaman, when equipped with the Hand of the Waterbearer, had some fairly high-level hydrokinesis abilities.
* Filmation in order to gain his powers back. Upon hearing this, he muses, "How disgusting."
* Filmation, is color-blind. This goes far toward explaining the odd color choices in some of their shows, particularly the infamous pink Kzinti.
* Filmation made him this for its "Mighty Mouse and the Great Space Race" episodes.
* Filmation: Most shows set in outer space have planets with green skies.
* Filmation's Ghostbusters: A ghost does this to Jake in the opening credits—it bellows out the first part of the "LET'S GO, GHOST...BUSTERS!" line. In that case, though, it's less the existence of cartoony rules that allow random teleportation and more the fact that it's a ghost who doesn't have many physical limitations.
* Filmation's Ghostbusters: Ansabone, the wisecracking phone/answering machine.
* Filmation's Ghostbusters answering machine which tries to answer the phone before the 'Busters can, and even tries to play keep-away with them. Examples of his "wit":
* Filmation's Ghostbusters do the same with ghost-related names on all of their artifacts, including: Ghost Buggy, Skelescope, Ansabone, Skelevision, Skelevator, etc.
* Filmation's Ghostbusters, Eddie Spenser Jr. had this down to an art form. Most of the time, it made things even worse for him and his fellow Ghostbusters.
* Filmation's Ghostbusters episode, "Mummy Dearest". Airhead, a ghostly mummy, has been turned into a giant and set loose to terrorize the oil fields. When the Ghostbusters' Dematerializer (the weapon they use to bust ghosts) is damaged and thus useless against anything larger than a couple inches in height, the Ghostbusters hit upon the idea of using a car wash to shrink Airhead down to size.
* Filmation's Ghostbusters episode "The Princess and the Troll" had a handsome prince turned into a troll by the episode's villain to prevent him from marrying his true love Princess Gwendolyn. At one point, the transformed prince looks into a hand mirror and causes it to shatter because of his ugliness.
* Filmation's Ghostbusters episode "The Sleeping Dragon" featured a ghostly dragon whose minions were stone soldiers who turned people into stone.
* Filmation's Ghostbusters for the ghostbusters to do exposition about thing in the present that she doesn't understand.
* Filmation's Ghostbusters, functions as one of these, but it only works on ghosts, temporarily sending them to another dimension.
* Filmation's Ghostbusters gets the wish wrong. (For example, Jake wished to be "invincible", but Fuddie made him invisible instead. (In fact, Fuddie seems to mess up a lot doing other things too.) Fortunately, the heroes can usually make do with what he gives them anyway.
* Filmation's Ghostbusters had ghosts that could take tangible form in our dimension; a Dematerializer stripped them of these forms and forced them to escape to the Spirit World.
* Filmation's Ghostbusters has the "robot ghost" Scared Stiff. Whether that literally means he's a robot who died and became a ghost is never addressed.
* Filmation's Ghostbusters, he sent the mummy Airhead and Apparatia on one of the missions, but the heroes beat them after filling Airhead with air until he exploded. So Prime Evil simply made Apparatia sew him back together. (Neither an easy or pleasant job, definitely.)
* Filmation's Ghostbusters. (However, his henchmen did prove themselves to be capable on rare occasions.)
* Filmation's Ghostbusters: In "Runaway Choo-Choo," Apparitia sabotages the train's brakes in this way when Jake says, "Bad break for you!"
* Filmation's Ghostbusters: In the episode "The Haunted Painting", Eddie is trying to learn to paint, but is frustrated with the slow pace of developing his artistic skills. He goes to Madam Why and asks her for a set of magic paints, but she declines, stating the episode's intended Aesop: "Practice, practice, and more

practice! That's what it takes to be good at something like painting. And that's also what will make you truly happy with your work". Eddie later receives a set of magic paints which, unknown to him, were actually delivered by the villains. The paints let him create a high quality painting, but trap the Ghostbusters in a magical world controlled by Prime Evil. The end result is an Aesop more along the lines of "Don't use magic paint from an unknown source".
* Filmation's Ghostbusters is MUCH more than a mere ominous pipe organ. It has most of his powers and can use it to zap his minions and teleport anyone he wishes across time. It is an ominous device that broke him out of limbo and into the material plain after all.
* Filmation's Ghostbusters kidnapping the titular character, who manages to wreck Prime Evil's lair because he is such a screw-up. Prime Evil ends up pleading with the other heroes to take him back, even promising to call off the horde of thunder ghosts he's unleashed on the city if they do. (And he does.)
* Filmation's Ghostbusters: Lightning, thunderclaps, and chords from a pipe organ are Prime Evil's trademarks.
* Filmation's Ghostbusters—here, Jake and Eddie were the sons of the originals (Kong and Spenser, respectively).
* Filmation's Ghostbusters often used the "monkey's uncle" variant, usually followed by an irritated grunt from Tracy.
* Filmation's Ghostbusters: Prime Evil did this pretty much all the time.
* Filmation's Ghostbusters Prime Evil had Hauntquarters, a cathedral-like building located in the Fifth Dimension.
* Filmation's Ghostbusters quickly turn real, though, when Apparitia and Brat-a-Rat get involved...
* Filmation's Ghostbusters "robot ghost" henchman; he tended to fall apart a lot.
* Filmation's Ghostbusters's great-grandfather. (The ghosts scared all the miners away.) Jake made his distrust of the Horseman very clear, even as the ghost protested that he wanted to help and try to redeem himself. So very tragic, and that sad voice...
* Filmation's Ghostbusters, sucking them all back to their home dimension.
* Filmation's Ghostbusters team have a Ghostbusting Manual in the first episode, which details the features of Ghost Command, the equipment, and the Ghostbuggy. It is never used again.
* Filmation's Ghostbusters that time, even after he spent the whole episode using dirty tricks.
* Filmation's Ghostbusters: The cartoon version is a sequel to the original live action series. While that one has light-hearted and silly villains, here the ghosts are slightly more malicious leading to a few tense moments.
* Filmation's Ghostbusters: The Ghostbusters are more like gunslingers than exterminators, and this extends to whenever they go back and forth in time. They arrive, get rid of whatever ghost is there (or capture whatever artifact Prime Evil is after), and leave before they can alter history.
* Filmation's Ghostbusters the haunted technology, which took the form of anthropomorphic, skeleton-themed appliances, and let those ghosts live with them. Most famous was the Ansabone, which hung up on callers or had some wisecracks when they succeeded in leaving a message.
* Filmation's Ghostbusters, the heroes have to get past Fangster and Long John, who are guarding a room. Tracy takes out a cute wind-up toy tank and sets it towards the two henchmen. They look at it, and then burst out laughing... Then it fires a freeze ray, freezing them sold. (Unfortunately, it only freezes them for seven seconds, so the heroes have to run past them quickly.)
* Filmation's Ghostbusters, the lesser known animated series falls under the same premise as the other Ghostbuster organizations described below..
* Filmation's Ghostbusters the whole headless thing was Prime Evil's attempt to make me scarier. It didn't work...I only like scary things that are fun, like Halloween." The Horseman was, for once, on the side of the heroes—he'd wrecked the life of Jake's great-grandfather and wanted to make amends.
* Filmation's Ghostbusters trope by having Prime Evil teaming up with the heroes

against Big Evil.
* Filmation's Ghostbusters: Two of the protagonists (Jake Kong Junior and Eddie Spencer Junior) are sons of protagonists (Jake Kong Senior and Eddie Spencer Senior) of the series it spun from.
* Filmation's Ghostbusters villain Scared Stiff is an odd robotic version of this. There's also the company phone, Ansa-Bone.
* Filmation's Ghostbusters was fond of ghost planets, featuring at least two or three throughout its 65-episode run.
* Filmation's Ghostbusters, who was also carried over to the animated series.
* Filmation. Superman and Superboy turned and looked at the camera (usually winking as well) at the end of almost every episode.
* Filmation) that was based on their previous live-action series (which predated the 1984 film by nine years).
* Filmation the Brooklyn Bridge. When the con man scoffs, he is utterly stunned when an armored car immediately stops by the magpies with the latest proceeds from the toll for the Brooklyn Bridge.
* Filmation TV series instead, the gang had to be redrawn into their usual costumes to avoid imagery the NBC network could never allow in that timeslot.
* Filmation were fond for doing these for both heroes and villains alike. It probably helped with the fact that they knew they couldn't rely on too much continuity when the episodes were aired out of order for syndication.
* Filmation were notorious in their heyday for using the same animation sequences regardless of what show they were making. One particular shot that was in almost everything they made in the mid-60s to mid-70s period was a charge directly at the camera by a main character immediately prior to a scene change. Superman, Superboy, Aquaman, Batman, Captain Kirk, Spock... they all did it. Same movement, just different characters.
* Film Brain, as the general public isn't really aware that other services exist.
* Film Brain Bad Movie Beatdown review from its intended March release, removed a couple of lines which he felt were callous and put up a disclaimer at the front of the review when it was released in May.
* Film Brain. Despite it ostensibly being torture, he joins in himself.
* Film Brain for when the actions of the characters in the movies he reviews don't make sense: "and he did that because..."
* Film Brain, when the main character jams his pocket watch into the machine's mechanics to make it blow, creating... "a time bomb!!! ...Time bomb? Who writes this shit?"
* film, but it is too far away to reach, so he instead transmits the data to Paladin's ship to be delivered by hand.
* Film/Closer. They continue walking towards each other until Alice crosses the street and a car hits her. Dan rushes to her side and takes her to the hospital.
* Film Club/Book Club/Songbook whatever will brie will brie, the feta's not ours to see".
* Film Comic: A comic adaptation of a movie or television show that uses screenshots of the original work with speech bubbles, onomatopoeia and narration boxes added instead of using original artwork based on the work being adapted.
* Film composer Franz Waxman scalded his eyes when he was three years old, permanently impairing his vision and forcing him to wear thick glasses for the rest of his life.
* Film composers often get the blame and labeled with stigma for adapting a piece of classical or contemporary music into their film score. Generally during the editing stages of the film temp music is placed before the score is completed and it's common for directors and executives to "fall in love" with the temp score. And it's usually to rewrite it just enough to slip by rather than pay the extra money to license a work (for non-public domain).
* Film Conscience: Ringo represent the more cheerful, optimistic side of Kinley.
* Film/Conspiracy Nazi higher-ups are discussing the program of gassing Jews as the Final Solution. One character brings up that the Italians won't like it, and the Nazis let out a collective groan, showing what the Germans really thought about

their allies.
* Film/Constantine there's a bible from hell where the coming of Mammon, the son of the devil is prophetized.
* FilmCow about all the things that make him happy. It includes apple pie, breezy meadows, the sound of rain, guitars, Holocaust denial, eugenics, sexual molestation, and murder.
* FilmCow. The genie can only do impersonations of celebrities who won't be born for another thousand years.
* Film Critique used the power of the blue shard of the Rainbow of Light to become an
* Film director Andrea Arnold grew up in a council estate and as a result, often sets her works (
* Film/Dragon Blade, this is invoked quite literally twice. When Huo An and his Roman allies are trapped by Tiberius' forces, the nations along the Silk Road, many of whom Huo An was shown helping earlier, arrive to help him, and almost all of them are mounted on horses. And even when that is enough, the Parthians, who boasted one of the most famous cavalry armies of the ancient age, show up to tip the scales yet again.
* filmed, as they know they won't be missing anything they paid to see.
* filmed in the Czech Republic, and have a shot from the Charles bridge in Prague.
* filmed sketch three gangsters have one of these which lasts for days; they sleep together, shower, go to a Thanksgiving dinner, go ice skating, even attend one of them's son's soccer game. Finally, one of them says that the last few days have been the best of his life; the other two immediately shoot him, then go back to a standoff with each other.
* Film fans who pay attention to the credits must have wondered why the poster for
* film features this after the main character refuses to kill a child prostitute.
* Film Felons: A robbery? No, no, officer, this is just part of our film!
* Film Felons: Criminals pretend to be filmmakers so that they can commit crimes with the pretense that they are making a movie.
* Film Felons: Crooks pretend to be filmmakers so they can use the cover of making a movie to keep their crimes under wraps.
* Film Felons (usually a robbery) by pretending to be making a TV show or a movie.
* Film Fic: A fan fiction that retells the events of a movie with characters from a different work playing the roles of the characters in the original film.
* Film, Film, Film, the writer gets several writer's blocks and then his writings are edited so much that these are unrecognizable compared to his original intentions. Later he attempts to commit suicide but is ultimately saved by the film's positive reception.
* film from a time when the page wasn't sorted and the page not yet namespaced.
* Film//Genocide, a lovely pice of sci-fi shlock where the insects of the world issue an ultimatum: if mankind detonates one more nuclear weapon, the killing starts. Guess how it ends!
* Film/God's Not Dead ends with most of the main characters attending a Newsboys concert.
* Film:Gold like his fights being interrupted, both stop and stare at it in shock.
* film had an almost war documentary feel to it, focusing on an East Coast family trying to survive.
* Film/Harry Potter movie franchise, Harry gets together with Ginny. Other thirds of the Golden Trio Ron and Hermione are paired as well. The eighth movie also includes a scene which implies Neville and Luna are developing a romance. It all ends with a 19 Years Later epilogue, in which both main couples are given children, as well as Draco and his wife.
* film have the line "Once they begin to move, no more news comes out of that area."
* film, Hornblower orders a crewman flogged specifically because one of his lieutenants threatened the man publicly with it, and Hornblower feels his duty to support his officers is more important than his dislike of the lash. But he lectures the lieutenant about it afterwards.

* Filming conditions would be very impractical for the degree of disability such as location travel, stunt work, number of lines, or long shooting hours.
* Filming could only take place intermittently on weekends due to everyone having day jobs, causing the movie to take
* Filming for Easy Dub- Making sure the character's mouth can't be scene so potentially different dialogue can be dubbed in later
* filming his TV with a camera, and even just how well the low-quality footage matched his bad gameplay.
* Filming was often delayed by having to calm down the twin babies who played Sunny, as they often burst out crying at inopportune times. One funny outtake also has one of the babies fall asleep during a take, much to the amusement of the rest of the cast, who try to gently wake her up.
* Film isn't good enough for awards season? Remember: you don't need to convince general audiences or critics that it's great,
* Filmixxy.pl are still popular, although almost every viral appears at least once.
* Filmmaker Clive Barker had a fan come up to him during a book signing and slit their own
* Filmmaker Rob Spence lost his eye in an accident on a firing range. For equal parts novelty and science, he had it replaced with a
* film makes it more blatant by having Burroughs rush to his uncle's tomb and, upon opening it, discover it empty. A Thern appears behind him about to kill Burroughs and Carter only to be shot by Carter who shows up behind the Thern. Carter tells Burroughs to write a book, locks himself in the tomb and once again projects to Barsoom using the Thern's talisman.
* Film making and television has had a few productions that changed how the entire system can be approached.
* Film/Mary Poppins — Fantasy musical series. 2 films from 1963-2018
* Film Noir (1947) involves a woman who came to Reno to get a divorce, and hooks up with a jealous lover who murdered his ex-girlfriend and her new man.
* Film Noir about a romance between two neighbors after their involvement in a criminal investigation.
* Film Noir, Al the narrator continually address the audience as "you", as Al pleads with us to believe that he isn't a murderer and he didn't mean to do anything wrong and he only stole that dead guy's money and car because he had to and when he strangled that woman to death it was totally an accident...
* Film Noir and is constantly sucking on a pink lollipop. It does not at all detract from his manliness.
* Film Noir) at one part asking for his cut in the business, but Dink and his men explain that a legitimate business is backed by corporations, board of directors, shareholders and the days of having money and assets in a simple safe are long gone.
* Film Noir, a washed-up boxer wins a fight he was supposed to lose. The mobsters who put the fix on the fight retaliate by breaking his hand so he can never box again.
* Film Noir. Fittingly dramatic music is played in the scene, with the assumption by the audience that this is background music, until Walter Neff complains to the neighbor that the music is too loud.
* Film Noir, Francie admits to her sister Sheila that she and Sheila's husbamd Matt were planning on cheating Sheila out of her share of the diamond smuggling affair. By the looks of it, Matt was planning on ripping Francie off too, keeping all the profits for himself.
* Film Noir had John Dall and Peggy Cummins as a war vet and a circus sharpshooter who fall in love and go on a crime spree.
* Film Noir, has Mike hides an accidental murder by (temporarily) taking the identity of the victim to hide his tracks.
* Film Noir in general (see above) was inspired by the depression and urban decay of the prewar and postwar years, especially in the years 1945-1949. Which is what prompted many Americans to abandon the city in the first place...
* Film Noir is Douglas vs. Lancaster, with zero scenes not featuring at least one

or the other.
* Film Noir, it is associated, as in the case of the Lone Ranger and Rossini, with the Maltese Falcon.
* Film Noir parody uses a home stereo for tense, dramatic music during a confrontational argument... and after one person finishes, the other changes tracks to THEIR power music and continues to argue, and vice versa.
* Film Noir, Philip Marlowe perfectly describes this. He outright states that he only did it for the cash.
* Film Noir straight (and even manage to convince Walter of this for a time).
* Film Noir style crime out of greed over it, without a joke to be heard. These scenes would even switch to a widescreen format back when the show was still aired in fullscreen just to make them look more cinematic.
* Film Noir takes this to a dark extent, in which a reporter ruins the boyfriend's life in order to get him away from his sister.
* Film Noir that both killings were completely accidental. Two decades later, Neal was convicted of involuntary manslaughter for the gunshot death of his estranged wife, which he testified was accidental.
* Film Noir, the Ward family are the only non-white characters, which is highly conspicuous considering that the proportion of Phenix City's population categorized as "Negro" in the 1950 and 1960 censuses was 34.7% and 36.8%, respectively.
* Film Noir: This genre was spawned out of the hard boiled detective stories. In fact, many of those stories were made into film noir adaptations.
* Film Noir though and it stuck throughout the wacky adventures he's been through.
* Film Noir was released, the film is the tragic story of two star-crossed lovers — a career criminal, Eddie Taylor (Henry Fonda), and Joanna (Sylvia Sidney), the girl who loves him.
* Film Noir. Whenever they get horny they turn into a jaguar and proceed to try to kill anything near them. And pretty much everything gets them horny.
* film of Captain America were frozen during the second world war and revived several decades later. For the 90's movie version, it was about sixty years. For the recent film version, it was seventy... ouch.
* Film of the Book, Dr. Terrell has taught several dolphins to speak English, and has come to love them as if they were his own children. At the end of the movie the evil government representatives are coming to take them away. He has to tell the dolphins that he doesn't love them any more to get them to leave him, so they can be safe.
* Film of the Book, Fog tries to pull Passepartout out of the way of a falling pillar, the latter instead pushes him out of the way when it takes too long.
* Film of the Book has a subplot where the main character ends up getting into a relationship with the widow of his bombadier/navigator, who died in the film's opening.
* Film of the Book) is that "How many vogons does it take to screw in a lightbulb?"
* Film of the Book made it clear those dates were possibly just Winston Smith's guesses in the first place).
* Film of the Book murdering her husband via a staged car accident. In the end, Cora and Frank get in an actual car accident that kills her, and Frank is convicted and on death row for her "murder". The DA tells him that even if he wasn't charged for Cora's "murder", new evidence showed that he took part in Nick's murder, so there would be no point in trying to fight it.
* Film of the Book, only Joey and Albert (and his family as well) get a happy ending. The other characters die or are left with nothing to live for (Like Emilie's grandfather)
* Film of the Book specifically mention how much they hate Earth with its blue skies, low gravity, and poisonous air (for them). Their homeworld is shown to be a large planet with purple smog-filled skies almost entirely covered by structures.
* Film of the Book. This also counts as a stealth gag, since the Mars landing in that movie is actually faked.
* film of the musical of is midway through insulting a dancer, but gets taken aback by the strikingly handsome Link Larkin walking in:

* film of the same name has the same writers but an almost completely different plot, in which a submarine commander accidentally orders a nuclear strike because a stage hypnotist has implanted the command to say "Fire!" whenever someone snaps their fingers.
* film of the series retcons the format of stardates again to make it correspond with the Gregorian calendar — thus, Stardate 2258.42 is the 42nd day (i.e. 11 February) of the year A.D. 2258.
* Filmpje (1995) thousands of times and still goes to see it every day. The local film theater only keeps programming it just for her.
* Film producer Dino De Laurentiis' career never fully recovered after opening his own studio in the early/mid-1980s, which he then proceeded to run into the ground within less than five years. The films De Laurentiis produced at his studio were not box office hits (even
* film remake, Dr. Kimble commits multiple burglaries (a clinic, a hospital, an apartment), thefts, auto theft (ambulance to be specific), unauthorized use of medical records, accessory after the fact in the murder of a transit cop (disposing of the gun, even though he didn't shoot the officer), and more in the course of proving that he didn't murder his wife. This is to say nothing of his original escape from custody, which is illegal whether or not you are innocent of the crime you are accused or convicted of (running away to avoid being hit by debris from a derailing train is justified, but continuing to run instead of turning himself in...). Notably, however, the film ends with him in the custody of the US Marshals who were pursuing him throughout the movie, and while he's cleared himself of the original murder, there's no indication that all the other stuff is just going to be let slide. This said, the rather shady circumstances around his original arrest and conviction (including a fairly hefty, albeit never directly confirmed, whiff of corruption on part of the authorities) heavily suggest that he's unlikely to face too hefty a punishment; the point is simply that he's not simply let go after everything.
* Film Reroll, but he's still the main villain of the story and still tries to kill Elsa at one point.
* Film Reroll, the DM decided to recreate the behavior of people unaware that they're in a horror film by convincing them they're actually playing an obscure sex comedy called "Summerspell". To help sell the illusion, each character was given secrets and objectives to complete, as well as a simple relationship-building mechanic. Jason appearing, and killing most of them in a short period of time, led the dead players to wonder if there was a point to keeping their secrets anymore.
* Film Riot has an episode where they make a camera stabilizer with balloons.
* Film Riot" when its revealed that stark has been hiding in the attic for the years he was absent. we are then treated to a series of shots from past episodes with him greenscreened in.
* Film/Robocop Alex Murphy's partner in law enforcement Anne Lewis, blows a bubble before trying to apprehend one of Clarence Boddicker's men. She fails and gets knocked out some minutes before Alex Murphy faces something much worse.
* Films adapted as radio plays being a very famous example, and also one of the very last produced in this manner.
* Films and television shows have been known to hire twins to play a single child character (like the
* films based on a TV series fall into this trap, as they continue from events in the TV series and assume viewers are already familiar with them. How severe this trope can be depends on its connection to those events, as well as the setup of their respective series: a film with a self-contained story can easily be enjoyed by unfamiliar viewers as a standalone work, whereas one with a complex mythos and already-established characters will leave them completely lost.
* Film school student films can be intensely creative and oblique in their style. For instance,
* Film Serial (1943). After being given permission to bury their dead in Allied territory, the evil Nazis callously dispose of the bodies and fill the coffins with explosives for their secret agents to pick up later.

* Film Serial and has taken over their organization. The bad guy smugly says that now they can compare the handwriting in the letter with everyone they know in order to find out who is Mr. M. Right after this, and without any warning, the letter bursts into flame.
* Film Serial had an initial fuse hanging blow a trap door. When it was lit, it ignited a gunpowder trail, which in turn lead to explosives that would blow up the warehouse the bad guys were escaping from. The plan was to kill the members of the coast guard as they were raiding the warehouse, and caused the classic end-of-episode cliffhanger with the main characters in the building (who simply survived without explanation.)
* Film/Showgirls, the characters Gaye and Marty were combined to make one flamboyant character simply called 'Gay.'
* Films made prior to the inception of the rating system (unless they were reissued later), tend to be rated G by default, partly because of oversight regarding the many changes on the system since 1968 and the perception that all pre-1960 films were family-friendly entertainment (an assumption not dissimilar to the
* film's portrayal's Shang Tsung has him wearing a black longcoat for most of the movie.
* Films released in January or February will frequently unironically trumpet the one review calling them "The best film of the year!"
* Films set during the Philippine-American War, including the following:
* films, Skids and Mudflap are two idiotic robots who seem to have based their mannerisms on hip-hop culture. Specifically; they're wiggers. There's also an Australian 'Bot.
* Film star Colleen Moore's Fairy Castle dollhouse, completed in 1935 and displayed at Chicago's Museum of Science and Industry, features elements of all the silent film actress's favorite stories from childhood. Classic fairy tales like
* films, that being the siege of Mordor where the Last Alliance of Elves and Men were able to defeat Sauron. However, Isildur's refusal to destroy the ring ultimately led to the War of the Ring at the end of the third age.
* films when he steals a Telmarine falchion and crossbow, and proceeds to kick all kinds of ass.
* film tech forum tells how the electrode was embedded into the wall on the other side of the projector booth after one such incident.
* film, the boys of two villages are at war. When somebody is captured, they cut off the buttons of his clothing. To avoid this, in one battle the boys attack naked.
* Film the Hand: Sticking one's hand over the camera so as not to be filmed.
* film/The Jitters, involves a jiangshi getting loose in modern America.
* Film/The Messenger: The Story of Joan of Arc, the young Jeanne d'Arc is traumatized when her village is attacked by English soldiers, and she is forced to hide and watch as her older sister is murdered and raped - in that order.
* film, they just happen to Apparate right in the middle of of a group of snatchers.
* Film/Threads to compare it to. released at about the same time.The American film was considered fairly light-weight in comparison.
* Filmtracks and suggested that the soundtrack would make better use as a frisbee.
* film version) and carrying Eragon on her back. This effect comes complete with flashing lights, sound effects, and a generous smoke screen to hide the actual transformation.
* film version) appearing as the hologram message from Magrathea. Oddly enough it seems that he had to ask for it.
* film version as you see him stripped away layer by layer like an anatomy textbook...
* film version by Betty Hutton, whose rendition of the song was also recorded but unused. The song had actually been written for the stage version, but never had a spot in the script.
* film version cut out "The Name of the Game" (shown as a deleted scene at the

DVD), which was in the actual Broadway show. It also scrapped out of the original script three songs: "Under Attack", "One of Us" and "Knowing Me, Knowing You", the last one being replaced with "When All Is Said and Done".
* film version has a diegetic example with a real brass band playing a celebratory tune for the winner of the Triwizard Cup... which falters out when they notice Harry screaming and crying over Cedric's body.
* film version) is up for debate, but Shuya and Noriko's reaction to the painting was everything but favorable.
* film version, Manuel suffers an accident. As he is overboard in the ocean, he calmly states that he is as good as dead, because his entire lower body is gone. He speaks in Portuguese because he doesn't want Harvey to know. A member of the crew who does speak the language quietly translates for those who don't, but Harvey is left wondering why Manuel didn't climb back into the ship.
* film version of, Denethor is ranting and raving about how the White City is doomed, all is lost, that the line of kings is ended ... and the camera pans to focus in close-up on the "dead" White Tree of Gondor — which has suddenly, out of death, spawned a single, white blossom.
* film version of Speed Racer in which case he subjects them to a comprehensive wall-to-wall beat-down.
* film version provides a variation in that the Wizard instead gives Dorothy's friends various symbols of what they've achieved—a diploma that signifies the Scarecrow getting his brain, a ticking heart watch that reflects the Tin Man's kindness, and a war medal that testifies to the Cowardly Lion's courage.
* film version puts a twist on the fight Ron and Hermione have during the Yule Ball over Hermione going with Victor Krum. When Harry shows up on the scene after seeing the discussion between Snape and Kakaroff, Hermione snaps at him while demanding to know where he was before shooing him off along with Ron, despite Harry having nothing to do with why she was angry.
* film version share a kiss at the end, much to Cornelius' annoyance and Zira's mild but sporting indignance ("But you're so damned ugly!")
* film version than their live-action counterparts (Mr. Wormwood looked a bit like a rodent and Mrs. Wormwood is described as being plump, with obviously-dyed hair and a "suet-pudding" face).
* film version, the male protagonist intends to rape his female counterpart, but when he oversees her crying and praying he doesn't actually go through with it.
* film version. The owl that delivered Sirius's letter bites Harry on the hand. Then Harry reads the letter's postscript, which says "the bird bites".
* film version there's a photograph based precisely on the illustration.
* Filmways-produced were both set in the town of Hooterville, and characters from each gravitated to the other fairly regularly.
* Film Within A Film by François Truffaut there is a scene where the film crew overviews footage and then they suddenly realize that the (previously unnoticed) pregnancy of an actress will become more and more visible as the shooting progresses. Then they decide to make the character pregnant as well, although some of them complain that the viewers could make some unfortunate assumptions about who is the father of the child.
* film-within-a-show from the "Scott of the Sahara" sketch includes a giant killer penguin and a man-eating roll-top desk for no apparent reason.
* Film [year]'s film review show, has an instrumental version of "I Wish I Knew How (It Would Feel to be Free)".
* Film Zone, belonging to FOX Latin America (before being bought by Disney) underwent some changes in its programming after the changes of its parent company LAPTV. Among these was the elimination of the soft porn that were shown at night, in addition to new graphics. Despite this, Film Zone was one of the most-watched and loved channels. In 2017, FOX Latin America made the biggest change of all: introducing the FXM brand to the Latin market. This meant Film Zone had to close to make way for the new channel. FOX Latin America, in order to put an end to the channel, decided to launch some promotional items with the Film Zone logo in mourning and giving some references to some of the films that were shown on the

channel. On September 18, 2017, after showing its latest film, Richard Gere's
* Filo, who belongs to a breed of magical birds, is also added later. However, she has a human form in which she looks like a young girl with blonde hair, blue eyes and two white wings.
* Filsinger Games made two card games about running a wrestling promotion, one based on
* Filter is about the politician Budd Dwyer, a Pennsylvania state treasurer who was accused of corruption. Vehemently claiming his innocence until the end, in early 1987 Dwyer called a press conference during which he read half of a prepared statement and then shot himself. The song was released in 1995 and its timing and subject matter lead many to speculate it was written about the similar suicide of Kurt Cobain but it was written in 1991.
* Filter, the rock side project of Nine Inch Nails' Richard Patrick, had a few hits on the rock charts in the '90s, but today, only two songs of theirs are well remembered: 1995's highly controversial "Hey Man, Nice Shot" and the 1999/2000 crossover hit "Take a Picture" (which technically was their only Top 40 hit).
* Filter, wrote an identical chorus riff for both Stabbing Westward's "Ungod" and Filter's "Hey Man, Nice Shot". The bands mutually agreed not to sue for plagiarism, and Stabbing Westward very rarely plays "Ungod" live, since "Hey Man, Nice Shot" was released as a single and became the much better-known song.
* Filth are permanently coated in a thick layer of black goo, the most-commonly encountered form of the Filth itself - along with all the usual mutations that go with it. According to the lore, it all began as tarry black discharge oozing from every single orifice of the infected individual.
* Filth Biscuit, in which the legendary hero is recast as a hard-partying douchebag only interested in amusing himself and his equally obnoxious friends.
* Filth Biscuit sees others as obstacles or pawns in her struggle to claw her way up from the gutter — specifically her childhood friend, incredibly loyal but dim-witted boxer Mick the Rock. Her philosophy, as she explains it to Mick, is pure Social Darwinism; which suits her, since she's also a textbook psychopath.
* Filth Biscuit, the inherently silly hero is made much more cat-like than in the original Golden Age comic, with powers such as napping and licking himself clean.
* Filth, Bruce says "Okay baby, let's take this rocket to Uranus'' to a prostitute after watching a sci-fi themed porn movie.
* Filth detour, "Festa no Apê", also obscures "Dragostea din tei".
* Filthy Figments, for those who object to eroticism with men holding the strings. It's just as smutty as regular porn but it's drawn by women.
* Filthy Frank: A large portion of the humor of the show. Also, the tags in the descriptions of the videos.
* Filthy Frank and commonly treats his own friends and audience like shit.
* Filthy Frank: Frank thinks he's most like a cat due to reasons like hating water...and being neutered at a young age.
* Filthy Frank makes the mistake of making a pun when Mr. Negi wouldn't accept the spaghetti he and Red Dick made for him (technically, Red Dick did all the work). Frank then mocks Mr. Negi about the leek along with the aformentioned pun:
* Filthy Frank Show makes so many of these almost ALL of Frank's videos contain at least one Suicide joke.
* Filthy Frank's video images of weeaboos. He also jokingly mentions about a reverse weeaboo, in which an Asian person starts acting as if they are Westerners and do things like dress up as Cowboys. The video is hilarious and will give viewers a good laugh.
* Filthy Frank videos always have valid subtitles, his other videos often include lines which are deliberately translated as something else.
* Filthy Frank: When Mr. Magic Man says "I wish I was Stevie Wonder so I'd never have to see you again!", Frank calls it "pretty clever".
* Filthy Frank who frequently said and did immoral and offensive things merely for the sake of being edgy and evil.
* Filthy Lies: The cast taste a certain kind of beer for the first time and all find it horrible. Ted declares that it tastes "like going down on a dead hooker."

When the others look at him strangely, he says "What? I thought she was just bored!"
* Filthy Rich & Catflap, Richie wakes up in the morning, assumes he is alone and addresses a lengthy monologue to the camera. Then a huge fart is heard and his bedmate is revealed to be his drunken minder, Eddie.
* Filthy Rich became an alcoholic wreck after the tragic death of his wife Crystal Eyes and their unborn son, and again when his daughter Diamond Tiara was hit by a carriage and died.
* Filthy Rich episode "Proverbs 20:6", Eugene gets roped into helping two stoners blackmail Mark, who's been impersonating Eugene's son Jason while the latter is in a coma. After the blackmail attempt is successful, Eugene realizes that the stoners intend to keep the money for themselves, and thus decides to steal the cash and bring it to Jason's hospital bed to pay for his care.
* Fimfiction.Net uses the British method of displaying dates (because its creator is British), despite the fact the majority of its users are American. People usually are not confused.
* FIMFiction site-wide contest was held where writers had to use at least one of the "always bad" story tropes - second person perspective, alicorn OC, OC x major character romance, or human in Equestria - and make it into a good story, proving that a good writer can make anything work.
* FIMFiction's loss to him is treated by her as horribly dehumanizing as a boy would treat losing to a girl in our world.
* Final 2016 he was prominently featured on the international TV stream (unlike the NFL with Football, the UEFA and FIFA don't allow TV stations to shoot their own feed instead making one pre-mixed for the world to take at face value or leave) even though he wasn't on the field for most of the game, falling victim to an early injury. Maybe France also fell victim to this trope as they lost to a team "that only consists of Cristiano Ronaldo" - without Cristiano Ronaldo.
* Final Analysis, a woman is tried for murdering her abusive husband. Her defense is that she did so while in a psychotic state brought on by alcohol consumption (she normally does not drink, but took a sip of cold medicine that night). She's found not guilty by reason of temporary insanity and sent to a mental hospital where she anticipates being released in a few months. Until her psychiatrist/lover learns that she's been faking it the entire time. At the hearing where it's to be determined if she can be released, he provokes her into a screaming fit, leading her to be permanently institutionalized.
* Final Analysis when the psychiatrist tries to cover up for his girlfriend by "helpfully" handing the murder weapon to the detective, disingenuously adding: "Oh, I guess I shouldn't have touched it." The angry detective scowls, "You're a smart fucker, aren't you?"
* Final Appeal and a veteran of the War of 2059, was a member of the panel that recommended the ban. The conservative wing of the Court, consisting of Oliver Harbison and Gretchen Parkhurst, supports the ban with Harbison being its most vocal proponent. The liberal wing, consisting of Earl Clayton and Kendall Woods, oppose it, very vehemently in the case of Clayton, who is affectionately described as a "bleeding heart" by Parkhurst.
* "Final Appeal": A woman time travels to the future and is arrested because technology is banned. She goes on trial and tries to convince the leaders to bring technology back, because she has seen futures where humanity is screwed without technology. A second time traveler arrives with a nuclear bomb and threatens the leaders to keep technology banned, because he had seen futures where humanity ended up screwed over because of technology. After a long debate, the leaders decide to lift the ban and everyone seemingly convinces the second time traveler not to kill them and to return to his own time. He leaves...but leaves the bomb behind and it explodes, wiping out the city.
* Final Approach Loosely, Emiho, Miki, Shizuka and Akane are romantically involved with Ryo in varying degrees.
* Final Approach Ryo learns late in the show that this is why his fiancee was given to him at the start of the story. His grandmother and her grandfather were once in

love, but were torn apart by her grandfather's family for being from a poor family. He relented to his family's wish and married another woman. It turns out the entire setup for the series is her grandfather using his tremendous wealth to create a situation where his granddaughter can marry the grandson of the woman he lost to Parental Marriage Veto.
* Final Ark). Nearby locales include the state of "New Gerbil" (New Jersey), including the town of "Yakkensack" (Hackensack). Gnu York's nicknamed "the Big Awful" or "the Big Candyapple."
* Final Battle, although he seemed to be using it as a taunt rather than a serious proposition.
* Final Battle: An action/adventure series usually ends with this. May be a precursor to any of the above.
* Final Battle) and continues using the comm chatter for less-than-serious commentary.
* Final Battle and his cyborg army on the helipad atop his corporate headquarters.
* Final Battle and near-destruction of the world, it's mentioned that governments everywhere are stepping up their defense programmes, both mundane and supernatural. The Chinese, Americans, Russians, French, Germans, Brazilians and Israelis are all working on getting helicarriers, and probably India, Japan and South Africa too.
* Final Battle, are as a result not sealed with Tarakudo and the others, and are therefore still potentially in play if they find new hosts.
* Final Battle breaks out with Jade and Tarakudo fighting each other for leadership of the Oni and their respective loyalist Generals turning on each other, all while the heroes are still fighting their forces.
* Final Battle capable of facing Titan in an even fight, allowing her to defeat him.
* Final Battle doesn't begin like this, but the arrival of the previously imprisoned Black Robes leads to this.
* final battle Even so, it's a compulsive liar telling you this in a pep-talk to save the planet.
* Final Battle happens both inside and outside a train, with the D'Bari attacking the armored train with the prisoner X-Men and Magneto inside.
* Final Battle, Hela points to the history Odin hide away as a sign that he covered up anything he found unpleasant. Thor doesn't deny it.
* Final Battle, Ilsa tries to take down Lane with her signature jumping scissor move only for Lane to throw her off and start strangling her. She does it again after Benji distracts him, with much more success.
* Final Battle-Induced Shirt Loss: Male protagonist gets his shirt torn off during the climax.
* Final Battle is ultimately won through the reuse of one-off techniques:
* Final Battle kicks off with Operation Endgame, a full-scale assault on Section 13 by all of Jade's combined forces.
* Final Battle leads the combined armies of Ainz's followers and allies against the Theocracy's last remaining forces in Kami Miyako. To mark the occasion, Ainz insists on his minions having popcorn as they watch, which they treat as a "delicacy" of the Supreme Beings.
* Final Battle Matrix of Leadership for a reason, so he fails and is forced to watch Unicron begin laying into Cybertron before the Chaos Bringer devours him whole for his insolence.
* Final Battle of the rebellion against Phobos, as the combined forces of the Rebellion and the nobility clash in a massive, chaotic clash.
* Final Battle people if done wrong or cause massive damage and status effects on the party. Losing the fight means doing the first phase all over again. Like with the Steps of Faith trial, many people would prefer to take a 30 minute time out penalty than to suffer trying to clear the fight again and they also wanted the fight to be nerfed so they wouldn't be locked out of end game content. Unlike the Steps of Faith, the developers stated that they had no plans to nerf the fight.
* Final Battle planet inhabited by much smaller forest-dwelling aliens—whose costumes would be much cheaper to manufacture. As a reference to the fact that they

were originally Wookiees, Lucas switched the two syllables in "Wookiee" ("WOK-EE") and called the new aliens "Ewoks" ("EE-WOK").
* Final Battle, rendering them all but invincible against anybody other than each other.
* Final Battle starts out as a fight between alter-powers and then gradually breaks down to a simple (though brutal) slug fest.
* Final Battle that dusted half the universe. He knows the Avengers who were around in 2012, since his underling loaned Loki the Chitauri to invade Earth, but others, he has no idea what his past self did that would make them specifically want to kill him.
* Final Battle to finally stand up to Moriarty, as there are functional prop swords lying around and fencing is the one thing he's good at.
* Final Battle took place only a few days before Christmas. This was acknowledged by several Dino Attack agents who, fearing they might not survive the battle, decided to celebrate Christmas during the battle.
* Final Battle turned the freezing power of the Gekkaja on himself. The weapon froze him solid, allowing him to survive through Saffron's mountain-vaporizing heat beam —which thawed him almost instantly afterwards. The art isn't very clear on how complete the freezing was, but consider this: the Gekkaja can turn multi-ton chunks of rock into solid ice just by touching the ground, and Ranma's clothes and hair were still covered in ice despite being hit head-on by the Imperial Annihilation.
* Final Battle, where there's no vegetation thanks to being set in the mountains of the island.
* Final Battle while all other characters and plot points are thoroughly ignored or put on hold.
* Final Battle, with Batman given a mention. Rick and Trouble (and possibly Stranger) make early appearances as well.
* Final Blasphemy has Jeremy being shown several possible futures the author had planned, some of which had alternate timelines.
* final book. It's heavily implied that King himself sends Danville to the Ka-Tet as a "secret weapon".
* Final Boss, after King Boo thrusts Luigi onto the roof of the mansion, an enormous shadow drops from above him, revealing to be Bowser.
* Final Boss. And then, qualifying for this trope, there are the Crusader and the Hellion.
* Final Boss, and two Kamui fighters from the developer's previous game.
* final boss before you go, his response is longer and a lot angrier, but is basically amounts to the same thing.
* Final Boss, but he forgot he was a puny human beneath all that bluster.
* Final Boss comes down to "kill them with a special weapon, or else you won't defeat him." Whether this is because of the boss's innate ability to negate damage or a rather downplayed version with lowering damage encouraging players to use the Lord with the weapon to fell them easily.
* Final Boss, corpses fall from him, come back to life and attack you.
* Final Boss, Cronus the archmage, screams "MAGIC!" every single time he uses a move.
* Final Boss: during each phase after the Elementals attack Crash, Crunch becomes exhausted long enough for Crash to be able to shoot him with the Wumpa Bazooka. Crunch responds by punching Cortex into the arena, allowing Crash to attack him and chip off his health meter.
* final bosses, you will outnumber the boss four to one. And if even that wasn't enough, you can cheese the boss battle entirely by choosing to play as the character you are rooting against, and then lose on purpose. Not that it would be necessary.
* final boss fight with Nero is much less powerful than his incarnation fighting Dante. He just had a fight with Dante that pushed them both to their limits and he doesn't want to fight Nero as much as he wanted to fight Dante.
* Final Boss Flowey's time warping powers allow him to know exactly how your fight

is going to go down (you kick his ass), so he hightails it after you beat the penultimate boss Asgore.
* Final Boss for the season, Randy's decision to sell cocaine to the adults is what drives the plot for that episode.
* Final Boss game had to be fought using such a device, to launch acorns dropped by a cracoucas.
* Final Boss get white text in black balloons, which is the visual expression of this trope.
* Final Boss, given that he is supposedly the most devastating dragon in multiple worlds. His son Nefarian pretty easily retains the title of "most infamous dragon final boss".
* Final Boss, giving a number equal to your current level. Every time he hits you with his scythe, the number goes down. You have to beat him before it hits zero.
* Final Boss, Gogmazios, attacks with a black, tar-like substance that incapacitates hunters and, if not gotten rid of quickly, will explode and cause them massive damage. Supposedly, the monster got all this substance in its body after a lifetime diet of sulphur and gunpowder.
* Final Boss. He is large and powerful god of destruction and is surrounded by a purple aura.
* Final Boss. He wore a lab coat and was armed with a needle filled with the "poisonous corpsokinetic animation serum" he used to create his mutant zombie soldiers.
* Final Boss in her thorax. In the same game, many smaller spiders appear as common enemies.
* final boss in the knights' adventure, was "Jake Dragonmonkey", a Medieval villain based off of butt-obsessed character, Jake Spidermonkey. To help commit to the "butt" theme, Dragonmonkey's cave was designed to look like a giant butt. Guess where the entrance was located.
* Final Boss is even called Shub-Niggurath. She's a tentacled abomination, responsible for giving birth to all the other monsters. She is also referred to as the Hell-Mother and the Witch-Goddess.
* Final Boss. Is he a human with augmentations, or, as Doktor speculates, is he an android? Eventually it's made clear that both are the wrong questions to ask.
* Final Boss is killed with a rocket launcher, which is given to you by another character. If Ada Wong is in a game, she'll usually be the one to give the rocket launcher to you.
* Final Boss is named DethI (with an uppercase "I" at the end and pronounced "Death Eye"), but since a uppercase "I" looks identical to a lowercase "L" in many fonts, its name is often mistaken for "DETHL." Even the encyclopedia on the official Zelda website made this mistake.
* Final Boss is the Sky Fortress. There’s no information on who built the Sky Fortress, nor is their any information on where it came from. Its not until later games where we get some hints that the Sky Fortress may have been built by Belkan radicals.
* Final Boss, is vulnerable to hits on his actual body whenever his shield isn't up.
* Final Boss. Justified as her jacket had been set on fire, and she ripped it off so she wouldn't get burned.
* Final Boss males. As a result, the armor made from her carapace is golden as well.
* Final Boss—in the last potental power struggle, the last hit sends the boss flying from the ring you're in all the way to the audience stands. A helicopter then picks up the boss from the stands, now dazed, and lets you kill him off for real.
* Final Boss, Megaman Juno, is no better. All the player has to do is run around the room in circles all the while shooting him with the Buster, only sometimes jumping to avoid his shockwave attacks to beat him in both his forms, often without taking a scratch.
* Final Boss of death, and shows up in the end to give the heroes a chance to

literally defeat Death itself.
* Final Boss of Story Mode doesn't make you restart the map if you lose, instead just letting you start the boss battle over.
* Final Boss of the 2nd game is a living aggregate of computer bugs that come to life and threaten to overload the Internet's servers called "Gospel".
* Final Boss of the 3rd game is the faulty "alpha" version of the Internet that, when released, threatens to consume the whole current internet like an amoeba, aptly named "Alpha".
* final boss of the ninth game quotes Yoda: "Fear leads to anger, anger leads to hate, hate leads to suffering."
* Final Boss onward, the true Infinity Sword is always capable of extreme damage, but always cursed in some way.
* Final Boss Preview. A second cushion shows up shortly after when Junk Dog is able to get to his feet and taunt Yuri from the ring as Yuri is leaving.
* Final Boss, rather than actually having a challenging note pattern, and no individual section would feel out place in a Chaos 13 or even 12 song.
* Final Boss. So naturally the player expects an epic one-on-one battle against your evil counterpart, but no, what you get is not a battle but an execution.
* Final Boss stage and the place where Abyss was sealed, is his home stage.
* Final Boss takes away your senses one by one as you fight it. First sight (black screen, although the interface is still there), then hearing (muted audio), then movement (controls locked).
* Final Boss that precedes it, and resets the timer upon entering the area, as well as setting a checkpoint right before the boss.
* Final Boss: The last villain or antagonist that must be confronted at the end of the story.
* Final Boss, the most powerful monster in the land, so a few extra points to INT doesn't really mean much at this point.
* Final Boss: The video game ends with a final boss fight that the player must win to finish the game. In many cases, the final boss is the main antagonist of the game and defeating them triggers the ending cutscene.
* Final Boss to not work in the game), which pretty much plays this trope straight.
* Final Boss type weapon, the whole place starts coming down around you and you have a running timer to get to your ship before the place explodes and you die.
* Final Boss where Ant Queen fights one true last enemy of the storyline: Possessor Apollyon. There is a save point before this so that you can retry the fight if you were to lose against him.
* Final Boss where Joker can talk to his confidants and say goodbye before calling it quits and seeing the game's ending.
* Final Boss who more likely than not will go down without having landed a significant hit on Ichiban. However, the post-fight cutscene shows the two as far more evenly matched, with the boss landing several big hits and drawing blood.
* Final Boss will launch even more missiles at you on the hardest difficulty.
* Final boss Z-Gradt has the largest one of all, in which a giant cannon extends from its body and tracks the player. After a moment, it fires a giant beam that can severely damage any mech, and is particularly devastating to the more lightly-armored ones. As its health gets low, it can even fire this beam while still moving, and tends to back itself away into a corner to try and prevent the player from simply walking around it to dodge. Unfortunately (for Z-Gradt), it is extremely vulnerable to all attacks during this phase.
* final campaign. A sketched-out five-year plan was found later, but, well, it was written with the assumption that the Empire would win that particular battle.
* Final Combat's de_dust. Just how many stolen assets are actually in this thing?! (Answer: Enough for Valve, usually a fairly laid-back group, to start vigorously pursuing legal action.)
* final confrontation with Victoria voice is less of a menacing growl and more of a high and childish squeal.
* Final Crisis, after Darkseid takes over television, radio and the internet, the Daily Planet relocates to the Fortress of Solitude and become the only free news

source on the planet.
* Final Crisis Aftermath has this little gem: "Heroes die. Fame lives forever."
* Final Crisis Aftermath mini-series is this trope's race to catch The Human Flame. After being pegged as the man who photographed the Martian Manhunter's final moments, he suddenly finds himself the most wanted man ever and he decides he's not going to be pushed around anymore. He gains what he feels is ultimate power, only to for karma to finally catch up, leading to Firestorm, Red Tornado, and John Stewart to haul him away in a prison in space, unable to move or use his powers. John even calls this karma.
* Final Crisis, a man capable of finishing any fight before you even think of defending yourself, you keep your crimes light and theatrical and hope he responds in turn.
* Final Crisis bigger than a universe) mecha empowered by the dual spirits of the two supermen, meant for one single battle. It is super-adaptive, getting stronger in response to its opponents' strength.
* Final Crisis, Bruce Wayne decides to expand Batman's operations into a global franchise with Batman Incorporated. With this, each country will have its own Batman representative, as opposed to the central Bat-Family that mainly operates out of Gotham and occasionally Bludhaven.
* Final Crisis, Director Bones is depicted as having survived a failed attempt to lay siege to Darkseid's fortress in Bludhaven and Count Veritgo's fate is unknown. In the novelization, they died with Negative Woman, the Atomic Knights, and several Checkmates agents.
* Final Crisis has said character (a horrible degenerate) saying "This is what happens to anyone who ***s with the Human Flame" while Martian Manhunter (a straight-up hero) burns, it ends with Nix Uotan (the 'Judge of All Evil' and a straight-up hero) saying "No-one ***s with the Judge of All Evil" while Mandrakk (a horrible degenerate) burns.
* Final Crisis have it that Savage wasn't Cain at all, he "stole" the Mark of Cain from a man who was passed it by the real Cain.
* Final Crisis in his conquest of the Earth and seems to have no problem with Libra brainwashing people and killing superheroes. But when Libra vaguely implies that after victory he plans to organize a rape-train on Supergirl and Lex is going to be first in the line, Luthor teams up with Doctor Sivana to bring him down.
* Final Crisis is any indication, the Crisis events will function as they did before, but won't have Crisis in the title.
* Final Crisis, it is revealed that this is what being trapped under the Anti-Life Equation feels like. No free will means no responsibility. At least one person freed from it remarks that living under Anti-Life was "easy".
* Final Crisis. It was reevaluated by a popular theory that it is a commentary on the state of superheroes and storytelling.
* Final Crisis miniseries, Superboy-Prime punches his future self, causing both selves to dematerialize and disappear.
* Final Crisis of Comic Book Limbo and the King of Limbo (Merryman, one of the Inferior Five) yelling "LIMBO SAYS NO!"
* Final Crisis rule, but three different Brainiac 5s suggest that Prime just disappeared somewhere else in time/space instead.
* Final Crisis, Shazam came across a woman who had become possessed by a demon. Shazam basically glared at the demon and said, "Get out of her. NOW." The demon promptly left without another word.
* Final Crisis sitting on a small mound of skulls when he comes to recruit him to fight Darkseid.
* Final Crisis, Superboy-Prime meets the Time Trapper in the end, now revealed to be a future, older Prime. Time Trapper makes the mistake of ordering their younger self to kill the Legion. Prime, furious by being ordered around by him, punches the Time Trapper and resulting paradox causes that Time Trapper to cease to exist while Prime is launched back to Earth Prime.
* Final Crisis: Superman Beyond counterpart, Ultraman, can't touch each other without causing an explosion that would destroy them both. Except in Limbo, where

the rules are different. (Never mind that they've fought each other lots of times and that's never happened before.)
* Final Crisis that he was the Biblical Cain, cursed to eternal life for murdering his brother.
* Final Crisis) that they short-circuit said clones. Later, when Superman asks Darkseid why he chose to possess Dan Turpin instead of Batman when he'd both of them captive, Darkseid answers that Batman would've resisted him far too long while Turpin resisted Darkseid long enough to eventually submit to his will.
* Final Crisis. The Rogues do kill the bad guys, but Cold does not kill his father. Instead he orders his teammate Heatwave to burn him to death.
* Final Crisis. They don't interact, one isn't manipulating the other, and it isn't clear whether Darkseid even knows Mandrakk exists, but Mandrakk is all too happy to piggyback onto Darkseid's schemes to further his own.
* Final Crisis, this is Superboy-Prime's reaction upon discovering the 31st Century's Superman Museum.
* Final Crisis was interested in humanity because humans were one of the few species that possessed the Anti-Life Equation in their collective consciousness. He was especially interested in finding the few rare humans who possessed the entire Equation in their minds.
* Final Crisis, wishing only for a "happy ending." A mountain of hope in a sea of hopelessness. Even the words engraved on his tombstone inspire hope: To Be Continued.
* Final Crisis with a radion bullet, killing his physical body, starting the process of his final defeat.
* Final Crisis working together could barely lift it. And it was only a single page, said to contain every page created in all possible realities. Ultraman read enough of it to be driven insane.
* Final Crisis would also count. An amnesiac Batman was sent back in time, fighting to survive as he was shunted between historical periods closing in on the present. It turned out that Batman was absorbing Omega energy with each jump, and surviving to reach the present would cause the energy to release and destroy reality.
* Final Cupil is another example of an Infinity Plus One Weapon. You see, the
* Final Cut by Steven Bach has a brief prologue about why he needs to find a new movie for United Artists Studios, then spends over a hundred pages going through the entire history of United Artists before getting back to the studio's slow downfall.
* Final Destination 2: At the end, a teenage boy who narrowly survived a death earlier in the film suddenly dies for a final BOO scare when he messes up using a barbecue grill.
* Final Destination 2 features a similar scene, except with two fenceposts with barbed wire spun in between, slicing apart one of the destined to die.
* Final Destination 2 has a man on the radio accurately breaking down the Chain of Death based on the previous films events and being mocked by the host.
* Final Destination 2 has the sole character who survived the previous film taken out quite swiftly and suddenly.
* Final Destination 2, hinting that Kim and Thomas might not be safe forever.
* Final Destination 2's methods of killing off the players were at least plausible, especially compared to the killer shower head in the first movie. This alone reduced the cheesiness of an otherwise interesting concept in some viewer's minds.
* Final Destination 2 so that the audience would not confuse her with Ali Larter, who played Clear Rivers in both the original film and this sequel. Ironically, while this made it easy for audiences to distinguish Cook and Larter's characters, some of Cook's own fans had difficulty recognizing her as a brunette because they were so used to seeing her as a blond. And hilariously enough Ali Larter had sported brown hair as Clear in the first film.
* Final Destination 2. Thanks to getting her hair caught in a man's prosthetic hook box, she gets her head trapped between elevator doors, the ceiling, and the elevator floor, and it chokes and slices her head off.
* Final Destination 2, when one character believes he will be the next to die, he

gives another character the keys to his apartment and asks him to remove all the porn and other contraband before his mother can find it.
* Final Destination 3, a group of young boys try to bluff their way onto the roller coaster but are kicked off by the carnival staff for not being tall enough to ride it. Thus, the boys avoid dying in the crash, without any need for psychic visions to warn them away.
* Final Destination 3 DVD revolved around various causes of death, from the most unlikely to the most probable. The ending was simply "Chances of dying - 1:1".
* Final Destination 3 flashes the double-deuce when her big sister takes her picture at the amusement park.
* Final Destination 3, in which the makers explicitly went out of their way to kill the Final Girl. Whether the two people she saved live or die is left open in the theatrical version.
* Final Destination 3 on DVD features "Choose Their Fate", in which the viewer gets to determine the fates of some characters. Subverted in that each person would be killed in a different fashion immediately after they were saved by your choice. This is sort of in keeping with the predestination ideas of the movie.
* Final Destination 3, photos taken on the night of the roller-coaster crash that depict the people on Death's hit-list contain clues to what sort of improbable demise they'll suffer when their belated turn comes up.
* Final Destination 3. Quite a few people like that ending, and many people who don't still feel that the theatrical ending is less enjoyable.
* Final Destination 3 snaps due to the loss of his girlfriend. He then tries to kill his friends to steal their time and get off of Death's list.
* Final Destination 3 starts with a class of graduates going to an amusement park... and then a bunch of them die in a roller coaster crash.
* Final Destination 3: The HIGH DIVE's ride sign is partially broken, so it reads "HIGH DIE"
* Final Destination 3: The roller coaster "Devil's Flight" breaks and kills a bunch of people, and everything else in the park is a "sign" of the cast's impending death.
* Final Destination 3 which heavily implies that the remaining survivors die in a train crash. An alternate ending omits that scene and implies that they might have actually cheated Death.
* Final Destination 4 from the POV of the now-hollow torso, showing the other characters' horrified reaction.
* Final Destination 4's near-death experience and shows her walking across a street with her eyes closed, testing to see if Death is still after her, and wanting to get it over with quickly if he is. This is followed by a touching moment of relief after she makes it across the road.
* Final Destination 4, when two characters leave a hospital deep in conversation and one gets run over by an ambulance.
* Final Destination 4, with even less realism as the explosions of the NASCAR race cars are somehow able to propel enough shrapnel through the fence to kill an audience of spectators.
* Final Destination 5. And the only other character who survived Death's design by accidentally having someone else take his place is sitting at a bar and talking to another dude...who reveals that the guy who took his place was terminally ill and about to die anyway, and then the plane turbine crashes through the ceiling, killing him.
* Final Destination 5 appears to be this. When she loses her glasses on the bridge she is unable to do anything but stumble around and cry for help. The audience is also shown a brief glimpse of her vision — it's pretty dire.
* Final Destination 5 as the two survivors board the plane where the cast of the first movie were forced out before the plane takes off and blows up.
* Final Destination 5, Canadian Olympian Brittany Rogers plays the gymnast on the balance beam when Candace is on uneven bars.
* Final Destination 5, Dennis thinks Sam's name is 'Stan', and even tells him off for trying correct him. And he doesn't seem to know who Isaac is at all.

* Final Destination 5 loses her glasses in the opening bridge collapse, rendering her helpless as she falls into the water below and is crushed by a falling car.
* Final Destination 5, Sam reserves the restaurant for an afterhours date with Molly. Peter, who has become unstable after Candice's death, interrupts the date and tells them that he will kill Molly to take her lifespan. After Peter draws a gun, Sam and Molly both escape to the kitchen. Peter pursues and running chase/battle ensues.
* Final Destination 5: The movie series is usually serious about funeral, but this one gets in some laughs when the speaker, the less-than-attentive company manager, is listing off names of the dead and accidentally names a survivor. The other two survivors next to him have some fun at the guy's expense.
* Final Destination 5 was almost called "5nal Destination", but this was dropped when the producers realized it looked a lot like "Anal Destination".
* Final Destination, Alex Browning runs away from a falling tree in a straight line. This trope is averted later in the movie, however, when he jumps out of the way of a bus after Clear Rivers alerts him.
* Final Destination. Apparently it was the most talked-about death scene so subsequent installments gradually increased the complexity of the deaths.
* Final Destination are the elevated number of fatalities and the level of gruesomeness involved in the deaths.
* Final Destination as being the work of an unseen force, be it Death or Fate, deliberately tampering with the machinery to lethal effect in order to "balance the books" whenever someone survives a disaster they were never meant to.
* Final Destination became "Βλέπω το θάνατό σου" (I See Your Death)
* Final Destination, being an inscrutable and unstoppable entity picking off hapless mortals in ridiculously cruel ways.
* Final Destination blows up in a very Pinto-esque manner only a few seconds after takeoff. The problem isn't that the sequence is impossible; it's just that the NTSB animation of the real TWA 800 explosion is a million times scarier than the cartoon blow up in the movie.
* Final Destination, Carter deliberately stops on the train tracks in an attempt to prove that he "controls his own destiny". Having made his point he discovers that his car won't start and his seat belt is jammed as the train bears down on him.
* Final Destination, culminating in the surviving characters dying in the airplane disaster that opened the first film!
* Final Destination: Despite being in danger, Clear Rivers makes sure her dog doesn't get electrocuted by shooing him away.
* Final Destination. Every plan the heroes have made involves evading or hiding from Death and have only occasionally been successful and temporarily at that; destroying or defeating it for good is never presented as an option.
* Final Destination featured Tod getting startled by a shadow in the mirror, and the water he slipped on in the bathroom retreating back into the toilet to make his death look like a suicide. This is left over from when all the deaths were planned this way, but the filmmakers changed their minds to have the others as accidents.
* Final Destination film, one of the characters was killed this way by an incoming sharp object caused by the train.
* Final Destination films have Clear Rivers, an emancipated teenager, although she didn’t divorce her parents, they died. As they’d left her the house and enough money to last until she finished school, the courts decided she was capable of living alone.
* Final Destination film where the protagonist witnesses his teacher with a knife in her chest and briefly tries to wrestle it out before leaving.
* Final Destination franchise start out this way. A truly epic example is Mrs. Lewton's death in the first one, which starts with her making tea and ends with her house exploding. Examples in later additions to the series delve into the patently absurd.
* Final Destination girl to use the beam steps on the nail and falls off, setting off a much shorter chain of events.

* Final Destination has a notoriously simple and shocking death when Terri is hit by a bus immediately after a heated argument with her friends. Cue the rewind button on a lot of home videos to check if that really did just happen.
* Final Destination included deleted scenes with the original ending. The scenes have the hero sleep with his love interest, then get killed saving her. The baby she ends up giving birth to is how she considers he "cheated death", creating new life even though he died.
* Final Destination includes a single Realistic Delay amongst the generally unbelievable escapades.
* Final Destination" in reaction before they roll out the metaphorical blackboard and start trying to find a workaround to the Grim Reaper's cosmic book-balancing. The sequels then take it up several more notches.
* Final Destination, in which a handful of med students engage in "Sux racing", wherein they inject themselves with a dose of suxamethonium, a general anaesthetic, and see how far they can run down the hall before the drug kicks in.
* Final Destination is cut off mid-rant by a large shard of metal kicked up by the train that just took out Carter's car, which whistles up apparently out of nowhere and beheads him. He stays on his feet for a few startled seconds before his legs realize he's dead, whereupon he topples over.
* Final Destination is hunting the protagonists and killing them off one by one after they survive a major freak accident or incident. Separate movies adopt slightly different attitudes towards the exact nature of the connection.
* Final Destination is implicated in the Rube Goldbergian death of his teacher when he comes upon her Death-induced "accidental" death and immediately yanks the fallen kitchen knife out of her chest to stare at it before running out just before the house explodes. As his hysterical premonition of the plane exploding at the beginning already has the FBI suspicious that he's behind the deaths, this is more than enough evidence for them to pursue him.
* Final Destination is manipulating events to kill them off. But some viewers see it as cheating when instead of causing unlikely malfunctions or contrivances that end up killing people in ways that seem theoretically possible if unlikely, like elevator doors malfunctioning and closing on someone, which has happened in real life, Death instead just creates homicide machines, like tanning beds that can inexplicably go up high enough to set people on fire.
* Final Destination is particularly appealing to wannabe tournament players, as it is a single wide platform, making it the closest to a "traditional" fighting game stage. However, this
* Final Destination managed to have someone else die in his place, but that person was going to die in a few weeks anyway, so he dies a violent death too. A second character manages to have someone die in his place (it's hard to explain) but he dies violently too because he was on a flight that his girlfriend was destined to die on.
* Final Destination — People evade death, only to be killed afterwards by a malignant force. 5 films since 2000.
* Final Destination movie, a girl is slowly pulled into the machinery of an escalator. As soon as her feet get crushed, she starts spewing blood all over her boyfriend. No reason for that, really. No digestive or respiratory organs in the feet. However, it is possible that getting her legs crushed between those cogs and gears caused her blood pressure to skyrocket, which would pop blood vessels (starting with the very weak ones, such as the capillary bed in the lungs). Imagine rolling a tube of toothpaste starting from the bottom up.
* Final Destination movies can be interpreted as rather dark comedies.
* Final Destination movie, the main character's birthday is the 25th September. It coincides with the departure time (9:25) and his designated seat (25 I) of the ill-fated flight he was supposed to be on.
* Final Destination Novels has the big disaster at the beginning of the novel take place in a glass elevator on the outside of the building. The elevator gets caught and the gears continue forcing it to move, which causes it to tilt until everyone falls into the glass and it shatters, causing them to fall to their deaths. This

continues until the thing is entirely sideways. Of course the protagonist wakes up from her vision in time to save her friends, but as Final Destination does, everyone dies in various ways eventually.
* Final Destination one of Death's intended victims, a bitchy reporter, gets impaled through both eyes by a large two-pronged icicle that falls on her during a live broadcast.
* Final Destination raises the idea that somebody marked for death can kill somebody else and gain the time that their victim had until they were fated to die. Nathan accidentally kills Roy and so gets passed over in Death's order, causing Peter, who is next in line, to try and kill Molly (the one person in their group who didn't die in Sam's premonition of the disaster) in order to claim the time that she had left. The ending reveals that Nathan only bought himself a couple of weeks, because Roy's autopsy revealed a massive aneurysm in his brain that would've burst "any day now" had he not died sooner — meaning that the film ends with Nathan getting squashed.
* Final Destination revolved around that plot point, just with different players involved.
* Final Destination series do this constantly. There are even cases where it is done more than once.
* Final Destination series follows this trope all the time, with only varying times between the near-miss and the death blow.
* Final Destination series is a variation, which says "If you're supposed to die, you will".
* Final Destination series of films, a number of characters escape Death's original design due to a premonition. In an attempt to restore order, they are killed one by one by a series of seemingly unrelated events in this fashion, with some sort of malfunction leading to another and so forth.
* Final Destination series runs on this trope. When Death has it out for you, nothing and nowhere is safe.
* Final Destination series, where the recurring villain is Fate or Death itself.
* Final Destination series. Whether he's helping Death or not, or is just an uninterested third party is left deliberately vague.
* Final Destination, the airplane explosion that kicks off the plot happens in the background just as characters are mocking the guy who had a premonition of it.
* Final Destination. This carried over to the second film, where Clear is still blonde even when she's in a padded cell.
* Final Destination, Tod Wagner gets killed when a shower clothesline asphyxiates him.
* Final Destination until he slips on it and strangles himself on the clothesline. Then it retreats quietly into the crack under the toilet.
* Final Destination use this theme, showing a clock ticking by the hours with an eerie, deterministic theme in the background, visualizing the survivors' limited time until Death catches up with them.
* Final Destination version of the usual stereotypical depiction of the Grim Reaper appear in a dream sequence.
* Final Destination, whose presence is usually indicated by things like shadows, gusts of wind, ominous phrases, etc. Its true form does show up in one of the spin-off novels.
* Final Doom says this happens to a cyberdemon after a portal from hell is shut down with a "quantum accelerator."
* Final Doom (you were "really" paying for the book itself, and the actual game was a "free bonus").
* Final Dungeon PreviewThe player pays an early visit to what will be the game's final dungeon.
* Final Dungeon when asked to explain. It was cut for being too obvious.
* Final Dungeon, you can be attacked by the grass outside or the floors inside.
* finale Black Shadow right back into the radius of the explosion of the exploding reactors themselves (which many may argue that the Falcon Punch caused, if the scene is taken out of context), incinerating them both and at the same time saving

the galaxy.
* Finale ends with the cast singing about how they accept the fact that the world is going to end tomorrow.
* finale featured a series of these: rapid-fire clips of all the celebrities who had been on the show, for example, or of Alice's son Tommy coming into the diner and saying "Hi, mom!" over and over (and growing up a little each time, which was the point).
* Finale has Liam Prasmin, who constantly causes his daughter Dani's boyfriends to leave because he doesn't approve of them.
* Finale has the cast doing some impressive acrobatics during "Break Free".
* Finale has this with Tyler as B, Dylan as A, and Alex as C. A slight mix with this and type 4, as Alex reciprocates Tyler's feelings.
* Finale Movie: A non-movie series has its story wrapped up in a feature-length film.
* Finale Movie: A work that isn't a film series receives a conclusion in the form of a feature-length film.
* Finale Movie: A work that isn't a film series receives a conclusion to its story via a feature-length film.
* Finale Movie had Spot's original voice actor Nathan Lane reprise his role, when the original television series had him replaced by Kevin Schon partway through the second season.
* Finale Movie reduces the roles of all of Spot/Scott and Leonard's classmates with the exception of Ian Wazselewski (who turns out later to be the nephew of the film's villain Dr. Ivan Krank), to the extent that they only have one or two lines of dialogue and vanish from the plot after the school year ends.
* Final Encounter to his companion, fatally exposing himself to enemy fire.
* finale of season five: Chloe gives Clark a passionate Now or Never Kiss
* finale of Volume 3 finishes up with this, to the closing lines of "Cold":
* finale pays tribute to the show's main screenwriter Kota Fukihara, who passed away on May 17, 2020 at the age of 37 due to brain hemorrhage a month before the series started its run.
* final episode. And in the first episodes of the sixth reboot season they now are a proper couple, although it's uncertain just how stable their relationship will be during the rest of the season.
* final episode had the character portrayed by the show's main writer being handed a laptop to write an ending that saves the cast from a rebellion.
* final episode in 1967, John Daly was both the host and the mystery guest.
* final episode of the original run has the BAU finally invalidate Everett Lynch's warranty as he is killed trying to flee in a stolen FBI jet.
* Finale PrintMusic changed a few things around between different versions. To name just one example, the number keys 6, 7, 8, and 9 are keyboard shortcuts for transposing a selected bit of music up or down. In PrintMusic 2004, 6 goes up one note, 7 goes down one note, 8 goes up an octave, and 9 goes down an octave. In PrintMusic 2011, 6 and 8 go
* Finale Production Upgrade: When a live-action series increases its overall production value for its season or series finale.
* Finale Production Upgrade: When media, at the end of its run, goes all-out on the production value and effort for costumes, characters, guest stars, sets, technology, and depth of a story, or in the additional case of reality TV, real-life competition.
* Finale Season Ted in the present story. But to keep the hype around the character even the actress doesn't know her name.
* Finale Season: The last season of a series, which comes with a conclusive story arc to wrap up everything.
* Finale Season: When the final season is essentially a long multi-part Grand Finale to the series.
* finale think that the half-hour length of the episode, despite it being twice the length of the show's usual 11-minutes, was a rushed and confusing affair. Many think that an hour-long runtime would have allowed the episode's various plot

points to have more breathing room and/or have greater impact.
* Finale was produced by two high school students. The budget almost entirely came out of pocket and from a (mostly unsuccessful) gofundme page.
* Final Exam Finale: The finale tries to incorporate all the events that occurred before it.
* Final Exchange: Replying to another person's last words before they die.
* Final Fantasy 1, it had quite a bit of bugs related to it, such as spells running off of the strength stat instead of intelligence. The North American release attempted to fix some of the bugs, but practically every non-major mechanic is still broken.
* Final fantasy 7 in 2 minutes, 44 seconds, 48,38537 microseconds. Surprisingly accurate for a video this short.
* Final Fantasy Adventure, did its best to keep weapons and magic in separate worlds—some creatures were best defeated with spells, some were best defeated with brute force, and rarely did one overpower the other.
* Final Fantasy Adventure is a torus with a land mass that crosses on both edges.
* Final Fantasy Adventure: Julius. Hero discovers that the Heroine is under Julius' mind control and has opened the entrance to the Mana Tree. Julius reveals he is the last survivor of the Vandole Empire, the empire who attempted to control the Mana Tree years ago, and handily defeats the Hero.
* Final Fantasy Adventure not only looks like a mouth, it has a sense of taste as well, and will spit you back out if your armor isn't tasty enough (it likes silver).
* Final Fantasy Adventure or Seiken Densetsu 1) came with a world map. Still it was easy getting lost.
* Final Fantasy Adventure, the hero is forced to kill Amanda, a fellow gladiator, after she gets bitten by Medusa.
* Final Fantasy. After mastering the power of the Wind Crystal, they constructed many ancient wonders such as the Airship, the Mirage Tower and the Flying Fortress. Their civilization was eventually destroyed by the Fiend of Wind, Tiamat.
* Final Fantasy again. However, the Warriors finally go "Screw this, you die now!" and finally defeat Chaos, breaking the time loop.
* Final Fantasy Agito possibly tops all others to the degree it's compared to a dating sim and you can wind up with multiple girlfriends or boyfriends from the main characters.
* Final Fantasy. All of these engage in various atrocities including razing population centres, terrorizing civilians, deforestation, theft and pillaging, scorched earth tactics, abuse of prisoners of war, summary execution and general acts of oppression. Interestingly, the regular Shinra soldiers and the Galbadian army share almost identical uniforms, including the 3 eyed visor helmets, despite being in different universes.
* Final Fantasy: All the Bravest, a mashup of Final Fantasy locations, bosses, monsters and characters co-exist in the same setting without much context as to why.
* Final Fantasy: All the Bravest, is generally seen as a pretty solid mobile game.
* Final Fantasy: All the Bravest to instantly revive your team). Fans and critics alike were not amused.
* Final Fantasy, almost all the games in the saga features purple swamps where you take damage as you walk.
* Final Fantasy also has cactus fruit and an otherwise-undefined undefined "succulent fruit" as loot.
* Final Fantasy and all prior games would see slowly re-release on other consoles, PC, and mobile devices in the subsequent years.
* Final Fantasy, and became a franchise spanning over a dozen games, not counting the many, many spin-offs.
* Final Fantasy, and makes mention in a few of his battle quotes that he likes the idea of a challenging opponent.
* Final Fantasy Apparently being able to rend the very fabric of space and time with your magic isn't enough to budge an overgrown twig.

* Final Fantasy as a fire-elemental canine with no connection to the underworld.
* Final Fantasy. A solo Fighter is regarded as easiest. Black Belt is not difficult when massively overleveled, Red Mage has both good offense and defense plus multi-targeting black magic, White Mage has the advantage of the RUSE (Blink) spell, and Black Mage has multi-targeting black magic starting from the third town. By far the hardest, Thief has to grind halfway to the level cap (with poor offense and defense the whole time) before being able to have a CHANCE to defeat the fourth miniboss. The White and Black Mages have spells that allow them to get to the end of the game much more easily, although the White Mage's limited offense and the Black Mage's abysmal max HP may make the final dungeon the most challenging for them out of any character.
* Final Fantasy A+ spoofs Scan in this regard by renaming it "Study Guide".
* Final Fantasy (at least all its remakes) was the inventor of the first airship.
* Final Fantasy). At the same time, he tends to have less HP than bosses of equivalent difficulty.
* Final Fantasy before being obliterated by the Fiends. The Castle was abandoned, the robots were left to fend for themselves in the ruins (one of them even fell from the sky and crashed near a waterfall) and the Airship was buried in a desert, and yet everything is in perfect working order by the time the Light Warriors need to use it.
* Final Fantasy Brave Exvius features a Trust rating for almost every unit (with the exception of some plot-critical units). Increasing trust has two benefits - one, after every quest or exploration, there's a chance that each unit will find a bonus item, with that chance equal to their trust rating (with 100% trust guaranteeing said unit will find something). Two, a unit that achieves 100% trust gives an item or ability that can be equipped on other units, and many of these items and abilities are rather nice and only available in this manner.
* Final Fantasy Brave Exvius has Xon, the game's best thief. Not only can he unfailingly steal both money and items from anything that has them, his Twist of Fate skill allows him to steal stat buffs from the enemy and give them to the party.
* Final Fantasy Brave Exvius, it's speculated that someone who's been given immortality and then stripped of it might see all those years catch up to them at once. However, all it does is get them aging normally again.
* Final Fantasy Brave Exvius, making it totally random as to what the player will pull. Having a bad run of pulls, and out of in-game ways to get more lapis? The game is always quick to remind you that you can simply buy more lapis for more pulls. In addition, some of the limited time packages will come with other in-game loot, such as extra equipment or just getting a character directly.
* Final Fantasy Brave Exvius. Once a bustling port, the town died down once crystal farming, the main industry of the island, was no longer able to sustain it.
* Final Fantasy Brave Exvius starts with tolerable level progression comparable to a single player game, and most of the paid items are upgrade material that can be earned through grinding. You don't really need the periodic limited availability bundles of abilities, accessories, awakening materials, magicite, more energy, or mithril currency to help with buying character experience and rare tickets for even more powerful characters.
* Final Fantasy Brave Exvius that will not stop at anything to accomplish his goal, there's no line he will not cross. Lazarov pretty much admits the only reason he's working for the Six Sworn of Paladia is because the war they wage will leave a nice amount of fresh corpses on its wake... fresh corpses he will put to good use.
* Final Fantasy Brave Exvius: "Visionary Magick" refers to a class of magic born from scientific progress and far more powerful than the usual kind. The game's backstory tells of a civil war between two countries over the mastery of this kind of power which was deemed to dangerous to be employed.
* Final Fantasy broke this pattern, and all games afterwards tended to be very story heavy.
* Final Fantasy, built to connect the peninsula of Cornelia to the rest of the Southern Continent as reward for the triumph of the Warriors of Light over Garland

and their rescue of Princess Sarah.
* Final Fantasy, but the name was already being used for a tabletop game. Even before that, the game's original project name was simply "FF", with the full name being decided later in development.
* Final Fantasy by Tidus if he encounters on in the desert around Home.
* Final Fantasy can learn the Bomb's "Self-Destruct" spell, which deals high damage to surrounding enemies while also killing the user on the spot.
* Final Fantasy: Cerberus, Garm, and the hellhound are recurring enemies in the series.
* Final Fantasy Chaos) have very high magic defense, Black Mages are generally reduced to casting Haste and Temper on the physical damage dealers, and then standing back while they have at it. Meanwhile, White Mages are actually better tanks than fighters. They have the Ruse spell, which raises evade by 80. Cast it a couple of times and almost no enemy can hit you. With careful leveling, they can do damage comparable to fighters.
* Final Fantasy compared with its GBA re-release, some fans felt that the later more accurate translations lost some of the charm the the older versions had.
* Final Fantasy countless, overlapping planar shockwave rings expanding from it.
* Final Fantasy Crystal Chronicles 1 are very well-endowed. Inverted with their relatives the Clavats, whose females are almost universally flat.
* Final Fantasy Crystal Chronicles. All four are considered human and distinct from animals, monsters, and other sentient races like Moogles or Carbuncles. This is rather challenging for Yukes who may be pure spirits or gaseous beings in armor or Lilties that are half plant and grow like them.
* Final Fantasy Crystal Chronicles also does this, but only for the purpose of drawing you closer so it can body slam you. It presents a prime opportunity to get some free hits in on it, due to how sluggish the latter attack is.
* Final Fantasy Crystal Chronicles: Conall Curach is another good example, being filled with poisonous miasma and full of fish-like creatures, giant toads and ghosts. Not to mention its boss is a huge undead dragon.
* Final Fantasy Crystal Chronicles, due to using crystals for power, but is not considered to be magic by the population.
* Final Fantasy Crystal Chronicles: Echoes of Time: The hero's crystal fragment triggers Veriaulde's transformation and harms Larkeicus, in both cases causing their bodies to smoke or steam.
* Final Fantasy Crystal Chronicles: Echoes of Time, the party reaches the end of a library-themed dungeon and runs into a spacious arena-style gallery as the boss fight music strikes up, then peters out as the heroes look around and no boss monster is evident. Of course, then one of the bookcases grows teeth and claws, and the boss battle music kicks in for real as it attacks.
* Final Fantasy Crystal Chronicles: Echoes of Time village, which is a burnt-out ruin. After you learn the truth and start fighting Larkeicus, they allow themselves to fade away.
* Final Fantasy Crystal Chronicles ends with the characters in the player's home village dancing around a bonfire.
* Final Fantasy Crystal Chronicles games the player can draw on moogles in moogle houses in the first game and save points in the second.
* Final Fantasy Crystal Chronicles had a set of Infinity Plus One equipment for each of the four races. The problem? To get items created, you have to get an item's crafting scroll, and the right materials, and then take them to a blacksmith and have it made. All of the ultimate weapons require a rare drop, sometimes multiples, from the boss of a particular dungeon, and virtually require you to own a Game Boy Advance to know how to get enough points to have a chance of that drop set appearing. This is mitigated by the consolation prize: Even if the item you want doesn't appear, there's still some good loot to be had.
* Final Fantasy Crystal Chronicles has a glowing red crystal that does more damage than hitting the rest of the boss.
* Final Fantasy Crystal Chronicles has the player character(s) encounter many other myrrh-gathering groups, including the real main characters. You're just there to

watch.
* Final Fantasy Crystal Chronicles Instead, you have to go all the way north to Veo Lu Sluice and revive the flowers that provide the river with water.
* Final Fantasy Crystal Chronicles: My Life as a King, but retaining all of their equipment, skills, and behavior from their previous adventures.
* Final Fantasy Crystal Chronicles: My Life as a King contains another promised land with the name "The Promised Land" … Imaginative bunch, aren't they?
* Final Fantasy Crystal Chronicles require each player to use a Game Boy Advance connected with a GBA-GCN cable to play. While this did make things a bit more streamlined by not making players constantly pause to go through their menus, or clutter up the screen with windows, it did make non-handheld gamers upset at being asked to buy a handheld system to play a console game with their friends.
* Final Fantasy Crystal Chronicles: Ring of Fates Although this doesn't cause the party much trouble as they never use magic in town, it does disconcert the citizens and the magicite vendor tries to sell you matches when you first talk to her.
* Final Fantasy Crystal Chronicles: Ring of Fates are the (twin) brother and sister pair Yuri and Chelinka. Presumably their interaction was intended to be platonic, but when Yuri is swearing to always protect Chelinka and never to leave her side, this gets a lot harder for the players to believe...
* Final Fantasy Crystal Chronicles: Ring of Fates, but you have to use other party members which requires a bit of finesse as they move away from being jumped on (probably to avoid this exact thing).
* Final Fantasy Crystal Chronicles series has magicite, which is used for everything from making fires to purifying water. Kinda justified though, as it does warp reality.
* Final Fantasy Crystal Chronicles series, have the highest normal attack of the 4 races. Clavats have above average defense and moderately fast spell casting, but nothing special compared to the other 3, specialized tribes.
* Final Fantasy Crystal Chronicles series, "onion" is a slur used against the Lilty tribe.
* Final Fantasy Crystal Chronicles, the adorable, tiny Lilties are the warrior race whose harsh rule once encompassed the entire world.
* Final Fantasy Crystal Chronicles: The Crystal Bearers, about half of the members of the Selkie tribe, including all four major characters from that tribe, have red hair. Most of the other Selkies have blond hair. No non-Selkie with red hair exists in the game, so red hair is pretty much a "red flag" alerting you that a character is a Selkie. Blond hair, however, leaves an individual's tribe ambiguous; the protagonist has blond hair and is not a Selkie.
* Final Fantasy Crystal Chronicles: The Crystal Bearers, after he drops pretending to be good.
* Final Fantasy Crystal Chronicles: The Crystal Bearers has the capital city of Alfitaria, which is powered entirely by Magitek crystals (as shown by the page picture of the nice Magitek screens).
* Final Fantasy Crystal Chronicles: The Crystal Bearers is capable of this, as we learn when she and Layle fall from a height. It can be postulated that any Yuke can do it.
* Final Fantasy Crystal Chronicles: The Crystal Bearers, Layle will walk up to ladders, poles, and other climbable things, and then use his gravity powers to vault himself straight to the top (or bottom). Makes one wonder why he even bothers.
* Final Fantasy Crystal Chronicles: The Crystal Bearers. None of these feats can even be partially re-created by the player. It seems that the coolest things Layle can do occur when he leaves the player's control.
* Final Fantasy Crystal Chronicles, the Little King is followed around by a penguin who often is more snarky than helpful. Still, he's cute.
* Final Fantasy Crystal Chronicles, the plot is about removing miasma (deadly purple gas) from the world.
* Final Fantasy Crystal Chronicles the sub-series. The blizzard spells temporarily encase a character with ice, doing minor additional damage until it shatters.

* Final Fantasy Crystal Chronicles was bashed for, among other things, ease of play, which contrasted directly the much-hyped difficulty of use. It's not a hard game by any stretch of the imagination, but it's not supposed to be.
* Final Fantasy: Curiously, the series portrays mythril a very low-grade metal obtained in the early game.
* Final Fantasy Dimensions explains that the artifact doesn't work that way. She's just going to start aging normally again without it.
* Final Fantasy Dimensions: The World of Dusk. contains areas from both World of Light and World of Darkness, but the color scheme is sombre brown with melancholy music. The overworld contains much stronger enemies, most towns are empty, and some areas are just plain not there.
* Final Fantasy Dimensions, where, in addition to the life-draining Darkness and Onyx Wave, they have Last Resort, a move that massively improves their stats, but inflicts them with Doom, which will kill them at the count of 10.
* Final Fantasy, each attuned to an elemental force and being a source of great power. As this trope became stale, later games started to use them in more creative ways that allow Crystals to remain important to the story in a less-dated way.
* Final Fantasy, each town had its own uniform hair color and clothing color, due to graphical limitations.
* Final Fantasy Endless Nova always appear to be set at night, with the street-lamps always on. Apparently the asteroids always have their bases turned away from the sun.
* Final Fantasy Explorers features a kingdom exploring an island to collect crystals to power its Magitek, which is utilized in some attacks (particularly from the Machinst class) and the construction of "mechanoid" enemies.
* Final Fantasy Fables: Chocobo Tales, Gazzy urges the main character to find all of the missing chocobos.
* Final Fantasy Fables: Chocobo Tales the demon book Bebuzzu spits out Chubby's chocobo card because he's "too buttery."
* Final Fantasy Fables: Chocobo Tales the demon book Bebuzzu transforms a storybook into one of these.
* Final Fantasy feel like a narrow corridor, but has side-quests more evenly spread throughout the adventure as opposed to collected in one specific portion of the game, like the original had.
* Final Fantasy fire as a result. She only finally unlocks fire magic when the group needs to proceed past a wall of ice to warn another town of an impending attack, and there are no other black magic users currently in the party. The fact that innocent people will die if they can't be warned in time allows her to overcome her psychological block and cast Fire to melt the ice.
* Final Fantasy for good reason: Flare spells are pretty much a magical nuclear blast; whether this is accomplished by magically fissioning atoms around the opponent or teleporting a piece of the sun or whatever is never really specified.
* Final Fantasy (for introducing more frequent cut scenes and voice acting) tend to bear the bulk of it, but other games are not immune to these complaints; the series has been "ruined" about thirteen to sixteen times by now.
* Final Fantasy: For the most part, your entire party has no lines, and given their ambiguity, you won't really notice or care. However, reading the description for the Rat's Tail yields a pretty funny conversation between them, where they almost consider throwing it away. "No!! Don't do that!!"
* Final Fantasy for the NES", borrowing a lot of mechanics and monsters from it. It has since become one of the highest-grossing video game franchises in the world, with endless sequels, spinoffs, rereleases, and adaptations to non-game media.
* Final Fantasy for the NES game came with two foldouts. One had the map of the world along with key locations on one side, and maps of various dungeons on the other. The second had all of the weapon, item, and magic details on one side, and monster stats (albeit with the main boss shadowed out and several monsters provided with ??? vulnerabilities) on the other. And the 80-page manual included a walkthrough of the first half of the game, along with some other useful information.

* Final Fantasy franchise gives us Chocobos, giant adorable (mostly) flightless birds used as mounts.
* Final Fantasy game does this. At the beginning, you may have a few hundred Gil which can buy a Potion or two and perhaps slightly improved armor. By the end, you have hundreds of thousands of Gil and a full inventory of healing potions and equipment.
* Final Fantasy game has had someone do this, including the ones that don't actually use levels:
* Final Fantasy game, if not the first RPG, they ever played. This is due in part to the series not being released in Europe until this point and in part to the fact that only three games were released in the United States until this point (and they weren't that well-known).
* Final Fantasy games have a Jack of All Stats, often the lead character. This character is typically near but not quite at the top of the heap in fighting ability and somewhere in the middle of the pack in magical ability, and any special abilities they have will be fairly general-purpose and not push them to the top of either of these categories. Examples include:
* Final Fantasy games have this, except the characters other than the main three (hero, lancer, and love interest) tend to drop in and out of focus. List of examples follows:
* Final Fantasy games have this, typically as the effect of the Scan/Libra/Peep ability/spell.
* Final Fantasy games include human-looking Clavats and Selkies (and Lilties, if you allow for their flower-like hair).
* Final Fantasy games, in EVERY game that features summoners, this word is translated as "invokeur", which is horribly un-French, instead of the more accurate "invocateur". This may be for technical reasons (number of letters).
* Final Fantasy games, no matter how hard the heroes try, the villain can never be prevented from becoming all-powerful. Their victory only comes after the villain has already brought the world to its knees.
* Final Fantasy games often include enemies that cast a Death Countdown spell which will instantly kill a cursed character if the battle is not over before the counter reaches zero. Failing any other option, this can often be delayed if the character is re-cursed, so the countdown is reset.
* Final Fantasy games, spells that protect a party member from magic attacks will also block friendly spells, such as Cure. This can be quite annoying.
* Final Fantasy games tend to be quite different from game to game, so most games have their own unique challenges:
* Final Fantasy games, the beneficial status "blink" is presented as the character moving back and forth, leaving blurry afterimages, and therefore making it difficult for the enemy to pin down where they are exactly.
* Final Fantasy games use increasingly ludicrous adjectives to describe the popularity of the series with each numerically subsequent game.
* Final Fantasy games where crafting is possible, meteorites are usable as raw material for that crafting.
* Final Fantasy games, where enemies will cast a particularly devastating attack as a scripted counter when their HP drops to zero, but before their death animation occurs. If the party bites it due to this attack, it still counts as a game over.
* Final Fantasy games without hitting a fully functional relic of a lost civilization:
* Final Fantasy game; the NES version referred to underwater scorpions as "Lobsters".
* Final Fantasy, get more hate than others, and as the years have worn on, the vitriol has gotten a lot worse. But all four games have large fanbases who will defend them to the death. In truth, all the games get argued over to death. You'd think a series where the sequels are deliberately out of continuity would not have this problem, but it had it even before Square started making direct sequels.
* Final Fantasy Gil Quest, Cactaur and Tonberry are trying to raise 3 million gil so that they don't have to go to jail.

* Final Fantasy has a couple of examples from different games in the series:
* Final Fantasy has a lesser example: Masamune, the most powerful weapon in the game (it gave by far the highest attack and accuracy bonuses, had the highest critical hit rate, and, unlike virtually all other top-level weapons, could be used by any class) was acquired on the penultimate floor of the final dungeon, but only if you took a relatively long detour, making it still an example of this trope.
* Final Fantasy has Countdown or Condemned or Doom or Slow-Death. Basically it consists of a countdown over a character's head; in real-time games, this is usually done by time, though in turn-based games, it's always done by turn. There's also sometimes a "turn to stone" variant.
* Final Fantasy has largely determined their roles in any future parody.
* Final Fantasy has plenty of heroes with explicitly magical nature and cool powers, some nonhumans, a few cyborgs... and then it's got the non-powered heroes who easily keep up with them:
* Final Fantasy has some final bosses get souped-up versions of themselves after meeting certain requirements.
* Final Fantasy has the Black Mage, who can use high-level offensive magic, but ranks dead last in terms of HP growth, Vitality, and Strength, and he is tied for last with the White Mage in terms of hit rate. The weapon and armor selection for the Black Mage is also beyond pathetic. The White Mage also has low physical stats, but not nearly to this extent.
* Final Fantasy has this as its power. Apparently, they mime any action last performed by an ally or enemy, and it becomes a real repeating of this action.
* Final Fantasy. He normally sports a collection of swords (Excalibur and Excalipoor being his go-to, with Masamune and Zantetsuken close behind) but has also been seen wielding spears, axes, daggers, bows, and automatic rifles; depending on the game he makes a cameo in.
* Final Fantasy. He rants at Wol about how women are traitorous demons and royal women are even worse. Wol merely asks him if he's had a few bad experiences.
* Final Fantasy House of his roommates, forced to eat a physically unhealthy diet and basically putting up with an endless amount of abuse and neglect on a daily basis. However, he finally snapped and stormed out after one of his housemates stole his shoes, this final indignity making him realise that he preferred even homelessness to his current situation:
* Final Fantasy. "I, Garland, will knock you all down!" In the original Japanese, it's, "I, Garland, will kick you around!" The Japanese really do have a verb for "to kick around". Still ineffectual, though. It's not that he wouldn't have followed up on it, the threat just got inverted.
* Final Fantasy II against the Black Knights, the game simply takes you back to the start menu.
* Final Fantasy II, and lined both sides of the path with high-level enemies, leading to slight missteps to be fatal.
* Final Fantasy II and marvel at the differences. Leon doesn't get it too bad, Guy is badly altered but still basically "Guy," Firion and Maria resemble the actual character only vaguely, and if you hadn't been told beforehand that that was the Emperor, you would not recognize him.
* Final Fantasy II and takes over hell. Though he returns from hell, this form is presumably undead. He is destroyed again in the final battle, this time for good.
* Final Fantasy II article reports, a programmer deliberately made Ultima, the legendary ancient magic, completely useless, saying that:
* Final Fantasy II but it made it into the final game. This was fixed in the remakes, however.
* Final Fantasy II, calling him the most suited man to wield it. When powered up, Ultima will outdamage everything else in the game easily.
* Final Fantasy II considers having the heroes relay a message to Hilda about how he feels, but orders them not to, saying that she would be pained to hear him confess his love while dying.
* Final Fantasy II: Emperor troops, like Soldiers and Sergeants, will often attack you in groups alongside proficient magic users, like Sorcerers and Wizards.

Sometimes the latter actually end up being more annoying and harder to kill than the physical attackers.
* Final Fantasy II. Even the weakest Imperial Soldier would one-shot any of them at their starting stats.
* Final Fantasy II has a vast snowfield stretching on the northern hemisphere and two deserts and a tropical island on the southern hemisphere.
* Final Fantasy II has Firion and Minwu, mostly in artwork, as their in-game sprites gave them the same skin tone as the rest of the cast. The PSP remake also adds in Deumion.
* Final Fantasy II has many empty rooms with very high encounter rates. It drops you off in the middle, and you'll probably have to fight a battle or two on your way out.
* Final Fantasy II, he has a little trouble with English. It's a little jarring.
* Final Fantasy III any of the remake characters, as the game's representative. Later spin-off games have used both the remake's orphans and the Onion Knight.
* Final Fantasy III, both Light and Darkness are shown to be capable of world-ending devastation: long before the events of the game, the world stood to be annihilated by a torrent of light, and four Warriors of Darkness rose to combat it. This time, it's darkness that threatens to overwhelm the world, with four Warriors of Light to oppose it. In the end, both the Warriors of Light and the Warriors of Darkness join forces to defeat the Cloud of Darkness, who despite her name does not embody darkness itself, but rather annihilation and oblivion.
* Final Fantasy III considerably in the DS remake, and they're rather generous with how much spells you can use...plus one can dual-wield staves.
* Final Fantasy III, Diablos has it as one of the commands it can have and the Dark Knight dressphere. However, in X-2, it used no HP if you had the auto-ability Spellspring, which sets MP cost to 0.
* Final Fantasy III does this regularly with its "Souleater" skill, which deals heavy damage to all enemies and some damage to the knight. Played for utility, not drama.
* Final Fantasy III: Freelancers-only, the Four Class Challenge, and a popular variant of the latter, the "Four Job Fiesta", where each character is assigned one class per crystal. Having all characters be the same job is also popular for this one.
* Final Fantasy III gave us the Cloud of Darkness, a woman wearing a cape, paint...and that's it. All other female characters in the game are significantly more dressed up.
* Final Fantasy III hair, which (as far as we can see) opens like a flower around his face.
* Final Fantasy III has its signature Particle Beam attack. In the DS version, it builds it by charging the energy between its hands; which are cupped, facing each other, and stacked vertically, and then fires it as a beam of energy by separating its hands.
* Final Fantasy III has Xande, a scholar to Noah who was given the gift of mortality. Fearing death so much, Xande concluded that life, in general, has no meaning and tried to cover the world in total darkness, freezing it in place forever, as a result.
* Final Fantasy III. He uses mind control to make the king exile his son and plunge all of Saronia into civil war.
* Final Fantasy III: If you try to cross the swamp in front of the Goldor Manor WITHOUT the Levigrass Shoes, your party sinks into the swamp. Also, if you try to pass the statues without collecting ALL of the Fangs, your party members are instantly killed by an unseen force.
* Final Fantasy III. It's almost as big as the world map when you're on it, but very small when you're on the world map itself.
* Final Fantasy III — it becomes impossible to get him as a summon later in the game.
* Final Fantasy II In A Nutshell, Emperor Palamecia is this for round one with Firion's party.

* Final Fantasy II, in both cases giving the original Famicom versions scripts influenced by their remakes' official translations.
* Final Fantasy II in the form of a powerful canine demon that is summoned by Deumion the Guardian to test your strength.
* Final Fantasy II inverts this in the Soul of Rebirth bonus quest—the path taken in the quest is assumed to be the Jade Passage and Pandaemonium, locations in Hell. It turns out that the areas are actually Raqia and Arubboth, and the party is in Heaven, which appears as a mirrored reflection of Hell with a lighter color palette.
* Final Fantasy III, one of the villagers in Ur thinks the four Onion Kids are crazy because they want to save the world.
* Final Fantasy II is a captain of a pirate ship who attempts to rob Firion's party in the middle of the ocean where no one can help them. After her pirate crews get beaten, Leila happily joins up with the party and turns out to be quite friendly.
* Final Fantasy II is very guilty of this. There are a grand total of three populated cities on the entire planet still standing at the end of the game (down from ~10 at the beginning). It's almost impossible to think that a vibrant or even viable humanity could still be left to rebuild by the end of the game. The town of Salamond, one of the three survivors, was explicitly founded to sell mythril to the rest of the world, but without any significant trading partners and with transportation almost cut, the town would starve. Fynn shows no signs of abilities to support itself, either.
* Final Fantasy III. That doesn’t mean that there’s no dramatic moments, however.
* Final Fantasy III, the characters gains access to the skills of 'ancient warriors' by picking up the shards of the Crystals.
* Final Fantasy III. The three immortal students received the gift of magic, the gift of dream, and the gift of mortality. Mr. Mortality is PISSED but the other two and their master firmly believe the ability to die was a great gift.
* Final Fantasy III Trilogy, while the heroes are answering the bridge troll's questions, you can briefly see Kefka pull Celes offscreen and then replace her after taking her likeness.
* Final Fantasy II, it turns out that your usually-silent friend and party member knows beaver language. Guess who becomes your interpreter when you run into giant beavers.
* Final Fantasy III wasn't a system killer app, but denoted the start of major third-party support for a gaming system the rest of the industry was skeptical of.
* Final Fantasy III when he stopped time. She was also manipulating Xande to carry out her goals to plunge the world into nothingness.
* Final Fantasy III. You encounter him very early in the game, and if you don't run then he'll kill you on turn one.
* Final Fantasy II least evil laugh in the series, or else he's packing one mean turkey call.
* Final Fantasy II mage in general and healer in particular. Unusually for this series, Minwu's a he.
* Final Fantasy II novel does have Maria harboring feelings for her adopted brother and the story's main character, Firion.
* Final Fantasy II on the Super Nintendo in the US), leading players of those versions to wonder why Dark Knights could shoot energy beams all of a sudden. Cecil also goes down to Level 1 as a Paladin, but starts with around 600 HP and quickly gains levels and statistic points; a level 1 Paladin Cecil is nearly, if not as good as a level 20 Dark Knight Cecil.
* Final Fantasy II, Scott asks Firion and friends to not tell Hilda about his death, as she deserves to fall in love again.
* Final Fantasy II situation with a princess by coughing a "tell her that I love her" at the party, but then realizes that she would follow this trope and tying her to a dead man would be nothing but selfishness. He forbids the party from saying anything, and they obey, even though the princess is expecting word. It's implied that the princess ends up with his brother.

* Final Fantasy II, so heavy armour will no longer decrease your magic stats, so now your wizards won't be squishy.
* Final Fantasy II, so it fits the trope...but it's also likely to have been chosen simply because of how well it goes with the rest of his mostly-golden-with-purple-accents character design.
* Final Fantasy II system. In short, your party gains experience by switching the fight from "kill the goblins" to "kill the goblins while the party's fighter takes swings at you and the mage steals away your mana".
* Final Fantasy II. The Emperor seeks to take over all of reality, so he baits Firion into killing him, splitting his soul in two and allowing him to conquer both Heaven and Hell in addition to the rest of the world.
* Final Fantasy II. The GBA remake adds exclusive weapons for each of the Soul of Rebirth heroes that give massive attack boosts and maxed-out stats, and the PSP version gives the four main heroes their own exclusive Infinity+1 Sword.
* Final Fantasy II, the last dungeons; Jade Passage and Pandemonium Castle, takes place in Hell. If the party talks to the NPC Paul, he flips out, calling the lot of them insane before wishing them safe passage back (this being the latest in a number of increasingly incredulous reactions to the party's destinations from him).
* Final Fantasy II, to make us feel more comfortable here." He continues to pointlessly betray people over the course of the animation, occasionally in self-sabotaging ways.
* Final Fantasy II, Venom magic is bright green at low levels and dark green at high levels.
* Final Fantasy II, where a bridge is a possible background for random encounters, but not boss fights.
* Final Fantasy II, who offers taxi service with his airship to the heroes.
* Final Fantasy in an attempt to wipe out and absorb the life energy of all living things on the planet; ironically, his human spirit allows him to make more use of Jenova's powers, because he can plan ahead, focus on things other than instinct, and act from within the Lifestream, reanimating Jenova cells that would normally remain dormant.
* Final Fantasy In A Nutshell, after Zidane grabs Garnet's ass and remarks how soft it is, she farts in his face.
* Final Fantasy in general is strongly hinted to take place in a multiverse, with each game (barring a couple exceptions like direct sequels that take place in the same world) taking place in parallel universes. It hasn't been officially confirmed, but every Final Fantasy game has its own version of Cid, Biggs, Wedge, Chocobos, summons (Ifrit, Leviathan, Bahamut, etc), and the worlds they take place in seem to be similar, and yet different at the same time.
* Final Fantasy in particular being the only one confirmed as Stage 5.
* Final Fantasy is a melodramatic series, but there’s a few moments in this that softens the mood;
* Final Fantasy is another notable exception; fans are likely to remember lines such as "I'm Captain Basch fon Ronsenburg of Dalmasca!" and "Ashelia B'nargin Dalmasca! Just how far will you go for power? Does your lust for Nethicite consume you?" And yet, just to mix things up again, several characters, including Vaan, Penelo and Fran, don't have stated last names, even in supplementary material. (Balthier is an alias.)
* Final Fantasy is. At least one person interprets the word as a slur.
* Final Fantasy is mistranslated as Maliris. Gurgu Volcano became Mount Gulug (spelled "Mount Gulg" in initial translations of the first game).
* Final Fantasy, is that male White Mages tend to wear the hood down, while female White Mages tend to wear the hood up.
* Final Fantasy It's implied that the cycle has continued without a clear end a countless number of times, which is why the prophecies of the Circle of Sages and Lukahn are so accurate: they've literally seen it all happen before.
* Final Fantasy IV abilities, which allows the party to run immediately from any non-boss battle.
* Final Fantasy IV, after going through the Eblan cave and finding yourself right

outside of the Tower of Babil, the heroes wonder how they're going to get in. Of course, Edge the ninja teleports all of them in. Gee, why do we even bother travelling anywhere or climbing up towers the hard way if you can teleport through walls?
* Final Fantasy IV aged Rydia from eight to twenty by claiming time moved extremely quickly in the Feymarch. Like the later Narnia books, when the party visits the place again later on, they're never inside long enough for it to make much of a difference.
* Final Fantasy IV allow him to analyze the statistics and current condition of whatever monsters your party is currently fighting.
* Final Fantasy IV and the whole song is him singing about how he likes Brent.)
* Final Fantasy IV appears to have a massive, ribbed equine penis continually jizzing blood out of the end. This particular appendage was removed in the DS version.
* Final Fantasy IV. A prince who will fight like a wildcat to protect his people, but never misses an opportunity to get close to pretty ladies.
* Final Fantasy IV, a sad piano remix of its overworld theme for the sad moments.
* Final Fantasy IV, as he was already suffering a crisis of conscience against his kingdom of Baron due to the immoral acts the king had ordered him to commit, which included unwittingly destroying Rydia's village by delivering a deadly item there.
* Final Fantasy IV becomes much easier to manage with proper use of it.
* Final Fantasy IV: Both the Dwarven Castle and Tomra qualify, by virtue of being located on the underworld deep inside the planet.
* Final Fantasy IV, but since the European version is in English and GBA games are region-free...)
* Final Fantasy IV called Whyt. Using the DS stylus, the player can change what its face looks like.
* Final Fantasy IV calls an "antlion" is a monstrous brown creature larger than a man which resembles no Earth animal and looks nothing like a real antlion except for its oversized tusks.
* Final Fantasy IV: Cecil and King Baron (Who gets to show them off as the Eidolon Odin).
* Final Fantasy IV, Cecil does this upon finding the King of Baron (i.e. his foster father) had sent him to unwittingly raze a defenseless village with his package.
* Final Fantasy IV. Cecil rescues her a bunch of times and is protective of her, though it's worth observing that Rosa is just as invested in protecting him, having learned White Magic specifically to do it.
* Final Fantasy IV chapter bundled in with the compilation, has Rosa outright state she's indeed pregnant.
* Final Fantasy IV Color, Game Boy Advance, Nintendo DS, Virtual Console, FOMA 903i / 703i and PlayStation Portable.
* Final Fantasy IV delivers the message to Cecil that Golbez will trade the Earth Crystal for Rosa's life, the messenger is allowed to leave unharmed, and before that, the white flag raised by the enemy airship is respected.
* Final Fantasy IV dies early in the game. Once it returns to the realm of summoned monsters, the Summoner can no longer be harmed by its death. Which is likely why Rydia always has her monsters show up for a single attack and then teleport away.
* Final Fantasy IV during the 17 years between games and only gets kicked out at the start of her chapter, but the only change in her appearance is her outfit.
* Final Fantasy IV ends with Cecil's and Rosa's wedding which also serves as their ascension to the throne of Baron.
* Final Fantasy IV features a couple instances. The Tower of Zot, a huge flying structure that falls apart moments after you leave it, never crashes anywhere. The Tower of Babil is perfectly fine (and is totally structurally intact, according to the sequels) after the Giant of Babil seemingly walks out of it. Similarly, in the sequels, there are almost no changes to the world map (not even changes to local climates, tides, or sea lanes) after one of the planet's moons flies off into deep space, never to return.
* Final Fantasy IV form of matter largely believed to be both invisible and

intangible, from the final boss.
* Final Fantasy IV: Goes good (advanced technology) and bad (mad scientists, rampaging mechs.)
* Final Fantasy IV had not just four crystals for the elements, but an additional four dark equivalents for the underworld. While these crystals are never threatened within the time-frame of the game (merely used as tools to reach villains' goals), it is strongly implied that they are just as vital to the world as similar crystals other installments in the series.
* Final Fantasy IV had the Feymarch and the Land of the Espers respectively, where the Eidolons(IV) and Espers(VI) lived.
* Final Fantasy IV has almost Vegeta-style pale-purple spikes that jut out above him. It's almost the exact opposite in official art, though.
* Final Fantasy IV has a perfectly breathable atmosphere and its gravity is identical to the heroes' homeworld. Just ignore the man-sized viruses and the killer plates of flan.
* Final Fantasy IV has a VIP room in one of the cities where you find a porno mag on the bookshelf. The screen turns pink and the music changes to reflect the mood.
* Final Fantasy IV has its foot in the underworld (which is deep enough that airships have ample sailing space above its mountains), crosses the surface through a huge hole and culminates high in the sky, way higher than the tallest mountains on the world map.
* Final Fantasy IV has pitiful stats in everything except speed; then again, one of his character abilities is to run and hide. The DS remake improves him to the point where he's legitimately as useful as characters like Rosa and Yang.
* Final Fantasy IV has several characters that fit this trope: Rydia, Tellah, Palom, Porom, and FuSoYa.
* Final Fantasy IV has the Epopts of Troia, a group of white magicians and diviners. Mysidia is also this, although it's more theocracy than a typical government.
* Final Fantasy IV, he is given the choice of killing Cecil or facing Dark Bahamut. Much of the previous trial highlighted presumed romantic jealousy that Cecil has Rosa's love, but the correct answer, choosing not to kill Cecil, signifies him coming to terms with this.
