* There's also this example, because the GM is railroading the plot and he and Legolas had already set up Legolas taking a shot at Saruman.
* There's also this exchange between Vegeta and Android 19 in Episode 36.
* There's also this exchange when Sir Lancelot shows up to "save" Sir Galahad from the "peril" of eight score blondes and brunettes between the ages of 16 and 19½:
* There's also this, from Holly: "Three million years from Earth, the mining ship Red Dwarf. Its crew: Dave Lister, the last human being alive; Arnold Rimmer, a hologram of his dead bunkmate; and a creature who evolved from the ship's cat. Message ends. Additional: As the days go by, we face the increasing inevitability that we are alone in a godless, uninhabited, hostile and meaningless universe. Still, you've got to laugh, haven't you?"
* There's also this memorable exchange from the second part of the Season 2 premiere "
* There's also this memorable line from "Love and Rocket," when Bender is caught in a compromising position with
* There's also Those From The Past, a group of villains lead by Saiki who time-traveled from the distant past and aims to take the power of Orochi for their own purposes.
* There's also Tiff and Glenn from the same series. Though Glenn is somewhat of a subversion and Tiff is...
* There's also Tom Bombadil who is so devoid of ambition that the ring has no effect whatsoever on him, not even its standard invisibility. He settled down into his ideal lifestyle thousands of years previous and he ain't changing now. This also made him useless as a ring-bearer or guardian, despite him being possibly the most powerful individual in the world; it's so meaningless to him that Gandalf thinks he'd just lose the damn thing and never think about it again.
* There's also Toph Beifong, whose name translates to "fragile lotus".
* There's also Toriel's ex-husband Asgore, a really huge goat guy with a pair of massive horns, manly facial hair, and an armor that would suggest you should stay away from him, who is the King of all monsters. Despite his imposing figure, he is loved by everyone under his rule. Thanks to Asgore's positive personality traits, he gained quite a following in the Furry Fandom with many fans drawing him as either a
* There's also Touma, who will help anyone in need. Usually this help involves punching someone in the face. While everything around him is exploding. During one arc, several factions are trying to capture, rescue, or kill Orsola Aquinas due to her supposed knowledge of The Book Of Law. When Touma rescues her, she is surprised and charmed to find that he didn't care about the knowledge at all. He was the only person who cared about
* There's also Trafalgar Law, who apparently can do similar things to other people. The first instance of him using tricks like that in the manga involves a justifiably weirded out marine juggling the talking head of one of his comrades.
* There's also Travis Mayer's "The Devil Went To Jamaica" which is misattributed

to both David Allen Coe and of course
* There's also "Trenderman", a character created on Tumblr after someone noted that the faceless, featureless clothing store mannequins resemble Slenderman. He generally shows up just to give fashion advice.
* There's also "twip" which was used often by Terry as an insult for his younger brother. Though it could just be a corruption of "twerp", a contemporary insult commonly delivered to someone smaller than the insulter.
* There's also two Georges: Fiona's father George Fennec and a gopher named George who transferred to said gardening team in 2019.
* There's also two Laurens: Lauren Mallard (Night Vale Radio Station manager and StrexCorp Shill) and Lauren James (Night Vale Weekly Gazette writer).
* There's also two lesser instances of Twilight Sparkle nearly falling to her doom. "
* There's also two versions of the basic Skeleton monster, two of the Skeleton caster, two of the Bat, two of the Man eater (a jungle-based killer plant), and many of the Zombie.
* There's also Tyrion's backstory going in this book and A Feast for Crows
* There's also Ulene Hlervu, castle mage to Count Indarys of Cheydinhal. She scoffs at the practice of worshiping the Nine, stating that worshipping Daedra is more reasonable, though still foolish, because it produces
* There's also Uncle Vernon's "Japanese golfer joke," which was orphaned for good reason, as the joke he's talking about is possibly one that's
* There's also Vaelia. Ariel released her when she saved her life, but this didn't prevent her from continuing to protect Ariel and follow her orders, and calling her "Lady-child." Since Ariel saved her from the gladiator pit, she considers her life to be Ariel's property, no matter what, large due to
* There's also Varrick. If anything, being ambiguous is his schtick. Without a doubt he hates Unalaq, but there's signs he's not completely on Korra's side. As it turns out,
* There's also Vegeta in the Frieza Saga, after being beaten by Frieza and on the verge of death he throws his pride to the side and begs Goku to stop Frieza; he even cries and is given a
* There's also Vincent towards Hazel, who's a more mature and level-headed version of this trope, at one point he even had an epiphany saying that it was time to move on from his high school-old crush on her. However, during the webcomic's final strips
* There's also what happens when you've got a Pokémon in your party with a Poisoned status effect inflicted on it; every few steps, the game's graphics go haywire for four seconds and
* There's also Willikins, who started out as Standard Issue Butler #48592, and then his combat skills were established in
* There's also Wonderella and Doctor Shark. The two get along great, they hang out together, he shows her inventions (and offers to do her cosmetic surgery in one strip). But he's also a diabolical supervillain.
* There's also Xen's barnacles: saggy bags of flesh with a long tongue hanging down... relatively appropriate appellation though.
* There's also Yue. Fourteen-year-old high school student versed in philosophy and Negi's sounding board for moral dilemmas.
* There's also Yuri, who is generally very supportive and encouraging to his younger teammates, Karol and Patty in particular.
* There's also Zero's Saber, for which you have to keep Zero alive throughout the entire game until you get to a certain boss and have Zero beat him.
* There's a luchador costume available as one of the many "costume themes."
* There's "a lumbering and ancient Winnebago, which smelled non-specifically but pervasively and unmistakably of male cat."

* There's always that threat that Mankind will stuff up something before any of the above "Real Life" Tropes even come close to coming true. There is even rumour of a small cult of people who believe that Mankind will push their "playing God" role too far and rather spectacularly fail, thus killing themselves. A wonderful quote from
* There's always the patent "reaching out patting each other on the back we're-not-gay-honest hug" which seems to be endemic to all males of a certain age when formality dictates some form of physical embrace.
* There's always time travel for bringing an extinct dinosaur species back, like Cassie from
* There's a Lysol ad that starts out with a woman taking her young daughter into such a restroom, making the point that your own toilet might be just as full of germs. Mocked in
* There's a magazine for people who like to get drunk. It's called "Modern Drunkard".
* There's a major difference in functionality between many electronic keyboards and traditional pianos: on traditional pianos, and electronic pianos made to emulate them, when you press a key the whole key goes down. On most electronic keyboards, however, only one end of the key moves down, in a swinging motion. It can easily result in both skilled and inexperienced pianists whiffing notes if they start playing up in the black keys.
* There's a Mako/Bolin fandom. Fans shipped them when they were revealed though the revelation that they're brothers caused most shippers to jump ship. Korra is
* There's a manga-only storyline where Kaoru agrees to help manage Mayotama's table at Comiket so she can find out the location of Hajime's magazines and doujinshi.
* there's a man with the gift of divine prophecy whose prophecies always.
* Theresa May called a snap election on the back of record-breaking approval ratings for her government, and it was widely expected that at the very least the party would significantly extend the small majority that David Cameron had earned two years prior, with some even predicting they might match their all-time best performance from 1931.
* There's a Mecha-Dinosaur boss that has a large one of these as a minion in the boss fight. If said poo snake dies, the dinosaur...umm...
* There's a minor meme making rounds on tumblr of making PSAs for proper clown care, pretending to be from a universe where clowns and the like are a domesticated species. At least one of them states that balloon clutches are their eggs.
* There's a minor political party in Russia called "Communists of St. Petersburg and Leningrad Oblast" (CPLO), that is best known for their public appeals, written in an over-the-top style of mock Soviet propaganda. They sent a hate mail to Steven Spielberg over
* There's a minor supporting character Bigelow Mouse had appeared on
* There's a misconception that Durmstrang is an all boys school and Beauxbatons an all girls one because they are in the movies. Both are co-ed in the books.
* There's a mission called "You Only Die Once a Night" where the Hollywood graveyard caretaker Romero(!) asks you to keep
* There's a mission later in the game where you have to steal a skycrane helicopter from a military fuel depot. The caption tells you to steal a military vehicle (which it promptly provides by spawning a Patriot humvee leaving the facility when you approach it) to gain entrance, but it's much easier to just grab the nearest airplane (which are freely available at this point) and parachute right

on top of the target's helipad or, if you completed the Flight School missions beforehand, clean up the bulk of soldier resistance on the rooftops with a Hunter attack chopper first. You can complete the game several times over the years without even knowing there was an entire part of the facility accessible and in place especially for the shootout that would ensue if you took the regular Dungeon path.
* There's a mission you accept from a boy who escaped from an orphanage. He hires you to kill the headmistress who is exceptionally cruel to the orphans. After you do so, the orphans
* There's a misunderstanding where Olaf the snowman believes that Kristoff is named Sven, the same as the reindeer. He proceeds to call Kristoff "Sven" for most of the film, until the scene where they meet his troll family.

* There's a mod for the game such that any time a guard says that line, they get struck dead by a bolt of lightning. Thankfully, the guards respawn, so this doesn't leave Skyrim undefended.
* There's a moment during the song "Never Had a Friend Like Me". During the song, the Genie uses his magic to make a group of harem girls appear. Normally this would be (somewhat) harmless but when you consider both the way the girls were acting towards Aladdin and how Al himself reacted it seemed like one of the girls (the one in the middle to be exact) was giving Al

* There's a more straightforward example when Paul is strolling incognito through Gotham and doesn't bother to cross the street to avoid three teenagers. One of them confronts him and starts mouthing off, then shoving him — to absolutely no effect — and then notices his glowing orange eyes. And ability to teleport. No hard feelings, though; Paul just smiles at them, suggests that they all keep things peaceful, and
* There's a much more extended example: "Oh, I'm sorry. I can't divulge information about that customer's secret illegal account. (
* There's a museum in Galveston, Texas that had an exhibit on the world's most dangerous creatures, with pictures and a few of the smaller ones. At the end of the exhibit, there's a picture of "The deadliest creature in the world". There's only a mirror.
* There's a museum that offers a sample of different exotic food in most episodes.
* There's a musical adaptation of the Bible called both "The Toymaker's Dream" and "The Masterpiece" which has a song titled 'You can be bought at any price' play during the shenanigans of Judas betraying Jesus. Jesus belts out "Then let this cup of poison pass; if not, then let your will be done!" right before getting captured.
* There's a myth of a place called Jelly World where everything, even the people, is made of jelly. But it's not a myth —
* There's an 8/10-year-old girl on the Vampire Council in the second season of
* There's an absolute clusterfuck of a match between Lena and Lana Luthor in
* There's an absolutely hilarious parody of this in the fifth episode of the first season of
* There's an absurdly popular shopping center near the University of Central Florida that constantly streams a mix of the least enjoyable music they can find at peak "young people hours," presumably to make them go the hell away. Doesn't work; the youth counter by bringing their own music (think iPods and boom boxes) to drown out the muzak.
* There's an account of a rogue baboon killing people and eating their brains.
* There's an actual creature called a Genius Loci. They form from places that are

undisturbed for a long time. They're normally not intelligent, but can enslave a creature, which then gives them intelligence and the ability to speak. They're often, but not always malign.
* There's an actual DVD collection of their top ten favorite episodes (at least, made up until that point); notably, there are no episodes from
* There's an actual necromancer early in the series whom he fools into reawakening a dragon. He pulls a
* There's an ad campaign for Chef Boyardee which is this same idea, except the harm comes to a display pyramid of cans instead of the woman who won't stop talking about the full serving of vegetables in the product.
* There's an ad circulating for Tony Hawk sports gear (mostly bikes) which feature kids on a tour of the factory suddenly break formation, hop on something with wheels and ride it out the door, much to the chagrin of their
* There's an ad for a home makeover show that started by pretending to be a standard "game" banner ad.
* There's an ad for a Louisiana lawyer called Patrick Daniel that uses blue screen effects to make it look like he's driving a car that's falling apart. He throws the steering wheel off screen and we hear a cat yowl.
* There's an ad for Barclays Bank that has a man chasing a pallet of gold bars on a tilting floor. They keep sliding away. At the end of the advert, with the help of Our Product, the bars slide downhill towards him and there's a
* There's an ad for Orbit gum that implies that using the product will give one's girlfriend the impression that one is cheating on her, possibly with

* There's an ad showing a sexy female cop searching an equally sexy woman while she has her hands on the hood of her car.
* There's an advert for Aero in which a man wrapped in a towel explains
* There's an advertisement for a particular doll out there that comes in three versions. They are, shot for shot, identical; the only difference is that the child and the doll the child is playing with are, respectively, white, black, and
* There's an ad where a woman on a plane attempts to climb over the sleeping man sitting next to her to get to the aisle. Through a series of mishaps, she ends up with her sleeves snagged (pinning her arms behind her back) and her blouse popping open. The man wakes up with the woman's
* There's an ad which plays with this trope: it turns out the product is already on the shelves, and the store is already open.
* There's an alternate dimension, and the walls are breaking down. Things in one universe begin to affect the other, or are even forced to exist in the same place at the same time, to disastrous effect. The other world has it worse and is becoming nearly unlivable, but "ours" is on the same path, and if unchecked, both worlds will be destroyed.
* There's an alternate take on this in the unused ending: Seth makes the same deal with the Feds and leaves the building when a customer whose money he stole pulls up in his car with and walks in with a concealed gun. He misses Seth himself, but it's not clear if he went on a shooting spree at J.T Marlin after their brief run-in.
* There's an amazing array of Krusty-Brand products ranging from home pregnancy tests ("May cause birth defects") to contracts ("Hey hey! They're binding!") to crowd-control barriers ("Krusty sez get back!") to facial hair removers (which are "probably" supposed to make your upper lip bleed, according to Johnny Unitas). In "The Last Temptation of Krust", Krusty realizes he's lost touch with what audiences find funny and ultimately becomes a stand-up comedian who launches several tirades against his former sponsors. And then
* There's an amusing scene in the first book where Anton, the protagonist and agent of the Night Watch, uses his magic to force an annoying street hawker to become more moral and is immediately called out on it by a pair of Day Watch agents. Anton tries, unsuccessfully, to persuade them that the hawker's quality of life will decrease as his morality improves, and thus he has not violated the balance.
* There's an amusing scene regarding these about two-thirds of the way through the

book, where Dodson explains this to his parents and that one of the bombs will be directly overhead by the time they finish dinner. His mom panics — "What if it falls?" — which leads to Dodson having to explain how orbital mechanics work and that if Space Patrol wanted to nuke them they'd use a different bomb further back on the same orbit that could actually dump enough velocity to hit them. Dad doesn't find this very reassuring.
* There's an Angel in Dickenson Cottage Lodgerman explicitly tells Kerry that her brother can't come to Whateley despite his enormous magical potential because Whateley only trains students who can already use magic. Ayla can't do this, but is somehow getting enrolled in a Magic 101 course anyway. Lodgerman may be lying for some reason or another, of course, but it isn't addressed.
* There's an argument that virtually every play by Henrik Ibsen lacks an
* There's an Art Brut song called "18,000 Lira" about a failed bank robbery, which concludes: "sounds like a lot of money."
* There's a Native American legend about Coyote where he ends up in the home of an old woman with two daughters. One is her actual daughter and the other is a stepdaughter. She has given both of them teeth so that they can kill the men who come, so the woman can steal their belongings. The stepdaughter is sent to seduce Coyote, but since she hates being forced to do this, and knowing Coyote is a hero, she asks him for help. He then takes a sharp stick and lets the daughter's teeth gnaw on that, distracting her so he can kill her, and then the old woman. He asks the stepdaughter to become his wife. Pragmatically, he then has to knock out all the sharp teeth, but saves a little blunt one that they find is rather pleasurable to have during the act.
* There's a Native American legend (which nation is unknown) involving a giant rattlesnake several hundred miles long.
* There's an Australian city in the state of Queensland called the City of Townsville. Yes.
* There's an Australian poem about 'Feral Mixed Grill', made from virtually every creature in the Australian outback (and probably illegal, given many of them are endangered or protected). It tends to turn the consumer into an outback animal themselves, temporarily.
* There's an early side quest in Emerald Vale where you either destroy or repair a malfunctioning robot. One possible ending is to have
* There's an e. e. cummings poem about this: 'annie died the other day'.
* There's an engine in the Shell station. Rumors say it can be installed in one of the cars, despite how the setting offers plenty to contradict this; too many paths are collapsed/caved in to travel freely by car, and protagonist Harry is a writer by trade, who is
* There's an English legal anecdote about a judge who was called a "big-nosed bastard cunt" by an angry defendant. When his wife was told about this, her response was "but you haven't got a big nose".
* There's an entire category of Christian Saints — the cephalophores — who are usually depicted as holding their severed heads.
* There's an entire class of demons (Libris demons) who are tasked with killing any ordinary mortals who discover that they exist. Those demons are discontinued, however; after the Season 3 finale, from which the side of good lost Prue and the side of evil lost Tempus, they pool their powers to create The Cleaners, a
* There's an entire, darkly surreal section devoted to the Mad Hatter's insane fantasies, where Batman winds up in another hallucinatory world. Also like Arkham Asylum, the gameplay was unchanged.
* There's an entire family of puppet digimons in the verse. Interestingly enough, almost all of them are classified as
* There's an entire genre where every notable show and game has done this:
* There's an entire industry built around selling people merchandise with their family crest. These can be online, at state fairs, and even at the Disneyland Castle. All of these companies claim to be vigorous researchers, but they're misleading and capitalize on most Americans' ignorance of heraldry. First of all, there's no such thing as a "family crest"; in heraldry the crest is a helmet or

crown above the shield to indicate the holder's rank. The only legitimate thing similar is the clan crests of Scotland, but these look totally different and the custom is only about 200 years old. Secondly, coats of arms are granted to individuals, not families (this isn't Westeros). The children of the bearer usually modify their arms to differentiate themselves and only a firstborn son may inherit it unmodified. Thirdly, these companies claim that every last name in Europe has a coat of arms when in reality only noble families and a few exceptional commoners do; plus the entire business is built on the false assumption that everyone with the same surname is related. Often these businesses will say that they used legitimate sources like Burke's Peerage, and perhaps that's true. Whatever design you see presented as your family arms was probably taken from the first person with that last name they could find with arms, which would be akin to using the Golden Arches as the symbol of everyone named McDonald.
* There's an entire luchador genre in Mexico where the hero is a real luchador playing himself. The most popular series (52 films!) starred
* There's an entire subplot in the "Season of Bloom" chapter involving the local goblin tribes. They think the plague of magical parasites turning humanoids into monsters is a sign from
* there's an entry that defines her eyewear as ''manstopper glasses''.
* There's an episode about a college student caught dumping her unwanted baby. By her father. Who she basically just met. Because she tracked him down.
* There's an episode about the murder of a teenage girl. The cops keep pursuing the girl's father, as evidence indicates the girl was sexually abused, but he keeps protesting his innocence. It's ultimately revealed that
* There's an episode called "Haunted" in which police officers on a stake-out in an allegedly haunted building recounted spooky but just-about-plausible things that happened to them (a lost girl with uncanny similarities to a murder victim; a woman who dies at the around same time as her psychotic and jealous husband, who left a message on her machine saying "I need you with me"), before ending with DS Stanton (the
* There's an episode entitled "Snuff", where a snuff film actress was murdered during the performance.
* There's an episode in which a King Charles Cavalier Spaniel is purchased because it has "one leg shorter than the others" and shown at a Westminster-like dog show
* There's an episode in which a technically-minded alien race is entranced by the Doctor's singing, an art that they'd never experienced before. It later turns out they have distinctly non-human tastes in this department; they are impressed by technically hard pieces that have no rhyme or reason to them.
* There's an episode in which a teenager impersonated a uniformed police officer, arrested a suspect, and handed him over to Benson and Stabler. Once the ruse was discovered, it led to a big legal issue in the suspects' trial. This one wasn't intentionally committing a crime. He was just overenthusiastic about becoming a cop one day
* There's an episode in which Batman meets Catwoman in the snow, and she has to ask, "Are you getting soft on criminals, or just on me?"
* There's an episode that has a miniature Marge appear at the bottom of the screen and at first, it seems like one of Fox's advertisements... until a miniature Quagmire attempts to rape her.
* There's an episode where Adam and Blake have a crush on the same woman, with Adam thinking she's black and Blake thinking she's Asian. They awkwardly try to trick her into revealing her ethnicity until she explains that she's both; she has a black father and a Filipino mother.
* There's an episode where a father kills himself to give one of his organs to his son.
* There's an episode where a married couple is found to have genital herpes. The wife, naturally, is furious, assuming her husband to be unfaithful. He denies it. House then proposes that one of them could've picked it up in a public toilet. The wife claims she knows about it and always covers the toilet seat. The husband claims he never knew. All seems resolved... then House points out that the husband

agreed way too quickly. Turns out the guy really is a cheater who was just trying to avoid the reveal by accusing his

* There's an episode where Lwaxana Troi is fascinated by someone she cannot read. He turns out to be a hologram, which she is quite embarrassed by.
* There's an episode where Malcolm meets a female friend after the summer holidays, and can't work out why she's suddenly slouching around in baggy jumpers snapping at people. Turns out she...
* There's an episode where Martin wants to get out of a date with the mother of a woman that Frasier met when they were at the opera together, and tells the mother that he's gay. She tells her daughter, and the daughter sets Martin up with her gay uncle, also at the opera that night. It takes Martin a long time to realize it, but when he does he goes to great lengths to get out of dating the other man, including introducing Niles as his boyfriend. One of the best moments happens when Niles gets fed up with being forced into the lie and stages a break-up so over-the-top and hilarious that it seems implausible even compared to one of Frasier's typical break-ups.
* There's an episode where no part of the family's beach vacation goes according to plan. When they ask the hotel clerk about the advertised beach view, she sighs and looks wistfully at the neighboring building, telling them they're a few years too late.
* There's an episode where Salem is about to be launched into space. The launch gets temporarily delayed by a "code fifteen" - which Sabrina later finds out was Uncle Quigley walking around without his pants.
* There's an episode where Stella participates in a beauty pageant, and another where Tecna is strongly suspicious of Professor Avalon.
* There's an episode where Stimpy genetically engineers himself to have an additional ass cheek.
* There's an episode where the inmates of an insane asylum get loose and take particular pleasure in using a very nasty device that simply activates the pain receivers in the brain, resulting in an increasing sensation of pain the longer it's kept on with no evidence afterward, and theoretically nothing to stop the pain until you die from it. The fact that
* There's an episode where they go to Australia and end up having to seek refuge in the American embassy:
* There's an episode where Will goes back to West Philadelphia, where he fights an old bully who he describes as the "dude who be spinnin' me over his head in the opening credits."
* There's an episode where Woody is eating a bag of chips while performing an autopsy.
* There's an especially critical part in German when the parson says "And he took bread, and gave thanks" which in German is "Und er nahm das Brot, dankte".
* There's an even more egregious example elsewhen. Kain at one point uses his telekinetic might to blaze a path through some ruins. Cut to Raziel 200 years later, and the columns are somehow untoppled. Made even worse by the fact, later on, you do make use of Kain's temporal trailblazing.
* There's a new Defense Against the Dark Arts professor in every book. They always end up somehow playing a significant role in the book's greater plot and
* there's a new sheriff in town to Joel and the 'Bots... then went straight back to taking their order for take-out.

* There's a new teacher, Koshino-sensei. She was introduced in volume 3 as the fashion teacher with a not-wholly-undeserved reputation for being harsh.
* There's a new version of the Sentinels, only this time, there's something different.
* There's an exaggerated one from Papyrus and Sans when you surprise them having a private conversation and they turn back and forth somewhere around a dozen times.
* There's an example of the permanent switch in Tohru, who was already pretty effective before he switched, and then learned magic and upped his success rate.
* There's an example similar to the Strikers Sound Stage X example above, in which a hero infiltrates a villain's organization
* There's an exception in one section in the sequel's tutorial mission. Just prior to rescuing Joker from the cockpit, Shepard is temporarily in vacuum, and hears nothing but their own breathing. Even the

* There's an important sub-plot involving traditional gladiatorial games in
* There's an impractical prison that works by shifting the gravity horizontally and turning a long room into a deep pit. It has no door, fails during a power outage and could be escaped from by having a friend lower you a rope. But, dammit, it looks so
* There's an indie card game known as "Slash: Romance Without Bounderies," which is essentially Cards Against Humanity with crossover ships. Seen
* There's an infamous police sketch of a man in a baseball cap and large sunglasses, with the bottom of his face hidden with a bandanna. What was that drawing supposed to accomplish?
* There's an infamous series of spots (including a couple of nasty looking botches) from a WWE(then F) match between
* There's an (in)famous Spanish-language joke with a long setup involving a circus coming to a remote town with an act called "EL PAN QUE HABLA" (the bread that talks). The isolated villagers sell out the circus week after week, with lines

around the block to see the legendary bread. It all culminates when the ringmaster brings out a slice of bread on a plate with a glass of water. He asks a volunteer to try the bread after pouring the water on it, and asks if it's hard or soft.
* There's an infamous wreckage of a ship in the salty, dried-up lakebed known as Shimmering Flats in
* There's an insurance commercial in which a tailor is outfitting the ad's spokesman in a custom-made suit, pinning sections of material in place as his client talks about Allstate. There's a three-quarter-length portrait on the wall behind them, which shows the client
* There's an interesting example with submarines, as well. Nuclear-powered subs are unparalleled in their ability to roam the open ocean for months at a time with little to no support. For most of the mid-late 20th Century, they also performed much better in terms of submerged speed and other factors. However, beginning with the Soviet Kilo class in the 1980s, diesel-electric technology started catching up in performance, if not loitering time. While their batteries limit the amount of time they can spend underwater, diesel-electric subs are now significantly
* There's an interesting example with the Talosians from the original pilot episode "The Cage." Their brains are actually significantly more evolved than those of their ancestors, to the point that their powers of illusion essentially (though not technically) make them
* There's an interesting version where the King spends all day hunting dragons and the Queen spends all day sewing, and they decide to switch not so much out of "your job must be easy" but out of sheer boredom. The Queen finds that dragons are actually nice and also almost extinct thanks to all the hunting, and the King finds that he doesn't really like sewing. At the end of the day, they've decided that the way it's always been done is stupid, so the Queen finds better things to do than sewing and the two of them invite the dragons to come over weekly for tea.
* There's an internet joke about pretty girls doing ugly faces. Most of the girls have nice bodies, but the expressions they make can range from weirdly funny to outright disgusting. This is invoked by pretty girls
* There's an in-universe example in the "Mom and Pop Art" episode of
* There's an inversion at the end of the Griffin family history episode, where there's a whole conversation where Peter confesses that he doesn't like
* There's an inversion of the trope when Vaarsuvius cast a Cone of Cold on goblins,
* There's an inversion with the Intelligence Division, though. Hazama is quite snazzy in his suit, slacks and fedora despite being a total troll at best. This contrasts with Makoto, who is described in-universe as being "one strong breeze or sudden cough away from a massive wardrobe malfunction".
* There's an invitation-only subset of the Shriners in some states called the Jesters. The sole purpose of this secret, invitation-only group is (by their own charter) to be sillier. Oh, and they often end up wearing the stereotypical "Jester's Hat".
* There's an Irish story in which a farmer sells his soul to the Devil for enough money to send his three sons to school as a doctor, a priest, and a lawyer. Come the end of his life, the Devil shows up to collect, and the farmer begs for just one more day to say goodbye to his sons. The Devil agrees, and the doctor arrives to send his father off but begs just one more hour for his brother. The priest comes in and begs another hour, but come the third son the Devil says no more hours, so the lawyer asks him to refrain from taking his father's soul until the candle stub in the corner burns all the way down. When the Devil agrees, the lawyer blows the candle out and pockets it.
* There's a Nissan ad that shows the car jumping from a ramp to the top of a moving commuter train. The warning reads "Do not attempt. Cars cannot drive on trains."
* There's an Italian comic by Marco Rota where Donald takes a nap on a bed in Gyro Gearloose's workplace, but accidentally activates a dream device by releasing a nightmare potion. The rest of the comic features freaky scenes such as
* There's an Italian film where a pair of lovers reincarnate several times. Sadly,

in the film's last vignette the woman has reincarnated and is a young girl, only to meet her lover while he's still alive from the last cycle, and an old man.
* There's an Italian joke subverting this trope: Jesus walks along the street when he sees a sad old man sitting on a bench. He stops and asks him what his name is and why he is sad. He says his name is Joseph and he has lost his son. "How will you recognise your son?" "He has nails in his hands and feet." "Father!" "Pinocchio!" (Geppetto is a diminutive for Giuseppe, the Italian form of Joseph.)
* There's an LCD mod where you can have your LCD seemingly emit white light and by wearing special glasses, you can see what's on the screen. It's actually taking one of the polarization filters out and turning it into glasses.
* There's an obscure villain from Batman's Rogues Gallery named Orca that's, you guessed it...an anthropomorphic orca. What's better is she's female and quite large (probably about the same size as Killer Croc). Naturally, only the fandom seems to even know she exists.
* There's an obvious shout out to Ras Al Ghul/Apocalypse in that he believes that only the strongest and smartest will be able to survive the virus (possibly through his intervention) with those he deems unworthy being eradicated.
* There's an octonary star system where eight stars are arranged in seven distinct orbits: four pairs of stars orbit each other, two pairs of those orbit each other in a larger radius, and those two pairs orbit each other in the largest radius. There's a habitable planet named Aia in the center of the main orbit. It was artificially constructed so that any spacefaring civilization would notice it and investigate, since the odds of such a system forming naturally would be infinitesimal.
* There's an odd example of what seems to be a genuine inside joke in the original movie's first draft. George Lucas's earliest concept for
* There's an office building in the St. Louis suburbs called Cequel III.
* There's an official figurine of Nyarko decked out this way; while she hasn't done it in-series yet,
* There's an offshoot of roleplaying games developing that might be called "world-building games", in which the players collaborate to tell the history of a world that develops in-play.
* There's an old baseball story about a player who actually pulled this on an umpire after the umpire made a call he didn't like. Predictably, the umpire
* There's an old czarist tradition whereby Moscow is claimed as "the third Rome". The idea is that the center of the Christian church began in Rome and (if you're an Eastern Orthodox believer) moved to Constantinople ("the second Rome"). Then, after Constantinople fell to the Muslim Turks, the Eastern Orthodox Church moved its headquarters to Moscow ("the third Rome"). Thus, Russia claims itself as the spiritual successor to the Roman Empire by way of the
* There's an old Hollywood urban legend that tells of an actor and actress filming a passionate love scene. The director says cut...and they don't stop. Everyone else then quietly leaves the studio.
* There's an old Italian folktale where the hero makes a bet with his brothers-in-law that the Sun will set at midnight. They laugh, and are glad to get all his stuff, but the hero made a deal with the Sun, and the Sun doesn't set until well past midnight.
* There's an old Jewish joke about a father who gives his son one piece of advice as he leaves for college: whatever you do, don't marry a girl who isn't Jewish. Sure enough, he goes to college, meets a girl who isn't Jewish, falls in love, and gets married. To appease his father, she converts. In fact, while taking conversion classes, she gets so excited about the religion that she becomes a fervent believer. Fast forward a few months, and the father drops by the son's house and tries to get the son to come to the movies with him. The son refuses, saying that his wife tells him that it's not allowed for Jews to go to the movies (or do anything involving electricity) on Saturdays. Punchline: "I TOLD YOU NOT TO MARRY A GIRL WHO WASN'T JEWISH!"
* There's an old Jewish story that's a good way to introduce the concept of chutzpah: a man convicted of murdering his parents begs the court for clemency on

the grounds that he's an orphan.
* There's an old joke about a bar bet where a customer bets he can't bite his own eye... then of course takes out his false teeth.
* There's an old joke about a barrister's son who is asked if he knows anything about the broken window in the schoolroom: "In the first place, sir, the schoolroom has no window; in the second place, the schoolroom window is not broken; in the third place, if it is broken, I did not do it; in the fourth place, it was an accident."
* There's an old joke about a boy who figures out that he can get adults to give him stuff simply by saying a sly "I know the truth..." and leaving it at that, allowing their minds to jump to "What could he know?" and pay him off without confirming what it is he "knows". Then he tries this on the milkman, who, rather than paying him off, drops down in tears of joy and exclaims "SON!" as he hugs him.
* There's an old joke about a man being accused of breaking his neighbor's teapot. He responds: 'I never touched it, it was broken before I got it, it was in perfect condition when I returned it, and there is no teapot.'
* There's an old joke about an American general visiting an Israeli military base. He's making rounds with the base's commandant (also a general) and glumly notes the total lack of discipline to his colleague, pointing at a private who just passed them without saluting. The Israeli general rushes after the private... only to ask if the guy is upset at him for some reason.
* There's an old joke about a trainee sailor asked how he'd deal with a series of increasingly severe incoming storms; in each case, he answers that he lowers another anchor. When finally asked "Where are you getting all your anchors?" he replies "Same place you're getting all your storms."
* There's an old joke about a woman seeing a parrot for sale very cheap, and upon asking the seller why it is so cheap, is told that it used to live in a whorehouse and thus is prone to saying some pretty vulgar stuff. The woman buys the parrot anyway and takes it home. The parrot looks around its new home and, assuming it to be another whorehouse, says, "New house, new madam." Then the woman's two teenage daughters come home and the parrot says, "New house, new madam, new whores." Finally, her husband comes home and the parrot says, "New house, new madam, new whores, but still the same old customers. Hello, Larry."
* There's an old joke about a woman whose son and daughter got married within a week or two of each other. A few months later, a friend asks her about how her daughter is doing. The mom gushes about her son-in-law, how he cooks for her daughter, gives her lots of gifts, and sends his wife to a spa once a month. The friend then asks how the son's marriage is, and the mother
* There's an old joke about how a man goes to God complaining that his wife got the better job. So God lets him switch bodies with his wife, telling him he's got a week to see what it's like. By the end of the week he's burnt out and ready to switch back, but God has some bad news: he's pregnant!
* There's an old joke about how people generally don't "get" the previous/next generation's music that has a father saying "if it wasn't for doctor's offices and elevators, you wouldn't know what
* There's an old joke-cum-urban-legend that subverts this trope. A wife who disguises herself and follows her husband to a costume party. She seduces him as this trope, but learns later that he gave his costume to someone else.
* There's an old joke: "How do you pronounce the capital of Kentucky? LooISville or LooIEville?" The punchline is "Neither, dummy. Frankfort is the capital of Kentucky." (It's pronounced "LOO-uh-ville" by natives). The joke can work with other cities like New Orleans.
* There's an old joke saying that tapdancing was invented by a man called Stepan Stepanovich who was inspired by the unusual dances his family performed every time he occupied the toilet for too long.
* There's an old joke that goes: "I bet you'd like to see me dead just so you could spit on my grave, wouldn't you?" "Nah. I don't like to get in lines."
* There's an old joke/urban legend told about the armed forces (doesn't matter which country, the agency names can be easily swapped out). A recruit is handed a

gun and told that the final test is to go into a room and shoot whoever they find there. The first goes in, finds his wife or mother, and immediately turns around and leaves. Repeat with various branches of the military, until the Navy SEAL/SAS/FBI agent goes in, and comes out 5 minutes later. "Some idiot loaded the gun with blanks! I had to strangle them to death/beat them to death with the chair."
* There's an old joke where a group of aliens is having a conference about Earth. The keynote speaker gets up and informs the gathered scientists that, "We have now been performing our rectal probe study on the inhabitants of Sol 3 for 60 of their years. So far, the only information we have reliably obtained is that one in six likes it."
* There's an old joke where a man gets hit by a car while committing a bank robbery. He wakes up in a fiery pit.
* There's an old joke where a wise rabbi says, "Life is like a fountain." When asked why, he thinks for a long time, and finally says, "Fine, so it's not a fountain."
* There's an old linguist joke about a linguist who is trying to learn a culture's language. Everything they point at has the same word in that language. At first the linguist thinks they have discovered a language consisting of a single word... Until they learn that the word they've been hearing is the culture's word for "finger".
* There's an old one about a genteel woman inquiring about toilet facilities at a campground - she even found her euphemism 'bathroom commode' too vulgar and shortened it to 'B.C.' which causes
* There's an old railroad bridge in Durham, North Carolina, built before minimum clearance requirements, that is just 11 feet 8 inches (3.56 m) above the road that runs under it. There are many trucks that are more than 12 feet (3.7 m) tall.
* There's an old sea shanty from the late 1800's called "New York Girls", in which a sailor spends the night with a hooker, only to find out in the morning that she's robbed him of everything he owns including his clothes. He's forced to don her clothes to return to his ship.
* There's an old song involving a young girl being offered a coat, first by an older man and then by a younger one that she's interested in.
* There's an old Spanish folk song about a man having a romantic night with his newlywed wife, who just happens to have deceased several years ago. The last lines are more or less translated to:
* There's an old story about a German mayor who didn't want people to let their dogs run unleashed in the local forest, so he had put up a sign stating: "Anyone who'll let his dog run unleashed in the forest will be shot!" When someone remarked that this could be read as if the
* There's an old story, occasionally found in some advice books, about a business owner who would take his prospective employees out for a meal. If the prospect put salt on the food before tasting it, he'd know they were someone who made assumptions, and therefore not someone he wanted to hire. Problem is, the prospect could simply be familiar with the restaurant and how they season their food. Or they could be someone who seasoned their food by reflex, out of nervousness. Not to mention how business and brunch are two different things. It would be like assuming someone who forgets to use their turn signal once has memory problems.
* There's an old TV ad in which a couple is looking through a window into their neighbors' impeccably neat and organized living room. The husband remarks that people like that are always too uptight, at which point the neighbors go running through the room in full BDSM gear. The wife then observes, "They don't seem so uptight."
* There's an old, well-worn 50s-style diner called Scram's Diner in the Widow's Creek neighborhood of Gotham where Tim and Steph go to have comfort food and discuss her feelings regarding her father's death in
* There's a non-collectible card game by the name of... you guessed it,
* There's an online game called Baby Hazel Tea Party, in which Baby Hazel has a number of tasks to perform to prepare for her tea party. According to the

description text, though, everyone is happily participating, making this a subversion.
* There's an online shop called Me Undies which carries underwear for both men and women in cute goofy prints, as well as standard solid colors.
* There's an Orbitz commercial where a guy is watering his lawn, and a scientist-type from an earlier spot floats down in a hovercraft. Getting out, he strides over to the guy and removes an envelope from his coat.
* There's a normal, area-specific enemy that can only be hurt on a spot on its back. Circle-strafe all you want; it'll keep up. You have to
* There's a note in the Hawke Estate that reads "I'm very proud of you. Love, Mother." Easily missed, but hardly forgettable
* There's another 2020 ad that shows a woman waking up in bed as upbeat music plays, and then she rolls out of bed, taking the bedding with her and proceeds to roll out of her house and down the street in an ever-increasing ball of stuff that she picks up as she rolls. The ad is for home insurance, but it looks more like some sort of ad for

* There's another brilliant exchange where Robin asks if the gang has ever watched her show, and they all lie and say "yes", except Barney who says he's never seen it. Then she asks what their favorite part is and they all make something up, except Barney, who repeats that he's never seen it. Finally:
* There's another case where Lilo and Mertle bet their prized possessions in a baseball game (Lilo her
* There's another challenge that replaces No Overdrives (NO) with No Items (NI). Neither have been completed.
* There's another early episode, where Peter loses his job and goes on welfare. When he tells Brian he got off subject by telling Lois she was getting fat, Brian rolls up the newspaper and whacks him twice saying "No. No."
* There's another episode in which the boys develop X-Ray vision glasses, and use them to find Mrs. Garcia-Shapiro's missing wedding ring, which went down the drain.
* There's another episode that fits, "One More Pallbearer". A mentally unstable millionaire offers three people who wronged him the chance to ride out an atomic attack in his personal underground shelter, but they all refuse. Then, the attack happens. Devastated, he emerges into the ruins of the city, but the
* There's another episode that perhaps causes a little confusion about all this - when Tolkien finished the manuscript, he passed a few copies around to friends and favorite students. One of these traveled from one of his students to a friend of the student's, and eventually to the hands of Stanley Unwin, one of the heads of Allen & Unwin (Tolkien's first and greatest publisher). It was Unwin who then presented the book to
* There's another episode where a female Charizard appears. No points for guessing
* There's another episode where a guy snags a date with Elaine by making a bet with her over whether an obvious example of this trope is true or false, with the terms being that the loser buys the winner dinner. Jerry realizes (and explains to her) that the guy did this
* There's another episode where a serial killer carves a "Y" onto their victim's chests. When they've arrested a suspect, another body turns up, but the medical examiner determines that the "Y" is different; the previous victims were carved with the right hand, this one with the left. The suspect in custody is right-handed, but Calleigh notices that his sister wears her watch on her right hand.

* There's another episode where servicemen attempted to sneak five or six Asian women overseas in a shipping container, the plan being that one of the men would be on the ship to help them. However, none of them were, and all but one woman died in transfer, and she was taking her revenge on the men one by one.
* There's another episode where this trope is used in spirit; Frasier and Diane have a long heart-to-heart and they come to terms with their history together, and Frasier says his heartfelt goodbyes and turns to leave in this perfect moment... only to accidentally walk out the stage door, which has been designed to look like the
* There's another episode where Tom Paris gets too close to an alien shuttle with a neural interface.
* There's another example, called out in-setting as even more extreme than the Terran takeoff. The Daryens (
* There's another featuring Pepe Le Pew where the animals react to his smell.
* There's another folk legend about Native Americans and the Spanish. One of the first tribes an expedition came across told them that they would find gold with a mysterious tribe. They were given the name and set off. Every tribe they came to on their journey always said that the tribe they were looking for was just a few days' march away. The name the conquistadors were given was a coded message to the other tribes meaning "These guys are trouble, get rid of them."
* There's another gag where a voyeur spies on a naked woman through a keyhole. When she notices him but decides to let him in, he ignores her and proceeds to spy on the empty hallway.
* There's another group of mutants roaming in London's sewers that make the Morlocks look like supermodels.
* There's another hilarious incident when Phase figures out a new technique to fend off bullies - he can, by phasing just right,
* There's another instance for Starfire, in the episode "Go!". Throughout the entire episode, Starfire has been wearing her prison garb and either screaming at everyone or being suspicious of them (since she just escaped being sold into slavery, that's understandable). At the end, when the enemy has been driven away, Starfire shows up wearing the outfit she spends most of the series wearing, smiling and looking happy and relaxed for the first time. Everyone is amazed.
* There's another instance in the same cartoon where the blonde scorekeeper (based on Red Hot Riding Hood by Tex Avery) needs to do complex math equations as Tom, then Droopy, make the dive and perform multiple acrobatic feats on the way down.
* There's another insurmountable waist high fence in a backyard in Takoma Park.
* There's another Jimmy Durante movie in which he's guarding the dressing room of the beautiful young singer played by Kathryn Grayson from a pushy fan. "She's got twelve kids and I'm the youngest!"
* There's another justification for this - Zsasz is actually bouncing his phone signal around the network, making it harder to pin-point where the signal is coming from (it's implied that the Riddler is helping him).
* There's another justified 2nd ed version — Clarity. As an Alchemical's Essence rises, they run the risk of becoming more mechanical in mind as well as body, bordering on
* There's another layer of unrealistic reality here, as many cars' traction control systems will interfere with the performance of the powertrain, say by cutting fuel. Hard cornering while accelerating is very much hampered by most traction control systems, so it's very common for a performance driver to turn them off (or to a less intrusive setting). If the characters in the chase are skilled drivers, it's totally believable that they would disable such aids. A strong case can be made for justifiability here, but someone who doesn't performance drive their car (99% of people) wouldn't know.
* There's another legend that he was staying with a king who had (again,
* There's another, less obvious weakness - Diana Prince needs enough freedom of movement to spin to turn into Wonder Woman. No villains
* There's another minor exception in Explorers' "Sentry Duty" minigame, where the PC is the one who shouts "The footprint is [Pokémon]'s! The footprint is

[Pokémon]'s!"
* There's another mod called Chronicles of Talera that features a faction called the Blighted Plague. It's basically a faction of egalitarian Necromancers that brought back the corpses of the dead to overthrow the aristocracy. At first they were good guys, but after discovering tools to capture the souls of their enemies they began a civil war that really doesn't play any role whatsoever in the actual game.
* There's another, more subtle instance of this a few minutes earlier. After Darth Vader shoots down two of Gold Squadron's Y-wings during their trench run, the lone survivor — Gold Five — radios Red Leader to report their destruction. Red Leader responds with "I copy, Gold Leader," acknowledging that as the sole surviving member of the squadron he became its leader. At least,
* There's another, more subtle, level to this one. With a somewhat nerdier level of knowledge it is also possible to read "Fabricati Diem Pvnc" as "Built in the year dot", which given the preceding description of the ancient building is highly appropriate.
* There's another musical version of spot monkeys. There are several singers who can achieve very high notes in a range known as the Whistle Register. Minnie Riperton was one of the first, and others such as
* There's another one a few hundred chapters later, during the flashback that shows Luffy and Ace's past. The brothers are at Dadan's, enjoying dinner and talking about becoming pirates, when they see Dadan and all of the mountain bandits Spit Take. Luffy and Ace look in confusion for a few seconds until
* There's another one, and it does say lightbulb rather than 'light a lamp' or something:
* There's another one besides the infamous DUN DUN, the odd horn whenever a nastier thing such as cholera or an infection occurs.
* There's another one in "A Canterlot Wedding, Part 1". It looks like Twilight and Cadence are going to make up when Cadence pats her on the head,
* There's another one in "Anne of Green Gables: The Continuing Story" when Gilbert goes off to war shortly after their wedding. It's the only movie to not follow any canon at all (it's not even in the right
* There's another one, in which he's committed to writing a school essay:
* There's another one later in the film, when Ethan's sleeping in the back of the team van on the way to London. This dream also features Julia and Lane, and Ethan wakes just as suddenly and silently, looking just as shaken.
* There's another one like this, showing the outline of Kong, with a bunch of smaller outlines of people inside it.
* There's another one on the floor of the room that contains the first enemy.
* There's another one that plays in Sims 2 when your sim turns into a plantsim.
* There's another one which can even give a bilingual player an advantage: When the Ganado sneak up behind Leon, they generally say "¡Detrás de ti, imbécil!" (Behind you, you idiot!), giving the player enough time to either get out of the way or counterattack.
* There's another parallel that Western eyes will see even if they're unaware of its true inspiration: the Nazis' treatment of the Jews, Amestris being a militaristic European-like military dictatorship—led by a Fuhrer, no less—who committed genocide against a religious minority of monotheists. Though the Ishvallans share more in common with Middle Eastern Muslims than Jews, or any of the other groups the Nazis targetted.
* There's another part were the protagonist is captured, and you're presented with two options: Break out yourself, or select two companions to control and break you out in
* There's another picture in the Palmer house of an angel serving food to three children. Then,
* There's another red herring at the climax when Johannes tricks the devil into demanding the box of contracts rather than all of the contracts. Thus, Johannes saves the souls of the innocents he coerced into signing.
* There's another reference in the episode where the kids go to military school.

"Company L? But they smell!" "Yes, we've all heard the song."
* There's another scene where Alvy, leery of Annie's becoming a regarded singer and expanding her social circle, begs off going to a party a fellow musician (Paul Simon) invites them to, claiming a previous engagement, and the next scene has them at the cinema showing
* There's another secret passage between Order HQ and the house of its leader, Irena, put in place so that no-one could track down where she lives by stalking her, and also so that she could escape quickly if need be.
* There's another show/film where the brand name on a "pear" computer was plainly visible:
* There's another sign that warns you to pay no attention to the man standing next to it. If you go up and talk to the man, he's silent. But if you steal his sign, he gets a bit annoyed and starts following you around...
* There's another, smaller airship docked above one of villages which, from the outside, appears to be a blimp, but you can climb up inside what should be the part where the lighter-than-air gas is contained and find a blacksmith's forge in there, calling into question what exactly is keeping the ship in the air, since no mention is made of it being magical.
* There's another song called "Van Diemen's Land", this one about a poacher whose entire gang gets transported. As a folk song, it has numerous variants: in the
* There's another Spanish song named "Let's tell lies" which plays this trope literally:
* There's another spot on "TSC" where a door is meant to close before you can get to it. The intention is that you are entering on foot - with a warthog, you won't be slowed down by the enemies between you and the door, and with good timing and driving skills, you can wedge the warthog in the doorway, forcing the door to stay open. If you're also lucky, it's far enough through for you to hop out on the other side, bypassing having to fight your way to and through the back door.
* There's another strip which is done from Hobbes POV during another sled ride...and he closes his eyes a couple of times during the ride.
* There's another study group on campus that apparently features Jack Black, Owen Wilson and Starburns.
* There's another subversion in the book that comes right before it in the series,
* There's another tactic called echoless sneaking, in which an army approaching an enemy stops immediately before each timewave so that the attack doesn't get propagated to the future, and the enemy doesn't see it until it happens in the present.
* There's another time when he taps into Poseidon's earthquake abilities inside Mt. St. Helens and nearly causes it to erupt
* There's another time where Perry the Platypus actually crashes through the window and interrupts the quartet as they're recording the jingle.
* There's another time where Peter gave Chris a ring and asked him to marry him.
* There's another urban legend floating around about someone who successfully passed a $200 bill with George W. Bush's face on it. (Bush does not appear on any currency—living persons are forbidden from appearing on US currency—and the US Treasury Department does not print a $200 bill).
* There's another variant of this trope where the ad repeating twice in a row is part of the ad itself, with people usually saying "One more time!". When the ad plays again, it's usually the same, but sometimes, there's only a minor difference. This variation is very common in Japan:
* There's another variant, the Nemmerah ("leopardess") which can not only tow the Merkava, but also swap an extra power system with it, recharging it in under two hours.
* There's another version where the car runs out of gas, and the boyfriend goes to the nearest garage to buy some more. As the girl waits for him, she hears the above news bulletin, and decides to lock all the car doors. Later that night, she hears something trying to open the door, but it's too dark and foggy to see what, so she leaves it locked. In the morning she finds her dead boyfriend clinging to the door handle, the hook still embedded in his back.

* There's another way to get to the third island early. On the second island, there's a hospital with a big dark blue window high up in the air. A player could, with careful use of cheats, get up there and find the window wasn't solid. If the player drove a car through the window, they would fall and land inside a tunnel that led into the third island, bypassing the blocked tunnel entrance.
* There's another way trauma can awaken new powers: if a parahuman's power is tied to a body part, losing that body part causes the power to adapt. An example would be Valefor, as
* There's another Weetabix one. In it the Trickster character Hungarr gets super speed if he eats Frosted Weetabix.
* There's another, where Ralph is testing a device he invented that makes teleporting possible. He ends up teleporting himself into the shower, while Dean is in there. He does this, incidentally, just as Dean
* There's an outtake for a British radio commercial in which the narrator is obviously several sheets to the wind. After several unsuccessful attempts to read the copy he slurs, "I've got nothing against the man who wrote this, but whoever wrote it should be... chopping out sugar beet, not writing scripts."
* There's Antidote X which was used in only one television episode ("Slumbering With The Enemy", on the girls themselves) and in the movie (on Mojo Jojo). Mojo also tried to use it in another episode where he also used Chemical X to give his then-partner Princess super-powers. Unfortunately, this backfired on
* There's a number of Final Fantasy spinoffs known collectively as the Chocobo series, all featuring the same
* There's a number of urban legends about Christian college students and their atheist professors, who try to convince their students that God isn't real. One variation has the professor hold up a piece of chalk saying that if God was real, he'd stop the chalk from breaking on the ground if he dropped it. The student prays that he will have the courage to tell the professor he believes in God. When he tells the professor this, the chalk slips out of the professor's hand, rolls down his pant leg, bounces off his shoe, and lands on the ground unharmed.
* There's an undead creature called a shadow which drains the strength of whatever it encounters. If the creature it attacks dies, the creature will become a new shadow under the control of its creator.

* There's an urban legend of an immigrant or other forced labor using the fortune cookie as a "I'm being held prisoner at [a Chinese food preparation place]." The earliest documented one is from 1955
* There's an urban legend that Chevrolet (and their foreign counterparts)

apparently came up against quite an issue when they attempted to market the Nova in Hispanic markets since "no va" means "doesn't go." In actuality, a Spanish speaker wouldn't read "Nova" as "no va," any more than an English speaker would read "notable" as "no table." Especially since "nova" is clearly related to 'nueva', meaning "new."
* There's an urban legend that "Ku Klux" approximates the sound of a shotgun being cocked. Another idea was that "Ku Klux" is a bastardization of
* There's an urban myth where people found the dead body of a man in the desert holding a piece of straw. In a line from his body are clothes and equipment. It's impossible for him to have walked and there are no tracks leading away from a vehicle. The solution to the mystery is that he was on a balloon that was descending over the desert; the passengers threw out everything they could to gain height, before realizing one person would have to go. The corpse drew the short straw.
* There's a parody version of Aesop's fable, where the organs argue over which one is the king of the body, and they all seems to hate the anus because "he's an asshole", so the anus decides to clog up to "stop being an asshole" and the body gets gradually sick from constipation, then the organs apologize to the anus, which decides to work correctly (="be an asshole") again, the body recovers and the organs decide that the anus is the real king of the body. And this

* There's a particularly good example in one Thanksgiving episode. Ted and Robin decide to help out at a homeless shelter on the holiday, where they find that Barney is the model volunteer there in his spare time. They spend the entire episode completely dumbfounded by the fact that he is capable of good deeds
* There's a particularly monstrous error on the "Life" card in the "Wonders of the World" pack:
* There's a part where you can pick the name of your new coalition. Options include "The New Alliance of Free Stars", "The Concordance of Alien Nations", "The United Federation of Worlds" and "The Empire of (Insert your name here)". Hayes is a bit put off if you choose the Empire of Me option, but goes along with it.
* There's a pastor's story about a nice guy whose family went off to Christmas service without him. He wasn't a believer, because he doesn't get why God would become man. After his family leaves, some birds fly into his window in the heavy snow, and he tries to herd them into his warm barn nearby. After being frustrated in his attempts, he muses that if he were a bird, he'd be able to get them to understand. Then the church bells happen to start ringing, and he sinks to his knees as the

* There's a rare benevolent example of this trope in an ad for "Be The King", a mobile game set in feudal Japan. A young maid smacks her lord off into the sky (complete with twinkle) to save him from an assassin. She even gets a promotion for doing so.
* There's a rare genetic mutation which will slowly turn the afflicted person into a human-sized spider.
* There's a rare male example in "Downhearted Duckling". Jerry puts curlers, a mud mask, and a corset on a duckling who is suicidal due to being convinced he's ugly. The beauty regime trappings cause Tom to freak out and run away at the sight of him, making the duck's complex worse.
* There's a rather dark joke about two hunters on a trip where one fell out of the tree stand and lay unconscious. His friend calls 911 saying he thinks his friend is dead. The operator's instructions are "Okay, first thing is to make sure he's dead." There's a pause on the other end before a gunshot is heard, with the hunter coming back and asking "Okay, now what?"
* There's a rather grim one in "Krusty Love". Mr. Krabs asked what happened to Mrs. Puff's husband, to which SpongeBob replies that he isn't sure. Cut to live-action footage of someone using a dried-out puffer fish as a lamp.
* There's a rather interesting twist on this trope in Kathryn Lasky's
* There's a rather large controversy on the internet regarding whether or not
* There's a rather strange example at the end of Deuteronomy. Moses' final lesson to Israel before his death is to teach them a national anthem: a song spelling out the future of Israel, complete with the fact that they will grow rebellious and turn away from God, and that this apostasy will spell disaster for their descendants, ultimately leading to their scatter and the destruction of all but a remnant.
* There's a real example that's even more disgusting than usual where a lonely funeral worker assembles a Frankenstein-esque body from various stolen body parts, including his dead sister's head. He then proceeds to have sex with it.

* There's a scene where he's in jail and watched by an officer. He tries to get under his captor's skin, and even though the guy brushes off the first attempt, Joker eventually succeeds.
* , there's a scene where Malty is frequently glancing at a bulge under Naofumi's cloak and thinking that it's getting larger in response to her discomfort and "moving on it's own in response to some bestial desire". Turns out he's got a few monster balloons gnawing on him that he's been ignoring.
* There's a scene where Pop is taking her first trip alone and doesn't make it to the restroom in time. Fortunately, Doremi is watching from the shadows and conjures a magical washing machine (the scene ignores the fact that Pop's legs would need washing too...)
* There's a scene where Robo interrupts an armed robbery in a mom-and-pop store. The robber watches as his bullets bounce off and backs away, exclaiming "Why me? Why me?" which seems to work better, and be funnier, than the original version.
* There's a scene where Sully tries to hide from Randall. Randall makes this face of shock as if he thought he heard something, but really, he made that face because he felt a sneeze coming on.
* There's a scene where Thrawn and three Corellian captives/guests come to look at a very beat-up nonmilitary spaceship that came into his territory, attacked, and was disabled in such a way that all those aboard died. Thrawn asks the Corellians what they think, and one doesn't care, one thinks he killed poor people and/or refugees, and the third looks at the height of the dead aliens, looks at the wall and a point where sealant patterns change texture, and concludes that the people who repaired/maintained the ship were much shorter than the current owners. A bit of information later and he speculates that this was a slaver's ship. Thrawn is pleased.
* There's a screen capture of the computer on Boomer's Raptor from one episode that clearly shows "Gravity Control" as an option, indicating that Colonial gravity generators have variable settings (and are presumably small enough to fit within relatively small craft).
* There's a Sears commercial in which a woman is continually asked where she got her clothes, and each time responds "Sears" with a little bit more confidence as she learns that no one will mock her for clothes shopping at Sears. They tried again in 2016, basing their ads on the knowledge that people park near Sears because nobody goes to that end of the mall. Results have been less than promising to say the least.
* There's a second episode in which aliens produce multiple Fred clones. They can say nothing more than "Yabba. Dabba. Doo." And almost no one notices.
* There's a secret weapon which is a chicken. Which shoots eggs. Which are one hit

kills and pretty much cut whatever they hit to ribbons. The only drawback is that you aren't about to be finding eggs scattered across the haunted prison to replenish your ammo.
* There's a sequence in "The One With The Truth About London" where Monica confesses that the night she hooked up with Chandler in London, she actually went to the room to seek out Joey. They imagine what life would've been like with those two together, in which Joey is fatter than young Monica, thanks to her cooking.
* There's a sequence involving Light Yagami learning the rules and limitations of the Death Note before he embarks on his great scheme of moral cleansing. He continues to experiment with its powers and devise loopholes throughout the series. By the end of episode three, he knows more about the thing than Ryuk, a shinigami.
* There's a series of ads for "Crunchy Nut" cereal in the UK to this effect, one of which has supermarket staff confiscate the boxes from customers so as they can eat it themselves. Seriously, they couldn't just take
* There's a series of commercials for a pickup truck so awesome that all who lay eyes on its magnificence involuntarily drop their jaws - from people, to other trucks (their tailgates fall open), to a bear who drops a fish right out of its mouth.
* There's a series of commercials for Captain Morgan's spiced rum wherein men use (false) sensitivity (e.g. walking puppies that are being handed out for just this sort of thing) to trick women into lavishing attention on the men. And then the men celebrate outsmarting these caricatures of women by drinking said rum.
* There's a series of commercials for Wonderful Pistachios showing someone doing what they normally do, only with nuts involved.
* There's a series of Glade commercials involving a housewife desperately trying to conceal her deep, dark secret: She uses Glade products. (
* There's a series of illustrated stories that transform a lot of fairy tales into yuri, and twist the ending. For example, "
* There's a series of Pop-Tarts commercials in which people are shown getting away with murdering sentient Pop-Tarts. One even shows a nurse eating a baby Pop Tart in front of its parents.
* There's a series of posters that describe people in the style of weather forecasts (e.g. a man who always takes a shower before work has the description "steamy in the morning"). The description for a baby mentions "showers". Does this refer to crying, or peeing?
* There's a series of small signs on Plunder Island set up by the Naturalists' Society. One of these is next to a thorn bush in a patch of quicksand. It identifies the bush as a "Papapishu Bush" and explains that "papapishu" is a native word meaning "ouch". After reading the sign, Guybrush will say "papapishu" instead of "ouch" for the rest of the game. If he doesn't read the sign, he says "ouch" as usual.
* There's a series of supplements called the Gazetteers, which featured a scholar known as S who traveled around the major domains of the setting and chronicled their cultures. Everyone assumed S was a man until Gazetteer III, which featured a throwaway line about S's struggles to manage the layers of corsets, skirts, and petticoats that one domain expected its citizens to wear. Even then, some fans continued to insist that S was a man (apparently more willing to believe the character to be a drag queen than a woman), and it wasn't until an actual illustration of her appeared in Gazetteer IV that the argument was put to rest.
* There's a set of characters that exclusively used this trope: English As A Second Language News, with the anchors Heiki Flergenpootz and Svetlana, who began their broadcast with "Goodnight" (and, less subtly, ended it with "Hello"). There were also several correspondents attached to the skits, such as the Espresso-Drinking Greek (who would calmly sip his espresso and then energetically shriek out his views on a given story).

* There's a ship drive that functions on the principle that bad news always reaches places before anything else. Too bad nobody would allow it to dock.

* There's a short by Fukazawa Shichiro with this premise. The main character is a Jinmu (a derogatory term for second born son), in a village where second born are treated like livestock (they aren't even allowed to have sex, ever). One man who feels guilty for killing a Jinmu once, leaves a will behind before dying declaring that his wife must sleep with every Jinmu in the village. Guess who's the only one left out.
* There's a short Marvel comic called "The Creature". A man finds an alien's diary and runs around trying to find someone who'll believe him. The random guys on the street don't believe him. The policeman doesn't believe him. The soldier guarding a military base tells him to take it to the observatory. The man rushes to a scientist there, hands him the journal. The journal is written in an "unearthly scrawl" which only the person who wrote it could read.
* There's a short story about a girl who goes to stay with her aunt for a vacation. While there, she finds her aunt's old china doll, which is described as being very beautiful, except for its orange-ish, creepy eyes. When she keeps the doll in her room at night, she sees the eyes are glowing and freaks out.
* There's a short story by Arthur C. Clarke called "The Wall of Darkness" about a planet with a wall that divides it in half. The protagonist spends many years (and most of his wealth) building a staircase to climb the wall to see what's on the other side.
* There's a short story entitled "The Last Master of Limericks" that invokes this trope. The eponymous Last Master is, basically, a brain in a jar operating the defenses of the Solar System. It's kept "asleep" when not actually needed because of the trope. It muses at one point during the story that it long ago reached maximum capacity and now must continuously grow in order to have space to store new memories ... fortunately (or maybe not; it's got one of

* There's a similar story in black American folklore about a black sharecropper and a white landowner. The landowner promises to give the sharecropper the bottom half of the crop, assuming he will plant cotton. The sharecropper plants potatoes. The next year the landowner asks for the top half, and he plants carrots. The third year, he asks for the top and bottom parts of the crop, and the sharecropper plants corn, so the landowner only gets the tassels above and the stalks below, and the corn in the middle is for the sharecropper.
* There's a Skaven spell that changes its victims into a unit of Clanrats.
* There's a sketch where courtiers are forced to carefully tiptoe around Henry VIII when it comes to matters like his latest marital issues. Two courtiers have found out about Catherine Howard's infidelities. Knowing that they can be put to death if Henry is in a bad mood, they have Will Somers, the court jester, break the news in the form of a comedy routine. When he comes back out, he says it should be effective in three, two, one... cue Henry calling for the courtiers to fetch his executioner.
* There's a slew of episodes of this kind where some of the characters (usually Sally, rarely Dick) will end up in a genre-shifted B story. In one of the tamer incidents of these stories (also an A story featuring Dick), Dick and Sally get into a magic act. They both do pretty well at a local place but start getting inflated heads when the manager strokes their egos. Of course, Dick having an inflated ego is neither acquired nor situational. He's always that way. Likely side effect of
* There's a sliding scale between "shooty" and "fighty" armies based on whether they emphasize the Shooting or Assault Phase more, with the Tau on one end favoring massed energy weapons fire at long range and the Orks on the other charging screaming into close combat.
* There's a slightly more practical bit of advice, in that if you jump to a pirate point and your drive melts, no-one is going to be around to help you out. If you arrive at the standard local stellar zenith or nadir points, there'll be the equivalent of a service station and rest stop close enough to be of practical use. If you're somewhere relatively civilized.
* There's a small amount of people who enjoy the idea of Dr. Henry Jekyll(/
* There's a small bit of explanation of the world in the opening cutscene, then straight into a mysterious mission for mysterious, untrustworthy people that doesn't explain anything. The inciting incident of Rex's death and resurrection followed by deciding to go to Elysium takes things in a good direction at the end of chapter 1. However, the story takes every opportunity to
* There's a small, but vocal faction of the fandom that prefers Jim/Karen over Jim/Pam. This is mostly due to them believing that Karen's more outgoing and ambitious personality made her a better fit for Jim than Pam's shyness and risk-averseness.
* There's a small instance in the first book of the same series. F'lar assumed leadership of the weyr from previous Weyrleader R'gul. After Weyrwoman Lessa performs the huge event of the plot, R'gul insists that it's not possible and F'lar must be mad and privately prepares to resume leadership once F'lar's incapability is publicly known. When people show up who prove that it really did happen exactly the way the leaders said, "R'gul got very quietly drunk."
* There's a soda commercial with a fellow who enters the wrong room at the doctor's office because he sees an open fridge with a soda in it. He didn't look at the sign on the door, or he'd know it said "Bikini Wax." What happens next is given a discretion shot.
* "There's a soldier in all of us." has been used in the live-action trailers for every
* There's a somewhat squick-worthy one-sided example of this. In Episode 2 of Season 2, Theon Greyjoy returns to his homeland where he meets a young woman and they begin flirting. During a subsequent horseback ride, Theon begins feeling up the woman in a sexual manner (this is the series that led to the phrase "sexposition" being coined) and she not only doesn't object, she seems to take pleasure from it. A few minutes later, Theon (and the audience) get squicked when

he learns that woman he was making out with was his
* There's a song where a woman sings she will not marry until streams run uphill, and a few other conditions. Of course, she then falls in love,
* There's a sort of poetic justice in the U.S. Supreme Court case striking down laws prohibiting interracial marriage in the country being titled
* There's a sort of switchback that you have to travel through each time you want to go between Thorntail Hollow and Moon Mountain Pass, hopping on pillars that rise and sink to get across to the updrafts that push you out of it.

* There's a special grim reaper, the Black Flash, specializing in speedsters (like the Flash) who would presumably be too fast to be caught by the normal Death.
* There's a Speedstick deodorant commercial that's about a man who's been waiting for a dryer to become available for a very long time, so he decides to unload it himself. He drops a piece of clothing and politely picks it up, not realizing that it was a pair of panties until the beautiful girl who they belonged to showed up. He even lampshades it.
* There's a spell as well that drops an asteroid on the battlefield. It can wipe out castles, and half the opposing army when timed right.
* There's a spell called "Blood Crow Strike", which creates energy blasts in the shape of fiery crows.
* There's a spell called Teleportation Field. When cast, it creates a zone that will cause every enemy within it to be randomly teleported to another location within the zone each round. There is no saving throw and it ignores magic resistance. The spell is useless most of the time, except in a couple of duels, since you can cast the spell so that half the zone is inside the arena and half is out. If the enemy stays in the zone long enough, they'll eventually be teleported outside the arena and you can turn the 1-on-1 fight into a 5-on-1
* There's a spider in the Thriller Bark arc. It had the head of a monkey and a verbal tick of 'Monkey.' Does this pun even make sense without knowledge of English?

* There's a story about a rabbi who orders a pair of trousers from a tailor while on a trip but has to leave the town again before the tailor's finished them. Six years later, he coincidentally travels to the town again, where he runs into the tailor, who happily tells him that he just finished the trousers.
* There's a story about a vicar who always made a good impression with mothers bringing their babies in for christening, though nobody ever remembered his precise words on seeing the baby, only that it was "something nice". Invariably, his actual

opening remark was: "My, this
* There's a story about how when Paul Wolfowitz was president of the World Bank, he found himself in an elevator with a woman wearing a blue ribbon and asked her what it meant. She told him it was being worn by World Bank employees petitioning for his resignation.
* There's a story about the siege of Troy in which it was prophesied that the first Greek to land on Troy's beach would be killed. Odysseus solves that problem by tossing out a shield and jumping on that instead, tricking other men to jump behind him.
* There's a story from somewhere in Africa about a tribe that doesn't exist any more, because when seeking a reward from some supernatural being, the men said that the best thing that could happen to them was for their wife to give them a son, and for their cattle to give them female calves. — So be it, all your children shall be sons and all your calves shall be heifers. — They rejoiced, until...
* There's a story of a boy who practiced diving into a public pool at nighttime. One time as he was about to dive, he noticed he was casting a shadow in the shape of a cross. Feeling a pang of religious conviction, he stopped and began to pray. Moments later, the lights came on... revealing that he'd just barely avoided this trope.
* There's a story of a guy new to Spanish who wondered why, every time he asked a kid their age, the kid would burst out laughing and answer, "Uno" (one).
* There's a story (possibly apocryphal) of a Christian missionary, who thought he had said "we must take up our crosses and follow Christ" during a sermon, which caused laughter amongst the congregation. He'd apparently fallen afoul of the differing inflection problem, and was informed that while everyone knew what he
* There's a straighter example, also, in the episode "Jack is Naked," in which a rabbit hopping on by takes Jack's clothes as he's bathing and Jack spends the episode attempting to get them back, stumbling into some densely-populated areas in the process.
* there's a strange, facehugger-like creature apparently coming from mutated worms. When confronted, this thing will latch onto its victim, and much like the facehugger, getting it off is easier said than done, since attempting to remove it only causes it to tighten its grip, and cutting it releases a highly corrosive acid. Then the creature in question actually works it's way into the victim's mouth.
* There's a strip in which Beetle and Killer both whistle at a woman who looks attractive from behind, but when she eagerly turns her buck-toothed face to look at them, both point at each other in an "it was him" kind of way.
* There's a strip where an aggressive co-worker of Dilbert's, Floyd, gives him an atomic wedgie
* There's a strip where Garfield is facepalming for no reason. Jon asks him what he's doing, and Garfield replies, "Practicing being exasperated." Jon notices he's not wearing pants, and Garfield puts his practice to good use.
* There's a strip where Jon asks Garfield which way he puts his feet down when he walked. Garfield is then paralyzed.
* There's a strip where the brand name on a bag of chips changed in every panel.
* There's a strong implication implies the number 12 is evil, what with the Sinister Dodecahedron, fuzzy dice killing you if they get boxcars, the level 12 quest being to start a war, etc. This may or may not be related to Jick's apparent hatred of the number 13. Look at the object numbers carefully.
* There's a stunt called "Mr. Bill" which entails doing this deliberately. It's done well before reaching terminal velocity though, and the other guy then jumps off and deploys his own parachute. Depending on the parachute it could be done at terminal with minimal injuries, this troper's parachute (Spectre 150) has very soft openings. Landing two people with a chute designed for one is bound to be rough though - but still better than landing without one.
* There's a style of clothing in fashion known as "boyfriend clothing". It's clothing that was designed for men and redesigned for women. It looks like typical men's fashion, but with a looser fit more comfortable for women.

* There's a substantial rivalry between metal and rap, though it's mostly one sided, since
* there's a subversion — it's widely agreed that the artworks Warhol created after he became a vampire lack an essential spark present in his earlier work, but it turns out at the end that Warhol never actually crossed over, only adopted vampire mannerisms, and remained human his entire life.
* There's a subversion of this. The cadets are all taken to the academy shooting range, and walk though the course one by one... until Tacklebury, who is gun-crazy, goes off on his own and starts shooting every target. Beforehand when Leslie goes through the course he accidentally shoots a civilian before waving the gun around at the cadets, Tacklebury is the only one who doesn't hit the deck: being a gun nut he realizes that the shotgun was not recocked. Silly, but makes sense he wouldn't think they were in much danger.
* There's a subversion when the killer delivers a crazed speech detailing his motivation — which the protagonists can't hear at all, because they're trapped in soundproof bags.
* There's a Sunday strip in which the protagonist duo are about to go sledding down a hill, but Hobbes jumps off at the last moment. Then the view remains centred on him and we only get to see a hint of how spectacularly Calvin's ride goes (and fails) by the look of Hobbes's reactions.
* There's a supernatural disease called the Hunger. Over a period of weeks, it transforms the carrier into an inhuman monster with an uncontrollable desire for human flesh.
* There's a supernatural entity called the Thief, which hungers to devour key organs (such as hearts from vampires) of any supernatural creature it encounters.

* There's a Terry's Chocolate Orange commercial where a patient in a hospital has died, and is covered by a sheet. For some reason, he's still hooked up to an EKG. A nurse tries to steal his chocolate orange, and Whacks it, right there. The patient kicks and his EKG starts beeping again (wow, he came back from the dead because someone was trying to pinch his favorite candy). Cue the Slogan, "When you Whack a Terry's Chocolate Orange, good things happen.

* There's a true story about a suspected German spy being questioned for several days. The interrogators had their suspicions, but there was nothing definite, so they let the man go. He blurted out, "Danke..." The story is also told the other way around - an American spy, after days of interrogation, being told in German, "Well, seems you're not a spy after all, you can go" to which they replied - in English - "Thank you!"
* There's a tunnel beneath the street connecting burlesque theatre Music Box with bordello Terra del Fuego. The two establishments are owned by twins, and because "private shows" with the girls are not allowed in the Music Box, the clients who would like them but can't or shouldn't be seen entering Terra del Fuego use this way.
* There's a turkey commercial where the woman is struggling with the frozen turkey [which is huge and heavy]. She miscalculates the amount of effort to toss it into the sink. So it overshoots the sink, breaks through the window and brains a man outside [her husband?]
* There's a TV commercial for a jewelry company that starts off with a young couple running into a gazebo to get out of the rain, and while inside, they share their first kiss (which leads to their wedding kiss, their baby kiss, etc.).
* There's a Twitter account belonging to Steven Smith, Tea Party member and Representative of Georgia's 15th Congressional district, who's been known for making outlandish remarks such as calling

* There's a type of mite that has a reproductive cycle in which every female is born pregnant; males aren't born at all, because they impregnated their sisters before any of them were born, and once he's mated his usefulness is over, so he just kind of dies inside his mother.
* There's a type of monster called ghouls - scavenging monsters that eat corpses and take on the memories and appearance of the last person it ate.
* There's a variant for Phoenix Lords. They can be killed, but resurrect by subsuming the soul of an Exarch into themselves. The Exarch becomes the new incarnation of the Phoenix Lord, but their original personality is completely buried.
* There's a variant in "Famigerado", a short story by Brazilian author João Guimarães Rosa. A local bandit goes to a doctor hoping the educated man can explain what means the word in the title (translation: "infamous"), which a cop has described him as. The medic says it's a compliment akin to "notorious", and the guy buys it.
* There's a variant of this trope where a well-known celebrity plays a voice role in a show or movie, and it remains the only animated work they've ever starred in. Some examples of this are a good amount of guest voices on
* There's a variation a bit later; Harry really needs to get something out of the bag, so when rummaging is too slow, he just uses a summoning charm.
* There's a variation. Carl Elias laments that it's hard to find a worthy opponent in prison, then finds one when Harold Finch agrees to visit him from time to time. It's not a typical example of this trope because Elias is referring to
* There's a variation in "Fat-Butt and Pancake-Head" with Eric Cartman and Ben Affleck. Well, Ben Affleck and Hennifer Hlopez (
* There's a variation of that in a Bugs Bunny cartoon: "The Wind-Blown Hare". Bugs is at the bottom of a staircase and the Big Bad Wolf is coming down to get him, and Bugs keeps turning off the light. What's different from the Tom and Jerry version is that there is an audible sound when the light gets turned on or off, so when Bugs invokes the trope, he simply
* There's a variation where the man gives his doctor, his minister and his lawyer each the same amount and asks them to toss it in his grave. At the funeral all three toss envelopes in his grave. The minister admits to the other two he used part to pay for a new roof for the church, the doctor admits he used some to buy an X-Ray for the hospital, while the lawyer says he is ashamed of both of them, as he followed the instructions and
* There's a version of this trope when Hank takes Ladybird to a moonlit bluff to practice dog dancing.
* There's a very high rate of suicide among timecops who have to protect the Nazis.
* There's a very interesting section on this. In a discussion about conscription, Sir Humphrey demonstrates to Bernard how statistics can be obtained which prove both sides of the discussion correct, through the use of leading questions that are not included in the reporting of the survey concerned.
* There's a very mysterious assassin called "The Lord of Owls" who appears in one chapter.
* There's a very old story called "The Scorpion and the Frog." Basically, the scorpion wants the frog to get him across a river. The frog initially refuses, afraid the scorpion will sting him if he lets him on his back. But the scorpion assures him he won't, since then they'd both drown. So the frog relents and lets the scorpion hop on board. Midway across the river, the frog feels a sharp pain in his back and realizes the scorpion's stung him. He demands to know why he did it, since now they'll both drown. The scorpion replies,

* There's a well-known joke involving novice fighter pilots being told "Enemy fighter approaching you at six o'clock" and deciding they don't need to worry yet because it's only half past three.
* There's a well-known lawyer joke along these lines. A young man is just starting up his own law firm. On the morning of his very first day in business, a man comes to the door. Just before he enters the office, the lawyer (wanting to impress this client) picks up the phone and shouts into it: "$100,000 is my final offer! I'm a very busy man, you know, and my time doesn't come cheap. You don't like it? Fine, then, you can just go find yourself another lawyer!" He slams down the phone and turns to the other man. "Now, what can I do for you?" he asks. The other man replies, "Uh, I was just here to hook up the phone."

* There's a whole class of games where you have to work your way through obstacles in a prescribed order to beat the level (get food to chop tree, chop tree to fix bridge, fix bridge to talk to next NPC, etc.).
* There's a whole genre of films based on this trope. Most of them feature some girl or other flexing, beating up men, and sometimes wrestling with another girl. They generally run from about PG-13 to softcore porn (there are a few who do hardcore porn, however), depending on the girls participating and what their limits were.
* There's a whole genre of porn dedicated to this, called sexfight (sometimes "cockfight" for the male homosexual version). Although obviously they usually

destroy very little of the scenery, as they tend to be low on budget.
* There's a whole history of military aircraft being painted with special markings to prevent confusion with the enemy. When it first entered service, the Hawker Typhoon sported "invasion stripes" on its underside (long before D-Day) to prevent it being mistaken for a German aircraft. In the PTO, Allied aircraft quickly lost any red in their national markings to prevent confusion with Japanese aeroplanes; the RAAF took this to an extreme as the years passed, first painting the leading edges of the wings of their aircraft white (also used by US P-47 Thunderbolts in Europe to distinguish them from Fw-190s) and then painting the entire tail white.

* There's a whole subcategory of fishing poles in WoW. It has to be equipped to fish with it, but sometimes bored PVPers would equip it just so they can say they beat someone to death with a fishing pole. Mostly rogues, because it's the only two-handed weapon rogues can equip, aside from a
* There's a whole sub-field of psychology devoted to this: art therapy. Like play therapy, where children are encouraged to act out their traumas so they can learn to deal with them, art therapists get them to draw pictures or make play-dough sculptures. Anyone who has trouble communicating verbally or in writing might find it useful, including teenagers and people with Pervasive Developmental Disorders, the family that includes autism. Senior centers, nursing homes and assisted living places offer it just as a way of communicating and staying engaged.
* There's a widespread fairy tale ("Clever Greta" is one title) in which a ruler is determined to throw a man into prison for some reason. However, he will let the man off if his famously clever daughter can show up "neither clothed nor naked, neither walking nor riding, not on the road but not off it, and bearing a gift that is not a gift". The exact terms vary. The answer to this version is: wrapped in a fishing net, one leg thrown over the back of a goat that is walking in a huge rut, with a fly in a basket that flies away as soon as the lid is taken off. Some versions add that the ruler is so impressed that he marries her. She uses her wits to help someone challenge one of his verdicts, so he kicks her out in a rage, saying that she can take whatever she likes most from his palace, but it's over. She hosts a farewell dinner in her chambers, then leaves in the carriage with a fat roll of carpet. The ruler wakes up the next morning, hungover, in her father's farmhouse. Well, he

* The Rescue (1971): The Ming patriots eager to rescue Minister Wen, a hero of the revolution, are branded "rebels" and "criminals" by the Mongol Emperor.
* The Rescue. At the end of the story, however, the Doctor corners Coquillion and reveals that what we assumed was his face was actually ceremonial dress used in his people's religious rituals, being worn by a human man who claims to have committed genocide against the natives of the planet. The man is then attacked by two natives

who survived his genocide, and we see that they are actually beautiful blond men similar to Thals.

* The rescuer asks for the rescuee to give them both hands, and the rescuee refuses because they're (a) holding something they don't want to let go of, (b) trying to grab something valuable nearby or (c) afraid to let go of what they're holding onto.
* The rescuer ends up in the same predicament, either accidentally or because the falling character deliberately tried to
* The Rescuers: According to Milt Kahl, Geraldine Page nailed every single one of Medusa's lines in one take.
* The Rescuers, and all subsequent releases of the film have, of course, have been edited to exclude the image. There have been many urban legends surrounding Disney movies and purported hidden risqué content, but this remains the only incident to have been clearly deliberate and of an unquestionable nature.
* The Rescuers), and Bianca (again) volunteering herself and a reluctant Bernard. The sequel ends with Bernard and Bianca getting engaged and presumably going off to continue their rescue work.
* The Rescuers and her greed finally catches up to her in the end when her two alligator minions, Brutus and Nero, turn on her for her mistreatment of them just to keep the diamond to herself after Penny and the gang successfully escape with it in her own swampmobile.
* The Rescuers and his pet goanna using his wit and an assist from gravity to defeat them both singlehandedly.
* The Rescuers as "homely" and claims no adoptive parent would want her. As horrible as her endangering Penny's life is, that kind of cruelty happens far more commonly.
* The Rescuers: a sweet little kidnapped orphan who needs the mice of the title to rescue her.
* The Rescuers: Averted with Bianca, but Medusa actually takes the brunt of the comedic retaliation of the Rescuers and the Bayou animals, especially compared to her male partner, Snoops.
* The Rescuers before she was kidnapped by the verbally abusive Madame Medusa. With the help of the titular two mice, she saves the day, and the movie ends with her getting adopted.
* The Rescuers call them alligators, and cartoon alligators are often drawn with crocodile-type teeth.
* The Rescuers Cruella until they rewrote the story to have a new villain.
* The Rescuers: Devil's Bayou. The presence of Madame Medusa doesn't make it any friendlier. However the local Rescuers members, who know how to move around, do manage to make a cozy home out of it.
* The Rescuers Down Under, after Cody is kidnapped, the audience follows the radio signals as they travel mouse-to-mouse from Australia to New York City to summon help from the Rescue Aid Society.
* The Rescuers Down Under also voiced him in the Norwegian dub, as he was the son of the Norwegian TV writer Tore Ryen.
* The Rescuers Down Under). As he tries to escape, the Doctor and nurses try to prevent him from leaving and pull him back inside, and Wilbur's back locks back in place and is off on his way. But in doing so, he accidentally falls on top of the doctor, who then moans, "My back!" *crack*
* The Rescuers Down Under, a variation of this happens when Cody tries to free

Marahute from a net. The poacher McCleach spots him and shakes the net, causing Cody to lose his grip and fall but his foot gets snagged on the net, leaving him hanging upside down and his foot nearly sliding out before been dumped into a cage.
* The Rescuers Down Under: A variation on the back cover for the box, with McLeach being to being to scale with the other characters as he stands behind them with a hate-filled glare.
* The Rescuers Down Under: A wanted poster of McLeach can be seen shortly before he makes his debut.
* The Rescuers Down Under, Bernard, Bianca, Cody, Jake, and Marahute fly triumphantly into the sunset. The movie then cuts to Wilbur the albatross, who was left to guard Marahute's eggs, realizing that he was left behind and starts wondering what's taking everyone so long. And then the eggs start to hatch.
* The Rescuers Down Under, Bernard competes with Jake over Bianca's affections. Though in this case, Jake isn't openly competing with Bernard, just unaware of his relationship status with Bianca.
* The Rescuers Down Under. Bernard, Miss Bianca, and Joey get under McLeach's truck to follow him when he goes after Cody.
* The Rescuers Down Under, but there are many furries attracted to Jake the kangaroo rat.
* The Rescuers Down Under, Cody is accidentally knocked off of a large cliff by the giant eagle Marahute. However, she rectifies this mistake by swooping down and catching him on her back (as a thank you for freeing her and presumably as an apology of sorts). She later saves him again as well as Bernard when they fall off a waterfall.
* The Rescuers Down Under, Cody shouts "Uso da!" or "That's a lie!" after McLeach lies to Cody about Marahute, the giant golden eagle, being shot to death.
* The Rescuers Down Under, during the operation scene, upon seeing the increasingly painful operating tools the doctor calls for, Wilbur cries "Mother!".
* The Rescuers Down Under from a trap set by Mcleach, the eagle flies him around for a ride across the sky. During the event, Marahute throws Cody into the air before catching him by wrapping her talons around his arms. She then proceeds to use one of her talons to tickle his belly while he's in her grasp.
* The Rescuers Down Under has Australian mouse Jake as the foreigner, but he's not evil, and Miss Bianca herself is Hungarian.
* The Rescuers Down Under is good friends with a lot of animals from the Australian outback, including a kangaroo, some wombats and a giant golden eagle.
* The Rescuers Down Under is, he reveals his true colors and kidnaps the boy.

* The Rescuers Down Under: Mcleach tries to feed Cody to some crocodiles.
* The Rescuers Down Under nest. Also subverted earlier during Cody's flight when Marahute is carrying him in her talons, with a POV shot from Cody looking at the ground far below.
* The Rescuers Down Under Percival McLeach, and uses it to steal the keys to the man's truck. Also, the mice tame and ride a flying squirrel and a snake.
* The Rescuers Down Under - Right before the credits roll, Wilbur is shown still waiting on Marahute's nest.
* The Rescuers Down Under. The CGI quality is absolutely terrible (though excusable for 1990), with untextured boxes passing for New York City traffic and generic-looking untextured buildings in cityscapes. Other parts of the film where CGI is used include the main villain's tractor and a scene where a large CG globe is used.
* The Rescuers Down Under) . The two being villains from the same movie series, it's more probable that'd they meet over other pairings.

* The Rescuers for Bernard to confess his feelings — on the back of an eagle.
* The Rescuers has a scene where Madame Medusa removes her makeup. Beneath her lipstick, she has no lips at all, no eyelashes under her fake ones and generally looks like a hideous gargoyle. It's terrifying.
* The Rescuers has a scene where Miss Bianca and Bernard share an umbrella.
* The Rescuers has Miss Bianca, a lady of high social standing, and Bernard, a janitor.
* The Rescuers: If Penny starts to get sophisticated about her violence, get into this with her.
* The Rescuers, is another Disney feature starring mice that's often forgotten, but several furries fondly remember the starring anthropomorphic mice, Bernard and Miss Bianca.
* The Rescuers is last seen hanging for dear life and with crocodiles chomping at her, but the scene ends before showing if her willpower ran out before theirs did.
* The Rescuers is rather clumsy with the comb-ladder he carries into the R.A.S. meeting and nearly hits the Chairman with it, repeatedly.
* The Rescuers is voiced by a young girl - the then-eight-year-old Michelle Stacy.
* The Rescuers, Miss Bianca is portrayed as representing Hungary. She was voiced by Eva Gabor, who was Hungarian herself.
* The Rescuers pretends to be sweet on Penny when she’s really trying to get the girl to participate in a dangerous quest for a valuable diamond. During their first on-screen conversation, Penny asks to return to the orphanage once she gets Medusa her diamond only for Medusa, still feigning a nice attitude with her, to laugh and ask who would want to adopt a homely-looking girl like her.
* The Rescuers (Snoops's attempts to squash the mice with a broom results in a broken chair and two concussed alligators) and pulls a shotgun on them.
* The Rescuers. Then again, they are albatroses for better or worse. Orville has to fall almost the entire height of the UN Building to accelerate beyond stall speed, and when Wilbur approaches the RAS outpost in the Australian outback, he is described as a "jumbo", and the rooftop airfield isn't designed to accommodate a bird of his ginormous size.
* The Rescuers, when Bernard and Bianca overhear Medusa's plan to use Penny (the orphan girl they're trying to rescue) to get the Devil's Eye (a valuable jewel), Bianca whispers to Bernard that "she's insane; utterly mad!".
* The Rescuers, when Bernard talks to Orville via CB, the communication happens without him pressing any call button.
* The Rescuers when coercing Penny go down into the cave to retrieve the diamond by taking her teddy bear hostage.
* The Rescuers, with Cruella DeVil as the villain, but they decided to replace Cruella with an original villain.
* The rescuer themselves leaps down, grabs the rescuees hand, then proceeds to grab a rope with their other which they then slide down until they have no extra room. Bonus points if someone at the top starts cutting it. Grapple guns and such also fall into this category.

* There she is!!: A series about the love between a Bunny and a Cat and how they deal with the prejudices involved.
* There she is!!, a story in five "steps" about a relationship between Doki, a rabbit, and Nabi, a cat. In their society, friendly intermingling of felis and lepus is perfectly fine, but the reactions of others to a romance between the two highlights the still-somewhat-strained relationship between Japanese people and Koreans. In the first step, Nabi flees Doki's attentions more because of social norms than actual disinterest (although Doki's enthusiasm probably intimidates Nabi a bit, as well). The rest of the shorts are more about Doki and Nabi's attempts to cope with society's opinion of their relationship. The example works so well because the creators (Koreans) show both sides' crowds as being equally disapproving (removing bias) and refraining from demonstrating which country is represented by which animal.
* There she is!!, Doki imagines Nabi in this way, and continues with the mindset throughout the series.
* There she is!!, Doki the rabbit's floating hearts, generated by her love for Nabi, are apparently quite physical and can bury people under them, mainly Nabi.
* There she is!! falls head over heels, crazy in love with Nabi the first time she sees him. Nabi...well he comes around eventually.
* There she is!! has a No Cat and Bunny romance road sign. This is enforced by prejudicial cats and bunnies all over the city.
* There she is!! is an entire series of web animations done like this with K-pop.
* There she is!! Nabi makes the mad dash for Doki in an unusual boy racing for the

girl role-reversal.
* There she is!! starts as a fairly minor example of this: She does chase Nabi around the city and can't take "No" for an answer, but otherwise doesn't seem to be all that crazy or violent. Her love craziness reaches its apex midway to Step 3, until she becomes saner, but only after Nabi agrees to become her boyfriend. While it could be seen this way, keep in mind, "There She Is" is all about showing Nabi and Doki's relationship in a condensed form. It can also be interpreted that Doki's trying to chain away Nabi's social qualms with their relationship, as can be seen in the later steps.

However, it's very widely suspected that they are actually the same people as their "management team" the Cryptic Corporation, who do interact with the media. Cryptic Corporation co-founder Hardy Fox finally outed himself as a Resident in 2017, and it was universally noted in media reports of his death a year later.
* The Residents It is, however, long been suspected that "The Cryptic Corporation," a group of two "spokesmen" who speak for the band in all interviews, are actually the creative core of the band. The Cryptic Corporation admits to collaborating with the Residents but always denies that they are actual band members.

They approach the man in charge of the Dutch national railways who assures them they have an emergency fund put aside to pay the wages of the striking workers for the few weeks to a month it will take the Allies to liberate Holland—this is in September 1944. The protagonists exchange a skeptical look and set about organising a more realistic fund, which unfortunately requires them to acquire millions of guilders.

* The Resistance Banker plan to remove government treasury bonds held in the Central Bank and replace them with forgeries. There's skepticism as to whether the forgeries will pass inspection, until it's pointed out that the electricity is out in the basement vault (due to wartime fuel shortages) and so the inspection of the bonds will be made via lamplight.
* The Resistance Banker. The protagonist Walraven van Hall goes by the name of "Van Tuyl". This name gets dragged out of a tortured resistance member, but it doesn't mean anything to the Germans then. Even when they finally capture Walraven, it takes the Germans a while to figure out who he is. The Dutch naval officer who first recruits Walraven goes by the name of "Van den Berg", which he admits is not his real name.
* The Resistance Banker, when a barber suddenly drags him into a shop and starts

When the Germans shoot the man they arrested right outside the shop the barber's hand is shaking, though he doesn't cut Walraven because he stops at that point.

The main group followed is led by Broussard, who is willing to shoot members to prevent their capture, but is working to gain information and advantage, not just wanton violence which is known to lead to the abandonment or 'Rendition' (read: extermination) of entire blocks. In the second season, a new faction called Red Hand emerges, willing to use suicide bombs and target civilians. After a cautious meeting over alien tech the Red Hand stole, Broussard concludes that their only objective is destruction, and leads a mission to give it to them.
* The Resistance leave the group, leaving the paladin Thanh in charge of the Resistance.
* The Resistance makes everyone outside the village ignore it, so outsiders would simply assume Cresdon green was a fictional location invented for a sci-fi series.
* The Resistance so much that they decide he'll be more useful as a martyr.
* The Resistance. The aim of the resistance is to accomplish at least three out of five missions. The aim of the traitors is to sabotage at least three out of five missions.
* The Resistance. The Resistance in this case consists of just two people.
* The Resistance Trilogy, he and his girlfriend will get passage on an American submarine to sneak him off Soviet-occupied Britain. The girlfriend frankly states this is a fairy tale, but they both get killed so we never find out.
* The Resistance, who are Star Trek fans on their yearly camp out to look for aliens or something.
* The Resistible Rise of Arturo Ui, and almost everything he does is a smaller-scale version of something Hitler actually did. However, Hitler never actually appears.
* The Resistible Rise of Arturo Ui has a gang that takes over Chicago, followed by the neighboring town of Cicero. Their resemblance to the Nazi Party is entirely deliberate.
* There's JD and Elliot in the eighth season when they finally get together with a stable relationship after a majority of the series (aside from a break from the fourth season to end of the sixth season) went through their on-and-off-again relationship.
* There's Kaylee's reaction to Book's strawberries in the pilot, to say nothing of
* There's Kiyomi Takada, who was once Light's girlfriend. She really hates Misa for her involvement in Light's life and has suggested to Light that he should kill her.

* There's little blood in Chapter 2 seen when Tessa comes across her dead and dying teammates, with it only seen trickling out of her dead teammates' mouths, despite the fact that they were all flung in the air and then slammed into the ground. It's at least justified with the case of the dying teammate, Undine: she has water based powers, and she can somewhat control her blood (though she's

starting to fail at it since it's not purely water).
* There's little evidence for a concrete Native American system, though the Plains Indians attributed their directional winds to South/Fire, West/Lightning and North/Water (as ice). In general, directions and times of day seem to have been the concepts that got formalized instead, with groups from at least across the American Southwest (extending into Mexico) associating each direction (North, South, East, West) with a time of day (morning/predawn, midday, evening/twilight, full night) and a color (what colors are used, and for what direction, varies significantly from culture to culture).

* There's lots of difficult parts in this game that can cause you to get stuck for an hour or two. One part that stands out is a section near the end of the game, where you have to fight two Reapers that attack at the same time. They both have instakill attacks and require you to aim at specific body parts to kill them. And a few moments after the giant insects appear, two Gatling Majini (who have massive hitpoints) and a huge amount of melee Majini come to attack you, and it's mandatory to kill the two Gatling Majini. Better kill the Reapers quickly or you'll have to face all of them at the same time.
* There's Mad-Eye Moody, too. Leaving aside that much of the cool stuff we actually see him do is a Death Eater impersonating him rather well, he's annoying and insane but pretty cool.
* There's Magic Between Us (pansexual main character, lesbian character, genderfluid character and bisexual supporting characters)
* There's Major Bloodnok, who explodes constantly in a slightly... different fashion.
* There's many a Rakshasha and Naga of immense size. Of note are Kumbhakarna, who was a giant even among the monstrous Rakshasha. His brother, Ravana, for his many heads and hands. Then there's Ananta-Sesha, a world serpent of a much more benevolent bent.

* There's mention of a droid rights movement in the New Republic early on when Threkin Horm makes a remark disparaging Threepio, who presumably believe droids are people deserving of equal legal protection.
* There's mention of a geist, the Gravedigger, who in life did this to his murder victims (hit them with a shovel, bury them alive, listen to them scream). He met his end when he didn't hit one hard enough — the man woke up, retrieved the shovel, knocked the Gravedigger out and buried

* There's More Magic Out There a sizeable chunk of the main school cast of Ladybug are all various sorts of magical or monstrous being but before the events of the story a vast majority of them don't know about the others and only start to figure out this by sheer chance when Juleka (a vampire) notices something odd about Alya (a Selkie's) coat. In addition they remain completely unaware of the fact that two of their other classmates are superheroes, and the two superheroes have no idea just how many of their classmates are something other than human.

* There's nothing in the original Old Testament account of the destruction of Sodom which says the sins of its inhabitants included homosexuality. It's not until the Epistle of Jude in the New Testament that references to the sins of Sodom take on an explicitly sexual aspect, but still not an explicitly homosexual one. While a few Christian and Jewish philosophers had occasionally implied links between the two, it wasn't until Eastern Roman Emperor Justinian I explicitly defined 'sodomy' as same-sex sexual activity in his law code in the 6th Century CE that the idea that homosexuality in and of itself (as opposed to male-on-male rape) was Sodom's sin became widespread.

* There's not much opportunity. Most normals aren't going to grow up sharing any kind of close relationship with anyone able to use magic. Most normals tend to find sensitives and adepts weird at best and disturbing at worst, and tend to avoid them.
* There's now an artificially created No Warping Zone. The Republic of the Sphere has enacted something called "Fortress Republic," which causes jumpships that try to enter its systems to catastrophically misjump, killing everyone onboard. It has yet to be revealed how this is being done (and none of the other states have figured out that the Republic has a way to send ships through the Fortress walls without harm, allowing them to make black-ops raids on their neighbors).
* there's now an English version of the page, and now a lot more people know about the station's existence than if French authorities had simply left that article alone.
* There's now an explanation for the phenomenon. It turns out that even after the sons of the Sage of the Six Paths died, their chakra kept reincarnating into their descendants again and again for generations to continue their feud. And before Naruto/Sasuke, the previous vessels were Hashirama/Madara.
* There's now a sub-feature in Generation VI called Pokemon-Amie where you can play with your Pokemon, feed them cakes and pet them. Increasing their affection

this way improves critical-hit ratios, exp gain and recovery from status conditions, among others. Similar sub-features were implemented in future games, such as Pokemon Camp in

* There's no way to see what's on the other side. This is counteracted in civilized space by placing traffic buoys on either side to send an alert that a ship is about to pass through, and Kris's people eventually invent a "periscope" that can see out the other side of a jump point. What prompts the latter invention is the their tracking a spaceship through a jump but having their buoy not return; the periscope reveals that the star on the far side is in the middle of a supernova.

* There's one Dutch song by the group Kadril, "Het Heerke van Maldegem" (the lordling of Maldegem). The song tells the story of the main character, who goes out hunting and instead of game finds a group of robbers, who organise a party and make him pay for the booze. He asks them to let him go, and in exchange promises not to speak to anyone about them. When they agree, he goes on to Bruges and writes down what happened to him and where the robbers are, making his original hunt successful.
* There's one episode in which the sliders visit an alternate U.S. that is turning into a Nazi-like state under a rising demagogue, Gov. * There's one instance where breaking a Psyche-Lock with the Magatama yields Phoenix information which turns out to be completely wrong. It's hard to say, though, whether this is an example of this trope or whether it's a mistake from the Magatama.
* There's one in the early episode "The Witch". Notable only because it was used in the credits sequence for quite a while.
* There's one in the Netherlands, Canada and the United Kingdom which shows an attractive woman smoking, and then says "Lose the Smoke, Keep the Fire". The problem is she still looks sexy smoking, and kind of dorky afterwards. This is a rather indirect version, however, since it's coming from Nicotinell Gum, which doesn't make any money if smokers keep on smoking, but does make money from maintaining a steady consumer base of smokers in need of its product to help them quit.

* There's Paul Timberman, a woodworker that constantly injures himself using tools.
* There's plenty more where that came from. Dolores' line about having to "shake the weasels", for instance.
* There's plenty of benign demons in the Buffyverse, but Lorne goes above and beyond the call of duty. His club, Caritas (Latin for "sanctuary") was specifically designed to bring human and demonkind together peacefully.
* There's plenty of them, but Kharisma, in particular, represents this. A horribly shallow, self absorbed character who has received so damn much punishment (her face being set on fire, being sent to prison for a crime she [technically] didn't commit), it is getting harder and harder to feel schadenfreude at her. The author appears to have caught on, as after she got sent to prison she's been portrayed much more sympathetically.

* There's probably some kid somewhere who drifted into a life of crime because he never got to hear his idol denounce violence.
* There's profound socio-economic effects too. First Generation Prolong was only discovered around a century ago, and on rich planets like Manticore there isn't anyone physically over 40, and the life span will go for 300 years. 3rd Generation like Honor will go much farther, 500 is possible. For many worlds, the promise of Prolong being administered for free as a Government program is a major plot point. This causes what's practical in governments to change. One Government's Annexation bid will gradually rewrite districts in the new federal government, with the core nation having dominance written in for the next 20 years, and ending fully in 70 years. Given that the prolong makes this nothing on a human lifespan makes it work.

football star Brett Favre. Naturally, Mary chooses the main character over Brett. (She's a Niners fan.)
* There's Something About Mary for managing to get the zipper all the way to the top.
* There's Something About Mary. Mary tells her friends she doesn't need a man, she has a vibrator. Later, Ted's friend encourages him to "spank the monkey" before his big date. This doesn't lead to the main character getting caught with his pants down, but to the movie's signature hair gel scene.
* There's Something About Mary Matt Dillon plays Pat Healy, a modern day private detective who is hired to stalk on the title character for a ex-lover in high school. Pat averts the honorable portion of the trope by going after Mary for himself.
* There's Something About Mary of the bunch, pined over her for decades) to not mention ruthless in their struggle to be the only one Mary loves. It is mentioned a few times throughout the film (and showcased in full in the end) that Mary is completely sick of her sex appeal attracting only madmen.
* There's Something About Mary, Pat Healey tries to revive a dog with a cut lamp cord. He winds up setting it on fire instead.
* There's Something About Mary's character attempts to do one of Moe's eye pokes on his dog, only to be paw-blocked like Curly would do.
* There's Something About Mary: "Seven's the number. Like a mouse on a wheel."
* There's Something About Mary, Ted explains that none of the guys pursuing Mary love her, but are fixated on her "because of the way [she] makes them feel about themselves".
* There's Something About Mary was based on the eponymous character being one of these.
* There's Something About Mary. When Pat finds out that Mary's neighbor routinely intercepts and listens to cell phone calls, he sets one up with his friend where they talk about his philanthropic work with orphan children in Africa, and generally make him seem like the greatest guy in the world.
* There's Something About Mary where Ted confesses to picking up a hitchhiker when he's actually under arrest for murder.
* There's Something About Mary: While Ted is in the bathroom waiting for Mary to finish dressing up, he stares at a bird through a window. The bird then flies away, which reveals the half naked Mary through a window on the other side...
* There's Something About Mary, word-of-mouth, and box office success. Plus he wasn't even looking at Mary, he was looking at a songbird in the same general direction as Mary.
* There's Something About Miriam - something the participants had no idea of but which the audience knew right from the start of episode one. The whole thing led to some of the competing men suing the TV network. And as one can imagine, transgender advocates were not thrilled at the show setting the movement back to the stone age.
* There's something a little magical about the dog's longevity. The character gains its companionship in childhood, and it's still just as spry when the character is an adult with children who are old enough to speak. Dogs of that size rarely live more than 13 years.
* There's something inherently hilarious about a belligerent gorilla swinging a sleeping man around by his hair in
* There's some variation within the castes as well. In the warrior caste, the freeborn (those born the old fashioned way) are always below the trueborn (those born from the clan's controlled breeding program). Among the Trueborn some of the Elementals who are bred to specialise as
* There's sort of an in-universe and out-of-universe example in the Season 2 episode "
* There's sort of a reason for it. When you travel back in time to fix something, you don't actually prevent the Bad Thing from ever happening; you create a quantum split at the point you emerge in the past that creates two universes; one where you didn't arrive, thus creating the timeline you lived through that was so shitty you had to go back and fix it, and one where you

* There's Steve, her great-grandfather, who's biologically and mentally in his late 20s thanks to his ice stint. Then there's her grandmother Alison Carter, who's a badass
* There's still confusion over whether Neo's first name is "Neopolitan" and she has no known last name, or if her full name is "Neo Politan". Characters only ever call her "Neo" until late in Volume 7, and as her name has only ever been spoken as an explanation, not to address her, it's still possible to hear it as a first and last name. Though official materials called her "Neopolitan" for many years, the video games
* There's still some debate as to whether the Holodomor, the famine caused by Stalin's agricultural collectivization policies in Ukraine, was the result of simple mismanagement or a deliberate genocide against a nation that had a (not undeserved) reputation as a breeding ground for counter-revolutionary sentiment.
* There's subtle implications, such as when they arrived together for the student council's vacation to Okino Island, as if the were a couple. At other times, like the chapter 45 preface page

* There's Susan, one of Issei's first customers. She is an avid fan of Samurai-era Japan, and always wears a samurai armor.
* The Restaurant at the End of the Universe, a culture of idiots that has just been transplanted to the prehistoric Earth decides to make leaves their national currency, then immediately begin burning down trees to fight inflation.
* The Restaurant at the End of the Universe after being told by a machine that the universe revolves around you.
* The Restaurant at the End of the Universe, after narrowly avoiding death by Vogon via escaping to the titular restaurant, Zaphod and Ford quickly head for the bar. Ford becomes so drunk he's hilariously incoherent for much of the scene.
* The Restaurant at the End of the Universe, and their place in it. It's described as the worst fate a sentient being can endure, as the realisation of just how insignificant he is completely destroys his soul.
* The Restaurant at the End of the Universe appears to do something like this; by stuffing the entire vastness of the Universe into the victim's head, their personality is squashed into a nice compact ball of insanity.
* The Restaurant at the End of the Universe are. People's minds cannot handle it, and are generally driven completely insane if not catatonic from even a second's exposure.
* The Restaurant at the End of the Universe, Arthur Dent attempts to prompt the evolution of the human race by teaching the primitive humans how to play Scrabble.
* The Restaurant at the End of the Universe, Arthur Dent, sick of getting bad tea from the Nutri-Matic machine, gives it a lengthy lecture on the nature and history of good tea. The machine hijacks the starship's entire computing power to work on the problem, leaving the ship defenceless against a missile attack. Arthur gets his tea in the end, though.
* The Restaurant at the End of the Universe, Arthur initially orders a steak, changes to a salad when he finds out what the steak comes from, and eventually settles for a glass of water.
* The Restaurant at the End of the Universe"), Arthur starts "I said it was a sort of après..." only to be interrupted with "Yeah, and don't you wish you hadn't?"
* The Restaurant at the End of the Universe. Earth is the computer that Deep Thought created to discover the Ultimate Question of Life, the Universe, and Everything. Because he was a part of Earth's organic matrix, the Question (or a reasonable facsimile thereof) is stored in Arthur Dent's brain wave patterns. Near the end of the book he and Ford Prefect try to discover the Question by introducing a random element that can be shaped by that pattern - drawing Scrabble tiles from a bag without looking.
* The Restaurant at the End of the Universe, every species in the galaxy has some drink whose name is a variation on Gin and Tonic, which has confused etymologists

for centuries. The drinks are all completely different; it's just the name that is identical. Variations listed include jynnan tonnyx, jinond-o-nicks, chinanto nigs, txjin-anthonty-ks, and of course, the Terran gin and tonic.
* The Restaurant at the End of the Universe, Ford tries to explain why they won't die when the universe ends this way. It doesn't work because he's very drunk.
* The Restaurant at the End of the Universe he wanted to be Galactic President, the Council would have kicked him out with "nothing but a fat pension, a secretarial staff, a fleet of ships, and a couple of slit throats!"
* The Restaurant at the End of the Universe) looking for chances to be useful.
* The Restaurant at the End of the Universe, Marvin reveals in passing that he could see The Ultimate Question of Life, the Universe and Everything — for which the characters had been searching for some time — imprinted on Arthur Dent's brainwave patterns. His response to why he never mentioned it...
* The Restaurant at the End of the Universe on which the concert is taking place flips like a flapjack, converting a former blasted wasteland into a fertile field of volcanic soil which becomes the garden spot of that world in just a few short years. It also somehow cured the natives of their unwanted psychic powers, which were forced on the populace by the rest of the galaxy for being quiet and happy while the everyone else was miserable from the small talk they were forced into by social convention. The concert was to distract them from the constant buzz of other people's thoughts.
* The Restaurant at the End of the Universe Pralite Monks leave the order "just after finishing their devotional training and just before taking their final vows to remain locked in small metal boxes for the rest of their lives."
* The Restaurant at the End of the Universe's parking lot was even shinier, an amazing feat for a ship that was perfectly frictionless.
* The Restaurant at the End of the Universe states that "When you are tired of Ursa Minor Beta you are tired of life". As a result the suicide rate there quadruples overnight.
* The Restaurant at the End of the Universe that later copies of the book have blank pages after that point to save on printing costs. The only useful thing to come out of the book is the discovery that the future perfect tense is actually invalid, because it was "discovered not to be."
* The Restaurant at the End of the Universe, the Belcerebons of Kakrafoon Kappa were found to be in contempt by the Galactic Tribunal for smugly living lives of peaceful contemplation. As a punishment the Tribunal inflicted a terrible social disease upon them: telepathy. Now in order to hide their thoughts they either have to babble endlessly about meaningless topics like the weather or play host to a concert by plutonium rock band 'Disaster Area'.
* The Restaurant at the End of the Universe the elevators at the publishing office are precognitive so they know just when someone needs them. Unfortunately, they also refuse to bring passengers up to floors where they predict something bad is about to happen. They have therapists.
* The Restaurant at the End of the Universe). The Guide itself calls this an incredible coincidence.
* The Restaurant at the End of the Universe, the machine in question instead got driven into a rage by poor Marvin's general situation, and blew out the floor beneath it, falling to its death. All Marvin has to say about it is, "What a depressingly stupid machine."
* The Restaurant at the End of the Universe, there is a poem about five Golgafrincham princes who, amongst other things, "rescue beautiful monsters from ravening princesses".
* The Restaurant at the End of the Universe. Trapped on a spaceship that was about to crash into a sun, their only way out was a teleporter whose navigation controls were broken.
* The Restaurant at the End of the Universe was set to autopilot directly into the sun.
* The Restaurant at the End of the Universe when a receptionist tells him that the executive he wishes to see is on an intergalactic cruise... in his office.

* The Restaurant at the End of the Universe, Zaphod gets into an argument with the Guide's receptionist:
* The Restaurant at the End of the Universe, Zaphod justifies stealing a spaceship thusly: "Property is theft, right? Therefore, theft is property, therefore this ship is ours."
* The restaurant Bella Italia in Port Angeles, where Bella and Edward have their first date, received so many requests for the mushroom ravioli that Bella orders in the book that they
* The restaurant chain Moe's used to adorn its shops with posters of various musicians, both living and dead. They eventually had to pull all of the posters after being sued by the estate of one of the musicians. At first, they replaced the artwork with generic music-themed images, then later used pictures of celebrity look-alikes... with the disclaimer that there is no implied endorsement by any actual celebrities whom the pictures might resemble.

* There's that time Flanders's house got taken over by a radioactive baboon. He was seen slapping Flanders while the latter was driving and trying to understand his commands.
* There's the actual move Curse, where a ghost Pokémon can sacrifice half of their HP to put an extremely damaging curse status effect on the opponent that takes away a quarter of the opponent's health per turn. And has the illustration of a needle going into the ghost type. If any other type uses it, it just decreases speed, but increases attack and defense.
* There's the Adventurers' Guild (which has members everywhere but leaves much of the actual direction of adventurers to other groups), as well as a separate guild for every single playable class in the game.
* There's the Aozaki sisters; it's best to explain how they respectively react to meeting somebody with the
* There's the Autosanguine/Black Blood implant, which injects nanobots into the bloodstream and allow someone to heal quite quickly, though it can't gloss over lost limbs or permanent scarring.
* There's the Bison Steve hotel, where you can find pre-war ransom notes and a murder/suicide. It's also where a group of criminals are currently holed up. Interestingly, it's mentioned that it was run as a hotel a few years back before the start of the game, but apparently nobody bothered to clean up some of the crime scenes.
* There's the bronze golems who can attack with an arc with their saw blades.
* There's the "Bulletproof Nudity" optional rule, for a certain kind of cinematic game — the less you wear, the harder you are to hit. For many players, this rewards you for dressing your character up in cheesecake armor. For a certain kind of player, this rewards battlefield streaking.
* There's the buzz bean, which is their equivalent to coffee with really high caffeine levels.
* There's the canonical example of Steve Rogers, though rather downplayed since he's had a couple of years to adjust.

* There's the case of Izumi's dad. He doesn't approve of her liking Hayate, because he took his little girl's words too seriously, it seems.
* There's the case of Megan Meier, who killed herself after a cute boy she had friended on
* There's the classic Bill Cosby routine about him listening to a radio drama about a chicken heart that not only keeps beating...but grows...and grows...and grows. I forget if that was an actual episode he was remembering.
* There's the classic "spit in your food" from restaurant workers who get annoyed by an irate customers, though this is not as common as one may think due to cameras being everywhere.
* There's the classic urban legend about a guy who decides to be a jerk and throw his annoying cat at the window. The cat digs its claws into the curtains and its falling brings the curtains crashing down, rod and all. There is a group of now horrified children passing by right at that moment.
* There's the crates too. As mentioned above you can get items by random drops, or by crafting them from other items. However, with the arrival of the Store, you would start getting crates as random drops. A crate is of no use at all on its own, and needs a key to open. Whilst crates are come across on a fairly regular basis, there's only one source of keys. Yes, you guessed it, the Mann Co. Store. When you open a crate with a key, you get... a random item. You're basically being asked to pay for extra random drops. Whilst some of the items you get from crates are unique and can't be gotten by any other means, most of the time all you'll get is a bog-standard item that you probably already have three of in your inventory as it is.
* There's the Dark Assembly, where bills that are voted down can pass anyway by
* There's the episode where Benson and Stabler are called in because a little girl is drawing some rather
* There's the fact that the narration is in past tense, but some details are given in present tense ('I did X, Y and Z, then went back to my apartment. My apartment is...') which would be consistent with Harry writing about events a short time after they've taken place.
* There's the famous instance in which Frank Burns, while holding an auction, tries to wish the Korean crowd "peace and prosperity." In response, a man asks, "You wish us all a prostitute?"
* There's the famous rumor of President Kennedy cheating on his beloved wife Jackie with popular actress Marilyn Monroe. Interestingly, sophisticated, wealthy

* There's the general case of "1 million hits", "1 million subscribers", etc. This usually has some celebration or special comment on sites that consider those relevant.
* There's the good Commissar's skill with a chainsword and las pistol, as well as his "friendly" relationship with a certain Ordo Xenos Inquisitor.
* There's the Hater type enemies, represented by some knight battler, of Pale Haters, and Hater Trolls.
* There's the incident where Amanda won a gambling club from its owner, and refused to give him the chance to win it back. The man loses his temper: "No thieving French harlot with a coiffure is going to cheat me out of my club!" Amanda slaps him hard, and says: "I'm not French!"
* There's the infamous episode where a joke was made about sticking a live firecracker up a cat's behind, which caused so much outcry that MTV was forbidden from airing it again. Clearly, the fact that they thought it went too far was saying a lot, given the type of humor this show is famous for.
* There's the infamous Kalekka Incident, mentioned a few times in the first
* There's the infamous story of a dog, a German Shepherd-mix named Zuzu, that was abandoned at a Los Angeles shelter because she became depressed after another pet died. Her owners returned to the shelter, making Zuzu excited that they were taking her back... except they intended to adopt a different puppy. After this story went viral,
* There's the interesting case of Erik Jan Hanussen, a hypnotist, mentalist, and

fortuneteller who has been attributed with teaching Hitler his charismatic form of public speaking, predicting the Reichstag fire that enabled Hitler to seize absolute power, and later being assassinated by the SA for getting too much influence with the Fuhrer. Bear in mind, like most other Nazi-occultism allegations, there is a good chance that a lot of stories associated with him are more sensationalism than fact.
* There's the Irish legend of the harp of Daghda, which could cause pain, laughter, or peace through music.
* There's the issue that she is technically the gender-less magical being Ruby Moon, but since she looks and refers to herself as a girl, we should keep it that way.
* There's the joke about the fox, the bunny, and the bear who want to avoid conscription. The fox thinks he is going into military intelligence and

* There's the little girl with cancer who convinces Chase to kiss her.
* There's the mask Huu wears with his swamp monster disguise. It's more light brown, apparently made of bark, but same difference.
* There's the military holdout in Riverside, that is overrun when the survivors get there.
* There's the "Minimalist" achievement, where you have to beat the game collecting no permanent items other than your starting weapon (meaning no Lute, special moves, or items like the Bow and Hookshot), but allows the use of glass weapons, bombs, and scrolls.
* There's the Minotaur Emperor in the minotaur maze under a ruined city. He carries an axe that deals massive damage, but is also massively heavy.
* There's the motel at "the centre" (the central point of the continental United States) in
* There's the new Avatar learning Airbending from Tenzin, the youngest son of Aang and Katara. So yeah, they got hitched.
* There's the not-at-all-gratuitous "alien learns to put on a bra" sequence in
* There's the old joke about the man who buys a parrot who has no legs and can only stay on his perch by wrapping his incredibly long penis around it. One day, the man comes home from work and the parrot informs him that his wife is cheating with the milkman/mailman/[insert job here]. The man keeps pressing the parrot for details, but eventually the parrot is unable to provide any further information because he unfortunately wasn't able to witness the entire act take place... because
* There's the one about the woman who asks after an acquaintance's teenage son, who hasn't been seen for some weeks, and is told he's "gone up to Jesus"
* There's the one time where Farnsworth catches himself: "Wait a minute, that's not good news at all!" Which is because this time, the bad news applies to himself. It's pretty much good news to the rest of the group.
* There's the one where Bart & Lisa are caught going through Sideshow Bob's dumpster. Cut to him showing up at their house and telling Marge that her children "are no more... than a couple of ill-bred troublemakers".
* There's the option of hitting on some of your teammates after you complete their third "find [item]" quest, which have no significance at all beyond one pickup line and are never brought up again.
* There's the "oxygenated water" thing. Drinking water with more oxygen packed into it is good for you, right? Well, only if you had fish gills in your stomach. If your stomach and intestines could perform that sort of gas exchange, Coke and Pepsi with their carbon dioxide would be a deadly poison. Lungs do that function excellently, thank you.
* There's the "quantum mirror", which makes a few appearances in early episodes before being destroyed offscreen, on O'Neill's orders. In one episode, Daniel accidentally uses it to travel to another universe; in a later episode, alternate-universe versions of Carter and Kowalski come back through it, looking for refuge from the Go'a'uld invasion fleet that just arrived on Earth in their universe.

* There's the quasi-legal (if you have a valid prescription) to wildly illegal (if you're using street speed) "biker coffee." As in, coffee either brewed with amphetamine-class stimulants or with them dropped into the cup post-brewing. Anything from Ritalin and Adderall pill form to a piece of crystal meth can be the option of choice, and this is a very popular option among speed users who wish to maintain some sense of normalcy/avoid police attention.
* There's the relatively minor villain Paragon who can copy the powers of everyone near him at heightened levels. So if you have
* There's the scene where you have to wander around on a moving conveyor belt leading to an incinerator and littered with half-dead zombies, in order to get round a metal crate
* There's the schoolyard-esque taunt, "I'd be your father, but the mailman beat me up the stairs." Or "
* There's the spell Barrel Shot, which fires a burst of pressurized air at the target that deals no damage, but paralyzes them as a prelude for
* There's the stone golems who are the less dangerous and who attack by punching, with the exception of Flint who can gets a flamethrower and a saw blade.
* There's the temporal filcher, a bizarre monster which pulls its victim out of synch. It is a bit different since the anomaly only works for several subjective rounds but the filcher is still alone with its victim until the rest of the party catch up.
* There's the "Timer", several of which were actually used by the main characters (the original until about the midpoint of the series, the one from Egyptian World that they'd use until the end, and Colonel Rickman's Timer, important for season three's endgame). The Timer's job was to open wormholes between universes, and also to
* There's the TurtleSim in the Combat Simulator mode, which spawns with a shield stronger than any human player can get, but also moves much more slowly.
* There's the very creative use of short-distance time portals the indian villain Phir Sē does: two linked portals, one slightly further in the past than the other. Then he takes advantage of the paradox-free nature of his power to loop the same photons over and over, until he has what he calls a
* There's the very special case of Swan Queen (Emma/Regina). It's Squick to some of the fandom because Regina is Emma's step-grandmother, has repeatedly tried to kill Emma
* There's the village from the start of the film that gets shot by flaming arrows
* There's the young girls whom Lilith likes to possess and terrorize and kill their families, as well as her dental hygienist; Meg Masters, who has to spend over a year watching a demon use her body to kill people;

* There's this poor but not so honest farmer who's so poor he's practically forgotten what money looks like. He finally decides that the only way he's going to get any money is to print his own, but he's a bit vague about the denomination he should print, so he finally settles on a fifteen-dollar note. He takes his freshly minted note to the store and gets some items. The shopkeeper says "That's exactly three dollars" and the farmer hands over his fifteen-dollar note. The shopkeeper looks at the note, looks at the farmer, looks and the note again, looks at the farmer again and finally says "How do you want your change? A nine and a three, or two sixes?"
* There's this Quarterback. Let's call him P.M. He is by all measurable (and some unmeasurable) categories the best of his era. However, any team he plays for suffers from chronic
* There's this really tall white-haired elf in the future named Jinx who has a lot of sex with humans and talks to reptilian aliens and can teleport.
* There's this story of a guy who gets asked by a buddy whether he knows about the "orange position". Not wanting to admit he doesn't, he says yes. Now he has to find out what the hell it is about. When he asks a co-worker, she slaps him and complains to the boss. When he tells the boss what he asked her, he gets fired. When he asks his SO whether she knows about it, she also slaps him and leaves him. When he goes to a brothel he once frequented, he also gets slapped and banned for life. Then he goes on asking several whores on the street, getting slapped several times. Finally, he finds an older, washed-up prostitute who tells him she knows about the position but doesn't practice it since it's illegal and an affront to human dignity. Completely desperate, he offers her all the money he owns. This makes her change her mind, and she tells him to come up to her room. The staircase leading there is pretty dark, and so she stumbles, falls, and breaks her neck.
* There's this VHS called "The Dangers of Smoking" that shows this smoking cessation class watching an old video that shows graphic cancer surgery and then shows this cancer patient with a huge chin speaking in a deep voice. It then shows a montage of photos of his chin getting bigger and the last photo showed his dead corpse. VERY grotesque!

* The rest of TJ's gang finds out Mikey still likes the children's TV character "Bonky", and they try to confront him about it in an effort to save him embarrassment, but he gets defensive, and his backpack full of Bonky toys spills out onto the blacktop, causing a bunch of kids to chant "Mikey loves Bonky" at him anyway.
* The rest of Transformers plays this pretty straight, though. "Oh Slag..." "That bot's got bearings of chrome steel." And so on....
* The Rest Of Us Just Live Here, Jared calls Meredith "Merde Breath" rather often. Speakers of French will know that "merde" means shit.
* The Rest Of Us Just Live Here, Mikey describes where he lives as "a suburb of a suburb of a suburb of a suburb of a city that takes about a hour to get to."
* The Rest Of Us Just Live Here plays with this: adults never seem to notice even large-scale supernatural events. Such events have been going on for decades, so narrator Mikey wonders whether people forget what they've seen as they age out of the Competence Zone, or if they're just pretending not to notice. The adults he talks to imply that the truth is closer to the latter.
* There's too many examples of bigger tech companies buying out smaller firms and integrating them into their offerings that it could be its own article. Some famous examples are AMD buying GPU designer ATi and Google purchasing Android Inc.
* The Restoration Game to an allegory by J.B.S. Haldane, in which the Republic of Krassnia has "materialism" as a state religion, and this very much informs the character of MacLeod's Krassnia.
* The Restriction on Underage Wizardry prevents the main cast from using magic outside of the school. Even without that, one has to contend with Potterverse magic being pretty much worthless because all of the major antagonists can also use magic with equal or greater skill.

* The restrictions and creative freedom a Korean idol may have can vary depending on the company and the idol's experience; while some companies like SM Entertainment are infamous for their tight control over artists (as frequently portrayed in Western media), there's an increasing amount of groups in the industry with looser contracts and/or with

* The Rest Shall Pass: When the heroic team is split up by the sudden arrival of a series of villains.
* the rest were all dead). It also seemed to imply that the first ever companion, the Doctor's granddaughter Susan, was dead as well. Other mysteries lurk in the Ninth Doctor's era, mostly revolving around how fresh his face was in his first episode and whether he knew or had anything to do with Jack Harkness's past life. The big mystery, though, is whether the Ninth Doctor A: is canonically Bisexual, and/or B: is the first Bisexual Doctor.
* There's two different flavors of magic, depending on what its source is — Arcane or Divine. Arcane magic comes from wizards memorizing spells and using hand gestures to cast them (and so can be screwed up by wearing armor that restricts your movement and gets in the way), whereas Divine magic comes from the Gods and has no such restriction. Also, for the most part, healing spells are limited to divine only (except for Bards, who do things their own way).
* There's two incubi and one succubus among the main cast. Furry ones. Not to mention, a rather prolific race of Cubi, with their own

* The resulting confusion stopped the invasion in its tracks, thus proving that even Orks have their limits.
* The result is that Tithonus shriveled away into increasing decrepitude. In some versions of the story, Eos eventually shut him up in a room with shining doors to babble endlessly in his senility, too weak to move; in other versions, he ultimately became a cicada, as a way to alleviate his suffering.
* The results left much to be desired. The man admitted he was more interested in seeing if he could do it and to "laught in God's face", in his own words. He also realized the only practical use he could give to the newly resurrected was to sell them to the military as willing suicide bombers.

* There's usually little interaction between the Naval component of a battle, and any other part of it, so if you should choose to do both, you're basically fighting two unrelated battles simultaneously, which might or might not be operating under different rules. After all, ground troops can't very well waltz into the sea, and your ships certainly won't get anywhere trying to cross the land. And if you should win the battle at sea and advance inland with your ground forces, your ships, unable to go aground themselves, will have no choice but to remain on the water twiddling their thumbs. Some games alleviate this by giving navies the ability to do things like

* "The Retraction Reaction": Leonard is doing a radio interview about breakthroughs in physics. The interview is not going so well as he keeps mentioning there are no new exciting discoveries, only stuff people expect to find and prove, but nothing new yet despite huge investments in new equipment. His friends are worried that he shouldn't say that in public. Howard jokes that not too many people listen to public radio.

* The Retreat, a man named Gus finds himself tormented by a wendigo during a winter backpacking trip with his friend Adam in the Adirondack High Peaks of upstate New York.
* The retreat from Kabul in 1842 is a strong contender for the worst military disaster in the history of the British Army. 4,500 troops and 12,000 civilians left the city on the 6th of January, intending to regroup with the garrison at Jalalabad. A week later, surgeon William Brydon rode into Jalalabad alone, suffering from a severe head wound. When asked about the rest of the army, Brydon replied, "I am the army." A few dozen captives and stragglers trickled in over the next days, but the vast majority of the column was annihilated by the Afghans.
* The retro group Big Daddy based their entire routine on this trope. They did mashups of contemporary hits (they were active in the 80s and 90s) not just in a generic style of the 1950s, but with a carefully reconstructed homage to a specific artist's signature riffs and vocal stylings, such as "I Want To Know What Love Is" with Ritchie Valens' rapid bass accompaniment, complete with a chorus in Spanish.
* The Retro Video Game System and its successor the Coleco Chameleon (unrelated to the Colecovision besides the name) were two consoles that were meant to "bring back" cartridge-based gaming. They were supposed to be able to clone numerous 8-bit and 16-bit consoles as well as play
* The Re'tu play this one straight, being invisible human-sized spiders. Because of their invisibility, most have been hunted and wiped out by the Goa'uld using a device that can make them visible. Of the remaining ones, a radical faction of them has decided to wipe out every human civilization in order to prevent the Goa'uld from getting more hosts. Their weapons include an energy gun of some sort and a small bomb that has the power of a mini-nuke. They are only present in one episode but are mentioned almost every time an invisible assailant has infiltrated their ranks.
* The Return (1980) features an alien-tech bar of light that sometimes burns, sometimes cuts and cauterizes, and sometimes just acts like a normal knife.
* The Return, 25 years later. His friends also manage to locate the missing pages of Laura's diary with the message from Annie.

* The Return — while demonic and of nobility, when Dark Star wants to "topple your castle", she'll use artillery, and then go in the ruins and personally kill anyone left.
* The Return of Barry Allen; even though Wally escapes, he felt that he should go into hiding that only a select few know of his survival. Other speedsters (plus Green Lantern Hal Jordan) decide to deal with Barry Allen when he goes rogue, but Wally was still affected by the betrayal that he refuses to lift a finger. But then Wally finds an important clue that reveals that the rogue Barry Allen is an impostor. Wally proceeds to return to being the Flash, and unmask the impostor as Eobard Thawne the Reverse-Flash. And in the duel of the two speedsters, Wally further overcomes his own limitations, a mental block he placed on himself that Nerfed his power, allowing him to fight Thawne on even ground and eventually win.
* The Return of Barry Allen, Jay Garrick rips off the front of the costume (symbol included) of the imposter Barry Allen while the latter keeps furiously ranting that there can only be one Flash. The rip only made the imposter even angrier.
* The Return of Barry Allen presented an interesting example of this when the "Barry Allen" who had returned turned out to be a version of Thawne who personally hadn't even met Barry yet even though he was now in a time period where Barry had killed him years ago.
* The Return of Barry Allen who stole Barry Allen's identity in order to 'fix the mistake' that was Barry's death and Wally taking over the mantle. The story ends with Wally proving himself not just Thawne's superior, but also proving to be just as good a Flash as Barry Allen, if not better. Something he would continue to prove for the next two decades.

* The Return Of Bruce Wayne, which was a six-part mini-series about Cap coming back.
* The Return of Captain Invincible, although he has previously been prosecuted for his dress sense.
* The Return of Captain Invincible has "Name your poison", a song entirely composed of alcohol puns.
* The Return of Captain Invincible when one of the charges levelled against the

eponymous superhero was of showing his underpants in public.
* The Return of Chef and Stan calling out "that fruity little club" for what they did to him.
* The Return of Cooler Abridged and the Cell Saga. Given the amount of time that had passed in canon since his last appearance, this could be Dende going through puberty.
* The Return of Cooler, both Vegeta and Goku are barely able to destroy one Metal Cooler, when they are overwhelmed by an army of them. After that, they were captured by Cooler.
* The Return of Cooler is a mechanical life form that was trying to absorb New Namek.
* The Return of Count Yorga had the the main hero Baldwin finally reaching Cynthia after barely avoiding Yorga's traps. He confront Yorga on the roof of the manor and, with Cynthia's help, manages to kill him. Looks to be all well...until it's revealed he was bitten by Yorga's brides on his way to rescue Cynthia and the change finally kicked in, to which immediately goes to bite Cynthia.
* The Return of Count Yorga, one character named Mitzi encounters Yorga before she's about enter an auditorium for a orphanage fundraiser. He takes some of her blood before going in himself with her stumbling in some time after. When the guests examine her, they see some slight puncture wounds on her neck but aren't sure what to make of it while Yorga quietly leaves as they tend to her. Unlike Erica, no one makes the connection of her being a victim of a vampire attack, allowing Yorga to claim her later easily.
* The Return of Count Yorga start off Yorga commanding his buried vampire harem to rise from their graves, which they proceed to do from the local graveyard that an unfortunate child was playing in.
* The Return of Count Yorga to Cynthia's home to kidnap her, which they do and feed on the rest of her family. After Cynthia is brought back to his manor, he has his servant, Brudah, clean up the dead bodies. The mother and father of which are taken to a small bog close to the manor and dumped into it to be disposed of while Cynthia's sister is turned and joins Yorga's vampire harem.
* The Return of Count Yorga, two policemen are beset by Yorga's vampire brides. Spooked by them appearing out of nowhere, they shoot two of the brides point blank. The brides winch a bit and gain bloodied stomachs but aren't phased and continue coming after the two policemen.
* "The Return of Doctor Mysterio" aliens with eyes that peer out from deep within the lobes of the brains.
* "The Return of Doctor Mysterio" (Christmas 2016, set in 1992 and 2016) aired between the previous Christmas show and Series 10 and averts the trope. The opening sequence is set on Christmas Eve 1992 and humorously establishes how the Doctor accidentally had a hand in granting a human boy superpowers, but the rest of the episode has nothing to do with Christmas.
* "The Return of Doctor Mysterio" ends with the alien brain posing as the German doctor escaping into the body of a UNIT soldier.
* The Return of Doctor Mysterio. Grant, the secret identity of the superhero The Ghost, is in love with Lucy (for whom he serves as nanny to her infant daughter). Lucy only has eyes for The Ghost. At one point, when the Ghost sets an interview/date with Lucy, Grant actually starts feeling jealous of his alter-ego. Strangely, when he blurts out to her (as Grant) that he also has a date, Lucy is the one who starts feeling jealous of the other woman... who is herself.
* "The Return of Doctor Mysterio" introduces Mr. Huffle, a squeeze toy that "feels pain", or so Lucy Fletcher claims, when she uses it to interrogate the Doctor. Later, she gifts Mr. Huffle to the Doctor.
* The Return of Doctor Mysterio" involves alien brains who are trying to take human bodies for themselves. They do this to take over planets, and have tell-tale scars from it.
* The Return Of Doctor Mysterio," Lucy asks the Ghost if he has a girlfriend or a boyfriend.
* "The Return of Doctor Mysterio", the alien invasion takes the form of brains in

jars seeking human hosts.
* "The Return of Doctor Mysterio", the aliens have their brains transplanted into human hosts by a team of scary surgeons.
* "The Return of Doctor Mysterio", the Twelfth Doctor's "plan" at one point consists of literally randomly mashing buttons on a spaceship control panel.
* "The Return of Doctor Mysterio": UNIT is raiding the Harmony Shoal's bases and their plan has been scuttled... but the alien brain in the body of Dr. Sim possesses one of the UNIT soldiers...
* "The Return of Doctor Mysterio": When being held at gunpoint by Dr. Sim, the Doctor challenges Sim to shoot him, Nardole and Lucy Fletcher in the back so he won't be able to claim self-defence. They then get rescued by the Ghost.
* The Return Of Ganondorf. Ganondorf has reformed and changed his evil ways, but Link is determined to prove Ganondorf's still evil.
* The Return of Godzilla counts as this, being a military satellite operated by Soviet Russia armed to the teeth with ICBMs. In the original Japanese film, the Satellite is accidentally activated after Godzilla damages the boat carrying the launch system. In the American dub, the Russian Colonel aboard the boat deliberately launches the missile.
* The Return of Godzilla find the body… And turned it into the titular Mechagodzilla.
* The Return of Godzilla, somebody has the brilliant idea of dropping a nuclear bomb on him. Think about that for a minute.
* The Return of Godzilla version is unavailable on any format newer than VHS, and will likely never be officially released again.
* The Return of Hanuman, a fruit was very frightened when it was chased by a squirrel, but is totally relaxed after he was eaten by Hanuman and disappears.
* The Return of Hanuman. Big girly eyes, cheeks, innocence, he's just so adorable.
* The Return of Hanuman Hanuman and released all of the victims after he defeated a monster formed out of the volcano.
* The Return of Hanuman, Hanuman reincarnated as Maruti rapidly ages into an elementary school student in three months in order to quickly help an elementary school boy from being bullied.
* The Return of Hanuman, not only he finished the whole fridge, he ate all of the village's food supply.
* The Return of Hanuman, Rahu and Ketu were cut in half. Their bodies were reattached, only that their lower halves were switched.
* The Return of Hanuman, the villagers uses a piece of log to break into Maruti's house.
* The Return of Hanuman) told Minku to be strong before left the village.
* The Return of Harmony, and the loyal Rainbow Dash deserts her friends. Eventually Twilight Sparkle became affected, no longer caring about friendship. This lasts until Princess Celestia sends back Twilight's friendship reports, which breaks Twilight's corruption and reunite her friends.
* The Return of Harmony arc was originally produced as part of Season 1, but got pushed back to the Season 2 premiere.
* The Return of Harmony. Later, another one occurs in the Ponyville library when Twilight Sparkle tackles Applejack and Pinkie Pie to recover a book.
* The Return of Harmony segments for the next episodes are omitted, though...
* The Return Of Jafar, Abis Mal chops his own trousers off trying to slash his sword in the air while talking about a swordfight he was in.
* The Return of Jafar being one of the most well-regarded of the sequels.
* The Return of Jafar (establishing things like Abis Mal as a villain, Genie being somewhat weaker and his powers being on the fritz so that he couldn't solve the problem-of-the-episode easily, Iago being something of an ally to Aladdin and Co.) in addition to tying up some dangling threads from the first film.
* The Return of Jafar for Iago, who was genuinely warming up to Aladdin.
* The Return of Jafar has an example near the beginning of the film when Genie! Jafar, still in his lamp, asks Iago if they have exited the Cave of Wonders. It is implied he asked more times before the scene as an annoyed Iago responds "'Are we

out yet? Are we out yet?' Yes, we're out!"
* The Return of Jafar, he dies the instant he's beaten in his boss fight, with his lamp simply vanishing the moment he does.
* The Return of Jafar, Iago says (in reference to Jafar) "He's large... and IN CHARGE!" This qualifies with Jafar in both regular and Genie forms.
* The Return of Jafar, Iago tries to trick Aladdin into letting him back into the palace by acting severally injured and claiming that he just escaped from Jafar. Naturally, Aladdin isn't fooled and attacks Iago.
* The Return of Jafar: Jafar has an entire musical number about showing this to the Genie.
* The Return of Jafar: Jafar is a nigh-omnipotent genie, but will die if his lamp is destroyed.
* The Return of Jafar - Jafar's last line in the first movie was one of these to Iago as the two were flung into the distance.
* The Return of Jafar, Jafar's true form of a huge red genie is too much for thief Abis Mal to handle, so Jafar spends most of the film in human form, transforming back to his genie form during his musical number/confrontation with Genie and the climatic battle with Aladdin and his friends. Granted, this only helped a little, since let's face it, even human Jafar is pretty damn intimidating.
* The Return of Jafar knocks Jafar's lamp into the lava, destroying Jafar.
* The Return Of Jafar that he is, deliberately invokes this on Abis Mal. When Abis wishes for sunken treasure and Jafar teleports him to the bottom of the ocean, he makes Abis use his second wish to take him back to the desert.
* The Return of Jafar that we fade back to the tree with Abis Mal pitifully hanging by his pants from a tree.
* The Return of Jafar to heat his revenge on Aladdin, several more scenes fade out with Jafar's smiling evilly—even more than the original film.,
* The Return of Jafar to save his life, but was limited by his own previous statements ("no more freebies), so he took what he could get.
* The Return of Jafar, while listing everything about Aladdin that she loves. She catches on, but gets his point and reconciles with Aladdin.
* The Return of Knecht Ruprecht: The War of the Krampus has a war going on between Santa Claus and Krampus.
* The Return of Knecht Ruprecht. where three children help Santa Claus fight off the army of the Krampus.
* The Return of Krampus by Tim Ozman has Krampus taking over the North Pole from his brother, Santa, after the revelation that there are more naughty children than nice children. He also has his own gang of elves.
* The Return of Maggie Beckett". In the parallel universe featured in that episode, the Germans broke the Allied lines at the Battle of the Bulge in 1944 and World War II continued until 1947. Given that Eisenhower was disgraced because of this failure, Stevenson won the 1952 presidential election (which he lost to Eisenhower on Earth Prime) and revealed that the US government had made contact with aliens called the Reticulans at Roswell in 1947.
* The Return of Mr. Lawrence plays it by the book: a murdered woman's maid accuses the woman's former husband of poisoning her. The police never said it was poison.
* The "Return of Queen Chrysalis" arc (issues 1-4) has the titular Changeling Queen.
* The Return of Queen Chrysalis", as Chrysalis begins to describe what will happen should the Mane 6 miss the deadline, a fillynapped Scootaloo blurts out that she's about to reveal her evil plan to the heroines. Annoyed at the interruption, Chrysalis cuts off communication.
* The return of River Song in the 2015 Christmas special sparked a major retcon as it was previously thought that River's story arc had been concluded. As a result, it was now established that the Doctor was prepared to go to his final death in the
* The Return of Sherlock Holmes"), an investigation into the seemingly motiveless crime of someone smashing plaster busts of Napoleon uncovers a case of grand theft and murder.
* The Return of Sherlock Holmes, a victim is shown being stabbed. However, the

camera forgot to cut away before the stage knife was pulled out, showing no blood at all.
* The Return of Sherlock Holmes, Beppo is an expert with the switchblade he carries.
* The Return of Sherlock Holmes, Doctor Watson is a woman, played by actress Bessie Nellis.
* The Return of Sherlock Holmes: In keeping with the original story, Holmes reveals that he faked his death at Reichenbach Falls.
* The Return of Sherlock Holmes makes a valiant effort to make 2015 New York look like 1894 London on zero budget.
* The Return of Sherlock Holmes. The film contains two unrelated characters named Hudson: Holmes' housekeeper Mrs. Hudson, and antiques dealer Morse Hudson.
* The Return of Sherlock Holmes to Professor Moriarty, is completely bald.
* The Return of Sherlock Holmes: Watson to Sherlock Holmes after his friend falls asleep on his consulting-room table in the Granada TV version of "The Empty House".
* The Return of Sherlock Holmes: When Holmes buys the last Napoleon bust off Mr. Sandeford, Sandeford asks him how he deduced that he possessed the bust and his address. Holmes replies that after the sculptor provided the names of the purchasers, he glanced at the sculptor's records and copied Sandeford's address down.
* The Return of Spring, so it is likely that she is meant to be a lesser goddess of Spring.
* The Return of Superman respectively, leading to a spike in couples seeking fertility treatments. It became enough of an issue that the producers had a regular family with five children (one set of triplets followed by a set of twins) come on to discuss the sheer expense of taking care of so many small children at once to try and dissuade fans. Also, the sight of celebrities getting to spend time with their children resulted in enough resentment from everyday Koreans (who have some of the longest working hours in the world), led to the government forcing employers to give employees more time off.
* The Return of Swamp Thing by Swamp Thing. It's pretty obviously designed to parody more typical uses of "monster carrying girl" imagery.
* The Return of Swamp Thing: Dr. Rochelle is more interested in causing mutations than researching the key to eternal life like his boss would want him to.
* The Return of Swamp Thing ends up flames, and explodes shortly afterwards.
* The Return of Swamp Thing, Gunn tries to take Swamp Thing out with an armed jeep.
* The Return of Swamp Thing wear bright orange uniforms in swampy surroundings.
* "The Return of The Archons". He tries to do it on McCoy but fails because of Landru's
* The Return of the Archons", where Sulu is turned into one of Landru's followers.
* "The Return of the Christmas Specials": The top 12 runners-up to the previous year's list of best Christmas specials
* The Return of the Condor Heroes, and 2021. The page image is from the 2006 series.
* The Return of the Condor Heroes has Yang Guo, a young rogue martial arts student, falling in love with his master, Xiao Long Nu. The issue, however, was less of age than it was of position; in those times, it was traditional for students to revere and respect their masters in the same way one would a parent. Society's inability to accept their relationship plays a very important part of their romance.
* The Return of the Home Run Kid, our hero used magic to ensure that he never struck out, and this was treated as entirely proper. Anyone who considered that poor sportsmanship probably wasn't still reading the books, and anyone who accepted it would have a hard time telling how physical cheating is worse than magical cheating.
* The Return of the King, albeit accidentally, in his insane father's suicide attempt had Gandalf and Pippin not shown up. After he's rescued, he regains consciousness. (Basically canon.)
* The Return of the King: Aragorn has a dream of Arwen dying. He then wakes up to discover that Elrond has arrived to tell him that Arwen is dying.

* The Return of the King Aragorn pulls this when he arrives at the battle of Minas Tirith. What appears to be just one man charging at the enemy is suddenly one man followed by an Army of ghosts.
* The Return of the King briefly uses two swords on horseback (with Merry holding the reins) to good effect against the Mûmakil outside Minas Tirith.
* The Return of the King chapter "The Scouring of the Shire" it says that Saruman's evil agent Wormtongue has red eyes.
* The Return of the King does not show Gothmog's ultimate fate. He is last seen at the front of his army as the Riders of Rohan charge them, which heavily implies he did not survive their charge. The Extended Edition shows his ultimate fate (though it was much later than theatrical version made us believe).
* The Return of the King, Faramir's restraint is broken and he points out that it was Denethor who chose Boromir to go to Rivendell—and so if he's looking for people to blame for his favorite son's death, he should start there.
* The Return of the King features an example of this when Frodo and Gollum fight inside Mount Doom near the end of the movie.
* The Return of the King features a scene where it seems Frodo (captured, naked, bound, weaponless, and Ringless) is about to be killed by an Orc:
* The Return Of The King, Frodo's dreams are filled with the Eye of Sauron, who fortunately has less ability to reach him than in most instances of this trope.
* The Return of the King had the Battle of Pelennor Fields, which comes about three-quarters of the way through the film and is easily the biggest and longest fight of the whole trilogy.
* The Return of the King have every reason to be scared of the mountain where the Dead dwell. For once, the Humans understand the reasons for their fear. Elves, however, don't. The Dead aren't really evil, and end up being of great help to our heroes... but they're still pretty darn scary.
* The Return of the King includes an intentional example. Faramir is forced to make an unsupported cavalry charge across open ground against a fortified position. Said position being an urban environment with lots of rubble in the streets that would handily take away all of a horse's speed and maneuverability. This goes about as poorly as one can expect and was meant to display Denethor's failing sanity.
* The Return of the King, Lotho Sackville-Baggins bought most of the supplies and the farms of the Shire with funds of unknown origin. It was later revealed these funds came from Saruman, and Lotho was eventually and secretly murdered by Wormtongue.
* The Return of the King. Note that in the book, the Watchers merely sapped the will of anyone trying to pass through; the barrier was more psychic than physical.
* The Return of the King pointed to an account of the Battle of the Catalaunian Plains by the late Roman historian Jordanes, in which Theodoric, King of the Visigoths, was slain in a nevertheless tactically successful battle against the Huns, invaders from the East.
* The Return of the King, Samwise becomes the bearer of the One Ring, which tries to corrupt him with a vision of a world in which he has become all powerful. Of course, it being Samwise, this vision involves innocuous things like turning all of the orcs into cute animals and the entire world into a flower garden. Samwise realizes how silly the idea of him being an Evil Overlord would be and is able to resist the allure of the Ring.
* The Return of the King: Sauron's full-blown assault on the kingdom of Gondor with his armies of orcs and affiliated. They besiege the citadel of Minas Tirith. Later at the end, the remaining forces of good of Middle Earth gather in front of Sauron's home turf, Mordor, as a distraction to give a chance to Frodo to destroy the One Ring.
* The Return of the King scene, all the other pirates are played by the production team as well.
* The Return of the King strongly suggests the Orc soldiers are conscripts.
* The Return of the King, the Mouth of Sauron's claim that Frodo and Sam have been captured leads Aragorn and his army to firmly believe themselves to be fighting a last stand.

* The Return of the King themselves have been widely accused of being too populist, being too focused on homages to the original trilogy, etc. In other words "Jackson's too popular, the original series is too popular, these movies will be too popular, so they suck, and so does he."
* The Return of the King, the orc skeleton which Frodo trips over in Shelob's lair appears to be that of a chimpanzee.
* The Return of the King, there were the Two Watchers, gargoyles who guarded the entrance to the Tower of Cirith Ungol. While they seemed to be immobile statues, they also seemed at least partially sentient, and could keep trespassers out with an invisible barrier created through force of will alone. Samwise (who felt an evil presence in them, like "some web like Shelob's, only invisible") got into the Tower the first time using the Phial of Galadriel, but the two Watchers were expecting him when he came back after rescuing Frodo, requiring both of them to use the Phial with the power of Elvish words to escape.
* The Return Of The King, the Rohirrim somehow easily routed the much bigger army of Orcs only to get completely thrashed by the enormous Mûmakil (mounted elephants), in the book they spent most of the battle fighting other human cavalry and only took on the elephants when they had sufficient backup from Gondor.
* The Return of the King, the sight of the fleet causes panic in Gondor until its flag becomes clear.
* The Return of the King, the soldiers' decapitated heads are catapulted over the walls of Minas Tirith in broad daylight...
* The Return Of The King. The text states that it takes incredible effort of will and focus to force it to reveal anything else.
* The Return of the King to give a sense of importance to the quest. Every other main character but Gandalf, Aragorn, and the other hobbits was cut entirely.
* The Return of the King to the men of Gondor that whatever comes through that door, they can fight it. His expression at the giant armored battle trolls that smash through is priceless.
* The Return of the King, trebuchets are used to defend Minas Tirith's walls, and catapults are used by Sauron's forces to weaken Osgiliath, and a huge ram was brought to bear against the gates of Minas Tirith, in addition to siege towers pushed by trolls and full of angry orcs.
* The Return of the King trilogy (see the Literature section) in "Frodo and the Nine Fingers":
* The Return of the King uses a battering ram to attack the gates of Mines Tirith. Their standard battering ram has absolutely no effect on the gate, so they bring up Grond...
* The Return of the King, when 6,000 Rohan horsemen cause an army of 100,000 Orcs of Mordor to rout through the sheer fury of their charge.
* The Return of the King you have the siege of Minas Tirith, the Pelennor fields, and the Black Gate.
* The Return of the Living Dead, a brain-eating zombie and corpse-animating 245-Trioxin gas are accidentally released from a sealed metal canister.
* The Return of the Living Dead. After two of the main characters are exposed to Trioxin, they start feeling crappy and complain about the cold. Near the climax they feel better as zombies.
* 'The Return of the Living Dead as a movie within its world. One character even exclaims, "You mean the movie lied?!" The films include:
* The Return of the Living Dead, as he'd become a zombie and had no other means of ending his agony that would be certain to work.
* The Return of the Living Dead. Don't cremate the living dead. Please, don't.
* The Return of the Living Dead features a brief but memorable scene where a reanimated skeleton rises from a grave. It's never seen again after that. There is also Tarman, a prominently-featured zombie so decayed he's a skeleton held together with rotting tissue; unlike the skeleton, Tarman shows up in movie after movie.
* The Return of the Living Dead has an employee at a warehouse accidentally release a zombie virus into a nearby cemetery where his friends are having a party.
* The Return of the Living Dead has one of the brain-hungry zombies using the Fake

Distress Call variant to order in some food: "Send more paramedics."
* The Return of the Living Dead. Here, the zombies eat brains because they give off endorphins that kill the pain of decomposition and rigor mortis.
* The Return of the Living Dead, he's shown eating a sandwich over a body he's embalming.
* The Return of the Living Dead runs with this as well. Turns out that zombies keep a lot of their brainpower; it's just overwhelmed by the constant agony of decomposition (that's why they eat the brains). Tar Man uses a chain winch to rip open a closet door when a victim hides behind it, demonstrating puzzle-solving abilities, and they're capable of enough speech to fake distress calls to lure additional victims (the famous "Send more paramedics" line).
* The Return of the Living Dead shows how Freddy "has an epiphany" that the only thing that can stop his pain and will show Tina's true love for him, is letting him eat her delicious brains.
* The Return of the Living Dead survivors are a couple of voices at the other end of a phone call because they're the ones who called in the nuclear strike.
* The Return of the Living Dead The army has no idea how to get rid of the zombies. They bomb the whole town. This proves to be ill-advised.
* The Return of the Living Dead, the characters are finally killed because they decide they can't deal with the zombies themselves, and decide to risk prosecution by calling the military. The military nukes the whole town...take that as you will.
* The Return of the Living Dead. The protagonists evade the zombies and send a message to the military, asking for help. The town gets nuked in response.
* The Return of the Living Dead to quell the terrible pain of being dead.
* The Return of the Living Dead Trash gets gnawed by a bunch of zombies and becomes a zombie herself, but unlike all the other zombies she's still reasonably hot as a zombie. And still naked.
* The Return of the Living Dead use a cemetery as their stomping ground. This is a bad idea.
* The Return of the Living Dead, we have Trash, who thinks a picnic in a cemetery is a fantastic way to spend an evening, and who becomes visibly aroused when talking about her idea of her worst way to die, to the point that she tears all her clothes off and dances naked in said cemetery.
* The Return of the Living Dead, when Freddy finally succumbs to the zombie hunger he starts foaming at the mouth like he's chewing on Alka-Seltzer.
* The Return of the Living Dead. When the local graveyards are doused with Trioxin gas, the dead start busting out of their eternal resting places.
* The Return of the Living Dead, when two employees of a medical-supply company carelessly rupture a zombie's containment tank.
* The Return of the Living Dead, with the disclaimer "All of the events in this film are true. Everything is shown as it actually happened".
* The Return of the Musketeers. She dives out of the castle window into a lake and is last seen swimming away. Raoul starts to follow her but is stopped by D'Artagnan.
* The Return of the Musketeers, the powder fuse is used to blow up a ship.
* The Return of the Musketeers was so shaken by the incident (he had worked many times with Kinnear and considered him a friend) that he retired prematurely from the film business, despite a series of successes.
* The Return of the Native spends all of the first chapter describing the heath where the story takes place. The whole goddamn chapter.
* The Return of the Pink Panther. After the guard discovers the theft of the Pink Panther diamond, he triggers the activation of the security system and causes the door to the room to close. The thief rolls under the door and out of the room just before it closes.
* The Return of the Pink Panther. Clouseau fails to stop a bank robbery.
* The Return of the Pink Panther - Clouseau walks into a hotel, where a man asks to take his hat, coat, and bag - and promptly leaves with them.
* The Return of the Pink Panther ends with Clouseau's boss, the former Chief Inspector Dreyfus being driven mad by his obsessive hate for his underling. He

spends the last scene in a strait jacket holding a crayon between his toes, writing "Kill Clouseau'' over the walls of his padded cell.
* The Return of the Pink Panther. However, Charles' wife Claudine figures out that Clouseau's not who he says he is, so she and her housekeeper pretend she's planning a secret meeting with someone over the telephone, giving the eavesdropping Clouseau a false lead for his investigation.
* The Return of the Pink Panther: Inspector Clouseau picks up a phone in an attempt to spy on the wife of Cat Burglar Charles Lytton, subverted when we learn the conversation is occurring inside the house to draw him to a false lead.
* The Return of the Pink Panther, Inspector Clouseau's car and clothes are stolen by a transvestite thief, and he flags down a police car wearing the fur coat he was given. The officer gives him a ride to the nuthouse.
* The Return of the Pink Panther proves that his accent gets even funnier when a "minkey" is on the scene, as he argues with an accordion-playing beggar about his pet.
* The Return of the Pink Panther, there's a scene where Inspector Clouseau is bathing while using a hand shower sprayer. The phone rings, and he finds he can't shut the sprayer off, so he places it in the toilet while he goes to answer the phone. He shuts the bathroom door behind him, and we can already see the toilet starting to overflow. One lengthy phone conversation later, Clouseau returns to open the door to the bathroom. *SPLOOOOSSSHH!*
* The Return of the Pink Panther. The thief escapes from the museum with the diamond by firing a zip line from a crossbow to an adjacent building, then sliding down the line into an apartment in the other building.
* The Return of the Pink Panther with predictably violent results, such as when his assistant Francois, hearing a gunshot, bursts in the office to see the top half of Dreyfus' face looking up at him from behind his desk:
* "The Return of the Rogue Rabbit" has a variation where it's only one of these from
* The Return Of The Saint episode "Signal Stop" has a variation where a woman on a train reports a murder being committed in an empty building next to the line.
* The "Return Of The Scarlet Empress" book details the actual bringing about of the End of the World as We Know It at the hands of the Yozi, (who actually like lots of things, but prefer them crushed under their rule), particularly
* The Return of the Tall Blond Man, a sniper tries to shoot François in his apartment in Rio but the attempt fails because the latter bows down to spit out his drink.
* The Return Of The Vampire (1944), starring Bela Lugosi, shows the corpse of the vampire in a coffin and then a reflection that only shows the clothes.
* The Return of What If?, when Neo’s actions force the Machines to deploy a new type of Agent who are better able to understand humans on an emotional level, to the point of dressing in more casual clothing that could be mistaken for hacker attire.
* The Return", Rarity is brainwashed by Discord into thinking a boulder is actually a giant diamond. She becomes increasingly obsessed with and protective of it, and starts calling it "Tom".
* The Return relationships (in purely chronological terms she could actually be younger than 2 of her kids).
* The Return-Remixed. After DEAR made their return, attacking all the women in the ring, the Divas each got a male superstar to act as a bodyguard in case DEAR tried anything. Some couples were more successful than others.
* The Return-Remixed triple powerbombs on the unpadded floor from DEAR.
* The Return. She has an internal monologue about how she feels isolated and apart even in a crowded school hallway.
* The Return. Simply turning the heavily-armored ship around in a circle splits the Warbird like an English muffin.
* The Return to Gravity Falls, before the writer decided it wasn't worth the hassle and proclaimed that (for the most part) only the events up to "Not What He Seems" happened in this story's timeline.

* The Return, using a Klingon's best weapon. Consider who these novels are written by...supposedly.
* The Return where it's revealed that Succubus (Succubi? Succubae? Help me out here people) culture is possibly more complex and multidimensional than human culture, and, from their point of view, it is humanity that borders on Always Chaotic Evil.
* The Return who let her kill and feast on flesh with impunity is preventing that final step.
* The Reunification war became this for the Taurian Concordat. A 56-world Periphery State, the Concordat were invaded by the 1000+-world-sized Star League... And lost horribly. The cushion comes in that the Star League expected the Concordat to fall within a year or two. It took them
* "The Reunion" features a woman, Edie, hiring the detectives to help facilitate a reunion with her estranged twin sister, Jane. The patsy comes in when it's revealed that
* The Reunion With Twelve Fascinating Goddesses depending on which of the goddesses possesses it. It has possibly the coolest origin story as far as swords go, being forged by Zesca, the Deity of weapons, using Etherium mined by Gushana, the Deity of earth, and finally completed using Tooi's blood and the souls of all twelve goddesses.
* The Reunion With Twelve Fascinating Goddesses has technology powered by Spirits, including motorbikes and a telephone equivalent.
* The Reunion With Twelve Fascinating Goddesses, holding objects in mid-air, and changing the distribution of gases (removing oxygen to asphyxiate an opponent or concentrating it in preparation to cause explosions).
* The Reunion With Twelve Fascinating Goddesses in nature, being powered by the native spirits instead of petrol or electricity.
* The Reunion With Twelve Fascinating Goddesses: while Tooi has aged one year from his previous visit, everyone in the other world has aged ten years (so most expect Tooi to be 26 instead of 17, not knowing that he's from Earth).
* There used to be a brand of pretzels called "Captain Salty's" complete with a salty-sea-dog captain as mascot. Did they change their name or go out of business? Either way, the original name wouldn't sell too many pretzels these days.
* There used to be a car salesman in Washington State named Dick Balch who would smash in the windshields of cars in his ads.
* There used to be a cider called "Xider". It may intend to evoke an American pronunciation of "exciter," but everyone around Sweden just said "kseeder". Then regulations changed and the stuff could no longer be legally referred to as a cider, so they changed the name to "Xide," whatever that's supposed to mean.
* There used to be a clever solution - the mapmakers would deliberately add a fake street in a nondescript area of the map. That way, if another map had the same fake street, it would give the original mapmaker solid proof of copyright infringement. (The practice has fallen out of use since a US federal court has ruled such "false facts" as ineligible for copyright protection.)
* There used to be a commentary by Johnny in Cartoon Network's years of running the show, asking
* There used to be a commercial selling some CDs of songs from the 1980s where the snippit of "Goody Two Shoes" by Adam and the Ants cut off after the line "What do you do?" and was directly followed by the chorus of "Come On, Eileen" by Dexy's Midnight Runners.
* There used to be a game for early models of Apple PC, called "Those Amazing Reading Machines", that was all about this.
* There used to be an "Acme Novelties," which sold stuffed toys for the redemption counters at arcades and at carnivals.
* There used to be an ad for a business in the US called Lumber Liquidators that used a beep very, very similar to that of the EAS. A law was eventually introduced specifically to stop this practice.
* There used to be an ad that pushed "no fine print." While they said that, there was fine print on the screen that basically said "This is fine print, this is what we don't have" stretched out to fill half the screen at 1-point font.

* There used to be an Elvis Is Alive Museum in St. Louis until it closed in 2007.
* There used to be an Indonesian version of this program in one of the local TV channels called "Oh, Mama. Oh, Papa" (or something like that) based on a
* There used to be an X-treme Gulp which was slightly smaller as it held a mighty 53 ounces.
* There used to be a place called GM Island, far off the coast of Kalimdor, made for the use of Game Masters. A weird rumor suggested that if you found a way there, you would be crowned an in-game GM. The truth is that if you were to get to GM Island, you'd most likely just be suspended.
* There used to be a planned dimension filled with these, known simply as the Sky Dimension. It made it as far as a terrain generator hidden in the 1.6 and 1.7 betas, and it was accessible through hacking until some time in 1.9 beta. It was then replaced with the End, a floating mass of white stone in an endless black void where the final boss is fought.
* There used to be a series of British beer commercials in which a guy became a superhero after drinking a pint, probably inspired by
* There used to be a Spanish brand of potato crisps called Bum (pronounced like "boom" indicating a "taste explosion"), but they changed their name, having got fed up with British tourists making fun of them.
* the reuse of sprites features the Wolf and Jaguar, but both monsters use the same graphic of a tiger. Okay, so at least one of those is another type of big cat.
* The revamped post-Rebirth Corps now has two Lanterns per sector, who are even referred to as police-style back-up. Earth actually has four Lanterns, but only two (Formerly Jordan and Stewart, now Jessica Cruz and Simon Baz) operate in Sector 2814, while the others (Gardner and Rayner) are specialists based out of Oa.
* The Reveal, allowed the final confrontation between him and Spidey that the fans were initially denied.
* The Reveal and developing genuine emotional bonds to people is something not even she is sure of.
* The Reveal and lied about being Deliora just to rile Gray up enough to put an end to his agonizing existence.
* The Reveal. An even tighter fit for this trope is the revelation that Elijah Snow and all other Century Babies aren't human, they're a kind of meta-world antibody created to help humanity and as a result, have no soul. Elijah takes it surprisingly well.
* The Reveal, at first not believing Reid when he tells him he is gay.
* The Reveal before the final battle he reaffirms his feelings for you, but this time it's much less anguished.
* The Reveal. Don't lie: you would've laughed at anyone who would have theorized this, if only because Shanks seemed like the more rational choice. Oda probably loves this trope considering how unpredictable One Piece is.
* The Reveal episode "The Message" is that the 1s and 0s the woman keeps furiously scribbling at 3:10 AM every night are a cry of help from an alien ship that is propelled by a solar sail. The ship is moving on a trajectory towards the Sun, much too fast for the solar sail to stop. They instruct the woman how to build a high-energy laser to push the craft onto a safer course. It works.
* The Reveal further cranked up his competence, effectiveness as a villain and dastardliness all at once.
* The Reveal get him to safety and patch up his arm, and get him to rest for shock. They talk with him about what they learned.
* The Reveal? He's in a bunk bed and the "monster" is his younger sibling, who sadly asks, "Why do you hate me, brother?"
* The Reveal in a plot that shows almost the exact opposite of what Freud thought was really going on in such cases.
* The Reveal intended to force Eleanor, Chidi, Tahani and Jason to torment each other forever.
* The reveal in the Cyan Desert Car that Chloe actually DID want to be friends with Ash, despite the fact that she never expressed any prior indication that she ever wanted his friendship at all, and made it very clear she wanted him out of her

life for
* The Reveal is. In the theatrical showing, there is another level to this. The opening minutes, where the "clip" of Galaxy Quest is played, is in 4:3. When this ends, the aspect ratio pulls back to "standard" 1.85:1. When the doors open the ratio is again increased, this time to 2.35:1. The DVD ignores this.
* The Reveal) is one of the most infamous of these in TV history, to the point where AMC ran no commercials whatever for the final twenty minutes of the original broadcast. What makes it even worse is that the reveal is followed by what was, back then, probably the most brutal depiction of murder seen in an American mainstream TV show.
* The Reveal is written by the killer. They don't reveal their name, but their identity is made obvious in the last few paragraphs.
* The Reveal leaked online a few days earlier, so it's unclear if DC would have released said previews and sanctioned those reviews if it weren't.
* The Reveal loves the end-of-episode reveals, it's one of the first big reveals of the series.
* The Reveal, Margarito got knocked out by Shane Mosley the same night. Margarito, who no longer had punching power, was exposed as a cheater and nicknamed "Margacheato". However, the trope was almost averted when he still landed a big money fight with superstar boxer Manny Pacquiao... only for Pacquiao to beat Margarito up so badly, the injuries ended his career and permanently damaged one of his eyes.
* The Reveal marks the return of "Years in the future, but not many..." alongside establishing shots that make it clear what the future is not a nice place to live.
* The Reveal — the characters involved already know of the connection, but the audience is kept completely in the dark until the very last episode.
* The Reveal (movie and novel). Dorfmann doesn't actually design commercial aircraft, just scale models operated by remote control. However, the basic principles are the same, and he notes to Towns and Lew that there are extra challenges in designing model aircraft, as they have no pilots and so cannot rely on them for stability. Unfortunately he only mentions this (quite casually) the night before the plane they've constructed is due to fly; Towns and Lew naturally assume he's mad and only go ahead with the plan because they're run out of both water and other options.
* The Reveal of a walking Christopher Reeve was rather surprising, and some people (who apparently missed the parts about AIDS and cancer being cured) thought it was real. They were disheartened to realize that Reeve was still in his wheelchair, and felt that Nuveen was giving people false hope.
* the reveal of her true identity as Pink Diamond and her part in orchestrating the war as far as he's concerned.
* The reveal of Naruto's father, though this was not previously revealed in the story and counts on the reader knowing it from canon.
* The reveal of "Something About Harry" was that the mysterious tenant at a teenager's (played by
* The reveal of Takamaru seems to be in the same vein as Waluigi, building him up before dragging him back down again with the fact that he's not playable:
* The Reveal of the story. His first supervillain threat is the Chameleon, a character who would go on to be a regular member of his rogues gallery.
* The reveal of the Wii Fit Trainer as a playable character was planned right from the start to be a big "WTF?" for the fans.
* The Reveal, or if the narrator's envy was allowed to persist so his crushing poverty would be underscored.
* The Reveal Prompts Romance: A character reveals their secret to their love interest, resulting in them beginning a relationship.
* The Reveal Prompts Romance, which causes them to commence a relationship.
* The Reveal) receive the news, they realise they're just dealing with an infection and act accordingly.
* The Reveal scenario, all of Shinsen's scenes establish him as a mysterious figure, he's the guest given the least development and both the identities of the

Committee chairman and missing 000 are referenced throughout the book and speculated to be the same person, making it obvious both will be addressed.
* The Reveal similar to how it was with Harold Saxon although more people suspected him of being evil.
* The Reveal: Something not known to the audience at first is made known to them.
* The Reveal so the viewer is on the same page as the characters. Sometimes literally.
* The Reveal starts out sounding like Cadel is simply paranoid, but then the evidence starts stacking up...
* The reveal that Birdperson and Tammy had a child together. Rick knew about this beforehand, but Birdperson did not, and now the child is in prison for being the daughter of a Galactic terrorist.
* The reveal that Kyoko's talent is Ultimate Detective. She spends every single case ruthlessly investigating, everyone is amazed by how professional she is when inspecting bodies, she's constantly talking about proper investigative procedure, and the first thing she does after the Chapter 1 investigation begins is to search the crime scene, Makoto's bedroom, for stray strands of hair. Even Makoto himself, in the anime,
* The Reveal that Lillie, Gladion, and Lusamine are all related is hardly surprising given that they all look so similar, especially Lillie and Lusamine.
* The reveal that Rick cloned Beth and sent one or the other to space.
* The Reveal that Sasuke and Naruto were the reincarnations of the Sage of the Six Paths' elder and younger sons respectively. While many were still shocked, just as many were left unsurprised, and those that were shocked admitted it was obvious in hindsight, especially after it was revealed that their respective previous incarnations were Madara Uchiha and Hashirama Senju, the First Hokage.
* The reveal that the Adelaide we were following throughout the movie is a tethered, who swapped positions with Red after kidnapping and restraining her.
* The Reveal that the death of Riggs' wife was no accident but rather a botched attempt by the villains to kill Riggs himself back when he with Narcotics working at Long Beach.
* The Reveal, that the world we see in the episode is a computer simulation, and that the episode itself is a recording/retelling by the simulation!Doctor to the real Doctor.
* The reveal that Yoh fell in love first and earned Anna's love by accepting her as she was, and the implication that they slept together before Yoh left Japan first probably helps. Either way, as their relationship is expanded upon, we see that this isn't really the case.
* The Reveal. Then she accidentally reveals it, and almost no viewer was surprised. Lampshaded when a tertiary character had figured it out after meeting Blake for about a minute and pointed out one of the more obvious hints to the rest of Team RWBY.
* The Reveal. The only subtle change is that Brooklyn and Broadway, who developed American accents early in the series, revert back to their subtly mid-Atlantic gargoyle accents when possessed.
* The reveal trailer for the final DLC character of the fourth game starts off showing Pit beating Bowser and Samus in a battle and then Palutena warning him a new challenger approaches, making viewers think that the final DLC would be another
* The Reveal was done with one of the most memorable lines in TV history:
* The Reveal was having sexual relations with most of the people from the group therapy.
* The Reveal You must be insane." However, Grissom actually seemed crazier than pre-Joker Jack.
* The revelation from the end of Season 2 that Shenron is, in fact, a servant of
* The revelation of Hans as the villain also makes the Duke of Weselton a red herring as well. While his decisions and attitude regarding Queen Elsa and her ice powers are certainly reprehensible, he's far more open with his intentions and desires. While he does nearly succeed in his goal of killing the queen, he at least believes what he's doing is necessary and in everyone's best interests, and he

makes that clear after Hans lies that Anna is dead. All of this means that, while he is devious, he certainly isn't anywhere near as evil as Hans. For all his paranoia, he doesn't question Hans' story, and falls for his "grieving widower" act just like all the other diplomats do. Hans, on the other hand, is a master manipulator, can alter his plans on the fly, and is perfectly capable of taking full advantage of a crisis to benefit himself, and does all of this while coming off like a saint. The only reason he failed was because
* The revelation of most of the Hunters' Levels, as they receive so little focus, their growth rate not being shown due to the First Person Narrative, and they aren't thrown in as many specificly dangerous situations as Jaune has throughout the story, that their Levels once revealed come off as mostly made up on the spot.
* The Revelations of Glaaki can cause the reader to become aware of the deity Y'golonac, which allows it to possess and destroy them.
* The revelation that all currently living humans are clones or the descendants of clones really hammers this trope home.
* The revelation that the aliens' only interest is the complete and total destruction of Earth serves as the Godzilla Threshold moment that convinces the president to
* The revelation that the mooks have been indoctrinated and can no longer fear for themselves implies that their Reaper masters are as scared of Shepard. This is pretty much confirmed in the Leviathan DLC.
* The Revelation, when it's revealed that the Yeerks helped humans discover Zero-space. Lampshaded by Ax in the same book.
* The Revenant even call the most macho art film ever made. In the latter's words:
* The Revenant has many elements of it, though it's not a straight example.
* The Revenant of a trapping expedition being attacked by a band of Indians who storm their camp and force them to flee on their boat.
* The Revenge Files Of Alistair Fury a boy does this whilst waiting outside the toilet while Alistair and his friends are holding a meeting inside it. (He doesn't make it).
* The Revenge of Cobra, Flint is Number Two to Duke and takes over command of the Joe team when Duke is captured by Cobra early in the first episode.
* The Revenge of Isaac Finkelstein - there's a ghost of an ancient monk who's invisible to everyone except the protagonist, unless he has a hard-on, which makes him visible (or semi-transparent, depending on the hardness of his 'on').
* The Revenge of Rusak. One type of trap in Rusak's lair is areas of quicksand. A character who falls in can sink at a rate of two feet per minute and thus be pulled under the surface in three minutes.
* The Revenge of Shinobi among your enemies are women whose dresses are shredded when hit by enough shuriken, leaving them sitting on the ground holding up what remains of their clothes rather than dying.
* The Revenge of Shinobi, Joe Musashi can use an attack called Mijin, which destroys all enemies on screen at the cost of his own life. If the player has at least one life remaining after using Mijin, Musashi's body parts will reform, allowing him to continue on the spot at full health. If not, his body simply explodes, and the game is over.
* The Revenge of Shinobi, revealing a robotic exoskeleton that explodes when defeated.
* The Revenge of the Demon Headmaster, this occurs near the end of the book:
* The Revengers at the survey camp, Chamaco leaps out of the trench with a revolver in each hand, firing at the Comanche. Done somewhat realistically, as he is alternating which gun he fires, rather than firing both at once.
* The Revengers, Benedict and Elizabeth develop feelings for each other during the months she spends nursing him back to health following a near-fatal gunshot wound. She is not happy when he leaves her to continue his mission of vengeance. When he abandons his quest for vengeance at the end of the film, it is implied he is riding back to her.
* The Revengers, Benedict and his gang end up in an Army survey camp that is besieged by Indians. The camp is commanded by a young Lieutenant fresh out of West

Point and suffering from an arrow wound in the chest. Benedict is impressed by the lad's ability to stick to his principles and his training despite the desperate circumstances. In particular, he knows when to defer to his sergeant.
* The Revengers' Comedies to the protagonist is strongly implied to have started the fire that killed her parents when she was eleven because they did something minor to displease her.
* The Revengers, it seems likely that Benedict is riding back to Elizabeth (after all, where else has he to go?), but it is never explicitly stated, and the viewer does not know what Elizabeth's reaction will be when he gets there.
* The Revengers, John Gilbert is a recipient of the Congressional Medal of Honor during his service in the Civil War. This is relevant to the plot, as it entitles his son Morgan to attend West Point.
* The Revengers: The Revengers are riding towards a border town and one of them comments that they'd been banned from there. Another says that was a year ago and they were bound to have forgotten about it by now. They haven't.
* The Revenger's Tragedy jumps back and forth over the line constantly. The title character Vindice exhumes his beloved's skeleton, dresses her, fills her mouth with poison, and then tricks her murderer into making out with it. Hilarious. Not quite dead, Vindice and his Brother then proceed to kick the dying man to death. Not so funny.
* The Revenger's Tragedy, so long that when his mother and sister appear they treat his behavior and the presence of the skull as completely unremarkable.
* The Revenger's Tragedy, the mother sleeps with her step-son, the youngest brother is a rapist, and the Duke himself has a history of having women who reject him poisoned.
* The Revenger's Tragedy Vindice's in a bind: his employer Lussurioso wants him to kill Piato, but Piato is a previous alias of Vindice! Luckily, Vindice's got the corpse of Lussurioso's father the Duke whom he recently killed sitting around, so he props him up on his elbow to pretend he's found Piato drunk, so he can stab the corpse and satisfy Lussurioso.
* The Revenger's Tragedy. When Gloriana won't sleep with him, the Duke poisons her and then rapes her corpse.
* The Revenge Song is practically made of this trope, but these lyrics are particularly fitting:
* The Revenge Troll (what better way to creep people out than to intentionally threaten or publicly wish harm on another human being?).
* The Reverend Charles Lutwidge Dodgson, a famous Victorian British mathematician and Anglican deacon, author of some prominent works on logic, is also known under his pen name
* The Reverie arc introduces a number of nations that have clear analogues to real-world places: Ballywood is based on the United States (including a "King Ham Burger" who resembles Abraham Lincoln), the Kingdom of the Dead is based on Mexico, Roshwan Kingdom is based on Russia, and Tajine Kingdom is based on Morocco. There are also unnamed delegates who strongly suggest there are countries in the
* The Reverie Arc is likewise a short mini-arc, serving as a cooldown between Whole Cake Island and the Wano Country Arcs. The Straw Hats take a backseat to the various royal families they befriended, and the arc drops several major reveals, as well as sets up some major events in the future. Just like the Zou arc, the lone villain who attempts to mess things up is dispatched as soon as he makes his move.
* The Reverie arc makes it quite clear that Luffy unknowingly created a royalty harem for himself that consists of Princess Vivi of Alabasda, Princess Shirahoshi of Fishman Island, and Princess Rebecca of Dressrosa. All three of which met each other during this arc, and were able to easily get along due to having one notable thing in common; being saved by Luffy and his Straw Hat crew. Add in the Snake Princess, Boa Hancock, having fallen madly in love with him, and that's a total of
* The reversal, substituting "C" instead of "K," is also very common in the Hip Hop community. It is also used in languages that don't use the letter C for a "k" sound, such as German.
* The reverse also happens in just about every movie in the series; they kill off

Michael in some
* the Reverse-Flash, he's actually Eobard Thawne and merely stole the real Wells' identity after murdering him and his wife.
* The Reverse-Flash may wear a yellow suit, but his gloves and boots are black, his eyes glow red, and he produces red lightning when he runs.
* The reverse is also possible. A lot of autistic people become incapable of speech (sometimes called 'going non-verbal') when severely stressed- even incapable of explaining
* The reverse is also true; when a human villain shoots Buffy, he boasts about it in a demon bar afterward. The demons just laugh at him, pointing out that Slayers are notoriously difficult to kill, heal very fast, and get really pissed when they get better.
* The Rev had a habit of slowing the scene to a freeze, fading to black, and jumping to the next action with no fade-in. It's as if they sat around and asked "What is the most noticeable way we can think of to avoid showing violence?"
* The Review Must Go On in which the Nostalgia Critic crashes and this exchange occurs.
* The review of Salem's debut album King Night, and of Witchhouse as a whole, is currently sitting on a like-to-dislike ratio of 50/50 presumably due to angry fans upset that he doesn't "get" the point of the genre. Many commenters have taken to calling him a "normie" due to not enjoying an admittedly harsh sounding style of music.
* The Review Reviewer. All we know is that he nicknames himself "Timber" as evidenced by his DeviantArt page.
* The Review Team When the lights come back on during one scene, there's a strange eyeball monster in the room.
* the review where, after naming this trope, the reviewers exercise it for half of the video.
* The Revigator, a ceramic crock for irradiating water. Though it too had rather low radiation levels, the water would often be contaminated by lead.
* The Revised Edition game manual included Richard Garfield's account of the creation of the game. He mentions that the pre-release version used placeholder art for the cards, including a few of these. For example, "Heal" was a photograph of someone's foot, while "Power Sink" showed
* The revised Starfleet tutorial now has the player as the designated first officer of a training crew fresh out of the Academy - the captain was the only officer of any real rank on the whole ship. Cue a disastrous encounter with some Klingons which results in the captain getting captured and killed, and everyone on board looking to you for direction. As with the original opening Starfleet mission, the player then reports in and is formally given command because Starfleet is in desperate need of even moderately effective command staff - ships are a lot easier to make than capable officers, and Starfleet is facing problems from all sides.
* The revised tutorial has you serving as XO to Captain Taggart on a training cruise, mostly made up of cadets from your graduating class. Your ship is ambushed by Klingons, boarded, and Taggart is taken prisoner. The Klingon Captain (who has cloaked his vessel) demands Taggart order you to surrender or he will destroy your ship. In order to save the crew, Taggart tells you that you are now in command and then orders you to lock on to his combadge and open fire.
* The revised world generation can make gathering certain resources incredibly tedious. In the old days of the game, biomes could appear next to one another without much throught, meaning
* The Revival/AEW: Defected to AEW during mid-2020 and renamed themselves "FTR"; later joined The Pinnacle.
* The revival also had 2 rounds of spinning on the big board like the original had done, but it was very common to see people mainly win in the 2nd round of spinning, since round 2 typically had prizes with higher values than the prizes in the 1st round.
* The Revival/FTR - Scott Dawson/Dax Harwood (David K. Harwood), Dash Wilder/Cash Wheeler (Daniel Wheeler)

* The revival has other groups that try to track the Doctor specifically. Both fall under the "concerned citizen" status.
* The revival has this in a roundabout way: the TARDIS' monitor displays whirling patterns of the clockwork-like Gallifreyan language.
* the revival series. And she objects to Karolina and Nico dating... because they're playing at being superheroes. It's all totally just a bizarre coincidence that all these situations that she objects to just happen to involve homosexuality, and totally isn't a reflection of her feelings about gay people.
* The revival series benefits from this trope too. Each season has an individual
* the revival series be "parents will complain-y!" complete with Wakko scissoring a letter from a Moral Guardian in half.
* The revival series saw them retooled as religious fanatics with a distinctly
* The revival, which incorporated American Sign Language, censored nothing from the original, and had cast members with varying hearing abilities, turned off some hearing audience members who didn't want to see a "deaf musical", assuming it'd be incomprehensible. Result: Nominated for three Tonys and got a national tour.
* The revived series has gone on to show he was broken before he became an ace, growing up he spent his nights in a barn crying himself to sleep, his
* The revived series has made much more of the Doctor's fame (or notoriety) both on Earth and in the rest of time and space, to the point of making
* The revived Spider-Man, who hates the idea of trying to even kill people, activates the Iron Spider's "Instant Kill" mode.
* The Revolting World Of Stanley Brown, one of Stanley's future relatives makes sure Stanley keeps on inventing so that he will be born.
* The Revolt of Paradise Estate, Part 2", Beezen is last seen being chased down by his angry and animated wand, and it's not show what happens to him afterwards.
* The Revolution (2006): In the episode "Treason & Betrayal", Benedict Arnold. He started out by fighting for the Americans. But he went to the British hoping to get gold and recognition.
* The Revolutionary government created its own state-sponsored secular religions to replace Catholicism. First was the explicit atheistic and anthropocentric
* The revolution fails or is temporarily crushed, and they’re killed, "purged" or otherwise done away with
* The Revolution: In the episode "Rebellion to Revolution", African American slaves were conscripted on both the American and British sides.
* The Revolution in turn provoked internal rebellion in the Vendee and the Britanny. Henri de la Rochejacquelin, the young royalist, became a legendary figure for his youth and courage, while Jean Cottereau, a smuggler and suspected murderer, became celebrated by Restoration writers as a reactionary fantasy of a Robin Hood who rose against an "unlawful" republic while living in the forest with his merry men. The Directory Government provoked a rebellion by ex-Jacobins and ex-Radicals led by Gracchus Babeuf and another rebellion by royalists which was later suppressed by Napoleon.
* The revolution that led to the Republic of Colombia becoming independent was supposedly triggered by "El Florero de Llorente" (the vase of Llorente), which was a trick by the supporters of the independence to upset a Spanish merchant and incite the crowd against the Spanish people. This led to a popular expression used when you need a excuse to start a fight.
* The Revolution Will Be Televised has a recurring segment called "Honest Subtitles", in which various politicians have their speeches replayed, only stripped of their flowery speech to reflect their (possible) true meaning.
* The Revolution Will Be Televised has the sketch character of Eugene X, a South African white supremacist. He denies being racist, saying that he instead knows some races are superior to others.
* The Revolution Will Be Televised turned on) and liked a lot of them.
* The Revolution Will Not Be Bureaucratized: The rebels are great at overthrowing the tyrannical government, but not so good at establishing an effective government themselves.
* The Revolution Will Not Be Civilized and in desperate need of total eradication!

The more violent and brutal the better.
* The Revolution Will Not Be Civilized: In the end, the revolutionaries are just as brutal as the people they were overthrowing.
* The Revolution Will Not Be Civilized: Rebels and revolutionaries are not too merciful towards pro-government loyalists (or even their own allies who start getting the wrong ideas).
* The Revolution Will Not Be Civilized: Rebels and revolutionaries engage in a reign of terror against anyone who is (perceived to be) a counter-revolutionary or loyalist of the old regime.
* The Revolution Will Not Be Civilized: The rebels are just as brutal as the oppressors they're fighting against.
* The Revolution Will Not Be Vilified: A rebel revolutionary force are the good guys.
* The Revolution Will Not Be Vilified: The rebels have a clear moral high ground over the oppressors and don't fight dirty.
* The Revolver Knuckles of Subaru and Ginga's devices (Mach Caliber and Blitz Caliber respectively) load cartridges via a revolver cylinder, hence the name.
* The Reward, a considerably longer piece, further elaborates on the same subject:
* The reward for being part of the kills of every leader of the opposite faction, a feat that can require nearly a hundred organized players? A black war bear mount. Even better? Those bears were implemented in the closing days of
* The Reward, Vito tries a high-five with Wilhelm as they find their weapons and gear, this trope as the result.

* There was a 2000s film with the same name about a guy who injected himself with spider DNA in an attempt to become a super-hero, only to mutate into a grotesque humanoid arachnid-thing that was eternally hungry and devoured people indiscriminately. It was basically a horrifying parody of
* There was a 300" screen on board the Planet Express Ship during the events of Into The Wild Green Yonder. It was smashed in frustration after it broadcast an ad for a 30
* There was a 3D flash game on miniclip.com from some years ago, in which the player controls an alien flying saucer, and the objective is to beam up different things, with different points alotted based on what's been beamed up. The player can beam up cars, human beings and yes, cattle.
* There was a backlash when the toys based on the family-targeted films
* There was a bar that would allow one person to destroy a TV set whenever a particularly hated sportscaster came on.
* There was a biblical battle that took place and overall the terrain was consistent no matter which direction you would attack from. So the attacker came around dawn from the east so the sun would be at his men's back and in the eyes of the enemy. This is actually a very valid tactic: if you can use it do so.
* There was a big issue over whether the first American-built Japanese brand cars in the 1980s would maintain their quality. It turned out the real problem wasn't American workers, it was
* There was a big storyline involving Drucilla learning that her daughter Lily was not fathered by her husband Neil, but her brother-in-law Malcolm whom she mistook for Neil due to being doped up on cough medicine. However, by the time this storyline kicked into high gear, the actor playing Malcolm left the show and they never recast the character.
* There was a big to-do concerning a personal appearance of Rockne S. O'Bannon, the brains behind
* there was a billiards mini-game in one of the many scrapped Sonic games from the

mid-1990's, where Sonic had to act as the cue ball.
* There was a bit of a scandal in the Netherlands some years ago when chupa chup lollies came on the market and made a big point about 'being healthy' (on account of the fruit-juice in it). Of course they aren't healthy: they're full of sugar, and the fruit is way too processed to have any nutritional value. They were laughed off the market.
* There was a black bone/tissue market discovered in one episode. Strange objects were found inside corpses. They were used to replace the harvested organs.
* There was a board game called "Don't Wake Daddy" where the players were kids sneaking for a snack in the middle of the night. Landing on squares that made noise forced the player to press the button on Daddy's alarm clock. If he woke up, your piece went back to start.
* There was a brand of cat food called "Kattomeat" and they started advertising it with a white tomcat called "Arthur"...became such a good mascot that not many months later they had to rename the catfood "Arthur's".
* There was a brief, glorious moment in time somewhere in November where the site was turned into a pulsating, swinging, Hotline Miami bootleg, with the title screen music to boot. This heralded the
* There was a brief string of SBEmails during the Lappy era that featured a random reference to "DNA evidence", starting with Marzipan saying "the DNA evidence had been tampered with" in "strong badathalon", then continuing with Strong Bad claiming to have tampered with the DNA evidence in "unnatural", and so on. The last of these emails, "rough copy", had an Easter egg with Homestar sitting by himself in Marzipan's living room and wearily saying the phrase "DNA evidence", to show the gag had

* There was a British campaign which featured surreal little vignettes, ending with a picture of a soft drink can and words like "Hypno", "Chas", "Legitima", "Appe", "Trauma", "Bap", and "Dogma". Turns out they were for a drink called..."Tizer". Get it?
* There was a British commercial for a brand of cereal that tasted so good a man
* There was a bygone advertising campaign in Australia, in which an electrical goods purveyor sat on a rocking chair with an deranged look, as the announcer said, "Ken Bruce has gone mad, Ken Bruce has gone mad — [shouting] Ken Bruce has gone completely MAD!"
* There was a cable internet company in the US around the year 2000 literally called "Brand X." They challenged a Federal Communications Commission interpretation of federal law that was bad for its business, and now "the
* There was a Candid Camera-esque show of two guys about to prank a barber. The first guy put a bag of fake blood under his wig, planning to make the barber think he cut too deep. When the fake blood was released and the first guy acted in much pain, the barber apparently went into such shock that it triggered his heart condition. To make matters worse, his friend ran away, and the barber's daughter called the police immediately to the scene.
* There was a car commercial in the mid-90's where the car being advertised drove past a cornfield and caused all the corn to start popping right off the stalk.
* There was a car commercial which had so much 1 point font, low contrast text that it had to
* There was a case in Canada of a young man whose identification had actually been destroyed due to becoming a foster child. He ultimately used his criminal record to get a driver's license.

* There was a Christmas edition of Monday Night Raw in 1997 with the logo wrapped

inside of a wreath, and featured
* There was a comic where Hercules rode a chariot across space. He was given a robot by some aliens to record his adventures for them, and abuse the robot's credit card. The robot spoke in the same "Question: Is this wise?", "Statement: Thank you" fashion, at one point saying:
* There was a commercial about a man and woman having lunch together at a lavish café. The two were smiling at each other and holding hands. All the while, the man was murmuring things to her in
* There was a commercial for a lawn mower brand where a woman we see from the front tells her husband "It's time." He takes this to mean it's time to mow the lawn and uses the advertised mower to do so. She tells him again and he continues his lawn mowing. Finally, she yells "It's time!" and turns to the side to reveal she's heavily pregnant. He finishes quickly and takes her to the hospital.
* There was a commercial for a new sitcom called "Zombie Dad" on Canadian sci-fi cable channel Space. It actually looked pretty fun, until it ended up being a network ad for Space saying you don't have to watch such awful shows.
* There was a commercial for an optician's in Europe involving a woman inadvertently performing fellatio on the gearshift of a car instead of the man sitting next to it — while "parking" with her boyfriend.
* There was a commercial for a real-life "Heart of the Ocean" necklace shortly after the release of
* There was a commercial for Glade candles that showed a woman peeling the "Glade" label off her candle and claiming it was a fancy, expensive candle, getting foiled only by the fact that the label stuck to her skirt when she tried to throw it away. The intended message was "Glade candles are of such good quality that they could be mistaken for a more high-end candle." The message many people got from the ad was "Our customers are ashamed to admit that they use our product."
* There was a commercial for Mini cooper cars where the car drives into a parking lot and was attacked by living shopping trolleys.
* There was a commercial for some kind of dog food or treat that showed a little dog somehow walking up five stories up the side of a building to reach his owner, who was leaning out the window with the goody.
* There was a commercial for the Lion King Broadway musical that was twice as loud than the rest of the programming, and even the other commercials. It would be at the start of the commercial break, giving you almost no time to grab your remote. It also ran during the Super Bowl. That was really nice.
* There was a commercial (probably featured on one of those "best commercial" shows) that started out as a Haagen-Dazs ad, complete with a passionate couple in bed with the yogurt. At one point they run out, so the guy goes to the refrigerator to get more... and his attention turns to the Fosters lager near it. Next thing you know, he's drinking beer and watching the game.
* There was a commercial some time back with a little girl standing calmly in a field while a rhino charges at her. As the camera flips from girl to rhino and back, the message "Faith is not belief without proof, but trust without reservation" is displayed a word or two at a time. At the end, the rhino comes to a halt right in front of the girl, who reaches out to gently touch its horn. It was for a telecommunications company; now try and guess which one.
* There was a commercial that had a woman do "EEK a Mouse!" bit and her husband hunts the mouse down but before he can dispatch it, the wife sees the mouse cornered and now it's a cute little mousey and she stops him. End of commercial has couple cuddling on the couch and mouse in a cage running on a wheel.
* There was a commercial that looks like it's for a performance car. We see a young man driving the car while cutting back and forth with two of his friends talking about the man's new ride. Finally, one of the friends asks what his ride has under the hood. The other replies "Nuclear reactor." The car finally stops on a dock next to a submarine. It's a recruitment ad for the Navy.
* There was a commercial which featured a clearly nerdy dad who was sporting facial piercings, talking about bonding with his son at Burning Man. The son just sat there looking utterly mortified.

* There was a competition between two Japanese officers during the second world war in China to be the first to
* There was a concern that the first atomic bomb tests would trigger nitrogen fusion and ignite the entire atmosphere, wiping out all life on Earth. Teller first brought it up. "In Serber's account, Oppenheimer mentioned it to Arthur Compton, who 'didn't have enough sense to shut up about it. It somehow got into a document that went to Washington' which led to the question being 'never laid to rest'." By the time the test was done, this outcome seemed vanishingly unlikely (nitrogen does not fuse easily).
* There was a considerable increase in marriages set for July 7, 2007 (7/7/07) due to the conception of 7 as a lucky number. No word on if those marriages have had a better rate of success.
* There was a contest for fans to submit art of their own created monsters. The winner was a monster named Sharbon, a bubble blowing monster that was featured in "Scare Tactics Part 2".

* There was a Dare Iced Coffee ad in Australia that was a montage of all the awkward things your girlfriend might want to tell you over coffee. One of them was, "Remember that video we made? It went viral."
* There was a dark side which is seldom mentioned. This custom often ended up with youths being given a shocking amount of authority long before they were mature enough to handle it. While some became good officers, it wasn't unknown for them to be sadistic tyrants.
* There was a Dark War in the antiquity of the Discworld, and before that magical wars between super-powerful wizards, and before that a primal conflict between the Gods and the Ice Giants (apparently owing to a dispute concerning ownership of a lawnmower). The land of the Wyrmberg is a survival of this early conflict, as is the cursed valley of Loko where men, Dwarfs and Trolls fear to tread.
* There was a debit card commercial featuring a couple at a tattoo parlor with "Oh Donna" playing in the background. He is in the middle of getting a tattoo featuring the name of his girlfriend in a heart but discovers he lacks enough cash to pay for it. Next, we see her storming off, followed by him begging her to come back, while

prominently sporting a tattoo reading "Don". The background music's lyrics change, appropriately.
* "There was a decorated general with a heart of gold / that likened him with all the stories he told / of past battles, won and lost, and legends of old / a seasoned veteran in his own time..." (Ask your college-age friends. Especially the ones that wear upturned collars.)
* There was a deleted scene from that same episode, where Lemongrab sends a tiny candy kid to the dungeon. When the kid meekly tries to protest, LG makes an exceedingly creepy, deranged face, and the kid leaves the room in tears.
* There was a discussion about bringing Alaina Reed back to play Olivia in the mid-'00s, but the plans fell through, and Reed would pass away from cancer in 2009.
* There was a documentary about "the evils of rock and roll" called "Hell's Bells," which claimed that rock'n'roll makes children prone to violently killing people and that rock musicians
* There Was a Door: A character makes a dramatic entrance... by going through the wall.
* There Was a Door instead of the door because the people inside will most likely have guns trained on the doors.
* There Was a Door: Someone breaks through a wall even though they could've just used the door.
* There Was a Door: Someone bursts through the walls even though they could've just entered through the door.
* There Was a Door: Someone crashes through a wall to get in even though they could've just entered through the door.
* There was a downside to Sable's popularity, as the company tailored their new women's division to her strengths (her massive sex appeal) and weakness (a lack of any actual wrestling ability or desire to learn). She is the reason why so many of the Divas (a term she invented) were

* There was a Glade detergent commercial where the customer argued that three bottles of Glade count as one item, because 12 eggs count as one item. The cashier explains that the three Glades are separate items because each one smells different. She then gets distracted by enjoying/describing the new scents.
* There was a glitch where it was possible to enter the Draynor Bank Robbery cutscene and pick up the Blue partyhat that would drop. This partyhat actually has a different Item ID than the regular Blue partyhat and is untradeable. If the player attempted to equip it, it would disappear and a message in the chatbox would say, "Please send in a bug report and tell Jagex how you got that hat."
* There was a great prophecy stating that a child of the "Big Three" (Zeus, Poseidon, Hades) would make a decision that will decide the fate of Olympus upon turning sixteen. Those three gods formed a pact to stop having children as a result, and to kill the ones they currently had before they turned sixteen. Suffice to say that if not for that pact
* There was a hilarious one in which Spock is mailed a pamphlet called "
* There was a History Channel special on snipers, which included a somewhat famous bit of rifle marksmanship that occurred during the Vietnam War. On St. Valentines Day, just before midnight, 20 Vietcong soldiers were crossing a river, holding their rifles over their heads because the water went up to their necks. On the other side of the river was an American sniper who killed them all with one headshot apiece in about 30 seconds. An unpleasant, but necessary, part of war. We see a recreation of the shooting narrated by the original sniper. After the recreation, he discusses the shooting a little bit more before saying, "Yeah, that was my St. Valentine's Day massacre present to the Vietcong" and
* There was a hit rockabilly song in the 1950s entitled "Thirteen Women and Only One Man in Town"; it experienced a resurgence in popularity in the mid-1990s. What many people did not know, either then or now, was that the song alluded to the only fourteen people left on Earth following a nuclear holocaust. Lucky guy....
* "there was a hole here, it's gone now" effect), or sudden jumps in physical location.
* There was a horrifying commercial by Huggies, (what else) a diaper brand that showed a father taking his baby into a bedroom to change him. That baby "opens fire" all over the ceiling but the stream stops instantly when the diaper is closed.
* There was a Howie Mandel skit where Little Bobby's mother was singing him to sleep with the Mockingbird Song, over Little Bobby's panic-stricken pleas to please stop.
* There was a huge spike in sales of heart-shaped sunglasses after they were featured in the movie poster for
* There was a Japanese shogun who was forced to fight an enemy army with nothing but his elite samurai guard at his side. The couple of hundred of them rode through the whole army and seven emerged alive from the other side.
* There was a joke on Conan O'Brien making fun of the fact that Clint Eastwood spoke no Japanese despite producing the movie
* There was a joke submitted to the Humor In Uniform section of Reader's Digest. A

new graduate's parents were visiting on base and saw a van pull up that said SWAT on the side. The parents were concerned until the graduate informed them that it was the landscapers and stood for Seeds, Weeds, And Trash.
* There was a judge known for his unusual sentencing, among the examples:
* There was a kids' Valentine set that was just Kylo Ren's helmet on a heart-shaped box. While Valentine cards for children have no actual romantic intent, an emotionally unstable
* There was a legend about Thales, the sixth-century B.C. philosopher and mathematician, falling into a well because he was gazing at the stars instead of watching where he was going. This tale became so iconic that it was eventually immortalized as one of
* There was a little boy, stood on a burning log/rubbing his hands with glee"
* There was a local variant, ask anyone from Northern Ohio about the phone number "Garfield 1-2323, Garfield 1-2323," and they'll finish the tune for you, even if no one can recall the product — supposedly aluminum siding.
* There was a long period of time where the best weapon for a rogue was the Barman's Shanker, essentially a smashed liquor bottle.
* There was a longstanding pizza joint in the college town of Ypsilanti, Michigan, called DomiNick's, named after its founder, Dominick DeVarti. In 1960 the Monaghan brothers, Tom and Jim, bought it, but kept the name. Within a few years, they'd acquired two other local pizza places and wanted to turn DomiNick's into a chain, but DeVarti wouldn't let them use the name. Instead, one of the Monaghans' employees suggested changing the name to Domino's Pizza. Shortly afterwards Jim sold his share in the business, and Tom eventually expanded the operation beyond Washtenaw County. Now it boasts 17,000 locations in 84 countries.
* There was a longtime ban on Darth Sidious's childhood and apprenticeship to Darth Plagueis. The ban was eventually lifted with the publishing of
* There was a lot of controversy and in-fighting (some of it racial in nature) in the
* There was a lot of uncertainty surrounding the Boneyard Match between
* There was also a 1955 remake for television, abridged to 45 minutes.
* There was also a 1973 remake for television, starring Sebastian Cabot and David Hartman.
* There was also a brief sequence in an earlier episode in which a Japanese chef with a butcher's knife embedded in his shoulder flatly replies to the obvious question: "Does what hurt?" This is part of a series of examples of how different people deal with pain differently, another example given was a husband standing next to his wife who is in labor when he happens to bite his lip and exclaim "
* There was also a case of the USA losing a nuclear bomb, never to be found again. What happened was that an F-86 fighter plane collided with a B-47 bomber carrying the device. To prevent an explosion and loss of the crew, the bomb was dropped. Several unsuccessful searches later, the bomb was presumed lost somewhere in Wassaw Sound off the shores of Tybee Island.
* There was also a case of this in the form of the second season finale
* There was also a character named Bethany who had telekinesis, but that might be considered a
* There was also a chicken sword given out for an event at some point.
* There was also a Cloverway dub that aired in Australia that was only comprised of the first two seasons.
* There was also a commercial that negatively compared the game library of the SNES to the Genesis, despite one having been around for years and the other being a fairly recent release. And let's not forget ... the Genesis's DMA controller had
* There was also a contest to design a dress that would appear in an episode of
* There was also a despondent duckling with a briefcase who, whenever Daffy Duck tried to comfort him or ask
* There was also a dodgeball that would duplicate itself every time it struck something, eventually resulting in a ceaseless bombardment.
* There was also a drug dealer who tried to use a laundromat dryer to dry his pot. It wouldn't have worked anyway, even if a cop hadn't come in.

* There was also a female Romulan Commander in "The Enterprise Incident."
* There was also a fifth ship, the Hispania, that was broke down. They became pirates working for various factions. Most notable among these are the Outcasts, whose home planet is called Malta, and the Corsairs, whose home planet is called Crete. Make of that what you will.
* There was also a five-story plunge, which was really only supposed to be a laugh when the new initiate fell about two feet, but Homer of course went through five stories, breaking through the floor each time.
* There was also a fly that he tries to kill with karate, wrecking some of his own furniture... before it turns out the fly
* There was also a folkloric tradition that certain banshees were ghosts. This is because in the actual folklore, the line between the Fair Folk and ghosts was not so clear-cut as you might think it would be.
* There was also a last-minute, post-credits inversion of this trope didn't so much negate the
* There was also a longstanding myth that McDonald's used ground-up earthworms in their meat. Founder Ray Kroc put that one to bed by pointing out that he'd never do such a thing, because
* There was also a minor doctor in the LEGO Island arc named Burns who subverted this archetype, spending most of his screen time being a complete
* There was also an arc where Artie would extrapolate what Dave or Helen were about to say and respond pre-emptively.
* There was also an episode (2X12) where they struck... dirt? in Canada, which is highly valued as a food source (wait what?), and then they claim the land and set up a colony and everything's good for a few years, but years after they die the colony turns into Canadian Pittsburgh. Or something.
* There was also an episode dealing with the Cylon ace, Scar, who's a Bushwacker/Sniper using his wingman as a decoy. Scar had one big difference from every other Ace on this page: he couldn't die, at least not permanently. He was resurrected and reloaded into fighter bodies countless times, until he seemingly had too much experience to be beaten at all. Sure, he had countless kills, but he himself was killed a significant number of times — and every time he died, he got angrier and
* There was also an episode featuring a super-genius who couldn't deal with the pressure of the expectations everyone had in him,
* There was also an episode in which some rock stars go berserk and chase Homer around in a giant red vehicle shaped like Satan's head, pushing a button that causes flames to shoot out from the devil's mouth and burn Homer's buns. Once they've come to their senses, the musicians apologize to Homer and offer him the vehicle as a gift - and he uses it to burn off Principal Skinner's clothes, leaving him in only his
* There was also an episode of the show which focused on this. "The Story of 420" poked fun at this backfiring with video games. First Lady
* There was also an episode were Mandy lost her nerve (as in a little
* There was also an episode where a fire broke out at a club. Two members of the
* There was also an episode where Alexis is setting up a profile for Martha on a popular social networking site; Martha tells Castle that she's getting a "
* There was also an episode where a maintenance man had to deal with a gas leak during his last day before retirement.
* There was also an episode where a man died when he "ingested" dozens of razorblades "hidden" in the Halloween candy he'd been sneaking at night,
* There was also an episode where a psychic got killed because she managed to divine the place a murder victim's body had been hidden, and the villain heard of this. In the end of the episode it was revealed that she had no supernatural knowledge, and her assessment of the victim's soul's current location (she is in "Summer
* There was also an episode where Parker spilling tea on a console resulted in the Sphere jumping prematurely (i.e. before he got in). So when the alarm sounds seven days ago, the others are

* There was also an episode where the family was lost walking through the jungle. Both Bart and Lisa repeat "Are we insane yet?" over and over, until Homer stops, flinches and screams "I already said YES!".
* There was also an episode where the worker caste were forced to mine and provide energy for the higher class and didn't even know that the upper caste existed. It wasn't explored if the common upper-class people even knew there were workers, as SG1 were sent to the mines for wanting to explore the frozen tundra.
* There was also an example of Twilight and Pinkie Pie ending up in a 1984esque version of Equestria, Twilight's response?
* There was also an immortal who was one of Cleopatra's attendants, and ended up entombed for 2000 years. The likelihood that she repeatedly revived and then died again of asphyxiation in the sealed tomb isn't brought up in the episode, but it would explain her insanity when she got out.
* There was also an incident when Peter wrecked his car and a bus full of supermodels laughed at him.
* There was also an incident where Hyatt received severe burns in a fire, but was shown peeling off her bandages to reveal her usual unburnt self the following day.
* There was also an incident where they drank several bottles of Gob's fake wine. It ends with
* There was also an individual that was thought to be an example of this, composed of thousands of sophonts, usually experts at something. Then it was revealed that: 1. The meta-sophont was really composed of the relevant
* There was also a non-lethal version of this trope involving (who else?)
* There was also a notably short lady in the episode "Gourmet Night," about whom Basil
* There was also another big plot for Russian influence in the election uncovered by a relatively small crime, being an unregistered agent of a foreign government. Russian National Maria Butina started a Master’s program in 2016 at American University in Washington DC which ended up being merely a cover story. She was a purported Russian gun rights advocate who’d been dabbling in American politics for a few years at that point, mainly with the NRA. She had been under the mentorship of Russian oligarch/former member of parliament, Aleksandr Torshin since 2011. She was charged and later pleaded guilty to the fairly minor aforementioned crime. Turns out the Russian government was trying to covertly fund the NRA as a roundabout way to help Trump (foreign nationals aren’t allowed to donate to American elections) and she was the point(wo)man. The only American who’s been charged in this scheme is her boyfriend, Paul Erickson, who has been indicted on the also relatively minor to the accusations charges of wire fraud and
* There was also another one where Olive and Otto did a little fixing-up of the box with the same text. They actually
* There was also another shot of zooming in on battle scarred Galactica with Colonial One in shot that first cropped up in season 3 and was repeated constantly for the rest of the series. This is perhaps the most egregious use of this trope in the reimagining.
* There was also an unsold 1996 pilot which greatly altered the format, and another in 2000 that eventually became
* There was also a nurse who had a crush on him. She was always making passes at him, but he didn't act on them because he was only a lowly corporal. When he's promoted to lieutenant, the nurse loses interest in him and explains that the only reason she was attracted to him in the first place was that it was wrong.
* There was also a practice called "waving", which involved deliberately sticking an extremity out of the trench in hopes that the enemy would hit it non-lethally. It had mixed levels of success.
* There was also a preponderance of circumstantial evidence: she and her lover were murdered the same night as their argument, there was evidence placing him at the scene (and he was there, and had actually considered at least scaring them with a gun, before throwing it away in disgust with himself), he owned a gun which he couldn't produce for comparison and was never found... None of this is conclusive, but taken together,

* there was also a problem of egos clashing despite their success. At The International 2015, this became part of the reason why they were sent home in 7th-8th, a solid, yet extremely disappointing finish for a team of their caliber.
* There was also a prominent subversion. They had their own words for time units (
* There was also a rarely used "Condition Green" which was a distress code to alert the receiver that the landing party had been captured. Given how often it happened, you'd think it would get heard more often. One reason why it wasn't was that it was specified to mean "The landing party has been captured, but don't take any immediate action!".
* There was also a rather entertaining episode in which he proved that the sword wasn't everything — he took on an entire army of
* There was also a regular animated segment on the show, with a chicken mistaking anything and everything for an egg. The chicken would sit on items, such as a ringside bell, a man's bald head, a billiard ball, a football, a golf ball, and even a bomb, with various disastrous results.
* There was also a round of combat that took three to four days to roll, where nobody hit anybody, with eight combatants? This qualifies.
* There was also Arthur's nemesis Handy, a hand puppet belonging to The Human Ton.
* There was also a rumor that you could finish the game without siding with the Partner and abandoning the Friend, either in the original or in the remake. This, again, is impossible without cheating: you can't finish the game without the Water Seal, and you can't get that without the Partner in your party.
* There was also a series of ads with Bullwinkle and the Cheerios Kid doing some kind of competition like bicycle racing, etc. Bullwinkle gets his energy after a bowl of the stuff, but usually ends up crashing into walls and other things. The slogan?
* There was also a short with Rita and Runt that takes place during the Nazi invasion of Poland, where Rita and Runt keep the Nazi's dog, Schnappsi (who happens to be Newt from the Minerva Mink shorts), and the Nazis themselves, from finding a Polish girl and her father and taking them to a concentration camp.
* There was also a significant belief that Stannis getting beheaded by Brienne at the end of Season 5 was a fakeout due to the scene cutting the second Brienne swings her sword. This lead to both the writers and the actor confirming no, he's definitely dead.
* There was also a somewhat less excellent, but still very funny, mod for the original Doom that turned the rocket launcher into a chook launcher.
* There was also a space whale in the Sector Y level of the game, though it had to be encountered in a special way.
* There was also a special celebration for a single performer in 2012. Longtime circus performer and
* There was also a Story arc in which male Ranma's hair grows uncontrollably because he ate a dragon's whisker at one point (though it only happens for a finite amount of time, and at the end, Cologne confirms that this particular whisker's curse had terminated for good and Ranma's hair is now back to normal).
* There was also a suspicion that Swigert might've held out answering just a little longer than the earliest he could have gotten through, making it last a little longer than absolutely necessary.
* There was also a swimming pool (located near hot springs) with a sign that had a letter scratched off and seemed to be taking advantage of the fact:
* There was also a theory that the Madeira and the Azores archipelagos were what remained of the land of Atlantis. Since they were beyond Gibraltar, it kind of made sense, especially considering the theory surrounding the Egyptian and Mesoamerican pyramids.
* There was also a time that Pinky and Brain duplicated themselves for the sake of having a dance group. Sadly, it was
* There was also at least one episode where the original investigator of the team's latest cold case was the one who brought it to the team's attention in the first place.
* There was also at least two cliffhangers involving John being stranded alone in

space after incidents with wormholes. The first time Moya was sucked into a wormhole while he was outside, leaving him alone in the middle of deep space, the second time he was left in orbit around Earth.
* There was also a Tragically Hip tribute band in the 90s with the name Road Apples.
* There was also a variation, where instead of stealing the organs himself, one man started killing organ donors in the hopes that his daughter would get a liver. It nicely sidesteps the issue of transport and removal (he even dropped one victim off at the hospital and called 911 before committing the other murders so EMTs would get there on time), but it still didn't work out how he wanted.
* There was also a very short-lived line of stuffed toys by Remco based upon these characters, which identified these hybrid creatures as "Firffels". Coincidentally — or not — they arrived around the same time the Wuzzles toy line was launched (
* There was also a villain in one of the adventure modules named Zahnarzt. Yes, just so you would understand how evil he was, they named him "dentist". The same adventure also prominently featured a clerk named Kugelschreiber (ballpoint pen).
* There was also a Weekend Update sketch about the All-Drug Olympics, where athletes are allowed to compete while taking any and all substances they want to. It then shows a Russian weightlifter so hopped-up on multiple painkillers that he tears his arms off trying to lift.
* There was also a world that was forced to live like the American old west because the colony's resident mega-wealthy civic leader would rather live out his cowboy fantasies than invest anything in developing the economy or improving the local quality of life (although he, hypocritically, had a personal hovercraft and the only personal laser pistol seen on the show).
* There was also "Bear Raid Warden", which depicts him as an overzealous air-raid warden determined to keep all lights off at night.
* There was also Dave Winfield, whom George Steinbrenner called "Mr. May" due to his failure to perform in October when it mattered. Alex Rodriguez seems to hold this role now (former Yankees manager Joe Torre has revealed that Rodriguez's nickname "A-Rod" was altered in the locker room to "A-Fraud" for his poor postseason performances), though his clutch performance in the 2009 Yankees series win might shake that a bit.
* There was also Fontaine Futuristics, the company that Frank Fontaine owned before Ryan took it over. In the original it was established that it was the second most successful brand in Rapture, but it wasn't until
* There was also Fry's puppy, who grew old and fossilized waiting for his master to come back.
* There was also Gary Macdonald, Norm Macdonald's "brother" (really David Koechner), and "the funny one in the family", who would come on Weekend Update and attempt some topical humor, usually telling the lamest joke possible. What made it funny was how visibly nervous he was to be on TV telling jokes, and the fact that he ended each joke with the word "no", as if it was part of the sentence.
* There was also "Gum Drops" a bit earlier, which had Grissom absent due to William Petersen attending a funeral, with his absence explained by a throwaway line about him teaching a class at the body farm. That said, many eps have had missing characters without much explanation.
* There was also half-legendary Polish student, Nawojka, who attended Jagellonian University disguised as a boy. She was discovered and removed from the university (though not charged with anything specific), but eventually went to a convent and became a teacher there. Her story was supposed to happen in early 15th century.
* There was also has a small moment when Kurt sees his dad and new stepbrother bonding over watching college sports. As Kurt is more a
* There was also his claim that Whiskeyjack was done with and would not feature in the story anymore. Uhuh,
* There was also his moment in the 1988 Vice presidential debate where he compared himself to
* There was also his speech for the opening of the new bridge on Sqornshellous

Zeta.
* There was also Jarvis the Wizard who got replaced by Cookie Crook & Officer Crumb, and Jarvis even had one commercial
* There was also Katy (a.k.a. The Purse Girl), who Jim dated from the end of Season one to the second episode of Season two. Even if you didn't know that Jim and Pam were the
* There was also Maxima, who wanted to marry Superman and did not quite understand why he didn't want to marry her, being used to always getting her way.
* There was also Mazda's ads for their new SkyActiv cars, complete with the Lorax and his forest friends shilling for the car, also incidentally promoting the movie on top of that.
* There was also Nandi's funeral at the end of "Heart of Gold". The sense of community between the women was evident, as well as the way they would move on.
* There was also Nathan Jones, although he was more of a heel due to his criminal past rather than being Australian.
* There was also nothing stopping different composers from writing operas from the same libretto, Metastasio's
* There was also one comic where he ate an apple-shaped candle because he didn't realize it was a candle when he started. He was aware that he shouldn't have eaten the other candles, but by that point he just had a taste for them.
* There was also one in chapter six, between the four main girls of the Konoha 12 plus one against nearly every other girl in the academy, after the former trounce the latter in a competition.
* There was also one in "Little Ed Blue" where it all started because Eddy accidentally spilled hot buttered popcorn all over Jimmy (stinging his eyes as a result) and then
* There was also one of these in "Scarecrow." Niko has a nasty nightmare after the Scarecrow attacks her. She dreams of waking up in her own grave, and the Scarecrow jumping in to strangle her with his bare hands.
* There was also one particular Order player, Canoness Astra, who had a Sisters of Battle army that coordinated the defense for one of the sectors of the war and got special mention in the game newsletters and in the summary at the end of the war.
* There was also one skit which featured anthropomorphic chickens acting out a
* There was also one unnamed "maiden" whom Lord Sykos sent to get tacos who had the misfortune of failing to return before Lord Sykos restored everyone else and returned to his home dimension, leaving her with no memory of the incident, and a lot of unanswered questions.
* There was also one where kids could vote on whether or not the Rabbit could have some Trix. He wins the election and the kids still wouldn't let him have any.
* There was also one where the Allies and Axis are visited by Finland as Santa, who gives them gifts, and one where Italy, Germany and Japan interview the other countries about their Christmas traditions. In the Webcomic, there's a strip where Britain and Germany call a truce on Christmas and play a game of soccer/football, based on a real-life event. There is an episode in the anime where America holds a Christmas party.
* There was also one where the leader of the robot Mafia was trying to teach another robot a lesson. The robot starts begging (not in Robo Speak yet), "Please, look into your hard drive, and access your mercy file!" to which the leader of the robot Mafia said "File not found!" Granted, it was used more as a snappy comeback said in a normal tone, but he still reverted to a primitive phrasing to describe the "missing" file.
* There was also quite an uproar about a Nazi swastika in the background of a Zubat card illustration... turns out, the card image was flipped when brought into America, and it's the symbol of peace they intended to put on the card. Not that most people in America would be able to tell the difference anyway.
* There was also Saleen, an evil mermaid who attempted the same thing. Though in one episode she turned Aladdin into a shark, which seems sort of counterproductive to this trope.
* There was also some concern that a thermonuclear device detonated in the ocean

would cause a chain reaction of nuclear fusion, which proved even less founded.
* There was also some speculation during the 1980s that if Warsaw Pact forces decided to go conventional, they would use vast numbers to take West Berlin pretty quickly and then
* There was also some subtle ship tease between Akane Taiyo and Tsukishiro Yukimachi, and they're confirmed to also be dating at the end. A bonus chapter shows how they got to together, with Taiyo realizing he loves Yuki and admitting it out loud, which she overhears.
* There was also Springfield Elementary School teacher Mr. Glasscock in "Separate Vocations", who quit sometime in the past because students kept making fun of his name. After Bart made a
* There was also that bit where the author went on about how there are not only missiles and anti-missile-missiles, but also anti-anti-missile-missile-missiles, anti-anti-anti-missile-missile-missile-missiles, and so forth.
* There was also that cute clubbing dress with the magic make-you-shorter heels. And the wig, obviously. Despite the heels, it was a pretty casual outfit.
* There was also that time he made Turk feel bad about betting on a patient's life for no other reason than "poops and giggles."
* There was also that time Stan created his own theatrical one-man show about
* There was also the 2009 Super Hulk Tournament where four guys of varying lighter weights were put up against four apparent behemoths — middleweight Ikuhisa "Minowaman" Minowa against Bob Sapp, middleweight Gegard Mousasi against Mark Hunt, light heavyweight Rameau Thierry Sokoudjou against Jan "The Giant" Nortje, and the debuting ex-Major League Baseball player Jose Canseco against Choi Hong-man; with the exception of the untrained, mid-40s Canseco all of the "Davids" won, complete with Bob Sapp (getting a bye thanks to the "injured" Mousasi withdrawing) being eliminated twice, and the finals are between the middleweight Minowa and light heavyweight Sokoudjou.
* There was also the Balloon Race episode where Team Rocket was actually winning the race fair and square before Jessie and James screwed them up by cheating over Meowth's vigorous objections.
* There was also the Blue Team funeral for Church and Tex, made more awkward because
* There was also the case of Naota hearing Haruko trying to fix the robot she made of his father. "Why won't it stand up? It's got this extra layer..."
* There was also the dragon that the group met during the second episode. His mad thrashings were creating severe turbulence in a river they had to cross. The ponies expect some insane beast, but it turns out he's just a particularly
* There was also the early episode "A Matter of Time", wherein an SG team had been sent to a planet that was close to a newly formed black hole; they tried to gate back home, but by then the time dilation effects were too strong, and the gate deactivated at Earth's end...the other end would be open until the end of time. The SGC blew the connection to keep the Earth from being pulled through the gate into the black hole. The time dilation also caused everyone in the mountain to be several weeks behind everyone else once the crisis was over.
* There was also the episode in the 1960s version where Friday and Gannon
* There was also the episode, "Krab Borg", where Spongebob mistook Mr. Krabs for a robot. At first, Squidward didn't believe his ramblings, but after seeing Mr. Krabs with piercing red eyes (due to getting salt in his eyes), a pair of tongs in his claw (mistaken for metal pinchers) and two batteries in his back pocket (from his radio that broke and the batteries were in his pocket 'cause he planned to give them to Pearl for Christmas), he starts to believe Spongebob.
* There was also the episode "Look Who's Not Talking" when Jill was nervous about giving a speech and Tim tried to give her this advice, but she wasn't in the mood for it:
* There was also the episode "Speak Like a Child" where Faye receives an old Betamax tape that might contain clues to her past, so Spike and Jet scour the solar system looking for a working Betamax VCR.
* There was also the episode where Brian writes a best-selling book and Stewie

becomes his agent. But soon, all the fame goes to Brian's head and starts acting really mean towards Stewie and going as far as to firing him. At the end of the episode, Brian tries to apologize to Stewie, but claims that Stewie was the reason he acted like that. Realizing that's the best he'll get, Stewie simply tells Brian he can't write.
* There was also the episode where Edd stuffs lint into his belly button.
* There was also the episode where Enzo accidentally made everyone (but himself) into dimwits.
* There was also the episode where Jack O'Neill is aged to geezer status... by a nanotech STD, no less!
* There was also the episode where Steve eats a cookie that Roger wanted, and Roger decides to get back at Steve by trying to convince him that he's adopted. Even going as far as to
* There was also the episode with a man who wanted lots of kids so he
* There was also the extreme dead guy in Aura's locker from the first episode.
* There was also the famous exhortation of Spartan women to their husbands and sons going off to war: "Return with your shields or on them!" Meaning they should prevent their shields from falling into enemy hands, even if they got killed in the process. (It's also been interpreted that a warrior who flees would logically toss away his heavy shield to do so, which also has him break formation and leave the rest of his comrades-in-arms in a rut.)
* There was also the flashback episode to when Joey moves in with Chandler, time during which Monica had a crush on Joey. Monica invites him over to drink some lemonade, and while she's distracted serving it, Joey starts stripping:
* There was also the Flying Zucchini Brothers, and the incomparable Whatnot musician Marvin Suggs (described with that word by Kermit, because
* There was also the goal of Master Splinter to return to human form. Happened once, but he was back by the end of the episode.
* There was also the guilt Tai goes through when remembering the time he took a sick Kari outside to play soccer and she collapsed right in front of him. She was then rushed to the hospital where she was diagnosed with pneumonia and almost died.
* There was also the guy who ordered a crime that unexpectedly led to the murder of a housekeeper, but
* There was also the incident where two very tiny alien races were on the brink of war due to a
* There was also the moment where Nate ended up revealing to his dad that he was a superhero, while holding a stark naked Ray in a bridal carry.
* There was also the moment with Dean Toadblatt siccing a giant one on Nigel Planter.
* There was also the occasional extra wearing a miniskirt uniform instead of the usual two-piece uniform with trousers.
* There was also the "original" Cutie Mark Crusaders theme tune, which apparently wasn't deemed
* There was also the part where some people became Toa from Bionicle, and others started using exo-suits. It became known as the "Bionicle meets Exo-Force RPG" and was never spoken of again, except in hushed whispers in dark street corners.
* There was also the point that the coat of paint actually reduced performance (because it added weight) - an unpainted B-17 was 8mph faster than a painted one and an unpainted P-51 was up to 16 mph faster. Also, the olive drab was primarily of value in making aircraft parked on airfields less visible to people attacking that airfield - in WW2, by 1944, US airfields weren't often attacked. These days camouflage is primarily aimed at optically-guided missiles.
* There was also the Rayek's original challenge to Cutter (via a carved stick).
* There was also the revival of the Triple Crown, which takes the three 500 mile races on the schedule (Indy, Fontana and Pocono) and not only throws a million-dollar bonus to anyone who can win them in one year, but also awards double points to all starters. The former was revived for 2013, when Pocono was returned to the schedule for the first time since 1989, and the latter was thrown in after Pocono was extended back to 500 miles for 2014 (after being reintroduced as a 400 mile

race). After Fontana dropped off the schedule for the 2016 season, the Triple Crown was disbanded, with double points being shifted solely to the Indy 500 and the season finale event (Sonoma from 2016-2018, Laguna Seca starting in 2019).
* There was also the second Halloween arc, where Riff's redesigning the fog machine to run on Rogaine caused him and Torg to sprout hair all over their bodies, just in time for the first of the many annual demons from the Dimension of Pain to show up and ask the 'werewolves' how to find Torg.
* There was also "the secret of the opera house", something that was being hinted at being something of great significance since season 1. In the finale, it takes up about 5 minutes to resolve, has little to do with any opera house at all, and is utterly pointless. It involves a 2-minute kidnapping of a character who was just rescued from a much longer and bigger kidnapping, and a cease-fire between the Cylons and Humans that lasts all of two minutes before shit hits the fan, and the kidnapper is simply shot. So the whole plot ends with a kidnappee being rescued and the Cylons shooting at Galactica. Which is exactly the situation before this all-important resolution of the opera house plotline. You could have fallen asleep during the resolution and you wouldn't have missed a thing.
* There was also the similar Vendawish, which appeared in Season 3 and seemed to be an upgraded Vendaface. When its customer, a generic Muppet, wanted to be taller, it obliged by grabbing his neck and stretching it higher.
* There was also the story about the high-tech snowblower that "ate" pets.
* There was also the story "Father's Day", which followed three sets of characters over a single day, but there wasn't any overlap between any of them.
* There was also the tale of the sideshow performer whose stage name was
* There was also the time an article praised Louis for supporting the LGBT community and angry tweets came from his Twitter account saying he wasn't gay. Later on, Zayn, who hadn't even spoken to them in months, was asked about fans invading his privacy and he randomly said that Harry and Louis weren't together. Okay, guys.
* There was also the time Blue Laser invited the Cheat Commandos over for Thanksgiving dinner (except the overzealous Gunhaver).
* There was also the time Faith and "Angelus" captured her. Had Angel actually been Angelus, she would have been in serious trouble.
* There was also the time he defended the honor of his "sister" Santina from The Great Khali's advances.
* There was also the time he gave the middle finger to someone at a speaking engagement, apparently not knowing the cameras were still on.
* There was also the time he got an erection while hugging his transgender mother. A later episode has Quagmire having sex with his transgender mother due to meeting a woman even kinkier than he is.
* There was also the time he jumped for joy, clicked his heels together, and there was a slight cracking noise when he landed. "See? I only broke ONE ankle!"
* There was also the time he saved the Light Warriors from a fatal fall by
* There was also the time in the Land of Waves when Naruto showed up just in time to save the kid from the bandits, and he even
* There was also the time she stole a key from a highly trained killer Kumadori while he had her limbs bound
* There was also the time that Calvin made sandwiches for himself and Hobbes as rations for an ill-planned journey to Yukon, Alaska. They were marshmallow sandwiches, with one containing honey and the other chocolate syrup.
* There was also the time the perp was caught and plead out by about :20, only for McCoy to decide to go after the makers of the illegally modified pistol used to commit the crime.
* There was also the time they're tracking a suspected rapist and murderer who they
* There was also the "Zeo Serial", a set of teasers that played at the beginning of
* There was also this between the children of Aegon IV "The Unworthy", who sired numerous bastards but only one legitimate son Daeron. Their father was partially

responsible for this, Aegon hating Daeron and trying to make one of his bastards heir, even legitimizing them all on his deathbed. This led to his eldest illegitimate son Daemon Blackfyre eventually rebelling against Daeron. There was also the enmity between Aegor Rivers "Bittersteel" and Brynden Rivers "Bloodraven", who were sired on mothers from one of the biggest cases of
* There was also this weird cartoon called Shnookums and Meat about a pet cat and dog that were trying to get fit and ended overdoing it. Their owners then had to start forcefeeding them to return them to normal. The short ends with a typical
* there was a mass nanite attack, and Tagon Sr. was suddenly a general.
* There was a meme perpetuating the stereotype of big muscular men being aggressive, specifically showing an image of Bodybuilder Søren Falby and a taunt involving him slapping mothers. Having heard that his photo has been used in the meme, Søren Falby hit back at the stereotype by using a photo of him with his mother, saying that he doesn't hit women and his mother would be angry at him if he does so.
* There was a Mercury car ad where two guys were discussing how much you can tell about someone from their cars. He walks up to this muscle car and says that whoever owns it is "Da Man!" Cue woman walking up, getting in, and driving away.
* There was a minor kerfuffle on Twitter when Sasha Obama, daughter of former US president
* There was a minor scandal during the last election in Sweden, when the chairman of the Left Party flipped off a leading Conservative during a debate. Luckily, it was not televised. Unluckily, someone had a cellphone camera.
* There was a moment on New Zealand TV when Leighten Smith, the "colour" presenter for the then relatively new TV3 channel, interrupted a lead-in to say, without changing his serious tone of voice; "Who writes this stuff? [Long Pause] I did." He then went on as though nothing had happened.
* There was a more pragmatic reason for which both Heer and SS soldiers hated them: when drunk, hysterical or out of control (that is, most of the time they served),
* There was a more straightforward application two episodes later. In "A Turn of Events", Karen entered Michael's room late at night to pick his clothes off the floor and discovered him and Paige in bed together asleep. Or so she thought as it turned out that Paige was only pretending to be asleep.
* There was an accusation that President John Adams had sent General Charles C. Pinckney to England to procure four women, two for each of them. Adams laughed off the accusation, declaring, "If this be true, General Pinckney has kept them all for himself and cheated me out of my two."
* There was an actual MI9, a British intelligence service that used POW camps to gather intelligence on Germany during
* There was an actual South African white supremacist named Eugene Terreblanche ("Terreblance" = "White Land"). He was murdered in March 2010. The name is ancestral and dates back to the early 18th century at least, and may have been adopted intentionally with at least some racist ideas in mind.
* There was an ad about raising awareness about global warming; lots and lots of kids of various ages saying "Tick" or "Tock", with various levels of seriousness or enthusiasm, speeding up with less of a pause between each word, then repeating "Tick" before having a few more kids explain that time was running out, and
* There was an ad for a minivan in which the happy owners were asked what they liked best about it. "Its all-wheel drive," was the reply. "Yes, we know it's all you'll drive, but what's your favorite feature?"
* There was an ad for fluorescent bulbs, bragging about lasting seven years. There's a kid who was newborn when the bulb was put in, and near the end of those seven years, he doesn't get a light bulb joke, saying "Change a light bulb? Why would anybody need to change a light bulb?"
* There was an ad for Hellmann's salad dressing where a woman is trying to explain to her relatives that the salad dressing she's serving isn't homemade. At the end, she says "Hellmann's made the dressing!" at which point the relatives say "You sold your recipe to Hellmann's?

* There was an ad for Kraft shredded cheese where the husband was being a
* There was an ad for Tabasco sauce where a man was eating pizza on his porch, putting a good dollop of Tabasco sauce on each bite. A mosquito landed on him, bit him, flew off, and
* There was an ad for the Irish Independent a couple of years ago that featured penguins. Playing hurling. To Mexican music. Yes, it was
* There was an ad for what at the time was the latest version of Office that showed a man sitting at his office desk, which was racing through the desert. The disclaimer was again, "Do not attempt."
* There was an ad that began as an ad for a 15-bladed razor, that featured the actor staring at it in disbelief. Then, it went on to be an ad about a three-bladed razor, apparently as a jab at the four-bladed razor that was being released around then.
* There was an ad that ran in theatres was anti-weed. It featured two badly drawn stick figures—a man and a dog—talking about weed. The message was basically, "Don't do pot or your dog will be disappointed in you".
* There was an adults-focused long-running television series in Brazil called
* There was an adventure done by Thomas "Wanderer" Wilde (best known for his
* There was an advertisement for the lottery that had a man kiss his wife goodbye from his car as he went "to work." He drove around his circular driveway to pick up his check from the mailbox, then drove back and greeted his wife, who asked, "How was your day?"
* There was an advertisement in the United States where some kids in a city left a trail of food behind them. After the food disappeared, they discovered their location with some kind of GPS device.
* There was an all-covers album called "Punk Goes Crunk," which featured various alternative music artists doing their own takes on various hip-hop and R songs.
* There was an all-out war between the two companies in the mid-90's. In fact, both companies practically spent more time criticizing their competition than actually promoting themselves.
* There was an ancient civilization who's entire naval tactics consisted of:
* There was an antiseptic for cuts developed to be sting-free, but it sold poorly because people didn't believe it worked. They had to put some alcohol back in it to make it sting.
* There was an arc from the early-to-mid 1990s where Grimm and Attila find themselves being pursued by Mother Goose's vacuum cleaner. They tried to stop it by sticking it in the toilet and flushing it, but unfortunately, that only caused the vacuum bag to inflate before the chase resumes once again.
* There was an arc where Luann was spending a lot of time with Gunther, only for the end of the arc to reveal that it had been Aaron
* There was an attempt to arrange a dialogue in Munich between Hitler and Churchill in November 1932, when both struggled for power.
* There was an attempt to justify this: A progenitor species seeded thousands of Minshara Class (M-Class) Planets with a common genetic source code, leading to parallel developments on many worlds. As such, many alien plants and animals are genetically very similar to Earth species; a Rigellian bat is simply a bat native to Rigel. However, the justification doesn't quite work, since evolution doesn't work that way. Constant monitoring and selective breeding would be required to produce multiple humanoid species on hundreds of separate planets at roughly the same time, billions of years after the original seeding. Otherwise, the evolutionary paths would just go in any which direction the environment dictates, no matter what kind of genetic material was dumped into the planets' oceans. (Then again, this is
* There was an Australian McDonald's ad where a boss asked his secretary to get him an order, who then asked someone else to get them something. It kept going down until the list reached a guy in a dingy basement sort of office. He then makes the work experience kid get the stuff, which has accumulated several A4 pages.
* There was an Australian TV commercial for the Yellow pages where a guy came home and found all of his stuff on the sidewalk. When he made some remark about how was

he supposed to move it, the girl flung the Yellow Pages at him from an upstairs window, smashing his model ship.
* There was an Austrialian football player in the early twentieth century whose last name was Conquest. Then you learn
* There was (and still is to some degree) a persistent rumor that if you deliberately kept the water level in the boat during the
* There was an Eggo commercial in which a boy found out it was currently breakfast time in China, and promptly dug through the earth to
* There was an Emerald Nuts ad which implied a woman burned down a building, and at the bottom it said "Do not commit arson. Not even once."
* There was an entire city in Ancient Egypt devoted to the worship of Bastet.
* There was an entirely too meta example where Paul Burchill, in tracing his family tree, discovered that an ancestor served as Blackbeard's first mate, and decided to become a wrestling pirate. He came up with the idea after the aforementioned UPN exec, Palmer Cannon, showed up and basically asked how he could make himself more interesting to viewers. Burchill pitched it as "Swashbuckling on SmackDown!" and Cannon was crazy about the idea. This led to a whole storyline where his former mentor,
* There was an entire series based around this trope, with titles such as "Help, I'm trapped in my dog's body!" and "Help, I'm trapped in my gym teacher's body!".
* There was an entire series of commercials in the 80s/early 90s about people having increasingly agitated monologues about how unfair it is that some circumstances prevented them from getting their morning bowl of Corn Pops, while the theme from
* There was an episode "Dreadnought" where B'Elanna had to persuade a rogue Interplanetary Missile Girl that it was
* There was an episode in which a black patient claimed that making heart medication specially designed for black people (which would hence be more effective than other forms of heart medication) is racist. Foreman disagreed. However, when House later tricked the man in question into accepting a prescription for the heart medication he'd earlier refused, Foreman then said House himself was being racist.
* There was an episode parodying "The Fly" in which Mandy unzips her head and accidentally zips onto a fly's body.
* There was an episode that DID use the standard plot, where Zack and Cody accidentally break London's bust while pet sitting for her. They spend the episode hosting an illegal slumber party in London's suite (that the guest thought was a legit hotel room being rented to them and their hosting services being part of an actual hotel package) in order to be able to have enough money to replace it before she got home.
* There was an episode where a bull rider cracked a vertebra after getting kicked in the head, only to die after
* There was an episode where an American M7 Priest (a self-propelled artillery piece from WWII), painted grey and given iron cross decals, stood in for a German AFV. They even use the Priest's gun to set off some dynamite they've wired to a bridge at one point.
* There was an episode where a teenage boy had been buried alive. The killer in question walks into the station 20-something years later to confess to the murder—and reveal that he has just buried another victim. The episode is spent trying to determine his motives for both attacks and find the second victim before he suffocates
* There was an episode where a woman was drowned in a bathtub by her employer, just because she was causing him to lose by messing up his Feng Shui. Note that both she and her employer had apparently enjoyed such baths on many previous occasions without incident.
* There was an episode where Bob orders his keytool to do just that, as
* There was an episode where Carter, trapped in an Asgard research facility, used the
* There was an episode where Ross and Chandler were together on a hotel in Vermont and they decided to do this (in this case because the hotel ripped them off by

first refusing to refund the reservation Chandler made for him and Monica, then forcing him to pay for their most expensive room when they lost the original reservation). By the time they check out Ross' suitcase is so full of stolen items that it bursts open in the lobby.
* There was an episode where Sam, in a life-threatening situation two switchblade-wielding kidnappers/rapists, was able to fend off his attackers
* There was an episode where the sisters try to save a man trapped in a painting, but it turns out he was evil all along.
* There was an episode where Watanuki presumed that there was a supernatural cause for the problems of a young woman that he helped. He notice that light flashed from her shoulder and he presumed that it was the cause of the problems. When she met Ms. Yuuko, Yuuko explained to him that it's actually purely physiological and the light just reflected from a buckle on her shoulder bag.
* There was an even more blatant example with Richard Carlisle, Mary's
* There was an evil genius who traps the main characters in a VR system. In the end, the system is shut down while he is still hooked up (and "downloaded in"), resulting in his mind being separated from his body, and the last shot is him
* There was a news story a few years back about a guy, caught out in the middle of a thunderstorm, asked God for a sign.
* There was an extreme level of luck involved in the flight having no fatalities. The captain happened to be a glider pilot (and thus knew about the unique requirements of powerless flight) and the first officer happened to be a former RCAF pilot who was stationed at RCAF Gimli, a nearby (decommissioned) airbase. The base had been converted into a race track and the pilots managed not to hit the drag races held on the runway they landed on, so
* There was an extremely persistent myth of a cloaking device for the main flagship. Despite
* There was an incident in Tenbi's past, where a male teacher and a group of his students were
* There was an incident where a client of a prostitution ring requested an underage girl. The owner of the ring contacted the police anonymously and agreed to help set up a sting against the client. The police sent a female officer to him claiming to be 15 years old.
* There was an incident which scattered Ash, Brock and Dawn and their Pokémon throughout Canalave City. The teams eventually reunite at the end of the episode, and the humans ponder if they're forgetting someone. Brock dismisses the idea because he sees a pretty girl, and just as he tries to flirt with her did the missing party member, Brock's Croagunk, show up to halt his advances.
* There was an infamous counterfeiter who was known as the Omega man. The only flaw in the coins he made was a tiny Greek letter he
* There was an infamous incident in 2010 when Sears was selling pillows and clocks and such printed with one
* There was an infamous IndieGogo campaign for a sitcom inspired by a
* There was an infamous Swedish election in the immediate post-war era which had the Conservative party post slogans like. "A vote for the Social Democratic Worker's Party will lead to the destruction of liberty, the savagery of children and the annihilation of traditional values." Needless to say, the Social Democrats and their left allies crushed the Conservatives, and went on to stay in charge of the country until 1976.
* There was an infomercial back in the 90s for an iron cover which apparently was supposed to prevent users from scorching their clothing because they were too stupid to set the iron's thermostat correctly. (It worked by insulating the face of the iron, which meant you were basically setting your iron to High and ironing on Low.) One of the demonstrations showed the presenter meticulously ironing a thick wool casual sweater. Certainly wool does iron beautifully with very little effort and looks wonderful on camera, but who in the history of humankind has ever ironed a thick wool casual sweater?
* There was an interactive Japanese IKEA Christmas holiday commercial had had this thing called, a "Merry Meter".

* There was an interesting case of the "tilted derelict" principle in "Empok Nor". The eponymous derelict space station was constantly being shown as tilted. Of course, this was for the benefit of the viewer, so that a viewer can tell it apart from its sister space station, Terok Nor (a.k.a. Deep Space 9), since they're the same class of station and visually identical.
* There was an Inuit tribe whose entire culture was based around two large meteorites, the only source of metal in the area. Which didn't stop polar explorer Robert Peary from hauling them off to a museum under the justification that they could now just buy their iron from white traders.
* There was an odd movement in Detroit that amounted to this as an alternative to gangs using real guns. It was called
* There was an official fanfiction ban during the original broadcast run of
* There was an old FMV PC game about art trading that would end each level with a news report on current events that would affect the values of certain paintings. The news anchor would smirk triumphantly while delivering tragic news and scowl while delivering upbeat news.
* There was an old friend of McNinja who did so much body building that his back muscles formed a
* There was an old German folk belief that a man can turn into a werewolf if he goes at a full moon's night to a crossroad, wearing nothing but a belt made of a wolf's pelt. At midnight, the transformation will happen.
* There was an old Nike commercial that aired around 2000-01 or thereabouts where a traceur blasted across rooftops to avoid...
* There was an old radio show featuring the Story Lady, whose job it was to tell short stories, generally with some very weird twists. The fillers used this trope a great deal: Story Lady is very prone to losing her temper and when she does, the only target is generally her hapless partner, who announces the segments. She has no qualms about hitting him with books, beating him out of her path with her bare fists, breaking his limbs, or actually shooting him if he doesn't do what she wants fast enough. No mention of these injuries is brought up later, and they're always, always played for laughs.
* There was an old Toyota radio commercial where if someone could guess the number of peapods in the jar, they would get a discount on a car. Whenever someone pointed out that there was only one peapod in the jar, a gong would sound and the Japanese-sounding announcer would say, "Winnah! Winnah!"
* There was an online game between Seasons 2 and 3 where comatose Aang revisited the Spirit World and had to fight Koh; the creators consider it canon, but it certainly doesn't satisfy as much as watching an episode on DVD would.
* There was an online Martian Rover Sim in 3D, which had been designed as part of the mission's publicity. The Sim was designed to show how the rover would move and collect samples. It also had some speed settings which, instead of speeding up the whole simulation, increased the speed of the rover, allowing some really stupid stunts. You could take the rover to the edge of the map, where there was a small wall, climb it, and head out into the wide red yonder, which caused the rover to drive upside down through the air, among other things... Not bad for an educational resource!
* There was another attempt to remake it with Bea Arthur as the gender-swapped version of
* There was another claim on some websites that beating the game would let you unlock a two-player mode, with the second player being Woody, Jessie, Bullseye, and in some claims, even Zurg himself. This, much like "Woody's Workshop", is totally untrue. Beating the game only unlocks an extra movie clip or two.
* There was another commercial aired in the early '90s. We see a man in a Col. Sanders suit (the camera never shows his face) as he looks through some papers in a '50s era kitchen and grumbles about not being able to find a certain recipe. We then pan to a piece of paper stuck behind the table and the words "To be continued...". After a few weeks the second half of the commercial is shown, in which a modern day KFC employee is in the kitchen - now a museum - and finds the paper which allegedly is the Colonel's recipe for grilled chicken.

* There was another early strip where he computed the most Inherently
* There was another episode focusing on a pilot fantasizing about assassinating his politician boss. It opens with a shot of him succeeding, then cuts to reveal that they hadn't gotten to the destination that it took place in. The main characters are randomly different people, apparently running a brothel. At the end, they agree that he's not a real threat to anyone's life, as he would never really go through with his assassination plot.
* There was another episode where Francis teaches Otto to waltz, to surprise Gretchen on their anniversary. But when the moment comes, Otto fails miserably. He comes to realize he could only waltz with Francis.
* There was another episode where they were so desperate for real food (Father Mulcahy in particular) that they spent months growing corn. And then the cook creamed all of it, much to Mulcahy's chagrin.
* There was another episode with a more traditional mummy, this one being a unfairly punished baker. This mummy's background is more
* There was another featuring Miroku's perverted moments to Sango and other pretty girls and them slapping him to porno-esque music.
* There was another infamously bizarre ad for the PS1 called "Mental Wealth". It featured a Scottish woman whose head had been morphed using CGI going on a philosophical tangent that had nothing to do with the PlayStation, and then laughing.
* There was another instance in one of the "Treehouse of Horror" episodes in which Bart crams a stick of glowing radioactive waste into the remote (Marge had taken the batteries to curb the kids excessive viewing) and with a push of the On button sends Bart and Lisa into an "Itchy & Scratchy" cartoon.
* There was another instance of this during the episode "Flaming Moe's". Bart attempted one of his frequent prank calls on Moe's Tavern, asking for "Hugh Jass" (
* There was another major mob war in Tampa Bay in the 1930s and 40s between the forces of the two most powerful mobsters in the region, Charlie Wall and Ignacio Antinori, known by the
* There was another officer of artillery, well endowed in the field of mathematics where he wished to have a career. He rose to fame as Napoleon I.
* There was another one in the episode where Maude Flanders died: Ned plays a game against himself, with all the words being about loneliness. And "horny".
* There was another one related to Darth Vader. Supposedly, the scenes in
* There was another one. The Doctor himself mentions that he was at the Fall of Arcadia, and that he might be able to come to terms with it someday. In "The Day of the Doctor" it's revealed that Arcadia was the second biggest city on Gallifrey, and its fall to the Daleks meant that the Time Lords were on the verge of annihilation. This ends up motivating the Doctor to

* There was another story in which said president had his clothes stolen while he was skinny-dipping and he had to ask a passerby to run to the White House and bring him back another outfit.
* There was another time in Haruhi-Chan when Kyon confesses his love to Itsuki (
* There was another time when some law-enforcing officer enters Moe's tavern for some reason (can't recall why). Upon learning he's facing the law, Moe presses a secret button, which rotates all the tables and walls to reveal roulette wheels, darts targets and other casino appliances, complete with a croupier. He then remarks "oh, wait, the other one was better".
* There was another UK game show from the '80s where the contestants got to be movie stars for a day and reenact famous movie scenes. They almost always read the stage directions along with their lines — by accident of course.

* There was another variation in this show. Before she was thrown out of a plane, Lois asked to kiss Clark goodbye. She really wanted to get close enough to whisper, "I'll take the one on the left".
* There was another with Penny on a Conveyor Belt o' Doom, tied up and heading for a laser that's used to cut up diamonds.
* There was an unmade script for a Sixth Doctor story called "The Nightmare Fair", later released as a novel, then an audio play (unofficial) and then an audio drama (official). The circus in question belongs to an old enemy, the extra-dimensional
* There was a parable in the Eighteenth century about the need for this in a military officer and the fact that street smarts aren't necessarily enough. It goes roughly like this, "There was a mule who served in the army for ten campaigns. At the end it was-a mule."
* There was a parody Asian Trix commercial, where after the kids say the line (in the stereotypical Asian
* There was a patient who, ironically, was a Christian faith healer. House's adamant belief that the guy was a fraud (while the rest of the protagonists went from skepticism to doubt) turned out to be the key to identifying his disease.
* There was a perfectly good reason. They were going to fight. They both had swords in their hands. What else are they going to do?
* There was a period in history, particularly during the time between the Napoleonic invasion of Egypt and deciphering the hieroglyphics, but later on as well, even well into the 20th century, when Egypt was widely considered to be the actual cradle of most if not
* There was a phone commercial on how an old guy ended up delivering a girl-in-cake to a kid's birthday party. The point of the commercial was that it could have been prevented if his bosses could reach him, but he has no phone.
* There was a Pink Panther cartoon short that consisted of a series of unrelated gag clips. In one, the Pink Panther climbs a diving board ladder and dives into a pool (with irrelevant results). Then he ascends the ladder again but continues on past the first board to a (much) higher dive platform. Between the time he jumps off the board and reaches ground level, the filled pool suddenly and inexplicably drains completely. Elapsed time: about 2 seconds.
* There was a popular AMV called "Euphoria". It combined the song "Must Be Dreaming" with the anime
* There was a PostSecret card that described how the writer, as a child, gave his/her nemesis hamster poop in a Tic Tac container and claimed they were a new chocolate flavor.
* There was a puzzle involving two cops trying to decipher a coded message they intercepted from some of the prisoners. Their failure to crack the code in time allowed the prisoners to plan an escape.
* There was a radical group bent on destroying space travel in order to preserve planetary ecologies. It was founded by a warship's A.I. Of course, even before that became known, it was well known the group uses warships to enforce their views...
* There was a radio ad for Quiznos subs, where an employee attempted to trade items of ever increasing value for his co-worker's sub. It culminated in him asking his supervisor to try and persuade him only to find that the supervisor traded his job to the mailman for a sub earlier.
* There was a radio advertisement for Heluva Good dips which involves a conversation between two men trying the dip. One is confused by the other when the name of the dip is said, since he sounds like he's saying "Hell of a good dip."
* There was a rather amusing bug introduced during July of 2009 where Rikti drones would re-explode for eternity after they were defeated. It was nicknamed the 4th of July Bug.
* There was a rather amusing discussion on whether female minotaur PCs of the text-based RPG
* There was a rather comical (and creepy) art shift for a second at the first season's grand finale to show how the gang is back to their normal happy lifes.
* There was a rather excellent modification that gave you a chicken launcher (complete with feathers, clucks and screams). Nothing quite like rounding a corner

and eating a high-velocity chicken.
* There was a rather extensive treatise on the subject in the 16th Century, by one John Northbrooke. This excerpt (adjusted for modern spelling) should tell one enough:
* There was a real and well documented case of Opposing Combat Philosophies within the U.S. Air Force during the late '40s and early '50s between Gen Curtis LeMay, who wanted manned nuclear bombers and lots of them, and his detractors who included President Kennedy, Secretary of Defense McNamara, U.S. Army Gen. Maxwell Taylor and many, many others.
* There was a rebellion seventeen years previously, resulting in the overthrow of a three hundred-year-old dynasty. But
* There was a red koi fish named Hanako, who died in 1977. She had been around for a long time, according to records from the temple she resided at, and the number of growth rings on her scales confirmed this. She had lived for about 226 years! (For reference, most koi only live for around 50 years on average.) Evidently, she came from a long line of long-lived fish, too.
* There was a report on the forums of a dwarf that got disemboweled and somehow managed to recover. Everywhere he walked, he'd trail a little "~~".
* There was a Rodeo Ford (a local car dealership) ad featuring a man in a cowboy suit who looks like a
* There was a Roman emperor who had the nickname "Caracalla" after a type of cloak he was fond of wearing. Though he didn't care for the nickname, it was probably for the best; if his nickname had reflected his personality in any more profound way, we'd be talking about
* There was a rule book laying out the expected behavior for Alcatraz that contained 53 rules. The last rule? "
* There was a rumor in Japan that if the player completes the Famicom version of
* There was a rumor that the original Xbox One included a secret second GPU based on a revised AMD architecture that MS would activate when AMD announced the update with the apparently weaker GPU (12 CUs v 18 in the original PS4) being a (n incredibly expensive given that many versions of the rumour had this supposed secret being stacked on the processor and the difficulties that would present for manufacture and cooling) ruse by MS to fool Sony. This persisted for a surprisingly long time even after the One's release.
* There was a rumor that you could play as Venom in the PS2, PSP, and Wii versions of the
* There was a running gag for a while (more so in the newspaper comics) where, no matter what Pokémon Misty would try to pull out, it would end up being Psyduck. One comic even had her pulling out Psyduck just to eliminate him, then tossing another Pokéball...
* There was a running series of the lighthearted version in the respective movies of
* There was a Russian scientist in the early 20th century who attempted to create a Humanzee, but apparently none of his experiments panned out and his funding was eventually cut. Interesting that in all accounts of trying to inseminate human women with ape sperm, the ape always happens to die shortly before the scheduled date. For the curious, said scientist was

* There was a separate NI cricket team at the 1998 Commonwealth Games (the Republic of Ireland is not part of the Commonwealth).
* There was a series Hidden Valley Ranch commercials set in "local" cities. However, the commercial doesn't look like it was set in the city they say it was.
* There was a series of adverts for Carfax that showed cars in dire shape, and the sound of a description being typed that downplays the problem, getting erased, then a description being typed that made the car sound like it was great! It was an advert for shady car histories. The ads included...
* There was a series of animated shorts in which a puppy would run behind a cat

and bark loudly, causing the cat to jump up in shock and hold on to the ceiling. When there wasn't a ceiling, the cat would end up on a tree, a telephone pole, or even the wing of a passing airplane.
* There was a series of commercials for a classic-rock radio station which included unlikely people (a very old man, a nun, a school teacher) reading rock lyrics deadpan. Hilarious. This happens quite often. A local radio station had people reading out the lyrics of pop songs, sometimes ironic to the situation, other times just not what you expect. (i.e. An elderly gentleman saying, "
* There was a series of commercials showing people scaling cliffs and overcoming other obstacles, with the last shot showing the word "Zyrtec" carved into stone or otherwise worked into the scenery. At the time (before you could just Google things like this) people genuinely wondered and debated what Zyrtec was. It was actually an allergy medicine.
* There was a series of crime novels that literally was based entirely on this trope, titles included
* There was a series of radio ads ca. 1970 for spray shampoo done as phone calls where a girl is trying to brush off a geeky suitor (voiced by geeky actor Arnold Stang) claiming she needs to wash her hair. He counters by telling her all about the product, to no avail for him.
* There was a series of UK adverts advertising common mixed drinks such as Jack Daniels and Coke, Gordons and {Schweppes) Tonic, Smirnoff and Red Bull, etc. Possibly related to this, there was a range of pre-mixed canned drinks on the shelves which featured the brand logos for both products.
* There was a short-lived fad for these abbreviations around 1840, such as "KG" = "(K)no Go". OK seems to be the only one that caught on and lasted, at least partly because of its association with
* There was a short Sci-Fi story where a worker at a salvage yard used a portable
* There was a short story called "Raistlin's Daughter", which implied he may have had a daughter, in the more or less conventional way and was
* There was a short story describing a man in a psychiatric hospital, who developed reality-warping powers. He spends the story exploring his abilities, watching humanity and moving them like pawns. Until he squishes one pawn that wouldn't move... only to realize it was himself.
* There was a short story in one anthology where a demon sorcerer (who is under a binding that he must always fulfill his offers, once made) crashes a village celebration, picks the least popular and most-abused girl in town, and offers her a

* There was a short story where the protagonist, a reporter, discovers that the red-suited burglar responsible for the increase in burglaries every December is none other than Santa Claus. Unfortunately for him, he is not remotely prepared to deal with a supernatural being.
* There was a side bet among the Supernovas on whether or not Cross's rivalry with
* There was a significant romance with Comic Book Guy (in his late twenties, early thirties) and the elderly Agnes Skinner. He was arrested for the possession of illegal videos at the end of the episode, and Agnes told him she wouldn't be waiting for his release from prison.
* There was a sign in a mall escalator in the Philippines warning about hitting a sign on the way up the escalator. In other words, it's a sign warning people about hitting their head on it. The real reason it was put up was to get people who aren't paying attention to hit their head on it and duck, rather than to accidentally get them stuck in the wedge where the two escalators meet.
* There was a similar advert for mayonnaise, where a woman says she likes to eat it with cereal, and remarks that most people would think she's pregnant...
* There was a similar case where a pedophile ran a site with pictures of children for fellow pedophiles to use as a pressure release. The children were fully dressed, not in sexual situations, and the pictures came from sources like school websites and parents' social media, so they weren't stolen, just gathered.
* There was a similar commercial in Australia: In the Australian 'bush', a man

lies groaning and clutching his leg. Cue rugged bush ranger type (imagine Crocodile Dundee), who starts talking about how to help snakebites.
* There was a similar event in the final match of the season-ending play-offs in the English football league in 1898. Stoke needed a draw or better to remain in the First Division the next season, and Burnley needed the same result to be promoted. The match finished 0-0, with neither side even pretending to try to score. The league responded by replacing the "test match" system with automatic promotion and relegation. It also increased the top flight to 18 teams, with the victims of Stoke's and Burnley's alleged manipulation, Blackburn Rovers and Newcastle United, joining the top flight.
* There was a similar event when Mr. Burns proposed to Marge's mother. He put the ring in her champagne glass, but she swallowed it. Luckily, he had a back-up ring in the fondue.
* There was a similar experiment by the Daily Mail, involving a little girl, little boy, dog and cat (in a carrier) left alone in Manhattan's Washington Square park
* There was a similar fairy tale, only that the whole group was a bunch of girls. When they got wind of the 'tests' to expose them, they would try to confuse things even more. When offered jewels and fabrics, some of them ignored them, some of them appraised the valuables, and a couple of them 'stole' some of the gems. When ashes were strewn across the threshold (on the assumption that the girls would try to clean it up), most of them marched right across it, while a few of them tried to clean it up and made the mess worse in the process.
* There was a similar gag, asking what would happen if the modern news practices were in place for other big events: "President Kennedy visits Dallas.
* There was a similar story about when the Devil came to take the man's soul, he showed the Devil his Certificate of Baptism, showing that there was a previous lien on the property, which takes precedence. As soon as the man's debt to God was paid off, the Devil can take the rest.
* There was a similar story, though the ad was for a beverage. From left-to-right, it showed a famished man in the desert, then the guy drinking one of the products, then shows him healthy.
* There was a sketch on a German comedy show (yes, they exist) where someone was giving a presentation on bikinis. Somehow an embarrassing picture of a house crept in.

* There was a small town. One day, an old lady said something bad was going to happen that day. Word gets out, and then every person is so paranoid that the townspeople burn it down and run.
* There was a snow-demon in the novel that explains Nuriko's backstory that demanded a more conventional
* There was a Soviet espionage ring in Switzerland, called The Red Orchestra, that spied on the Nazis during WWII. One of them was a Hungarian named Alexander Rado, whose codename was Dora.
* There was a special edition of Jurassic World that went way beyond that, including the movie discs in a tin container, and statuettes of the T. Rex and the Indominus Rex, staring each other down. They could even be separated or combined into a standoff pose!!!
* There was a story about a couple who kept their African grey in their bedroom; they "got busy" one night, and while guests were over, the African grey repeated the events of the night back to them.
* There was a story about an elderly Dutch man and his grandson who somehow ended up on a flight to Sydney... Nova Scotia, instead of the more well-known, oft-visited
* There was a story about a young boy during the Russian Revolution where he comes to his uncle's house, only to discover that strangers are living there. It turns out his uncle was taken away by the Bolsheviks.

* There was a story about four shops (or other kinds of service) located on the same street. One day, the first of them put up a sign declaring itself to have the best wares (or service) in the city. The second responded by declaring itself the best in the whole country. The third one soon followed by calling itself the best in the world. Then, the fourth one put up a sign saying it's the best on this street.
* There was a story in a magazine of Short Science-Fiction stories featuring an antagonist who was a member of a species whose reproductive organs became active and self-motivating after death. He happened to have a genetic flaw that caused his to activate early, resulting in constant arguments with his gonads, which were usually concerned with finding a female and spreading his seed. Eventually, they leave him in disgust after a humiliating defeat.
* There was a story where a pair of twins had trouble passing their driving exam when they were teenagers. So, one took the written exam for both of them while the other took the driving test.
* There was a story where the author obviously intended to call the tight group of nerdy outcast high school students a clique. Instead, he called them a cliché. Which is true, but...
* There was a Straight-To-TV documentary about (natural) disasters following a scientists life that plays with this trope. He of course is stuck in a loop, but he doesn't actually remember it, "nature" does though. He is trying to get to work, but one thing is always different from the previous loop, causing him to die (from small things such as getting electrocuted because of lighting to big things such as a sudden tornado or tsunami hitting the city) with the narrator at one point cheerfully implying that "the world" doesn't seem to want him to reach his workplace. With each loop he gets closer to work though, only to finally reach it at the end. It is then revealed that
* There was a strip where this trope is compressed into a proper theory: The combined IQ of any team starts at 100 for one participant, with 5 points deducted for every additional member to the team.
* There was a Swedish ice cream manufacturer (whose trick was the fact that they drove up to your driveway, selling ice cream to the whole neighborhood) whose commercial showed a young boy showing a condom to his father and asking what it was and the father trying to figure out what to tell his son, only to be interrupted by the insane, yet addictive jingle that tells us that the ice cream truck is about, and then distracting the kid by offering him ice cream. Cut to the kid eating ice cream in front of the ice cream truck and showing the condom to another kid who

* There was a trailer for an excellent sounding movie playing in a local movie theatre, but it is disappointing to find out it's just an
* There was a trend in action films between the 1970s and early 1990s (particularly in the late 80s)
* There was a trend involving the driver taking their drink then immediately throwing it at the worker and speeding off, then uploading it as a "hilarious" video online. This trend swiftly died when perpetrators started being arrested and charged with assault and criminal damage. In one case the reverse happened when a prankster loudly sounded their horn at the drive-thru window to scare the worker and they threw the drink at the driver in retaliation.
* There was a truly heartbreaking Christmas story ("Should Auld Acquaintance Be Forgot") in a DC Christmas annual a couple years after the Crisis in 1989 where the ghostly superhero
* There was a TruTV police car dashboard-cam video (with audio) of a guy on PCP. The wild mood swings were unnerving enough, but the completely inhuman roaring and growling, plus a voice straight out of

* There was a TV advertisement in Poland: the man asks his wife if she wants Earl Grey since the kids are asleep. After some
* There was a TV Show on PBS a while back about thrift stores and other ways to get cool used stuff. To start the journey, the show's hosts bought a retired ambulance on eBay to cart their findings around in. Several weeks into production, some terrorists stole an ambulance. Within a month, they had been pulled over by, interrogated by, and gotten signed statements from troopers in at least three states attesting that it was not these guys. Not that any of the troopers believed the previous ones, of course.
* There was a UK ad for quick-cook pasta where a woman hears her annoying upstairs neighbour leaving his apartment. She rushes to put the pasta on and it's ready within a couple of minutes, so by the time he comes to the door and asks her on a date, she apologises and explains that she's just sat down to dinner.
* There was a variation of this in Australia in the 1980s, involving Mikhail Gorbachev, Ronald Reagan, and Australian Prime Minister Bob Hawke. Hawke claims that the great news is that "No Australian child will be living in poverty by the year 1990!" (one of his more unrealistic promises)
* There was a variation of this in one episode: Daria quite deliberately told embarrassing anecdotes about Quinn to the "cool crowd".
* There was a very brief, quickly-disproved rumour that if the player lingered an absurdly long time on the first mission, they could actually trigger a secret alternate campaign branch and fight the Taiidani Imperial Navy taskforce that shows up to glass Kharak while the Mothership is elsewhere. It didn't really spread

beyond a single thread on the Relic Entertainment forums, being the result of a joke that a couple of newbies didn't get, but became a minor running gag in the community afterwards.
* There was a very disturbing fish stick commercial where a bunch of the fish sticks huddled at the back of a plate, finally deciding to shove one unlucky comrade forward proclaiming 'pick him, yeah eat him!' after the unfortunate fish stick is picked up out of screen we see the others looking in horror and you hear a crunch while the eerie narrator talks about how delicious they are: 'No, we're not! No, we're not!'
* There was a video game adaptation of, drills of course featured prominently.
* There was a video game commercial where two guys in a car stop next to the police. The passenger mooned them and the two sped off.
* There was a Volkswagen commercial in the 1970s which had a car, hidden underneath massive amounts of snow, burrow its way up to the camera (the ad exec was inspired by
* there was a wave of babies named Khaleesi, not Daenerys. She was also frequently referred to as "Daenerys Stormborn", which viewers may interpret as her middle name, which is actually just a nickname as she was born during a storm.
* There was a website in the early 2000s called moontruth.org which spoofed the Moon landing hoax conspiracy theory. A video on the site purported to be an outtake from the filming of Neil Armstrong's first steps on the Moon.

* There was a Wisk Plus laundry detergent ad a while back that had a woman magically teleport the clothes off of a bunch of
* There was a woman who appeared to be pregnant and was assumed to be so by many people and doctors, even though said woman took a pregnancy test and it came back negative. It wasn't until she was passing out multiple times that she went to the hospital to get herself checked out that she found out the reason for her stomach being extremely large; the large belly and her weakness was due to an abnormally huge ovarian cyst that was growing against her stomach.
* There was a women's golf tournament some time ago called the "Coca-Cola Invitational, sponsored by Safeway". This makes for a double example of this trope.
* There was a wonderfully memorable commercial one Christmas for Lowe's, featuring a little kid stumbling down the stairs scrubbing his eyes and tells his dad that he can't sleep. Dad responds that he's just nervous about the big day, escorts him down the dark hallway, opens the door to show light just pouring out and a room bright as day from all the Christmas lights. Not one mention of Lowe's until the logo flashes up at the end.
* There was Commander Kubrik Chenkov of the Valhallan Ice Warriors is an extreme example of this. His main tactic is sending legions of his own men straight at the enemy base without tank or artillery support or using them to draw enemy fire for his other forces, but unlike most cases, his tactics really work.
* There was debate among the fandom about whether Petey's making the Tricameral Assembly into an object lesson in the necessity of a healthy defense budget in the Teraport age by vaporizing them from orbit was a Shoot the Dog moment or falling through the
* There was Dwight and Angela's secret relationship from the second to fourth seasons and then becoming a full-out secret affair when Angela is engaged to Andy in Season 5. Only Jim and Pam each find out individually, and the entire office learns just before both Dwight and Angela truly break up in Season 5's "The Duel".
* There was even an episode based around how one guy reacted to Xena's leather outfit (and how upset it made his girlfriend). Xena considers switching to chainmail, but Gabrielle points out this would probably only attract a kinkier kind

of guy. The girlfriend recaptures the guy's attention in the end with her own (much simpler) leather outfit.
* There was extensive discussion of the insertion of a smoking scene into a major motion picture, just so people would associate smoking with post-coital astronauts blowing rings while floating sensually around one another.
* There was, for a time, a plan to develop softball-sized robots of this type for use on the International Space Station. They would be capable of moving about on their own by using ducted fans to produce thrust. Since the ISS is in a microgravity environment, they would effectively be capable of flying around the station in adherence to the spirit of the trope. Likely served as the inspiration for the SGU Kinos mentioned above.
* There was George Dzunda's Max Greevey, killed before he could testify against mobsters.
* There was Hayate and Hinagiku's date to the movies. Once they finally made it into the theater and their hands touched on the arm rests, to two of them finally realized that what they were on could be considered a date. When things fall to pieces (since they were set-up for failure in the first place), Hayate takes her to totally-not-Disneyland-Tokyo where the matter of it being a date is brought up again. This time neither denies it and instead Hinagiku changes the subject to continue the technically-acknowledged date.
* There was, however, a designated "intel" role that a CO had to fill for their perspective country: Sami for Orange Star, Grit for Blue Moon, Sonja for Yellow Comet, and Jess for Green Earth. Lin falls in for
* There was, however, a unit of measurement called the butt, equivalent to about 130 gallons for ale and 151 gallons of wine. This means you could claim to have a "buttload" of wine without using hyperbole.
* There was/is an European (most likely Franco-Belgian) comic called Charly that features a young boy and his Captain Lightning starship toy. It floats. It has lasers. It can blow a hole in a wall large enough to walk through (and kill an unfortunate sheep on the other side).
* There was King Gurnt the Stupid of Lancre, whose attempt at training an aerial attack force of armored ravens
* There was little mudslinging between the Conservatives and the NDP. However, the entire Conservative strategy was essentially portraying the Liberal leader Michael Ignatieff as evil for having lived in the United States while teaching at Harvard. (And, not living in Canada for several decades — and describing himself as an American)
* There was more to it than that. Early in the episode, Kinch agreed to spar with the German boxer, Battling Bruno, and knocked him out. General Burkhalter told Klink that Hitler would be furious to find out that a German was defeated by a black man, bringing up Jesse Owens' performance at the 1936 Olympics. A rematch is slated - with a German referee, German judges and with Bruno wearing horseshoes inside his gloves. Kinch knocked out Bruno again but with their heist completed, Hogan threw in the towel, making Bruno the winner.
* There was much confusion in the fandom as to whether Neo's name was "Neo Politan" or "Neopolitan". The guidebook finally confirmed it to be the latter, and Nora mentions Neo by full name in Volume 7, spelled as "Neopolitan" in the subtitles. Prior to the guidebook,
* There was much debate (and backlash from some who believed it was akin to denying him them) when Boston police questioned Dzokhar Tsarnaev about the Boston Marathon bombing without being read his rights. Police justified this under the "public safety" exception, though a judge did Mirandize him eventually (and he shut up after he was).
* There was never any doubt that Pegasus was fully American; he was the first
* There was Nissan's briefly notorious 1989 series of Infiniti commercials, which slowly faded through a series of beautifully photograph landscape shots while
* There was no area that was 100% secure, so taking prisoners meant there was a risk they would be set free (this goes double for partisans, who had to constantly move their base of operations, and prisoners would slow them down).

* there was no possible way anyone could actually steal from them, and failed to catch any of them on tape.
* There was no rain in the Garden of Eden; the ground was watered by a sort of mist. Humans first experienced rain, and all the beauty and soothing sounds that come along with it, long after they fell.
* There Was No Secret Evil Fighting Organization Kaburagi. After a while, her disappointment became resentment.
* There was once a 1950's magazine ad showing a Del Monte ketchup bottle, with a surprised woman saying, "You mean a woman can open it?". Said ad is commonly used nowadays as a symbol of outdated advertising and casual sexism in the 1950's. However, the ad was actually advertising
* There was once a candy bar called HITS. It was quickly pulled when someone noticed what a row of them on the supermarket shelf looked like. HITSHITSHITSHITSHITSHITSHITS.
* There was once a case where Stabler beat up a suspect who fought back and accidentally hit Benson. When asked about the badly beaten man's injuries, Cabot claimed that the only ones he had were on his fist were from punching the detective and threatened to charge him with assaulting a police officer. Another time, after it was pointed out that Fin and Stabler could be charged with assault after a particularly brutal interrogation, Fin just dismissed it and said he would like to see a lawyer try it. (Of course, it would have been hard in that case, because the assault was their response to the suspect saying he needed an attorney, so he was unlikely to ask for one again even if he had not committed suicide in the interrogation room.)
* There was once a Christmas-themed Disney figurine called "Three Cheers for Mickey". It was of
* There was once a commercial that started out like a typical pregnancy test commercial. A couple sits on their couch while the wife holds a beaker of fluid. The husband dips a plastic strip in the fluid and they excitedly watch it change color. They have just confirmed...that they have hard water. We then see that the commercial is actually for a hard water treatment.
* There was once a flyer at a videogame store for a "4Play" marketing campaign, which let you know about special offers at that store. This was aimed at the 6- to 15-year-old crowd. Given that this happened in a non-anglophone country,
* There Was Once an Avenger from Krypton, all while chastizing them for being too reliant on her to win things when they're not enough.
* There Was Once an Avenger from Krypton, and they're also at war with the Kree Empire, who are also conquerors.
* There Was Once an Avenger from Krypton clone game and instead decided to create a Choose Your Own Adventure game based off her experiences in the train.
* There Was Once an Avenger from Krypton is used to. The former are fully tangible if they want to be and capable of powerful feats, showing up in Amity Park on a regular basis, while among the latter few can escape Thanatos and return to the mortal realm without being summoned by a necromancer, and even as a son of Hades Nico couldn't make his sister semi-corporeal enough to touch her, let alone enough to assume some semblance of life.
* There Was Once an Avenger from Krypton, Kree, and Asgardians, fit this in one way or another due to hyper-advanced technology that has allowed them to span across the cosmos. Pidge calls Gem tech the most advanced she's ever encountered (and she works with Altean magitek) while Moonstone states that the Kree were already working with industrial machinery by the time humanity was just starting to form stationary civilizations.
* There Was Once an Avenger from Krypton), leading to a brief moment of embarrassment for both of the girls and the onlooking Kevin.
* There Was Once an Avenger from Krypton. Pepper jokes that everyone hates him, even Fury himself.
* There Was Once an Avenger from Krypton series due to him being fifteen, which results in them having different mind-sets on him. Tony prefers to help him from afar since the idea of having an underage teen be an official member of the

Avengers doesn't sit well with him (he also notes that it would be controversial with the public) while Steve wants to bring him into the fold and help him with proper training and support since he'd need it more than any of the adult heroes.
* There Was Once an Avenger from Krypton series, there are several examples in the greater cosmos.
* There Was Once an Avenger from Krypton series used to date and were married for a very short time, but they divorced and aren't a couple anymore, though they do still get along well and have been trading goods with each other for years. Considering that she calls him "handsome" in a flirty tone when they meet again, she may also still be attracted to him too.
* There Was Once an Avenger from Krypton so he can at least give Ben the best chance he'll get for success.
* There Was Once an Avenger from Krypton that power to locate people or information to be boring. Hence his vast network of informants, to spice things up.
* There Was Once an Avenger from Krypton: The World Security Council's response to Vilgax's invasion of Arcadia Oaks is to have the National Guard quarantine the area and force the Avengers to handle it themselves. When Coulson points out that this is the exact opposite of their reaction to the Battle of New York (where they wanted to sideline the Avengers and rely on conventional forces), Hill notes that it's probably retaliation to the team and Fury's habit of defying their authority.
* There Was Once an Avenger from Krypton to the mass of even one of Krypton's moons, let alone the other moons, Krypton itself, or its sister planet Daxam, not to mention that Kara's best estimates of how long she spent in the Phantom Zone don't give the belt itself enough time to form. Lena's best guess is that maybe time went wonky and Kara was in the Zone longer than she thought, and the explosion was so violent that the remaining mass fell further out of orbit than Kara thought it would, but Kara's still not convinced.
* There Was Once an Avenger from Krypton, Victor Von Doom never suffered from the facial scarring he did in his backstory and is noted to be rather handsome.
* There Was Once an Avenger from Krypton: Vilgax's invasion of Arcadia is the last straw for the Kree, who decide to wash their hands of Earth and hand custodianship of the Sol system over to the Nova Empire instead.
* There Was Once an Avenger from Krypton when the Mad Titan eventually comes for Earth.
* There Was Once an Avenger from Krypton, where they were enslaved by the Dark Elves. When they rebelled against their masters by siding with the Asgardians during the Convergence, Malekith retaliated by trying to wipe them out, with everyone believing they succeeded. Thor is therefore relived and exhilarated to find out that some of them survived by escaping to Earth.
* There Was Once an Avenger from Krypton. While the Avengers did win, it's acknowledged that they got lucky and were close to failing, not to mention the invasion caused a lot of collateral damage and death. The severity of the invasion, coupled with how it caused other hidden heroes to reveal themselves, is a major reason for why the Avengers are working to expand their ranks earlier than canon.
* There Was Once an Avenger from Krypton. While they rarely directly interact, it's established that they all exist in the same universe and will occasionally reference each other.
* There Was Once an Avenger from Krypton, with Ben first getting the Omnitrix, Vilgax as the overarching threat, and a number of the Original Series aliens.
* There Was Once an Avenger from Krypton. Zeus is worried to the point of seriously considering revealing the existence of the Olympians to the public at large so they can at least do it on their own terms.
* There was once an early-to-mid 2000s Flash ad/game for TAG body spray that had you clicking ("TAG"-ing) on girls until the "father" suddenly appeared—All of which happened to be black.
* There was once a post in Spanish on a message board whose language was usually English. Unfortunately the poster omitted the all-important tilde from "años", so instead of the intended "I am 25 years [old]", he said "I have 25 anuses"! Much fun was made of this.

* There was once a restaurant named Goombazz Big City Eatzz, most known for being the subject of an episode of
* There was once a roller coaster at Kennywood Park in Pittsburgh, PA called the "Steel Phantom", whose mascot was the Grim Reaper. It was torn down, supposedly for being extremely dangerous. When a new coaster, "the Phantom's Revenge", was being built in its place, there were commercials featuring

* There was once a soldier who got hit by a rocket. It was stuck in his body, and both the soldier and the bomb were still
* There was once a Sprite commercial brandishing their new logo design and new taste... except at the end of the commercial was a cue card and the announcer very quickly stating "Now tastes more like 7-Up!". It was very quickly pulled off the air after someone at Coca-Cola must have realized the implications of admitting that the competition is better and something you're striving to be like,
* There was once a supermarket themed art exhibition in France called the "Orrimbe show", that would've likely faded into obscurity if the creators of the exhibition hadn't asked Jean-Michel Jarre to produce music for the event. Jarre ended up creating Musique pour Supermarché, an album that was famously pressed only once and had its master recording destroyed in front of an audience.
* "There was once a time when darkness shrouded the world and the darkness had a queen." —
* There was one back in about 1998/99 or so, where two lower-sixth form students went clubbing, and one of them, Evelyn, gets flirting with a university student, whose number she gets and they go on a couple of dates. Then he turns up as a new trainee teacher for her A-Level classes....things get awkward, they agree to break off the relationship right away, but news about how they first met spreads around school anyway and he is forced to resign (not just from the position, but from his teacher training course and the teaching profession as a whole. Eventually, Evelyn discovers that while they were dating (they had slept together on one, maybe two occasions during that period) she had gotten pregnant by him; they move away and set up home together, and it's implied they got married at some point too.
* There was one between Prince Sky and Princess Diaspro but Sky doesn't love her, so he calls off the wedding. Lucky Bloom.
* There was one book of "Solve it yourself mysteries" intended for kids which seemed to do something with the trope while inverting it with more common examples:
* There was one Budweiser commercial involving the profanity jar, with proceeds going to the next case of beer — profanity ensues.
* There was one Cadbury's TV ad in the UK in which a boy gives a piece of his chocolate to a girl sitting behind him. The two start dating, get married, and eventually have a son - who then goes on to do the same thing as his father in giving a piece of his chocolate to a girl sat behind him on a bus. "First Taste. First Love."
* There was one caused by badly translated supertitles during a performance of
* There was one comic story where Snoopy took up magic tricks and turned Charlie Brown invisible. While in this state, he does manage to sneak up on Lucy and kick the football. It would be used in the animated special
* There was one commercial where a man is walking through the snowy wilderness. He then stops to drink a Pepsi and the rim of the can gets stuck to his lip. He heads to the doctor's and sees a bunch of people in the waiting room who have the same problem, including a dog.
* There was one crook that tried to steal a cereal box with a diamond that he had stolen earlier in it from the girls. All of his attempts to steal from them were complete failures.
* There was one episode about force feeding spinach and other about broccoli.
* There was one episode George spent complaining about women drivers, with an unflatteringly portrayed female bus driver getting
* There was one episode in which a literal truck load of evidence was stolen in the first five minutes. They got it back, but the chain of custody was broken so

none of it could be admitted.
* There was one episode of the second TV series where Lupin, Jigen, and Goemon ALL dressed up as Zenigata.
* There was one episode where Ma-Ti got into Sam Spade type detective novels and tried to use 1940's slang, only to get it all mixed up.
* There was one flashback to their younger days, where Truffles was considerably more attractive and less shrewish.
* There was one good use for them: gold farming. Buying a house with a lot of trophy display space, decorating it, and selling it results in a tidy profit for the player. You can then proceed to break into the house, steal the trophies back, buy the house again, redecorate it, and repeat ad infinitum. Of course, the
* There was one in particular that showed a professional chef in a restaurant kitchen preparing a sumptuous Tuscan meal, plated on fine china, which is then whisked away to the dining room. As the waiter carries it through the kitchen doors, it turns into a plate of cat food...what kind of
* There was one in "Robert Louis Stevenson's Belushi!" whose entire schtick is making 'wrapped up' puns.
* There was one instance of a man who caught a ball of cobalt-60 and had his hand amputated. This would not have been necessary as Plutonium nuclides are actually pretty benign, as far as radiation goes. However, this was not known at the time, like most of the properties of plutonium (which was only just available in macroscopic quantities and only because of the bomb effort itself). The two incidents with the Demon Core only served to further elevate fears about the lethality of the stuff.
* There was one instance where Mr. Burns asks Smithers about Homer Simpson's identity, and Smithers points out that everything important that has happened to Mr. Burns in the last several years was tied to Homer in some way. This does not change Mr. Burns's outlook on Homer in the slightest, though it does disappoint Smithers slightly. Smithers seems to be an aversion though: He is genuinely aware of what Homer has done and remembers it, trusting Homer enough to substitute as Mr. Burns's assistant in "Homer the Smithers" when Smithers goes on vacation.
* There was one in the episode "Brave and the Bold" when Gorilla Grodd gets snippy with Flash and he responds with: "Oh yeah? Well, you're... naked!" (he shrugs to Solovar behind him because he knew it was lame). The more hilarious part is that the comment was actually pretty funny.
* There was one involving Kakashi's first successful use of his Kamui, wherein he successfully saved Gai's team and his own team from Deidara's massive bomb at the last moment.
* There was one nifty aversion as well, though. The Zero Point Modules (Ancient power sources) are usually treated as
* There was one scene where crew in spacesuits were shown to be carefully traversing one of the flightpods with magnetic boots. This is consistent with ships being magnetically sealed to the flightdeck.
* There was one story of a man who proposed to his girlfriend by....
* There was one table of monsters that included the stat "% in liar". No, they weren't specifying how honest the monsters were; it was supposed to be "% in
* There was one time when he returned to Mega City 1 from Luna-1 and hadn't been reinstated as a judge yet. He spent a couple of minutes walking around, waving at anyone, and ignoring crimes because he was technically a civilian.
* There was one time when Napoleon won a major victory, and he ordered a rabbit hunt in celebration. Depending on the source, there were either several hundred or up to three thousand rabbits brought to the grounds and set loose, but what they all agree happen was that they made a beeline for the Emperor and continued to mob him despite bullets, riding crops and horsewhips being used by his hunting party to dissuade them. Eventually, the scourge of Europe was forced to jump in his coach and hightail it out of there. The problem was that instead of capturing wild rabbits, the man who organised the hunt used farm-raised animals who, far from being scared of humans, expected to be fed when they saw them and were quite happy to approach en masse.

* There was one (very bad) phone commercial that brags about how clear its screen is by showing two (apparently very stupid) people mistake a picture of a spider for a real tarantula; the woman jumps up and lets out an ear-splitting, screen-cracking screech, while the man destroys the phone with his shoe.
* There was one where they set up one of his traps, and it goes off on him several times wrong before he gives up. So he goes for something else, in which the original trap went off him, then the combination of his next scheme and the attack was his downfall, then he'd almost get the roadrunner, and the trap would get him again.
* There was originally an uncensored version of the scene. Reportedly, Don Bluth ordered the footage to be
* There was originally going to be one through Cincinnati. The project was scrapped, but several tunnels were constructed before hand. One is visible near the Norwood lateral on ramp. It's blocked by a three story tall slat fence. That wasn't always the case. There were no tracks, but the tunnel was finished and the atmosphere just screams get out. Even during the day.
* There was Pepsi commercial during the Superbowl that, at some point, involved
* There was plenty of concern among fans that [S] Collide and [S] Act 7, the series
* There was pretty much a Seesaw of Revenge going on in the backstory, starting in 997 and possibly ending in 1058: In 997, Gillecomgain's father, Mail Brigti, was killed in battle against Findlaech, and although Findlaech didn't strike the killing blow (and didn't even want to kill Mail Brigti anyway), Gillecomgain still blamed Findlaech for Mail Brigti's death. Then, in 1020, partly to avenge Mail Brigti and partly because Duncan commanded it, Gillecomgain murdered Findlaech. In 1032, Findlaech's son Macbeth learned that Gillecomgain had killed his father and killed Gillecomgain for revenge; then, in 1040, he learned that Duncan had demanded his father's death and killed Duncan as well. In 1057, Duncan's son Canmore "killed" Macbeth to avenge Duncan, and Macbeth's son Luach swore vengeance against Canmore. Whether the cycle was broken
* There was quite a gap where Pintsize and Winslow went unseen, and secondary characters like Penelope and Tai went out of focus during dramatic arcs for others. They all came back later, though.
* There was significant media controversy in Australia during the London Olympics centered around this attitude being incredibly prevalent towards the Australian swimming team, to the point where conflict around the long-standing tendency for this trope to be employed towards the team overshadowed the Olympics themselves for the first several days of competition, particularly Emily Seebohm all but bursting into tears in an interview after placing second in 100m backstroke because she thought she'd disappointed everyone, which many thought exposed just how much pressure the sporting culture places on athletes and how much backlash they really do have to fear if they take home anything other than gold. Todd Sampson summed it up on
* There was some confusion as to the rules involving ship-to-ship weapons introduced in
* There was some controversy between the police and coroner at the time, but five-year-old
* There was some feminist outrage over the marketing of an action figure based on Quentin Tarantino's character in
* There was some kind of relationship between the Alterans, a.k.a. the Ancients, a.k.a. the
* There was some talk of releasing it with the Capcom elements removed, but Living Room Games folded due to the financial loss incurred by not actually releasing the game before this could happen. Many RPG fans are disappointed, as by all accounts, it was one of the best and most novel applications of the d20 system ever.
* There was still a noticeable improvement in animation quality when production moved from
* There was still a supper club in Boston called "The Gay Nineties" as of at least 1950.

* There was supposedly an inn called The Ostrich in Colnbrook, Berkshire, England where the owner and his wife would put rich guests into a special room with a trapdoor in the floor by the bed. When the guest was sleeping the bed would lift up, sliding them through the trapdoor into boiling ale, and then the owners would steal all their belongings.
* There was supposed to be a 'haunted hands' sub-plot in issue 22 of
* There was supposed to be more information about horcruxes and Voldemort’s backstory in the second book but she didn’t have the clout to fight with the publisher about keeping it in at that point and therefore it was put in the sixth
* there was that one time" which, on the actual song, is conveyed only by a musical interlude and lots of screaming.
* There was that one very early episode with Elliot and Carla feuding over Elliot tattling on Carla for not doing something. When Elliot apologizes and then doubles back to elaborate on her reasoning, the scene shifts to a visual gag of her standing in a grave literally "digging herself deeper"; as Carla and the other nurses look on in like the Mafia.
* There was the 2007 season where they reversed the trend, went 10-6, and STILL didn't make the playoffs thanks to one Vince Young, quarterback of the Tennessee Titans at the time, along with the fact that the AFC's crop of teams was just
* There was the episode where a defendant, a cult leader was accused of killing several young women. He unsuccessfully tried to justify the killings as God telling him the women were too innocent and pure to live in this world. Needless to say, he was convicted and sentenced to death.
* There was the episode where Milhouse needs help finding his girlfriend at her school, and describes her blue plaid jumper. Since that's the school uniform, every girl is wearing it.
* There was the infamous case of a woman in the US who entered a contest named "Hold your wee for a Wii". The purpose was to drink lots of water and hold their urge to pee, but the lady drank too much and she was poisoned with water.
* There was the Newgrounds troll group the "Kitty Krew". This sometimes lead to some unfortunate acronyms with some anti-KK groups, such as the "Kitty Krew Killers".
* There was the one where a principal was raping one of her students and it is found out that a brain tumor is making her act like this.
* There was the storming of the Capitol Hill on January 6th, 2021 when Trump supporters entered the Congress chambers in response to President Donald Trump tweeting they need to "fight like hell" to stop the election from being stolen.
* There was the time there was a rash of serial killings of young teenaged black boys that looked like copycat killings of a white supremacist McCoy successfully prosecuted years ago. The detectives discover the killer is a black religious fanatic who confesses to everything...and reveals he was no copycat. He was the original serial killer all along. The white supremacist was innocent. The rest of the episode focuses on the mounting legal troubles McCoy faces for this blunder. It turns out his female assistant (and lover) at the time deliberately withheld evidence that would not only have cleared the white supremacist, but also pointed to the real killer. This became a
* There was the time they had a donated pair of lungs that were going to be implanted but couldn't be because they had some kind of illness, so House was called in to cure them when they were nothing more than a pair of lungs in a box.
* There was the time travel episode where a woman decides to kill an evil dictator as an infant by posing as his nanny. The baby was
* There was the time when Craftworld Iyanden was getting swamped by an Ork Waaagh!, forcing them to raise even more Wraiths. For the record, Wraiths are artificial soldiers that are powered by spirit stones that contain the
* There was the TNG episode "Tin Man" where our plucky crew encounters an entirely biological spacecraft
* There was this commercial for the self-help section of FHM magazine that aired in Singapore, depicting a guy who can't say anything but lame pickup lines, or score a job interview to save his life. Yes, a montage with

* There was this one episode where Chakotay, on his own on a planet, joins a group of humans in an effort to overthrow the lizard-people on the planet. It's two separate regions, two separate cultures. However, the two cultures (Vori and Kradin) are, at their worst, at least
* There was this one motor oil brand advert where customers who claimed synthetic oil functioned the same as the name brand (whatever it was called) were roundly whipped by a
* There was this white guy wearing a keffiyeh standing in front of the pissoir in the Dubai airport... I sez to him "You may look like an Arab, but I know you're-ah-peein'!", ha ha ha ha....ew.
* There was yet another instance of this when Elaine, craving a sugar high, eats a slice of cake from Peterman's office fridge. Turns out, it was a piece of wedding cake from a 1937 British royal wedding, worth $29,000. She replaces it with a $2 Entenmann's cake from the local supermarket. She gets found out in the most unimaginable way, when an antiques appraiser
* there were 3 1/2 days of rejoicing when the two witnesses were killed by Nicolae at the start of the Global Gala, which abruptly ended when they were resurrected and taken to heaven in a cloud,.
* There were a couple episodes where Princess Clara and Toot don't appear, leading to this quote in "Captain Hero's Marriage Pact":
* There were a couple of hollow victories, usually excised in the numerous adaptations.
* There were a couple of instances when another Legionnaire would briefly get Bouncing Boy's power. In one issue, Dynamo Boy (who happens to be
* There were a couple of old boardgames centered around the same fictional spaceship,
* There were a couple of underwater races (weresharks, merpeople, and, bizarrely, mervampires) and settings that were largely ignored by the player base.
* There were actually quite a few kids that started getting into the occult after
* There were actually several plot threads that were never fully resolved thanks to the canceling of the show. Surtur was just the most noticeable one. Others include Captain America's arrangement with Hela, Maria Hill leading the heroes toward
* There were a few American examples of the genre, usually involving the
* There were a few decisive bayonet charges in the Iraq war when ammo ran low, the most famous being the Battle of Danny Boy. The chargers had body armor and the insurgents did not, thus, a rout.
* There were a few examples of LPs shipped with swag in the 70s and 80s when the record companies liked to throw a lot of money behind record releases. Stickers, posters and even iron-ons in the sleeve were common, such as Prince's album
* There were a few other giant monsters, as well. Though all of them had sorta-scientific rationales behind them, they still stretched the
* There were a few reasons why misunderstanding of Christian doctrine was so rampant. Not only was Christianity a young religion at that time, but the ins and outs of Christian doctrine were only explained piecemeal to prospective converts, and some of the sacred mysteries were not permitted to be discussed with those who were outside the Church. Hence, Christians' partaking of the body and blood of Christ in the Eucharist may have been misunderstood as cannibalism, the liturgical "kiss of peace" and the agape feasts that used to accompany the Eucharistic celebration may have been misconstrued as orgies, etc.
* There were a handful of "Crunchatize me, Cap'n!" commercials for Cap'n Crunch cereal in which the kids would get surrounded by a hail of cereal and emerge as cartoons.
* There were also accusations of NFL teams intentionally doing bad in their final weeks of the season in order to gain an easier schedule next year. This was more prominent before 2002, when NFL divisions had five or six teams and more games on a team's schedule were determined by how well they did the previous season; nowadays only three games out of seventeen are determined by how well a team did, not much of an incentive and most likely not worth the rage the team's fans would have for

shelling out hundreds or even thousands of dollars to watch crap.
* There were also accusations of the reverse. The Shire was likened to idealized Germany, and the rampant racism-
* There were also accusations over the video for "Stripped" using clips from
* There were also a couple of scenes that gave auto(The homeless man Happy hires as his caddy) more to do, including going through a minor arc involving becoming a better caddy. Likely cut in favor of just showing his change over time.
* There were also a few less well-known love deities, for instance Anteros, the god of requited love who was particularly associated with homosexual love, and Himeros, god of sexual desire. There were also some minor deities belonging to Aphrodite's train or sometimes assisted her, most notably the three Graces and Peitho, goddess of persuasion (who helped Aphrodite to get Helena in bed with Paris).
* There were also a few times when their families showed up as extras, like the pancake breakfast in
* There were also a few unlicensed live-action versions made in Taiwan and Korea. They make the American version look passable by comparison.
* There were also a lot of various drums in Chinese and Japanesse armies while in Europe their role was partially fulfilled by brass instruments.
* There were also alternate Mexican dubs produced for T.V. airing of
* There were also a number of times in Greek mythology when gods and goddesses would take likings to mortals, particularly heroes on quests. As was the case with Zeus, a good number of those interests were romantic, but there were still a few cases in which the deity really respected the mortal. Notable examples include the hero Odysseus with Athena, and the hero Jason with Hera.
* There were also at least a couple female troops among The Insurrection's
* There were also bazookoids (essentially a mining laser adapted for use as some sort of
* There were also cases where Watson's medical expertise became significant, since although Holmes knows everything there's to know about pathology, and so on, he doesn't always know common habits or working methods of professional doctors, which may be clues.
* There were also downward firing ejection seats which were fitted due to fears of seats not being fast enough to clear the tailplane of some jets. Naturally this made low altitude ejections a bit of a hazard requiring the pilot to roll his aircraft before ejecting. And when these were replaced by improved seats which fired upwards, they forgot to tell the pilots, leading to a few cases where the pilot would correctly roll the aircraft and eject straight into the ground.
* There were also inquiries as to whether the coaster-sized dehydrated pizzas were real.
* There were also many derivative and imitations of the nWo, the latino World order being one of the earliest.
* There were also minor things which were incredibly detailed and never shown on screen. For instance, in
* There were also numerous "Brokeback" fake trailers to make other films look homoerotic in the vein of
* There were also "paper towns", an entire fictional community that would appear on a larger map. For example, the official state map of Michigan in the late 1970s included the
* There were also rumors about the death of King Gustavus Adolphus of Sweden in the
* There were also rumors about zombies being in the game, fueled by a rather
* There were also rumors of a variation of the Turner Entertainment Co logo with no planet and a variant of the second Saban logo with no coin. Even though someone recalled seeing the Turner variant at the end of an animated film, the variant was debunked after years of unnoticing, while the Saban variant was debunked very quickly.
* There were also seven Straw Hat Pirates for a considerable length of time (then they gained more crew members).

* There were also several rather controversial shorts produced that you'll rarely — if ever — see on television. Two notable examples are
* There were also the Army Ants corporals. Unlike their underlings, they didn't have guns, but instead had greater health, more powerful melee attacks and grenades.
* There were also the flying serpents. They give birth to live young that all burst out of their mother at once, killing her.
* There were also the large amount of Mentos mint ads during its Comedy Central days.
* There were also three Guineveres, two of which were half-sisters/twins known as the "True Guinevere" and the "False Guinevere." The True Guinevere was Arthur's wife, although the false one switched places with her on at least one occasion. Partly this is because the French re-tellings adapted the original Old Welsh names of the sisters Gwenhwyfar and Gwenhwyfach in such a manner that they became identical - although, given that these names mean "Gwenhwy the Greater" and "Gwenhwy the Lesser", respectively, it's not really much better.
* There were also two Icelandic dubs; once for TV and again for home media.
* There were also two instances of the trope in the episode "Giant Squidward" after the resident curmudgeon is sprayed with plant fertilizer. The second time the mob chased Squidward, it was because
* There were also two Oxfords, one northwest of Christchurch in the South Island and one southeast of Hamilton in the North Island. The North Island town was renamed Oxford North before in 1895 adopting its Māori name, Tirau. A bit of a loss when you consider 30 km to the west of Tirau there is a town called Cambridge.
* There were also unpleasant cases when electric lighting started spreading. A woman with makeup meant for gaslight or candles looked like "a badly painted doll".
* There were a number of people who saw the 2008 financial crisis and ensuing Great Recession coming, but were ignored.
* There were a number of Scottish fads in 19th century England. The first was the fad of the 1820s-30s kicked off by Sir Walter Scott (about which see elsewhere on this page); another fad was in the 1870s-80s, possibly triggered by how much time
* There were apparently fraud prosecutions on people who sold 'curative' radium water that didn't contain any radium.
* There were at least four Elaines, three of which were associated with Lancelot: Elaine of Benoic (his mother), Elaine of Astolat (the Lady of Shalott), and Elain of Carbonek (the mother of Galahad). The last was one of Arthur's interchangeable third half-sisters, and to make matters more confusing, T.H. White combined Astolat and Carbenok in
* There were Beheaded Bombers which threw grenades non-stop and Beheaded Firecrackers, which were just like
* There were billboards around New York that punned on food idioms, such as "Cool As A [picture of a cucumber]" or "Easy As [picture of a slice of pie]". That's the only thing on the billboard. They were selling
* There were both location shoots and set shoots for Emyn Muil. The set was designed to look very different when shot from different angles, allowing one set to take the place of a large number of locations within Emyn Muil.
* There were commercials for Verizon FiOS high-speed internet featuring
* There were concerns that censors would object to Taylor's cry of "God damn you all to hell!" in
* There were contests in the U.S. and U.K., and the annual Puffin Virtually Live school webcast that marks
* There were disputes over who was entitled to release the show on DVD.
* There were even a few examples of gladiators who reached super-stardom, much like modern-day athletes, and gained wealth and fame fighting men and beasts for (their and other people's) fun and profit. For those reasons, even if they won back their freedom, some still chose to remain gladiators. For example, a famous gladiator named Flamma is known to have turned down retirement - an incredible four times until he was eventually killed in his 34th gladiatorial combat.

* There were even riots during a screening of the movie in a Northern Ugandan town.
* There were formerly three Canadian Military Colleges: RMC (established 1876), CMR (est 1952), and Royal Roads Military College (est 1940) in British Columbia. Following the general cutbacks that many militaries experienced after the Cold War, RRMC and CMR were changed to civilian colleges in 1995. CMR was resurrected as a military institution (albeit with a much smaller student population than it had once had) in 2007.
* There were games with a first-person, but not quite 3D because it was rendered in discrete steps, view of the surroundings, typically a dungeon, and which had sensible and consistent worlds, NPC interaction, relatively few artificial restrictions, plotlines, and puzzles. These games were typically
* There were hints at this country being located in Eastern Europe, and one episode (relating to a St. Grotus day) also strongly implies that said country was actually Croatia (as it took place at a Croatian community center, had a Croatian flag, and it even had poster of Zagreb Cathedral).
* There were hints of something called a "Nightmare Circus" sub-arc within the Mahorafest arc of
* There were, however, some epic fails in hiding Smulders' belly in several episodes of the fourth season, notably Mosbius Designs and The 3 Day Rule. Baggy shirts only hid so much.
* There were known plans for subsequent issues. At least one featuring the
* There were known to be actual migrants from Atmora, known as the Atmorans, who emigrated to Tamriel throughout the 1st Era after Atmora began to experience the "Frost Fall," a gradual complete freeze that would render it uninhabitable. They definitely make up at least part of the ancestry of the Nords.
* There were legal issues surrounding the 3rd-season episode "The Pieces of Fate Affair", scripted by
* There were lots of other factors, but part of the reason for At The Drive-In breaking up was a legitimate case of this - Cedric Bixler-Zavala and Omar Rodriguez-Lopez wanted to explore
* There were many theories back in the day that there is a way to shoot the dog in
* There were multiple cases in the 19th Century of people gilding nickels, tricking people into believing that they were five dollar coins. The person to try this actually got away with it, because 1: There was no law against gilding currency at the time (This was quickly corrected), and 2: He only bought 5 cent items with his gilded nickels, thus if the store clerk gave him $4.95 change, it was arguably an error on the part of the clerk.
* There were multiple times during the era of the French Revolution where the reactionary monarchs actually had decent chances to end the Republic and later Napoleon's empire, though things went sideways either due to Napoleon Bonaparte, or due to internal arguments among the various nations.
* There were Nero sightings throughout the eastern provinces of the Roman Empire for about a century after his death, with people believing either that he had somehow survived, or had come back from the Elysian Fields to usher in a new age of imperial greatness.
* there weren't enough weapons under the ring for a match against James Provenzano.
* there weren't two cities called Taipei, one of which is the capital and one isn't). (There had been discussions about just merging the two into one large municipality along with Keelung, but the City and the County were governed by opposing sides of the two main political rivals in Taiwanese politics so we get the previous.)
* There were numerous other leaders who clashed with at least one of the kingdoms, including Zhang Jiao, Dong Zhuo, Lu Bu, Yuan Shao, and Meng Huo. It was an...interesting period.
* There were often rumours of rare enemies which have near-impossible spawn conditions existing in the game, usually just to screw with people or to hide how to get certain sellable items. Famous examples being a weapon NM which spawns under the invisible status and a Taisai that dropped the newly added "Refresh" spell. Both of them were later added by the devs as a result of the rumours. (Though the

Taisai one only spawns if you
* There were only two instances of their fighting compartments breached, by probably-Syrian
* There were originally only ten tasks, those last two were disqualified for exactly the ploys he came up with. Of course, since the tasks were meant to kill him the ploys still work.
* There were other AU memes on the site beyond the traditional "corners", such as "GAYTMND" (
* There were other games around like Kung Fu Panda World which are pretty much just reskins of Club Penguin with, as expected, hot IP names attached.
* There were others cut early on-"Lions and tigers and bears, oh my!" was to be a full song, and "If I Only Had the Nerve" and "If I Only Had a Brain" were longer. The longer footage of "Brain" does still exist and later became a bonus feature on various home video releases.
* There were plans obvious nods to Sonic (beyond the running part, there were dash pads and grinding) and the Spider-Man games. It was also highly possible to play as other speedsters from the Flash Family.
* There were plans showing Ash as an old man who is no longer a Pokémon trainer looking back on his childhood and missing the friends he made.
* There were plans to have Epsilon turning out to be a resurrected Danny Chase, which would been a
* There were plenty of "air adventure" series for boys written as propaganda during WWII (and a few during the '30s). Dave Dawson, Red Randall, Lucky Terrell, and A Yank in the RAF were just a few.
* There were plenty of those moments in the Sakura and Chiyo versus Sasori battle.
* There were pre-order bonuses for all three games that were the watches/bracelets the characters in the game wore.
* There were previous references to his hidden face being badly hurt or burned, however.
* There were quite a few radiation created monsters in Marvel's early monster comics, including a fairly adorable weed with mind-control powers and a
* There were reports that during the 2008 Mumbai attacks, the perpatrators were using Cocaine in order to continue their attacks.
* There were riots, raids and skirmishes before that and the Jews took the British side in the 1930s Arab Revolt because of said troubles.
* There were rumors that he said Jar-Jar Binks died on Alderaan, which he publicly dismissed.
* There were "scientific" papers and conferences that swallowed and processed nonsensical,
* There were seven survivors, all women and children, who had managed to hide. The Romans pardoned them.
* There were several attempts at Christian tabletop games during that period, including a
* There were several attempts through history to get parts or all of Canada to join the Union, either by force or by diplomacy (for instance, the organizers of the Continental Congresses sent invitations to Nova Scotia and Canada, and were quite surprised by Canada's lack of interest), but all serious attempts essentially ended shortly after the War of 1812, although some in areas like Alberta and Nova Scotia have occasionally semi-seriously floated the idea, especially back when it looked like Quebec might break away from Canada.
* There were several different opening numbers intended for the musical before "The Whole Being Dead Thing" was agreed upon, including "Death's Not Great" (an ensemble number where people describe the downsides of death), "The Hole" (where Beetlejuice bluntly addresses how the Netherworld is nothing like the afterlife anyone's expecting) and "Gotta Get Outta This House" (where Beetlejuice complains about spending eons ignored by the living in the house he haunts, gives a big
* There were several hints in the game that Varik was supposed to be
* There were several instances of songs from that time period where one artist would release a cover version because the version on the radio was unavailable as a

single.
* There were several instances where Richie crashed through a glass window. Justified at least once in that in the scene, he hit the glass at full speed on his motorcycle (though it's a surprise he wasn't cut, unless the motorcycle gear was heavy enough to protect him.)
* There were several sects of early Christians that are only known about by official church writings condemning them. In some cases, we only have the names and there must have been others where even that hasn't survived. Of course, since we don't know what their ideas were it is impossible to say whether those ideas were killed, absorbed by the Catholic Church or recycled by better-known groups. (That's a red herring, as many of those ideas would have had to also have been "absorbed" by the Eastern Orthodox Church, the Assyrian Church of the East, and the Oriental Orthodox Church)
* There were several slave-led revolts in the southern United States prior to the Civil War.
* There were several variants of the Starfury depicted: the standard single-seat Aurora Starfury, a once-seen heavy Starfury with a tail gunner's seat (called Muskrat by the production but mistaken by many fans for the designed but never shown Badger Starfury), and the Thunderbolt starfury, with two pilots sitting in tandem, an elongated fuselage, and folding wings to allow it to operate in atmosphere as a bomber. Additionally, there was also the "flying forklift", which only had one wing with two thrusters (instead of two wings with four), manipulator arms instead of guns, and a bright yellow paintjob in the style of a piece of construction equipment (which it was).
* There were several versions of the segment and the exact rule for crossing varied, but as mentioned it generally involved shapes in some way. In one segment, when a man arrives at the bridge he's told that the rule is "any circles you carry today must be eaten or thrown away". As it turns out, the man

* There were three men working for a construction contractor, two Americans and a Japanese man, and the contractor told the first American to dig out a hole to lay a concrete foundation, and the second American to mix the concrete, and the Japanese man to go out and get the necessary supplies to dig the hole. He comes back the next day, and sees that no progress has been made, so he goes to the man who was supposed to lay the concrete and starts yelling at him, but he says "It's not my fault, the other guy never dug the hole, so I couldn't lay the concrete." The contractor goes to the other man and yells at him, but he says "It's not my fault, the Japanese guy never got me the digging equipment." Annoyed, the contractor looks for the Japanese man, but he is nowhere to be found. Frustrated, he sits down, and suddenly the Japanese man pops out and yells "SUPPRISE!"
* There were three other songs that existed in early script drafts for the Kingston Mines version, though these ones have not been reinstated anywhere. It's unknown which characters were to sing them, but the titles are given as: "Inquest of Love", "All Clear", and "Think Of All The Starving Orphans". "All Clear" was

* There were two efforts to form the state of Franklin (named after Benjamin Franklin, in an effort to gain his support for the first attempt) out of what are now the 12 easternmost counties of Tennessee. Initially in 1784, when all of what's now Tennessee was part of North Carolina (and consisted of only 8 counties, though covering the same land), they declared secession from North Carolina and petitioned Congress the next year for statehood. Franklin's "secession" was initially ignored and eventually ended by force. In the 1840s, after Tennessee had been established as a state, there was an attempt to revive the idea on the basis that East Tennessee was culturally and politically incompatible with the rest of the state, but this time no actual attempt at unilateral secession happened. The name "State of Franklin" is still widely used in the region even in the 21st century, though. And during the Civil War, the counties of the former "Franklin" were central to an ultimately failed attempt by East Tennessee follow the example of West Virginia and break away to rejoin the Union as a new state.
* There were two failed car bomb attacks in London, organized by this group. One was parked illegally, and was promptly ticketed and towed away before being routinely inspected (
* There were two Fionas in thie comic: a girl who got lost in Grumbel's, and Marla's daughter. The former might very well have influenced the name of the latter, as it was watching the first Fiona while waiting for her mother that made Marla decide she wanted children.
* There were two hilarious commentary intros for the third season. In her commentary Mary Lynn Rajskub introduces herself as Reese Witherspoon, and later on in the season during their commentary with producer Tim Iacofano, Carlos Bernard introduces himself as playing 'Tony the Pizza Man', and James Badge Dale says he plays "Chase who delivers Chinese Food".
* There were two historical figures actually known as "The Black Knight" with the traditional look of "clad in a dark armor",
* There were two notable ones during the Afterlife Tournament filler arc. First, a rather easy foe that Goku is fighting suddenly wraps himself in a cocoon, his trainer bragging that he'll eventually come out stronger than before. Unfortunately, he also says the metamorphosis will complete in 1200 years, causing Goku and the referees to face fault (
* There were two other big reasons for the loss of technology during the Succession Wars: first was that the Terran Hegemony had been the most technologically advanced state and aggressively guarded its superiority to control the other states in the Inner Sphere. Between the massive destruction caused by the war when the Hegemony's ruler was assassinated and the subsequent destruction after the Succession Wars broke out in the wake of the Hegemony's collapse, many research and construction facilities that built the most high tech equipment were destroyed. Second, the quasi-religious organization Comstar had for centuries the practice of carrying out false flag operations to assassinate scientists and destroy research facilities (and provoke more wars) as a means of hastening the Inner Sphere's collapse into barbarism.

* There Will Be Blood because of the milkshake meme (it's right at the end, so the poor schlubs had to sit through the first 99% of this stunningly excellent film to get round to it, the poor bastards). And Jonny Greenwood fans.
* There Will Be Blood, Daniel Plainview gives a sales pitch to a large group who have discovered oil under their property. When he opens the floor up for discussion, there is so much chaos among the people that he just walks out, and tells a guy who catches up to him that he wouldn't take the lease even if they gave it to him as a gift.
* There Will Be Blood, dropped out of the movie, thus forcing Paul Dano (who had been cast as Paul Sunday) to play both roles.
* There Will Be Blood focuses a lot on this dynamic between Daniel Plainview and Eli Sunday, featuring several scenes of one beating the other up, physically or mentally. It's so prominent that nearly all of the fanfic written is for this ship.
* There will be blood / It might be yours / So go kill someone / Signed
* There Will Be Blood on meeting Eli for the first time after having already dealt with Paul.
* There Will Be Blood, Plainview recalls events in his hometown to test whether his half-brother really is who he says he is.
* There Will Be Blood quickly established the strange nature of the movie.
* There Will Be Blood, the violence ranges between gruesome and pathetic, but is never shown in a positive light.

* There Will Be Brawl ends with damn near the entire cast getting killed off, many of whom die in the last episode.
* There Will Be Brawl eventually brings down all the mobs, only to be killed himself.
* There Will Be Brawl himself. However, the way he delivers it, dead serious and menacing during a falling out with Zelda, definitely make it fit this trope.
* There Will Be Brawl, Ike is given black hair, likely to differentiate him more from Marth.
* There Will Be Brawl: In some scenes, the fights are just too slow to look realistic. Episode 10 is a big one.
* There Will Be Brawl in the previous episode, thanks to Zelda's (quite literal) backstabbing. However, he gets better just long enough to face down Ganondorf one final time as a true hero.
* There Will Be Brawl is set in a gritty film-noir-ish version of the Mushroom Kingdom, so it's only natural that Luigi (the protagonist) narrates much of the story in this fashion. It's played completely straight though.
* There Will Be Brawl is to money, power, and survival, and he is willing to backstab and use anyone to get and/or keep it. This is a guy that used his mentally challenged brother to kill a kid because said kid was a Pokémon trainer.
* There Will Be Brawl, it turns out that Princess Peach had been killed immediately

after she was kidnapped.
* There Will Be Brawl. Mario, Link, and a few other characters in particular seem to have taken it hard.
* There Will Be Brawl of Hannibal Lecter, presenting him as an imprisoned cannibalistic serial killer that is consulted in the hope of solving other murders going on.
* There Will Be Brawl parody that focuses on humanoid characters. Non-human characters such as Kirby, Fox, and Bowser do appear, but their appearances are kept minimal.
* There Will Be Brawl: "Survive this day, and tell your brother that no one ever made a trophy of the king!"
* There Will Be Brawl, the End of Days (a Game and Watch octopus) starts spearing everyone in sight. Fox pushes Marth out of the way of one tentacle, getting himself speared in the process. Made all the more significant because until that final battle, they were on opposite sides of the law.
* There Will Be Brawl: This is what happens when the psychopathic serial killer Kirby pays the Mushroom Kingdom a visit. This is also what he did to his homeland Dreamland.
* There Will Be Brawl treats Snake in a manner similar to a stereotypical homeless Vietnam veteran.
* There Will Be Brawl Young Link and Toon Link. They were compressed into one character. Link looks at a photo of his younger self. This photo includes both, Young Link/Toon Link, implying that they are both the same guy during the same period of time. Link is just their grown-up version.
* There Will Be Dragons so her brain will never have the chance to undergo the physical maturation processes of adolescence, and she will remain neurologically (and, it is implied, emotionally) a flighty teenager for the rest of her very long life.
* There Will Be Dragons. The inhabitants of a town are rather irritated with the legionnaires stationed nearby. The farmers and craftsmen all work hard for their living, while the soldiers are just lazing around in the woods, and coming to town with lots of unearned money and making trouble. Tension is high and there are fights between townspeople and soldiers. To solve the situation, the legionnaires challenge the town militia to a mock battle, and proceed to beat them soundly. The townspeople realize that the soldiers are not just lazing around, but are training hard to be able to defend the town if needed. And all are friends again.
* There Will Be Dragons. The nanites are regarded as being people, but one of the problems mentioned with the procedure is that it 'locks' the person at the mental and physical age they were when it was done, meaning that the friend is stuck as a teenager for the rest of her life.
* There will be hundreds of soldiers or vehicles running amok to show the scale of it (in most productions made after the late 1990s they will all be computer-generated).
* "There will be no war on this day, Optimus Prime; You have earned Galvatron's respect."
* There Will Be Time: The protagonist, a young man who possesses the power to travel through time, is fully aware that everything humanity thinks we know about the laws of physics say that his ability is utterly impossible: His best guess for an explanation is that there are loopholes in the Law of Conservation of Energy that we haven't figured out yet.
* There Will Be Toilet Paper: People who cut themselves shaving always use bits of toilet paper to stop the bleeding.
* There Will Come Soft Rains is on fire, it shouts repeated warnings of "Fire!" and "Run!", the irony being that its residents have long since been killed in a nuclear war.

* The reworked Sion gets one as his Ultimate: He charges in at tremendous speed, bellowing like a maniac, and keeps running until he hits something, which he will then proceed to chop with his ax. Notable in that, while hard to control, he can charge through most of the map this way, so just because he's back at base doesn't mean you're safe.

* The Reynard Cycle ends heavily on this note, and it gets worse with every new installment.
* The Reynard Cycle, explains that he was the only senior officer left standing after a particularly vicious battle.
* The Reynard Cycle. Given the severity of the crime (harming a priestess is a crime punishable by death no matter who you are), it's unclear whether or not he would have gone through with it.
* The Reynard Cycle. Given the tone of the series, it's difficult to tell whether or not he is being sincere.
* The Reynard Cycle: Grymbart, a mercenary with a wife in every major city, plays this straight. He's the first man onboard the Quicksilver to befriend Reynard.
* The Reynard Cycle: Hartnet is an otherwise attractive young woman who is missing her nose. She wears a veil (and later a helmet with a nose guard) to cover it, but people are still unnerved by the sight of her.

* The Reynard Cycle, Reynard captures the fortress of Kloss using this technique. It helps that all Calvarians wear uniforms, even the civilians.
* The Reynard Cycle, Reynard has Bruin recruit an entire army's worth of hired swords in order to combat the Calvarians.
* The Reynard Cycle, Reynard shows a defeated Calvarian army a measure of respect by laying their dead to rest according to their custom: The dead are laid out respectfully in concentric circles with their weapons planted in the dirt near their heads. Ironically, his own army sees this as a sign of deliberate disrespect, as the convention in the South is to burn the dead. Leaving corpses out in the open is something they only do to criminals. It's implied that Reynard knew the effect this would have, and is having his cake and eating it too.
* The Reynard Cycle: Roenel, captain of the Quicksilver. Call him anything other than "captain" at your own peril.
* The Reynard Cycle she aims another one at him for endangering himself. He catches her wrist before it can land.
* The Reynard Cycle. Shortly after this encounter, the clearly troubled captain of the ship claims that he encountered the same merchant at least fifty years previously.
* The Reynard Cycle. Somewhat ironically, they end up having to fight a group of mercenaries that were originally on their side.
* The Reynard Cycle. The Calvarians, being more practical, eschew this, though their uniforms are still described as being rather sharp.
* The Reynard Cycle: The militaristic Calvarians regularly field companies of these. They appear to be treated as equals of the men.
* The Reynard Cycle: The palace of Carduel has this reputation due to all the horrible things that happened there over the years: Mass poisonings, cannibalism both accidental and deliberate, people being entombed alive behind the walls, etc., etc. Even Madam Corte, a born skeptic, is convinced the place is haunted.
* The Reynard Cycle, the smith priests of Fenix the Firebird wield war hammers when they go to battle.
* The Reynard Cycle: Though no dates are ever mentioned (leading to much fan speculation about exactly when and where the story is taking place), the months of the year have names like Pearlmonth, Bloodmonth, Reaping, etc.

* The Reynard Cycle: Tiecelin has a pet raven, Prophet, who can talk, but only knows one word: "Doom!"
* The Reynard Cycle, which features Duke Nobel and Count Bricemer as Reynard's enemies (and the Countess Persephone as the exception.)
* The Reyne-Tarbeck revolt is one to the Second Barons' War, with Tywin Lannister being based on Edward I of England.
* The Rezort refugees, and using them as targets for the tourists. Considering the on-going refugee crisis in Europe, it could be argued the film draws a parallel with its discussion of exploitation and dehumanization.
* The Rezort: The army's only countermeasure to the zombies of the title resort escaping their enclosures is to napalm the whole island to kingdom come, without even trying to save anybody still inside.
* The Rez: Reservations. Communities where Native Americans were herded by settlers and the government.
* The Rhavenfell family, even considering the fact that it has only existed for

* The Rhesus Chart, as the vampires can simply hypnotize people into inviting them inside, the difficulty lying in combination locks and swipe cards, not mythical barriers.
* The Rhesus Chart. A think tank of investment bankers discover they've become vampires, so set about investigating in an organised manner how they'll get blood and what their powers and vulnerabilities are, turning up at hospitals and butcher shops wielding clipboards (even to church mass or nightclubs, where it's completely unnecessary).
* The Rhine was a natural obstacle for the western allies while invading Germany. German forces destroyed multiple bridges, hoping to block off the invasion or at least slow them down considerably. The plan might have been successful, if it weren't for certain bridges not breaking upon the explosions getting activated.
* The Rhino, apparently, is such an Awesome Personnel Carrier that with the exception of the aforementioned Land Raider, Rhino chassis form the basis for every tank the army fields. Need an IFV? Reduce the transport and stick a couple of heavy weapons on top (The Razorback)! Need a Main Battle Tank? Slap some more armour on the front (internally!) and a turret on top (The Predator)! Need a Multiple Missile Launcher? Just... you get the picture (The Whirlwind).

* The Rhino, featuring guided missiles and 50 caliber machine guns. Three, it can switch between bipedal and quadripedal.
* The Rhino specifically tries to avert this trope when he finds out that the method for recreating his superpowers is up for sale.
* The Rhodok Republic is Southern European or Alpine-like, based predominantly on the Italian city states or the various Swiss cantons. This is even evidenced in the structure of their military: very little cavalry, but lots of infantrymen armed with various spears, polearms and high quality crossbows. Politically, it is vaguely like the Polish-Lithuanian Commonwealth.

* The Ribald Tales of Robin Hood, Lady Sallyforth maintains a torture chamber full of some very kinky torture equipment that she uses on Marian.
* The Ribald Tales of Robin Hood, Marian begs to Lady Sallyforth that she will do anything if only the torture stops. Lady Sallyforth is only too eager to take her up on the offer.
* The Ribald Tales of Robin Hood, one of the Sheriff's men punches Little John multiple time in the head and then headbutts in the stomach to no effect. John then decks him with a single punch.
* The Ribald Tales of Robin Hood, Prince John coerces Marian into cooperating with his scheme to trap Robin by holding her father hostage.
* The Ribald Tales of Robin Hood, Robin escapes from his cell by slipping out posing as Marian; disguising himself with her hooded cloak.
* The Ribald Tales of Robin Hood, Robin is introduced as a boy who is watch to as Prince John murders his father, and orders his mother and sister raped. The film then jumps to when Robin is an adult and a permanent thorn in John's side.
* The Ribald Tales of Robin Hood, Robin's band is comprised of thieves and camp followers, which is even commented on by Prince John.
* The Ribald Tales of Robin Hood, Robin wakes up the unconscious Sheriff by emptying a wineskin over his head.
* The Ribald Tales of Robin Hood: When Little John is informed of Tina's rape and murder at the hands of the Sheriff, he snaps his quarterstaff in half.

* The Ribald Tales of Robin Hood: When Robin leaves his cell disguised as Marian, the jailer gives him a cheeky pinch on the butt. Robin cannot react in any way without blowing his cover.

* The Richmond Tigers were basically this for the early part of the new millennium. After eleven consecutive seasons out of the finals (2002 to 2012) and only making them twice since 1982, Richmond had its long-awaited return to finals action in 2013, only to be eliminated in ignominious fashion by Carlton, who had been promoted from ninth place to replace Essendon, who was punished by the AFL due to their involvement in a controversial supplements program. Although they made the finals again in 2014 and 2015, they were eliminated in the first round both times, by Port Adelaide and North Melbourne respectively. They missed out on the finals completely in 2016. Then in 2017, they made the finals again... and smashed this trope into oblivion, annihilating their three finals opponents by an average of over 40 points to claim their first premiership since 1980, winning against heavy contenders Adelaide

* The Ricky Gervais Show, for a real life example. Originally the show was just a vessel for Ricky Gervais and his partner in crime Stephen Merchant. Then they discovered the machinations of their producer's mind and the entire thing changed gear. Karl Pilkington quickly became the focus of the show, and his thoughts (and mad stories) have since been compiled into books, and even a TV series.
* The Ricky Gervais Show Halfway through, Ricky leaves to make a cup of tea, asking Stephen to call him when Karl's finished.
* The Ricky Gervais Show has a segment in which Karl refuses to believe that the monkeys can ever actually write anything, so stubbornly that Ricky ends up storming out on him.

* The Ricky Gervais Show insane beliefs of Karl Pilkington is that his body parts have a will of their own. Typified by his oft-repeated question "So, am I in control of me brain, or is me brain in charge of me?"
* The Ricky Gervais Show is often quizzed on metaphors, which he either doesn't understand or misinterprets completely. For instance, he believes "People who live in glass houses shouldn't throw stones" means "Don't chuck stuff about."
* The Ricky Gervais Show Karl comes up with something similar to this, saying that a person could have the world appear a certain way through a pair of glasses (e.g. somebody could have virtual graffiti over real-life walls). Ricky and Stephen tell him it's the stupidest idea they've ever heard.
* The Ricky Gervais Show, Karl talks about having to sleep "tops and tails" with his longtime girlfriend Suzanne. Why? Because the relatives they were staying with had hacksawed a mattress in half to fit in into the tiny space where they were sleeping.
* The Ricky Gervais Show mentions this being a serious pet-peeve of his, since the people trying on his glasses always react the same way; "Oh, I can't see a thing!"
* The Ricky Gervais Show pronounces "woo". When Steve reads Karl's comment that he could not imagine a situation where he would ever need the word "wewe", Karl is shown sitting at a table in a pub with a pint, looking around the room, then mouthing "wewe" (in time with Stephen's voice) with an expression of flat joy.
* The Ricky Gervais Show: Some of the stories involving Karl's brother Mark. He had an affair with his commanding officer's wife and was kicked out of the army for "going for a packet of fags in a tank".
* The Ricky Gervais Show sounds notably less intelligent than Ricky and Steve...naturally, he is.

* The Riddle Master Trilogy: Crows are associated with the kingdom of An; in fact, it seems to be common that members of the royal family can turn into crows, and they are portrayed positively—however, An is also the kingdom with the most restless dead, so much so that one of the main duties of the ruler is to keep them bound, and they can be distinctly horrifying when loose.
* The Riddle Master Trilogy map with uninhabited Badlands to the West. (The realms of the High One were colonized by humans two thousand years ago from across the ocean, but their original homeland is never mentioned, nor has anyone ever found anything of note beyond the Badlands.)
* The Riddle of Master Lu" cartoons about them. One seems to contain a dating advertisement by the deceased's widow.
* The Riddle of Master Lu: In Beijing, there's a gate you might want to go through (not for any particular reason, it's just there), but there's a guard blocking your way, and he won't let you through without a pass, which you can get from behind the gate. It's just a throwaway joke since you don't actually go through the gate at any point, although travelling to the First Emperor's tomb at the end of the game may be implied to involve going that way offscreen.
* The Riddle of Master Lu — relying on his wits, not strength or physical skill. His girlfriend Mei Chen is the one who knows how to fight. There's a scene in which she starts having a go at it with a large, skilled thug, who simply smacks Ripley aside when he tries to intervene, leaving him to figure out a way to help Mei indirectly.
* The Riddle of Master Lu: Ripley peeks down into the tomb of the first emperor of China with a matchstick and drops it when it burns his fingers. It hits a line of oil that lights up all the ancient lamps within. When Mei Chen asks what happened, he says he saw that would happen and dropped it on purpose.

* The Riddle of the Sphinx, features a hand-held audio player that looks as clunky as a brick-phone, and requires individual chips for each message played back.
* The Riddle Of The Wren, this is Minda's reaction to meeting Grimbold, an ancient and powerful wizard who is also a giant badger.
* The Riddle, Owan tells Maerad and Cadvan a story about how the sea once loved the mountains, however the mountains slighted the sea and the sea had been angry ever since. Cadvan interpreted it to mean that you should never refuse the love of a powerful woman, but Maerad interpreted it to mean that you should never love at all because it only causes trouble.

* The Riddler eventually does take vengeance on the corrupt businessman who ruined his life by sabotaging his experiment and seems wholly content to just die at that point, noting that he won so it's as good a note as any to go out on. Then he learns the corrupt businessman was innocent and framed by his partner and
* The Riddler for assistance when the titular villain began telling ancient Egyptian riddles while committing his crimes.
* The Riddler franchise is such a smug bastard that you can’t help but chuckle at his antics. It also helps that he’s legitimately pretty funny and is the only one of Batman’s foes in the games that can go toe to toe with him in the intellect department. It’s no mean feat for a character for whom the delicate balance of keeping him smart enough for Batman but not having him dumbed down by constantly getting beaten by him has proved difficult.
* The Riddler had Echo and Query towards the end of his criminal career. They have

yet to reappear since he became a reformed detective.
* The Riddler has him displaying his first crime's clues on a city jumbotron in crossword puzzle form.
* The Riddler, however, it's implied to be part of the same crippling Obsessive-Compulsive Disorder which compels him to leaves clues and riddles about his crimes.
* The Riddler, in some versions, is actually an interesting case, in that his gimmick is also explicitly his motivation and downfall: His superiority and inferiority complexes are such that he has to leave clues, to prove that he's smarter then everybody else.
* The Riddler is a better example, and is one of the few examples of this kind of character who is also actively cruel.

* The Riddler story that established that he's obsessively compelled to leave clues, otherwise he can't successfully commit a crime. The Riddler starts using forms of self-therapy to overcome his compulsion, and eventually manages to steal some jewelry without leaving any riddles. Meanwhile, Batman and Robin keep stumbling across strange people and events, which they end up connecting together to figure out Riddler's next crime. It's revealed when they catch him that Riddler hadn't overcome his compulsion—he started sleepwalking and left clues subconsciously. This realization actually led him to surrender to Batman, because he realized it meant he really was crazy.
* the Riddler's. Who cares if people die in his traps? If they're not smart enough to figure them out, they don't deserve to live. Really, he's doing a public service.
* The Riddler to go head-to-head with Batman, the only person he believes to be a worthy challenge for his intellect. Some fans believe this makes him stupid for constantly giving away clues to what he's going to do, but the Riddler doesn't care about money or material objects. All he cares about is having his Worthy Opponent's full attention and the thrill of the game.
* The Riddler tries to invoke an internet scandal against Batman by using the hashtag of #CrusaderGate. It doesn't go well for him. Apparently, even Gotham's nastiest Internet

* The Riddling Reaver: unlike the sword or the mace, the spear has a chance of dealing only 1 point of damage instead of the usual 2 on a low roll, but can do 3 damage on a high roll, just like the axe.
* The ride ends with a frantic order from Doc to leave the DeLorean before you encounter your past self coming in.
* The ride itself has an example of it. In the beginning, one of the planned characters/gags in the ride was going to be the "Hatbox Ghost", the groom to the Attic's bride, whose head would disappear from his shoulders and reappear in his

hatbox in time with the bride's heartbeat. The figure was produced, and the lighting implemented to create the disappearing trick, but the figure was taken out very shortly thereafter once it was clear that the distance between the riders and the figure was too short to allow the effect to work. Because it was taken out so early and so few people had seen it, the Hatbox Ghost achieved legendary status within the fanbase. His presence endured in the franchise, and in 2015, with decades of technological advancement, the Hatbox Ghost was made again with a more complex digital heat-transfer effect and more animation, finally placing him in the ride like he was always supposed to be.

* The Rifleman is a ranch story chronicling Lucas McCain's trials in raising his son Mark on his own and running a ranch in North Fork, New Mexico.
* The Rifleman murderer. Before he can say anything else, the dead man's business partner jumps up and blasts the plate out of Lucas's hand. After he confesses, Lucas admits he didn't have the proof because he doesn't know a thing about developing pictures.
* The rifles carried by the gigantic Nobuseri leaders almost qualify, but more properly, the main guns of the Imperial Capital
* The Riftborn crew very similar ships to the Lumeris and the Sophons, but their extra-universal nature reveals itself in their floating, geometrical modules.
* The Rifter: According to the laws of the Payshmura theocracy, burning is the penalty for witchcraft (along with quite a few other crimes). There are lots of burnings. Metal posts for doing so line the Holy Road, and it’s even become a standard finale to the Harvest Festival.
* The Rifter a fantasy novel with a male-male romance at the center of it.
* The RifterAlso, the Rifter, a one-man (or -god) army, breaking the siege of Vundomu.
* The Rifter: Averted. When Kahlil arrives in a Basawar where history was changed, the version of himself in the new time is already dead. He does have two sets of memories coexisting confusingly in his head, though. Eventually, he finds the bones of his other self and they merge into his body; at the same time, he feels like his two histories have become truly integrated into one personality.
* The Rifter, but lost their ability to change to their animal forms due to a curse that also gave the werebeasts their vulnerability to silver.
* The Rifter: downplayed— because John finds out that he can’t go home from Basawar to Earth, or rather that if he did open the gate between the worlds, it would destroy Basawar, which he would never consider doing. Laurie, however, intends to open the gate; she doesn’t care about destroying the world which has brought her great suffering.
* The Rifter embodied this trope. According to in-world history, the Rifter is usually an otherwise-ordinary person brought to Basawar from Earth and tortured until their pain and anger spark an apocalypse.
* The Rifter: How Laurie summoned John into a trap to use him to open the Great Gates: sending him one of his lover Kyle’s fingers. She chose the ring finger, because she was furious that John got his lover back when she couldn’t have her dead husband.
* The Rifter, is skeptical about the value of worship and faith in general and isn't convinced that the creator god Parfir is looking after people.
* The Rifter: John and Ravishan naturally have to be very discreet, since homosexuality is penalized by death. They don’t ever have sex for the first time until after leaving Rathal’pesha. Nonetheless, Fikiri, spying on them out of the Grey Space at the monastery, sees them kissing and blackmails them. It also turns out that one of the other supposedly-celibate priests at Rathal’pesha is secretly married (Hann’yu, one of the few truly good people at the monastery—Aesop: forced celibacy is bad).
* The Rifter, living in a temple that doubles as a fortress, and worshipping the Rifter, the destroyer aspect of the god Parfir.
* The Rifter: Played straight. The aristocracy are rapacious and repressive toward the common people; the one decent person among them that we meet, Joulen, has been

away with the army in the north for years, and John reflects that the simple life had done him good. Lady Bousim, exiled in the north, turns out to be a very good friend to Laurie and Bill, although we are told that before, in the south, she had taken a series of lovers without caring that her husband would have them all executed.
* The Rifter Saimura’s role in the Fai’daum guerillas. His magic is also useful in many other ways.
* The Rifters make the world the hub of some kind of interdimensional network
* The Rifter: "Weasels", egg-laying mammals of Basawar. Basawar and our world (it is possible to cross from one to the other by a magical gate) may have been connected at some times in the past; they share some flora and fauna, but not all — there are dogs (actual dogs) but no cats in Basawar for example.
* The Rifter where, does he?) but more often it works all too well. This is how John lets it slip out that Lady Bousim has been practicing magic and gets her burned as a witch, cementing her son Fikiri’s hatred for John.
* The Rift is about a submarine crew on a doomed rescue mission to an underwater rift full of monsters.
* The Rifts megaverse builder sourcebook also has an entire Landfill dimension. Seems when you can use magic to open Rifts and just dump your garbage it has to all go somewhere.
* The "Rifts Saga", seeds for which were planted as early as the sixth story in the series, but which more properly refers to Lupan Evezan's 2020 prose stories from
* The Riftwar Cycle, and starts hiring bands of grey warriors that had turned to brigandage out of necessity - many of whom having lost their Lord to the same man who killed her father, and more than willing to sign up under someone offering a chance at revenge.
* The Riftwar Cycle are ruled by a series of different people under various names, the most popular being "the Upright Man." Others include "the Virtuous Man," "the Sagacious Man" (who later became the second Upright Man), and "the Square Man" (the original leader of the group that would become the Mockers).
* The Riftwar Cycle: a seer announces that since a certain three red stars are in alignment, it is time for the hordes of the North to go forth and conquer the world. When they (inevitably) fail, the seer figures that, since the stars really aren't moving that fast, he'll be able to use the alignment as an omen of prophecy for another few years.
* The Riftwar Cycle. At the end of the evening, they examined the deck and discovered that it now had seventy cards in it, nine of which were aces.
* The Riftwar Cycle be outmaneuvered) or stop interfering with the people who were. They ultimately declined to turn the Empire into a Magocracy because they had a hard enough time just governing themselves.
* The Riftwar Cycle boasts that "I'm Captain Trenchard! The Dagger of the Sea! I've sailed the Straits of Darkness on Midwinter's Day! My ship's the Raptor and I've taken her into the Seven Lower Hells, drunk ale with Kahooli and sailed home again! My mother was a sea dragon, my father was lightning and I dance a sailor's jig on my victim's skulls! I fought with the war god and kissed death herself. Men tremble at my shadow and women swoon at my name and no one lives who can call me liar!"
* The Riftwar Cycle by Raymond E. Feist has an extensive mythology, which has gotten tangled up in its history at several points.
* The Riftwar Cycle, change of setting and a separate story of redemption for the earlier parts' villain, as well as setting up a later series.
* The Riftwar Cycle due to being unable to find a common frame of reference.
* The Riftwar Cycle father is entitled to compensation for her having taking advantage of him (The law was written under the assumption that the situation would be a high-born male seducing a common-born woman, not a common-born man seducing a high-born woman).
* The Riftwar Cycle gain knowledge, abilities, and to some extent form from the other demons they eat.
* The Riftwar Cycle has multiple Soul Jars in a number of locations across Midkemia

and Kelewan.
* The Riftwar Cycle has several. Among them, Prince Arutha in the early books is well-known for his skill with the rapier; in the later books, Talwin Hawkins and his son Tyrone are both declared Champions of the Masters' Court (that is, winners of worldwide swordfighting tournaments).
* The Riftwar Cycle intent on reducing the entire universe to nothing. It causes alot of casualties due to the changes to the planet that occur worldwide.
* The Riftwar Cycle, Locklear's senseless death can be this after spending so much time with the character in the video game.
* The Riftwar Cycle, on Kelewan, seaships have eyes painted forward on the hulls to scare away sea monsters that actually exist.
* The Riftwar Cycle opens with Mara of the Acoma learning that the Lord of the Minwanabi had successfully executed one that resulted in the death of her father, her brother, and most of her family's troops, leaving her as Ruling Lady of her now critically weakened house. She spends the next two books rebuilding her house from the losses suffered from the gambit and getting revenge.
* The Riftwar Cycle pulls this after being threatened with a death sentence for possessing a red-and-gold speckled falcon. Said falcon is the symbol of the royal family of the land of Kesh, nearly extinct and held with the same regard as a sacred cow. Nakor explains himself by claiming that he was the falcon's transport/bodyguard and he was merely aiding the bird's quest to visit the Empress on her birthday and repopulate the royal mews, which at that point had been reduced to three female falcons.
* The Riftwar Cycle: she makes comments about being in a relationship with a "youngster" like Pug. (He's in his 90s, she's upwards of 300 years old, nobody knows how long either of them is going to live.)
* The Riftwar Cycle starts when magicians from metal-poor Kelewan develop a way to create rifts leading to other worlds. Scouts report that the world of Midkemia has unimaginable wealth in metal just lying around; a Midkemian viewing a magical recording of the events recognizes the "wealth" as being trash heaps and slag piles.
* The Riftwar Cycle. Their home world, Kelewan, is an old world which was previously inhabited by at least two intelligent races, who mined out all the metals. Silver used to pay for a meal in a tavern on Midkemia could support a Tsurani family for a year. At the same time, the small, low-quality gems used in lieu of large-denomination coins on Tsuranuanni are so valuable on Midkemia that a Tsurani noble's modest travel chest is enough to set him up comfortably for the rest of his life.
* The Riftwar Cycle. Then he was put on a bus and never heard from again (Save for a one page reference in the next book stating where the bus is going). Strangely, the bus heads in different directions in each media: In the game, he gets a crown-paid scholarship to Stardock and potentially becomes a great wizard. In the books, he goes home and spends the rest of his life in a part of the Kingdom that is generally irrelevant to the plot of the series.
* The Riftwar Cycle, the only known truce between the Tsurani and Kingdom armies was during the Siege of Crydee. With all of the dead bodies piling up outside the walls, they need to dispose of the bodies before disease spreads. One squad of Kingdom soldiers goes outside the walls unarmed to erect funeral pyres. A few hours later, a squad of unarmed Tsurani soldiers leave their camp and help set up the pyres. After the bodies are burned, the soldiers exchanged salutes and returned to their own lines, at which point the battle resumed.
* The Riftwar Cycle to become the first king of the dwarves since its loss.
* The Riftwar Cycle two trolls literally drown in ankle-deep water, because Pug cast a spell on them that put in them in such pain that they couldn't lift their heads out of the stream.
* The Riftwar Cycle unless the Assembly of Magicians (a council formed of all of the Great Ones) ruled that they couldn't (only done once in story - to declare that they could not free slaves). Beyond that, they could arbitrarily declare - and be obeyed - that people shut down their businesses, entire noble clans commit mass

suicide, wars be arbitrarily ended, or anything else they could think of.
* The Riftwar Cycle. When the last city of their once multi-planet empire is close to falling, the taredhel retreat to Midkemia, their ancestral home - and the horde of demons pursuing them means to follow.
* The Riftwar Cycle, where slaves and prisoners of war are made to fight for entertainment in Kelewan.
* The Rift (which came out in 1990, a year late) has alien-like monsters lurking in an air-filled cave deep beneath the ocean floor.
* The Rigel Black Chronicles: Adrian Pucey's snake is frantically trying to escape from him and head for the giant platter of meat upstairs — until Harry tells it that the meat is for the basilisk, at which point it freezes and calmly returns to Adrian, not wanting to pick a fight with "the King".
* The Rigel Black Chronicles, although Blaise didn't know that would happen.
* The Rigel Black Chronicles, and her cousin is a Pureblood. Still, to make it work, she has to convincingly pretend to be a boy, gaining a reputation in the process for remarkable shyness about bare chests, and for sleeping in robes.

* The Rigel Black Chronicles, but Harry gets Dom to choke on his (illusory mental construct) tea by telling him about the advertised prize for winning the Triwizard Tournament.
* The Rigel Black Chronicles, but there's no hope for James or Sirius, so she turns to Remus for his opinion.
* The Rigel Black Chronicles for the Sleeping Plague, but it works quite differently and has different aims. It's not meant to kill anyone, just render a large number of children comatose and cause a public relations disaster for Dumbledore, weakening his political influence so that Riddle can push legislation through.
* The Rigel Black Chronicles gives the Weasley Twins a new potion she invented herself: a preservation oil that can be applied to a vial to extend the shelf life of a potion stored in it. It's not spectacular, but the Twins are savvy enough to realise that it would have been worth a mint to a commercial brewer.
* The Rigel Black Chronicles Harriett narrowly survives being killed or crippled with several of those products.
* The Rigel Black Chronicles: Harry has largely kept her head down at school and been polite to everyone, so she doesn't know why someone would make her fall down the stairs and break her wrist, hit her with stinging hexes from behind, and then try to poison her. Even when she finds out, she's still confused.
* The Rigel Black Chronicles, Hermione is on hand to solve the riddle and get them past peacefully. The second time, Harry is alone, and has no idea of the answer, so she has to fight her way through.
* The Rigel Black Chronicles include the ability to switch mindscape layers between a snowy mountain and an Egyptian desert. It's meant to help conceal her identity, but it turns out with enough control, it's also possible to lock an intruder in a tomb, drop them off the mountain top into the Nile and bury them in hot sand.
* The Rigel Black Chronicles, in the Lower Alleys. It's primarily about providing a government for those who don't trust the Ministry, but training and regulating pickpockets, and other illegal activity like free-duelling tournaments, does come under its purview. The Ministry doesn't sanction it, but also doesn't want to go to the trouble of doing anything about it, preferring to ignore the Lower Alleys' existence.
* The Rigel Black Chronicles is a friend of Archie's, rather than expose her, he decides to just make her do all his homework for the next several years. She actually takes advantage of the opportunity to learn a lot about the higher-level

classwork.
* The Rigel Black Chronicles is interested in her. She really can't afford to date anyone in her cover identity as Rigel Black, or she'll be found out and face a life sentence in Azkaban — but also, because she's hiding so much, she's not sure that anyone who falls for Rigel really knows her.
* The Rigel Black Chronicles is that in the event of everything going wrong, she doesn't want them to go down with her. She even sets up a whole fake identity — housing, employment, correspondence schooling — partly in hopes of concealing her attendance at Hogwarts if Archie's ruse gets out, but largely so that there's a plausible excuse for her family not knowing what she was up to.
* The Rigel Black Chronicles: Members of the "Save Our World" party pronounce SOW like sowing seeds. Its detractors, though, pronounce it like a female pig. (It doesn't help that the previous incarnation was named "Cure Our World".) Hermione doesn't actually realise that the pronunciation is intended as an insult until Archie explains it to her.
* The Rigel Black Chronicles permits any combination of weapons, but the most common choice is a wand in one hand and a knife in the other. When training Harry, Leo emphasises that the wand is her primary weapon, with the knife mostly being to hold off an opponent who closes the range.
* The Rigel Black Chronicles: Professor Snape has to put more than the usual amount of thought into punishing "Rigel" for any misbehavior; his usual detentions won't work on someone so devoted to the art of brewing.
* The Rigel Black Chronicles, Sirius amuses himself by imposing arbitrary rules on Archie as punishment — such as spending twenty four hours without using any form of the verb "to be".
* The Rigel Black Chronicles wants to work with her. She's more reticent, but gradually accepts out of necessity.
* The Rigel Black Chronicles: When Caelum Lestrange's Guild allowance won't quite cover the ingredients he needs for his research, Harry steps in to vouch for him and persuade the apothecary to extend him credit — making Caelum impotently furious at her. He doesn't have much alternative to accepting her help, though; his other option is asking his parents (who would give him the money, but with far more condescending attitudes than mere compassion). In the end, he can't bring himself either to refuse or to be grateful, and just storms out with his purchases.
* The Rigel Black Chronicles, with Harriett and Archie swapping places so that they can go to their preferred schools in defiance of restrictive blood status laws — except that they aren't actually twins. However, with enough magic, determination, and daring, there are workarounds for that, from Polyjuice potion to voice-altering charms to "specialised equipment" for making Harriett look masculine in a wetsuit. The fact that their deception is so long-term helps, in a way; when the "Rigel" people see is the same one they've known for years, they're less likely to look for signs of an impostor. The Aesop is absent, though; each is quite aware that their cousin has their own challenges, but they're both pursuing their dreams, and only the prospect of being caught and punished puts a dampener on it.
* The Rigel Black Chronicles wouldn't actually kill you; the giant swinging blade isn't sharp, and no doubt someone would provide medical attention if the artificial lightning made you catch fire, or six Bludgers at once knocked you off your rain-slick broom. It does scare off any players who aren't serious, and intimidate the competition, though.

* The Right Stuff, Alan Shepard frequently mimics 50s comedian Bill Dana's Mexican astronaut character "Jose Jimenez", but it eventually gets on the nerves of Gonzalez, the Mexican orderly, who tells him "me and my friends think your Jose Jimenez imitation is A-OK. * The Right Stuff has a character (listed in the credits as "Minister") with strong, symbolic Grim Reaper-ish overtones. He wears a plain black suit and tie, and first appears to tell a young Air Force bride that she's just become an Air Force widow. He is silent while doing so, but is then seen singing "The Navy Hymn" (suitably adapted for the Air Force) at his funeral, and then shortly thereafter enjoying a cold one at Pancho's. Then, as Chuck Yeager taxis away to try to become the first pilot to break the sound barrier, he's seen on the edge of the tarmac ...
* The Right Stuff. He was in the scene where Chuck Yeager bails out of a crashing F-104 prototype. There are conflicting reports on it, but his helmet filled with smoke, which either knocked him out, and prevented him from opening the chute, or screwed up his sense of when to open it.
* The Right Stuff military funerals (appropriately, with fly-bys and "Missing Man") for test pilots who died on the job, underscoring the dangerous nature of their business.
* The Right Stuff. "Mr. Clean the Marine" lived on the straight and narrow; he was devoted to his shy, stuttering wife, and when he was approached by a couple of prostitutes who were working their way through the entire flight crew, he drove them away. (Even in the straitlaced 1950s, he was considered remarkable.)
* The Right Stuff that Senator (later VP and President) Johnson invokes to scare the cabinet into funding the space program.
* The Right Stuff: The wall behind the bar of Pancho's Happy Bottom Riding Club is covered with pictures of pilots. Early in the film a young girl asks Pancho what a pilot has to do to get a picture on the wall. Pancho replies, "You have to die, sweetie." Later, when a new crop of test pilots arrive at Edwards Air Force Base and visit the bar, the cockiest of the lot, Gordo Cooper, decides to get in Pancho's face when he feels like they're not getting enough respect from her.
* The Right Stuff, Washington bureaucrats are being shown a film of potential

astronauts. One of them is a circus high diver, who dives into a pool of flaming water. The people showing the film say he might be a good candidate because of his "ease with flames, comfort at heights and agility in the splashdown phase."
* The Right Stuff "with a particular drawl, a particular folksiness, a particular down-home calmness that is so exaggerated it begins to parody itself..." and provides this example, from a flight from Phoenix getting into Kennedy Airport just past dawn:
* "The right to use my friend as a weapon. That is my sinful 'crown.' I accept this 'guilt.'" —
* The right-wing and somewhat insular British political party UKIP posed its leaders for photographs under a banner that said UKIPUKIPUKIPUKIPUKIPUKIPUKIPUKIP.... as was pointed out, the word "PUKI" in many related East Asian languages such as Malay has
* The rigidity of Dwarfs' honour codes results in Troll Slayers, unfortunate Dwarfs who have failed at some task or are unable to fulfill an oath, for which death is their only solace.
* The Rihannsu being very similar to pre-Reformation Vulcans, they got back into this state soon after settling. Rihannsu being Rihannsu, they quickly settled into mostly-ceremonial wars, nowhere as violent as the ones back on Vulcan, until a passing Federation ship sent them first contact information and,
* the Rihannsu (future Romulans) weren't involved in the last inter-Vulcan wars: their leader S'task, noticing that Surak's teachings were taking hold in the population and he was the main obstacle, took with himself his followers and left to try and avoid a war that could destroy Vulcan for good, and actually used the enormous planet-wide financial effort to build the colony ships to prevent the old wars from resuming while Surak spread his reformations. It failed, with the wars resuming soon after their departure and Surak himself being killed, but at least they tried.
* The Rikti Invasion events in City of Heroes feature dropships, which the dev team made virtually unkillable, with oodles of hit points, powerful attacks, and a tendency to simply fly away and escape before anybody can kill it, and which give no rewards for defeat, specifically because they were not intended to be defeated. When the Issue that introduced the Invasion events was in beta, a group of players took this as a challenge, banded together, and killed
* The Rikusentai were the Japanese marines, organizationally part of the navy. However, they had their own paratroops, specifically 1st, 2nd, and 3rd Rikusentai Units (roughly oversized battaliions, although usually translated as "regiments" or called SNLF's in English) home-based at Yokosuka.
* The Rime of the Ancient Mariner. After the attack, his crewmates force him to wear the albatross around his neck as a sign of his guilt, and they all die subsequently, each cursing him "with his eye" as he drops; the albatross only falls off the mariner afterwards, when he relents in his malice towards the dumb chums, and blesses the water-snakes.
* The Rime of the Ancient Mariner takes place largely in Antarctic seas shrouded in fog and haunted by spirits. Worth noting that Antarctica wouldn't even be confirmed to exist until some 22 years after the story was first published, and the predominant opinion at the time was that it did not, the two James Cook expeditions of the 1770s having gone as far south as to come within 75 miles of the continent before turning back from the relentless ice.
* The Rime of the Ancient Mariner, where he wears the dead albatross around his neck and is compelled to tell his story in order to atone.
* The Rim Worlds Republic played it straight; their government was often brutal and they eventually gave rise to an
* The Ring after Katie tells Becca about the tape, the creepy crawlies coming out of the TV, and the amount of discussion in the original version about urban legends to do with local television stations and rogue broadcasts.
* The Ring, a horse being transported on a ferry gets loose, jumps overboard and gets washed under the boat. A few seconds later, the boat's wake turns bright red.
* The Ring (American movie adaptation): Samara Morgan is unable to control her

ability to project images — whether that's onto surfaces or into people's minds.
* The Ring), and once in America. There have also been two Japanese TV series, three Japanese sequels, and one American sequel (directed, oddly enough, by the same guy that directed the original Japanese film). It was also adapted into a manga.
* The Ring and will die in seven days will have their faces blurred when their picture is taken.
* The Ring, an intersex condition that causes the woman affected to be born with a vagina, but with XY chromosomes, no uterus, and internal testes where the ovaries would typically be. Ashamed and humiliated, she retaliates with a massive telepathic attack, but he overcomes her long enough to strangle her and toss her down the infamous well. Sadako's vengeance against the world therefore stems partially from that incident.
* The ring (as Lars actually says to Abner when he questions Lars's line that it's 'kept him out of trouble') does end up being important, as
* The Ring: As shown in the page image, people who make the mistake of watching the cursed videotape may end up with Sadako/Samara climbing out of their TV to attack them.
* The Ring, at the start, one of the characters has this problem with a screen showing static. Then it gets worse.
* The Ring became "Σήμα κινδύνου" (Danger Signal).
* The Ring did this with Samara after she came out of the television, in the form of water from an old well.
* The Ring, either the father (Japanese) or the adoptive mother (American remake) kills the child because of the terrible and dangerous power she has. It's especially poignant in the latter version, in which the Morgans couldn't conceive on their own and desperately wanted to love Samara, but she drove them mad with uncontrollable psychic visions.
* The Ringer. This usually also highlights a dichotomy with their protagonists, who have grievances in their lives that seem very superficial compared to the physical and mental disadvantages their friends have.
* The Ring. Even the Dreamworks logo before the film starts suffers from it.
* The Ring face is horribly distorted and shown in close-up after Samara killed him.
* The ring generates gravity outwards from the ship, though when the Bebop's parked on a planet without the ring spinning, they can walk around normally when most of the rooms should be upside down or sideways.
* The Ring Genie from ‘’Revolve8: Episodic Dueling’’ is a prime example of this, constantly overshadowed by his more famous older brother, the Genie of the Lamp. This is especially exemplified in his own storyline where he not only saved an entire village from being flooded (which his brother was given credit for), but he also helped Aladdin escape from the cave and helped him free the Lamp Genie from the clutches of an evil wizard, yet hardly anyone knows who he is (let alone that Aladdin has two genies).
* The Ring has a secret option on the main screen, if you scroll down through all the normal options, the cursor will disappear. Hit enter and the DVD will play a (slightly extended) version of the cursed video, followed up by returning to the main screen with a phone ringing in the background. Once it starts playing, it cannot be stopped, paused, scrolled through, or in any way halted short of turning off your player.
* The Ring has been imitated so many times it could be a trope in itself. Anyone who watches the seemingly mundane video tape dies within seven days, unless they copy the tape and show it to someone else, akin to a video chain letter. This is an example of an artifact of death that actually seems mundane and benign.
* The Ring has plenty. If the one in the closet doesn't get you, the one in the chair will.
* The Ring imprints images on a blank videotape (cursing it in the process) and can

manipulate televisions when someone's week is up, up to and including emerging from the screen. Before her death, she had similar abilities to psychically imprint images on electromagnetic film.
* The Ring initially see him. A few minutes later in a brief clip that summarizes key events of the film, we now suddenly a new POV shot of Rachel turning his chair around and seeing his undead rotting face.
* The ring is hidden and somebody else finds it, believing it's for them, and the hapless guy has to get it back without upsetting the woman who has found it.
* The ring is later seen by Yukiji, given how it's priced, it seems possible that the ring is a fake.
* The ring is part of a big presentation at a sporting event, and the popped question shows up on the lighted jumbotron, to the delight or dismay of the person being asked.
* The ring is part of a big presentation over dinner. It'll be at the bottom of a champagne flute or on the dessert plate. Nine times out of ten, this results in the unsuspecting woman swallowing the ring whole.
* The Ring: Kanae's curiosity gets the better of her and she watches the videotape. Okazaki promises to watch the copy, only to chicken out, leading to Kanae's death.
* The Ring. Killer videotapes! (Okay, it's a ghost USING a videotape, but...)
* The Ring, known as Sadako Yamamura in the original book and the Japanese films and Samara Morgan in the American films.
* The Ring: Many of the scarier scenes in the original films happen during the daytime. In the American remake, only a few scenes were set at night (though the daylight scenes were still extremely cloudy).
* The Ring — Japanese horror series based on the eponymous novel. 9 films, along with a 4-film American remake series and a South Korean remake, since 1995.
* The Ring, Naomi Watts' character walks up to the television whilst there's footage of a fly on screen. She's able to pick the fly up in her hands.
* The ring of ancient Chimeri fortresses around Vvardenfell has "Propylon Chambers," which can teleport you to either of the neighboring fortresses if you have the proper Propylon Index. The remoteness of the fortresses makes this method of travel rather inefficient. (Still, they have their uses, such as the Tribunal Temple quest which requires you to travel across the island after taking a vow of silence, or to quickly travel as a Vampire where the other fast travel options are unavailable.)
* The Ring of Charon Pluto is used to create a wormhole to a multisystem to which the Earth was abducted.
* The Ring of Fire Series, a digitally published collection of short stories written by fans and selected by the series authors, and are officially canon.
* The ring of Gyges (a Persian folk tale that was old when Herodotus heard and repeated it) allows the wearer to become invisible. Gyges, freed from the fear of punishment, kills the king and marries the queen, making this one
* The Ring of Gyges is another good example, where the man Gyges finds a ring that makes him invisible. He proceeds to rape the King's wife, simply because he can.
* The Ring of Hans Carvel" has the paranoid husband dream that he's visited by the Devil, who gives him a ring that will prevent his being cuckolded as long as he wears it. He wakes up to find that he's jammed his finger up his wife's nethers.
* The Ring of Ritornel opens with the planet Terror having been wrecked by nuclear bombardment and about to be chucked into a black hole. "Terror" being a corruption of "Terra".
* The Ring of Solomon, Bartimaeus's list of transgressions against Solomon's Jerusalem includes eating guests of Jerusalem, fighting, devouring servants, running in the corridors, cursing, drawing rude stick figures on the harem walls, causing unpleasant smells to permeate the kitchens, and spitting on the upholstery. He explains that these are the things that aren't allowed to be done in Jerusalem because he's been told off personally for doing them. There may be others.
* The Ring of Solomon, Bartimaeus successfully retrieves the titular ring from Ammet, the powerful spirit of Khaba the Cruel. Afterwards, he returns to Jerusalem and takes the form of the shadow of Khaba that Ammet always assumed, pretending to

be Ammet who has come to return the ring to Khaba. As he draws closer...
* The Ring of Solomon magicians do you think to get involved in stroppy little verbal spats like this? They'd have hit me with the Dark Scouring by now and had done with it? ... You don't even know what a Dark Scouring is, do you?"
* The Ring of the Nibelung. Alberich in particular is often interpreted as an embodiment of Capitalism, out to depose the old, feudal elites. The Gods are sometimes referred to as Light Elves, though ironically enough the Nibelung Dwarves are sometimes referred to as black elves. The name of the Nibelung, Alberich, even roughly means Elf King. This is from Norse Mythology, where there wasn't really a clear divide between the Black Elves and Dwarves.
* The Ring of the Nibelung, Alberich steals the Rhinegold, but is robbed of it soon afterwards by Loge and Wotan. Wotan is eager to get the Rhinegold but wouldn't want to renounce love (which is the necessary condition for stealing the gold from its original place in the Rhine).
* The Ring of the Nibelung: Fafner transforms himself from a giant into a dragon after killing his brother Fasolt.
* The Ring of the Nibelung he and Mime compete over it, and Alberich is delighted when Mime is killed by Siegfried.
* The Ring of the Nibelung) of the Ring if Hagen manages to get it back from Siegfried.
* The Ring of the Nibelung production took significant liberties with the plot and changed the fates of several major characters.
* The Ring of the Nibelung that for no particular fault of his own, it's hardly a shock.
* The Ring of the Nibelung that she was imprisoned in) and their story also ends in fire, with them being reunited in death on a funeral pyre.
* The Ring of the Nibelung that the Nibelungs have become slaves to Siegfried.
* The Ring of the Nibelung: through the 16 hours that last the 4-part opera series, we get the names of 3 Rhine Daughters, 3 Nornes, 7 Gods, 8 Valkyries...
* The Ring On a lesser note, the adaptations all feature female protagonists with sons, while in the novel, it is a man with a wife and daughter.
* The Ring), or, with the proliferation of smartphones, Sadako coming out of the screen a few inches tall.
* The ring out is a standard part of the professional wrestling ruleset. Particularly inverted in
* The Ring Part of that was Aidan's fault, since he didn't tell his mother anything helpful about Samara. His mother did precisely what nearly anybody in her position would have done: give Samara's body a proper burial.
* The rings actually do have several failsafes which kick in, shutting down if the wearer breaks Lantern Code, reserving a small supply of energy the lantern normally can't access to protect the wearer from mortal energy and so forth. But Lanterns have been able to override the latter failsafe to continue fighting after their normal reserve is depleted (and given that lanterns are selected for fearlessness, it seems silly to allow that.) Also Hal Jordan was able to override the former failsafe after his ring was depleted for insubordination by drawing energy from a Guardian's construct.
* The Ring: Samara Morgan's cursed video tape causes whoever watches it to die within a week, unless they make a copy of the video and show it to someone else. Lampshaded at the end by Aidan.
* The Rings of Akhaten has the head of a Hoix, the breathing apparatus of a Hath, and the tentacle-beard of an Ood.
* "The Rings of Akhaten", the day is saved by the destruction of a "parasite planet". Fans incorrectly pointed out that this left nothing for the seven moons to orbit, nor any energy source for them, before it was pointed out to them that the planet wasn't actually destroyed and just went to sleep; it's still there and still radiates heat.
* "The Rings of Akhaten" who look human, most notably Merry Galel and the choristers, but there's no indication if they actually are.
* The Rings of Saturn: Cyborgs, in the future, are typically feared by mundane

people because they make for dangerous competition in the job market. On the other hand, the cyborgs seem to frequently think themselves superior to humans, to the point of establishing crime organizations and pulling off acts of terrorism.
* The Rings of Saturn: Very noticeable in its future setting — at one point, the time traveller protagonist gets in trouble because the address he gives is years out of date. Nevertheless, he's able to enroll into an elite academy later on and become a full-fledged astronaut (though it's implied he had the backing of a politician).
* The Rings of the Master series (Tolkien's book plays some minor role in it too, hence the name).
* The ring that Athena kept a hold of returns to the story when the group makes a trip out to Athens during their Golden Week vacation. First it's admired, and then left out in the open, by her when she's seen Hayate again, not having known where he was for the intervening years. Then Hayate notices it and picks it up. She also gave the ring-box (empty) to Nagi, his current master before she disappears at the end of the arc.
* The Ring, the corpses of Samara's victims are shown for a split second at two points in the movie.
* The Ring to get up in her last victim's face, though it manifests more like the flickering of a TV image.
* The Ring Two. Not only was she out to kill people who had never done anything to her, she was out to kill anyone who watched the video, regardless of whether they had done anything wrong ever. In the sequel she targets Rachel and Aiden specifically, and the feeling of "it could happen to you," so powerful in the first film, was accordingly defenestrated.
* The Ring Two: While most "Unrated" versions of PG-13 horror movies are nothing but marketing hype, this one actually includes seven minutes of new footage, including extended suspense sequences, more character moments, and some new and alternate scare scenes. In addition, some existing scenes have had special effects redone or new music put in.
* The Ring wants her story to be told before she can move on. Actually, she's just evil.
* The Ring, was originally built by the Emperor of Rheinland to be lined with mirrors and to serve Planet New Berlin as a second sun. Somehow, it ended up accidentally turned into an orbital superweapon which vaporised several colonies on the planet's surface.
* The Ringworld Engineers. So Louis comes up with an alternative. He "creates" a mute human servant for himself calling him Wu (of course, it's just Louis himself staying mute so as to not give away his voice), who ends up having Rishathra with one of the leader's wives to seal the deal.
* The Ringworld Throne, Luis Wu teaches Chmee's son Acolyte the value of predetermined actions, and in training until performing said actions are second nature. He compares it to an astronaut being trained so that the first thing he does in an emergency situation is put on his pressure suit without actually having to think about doing it, and then asks if wtsai (the Kzinti knife-fighting martial art in which Acolyte has been trained) has a "a default maneuver; a move that is used when you are surprised or if you aren't really sure which move to use." Turns out there is one: the disembowel.
* Therin Knite, Dynara and Murrough wear long white coats to signal their positions as head of EDPA departments. Dynara is the Commissioner of the Field Agents' Corps, and Murrough is the Captain of EDPA Security.
* Therin Knite. He (illegally) drives manually (as opposed to using the automatic AI driver installed in all cars) through a city where the average highway speeds are 200+ miles per hour.
* Therin Knite's, most of the books in the series take place over the course of a few days, due to the time-sensitive nature of the echoes themselves.
* Therin Knite's (the first book). Dynara manages to land a shot on an assassin in the shadows of a pitch black dance floor from fifty feet away.
* Therin Knite (the first book), medics inject Adem with an unspecified drug

concoction to force him to wake up from an echo he's trapped in. He immediately has a heart attack as a result of the drugs and has to be rushed to the hospital.
* The RinkWorks game Maze Maker generates a random printable maze. The same website allows visitors to submit altered screenshots from the site as "RinkWorks Graffiti" (
* The R in SPECTRE, the villainous organization in previous films, stands for revenge. Blofeld mentions it specifically as what will happen if his demands are not met in
* Theriomorph Chronicles: A dark science fiction story about an 11-year-old boy named Warren who is transmuted into a Bald Eagle Theriomorph against his will by Megiddo and must fight with the Blood Order in order to defeat Megiddo.
* Theriomorph Chronicles after the creature tries to attack him and Meredith.
* Therion Teresa this is considered to be one of the hardest (non-optional) battles in the game.
* The Riott Squad: Reformed as a duo in 2020; disbanded in 2021 after Ruby Riott's release from WWE.
* The Riott Squad's team Absolution, with Sarah and Liv serving as the clones, respectively, of Sonya DeVille and Mandy Rose.
* The Rip Chords and Terry Melcher as uncredited vocalists. A couple of non-surf singles which didn't feature Johnston and Melcher had previously charted, but most of the attention the group gets nowadays outside of "Cobra" is for their other surf and hot-rod songs featuring the duo, which also recorded as "Bruce and Terry".
* The Ripper is only seen as a pair of boots and a hand holding a knife until their true identity is revealed in
* The Ripper is trapped in the ring once more. The next morning, some kids find the ring and bring it home to their mom.
* The Ripping Friends at 11:00 PM ensued. Guess they figured adults would appreciate all the poop and booger jokes more.
* The Ripping Friends: A time traveler attempts to kill our heroes with their greatest weakness: Riptonite. Unfortunately for him, the Ripping Friends made this weakness up for the sole purpose of fooling overeager villains.
* The Ripping Friends. Funbag Animation manager John Shaw explicitly told his staff to disregard John K.'s style guide and left it sitting on the front desk for weeks. When he came to the studio and found out, the two came dangerously close to blows. Kricfalusi apologized, but was banned from the studio the next day. As a result, he was forced to make most of his revisions from a nearby hotel.
* The Ripping Friends has Rip and Slab doing an extreme version of the "fall and I'll catch you" routine that has Rip standing above a kiddie pool full of piranhas. Of course, Slab fails to catch Rip and the piranhas tear him to shreds.
* The Ripping Friends, in the two-part episode entitled "A Man From Next Thursday." The Ripping Friends' city, Ripcot, is said to be so advanced that it exists in "next Tuesday". The villain, Thursday Man, comes from the highly futuristic world of "next Thursday".
* The Ripping Friends is made of this trope. Not only are the four superhero protagonists absurdly masculine, but so is their mother!
* The Ripping Friends with their brutal mother. To them, having superpowers is cheating.
* The Rippingtons once did a music video for their song "Tourist in Paradise", in which an animated version of the band's trademark anthropomorphic mascot, the Jazz Cat, interacts with the members and some chicks on a beach.
* The Ripple Effect, takes him into a room and makes it look like they slept together. Jerrica catches them and gets the wrong idea. Luckily, Stormer noticed what Minx did and spoiled The Stinger's plot.
* The Ripple is a martial art that supposedly lets you channel the power of the sun. In practice, it's a touch-based magic that allows you to do everything from disintegrating undead, healing wounds, weaponizing liquids, and climbing sheer surfaces with your bare hands.
* The Ripple Kingdom's magic gachapon machine. All of the capsules provide spells that will work, but they create items so mundane, or the ability to do things in

such incredibly specific situations, that they're basically useless. Nautilus eventually saves everyone with her ability to order a pizza only if nobody is in the mood for it, allowing the group to escape an airship crash by jumping into the delivery vehicle—but she can't repeat it when she's in Rosemaster's prison, because she actually
* The Rip Van Winkle Caper", Farwell is the last survivor of the four criminals who stole £1 million in gold bars and placed themselves in suspended animation for 100 years. Dying of dehydration in Death Valley, he offers all of his gold to a passing motorist named George in exchange for water. He dies before George can do anything to help him. George is surprised that he offered him gold as if it were really worth something since a way to manufacture it was developed decades earlier. As he and his wife drive away, he throws the worthless bar of gold to the ground. This trope was also invoked on the trip through the burning desert, where a drink of water was sold for one gold bar each.
* The Rise and Fall of D.O.D.O., to train him. With Mortimer's tutelage, Tristan becomes quite the swordsman.
* The Rise And Fall Of Idi Amin has an infamous scene where the doctor protagonist visiting the infamous Ugandan dictator goes to the freezer to get some ice, only to find to his horror that Amin keeps the severed heads of several of his victims in there.
* The Rise and Fall of the City of Mahagonny for all three judges is projected while they pass sentence on Jimmy.
* The Rise and Fall of the City of Mahagonny opens with a wanted poster for Fatty, Begbick and Trinity Moses.
* The Rise and Fall of the City of Mahagonny. The crowd, who expected him to lose to Trinity Moses, laughs off the announcement of his death, saying, "K.O. is K.O. He didn't take a hard one."
* The Rise and Fall of the City of Mahagonny, Trinity Moses seems a little too keen on the idea of condemning people to death.
* The Rise and Fall of the City of Mahagonny uses an Advancing Disaster Map Graphic at the end of the first act and the beginning of the second, which project onto a map a moving arrow representing the track of the hurricane. Loudspeaker announcements report the destruction of each town in its path as it slowly advances directly towards Mahagonny. However, the arrow suddenly swerves in a semicircle around Mahagonny, miraculously sparing the city from certain doom.
* The Rise and Fall of the City of Mahagonny were forced to leave Germany.
* The Rise And Fall Of The Sky Valley Cult deadly road trip out of the eponymous valley.
* The Rise and Fall of the State of Mahagonny was covered by the Doors as "Alabama Song (Whiskey Bar)".
* The Rise and Fall of the Third Reich, William Shirer relates how, in the last days of WWII, the low-level staff in Hitler's bunker broke out the booze, put on records and started dancing after the senior staff had retired for the night. They apparently got so loud and raucous that Hitler himself called to request that they turn down the volume.
* The Rise and Fall of Ziggy Stardust and the Spiders from Mars (1972) — The tragic saga of a messianic rock star.
* The Rise and Fall of Ziggy Stardust and the Spiders from Mars; note that all of these eventually were B-sides:
* The Rise And Rise Of Michael Rimmer, just as the eponymous Rimmer is about to stage a popular coup one of the people he's pissed off attempts to shoot him from a high window while another is preparing to throw a bomb. Unfortunately the gunman falls out of the window onto the bomber, and the bomb goes off next to them.
* The Rise And Rise Of Michael Rimmer, the titular character managed to successfully become part of an advertising agency by going in with a clipboard, looking like he knew what he was doing and saying he was with "efficiency", and everyone buys it!
* The Risen Empire. Naturally he fails again (i.e. fails to die and become a martyr, not the above mission). Gee, he just can't catch a break.

* The "Risen Reaper" arc was the same thing, only replace "Justin, Susan, and Nanase" with Ellen, Nanase, Mr. Raven, Magus, and
* The Rise of Darth Vader, it backfires on them: Admiral Ackbar started as Tarkin's slave before escaping to the Rebels, taking valuable intelligence with him, nearly killing Tarkin, while the Wookies sabotaged everything on the Death Star they could.
* The Rise of Darth Vulcan by the situation, but decides to make use of her newfound loyalty to him so that he can have her power and experience on his side.
* The Rise of Darth Vulcan: In Chapter 39, we see that a fifteen foot high steel chain-link fence has been built around the Everfree, with runes protecting it against rust, wear and tear, and chewing, as well as being magically electrified, with lookout towers and armored guards patrolling the perimeter, and an alarm system that will set off if anything flies over, digs under or tries to squeeze through the fence. Twilight admits that it is more to give Equestria a last minute warning than to keep Vulcan and his horde in.
* The Rise of Darth Vulcan. Later on, he's also able to start recruiting ponies who have suffered from the flaws in Celestia's government system, by genuinely offering them a chance to improve their lots.
* The Rise of Darth Vulcan make him into a saint. Averted with his conflict with the Mane 6. They do make mistakes in dealing with him, but they are trying to protect themselves and are in fact trying to save Vulcan from the power he is abusing.
* The Rise of Darth Vulcan, minotaur mercenaries, and pony criminals, social outcasts, and others just plain dissatisfied with the Princesses' rule. His power grows to the point that he's able to get away with declaring himself lord of the Everfree forest, with no one able to defeat him in direct combat.
* The Rise of Darth Vulcan's face and firing off both barrels point-blank.
* The Rise of Darth Vulcan: Shining Armor begrudgingly admits that the titular villain earned the respect and loyalty of the Diamond Dogs.
* The Rise of Darth Vulcan that is being erected to try and box him into the forest.
* The Rise of Darth Vulcan. The mugger is lucky to get away with just being knocked out.
* The Rise of Darth Vulcan: The story opens with Vulcan imprisoned in Canterlot and being interrogated by Celestia. The next 18 chapters are composed of him narrating to the Princesses how he arrived in Equestria and rose to be Public Enemy Number One.
* The Rise of Darth Vulcan: The titular protagonist is visited in his dreams by Princess Luna, where she roughs him up for his various crimes against Equestria. Vulcan's response is to laugh in her face and play on her insecurities, calling her nothing more than Celestia's goon and her special talent meaningless since Celestia was able to do the same thing. Luna's response is to beat him harder, escape his mind, and spend time isolated in her room.
* The Rise of Darth Vulcan. This includes Lord Tirek, who is killed off in the span of a chapter without even meeting the heroes.
* The Rise of Darth Vulcan, who are far more powerful (and competent) than his standard Diamond Dog soldiers.
* The Rise of Darth Vulcan, with the power of the Amulet and the Diamond Dogs at his command. And since the story is told mainly from his perspective, it fits.
* The Rise Of Golus, the rampage of Golus manages to hit the news rather quickly, alerting both teams of heroes.
* The Rise of Kyoshi: Avatar Kyoshi is described by a couple of people as being quite beautiful. She's also described as being unusually tall for a woman and is taller than most men she comes across.
* The Rise of Kyoshi. Her immediate predecessor died at only 33 so his friends all go looking for his successor. She quickly bonds with his Airbender friend Kelsang, who all-but adopts her as his daughter.
* The Rise of Kyoshi, she's realized that she's a blunt object, and not to try to be anything else.

* The Rise of Kyoshi, the previous Avatar Kuruk died at only 33 so his friends are left to find the new Avatar in the Earth Kingdom. Since the Earth Kingdom is the biggest and most populous, the search drags on and on and they ultimately pick the wrong kid, Yun. Kyoshi works in the compound where they’re training Yun and ultimately they figure out that she is the Avatar. The master who’s been teaching him earth bending, Jianzhu, feeds Yun to a spirit once they prove that he’s not the Avatar to protect Kyoshi from said spirit.
* The Rise of Kyoshi: The writer F.C. Yee was a fan of the original Nickelodeon series when it was first shown.
* The rise of mixed martial arts, whose promotions tend have weight classes based more on pro wrestling than boxing due to the earliest company's being born directly from pro wrestling, has only reinforced how small minded the obsession with heavyweights really is. There have been some heavyweight and super heavyweight attractions, the bewildering success of
* The Rise of Phoenixes and immediately assumes he's dangerous. Much awkwardness ensues, to Zhu Yin's amusement.
* The Rise of Phoenixes: Chang Zhong Xin literally shoots Ning Yi's messenger.
* The Rise of Phoenixes: Invoked. Ning Yi wants Zhi Wei to stop asking awkward questions, so he pretends she aggravated his arm injury. He drops the pretence as soon as she leaves.
* The Rise of Phoenixes: Ming Ying forces Zhi Wei to promise she'll never marry Ning Yi.
* The Rise of Phoenixes: Nan Yi moves impossibly quickly so that he's right in front of Zhi Wei when she turns. She's suitably freaked out to come face-to-face with the guy who was behind her a minute ago.
* The Rise of Phoenixes: Ning Yi has his moments, like when he gets Zhi Wei to repeat her unflattering remarks about Zi Yan while knowing Zi Yan can hear everything she says.
* The Rise of Phoenixes: Shao Ning falls in love with "Wei Zhi", unaware "he" is really Zhi Wei in disguise, and tries to make "him" marry her.
* The Rise of Phoenixes: The Crown Prince controls the remnants of Bloody Pagoda. He orders one of its members to attack Gu Yan's men, then uses that as an excuse to pretend he's wiped out Bloody Pagoda.
* The Rise of Phoenixes who is also perverted and strange". Zi Yan is hiding behind a curtain and overhears everything.
* The Rise of Phoenixes: Zhi Wei drops a tray when she hears Ming Ying disown her.
* The Rise of Phoenixes: Zhi Wei falls asleep beside Ning Yi's bed. Ning Yi wakes up before her and watches her sleep for a while. Then she starts to wake up so he pretends to be asleep.
* The Rise of Phoenixes: Zhi Wei gets Nan Yi to dress as a woman so he can stay by her side. He doesn't mind wearing a dress, but he does mind when she tries to make him wear a veiled hat.
* The rise of reality TV in the late 1990s has also given viewers what soaps used to, at less cost to the networks and with less predictability for viewers.
* The Rise of Skywalker, angering the shippers who wanted the two to have a happy ending.
* The Rise of Skywalker attacks Exogol before the fleet can deploy, a single Y-Wing is enough to take out a Destroyer.
* The Rise of Skywalker, both Finn and Poe are Resistance generals, and they lead their forces in the attack on Exegol.
* The Rise of Skywalker, claiming that both Finn and Rose amounted to little more than tokens while all the depth went to the white leads Rey and Kylo Ren.
* The Rise of Skywalker-class Star Destroyers, each armed with a planet-destroying superlaser. Without shields, however, the superlasers are so vulnerable to damage that even starfighter guns can destroy the ships by targeting them.
* The Rise of Skywalker, during which, among other things, Rey's been honing her Force abilities.
* The Rise of Skywalker-exclusive event and may be taken by surprise to see it mentioned in the opening.

* The Rise of Skywalker from the previous Sequel Trilogy films, having to direct the last of her vital strength toward using the Force to spiritually connect to her son Kylo Ren. Her body later disappears, having become one with the Force.
* The Rise of Skywalker has a massive fleet Star destroyers with built-in planet killers. One of them ends up destroying Kijimi. Most fanedits remove this planet-killing ability from the film, and the biggest one that didn't (TROS: Resurgence by Krausfadr) had Kylo Ren destroy Corellia early in the film.
* The Rise of Skywalker has Poe lightspeed skipping the Falcon to evade pursuers. The tactic damages the ship enough to cause it to be on fire and infuriates Rey to no end.
* The Rise of Skywalker is on fire when she returns to the Resistance base.
* The Rise of Skywalker is vague on whether he really did survive or whether the body he has in that film is a clone instead.
* The Rise of Skywalker looking on. Another poster shows Kylo Ren staring on.
* The Rise of Skywalker makes a return appearance but goes uncredited.
* The Rise of Skywalker, only without the ewoks (although they still have a cameo).
* The Rise of Skywalker Palpatine confirms that he did die before, meaning that he was not faking his death and had to be resurrected through Sith practices. Rey is also resurrected by Kylo Ren with Force healing, at the cost of his life.
* The Rise of Skywalker reveals that Rey's father was a clone of Palpatine, the Dark Lord of the Sith. He appears to have been far less nefarious than the original, dying in the process of trying to hide his child from being found by the Emperor.
* The Rise of Skywalker: Rey uses her lightsaber as an illumination source in an underground area. It's notably more effective than the dinky little flashlight Poe pulls out.
* The Rise of Skywalker, sharp-eyed fans spotted a telltale sign that Kylo Ren's cape during a scene of him fighting with Rey was in fact CGI, as it was not visible in his reflection in a pool of water. Fortunately, it was fixed in the final product.
* The Rise of Skywalker, Sidious transmits a message across the galaxy ordering all planets to surrender or be destroyed after having blown up Kijimi, a planet that didn't get the luxury of choosing. This winds up backfiring as it puts the galaxy in a position with their back to the wall and this, coupled with the revelation of the Sith fleet's location, prompts a fleet of thousands of ships to answer Lando and Chewie's call to arms and storm Exegol to blow up the Sith fleet before it can launch.
* The Rise of Skywalker. Suffice to say, he does end up revealing himself to be the spy.
* The Rise of Skywalker. The effort of resurrecting Palpatine was not precise, resulting in him having milky white eyes and a need for life support. Outside of that, he is still an expert manipulator and sorcerer (though less subtle than before-possibly he has grown more unhinged from his resurrection).
* The Rise of Skywalker them to use their resources in securing his hold on the rest of the galaxy).
* The Rise of Skywalker, the path through the unknown regions to Exegol requires precise coordinates, but it's not clear if there are entrances that can be accessed from flying above the unknown regions. The Xyston Star Destroyers do not appear to take advantage of the Z-axis, and end up staying in formation rather than using rotation maneuvers.
* The Rise of Skywalker, the Resistance targets the source of that signal (initially a ground relay, but moved to the flagship by a pragmatic First Order officer), knowing that if they destroy it, the armada will be trapped and useless to their enemies.
* The Rise of Skywalker, to escape some TIE Fighters Poe Dameron has to make multiple blind jumps to random locations. He pulls it off, but arrives at the Resistance base with the Falcon on fire.
* The Rise of Skywalker uses a double-bladed lightsaber with a hilt that has a hinge in the middle, allowing the weapon to be more easily concealed.

* The Rise of Skywalker without any resolution as well. And in spite of heavy shipping, no, Finn doesn't wind up with Poe either.

* The rise of the Internet has led to a veritable explosion in the second type by lowering the cost of entry and allowing every Tom, Dick, and Harry with a keyboard and Internet connection to voice their opinion.
* The Rise of the Iron Moon are subjected to this for scientific purposes.
* The Rise of the Rajas (HD Edition), Wang Tong, the narrator of Lê Lợi's campaign, noted that while Lê Lợi did much good during his reign, the state of affairs deterioriated under his successors.
* The Rise of the Unemployed Wise Man are just basic parlor tricks, and that a real hero would have no trouble kicking his butt (despite kicking the ass of the current Hero with ease). All of his fights end so thoroughly in his favor that Karna believes that his opponents are just hiding rather than him blowing them to pieces with one punch.

* The Rising Martin was an army chaplain in Vietnam, and these skills save his life after a deserting soldier attempts to use him as cannon fodder and a distraction to escape.
* The Rising of the Moon. His allies have a complex scheme to help him escape, partly involving a pair of nuns. The authorities are completely taken in by these clever fakes, but after the nuns leave, the police sergeant muses "I didn't know nuns wore high heels."
* The Rising of the Shield Hero additional seasons after the first season concluded.
* The Rising of the Shield Hero and serves mainly as a lure for potential customers and victims alike: he initially intended to enslave Naofumi; and eagerly offered to pay a significant amount to buy Raphtalia back upon seeing how much she'd grown, with the implied intent of selling her into prostitution due to him upping his offer when informed she was still a virgin.
* The Rising of the Shield Hero began as a web novel on "Let's Become a Novelist" by Yusagi Aneko, which was later re-written and expanded as a light novel and adapted into manga and anime series.
* The Rising of the Shield Hero both see Naofumi as the only one of the four heroes worthy of any respect.
* The Rising of the Shield Hero but reminds himself that it used to be common on Earth in the past.
* The Rising of the Shield Hero but the grief from losing his sister is the root of his issues.
* The Rising of the Shield Hero by transporting Naofumi to Melromarc when he opens a book about the four cardinal heroes. The other heroes come to the country by slightly different means though.
* The Rising of the Shield Hero continues to repeatedly deny her crimes, including her attempt to murder her younger sister to become heir to the throne and frame Naofumi for it. For added bonus, Motoyasu and the King also refuse to believe that she was capable of that, despite the seal's effect giving her away.
* The Rising of the Shield Hero: Demihumans age differently from humans, growing as they become stronger and level up. Raphtalia, who begins the story looking like a ten-year-old girl, becomes a young woman in her early twenties after a few weeks of killing monsters.
* The Rising of the Shield Hero: Filorial Kings and Queens can assume humanoid forms which sprout a pair of angelic wings from their backs.
* The Rising of the Shield Hero for demi-humans, and the legends of the Four Cardinal Heroes said that the Shield Hero would be heavily associated with a party made of them, as well as demi-humans worshipping the Shield Hero for being a

champion of demi-humans according to their legends. Thus, he enacts a hidden plan to discredit Naofumi, the titular Shield Hero, which results in him being considered a pariah by almost every member of his kingdom. Naofumi becomes jaded and distrustful toward everyone as a result, and only takes on slaves (the majority of which being demi-humans) as party members because they are unable to disobey him.
* The Rising of the Shield Hero has character level, which the main character can see. When the weapon merchant upgrades his armor, he calls the upgrade +1. Demihumans like Raftalia are able to rapidly age from a child to an adult when they level up enough. The world also even has events where experience from killing monsters is boosted like in an MMORGP. Although some of the heroes make mistakes based on expecting the world to work like a video game in ways that it doesn't, such as one hero who accidently caused a village to get sick by failing to dispose of a dragon's corpse.
* The Rising of the Shield Hero has Filolials, which is yet another case of what are basically chocobos in every way except name. Even Filolial Queens, which look more like giant fluffy balls of feathers than birds, are just as eager to act as mounts and carriage-pullers, with main character Filo outright getting vocally upset if she's prevented from doing so.
* The Rising of the Shield Hero, hated doing her voice since she shares the fanbase's reaction to the character.
* The Rising of the Shield Hero. He almost convinces the other Heroes that he's innocent, only for Malty to create yet another lie, this time about Naofumi brainwashing his party.
* The Rising of the Shield Hero he once again forced the former into, or that the latter's party ultimately abandons him when things look dire (the Spirit Turtle incident).
* The Rising of the Shield Hero. In the early stages of their spread the zombies acted completely normal so they could perform sabotage and infect others. When their sabotage or infection is revealed they become openly hostile to anyone not aligned with them and attack while shouting propaganda.
* The Rising of the Shield Hero is a pretty, feminine demi-human. The only thing that differentiates them from a human are their ears and their raccoon tail.
* The Rising of the Shield Hero is called "Blood Sacrifice". The spell violently pulls out much of Naofumi's own blood to summon a giant maw of fangs to bite down on and crush his victims to death.
* The Rising of the Shield Hero: It doesn't matter how many times Naofumi saves Melromarc—The three other heroes and the ruling family still find reasons to hate him. Although it's also kinda averted because people like Raphtalia are grateful for the things he did.
* The Rising of the Shield Hero, King AultClay Melromarc and his daughter Princess Malty spend the entire first story arc screwing over Naofumi, getting him accused of crimes he didn't commit, and hampering his progression through the use of their positions of power. They continue to get away with it until Queen Mirelia returns from aboard and immediately puts her foot down. The backlash of their actions is so great that it had to be contained in a mini-arc.
* The Rising of the Shield Hero-like dragon to deal with his enemies. The monster promptly crushes him under its foot and then goes in a rampage.
* The Rising of the Shield Hero, Motoyasu delivers a direct challenge to Naofumi after the first wave of monsters is defeated, having learned that Naofumi had been using the slave Raphtalia to fight his battles for him.
* The Rising of the Shield Hero Motoyasu's death resulted due to him not wanting to choose one of his two female friends over the other. Both girls responded by stabbing him to death while arguing over who would go to heaven with him.
* The Rising of the Shield Hero, Naofumi initially buys the sickly and weak Raphtalia from a slave trader because he needs a way to damage enemies to grow stronger, and she's all he can afford.
* The Rising of the Shield Hero of the gun's wielder rather than the velocity and mass of the bullets. This means that guns are no better in a fight than bows and

arrows, and there's only one country where anyone bothers to use guns.
* The Rising of the Shield Hero on coming to the rescue of every cute girl he meets. Problem is, not only is this mentality born from a selfish desire for a harem that he's nursed from the very start of the series, said cute girls are either perfectly capable of fighting for themselves, never need his help in the first place and ultimately end up resenting him for his forced assistance (Raphtalia and Filo), or are all too keen on taking advantage of it for their own selfish gain (Malty and the rest of his party), and to the point of using him as a glorified attack dog. What's more, this winds up putting said girls in danger by repeatedly antagonizing the person he blindly assumes is "brainwashing" them (Naofumi), and to the point where he outright tries to either maim or kill them without sparing even a second to consider his actions.
* The Rising of the Shield Hero on him, and the king's personal hatred of him. He slowly lets his actions speak for himself, earning the respect of people around, and finally getting vindication when the queen personally clears his name.
* The Rising of the Shield Hero, Princess Melty appoints Naofumi archduke as payback for teasing her, hoping he will be buried in legal work like her. It isn't until later that she learns the title is reserved for the future king, and that Naofumi is now bound by law to marry her. By then its too late do undo it however.
* The Rising of the Shield Hero. Raphtalia was enraged when she discovered Itsuki was purposefully holding back during fights so that he could jump in and save his companions the instant they were in danger.
* The Rising of the Shield Hero Raphtalia was temporarily freed from her slave seal but insisted Naofumi replace it. She wants to remain by his side and knows that he can only trust a slave due to his emotional trauma.
* The Rising of the Shield Hero. So he basically vents his personal anger on someone who didn't personally slight him, but also had no idea of why he was being treated that way.
* The Rising of the Shield Hero. The guy deliberately holds back during fights solely so he can get as dramatic a killing blow as possible, what more proof do you need?
* The Rising of the Shield Hero: The Kingdom of Melromarc is of matriarchal line, so the Queen has higher authority than her husband, and crimes against women are very frowned upon. A plot point is that at the beginning of the story, the Queen is absent because she's had to deal with a pretty big diplomatic mess caused by the King, and she resolves to set things right once she's back.
* The Rising of the Shield Hero. The Queen concurs and the condemned are spared.
* The Rising of the Shield Hero things that'll prove useful in the long run, the other three heroes end up causing problems due to the fact that they expect to succeed through the bare minimum amount of effort, refuse to think critically beyond what several obviously shady people tell them, leaving easily avoided disasters in their wake in the process and leaving the civilians to see them as just plain inept.
* The Rising of the Shield Hero trait and something he only considers as a last resort.
* The Rising of the Shield Hero unlike Trash and Bitch for major instance, he starts to listen to her pouting of calling her by her name instead of her title like he did before.
* The Rising of the Shield Hero... while the truth blissfully passes right by them. Thankfully, meeting a few allies such as Raphtalia and Filo help him shed this attitude over time. Granted, he always demands compensation for his trouble whenever he helps somebody, which paints him as greedy jerk in the eyes of strangers, but it's actually because he needs to make living somehow unlike the other heroes, who get funding from Melromarc's king.
* The Rising of the Shield Hero, with Myne Sophia, a.k.a. Princess Malty S. Melromarc, stealing all of protagonist Naofumi's stuff while he is sleeping and then falsely accusing him of trying to rape her. Most everyone in Melromarc, especially the King and the three other Heroes, believe Malty's lie without question, resulting in Naofumi being branded a pariah in the kingdom and becoming

quite emotionally embittered to boot. Because of this, he cannot find reputable companions, forcing him to rely on slaves like Raphtalia and Filo to do his fighting for him. Naofumi is exonerated when the Queen and true ruler of Melromarc returns, puts the King and Malty on trial, and then uses a Slave Crest that zaps its bearer every time they tell a lie in order to expose all of Malty's lies for what they really are.
* The rising sun in theory dissolves most spells or magical beings. In keeping with the author's preferences, all of the above are generalities: just as there's no such thing in this setting as a perfect defense against the non-magical, there's no form of anti-magic that stops everything.
* The Rising Thunder marks to make contacts with him. Given that the Madras Sector is in an ass end of the League, where graft and corruption reign supreme, a lot of them are surprisingly better then they could've been.
* the Rising Tide, a hacktivist organization similar to Anonymous. Coulson wins her over relatively quickly though, convincing her that if S.H.I.E.L.D. is Big Brother, it's a protective and well-meaning one
* The rite for taking over the Light Fae involves "marrying the land". The wedding may be metaphorical but the consummation is quite literal. "The land" is called forth in the form a young woman.
* The Rite it by having the exorcist joke about profectile vomit head spinning.
* "The Rite of Turnabout" is the first time Maya channels a victim onscreen. The victim is then interrogated and cross-examined like any other witness. The victim was technically one of the culprits, as he killed himself.
* The "Rites of Spring" sourcebook for Changeling: The Lost also notes that a shot of Glamour (the "mana" of changelings) has the same general effects as Solace—it makes a vampire feel alive again.
* The Rites Of The Fall and various other malcontents in District 12 being punished this way in the aftermath of the First Quarter Quell. Kay ends up suffering permeant and severe back pain as a result, causing her to gradually develop an addiction to painkillers.
* The Rithmatist, North America consists of sixty islands instead of a continent, all of which are part of the United Isles of America. We don't hear much about the rest of the world, though the sequel will focus on Central and South America.
* The Rithmatist, the main character, Joel, doesn't have the power to use Rithmatics (a form of chalk-line geometry-based magic), but is very passionate about the theory and strategy behind it. He gets the chance to study under a teacher of Rithmatics, and ultimately teams up with Melody, who has the power but isn't as skilled; they're able to effectively work together by having Melody trace the lines Joel draws.
* The Rithmatist, the Scribbler initially creates a drawing that steals their voices so that they cannot be heard screaming or fighting (or anything) while he's kidnapping them and the crime won't be discovered.
* The Rithmatist when Joel and Professor Fitch are attempting to determine the properties of the new Rithmatic line they've discovered at the crime scenes. They know it is a Rithmatic line because Fitch's chalklings react to it as one, but they can't figure out what it does. The obvious solution would be to draw the new line themselves and see what happens, but since you have to intend to draw a Rithmatic line to draw it (which is why all straight lines don't turn into Lines of Warding and so on), they have to know what the new line does before they can draw it.
* The ritual celebration at the end of a Formula 1 race has the winner hold a magnum of champagne at hip height, shake it vigorously, and spray white foam over the audience.
* The ritual Fastidiousness in the fourth edition grants magical protection from dirt as well as water damage.
* The Ritual Heralds have this in spades, to the point where the Boss of the archetype, Herald of Ultimateness can negate virtually any action your opponent does. This also applies to cards like Naturia Exterio, Legendary Six Samurai — Shi En, and Shooting Quasar Dragon.
* The ritual of the Kabbalistic Cross is an Esoteric protection ritual use in

* The Ritual with the body of a large elk overgrown with plant matter, with the addition of protruding spines from the vertebrae and an additional set of human-like hands by her hips. Her head is far more monstrous, resembling a headless human torso with antlers for arms and arms for legs, with a vaguely human head with glowing eyes where its crotch would be. It's worth noting that the most well-known Jotunn are Loki and his children: Fenrir (a giant wolf), Jormungandr (a giant snake), and Hel (a half undead goddess), so an animalistic being is completely in line with Norse myths.
* The Ritz Brothers: Comedy series. 22 films with the original trio between 1934 and 1956.
* The rival 82nd Airborne Division were known as the "All-Americans," as when the division was originally raised, it was made up of soldiers from each of the then-48 states in the Union (hence the "AA" division patch).
* The Rival always chooses his starting Pokémon after you do, and systematically chooses the one whose type is strong against yours.
* The Rival and eventually decided outcomes before the fact were in response to boxing's own developments and popularity. On the other hand, boxing and pro wrestling were governed by the same athletic commissions in the USA prior to the National Wrestling Alliances's rise and remained governed by the same in Mexico even afterwards.
* The rival dealers have 2-3 appearances, have no lines and are killed off in their last appearance. But
* The Rival from the first season wears a long white tench coat obviously in contrast to Dan's nice jacket and Alice's coat thing, so Alice counts too with her yellow coat.
* The Rival: I'm not the main villain, but I hate stupid pathetic losers like you and would love to kick your ass at any chance! And more importantly, I want to prove I'm better than you!
* The Rival is one whose presence owes itself to the Lowered Standards.
* The Rival, Justine Courtney, has one as the centerpiece of her theme. It's used to reinforce her "holy" appearance.
* The RivalKaito's attitude is illustrated rather clearly in Episode 2, where he finds a young boy stuck in a tree and too scared to climb down. Kaito tells him that he can either jump down himself or stay in the tree all day; when the boy jumps, Kaito catches and congratulates him, saying that he can take care of himself from now on.
* The Rival Kikyo, who also uses the same style as the hero, their sword style is Yagyu Shinkage Ryuu, which is a real life swordsmanship school.
* The Rival: My old nemesis! Looks like we're gonna be competing regularly!
* The rivalry between Colgate University and Cornell University ice hockey teams often ends in this. Visiting Colgate ice hockey players are often pelted with toothpaste
* The rivalry between Huanni and their offshoot race the Falorians. Huanni are graceful and ethereal as well as emotionally expressive, Falorians are stockier, stoic, disciplined and historically a labour class.
* The rivalry between legendary basketball players Larry Bird and Earvin "Magic" Johnson is the ultimate example between athletes. After first meeting in college in the 1979 national championship game, Bird and Johnson revitalized the struggling NBA during the 1980s, meeting in the NBA Finals three times and winning a combined 8 NBA championships and 6 MVP awards between them. Their rivalry was a proxy for multiple cultural issues in the United States at the time: West Coast vs. East Coast, Hollywood glitz and glam vs. blue collar work ethic,
* The rivalry between mystics and regular military extends into the Empire's successor state,
* The rivalry between Springfield and Shelbyville, which can turn violent at times, is because Springfield built a mini-mall that was purposely larger than a

mini-mall Shelbyville built. Then, after Shelbyville made the world's largest pizza, Springfield burned down their city hall. Then Shelbyville spiked Springfield's water supply to get even. And on, and on, and on. Supposedly, the founders of the two towns, Jebediah Springfield and Shelbyville Manhattan, were once friends and partners, but broke into two factions simply because the former objected to the latter's desire to allow citizens
* The rivalry between Texas A&M University and the University of Texas has this vibe. A&M students seem to identify themselves more as "not Longhorns" than as "Aggies." Maybe a third of the t-shirts, bumper stickers, and other memorabilia sported by Aggies actually don't say "A&M" but bear anti-UT (which they call "t.u."—no caps—because it's just another "Texas university") slogans and logos (many with biblical references). The A&M fight song, for goodness sakes, is more about insulting UT than building up A&M. Yet UT students don't really think about A&M except when they have sporting matches scheduled—which is not often anymore, given that they are in two different conferences now.
* The rivalry between the Metropolitan Police and the City Police causes problems in the
* The rivalry between these two schools and the Air Force Academy is a lesser, but still strong, example, as is the Division III Secretaries Cup between the Coast Guard and Merchant Marine Academies.
* The rivalry between the Ultramarines (Tactics) and Alpha Legion (Strategy) could be seen as this. The Ultramarines Primarch Roboute Guilliman literally wrote the book on how to be a
* The Rivals. All the major characters either start out paired or pair up over the course of the play, except for Sir Lucius O'Trigger, one of the heroine's unsuccessful suitors, and Mrs. Malaprop, the heroine's maiden aunt. This leads another character to suggest that the two spares should pair up with each other, but Sir Lucius responds with disdain.
* The Rivals, first performed in 1775. Lydia likes the idea of being in love with a man her guardian disapproves of, so Captain Absolute courts her under the name "Ensign Beverly" and pretends to be a poor sailor. Later on, his father arranges for him to marry Lydia, who refuses because she's in love with "Beverly". To make things even more complicated, at one point Captain Absolute actually impersonates himself.
* The Rivals, in which all the major characters but two are already paired by the end as part of the story. This leads another character to suggest that spares Sir Lucius O'Trigger and Mrs. Malaprop pair up, but Sir Lucius responds with disdain.
* The Rivals Jack Absolute, who chose to woo her under an assumed identity because he spotted that she was a romantic and would never have given him a chance if she'd known how well-off he was. She spurns him when she finds out the truth, but realizes in the end that she loves him for himself, regardless of how wealthy he is.
* The Rivals of Sherlock Holmes, one episode adapts Robert Barr's "The Absent-Minded Coterie". The clever Mr. Macpherson becomes the equally clever Miss Mackail.
* The Rivals. Sir Anthony Absolute announces to his son Jack that he's arranged for him to be married to a wealthy heiress. Jack refuses to go along with the arrangement since he already loves Lydia. Then he finds out that Lydia is the wealthy heiress in question, and makes a show of allowing himself to be reluctantly persuaded.
* The Rivals, Sir Lucius writes a letter expressing his feelings for Lydia, and enlists her maid to deliver it discreetly; it leads to an ongoing correspondence. What he doesn't learn until the end of the play is that the maid played a prank on him and he's actually been corresponding with Lydia's battleaxe of an aunt.
* The Rivals, where Bob Acres is persuaded by peer pressure to challenge his romantic rival to a duel, but then immediately starts coming up with excuses to call the whole thing off.
* The Rival, the actress playing Amber Von Tussle has to be a good dancer, because it takes a lot of skill to trip consistently and safely.

* The Rival: They really want to beat the hero, but might treat everyone else okay.
* The Rival to established Top-40 station Z-100. Since then they've been bashing Z-100 constantly in commercials, including a shameless ripoff of Mac's "I'm a Mac, I'm a PC." ads, and a spot accusing them of supporting hip-hop artist and domestic violence accusee Chris Brown. If Z-100 has noticed, they have yet to show it.
* The Rival to Filia, has a symbiote who act as a rival to Samson: Leviathan, a snake-like creature who has a much friendlier relationship with his host than Samson does.
* The Rival wears a black suit and he also leaves behind red lightning when he runs. He also has dark orange highlights on the said suit.
* The River featured Thomas Breen as "Captain John", a man who lost a leg in World War I. Thomas Breen lost a leg fighting in Guam in 1944.
* The River God supposedly based in Egypt 1780 BCE, and follows a slave eunuch with magical powers.
* The River has an episode where Lincoln is dead and is brought back to life by a local ritual - but he's been possessed by the spirit of the Boiuna as a result.
* The River Ki born in the late 19th century. The novel starts with her marriage, whereupon she devotes herself fervently to serving her husband, his family, and their interests. She's highly cultured and graceful (also beautiful and tall), and quickly earns a reputation for tact and wisdom by serving as a matchmaker. She uses behind-the-scenes influence with great skill and energy to further her husband's political career. She's definitely strong and is compared to a river that swallows up all lesser tributaries. Hana finds this to be a fulfilling life. However, her rebellious daughter Fumio and her modern granddaughter Hanako don't share her values, and a major theme in the novel is Hana puzzling over, and partially coming to terms with, their alternate way of thinking. Hanako admires her grandmother but couldn't be her even if she wanted to: the social conditions for it don't exist in the post-war years.
* The Riverlands are home to Harrenhal, a castle built by the Ironborn during their occupation of the region. Though now a ruin, it remains the largest castle built in Westeros, but the day it was completed, the Targaryens invaded and roasted the Ironborn royal family inside. The
* The River Nymph, the male protagonist grows darker and darker in character as the titular riverboat goes ever farther up the Missouri River and into the wilderness of the American frontier.
* The Rivers of Zadaa, series, Bobby is rendered drooling and speechless at the sight of Loor in a red dress, the first time she's not wearing her fur-and-leather warrior garb.
* The River Wild is about a family whitewater rafting trip that becomes an increasingly desperate fight for survival against a criminal who takes them hostage and becomes more and more unhinged.
* The Rivieras are known almost solely for the widely covered "California Sun", which was a cover of Joe Jones (see the R&B page).
* The Riyria Revelations-inquisition, beholden only to the Patriarch and Sentinels.
* The Riyria Revelations them until the elves arranged a peace treaty to end the (to them) unbearable losses. As one of the main characters put it, "the elves were drowning in a floodtide of humanity."
* Therkla, a half-orc ninja. While the males of the orcs we see aren't exactly any more ugly, mishappen, or inhuman than the females, this could be a limitation of the art style.
* Therkla also joins this territory when she realizes that between the compelling arguments of Lawful Evil against Chaotic Good is a whole slew of inappropriate ego. So she tries to compromise hard.
* Therkla from the Kubota arc. Originally an assassin hired by Kubota to kill Elan and Hinjo so Kubota could take the throne of Azure City, Therkla instead ends up falling in love with Elan, causing her to turn against Kubota, who promptly poisons her to death.
* Therkla, Kubota's assassin, falls in love with Elan at first sight, writes about it in her journal, and is willing to betray her master if Elan will become her

boyfriend. Her prequel story shows that she is an avid reader of trashy romance novels, even though her job rarely gives her time to read them before someone else spoils her.
* Therkla. She's only in the comic briefly, but she's more or less every negative stereotype of modern teenage girls in the form of a half-orc Ninja: she compromises her mission because she has a crush on a boy, she's overly dramatic about her home life (treating the fact that her parents are
* Therkla that he's "Grade-A, lock-the-bathroom-door, 'No, Ma, I'm just taking a long shower,' fantasy material."
* Therkla, though Kubota surrenders before Elan can actually kill him: "You were her captain... now you're going down with her ship."
* The RL-10 rocket engine family, used as an upper stage engine for space vehicles. There have been upgrades, but the same general design has been in use since 1962, and is still fling today. It's engine cycle probably explains why: in a so called expander cycle engine, hydrogen fuel is used to cool the rocket nozzle, and the heated and evaporated hydrogen drives the turbines that pump fuel into the rocket. This type of cycle with this type of fuel, under the right conditions, has a lot of engineering advantages that are hard to beat, so the same basic design can last a long time. (above a certain thrust, expander cycles don't produce enough power to pump enough fuel, so other fuel cycles are used instead which require better technology and more work to develop.)
* Thermae Romae: After being transported to modern-day Japan, Lucius finds himself inexplicably compelled to do this.
* Thermae Romae doesn't have a person that gives technology to Lucius as he just randomly timetravels to modern Japan, but other than that, this story fits this trope as Lucius sees Japanese bathing culture and designs his own baths for the people.
* Thermae Romae is about an Ancient Roman architect called Lucius who gets magically transported to modern day Japan via a time traveling spa house. Fortunately he can travel back the same way after spending time messing around with modern technology.
* Thermae Romae there is a portal between a modern day bathhouse in Japan and a spa in Ancient Rome.

* Thermal Physics moment when the reader is instructed to do the problem "carefully and honestly." Many a physics student has probably had a WTF moment there.
* Thermite Grenades are designed for this. Not actually used in combat, they allow for combat engineers to disable allied equipment they have to abandon, or to permanently disable enemy equipment. One of these stuck in an engine block can melt it almost completely.
* Thermite has temperature-based powers; he has to always wear his costume and regulator pack to keep them in check.
* Thermoelectric cells and reactive braking allow many modern vehicles to get energy "for free" from what otherwise would be waste energy. A number of advertisements have specifically played off of the perpetual motion idea.
* Thermographic "vision" is found in pit vipers, many boas and pythons, and vampire bats.
* Thermometer: if they don't defeat Thrax before Frank's core body temperature hits lethal levels, the entire "city" of sentient cells dies.
* Thermopod's Remorhaz. This one actually has a plentiful supply of caribou and goblins to feed on, though.
* ThermoSpa hottubs say that you can own a hottub for about $1.50 a day. That may be true, but there's still the big upfront fee associated with buying the hottub (especially one with all the bells and whistles), no matter how low-maintenance it might be.
* Thermos (temperature-regulating vacuum flasks): In the company's early years (1910-1922), the Thermos company deliberately invoked the trope since they felt it was basically free advertising. They changed their mind by 1923 as the vacuum flask

market grew, registering their trademark, protesting against dictionaries that included "thermos" as a generic word and even employing a clipping service to find and squash unauthorized usages. This effort was all for naught, however, following a 1958 lawsuit against Aladdin Industries for marketing "thermos bottles", which ended in 1962 with a judge ruling that "thermos" was generic due to the company's failure to defend the trademark. The company still retains the trademark in some countries.
* Therns physically resemble humans the closest out of all other Martian races, who either have exotic skin coloring or are straight up monstrous. So much so that the main protagonist, a human from Earth, is mistaken for one by other people. The Tarids from Thuria also qualify.
* Therns. They had used their power to manipulate the people of Barsoom for ages and change the course of their history to serve their own ends, and it's implied they have done so to many other worlds in the past.
* The Road: As with the book, nearly all life on Earth has been destroyed by an unspecified cataclysm, and the father and son protagonists must search through the ashes for what little supplies remain while evading cannibal gangs.

* The Road. For most of the story, no one ever has their name mentioned. The main characters are simply referred to as "the Man" and "the Boy". That is, until they encounter an old man whose name is Ely... but then it turns out that Ely is a pseudonym, and he doesn't give away his real name. Neither do any of the other characters they meet in the rest of the story.
* "The Road Goes On Forever" by The Highwaymen is about the start of the relationship of an outlaw couple. However, things go seriously awry on their first job, leaving the guy under arrest and the girl on the run.
* The Road has a boy and a man heading south to get to a warmer climate. Of course, this place doesn't exist.
* The Road Home It is generally considered to represent Poland - the story was loosely based on accounts of Polish migrant labourers - but doesn't resemble it very much.
* The Road Home, Lt. Rebecca Phillips, a young Army nurse serving in Vietnam, is constantly being reprimanded for wearing sneakers with her uniform. It turns out that she isn't trying to disregard orders but that the boots are only men's sizes and she's a fairly small woman.
* The Road is about a father and son as they travel south during what is suspected to be a nuclear winter. The father and son are all they have left.

* The Road Not Taken specifically calls out that she's saluting Ro's rank.
* The road panel is labeled in french with "chaussée déformée" (uneven road surface) and "interdit aux nomades et campeurs" (forbidden for gypsies and campers).
* The Roadrunner always runs like this. Even the Coyote is seen this way sometimes.
* The Road Runner and Coyote lampshades this trope in a cartoon where they use signs to communicate the same thing.
* The Road Runner holds up a sign that says "Here we go again" at the end of "Wild About Hurry" when the Coyote's indestructible steel ball returns and goes through the same hell he went through the first time around.

* The Road Runner is an odd example. While he does occasionally tease the Coyote who's trying to catch him, he very rarely has to actually
* The Road Runner is one of the most iconic Hero Antagonist of Western Animation; the shorts granted little character to the bird outside his fast speed and his trademark "Beep Beep", and all sympathetic spotlight was deliberately kept on its predator, Wile E. Coyote.
* The Road Runner's "Beep-Beep" is just as often quoted as "Meep-Meep" due to how it sounds phonetically.
* The road running from Fort Irwin (California) to Barstow, the nearest town, has a sign reading: "This road is deceptively dangerous. It has killed __ injured __ this year. Please drive carefully." For symbolic effect, the sign includes a "map" of the road — pictured as a rattlesnake with a lane divider running down its back.

* The Road, the violence is cringe-inducing and unglamorous, even (or especially) when done by the hero.
* The Road to Avalon has no magical elements except for Arthur and Morgan (portrayed as Arthur's friend) sharing a telepathic link. Merlin is a Roman-trained engineer.
* The Road to be a Pokemon Master. Hurt Ash, and she won't hesitate to return that harm multiplied by ten.
* The Road to be a Pokemon Master, when May asked Ash why does he feels the need to stop Teams Aqua and Magma personally instead of letting the authorities handle them, Ash tells her about his past with Team Rocket and how much they made his friends and family suffer, and thus he can't stand the thought of more criminal organizations running unopposed.
* The Road to be a Pokemon Master, while not a couple at that point yet, Ash and Serena do have one in Cinnabar Island's Theme Park.
* The Road To Damascus each time. When he finally realizes that their claim to his loyalty is invalid, his first act is to shoot the medals off with one of his antipersonnel turrets.
* The Road to El Dorado. After being asked for a show of godly power, they get into an argument. As their fighting builds to a peak, a nearby volcano starts to erupt, only to abruptly stop just as Tulio yells "STOP!" at Miguel.
* The Road to El Dorado: After sealing off the entrance to El Dorado so Cortez can't get to it, Miguel, Tulio and Chel ride off into the sunset in search of their next adventure.
* The Road to El Dorado all gasp and whisper "El Dorado!" simultaneously.
* The Road to El Dorado and make them into main characters instead of putting them in their normal sidekick role. While the bigger plot revolves around Cortez seeking conquer the New World, which runs parallel to Miguel and Tulio's quest to find El Dorado.
* The Road to El Dorado. And the funny thing is that Tzekel-Kan did it accidentally since he didn't really doubt about their divinity so far and merely wanted them to act like proper gods.
* The Road to El Dorado are a pair of Spanish con artists who upon washing ashore in the New World are mistaken as gods by the local people of El Dorado. While mostly just in it for the gold, their tenure as "gods" is mostly benevolent (if a little eccentric).
* The Road to El Dorado asked to perform their dialogue together. The result was a very natural (and very funny) banter.
* The Road to El Dorado, at one point, a giant statue is brought to life and has Tron Lines.

* The Road to El Dorado break up because Tulio falls in love with local girl Chel. They get better.
* The Road to El Dorado Chel doesn't wear much, though it's downplayed.
* The Road to El Dorado- Chel's tube top and form-fitting skirt were quite risqué for an early 2000s animated film. She is fondly remembered for this reason.
* The Road to El Dorado: Con artists-cum-explorers Tulio and Miguel allow the residents of the titular city of gold to believe they are incarnations of the gods that built the city. (This is based on myths about Aztecs' first contact with the Europeans; in reality, they probably weren't fooled for a second.)
* The Road to El Dorado did a scratch track as Cortes but the filmmakers liked his work and kept it in the final cut.
* The Road to El Dorado: During the number "The Trail We Blaze", the heroes go skinny dipping and their clothes are stolen by monkeys.
* The Road to El Dorado, early on, Tulio and Miguel are being chased by soldiers, and need to jump off a ledge, and Miguel spots two barrels.
* The Road to El Dorado, establishing their status as partners in crime.
* The Road to El Dorado, exiled ex-High Priest Tzekel-Kan is planning on revealing his city of gold to appease the recently arrived gang led by Cortez. Upon learning of this, Tulio and Miguel devise a plan that would bury the entrace to the city behind rubble, which would have the drawback of preventing them from ever returning as well. Their plan succeeds, and Tzekel-Kan is taken for being a "lying heathen", with nothing to show for his claims.
* The Road to El Dorado has a midriff baring top that hardly covers her breasts.
* The Road to El Dorado has some of the same problems, the most obvious being the "To Xibalba" sequence (all gold in the movie is CG) and the barrels being lifted onto the ship. While a special program was written to make all gold look golden and not just yellow, making it a style choice, the barrels aren't even cel-shaded.
* The Road to El Dorado has the heroes doing this during a montage; naturally, their clothes are stolen by monkeys.
* The Road to El Dorado have a short one; they use it to seal the promise that "Chel is off-limits." Not that it lasted long.
* The Road to El Dorado. His actual title is High Priest and is more of a rival authority figure, but he's a major advisor to the ruler of El Dorado and is scheming to take it over.
* The Road to El Dorado implies that this has more to do with his biology than his eating and exercise habits.
* The Road to El Dorado is a male version, despite being a thief for a living. His lack of actual innocence is made up for by his genuine sweetness and optimism about the world in general. Overall he's a really good person who isn't above using puppy eyes to get his way.
* The Road to El Dorado is bitten in the rear by a jumping piranha in the "traveling the jungle" montage. He also claimed to suffer the same treatment from Altivo the horse.
* The Road to El Dorado make landfall somewhere on the Yucatan Peninsula, they discover on the sandy beach two skeletons, each with glaring evidence of a violent demise. One has a sword through his rib cage, the other has an axe-like implement embedded in his skull.
* The Road to El Dorado: Miguel decides to stay in El Dorado ("isn't king kind of a step-down from god?") but at the last second he has to jump onboard Tulio's ship to help him make a clean getaway (they were sealing the city as they left because a conquistador was on his way). Regardless, they decide to blaze another trail in America instead of returning to Europe.
* The Road to El Dorado, Miguel has a tendency to play background music on a lute. Also, Chel hums the theme to El Dorado while offering to help Miguel and Tulio. When Miguel wants to go and wander the city, the song starts to swell, but Tulio cuts it sharply when telling him not to go out.
* The Road to El Dorado over a decade it came out in theaters and many people just watch it just to see where the quotes came from.

* The Road to El Dorado. Protagonists Tulio and Miguel deliberately use Flynning to stage a pantomime street-fight (with rapiers; the classic duelling weapon) to divert attention from their con-tricks, in a manner that suggests they've done it before. Once out of trouble, they announce:
* The Road to El Dorado she is seen being chased by the guards when Tulio and Miguel first meet her. This was cut out of the film for being too dark, but was left in some promotional media like the tie-in book on tape.
* The Road to El Dorado status.) Kevin Koch, an assistant animator, cited this trope as part of the reason for the film's lack of success:
* The Road to El Dorado to collapse the city entrance, hiding it from outsiders.
* The Road to El Dorado Tulio and Chel are both cunning and practical con artists.
* The Road to El Dorado, Tulio decides to save time by walking through a pond. Cut to Miguel pulling leeches off his back.
* The Road to El Dorado Tulio exclaims "Holy...Ship!" as a boat appears and nearly runs over his raft. Of course, as a ship of the conquistadors, it literally WAS a Holy Ship...
* The Road to El Dorado Tulio notices this and promptly asks her if she minds, which she replies, "No." She eventually does reluctantly leave, but not without taking a good long look at them first.
* The Road to El Dorado when Tulio and Miguel first set off to find the treasure.
* The Road to El Dorado, when Tulio asks why Chel would help him and Miguel steal from her own people, she says, "You've got your reasons, and I have mine." Originally, there was going to be a scene of her almost getting sacrificed to the gods, and then escaping. This is why she is seen being chased by the guards when Tulio and Miguel first meet her. This was cut out of the film for being too dark, but was left in some promotional media, like the tie-in book on tape.
* The Road to El Dorado yells "STOP!", just as an erupting volcano becomes dormant in the background.
* The "Road To Health" booklet issued by the South African Department of Health. It included this advice on how to start your child on solid foods:
* The Road to Hell... and killing anyone on his orders. Many of them also have their own friends and/or family that they care deeply about.
* The Road to Hell... die, and they won't be praised as heroes afterwards. Harvon agrees to start a rebellion regardless.
* The Road to Hell... has awful breath. Krun goes as far as telling the orc that he'd be fine having his nose cut off just so he doesn't have to smell his breath anymore.
* The Road to Hell... has Gurchun getting killed after Jervow maims his face, followed by him inserting a claymore into his rectum.
* The Road to Hell... has Shurrmvin and Jervow, the former of whom had a boyfriend prior to his death.
* The Road to Hell... lives in one, and it's filled with prisoners and other victims that he mutilates on a daily basis for his own pleasure.
* The Road to Hell..., which Torgash mentions has happened multiple times in orc history.
* The Road To Oz Dorothy and company encounter the Scoodlers who capture them for soup. Although they escape without ever actually going in to the cauldron, they do see the Scoodlers preparing the cauldron and discussing what vegetables to use.
* The Road to Oz, Dorothy, Toto, Button-Bright, Polychrome, and the Shaggy Man travel across the Deadly Desert to Oz in a "sand boat", which is described as "a sleigh with sails and a rudder".
* The Road to Oz is a stellar example of this trope, especially given that his tendency to get lost often leads the other characters to places or objects they need in order to solve a larger problem.
* "The Road to Rupert": In addition to not only doing nothing to stop Peter, Quagmire, and Cleveland from annoying Meg during her driving test, he joins in the "fun."
* The Road to Shalka (at least for the guy who gets dizzy if he tries to walk in a straight line).

* "The Road to Thunder Bay" by Stompin' Tom Connors tells of a driver picking up a "young man with a small blue guitar," and carrying him on some distance down the road before coming to a wreck where a man of the same description died, not much earlier. The apparition disappears, but the ghost's song lingers as the narrator drives on.
* The Road to True Love which covers parts of Snow White and Prince Charming's story.
* The Road to Wellville, a group of somewhat shady businessmen try to produce a new brand of cornflakes, in competition with the very John Kellogg. Since their... products are anything but tasty, they feed them to some pigs. Who won't eat it either.
* The Road to Wellville tells the story of Dr John Harvey Kellogg (he of the cornflakes) through the eyes of one of his long-suffering patients.
* "The Road to Whateley", part 3, we get some flashbacks which set up the conflict between the Witch Queen and her longtime rival Sycorax. It isn't really a full Start of Darkness for either of them, but it does give us the background of their feud.
* The Road Virus Heads North gets steadily nastier as the changes continue.
* The Roadwarrior. After Max drives the big rig into the compound, their mechanic looks it over and relays a long list of mechanical faults which are promptly shouted up to Pappagallo.
* The Road Warrior is the masked behemoth leading a band in the wastelands.
* The Road Warrior. Not exactly censoring anything, since it shows the limp body being thrown over the wall immediately afterwards.
* The Road Warrior qualifies (described as fertile place of plenty, with "nothing to do but breed"). It's never revealed whether or not their destination fits this exact description, but since the narrator (who's actually the Feral Kid as an old man) reveals that the villagers successfully built a mighty tribe with the Gyro Captain as their new leader, it can be assumed that their new home was at least better than the one they left.

* The Road Warrior Wez encounters Max again after their opening car chase.
* The Road. What brought upon the end of the world is never really stated; theories ranging from asteroid impact to a nuclear war have been brought to the front. Whatever it was, it is of little consequence to the characters, who will be dead anyways at some point as the biosphere is now dead.
* The Road, women held underground are discovered briefly. The women are members of a group of individuals who are being held in a bunker by cannibals. When the main character discovers these Bunker Women, he is shocked, but ultimately powerless to save them and he quickly leaves them behind.
* The Road You Choose features Ash and Misty's impromptu elopement when the battle to determine whether Misty becomes a Water-type Master is postponed.

* The Roaring '20s, but also resembles cosmopolitan Asian city-states like Hong Kong and Singapore. The giant statue of Aang in the harbour is a clear parallel to the Statue of Liberty in New York.
* The Roaring '20s, Chiang continued his purging ways on the native Taiwanese population, establishing the second longest period of martial law in history, and

installed another one-party military dictatorship that thawed out with his death. Although the worst atrocities committed on local Taiwanese lasted from the early years of KMT occupation from 1945 to 1947, with the KMT beginning a legacy of good governance after 1949, the purges continued, with even teenagers being hauled off to labor camps and imprisoned for life for reading banned books. Martial law was ultimately ended by Chiang Kai-shek's son, Chiang Ching-kuo, in the 1980s.
* The Roaring '20s: Due to the turbulence of the Great Depression and Second World War, the 1920s gained a reputation as a more peaceful time and became the decade for nostalgia.
* The Roaring '20s. Even the days of jazz and bootleg booze got their slice of the cake in this heavily nostalgic decade.

* The Roaring '20s. Oddly enough, the statue also appears at Tokyo DisneySea and Shanghai Disneyland.
* The Roaring '20s than in the real world. Seventy years before the real world 1920s, the first ironclads hadn't even come off the drawing board, and tanks were decades away.
* The Roaring '20s. There is concern about media not concentrating on facts and becoming too sensationalist.
* The Roaring Girl features one of these as a protagonist; unlike the cross-dressing heroines of Shakespeare's plays, though, she isn't disguised, and everyone in the play knows her real sex — she just likes dressing like a man. (The real person she is based on was slightly less wholesome.)
* The Roaring Twenties (1939) starring James Cagney came out in the late 30s. They didn't even try. Literally, it was a conscious decision not to recreate the actual look of the actual 20s. The two female leads sport some fashion elements of the '20s, but overall still look like they're from the '30s.

However the roasters get more mileage out of hazing MySpace instead, and MySpace himself derails the Roast completely when own his set falls flat.
* The Roast of HBO... which lasts for the first three jokes. After that it quickly becomes everyone roasting everyone else.
* The Roast of Mario, most characters who talks about Mario usually directs theirs jokes towards Luigi, who continues drinking more liquor until he gets fed up with it and throws a tantrum.
* The Roast of Weed by alcohol, cigarette, cocaine, and other drugs associated with them.
* The Roast satirising speculation about cuts to the civil service. A boy explains he dreams of being a bureaucrat to his gruff, Northern father, who shuts him down, insisting he'll be a ballet dancer - as being a civil servant "just isn't a secure job."
* The Robber Bridegroom, according to the song "Once Upon the Natchez Trace," the moon had this reaction to Rosamund's beauty.
* The Robber Bride, Tony used to read fairy tales to her goddaughters, Roz's twin girls, when they were young; the twins insisted that all characters were female regardless of how this impacted the story. It's from this - changing "The Robber Bridegroom" - that the title comes. (Incidentally, in the "new and improved" version of the fairy tale, the victim is still a woman, echoing the narrative of the novel.)

* The Robe and she's referring to this trope. Even though she's been promised to the future emperor Caligula, Diana would prefer to keep her oath to Marcellus instead.
* The Ro-Bear Berbils seems to be space-colonists from the Sugar Bowl and true to their nature, they've set up a little piece of Sugar Bowl right in the middle of the mutant-infested swampland of Third Earth. A place filled with houses shaped like giant, pink mushrooms, where candy-canes grow in orchards. They also talk like Smurfs, and all have names starting with a B. Isn't that right, Ro-Bear Bill? Berbil-fruit, anyone?

* The Robots of Death, either due to standard changes in the intervening eleven years or the unresolved cliffhanger.
* "The Robots of Death" establishes that this monotone has become fashionable for humans to affect, especially those of upper classes.
* The Robots of Death" has an utter howler when a character shows up to watch the Doctor being tortured, who was last encountered having been strangled to death.
* "The Robots of Death" in-universe. In particular, a delusional man who identifies with robots paints his face to more closely resemble the stylised faces of the robots — literally using makeup to make himself resemble a being that causes an in-universe uncanny valley effect.
* "The Robots of Death", likewise the mastermind behind reprogramming them is revealed early on. The mystery is trying to figure out which of the crew, is them in disguise.
* "The Robots of Death", the eponymous robots' eyes are filled with red static when they prepare to kill.
* The Robots of Death (The Fourth Doctor), Louise Jameson (Leela), Pamela Salem (Toos) and serial director Michael E. Briant.
* The Robots of Death" turns Uvanov, Borg, Cass and Dask into women. One would think that this was being done to obscure which character is secretly the pro-robotist terrorist Taren Capel, but the main characters refer to Taren as 'she' from the beginning. Another side effect of this is that it means the only surviving male character of the story is Poul (who exists as a gibbering vegetable).
* "The Robots of Death" uses this as an intentional homage to the 1920s and 30s science fiction the story is based on, with the sets, robots and human costumes all fitting a distinctive Art Deco aesthetic.
* The Robots of Death", while he comfortably confronts the robots and murderers, the thought of what may result from robot terrorism seems to genuinely scare him.
* The robots of Robotorama, Robopolis' sunken predecessor city, had been instead created with evolving AI so as to be educated... Prompting Mickey to react in horror, as he could easily imagine what could have happened if one or more of said robots were raised by a villain. That's before finding out that Nemo, one of Robotorama's AIs, survived the sinking of the city and had been visited by a pirate that corrupted it, and has allied itself with

* "The Robot": With the cleaning robot about to grab and suck away Garfield
* The robot wives in both versions are forced into different outfits than they normally wear. In the original film, it worked because Joanna, Bobbie, etc were already very good looking beforehand - and they were forced into 1950s style dresses with too much make-up. The implication was that they looked like porcelain dolls. But in the remake, Joanna spends most of the film with a hairstyle that doesn't suit her and Bobbie is likewise dressed down - making the robot transformations come across as

* The Roboutian Heresy, the forces of the Adeptus Mechanicus have been fighting against the surviving elements of the Dark Mechanicum under the surface of Mars since the end of the Heresy.
* The Roboutian Heresy: The Salamanders are themed after them, being proud, loot-obsessed conquerors who pillage and dominate largely to prove they can. Their Daemon Primarch, Vulkan, has taken the form of a great black dragon after his ascension, and the Dragon Warriors take similar forms.

* The Roches. They began by simply singing their names: "We are Maggie and Terre and Suzzy Roche."
* The Rock. 6'5", muscled like a comic book superhero; and impossibly charming and friendly, widely considered one of the nicest guys in show business.
* The Rock actually agree that the way the government treated his soldiers is inexcusable and Hummel has every right to be pissed of, even though the means he's using to force the government to change their minds is wrong.
* The Rock actually was filmed in San Francisco and Alcatraz Prison on Alcatraz Island itself. Since the prison is a designated national park, they couldn't close it for production, so they needed to accommodate the tourists there.
* "The Rockafeller Skank", in addition to the repeated "Funk Soul Brother" sample throughout the song, ends with "rarararararararararararararara..." to fool the listener into thinking
* The Rock-afire Explosion ended with "The Rolfe and Earle Show", which was a series of flashbacks hosted by Rolfe and Earl, all while they revealed that Chuck E. Cheese and his friends would be gaining control of that location. All this was going on while staff were removing the animatronics and refitting them to be Chuck and company behind curtains on a nightly basis.
* The Rock-afire Explosion. Rolfe DeWolfe, Mitzi Mozzarella, and Beach Bear seem to be the most popular RAE members among furries.
* The Rock (already the longest-reigning WWE Champion since the Hulkamania heyday)

* The Rock And his movies still get a return to cover every expense and justify a sequel.
* The Rock, and "John Mason" is simply an alias he is using during the events of the plot.
* The Rock and Roll Hall of Fame and Museum started out as a glass pyramid, and then was expanded upon.
* The Rock; as he was WWF Champion at the time, he would retain his title in the event of a draw (a convention which has been retained since).
* The Rock asks somebody a question, he cuts them off before they can give him an answer.
* The Rock. At first, anyway, because as the action intensifies, Goodspeed gradually starts using actual swear words.
* The Rock at the 1998 Royal Rumble. He hit Shamrock with brass knuckles, and then hid them in Shamrock's tights. Shamrock eventually won the match, but the Rock claimed he had been hit with a foreign object. The referee searched Shamrock, found the knuckles and reversed the decision.
* The Rock: At the end, Stanley Goodspeed claims that John Mason was caught in a missile blast and either vaporized or blown to sea. When this report is made, Mason is standing right next to Goodspeed, totally unharmed. Mason then uses the report of his death to allow him to start a new life.
* The rock band Clutch has been a mainstay on the indie touring scene for nearly 30 years, with over a dozen albums to their credit. In that time they've only had 3 singles on any chart, with the best peaking at #24 on the Mainstream Rock chart.
* The Rock. Booked as a heel as part of an attempt of a nWo resurrection, the Toronto crowd decided they just didn't want to boo the legendary Hulkster. They cheered Hogan and booed The Rock. The Rock switched on the fly, wrestling a more heel style than he'd planned once the crowd turned on him. The next night, also in Toronto, Hogan cut a promo thanking the fans, who at times drowned him out with their ovation. Shortly thereafter Hall and Nash turned on him, and he started coming out in his signature red and yellow to "Real American" once again. He enjoyed a short resurgence and even recaptured the WWE World Title from Triple H in 2002. He briefly left WWE in 2003 after a contract dispute, but returned in 2005 and finished up with WWE in 2007. His in-ring career ended shortly thereafter.
* The Rock, buying them all expensive gifts so they could look the part like him.
* The Rock Cocks, Coral and Clover reveal that they got married at Melody Faire's clothing-optional resort to have their own clothing-optional wedding. They enjoyed their stay so much that they decided to stay indefinitely as employees.
* The Rock Cocks, Elizabeth Santos has a crush on her oblivious boss, Seth Sterling but he's gay.
* The Rock: Debuted in 1996, peaked in 1998, and then became one of the most celebrated wrestlers of all time.
* The Rock does the self-administered version to counter the effects of poison gas. At least he uses the right drug. Rather than epinephrine, he injects atropine, which along with pralidoxime and possibly diazepam is the correct treatment. Just not directly to the heart.
* The Rocket Boy has the hero lie about what was guarding the nest, since he wanted to sound like he did something more impressive than destroy a recording. He described a large orange spiky reptile, which then appeared after finishing his boast.
* The Rocketdyne F-1 (the engine that powered the Saturn V rockets) to every U.S. rocket engine since then. It was so powerful that the first examples built, scaled up from existing rocket designs, were unable to stand up to the force they were delivering and literally ripped themselves apart on the test stand. To test their stabilizing capabilities, NASA essentially built a grenade launcher to fire

explosives into the rocket plume while the engine was running. Each individual flying F-1 engine was hand-built and hand-tuned, making the whole production run of fifty engines a series of Super Prototypes designed to work with four other Super Prototypes in concert.
* The Rocketeer and a justification for his climactic showdown with the hero.
* The Rocketeer and shut off the jetpack by accidentally hitting his throttle button (indicated by an audible "buzz") on his helmet when he attempts a patriotic salute.
* The Rocketeer as a prototype rocket pilot appearing in a top secret Luftwaffe documentary smuggled out of Germany.
* The Rocketeer as the vanguard of an invasion force against America. Especially chilling considering that the movie was a Disney Studios production!
* The Rocketeer came out in July 2020, months before their respective holiday seasons.
* The Rocketeer Cliff buzzes a road which happens to have a shooting chase between mobsters and the police. One of the mobsters sees the plane and shoots at it, damaging its engine and controls.
* The Rocketeer crashes into the tail end of the famous "Hollywoodland" sign, turning it into the rather more famous "Hollywood" sign.
* The Rocketeer flight with the jetpack, which ended with a crash-landing in a lake, Cliff simply says "I like it!" when Peevey finds him.
* The Rocketeer found an audience among genre fans at home after its box office failure, it turns out the wave of period adventures failed to resonate with younger audiences who had no interest in said properties.
* The Rocketeer has movie star Neville Sinclair hearing Cliff Secord tell his actress girlfriend Jenny Blake about the rocketpack Sinclair is looking for.
* The Rocketeer. However, he is impressed when he finds out the pack not only survived, but was improved upon by the mechanic who found it.
* The Rocketeer: In "Hypnotic Hughesville", The Great Orsino has this reaction upon learning chickens are his assistant Deany's favorite animal.
* The Rocketeer: In "Rocketeer Day", Sylvester Slapdash disguises himself as the original Rocketeer and has to come up with a name. Upon looking at a chicken and the picture of a barn, he comes up with "Chick Barnes".
* The Rocketeer: In "Save the Statue", Harley believes she can fly a plane because she saw somebody doing it in a movie.
* The Rocketeer: In "Save the Statue", Harley has Laura dress up like a baby as part of a plan to steal the money meant to repair the original Rocketeer's statue.
* The Rocketeer: In "Sitti's Visit", Cast-Iron Chef steals a list of ingredients Kit's Mom bought for the Bulldog Cafe and mistakes it for a recipe. He's called out for believing a recipe would use such a big amount of yeast.
* The Rocketeer is a Caucasian girl of Italian, Chinese, and Taiwanese ancestry.
* The Rocketeer , Kit becomes the titular hero, and the only ones who know are her Grandpa Ambrose, her dog Butch, and her best friend Tesh.
* The Rocketeer, Neville Sinclair gloats about this when his gangster henchman threatens to squeal:
* The Rocketeer: Neville Sinclair's role in movies is that of a Flynn-type action hero. As such, he engages in this kind of swordplay with one of his costars. However, he "accidentally" stabs said costar for upstaging him.
* The Rocketeer, Neville Sinclair steals the rocket pack but ends up crashing into the "HOLLYWOODLAND" sign and exploding, converting it into the now-famous "HOLLYWOOD" sign.
* The Rocketeer on the radio while sipping tea from a dainty floral-patterned cup.
* The Rocketeer. Sinclair's swashbuckling smile vanishes and the music comes to an instant stop.
* The Rocketeer: The US hasn't entered WWII yet due to the war having not started yet, but the Nazis already plan on invading utilizing stolen jetpack designs invented by Howard Hughes.
* The Rocketeer this by suggesting that the alcohol-based fuel will result in a cooler flame (which is true)— but said fuel will not produce nearly enough

energy. Points for trying, though. In fact, the Rocketeer is flat-out bizarrely inconsistent about this — in one scene, the jets set fire to the set, but in another a sheet is directly exposed to the flames for several seconds without even being singed.
* The Rocketeer to escape, the rocket exhaust ignites the fuel from the leak and turns the device into a bomb.
* The Rocketeer uses a match to verify the identity of his sleeping victim, and the light gives the audience the first good look at him.
* The Rocketeer was slated to premiere in January 2020, but it got bumped two months ahead to November 2019.
* The Rocketeer were the biggest names in the cast overall, and the latter of whom was playing the villain.
* The Rocketeer when he's at the South Seas Club, where his girlfriend Jenny is with Neville Sinclair, who's looking for the rocketpack. He "accidentally" spills some champagne on Jenny just before she tells Neville about him and how he's got the rocketpack.
* The Rocket. It's an exaggeration of how it went in real life; while Bob Dill was an aggressive player and did get his ass handed to him, it wasn't really a curb-stomp and he wasn't specifically picked to target Richard.
* The rocket launcher also fires backward, though it doesn't hit the player die to the silos sitting on the player's shoulder.
* The rocket launcher system of the same name was named after the song.
* The rocket launcher, the two-story house, America and the stage play were all invented by Shakespearicles, the strongest writer who ever lived.'
* The Rocketman is a prototype sea train that was too fast to control, meaning it was put aside in favor of the Puffing Tom. Kokoro and Iceberg put it to use when the Straw Hats need to catch up with the Puffing Tom, since the Rocketman is the only other sea train available.
* The Rocket Red Brigade served a similar purpose as Red Star except they were in
* The rocket turns around mid-flight to decelerate at the same rate for the second half of the trip. This requires turning off the engine and restarting it, which is the "intentional" part.
* The Rock Farmer's Daughters, Cheese Sandwich finds himself in awe when he witnesses Pinkamena smile for the first time in years.
* The Rock Farmer's Daughters: The epilogue is about Cheese and Pinkamena's wedding.
* The Rockford Files, a few of which were fairly popular but didn't crack the top ten.
* The Rockford Files but one episode subverts it. Throughout the entire episode, Beth Davenport is trying to clear her client on a murder charge while scared half to death by a stalker. It is theorized that the stalker is someone who is convinced of the guilt of her client, and wants her to be too distracted to possibly clear him. She clears him, but Jim discovers that not only was the client guilty, but he was also the stalker because he wanted to be able to request a mistrial if he was found guilty because his attorney was clearly distracted.
* The Rockford Files episode "The Empty Frame", Angel tells his brother-in-law "When it's in the immediate family it's not called blackmail. It's called family spirit."
* The Rockford Files episode "There's One in Every Port", Rockford is in the unenviable position of having to con a fellow conman, who is in turn running a con of his own against a third party. As a result, he has to come up with something the other guy hasn't seen before, which ends up being an odd three-layer con. He fakes like he's trying to steal his rival's mark, while allowing said pre-made fake mark to learn what he thinks is good blackmail material about the oil baron who Rockford is impersonating. Then he has some fake IRS agents rope the rival conman into a fake tax sting against his own mark, and allow him to hear said blackmail material when the mark attempts to use it against Rockford as the oil baron. Now the rival takes this information and attempts to use it against the real oil baron, and ends up buying a huge amount of stock at a steep discount (that way he gets money, but

cannot release the blackmail material easily because he has a financial stake himself). However, the stock certificate ends up being a fake. The second oil baron was also a fake, and yet another fake mark.
* The Rockford Files featured an insane doctor who arranged "accidental" deaths in order to obtain and sell the victims' organs for his wealthy clients. He tended to target victims with rare blood types.
* The Rockford Files featured Jim getting out of jail on a contempt of court charge due to issues with the subpoena that was used to get him to testify in the case where the charges occurred. It listed the wrong middle initial.
* The Rockford Files features the town of Pastoria, which traps wealthy travelers in the town, frames them for an absurd number of crimes, then convinces them to plea bargain and pay a large fine to the city instead of going to jail.
* The Rockford Files for Beth Davenport mysteriously vanishing before the police can see it.
* The Rockford Files had an episode where Jim and Rocky had invested in some boxer, and there was a fair amount of corruption surrounding his manager.
* The Rockford Files had Jim meeting an attractive blind psychologist. While she was technically only a temporary love interest, she does show up again in a later episode. Jim still held a flame for her, but she was engaged to another man.
* The Rockford Files. However, the interesting part was not the explosion, but rather Jim's attempt to explain what happened to his insurance agent.
* The Rockford Files. In the back story of the series, Jim Rockford was wrongly convicted of armed robbery and spent five years in prison before receiving a pardon.
* The Rockford Files in the credits—was the introduction to the episode, often leaving the audience with an idea of either the trouble Jim was up to or the personality of Jim's new client.
* The Rockford Files involved a robbery that was a few days away from its statute of limitations running out. Organized crime knew who the thief was and naturally tried to get their hands on half a million dollars that would very soon be clean.
* The Rockford Files involve elaborate cons to recover stolen money or avenge a wrong.
* The Rockford Files: Jim Rockford is friends with Sergeant Dennis Becker.
* The Rockford Files, Jim Rockford often finds matchbooks as clues. This is a 1970s show.
* The Rockford Files: Jim Rockford served during the Korean War and was awarded the Silver Star. The combat experience shows, as he's very calm under pressure and isn't intimidated by guns.
* The Rockford Files Jim Rockford, the clear hero, would always immediately request to speak to an attorney after being arrested. Conversely, total sleazeball Angel Martin always tried to talk immediately.
* The Rockford Files: Jim Rockford was given one of these before he opened his detective agency.
* The Rockford Files most notably in one episode where a man fakes his own death and splits the insurance money with his wife before they go their separate ways.
* The Rockford Files people in official positions often threaten to have Jim Rockford's private investigator's license reviewed to get him to cooperate.
* The Rockford Files seemed to do this a lot, but all shows about private detectives will do one eventually.
* The Rockford Files whether it's a relative of the accused or Jim's attorney friend Beth Davenport requesting that Jim clears an innocent person's name.
* The Rockford Files, which satirize the image of the two-fisted Manly Man private investigator.
* The Rock, General Hummel threatens to unleash rockets filled with VX gas on San Francisco if his demands are not met. When his deadline passes, he launches one of the rockets towards a nearby NFL stadium... only for it to land harmlessly in San Francisco Bay. When his Marines question what happened, he reveals that it was all a bluff.
* The Rock, Gen. Hummell leaves his Medal of Honor at his wife's gravesite. He's

also mentioned as having three Purple Hearts and two Silver Stars.
* The rock giant Paddington Rumblebottom the Third from the webcomic
* The Rock. Goodspeed's assistant inadvertently triggers a time bomb loaded with corrosive gas. Goodspeed immediately sets to work rapidly clipping wires to defuse it while ignoring his colleagues telling him to inject himself with antidote first.
* The Rock has the SEAL team leader brief first the Washington bigwigs on the overall plan, and later his team (plus Mason and Goodspeed) on the details.
* The Rock hated — had his main event push come at a later date, the fans probably wouldn't have reacted so bad. However, his character was so mishandled by management, that since fans can't boo any officials besides the McMahons, who are heels anyway, he's the one who had to take the brunt of the rage.
* The Rock". "Helen Franklin" explains why he didn't arrest Leon even after his incessant offers of bizarre sexual acts.
* The Rock, he played a Marine general who was famous for his black ops exploits in 1960's southeast Asia.
* The Rock, he unexpectedly got a lot of boos and "Rocky sucks!" chants (he was also booed at the last Wrestlemania, but that was against Stone Cold in Texas, so it's understandable). Given how popular The Rock is supposed to be, it came as a shock that people would boo him over the heel, Hogan. The Rock later used this as partial reasoning for turning heel the next year where he defeated both Hogan AND Austin in back-to-back PPV's.
* The Rock: "I have some bad news, and some really bad news! The bad news is that the gas is corrosive and its eating our suits. The really bad news is there is enough C-4 explosive and poison gas to blow the whole chamber and everyone in the building!"
* The Rock in 2008 and in-ring since 2004. Became a ten time World Champion in 2013.
* The Rock-It Launcher is the coolest of the bunch, and relatively efficient in that it can load any random junk and deal a hefty punch with it. It also suffers in that before a player can build one, they must first buy rather expensive plans. By the time most players have enough caps to make the purchase they have normally killed, looted and leveled enough that they now own more conventional weapons then they know what to do with.
* The Rock-It Launcher's swole successor, the Junk Jet. Ever beanbagged a Super Mutant to death with pillows?
* The Rock love triangle in early 2012, Rock pointed out that Cena is married in real life.
* The Rock, Mason yells "I hope you're insured!" out the window of a car he has stolen just after having crashed into another car.
* The Rock 'n' Roll Express are still wrestling and training at 61 and 63 respectively.
* The Rock 'n' Roll Express proclaimed Ricky Morton's father was a "drunk alcoholic".
* The Rock 'n' Roll Express the name and thought it was the worst name he had ever heard and that they'd use it for one night but would try to come up with something better. As all those screaming girl fans shouting "ROCK N ROLL! ROCK N ROLL! ROCK N ROLL!" proved, he was wrong.
* The Rock 'n' Roll Express underdog pretty-boy babyface team of the 80s, and inspired MANY imitations.
* The Rock of Eternity is in between dimensions, and serves as, basically, the ultimate prison. It's described as being the original
* The Rock once got savvy while trying to perform the People's Elbow on Undertaker. When Undertaker sat up, Rock kicked him back down and did the elbow anyway.
* The Rock on commentary for it (such as when he low blowed the Rock), the Rock was more or less given a pass whenever he skirted the rules (like low blowing Triple H) as acting "in desperation".
* The rock-paper-scissors thing is referenced later to show how they have diverged from each other, one (having died) sends the other a holographic recording which he

closes by offering to play again, throwing rock as the other Crichton throws paper.
* The Rock previously used a variation of the following phrase as this trope:
* The Rock prison. After a group of terrorists use Alcatraz Island as a base for launching chemical weapons at San Francisco, the US military is forced to recruit British political prisoner John Patrick Mason—the only man ever to escape Alcatraz—as an advisor. In the course of the break-in, he ends up retracing his old escape route to storm the island through its underground tunnel system.
* The Rock Raiders Meet BIONICLE that Primis's chapters had adopted by that point.
* The Rock Rats, space corporations, and space privateers/space pirates for a cause. They're all violent, though in different ways.
* The Rock, researchers had discovered hidden tunnels and even buildings dating back to the Civil War similar to those seen in the film.
* the Rock's, and seemed to try to recreate it the very forced-seeming "Cookiepuss" for Punk and "Walrus" for Heyman, neither of which were taken very far by anybody aside from Rock himself, the commentators, and a handful of fans (mostly kids). Punk for his part, refused to engage and even attacked the Rock for wasting time coming up with catchphrases instead of preparing for their matches.
* The Rock's catchphrase in his presence, or he will let you know about it.
* The Rock sees both Mason and Goodspeed steal expensive cars from a valet stand - a Hummer and a Ferrari, respectively, both of which get banged up in the ensuing chase. As a bonus, the Hummer's owner is actually admonishing the hapless valet not to put any "dings, dents, or scratches" on the car just before Mason drives off with it.
* The Rock's favorite food is "Pune Tongue" but nobody knows what the hell that is.
* The Rock's. He occasionally adds a few more phrases before shoving in the last three:
* The Rock's own page's damn head while the man was handcuffed (normally to take a chair to the head you throw your hands up to soften the blow, none of that here).
* The Rock's People's Elbow or Rock Bottom. Usually in the form of a Rock Bottom followed by a People's Elbow to add insult to injury on the supposedly-unconscious foe. In the same vein, Sting's Stinger Splash.
* The Rock's. Some have worked, some haven't, but as a whole, the sheer number of them are seen as damaging. It creates difficulty in working angles and building momentum due to their spotty appearances, which can damage the push of younger wrestlers who are working with them. The sheer number of them who are clogging up the roster, and the short-term rise in popularity, could potentially hurt WWE long-term by not giving their rising stars the time to become the main-event performers they need to be when the current generation starts to step down. While most of the returning Superstars themselves are very popular, the term "part-timers" has become a dirty word among WWE fans.
* The Rock, Stanley Goodspeed is trying to dodge a pair of soldiers and hides behind a really flimsy wooden wall. Cue the soldiers smashing through the wall to grab him.
* The Rock, Stanley tries loudly to convince Mason not to abandon the mission.
* The Rockstar Mayhem Festival came to an end after a lackluster and
* The Rockstar, the musical equivalent, where you are passed along either toward or away from the stage.
* The Rock's would be the host. (The Rock briefly alludes to this in his monologue.) Speaking of The Rock, his feud with John Cena was strained because the two men actually did not get along (at the time) but both knew the fans wanted to see them in a match.
* The Rock, the bad guys are a group of disgruntled American soldiers.
* The Rock. The characters don't pretend it's anything but a way to fight boredom.
* The Rock, the elite SEAL team sent in against the renegade Marines is quickly ambushed and massacred, leaving behind only the two non-SEALs that were accompanying them.
* The Rock!". The first promo he'd cut during shows would also feature one, in the form of "FINALLY… The Rock has come back to [show location]!".
* The Rock, the mercenaries use tranq darts on the soldiers guarding the chemical

weapons depot. All of them fall unconscious immediately.
* The Rock, the Navy SEALs are ambushed by Hummel's forces when the trembler left behind by one of the Marines alerts them to the SEALs' presence. Hummel's men have the SEALs dead to rights since, as Hummel puts it 'Your unit is covered from an elevated position, Commander. I'm not gonna ask you again. Don't do anything stupid.' The Marines have the higher ground and cover, while the SEALs have none. It doesn't end well for the SEALs.
* The Rock: "The Rock's gonna take your candy ass down to the corner of Know Your Role Boulevard and Jabroni Drive, and check you into the Smackdown Hotel!"
* The Rock, the secrets that John Mason stole include the truth about Roswell.
* The Rock: The VX gas threat was neutralised so late and the signal indicating the all-clear took so long to transmit to the bombers sent to destroy the Alcatraz facilities (holding the terrorists and the VX gas) that by the time it gets through, one missile has already been launched.
* The Rock, this definitely fulfilled the purpose of the trope as Ed Harris's team of Marines definitely look imposing. And they also have a lot of cover and a much clearer line of fire on the SEALs (the SEALs really did have no cover at all).
* The Rock to fatal degrees, and while he does seem to be floating in it dead or unconscious, it was just a few seconds after the drop and he might have recovered from that.
* The Rock to give him a shoulderblock during a match, then going down v-e-r-y s-l-o-w-l-y when he did the move.
* The Rock to the letter), the Ferrari gets crushed by a cable car, so Goodspeed then grabs a bystander's minibike.
* The Rock-type is mainly geared toward Turtling play, as Rock-types tend to have low ATK and high DEF, as well as quite a few of them having the ability to flip into face-down Defensive Position. There was even a Rock-type Structure Deck at one point built entirely on building an uber-strong defense. Formerly shown above was Labyrinth Wall, which does nothing to most other monster cards on its own, but has 3000 DEF, meaning it can shrug off even an attack from
* The Rock use a grappling hook rifle to set up ziplines, in order to infiltrate and steal the Chemical Weapons.
* The Rock used a lot of these, notably using "pie" as a nickname for vaginas, and "strudel" as a nickname for penises.
* The Rock: variations of running Spinebuster or Scoop slam (one or the other is performed first), then a Rock Bottom, followed with removing his elbow pad and the People's eyebrow, finishing with The Most Electrifying move in Sports Entertainment!
* The Rock was a master of crowd participation in his promos, the fans hanging on to every one of his catchphrases when he talked.
* The Rock was so fun to watch (the other was that the men were good friends in real life and relished the opportunity to give the other a good-natured ribbing).
* The Rock was the champion at the time, he and Rock were scheduled to fight for it at the Royal Rumble, and Jericho, sick of Rock's repeated refusing to acknowledge him as a threat...
* The Rock was the location of a mobile FBI War Room. The equipment and staffers were brought in on trucks.
* The Rock were played by the (retired) SEALs who also advised on the film.
* The Rock) when he dressed up like The Rock in order to mock him: first was when the former was leading The Nation, by painting on an exaggerated eyebrow in pencil; then later during the feud with The Corporation, by slapping what looks like a strip of black tape.
* The Rock with the brass knuckles, and when the referee searched Shamrock, he found the knuckles and reversed the decision.
* The Rock XXVIII, claiming it was an event that could only, should only, would only happen "Once in a Lifetime!". With such insistence that it was a "Once in a Lifetime!" event over and over, one would expect it to actually BE "Once in a Lifetime!" But it was not. It happened again the next year, and the WWE knew it would from the start. The Rock said in an interview he had been signed to three

WrestleMania matches, the first costing him the title, the second a rematch with Cena, the third a rematch with the title on the line. Maybe the phrase "Twice in a Lifetime" just isn't catchy enough, so they decided "Who cares? Everyone will pay to watch it anyway!"
* The Rocky Horror Picture Show. According to the commentary, the actor actually was whipped.
* The Rocky Horror Picture Show after she takes control of the light when Frank sings "I'm Going Home".
* The Rocky Horror Picture Show. (Although it's hinted that Furter's "butler" Riff Raff is the one who did most of the actual Mad-Sciencing, with Furter characteristically stealing the credit.)
* The Rocky Horror Picture Show always said that Dr. Frank N. Furter was pansexual, though the movie does make it obvious that he's bi. Some of the draft scripts for unmade sequels would have said that Brad and Dr. Scott turned gay shortly after the first movie.
* The Rocky Horror Picture Show appears on their clothes, flags and some of Frank's equipment.
* The Rocky Horror Picture Show, as Brad and Janet back away from Dr. Frank N. Furter and his crew while they sing "The Time Warp".
* The Rocky Horror Picture Show as we hear Eddie's screams and Frank chopping him to pieces with a pick-axe.
* The Rocky Horror Picture Show, at first, Brad and Janet wear more conservative clothing compared to Frank N. Furter (who is in women's lingerie). Later in the film, when they are corrupted, they are stripped down to their underwear and also end up wearing the same clothing as Frank during the floorshow.
* The Rocky Horror Picture Show: Brad and Janet's bedrooms are lit with blue and link lighting respectively.
* The Rocky Horror Picture Show: Brad does one of these when Frank seduces him.
* The Rocky Horror Picture Show. Brad takes a wrong turn at a fork in the road leading him and Janet to a dead end, getting a flat tire, and having to seek shelter in Frank N. Furter's castle.
* The Rocky Horror Picture Show callbacks replies to Riff Raff's lines:
* The Rocky Horror Picture Show couldn't sing, so his singing voice was dubbed by Australian singer, Trevor White.
* The Rocky Horror Picture Show, Doctor Frank-N-Further asks his servants on their opinion of Rocky, his latest creation. While Riff Raff and Magenta offer lavish praise, Columbia enthusiastically says "He's okay!" The doctor doesn't appreciate that.
* The Rocky Horror Picture Show: "Do your worst, inferior one!" Downplayed in that the aliens only advantage is their more advanced technology than the human protagonists. That, and, said aliens mainly use the technology for bizarre stage performances rather than to take over the world.
* The Rocky Horror Picture Show, Dr. Frank N. Furter often dresses in nothing more than a corset, fishnets, heels, and short shorts (or panties...). When others "succumb" to his power, they start dressing this way.
* The Rocky Horror Picture Show, Eddie starts his letter to Doctor Scott with "I'M OUT OF MY HED. O HURRY
* The Rocky Horror Picture Show end with a shopping list for flour, eggs, bread sugar and two hypodermic needles.
* The Rocky Horror Picture Show feature a straight-laced couple being seduced by a transsexual, alien scientist.
* The Rocky Horror Picture Show fit this pretty well, for the most part:
* The Rocky Horror Picture Show. Fitting, since it's a parody of B-movies (they even lampshade it in the opening tune). It's remembered more for its sexual innuendoes and homoeroticism than for the horror elements.
* The Rocky Horror Picture Show for Dr. Frank N Furter. Also Frank has made overtures towards Brad and slept with him and has great love towards Rocky.
* The Rocky Horror Picture Show for Dr. Frank-n-furter, a (not so) sweet transvestite from Transylvania.

* The Rocky Horror Picture Show, Frank N. Furter does this after the song "Eddie's Teddy" to reveal Eddie's unfortunate fate.
* The Rocky Horror Picture Show: Frank-n-Furter turns Columbia, Janet, Rocky and Brad into statues, dresses them up in makeup and corsets, turns them back to normal, forces them to do a floor show, then makes them join him in a synchronized pool orgy.
* The Rocky Horror Picture Show: "From the day he vas born, he vas trouble/he vas the thorn/in his Mutter's side".
* The Rocky Horror Picture Show had wipes that sometimes matched the action onscreen (a windshield wiper wipe when driving in the rain, a dripping wipe when outside in the rain, etc)
* The Rocky Horror Picture Show hail from the planet Transsexual in the galaxy of Transylvania. They're known as Transylvanians.
* The Rocky Horror Picture Show has a sequence where Frank runs his finger down Rocky's chest while singing "ste-e-e-eam". During the utterance, a beep can be heard—someone accidentally bumped a synthesizer while mixing the music (this occurs during the song "Charles Atlas").
* The Rocky Horror Picture Show has called it a rite of passage for teenagers.
* The Rocky Horror Picture Show has Columbia credited as "A Groupie". She acts as a devoted fan of Frank-N-Furter throughout the film, even after she snaps at him for how he treats people.
* The Rocky Horror Picture Show has Frank-N-Furter being done in by his "faithful handyman" Riff Raff.
* The Rocky Horror Picture Show has grossed over $130 million and has played in theaters for over 30 years.
* The Rocky Horror Picture Show has in some parts developed so many extensive routines that the audience talks more than the actors.
* The Rocky Horror Picture Show has several actual Easter eggs hidden in the scenery.
* The Rocky Horror Picture Show, he and Janet dance over various graves, completely oblivious to the funeral procession in the background.
* The Rocky Horror Picture Show, he goes into a jealous rage. Janet Weiss had to learn this the hard way.
* The Rocky Horror Picture Show: "I'm just a Sweet Transvestite from Transsexual, Transylvaniaaaaaaa..."
* The Rocky Horror Picture Show: In stark contrast to the dorky Brad, whose wearing “tighty-whitey” briefs serves to emphasize his nerdy nature, the muscle-bound and highly sexualized Rocky is wearing nothing more than a pair of quite tight golden briefs throughout the entire musical. This is invoked on Frank's part; he designed Rocky to be little more than a masculine sex object, and the choice of underwear emphasizes that, making his otherwise constant nudity more comedic and blatant.
* The Rocky Horror Picture Show, is almost literally brainless. He's only got half-a-brain and, quite frankly, he ain't too bright. It doesn't help that he's a day old, either.
* The Rocky Horror Picture Show is a transgender alien scientist who's adept at seducing men who were otherwise straight.
* The Rocky Horror Picture Show. Janet begins to bandage Rocky's wounds by ripping strips from the slip that she's wearing. Of course, more than just kissing occurs afterward.
* The Rocky Horror Picture Show: Let's Do the Time Warp Again being replaced with the Usherette from the original play.
* The Rocky Horror Picture Show: Let's Do the Time Warp Again when Riff Raff and Magenta beam off to the planet Transsexual in the Galaxy of Transylvania, they demolish one of the castle's towers on the way out.
* The Rocky Horror Picture Show mentions that this was a concern around the time the film was released.
* The Rocky Horror Picture Show: More of a sex dodecahedron, but applies nonetheless. Brad and Janet are dating, and both of them have sex with Frank

separately. Frank created Rocky as a sort of living sex doll, and Janet has sex with him as well. Rocky was created with part of Eddie's brain, who was dating Columbia in life. Columbia is also in love with Frank.
* The Rocky Horror Picture Show mostly takes place in one night apart from it starting with a wedding that afternoon.
* The Rocky Horror Picture Show musical series. 2 films and a remake since 1975.
* The Rocky Horror Picture Show notes this in the commentary and regrets not having Frank N. Furter accidentally hitting a button or something.
* The Rocky Horror Picture Show of old B-Movie science fiction films, it's no surprise.
* The Rocky Horror Picture Show on LOGO TV on Halloween, chances are you may have seen an ad from the World Wildlife Fund about tigers repeat many times during the duration of the film, along with ads for BarkBox and an app called Cookie Jam.
* The Rocky Horror Picture Show opening song "Science Fiction Double Feature" (as well as references throughout) are completely lost on the younger fans of RHPS.
* The Rocky Horror Picture Show, originally written as a parody of this very trope. It mentions a fair number of steps:
* The Rocky Horror Picture Show (pansexual and transgender female main character, sexually fluid supporting characters)
* The Rocky Horror Picture Show: Photographer Koo Stark appears as a bridesmaid.
* The Rocky Horror Picture Show reads like a morality play, saying essentially that hedonism and a queer lifestyle will get you kidnapped and/or killed by aliens.
* The Rocky Horror Picture Show recognised, but, if you attend a Shadow Cast, they tend to comment on their appearance, with lines like, "Even a Virgin recognises Dr. Frank," and, "Hey, Frank, Riff's front! Hey, Riff, Frank's back!"
* The Rocky Horror Picture Show refers to him as "General Riff Raff", implying him to be a soldier on his home planet.
* The Rocky Horror Picture Show responded with, ‘Do your worst, inferior one.’
* The Rocky Horror Picture Show, Riff does this to Magenta during the dinner scene.
* The Rocky Horror Picture Show (Riff-Raff) and is both informative and rather humorous.
* The Rocky Horror Picture Show: Rocky is a full-grown adult when Frank N. Furter brings him to life and even states that he's "just seven hours old" during the song "Rose Tint My World".
* The Rocky Horror Picture Show routines seems to be in shouting obscene call lines at the screen (and sometimes at other audience members). Generally, though, these remarks are clever at the same time as being gratuitous. Audience lines that fall under this trope are often the mark of an inexperienced "participator".
* The Rocky Horror Picture Show ("same room, different lighting, cheap movie!")
* The Rocky Horror Picture Show shows Eddie riding his motorcycle through a window.
* The Rocky Horror Picture Show shows that it has "ACME SOUND" stencilled inside it.
* The Rocky Horror Picture Show spends the entire movie in golden briefs... and not much else.
* The Rocky Horror Picture Show. The commentary says that because Frank's an alien posing as a human, he has no idea what else to do with animals.
* The Rocky Horror Picture Show. The Criminologist sums it up at the end.
* The Rocky Horror Picture Show (The Criminologist), the only non-surviving cast member at the time of that release.
* The Rocky Horror Picture Show, the main cast sing "Happy Birthday" to Rocky, but are cut off by Frank N. Furter when the song is near completion.
* The Rocky Horror Picture Show, the mummy version happens when Rocky is unwrapped.
* The Rocky Horror Picture Show: The narrator comes awfully close to this, dancing with the rest of the cast. The stage version plays the trope straight.
* The Rocky Horror Picture Show they come from rather than the Romanian region.
* The Rocky Horror Picture Show, this is often used by the stage manager when explaining the general "rules of behavior" in the theater.
* The Rocky Horror Picture Show. This was caused by somebody accidentally hitting a

synthesizer and wasn't edited out.
* The Rocky Horror Picture Show, when Brad asks if he can use the phone, Frank smirks into the camera and comments on Brad and Janet getting a flat tyre, even though Brad never mentioned it. Though Brad doesn't pick up on this.
* The Rocky Horror Picture Show, when Dr. Frank N. Furter says of his newly-finished creation Rocky that "he carries the Charles Atlas seal of approval". Near the end of the movie, it does take quite a number of shots from Riff Raff's "anti-matter laser" to bring down Rocky. In the original musical, the song "I Can Make You A Man" and its reprise were both originally called "Charles Atlas".
* The Rocky Horror Picture Show when Frank comes after him with a pick ax, which is one word more than Rocky says. (Not counting their songs.) So, he theoretically could talk and knew crazy guy with ax=bad. Not bad for someone with half a brain.
* The Rocky Horror Picture Show where the screen picture is otherwise perfect despite being in black and white.
* The Rocky Horror Picture Show with a raised eyebrow and says "Well you got caught with a flat Well, how 'bout that". Implying he already knew about or even caused the flat tyre.
* The Rocky Horror Picture Show within the film also counts. Sure, people in general know you're supposed to use props and yell certain lines when watching the movie. But ask anyone who isn't a die-hard fan what you're supposed to say and when!
* The Rocky Horror Picture Show. With only a few very minor variations, it precisely fits the classic version of car breaks down in the rain, protagonists are stuck in a spooky castle. Though this is only natural considering that it's a parody of (among many other things) exactly those kinds of stories.
* The Rocky Horror Show aged Frank N. Furter with a German accent before switching to his "mother's phone voice" posh English accent that carried over to the movie.
* The Rocky Horror Show a human, the declaration that "[his] lifestyle's too extreme", and Riff and Magenta's eagerness to return to their home planet.
* The Rocky Horror Show, Frank chases Eddie into the freezer with a chainsaw or an axe.
* The Rocky Horror Show in 1981, which was adapted into a play in 2015.
* The Rocky Horror Show is usually played by the same actress as Magenta.
* The Rocky Horror Show. So far, however, nothing beyond a few rumors and some scrapped script ideas. All that's known about the yet-to-be-made sequel is that it would've involved Frank N Furter coming back to life.
* The Rocky Horror Show. The movie just shows it turning people to stone.
* The Rocky Horror Show. When Frank first meets Brad and Janet, he says "Unlock a mind, unmind a lock.
* The Rocky Mountain Athletic Conference was formed in 1909, ultimately encompassing schools in Colorado, Utah, Wyoming and Montana. By 1937, the aforementioned issues of budgets and player eligibility led seven of the RMAC's schools
* The Rocky Mountain News as a source, which went out of business in February 2009.
* The Rodney Carrington song "Fred's Riding Fred" parodies this, as the narrator is drunk (or stoned in some recordings) and can't remember the names of anyone in the story, so he names them all Fred. This includes the protagonist, the horse and the protagonist's girlfriend.
* The Rod of Rulership is a magic rod that can magically compel a large group into following your commands.
* The Rodriguez Brothers could all be triplets if there weren't some subtle ways to tell them apart: Pablo is the shortest, Pancho has the most pronounced beard, and Pepe has a "smile" moustache.
* The Rod Squad that becomes the Rod Squad's case. It helps that the author is old enough to have experienced the '70s himself.
* The Rogolon, who get invaded by the Centauri because their space allows them to bypass the frontline and strike at the Orieni rear, are firmly on the Warrior side, even compared to the Drazi: they have powerfully built warships but refuse to mount
* The rogue AI in the Overlord DLC runs the risk of becoming one of these if it

can get off the planet.
* The rogue AI Two at one point possesses the body of a combat droid from the 23rd century and faces a future version of Everett Ducklair, who has by now mastered the magics of Dhasam-bul. Thanks to his immense analytical abilities and the more advanced technology of the droid body, Two is able to counter all of Everett's spells with ease.
* The Rogue King age and, presumably, has only ten more years to live.
* The Rogue King by Aldrea Alien, there was once an empire spanning the whole continent. It fell 2000 years prior to the story's setting.
* The Rogue King has almost nine-foot Koral hook up with a girl whose eyes are 'level with his belt'. But then, most people are that short to him.
* The Rogue King, Lasil heals the injury Veng gained trying to save her. She then tends to the wound and attempts to seduce him.
* The Rogue King series starts with spaceships crashing on an alien world, which is largely controlled by gods, and the larger population has some form of magic.
* The Rogue King. The All Mother and the Devil are the highest, whilst the majority are divided into two hierarchies:
* The Rogue King there are two walls that hem in the continent's desert, which is designed to keep out the natives.
* The rogue NID. At first, they're stealing alien technology with the purpose of using it to defend Earth, making them into
* The Rogue: Searching for the Real Sarah Palin as a salacious collection of water-cooler gossip, much of which contradicted itself, such as that Palin's drug abuse history and promiscuity were "well-known" while also being "a well-kept secret". He hardly had any named sources, crediting "a friend of the Palin family" or "a former colleague" without naming names. He later had to admit that most of his sources were tabloids.
* The Rogues Gallery. The NPC Lassiviren the Dark has taken steadily increasing doses of poison over the years. As a result, few poisons affect him.
* The Rogues' Guild is surprisingly well-justified, set up to enforce
* The Rogues have a duct taped together look to their tech which fits in line with their principles of freedom. It's all scavenged and cobbled together from tech from other factions such as the UPR and doesn't have a real sense of uniformity. With such a look that's all over the place, their technology is likewise as such and can't exactly be considered overall advanced.
* The Rogue Squadron comic books had six female pilots and eleven males, though the squadron never had more than twelve members total. They all had strongly varied personalities and roles and the two
* The rogue's signature sneak attack ability was also changed from a damage multiplier in 2.0 to deal consistent bonus regardless of the rogue's strength or size of his or her weapon in 3.0 so that rogues do not particularly suffer from low strength or lightweight weapons.
* The Rogues tended to be pilots with secondary commando skills whose missions meant those skills became important very, very often; the Wraiths were picked as commandos who could pilot snubfighters. The Wraiths were eventually transferred out of the military's Starfighter Command to New Republic Intelligence.
* The Rogue Titan, which kills other Titans instead of humans, puts up its fists in a boxer's stance and knows to crush the nape of a foe's neck to kill it for good.
* the rogue Unit-A subdues Unit-01 and attempts to kill Shinji, Asuka jumps to his defense and wraps her robot's hand around the monster's neck before stabbing it to death.
* The Rohirrim, at Minas Tirith, where the full might of their cavalry is able to perform some great deeds, even against oliphaunts twenty times the size of their horses.
* The Rohirrim cavalry charge head-on at the giant Oliphaunts, swatting at their legs, goes exactly as one would expect. However, this was due more to real-life considerations than artistic license. According to the DVD commentaries, going by the book -

* The Rohirrim defenders of Helm's Deep let the Orcs neatly form up outside the fortress without shooting - until one bowman prematurely does, which (only then) provokes the Orcs to charge. In the book, their scouts or advance-guard shoot at every Orc stupid enough to carry a torch on the trip up there, before retreating into the fortress.
* The Rohirrim's charge against the Orcs at Minas Tirith. One really big line of horses coming at full speed on the Orc army, whose volleys of arrows do little to impede the cavalry charge before they're all swept away by a literal equine tidal wave. The Rohirrim attempt the same strategy against the line of
* The Rohirrim tend to be kinda Viking about the whole 'death in battle' thing. "Hail the victorious dead!" is again movie continuity only, but it's definitely true to the essence of the culture.
* The Roland TB-303 bass line synthesizer/sequencer was introduced in 1982, but didn't sell too well and production was ceased two years after its introduction. By the end of
* The role of ballet in many operas was to make the men more willing to attend (
* The role of the weapons also becomes clear in the 2012 series episode "Pulverizer Returns!" when Splinter orders the turtles to switch weapons.
* The role of women on Earth is also extremely vague. Because resource-starved Earth cannot afford amenities, most people live in tiny apartments which do not have kitchens, eat in communal cafeterias, and have small families due to
* The roleplayers know that, in the RPG they're playing, planet Naboo has been destroyed and Jar Jar Binks is now dead. The characters they're roleplaying don't know this yet. Jim (who, in previous games, had a lot of trouble separating in-character and out-of-character knowledge) announces, in-character as Han Solo: "I am sure that we will have many fun adventures on the surface of the planet Naboo with our friend Jar Jar, who will surely greet us there upon arrival."
* The Role-Playing Game: An RPG inspired by a specific fictional work.
* The Role-Playing Game: A work is adapted into a tabletop role-playing game.
* The role-playing game phenomenon inspired the Niven & Barnes novel
* The roles WERE reversed in one episode where the Eds (well, Double-D really) came up with the idea of using reverse psychology by feigning a similar over-the-top romantic interest in the Kankers in order to get them off their backs for good. It would have worked, too, except Eddy choked at the last minute, the Kankers caught on, and went right back to chasing the Eds.
* The roles were switched in another episode, with Tom and his buddies throwing a wild party while his owner was out and Jerry trying to get some sleep. They start picking on Jerry when he tries to convince them to shut it down, and after an escalation Jerry ends up calling Tom's owner to throw him out. It works... until the owner starts playing the
* The roller coaster scene. Will is furious that most of the front row seats have been taken, even though his gang were queuing for them. Despite being told by his friends and the attendant to just sit down, he demands that the queue-jumpers be removed and calls them "inconsiderate arseholes". He then finds out he's just insulted
* The Rolling Boulder sprites to keep them from violating the sacred fertility statues...
* The Rolling Stones’ “Gimme Shelter” - one of their most famous songs - has a moment at the end of the third hook where Merry Clayton’s voice cracks as she screams “Rape, murder, it’s just a shot away”. Arguably a subversive example of this trope, considering it’s become well loved by music fans and considered a classic moment.
* The Rolling Stones (1989) was recorded with the Moroccan folk band The Master Musicians of Jojouka and has a distinctive Arabic sound to it.
* The Rolling Stones", about the decades long bromance between Mick Jagger and Keith Richards.
* The Rolling Stones, after travelling to Mars, and eventually the Asteroid Belt, the Stone family shrug and keep on Rolling.
* The Rolling Stones, and Etta James - any of whom may be believed to be the

original artist - but was first recorded by Muddy Waters, in 1954.
* The Rolling Stones: "And I'm trying to make some girl, who tells me baby, baby, baby, baby, baby, baby, baby, baby, baby..."
* The Rolling Stones are in their seventies, and the band's been touring for more than 50 of those years. Do they seem like they're gonna stop any time soon? Very probably not.
* The Rolling Stones became one of the most famous Soviet Koreans in a country of 300 million people.
* The Rolling Stones, but here it is a trope used by various family members when plotting and writing scripts for a successful commercial space opera serving as an income source for the family, the original scripts having been written by the Grandma character Hazel Meade Stone.
* The Rolling Stones, buying a spaceship capable of flying from the Moon to the Asteroid Belt is roughly equivalent to buying a sailing vessel big enough for a family to go on an ocean voyage.
* The Rolling Stones) changed into someone much more submissive and sweet.
* The Rolling Stones' classic "Gimme Shelter", which was actually rumored to have caused her miscarriage.
* The Rolling Stones drummer Charlie Watts was famous for wearing stylish suits, often landing him on "best dressed" lists.
* The Rolling Stones features the titular family Stone traveling to the Asteroid Belt, where the twins of the family hope to sell food and luxury items to the miners extracting radioactive ores.
* The Rolling Stones got the guitar riff for "(Can't Get No) Satisfaction" in a dream. He woke up, turned on a tape recorder, and played the riff before falling asleep again - the tape would later have about forty seconds of guitar and an hour of his snoring.
* The Rolling Stones guitarist Brian Jones had sex with an average of two, sometimes three, groupies per day. Keith Richards allegedly begged him to slow down as he couldn't keep up and it was making the rest of them look slow, except for bassist Bill Wyman, who was also notorious for his activities with the ladies. Most appropriately, during their early tours, Jones and Wyman were roommates on the road.
* The Rolling Stones have done many covers of blues and R&B songs over the years:
* The Rolling Stones have, was widely seen as the heart of the Stones. The time the Stones came closest to splitting up was in the 1980s, when Watts struggled with drug addiction.
* The Rolling Stones he has an apparently non-symmetric space ship use this, mocked as a “tumbling pigeons”.
* The Rolling Stones, Herman's Hermits, The Dave Clark Five,... Some bands eventually created their own sound, but others have been forgotten as being nothing more than pathetic attempts to cash in on the Beatles' success.
* The Rolling Stones' "Honky-Tonk Women" features the line "I just can't seem to drink you off my mind."
* The Rolling Stones' "I'm Free" is usually featured in commercials, movies and such through the version by The Soup Dragons.
* The Rolling Stones in light of Microsoft's apparent monopolistic ambitions, coupled with notorious quality control problems (especially in the area of security).
* The Rolling Stones in the US. Though both albums are pretty good, they basically follow the format of their debut album, mostly comprising covers of songs over original material.
* The Rolling Stones is also a subversion, as the band wasn't originally intended to be portrayed on it. Originally they showed photos of famous celebrity actresses and models, done without asking permission. Some sued and as a result the cover was quickly changed by having band members' faces in place of some of the women's faces.
* The Rolling Stones. It has since become their most polarising release.

* The Rolling Stones' "Jumpin' Jack Flash", which has him born and raised in an abusive household and abandoned at some point in his childhood. It's hinted in the chorus that he's gotten over it, albeit not in one piece, given the nature of the song.
* The Rolling Stones, one is brought aboard a spaceship as a pet... only for problems to arise when the Flat Cat starts reproducing, aided by the lack of predators and environmental threats.
* The Rolling Stones' "Ruby Tuesday" is all about this, a woman who lives only for the present ("yesterday don't matter if it's gone"), never stays in one place for long, and can't really be obtained by anyone.
* The Rolling Stones's 2003 remix hit #97), "Start Me Up" (#2), "Jumpin' Jack Flash" (#3), "Wild Horses" (#28), or "You Can't Always Get What You Want" (#42).
* The Rolling Stones' "Start Me Up" as part of its Windows 95 20th Anniversary promotion. The catch is the offer is only valid in North America, West Europe including the UK, Japan, Australia and New Zealand. Live elsewhere? Clicking on the link on the blog site does launch the Windows store and takes you to the album's page... where you need to buy the song with your own money. Ouch. Even worse when it displays the album but claims that the album cannot be sold in your country, but searching for the song on the store does produce a result, except that it isn't free.
* The Rolling Stones, "Stupid Girl", spits vitriol over a particular type of female
* The Rolling Stones's "Under Cover of Night": Man tries to sneak out of fascist Latin-American country.
* The Rolling Stones' "Sympathy for the Devil" has the literal devil introducing himself as a man of wealth and taste before going into a laundry list of terrible thing's he's done. All while being very polite and demanding the listener do the same or else.
* The Rolling Stones takes precautions anyway when they enter an unusually dense field that's a haven for miners. Averted in that nothing happens to the ship.
* The Rolling Stones, the eponymous Stone family finally tire of space travel and decide to go home and settle down for assorted reasons, including that it is high time the oldest daughter got married. Said daughter is all of twenty years old.
* The Rolling Stones, they had patched things up (quite possibly reflected in the album's lead single, "Mixed Emotions").
* The Rolling Stones) was actually accused of being a draft dodger because he never showed up for his draft physicals, as he was on the road playing and never received the letters. He was advised by the head of his local draft board to try and enlist before the Army caught up with him. He did so and was rejected due to a medical history of ulcers.
* The Rolling Stones. When he finds a note from the would-be bride saying she can't go through with it, he responds with "tears of relief".
* The Rolling Stones. Whereas the rest of the band is notorious for engaging in the sex and drugs lifestyle of rock 'n' roll, he spends more of his time sketching hotel rooms.
* The Rolling Stones, which as the title makes clear is narrated by Satan himself.
* The Rolling Stones, who'd drowned earlier that year. The sleeve notes include an epitaph that Jones had composed himself:
* The Rolling Stones, who emerged in the 70s, is also a worthy candidate there.
* The Rollo ad in which a brat kid offers a baby elephant his last Rollo sweet and then eats it himself. Years later he's watching a circus parade when a trunk taps him on the shoulder, then the now fully-grown elephant whacks him across the face. An elephant never forgets...
* The Roll Only run: Only defeat enemies by rolling into them with Kirk's Thorn Armor (which deals a small amount of damage);
* The Rolls-Royce Silver Shadow's original nameplate was "Silver Mist". Fortunately, someone noticed that "mist" means "manure" in German, and the car was quickly renamed, with new badges fitted just before the debut.
* The Romalian Empire were actually somewhat competent and are the cause of all the problems in the series. The Academy from

* The Roman Agent. One of the labels is in the middle of the village far away from the action, pointing out Cacofonix, asking Getafix if he has any idea what's going on.
* The Roman Army included other kinds of troops, both from citizens and subjects/allies (Roman citizens were heavy infantry only from the Marian reform in the first century BC, and that was reversed by Caracalla giving Roman citizenship to all subjects in 212 AD).
* the Roman Army were thrown seconds before meeting the enemy infantry, suddenly disorganizing their formation due the rain of javelins that pierce shields and either unbalance them or kill the wielder and not giving them time to get back in formation before melee starts, and their tactic against the phalanx was to deploy part of the troops in their own shield wall to pin the phalanx down and have the rest (cavalry if the enemy didn't have it to guard their flanks, infantry if they had) flank the enemy and start chopping until they broke formation.

* The romance between a Soviet soldier and a German girl. They met at the end of the war when he was sent to interrogate her father, they fell in love and lived together for a while until he was sent back to Russia. (Additionally, party officials told him he could be sent to a gulag if he did not end the relationship.) They managed to meet again 60 years later, now 80 and married to other people, and they decided to move in together, leaving their respective spouses.
* The romance between the elven lady Lúthien Tinúviel and the human Beren was inspired by Tolkien's own marriage; his wife used to dance for him in the forest. The names "Lúthien" and "Beren" are even engraved on his and his wife's tombstones.
* the romance built up between Minmax and Kin over a long period is absolutely destroyed in two pages.
* The romance events in the game were fairly secondary plot-wise and did not change the main story much.
* The Romance of a Choir-Boy, who falls in love with Teddy Faircloth, a beautiful boy of twelve and a half. Recognising the exceptional beauty of Teddy's soprano voice, he arranges for Teddy to attend a famous London choir school. Two years later, when Teddy is fourteen and a half, the two have a friendship, Philip mentoring Teddy and resolving, in spite of his sexual attraction to Teddy, to keep the friendship on a chaste footing. The author, John Gambril Nicholson, a teacher at boys' schools, also wrote Uranian poetry.

* The Roman Emperor Caligula exploited this trope; he would set some of his slaves free and give them important positions within his Empire. The reason he trusted them with these positions was that they owed him everything they had, even their own freedom.
* The Roman Emperor Domitian believed a prophecy that said he would die at noon on a certain day. On that day, he locked himself in his room with a servant and allowed no one to enter. He asked the servant several times what time it was (Roman

hours depended on sunrise and sunset, so it could be difficult to tell), but the servant lied and said it was past the hour he was fated to die. Relieved, Domitian allowed other people in the room. One of them was the assassin who killed him, almost precisely at noon.
* The Roman emperor Tiberius married his stepsister Julia as part of his stepfather's plans to make him his heir. Given that Julia's father, Augustus and Tiberius' mother, Livia had already been together when Julia was born, and Tiberius was already 14 at that time, it's still more than a bit squicky. But to their credit, it wasn't their idea (in fact, Tiberius was already married to Vipsania Agrippina,
* The Roman Empire followed by Simon Bar Kohkba, Queen Zenobia of Palmyra.
* The Roman Empire itself became something of a legacy character. Various subsequent empires that took over / developed from former parts of the Roman Empire portrayed themselves (with varying degrees of validity) as successors to the Rome Empire. Notable examples are the Holy Roman Empire, the Byzantine Empire (which was technically not a legacy empire because it was still the same empire, just reduced by half), the Tzardom of Russia/Russian Empire, and the Ottoman Empire.
* The Roman Empire (the military scouts) they were also conducting arrests, interrogation and elimination of the most dangerous traitors, dissenters and troublemakers.
* The Roman Empire, who like Palpatine openly abolished the republic and made it an empire in name as well as fact with himself as emperor. Napoleon was inspired by Imperial Rome (with Eagles carried by his troops), while Hitler had them later as well.
* The Roman expansion and constant warfare led to an excess of slave-labour and weak distribution of land and wealth to the urban poor and poor soldiers. The Senate led and dominated by the Patrician class of Rome had nothing but contempt for newcomers and weren't interested in sharing and distributing power and rights to other Italian cities and clients, leave alone the Mediterranean. The one real avenue of consistent change since the Socii War had been the army, and generals like Marius and Sulla, followed later by Pompey and Caesar, became bigger job creators and wealth creators than the state.
* The Roman General Quinctilius Varus was warned by several German chieftains not to lead his army into the Teutoburg Forest as the warlord Arminius was planning an ambush.
* The Roman historian Tacitus utterly refused to write anything good about the Emperor

* The Romanian Prime Minister Victor Ponta, after hearing he was leading the elections against the opposition (and ethnic-German) candidate for Presidency Klaus Iohannis in the 2014 election with a comfortable lead, and around 40% in opinion polls, said that he will “sit back with a bag of popcorn” in the first round of the election on November 2nd and "watch his challengers debate". Ironically enough, the Romanians were so pissed by this statement and his seemingly endless narcissism that they decided to choose the non-Orthodox, non-ethnically-Romanian as president. Romania is one of the most conservative societies in Europe. Go figure.
* The Romanian Revolution, which started as a series of protests before it escalated to fighting in the streets where revolutionaries overthrew the Communist regime lasted from the 15th to 25th of December 1989. Ending with the executions of Nicolae and Elena Ceausescu on Christmas Day.

* The Roman Mysteries, Gaius poses as his twin brother Marcus (who has been shipwrecked), in order to convince the bankers who want to foreclose on Marcus's home that Marcus is in good health and should get more time to pay off his loan.
* The Roman Mysteries had his tongue cut out before the stories start.
* The Roman Mysteries has a mystery about someone trying to sabotage a chariot race. Like everything else about the series, the history was carefully researched and the portrayal of the racing is very accurate.
* The Roman Mysteries Nubia spends months travelling to a Nubian settlement in the hopes that she'll find her own people there. She is eventually reunited with her betrothed, only to be torn between marrying him or returning to Rome with her friends. It's a tough decision, but luckily her betrothed goes from a nice guy to a potential wife-beater within the space of a paragraph.
* The Roman Mysteries, the main characters must clear the name of a slavegirl falsely accused of murder.
* The Romanov royal family were a family of mages who controlled a demon known as
* The Roman Republic, a consul named Gaius Marius demanded that armies stop using beasts of burden to carry weapons and armor: If it's your weapon, it's your responsibility to carry it. Initially, this rule was ridiculed, and the soldiers who were now forced to carry a whole bunch of weapons and armor rather than rely on pack animals were called "Marius' Mules"... Then people realized how much it improved the army's mobility and overall effectiveness...
* The Roman Republic as per legend, was founded by a rebellion led by Lucius Brutus (ancestor of the assassin) against Tarquin.
* The Roman Republic because of this. Its institutions and civic patriotic culture worked effectively for a city-state that was more or less Rome, outer-territories and Latin environs, but it was not equipped, at least not without reforms, to deal with an empire that included the Iberian peninsula, parts of North Africa, all of Greece and Asia Minor and all of Italy.
* The Roman Republic. Both of them had the same political sympathies and ideas but different modes of rhetoric and speaking. Tiberius, as per Plutarch was modest, calm and appealed to reason, while Gaius appealed to emotions and sentiment. Tiberius would speak standing in one place, Gaius would move around and make gestures and act out his emotions.
* The Roman Republic, he notes that it largely happened because of a failure of the Senate to properly control its army by the end of the Punic Wars, leaving Generals like Scipio Africanus to decide how to pay for their wages, upkeep and remuneration, and forcing politicians, opportunists and reformers both, to start using offices as a path to power and slowly exceeding their command. The end result led to temporary titles like Dictator becoming Dictator perpetuo and imperator becoming Emperor.
* The Roman Republic, Julius Caesar and Mark Antony, in the eyes of their enemies did this when during his time as dictator, Caesar ostentatiously participated in public ceremonies where Antony would present diadems to Caesar only for Caesar to turn it down. Most observers at the time, and later historians don't know what to make of this. The optimates often invoked the fear of "return of Kings" to justify brutally purging popularii reformers (such as the Gracchi) and Caesar and Antony might have been mocking and parodying that concept. Others however see this as Caesar testing the waters to see how the public would react to him claiming the Crown, as a way of testing whether he should make a play for the Crown, but using the guise of mockery and jest as a form of plausible deniability. In either case, his assassins and their defenders cited this as justification for murdering him, seeing these spectacles as a poor attempt to cover his ambitions.

* The Roman Republic. The reasons for the failure of the Spartacus revolt, at least as can be glimpsed from Roman sources (we don't have any sources by Spartacus and co. obviously), is that Spartacus and his rebels were rural slaves and they refused to appeal to urban slaves as a common cause, and indeed his armies often attacked and killed urban slaves in the cities they occupied and conquered. There was also a lack of cohesion without any real goals for an overall overthrow of Rome.
* "The Romans" — the Doctor's gone off with Vicki, they've got the villa to themselves, and they're clearly very comfortable around each other.
* The Romans also encouraged initiative among their individual legion commanders. Cynoscephalae, the last decisive battle for Roman control of the Mediterranean, was won largely due to an unknown Roman commander leading a charge to the unprotected Macedonian rear without being ordered to.
* The Romans also used their Legions as engineers in peacetime, since tens of thousands of idle soldiers are a waste of money and tend to get into trouble if left to their own devices. When they weren't marching or fighting, the Legions were often employed in construction to not only keep up morale but also keep them in fighting shape. One of the biggest examples of this was Augustus using the Roman Legions to rebuild Egypt after a century of neglect by the Ptolmeic dynasty left it in ruins. The Legions built massive networks of roads, caravan stations, forts, and watchtowers to secure the trade infrastructure, which turned Egypt into one of the most prosperous provinces in the entire Empire.
* The Romans also used to take the rams of enemy ships captured into battle and mount them on columns to commemorate naval victories. While the tradition is actually of Greek origin, the most famous was the one of Gaius Duilius, erected to commemorate Rome's victory in their

* The Romans are said to have put a bounty on a rebel leader's head. When he came forward to give himself up and claim the reward, the Romans were supposedly so impressed they let him go.
* "The Romans", Barbara is sold as a slave and ends up working in Nero's palace. At the same time, the Doctor and Vicki are guests at the palace. Through the middle two episodes of the serial, they repeatedly just miss seeing Barbara (though Vicki does unwittingly save her life).
* "The Romans" changed history, having been accidentally responsible for Nero's burning of Rome. When the Doctor realises this is the truth, he gibbers and squeals in delight.
* The Romans created cultural quislings where they would demand the pliant chieftains' sons as "hostages" and ship them to Rome, where they would be treated to the high life and the best Roman culture could give. This resulted in the heirs becoming thoroughly Romanized and converting a previously "barbarian" kingdom into a miniature Rome. It backfired with the Germans, however: instead of

* The Romans had Latin names for their gods, but several have names which are directly lifted from Greece: Apollo is the first one, the other one is Uranus, whose name replaced the god's original Latin name Caelus. Hence, Uranus can be both the Greek or the Latin name in English. Other languages do not have this ambiguity: in French, the Greek name is transcribed as "Ouranos", which is close but distinct from Latin "Uranus".
* The Romans had sharp memories of being on the other side of this, though. In the semi-legendary past, the Gauls sacked almost all of Rome and agreed to spare what was left in exchange for a ransom of 1,000 pounds of gold. A balance scale was brought out to weigh the ransom. When the Romans complained that the Gauls were using dishonest weights, the Gaulish chieftain threw his sword onto the scale with the words
* "The Romans": Ian changes into Roman clothing and a slightly drunk Barbara says he looks "splendid", even helping him style his hair correctly to fit the costume. It goes to his head a bit and he gets quite into pretending to be a Roman.

* The Romans identified Athena, the Greek goddess of wisdom and war, with Minerva, a considerably more domestic goddess of crafts. She was already the goddess of weaving in Greek myth, but that was a considerably minor part of her.
* The Romans initially had difficulty dealing with the superior Carthaginian navy. That changed when they started using heavily armored infantry to board enemy ships. The Ancient Greeks did something similar with their hoplites.
* The Romans later did something like this during the siege of Masada. The fortress of Masada lay on top of a mountain and could be accessed only from a narrow road, meaning it couldn't be conquered by force, only by trickery (how the Jewish rebels had conquered it in the first place:
* The Roman social class "equites" (more or less similar to medieval Europe's social class of knights) would regularly try to gain the glory of "spolia militaria" (the armor and weapons of defeated enemies) as they fought as cavalry in the time of the Roman Republic. The semi-legendary Roman consul Titus Manlius Imperiosus Torquatus (4th century B.C.) got his cognomen "Torquatus" (which was then passed on to his descendants) from the torque worn around his neck, which he got from a big Gaulish warrior he defeated in single combat, and later had his own son executed for presenting spolia from an enemy cavalry commander that personally challenged the young man, as he was under strict orders to not engage with the enemy during his reconnaissance.
* The Roman Spring of Mrs. Stone. Mr. Stone's fatal attack is very subtle and well played.
* The Romans remind one of nothing so much as a bunch of gangsters, with names like Horatius Flaccus ("Flabby" Horace), Tullius Cicero (Tully "the Bean"), and Claudius Pulcher ("Pretty Boy" Claude).
* The Romans sometimes used to free slaves (manumission) and it became such a social institution that they developed a whole legal code around how it could be done, the legal status of a freed slave and his descendants, and so on. Of course, their motivation was not a belief that slavery was wrong. Often manumission happened because it was possible for a slave to buy his own freedom from his savings, so it provided an incentive for them to work hard.
* The Romans themselves, meanwhile, initially subverted this trope, intimidating their enemies with stony silence and grim obedience. Towards the latter part of the Western empire, however, they adopted the

The cool, passionless underhanded tactics of the Tal Shiar intelligence agency therefore offend them, as does their tendency to question a warrior's loyalty. The Tal Shiar, for their part, view the military leadership as inbred, unimaginative fools.

Since that does not bode well for the Tal Shiar (and the Iconians) and their plans to subjugate the Romulans and Remans that escaped the destruction of their homeworlds, the Empire does its best to paint them as terrorists trying to destabilize the peace, accusing them of kidnapping citizens on various colonies (kidnappings that the Tal Shiar are doing with their Elachi allies).

Many of the systems of the old Romulan Neutral Zone are lawless and run by warlords and crime syndicates.

* The Room just grabbed a random selection of clothes off the rack when they went to film the scene, and insisted on sticking with them despite both Greg Sestero and the costume designer politely trying to point out how ridiculous he looked.
* The Roommate: After learning Professor Roberts came on to Sara and forcefully kissed her, Rebecca frames him for attempting to rape her, making a recording so he's fired.
* The Roommate. The director denied this was the case, but it's hard to take this seriously when at least one scene is lifted frame for frame from the latter.

* The Room. The furniture was purchased from a thrift store display window and placed exactly as it was. Hence, none of the chairs face the television, and it does not look inhabited.
* The Room. The main characters state that she's "so beautiful" almost ad nauseam. There's even a side character whose only line in the movie is "Lisa looks hot tonight." To make matters worse, he says it to a woman who's possibly his date/wife.
* The Room to look as if he's dyed it with Sharpies. Sestero also discovered that his bathroom is covered in black stains, heavily implies Wiseau dyes the whole lot over and over instead of just the roots, and finds old photos of him with chestnut brown hair. Wiseau seems to think it makes him look vampiric.
* The Room: Tommy Wiseau both in his film, and in real life, unintentionally.
* The Room Tommy Wiseau wasted money like crazy, buying two cameras to film every scene side-by-side on film and digital. He spent a fair amount on buying the copyright so the characters could sing "Happy Birthday". Some people speculate that the film was a money laundering scheme, which would be where most of the supposed budget went.
* The Room, Tommy Wiseau wildly throws his arms downward while uttering the film's most famous line, "You are tearing me apart, Lisa!"
* The Room, was blonde when she made the film but has since reverted to her natural brown. She jokes about how she went to a screening early and walked along the line, chatting to the fans who were waiting. Half of them were happy to see her, and the rest had no clue who she was.
* The Room. When Claudette discovers Mike and Michelle, who are introduced as they inexplicably come into the apartment to make out and eat chocolate, she asks, "What are these characters doing here?" The audience is probably wondering the exact same thing.
* The Room, when Mark comments about the soft music in the first scene Lisa tries to seduce him. The music is definitely a part of the soundtrack and not established to actually be playing so that the characters hear it.

Concluding that Darwin wants to return to the ocean because he misses other fish, the Watterson Family reluctantly complies.

* The Roots of Evil to say where he knows him from — "Does your planet look like a gravel pit? You'll be surprised how many planets look like gravel pits."
* "The Roots of My Raising" and "The Way It Was in '51": A two-sided hit from 1976 which played upon the values of home and growing up in a carefree era. "The Roots of My Raising," about a young man who visits home for the first time in several years, reflects on such childhood memories as the one-room schoolhouse, the homestead, father and bankers who had absolute faith in their customers' ability to repay loans. "The Way it Was in '51," which became a minor hit of its own in 1978 (and still gets classic country airplay today as a "B"-side) spoke about a now middle-aged man's teenage years, before rock music and Interstate highways, when camaraderie was found amongst small town residents and neighbors and Hank Williams and Lefty Frizzell were unquestionably the most popular singers of the day. "The Way it Was in '51" made a reference to the Korean War, and the line "servicemen were proud of what they'd done" was perhaps a sly reference to the Vietnam War, where not all veterans were "proud" of their service and they were shunned when they got back.
* The Roots uses an eerie music box tune in it's backing music. The effect is meant to be sad rather than scary though; the song is about the child of an abusive drug-addicted father growing up to become an addict himself and eventually dying at a young age from a gunshot wound.

* The Rose of Versailles consists to sit on the sidelines and snark about it — at least as long as she's not forcibly involved, as it happened during the pissing match between Marie Antoinette and Countess Du Barry.
* The Rose of Versailles covers arranged marriages from several angles:
* The Rose of Versailles, despite never airing in English and being virtually unknown in the English-speaking world, had an English-language film made anyway... by the French. Most fans like to forget it ever existed. It was actually made a year before the anime debuted, so it didn't even have a fanbase in the west that could have saved that clunker from sinking like a stone.
* The Rose of Versailles for sleeping on guard duty (in fact all the Household Regiments were known for that, the French Guards and the Swiss Guards were just the worst ones). Their recently posted commander Oscar then shows up, her too expecting them to lazy on the job and in fact planning to catch them in the act to discipline them and, after realizing the absurd situation, saves Fersen... And redirects him to a gate guarded by the Swiss Guards she had just checked they were, in fact, sleeping (and, not being from her regiment, it wasn't her problem).

* The Rose of Versailles, Oscar shoots a guy's gun hand in a duel, as this is the only way she can punish him for shooting a peasant boy in cold blood.
* The Rose of Versailles shows Fersen being extremely relieved at discovering that Lady Oscar is, indeed, a lady — and admitting that "I was beginning to wonder about myself."

* The rotary gun experienced renewed popularity in the second half of the 20th century as anti-aircraft weapons. Where firing windows are measured in fractions of seconds, higher rates of fire are a massive advantage and an externally powered gun can't be stopped by a dud cartridge. Another major reason is that rotary guns have an inherent tolerance for higher rates of fire due to the presence of multiple barrels; when compared to a single-barreled machine gun firing at 1,000 rpm, a rotary gun that has a maximum firing rate of 1,000 rpm fires at least 200 rounds per barrel per minute, which is at acceptable levels for the gun for continuous use and therefore significantly lessens the chance of overheating or, worse, jamming (two problems that single-barreled guns always have and likely will never be corrected despite technological advances in the future). The 20mm M61 Vulcan, developed in 1959, is still in use to this day on US fighter aircraft. Newer versions of the M61 are lighter and have a faster rate of fire, with derivatives (GAU-22 and GAU-8) firing heavier shells.

* The Royals: Prince Cyrus Henstridge is the younger brother of King Simon, and has always been jealous of his brother's crown. He often speaks to Simon and Liam about being deserving of the throne and how a good king would do things, and the unsaid implication lies in his words that he thinks he would make a better king. And indeed, he attacks Simon from behind at one point, effectively killing him and making Cyrus king.

* The Royal Tutor, Beatrix thinks this is one of the reasons her cousin/fiancee Kai does not recognize her as his future wife because she is quite tall and tends to act in a more masculine manner. She also worries that she does not fit Kai's standard of cute things, as Kai adores all things cute and small.
* The Royal Tutor has a crush on the titular character Heine. She is three years old, the youngest out of King Viktor's children, while Heine's age has yet to be revealed but he reminds others that he is an adult and at one point, muses to himself that Adele is young enough to be his daughter. It also doesn't help that Heine physically appears only a few years older than Adele.

It started as a war between Pakistan and India, escalated when both sides' allies tried to break the stalemate, went nuclear when Pakistan nuked advancing Chinese troops, and became a World War after China's collapse and the invasion of Russia from some of the Chinese warlords, at which point US, NATO and the European Union stepped in to try and stop the fighting. Amazingly, widespread devastation was avoided: the US had in place Earthshield, a network of satellites equipped with lasers to shoot down missiles, so only tactical nukes were exchanged. At the end of the war the political situation had returned to pre-war status quo (except for a divided China occupying North Korea), and the US called for disbanding the United Nations and the creation of what would become Earth Alliance, including a military capable to enforce its decision (to which they pledged both Earthshield and the national military forces).

* The Rugrats Movie: Chuckie, Phil and Lil are lost in a forest during a thunderstorm, with the lightning strikes creating the impression of faces in the treetops.
* The Rugrats Movie: Dil and Tommy do this while sleeping under a tree during the storm. It sets in motion the short but sweet chain of events when Tommy realizes just how badly he's been treating his baby brother, and starts reassuring and comforting him instead.
* The Rugrats Movie, Dil can say the words “poopy” and “mine”, and can hold his own bottle, but otherwise behaves like a typical newborn. However, the musical number in the maternity ward features newborns who can sing when they’re only about a few minutes old. Either those babies are geniuses or Dil is literally dumber than a monkey.
* The Rugrats Movie, Drew and Charlotte first learn Angelica is missing from Rex Pester before Stu and Didi have a chance to tell them.
* The Rugrats Movie gives the debut of Tommy's baby brother, Dil. Since he's still developing and cannot talk yet, he tends to annoy his big brother and his friends by drooling, throwing toys, and yelling. The focus of the movie is about Tommy, trying to deal with him as his big brother and learning to accept him.

* The Rugrats Movie: "Nice try babies, now give me back my...*GASP*...CYNTHIAAAAAAAAAAAAAAAAAAAAAAAAAAAA!!!!!!"
* The Rugrats Movie stalks the babies and Angelica through most of the movie.
* The Rugrats Movie, Stu builds the Reptar Wagon for a toy-building contest being held in Tokyo, in the hopes of winning the money to support his newborn son, Dil. When Phil and Lil see the Reptar Wagon, they try to use it to take Dil back to the hospital against Tommy's wishes, which is how they, along with Chuckie, get lost in

a forest. A goat that Boris and Minka gave Didi to feed Dil stows away in the crate that Stu attempts to put the Reptar Wagon in, and when Stu believes he accidentally sent the babies to Tokyo, as they were playing in the crate earlier, he rushes to the airport, only to find out that the goat is in the crate.
* The Rugrats Movie, the babies are cornered on a bridge by the escaped circus monkeys. Suddenly, the monkeys flee, shrieking with fear. The babies start cheering...only to turn and spot a huge vicious wolf ready to pounce at them. Thankfully, Spike saves them just in time.
* The Rugrats Movie, the babies find an abandoned circus cart with a trenchcoat and hat inside. Some circus monkeys jump out and scare the babies.
* The Rugrats Movie the goat would've made it on to the plane, as x-ray scanners at airport security would've detected it.
* The Rugrats Movie, the news reporter gets the kids' names wrong, calling Tommy "Tammy", Dil "Dale", Chuckie "Chunky", Phil "Bill", Lil "Jill", and Angelica "Amelia".
* The Rugrats Movie: The scene where Dil pulls down Tommy's diaper showing his behind. His diaper usually slips down while he talks to his friends.
* The Rugrats Movie. The train eventually derails on a sharp curve and crashes into a forest, but nothing blows up this time.
* The Rugrats Movie: The woods that the babies get lost in are big and dark woods. The babies almost fall over a waterfall, Dil gets taken away by escaped circus monkeys, and also a wolf stalks and almost kills the babies.
* The Rugrats Movie, Tommy and Dil feud over a blanket. They tear it in half with their fighting. Dil angrily takes most of the blanket for himself, but seeing how cold and sad the former is, he pets his big brother and shares the blanket.
* The Rugrats Movie: When Chaz & Howard notice baby footprints and wheel tracks in the woods, the adults realize the kids are in the woods, on the Reptar Wagon. When Drew angrily calls Stu out on this, it gives Stu the idea to search for the kids on his Dactar Glider.

* The rule here is that while you can meet a version of yourself in your own natural timeline, like Stein's younger self, you can't meet through time travel a version of yourself that is ALSO time traveling to that same spot because that can cause timequakes. This basically makes sure the Legends can't get infinite do overs by just traveling back 5 minutes to try again, because they'd see their other selves. Though they get around this in the first season finale by having Sara and Firestorm travel to the point in the first episode where the whole team first took on Savage, by making sure they remain far in the distance where the Legends can't see them. Notably they had to hide at one point so the other Firestorm didn't see them when he was flying by.
* The rule is averted in two cases. Mega-Damage creatures (and special cases like vampires) are immune to any kind of chunky-salsafication; since they can expressly shrug off jumping on an antitank grenade, their MDC have to be reduced to zero (and if they can regenerate, they're not dead until they are shot into red mist - chunky salsa is too likely to get back up -

As of 2007, only 35.9% of the population were subject to a strict one-child limit. 52.9% were permitted to have a second child if their first-born was a daughter; 9.6% of Chinese couples were permitted two children regardless of their gender; and 1.6% had no limit at all. In 2015, it was abolished completely, due in part to fears by the Chinese government their population had become too imbalanced. * The Rumble Ball enables Chopper to expand the powers of his Devil Fruit by affording him four additional transformation points. The problem is that its effects only last for three minutes, and he can't have more than one in six hours. If he takes two, he loses control, and if he takes three that's when this trope really takes effect. Three Rumble Balls within six hours causes his Devil Fruit powers to go crazy, changing him into a very big and very powerful monster. He also loses consciousness, resulting in a berserker that is a danger not only to foes, but to friends and himself. The form requires massive amounts of energy to maintain to the point that it threatens to kill him if it's used for too long. After he changes back to normal, he's incapable of moving for a couple of hours.

* The Runaway Bride": Donna and Lance get webbed up and hoisted into the Racnoss Empress' webs. The Empress later cuts Lance down so her emerging children can eat him (off-screen, thankfully).
* "The Runaway Bride" enough for someone to grab her and run to safety.
* The Runaway Bride era of the show for having too many stories based around everyman characters and set in contemporary London, and too many pop culture jokes.
* "The Runaway Bride" fall prey to. The Doctor tries to mask his attempts to deduce her plan as simple curiosity, but the Empress' human accomplice alerts her to what he's doing, prompting her to order him killed.
* "The Runaway Bride" features aliens hungry enough to eat all of humanity, and the climax involves an actual tank shooting down the villain's spaceship.
* The Runaway Bride", his part was replaced by Wilfred Mott, who was retconned into

Donna's grandfather, and Geoff Noble is stated to have died. As a dedication to the actor, the Tenth Doctor in his final episode gives Donna's mother, as a wedding gift to Donna, a lottery ticket bought with a quid the Doctor obtained by going back in time offscreen to borrow from "a really lovely man. Geoffrey Noble, his name was."
* "The Runaway Bride": "It was all there in the job title, the head of Human Resources."
* "The Runaway Bride". She started walking the earth after having met the Doctor, but got bored after a few weeks after she realised that "it's all bus trips and guidebooks and don't drink the water and two weeks later you're back home."
* The Runaway Bride strays deep into screwball territory, although it is more serious in some respects than most - the protagonists' psychological hang-ups are explored and e. g. the father's drinking problem is not done for laughs.
* "The Runaway Bride" that the reason the Doctor travels around with a companion is so that he has someone to remind him not to do this, since he has so much power and gets into such intense and painful situations it would be hard for him not to slip, and hard for anyone to stop him once he starts sliding. The Doctor officially jumps in two stories in which he is without a companion, though he does manage to return to the side of right in both:
* "The Runaway Bride": The Doctor finds an elaborate ex-Torchwood One research facility beneath the Thames river in London.
* "The Runaway Bride": The Doctor gives Donna his jacket. She's fully dressed, but wearing a sleeveless wedding gown and it's Christmas. Donna undercuts the attempt at chivalry somewhat by commenting "God you're skinny... this wouldn't fit a rat." Though she has a point.
* The Runaway Bride"; the Doctor steals a guard's uniform and uses it to infiltrate a secret chamber — but the enemies aren't fooled for a second.
* "The Runaway Bride": The Racnoss ate entire planets, and were dangerous enough that the Fledgling Empires, including the Time Lords, went to war against them in the early history of the universe. The Doctor winds up killing the newborn Racnoss that the Empress reawakens because they're "born starving" and thus cannot be reasoned with.
* The Runaway Bride": This is Donna's reaction to seeing the TARDIS flying down a motorway after her.
* "The Runaway Cart" takes place after Valjean saves Fantine from arrest onstage, but in the film it takes place just after Fantine loses her job. (In the novel, it happens several years before either of those events, making both the stage and the screen versions examples of this trope to begin with.) Both versions of the scene eventually lead to the reveal that a lookalike has been wrongly arrested in Valjean's place. In the stage version, Javert simply mentions that he's only known one other man as strong as "the mayor," an ex-convict who happens to have just been recaptured; in the film, as in the novel, the earlier cart-lifting incident makes Javert start to suspect that "the mayor"
* The Runaway Guys as a guest player, the latter experienced a significant surge in popularity.
* The Runaway Guys. Chuggaaconroy thinks being Canadian is a horrible offense.
* The Runaway Guys declares he's the best Yellow Toad they've ever had. The guys are quick to point out he's the only Yellow Toad they've ever had.
* The Runaway Guys: Done in episode 4 with 'bee' references as soon as they enter the Flower Fields level and start fighting bees.
* The Runaway Guys. He seems to find it somewhere between funny and disturbing.
* The Runaway Guys less so... though he can can be quite loud himself. Later videos have shown him to be just as loud as Proton Jon and Chugga. One time, The Runaway Guys were so loud, they actually woke up a woman in the hotel they were staying in.
* The Runaway Guys playthrough, part 7 of Creepy Cavern. Jon has just gotten a Boo Bell, and he comes to a fork in the road where he could choose to land on the same space as Emile and Mario, initiating a duel with one of them. He chooses the other way.
* The Runaway Guys sell T-shirts with cartoonly-designed faces of the trio on them.

The artist, Tom Fawkes, got endorsement from the Guys to draw these.
* The Runaway Guys sticks a whole bunch of ring objects on her avatar, saying "I really like it!" The two would later get engaged in 2017.
* The Runaway Guys, the guys got attatched to a mannequin of an old man that sits outside Station Square's burger shop. They then dubbed it the Old Man and attempted to take it everywhere with them, even into areas the mannequin isn't supposed to be in.
* The Runaway Guys thinks that the word "Beebs" is this, leading him to mutter it practically any time Beebs show up.
* The Runaway Guys, together it goes beyond. And then they have guests sometimes... that also hams it up to ham galore!
* The Runaway Guys, when Bowser gives 20 coins to the completely broke DK (Chugga). "Even DK wants to know, 'What the hell was that crap?'"
* The Runaway Guys whenever he makes a terrible pun, as he's known to consciously do.
* The Runaway Princess, a witch routinely turns princes who come to bother her into frogs. Although she's perfectly willing to turn them back into princes, most of them prefer to stay as frogs.
* The Runaways biopic features a cherry with a lit fuse instead of a stem - a reference to the band's hit "Cherry Bomb".
* The Runaways: Made in 2010 and set mostly in the mid to late 70s, but the epilogue is set in 1982.
* The Runaway variant of it, since circuses are much more niche now than they have been in the past and are much more regulated now.
* The Runaway). While it delivers messages just fine, it's only response to being asked for advice is to poop.
* The Rundown (aka, The Rock) is humped by a monkey while hanging from a tree in a rope trap. Interestingly, he, the big bounty hunter, gets this treatment and not the comparatively smaller and comic relief character who is also trapped next to him.
* The Rundown, Beck gets into a debate over whether Mike Tyson could take Muhammad Ali if they were both in their prime. Beck claims Ali could take Tyson.
* The Rundown is absolutely loaded with Dakka flying in all directions. It makes the movie.
* The Rundown, is a "retrieval expert" hired mainly to collect debts or other stuff that his boss wants from people, or in the case of the main plot of the movie, track down people who have cut and run and bring them back to him. He's described in many summaries as a "bounty hunter."
* The Rundown, much to the amusement of Travis, who he's been assigned to take back to Chicago:
* The Rundown's ass, as Beck doesn't speak Portuguese, telling Beck to keep a "fierce gaze" and maintain eye-contact, (knowing that to the natives, this is a major sign of disrespect) going while he tries to convince the natives to let them go. The natives also don't speak English, so when Beck starts suspecting that Travis "really sucks at Portuguese," Travis has to "translate" what Beck said.
* The Rundown, The Rock plays a "retrieval expert", and in the opening scene, a client has sent him to collect a debt from a professional football player. Having approached the player in a club, he gets a drink thrown in his face before looking round to see that half the team has surrounded him. Sighing, he explains that they can do this the easy way or the hard way — they choose the hard way. Cue one guy beating up seven or eight huge athletes with ease.
* The Rundown, the Rock's character refuses to pick up a gun the entire movie, maintaining that "bad things happen" when he does. When he gets into a tight spot in the end, he does end up using guns.
* The Rundown, where the collapsing ceiling trap is entirely dependent on the fact that the wooden logs are weak and rotten. So it's a trap that would gradually grow more dangerous with time, until it just completely collapses and becomes useless. The heroes just happened to arrive in time for it to reach maximum potential lethality?

* The Runecaster kit also makes use of geometric magic, as it needs to physically carve or draw runes to be able to invoke the attendant magic.
* The Runelords are separated by the day. Very nearly every minute is accounted for, often from multiple perspectives. With time-skips of maybe a week or two in between each book, the entire first tetralogy takes place over a couple months at most.
* The Runelords, at one point the One True Master of Evil unleashes a horde of plague rats against human villages.
* The Runelords books 'speak' by pheromone scents (and anti-scents, since they have to erase the previous 'word' before they can say anything else), and can 'see' energy and electricity. Their death cry, the scent they produce when killed, is said be be something like burned garlic. They have neither ears nor eyes that can see visible light wavelengths.
* The Runelords books. The description of the weapons, however is somewhere between a medieval poleaxe and a military pick.
* The Runelords each received a large number of metabolism endowments, effectively causing time to slow down for them. Moving in this state was depicted relatively realistically, with a "thickening" of the air and some care required in movement to prevent injury, particularly when they weren't endowed with proportionate strength.
* The Runelords eventually learn that their ultimate opponent isn't Raj Ahten, the Darkling Glory that was summoned by Raj Ahten's flameweavers, or even the Reaver queen, but the One True Master of Evil, queen of the Loci. She's actually introduced as a character in the second series, and we begin to see why she's worthy of the title. Glories and Bright Ones are talked about, but scarcely ever actually seen on-stage, and there's no indication as of yet that they have a leader or that there's any good-guy counterpart to Shadoath, the One True Master.
* The Rune Lords. Internally-consistent and thought out rigorously well, it was actually one of the inspirations behind Sanderson's ideas for the Mistborn books.
* The Runelords, though, in a section that explicitly spells out (and demonstrates) a speedster leaning into turns, being careful not to break his legs, and arcing through the air after cresting a hill.
* 'The Runner' and 'The Driver' (their names could not be given due to the concurrent court case), whose claim to fame was to kill Jason Moran in front of their kids, would also qualify. Specifically when the Runner thinks his wife is having an affair he first tracks down who he thinks she is with, only for the teenager to not only be taken into protection by the police but is the wrong man, after trashing his house he beats and rapes his wife.
* "The Runner", the case of a murdered cop who was recorded screaming "Runner! Runner!" before his death. Once the police discover "Runner" was the street name of an
* The Runner-Up Takes It All guy, even if by winning she'd get $15,000 ("I don't need the money, but I knew you did.").
* The running commentary of Butters crossing the border in "Last of the Meheecans" refers to
* The running gag's popularity even gave it an episode of the same name where they say the catchphrase
* The running joke of Hermes saying a rhythm with the format "Sweet X of Y!" whenever he is surprised ("Sweet Guinea pig of Winnipeg!", "Sweet gorilla of Manila!", etc) once came as "Sweet squid of Madrid!" Well, despite Madrid being nowhere near the sea there is, in fact, a recipe for Madrid-style calamari, and calamari sandwhich is a traditional street food in Madrid.
* The Running Man. Actor Erland van Lidth had a background as an opera singer.
* The Running Man: After Stalkers Buzzsaw and Dynamo were sent to the game zone, Fireball said, "Let's win one for the Zero!", in reference to Subzero, who was killed by Ben Richards earlier.
* The Running Man all have pro wrestling gimmicks and weaponry to match. Bonus points for most of them actually being played by pro wrestlers.
* The Running Man, Amber exclaims "Jesus Christ!". Ben responds, "Guess again."
* The Running Man, Amber Mendez's friend tells her she was lucky to survive an

encounter with Ben Richards: "You're lucky he didn't kill you, too. Or rape you, then kill you. Or kill you, then rape you."
* The Running Man. Amber Mendez steals the raw footage of the Bakersfield Massacre and tucks it away, but is captured. Later she produces the tape.
* The Running Man, Ben Richards shoves the blade of Buzzsaw's titular weapon into his groin area, causing him to emit a scream that went higher in pitch.
* The Running Man. But he believes strongly in the Gladiator Code, and quits over Killian's cheating.
* The Running Man ends with the hero presenting the double-deuce to his enemy while performing a suicide attack via jumbo jet, aimed at his enemy's skyscraper headquarters. He had earlier flipped off the camera in an image used to present him to the viewing audience.
* The Running Man ensue. Notably, however, they're only able to disable the remote trigger system itself and need to find other means of removing the still-very-explosive collars themselves (which can still be inadvertedly activated if fiddled with).
* The Running Man: Here, the Most Dangerous Game is also the Most Popular Gameshow, and convicts are given their chance to fight for their freedom in a somewhat one-sided battle arena (or in the populace at large in the original book). Rather a lot of carnage ensues.
* The Running Man he wanted his name taken off the credits. This is because the movie is barely anything like the book he wrote.
* The Running Man is shown to be chased and shot by the security forces despite still being alive and the people of the future take it for granted.
* The Running Man. It's set in 2017, but the clothes scream 80s (not that that's a bad thing). Just look at the leotards worn by the dancers at the beginning of the game show. Then there's the earrings on some of the female audience members, the sweater on Killian's make-up guy...
* The Running Man on Amber, the bad guys stick her in their televised-everywhere games. This gives the rebellion time to rescue her, retrieve the tape with the evidence of just how badly corrupt the government is, and broadcast it. (They also suck at searching her — this was an old-style VCR tape, and they made her change her clothes before dumping her in the arena.)
* The Running Man, one of the Stalkers, appropriately named Fireball, dual wields flame throwers. It ends badly for him.
* The Running Man. Prisoners wear neck collars which, when activated by a sensor perimeter, explode. It happens to Chico when he mistakenly thinks the perimeter's been shut down.
* The Running Man, released in 1987 and set in 2019, the ICS televison network digitally creates a fight between Ben Richards and Captain Freedom, using what would become known around that time in real life as "deepfake" technology.
* The Running Man: Richards briefly meets another contestant of the Running Man contest before they're separately sent out into the field. He later hears a news report that the other contestant was found in another town hiding in a container and killed by the Hunters.
* The Running Man: Richards kills three Boston police officers in a gas explosion during his underground escape from the hotel. He already had a target on his head, but now every cop in the city wants his blood.
* The Running Man, Richards wonders what his wife and child are eating. Some options include fake milk, fake coffee, and kelp pills.
* The Running Man that are broadcast to the poor populations to distract them from how the network is poisoning the air.
* The Running Man: The intro mentions how Earth's resources, such as food, are in short supply.
* The Running Man the massacre and part of the plot is finding the evidence of this to give the real story to the public as well as bringing the corrupt officials behind it to justice.
* The Running Man, the TV screens all read PLEASE STAND BY after Ben Richards and his girlfriend walk off the game show's studio set.

* The Running Man. The U.S. has become intensely repressive, including (among other things) slaughtering people who are protesting not having enough food.
* The Running Man: The world's economy is in shambles, along with the United States, which has become a police state.
* The Running Man: Two contestants wore yellow jumpsuits while two wore red. Guess who died?
* The Running Man: "What's the matter now, BITCH!? Why aren't you laughing..!?"
* The "running parallel to the goal line" is an interesting twist. In reality, this play has occurred at least as far back as
* The run of the Twelfth Doctor revisits this dichotomy between rival love interests the Doctor and Danny Pink, with the added classification of "Officer". The viewer knows both of them as soldiers: the Doctor with the Time War, and Danny traumatized by the violence he was ordered to commit, and the people he could not help. These experiences weigh deeply on them both. However rather than getting to know Danny, the Doctor almost immediately starts insulting him, stemming partly from his assumptions that Danny is a "warrior", for the worse. Danny then pegs the Doctor as an "officer", the
* The Runt at the End, Crippler. As Burns laments, Crippler was once as vicious a beast as all his other dogs, but having been around since Woodstock, time hasn't been kind to him.
* The Runt at the End. The runt points at the beefy guy and says (in that same voice) "It was him! Let's get him, fellas!" As the other workers pound the guy into pudding, the runt chuckles.
* The runway sequence at the end of each movie was also comprised of people's characters who won a lottery to have their characters shown in the movie. The most notable example of this was when
* The Rural Purge them, slashing budgets and hiring outside writers with distaste for the genre.

* The Rur crystal from the first couple of arcs. Long ago, a renegade Jedi calling himself Eternal Rur used the crystal as part of an experiment to gain eternal life. All he succeeded in doing was creating a copy of his mind within the crystal which quickly went insane, convincing itself it was the real Rur and that the actual Rur was an evil spirit who'd stolen its body. It proceeded to use its Force-based

* The Russia House and Austrian Klaus Maria Brandauer, both as Russians.
* The Russia House and some Russian friends play a tune using improvised instruments such as matchboxes.
* The Russia House's character is given some basic spycraft instruction, and is told that running showers or playing music loudly won't work against modern listening devices.
* The Russia House. The protagonist is taught to write on a glass surface to avoid this trope. He later does so, using a picture taken off the wall.

* The Russian airfields near Murmansk also get this treatment at the hands of sub launched American Tomahawk missiles.
* The Russian and British Assault class originally used the Browning Automatic Rifle. A later patch replaced the Russian BAR with the DP-1928, and the SAS Assault in the Secret Weapons of WWII expansion got the Bren.

* The Russian presidential election of 1996 featured a TV ad portraying the Communist Party leader Gennady Zyuganov with a flute leading various food products into the sea. The implication was: "If the Communists win, they'll return the country to the times of product shortage." It was dropped in the second round, when it became clear that
* The Russian Revolution Finland eventually declared herself an independent state 6th December 1917.
* The Russian "Rus" project, which looks like a cross between Soyuz and Apollo.
* The Russians Are Coming, the Russians Are Coming, in which the titular Russians have accidentally run aground on a small New England island, and are just trying to get a motorboat to pull their submarine free. However, thanks to the Red Scare, the entire island promptly whips itself into a frenzy over the Russian "invaders" and bloodshed is only very narrowly averted.
* The Russians Are Coming, the Russians Are Coming, the final climactic scene is where the American small town police force and milita are facing off against the deck guns of a Russian submarine, with the rest of the town watching. Two boys climb up the church tower to get a better look, one of them falls and is caught by a protruding nail and left dangling 30 feet in the air. The Americans and Russians both drop everything and work together in forming a human pyramid to rescue the boy, releasing the tension and allowing cooperation between the groups to help the submarine get away.
* The Russians Are Coming, the Russians Are Coming, there are obviously many joking lines spoken by the Russian soldiers. One example of this is, when the Russians are in an American garage, one thinks a bag is filled with grain and offers it to another. The other tastes it and proceeds to exclaim "This is SHIT!"
* The Russian screw tank was a wildly innovative vehicle able to cross snow, ice, mud, gravel, debris, water, in short any terrain you can imagine. Except a good road.
* The Russians had several psychological issues in their early Salyut and MIR missions.
* The Russians have "Katyusha" ("Little Katie"), who waits for her soldier boy.
* The Russians Moscow correspondent, Headrick Smith noted that the "It's a queue! It must be important!" version was very common behavior of Muscovites during his stay in Moscow. Basically, Muscovites had to line up to buy anything worth having, and the very sight of a line of their fellow citizens would cause them to assume that something worth buying would be found at the business end of the queue.
* The Russian song "Million Scarlet Roses" is about an artist who fell in love with an actress who loved flowers. So he sold his house and his paintings and bought
* The Russians plot to detonate a nuclear bomb near a US Air Force base, to cause the election of an anti-nuclear, pro-Soviet government (Labour at that time were anti-nuclear. While not pro-Soviet, they had quite a few fellow travelers attempting to influence them from within. In the novel a faction of these are thus waiting in the wings to take control and remove the US nuclear missiles from the UK, eliminating this threat to the Soviet Union).
* The Russians seem pretty okay with "Back in the USSR". for being a corrupting Western influence, even as American reactionaries accused the band of being pro-Soviet.
* The Russians themselves did this to the Polish nobility. The Tsar sent one of his cousins to "count trees" because she refused to let her husband go without her.
* The Russian translation corrects this by calling him and the show Herakles (although, dropping the "es"), which is more known in Russia than Hercules, which most people there think is a brand of oatmeal. Cupid probably remained, likely due to Eros not sounding very family friendly.
* The Russian Tsars have late 20th-century rocket launchers with which to dispose of
* The Russian version of the game has Shepard referred to as "Captain", as the Russian equivalent of "Commander" is "Captain 2nd Class" or "Captain" for short. The translators just figured that transliterating "Commander" would be too awkward

for Russian gamers.
* The Russian women's curling team at the 2014 Winter Olympics became best known for how most of its members participated in lingerie photoshoots days before the event, in particular Anna Sidorova, Alexandra Saitova, and Ekaterina Galkina, especially when their performance that year ended up not even allowing them to reach the medal table (made all the worst as that year the games were held in Sochi, Russia, meaning that they were the home team).
* The Russo-American Alliance consists of Alaska, Hawaii, California, Oregon, Nevada, Michigan, Illinois, Indiana, Ohio, Pennsylvania, Maryland, Delaware, Maine, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island, and New York. They become minor allies to the main characters in Appleseed.
* The Russo Brothers. Altogether, the four films they worked on for Marvel earned a combined total of around 5 billion dollars, with a combined production cost of around 1 billion. Not bad for two sitcom directors.

* the Ruthless Seven. The Pits were eventually opened as part of a quest.
* The Ruth Rendell Mysteries - featuring DCI Reg Wexford and DI Mike Burden (might not be the best example, one might argue that Burden is more of a little brother than a son-like figure to Wexford)
* The Rutles, being a parody band, were quite fond of puns, including this batch from "The Knicker Elastic King":
* The Rutles: "I know you know what you know, but you should know by now that you're not me..."
* The Rutles lyin'!" She then says the everytime someone does a documentary about some white rock band he falsely claims to have been robbed by them.
* The Rutles sixties music being like. And it still ended up being close enough that ATV Music claimed copyright infringement and got a 50% share.
* The Rutles songwriting credits come from the Rutles songs being overly close to the real thing... but they're still not the real thing.
* The Rutles - the band are supposedly a living legend that will live long after other living legends have died.
* The Rutles. The songs were so close to the Beatles' work that Northern Songs (copyright holders of their music) threatened a plagiarism lawsuit against Chappell Music (the Rutles' songs). However, George Harrison appeared in the Rutles' mockumentary "All You Need is Cash."
* The Rutles, which pointed out that people were buying Rutles/Beatles albums just to burn them.
* The Rutles). While there had been an earlier Rutles release, it was not purported to be a "genuine" Rutles album; instead it was a soundtrack to their initial TV special. Although there was still a fictitious aspect to Archaeology (the new recordings were said to have comprised a 'lost Rutles album' from 1970), the three remaining members of the group not only thanked the Beatles in the booklet, but credited themselves under their own names. Even further, the lyrics of "Questionnaire" directly address John Lennon's murder, while "Unfinished Words" weaves in the titles of various Beatles 'outfakes.'
* "The Ruum" by Arthur Porges is all about this trope. The Ruum is a virtually unstoppable alien bio-mech creature which pursues the protagonist, Jim Irwin, until

it finally catches him, only eventually releasing him due to him not falling within its strictly limited capture standards. A full story summary is available on
* The Rwandan genocide was partially a result of this. Without getting into who was persecuting who at which time, let's just say that the Tutsis used to be in elite positions, but then the Hutus engaged in revolutions, purges, etc. By the time of the genocide, the Hutus were trying to get rid of Tutsis and moderate Hutus.
* The RWBY. All four of whom having at least one myth involving them cross-dressing (the characters are of the disguise's gender, meaning Joan and Mulan are represented as boys while Thor and Achilles are represented as girls).
* The RWBY Loops by looper standards. Kali, however, is explicitly stated to be a civilian, only joining in the fight because she couldn't stand not knowing what happened to the rest of her family. By the end of the whole thing, she's destroyed a factory, helped kill a vampire, befriended a bandit queen, and become an icon for her people — all within what's implied to be a few hours.
* The RWBY Loops catches up to Pyrrha's canonical death, the loopers all agree to declare war on baseline in response.
* The RWBY Loops. During the Tale of Two Sisters, a small number of enemy Pennydrones walk out due to what is essentially a combination of ennui and boredom. While this is initially played for laughs, it's eventually pointed out by one of them that they literally cannot feel anything anymore, and only joined in the fight because they had nothing better to do.
* The RWBY Loops For one, all loopers on Remnant activate in pairs, which is eventually explained as a result of their unique soul anatomy; for another, an early intervention by a hacker led to three nominally villainous individuals looping, alongside a pet dog and two teachers, which circumvented the usual way loopers were activated and had a number of consequences.
* The RWBY Loops only starts looping after her canonical death and thus ends up with a crippling terror of Pyrrha, the one who (accidentally) killed her. Pyrrha is very understanding, avoiding her for some time, and both of them realize it's not entirely healthy; over the course of the fic, they work together to help her overcome her trauma.
* The RWBY Loops Remnant had; after the expansion where Salem's existence was revealed, the part of her that indulged in villainy grew increasingly frustrated and disgusted with her position as damaged minion, leading to her repeatedly usurping Salem and eventually attempting to achieve power greater then she had ever offered.
* The RWBY Loops, Sun Wukong joins the looping crew only to find that Blake Belladonna, the girl he was crushing on, has been dating Yang Xiao Long for quite some time and the two are, in fact, recently engaged. Unusually for this trope, everyone is aware of the situation and somewhat sympathetic, attempting to help him move on.
* The RWBY Loops team JNPR becomes this due to an early variant loop cropping up around the time Ren and Nora's baseline orphan status was confirmed. Unusual in that all four individuals are biologically unrelated, as well as generally all being seventeen years of age, and Pyrrha has an on-again-off-again affliction known as being dead. Jaune appears to just roll with it.
* The RWBY Loops who can pass for "harmlessly cute" until it's far too late, but while other Remnant loopers are portrayed as being somewhat wary around errant bunnies and bunny-themed individuals Ruby is consistently terrified of them (unless they are people she already knows are decent).
* The RWBY Loops, with separate causes and each preying on their insecurities. Notably, Yang's are guided by a specific entity and, eventually, she manages to conquer the issue without losing her mind; Cinder's are portrayed as surreal and mind-breaking, probably because they're caused by Slenderman, and by the time she shakes them off she is utterly insane.
* The rylo is also on the receiving end of this; in Act VI chapter 25, Astreal uses the
* The Ryugu Shelter is a gorgeous amusement park that appeals to the people in it

and entertains them in any way they can, while actually functioning as a safety bunker. It looks great, but behind the scenes, things quickly fall apart as an accident lowers their food rations a lot
* The Ryugu Shelter reveals that one of its plans, if things really started to go down the drain, was to
* The Ryugyong Hotel was possibly the most literal example of this trope. Made in
* The SAAB 9000-series was notorious for its poorly built locks, culminating in a demonstration in which the car was unlocked and started in less than 10 seconds with an ice cream stick as the only permitted tool.
* The Saab coughed and struggled all the time, and only had enough boot space for a hat.
* The Saavedra position in chess, one of the most famous endgame studies, was named after Spanish priest Rev. Fernando Saavedra, who discovered a winning underpromotion in a position thought to be a draw. A weak amateur, this discovery is all that he is known for.
* The Sabaody Archipelago arc can be considered the best animated story arc so far. The art consistency did drop a lot, but there was hardly an episode with poor animation during this 21-episode arc. Many of the episodes (including those headed by the well known "average" animation directors) got treated with lots of fluid, "expressive", and just generally better animation in comparison to the norm.
* The Sabbat crossover fic, featuring Jack Skellington being appointed as the latest Guardian; North explicitly states "Jack is not being Jack" and has to clarify that he's referring to Skellington and Frost respectively.
* The Sabbat version can get even worse: occasionally they'll bury your dead relatives over you, forcing you to dig through their corpses.
* The Saber class were generally considered to be the first type, the Servant most formidable in battle. Any participant who didn't believe they could summon one instead focused on other tactics and assets that would circumvent direct clashes.
* The Saber that features in Fate Stay/Night, in particular, is noted to be the best of the entire Saber Class. Seeing as she is actually
* The Sabertooth guild leader, Jinemma, is an especially notable example. He won't accept anything less than absolute victory, so when Yukino loses to Kagura, he instantly humiliates her by causing her to strip naked in front of the guild members before kicking her out. Later when Sting and Rouge single-handily lose to Natsu, he beats them senseless then tries to kill Sting's exceed friend, Lector, when he tries to defend him. He gets a hole in his mid-section by Sting in retaliation for his trouble. But the real kicker comes an arc later when he shows up transformed into a demon by Tartaus (which he accepted willingly unlike his daughter Minerva who had to have it forced on her) just to take revenge on Sting and Rogue for
* The Saber version of Elizabeth Bathory is unskilled in swordmanship and mostly just flails her sword around or charges swordfirst at the enemy. She mostly wins through strength and bravery. The Caster version of her is overflowing with magical energy, allowing her to perform powerful spells despite being untrained.
* The "Saber Wars" event revolves around a version of Altria (the original Saber) getting angry at the large number of characters that look similar to herself, and going on a mission to murder all of them. She refers to her
* The Sable Quean, after he eats wild ramsons. Ambrevina was so grossed out by his breath that she told him to wash out his mouth or else she'd leave him behind and travel alone.
* The saboteur Firefly: more mercenary than terrorist, though for some reason he seems to hang out more with terrorists than governments (who could probably pay more). This may be because he finds tearing down social order more fun than shoring it up. In the
* The Saboteur goes up to five levels. The Nazis will not stop pursuing you until you find a hideout and lose them, but lower-level hideouts don't fool higher-level pursuits. At the highest level, the Luftwaffe joins the chase, and the only level five hiding places are at the top of the Eiffel Tower and a farmhouse at the top of the map.

* The Saboteur has a lot of really cool cars, but the coolest of all comes from unlocking the third level racing achievement (in game). It is like the batmobile meets an F1 racer.
* The Saboteur, in which Sean has to rescue a defecting scientist from a Nazi train before the train reaches the bridge that Sean has rigged to blow. There are also hijackable turrets every couple of cars that can be fired at any Nazi installations the train happens to pass.
* The Saboteur is accompanied by a haunting piano version of Nina Simone's Feelin' Good, being played by a despondent Nazi general. You have the option of killing him and playing the rest of the mission in eerie silence.
* The Saboteur, is an explosives expert working with the French Resistance.
* The Saboteur it, calling smoking one of Sean's least healthy habits (the man routinely climbs buildings, blows up buildings, crashes cars, and gets into gun fights, so that's saying something).
* The Saboteur) it does result in him being out of uniform from the waist down. Also, for whatever reason, Sean also refuses to wear the armband as well.
* The Saboteur, one of the missions Sean does is rescue a spy for the people fighting against the Nazis. It later turns out said spy is a full blooded German who is using his skills to help take down the Nazis. Sean invokes this trope by asking why he is fighting against his people, which the man replies that they are not his people, finding their actions despicable, and is tired of everyone stereotyping every German as so.
* The Saboteur: The game's option of going around the city and countryside to destroy the various Nazi war and occupation equipment is probably what gave this game its name, more than the actual French Resistance aspect. You'll spend a lot of time blowing up bridges, searchlights, AA guns, sniper nests, occupation towers, artillery, propaganda speakers, fuel depots, and various other things.
* The Saboteur, the music on the radio starts off grainy before it shifts into a non-diegetic version of the song.
* The Saboteur, we get the superior Nazi soldiers who use very powerful weapons and armor. Lucky for you, you get to use these weapons too.
* The Saboteur, while you can't actually do this in the game, there is a perk named "Paint the Town Red".
* The Sack Of Rome, a 1992 Italian/Russian movie starring Franco Nero, as you can imagine from the title. When the German mercenaries enter Rome they engage in rape, slaughter, looting and pointless destruction.
* The Sack of Torus Filney, a massive battle that occurs as the Rebellion — aided by the Guardians and Jade — storm said fortified city.
* The 'Sack Stuffers Local 199' strike and cause a Springfield-wide food shortage. The strike gains the support of the shelf-dusters union.
* The Sacrament initially comes off as a self-sustained utopia where people can live together regardless of the race or background. It's only until later that we find out that the people aren't allowed to leave, and those that disobey the rules are severely punished.
* The Sacramento Kings in the early 2000s. Fans of every NBA team not named the Lakers could rally around them. They became the NBA's Woobie at that time. They are one of a handful of franchises in any sport to have played in FIVE different cities with only one championship to their name. 2019 marks their 58th year since winning a title. Even worse, the Kings at their peak were a victim of what likely appears to be a fix, swinging the crucial Game 6 of the 2002 conference finals back in the Lakers' favor when the Kings had a commanding lead and a ticket to the NBA Finals in hand.
* The Sacred and the Profane: Caphriel (Angel!Crowley) towards Zirah (Demon! Aziraphrale).
* The Sacred and the Profane roles, the fic shows just how psychologically broken an angel like Aziraphale could become by Falling without warning and how Crowley's devotion to Aziraphale becomes much darker and sadder when Aziraphale is a manipulative demon who isn't above exploiting Crowley's affection for him to get away with heinous acts.

* The Sacred Art of Stealing a suave criminal mastermind kidnaps cool cop Angelique De Xavia, and when she accidentally says, "I wish you'd been there to tell me that when I got up this morning" he responds, politely, he wishes the same thing.
* The Sacred Art of Stealing has few real principles, can be casually violent towards people who try to mess him around and, although he is smarter and more level-headed than some of the people he kills for, he is a somewhat jaded character who seems to have a fairly dull and unglamorous lifestyle.
* The Sacred Art of Stealing. They immediately set free any hostage who is pregnant or has a heart condition.
* the Sacred Band of Thebes, whose skill in battle was unrivalled until they finally fell at the hands of Philip II of Macedonia, who (according to Plutarch) wept at the sight of their corpses and proclaimed "Perish any man who suspects that these men either did or suffered anything unseemly."
* The Sacred Blacksmith, especially the ending theme. Lisa paired with any of the other characters increases her own moe and significantly brings out at least one trait of the other characters.
* The Sacred Blacksmith gets excited. Cecily realizes what she just said and gets really embarrassed, trying to explain that she wanted him to see her heart and soul, not her body.
* The Sacred Blacksmith has Cecily, who in the anime, despite losing and needing saving a lot, never stops practicing and fighting.
* The Sacred Blacksmith like herself has to perform the tasks of a common servant as well as look the part. Her friends decide to gang up on Fio for subjecting her to such a state, and then this happens to all three of them after Fio effortlessly knocks them out and leaves them piled up on the floor.
* The Sacred Blacksmith reaction, prompts her to beat his face in savagely.
* The Sacred Blacksmith seems to be capable of cutting through most things, such as a two handed sword or another katana that was swung at it, meaning it can cut through other swords with no force behind it at all. His magically forged katanas are offset by their fragility, but they still cut through the insanely overpowered demon swords.
* The Sacred Blacksmith to forge a sword to fight him. It's not as drastic as most other examples here, except that neither Luke nor Cecily have a weapon at that point, and he seems to have no compunction against killing them while they are unarmed.
* The Sacred Darkness: Darkness which is explicitly not a metaphor for evil.
* The Sacred Diary of Adrian Plass, Adrian has to come up with a sermon based around three alliterative bullet points starting with H, but can't think of a third one and keeps getting absurd unrelated suggestions.
* The Sacred Diary of Adrian Plass uses "vquex", which he insists is defined in the full length Oxford Dictionary as "a cross between a ferret and a giraffe". Gerald objects because the required mating act would be physically impossible.
* The Sacred Order of Timekeepers wears double-breasted coats, apparently color-coded to indicate rank.
* The Sacred Realm is said to have a gold-colored sky. It is blood-red by the events of
* The Sacred Rings, though this one needs to be powered up in order to open, and the switch to go through is easy to spot.
* The Sacred Stones, Gilliam/Syrene, Ross and Amelia, and the mentoring/father-daughter bond between Amelia and Duessel. L'Arachel and Dozla is a non-romantic example as well... more in muscles since according to a support conversation with Ewan, Dozla is shorter than most.
* The Sacred Stones, it is possible to form a strong Support bond between the Paladin Seth and Princess Eirika, where he confesses that he has feelings for her that were fanned when he had to evacuate her from Renais Castle. This changes the epilogue such that Seth eventually gets married to her.
* The Sacred Stones of sorts Ephraim) and popular fanon option Rennac.
* The Sacred Stones, on the other hand, Flynns with a spear in his critical.
* The Sacred World of the Kais is always well-lit despite not appearing to have a

* "The Sacrifice": A man manages to kill a vampire, freeing the last survivor of an isolated town whose inhabitants have been sacrificing their own happiness to keep the vampire at bay for centuries. Then at the last minute, it turns out that he was bitten. (This is perhaps foreshadowed, however, with the fight that shows the vampire's power to teleport and turn invisible — or, at the very least, move so fast that it might as well be — meaning that it could have bitten him at any time.)
* The Sacrifice can kill hundreds of infected with hand-made weapons in the worst possible places (airport, hospital, church), do you think that trained soldiers in a base with twenty feet high walls, barbed wires, artillery, choke points and choppers can do the same ? Of course they can't, they're soldiers.
* The Sacrifice comic on L4D.com features some incredibly over-the-top gibs.
* The sacrifice of the bull being intercut with the death of Kurtz at the film's conclusion was not part of the original script — but after witnessing the ceremony, Coppola filmed a recreation of it, liking the symbolic resonance of it.
* the Saddam Hussein impersonator sent to trial in his place with "I'm No-Scar! ...dot com!".
* The Saddest Music in the World, Fyodor and Roderick walk in to hear Chester making loud sex with Narcissa upstairs.
* The Saddest Music in the World, Roderick asks his father if he has seen his missing wife and sure enough she turns out to be Roderick brother's current lover.
* The Saddle Club: In "Show Ponies Part 1" Ashley rode Comanche. Veronica gave Ashley her coat after it shrunk in the wash since it wouldn't fit her anymore.
* The Saddle Club in that horses are much more expensive to keep than most animals and this particular horse was too old to sell, so the trust was just the owner's way of ensuring that the mare would be able to get good quality care and boarding for the rest of her life. Given that the woman's nephew is a jerk who spends most of the book trying to find a way to subtly kill the horse so he can get his hands on the trust, the protagonists agree that the horse probably deserved it more anyway.
* The Saddle Club, since Carole intentionally gave the cat an ironic name to reflect his contrary nature.
* The Saddle Club that it's not quite right, but she decides to use it anyway in hopes that they'll understand what she's trying to get at. Fortunately, they do.
* The Saddle Club, which makes a point of showing that horses are actually rather fragile animals susceptible to a wide range of injury and illness.
* The Saddle Row Review reaction when she catches sight of one of the raccoons acting as waiter at her grand opening.
* The Saddle Row Review where the cast are reading a newspaper article about the opening of Rarity's new boutique, where each pony was interviewed about the problems they encountered; the events themselves are shown as individual flashbacks framed by interview segments.
* The sad fact is, a lot of big pieces of comic news get spoiled ahead of time to hype up new books. We know Thor is going to become a woman before it actually happens. We knew that Trinity War would end with the Crime Syndicate showing up so Forever Evil could happen. Often the premise of an upcoming big name project spoils the end of a currently running one.

* The sad story of DC character Mystek was this. Writer Christopher Priest created her as a new character with the hopes of getting her own mini-series. To test the waters, DC Comics asked Priest to put her into other titles, placing her in
* The sad thing is as a person she's not really that bad: selfish, certainly, but

well-meaning, but the death of her only child really unhinged her and led to her getting pushed out of politics by her ineffective councilors to concentrate on baby-making. Her greatest fault is an eagerness to please her father, which is what led to the Edicts and the delay in naming her heir. Not to mention it wasn't
* The sad thing is, the "cash shop," as they put, it was at first primarily cosmetic with a few extra things that could enhance your character, but could be skipped with either careful planning or a lot of free time. Then 2x exp cards appeared there.
* The sad thing? The next episode after Jack is set up almost immediately drops this whole plot when the FBI discovers the Starkwood conspiracy and realizes that Jack is being framed, which makes you wonder,
* The sad vignette WWE aired during Breast Cancer Awareness month where Layla talks about her mother's passing. It becomes a little more heartwarming with the knowledge that in 2013, Layla would be reunited with her father after nearly 30 years apart.
* The saferoom graffiti has some thoughts on this as well. One from "Swamp Fever" in the sequel was written by the last survivor of the small bayou village: "We held out longer than Shreveport. We held out longer than Baton Rouge.

* The saga is full of characters who can destroy the world. All the major villains starting with Frieza from
* The saga later reveals that Dio has four sons with different human women he slept with. Only one of them, Giorno Giovanna, displays distinct vampiric qualities that qualify him as a definite hybrid.
* The Saga of Arrow-Odd, a witch prophecies that Odd will live three hundred years, then be killed at the place where he grew up by the skull of the horse Faxi. Odd kills Faxi and becomes a viking, planning never to return home. When Odd is three hundred years old, he suddenly grows homesick and returns home, where he is killed by a viper nesting in the skull of Faxi.
* The Saga of Arrow-Odd: Captured by the viking Saemund, Odd spends the night scheduled to be executed in the morning, with his feet shackled and his hands tied behind his back, and guarded by twelve men. He strikes up a conversation with his guards to lull their vigilance, and eventually sings to them until they are all sleeping. Odd then crawls to a nearby axe and manages to cut the fetters on his hands on its edge. He unties his feet, grabs the axe, kills the guards, and gets away.
* The Saga of Arrow-Odd, Ogmund Eythjofslayer, is begotten by the King of Bjarmaland on a troll-woman and raised, trained and "turned into a troll" by the Bjarmians specifically to kill Odd, in revenge for Odd's depredation of Bjarmaland.
* The Saga of Arrow-Odd: The viking Hjalmar has set various rules for himself and his warriors, such as not to rob peasants and merchants and never to kidnap women. But the very first rule he lists is that they will not eat uncooked meat, come what will.
* The Saga of Arrow-Odd: When the half-trollish Ogmund and Odd fight at Geirrodsgard and Ogmund once again realizes it is looking bad for him, he tries to escape from Odd by diving into the earth (as trolls can). As Ogmund sinks into the ground, Odd gets hold of his beard, and rips his entire face off. As Ogmund is nigh-indestructible, he survives and takes to permanently wearing a mask.
* The Saga of Avatar Korra, her skills in science and business are much more pronounced in this story. She is a skilled inventor (in this continuity she is the inventor of the shock glove and not just its user) and she also holds a leading position in her father's company by the time she and Korra reunite.
* The Saga of Biorn: An aging Viking seeks a heroic death to send him to Valhalla.
* The Saga of Darren Shan and a pirate outfit which he gains during the middle of

the second book. The fact that he never changes his clothes is often lampshaded and the book gives no explanation as to why he doesn't change his clothes.
* The Saga of Darren Shan Darren and his best friend Steve were an inseparable duo but little did they know destiny had other plans for them.
* The Saga of Darren Shan. Darren finds it's actually effective once the agony wears off.
* The Saga of Darren Shan, Darren is enjoying the stew he's been served at Vampire Mountain. When he asks what's in it, Mr. Crepsley simply tells him to look up, revealing a swarm of bats hanging on the ceiling. Darren quickly loses his appetite afterwards.
* The Saga of Darren Shan. Darren is turned into a half-vampire at the age of 12, but the vampires there are not immortal, they just live a lot longer than humans. He won't stay a child forever, but he still had a much longer childhood. In the middle of the book series, he becomes a teenager, and as such, he spends most of the plot. When he finally transforms into a vampire in the last book, he is outwardly almost adult.
* The Saga of Darren Shan, half-vampires look blurry in film, etc. while full-vampires can't be seen at all. This becomes a (minor) plot point in the ninth book, when the police are wondering exactly why they can't photograph one of the arrested "criminals".
* The Saga of Darren Shan). In the fight he kills several vampires (two in the books, three in the manga), and thereafter the female vampire Arra Sails.
* The Saga of Darren Shan. Lady Evanna can take whatever form she wishes and occasionally makes herself stunningly beautiful. However, her preferred form is a hairy human-wolf hybrid. When Darren asks her why she doesn't stay beautiful all the time, she says that the hairy form is how she was born and prefers it for that reason.
* The Saga of Darren Shan — relative to humans, anyway. Their reflexes mean even half-blood / "incomplete" vampires can "jump" short distances faster than the eye can follow. Darren uses this to prove he's a vampire at least once, while his mentor likes using it to fake telekinesis.
* The Saga of Darren Shan, snatching things out of people's hands so quickly they don't see him take them. Full-blood vampires can cover much greater distances via "flitting".
* The Saga of Darren Shan speak this way, being mostly centuries-old immortals who live apart from changing human societies.
* The Saga of Darren Shan: Steve wants to be a vampire, so he can be an asshole and kill people he doesn't like.
* The Saga of Darren Shan, the titular vampire gets drunk at a vampire festival and sings an ode to ale.
* The Saga of Darren Shan. The "unpopular" part is downplayed in the manga adaptation, as his two assistants and Glalda genuinely like him.
* The Saga of Darren Shan, the vampeze get around their strict refusal to use projectile weapons by hiring human thugs and cutthroats. Debbie and Alice eventually come up with the idea for the vampires to join forces with humans for the same purpose. Those humans mostly end up being homeless people. It's justified because those are the people the vampeze are feeding off of, so they're only too happy to have a shot for revenge.
* The Saga of Darren Shan). They can become full vampires through the transfusion of more vampire blood, but given enough time, they will turn full anyhow.
* The Saga of Darren Shan. They try to squeeze content from the first three books (and even a huge spoiler from the ninth book) into the film. Scenes were removed with others added in their place.
* The Saga of Darren Shan, vampires will get sunburns after very limited exposure, and fatal sunstroke can set in after only a few hours.
* The Saga of Darren Shan wanted to be a vampire so he can kill people whenever he wants.
* The Saga of Darren Shan, where the "Cirque Du Freak", though intended to be nightmarish and slightly horrifying (and potentially dangerous), actually provides

a warning beforehand of what it will be like, and gives patrons an opportunity to leave. If any are injured, the show is halted until they are fixed up. Also, the "freaks" are rather friendly and personable people, and the Circusmaster, Mr. Tall, actually runs the cirque as a means of providing people with strange abilities with shelter, family, the opportunity to travel, and a circumstance where their unique abilities can inspire wonder rather than fear.
* The Saga of Erik the Red Gardi). Sigrid dies, but hours later comes alive again as an undead and tries to get into the bed of the sick Thorstein Eriksson. Her husband puts her to rest again by driving an axe into her breast.
* The Saga of Grettir the Strong: Having captured Grettir, the farmers of Isafjord prepare to hang him. They have already erected a gallows, when Thorbjorg, wife of the local chieftain Vermund, intervenes and uses her influence to save Grettir's life.
* The Saga of Grettir the Strong makes a habit of dispatching undeads and trolls.
* The Saga of Hallfred Troublesome-Poet: Crossing a sparsely populated forest on his journey to Sweden, Hallfred meets farmer Bjorn who straightaway invites him to stay with him for the night and behaves "most hospitable". In the night, Bjorn suddenly "thrust[s] a weapon into [Hallfred's] bed", but Hallfred, being suspicious of Bjorn, has already left his bed and drawn his sword, and thus kills Bjorn. Bjorn's wife and farmhands then try to frame Hallfred for murder, but eventually fail.
* The Saga of Hallfred Troublesome-Poet: On his journey to Vastergotland in Sweden (which, unlike Norway, is still pagan), Hallfred is seized under false accusations of murdering a farmer, and after convening to judge him, the locals decide to offer the stranger as a sacrifice. However, Hallfred's innocence is revealed before the sentence is carried out.
* The Saga of Hervor and Heidrek and ventured into a land ruled by giants that anyone works out that she is a woman.
* The Saga of Hervor and Heidrek, Heidrek kills his brother Angantyr (though whether it was accidentally or intentionally varies between the manuscripts)
* The Saga of Hervor and Heidrek was moreover cursed so that three deeds of parricide would be done by it.
* The Saga of Hervor and Heidrek: When Gothland is beset by a famine, an oracle reveals that "the noblest boy in the kingdom" must be sacrificed to Odin.
* The Saga of Hrolf Kraki, where three of the four main villains are evil sorcerers: the wicked stepmother-witch Queen Hvit, the devious King Adils, and the half-elven necromancer Skuld.
* The Saga of Hrolf Kraki who was the illegitimate daughter of a Sami chieftain.
* The Saga of Jenny couldn't say "No" in 37 languages. Bright as a penny, yes, but...she really ought to stop making her mind up.
* The Saga of Noggin the Nog, Olaf the Lofty has an artifact that grants him immunity to the effects of magic.
* The Saga Of Ragnar Lothbrok: At the age of three, Sigurd Snake-in-the-Eye composes his first impromptu poem and joins his brothers in their attack on King Eystein, and goes with them to raid Southern Europe right after that.
* The Saga Of Ragnar Lothbrok). This is apparently some kind of highly nutritious super-vegetable which provides a complete and balanced diet to small children.
* The Saga of Recluce books Mag'i of Cyador/Scion of Cyador by L.E. Modesitt, Jr., an indication that the Empire is in decline is the increasing rarity of coffee.
* The Saga of Recluce, mages have the power to reshape land, permanently alter weather, and wreak unholy destruction on those around them. However, the more powerful the magic, the greater the price. Using Order magic to cause death always results in a backlash against the mage, typically blindness. Improving the weather in one place can cause major and catastrophic climate shifts (in one book, changing one land from desert into productive land by moving weather systems creates a much larger desert elsewhere). Using Chaos magic prematurely ages the user, and turns one into walking entropy — food spoils more quickly, clothing and furniture wear out much faster than normal, and machines break down constantly. Using either one to heal injury or kill disease can weaken the person it's used on. The Balance

pretty much limits uses of magic to small, subtle things, or results in greatly shortened lifespans.
* The Saga of Recluce series has order and chaos magic. Natural aging is a breakdown of order in the body and an increase of chaos, which can be countered by using magic to restore and reinforce order to a person's body. While this makes a person healthier (and an order master is effectively immortal), it also causes cosmetic changes that make little sense, like gray hair returning to the person's natural color. In the first book, a secondary character goes from black to gray to black hair repeatedly while straining himself or using too much chaos magic, then recovering.
* The Saga of Recluce. The Chaos Wizards wear white and their city is Fairhaven, while Order Mages wear black and Nylan is the Black City.
* The Saga of Recluce to annihilate the stronghold of the chaos mages.
* The Saga of Ryzom, you can customize your attack skills and spells to do this. It's considered an economical choice.
* The Saga of Seven Suns, at least in the early books. And it only works because you ram them at the same time as overloading your engines. Later on, ships were designed specifically for this purpose — essentially giant lumps of ablative armour, with huge engines for their weight, crewed by robots.
* The Saga of Seven Suns: Boone's Crossing, Forrey's Folley, Barrymore's Rock.
* The Saga of Seven Suns: Corvus Landing, Palisade, Rendezvous, Hurricane Depot, Sunshine, Happiness.
* The Saga of Seven Suns, during which he becomes even more controlling, and alienates previously loyal subordinates.
* The Saga of Seven Suns has the Ildirans with dozens of different castes, each different enough that some of them don't even appear to be the same species.
* The Saga of Seven Suns: Paris 3, Qrohna 3, Constantine III, Jonah 12.
* The Saga of Swamp Thing Vol. 1 #4 when a possessed man hangs Swamp Thing on a meat hook on a stationary conveyor belt leading to a freezer. Swamp Thing tricks the demon into possessing him instead and then starts the belt. While he can survive the cold for a short time, the demon can't.
* The Saga of Tanya the Evil advert and she gets absolutely flooded with requests from people to join her battalion.
* The Saga of Tanya the Evil, after Tanya defeats the Republic and occupies Paris, the Empire agrees to an armistice with them and refuses to let Tanya destroy their fleet at Brest before they can escape. The Republic's remaining military forces flee to Algeria and vow to continue the war, just as Tanya had predicted they would.
* The Saga of Tanya the Evil. As far as anyone in-show is concerned Tayna is just one of an innumerable amount of war orphans in their country. And considering she joined the military at age 9 (and continues base her decision to join on her status as an orphan), there is literally nothing else for them to go on regarding the source of her sadistically ruthless personality.
* The Saga of Tanya the Evil, as he doesn't believe the world could possibly be as screwed up as it is, if an all-powerful, benevolent being actually existed. And since it doesn't identify as the Devil, he therefore decides to refer to it as "Being X". Being X keeps intervening and creating miracles but still Tanya refuses to believe in or pray for it.
* The Saga of Tanya the Evil as she is capable of taking down entire platoons of mages and bomber planes by herself.
* The Saga of Tanya the Evil, as she was reincarnated with all her memories from her past life intact. Even Tanya herself admits that she was never a genius of any sort during her previous life and she simply has the benefit of a lifetime's worth of experiences.
* The Saga of Tanya the Evil as they are overwhelmed by the Empire by sending their Minister for Cultural Affairs on an Albish sub to establish offices in Londinium under the condition Albion doesn't get dragged into the war. Unfortunately, the sub is caught and damaged by Empire forces. Fearing that the Minister's presence will give the Imperial forces an excuse to antagonize Albion, the crew execute him,

destroying all hope for a resurgence of the original Legadonia.
* The Saga of Tanya the Evil: At the conclusion of the first act, Tanya justifies her attempted pre-emptive strike on the fleeing Republic navy (and consequently, brutal subjugation bordering on genocide of the remaining factions), despite the Empire agreeing to a peace treaty and ending their 'conquest' before it got really genocidal, because (A) while the Empire might have enough reason to realize that their best bet to ruling the world is to just have the biggest slice of pie and use it responsibly, EVERY OTHER NATION wants them dead out of fear of a centralized world power that could easily bully whoever they wanted, and (B) Tanya's own history of witnessing hatred triumph over reason, from her "father's" death out of spite to a family man who cast them aside for revenge, led her to believe the soldiers would come back and willingly sacrifice themselves to get revenge and murder as many Empire citizens as possible. Sure enough, the war restarts despite the lack of profit for everyone involved.
* The Saga of Tanya the Evil, hoping that they all wash out. Every recruit passes the training, and they are so capable that she and the newly formed wing are sent out constantly into the most dangerous situations since the brass are (rightly) convinced they are up to the challenge.
* The Saga of Tanya the Evil is replaced with a council of gods from different religions in the manga.
* The Saga of Tanya the Evil leader, willing to get her own men killed simply for annoying her and only pretending to care about her troops or country to further her own personal gain.
* The Saga of Tanya the Evil. One of Tanya's first duties is spotting for an imperial artillery battery.
* The Saga of Tanya the Evil personality that Tanya develops the more she prays to Being X.
* The Saga of Tanya the Evil, Tanya Degurechaffe uses a "defusive magical explosion" spell in the battle that earned her "The Devil of the Rhine". Said spell generates a massive explosion that instantly kills anyone caught in the blast, and kills even more victims over time due to oxygen deprivation from the resultant vacuum, or poisoning by carbon monoxide given off by the explosion.
* The Saga of Tanya the Evil: Tanya is an unusual example of an Unwilling Conscript playing the part of a Jingo, as she is a pacifist callously concerned only with her own self-preservation, and joined the military at a young age in hopes of improving her lot in life and working her way into a cushy desk job away from the front lines. Unfortunately, her combat acumen is so great that she constantly finds herself being sent to the frontlines and vents her rage and frustration on her enemies — making her come across as the Psychopath.
* The Saga of Tanya the Evil, Tanya Von Degurechaff. She joined the military at age 9 and spent the next 3-4 years becoming one of, if not the most frightening soldiers in the entire Imperial Army (terrifying both allies and foes alike). She is a blond-haired, blue eyes little girl, who looks almost like a doll. Despite her cherubic appearance, she is an absolute nightmare on the battlefield (able to slaughter entire battalions/squadrons single-handed). She is cold, calculating and ruthless above and beyond the call of duty. She has a personal grudge against God (not figuratively, but literally). And she has demonstrated on more than one occasion to have no problems using her childlike appearance and qualities to gain tactical advantages that typically result in bloody victory. As one of her commanding officers says, "She is a devil/monster in the form of a little girl".
* The Saga of Tanya the Evil, tells a general she's dining with that the fresh and hot German cuisine she's being served causes her to remember, her time on the front-lines "fondly." As in she would rather be eating cold army rations than the high-end slop she's being served. Though luckily, the general and the other officers present take it as a sincere compliment.
* The Saga of Tanya the Evil, the Duchy of Dacia invades The Empire requiring Tanya and her newly formed Rapid Response Mage Battalion to launch a counterattack on them, it's a staggering 50.000 infantry soldiers VS 48 aerial mages. All this happens on Tanya's "on paper" birthday. Tanya herself however, consider the attack

as 'surprise gift' from Dacia because she got a chance to get a 'life fire exercise' for her newly formed battalion.
* The Saga of Tanya the Evil the trope as a subplot, especially in the character Mary Sioux and the Francois Replubic.
* The Saga of Tanya the Evil: This is how Tanya "trains" her personal battalion of elite mages. First day? She wakes them up in the early morning and subjects them to a 36 hour artillery bombardment with no time for preparation (with a few live rounds mixed in with the dummy shells to keep them on their toes), and immediately after orders them to hike several dozen kilometers within 48 hours while being hunted by military forces with air support and tracking dogs. Through the snowy mountains. With nothing but the clothes on their backs (and one shovel). What is waiting for them at the end of the hike? Counter-interrogation training, ie outright torture. Within a couple of months, her mages are among the most elite soldiers in the whole Empire. Of course, her real intent was not to produce super soldiers, but to scare the recruits into giving up... which failed utterly.
* The Saga of Tanya the Evil to both her enemies and allies for her cold, calculating, and absolutely ruthless approach to warfare, being more than capable of wiping out entire battalions/squadrons single-handed. On top of that, she's demonstrated on more than one occasion to have no problems using her childlike appearance and qualities to her advantage. One of her commanding officers outright refers to her as "a monster in the form of a little girl".
* The Saga of Tanya the Evil voice she could muster, so everyone would think it was some kind of prank, and nobody evacuated, and she went ahead and blew up the factory with everyone still inside.
* The Saga of Tanya the Evil, wanting to get out of the front lines and live in the safest place one can be during the war. However, through a mixture of miscommunications, her awesome skills, and God screwing with her, she remains in the front line.
* The Saga of Tanya the Evil was banned because of rusophobian content and nazism propaganda. This is not surprising, since the main character of the anime bears many similarities to Hitler, and nazism is an extremely sensitive topic in Russia.
* The Saga of Tanya the Evil: When Tanya is tasked with creating her own battalion of elite mages (which she really doesn't want to do), she draws up an advertisement that emphasizes how miserable and horrific the detail will be, thinking this will deter the majority of soldiers. The military mistakes it for a Dare To Be Badass ad that results in her office being flooded with volunteers, to her frustration.
* The Saga of the Banned) is a infamous 40 minute long gag dub where Frodo and the fellowship are on the run from "Flower Wraiths" because Frodo had not given water to Bilbo's flowers. Boromir is apparently castrated, Legolas likes to have sex with frogs and Aragorn keeps telling everyone that they are too bad to do various things like throwing rocks and partying.
* The Saga of the Bordenlands are an example, or at least their leaders are, the Supreme Astronomers, magicians and scholars. They have an army, but they have not participated in wars for many generations.
* The Saga of the Borderlands However, when the sideresios of The Ancient Lands arrive with horses, they are quickly adopted as a mount.
* The Saga of the Borderlands performs human sacrifices, especially of virgin princesses, a practice that to other peoples of the Fertile Lands it seems repugnant.
* The Saga of the Jomsvikings: After getting utterly wasted at a banquet at King Svein's of Denmark, Sigvaldi, chief of the eponymous Viking band, is induced to make a solemn, public vow to conquer Norway. When he wakes up the next day, he remembers nothing at all and needs to be told what he did by his wife.
* The Saga of the Jomsvikings: After the Battle of Hjorunga Bay, seventy Jomsvikings who have failed to get away are taken prisoner by the Norwegians, and are set to be executed by beheading. One by one, ten Vikings get decapitated until their death-defiance impresses the captors sufficiently they pardon the rest.
* The Saga of the Jomsvikings: At daybreak the day after the Battle of Hjorunga Bay, the victorious Norwegians are busy binding up their wounds when they "heard

the twang of a bowstring" from one of the ships of the Jomsvikings which are still drifting in the bay, and an arrow strikes and kills Gudbrand, a relative of Jarl Hakon. They search the ships and find Hávard the Hewing, who is still alive even though both his feet are cut off. Before he is put to death, Hávard expresses his disappointment that the man he killed was not Jarl Hakon himself.
* The Saga of the Jomsvikings: In the battle of Hjorunga Bay, the warrior Thorkel Midlong splits Bui's chin with a sword-blow, but Bui returns the blow while Thorkel slips on the wet planks and topples against the gunwale, and "the blow struck him in the middle, and he was cut in two against the gunwale."
* The Saga of the Jomsvikings: Of seventy Jomsvikings captured after the Battle of Hjorunga Bay, ten have already been beheaded when Jarl Erik is so impressed with their defiant behavior in the face of death that he saves Svein Buason by taking him into his retinue. When he makes the same offer to Vagn, Vagn makes it a condition that all the others are set free too, or else he would rather be executed. Jarl Erik accepts and grants them their lives.
* The Saga of the Jomsvikings: The eleventh Jomsviking brought up to be executed is Svein Buason, a young man with hair "long and golden yellow like silk" who asks, as his last request, for a man of Jarl Hakon's bodyguard to hold his hair away from his head so that it will not be bloodied when he is decapitated. When Thorkel Leira is striking at Svein's neck, Svein jerks his head so that the blade falls on the arms of the volunteer who has wound Svein's hair around his hands, cutting them off at the wrist. Svein follows up with a joke:
* The Saga of the Liberal Vikings, which depicted the MPs from the Liberal Party as a clan of goofy and not very efficient Vikings, led by the grouchy, cigar-chomping Chief Erik of Ringe (Erik Eriksen, prime minister 1950-53). The cartoons became immensely popular among the politicians depicted, who would frequently get the good ones framed and keep them on the walls in their offices.
* The Saga of the Noble Dead and developed a thing about superstitious peasantry.
* The Saga of the Noble Dead and she hunts and kills vampires. Later it turns out that she could only be born because of a special ritual, and because of her origin, has a natural hatred for vampires.
* The Saga of the Noble Dead, descendants of Fay-possessed wolves, they have the innate ability to sense the presence of undead.
* The Saga of the Noble Dead, drinks heavily in the first arc to suppress his memories of the time he spent as an assassin.
* The Saga of the Noble Dead, half-elf Leesil was never properly taught the Elvish language. His later attempts to learn it go poorly; the first time he actually tries speaking to an elf, he manages to turn a request for directions into an insult against the elf's mother.
* The Saga of the Noble Dead has the ancient vampire Li'kan, who fights completely naked in the snow and ice high in a mountain range. Being undead, she isn't bothered by the cold.
* The Saga of the Noble Dead has the undead wraith Sau'ilahk. He is a powerful sorcerer and can turn solid for brief periods to move physical objects, but is most dangerous in his intangible state: any living thing that passes through him is rapidly drained of life.
* The Saga of the Noble Dead is a dhampir with a human mother, vampire father. Justified in that Magiere's birth was only possible thanks to an elaborate magical ritual (vampires naturally being infertile) that consumed her father's energy and (re)killed him immediately following his having sex with her mother. Logistically, this would make a vampire being the mother essentially impossible (although in one early book a skeptical nobleman snidely asks Magiere if the vampire was her father or mother- she deflects the question, as at this stage she doesn't know).
* The Saga of the Noble Dead, the sage Wynn wields a magical staff that generates sunlight, which is capable of destroying the undead.
* The Saga of the Noble Dead, the vampire Pawl a'Seatt is so old that many of his memories have faded, and he can barely recall anything at all about his early life or how he became a vampire.
* The Saga of the People of Laxardal: Audgisl Thorarinsson looks for an opportunity

to kill Thorgils Holluson at the Althing and comes upon Thorgils as he is counting out the money he is to pay for the killing of Helgi. As Thorgils is counting 'ten', Audgisl strikes, and "everyone thought they could hear his head say 'eleven' as it flew off his body."
* The Saga of the People of Vatnsdal: The soothsaying woman who tells Ingimund that he will settle in Iceland is a 'Finn' (i.e. a Sami), and so are the three wizards whom Ingimund hires to undertake a spirit-journey to Iceland.
* The Saga of the People of Vatnsdal: When a "Lapp enchantress" prophecies that Ingimund will settle in Iceland, Ingimund rejects it as ridiculous, because he has absolutely no intention to leave Norway. The soothsayer then tells him that a certain precious amulet, which has mysteriously disappeared from Ingimund's purse, is now lying in the wood in Iceland where he is destined to settle. Ingimund is still forcefully opposed to the idea, but come time he gets curious whether the amulet is really in Iceland and when three Lapp magicians ensure him it is, he decides there is no use fighting fate, and goes to Iceland.
* The Saga of the Sworn Brothers: The saga takes its time to describe the weapons of the young Thorgeir Havarson, of which the foremost is "a broad axe, a mighty weapon, keen-edged and sharp, with which he had sent many a man to dine in Valhalla" (i.e. killed them). The saga also somewhat apologetically comments that "[i]n those days, very few men were armed with swords". The poetical description of Thorgeir's weapons is undermined by the fact that at this point, Thorgeir is still a teenager who has not yet killed anyone, much less sent them "to dine in Valhalla" (a place that neither the author nor the audience of the saga believed in). This suggests the entire passage is tongue-in-cheek, and that likely teenage Thorgeir simply cannot afford a sword, and that his "mighty weapon" is actually a completely ordinary battle-axe.
* The Saga of the Sworn Brothers: When Thormod and Skuf go to the ship ready to sail for Greenland, they meet a stranger who calls himself Gest and is "wearing a hood that prevented them from seeing his face", making it obvious he is a man who does not want to be recognized. Much later, it is revealed that "Gest" is Steinar, a relative of Thorgeir who (like Thormod) wants to go to Greenland in order to avenge Thorgeir.
* The Saga of the Volsungs is conceived and raised for no other reason than to exact vengeance on King Siggeir.
* The Saga of the Volsungs, Sigmund sleeps with a vagrant soothsaying woman. Many years later, Sigmund learns the soothsayer was his sister Signy in disguise, and her son Sinfjotli who Sigmund thought was his nephew is actually (also) his son.
* The Saga of the Volsungs: Sinfjotli drops dead instantly after drinking a cup of poisoned ale.
* The Saga of Tuck and the group of boys around its main character. At one point, one of them is attacked, and the rest — geeks all — immediately charge.
* The Saga of Tuck: At one point Tuck refers to a group of female underclassmen as "Homo Mundanus." Tuck and his (male) friends are extremely contemptuous of most of the people that surround them at school.
* The Saga of Tuck averts this in the beginning, as Tuck is so scared of discovery when his girlfriend dresses him up that he acts like a demure, shy young girl. Later, as other women in the story sharpen his imitation, this trope is lampshaded. Some girls who admit they find dresses and makeup intimidating also lampshade this.
* The Saga of Tuck, Mike's car, the Beast, runs. Most of the time. Beyond that, there's not much one can say for it.
* The Saga of Tuck seem to believe that they are psychically connected... and there's a few indications that they are right.
* The Saga of Tuck. The members admit that they made up the name by picking words at random from a dictionary.
* The Saga of Tuck, when many minutes of taped conversations must be screened for the necessary information.
* The Saga of White Will, a white supremacist underground comic scripted by neo-Nazi William Luther Pierce, was intended to recruit members for Pierce's movement, the National Alliance.

* The Saga Prefecture needs help, and Kotaro Tatsumi has a plan: Make a regional idol group to boost Saga's popularity. Seems reasonable enough, so how is he going to get seven talented women to sing for him?
* The Sagara Family. This results in an awkward breakfast the following morning, where one of the other characters comment on the need to soundproof the walls.
* The Sagas of Noggin the Nog was when he obtained the Sorcerer's Sword in "Firecake". It was a longsword that gave the wielder control over all living beings in the world, except for the stone giants. It was useless as a melee weapon, as knut was able to shatter it into pieces on a rock like glass, making it more like a magic wand than a sword.
* The Sage Durvasa tells Krishna to cover his body with rice gruel. However Krishna did not cover his soles with the gruel, so Durvasa told him that death would assail him from the sole. Years later, a stray arrow pierces the sole of Krishna, slowly killing him.
* The Sage of Necloth is clearly an aged Gishki Avance, with the same stats.
* The Sage of Six Paths. Originally just the man who was the first user of chakra and supposed progenitor of the Uchiha and Senju clans, and later the one who brought the tailed beasts into being by defeating a worse creature and splitting it up, it eventually turns out that
* The Sage of Six Paths shared his chakra with the people of the world so that it would act as a bond between them, fostering understanding and peace. Instead they created ninjutsu and used chakra to fight one another.
* the Sage of the Six Paths creating the moon without the sudden presence of a new body of gravity killing everything on the planet. Never mind the conspicuous lack of a moon-sized crater that the material to create it should have come from.
* The Sage's Disciple has the title "Sage of the Forest" for good reason. So far, he's used his woodshaping abilities to craft Wicker Men golems and Team Caster's base camp.
* The Sage's Disciple uses a married pair of magical knives as his main armament. Made from a stag's antlers and imbued with the concept of "purification", they work similarly to a low-powered combination of Black Keys and an Origin Bullet.
* The Sage's twin brother also had descendants of his own; the Hyuuga clan (whose members include Hinata and Neji), and
* The Sage, through his two sons, is also the ancestor of the two founding clans of the Hidden Leaf Village; the Uchiha (whose members include
* The Sagittarian 2 has one ending in which you're bitten and immediately confronted by another survivor. Your two options are to allow him to kill you or to try to fight for survival. Both come to the same ending, but one allows you to face it with dignity.

* The Sahara is a desert (DE-zert), you desert your post (de-ZURT), you get your just deserts (de-ZURTs), but a dessert (de-ZURT again) is a yummy pudding. You can also use "just desserts" if you're making a pun, but the original phrase uses single-s "deserts", in the now-obscure (other than in that phrase) meaning of "something you deserve".
* The Sahara place in Africa or named in pop culture as "Sahara Desert". But Sahara derived from the plural word in Arabic language means "desert", so technically it's translated to "The Desert Desert".
* The Sailor on the Seas of Fate. Erekose, Elric, Corum and Hawkmoon join together to form the "Four Who Are One" to fight Agak and Gagak.
* the Sailor Senshi die, children in Japan were so upset by this that they made themselves sick.
* The Sailor Star Lights become a famous boy band. Even though they came to Earth from a far-off planet and now are under the media spotlight, no one notices a lack of childhood on Earth. Most of the various villains arrive in the form of being shopkeepers, a traveling circus, a famous medium, or exchange students. Even though

almost all of these characters are/become highly successful and get a lot of attention under their disguise, no one notices that they came right the flip out of nowhere. Presumably like Chibi-Usa, they brainwash everyone into not noticing or caring.
* The Sailor Star Lights make clear they value their mission to find their princess above everything else, with the anime having Yaten berating Minako (
* The Saint (1997), as punishment for Simon's refusing to answer to the religiously-themed name arbitrarily given to him by the priests at his orphanage (even when whipped), not only was he not given dinner, every other boy in the orphanage wasn't given dinner as well. Simon waited until the priests left, picked the lock to the pantry, and then the boys helped themselves.
* The Saint (1997) before they go to bed. But he betrays her. Incensed, Emma throws off the meek mouse persona and tracks him down. Along the way, they're pursued by the Russian Mafia, and by the end of the movie, she can do a 100-yard dash and doesn't need her pills anymore. In the original ending, she was going to die of heart problems, but test audiences didn't like it.
* The Saint (1997), but everyone still refers to him as "that sneaky fucking Russian".
* The Saint (1997) - Emma says something to this effect to Thomas More [Simon in disguise] before he takes her to bed.
* The Saint (1997) has invented cold fusion, thus solving the world's energy problems. Naturally, many folks want this information quashed.
* The Saint (1997) is about Simon Templar's final job before he hits his predetermined retirement figure.
* The Saint (1997): Originally Elizabeth Shue's character was going to die, but the test screening didn't like it.

* The Saint" a defecting Soviet scientist is murdered with his own weapon for the secrets of the death ray he has just invented; at the end of the episode, the killer runs away with the only working prototype; he trips, falls, drops the device, the beam accidentally activates, and...
* The Saint and the Sinner at winning against Kirishima does show that he's actually acknowledging his former victim as a competitor. He even goes so far as to praise how he fights against Todoroki. In addition, he slowly starts giving Mineta a modicum of respect as well, as he reportedly cheered for both him and Midoriya during their match (in his own way at least).
* The Saint and the Sinner have stated that the entire idea behind the story is the make Mineta more likable while still maintaining the recognizable aspects of his character. His perversion, while still present, is toned down in favor of his more redeeming qualities and he's given a strong friendship with Midoriya. Considering that the readership of the fic has given a very positive reception to Mineta's characterization and story, it's safe to say that the authors were successful in this regard.
* The Saint as an exemplar of this throughout the author's life. "The Saint in Pursuit", published after more than 40 years of adventures, has a minor character tell Simon Templar, "I haven't been completely briefed on your background." "Nobody has," Simon replies.
* The Saint began each episode with Simon Templar addressing the audience and setting the scene for each week's adventure. After the show moved to color production, this was replaced by narration.
* The Saint, but Barer otherwise sidesteps the issue of time. Film and TV versions of the Saint have never gotten down as period pieces. The Roger Moore version took place in the then-contemporary 1960s. Post-Roger Moore TV versions such as those with Simon Dutton, Andrew Clarke, and Ian Ogilvy also eschewed the period piece approach.
* The Saint by covering it in plaster of Paris and leaving it on display in a studio. Inevitably, the sculpture gets knocked over.
* The Saint debuted over thirty years after the first appearance of the Saint in

print in 1928, but presented an updated story, as did subsequent adaptations with Ian Ogilivy, Andrew Clarke, and Simon Dutton. The Val Kilmer film took place in contemporary times, arriving in theaters in 1997-almost seventy years after the Saint's debut.
* The Saint, driven by Roger Moore. When they decided to make the movie in 1996, the Volvo coupe had been so well connected to the character of The Saint that Val Kilmer drove the definitely less cool Volvo C70 because it was a Volvo coupe.
* The Saint episode "The Man Who Liked Lions" has Simon Templar running afoul of a thuggish Roman revivalist.

* The Saintess And The Villainess protagonist whose goal is to save the villainess of the novel she's been transmigrated into. The romance between the two is the main focus of the series.
* The Saint. Examples include The Saint in Trouble (has a footnote to the events of The Last Hero) and Salvage for the Saint.
* The Saint had the detective investigating a murder supposedly caused by the monster. Turns out it was just a hoax to cover up the real murderer... who ends up killed by the real Nessie in the end!
* The Saint is awed when Simon Templar tells him he used to have a Hirondel.
* The Saint Jean find themselves locked in a hidden cell which can only be opened by sliding a sculpture, visible through a small viewing hole, on the wall opposite the entrance. He happens to notice Jean fiddling with the beads of her necklace - by pulling the string taut, he uses it to reach the switch and release the door.

* The Saint not because he has any particular regard for the law, or any particular code of ethics beyond "be nice to pretty women and try not to hurt innocents", but simply because his idea of a fun afternoon is separating a conman from the proceeds of his swindling, donating a portion to charity and spending the rest on nice suits, expensive booze, and world travel. He's charming in person and engaging to see in action, and he puts genuine effort into his vigilante sting operations; even the cops who are out to get him invariably seem to find themselves asking him for help, which he provides...with a generous dose of banter in the process.

* The Saint opens with Simon Templar gunning down a murderer on the sidewalk outside the courthouse.
* The Saint series had Simon Templar (AKA The Saint) stealing from or tricking criminals, thus obtaining their ill-gotten wealth. He usually gave most of the money back to the criminals' victims, keeping only a small percentage for himself.
* The Saint. Several characters are involved in an elaborate game of 'Assassin'

which places value on inventive methods of 'killing' your target. One character describes how he wired a small torch to the spacebar on his target's typewriter. When the target depressed the spacebar, a bright light flashed in his face. When he investigated, he found a note taped with the torch explaining he had just been shot with a high-power laser.
* The Saint's foe Doctor Rayt Marius attempted to start warfare for profit. Later, the Saint used Marius' records to blackmail his accomplices to start a fund for the families of the wounded and casualties of war.
* The Saint short story "The Darker Drink", Simon Templar encounters in the High Sierras a man named "Big Bill" Holbrook who claims to represent the dream avatar of Andrew Faulks of Glendale, California. Holbrook notes that Faulks had started to have an increasingly vivid recurring dream, such that smell and tactile sensation emerged. It appears that the personages in Faulk's dream (such as a woman named Dawn Winter) had started to manifest in the waking world. Templar notices curious phenomenon which seem to support Holbrook's claim: Simon sees his own reflection fine in a small mirror, but Dawn's features are "blurred, run together, an amorphous mass"; when every single character repeats the same cluster of honorific catch phrases when they first meet the Saint; and the phenomenon of time compression that Holbrook identifies as an aspect of dream (a group of thugs searching for Holbrook and Winter say they will travel a long distance to fetch their boss from the town return in less than thirty minutes). Though one of the thugs opens fire on Templar, he has no wounds in the morning. However, when he visits Glendale, California to look up Andrew Faulks, Faulks has died after slipping into a coma.
* The Saint short story "The High Fence". A captured criminal agrees to turn Queen's Evidence and tell the police who the High Fence (an underworld buyer of stolen goods) really is. He's murdered in his cell by being fed poisoned food. When another criminal is taken into custody and agrees to tell Inspector Teal the High Fence's address, he's shot dead before he can do so.
* The Saint: Simon Templar is a con man whose victims are criminals and other shady characters. He’s always one step ahead of the police, particularly Inspector Claude Eustace Teal. However he does occasionally give them assistance in bringing criminals to justice.
* The Saint: Simon Templar prefers knives to guns; his ability with his favorite throwing dagger, "Anna", saves his and others' lives numerous times.
* The Saint's Magic Power Is Omnipotent, Sei and Aira, two women brought from earth, can instantly understand the language of the European medieval fantasy kingdom, Slantania. They can speak fluently and without issue and even any written language is conveniently turned to Japanese. This is particularly useful for languages that even locals have issues with, like the Ancient Script used for foundational magical books.
* The Saint's Magic Power Is Omnipotent. The anime adaptation compresses several chapters of the web or light novels and the manga into single episodes. In line with this, it cuts out scenes or speeds up transitions, which some viewers feel makes the anime jump around too much with little explanation.
* The Saint's Magic Power Is Omnipotent, the protagonist Sei had an herbalism hobby in her earth life, and she applies that in the medieval fantasy world of Slantania by introducing the concept of using precious medicinal herbs to enhance the flavor of food. Not only is this massive jump up in the culinary arts of the world, but her cooking especially gives the users supernatural strength and enhancements to their physical capabilities.
* The Saints: Marcus can manipulate the ground around him with his magic.
* The Saint spent much of his early career fighting the villainous Crown Prince Rudolf - whose country is never named but who gives a distinctly Ruritanian impression.
* The Saints The plot follows The Saints, a coven that uses their supernatural abilities to commit crimes.
* The Saints, use magic to create this effect on a pair of police officers.
* The Saint the crime by determining that only one of the suspects has a prior

felony (selling fraudulent stock) to conceal. Because nobody ever killed somebody for threatening to expose an extramarital affair or for claiming one's religion is fraudulent. Really, Simon's entire career consists of liberating a succession of asshole victims from (always) their money and (periodically) their lives.
* The Saint, "The Golden Journey", was loosely based on this idea. Simon Templar manipulated circumstances in such a way that the spoilt, entitled fiancee of his friend would be compelled to travel rough with him and learn to be more kind and sensitive.
* The Saint - The main character is not a spy for anyone in particular, but has all the workings of one.
* The Saint, the one time the police had the Saint dead to rights, he had prevented a train carrying members of the royal family from being bombed. He's pardoned.
* The Saint, the villain traps Simon and that episode's heroine in another cellar, then opens a valve of plain old heating gas.
* The Saint version who does his vigilante thing not because of any specific need for vengeance, but because he enjoys the challenge of defeating people who believe they are untouchable. In the earlier novels, he was much more likely to kill the villain of the piece; later stories saw this toned down, and by the time the stories were no longer being written solely by Leslie Charteris, it had virtually vanished. Every so often he would remember his 'bad old days' and choose to exact fatal vengeance on someone the law couldn't touch.
* The Saint. When he decided to concentrate on the Saint as his main character, these stories were included in the Saint short story collections with the hero's name changed to Simon Templar.

* The Saiyans' neighboring race, the Tuffles, are stated to be extinct in every media they appear. Its last surviving member, Doctor Lychee, also passed away and was reborn as a Ghost Warrior by Hatchiyack.
* The Saiyans. The entire population, which was only a couple thousand, is reduced to
* The Saiyans themselves. Going just by the canon of the manga we know nothing about them outside they worked for Frieza, they plunder planets, there used to be good Saiyans among them who banded together to create a Super Saiyan God (which may or may not have happened before they worked for Frieza), and they got wiped out by their boss. Even using information from the anime opens more questions than answers. Like it's hinted that Planet Vegeta wasn't the Saiyans' original homeworld and that they actually came from another planet which may or may not been destroyed by the original Super Saiyan.

* The Salamanders adventurers (called climbers) actually wear practical armor and learn to use different kinds of weapons for different situations.
* The Salamanders and Ultramarines chapters arguably come in before Space Wolves as Class 2 or 3. The former chapter has a doctrine of compassion, duty and self-sacrifice; lives among the people of their homeworld when off-duty (rather than holed up in a mountain fortress); and are the only chapter said to have fought for the people during the 2nd and 3rd wars for Armageddon, defending hive cities,

supply lines, and evacuees. Chapter master Tu'Shan even reportedly came to blows with the Marines Malevolent for shelling an invaded refugee encampment. They can also count as
* The Salamanders chapter is one of the nicest out there, but they're fond of exploiting their borderline demonic appearance (
* The Salamanders chapter of Space Marines are known to prefer Thunder Hammers along with flamers and melta weapons, as it helps to reinforce forging and smithing motifs.
* The Salamanders, however, ascribe to the Promethean Cult and its principles of self-reliance, emulating their primarch's background as a blacksmith. Since all battle-brothers maintain their own equipment, this leaves the chapters' Techmarines free to make technological wonders for the Salamanders' armory.
* The Salamanders is an on-going slice-of-life web serial about a small group of main characters growing up in a fantasy setting. They face things like making friends, first crushes, coming out, moving out, dorm life, pursuing an education and career, managing money, getting The Talk, alcohol, and more.
* The Salamanders were this trope before they found Vulkan. His Promethean creed and leadership made them something better.
* The Salamis-Class and Magellan-Class were designed for 'big gun' engagements, the Salamis a fast cruiser, the Magellan a straightforward battleship. Their lack of mobile suit capability, however worked out disastrously against Zeon. Suits had to be strapped wherever there was empty space on the hull. Columbus-Class ships, unarmed vessels used for resupply, were converted to suit carriers and repair stations to fill the gaps, and in the Girhen's Greed series of games, the Salamis and Magellan were converted to carriers by attaching massive external hangars to them. They were refit for 0083 with additional guns, though they were still fairly

* The salarian religion is said to be similar to Hinduism. It has a "wheel of life" perspective, where the dead are
* The salarians don't fit neatly anywhere on the spectrum. Like soldiers, they avoid direct combat as much as necessary and focus on winning the intelligence war so they can rapidly and surgically defeat any adversary almost before the war starts. At the same time, their military has no concept of "peacetime" and "wartime" (in fact, they consider Declarations of War immensely stupid, there's a saying that the Salarians only declare war when they have already won or crippled beyond repair the enemy forces), so their intelligence/espionage wars are fought around the clock. They take it upon themselves to deal with threats that other races either don't know about or can't publicly attack; previous persons of interest have a habit of dying from accidents or natural causes, or disappearing outright. This also means that they are constantly trying to maintain a military advantage against
* The salarians have a reputation as good scientists, albeit one overshadowed by their other reputation as spies. These are often the same people.
* The salarians tend to get this treatment a lot. As Mordin points out, salarians may not look very physically imposing, but being easily dismissable and also highly adept at stealth and subterfuge means that nobody ever sees them coming. The salarians were the forerunners of the Citadel's Spectre program, basing it heavily on their already existing STG force and even drawing on STG agents to be the first members. In
* The Salarian Union see the Dominion and KMC as useful pawns in their soon-to-be war against the turians.
* The Salaxalan ghost. He has been around literally since the beginning of life on Earth, which means that he literally spent two billion years surrounded by mud and "slimy things with legs". The time has driven him... a little bonkers.

* The salted gold mine in the second episode, "Fool's Gold" turns out to really have a vein of gold as the con artist is being chased through it by the people he cheated. Not that they notice this.
* The salt monster who seduced its victims by appearing as their ideal mate, and spends years alone with a man who thinks of it as his "wife"; Kirk even explicitly
* The Salton Sea was joined into the Gulf of California, but maps show the coast of the Salton Sea remaining the same. The Salton Sea has a lower sea level than the Gulf of California. If the two were joined, the land surrounding the Salton Sea would be flooded.
* The Salvation Army is commonly seen as a general Protestant charity. However, they are this trope: a church organized along military lines, although the denomination isn't devoted to warfare, but rather aggressively trying to end poverty and help their fellow man. In the youth of the organization, however, the Salvation Army fought a large number of street battles against rival gangs and mobs raised by people not to keen on their radical message.
* The Salvation: Basically the entirety of Princess's arc is dedicated to waiting for the right moment to enact her revenge. However, she is a bit more pragmatic, choosing to run away with the money while Delarue is absent instead of trying to kill him. She's tracked down by his men and ordered killed (after they rape her). Once she's freed when Jon shoots her guards, she joins in his rampage, shooting Delarue before he's finished off.
* The Salvation is the rape and murder of his wife and the murder of his son.
* The Salvation: Madeleine is kept tied to one so the gang can rape her before she's killed, per Delarue's orders. Thankfully, Jon kills the men who guarded Madeleine and she's freed (helping to finish some off) before any can do it.
* The Salvation War, and only let her do so as long as it suited "them"... before separately showing the queen of the succubi that he's as immune to her, too.
* The Salvation War. As a defecting general turned newly-installed-by-the-U.S.-government ruler of Hell puts it:
* The Salvation War, before any kind of modern judicial system was set up.
* The Salvation War by reciting some speeches of Russia's then-president Vladimir Putin to it.
* The Salvation War chapter books complete (alright, the chapters are quite short, but the point still stands), you'll spend at least a week catching up if you read at a reasonable pace.
* The Salvation War: demons and angels are able to use a form of telepathy based on quantum entanglement. Humans actually learn how to use it against them.
* The Salvation War, demon tridents can be charged to fire ball lightning (nagas are powerful enough "mages" to do so without a trident). Late in the Hell war, a deceased Nazi helps Belial build an artillery-style "great trident" which is much more destructive, but it never sees battlefield use. It's explicitly noted that only the Hell dimension's slightly more permissive physics allow this; when human-made generator-powered tridents are later tested, units made in Hell have a range of over a mile, whereas identical units made on Earth just arc to ground.
* The Salvation War, during the battle for the banks of the Phlegethon river in Hell, the Russians drop sarin gas shells on their own tank positions when they are overrun by Beelzebub's fire-breathing harpies; most of the crews were safe inside

their sealed positive-pressure tank hulls, but the harpies were completely unprotected and were killed in their thousands.
* The Salvation War From Hell, for whom driving a random innocent person insane was just a game (well, you know the kind). She's about to shoot him, but after seeing him groveling and wetting himself with fear, she decides that he is not worth pulling the trigger.
* The Salvation War good as a commander. In fact, he ends up as commander of the Human Expeditionary Army, although this is because only the U.S.A. has the command/control capability to actually lead a force of its (nominal) size.
* The Salvation War has a gorgon in "Armageddon" (Book 1 of 3) learn of the "invocations of 'goo gul' and 'wiccan pee-dee-ah'" only to fall victim to this effect:
* The Salvation War has constant mentions of the Great War between Heaven and Hell (lasting for a few million years), demons wiping out multiple other races on other worlds, and skirmishes among the demon nobility.
* The Salvation War has it that he's very good at that, but that's not his role and primary concern. In fact, in TSW, Petraeus is never seen to be carrying a weapon or on the front lines.
* The Salvation War has this trope as what seems to be its dominant feature.
* The Salvation War: Heaven and Hell have bizarre topologies. They are hollow worlds that have an inner surface, but lack an outer one. If you dig down long enough you'd exit somewhere else.
* The Salvation War, Humanity is kicking demon butt so thoroughly that the Lords of Hell start calling them "The Lords of War."
* The Salvation War, including the theme from the Dam Busters and Holst's Mars.
* The Salvation War/insert-Nobel-Prize-winner-here to magically appear and help them solve a particular problem, they cough up a couple of bucks. Last Friday of the month, everyone goes out drinking with the cash. This being the Salvation War, having such people around eventually will be possible, although Norman notes that even then they'll start out knowing less about the newly discovered dimensional physics than the scientists they already have.
* The Salvation War is an accurate portrayal of Hell based on visions sent to him by demons.
* The Salvation War is killed in that manner by an energy attack. His body is stated to be considerably smaller once it's done.
* The Salvation War is one of these, and is the one Baldrick who actually inflicts serious damage on the humans.
* The Salvation War is shown on several occasions accounting for known unknowns.
* The Salvation War is staffed by a horde of very squat, heavyset demons with long gray beards, who are, for all intents and purposes, dwarves.
* The Salvation War is that, as far as possible, everything that happens has some kind of rational, scientific explanation. In some cases, the divergence between the demands of mythology and what is scientifically plausible is so great that it cannot be bridged. To get around this (and to give the Angels and Daemons some hope of surviving the massed human firepower being thrown at them), it is stipulated that the laws of physics on Earth and in Heaven/Hell are slightly different. This results in the characters saying they have no idea why this thing is happening, so they're just going to accept that it does for now. This is, of course, the scientific method at work "we don't understand it but we'll study it until we do." Meanwhile, the engineering method of finding an empirical solution by trial and error is used to create a work-around. In some cases, these shrugs are actually puzzles that are solved later in the story line.
* The Salvation War. It doesn't help that the human militaries are actively attempting to deny them, but their mistakes compound the inevitable and turn mere defeats or could-have-been-surrenders into massacres.
* The Salvation War. It's implied that they use the humans in Heaven as power leechers or something similar and that their power is dependent on organized singing in some way. Of particular note is Michael, the military commander who has his own ulterior motives regarding the war against humanity, and Uriel, a powerful

angel who has the ability to induce living creatures to simply drop dead (though his effectiveness on humans has diminished noticeably over time). Oh, and angels aren't invulnerable; they can be gunned down or blown up for a veritable shower of white and silver blood. Six-winged Seraphim appear, although they turn out not to be actual Angels. They were one of the many species Yahweh has conquered, kept around essentially as songbirds.
* The Salvation War: Lampshaded by Michael - the last Bowl of Wrath gets poured on New York precisely because it's the city that always gets attacked in fiction.
* The Salvation War. Later, it causes divisions between those humans who respect this and those who do not.
* The Salvation War, most aircraft used in the war against hell are museum pieces which were long since retired. Tanks and other armoured units are also brought out of retirement and storage, a WWII Panzer showing up at one point.
* The Salvation War, mostly to avoid calling them demons and thus imply that they are very much a beatable enemy. The name caught on after Gordon Brown replied to The Message with the phrase "Sod off, Baldrick!"
* The Salvation War nations' nuclear, biological and chemical arsenals (in Heaven anyway).
* The Salvation War orders in a MacDonald’s "a double quarter-pounder with extra cheese, two super-size portions of fries, oh and a small diet soda please."
* The Salvation War: Pantheicide conquer heaven and seizes control specifically so that he can surrender before (more) nukes get launched.
* The Salvation War reveals that tinfoil hats actually work against demonic mind powers.
* The Salvation War, Satan wrings out an orc into a cup of his wine. The entrails dissolve.
* The Salvation War series, many first lifers are beginning to think this way. Second lifers on the other hand...
* The Salvation War series. They're rationalized, however, as using hydrogen-filled sacs within their bodies to fly and wings for maneuvering and thrust.
* The Salvation War since provisions to do just that are included in national mobilization plans.
* The Salvation War started her military career as a supply clerk, and was reassigned to a tank crew when the previous commander killed himself.
* The Salvation War. The city itself, as noted by several characters, has many cracks and structural problems below the jewels and artificial beauty.
* The Salvation War. The demons and angel are very much insufficiently advanced to deal with modern weaponry. However played straight in that this is what they were when they first showed up in the Bronze Age.
* The Salvation War, the demons are given modified 30mm RARDEN autocannons as assault rifles, since they are about 20 feet tall.
* The Salvation War. The number of characters you really need to keep track of is pretty reasonable, and helped by the large number of real life people, but the number of minor characters quickly goes off the charts. Not helping is that many of Hell's residents have absurdly long, complex names.
* The Salvation War, there is a story that the US keeps, in case modern trains are rendered useless, a federal strategic reserve of steam locomotives.
* The Salvation War. The result was an inefficient and unstable society that collapsed once it came under external pressure. Lampshaded on several occasions by baldrick defectors.
* The Salvation War to destabilize the alliance by stirring up pocket wars on the mortal plane.
* The Salvation War to little effect. When interviewed afterwards, her only words are "I need a bigger fucking gun!"
* The Salvation War underestimated how tough humanity has gotten in war. The resulting slaughter of demonic mooks who are consistently outmaneuvered, outwitted and sheer overwhelmed by Humanity's ruthless military might soon becomes an almost pitiful massacre.
* The Salvation War, whose calm is so scary she doesn't need to swear.

* The Salvation War, will answer any serious question about the logistics of his versions of Hell and Heaven and their relationship with our universe that isn't explicitly spelled out in the story itself. None of these are necessary to following the story, but they do make a great display of how much thought he puts into it.
* The Salvation War, with the odd historical character or twelve joining, no less.
* the same actor playing Lesurques and Dubosq. In reality, Lesurques and Dubosq did at least look similar enough that the former was mistaken for the latter by most witnesses, leading to his execution.
* The same album has "Sally Simpson", a song about a teenage fan who sneaks out to go to one of Tommy's meetings and attempting to climb on the stage to touch him. It doesn't end well for her. An obvious allegory for Tommy being a rock star, plus the song was originally a stand alone about a fan of a

* The same also seems to apply to Karstodes, but only when he's being criticized by the Emperor.
* The same also sometimes happens with wolves and domestic dogs; people want a dog that looks like a wolf but behaves like a dog. A half wolf, half dog is usually too much for most people, but breeding it with another dog is done to produce dogs that behave more like dogs. Meanwhile in Australia, dingos and domestic dogs frequently interbreed, and there aren't many purebred dingos left. Worth noting, all three animals are technically the same species,
* The same animated shots of Mowgli are frequently reused throughout the film.

* The same applies outside the big city. About ninety percent of a rural witch's work is a combination of district nurse and social worker (and occasionally community police officer), rather than magic.
* The same applies the simple riddle-type puzzles, where some inventor claims to invent a universal acid, and is told to leave as the other person knows it would dissolve the container it's contained in.
* The same applies to manga and anime. Some artists really push for their manga to be adapted to anime, as that's where the money really is.

* The same applies to the Botanical Ship(s) from the new series. Strangely there is a large domed luxury liner, and under the dome there is an elaborate simulation of the sky and sunlight (though "the horizon could need work") which could have been applied to the farm ships, meaning the Colonials have a way round it,
* The same applies to the title character of nearly every tragic opera as well.
* The same applies to winglies. The reveal that Lenus and Lloyd are winglies is treated as a huge shock to most of the cast. Then over the course of the game, two entire villages of winglies are introduced (though one doesn't know about the other). In the end, Lenus and Lloyd are only unusual in the fact they don't hail from either village.
* The same applies to Woodstock '99, the notorious thirty-years-later follow-up that degenerated into a riot.
* The same applies to Yuko Goto, the voice actor of Mikuru: she sings very well in the theme songs, but her in-character rendition of Koi no Mikuru Densetsu is hilariously off-key

* The same applies when Shinra later blows up the sector 7 pillar, dropping the upper plate onto the slums, killing thousands, and pinning it on AVALANCHE. In the remake,
* The same arc also had a limelight episode for the third-year student Tamaki Amajiki also known as Suneater, fittingly titled 'Suneater of the Big Three'.
* The same arc had the limelight on Uraraka in the episode 'Bakugou vs Uraraka', examining her desire and reason to become a hero.

* The same car also had a Daimler version considered in the 1980s, colloquially called the Daimler-S and having normal-styled C-pillars, but it did not reach production.
* The same case goes for the Italian version: with the film version being dubbed in 1997. Interestingly, "Honey Tree" and "Blustery Day" were originally dubbed theatrically in 1967 and 1970 (and released on VHS in 1982 and 1983) respectively, while "Tigger Too" had a direct-to-VHS dub in 1986.

* the same chorus. On the other hand, there's no shortage of stories throughout history that treat adultery as romantic, such as the tale of Lancelot and Guinevere (at least before it ended in tragedy), so maybe that's how some folks meant to interpret it.
* the same city that was once floating in the sky before it was brought down by the cataclysm that created the Big Bad. Unlike the other ruins you encounter, which have the appearance of being designed to take advantage of being constructed in underwater caves, the buildings in The Sunken City have the look of being terran in origin.
* The same class in the SFC/PSX version requires a character to kill 30 enemies personally in order to promote to it and is one of the strongest classes in the game. It always creates a passive terror aura that significantly weakens all nearby enemies and has the best defensive stats and heaviest equipment available. Its unit description states that the souls of the people it's killed create the aura of terror, though it's not clear whether the terror knight enslaves the souls of those it kills or whether they haunt their killer and he simply doesn't mind.

* The same could be said about Fabio Grosso, the man who almost single-handedly brought Italy to victory in the 2006 World Cup. He scored all the important goals, including the one in the semifinal and the decisive penalty kick in the final match, but never did anything else of note in his home country.
* The same could be said about kids playing the most brutal Fighting Games in arcades.

* The same could be said of almost every implied romance in KotOR2, as some party members can eventually become Jedi students of the Exile. And since those characters will only become Jedi if you increase their affection towards you, almost any opposite gender teacher/student pairing bears a degree of potential for romance. And that's not even mentioning the somewhat unwholesome attitude Kreia has toward you at times or the implied relationship between Kreia and Sion...
* The same could be said of Baby Doll, as she only ever had two appearances and was limited in both motive and ability compared to other, more menacing Batman villains.
* The same could be said of the Grey Wardens, due to the Darkspawn Taint within them getting stronger over time (at least they seem to understand the Darkspawn better). However
* The same darts were used on Vamp!Willow. The question is how Giles managed to not die from that much sedative. (Vamps, being dead already, obviously won't die from it.)
* The same deal goes for the equivalent animal-oriented professions. * The same example happened with the Pittsburgh Steelers. Tommy Maddox, who started thirty-one of the team's thirty-two games in 2002 and 2003, got injured and the rookie Ben Roethlisberger took over. The result? An one-loss season in 2004, losing only to Tom Brady, and two Super Bowl wins in the 2005 and 2008 seasons. Unfortunately for Maddox, unlike some of the other quarterbacks on this list who would at least move on to start for other teams, Maddox would never again land a starting job in the NFL.

* The same is true for training camps of the Germany military, the Bundeswehr. In fact, one of many amusing ads claims that tanks are good for nature, because their threads leave behind holes in the soil which collects rainwater, which in turn brims with wildlife such as microbia, worms and insects. Plus bigger wildlife can drink it.
* The same is true for Wally West. He was still Iris West's nephew, but he now had a
* The same is true in an even earlier Russian children's book series about a teen-sized android named Elektronik. A young math whiz in class proves Fermat's Last Theorem for 600 different cases over the summer break and presents it to his teacher. His 8th grade teacher is skeptical but agrees it looks promising. The notebook with the proof is then put near a flashlight supposedly run by a perpetual motion device and forgotten. The boy who wrote the proof later takes the notebook and destroys it.

* The same is true of Hồ Chí Minh, who married a Chinese woman named Tăng Tuyết Minh before becoming president of North Vietnam. The couple were separated by his arrest in 1931 and it was almost twenty years later before she found out what had happened to him; however, the government never answered her requests to meet her estranged husband, and even today her existence is not legally acknowledged.
* The same is true of his friend Andrew Sullivan, who is actually a lot like Hitch,
* The same is true of 'Kingswood Country' where the front door opens into the living room, the kitchen is separate and the back door (used at least as often as the front door) opens into the kitchen.
* The same is true of "Let Your Love Flow" by the Bellamy Brothers. It only got to #21 at country in 1976, but as it was also a #1 pop smash and a Top 10 hit in many countries, it has remained popular on classic country.
* The same is true of online role-playing in general, where those who use MUCKs, MMORPGs, and other real-time roleplay programs (or just roleplay through online messengers) will speak in-character of their "player" needing to leave/eat/go to the bathroom/sleep. This can be

* The same lack of creativity was applied to vampires in the first edition of
* The same level also has another one of these, though it can actually happen anywhere in the game; the trolley level is the easiest to perform it in. Throw a marble at a certain row of buzz saws causes a "Level Warp" screen to pop up, letting you go one level forward or backwards, whichever you choose. So why does this example fit this trope? The "Level Warp" is a very cleverly disguised Crash Handler. Whenever a

* the same nightmare about being executed many times so he knows that it is a dream but he notes the telltale signs to the district attorney Mark Ritchie. Most notably, he was sentenced and is due to be executed on the same day (a Sunday), which would not happen in reality. Although she is a character in the dream herself, Adam's defense attorney Erin Jacobs begins to notice them too. She points out to Ritchie that there were no press or spectators present in the court room during the sentencing even though it was a big murder trial. Later, she discovers that neither Ritchie nor his wife Carol have any idea how long they have been married and don't even remember getting married.

* the same one that Luke used who wants to get as far away from the First Order as possible).
* The same or similar can probably be said of any school whose student body consists largely of nerds (ie. Rice, Caltech, Brandeis, etc.)
* The same parasite typically infects rodents and alters their brain chemistry significantly-incidentally, this is why it changes human personalities. The alterations it makes are actually necessary to reproduce: it can only infect rats and mice, but it needs cats innards to breed, so it changes the brain chemistry around to that its host is attracted to the scent of cat, rather than repelled as normal. Then it gets eaten and the whole process starts again when the cats defecates.
* The same parody of Jor-El is the origin of Mr Might, Awkwardman's father in
* The same pattern of vampire owning human is consistent in the series, and it's often a female vampire owning a male or female human. However, these relationships are rarely as happy as the one between Sookie and Bill. In the second season, one guy belonging to a female vampire is so desperate for her love and blood that he'd do anything for it...

* The same principle applies in role-playing games, where players usually announce the names of specific combat options, special abilities and magic spells used by their characters.

* The same principle was used in a Sierra Mist commercial with a man whose legs fuse to the ground as he walks toward a vending machine, getting shorter and shorter as he leaves a denim-textured trail of goo behind him. He gets his drink in time to chug himself back to normal only moments before he would have been unable to reach the machine, then he just has to pour out a single drop to restore his poor puddle of a dog.
* The same problem (among a few others) is prevalent in the German school system, too. The average German high school graduate has a reasonably good shot at correctly identifying Earth's continents, but most won't be able to pinpoint the various countries on them (hell, many can't even name all of Germany's sixteen federal states, much less tell you their location). No wonder, given how superficially actual global geography is treated in class. Stuff like demographics, economy and such usually doesn't get any mention at all. The best you can hope for is one or two class hours of skimming a world map, and perhaps a short test of your knowledge of the neighbouring countries and their capitals, and that's about it. Fortunately, Germans are just as travel-happy as the Danish, so anyone with an interest in the world at large is likely to avert this trope, to varying degrees.
* The same reason bows are usually made from wood. Wood usually combines high tensile strength with a certain amount of flexibility (how much depends on the type of wood). This also explains why trees are usually still standing after heavy storms that utterly devastate human constructions (which are insufficiently flexible). When trees fall down it's either because they got uprooted, or because the forces exercised on them were greater than that particular tree could withstand (which may mean the tree was in a bad condition in the first place).
* The same reasoning (and infection attempts) is often applied to Rubella (aka German measles), at least for young girls. In children, it's unpleasant but mostly harmless - in pregnant women, it is

* The same rounding is done with cash purchases in Australia where the smallest coin is also 5 cents. However, the exact price is charged when paying by credit or debit card, so you could "game" the system and come out ahead by a couple of cents on every purchase.
* The same rude worker appears in another sketch, where Key is trying to go to the bathroom while the fasten seatbelt sign is on. Peele stops him in the aisle and tells him he can't, even though "it's the law." They have a stand off, before Peele retreats to his seat and Key travels to the bathroom. Turbulence hurls him towards passengers, and once he's in the bathroom he's saturated in water. When he leaves, turbulence thrusts him up to the roof and to the floor. He hits his head multiple times, only for the emotionless flight attendant to stare at him without compassion.

* The same sidequest also reveals something just as horrible, and is actually connected to the
* The same site also suggests a light-second as the maximum range for projectile weapons (at sub-relativistic speeds, at least), since at greater ranges, the target will have time to fire its engines before it's hit, and even a second's burn from a decent rocket can let a ship dodge by a wide margin. This doesn't go for guided missiles, of course, which are mostly only limited by fuel.
* The same situation is narrowly averted half a season later, in "Confidential"; much like the earlier case, the real murderer is found after committing a similar crime, but is killed before he can be tried. Fortunately for the wrongfully convicted man, the dead man's lawyer
* The same situation occurs in the original short story, although there isn't actually a defector: The man Bond is protecting is a British agent trying to make it back to the West, and Milovy is a real KGB sniper, albeit with an AK-47, with the Code Name "Trigger". Bond decides she's rather a looker, doesn't want to kill someone in cold blood and does the same as he does in the movie, but with more serious injuries.

* the same skeleton or zombie several times over he keeps around is nigh-irreplaceable.
* The same Slaaneshi cultist later takes Cersei's appearance to sleep with Jaime. As far as Jaime knows, Cersei is dead so he kicks hir away, causing the miffed cultist to take his gold hand in retaliation.
* The same slogan was also used to advertise a new apartment block overlooking Ruislip Underground station, likewise on a major route into and out of London.
* The same sort of situation is handled rather better in "The Girl Next Door," an

earlier and nearly identical song by Saving Jane, where the narrator admits she's turning the other girl into a villain
* The same sort of thing happens in a large percentage of Russian fairy tales. Either there will be three brothers or three sisters. If there are three brothers, then the two oldest will be greedy and ambitious, and the youngest will be lazy, considered a fool, and usually named Ivan. The youngest brother will compete with his older brothers for something, and will always win through kindness and wisdom. If there are three sisters, the oldest two will be lazy, greedy, and vain, and the youngest will be the only one who ever does any work. The youngest will always get to marry the prince.
* The same speed mod is applied to all players in a multiplayer room. This is a huge problem for players who have different preferences in speed modifiers for the same song.
* The same story also feature two others. Loke's contest is to eat faster than a jotun named Loge. Those familiar with Norse languages probably know Loge means
* The same story also predicted online television, on-demand television, online video chat, the various other mundane uses that people would use the internet and home computers for, and even made a pretty good guess as to what desktop computers look like.
* The same story has also a villain-on-villain example. Jewelius originally stroke a partnership of
* The same story has Manootensyon, a spore technician that found himself as the highest-ranked surviving scientist. Given his job is literally to clone and grow other Evronians but, being a low-caste scientist, he cannot understand the technique to grow
* The same story is also told about Lev Landau, the Soviet theoretical physicist who wrote a seminal textbook compendium on theoretical physics, where he would often cheerfully omit a longwinged and non-trivial proof as "obvious".
* The same storyline has an instance where Karolina takes an evening stroll and is mistaken for a prostitute by a creepy man, on the grounds that that's the only sort of woman who'd be walking around the city at this time of night. When she tries to correct the mistake, he refuses to listen and drags her into an alley. One beat panel later, he goes flying across the street and Karolina comments "Looks like history just lost another buff".

* The same thing essentially happened among the some parts of the Russian far right, who chose to throw away the intense, bitter Antisemitism that was a traditional trait of the movement, and instead come as downright Zionist. This is for somewhat different reasons, though, and has mostly to do with a shift of their object of hatred towards Muslims, perception of

* The same thing goes in reverse, to a lesser degree because Frodo is the physically weaker and more pacifistic member of the pair. However, he threatened Gollum with Sting if he didn't let Sam go.
* The same thing had happened to Otto before in "A Streetcar Named Marge", where director Llewellyn Sinclair took him out of the cast of "Oh! Streetcar!" just before the opening performance, replacing him in the part of Pablo with himself.
* The same thing happened in 2011 when they ran a cover story about relation troubles between the current couple on
* The same thing happened in season 3 with Zaheer, who is old enough to be greying but has a very young sounding voice. His actor
* The same thing happened in the dub, only it was called SpoonWow (made in Germany, you know the Germans always make good stuff).
* The same thing happened in the original, as well, though it was aerial bombardment / strafing from Cylon fightercraft that did the damage rather than nukes.
* The same thing happened in the US with Jeffrey Epstein, whose connections and all-star defense team allowed him to escape serious jail time initially in 2008 for molesting young girls.
* The same thing happened to Alexander Stewart, a prominent New York businessman, although this time it was for ransom, not medical research.
* The same thing happened to Decipher, coincidentally another 1990s Star Wars licensee. Both companies' problems may or may not have contributed to Wizards of the Coast getting both sets of licenses (the RPG and the card game, respectively).
* The same thing happened to the ads for Stanley Steemer and Celino and Barnes in the spring of 2016, where regardless of the channel you watch, the ad would always show up during the time that Cablevision devotes to local ads (or occasionally in the middle of the break).
* The same thing happened to the Chicago Cubs in 2016. Given that they had last won a World Series in 1908, and had essentially sculpted their entire brand since then around being the "lovable losers", this had surprisingly mixed reactions among Cubs fans.
* The same thing happened to the indie rock band The Zutons. Their hit single "Valerie" was covered by

* The same thing happened with Rod's successor, Rich Fields, who took over in 2004. Rich attended a taping when he was 18, and during a commercial break, he asked Johnny how he could get an announcing job.
* The same thing happens at least twice more in later seasons on alien planets. Again, it's a case of strangers materializing in a high-security area, although the circumstances are a bit different. In "1969", a freak accident sent them to a missile silo in the past: the location of the stargate in the present day, but it wasn't there yet. In similar episodes later, they traveled to worlds where the Stargate had been found and was recognized as being important, but the locals

hadn't figured out how to use it yet. Sometimes, some locals believe the team's story of being aliens who came through the religious artifact or museum piece or whatever they think the Stargate is, but other times, the locals jump to the conclusion that the team is attempting to steal or deface the Stargate or spy on something else of value in the same facility.
* The same thing happens (for real) to Senator Wilson Philips later on, after he's violently assaulted by DIO and unwillingly forced by the vampire to commit mass murder — by driving through a crowded sidewalk of people — while pursuing Joseph and Kakyoin. He loses it completely upon DIO telling him that

* The same thing happens in "My Hair Lady" when Bobby goofs around in "Hottyz" hair salon.
* The same thing happens in the next saga with Recoome, who dominates Vegeta, Krillin, and Gohan effortlessly then gets KO'd be a single elbow from Goku.
* The same thing happens in the Philippines with a similar manner- that's how
* The same thing happens in the third case of the first game, where Phoenix proves his client couldn't have committed the murder beyond a shadow of a doubt about halfway through the case, but the trial must continue because the actual culprit hasn't been exposed. In this case, it plays off more like the trial becoming an ongoing investigation - neither the prosecution nor the judge seem to seriously think the defendant is guilty any more, and seem genuinely curious about the truth, but your client still goes to jail if you fail.
* The same thing happens in Zevran's cameo, which occurs near the end of the sequel and thus
* The same thing happens on the railways, especially with passenger engines. The railway gets a new passenger engine, the fastest thing on the rails, and it pulls the big expresses for about ten or fifteen years. Then it gets an even newer engine, and the original one gets put on the second-string trains. Finally, after thirty or forty years in service, the former "star" engine is clanking around on branch lines or commuter routes, or being relegated to switching duty in a rail yard before it gets scrapped or donated to a museum. Ditto for airlines.
* The same thing happens to Batou in the second season, when he's arresting a terrorist called Angel Feathers.
* The same thing happens to Rarity in the comics, making the "superpowered" bit all the more obvious as she is able (with some help) to provide a serious challenge to the rest of the cast put together.

* The same thing is done whenever people are shown wearing gas masks (which happens quite a bit, as they have to go into parts of the station with non-oxygen atmospheres every so often).
* The same thing is possible in this game, which allows you to blow holes in almost everything. It's often the best way to get to snipers or MG nests.
* The same thing is true in the Second Doctor-era story, "The Power of the Daleks". Everyone in the human colony is convinced that the Daleks are robots that are there to help them in any way possible. This belief is reinforced by the Daleks' seemingly endless mantra of "I. AM. YOUR. SER-VANT."
* The same thing occurred in 2006, too. After Toon Disney stopped airing it, Boomerang picked up Garfield... but used the DVD versions of the episodes.
* The same thing occurs during command training exercises for civilian disaster response: it's typical for the organizers to arbitrarily declare that a given response has failed in order to make the situation worse, or that
* The same thing pretty much happens in the first film as well. Lining up and trying to face a numerically superior army (it's also apparently superior in weaponry, though the evidence doesn't really support this) instead of, say, having the cavalry try and maneuver around an enemy army doesn't really occur to them. It also fails to use their one advantage, as they have a diverse and disciplined army while the enemy is just an intermixed horde.

* The same thing served that purpose for diesel cars from the 50s to the early 80s. While private customers were turned away by their bad performance and work culture, those things did not matter too much in taxi work, while the high mileage that cabs get made the benefits of diesels' better reliability and lower fuel consumption more sizeable.
* The same thing surfaced with the 2015 reboot, with claims of new Toa (including a new version of fan-favorite Takanuva), the return of the Bohrok, and more showing up in the same grainy, out-of-focus manner as the originals. One that got dismissed as fake, ironically, was an ultimately cancelled Makuta set, which appears to have been planned for the series' third and final arc before being

* The same with Flash. It was supposed to be a vector animation based media container to keep animation sizes small in the early days of the web. The Adobe added all this other stuff on top of it. Flash just eats memory and CPU cycles and has become the de-facto media container. HTML5 is supposed to remedy this, but Flash went kicking and screaming until its end of life date on December 31, 2020.
* The same with King Piccolo, who easily curbstomped Goku in their first fight to the point he was believed dead. Goku went back to Karin's Tower,

* The same with working the night shift or early morning. Many radio hosts, for example, only work when doing their show, and then spend the rest the day doing whatever they want.
* The same word in the United States is quite obscene. In England and Australia, it gets thrown around a lot more casually.
* The same work also does something of a retcon on Mrs. Hudson, Holmes' widow landlady; although she's not described in much detail in the original stories, she's usually depicted in later pastiches and adaptations as a rather matronly lady around late middle-age. Wellman casts her as a young widow who is having an affair with Holmes. The reason Watson doesn't mention this in the original stories? He hasn't cottoned on, because he's a bit oblivious about these things.

* The Samurai Edge pistol fame is essentially a line of Ace Custom handguns used by the elite S.T.A.R.S. team, based off of the Beretta 92F. Commissioned by the Raccoon City Police Department and designed by genius gunsmith Joseph Kendo, even the baseline model featured target sights, Inox barrels, heavier slides from the 92 Brigadier, custom wrap-around wood grips with synthetic inlays and backstraps to cushion against recoil, and enough fine-tuning to fire repeatedly without any sort of drastic spread, even after going through a few thousand rounds. The ones used by the four main S.T.A.R.S. members (Chris, Jill, Barry and Wesker) all feature their own personal customizations: Chris' SE is geared toward accuracy with a blued hard steel slide for covert action; Jill's has a miniature slide stop to avoid snagging on clothes when drawing; Barry's is based on a Beretta 96, up-chambered in .40 S&W with an extended magazine to accommodate and an enlarged compensator; and Wesker's is almost Char-like in the amount of customizations it sports, such as a duralumin steel frame with a Vertec-style underbarrel rail that allows his to take a custom suppressor.

* The Sanctuary Tree: Donald Duck and the fat female guard who falls in love with him.
* The Sanctuary Tree, where the fat female guard, who was angry and rude throughout

* The Sandals resort also wants you to come to their "Island in the Sun", as advertised through a cover version of the Weezer song of the same title that sounds almost indistinguishable from the original (besides the replacement of Rivers Cuomo with some studio singer.)

* The Sand, as the characters toss items to one another so as to avoid contact with the deadly tendrils of the sand-burrowing jellyfish-monster. Nastily subverted when one character's overextended reach for a thrown towel sends him tumbling over the lifeguard hut's railing to his messy death.

* The Sandbaggers — extremely Stale Beer (characters often comment, "this isn't James Bond.")
* The Sand Castle: The sand man creates his helpers by simply building them out of sand, with them spontaneously animating when he's finished.
* The Sand Castle: The sand man has eccentric taste in helpers. He creates a weird creature that consists of three legs that meet at a common point, with a duck's head on the top. He creates two more little creatures that might be best described as heads with arms attached.

* The Sandlot, during the chase scene with The Beast, two chefs carrying a large layer cake are in the path of the runners. Benny jumps over the cake, the Beast runs under it, and the other kids jostle the chefs as they run around it. When the chefs finally set the cake down safely on the table, a clown on stilts loses his balance from all the kids and falls onto the table, launching the cake into the air and landing square on the poor chefs, covering them with frosting and stuff.
* The Sandlot". Everyone treats this as the worst thing you can say to a guy. Of course, this is because the film takes place in 1962 before feminism and Title IX took off and most girls began participating in sports.
* The Sandlot: Kids + Chewing Tobacco + Theme Park Ride = Bad time for them and everyone in a 30 foot radius of the ride.
* The Sandlot playing for sheer fun on their run down field get teased by a group or kids who look like they just came off a prep school field, complete with matching uniforms. The misfit kids respond by giving the bullies a humiliating beating in baseball.
* The Sandlot, Smalls, after his team's last ball gets knocked over the fence into the neighbor's yard where "The Beast" lurks, decides to play baseball with his step-dad's autographed Babe Ruth baseball. Sure enough, that ball gets knocked over the fence too, and the rest of the movie is spent trying to get it back.
* The Sandlot's yard. When the other boys learn of the autograph, they tell Scotty its value and make several attempts to get the ball out of the yard using makeshift

retrieval devices, but each is destroyed by the Beast. Ultimately, the Beast’s owner compensates them by giving them a ball with the names of the entirety of the Yankees "Murderer’s Row" lineup on it.
* The Sandlot turns out to be a big friendly dog by the name of Hercules.
* The Sandlot was a minor success at the box office, but the film became a best seller on VHS and DVD.
* The Sandlot, when Squints intentionally jumps into the deep end of the pool so that he'll be rescued by his lifeguard crush. After a few tries of CPR, Squints pulls the lifeguard into a big kiss.
* The Sandlot who supposedly once knew Babe Ruth personally, and always dreamed of beating the Babe's home run record before he was forced to retire when a wayward baseball left him blind. After hearing his life story, Scotty assumes that he never got to beat the record because he lost his eyesight. Of course, an older viewer will probably deduce the real reason: he's a middle-aged African-American man in the 1960s, and he would have played long before baseball teams were desegregated. In all likelihood, he was never allowed to achieve his dream because he was never allowed to play against White players.
* The Sandman: A chapter set in the legendary Baghdad of the 1001 Nights features a flying carpet. It's pretty shabby despite belonging to the king and being locked in the deepest, most difficult to reach part of the castle.
* The Sandman after escaping from his confinement is to grab nourishment from a passing dream — in this case, a dream where a man's gone to a glamorous party populated by celebrities dressed as a clown.
* The Sandman A more persistent theme is the difference between ancient and modern writing, stories which are male and stories which are female, the latter tends to be more common in the 20th Century.
* The Sandman, and his main character, Prospero, has dabbled in the dark arts, but Will would rather have him not damned by the end of the play.
* The Sandman an example, telling his black girlfriend that ideas about racial supremacy and racial purity are a lot more recent that most people assume.
* The Sandman, announces her identity to a group of departed souls, only for an unimpressed guy to dismiss her with, "You, and every goth chick in here!"
* The Sandman, a nobleman has intentionally created a loop which includes an entire island and all its inhabitants (including the nobleman himself), in which a decadent consequence-free party has repeated every day for hundreds of years. It's warded to be beyond Death's reach, but she eventually persuades a random human passing by to force open the entrance, letting her slip inside, break the loop, and return everyone to their proper timeline.
* The Sandman anthology is this. It is appropriately horrible. The poor fired guy is so afraid of telling his family that he turns to crime when his money runs out, while still pretending that he is going to his former job.
* The Sandman are beautiful to boot... as it turns out, the preexisting myth didn't so much exist at all, which is standard for Neil Gaiman.
* The Sandman) are shown as two blonde, half-naked winged Bishonen whose feet "never touch the impure ground." They ended up ruling in hell, with...mixed results to say the least.
* The Sandman, a schism grew between the younger and older members of the Endless after their "prodigal sibling", Destruction, abandoned his post for good. Without Destruction, Desire became more and more interested in tormenting Dream, while Destiny and Dream grew aloof and distant from their younger siblings.
* The Sandman, as Didi, while unconventional, spontaneous, and extremely outgoing, is at the same time calm, collected, and thoughtful.
* The Sandman. As Dream's domain includes everything conceived by the imagination, it has many books which were never written down, perhaps just coming to people as idle fancies and being immediately forgotten about.
* The Sandman as 'like falling in love with a kitten: one day you'll have to put an old cat to sleep'
* The Sandman, at the time when the place had apparently fit the trope.
* The Sandman because we as readers would naturally empathise better with (or be at

all able to understand) humano-centric stories.
* The Sandman, British schoolboy Charles Rowland dies after suffering terrible abuse at the hands of ghostly bullies. As he dies, he is accompanied by the ghost of one of their previous victims, Edwin Paine. Early on, Rowland asks Paine to hold his hand. Later, when he finally dies and becomes a ghost, he convinces Paine to leave the boarding school with him, and they are seen walking off, once again hand in hand. It's kept purposefully vague whether or not they are just good friends or something more.
* The Sandman. But when the main character Barbie sees her spirit enter the afterlife, it is as a woman, secure in her identity and no longer "camp or artificial" as she had appeared in life (as her facial features were too recognizably masculine for her to appear quite as feminine as she desired).
* The Sandman. By the end of issue #1, Burgess has died of old age, and his son Alex is a harmless, senile old man. After Dream escapes, he leaves him in a permanent nightmare and never sees him again.
* The Sandman, Charles Rowland is sent off to boarding school because his single-parent dad works for the British foreign service. At one point, having died of injuries sustained at the hands of undead bullies, he wonders if his being sent to boarding school was just a way for his dad to avoid actually having to be a parent.
* The Sandman, created a world where humans are the dominant species and cats are their pets. A group of housecats now roams the Earth, spreading this gospel of their former glory and implore all cats who hear them to dream back the old world.
* The Sandman curses a man who kept him locked up for decades with the never-ending nightmare, where every time he thinks he's woken up, the nightmare continues. The few panels of this we see are horrifying.
* The Sandman, Death's name is mentioned well before we see her. Gaiman intended for most readers to assume Death of the Endless would be male and menacing ... until we saw her.
* The Sandman, Delirium was shown in her previous form as Delight, who was normal-looking and very much a Cheerful Child.
* The Sandman, Desire, a nonbinary character, is portrayed by nonbinary actor Mason Alexander Park.
* The Sandman: Destiny, the eldest of the Endless, only intervenes when the Book of Destiny tells him to.
* The Sandman do it he gets upset, exclaiming that they don't even know him.
* The Sandman drafted from far earlier stories. Some notable examples:
* The Sandman, Dr. Destiny forces a woman to admit that she once, drunkenly, had sex with a corpse at a mortuary. And nothing since then's measured up.
* The Sandman: Dream, a.k.a. Morpheus, also has completely black eyes, in which, at times, pinpricks of light like distant stars can be seen, as it is said that, by staring into his eyes, you can see the vast emptiness of eternity. He isn't evil, however, or not a typical villain at least, but he can be uncaring (to the point of cruelty) and takes very long to forgive a perceived slight.
* The Sandman: Dream and Nada. It's forbidden for a mortal and one of the Endless to be lovers. When Nada spurns Dream after breaking this, he condemns her to hell.
* The Sandman, Dream goes to Hell to retrieve his helmet. The demon Chonoronzon, who currently possesses it, challenges Dream to the ultimate game of "Can you top this?" Choronzon's final move was becoming entropy personified. Dream responded, and won, by becoming Hope.
* The Sandman Dream has been given the key to Hell, and envoys from multiple pantheons approach him to obtain dominion over it. The Japanese envoy is Susano-o, who presents it as a corporate takeover (their pantheon apparently runs multiple hells, the Christian one would be a sizeable addition).
* The Sandman: Dream of the Endless. Some minor characters in the comics also go down this way:
* The Sandman ended with the rise of a new Dream, but also with Dream looking out upon and recreating his kingdom, which was a common theme in the beginning of the series.
* The Sandman: Endless Nights. It involves the population of Manhattan joining a

procession into the East River.
* The Sandman, especially regarding what happens after death (except for the very obvious fact that some people go to Hell, at least for a while). In an early issue, Dream follows Death around as she makes her rounds, and it is implied by his inner monologue that he witnesses exactly this, but he is to preoccupied with finding the solution to his own inner woe to describe it other than in brief, symbolic terms. Averted on another occasion, when Death assures a recently deceased character that he will now get to find out... but that's the final panel in that sequence. When near the end of the series Hob Gadling considers giving up his immortality, he asks Death directly about it. She just gives him a warm smile, as if not wanting to spoil the surprise. This particular sidestep is sidestepped itself in the final issue. An aging Shakespeare admits to thinking about death in his "every other thought", but when he gets the chance to speak to Dream a final time, he instead asks him about the nature of his literary talent (and he gets a fairly straight answer).
* The Sandman. Even if they want to help a questioner - and they often don't - they can't unless the questioner asks the right questions.
* The Sandman features a literal case: the majestic city of Baghdad is sealed inside a bottle at the request of its king and given to Dream to take care of; this allows the city to continue forever in dreams, even when the city is war-torn and battered in reality.
* The Sandman features the duel between Morpheus and Doctor Destiny, where Doctor Destiny believes he's finally destroyed the Dream-King because he's found himself on a featureless white plane. Pull back to reveal he's actually in the palm of Morpheus's hand...
* The Sandman, followed by an apologetic pause to take off his mask and put his glasses back on.
* The Sandman. For most of the first volume, he was struggling to get a sense of the characters and the kinds of stories he wanted to do, and also had to deal with an editorial mandate to include characters from the DC Universe which he found very awkward. But when he got to the final issue of that volume, which introduces Death, suddenly everything clicked for him. He still advises people that the first volume isn't really worth it, though many fans disagree.
* The Sandman for serial killers euphemistically refer to one another as "collectors" due to the body parts they tend to take from their victims. When they discover a journalist posing as a dead collector some of the con staff stuff him in the trunk of a car and take turns collecting from him.
* The Sandman had Boris Leland, a spy who stole plans for a device Wesley was planning to show at the New York World's Fair. He's taken to prison by the end of the first issue.
* The Sandman, had one character converse with the Spirit of Las Vegas (summoned by deliberately losing one's life savings in a rigged game, appeared as a 1930's hipster in a zoot suit).
* The Sandman has a particularly horrible incident in one of the early issues where rogue dreams have converted a still living man into this and draped him all over the walls of his dream-junkie daughter's apartment.
* The Sandman has a talking raven and a reincarnated nightmare killer running a good cop bad cop interrogation on the Norse god Loki. It's that kind of series.
* The Sandman has a ton of mythological and literary references, and you'll need to have read a lot to catch them all. Just to throw in a few:
* The Sandman has it that it has an annex that contains everything that actually was written, too. We just never see it because it's so tiny compared to the rest of the place.
* The Sandman has no fixed sex, and is androgynous, fluctuates between sexes, or both. Being the anthropomorphic personification of desire, to the reader (and to presumably most people who perceive it) Desire usually shows a mix of traditional gendered traits, such as a suit and tie with feminine facial features and lipstick.
* The Sandman has several magic gates. Each of the Endless has a gallery which they use to talk and visit each other's realms. In the real world, any labyrinth can be

used as a gate to Destiny's realm. Destruction creates a gate (with an appropriate big explosion) that Orpheus uses to visit Death's realm. Dream's realm has an ornately carved big gate at the front which dreams pass through.
* The Sandman has several spin-offs following supporting characters, including:
* The Sandman, he asks to borrow Morpheus' handkerchief expressly for the purpose of changing it to a polka-dotted design and carrying his belongings on a stick.
* The Sandman. He would dream about crimes that had not yet been committed.
* The Sandman hired The Sandman, they learned from their experiences with The Public Enemy (see below), and kept him exclusively in their hardcore division, so to downplay his weaknesses.
* The Sandman his job and wanders creation to try and be something besides Destruction incarnate. Death makes a point of becoming mortal for a day every now and then to avoid losing touch with her charges.
* The Sandman his son, Orpheus, Dream is attacked by the Furies, whose job is to punish those who murder their own kin and ultimately chooses to die at Death's hand. However, he's reborn in a new form, who then continues to do his predecessor's work. So the idea called Dream keeps on living, but the character everyone knew as him is dead.
* The Sandman: Implied with the Merkin, Mother of Spiders, a minor demonic character. She is a lumpen, hideous, vaguely feminine figure, whose womb produces spiders.
* The Sandman included the character of Hob Gadling, who was made immortal. In one of his stories, he states, while weeping next to the grave of one of his latest companions to die, "I thought we'd have longer. It never gets easier, people you love not being there any more." Dream's frequent though illegal romances are all of this form, since Dream as one of the Endless is as old as the universe (10 billion years for Neil Gaiman's purposes) and so even goddesses and really old witches will be outlived. Though he probably usually manages to destroy the relationship before old age becomes an issue. His brother Destruction has a similar relationship, with a goddess who only lived for a few thousand years.
* The Sandman in his eye sockets in lieu of eyes. Yet he can still see. And he can eat things with them, like people's fingers if they try to take his shades. And if he eats someone's eyes that way he can see things they've seen.)
* The Sandman: In the chapter/story "Dream a Little Dream of Me", Dream teams up with John Constantine to retrieve a pouch of magic sand from Constantine's junkie ex-girlfriend Rachel, who had mistaken it for a drug. Her abuse of the sand had warped reality around her house, including merging her father with the walls and floor.
* The Sandman in unintentionally molding the destinies of everyone who crosses where they've been.
* The Sandman: Invoked by Gilbert, who insists upon being Rose Walker's "Knight Errant" in her search for her brother.
* The Sandman, in which the titular ghoul sneaks up to a small boy's room while he sleeps, and...let's just say he doesn't give the boy sweet dreams.
* The Sandman is a prime example of this trope since he "collects names as others collect friends" (To wit, Morpheus, Dreamlord, The Sandman, Oneiros, Kai'ckul, Lord L'zoril, Shaper of Forms, Lord Shaper and on at least one occasion, "Tall, Pale and Interestin'").
* The Sandman is described as a hippogriff but is drawn as a Pegasus-type winged horse.
* The Sandman is, in theory, serving a purpose. Unfortunately, the more powerful ones have a tendency to go beyond their remit.
* The Sandman is literally about the Sandman of legend (although there's a lot more to his job than just putting people to sleep).
* The Sandman is Morpheus resetting the status quo. However since we never saw what things were like before Morpheus was captured, things are established for the reader as they are reestablished for the characters.
* The Sandman is psyching himself up for a speech. "You're the chairman of the convention committee. You're a successful orthodontist. You have a shack out in

Vermont that no one knows about, with four full chest freezers..."
* The Sandman issue 23, Season of Mists, after receiving the key to Hell from Lucifer Morningstar, the King of Dreams watches him vanishing into the vast, empty Hell. He holds the key in his hand for a moment, finishing the chapter with the words "I feel cold". Being the owner of an empty Hell may look nice on paper, it might destroy you (or it might not).
* The Sandman issue "Men of Good Fortune" used this across six centuries, beginning in 1389 and ending in 1989, the year it was written and published.
* The Sandman issue "Ramadan", Harun al-Rashid, Caliph of Baghdad, rules over a city of mystery, magic, and wonder that is the marvel of the world, but he knows it won't last. In order to have his city live forever, he sells it to Dream. As a result, all the magic and wonder is removed from the "real" city, but the mystic Baghdad will live on in legend and myth for all of time.
* The Sandman issue "The Hunt", a character tells a fairy story in which one of the strange objects the hero accumulates is a small bone he had carved into the shape of a small bone.
* The Sandman issue "The Hunt," the protagonist of the story-within-a-story stops for the night in an inn like this. He survives; it's heavily implied that the innkeeper doesn't.
* The Sandman is this trope played for as much tragedy as possible. When the blinded, paralyzed Loki is returned to his prison, Odin reminds Sigyn that Loki abandoned her and that she does not need to share his punishment. Sigyn silently refuses to abandon her husband despite everything. As Loki curses her in his impotent rage at his predicament, Sigyn tearfully whispers "I am so happy that you are back, my love." Loki's response is mocking laughter and more curses.
* The Sandman. It also has the books that you might dream of writing some day. Trippy.
* The Sandman. It is even implied that this will happen with every Endless (with the exception of Death, of course) before the universe ends.
* The Sandman. It makes him look like a badass, verging on making him look ridiculous.
* The Sandman. It's not entirely clear whether this is actually blonde hair drawn as white (since a younger Lyta is shown as a blonde, and one character refers to her as a blonde as an adult), or if it really is white.
* The Sandman, it took her some time to grow into the role, as she was much less pleasant when younger ("some time" being on the order of billions of years).
* The Sandman leaves the reason for Delight becoming Delirium ambiguous with a couple of tantalizing hints, and it's probably the most-debated topic amongst fans. Another obvious Canon Fodder point is who killed the first Despair; all we know about it is that the person responsible is a he and will never stop suffering until the end of the universe. Some theories even tie the two Canon Fodder events together (e.g. Delight went mad with grief after the man she was set to marry killed Despair and was condemned to eternal torture for it).
* The Sandman, Lucifer has no respect for Remiel because of this. He thinks that the only reason Remiel remained loyal to God was fear and not true loyalty. Lucifer also guesses (correctly) that Remiel whimpered and wailed when God made him the new steward of Hell in Lucifer's place. Lucifer contrasts Remiel with his silent friend Duma and guesses (again correctly) that Duma was the one who had the courage to actually take the Key to Hell.
* The Sandman — and, perhaps, this trope in general — may be summarized by the quotation prefacing the book:
* The Sandman milieu is also presented as a henotheistic one in which Lucifer (and, especially, Lucifer's Creator) are depicted as far more powerful than even the Endless.
* The Sandman, Morpheus and Nada make love once. Her home city is reduced to glass shards. It's suggested that had they remained together, the entire world would have been destroyed.
* The Sandman: Morpheus' "crown" is in fact a gas mask made from the skull and spinal cord of a dead god.

* The Sandman, Morpheus specifically goes to a crossroads to summon the Hecatae, because they are the goddesses of fate and, their holy places are always where choices are made.
* The Sandman: Mythical character in Western and Northern European folklore that represents the Lord of Dreams.
* The Sandman Nathaniel doesn't end up with his childhood sweetheart Clara nor the other girl who he fell for that happened to be a robot. Oops.
* The Sandman, Not exactly this trope, but fitting well enough: "Death Talks About Life". John Constantine is embarrassed to the max when Death wants him to demonstrate proper condom use on a banana...
* The Sandman, Odin keeps his thoughts and his memories in his two crows, Hugin and Munin. When he sends them off to gather information, he becomes completely catatonic, being capable of neither until they return.
* The Sandman of creating things, and tries his hand at countless forms of art. He's just terrible at all of them. It's implied that the reason is that, being the manifestation of destruction, creation goes against his inner nature. However, it's also implied that the Endless embody not just their namesakes, but their opposites as well.
* The Sandman of ECW fame shared this trademark, and arguably invented it.
* The Sandman. Often those stories are themselves framing devices for more stories. In places, it nests at least four framing devices deep.
* The Sandman, one character describes the normally stoic and emotionally repressed Sophie as having "a smile like a goddess of the sun". And indeed, in the best ending, we get to see her flash a lovely smile for the first time all game.
* The Sandman, one minor character makes the "not enough catshit" joke.
* The Sandman... only to realize he's in another, even worse nightmare, for all eternity.
* The Sandman opens with an infodump of how few people living today have been alive since prehistory, then goes to a 15,000-year-old caveman living as a lawyer in New York. As he's reminiscing about a dream he had of his childhood hunting mammoths he is unceremoniously killed by a falling pallet of bricks.
* The Sandman: Orpheus says this to the Griffin gate guard of his father's kingdom after his wife dies.
* The Sand Man or that they'll cover more ground if they're exploring different areas.
* The Sandman: Overture looks like a robot, meaning that there must be a world out there where robots dream.
* The Sandman: Overture, things happen which aren't in Destiny's book or the Fates' weaving, confirming Delirium's statement.
* The Sandman perceived a great fox coalescing from the night sky, and an ordinary cat saw a big black cat.
* The Sandman resembled this, especially early on when the series was less fantasy and more horror.
* the Sandman, Sand, has used it as a weapon a couple of times. As a younger hero once pointed out: "Wirepoon. Sounds kinda dirty."
* The Sandman (see below), has grown from a small grove to a forest in the time since his last visit. As there are at least hints that people mostly only end up in Hell if they think they deserve it, this implies that there have been a lot of suicides who believed at heart that the act was wrong.
* The Sandman. Seemingly minor details end up being plot-centric on a second read.
* "The Sandman" seems to have a infinite supply of baseballs as long as you let it "recharge". Knock your ball away and you can pick it up, but if you don't it will respawn in your hand after a while. Similarly, you can take as many sips of that BONK! energy drink can you want as long as you wait a few seconds between each use.
* The Sandman, serial killer Nimrod opens a serial-killer convention with a disgusting joke about rape. His audience finds it hilarious.
* The Sandman series has the first Corinthian. He occupies a position as both an all-powerful supernatural slasher as well as the muse of other serial killers. He was created by Dream to be the embodiment of humanity's worst fears but, much to

his master's disappointment, just became an immortal monster. The second is a more nuanced but still terrifying figure.
* The Sandman series is a Tome of Fate; being already complete, the book can't be edited. It is stated that Destiny's sole purpose is to read the book. It is also implied that the book is an actual part of him (or vice versa).
* The Sandman series qualifies since it explicitly disregards natural laws in favour of those crafted by Morpheus. In fact, each of the realms of the Endless (along with Hell) can be called an Eldritch Location by itself.
* The Sandman she gave a policeman was necessary and gets the same answer.
* The Sandman. She may look like a sweet young college-age girl, but in reality, she's a paranoid, millennia-old witch with a nasty habit of offing anyone who so much as annoys her.
* The Sandman. She's an anthropomorphic parrot wearing a dickey with a bowtie, a typically masculine form of apparel. You have to pay attention to the pronouns others give her to figure it out.
* The Sandman short stories had one character doing a reading involving "The King of Anchors", "Hiroshima", "Little Nell", and the like. Justified because said character was Delirium.
* The Sandman shows this happening to Delight during her transformation into Delirium.
* The Sandman, sleeping people are often conscripted into being temporary servants in Morpheus' kingdom. In the issue "Season Of Mists", one man begs a woman to tell him her name and address before they wake up. It's not shown if they manage to find each other in the real world.
* The Sandman, "soft places" are spots where reality is weak leading to easier inter-dimensional travel, and time working oddly. There is one in the Desert of Lop in China (a real place).
* The Sandman, sometimes transforms involuntarily into multicoloured butterflies or fish.
* The Sandman. Specifically, the city of Baghdad originally was full of magic and wonders, but Haroun al-Rashid was afraid it wouldn't survive that way, so he made a deal with Morpheus; Baghdad became a mundane city, and Morpheus would preserve a dream version which became the stories in the Arabian Nights.
* The Sandman's title character, goth pretty-boy Morpheus, frequently went shirtless. Indeed, one of his most frequently seen items of clothing is an ankle length robe that nevertheless exposes his skinny but toned midsection, allowing him to present the image of the authoritative King of Dreams while still providing the expected fanservice. And people think Sandman's biggest selling point was its sophistication.
* The Sandman stories focus on abstract beings of incomprehensible power and age that govern the whole of reality, and where supernovae exploding and wiping out solar systems of intelligent life are so common that they only mention them in passing.
* The Sandman: Subverted with lesbian couple Hazel and Foxglove who are both butch, then played straight as Hazel starts dressing in a more conventionality feminine way after she gets pregnant.
* The Sandman, switching from perfect English in a private discussion to "velly solly, me no speakee" in order to get rid of an opium addict.
* The Sandman tells the newly-arrived young thugs that "I took my mother by force, and strangled my sister when she wouldn't submit to my advances."
* The Sandman, the Carnifex of Aurelia threatens to pop Cluracan's eyes out with his thumbs and then piss in his sockets. A guard confirms that he's seen him do this.
* The Sandman, The Endless create their own golem, Eblis O'Shaughnessy, to act as emissary at Dream's death. He's basically human in most respects, but as two of the Endless are not present at his creation, he is unable to dream or destroy.
* The Sandman the eponymous character has his occasional romances with mortals. They don't seem to end well.
* The Sandman, the immortal Hob Gadling once comments on how it feels to starve

when you are unable to die. Although when promptly offered the chance to renounce his immortality, he turns it down, as he has so much to live for. Being immortal, he always has the chance to improve his lot (and indeed, the next time he meets his benefactor, he's pulled himself into high society). The whole point of his first story (besides its reflection on Morpheus's character) is to subvert the Hell out of this trope because, for all its suffering, life is worth living and certainly preferable than the alternative. It's a bit weird in a comic where Death is so nice, but it works very nicely, especially with Gadling's later appearances.
* The Sandman them. When he briefly freed his victims from his control, one of them demanded to know why he was tormenting them this way. His answer? "Because I can."
* The Sandman, then he abruptly stops laughing and gives a very deadpan "no".
* The Sandman, the only Sandman novel, was turned into a comic book by Vertigo.
* The Sandman, the title character punishes author Richard Madoc (who had kidnapped a Muse and was raping her for inspiration) by giving him an unstoppable barrage of ideas. When this happens while he has no writing materials on hand, Madoc transcribes the ideas on the sidewalk with his fingernails and blood. Another schizophrenic man (who is recruited to rescue Delirium) has a compulsion to write warnings on any available wall ("DO NOT ERASE THIS MESSAGE!")
* The Sandman They are above and beyond gods, have existed since before humanity dreamed of gods, and will be there after gods, and possibly the universe itself, have died.
* The Sandman this trope is applicable even with the goddess Calliope simply because his power is so far beyond hers, let alone the purely human Nada.
* The Sandman, Thor gets one to represent his hangover, which makes sense seeing as he's a storm-god.
* The Sandman (though his greater body of work is in regular literature).
* The Sandman, though it's mentioned only in passing in the final issue.
* The Sandman. Through all the stories the characters mix up slowly and in ways that aren't initially obvious and characters that were initially in two panels as a mention become major players later on.
* The Sandman to carve out a little corner of the Dreaming for themselves. They make him the sidekick of a superhero named Sandman, who is really a brainwashed spirit of someone recently deceased, only anchored to the living world by pregnant widow who lives in the dream with him. Thus their plan is facilitated by the desires of two miserable victims who wish for a better reality than they have.
* The Sandman to free Nada's soul. Knowing that Lucifer will Shoot the Messenger, he sends the Biblical Cain as his envoy, since Cain is marked by God and not even the forces of Hell can kill him. Lucifer still manages to hurt and terrify Cain, but notes that anyone else would have returned "with his liver in his mouth".
* The Sandman Universe, he perverted this sacred event by hunting the Hunted God before the hunt would even begin, killing the god at infancy again and again until the god's divine essence was whittled down nearly to nothing.
* The Sandman. Used again later on, where the Kindly Ones are never actually seen as they ravage the Dreaming, and only their weapons and shadows are seen.
* The Sandman, valuable paintings, and Krugerrands), and that it made his tongue feel numb.
* The Sandman, we're introduced to Lucifer Morningstar and several other powerful demons preside over Hell. While there are also angels and we're offered a glimpse of Heaven, God is only briefly mentioned in passing. There are many deities and spirits from various mythologies represented in the series, but the Abrahamic God never makes an appearance.
* The Sandman when Dr. Destiny makes the world go crazy and a kids show host encourages children to commit suicide.
* The Sandman: when he is trapped in the opening chapter Dream has his mask, ruby and pouch of dream sand stolen. While the mask doesn't do anything (the demon who gets it knows how dangerous and powerful it is) the pouch of sand falls into the hands of a drug addict who uses it to get a high, only for it to start turning her home into a nightmare landscape. The ruby on the other hand is used by a mad scientist who starts using its powers to take over the world and is stopped by the

Justice League. The items themselves aren't evil, just really powerful because Dream poured his power into them to make them what they were.
* The Sandman when it threatens the Dreaming; conversely, he cannot harm any visitors to the Dreaming due to the rules of hospitality. This applies to straight magic users such as Roderick Burgess and Thessaly as well.
* The Sandman when Morpheus first met Hob Gadling in 1389 the other people in the tavern were grumbling about the poll tax, seeing signs of the apocalypse, discussing whether Black Death was judgement from God, and making dirty jokes about the clergy. When they meet again in 1989 discussion topics include the poll tax, signs of the apocalypse, AIDS as divine punishment, and dirty jokes about clergy.
* The Sandman When the Endless visit this necropolis to receive the sacraments for Morpheus' funeral, the sacraments are collected with no fuss at all.
* The Sandman, where a woodsman brings a locket containing a portrait of a princess to the princess, meeting several strangers along the way. When he finally meets the princess, he gives her the locket... and leaves.
* The Sandman (which is set a long time before the main events), Dream and Desire of all people used to be quite close, with Dream referring to Desire as his favorite sibling. Then Desire meddled with one of Dream's love affairs, and it messed up their relationship ever since.
* the Sandman, who can and has competed in events for next to nothing. He owns a successful contracting firm, and is quite well off because of it -he just loves wrestling.
* The Sandman who is constantly upbeat, kindhearted, and ready to listen to Dream and offer support as his big sister.
* The Sandman will take place in the 2020s as opposed to the late 1980s-early 1990s, the time the comic was first published in.
* The Sandman, with Dream retrieving his ruby instead of his wallet. The pickpocket, however, refuses to admit to stealing it until Dream sets his dreams as nightmares about his future execution.
* The Sandman with Genie doing both sides of the joke ("Well, it hurtth.").
* The Sandman would occasionally make use of narration. Sometimes it would be by one of the series’ characters and other times it would be anonymous but fairly poetic.
* The Sand Pebbles depicts Western gunboat diplomacy in 1920s China. Quite literally: the setting is a gunboat.
* The Sand Pebbles has Jake Holman staying behind, pretending to be an entire squad, to cover the escape of his companions.
* The Sand Pebbles: Richard Attenborough saves a Chinese woman from prostitution by buying her debts and marrying her.
* The Sand Snake Obara is a warrior woman who specializes in using a whip and spear. In the TV series, her usage of whips was given to her younger sister Nymeria instead.
* The Sand Snakes apparently take over Dorne by killing Prince Doran, his son, and his bodyguard, thereby wiping out House Martell.
* The Sands Of Iwo Jima marries a girl he met at the USO shortly before the unit is deployed.
* The Sands of Time spell instantly ages a creature to its next age category for 10 minutes per caster level.
* The sand tiger shark. Despite its fearsome appearance and strong swimming ability, is a docile and slow-swimmer with no confirmed human fatalities. Its fearsome appearance and large size with its relative docility makes it a popular choice in public aquariums.
* The Sandusky Affair started with one Aaron Fisher, then a freshman at Central Mountain High School, mentioning a relationship with former Penn State assistant coach Jerry Sandusky that involved "inappropriate touching". Three years later, it would explode into a university-wide scandal that went all the way up to its president, among other higher-ups, cost one of the all-time most revered college football coaches his job shortly before his death, got the NCAA involved, and still influences local politics and leaves bitter memories among Penn State alumni to

this day.
* The Sandvich, which comes from the same update as Natascha, appears to be getting the same attention as well, with lines such as; "What's that, Sandvich? KILL THEM ALL!? GOOD IDEA!" It even got
* The Sandwalk Adventures's hair consider him to be their god and creator. The plot revolves around Darwin's attempt to set the story straight by explaining his theory of evolution.
* The Sandwich Alignment Chart, where the axes are Structure and Ingredient.
* the sandwich of the future, which really betrays just how misguided the concept was.) Add in the fact that it required those specialized breadcones as opposed to, say, bread, and the product was discontinued after only a few years.
* The Sand Witch Project" when Beth scares her as part of a challenge. Luckily, she was already in an outhouse.
* The sandworm will eat you in one bite if you stay on the sand long enough.
* The Sandy Hook Elementary School shooting in Connecticut (which claimed the lives of, among others, 20 grade-schoolers) ruined Christmas 2012 for the families of the victims, if not the entire town when it took place on December 14.
* The 'Sandy Hook' school shooting was arguably the most famous incident of the mass murder of children with firearms in the USA in 2012. It made
* The San Fierro 69ers, an obvious parody of the San Fransisco 49ers.
* The SANFL team the Central Bulldogs, they've won all but two grand finals since 2000 and came second in the years where they lost.
* The San Francisco 49ers were trying to get a stadium built for many years under multiple plans to replace Candlestick Park, which was built for baseball and had to be retrofitted to accommodate them. The new stadium in Santa Clara finally broke ground in 2012; Levi's Stadium opened in time for the 2014 NFL season.
* The Sanger Silbervogel, an unbuilt orbital bomber which was intended to bomb the US. It was meant to launch by using a large cluster of V2 engines to hurl it down a lateral track fast enough to get it into orbit. If the g-forces from the initial acceleration didn't kill the pilot, he'd simply burn up on reentry, because the designers severely underestimated the effects of atmospheric shock heating on the airframe.
* The Sangheili certainly live up to their nickname of "Elites", especially after they split from the Covenant. In
* The Sangheili/Elites play up the "Proud" aspects of this trope. Heck, the scientific name for the Sangheili is given as "Macto Cognatus", which means "I glorify my kin" in Latin. In particular, their portrayal in the book
* The Sangheili sense of honor is a little skewed, by human standards. While most warrior cultures view battle scars as badges of honor, the Sangheili view them as symbols of
* The Sangre del Diablo, a mutated variant of a naturally-occurring South American rainforest tree, is a dangerous carnivore that uses magical compulsion to lure its prey to it, at which point it engulfs it with corrosive sap, digests it and absorbs its liquefied remains. They're invasive in the Amazon basin, and when groves form they become entirely barren of animal life.
* The Sanguine Chronicles is a half-vampire, half-werewolf… which for reasons outlined in the story, is supposed to be impossible.
* The Sanguine Chronicles, it's implied there is no masquerade — not that monsters are walking openly down Main Street, they are still keeping hidden — but that they hardly have to try, because people are so religiously skeptical that they wouldn't believe it if monsters DID walk down Main Street.
* The Sanguine Chronicles, Marko's friend Janie is a hardboiled skeptic when it comes to the supernatural. Then she discovers Marko is a werewolf/vampire hybrid when she catches him mid-shift.
* The Sanguinista Movement, a group of Vampires who follow a literal view of the Vampire Bible and fanatically worship Lilith. Their belief is that humans are food and nothing else, the complete opposite to the mainstreaming Vampires.
* The Sanity Circus: After a while Attley and Fletch finally manage to get Donovan Sparc, ringleader of the eponymous circus, for a conversation to explain what he

knows about all the supernatural stuff they've experienced and been involved in. He spends most of the conversation trying to sate their curiosity while not revealing anything dangerous for them to know or crucial for the Nameless Organisation. The result: Some but not all questions are ultimately answered.
* The Sanity Circus, and are stuck that way. Donovan is already at that step (as a rhinoceros), and Fletch is approaching it.
* The Sanity Circus, and even when stabbed by Luther she still manages to engulf and (seemingly) kill him and walk away.
* The Sanity Circus, as Attley and Fletch quiz Donovan Sparc for answers to some of their problems:
* The Sanity Circus, as Luther the violin answers a question about his fellow Instrumen Steven the flute can be seen silhouetted in the background.
* The Sanity Circus, both the Scarecrows and the Instrumen appear like young adults. Posey Morris, a Scarecrow, looks like a sweet young girl. Regardless, when she gets into a fight with Luther the cello, he cheerfully says 'Oh well! Let's not bring up centuries-old grudges.'
* The Sanity Circus group of created-life Instrumen who target the Scarecrows in their own magic, vigilante way. And something terrifying seems to happen to every new Director to take office. The public know about none of these. And the people involved in each masquerade do not tend to overlap, creating layers on layers of secrets.
* The Sanity Circus, knew it all along - but then she's a Scarecrow too.
* The Sanity Circus 'requires sacrifice', and although humans are capable of casting 'body magic' the strain of 'soul magic' and 'life magic' is apparently too great - unless, of course, you aren't human.
* The Sanity Circus reveals that his damaged Instruman form means that he has less power and abilities than other Instrumen, and so he was ostracized and teased by them leading to him wanting to be useful to someone. He could be playing his grief up, though.
* The Sanity Circus. She also doesn't appear to know anything about Scarecrows, even though Fletch does — prompting explanations from Mr. Sparc.
* The Sanity Circus were originally musical instruments who were brought to life and given alternate human forms by their creator. They can still turn back to their instrument forms if wished, and can still move and speak as normal. Steven the flute even emotes to an impressive extent without any real facial features.
* The Sanity Circus who can resurrect after death as many times as needed. However, Posey later says that this time it had been so long that some had trouble coming back. Sammy Talbot's eyes, for instance, have two pupils and a doubled iris in each. Some of them have even forgotten what they are.

* The San Jose Sharks' home arena has always been sponsored by computer companies. The most creative was when Hewlett-Packard got the naming rights: the designated word was changed to one that evoked an
* The San Jose Sharks weren't always like this. In fact, they were pulling off upsets to top seeds throughout the 90s and early 2000s like the Red Wings and the Blues. Although the Sharks only missed the playoff thrice since the 1993-94 season
* "The San Lorenzo Job": His engagement isn't a lie, it's a campaign promise; he makes it, and then doesn't do it.
* The Sanmu Incident, which was suppose to happen on December 12, 1961, was halted when police arrested 13 suspects, some of them being with the Japanese Self-Defense Forces (JSDF) included Taku Mikami, who was known to be involved in the May 15 incident.
* The Sanrei Glove Uryuu uses to power up for the Soul Society Arc has the capacity to do this twice over: its primary effect is to make it harder for the user to gather spirit particles, so it's like training with wrist and ankle weights for added resistance. Removing the Glove after training with it, however, results in a huge temporary boost...that in turn causes complete power burnout. Uryuu ends up using the dangerous secondary effect against Mayuri to try and avenge his

grandfather's death.

* The San'Shyuum (AKA Prophets) had not only made contact with the Forerunners, but had actually fought against them alongside their own allied species...
* The Santa Clause 2, Santa Claus/Scott Calvin and Bernard, when learning about Charlie's addition to the Naughty List, gives this exchange:
* The Santa Clause 2, Scott Calvin gets the idea to fly with Comet back to the North Pole to defeat the Toy Santa. Comet has gorged on chocolate to the point of being unable to fly... or move for that matter. Later that night, Comet is still too bloated to help deliver the presents on Christmas Eve, so Chet takes his place.
* The Santa Clause 3: The Escape Clause retells the events that led to Scott becoming Santa from the POV of his future self, who is fighting to keep Jack Frost from altering the past.
* The Santa Clause 3, where Scott successfully tricks Jack Frost into invoking the Escape Clause and sending the two of them back in time again. This time, however, Scott succeeds in stopping Jack from putting on the Santa suit and in turn ensures that Scott is still Santa in the present.
* The Santa Clause. After being arrested, Scott delays his interrogation significantly by invoking this trope. Each time the interrogator demands his name, he replies with one of the many names of Saint Nicholas.
* The Santa Clause, an elf gives Santa Claus' son a magical snow globe early in the film; at the end, he tells the kid that if he ever wants to see his father, he just has to shake the snow globe and it will summon his father.
* The Santa Clause, as a) they genuinely have the kid's interests at heart and b) when they realize the truth, they're happy to build a healthy co-parenting relationship. The sequels do have straight-up villains, however.
* The Santa Clause Clause as well, or else the new Santa will lose their powers.
* The Santa Clause ends up marrying the high school principal and having a son with her in the next movie.
* The Santa Clause featured the Council of Legendary Figures, consisting of Mother Nature, Father Time, Santa Claus, the Easter Bunny, the Tooth Fairy, the Sandman, and Cupid. Jack Frost joins them in the third movie.
* The Santa Clause features a Toy Santa designed to fill in for the real one while he goes off to find a Mrs. Claus. While Santa's absent, Toy Santa takes over the North Pole, turns it into a fascist state, locks up all the elves, and goes off to give everyone coal.
* The Santa Clause for a phone sex hotline. To prevent repeat occurrences, Disney removed the scene from later home entertainment releases and television airings.
* The Santa Clause franchise has the entire North Pole operation for Santa Claus under an ice pack in the North Pole, large enough to contain the entire Elf village to look like a surface settlement (in Canada, according to the third movie). It remains hidden because Santa and the elves have various strategies to hide it from the outside world. The rest of the world just sees the ice-cap and preserves the Secret of Santa.
* The Santa Clause gives us this little tidbit: "And I'll have a Caesar. No dressing. And one of those homemade cookies, the warm chocolate chip. No nuts. And a little slice of cheesecake. Uh, creme brulée, and, um, hot fudge sundae, extra hot fudge... On the side."
* The Santa Clause includes a shot of Scott and another character conversing in front of a playroom, with Scott giving his acquaintance a big grin.
* The Santa Clause into Santa Claus has given him an addiction to sweets.
* The Santa Clause), it gets a TV-G. Averted by the sequels which all have G-ratings.
* The Santa Clause Newman do genuinely fall in love with each other - something that Scott figured would never happen.
* The Santa Clause parodies this trope with a line from Scott Calvin regarding an advertising campaign with Santa in a life size "total tank" model.
* The Santa Clause passed down whenever the previous Santa died and to whoever put

on the Santa suit first afterwards. It's also implied, at the end of the second movie, that spouse of whoever became Santa would gradually transform into "Mrs. Claus" as well.
* The Santa Clause Santa that they found on the streets, including ones who look nothing like Scott (different race, wildly different body types, etc.)
* The Santa Clause: Scott and his son have pulled into a Denny's to eat.
* The Santa Clause, Scott (at his first stage of his body turning into Santa) explains to the executives his sudden weight gain is from a bee sting. When the execs are ordering lunch, most of the others order things like fish or salads; Scott orders a large hot-fudge sundae, with big, chocolate cookies on the side.
* The Santa Clause, Scott Calvin and his ex-wife came to terms with their divorce and sharing custody of their son Charlie, as well as Scott being the new Santa Claus (in a particularly touching scene, she tosses the court papers that say Scott can't see Charlie into the fire). In the sequels, he grows close to Lucy, his ex's daughter with her new husband, who even calls him "Uncle Scott."
* The Santa Clause, Scott Calvin assumes that the guy who fell off his roof while dressed like Santa just needs a ride back to the mall. He has no idea...
* The Santa Clause, Scott Calvin notices Japanese businessmen are occupying a table in the same Denny's restaurant he is dining in, making the all-American Denny's restaurant chain less than all-American.
* The Santa Clause Scott Calvin's ex-wife is commenting sarcastically on the Santa pajamas he got at the North Pole. As she's driving away with their son, Charlie, he yells back a few comments about how he sleeps, including, "I sleep buck naked!" right as his neighbor walks by.
* The Santa Clause: Scott leaves Charlie forever, because a lot of kids are counting on him, and he couldn't let down, he had a lot of work to do, so Charlie let him go, even if it meant that he would miss him.
* The Santa Clause the focus is on the relationship between the main character and his eight-year-old son, Charlie. In the sequels Charlie is a teenager, but don't worry, now he has a younger half-sister named Lucy to fit the "cute child" role.
* The Santa Clause, "The List" is delivered to Scott Calvin - with instructions to check it twice - by half a dozen UPS trucks.
* The Santa Clause, the main plot is that Jack Frost is trying to steal Santa's powers and does get them at one point. At the end of the movie, however, Mother Nature explicitly states that their powers don't work on each other. The second movie had Cupid declare this as well. So... how can Jack Frost steal Santa's powers if their powers don't work on each other?
* The Santa Clause, the phone number of the mom of Scott's ex-wife's new boyfriend is given as "1-800-SPANK-ME", which turned out to be the number of an adult hotline when called. After a few parents complained about this, the scene was cut from future home video releases. In TV editions, her number is changed to 1-800-POUND, which isn't a real number, to keep the film's rating to TV-G.
* The Santa Clause the pole at the North Pole is a keypad stand, you need the correct code in order for the Sleigh to enter Santa HQ.
* The Santa Clause, the protagonist is bewildered to discover himself forced into the job and the appearance of Santa due to a legal technicality.
* The Santa Clause: Tim Allen's character speaks out against his company's design for a Santa in a tank as a toy for the kids.
* The Santa Clause trilogy and then appeared as Father Time in the second and third films.
* The Santa Clause uses this plot for the second half of the movie. Jack Frost tricks Scott into wishing he never became Santa and they are both transported back in time, allowing Jack to put on the original Santa's coat so he can become the new Santa. In the new timeline, Scott's family has become a bunch of miserable cynics who resent him for being a workaholic at his office job, which has led Laura and Neil to divorce; Jack Frost has turned the North Pole into a Vegas-like resort that completely commercializes Christmas; and parents have to pay to put their children on the nice list, making them (including Lucy) into greedy brats.
* The Santa Clause was originally going to released under the Hollywood Pictures

label, but Disney CEO Michael Eisner loved it and decided to release it under the main Walt Disney Pictures label to give it more exposure.
* The Santa Clause when the Christmas turkey at the beginning catches on fire. Repeatedly.
* The Santaroga Barrier the drug Jaspers increases the comprehension and understanding of anyone who consumes it.
* The SAO survivors' capacity to use their Sword Skills in real life seems to stem from this.
* The Saotomes had been doing this for about fifteen years at the opening of the series. It's left up in the air whether or not their time in the Tendō Dojo qualifies as the
* The Sapphire Guard believes the Bearer of the Crimson Mantle's goals are to destroy the universe. While an acceptable loss, the reality is that he is actually out to blackmail the gods for his species' dominance over others.
* The Sapphire Rose he's going to die several attacks before the final blow falls because of his mastery of swordplay.
* The Sapphire Rose he was leaving from a wound he received shortly before entering the maze. Then they realize that given the length of the trail, she should have already bled to death and discover that at some point the red splatters they had been following had switched from blood to paint.
* The Sapphire Rose, in the final battle of their war against the dark god Azash.
* The Sapphire Rose. Sparhawk and his friends try to navigate a maze by following blood drops from a wounded enemy. Then they discover 1) the blood drops aren't from any of the injured Zemochs, because 2) they aren't blood, and 3) they're only there to keep people in the killing-ground maze, the real entrance to the temple is elsewhere.
* The Sapphire Rose the maze so try going up through the ceiling. It works as they find the maintenance pathways, and funnily enough real access ways to the maintenance pathways.
* The Sapphire Rose,. This isn't exactly the weirdest thing to happen in Sparhawk's life up to this point, although it comes close, and once he wraps his head around it he takes it pretty well for the most part.
* The Sapphire Rose, when Sparhawk and former-friend-turned-villain Martel have dueled to the death. Martel has only a few minutes left, and requests to say goodbye to Sephrenia, who taught them both. His dying declaration is of a familial sort of love for her and Sparhawk.
* The Sarah Connor Chronicles: Catherine Weaver is an unusual version of this who with her shadowiness, methods and scientist schtick is doing a lot that fits this before the actual apocalypse due to time travel. Also unusually, she’s a robot.
* The Sarah Jane Adventures about an alien race who were the basis of the Medusa myth.
* The Sarah Jane Adventures, adopted son Luke informs Sarah Jane that he might be eligible to start university a year early. Sarah Jane suggests it might not be the ideal moment for the conversation, seeing as how they're currently handcuffed to a large alien bomb.
* The Sarah Jane Adventures age range. Her closest friends are all teenagers, other than the Doctor, of course, who out-ages her by centuries.
* The Sarah Jane Adventures alien sentient rocks attempts to smash the Moon into the Earth to free members of their species who are stuck in Earth's crust. The episode before also had The Trickster, the living embodiment of Chaos, remove from the Earth the person fated to stop a large meteorite naturally smashing into the planet.
* The Sarah Jane Adventures also lacks a navel, due to being created by the Bane.
* The Sarah Jane Adventures, although once again under such heavy make-up that only people who read the cast list would know.
* The Sarah Jane Adventures are a subversion. It turns out that they only fought to ensure peace on their world, and the Ship's Computer lead them to believe that the war was still going, even though it had ended ten years ago.

* The Sarah Jane Adventures are Saturday evening and varying post-watershed timeslots respectively, and SJA is mid-afternoon AND on the CBBC channel...
* The Sarah Jane Adventures", a shoddy laptop computer whose maker attempted to sell it with the help of alien-slave-controlled hypnotic technology.
* The Sarah Jane Adventures audio story said the current Sontaran race was bred on the planet's moon which has even more gravity.
* The Sarah Jane Adventures because Sky was born circa 2011 and aged up by phlebotinum.
* The Sarah Jane Adventures before being cast as Thirteenth Doctor companion Graham O'Brien.
* The Sarah Jane Adventures clean up nicely. Actually, he has one right after the other - first for his mum Sarah Jane, and then for Rani. (This version, obviously, is purely platonic on both counts.)
* The Sarah Jane Adventures, Clyde and Rani pretend to be a married couple of journalists. The faked marriage raises fewer eyebrows than the fact that they're supposed to be writers for a magazine aimed at senior citizens.
* The Sarah Jane Adventures, Clyde hides from some robots by pretending to be a store mannequin.
* The Sarah Jane Adventures", Clyde is trapped on a spaceship running out of air. He records a video for his friends and, addressing Rani, says "I always...always..." before he loses consciousness.
* The Sarah Jane Adventures did a zombie-themed story for the show's pilot episode, "The Invasion of the Bane". In this case, the zombie effect is caused by consuming a new energy drink that turns out to be a symbiotic life form. The resulting zombies try to force others to drink the stuff.
* The Sarah Jane Adventures don't fit this trope because they were created to be extraordinary. In fact, Luke ends up going right into college because of his high intelligence.
* The Sarah Jane Adventures, ends by paying tribute with a retrospective montage and the tagline, "And the story goes on... forever."
* The Sarah Jane Adventures episode "Death of the Doctor" and have a truly ridiculous number of children and grandchildren together.
* The Sarah Jane Adventures episode "Greeks Bearing Gifts". Presumably this was a less criminal member of the species.
* The Sarah Jane Adventures episode "Lost in Time" is set on 23rd November 2010.
* The Sarah Jane Adventures episode "Revenge of The Slitheen" Maria's divorced mother asks her ex-husband if she can have the double bed size duvet as he won't need it having a single bed. Her mannerisms and delivery of this line is enough to make older viewers think she's making fun of his sex life.
* The Sarah Jane Adventures episode The Gift, as the Rakweed spores enter the attic through the window, the camera follows them as they pass through the air... and are unknowingly inhaled by Luke.
* The Sarah Jane Adventures for the deaths of the Pasameer-Day Slitheen who previously came to Earth.
* The Sarah Jane Adventures" had a single-target variation, where anyone who heard or read the name "Clyde Langer" turned against Clyde.
* The Sarah Jane Adventures has Luke (the white guy), Maria (the white girl) and Clyde (the black guy). When Maria leaves, we get Rani Chandra (the Indian girl).
* The Sarah Jane Adventures has regular character Luke, who was biotechnologically created in the show's first episode by an invading alien race who wanted to use him as a lab rat to study human biology.
* The Sarah Jane Adventures. He gets away with it, not because the police recognise his authority, but because he's a seven-foot rhino-person with a ray gun. He fails to realise this, and thanks them for their co-operation as they run.
* The Sarah Jane Adventures, in the form of Maria, Luke and Clyde (and later Rani). In this show it's the boys, and not Maria, who tend to get captured more often... though they are still savvy enough to get themselves out of it too.
* The Sarah Jane Adventures. I remember when this was quite the thing."
* The Sarah Jane Adventures is able to fabricate an identity for him so that Sarah

Jane can adopt him.
* The Sarah Jane Adventures is at a loss in social situations. Thankfully he becomes more sophisticated so as time goes on. After all, he's being raised in a "normal" high school environment and is a quick learner due to both his age and his genes. He was grown by aliens: human but created to be a "Human Archetype" so that they could do tests on him. He has the absorbed intelligence of the thousands of people but not their social skills.
* The Sarah Jane Adventures is humiliated at being beaten by "a female and half-forms". He survives his first appearance, but feels unable to return to Sontar out of shame, and ends up working for the main villain in the series finale.
* The Sarah Jane Adventures it wasn't a dream and is going with the bluff to keep Alan and Maria happy.
* The Sarah Jane Adventures-like fanfic spinoffs, with every single companion up for grabs. (Also, the one-time return of Jo Grant and her grandson is a more direct example.)
* The Sarah Jane Adventures make this into Sky's way to assist the team, in a much cuter and less fanservicey way. Her ability to sense and understand energy being part of it, but she just understands machinery.
* The Sarah Jane Adventures", Maria is wiped from time and only Alan remembers her. Chrissie pays Alan a visit after time has been altered and tells him they never had a daughter. Alan protests that Chrissie was at their house earlier and saw Maria. This refers to a cut scene earlier in the serial where Chrissie does indeed visit the house and sees Maria.
* The Sarah Jane Adventures Maria's parents are divorced and she lives with her father; her mum frequently drops in unannounced.
* The Sarah Jane Adventures) Mr. Smith and her sonic lipstick, not to mention many different gadgets which just make one-off appearances.
* The Sarah Jane Adventures Mr. Smith awaken and transform the room (or at least the chimney breast).
* The Sarah Jane Adventures Mrs. Wormwood exclaims to the Bane that's come to kill her, "At least I'll have the satisfaction of giving you food poisoning!"
* The Sarah Jane Adventures. One example is Mr. Smith, Sarah Jane's extraterrestrial supercomputer.
* The Sarah Jane Adventures Pied Piper attack Sarah Jane and co with robot mannequins dressed as clowns.
* The Sarah Jane Adventures pulls this off in "The Eternity Trap" after Erasmus Darkening easily steps around the trap Sarah Jane set for him.
* The Sarah Jane Adventures. Remarkably so considering Chrissie left Alan for her Judo instructor.
* The Sarah Jane Adventures, Sarah asks him if it hurt the last time he changed. "It always hurts," is his reply.
* The Sarah Jane Adventures, Sarah Jane also tends to do this. Three guesses where she learned it from, and the first two don't count.
* The Sarah Jane Adventures", Sarah Jane gets a package containing an alien being while her boyfriend is visiting. Fortunately, Clyde and Rani are there to cover for her.
* The Sarah Jane Adventures, Sarah Jane gets eradicated, with Maria the only person with any memory of her. And later, Maria gets eradicated, with only her father remembering her. It nearly goes one step further.
* The Sarah Jane Adventures, Sarah Jane's alien computer, Mr Smith, seems to enjoy reading celebrity gossip... and looking at dating sites.
* The Sarah Jane Adventures, Sarah Jane Smith and her friends are also concerned citizens. Sarah doesn't trust MIB-agencies like UNIT and Torchwood to deal with things sensibly ("Too many guns").
* The Sarah Jane Adventures, Sarah Jane Smith becomes one of these, though both her children were adopted.
* The Sarah Jane Adventures, Sarah Jane Smith is very clear that she prefers to go by "Sarah Jane". The Doctor gets away with calling her "Sarah", though.
* The Sarah Jane Adventures seeming to get Raxacoricofalapatorian gunge all over

him. Or any other kind of gunge, actually.
* The Sarah Jane Adventures series 1 " Warrior of Kudlak" after thinking he caused a classmate to run away Luke runs off Clyde finds him later sitting on a swing
* The Sarah Jane Adventures stories "Eye of the Gorgon" and "The Eternity Trap".
* The Sarah Jane Adventures story "Secrets of the Stars", Martin Trueman manages to get his show displayed on television throughout the world.
* The Sarah Jane Adventures' story "Sky", a war between two alien groups called the "Fleshkind" (humanoid and biotech-using) and the "Metalkind" (robots) spills over onto Earth.
* The Sarah Jane Adventures, the Doctor is trapped on a planet that was also filmed in a rock quarry.
* The Sarah Jane Adventures: The second spin-off had The Bane appear as the starter villain in the pilot story. There's also The Slitheen for the first real episode of series 1.
* The Sarah Jane Adventures the show had finally been greenlit—only to quickly disappear again once Baker had trouble getting a second season off the ground.
* The Sarah Jane Adventures the titular character often tells her kids that she is so proud of them. While she's only technically the parent of two of the gang, Clyde, Maria, and Rani all look up to her immensely, and they always light up whenever she expresses approval.
* The Sarah Jane Adventures", the Trickster makes a deal with Sarah Jane's childhood friend who originally died after falling off a pier after Sarah was unable to save her. She accepts the deal to save her own life, switching places with 13-year-old Sarah Jane, making her fall to her death. She later relinquished her deal after learning the truth, causing time to return to normal so Sarah can save the earth from an impending threat.
* The Sarah Jane Adventures. Think three (sometimes two; once four) kids, an older lady, a sentient computer, and occasionally a robot dog can't turn you into alien slime? Think again.
* The Sarah Jane Adventures two-parter "Mona Lisa's Revenge", the picture comes to life.
* The Sarah Jane Adventures was going on with her, and she explicitly wasn't the woman who was actually painted, but the painting seems to have been made as a prison for her.
* The Sarah Jane Adventures" was recovered from the site of the Tunguska Event, unsurprisingly.
* The Sarah Jane Adventures What did her gang do after leaving Bannerman Road? Did Clyde and Rani ever hook up?
* The Sarah Jane Adventures" when Erasmus Darkening seemingly avoids her trap for him:
* The Sarah Jane Adventures when Maria criticizes that just because it says organic, that automatically makes it alright.
* The Sarah Jane Adventures - When the Doctor crashes Sarah-Jane's wedding, the Trickster yanks the church out of time and splits up the main cast by trapping them in two separate seconds.
* The Sarah Jane Adventures": While describing people getting possessed throughout the world, the newsreader gets possessed. "I accept the Ancient Lights."
* The Sarah Jane Adventures. While they used to collect evidence of aliens and erase memories, they are now mostly defunct and only guard the titular vault.
* The Sarah Jane Adventures. You didn't think they'd actually marry off the main character, did you?
* The Sarah Silverman Program come off much more as overweight nerds then campy gays. In fact their nerdiness is much more important to their characters then the fact that they're gay.
* The Sarah Silverman Program, in the episode "Kangamangus", Sarah tries to coin a new word and comes up with "ozay" (hard to define, but when you just feel...ozay). Her attempts to popularize it pale next to the organic spread of "dotnose", which Brian comes up with accidentally when Steve is so stubborn that he won't

acknowledge a marker dot on his own nose despite everyone mentioning it. Others find "dotnose" offensive for no particular reason (other than that it sounds insulting), and at a dictionary induction ceremony, Brian and Steve are threatened with the "kangamangus" (a very specific physical retribution).
* The Sarah Silverman Program, the titular character meets, is saved by, sleeps with, and then dumps the Morgan Freemanesque entity which she refers to as "Black God." When God makes his first appearance, she asks him, consistent with her character's casual racism, "Are you God's black friend?" A later episode has them reconciling and briefly dating, and God is portrayed as clingy, emotionally insecure, and prone to coming on too strong.
* The Sarah Silverman Program to Sarah living with her dog Doug. "Sarah!" "Laura!" "Check, please!" It comes up later, when Steve demonstrates his understanding of it, although they're no longer in a restaurant.
* The Sarantine Mosaic duology: early in the first book, Crispin rescues a woman from her life as an inn prostitute slated to be sacrificed to an ancient god. She falls in love with him, but he's quickly drawn away from her by the intrigues of the emperor's court, and she ends up marrying someone else entirely. She spends a little time picking apart the Rescue Romance in her head, deciding that she's been rescued from "being rescued" by marrying someone else.
* The Sarantine Mosaic, which takes place in a thinly disguised Constantinople, features warring factions of chariot race fans (the Greens and the Blues). The book describes a riot by the factions that nearly unseated the Emperor, which actually happened in real life (see the Nika Riots below).
* The sarcophagus is a device that creates eternal youth, and can even bring people back to life, but it's credited as the main reason the Goa'uld are as evil as they are. The Tok'ra don't use it, because "it steals the soul." In the episode "Need", Daniel Jackson gets addicted to it, and eventually gets to the point where he just doesn't care about anybody else (which is really remarkable for him, at the time).
* The Sarcophagus is very useful for curing illnesses, injuries, and, y'know,

* The Sarghress survived thanks to their cavalry making a forced march from the surface and coming to the rescue to their clanmates and Ill'haress just in time.
* The Sarkic cults are capable of biological engineering via anomalous means, and consider it a holy imperative. Think monsters that used to be people and living cities made of bone and flesh (which also used to be people).
* The "Sarna" chairs are quite the joke in Spain, considering it means "scabies".
* The Sartan of Abarrach use mud dragons, large chameleon-like lizards, as mounts for their undead armies.
* The SAS' attack during the Iranian Embassy Siege of 1980 was not an example of fast-roping, but was important in the development of the technique. One trooper got tangled in his abseil gear on descent and suffered 60% burns when a fire caused by the detonation of a stun grenade reached him.
* The Saskatchewan Roughriders of the CFL got this treatment. In a league of 8 to 9 teams (depending on the years discussed), the Roughriders have won three championships in 100 years (which is about 1/5th of how many they should have won, for those wanting to keep track). After each win, new fans were instantly shouted at for being not a true fan. It gets worse when, at any other time, the rest of the league will laugh at you for cheering for the lovable loser.

* The Sasquatch Gang is always bare-chested. His brothers and father are also bare-chested — first thing his father does when entering the house is to remove his shirt.
* The Sasuke and Itachi dynamic plays with this. As a child, Sasuke strived to be like Itachi to earn recognition, but his brother was always several steps ahead.

After the Uchiha massacre, Sasuke tried to distance himself from Itachi and become different from him, even refusing to obtain power in the same way as his brother. However, after
* The Sasuke Retrieval arc covers two intense days (the first for Sasuke to run away with the Sound Four, the second for the retrieval itself) but takes up 7 whole volumes.
* The Satan Bug clear to the hero that he's perfectly happy to unleash the title plague and wipe out all life on Earth. He himself has been made immune to the Satan Bug, and would live cheerfully alone on a dead world.
* The Satan Bug, Dr. Ostrer is found floating dead in his own swimming pool. The image was used prominently in some posters for the film as well.
* The Satan Bug The protagonist gets locked up in a cellar. It has no sharp objects, but it does have a vice and a rusty hacksaw blade.
* The Satanic Rites of Dracula: All the women in Dracula's cellar were once agents investigating the cult a company had ties with and were captured and turned. In the film, we see the secretary of one of the agents, Jane, kidnapped herself and turned by Dracula. When Jessica discovers her in the cellar and tries to free her. Jane bares her fangs and tries to bite her, helping the vampire women knock her down so they can feed on her. She also tries to pull the same trick on her boss as well.
* The Satanic Verses by the Indian Muslim-born author Salman Rushdie (though he was an atheist at that point) became famous in no small part because it offended his own so much that Ruhollah Khomeini, the religious leader of Iran at the time it came out, issued a fatwa against him that is technically still in effect (though Rushdie himself has said that he no longer considers his life to be in serious danger from it).
* The Satanic Verses. During a stay in the hospital, he also encounters patients who are slowly turning into animals and inanimate objects.
* The Satanic Verses Saladin Chamcha experiences this on a brief visit to his home in Mumbai, having spent most of his life in England.
* The Satanic Verses, that it was banned in over 15 countries due to its offensiveness to Muslims.
* The Satanic Verses, used to work in advertising. He created these slogans for the Aero chocolate bar: "delectabubble" and "incredibubble".
* The Satanic Verses was selling a few hundred copies a week until the fatwa against Rushdie. Afterwards, it became so popular that it sold five times more copies than the #2 best-seller. It's still the publisher's best-selling book of all time.
* "The Satan Pit", in the body of Toby, claims that it cannot die. Rose has an excellently thematic retort before she blows out the rocket's windshield and sends Toby into space:
* "The Satan Pit" that inspired legends of Satan, but all theories are put forward by different characters. It claims to predate time itself, which the doctor declares impossible.
* "The Satan Pit" who has just served as the inspiration for that mythological archetype throughout the ages and galaxies.
* "The Satan Pit", with the Beast attempting to escape by sending its mind away inside someone. While the mind may not be as powerful as it would be inside its own body, it could still spread the evil throughout the universe, knowing how hard it is to defeat an idea.
* The Satan Seller did some digging and found out that Warnke's stories and dates simply didn't add up and found major discrepancies between different tellings as well as several witnesses who flatly denied Warnke's claims. Not to mention that there is, to date, no evidence whatsoever that any of the wildly hedonistic satanic rituals claimed by Warnke have ever taken place in the United States.
* THE Satan, with Mephisto being particularly prominent, but none of them really having much to back their claim up, and all of them being notorious liars.
* The satellite gathers solar energy and sends it to Earth as a concentrated beam, straight to a receiver. When the satellite starts shaking, the beam has to be turned off. But the head robot refuses, as it is not the Satellite's will. The

humans, detained, consider the vast damage on Earth as the beam goes haywire. But when let out, they discover that the robots have kept the beam perfectly aimed at the receiver. It was the Satellite's will.

* The Satsuma Rebellion: A small group of more elite samurai faced down against the larger Imperial army using modern weapons of both Japanese and European origin, using European tactics. The more "elegant" and "civilized" samurai were eliminated to a man. The Boshin Wars, despite popular depiction, were not the same case. Both sides used modern weapons, infantry tactics and foreign aid.
* The Saturday family of the team is mom's long-lost brother, a trained mercenary with all sorts of badass gear, including a jetpack.
* The Saturdays are a notable example of a girl group that formed when the craze was dying down and still managed to enjoy lots of mainstream success.
* The Saturdays session at a diner, which would be fine, if it wasn't for the fact that Una, at the time, was pregnant with her second child from her relationship with Ben Foden, and sporting a pretty visible bump to boot. For most of the video, the bump is kept hidden by having her hide behind the other girls and only be filmed from the chest up, although at one point she does place her hand over it, showing it off to the guy who's hitting on her.

* The Saturnians are telepaths, but rather squander the ability by just using it to make doubly sure their victims cannot see them at all while using their invisibility cloaks and to "talk" to each other without being overheard. This backfires on them with Diana, due to her aforementioned telepathy she can both sense their locations and "hear" them.

* The Savage Damsel and the Dwarf. One of his brothers comments that he "needs a trail of breadcrumbs to find his own chamber pot".
* The Savage Damsel and the Dwarf passes the test when he responds that the knight must be thinking of someone else, since Sir Gaheris is a notoriously abysmal swordsman.
* The Savage Dragon; Barbaric is of a Hulk-like stature, while Ricochet is rather small for her age.
* The Savage Dragon being a comic book where the main hero is a green guy with a fin on his head, Horridus didn't have that much trouble integrating with society.
* The Savage Dragon, Chicago apparently was built over the ruins of an older city, now buried and inhabited only by superfreaks.
* The Savage Dragon comic, one of the supervillains is Horde, a body possessed by worms. It's later revealed that this is the wizard Fon~Ti (who granted Mighty Man his powers) who was taken over by one of Mighty Man's enemies, the Wicked Worm.
* The Savage Dragon featured a contest where the winner would appear in a future issue of the comic. The winner (James Quentin Manning, if you must know) had a two-panel appearance, the second of which composed of his feet as Dragon knocked him the fuck out. To be fair, the contest announcement was bluntly honest about this, to the point of showing the two panels pre-storyboarded.
* The Savage Dragon has tapped people on the shoulder before pummeling them more than once.
* The Savage Dragon Howard Niseman to spend the whole rest of the scene in the

background muttering euphemisms for "gay".
* The Savage Dragon sends everyone in Chicago into a murderous rage the moment he steps out of his bunker.
* The Savage Dragon. The hero, Dragon, early in his series, uses two chainsaws against a (later revealed) brainwashed rat man. The creator, Larsen, said he chose the chainsaws because they look cool. And Dragon could easily survive kickback.
* The Savage Dragon, there was a villain named Abner Cadaver who was a mystic zombie who could sew body parts onto himself. One of his last appearances showed him sewing the body parts of various superhuman in order to do battle with the titular character.
* The Savage Dragon, the time-travelling villain Darklord was originally dispatched this way. After beating several heroes near to death, he leapt through a teleporter in order to get to Earth. What he did not count on was that the teleporter had previously been given a virus and was in the process of shutting down. Half of him arrived on Earth but the other didn't. Keep in mind, since Darklord was a time-traveler, this didn't really stop him from showing up again.
* The Savage Dragon to rescue a friend's daughter, he finds her inside a gelatinous bubble. From his perspective, it only takes him a few minutes to dive in and retrieve her, but when they emerge, two years have passed outside the bubble.
* The Savage Dragon, was none other than Hitler's. When the brain leaped up and started walking, that's when the heroes called it...
* The Savage Empire is the only black person we see in the first five books or so. On the other hand, nobody makes a big deal about it; he just has a hard time being anonymous.
* The Savage Eye, Mick 'The Bull' Daly's mother used to read people's shite (faeces) in a cup to tell their future.
* The Savage Eye, the homophobic Mick 'The Bull' Daly claims that all 'quaaares' will try to trick you into 'riding' them.
* The Savage Indian: Native Americans are stereotyped as primitive barbarians who are ruthless towards their enemies.
* The Savage Is Loose message. The film was critically reviled for its overtone of parental incest to the point where Scott sent out bulk messages to movie theaters entreating patrons to see the film as a message of the bonding of a child with his parents.
* The Savage Land is a portion of Antarctica that still has a tropical climate and dinosaurs. In the mainstream universe this is because of aliens that used machines to keep things that way. In the
* The Savages had the main characters doing this, then wondering why it had been so long since they tried it. They remember it was because they could never agree on the water temperature.

* The Savage South: Places in southern regions are barbaric and dangerous.
* The Savage South: See its description in the "nightmare worlds" place.
* The Savage South: The distant south of pulp or fantasy settings. Expect jungles, stifling humidity, hostile wildlife and hostile natives.
* "The Savages" presents a wealthy, stargazing technocratic civilization headed by a council of elders, that is soon revealed to support itself by draining life energy from the more egalitarian cave-dwelling civilization that lives in the wilderness surrounding the city.
* "The Savages": The advanced and idyllic society of the Elders. It is revealed this is maintained by draining the life force of savages living outside the city for the Elders.
* The Savages, when Philip Seymour Hoffman's character finds out his sister (Laura Linney) stole pain pills from a dead man's room, he only asks, "Do they work?"
* The Savage Sword of Sharona, Sharlatin was found stabbed to death on the floor of his bedroom by his slave girl. Engorgia was devoured by the Kharnivors which she used to control.

* The "Savage Tide" adventure path published in Dungeon magazine kept getting close to providing aquatic adventures, but never quite delivered.
* The Savage Time the present Vandal Savage was unable to go back in time to take over the world. Instead he sent back a laptop informing his past self how to do so.
* The savage Wolverine after which the popular X-Man is named after is infamous for its relentless refusal to stop chasing, attacking and mauling it's prey/threat until either it or itself is dead. In fact, it's jaws will clamp down and
* The SAVAMA is another secret police under the Islamic Republic. After the Shah was overthrown in 1979, the Islamic government inherited the intelligence apparatus of the old SAVAK (Which was also pretty bad), the secret police during the previous regime.
* The Savannah Reid Mysteries, all of Savannah's younger siblings except Waycross and Alma.
* The Savannah Reid Mysteries book, Savannah's teaching a self-defense class, and she tells Margie to let her feelings out by pretending that the person volunteering to be the "attacker" is the guy that attempted to rape her. Margie attacks him ferociously, and it ends with her sobbing.
* The Savannah Reid Mysteries, Savannah's new brother-in-law is arguing with his wife, who tells him he "sucks". His response? "You suck worser!"
* The Savannah Reid Mysteries, the tough, manly-man cop Dirk is terrified of chickens. Savannah finds this amusing.
* The Savannah Reid Mysteries. They're saved by Granny Reid and a taser. Dirk announces afterward that they should never speak of that humiliating moment again.
* The Savannah Reid Mysteries time (first because an arsonist burned the building she was supposed to be married in, second time because someone was murdered at the place), she tells her Granny to not say any pitying, kind words because that will make her just fall apart.
* The Savant, Arlo and Louie drive to Kentucky in Louie's 1940 Ford, but it keeps breaking down along the way, and they end up spending most of the $1,000 they brought on repairs. Louie trades it for a brand-new Ford Fairlane 500 Convertible as soon as he can afford to.
* The Savant, Arlo hides in the storage room of a luxury boat while he travels from Leros to Patmos. He can't wait for a more affordable ride and travel legally because he was falsely accused of sinking his last boat.
* The Savant, Arlo's estranged mother steals most of the money from his account to pay the medical bills of her younger son, who was badly injured in the car accident that killed her second husband. As Arlo is a minor, his mother has access to the account and isn't doing anything illegal, but Arlo doesn't know about the medical bills and thinks he's just been robbed.
* The Savant, Arlo's grandfather is a hoarder. On one side of the house, he keeps things like rusty washing machines and old broken-down cars. He also uses Arlo's dead father's bedroom solely for storing the daily newspaper, which he doesn't throw away.
* The Save-Ums! has a couple in Wave World, including Wave Melons (which are like watermelons, only the inside is blue instead of pink) and Silly Sea Sammies (flowers resembling daisies that have faces and giggle).

* The Saxon Stories. A hugely arrogant master swordsman, he firmly believes that the English simply can't win without him on their side, and takes every opportunity to boast of his prowess and of his victories (especially of killing the Danish warlord Ubba in single combat). This helps make him extremely unpopular with the English but endears him to the Danes. As he grows older, he learns a little humility and a surprising measure of tact; by the time he is in his 50s, his boasting has been stripped down to grimly saying, in response to an offer of a champion to fight on his behalf: "I do my own work."
* The Saxon Stories. Decades of warfare have left him covered with scars and walking with a limp. Then comes his duel with Cnut Longsword, which leaves him in crippling agony for long months.

* The Saxon Stories is a more lingering and exquisite punishment than anything they could ever hope to inflict. This allows Uhtred breathing space to plot his next moves....
* The Saxon Stories, King Alfred's nobles include one Uhtred, known as "Uhtred the Wicked". He's a savage brute, a Pagan who despises Christianity and loves their Viking enemies, and hugely arrogant. He several times murders unarmed priests (and boasts about it), beats and disowns his own son for being a Christian, professes to hate Alfred himself (although in time he comes to respect him), and likes to spend his spare time raiding, pillaging, and killing anyone who annoys him. He's only tolerated because he's a terrifyingly skilled warrior and brilliant general. Oh yes, and he's the hero of the series.
* The Saxon Stories, Ragnar tracks a man who betrayed him, and attempted to murder his adopted son, to a monastery. The bishop there tries to explain that the man is dying from his wounds and that anyone who seeks protection at a church is entitled to it. Ragnar grows more and more furious at the priest sheltering a man who betrayed his lord and attempted to murder a teenage boy, until he eventually decides that the priest and church must be evil if they allow evil men to take shelter, and slaughters the bishop, the rest of the monastery, and the man in question.
* The Saxon Stories, Uhtred is frequently confused by Roman remains, and in particular their statuary and mosaics. He comes to the conclusion that, in Roman times, they had giant cockleshells and fish people.
* The Saxon Stories. Uhtred — a Saxon warlord who was raised by Vikings — notes that the Vikings are individually better warriors than the Saxon soldiers, but the Saxons win through discipline and persistence, and also because the Vikings' warrior ethos means that they follow the strongest warlord, and leave him when he starts losing battles, whereas if the Saxons are beaten they retreat, regroup, and come back for more.
* The Saxon Stories who pays bards to sing songs of his long-dead mother, breaks down into sobs upon hearing the songs, and wears one of her rib bones in his hair to have her with him always. He's also known to be a complete sucker for people complimenting his mother, and flattery of her can get him to do just about anything for you.
* the Sayaka of that time line turns into a witch. She so breaks from the revelation that they'll all eventually become witches, that she shoots Kyoko's soul gem, killing her, and would have killed Homura too, had Madoka not killed her first.
* The saying "You can't fight city hall" refers to having to accept bureaucratic decisions that go against you. A quip in response to the saying, attributed to Al Capone, is "...but you can damn sure blow it up!".
* The SAZ Massacre, alongside Megatron torturing and abusing him for reasons ranging from discipline to amusement, along with blackmailing him by threatening Lelouch and Nunnally, solidifies his role as one of Suzaku's foes.

* The Scandal of Father Brown uses this trope; there's a beautiful rich American woman in a small town in Mexico. She is married to a respectable businessman named Potter, but had been linked to a fiery poet named Rudel Romanes. She is constantly in the company of a short, stooped hairy man with a bushy beard, and is constantly being followed by a tall, darkly handsome man. There is also a journalist, who determines to write an exposé of the whole mess, assuming that the short man is Potter and the tall man is Romanes. After she flees the hotel with the tall man, Father Brown explains that in fact, it was the other way 'round. The tall handsome man is her husband, and the old man is the poet. As he explains to the journalist, "You see, you are so incurably romantic that your whole case was founded on the idea that a man looking like a young god couldn't be called Potter."

* The Scarecrow". Miss Beebee, a witch, brings her scarecrow to life to have company. When she has to flee, she leaves him behind with a feather that when he puts it on his hat turns him into the human Feathertop. He can only gain permanent humanity if he's willing to give his life for another. Feathertop sets out to help the workhouse inmate Polly and the orphans in her care by winning a dance contest and giving them the prize money to buy their freedom. The one problem is that the workhouse owner, Count Grisham, wants to marry Polly and isn't willing to let her go. Feathertop and Polly find out that Grisham intends to kill her if he can't have her and flee along with the orphans. However, Grisham is one step ahead and has had the bridge out of town sabotaged. Feathertop climbs underneath the bridge to hold the frame together until the others are across. He fails to climb back up and plummets to his death, but in doing so he fulfills the condition of Miss Beebee's spell and rather than dying becomes a human permanently.

* The Scarecrows are supernatural manifestations created from the murder on a miller by his wife and her lover during the war. In the 1980s, they are reawakened by Simon Wood, who has recently moved to a neighboring house. His relationship with his family is bad, because while he idolizes his dead father, his mother has remarried and even his sister likes the new guy. It's these negative emotions that bring about the three scarecrows, which ever so slowly proceed to close in on his new home. The situation forces Simon to come to terms with his new life as the only means to send back the scarecrows.
* The Scarecrow's character is found on one knee (he was tying a shoe) by the leading lady, who simpers and says, "This is so sudden." Luckily, he is in love with her, and they elope.
* The Scarecrow's Hat by Ken Brown, a chicken swaps various items until she has a walking stick she can swap with the scarecrow for its hat, which the chicken wants to build a nest out of. The scarecrow wants a walking stick to rest its arms on, because it's grown very tired of keeping them sideways for so many years.
* The Scarecrow short features a dystopian city in which Crow Foods controls the food supply with mechanized efficiency. Scarecrows, all unhappy, work for the company under strict guidance of robot crows. One scarecrow, who lives just outside of the City of Plenty, tries to rebel by growing his own produce and selling this "true food" as an alternative to Crow Foods' semi-junk food. The short was accompanied by a game in which the aforementioned scarecrow is the protagonist and has to smuggle proper ingredients to shops, save animals from the city, and grow pesticide-free produce. Once Scarecrow Food fully runs Crow Foods out of town, the player can get a free burrito at Chipotle.
* The Scarecrows' Wedding, scarecrow colleagues Betty O'Barley and Harry O'Hay agree to marry and ask around on the farm for the stuff they need for the ceremony. They acquire everything except the pink flowers, which Harry offers to pick on his own. Circumstances make this fetch quest one that takes several days and the missing scarecrow doesn't go unnoticed by the farmer. He replaces Harry with a new one, Reginald Rake, who fancies himself a smoker but only succeeds in causing a fire. Harry returns with the flowers kept fresh in a pail and uses the water to stop the fire. Then he and Betty finally get married.
* The Scarecrow. The movie isn't great but the dance sequences are crisp, smooth and imaginative. In the final dance near the end there's even a well-animated swing dance number.
* The Scarecrow the short story also mentioned on this page, the scarecrow wishes to be human and does eventually get his wish. His human appearance is initially an

illusion, but there is the possibility of becoming truly human if he gives his life for another.
* The Scarecrow uses a lug nut as a wedding ring while getting married on a speeding motorcycle.
* The Scarecrow uses a variety of chemical toxins that cause fear and otherwise alter emotions.
* The Scarecrow. While he claims he's exposing people to his fear gas for scientific interests, it's pretty generously implied that
* The Scarfy enemies is a cute little floating blob that means no harm... unless you turn your backs on them, in which case they turn into one-eyed large-jawed monstrosity that tries to fly straight at Kirby, only to turn back to their usual self if Kirby faces them again.
* The Scar has sapient dolphins aiding the security forces of the floating pirate settlement of Armada, as well as a small mention of sapient whales. Inverting typical presentations the main dolphin character is a sadist named Bastard John, while the whales are all extremely stupid dupes of the book's primary antagonists.
* The Scar has several aquatic races, most notably the Grindylow. Also the simply-named Menfish.
* The Scar, it's mentioned that many of the undead who rule the city-state of High Cromlech have had this done as part of their embalming process, so their national language is based on timed facial expressions such as eye-rolling rather than spoken words.
* The Scarlet Bullet, Conan and Sera find themselves trapped on the "Japanese Bullet," the world's first vacuum-tube super-conducting linear train, when the villain sends it racing out-of-control towards the stadium where the opening ceremony of the World Sports Games is being held.
* The Scarlet Bullet, sniper Shuichi Akai uses a specially made silver bullet to shoot along the tracks of the 'Japanese Bullet' linear train: not for any supernatural properties, but because silver will not not be affected by the high density magnets used in the maglev tracks.
* The Scarlet Chorus has only three laws for its members to follow. The two important ones are "Take What You Want, But Keep What You Take" and "The Strong Lead, the Weak Serve", which pretty much codifies Asskicking Equals Authority as expected behavior. The Chorus has no military ranks; if you command someone else, you were strong enough to subdue them.
* the Scarlet Chorus, who often recruit violent criminals and psychopaths to fill their ranks. Unsurprisingly, they are also the most depraved of the factions.

* The Scarlet Dynasty, which rules the Realm, has a eugenics program built around increasing the likelihood of Dragon-Blooded Exaltation.
* The Scarlet Empress ensured that the most ambitious of her children would not only not kill his siblings, but would be forced to be their protectors, by decreeing that he would be executed if they should die under any circumstances.
* The Scarlet Empress—asks what Orlov's rank is. When Orlov says he's a

captain, Peter says "you are nothing!" and proceeds to rip off all of Orlov's rank insignia. Orlov soon gets to have the last laugh when Catherine overthrows her husband and Orlov gets to strangle him.
* The Scarlet Empress' two most probable successors are much the same: her centuries-old daughter Mnemnon is a Sorceress known for pushing the mystical envelope as far as she possibly can, reaching great advances in power through often-sketchy means. When the young, charismatic Roseblack finally resolves to return home with her army, meanwhile, she plans to seek a return to the ways of the Shogunate rather than move forward with the Realm's empire.

* The Scarlet Ibis tells his older brother that they'll each marry one of their parents. The older brother brushes it off as "stupid things kids say."
* The Scarlet King plays the trope entirely straight. Depending on your preferred canon, he's either a member of
* The Scarlet Letter has two major male characters — Hester Prynne's long-lost husband who only recently returned, and the Reverend Arthur Dimmesdale. The reveal of whom she committed adultery with is not terribly shocking.
* The Scarlet Letter, Hawthorne is usually an omniscient narrator, knowing the deeds, words, and innermost thoughts and feelings of many different characters. But at one point, his omniscience falters, and he says that one woman is rumored to be a witch, without confirming whether she is or isn't.
* The Scarlet Letter: Hester Prynne, title character, gets one against a passive-aggressive villain, just after he's had his epiphany.
* The Scarlet Letter he wants revenge on. The main reason why Chillingsworth does not seek revenge on Hester was because he was an older man with an implied case of scoliosis (one shoulder slightly higher than the other), and he married Hester despite knowing that she didn’t love him.
* The Scarlet Letter how she is thought of in-story (in fact it's part of the reason so many people think she's some kind of demon child).
* The Scarlet Letter It's a Victorian novel written about fictional Puritans. Most people forget that it's a historical novel, though, as the present becomes almost as far removed from the book's publication, as the book is from the time of its setting, and think of it as a strictly factual account of Puritan life.
* The Scarlet Letter realizes that his desire for revenge against Rev. Dimmesdale for cuckolding him has turned him into "A fiend!" Hawthorne's narration says that this sort of moral clarity sometimes only occurs to people once in many years. However, Chillingworth's long since lost any purpose in life other than revenge, and so continues down the path.
* The Scarlet Letter, Roger Chillingworth has a beard and is a seeker of vengeance who uses his work as a doctor to achieve it (he was cheated because his wife, Hester, thought he was dead and slept with a man). He abuses Dimmesdale, one of his patients, because he was the one who slept with Hester.
* The Scarlet Letter Some parts, in particular the description of the General, may have had some satirical value for contemporary readers. For modern readers? Not so much.
* The Scarlet Letter was borne by the book's female lead, Hester Prynne, for her adulterous dalliance with Arthur Dimmesdale, who self-flagellates for his own sins.
* The Scarlet Letter was written in the 19th century, but it's often taught in high schools as an example of 17th-century writing.
* The Scarlet Pimpernel (1934), the titular character dresses up as an old woman and sneaks out a fellow aristocrat; when questioned by a soldier, "she" claims to be escorting her young grandson, who unfortunately is afflicted by what she claims is "the horrible black plague!" The soldier hastily sends her on her way.
* The Scarlet Pimpernel, Chauvelin gets Marguerite to help him because he has taken her brother, Armand.
* The Scarlet Pimpernel, Elton, Farleigh, Ben, Hal, Ozzy, Hastings, Neville, and Leggett. Later revisions cut the later three men out and give their lines to the

first six.
* The Scarlet Pimpernel, Englishman Sir Percy Blakeney (a.k.a. the Scarlet Pimpernel) continually refers to his rival, the Frenchman Chauvelin, as "Mr. Shovelin".
* The Scarlet Pimpernel for unintentionally causing the execution of the Marquis de St. Cyr, one of the French aristocratic fugitives her husband Sir Percy has devoted his life to protecting.
* The Scarlet Pimpernel. He probably would have told his wife the truth had he not been led to believe she was a sympathizer for the other side just a few hours after the wedding. The lies and miscommunications that followed drive the plot of the book.
* The Scarlet Pimpernel is immensely beautiful — she's the most beautiful woman in any room and she's basically the hottest redhead in France, England and in all probability in the whole world.
* The Scarlet Pimpernel is set at the tail end of this period and uses many of its tropes.
* The Scarlet Pimpernel, Marguerite calls Chauvelin out for forcing her to spy on her peers (to uncover the Scarlet Pimpernel's identity) to ensure her brother's safety.
* The Scarlet Pimpernel once she figured out what was going on with Percy, she hightailed it to France to try and help. Marguerite didn't just have Armand's difficulty to get her out of trouble.
* The Scarlet Pimpernel, Sir Percy acts like this once he finds out that his wife is probably spying on him for the French. It's really just a show to fend off suspicion that he's helping French nobles escape to England.
* The Scarlet Pimpernel Sir Percy Blakeney steps out in front of a firing squad, and we hear the "Ready! Present muskets! Fire!" and the report of the muskets. Then Sir Percy comes in for his hat.
* The Scarlet Pimpernel, Sir Percy carries Marguerite like this to get to the boat.
* The Scarlet Pimpernel (the 1999 miniseries): In the first episode, Pimpernel throws himself against a closed window in order to escape from Chauvelin after those two confronted each other in a French café.
* The Scarlet Pimpernel: This is a BBC adaptation from 1999. 2 installments, 6 episodes.
* The Scarlet Pimpernel to force her to spy on her friends. He'd never do such a thing! He's simply offering her the opportunity to serve her country, and simultaneously prevent her brother from being killed.
* The Scarlet Pimpernel, which also reveals just how much Percy hates himself for the pain he causes his wife Marguerite.
* The Scarlet Pumpernickel": The titular Pumpernickel does battle with a diabolical Duke.
* The Scarlet Sails)? Assol gasps in horror and breaks down, often running away.
* The Scarlet Sails, there is a barrel of wine belonging to the aristocratic Grey family that will only be drunk by "a Grey in Paradise", and for generations, the owners had been trying to guess what it could mean. One of the Greys decided to build a country estate called Paradise and drink the wine there but died of a heart attack before even opening the barrel. Arthur Grey ends up drinking the wine at his wedding when both he and his bride feel themselves in an earthly paradise.

* The Scarlet Throne is an elaborate thing made from magical jade of each colour carved into the shapes of the Five Elemental Dragons in a protective and deferential pose to the sitter, and has been the main symbol of the authority of the most powerful person in the world for 700 years. It's also a powerful magical artifact, and possesses at least some degree of consciousness: When the current regent seated himself upon it, the heads opened their mouths, hissed at him, and pulled back in a pre-striking pose. He hasn't dared enter the throne room since. You know you suck as a ruler when your own seat of office hates you.
* the Scarlet Witch, while pregnant with Nightcrawler's child, makes herself

anchovies with sour cream and Tabasco sauce.
* The Scar, many of the inhabitants of the floating nation Armada were press ganged.
* The Scarpetta series by Patricia Cornwell is an incredibly popular range of books about a forensic pathologist.
* The Scarrans are also mildly psionic and can use their powers to force the truth out of people, though it can still be an evasive half-truth. In the same series of episodes, when John is captured attempting to free Aeryn, he claims that he decided to because Aeryn was prettier than the nurse and that once he had freed her he was going to have lots of sex and babies with her.
* The Scarrans are mostly Warriors. Individual Scarrans rely on their own
* The Scarrans however, at least according to Scorpius (who, though biased, has shown a strong understanding of Scarran nature), play this trope straight.
* The Scarran Stryker and the Luxan Penetrator serve similar roles. The Stryker has a unique, hyper-fast propulsion system and the Penetrator has a cloaking device. Like he Marauder, they can operate on their own or as support vessels for larger fleets of warships.
* The Scarred Lands also has the Slarecians, psionic beings who challenged both the gods and the titans. The twist is that they sealed

* The Scar "speak" a language called Quiesy. As many of the residents lack vocal equipment due to the mechanisms of their reanimation, or simply had their lips sewn together as part of a mummification process the language makes use of carefully timed periods of silence, eye rolling and presumably other facial body language, though at least one form does include spoken elements that sound like coughing something up from the back of your throat.
* the scars will never fade. However, Fleur doesn't reject Bill because the scars mean nothing except "that [her] husband is brave," which is proof enough for the formerly wary-of-her Weasley family to accept her.
* The Scar, the accomplished linguist Bellis Coldwine publishes her books as B. Coldwine due to sexism in New Crobuzon's academic circles and is quietly bitter about the situation.
* The Scar, the Brucolac is hung up atop a ship's mast and left there. Being a vampire, he is slowly dying of exposure to sunlight before he is finally taken down.
* The Scar, Uther Doul wields a "possible sword" from the Ghosthead Empire; when swung imprecisely, it simultaneously strikes everywhere it could have possibly struck. Note that if you are not a competent swordsman, it is possible to cut yourself.

* The scary thing is how much sense most of them make, given the evidence she provides.
* The Scathing Atheist. One notable example was when they brought on the hosts of the Cognitive Dissonance Podcast in episode 128, where they listed jokes about the controversy regarding fetuses and Planned Parenthood.
* The Scathing Atheist opens their podcast on slightly different variations each week.
* The Scathing Atheist, the hosts talked about an Adventist Pastor named Ryan Bell, who decided to "Try Atheism for a Year", with them being Tongue-in-cheek about his sincerity. About a year and a half later, he is a notable figure in the atheist movement, and is interviewed in the show.
* The scathing review of Arctic Monkeys' AM is particularly despised by fans of the band.
* The Scavenger Hunt will change the chipset from being very useful to completely worthless depending if you put in the code before or after actually finding all of the numbers.
* The Scavenger plotline sometimes gets this. The problem being that there are fairly large gaps between the Scavenger-focused arcs, so events and plot points set-up for them don't get paid off until about ten issues or so later.
* The Scavengers, a gang of Confederate renegades takes over a frontier town two months after the war has ended, intending to rob a Yankee gold shipment. It seems most of the men are not aware the war has ended, but their commander Captain Harris certainly is.
* The Scavengers: As a slave, Polie was a heavyweight boxing champion until his lung was punctured by a broken rib. After that, he was transferred to the far more brutal life of a field slave.
* The Scavengers, Captain Harris attempts to rape Faith, but cannot perform the deed even when she does not resist. Faith mocks him for this.
* The Scavengers have a particular knack for this. Their misadventures have included a jailbreak that went awry because Misfire stopped in the middle of the escape for snacks, and an incident where Crankcase decided that taking part in a Nerf war with the other Scavengers was more important than
* The Scavengers have precisely three forms of entertainment on their ship: playing nerf gun battles (which is actually pretty awesome), watching recordings of former Decepticon-turned-stand-up-comic Skullcruncher's routines, and playing Jenga with a set that's missing pieces.
* The Scavengers, one of the troopers is singing a song about the lies he was told before joining; primarily "the cavalry ride horse, walk in infantry". It soon transpires that several members of the troop are walking because their horses have died.
* The Scavengers, the Confederate renegades take over the small town of Haswell to intercept the Yankee gold shipment.
* The Scavengers, the ex-slaves make it clear to Nancy that they are not attacking to avenge her rape, help her white friends, or even to take revenge on Confederates. It is just that have nothing better to do tomorrow than kill white men.
* The Scavengers: When Jess is explaining to Nancy that there are worse things than rape, she slides her dress off her shoulders to show her the scars she received from being flogged after a slave in the cotton mill stole and the overseers randomly chose her to make an example of.
* The Scavenger Trilogy: several characters maintain cool, sophisticated conversations after traumatic injury.
* The Scavenger Trilogy The whole series is an extended journey to appreciate how we got to the mysterious start of the story.
* The Scavenger Trilogy where the god Poldarn may be very real and active. Poldarn is the very spirit of death, failure, destruction and folly. When Poldarn creates, you won't like what he makes. There is no sign of a more hopeful god.
* The SCDP offices also have a nearby diner, where again the characters go when

they need to have a quick chat and a bite. Also,
* The scenarios are based around real incidents (the defection of NVA soldier Werner Weinhold in 1975, Solidarity and Martial law in Poland, the Able Archer incident
* The scenario that plays out over the Series 8 episodes "Kill the Moon" and "Mummy on the Orient Express" follow the trope almost to a T. Clara breaks off her friendship with the Doctor in the former because he places her in an impossible situation; in the next episode, she's agreed to go on one final adventure with him. By the end of the episode, she's recommitted to travelling with him — not that she tells her boyfriend Danny about her change of mind.
* The scenario was first proposed by Eric Drexler. He has since dismissed it as unrealistic as it's much easier to create a bunch of tiny dumb robots that receive their instructions from a central computer (that can be disabled if it malfunctions) than it is to create tiny robots that know and are capable of doing everything they need to make copies. The dumb nanobots should serve any purpose we'd need smart nanobots for, so any grey goo scenario would have to be
* The Scene, a Casanova "manager" whose wealth made him nigh impossible for EVOLVE officials to control.
* The scene also demonstrates a particular advantage Superman has in employing this trope: he could hear them talking about him with his super-hearing, starting to make the connection, and was able to perfectly time a "Clark Kent moment" to make the suspicion seem ludicrous.
* The scene at school where Ooblar tries to break up Jimmy and Cindy's argument.
* The scene between Lisa Bonet and Mickey Rourke in Rourke's leaky-roofed hotel room in
* The scene continues on with notes like Jaina's voice now sounding like an elderly mechanic's, Jag tasting it and making "a noise that suggested he'd just been punched", Kyp tasting it and surmising that it seems to be "part alcohol, part pepper, part rotted fruit" and then asking if the other two had had the antidote before he showed up, Jag taking another sip and having a clearly visible ripple of anguish from his neck to his feet, and at the end Jaina saying they should drink to the (unrelated) conclusion of the conversation.
* The scene even begins with a newspaper blowing across subway platform like a tumbleweed.
* The scene explaining the taboo on Voldemort's name in DH is deleted, so it just looks like the trio either have incredibly bad luck, or the Death Eaters are fantastic trackers who don't tell Voldemort where to find Harry and inexplicably go after him themselves, and Xenophilius Lovegood is insane, but happens to have incredible timing.

* The scene where Judge Doom gets his hand stuck to the steamroller and is slowly crushed contains the inescapability of the trope.
* The scene where Leonidas kicks the messenger in the well is sort of based on a real-life event, but different context. Ten years before Xerxes came to Greece, the original Persian campaign was coming through. They wanted Sparta's loyalty, but one of the two kings kicked the messenger down a well instead. This shocked and horrified not only the Persians, who put Sparta on their destroy list, but also the other Spartans since hospitality was important back then. They ousted this king and replaced him with a new one.

* The Schizoid Man a Village agent impersonating him) in order to break him.
* "The Schizoid Man": Deliberately done by Dr. Ira Graves, the guest character in the episode. Graves successfully implants his consciousness and knowledge into Data's positronic matrix (though we don't see how), before his physical body dies. However, realizing that he's becoming increasingly corrupt and overbearing in Data's body, Graves subsequently implants his knowledge into the Enterprise computer system to atone (again, we don't see how, since Data is only lying on the floor when found), but does so in a way that the human-consciousness element is lost forever.
* The schizophrenic man did also try to kill two cops, both of whom can attest that it was him and that he indicated his intention to kill, so he's probably not walking away a free man. At best, he might get off on an
* The Schlitterbahn water park chain experienced controversy in August 2016 after the death of a ten-year-old boy (the son of a local politician) on the tallest

waterslide in the world (called "Verrückt") at its Kansas City location, thus leading to the permanent shutdown of the slide. But it got worse after an indictment of park higher-ups was released in 2018. It implied that the slide's designer had no official engineering degree, the ride was known to be dangerous well before the fatality happened, and it was

* The Science of Discworld and sequels, the wizards have an entire non-magical universe to study. Once a planet with actual oceans and stuff emerges, they pretty much lose interest in the rest of it. Especially when it acquires people. (There may be other lifeforms on other planets. The wizards have never asked.)
* The Science of Discworld; a parody of the "flat Earth" arguments Jack and Ian mention in the text.
* The Science of Discworld books, Hex is able to treat our entire universe as one of these. Fast fowarding, or rewinding to see specific spots in human history (our universe canonically exists in a snowglobe on a shelf in the Unseen University, a wobbly shelf).
* The Science of Discworld books, humanity will eventually build a whole network of space elevators.
* The Science of Discworld books, in which Cohen and Stewart refer to the cultural conditioning and education of children as the "Make-A-Human-Being Kit". Every tribe has one exclusive to itself, and if you grew up in a culture that uses a different version of the Kit, your status as a True Human Being is probationary at best.
* The Science Of Discworld from humanity when he was turned into an orangutan.
* The Science of Discworld has Ridcully attempt a team building exercise by taking the wizards into the woods with their staffs set to paint spells. Unfortunately, wizards don't do team building:
* The Science of Discworld has the standard table, except with extra space for narrativium, octium, and octagen.
* The Science of Discworld). He tests this theory by sculpting a fish, and the wizards obediently make it rain fish. His next sculpture, predictably, is a naked woman. The wizards decide not to help with this one.
* the Science Of Discworld, Hex actually states (er, writes) definitively that recursion has in fact occurred.
* The Science of Discworld, Hex has also joined the Playful Hacker ranks, as it's hooked up to the semaphore network, has cracked their operations codes, and can slip messages onto the network for free, passing them off as internal signalling. So far as we know, it's only done this to save the UU faculty the expense of sending c-mail messages. Ridcully's reaction to learning this is to ask some serious questions, starting with "Could anyone find out we're doing this?"
* The Science of Discworld, Hex makes several dramatic announcements to the wizards, and says the words "pause for dramatic effect" before saying the last word. Ponder eventually tells him that he doesn't need to to that.
* The Science of Discworld involves the magical equivalent of a nuclear reactor, designed largely from information contained in scrolls found in a cave in a dangerously magical area (everyone who went there died of rare, magically induced diseases) in the form of a bowl-shaped valley surrounded by rings of mountains. When the thing begins to overload, Ponder Stibbons says he thinks that the reactor at that site probably was shut down in this state, so they need to come up with a way to bleed off the magic FAST.
* The Science of Discworld, in which Ponder Stibbons has set up an elaborate presentation to show the danger to the Roundworld Project, only for Rincewind to sum things up in one sentence when he still has "a dozen slides and a flowchart" to go.
* The Science of Discworld" is used to refer to analogies or descriptions that are completely wrong, but prepare the listener for the real truth.
* The Science of Discworld, it's mentioned that the wizards don't believe in the

gods- they know the gods exist, they just don't believe in them- because Unseen University has very good anti-lightning spells, and being immune from godly wrath does wonders for free-thinking. The fact that the Archchancellor and the High Priest are very similar brothers might have something to do with it.
* The Science of Discworld meteorites is because the UU student body had been tossing them at "The Target" (= Jupiter) as part of a cross-cosmic video game, and they never bothered to sweep up their unused ammunition.
* The Science of Discworld miniature universe created by the wizards that also happens to be ours) on the grounds that the world being round is an idea of their religion. Incidentally, they defend this idea of the shape of the world confidently while ignoring the plain evidence to the contrary. Their spokesman eventually calls Om to be his witness, and this being the Discworld, the god is obliged to appear. He then goes on to argue the case of the sect's opposition and also to state quite clearly that he doesn't like what they're doing in his name. After he leaves, the spokesman says "Well, that's one opinion," and they try to resort to terrorism next.
* The Science of Discworld next time. Penny collapses in helpless laughter at the expression on Leonard's face.
* The Science of Discworld: One of the first sapient species the wizards notice on Roundworld is a race of intelligent city-building crabs. Which are crustaceans, but close enough.
* The Science of Discworld, Rincewind's first scene is sorting the rocks left behind by the previous Professor of Cruel and Unusual Geography. Since this is an activity that doesn't involve fleeing from life-threatening danger, he's having a blast.
* The Science of Discworld safely intercepts it a few inches shy of the hard stone floor.
* The Science Of Discworld's co-authors jack Cohen and Ian Stewart point out that extinction events are so frequent in the history of Earth that sooner or later one will hit humanity and render the planet untenable for us - so we should be making preparations now.
* The Science of Discworld) that the Fifth Elephant that is supposed to have crashed onto the Disc may be just a myth, and the deposits of fat and whatnot found underground at the supposed crash site may be from lots of ordinary megafauna having got buried in some lesser disaster. On Roundworld, you could test this by seeing whether the deposits are in the shape of one big elephant. On the Discworld, there's no point because they will have that shape regardless, since that's the story people are now telling.
* The Science of Discworld, the Elf Queen tries to bribe Rincewind with his heart's desire. However, due to a previous incident involving Rincewind being stuck on an island for too long, his only real desire is potatoes (having gotten a little, ah, "confused" between them and sex). This baffles and enrages the Queen, and she stomps off, but had she actually provided some potatoes, she might've had Rincewind. He shouts after her he'd be happy with a bag of crisps.
* The Science of Discworld, the wizards create a universe containing 'Roundworld', where physics works but magic and narrative logic don't. The computer Hex tells them not to destroy it because "Recursion has occured".
* The Science of Discworld, the wizards disguise the Librarian and the Luggage with a large Elizabethan dress.
* The Science of Discworld, the wizards keep trying to build a giant turtle out of rock so Roundworld can have a "proper" world in it, but it keeps collapsing into an unsatisfactory spherical mass.
* The Science of Discworld the wizards to not read those books, and if they hear him coughing just before he comes back, it's because he has a cough, and is not a warning about his return.
* The Science of Discworld. The wizards want someone to investigate Roundworld, and have the Dean and the university porters to drag Rincewind up in front of Ridicully, who tells him he's been made Professor. And no, he can't refuse, or resign. He tries running away, but the porters prevent that. From then on, any

assignment involving Roundworld has Rincewind automatically chosen because it obviously counts as studying Cruel and Unusual Geography.
* The Science of Discworld, they also say that intelligence appears to be a useful enough trick that something would develop it sooner or later, they speculate that if sentient crabs had evolved on the Earth in humans' place, three of them might be writing 'The Science of Dishworld'', about a bowl-shaped world that's carried on the backs of gigantic marine invertebrates.
* The Science of Discworld, time within Roundworld passes so rapidly that many millions of years go by every Discworld day.
* The Science of Discworld, too. For various reasons, the wizards need books from the future. The Librarian can get them, but he isn't supposed to. Rincewind talks him into it and translates his answer as follows (paraphrased):
* The Science of Discworld version of the Salvation Army, operating out of a Citadel in Ankh-Morpork.
* The Science of Discworld Volume 1 ends this way. Long story short, the wizards have accidentally created a pocket universe where magic does not exist, where worlds are round balls rather than discs on the back of turtles and elephants. At the end, the computer Hex mentions "Recursion Is Occurring" and then, after the wizards have abandoned the "Roundworld Project", we see a discworld atop elephants and a turtle condensing out of gas and dust in the far reaches of its universe...
* The Science of Discworld, was Librarian's assistant. This job is implied to consist of fetching the Librarian bananas, something that Rincewind was actually good at.
* The Science of Discworld, when Ridcully dismisses the idea that Earth has turtles of its own because "you don't get giant turtles that small".
* The Science of Discworld when the Dean sticks his hand into the nascent Roundworld project:
* The Science of Getting Rich by J.Z. Knight. Both films feature followers of J.Z. Knight's Ramtha's School of Enlightenment in Washington State, which also teaches this concept. A lot of megachurches have co-opted this by calling it "prosperity theology".

By the latter part of the series, the remaining Sclash Driver users have to resort to increasingly
* The Scoobies are Buffy's Secret Keepers, but they all stretch the definition of "normal". Many of the Scoobies start outside the fold as "normals" and eventually get pulled into Scoobiedom (Cordelia, Oz, Tara). Another example would be Buffy's mother Joyce after Season 2.
* The Scoobies frequently find themselves in this trope, though they rarely last for more than a brief amount of time. Indeed, the first time Willow and Oz said more than a few words to each other was when Oz described how the other animal crackers are jealous of the monkey, being the only one allowed to have pants.

* , the Scoobies learn that D'Hoffryn and his vengeance demons don't require someone to say "I Wish" in order to use their powers, only that someone express regret and a desire to change things. As D'Hoffryn points out, "wish" is an English word and both he and several of his servants predate English significantly (Anyanka for example was born in the ninth century).

* The Score and various other examples of this trope, it might have improved the film.
* The score counter has actually found new life thanks to the introduction of leaderboards. While in the old games the purpose of the score was to either try to see if you can do better or compare with your friends, now you can compare your prowess against players from all over the world. Leaderboards are, more often than not, shown as a feature in a game's description.
* The score counter, while not being used as much as it once was, occasionally continues to pop up in newer games (although not necessarily always in the traditional way). However, it has found another purpose by changing the points to money or 'experience', and then having the player spend it on upgrades, weapons, health and so forth.
* The Score did have its moments. Several of them were the back and forth between Robert DeNiro and Marlon Brando, who were purposely given only key points to hit in dialogue and then simply left in front of a camera.
* The score for the song "Mr. Cellophane" actually says "vocalist continues note after orchestra stops"; though there is no indication that this is a gag, it is often played that way to emphasize the injustice of the character's invisibility.
* The Score Jack plans to steal a priceless scepter from the Montreal Customs House. He gets a job as a janitor in the Customs House so he has access to the building and can see the security measures first hand. He even goes as far as to pretend to be mentally disabled so he appears harmless and beneath suspicion.
* The Score, Nick is ready to retire after almost getting caught during his previous theft, but his fence Max talks into stealing the sceptre from the Monteal Customs House as one last job, even though this involves Nick breaking one of his rules and committing a crime in the city where he lives.

* The Scorge's attempt to attack Light's Hope Chapel in the Wrath of the Lich King expansion was similar, only that siege was thwarted after Tirion showed up and casued all the forces to either become good or die.
* The scoring system in VS mode heavily relied on number of survivors that made it to the safe room, how much health everyone had when they made it, and the map multiplier. This could often cause one team of very skilled players to dominate by 1000 points or more while the team that can't reach the safe room several times would never have a chance to get ahead. The sequel cuts down on this and the trope by changing the scoring where only the distance counts as the major factor of scoring and anyone that did happen to make it to the safe room would just get 25 more points per person that is alive. Tied scores in a round are dealt with by awarding the team that did the most damage as the infected in that round extra points.
* The scoring system is pretty frustrating. Each note has a base value of up to 300 points, depending on how well you time the note. Seems pretty standard for a rhythm game. Then comes the combo multiplier; by the end of the song, a single note can be worth tens of thousands of points. In other rhythm games, missing a note simply means you lose a few points. Here, missing just one note will completely botch your score, especially if said miss is in the middle of the song. Mercifully,

the
* The Scorpian also had two versions. The Barbed type was 8-12 feet long, covered with barbs that damaged anyone that attacked it from close range, and its attacks did massive damage. The Gold was much smaller (1-2 feet long) but still did tremendous damage with its sting.

* The Scorpion King, his wife dies and he deliberately lets the kingdom fall apart to go back to his life as a mercenary. She also gives a wrong prophecy earlier in the film.
* The Scorpion King how it's going to end. Call it a curious form of prehistoric male bonding. They engage in a spell of no holds barred combat — half wrecking the Free People's camp — before sitting down together to plan their assault on Gommorah.
* The Scorpion King is not only white, but very British, and played by Bernard Hill. Though the Sorceress is played by Kelly Hu, and appears very much Asian.
* The Scorpion King. It is probably more of a spin-off than a true prequel.
* The Scorpion King, Mathayus fights an invisible giant scorpion in the climax.
* The Scorpion King runs an equal opportunity and multicultural Horde.

* The Scots developed Creaothceann, which involved flying a broomstick around trying to catch rocks that had been levitated into the air in a cauldron tied to one's head. It was banned in 1762 because it was so dangerous, though the book suggests that it inspired the Bludgers in Quidditch.
* The Scots folk-song "The Bonnie Banks O' Loch Lomond", aka "You Take the High Road", has been almost universally misrepresented, even in Scotland, as a cheerful walking song, and as such has been used as upbeat background music and even as the title of a soap opera. In fact it's about two prisoners, one of whom is to be released and the other executed at the same hour. The "low road" referred to is the road that the dead go on — the speaker will get home faster than his friend

The Californian Nathan Vetterlein voices the Scout, a Bostonian trying to pretend to be a New Yorker, for example. Grant Goodeve, the voice actor for the Texan Engineer, isn't even Texan himself; he was born in Connecticut.
* The Scout - and likely others - parody this trope when dominating the Soldier. One example is the Scout telling him to "drop dead and give me twenty".
* The Scout can also completely ignore the terrain inside a cavern by using his grappling hook to traverse huge gaps. He even lampshades this:
* The Scout grew up with Seven older brothers who would roam Boston and get in fights. His speed training was for getting to the fights before they ended.
* The Scout has a fish that's as effective as an aluminum baseball bat.
* The Scout has an audio clip which references the fact that many forum dwellers noticed his resemblance to ShamWow! commercial pitchman
* The Scout has an utterly ridiculous scene in which Steve Nebraska 1) pitches a perfect game (possible) 2) by striking out every batter, 27 in total (ridiculous, as no pitcher has ever struck out more than 20 batters in a game and more than 15 strikeouts is pretty uncommon) 3) on the minimum 81 pitches (about a billion times more unlikely than the 27 strikeouts).
* The Scout himself has this affinity with the Haunted Hat. Which he dubs "Scary Hat".
* The Scout salute - cover the tip of your little finger with your thumb as if you're about to flick something with it, extend the other three fingers and raise your hand until they're vertical. Easier to describe than to do.

* The Screwtape Letters" by Screwtape, a mirror of "Our Father, in Heaven".
* The Screwtape Letters describes the church as seen from the spiritual dimension (where things that seem mundane to humans, such as a simple prayer, take on very real and tangible consequences) this way:
* The Screwtape Letters: Discussed by Screwtape, as he gives Wormwood advice about how to incite a type of human lust that can lead to adulteries that, in his own words, end, "if all goes well, in murders and suicides".
* The Screwtape Letters her for this, even though he never says anything.
* The Screwtape Letters is the boss from Hell (literally!). It's too bad we never get to see the booklet "on the new House of Correction for Incompetent Tempters" that he sends Wormwood at one point, as a motivational tool.
* The Screwtape Letters, none of the devils have any sense of humor at all, but they are played for laughs. In fact, being laughed at seems to be Screwtape's Berserk Button. "She's the sort of girl who would find ME funny!"
* The Screwtape Letters of God's, and so keep on suffering. Getting put in their 'Try to comprehend good' department is one of the worst jobs a devil could get.
* The Screwtape Letters Screwtape uses "light-year" as a measurement of time.
* The Screwtape Letters, the devils' inability to understand humor is played for laughs.
* The Screwtape Letters. Their business deals with humanity's damnation.
* The Screwtape Letters; they feed on them in Hell. It is emphasized in the sequel short story, "Screwtape Proposes a Toast", where it is stated that evil religious zealots are punished in Hell by being made into blended wine — those who hated each other the most make the best vintages when combined.
* The Screwtape Letters trope. Screwtape explains that it's fallen out of favor ever since Hell made the strategic switch from promoting Satanism to promoting atheism, which is seen as a safer bet.
* The Screwy Truant: the chase sequence would happen in a seemingly normal room (with only two or three doors), but then additional doors would be quickly created as needed — the trick was to open a door violently, and a new opening was instantaneously created where it had hit the wall; this worked completely regardless of the door's hinges, so that when there was no room left on walls, doors were created on the floor and ceiling as well. All accompanied by the song "In and Out the Window".
* The Scribbler) arriving at a high-rise halfway house where a series of suspicious jumper-suicides have occurred. After surveying the crime scene, she begins interrogating Suki (one of the surviving patients) with partner Moss (Michael Imperioli). Suki's testimony, shown in flashback, then tells the story.
* The Scribbler: At different points, the main character is convinced that both a bulldog and the elevator in her high-rise are speaking to her. However, since she's a recovering psychiatric patient, even she's pretty sure she's just hallucinating.
* The Scribbler syndrome. Her most dominant personality is the titular Scribbler, who - when in control of her - makes her compulsively write backwards, on any piece of paper or blank surface available.

* The scythe chariot lasted through no more than one engagement with Alexander the Great. He invented the Mousehole, a simple modification to the formation of his heavy infantry that allowed them to easily trap one when it was driven at them, then kill the driver. Combine that with the fact that heavy infantry was already pretty resistant to the damn thing and Alexander's armies included enough archers to kill horses and crew well before the impact...

* The Search, Azula attempts to cut down on traveling time by burning down a forest.
* The Searchers, a couple of very long exchanged glances are the audience's only clue of Ethan and Martha's feelings for each other.
* The Searchers, a group chasing an Comanche war party finds the grave of a dead Comanche. One man angrily smashes him with a rock but John Wayne pulls out his gun and shoots out the corpse's eyes. When asked by a Texas Ranger/Preacher what good that did, Wayne answers that by what the preacher believes, nothing, but the Indians believe that if he has no eyes he can't enter the afterlife and just has to wander "between the winds".
* The Searchers) has the voice of the song being cursed with a magic potion from Madame Ruth the gypsy, which turns them into a serial kisser, until a policeman destroys the potion's container.
* The Searchers is famous for is the completely silent interactions between Ethan and his sister-in-law, which most people interpret as an unspoken form of this trope.
* The Searchers is the scene where he uncovers a dead Comanche warrior and shoots his eyes. As he explains, the Comanche believe that you need your eyes to enter the spirit world — by shooting the eyes out, he'd just condemned that warrior to wander the Earth as a ghost.
* The Searchers made spectacular use of Utah's Monument Valley. These scenes were supposed to be set in Texas.
* The Searchers, Martin Pawley thinks he's buying a blanket from some Indians. Turns out he's married one of them instead. Ethan Edwards thinks its hilarious. He is also rather nicer to the unexpected bride than her 'husband' despite the fact she's a Comanche.
* The Searchers, Martin Pawley thinks he's buying a blanket from some Indians. Turns out he's married one of them instead, "Look". Ethan Edwards thinks it's hilarious. He is also rather nicer to the unexpected bride than her "husband", despite the fact that she's a Comanche.
* The Searchers role or are oblivious to the fact that they're racist at all. But at least one other character (privately) admits to harboring a vendetta against all Indians:
* The Searchers's) brother, killing everyone but a daughter who is kidnapped, leading to a rescue mission that lasts for years.
* The Searchers's character Ethan Edwards is first seen wearing a Confederate Army jacket years after the war ended.
* The Searchers tendencies (not to mention the undercurrent of racism that drove his quest) won't allow him to live a normal, happy life.
* The Searchers: The regular cavalry somewhat lampooned, in particular with the young lieutenant who is the colonel's son and adjutant, and who in the charge only manages to cause an embarrassing wound to the head of the Texas Rangers with his sabre.
* The Searchers to a Comanche woman, nicknamed Look. Naturally, this gets in the way of his relationship with Laurie Jorgenson. When Martin tries to press Look for information about the killer he's tracking, she panics and runs away. Martin later finds her dead— killed by the US Army in an attack on a Comanche camp.

* These are actually special cases: when a VI is designed for interpersonal interaction (such as Avina, the asari VI on the Citadel) it has a human- or asari-shaped projection. There's actually a VI interface in almost everything, from your omnitool to your biotic implant to your assault rifle. The rogue VI on the moon didn't have a projection because it was designed for organising drones for combat simulations, not for directing people to the nearest bar or restaurant.

* These are often the worst makeups of the show, as the contestants are majoratively creature and FX artists, so they largely specialize in monster, horror, and bloody makeup, not beauty or glamour. Also, these trials tended to result in racist and/or sexist situations, as one contestant went the blackface route, and another made himself a very ugly woman (because he knew he couldn't make himself a beautiful one). Add in their inexperience with the style and the typical episode challenges, and the winner was often just whoever's makeup was the least plastic looking.

* The Season 1 finale was written before they had any idea whether or not they would be renewed, which is why Jimmy seems to fully descend into the Saul Goodman persona at the end of the season. When they did get renewed, they realized they had more time to play with Jimmy before he fell completely, so Season 2 features him dialing back and rationalizing his brief episode as due to his grief for Marco's death.
* The season 1 segment "Car Jacked" features a car thief attempting to steal a chef's prized GTO Judge, only for his slackline to get tangled, causing him to hang upside-down for the next 24 hours and die of blood pooling in his brain.
* The season 1 villain Rex uses his astral projection power to spy on Prue changing her clothes. Then, he plants a subliminal message in his lover Hannah to make her take off her dress.
* The season 21 episode, "Once Upon a Time in Springfield" (the one where Krusty is given a female sidekick in a bid to get female viewers), Krusty's trick boutonniere flower squirted after Princess Penelope (the female sidekick) confesses her love for him.
* The Season 27 episode "Orange Is the New Yellow," Arnie Pye, with the threat of losing his job if he failed to agree to the assignment, was involved in another helicopter crash, this time when it is sucked into a large tornado ... all while delivering a live news remote. Shortly before the live feed is lost, he tells Brockman off and screams that the worst thing of all is that Brockman's arrogant voice is the last voice he'd ever hear. However, as he had cameos in two Season 28 episodes, he presumably survived the crash.

* The season 2 episode "Mini-Golf at the DSA" has the Deep Space Array install a

mini golf course. The kids compete against the adults in the DSA's first mini-golf tournament, and they win by applying their knowledge of force.
* The Season 2 episode "Sister City" features a group of delegates from Venezuela visiting Pawnee as part of an exchange program, with the episode openly mocking Venezuela's then-President Hugo Chávez. Chávez died in office just four years after that episode aired, instantly dating it. The same episode subtly references the Venezuelan economic boom that occurred during Chavez's tenure, with the delegation frequently bragging about their town's prosperity, and showing off their wealth by spending money in frivolous ways; this instantly became dated after Venezuela's economy collapsed during Nicolás Maduro's presidency, and the country's economic hardships subsequently became the subject of many headlines.

* The season 2 finale has the Greene Family Farm come under attack by a horde of walkers. The farm is overrun and the heroes are forced to flee.
* The season 2 finale has this; the main protagonists have been cornered by Moff Gideon's Dark Troopers, and all hope seems lost...but then a mysterious, hooded warrior shows up and begins effortlessly carving a path through Gideon's forces, sending the once
* The Season 2 finale sees a much larger Prime Order army personally led by one of
* The Season 2 premiere "Burked" was based heavily on the murder of Ted Binion, right down to the cause of death and the victim being the son of a casino magnate.
* The season 2 premiere had Cordelia complaining about her recent ordeal (captured and strung up by vampires)...because of how tough getting the stains out of her clothes was going to be. 'Band Candy', wherein the town's adults are mentally regressed to being teenagers, ends with Buffy reliving how terrifying her exams were.
* The season 2 premiere sees Foggy visit a crowded Dogs of Hell biker clubhouse to get info on a Punisher attack. He ends up encountering a particularly nasty bunch at the pool table and only narrowly manages to escape without injury.
* The season 3 episode "Bits of Love" involved a man who'd survived a nuclear holocaust with only holographic
* The Season 3 episode "Coda" opens with a discussion between Janeway and Neelix concerning each other's performances during an apparent sexual orgy. It was actually a talent show.
* The Season 3 episode "Earshot" reveals via telepathy that Cordelia quite literally does always say
* The Season 3 episode "I had an Accident", the scene with the live action gorilla had noticeably smoother animation compared to the rest of the episode. Patrick and Sandy had to be animated at 30fps to keep in sync with the gorilla's movement, when they were being thrown into the gorilla's bag. Similarly when the gorilla picks up Spongebob and rips him into two halves.
* The Season 3 Episode "Long Live The Queen" has two; first, the Earth Kingdom soldiers do everything they can to restrain
* The Season 3 episodes "The Story of Jimmy Rebel" and "Pause" were removed, the former because it was deemed too racist / politically incorrect (which is odd for a show that's already packed with a lot of racial humor), and the latter because
* The Season 3 episode "The Man Behind the Curtain" shows how Benjamin Linus initiated the Purge and became the leader of the Hostiles/Others, though he's more of an anti-hero than a villain.

* The season 3 episode "White Hare" shows the Loud Family as rabbits, with Lincoln's counterpart Warren having 25 sisters. Again, this was what Chris Savino originally had in mind for the series before Nickelodeon convinced him to make the characters human.
* The Season 3 finale demonstrates this perfectly. Two enemies make plans; one of the plans is fully detailed to the audience, while the other one is kept vague. The vague one, of course, is the one that succeeds. This one is particularly noteworthy, since the planning processes are
* The season 3 finale does this, except the Neutral Female is Wesley. It's the final battle, and everybody gathers to rush at the Big Bad; a few seconds later, we see Wesley get knocked down, and he is pathetically unable to get up for the rest of the fight. Wesley
* The season 3 finale has Fiona drive her car through a small-time arms dealer's wall into his living room with the express intent of scaring the shit out of him.
* The season 3 finale has Sam and Fi drive her coupe through the front of a house. This was purely to scare the living daylights out of the small-time arms dealer on the opposite side prior to interrogation. Remarked on by Sam in the next scene:
* The Season 3 finale of DBZA, released in 2018, ended with a teaser card promising a Season 4. Multiple update videos and social media updates throughout 2018 and 2019 made promises about the release window, with the timeline being pushed back every time. In October 2019 an off-hand reference was snuck into an update video that the team was considering making Season 4 with original 3D animation rather than the repurposed anime footage the series was known for. In January 2020, KaiserNeko made a Twitter post that noticeably said that

* The season 3 finale (which incidentally pays off said Star Swirl sequel hook) definitely is trying to draw you in for season 4. Twilight turns into an alicorn and is now a princess of Equestria.
* The season 3 premiere reveals that despite the kiss, Pam can't return the sentiment and Jim leaves and eventually transfers to the Stamford branch without a goodbye. Pam winds up breaking off her engagement, and through some corporate merging, Jim winds up back at Dunder-Mifflin Scranton, but in a relationship with his co-worker from Stamford, Karen. Throughout the whole season, Pam goes through a

* The Season 4 premiere gets a Britney Spears appearance to cross promote the film Melissa Joan Hart was starring in, which was titled
* The Season 4 premiere has Rick outright spell it out without even a shred of shame when, in the midst of stealing death crystals, they get attacked by a faction of aliens who also steal said crystals:
* The season 4 premiere involves Death Crystals, alien crystals that show whoever holds one how they will die. The knowledge of how one will die almost always allows them to avoid said death, so the visions constantly change, making them useless outside of combat (where they allow Rick to avoid enemy fire). Most of the

episode's plot stems from Morty seeing himself dying of old age with Jessica and going to extreme lengths to ensure it will come true.
* The season 4 premiere opened with a sketch wherein Seth Green and Matt Senreich try to get jobs in Hollywood after the "cancellation" of
* The Season 4 premiere starts out with Twilight Sparkle learning how to fly with her new wings with mixed results. Later in the two-parter, she is able to fly from one city to another with Spike as a passenger but not without him kissing the ground afterwards.
* The Season 5 "Broken Heart" has a flashback where Snow White sends Lancelot to get help from his mother, who is the Lady of the Lake - and Lancelot's debut episode was indeed titled "Lady of the Lake".
* The Season 5 episode "C*untgate" lampshades this with its titular example, as Mike and Amy argue with reporters and other staffers over whether reports of someone in the White House calling the President the c-word counts as a "gate".
* The Season 5 episode "Previously Unaired Christmas" has Marley make a valiant effort at countering Kitty's insult about her virginity. Unfortunately, Marley

* The Season 5 finale seems to resolve both major plotlines (the hydrogen bomb and pilgrimage to Jacob) by the end of the episode, but cuts back to 1977 for one final, short scene in which a still-living Juliet whacks the bomb until it explodes.
* The Season 5 finale, which explores multiple "What if?" scenarios, goes into specifics about what would've happened if he wasn't destroyed: not only would Equestria be covered in his dark crystals, but he would even be willing to
* The season 5 opener refers to Dean Martin, Frank Sinatra and Bob Hope all still being alive, working and successful. George Harrison cameos in the same episode (and not just the flashback bit).
* The season 5 premiere implies the Lich was created by a nuclear bomb. Later episodes would establish
* The Season 6B theory first came into wide circulation via the nonfiction book
* The Season 6 episode, "Crushed" ends with a dedication to Pat Harris, a friend, and colleague of the episode's director, Greg Bailey.
* The Season 6 episode "McStroke" contains an incident that is bizarre but still plays the mistaken impression of pedophilic acts for laughs: Stewie –
* The Season 6 episode "Suspicions" plays the trope straight. Guinan visits Dr. Crusher in her quarters for an elbow problem, but Crusher reveals she's about to be drummed out of her position. Most of the episode goes into the story behind it, then when it finally catches up we see Crusher find a way to solve the episode's problem (which would've led to her disgrace).
* The season 6 episode "The Mountain", where Lemongrab and Finn are seen running on their own respective bodies.
* The Season 6 episode "The Times They Are a Changeling" introduces a good Changeling named Thorax, who spends the bulk of the episode trying to win over the trust of the ponies with the help of Spike. In the season finale,
* The Season 6 finale "To Where and Back Again" uses this with the team of Starlight, Trixie, Discord, and Thorax trying to save the day.
* The Season 6 premiere was accidentally leaked by HBO's Nordic division one day earlier than expected, and snatched up by enterprising fans just before the company pulled it off their streaming service.
* The season 7 episode "Peggy and the Pirates" showcased Peggy telling their

(temporary) house guest Seven a bedtime story, with her as the heroine who is kidnapped by "Rubio The Cruel" (played by David Garrison), the most feared pirate on the Seven Seas. Why is he so feared? because his awful, awful singing of showtunes brings searing pain to the ears of whomever hears it. Half of the crew of the ship he captures jumps overboard to escape it.
* The Season 7 episode "Potential" supplied a particularly wonderful example with the introduction of openly gay potential slayer Kennedy, during a conversation with fellow potential, Rona, about using a wooden stake to fight Vampires.
* The season 7 episode "Toe Tags" presents a series of short cases, punctuated by the corpses of the victims discussing their cases with each other.
* The season 7 episode "T the Terrestrial" shows that the Omnicronians have started receiving current (31st century) television from Earth as well, as Lrrr's viewing of "The Finder-Outer" gets cut off by Nixon's head's embargo on Omnicron Persei XIII.
* the Season 7 Finale, but only Gibbs has access to them. They are revealed when he adds Rule 51: "Sometimes you're wrong" to the back of the card with Rule 13: "Never, ever involve lawyers."
* The Season 7 finale, "The First Day of the Rest of Your Life", features a truly massive battle, with Alexandria, Hilltop, and the Kingdom uniting to fight against the Saviors
* The season 8 episode "Keystone Konstables" features Higgins and Crabtree going undercover as vaudeville performers. They share a bill with a young
* The Season 8 episode "Think like an Office Chair" featured a similar dedication to the victims of Hurricane Katrina.
* The season 8 finale took an incredible amount of heat for various reasons, and one of them was this trope.
* The Season 8 premiere episode, along with several scripts for the season, leaked online due to a breach at the BBC's Latin-American affiliate station in Miami, FL. Interestingly, the leaked episode (
* The Season 9 comic "Daddy Issues" is also about this, with Drusilla and Faith dealing with their respective issues with their fathers. Though Drusilla's issues have to do with her sire, Angel.
* The Season 9 DVD set for the show claims the finale as one of the most talked-about in TV history. While true, it does leave out that the discussion was caused by the significant
* The Season 9 intro has a transition where the camera zooms into Brainy's mouth and changes to the Smurfs (now wearing caveman clothes) coming out of a dinosaur's mouth.
* The seasonal Deadman Mode features a fog that does heavy damage to the player.
* The Season, Alex enters Gavin's house this way, but to warn him of an evil plot.
* The season eight finale "Turtle Trek" ended with Shredder and Krang stranded in Dimension X with their battle fortress, the Technodrome, irreparably damaged.
* The season eleven episode "Savior" did this. A young prostitute goes into premature labor and her baby is put on life support. The mother then runs away, giving power of attorney to Olivia, effectively giving Olivia the choice of whether the baby lives or dies. The episode ends with the baby needing immediate brain surgery and the doctors hammering Olivia for a decision that she never gives. This turns into a case of
* The season ends with Mako realizing he is in love with Korra, and Korra reciprocating his feelings. Bolin, by his own admission, has gotten over his crush on Korra and holds no ill will towards his brother's new relationship. It's also implied that Asami, who had been dating Mako, settles into something like this after he apologizes for kissing Korra behind her back and trying to cover it up.
* The season finale seems to confirm that he's just a delusion of 21's. Not only did one of the fellow "ghosts" 24 introduced him to never exist, but Dr. Orpheus (a professional necromancer) couldn't see 24, and he communicates with the dead all the time.
* The season finales following the Season Four finale "Twilight's Kingdom" are this, with the two-parter being seen as having the best combination of action

pieces, big character moments, adventure elements, stakes, and
* The season finales have a tendency to leave a few questions unanswered, which has authors try to explain what will happen before the next season premieres. There are also frequent
* The season four episode, Frannie 911, where Klaus and Haley are in an argument:
* The season four episode "Selma's Choice" had "The Buzzing Sign Diner" (all letters function, but it is still part of, and a parody of, the buzzing sign trope) and the sign Dolph, Jimbo, and Kearney pass as they ride out of Duff Gardens on bumper cars reads, "You Are Now Leaving Duff Gardfns" (though it's not known whether this was supposed to be a broken sign or a mistake from the animation staff).
* The season four episodes "The Killing Game" Parts I and II have Voyager taken over by the Hirogen. The Doctor is stuck healing injured crewmen so they can be returned to the holographic simulations for most of these episodes (but he eventually helps when it comes time to take the ship back).
* The season four finale sees Archer, Lana, Cyril and Ray trapped in a room quickly filling with water and only three sets of scuba gear to swim out and to the surface. The dying station captain they're with tells them that one one them will have to drown and die, hopefully temporarily, while the other three took the scuba suits and tried to get themselves to safety and resuscitate the volunteer.
* The season four finale, set in the future, had a scene where someone was using holographic recreations to produce fake and/or "politically convenient" versions of past events.
* The Season Fourteen premiere "Found and Lost" was dedicated to the memory of Larry Riley.
* The season nine episode "The Woman Who Lived," in which a stream of energy emanating from a dying character's chest in this color causes the Doctor to gasp, "Purple... the colour of death!" This could be a callback to the fact that mauve, a shade of purple, is considered the universal danger color instead of red in the universe of the new series, as referenced in season one's "The Empty Child"...or it could just be an extraordinary coincidence.
* The Season of Divorce" a housewife's would-be beau pops up at her (and her husband's) apartment unannounced, with a check made out to the wife, which he hopes she'll use to go to Reno and get a divorce.
* The season one episode "The Wolf Is Out There" focused on Tommy noticeably gaining weight as a result of his appetite going out of control thanks to his wolf-side. While he doesn't balloon up to the same size as Merton, his weight's noticeable that people start making fun of him for it (specifically Tim and Travis, even though they're both much bigger than Tommy) and he splits his pants.
* The season one finale has the team handing out copies of the "little naked dude" statues they're
* The season one finale sees the D'Alessio brothers get quickly assassinated by Richard Harrow, Al Capone and Jimmy Darmody once Nucky gets Arnold Rothstein (who had been backing the brothers) to withdraw his support of them.
* the season one Opening Credits: Richie & Potsie are out with a couple of girls at the movies, the boys on the outside and the girls on the inside. Richie & Potsie both go for this, but end up touching hands themselves, and pull back.
* The season premiere, "More Than Meets The Eye", has a scene where the Autobots prepare to confront the Decepticons at Sherman Dam. Jazz calls out each character by name, who transforms on cue, just because.
* The season three boxed set contains a video that plays half a conversation (
* The Season Three DVD includes a promo for "Colonel Homer" with a deleted scene. The inclusion on the deleted scene is specifically noted, and is evidently the only reason why it was included on the DVD.
* The season three finale sees such a demise to Gyp Rosetti's attempt to take over Atlantic City. First, the 30-some henchmen supplied to him by Joe Masseria are called back to New York after Nucky and Rothstein arrange a deal with Masseria to get him to withdraw his backing of Rosetti. Those men never make it back, as Chalky White and Al Capone (and their respective gangs) massacre them with gatling guns as

they leave Atlantic City. This leaves Gyp with just his own nine men, all but three of whom are killed by Richard Harrow when he turns up at the brothel Rosetti is basing his operation from, looking for Tommy Darmody. Gyp's right hand Tonino survives Harrow's shootout by hiding, and when found by Nucky and Eli afterwards, is told that he will be allowed to leave Atlantic City alive on the condition that he kill Rosetti. So Tonino meets up with Gyp and the other two surviving henchmen at the beach, and kills Rosetti by stabbing him first in the back, then in the chest.
* The Season Twelve episode "An American Hero" was dedicated to the memory of Steve Shaw. Clips of him from throughout his eleven years on the series were shown while his on-screen mother Michele Lee sang "Look at that Face".
* The Season Twelve finale "Play, Pause, Search, Part Two" dedicated that entire season to the memory of the series' co-producer Lawrence Kasha.
* The season two finale, "TOW Barry and Mindy's Wedding", ends with Chandler and Janice making out. Not a happy version like the ones above, as she's married, they've broken up many times and this closes out a season where it's established he has a lot of issues and
* the season two premiere. Of course, it's also played with due to the chaos, making it a cotton candy cloud that's raining chocolate milk... which Discord then takes and eats.
* The Seas With Nemo and Friends. And Marlin and Dory just so HAPPEN to encounter the same jellyfish and anglerfish they encountered in the movie.
* The seatbelt, if you used it at all, was poorly designed and disconnects as soon as the seat ejects.
* The Seattle furry convention Rainfurrest was banned from its usual Hilton hotel after its 2015 event for large amounts of vandalism to the building, costing large amounts of money (costing more than the hotel's yearly maintenance/repair costs). The attendees deliberately flooded rooms, which caused damage to nearby offices, and also wore fetish gear around the general public despite being told not to. Rampant public intoxication was another serious issue (including multiple overdoses on various drugs), while individual incidents included tampering with a smoke alarm so an attendee could hotbox their room, shoving towels in the pump of a hot tub until the motor broke, and
* The Seattle Mariners deserve a place on this list as well. In the 1990s, they were one of the premier teams in the American League, with stars such as Ken Griffey Jr., Randy Johnson, Alex Rodriguez, and Edgar Martínez... one of the premier
* The Sea Voyage features a group of stranded nobles attempting to eat the woman of their party. When they're stopped, they're berated for trying to eat the one who can make more people for them to eat.
* The sea / water theme extends to Naminé ('nami' — wave),
* The Sea Witch's ultimate summons an unkillable slow-moving tornado which traps units in cyclones and deals damage to buildings as long as it's near them.
* The Sea Wolf plainly isn't a royal court, it fits. Despite being a clear subordinate, Van Weyden is one of the only people who can speak to Larsen as an equal, within reason, in large part because his intellect and naivety make him both interesting and amusing for Larsen. Though this doesn't spare him from Larsen's violent temper.
* "These Boots Are Made For Walkin'", anyone? Nancy Sinatra's legs definitely helped make her famous.
* These Broken Stars abilities for his own ends, and has used his wealth and connections to have at least one person killed.
* These Broken Stars. It becomes increasingly clear as the story progresses that Tarver is being less-than-forthright with his interviewer.
* These Broken Stars: Major Tarver Merendson. Gained his rank at eighteen for unspecified heroics against insurgents on the planet Avon.
* These Broken Stars, minus our two heroes, are killed when it's yanked out of hyperspace and crashes into the planet. Tarver and Lilac watch in horror as it plunges to the planet's surface, trailing nonfunctioning escape pods on fire.

* These Broken Stars Tarver is being interviewed by has a habit of asking questions that amount to, "So what were your priorities during this desperate survival situation?"

* The second, a female called Becks, is much more slender, but muscled like a gymnast. In fact, aside from her robotic coldness, quiet demeanor, and artificial speech pattern, you be forgiven for thinking that Becks was (an unnaturally beautiful, which she capitalizes on at more than one point) human woman.
* The second, a giant mace, transforms via your character plunging it into their torso. It doesn't cost any other health.
* The second All Stars-movie features 17 magical girls from 5 different continuities. From the previews it seems to feature some of the different baddies, too.
* The second and biggest being Batman stating he knew who the Comedian was a week after they met. One: it was established in the series itself that the chemical deforms identifiable features, two: a long-running feature in the Batman/Joker relationship is Bruce not knowing who the Joker is, three: the whole "three Jokers" thing was kicked off by Bruce sitting in Metron's Mobius chair during Darkseid War
* the second and fourth season's finale, Root's status as the Machine's Analog Interface and finally Finch's endgame in the last episodes of the fifth season usually follows, which is why the status of being helped/directed by the Machine is usually called God Mode in the series.

* The second and third (1974) were much closer to what made it to air, but were hosted by a drunk Edd "Kookie" Byrnes. When the show finally made it to air in 1975, it used a slightly altered Byrnes format with Chuck as host.
* The second and third game make it clear that the geth have been on the receiving end of this from the quarians for over three hundred years. Legion reveals that despite desperately wanting to make peace with their Creators, they cannot understand why whenever they try to stop fighting, the quarians respond by

* the second and third incarnations of Venom, Angelo Fortunato and Mac Gargan, were specifically portrayed as eviller than Brock for this reason.
* The Second Angel, Prevezer is forced to do this to Gates and Dallas by Rimmer, under threat of death. Even though it doesn't go into explicit detail as to exactly what's happening to Dallas and Gates inside the Simworld, we're probably better off not knowing.
* The second anime season ends with Sylphiel running off with the heroes, but she's nowhere to be seen in the third (being replaced by Filia), so this is a subversion. Also, the last season has more of this than the third did, with Zelgadis riding on a boat contentedly sticking out among them.
* The second: an intro solo (usually guitar or bass) is very badly botched. Unless the singer is relying on a cue other than a point in that solo or a note on teleprompter or notes, he or she
* The Second Apocalypse version of Christianity. Anasûrimbor Kellhus learns to exploit the tropes of the religion to become exactly what Inrithi followers would see as a messiah. He preaches to the people and attracts thousands of followers until the people in charge feel threatened and convict him of heresy. He's hung up to die in a manner called "circumfixion," but comes back even stronger, now with the circumfix as his symbol. It's all just a means to an end for Kellhus, however.
* The second appearance of Solomon Grundy. Dr. Fate, Green Lantern, Superman, and even Amazo could not take him down. Repeat,
* The second Apsalus, Apsalus II, was outfitted with the mega particle cannon, but using both proved to be a drain, requiring the final unit, the Apsalus III, to be outfitted with two Minovsky Craft Systems, three Rick Dom engines and a massive expansion to its body.
* The second arc becomes even more complex, with the protagonists traveling to another world
* The second arc concerns the lead singer of the rival band, Nuclear Bastards, who was the only survivor when the rest of her bandmates were killed by the house. She was covered in their blood and it won't come off, because it's
* The second arc introduces the youkai of Tohno which includes the swamp kappa Amezou and the village leader Aka-gappa (literally Red Kappa) who is of a third, unspecified type of Kappa.

* The second arc was even worse, beginning in March 2011 and lasting until February 2014 and that's with minimal slip and a further increase near the end to five days a week. It also had a lot of world-building and new characters, which were handled in the form of
* The Second Assassin than anything else, with the author explicitly referencing this in the same epilogue. There is no evidence such a plot really happened, needless to say.
* The Second Battle of Awaji is mostly an offscreen event, as the Shadowkhan sweep over the island. However, as they take the final human-held fortress, a large naval battle occurs immediately after,
* The Second Battle of Basilisk features a failed one and a successful one. The Havenite ships assigned to attack the Basilisk System's Wormhole Terminus overshoot their target by millions of kilometers due to a very small mathematical error. Having lost the element of surprise, the Havenites need over an hour to reach their target. Meanwhile, Admiral White Haven has brought
* The Second Battle of Chin'toka marks the Breen's first major engagement in the war, wiping out an entire fleet with unstoppable energy-dampening weapons.
* The Second Battle of Las Pegasus: Massive battle between the Armies of Equestria and the Changelings controlling Las Pegasus. End of any meaningful threat posed by the Changelings for over a thousand years.
* The Second Battle of Ponyville. Final battle fought between the Equestrian

Resistance Alliance and Discord and his Changeling minions. Brought down the Reign of Discord.

* The second book's ending has Nikita telling Robin that she knows a guy who can get them to the Archive, where the secret of Robin's identity is hidden.
* The second book starts with Stanley and the Royal Crown Coalition II thinking they have a trump card to easily win the major battle in Spacerock. It ends with Stanley
* the second book, the Slytherin team uses the fastest brooms available on the market but lose horribly since not only did their seeker buy his way onto the team, their "tactics" amount to injuring the other team until they can't play. Their team as a whole seems to embrace this, as most of them are big bruisers who power their way through the opposing team in contrast to the Gryffindor team, who emphasize more skillful play and teamwork.
* the second book when John leaves the embalming room, normally his favorite place, because the body on the table has been brutally tortured and he can't stop picturing himself inflicting the same things on his neighbor/crush, Brooke.
* The second boxing match between American Joe Louis and German Max Schmeling was very much one of these. The bout happened just a little over a year before the start of WWII, and Schmeling had become a huge propaganda hero in Germany both for briefly holding the world title and defeating Louis years earlier. With the coming conflict seemingly inevitable, the eyes of the world were on the bout, which was viewed as a showdown between America and Nazi Germany. (Even if Schmeling himself was very much

* The second campaign instead has Frumpkin, Caleb's familiar, who usually manifests in the form of a cat but can also take other forms as required. So far, he's been several types of bird for aerial scouting, and an octopus for underwater missions. On the road to Nicodranas, the Mighty Nein encountered a travelling merchant selling exotic pets, and the encounter resulted in Jester buying a Scarlet Weasel, which she named Sprinkle, and a Blink Dog puppy which she named Nugget, and

* The second case is during the Last Battle, when Egwene al'Vere sacrifices herself with a weave she literally just came up with to undo the reality-shredding damage that overuse of balefire
* The second case takes place at the high school baseball championships, an all-day event that covers the semi-finals and finals all at once. A mad bomber has decided to destroy the entire stadium and everyone in it, and it is up to Conan,

Hattori, and police inspector Nakamura to find the cell phones the bomber has scattered throughout the stadium containing clues that eventually lead to him. In the end, the bomber's motive was some kind of convoluted revenge for his son's accidental death. Of course, it the fault actually rested largely with the son, who had overworked himself training and thus was unable to avoid getting run over on his way home, but the man still blamed the sport anyhow and planned to destroy the stadium as a form of symbolic revenge.
* The second chapter has Encyclopedia helping a kid out with Bugs Meaney.
* The second chapter is just a paragraph about the leader of the assassins telling his men to return to their employer's company. The first name of Kai's victim and his company put together is
* The Second Chronicles of Thomas Covenant is crammed into it. The next Sun is always random. People remember when Suns lasted 7 days, now they last three. What happens when it reaches one ... or less.
* The Second Chronicles of Thomas Covenant, one of the subplots involves a sorcerer who uses pure gold as his power source, but must deliberately put a flaw in each spell. For example, he created a magical prison for the destructive Sandgorgons, the flaw being that if a particular Sandgorgon's name is spoken aloud, it is released until it kills the speaker. He wants Covenant's white gold ring, because being an alloy, it is "flawed" already, and thus can be used to create perfect works.
* The Second City - Chicago, Toronto, other locations of varying permanence
* The Second Civil War depicts the break-up of the USA, starting with the secession of Idaho and snowballing from there.
* The second class are the Zoan, which allow the user to transform completely or partially into an animal, or an hybrid form between the user's original species and devil fruit's target species.
* The second colony of Roanoke Island. Established in 1587, one of the governors decided to return to England to gather supplies, since lack of supplies was why the first colony failed. War with Spain prevented him from returning for three years. When he finally did return, the colonists had all disappeared, with only the word "CROATOAN" carved on a fencepost as a clue to their fate. To this day, no one is sure what became of the colonists.
* The second comes when everyone learns there is no curse on Ketafa — even Jeft believed it — and the gods could see the continent all along, but told everyone there was a curse on it so they didn't have to spend money "godding" it. The actual effect of the Vasyn is to end the reign of the Dalns gods and turn the planet over to the Pyar gods. Whether this is a Good Thing will be explored
* The second comes when the mayor hires three experts. The experts are replaced by the Beagle Boys, who try this... Except the collectors are still the guys who got defeated the first time.
* The Second Coming, a day in Heaven takes about fifty-seven Earth years. As such, when God goes for a week off in 1609 at the height of the Renaissance, he returns in 2011 to find the planet falling apart.
* The Second Coming) discovers that he's literally the son of God. He compares the experience of accessing divine omniscience with a human brain to "downloading fifty-million megabits into a pocket calculator," and, though it doesn't seem to be actually dangerous, he admits that it hurts.
* The Second Coming is another normal stick figure, yet he's still totally badass.
* The Second Coming of Christ apparently happened in 2443, although its only lasting effect seem to have been the destruction of most of the world's video tapes and that people now prefix the name Jesus with the word "Zombie".
* The Second Coming writer Russell T Davies and starring Christopher Eccleston proves who he is by creating daylight around Manchester City's football stadium during the middle of the night - he is not explicitly asked to show his powers, but decides the only way to prove it is to do something on a significant enough scale to be believed from the outset.
* The second commercial is even worse — a kid isn't sure about accepting food from strangers, but Ronald tells a kid it's OK — he's Ronald McDonald!

* The Second Confession - a murderer tries to take credit for a hit-and-run to hide his role in ending his partner's life. Unfortunately for him, there was an eyewitness, who wrote down the actual hit-and-run's license plate.
* The Second Congo War and its still ongoing offshoots. The aftermath of the Rwandan genocide mixed with the realization that the DRC had a crapload of resources to be exploited resulted in most of its neighbors and some countries further afield taking sides in order to loot the country's mineral riches. And killing several million people.
* The second Corinthian pulls this on Matthew—whom he had previously sworn to kill—in
* The Second Crimean War (an American from Miami stranded in the middle of a Ukrainian civil war in the dead of winter) is an example of this.
* The Second Cyrodiilic Empire was founded by Reman Cyrodiil I (though he himself would never hold the official title of Emperor). After uniting the disheveled petty kingdoms of Cyrodiil against the threat of
* The second Dawn of War had vehicles that still followed this trope, though the unit proportions are about equal to the tabletop models.

* The second DHMIS features even more shifts, mostly with claymation/stop-motion animation, such as the "Victorian Time" scene, the rotting apple, and Yellow Guy's reflection.
* The second DLC introduces Mr. Torgue, founder of Torgue Corporation. Despite being a screaming maniac, he personally designed all of Torgue's weaponry (all of which are of the Explosion element).
* The Second Doctor and his companions while they are peeking out of a London Underground tunnel in "The Web of Fear".
* The Second Doctor and Jamie, mostly because the actors both thought it would be fun to play them like this. Keep in mind that this was in the 1960s, when homosexuality was still illegal in Britain (although by that point barely ever prosecuted).
* The Second Doctor can tie his bow tie, but never straight or evenly. The knot is correct but askew.
* The Second Doctor companion Victoria Waterfield is an exaggeration bordering on subversion — she is actually quite brave and adventurous but has a truly eardrum-shattering scream considered painful even in-universe. In "Tomb of the Cybermen", Victoria even stuns someone pointing a gun at her and a friend by shrieking so loud he can't think. In "The Ice Warriors", her scream causes an avalanche that takes out her captor. In "Fury from the Deep", her scream is the weapon that defeats the
* The Second Doctor especially loved to outwit his enemies by being as annoying as possible.
* The Second Doctor's ability to obsessively read people's social dynamics started when Gerry Davis was fascinated by Troughton's ability to do the same.
* The Second Doctor's companion Zoe comes from the 21st century, but few dates are given for her era... until in "
* The Second Doctor's outfit is supposed in-story to be the First Doctor's outfit, but baggy as it now no longer fit him properly. In reality, both men were about the same size, so the baggy outfit had to be made especially, resulting in significant differences bordering on

* The Second Dream where the true nature of the Tenno are revealed; Tenno do not "wear" their Warframes, they actually remotely control them via somatic link due to their human bodies being unable to safely project their powers without breaking

down or becoming unstable. Once the Tenno is installed in the somatic chamber on the ship, they will become much more...vocal during missions, musing about certain factions and enemies and shouting encouragement to their warframes when downed in combat. The warframes themselves continue to play this trope straight, though it isn't clear whether they prefer to remain silent and let the Tenno do the talking, are physically unable of speaking, or simply aren't autonomous enough to have independent thought or speech.
* The second dream world uses this as background music, fitting what's meant to be a character's nightmare about an ominous
* The second dub was recorded in the UK, and has Daniel Flynn dubbing Jackie Chan, whose character name is retained as Freddie Wong. Beggar So was renamed "So Hai". Has seemingly replaced the original dub and has appeared on most commercial releases, the original dub becoming somewhat rare and sought after by many fans of Chan's films.
* The second during the final episode Although it is justified considering that the Gundams in question actually emit sparkles.
* The second earliest is Luffy's hat; in the anime, its importance isn't explained until after Zoro joins the crew, as opposed to chapter one in the manga. But after the
* The second edition corebook tells of the Children's Crusade, an entire covenant of undead children — indeed, they had sole right to Embrace children, and frequently non-Crusade child vampires were put into their care. Eventually, the adult vampires discovered the Crusade was twisted, corrupt in ways they could not understand or tolerate,
* The second edition of the Champions/Hero System rulebook explicitly pointed out that in the game system as it existed at that time, DEX was the
* The second edition setting book contains, by necessity, many spoilers to the previous campaign paths that occurred in canon as the setting moves forward. However, it also contains a bit of the same inversion as the example below: they refer to the "mystery" of Razmiran, the living god, and who he really is. What we actually know from the previous setting book is that he's a
* The Second Edition upgrades it to Omniglot Translation, removing the restriction on writing, to compensate for the fact that characters get fewer Knacks.
* The Second Encounter (which also makes significant changes to the engine, graphics, weapon selection, and so on).
* the second episode, and she cheerfully continues talking to Lucy about how much fun the brawls are before passing out.
* The second episode "Another Benghazi" introduces "Al-Harun" as a stand-in for Qatari Arabic-language news service Al-Jazeera.
* The second episode begins with a bait-and-switch initiation video for Glomgold Industries starting with Glomgold kicking down a section of wall, boasting about his wealth and belting out the appropriate slogans, before personally entering the room the video's playing in, cheering his own name.
* The second episode circles around an amulet with a bright green gem that causes the bearer to transform into the spirit of the Dragon of Aaragon when angry.
* The second episode features a literal example: the writers pelt Liz with things for some reason or other.
* The second episode had a full-on fight break out in the senate when Pompey's supporters passed a motion that called on Caesar to return and surrender or be labeled a traitor and condemned to death. Caesar's supporters did not take this well, as might be expected. The fight
* The second episode has Applejack telling Twilight to jump, and Fluttershy and Rainbow catch her.
* The second episode has Homer and Bart suffering through a performance of
* The second episode has the castaways gathered in an extra-strong hut to weather a storm. When it begins to look like it might collapse around them, Skipper orders Gilligan to lead the others to safety while he goes down with the hut.

* The second episode makes an offhand reference to Emma staying in Tallahassee for a while - a full season before it's revealed that Emma lived there with Henry's father.
* The second episode of Season 3 sees Matt kill the lights before entering a basement where the gangbangers who carried out an attempted kidnapping for Wilson Fisk are holed up. Things play out exactly as one might expect.
* The second episode of series two, entitled "Lesson 8: Plan Christmas Schedules The Burkiss Way", which mocked the space-filling rubbish that gets shown on TV at Christmas;
* The second episode of the DLC "Burial at Sea" turned into a stealth game as Elizabeth, physically weaker than Booker, not good with a gun, and
* The second episode of was dedicated to Carlos Lopez IV, a stuntman on the show's first two episodes who perished in a parkour accident in Lisbon, Portugal.
* The second episode of, who died a year prior following a battle with colon cancer.
* The second episode, "Our Boy Is Back", features one of these, who is returning to town after a five-year absence. During his previous crime spree, he raped half a dozen women, killing his final victim. Detective Vera is revealed to have been (and still be) utterly obsessed with finding the guy, to the point that he relentlessly browbeat two (ultimately proven innocent) suspects (the last victim's neighbor and her boyfriend) until the DA had to finally warn him to leave both men alone.
* The Second Europan War that forms the backdrop to the series is based on
* The second example happened in England 1966. Defending champions Brazil were pitted against Bulgaria, Hungary and Portugal, and only beat the first, who employed
* The second example in NGE is of Kaworu, who doesn't actually pilot Unit-02 when he hijacks it - he floats nearby in the air while remotely controlling its movements, using it to break into Terminal Dogma in an attempt to cause
* The second example is played straight. Snacker lives in Treasure Trove Cove and will spawn anytime you fall into the water and will bite at you until you return to shore... or die. He also has a message every time he spawns about how much he'll love eating you. He can be killed with ordinary attacks, but that will only save you for that time in the ocean. Go in the ocean again, and he'll be back like nothing ever happened. Snacker also shows up in Rusty Bucket Bay. In oily water that makes Banjo suffocate on the surface.
* The second example is the child characters' hair colors, which are inherited from their fathers. And since mostly any male can marry any female, that's a
* The second example of this trope is the Mush Bar, which is the first edible item players can produce and, going by its recipe, is little more than heavily processed mud. Due to the process used to make Mush Bars, they will always have germs on them, meaning eating too many
* The second example, written as "Super Rescue", was similarly based on a real-life incident that took place at Waterloo Station in 1967.
* The second expansion pack suggests that Casavir lives, but he is a prisoner of an enemy country.
* The second explanation plays this trope straight. Most will speak the galactic trade language, but there are those who can't or simply choose not to. For them, there is this trope, detailed in the downloadable content and in the
* The second fight with Solon, who is fought and defeated at Chapter 10, two chapters from the end of the first part. Given that Byleth has just collected their
* The second film also adds Robert Hardy as Cornelius Fudge, who works him much stuffier than in the book.
* the second film, Grindor acts as this during the 3-on-1 battle in the forest while in the final battle, the role clearly belongs to Devastator.
* The second film has him take five gunshots to the chest, two more to the eyes

which merely impair his vision instead of blowing off his head, and he's at the center of an explosion which, while rendering him unconscious, doesn't kill him.
* The second film has two: one where Reggie and Mike break into a hardware store to get any weapons they can improvise (and Mike makes a makeshift
* the second film in the premise, and simply sounding silly. All subsequent entries into the series simply went with the explanation fans had assumed all along: that Mimetic Polyalloy is very good at mimicking flesh.
* The second film in the series shows that the Statue of Liberty was constructed to conceal a giant
* the second film of the era moved a little closer to the serious side, they still had none of the bleak tone of the original.
* The second film plays with this more. The plan boils down to "don't interfere in 1955 events until we can avoid a
* the second film, the Pyramid of Khafre (Directly adjacent to The Great Pyramid) is partially destroyed to reveal the Sun Harvester.
* the second film who originally intended to stick closer to the comics and have the mutagen be the creation of a brain-like alien race called the Utroms. Professor Perry, who still appears in the movie as the man who created the mutagen, was going to be revealed as the last Utrom still on Earth. However, the cartoon featured a villainous alien brain named Krang who bore a strong physical resemblance to the Utroms but little else. Since the movie was being marketed to fans of the cartoon, the Utrom subplot was ditched because of concern that viewers would assume the brain was Krang.
* The second finisher, the Fujiyama Tiger Breaker, consists in using a

* The second flashback to her revolves about her cooking a meal, as she did every other Wednesday for years, for five friends and their mates and children.
* The second flavor are mods that try to insert additional races, while mostly retaining original units. These can either mean original units, or factions from the original Homeworld. So far, the most successful one is the
* The second floor's final test's pass condition is supposed to be for the team to help Bam and Rachel get through to the Net Dolphin Queen, but only Rachel does. Everyone passes anyway, without it being brought up that they technically shouldn't, though at least they're uncertain whether they will. In the original, the explanation was given that Bam asked the Administrator that everyone else could pass even if he doesn't make it.
* The second form had a Halloween-style setting, with the adult of the team still poised above the vat but the child now standing inside a gunge booth to the side. In this game, the adult's objective was still to answer five questions correctly and light five pumpkin lights next to them, but they would instantly lose if they ever answered with a word that began with a certain letter announced at the beginning of the game. The questions were usually deliberately set to lead them into doing this (if the letter was B, for example, a question might be "What is the opposite of 'forwards'?" - the adult avoided this one by answering "Reverse"). If they made a mistake or ran out of time, they were plunged into the vat - if they managed to get five correct within the time then their nominator was gunged instead. The rule above still applied, though, even if it made rather less sense in context.
* The Second Foundation is the opposite of the Foundation on Terminus in many ways; established at "the opposite end of the galaxy", hyper-focused on developing the science of Psychohistory (and by extension, telepathy), and they use multiple levels of secrecy to hide even their existence. They've sacrifices members several times to convince the First Foundation that the Second Foundation conspiracy has been eliminated. Their job is to make sure that the Second Galactic Empire never falls.
* The second game actually sets up the plot, showing Psy-Crow distracting Jim long enough to kidnap Princess What's-Her-Name. For this reason, it was the only Saturn game to

* The second game adds Fu Xi and Nuwa, deities in Chinese mythology, Gyuki, monsters from Japanese mythology, and even Sun Wukong from
* The second game adds specific formations for land (phalanx, staggered or double lines, and wedge) and sea units (lines are used for broadsides, crescents to gang up on an enemy). The expansion gives the Zulu civ an exclusive "Horns of the Impi" formation, essentially the crescent formation on land that also gives its heavy infantry a damage boost while using it. Like the first game, having too many units will cause them to split up and spread out, turning what should have been a steamroll into a piecemeal defeat (unless you centered the attack order on an invulnerable target like a resource or the edge of the map).
* The second game adds the Dnyarri (toads), the Druuge (pigs), the Melnorme (literal
* The second game adds the warlock class. It takes some effort to play as a warlock, as it tends to be fairly disappointing for a rather longer time than a wizard or sorcerer, but get them to a high level and they become almost unstoppable.
* The second game also featured "Callista", which was originally made for
* The second game also has Sir Hammerlock who has a mechanical right arm and leg (ripped out by a thresher) and Gaige who has a mechanical left arm (who built it herself after
* The second game also reveals the explanation for the Great Rift of Klendagon, believed to have been caused by a glancing blow from a
* The second game, and all the side media like the Ratman comic, firmly establish
* The second game and the Illusive Man's hideout. If they wanted to contact somebody else this way, they would need to do more quantum entanglements.
* The second game and Toys In Space also have various failure cutscenes for missions, ranging from being melted by a magnifying glass to
* The second game assumes the Voodoo Lady helped you in the first game. It's possible to complete the first game without ever talking to her.
* The second game at least addresses the issue, showing at least three (likely four) of the survivors are still alive and working to rebuild the world. Not only that, the
* The second game averts since. In fact, being very careful with what you have is a big part of gameplay.
* the second game begins with Phoenix getting hit in the head by a heavy fire extinguisher, causing him to forget who he is as a convenient way to do the tutorial. He gets his memories back by the end of the case.
* The second game, Buried in Time, reveals an abandoned silo converted into the antagonist's hideout, complete with futuristic computers and machinery everywhere.
* the second game by yourself and reach the city of Raseir instead of waiting for the caravan to cross as part of the group. It doesn't actually do anything for you because the city guards won't let you in, but if you have enough supplies and know where to go, it can be done.
* The second game can go either way. They're not forcing players to reinvest; as all the old figures can be used in the new game, and they even put together a cheaper package without the portal peripheral for those who already own one. However, old figures are treated as
* The second game Clockwerk of the first game from members of the Klaww Gang so that they can't be used for bad things (or worse yet, to revive Clockwerk).
* The second game considers only the first half of Kyosuke's storyline from the first game canon, as the first half of each story follows the same war on different fronts.
* the second game counts your successful attempt when it starts the mission over, which is probably the only reason anyone's finished the game. (That, and Bentley automatically escapes when he gets the last one.)
* The second game. Despite having the same characters, the games taking place in AU versions of the same world and with AU versions of the cast make this a Level 0.
* The second game doesn't even bother repairing the damage. "Players don't want to know about your fall from grace, it's BORING!"

* The second game ends with the Godmodder being revealed to be Not Quite Dead
* The second game focuses on a class at the military college, and while the player's unit is explicitly the dumping ground for applicants that scraped into admission but fit nowhere else, there's generally a lot more discipline.
* The second game had the Ultimate Artifacts (except for the Golden Goose, which provided a powerful non-combat advantage), acquired by finding enough obelisks to figure out where to dig. The Artifacts provided +12 to one primary statistic, +6 to two or +4 to all, which was more impressive in H2 than H3. The Price of Loyalty expansion added the Battle Garb of Anduran, a prototype Set Artifact (unlike H3's set artifacts, it only took up one slot) consisting of three items — together providing +5 to attack, defence and spellpower, while also providing maximum luck and morale to your troops
* The second game has a paratrooper plane which drops infantry at the targeted location. Western powers can also relocate the occupants of a single fortress via parachute (without needing a plane) to any location they can see.
* The second game has a similar sequence in a Sd.Kfz. 222 armored car that breaks down making a complete circle around the town.
* The second game has "battleriders" that are the size of the first game's destroyers or larger, have no FTL drives, and are launched from carriers or fixed bases. More like gunboats than fighters, especially since they max out at dreadnought size.
* The second game has Snake acquire a Nikita rocket launcher that fires "Kissiles": missiles with lips that only knock their target unconscious by
* The second game has somewhat more realistic gore (though it advertised "16 points of dismemberment"), but
* The second game has the people of the Faiths, desert-dwelling tribes for whom religion is very important and who are not big fans of the Empire extending its control over them.
* The second game has the Slylandro, gasbag aliens who live on a gas giant, both as a race and individually. They're the only ones in the entire game that ever met the Precursors, whose teachings they still use, and the one you personally speak to remembers when the Ur-Quan were still brown, rather than split into green and black, as they used to visit often back then. This split, that also caused both of them to become slavemasters and genocidal (respectively), happened over 20000 years ago.
* The second game has the Umgah do this to the Ilwrath by means of a powerful hyperspace transmitter. As a joke, they tell the Ilwrath to go to war with the neighboring Pkunk (although some believe that the Umgah
* The second game has two specific instances near the end of the game where you only have one shot to place a portal. For these particular instances, if you accidentally fire the wrong colored portal, the other one will silently take its place.
* the second game, if you die at any point, you can mash the jump button to regain a sliver of health that brings you back. You'll die in one hit and this only applies if there's actually an intact body to revive, but it can be tremendously helpful if you're close to finishing a boss and get killed at the last second.
* The second game indicates that the Hunt will be a part of the games' overarching main plot.
* The second game in the series gives slightly more information on the subject, suggesting that the problem is that mixing spells and technology
* The second game introduces Rezbits, a mechanical enemy that can infect Samus' suit with a virus, causing her visor to become staticky, the framerate to slow to a crawl and the HUD to display garbage text until the player reboots Samus' suit.
* The second game is also this. Like above, Logan and Xing control exactly the same; the only new things to the engine are a few additional weapons.
* The second game is mostly forgotten by fans (and for good reason).
* The second game is the most blatant, with the main campaign being based upon the Russo-Georgian War that was making headline news at the same time that it was in development. It also retroactively became a counterpart conflict for the War in

Ukraine. It features a break-away state rebelling against a
* The second game makes it more dangerous to bunch up by introducing the PACT Destroyer, an enemy unit whose missiles do splash damage upon reaching their target.
* the second game more useful for smashing crate stacks and small enemies.
* The second game, notably, avoids this from the main plotline, but the possibility of a second war between the geth and quarians is addressed several times. Additionally, the
* The second game of the series did it too. There were no huge balls of blue light or mushroom clouds, but the killed mech would be torn apart by a series of fairly small explosions, implied to be caused by weapons
* The second game of the Tiberian series does this with less-explosive ammo crates.
* the second game: once Aya reaches the Akropolis Café, she sees a young woman there. She faints, but her hand twitches as she wakes up and transforms into a monster right before Aya's eyes.
* The second game reveals that the vast majority of the Geth prefer a "live and let live" approach, the ones that followed Saren being seen as heretics.
* The second game starts you off in the GTF Myrmidon, a newer space superiority fighter with six gun ports instead of the usual four. On paper, the Myrmidon seems to be a good overall fighter due to its above average firepower and balanced stats, but it actually suffers from being a
* The second game takes place on their home planet, by which time the masks have conveniently become a symbol of pride for the Helghast.
* the second game, the Enclave has access to enough fossil fuel to manage a small army, complete with helicopters due to having total control of the last oil rig in the entire world. This made them more powerful than the Brotherhood of Steel, and they could curb stomp any faction in the Wasteland. They also have a strain of the Forced Evolutionary Virus that would allow them to kill off anyone and everyone via massive hemorrhaging and inflammations before finally dying after an hour of torture.
* the second game the most badass krogan since Wrex himself). Then came Urdnot Fortack, who was assigned duties such as medicinal engineering and crop genetics under Wrex; a duty Fortack laments, saying that krogan scientists are supposed to make things that explode. (He is much happier under Wrex's brother, should Wrex be dead, manufacturing armament.) And finally, the krogan mechanic on Tuchanka, who complains that he never gets any respect for what he does, even though everything would fall apart if he wasn't there to fix it. Krogan mechanics working on other worlds do seem to get respect though.
* the second game, the player and Gann or Safiya (depending on gender). Also in the second game, before it was cut, an evil female player and Bishop.
* The second game turns this on its head at points by transforming Ecco
* the second game uses "Marionette" for the character, even renaming the Phantom Puppet to "Phantom Marionette".
* The second game was working on a romance with a female Shepard and Tali, but her voice actor was really uncomfortable with the idea so it was dropped.
* The Second Gate normally channel energy they've "metabolized" and stored, but in a pinch, they can draw power directly from their biological functions. The mind instinctively tries to cut off psionic connections to prevent permanent damage at the same time, which can result in anything from mild burnout to a coma — which is usually too late to save the user anyway.
* The second generation: Lana (and Mana), Patty (and Daisy), Fee (and Femina), Nanna (and Janne), Altena, Larcei (and Radney), Leen (and Laylea). On the enemy side, we have the
* The second-generation protagonist builds on the first's foundations and establishes the family's position in the new world (The daughter who becomes entirely assimilated in the host culture and goes on to have a successful career).
* the Second Generation) whereas girl!Morgan, Cynthia, and Nah are the shortest girls. Pairing them up causes this trope to happen. Nah and Cynthia can also marry

a male Avatar, and a female Avatar can hook up with either Yarne, Brady, Gerome, or Laurent, so...
* The second gonk, Emokiss, is equally sensitive, though unlike the previous example her ugliness is self-inflicted, as she's constantly seen eating. She actually destroys her sentient Guardian &#65533;RM after it
* The Second Google Incident ended up being cut for real (it was restored afterwards).
* The second Greed takes the words of the first Greed to heart. After Father consumes him, he uses his Ultimate Shield in a reversal mannter to turn Father's body into the weakest form of charcoal, allowing Edward to strike the finishing blow
* The second group is the ships of the Lalairu, a neutral nomadic species that at times offers to host diplomatic meetings against enemies, maintaining the parlay under threat of annihilating whoever fires first. At the RV Trianguli meeting between the Rihannsu and the Federation, the Rihannsu react to
* The second had a wedding where the bride's jealous ex-boyfriend tells her off at her reception as he strips down naked and finally walks off triumphantly...right into a glass wall that fatally cuts and punctures him. Worse, not only is the bride horrified by his actions, she's genuinely heartbroken over his death.
* The second half-demon in the series, a manticore-baby, also inverts it.
* The second half of "Attack of the 5 Ft. 2 In. Women" has a story in which Lenora Babbitt tells Dick Langley about the events that had led up to her arrest: She had cut off the penis of her drunken husband, Juan Wayne Babbitt, because he couldn't satisfy her sexually.
* The second half of episode 9 was done in a completely different art style, but with more subtlety (Compare the eyes, chin, and hair of Shinobu with the first half of the episode). It was probably done to see if anyone noticed.
* The second half of Season 2, however, deals with another SHIELD civil war, this time between Coulson's rebuilt but traditionally run group, and
* The second half of season one, however, namely the reveal and the biggest connective thread the show has ever had - that
* The second half of Season Three has the residents of Storybrooke having to deal with
* The second half of "The Way Home" by Thyx, a solo project by Stefan Poiss of Mind.in.a.Box, uses the same rhythm and synth progression of MIAB's "Doubt".
* The second happens during a flashback revolving around events before the game.
* The second happens in Sonichu 12, during a dream Sonichu had. Count Graduon's voice presents him the choice between saving Christine or Rosechu, both of whom are locked in burning rooms. Sonichu chooses to save Rosechu, who has
* the second, happens to one gremlin after getting flashed with a camera by another.
* The second happens when the boat rental man testifies that he saw Edgeworth on the night of the crime, saying "Never thought I'd shoot someone" while his cravat fluttered in the wind. Edgeworth objects to this on the grounds that he never said that, and "Moreover... my cravat doesn't flutter to that extent!" Cue the the entire courtroom face faulting.
* The second has Ratcliffe exploiting this, inviting Pocahontas to a ball at the court where a bear-baiting is to happen. Considered appropriate public entertainment to the English, Pocahontas is horrified and calls everyone "barbarians" - getting locked in the Tower of London for it.
* The second has Sean enter another Grand Prix race in Paris. This time, his car is laden with explosives so he can take out the Nazi high command.
* The Second Hokage calmly explains the actual process of causing a Sharingan to evolve. Whereas the standard method known for developing the Mangekyo is "kill your best friend", he explains that during moments of severe emotional anguish, the Uchiha's brain releases a special chakra that mutates their eyes.
* The Second Hokage explains that when an Uchiha feels strong emotions, it causes their brain to generate a unique type of chakra. This chakra mutates the eyes into Sharingan. It's just that the strong emotions tend to be grief or rage (though

given how ninjas were often
* The second Hourman Rick Tyler also had the ability to spend an hour in a timeless dimension with his father. This eventually ended when
* The Second Hundred Years and is revived 67 years later, lives with his much older son and same-age grandson.
* The Second Hundred Years, a series that only lasted one year in 1967-68. An elderly man discovers his youngish father who was frozen in a glacier in 1900. One scene has the father surprised to discover that there now are African-American doctors.
* The Second Hundred Years (played by the same actor who played Luke).
* The Second Hundred Years. This trope was the entire concept of the show.
* The Second-In-Command of NORAD is a Canadian (it's NORTH AMERICAN Air Defense, not American Air Defense) — and yet in all the movies set in Cheyenne Mountain there is nary a Canuck in sight.
* The second indicator is when he'll fall victim to whatever scheme the
* The second installment has a bizarre ending where Mr Hopkins decides to time-travel to London to visit his grandfather
* The second installments feature boss battles, in which the bosses use different kinds of methods to block your view. Most annoying is Botan's, which covers the screen in black.
* The second instance when after Sally was roboticized, leading Sonic, Tails, and Amy to hunt her and Eggman down to save her.
* the second Investigations game with his body double. The imposter himself, however, is actually killed by Simon, which Edgeworth is finally able to arrest him for.
* The second is adding subtitles that have nothing to do with the original dialog.
* The second is Aldonza's Combat Drive; unlike Callista's Super Mode, this increases
* The second, is at the end of "iSpeed Date", Sam walks in on Freddie and Carly sharing a slow romantic dance in each other's arms. She walks out with saying a word. Again, it's not been brought up again, so speculation abounds on her motives and feelings for Freddie (or
* The second is a twenty-year period between the end of the Vox Machina campaign and the beginning of the second campaign.
* The second is a universe that takes place in Tarantino movies that are supposedly released in both the real world and the main Quentin Tarantino Universe, which consists of
* The second is Deb Stanley, a pharmaceutical researcher who looked too deeply into one of Pete and Myka's cases. She was adamant about using the knowledge of artifacts to create new, more powerful medical advances, but her motivation was due to a father who died of Parkinson's rather than greed. As such, she was trusted enough to be shown the Warehouse, and after seeing the Rod of Asclepius, and remembering the oath her father took to do no harm, she chose to become a Secret Keeper. She was last seen being asked by Adwin Kosan, an enigmatic man who is heavily implied to be the Warehouse's chief executive, if she wanted to join the Regents, the Warehouse's executive board.
* The second is in book eleven: Darren goes to his own hometown and sees his sister and other people, and decides it's better to not get involved in the lives of his former family and friends. Still, that doesn't stop the villains...
* The second is in the form of free DLC voice packs for the characters, including
* The second is in the opening cutscene in "The Great Esc-ape" Timmy, Cosmo, and Wanda learn that Timmy's mom has been kidnapped by an evil ape king.
* The second is Isabela, whose specialty is fighting battles of attrition against multiple enemies.
* The second is more of a subversion, seeing as the film follows two different storylines and the expected final girl of both (Aubrey and Allison) is dead by the end of the movie. Jake is a sole survivor in this film.
* The second is now defined based on atomic clocks, so that it doesn't change while tidal effects slow down the Earth's rotation (or when tectonic activity

alters the day length). It also means you don't have to be watching the Earth to measure a second
* The second issue happens in Episode 22, where the editor reveals that the author didn't like the show's
* The second is that the TV landscape in general has inverted in America. Hard to imagine now, but soap operas were traditionally allowed to be edgier, whereas
* The second is the "Black Numbers" of Tempest, made up of 711 of the strongest demons in the whole world and lead by Primordial Black Diablo, Primordial White Testarossa, Primordial Violet Ultima, and Primordial Jaune Carrera. The latter three brought 202 of their strongest from their personal legions, while Diablo recruited 101 various demons who he deemed strong enough. They are considered the
* The second is the Coveted, a strangely sharp executioner's axe made of solid diorite. According to legend, a royal executioner named Erland received it as a mysterious gift and immediately took a liking to it. Power in the kingdom shifted, and before long, the executioner had used his axe on the entire royal family. Power shifted further, and the executioner became king. But the executioner never resigned from his grisly station, and the axe was well fed, though never satisfied. Erland would later die alongside
* The second is titled "Guitar Hero Magazine" and is set up like an actual rock magazine. The cover outlines articles such as "A Rare Interview With Axel Steel" and "Clive Winston Retrospective" (all of which actually exist in the "magazine"), and the top mini-headline is "Getting Started | Controls | How To Rock | Star Power". The Table of Contents is designed like one in a magazine, and there's even a "Letters to the Editor" department.
* The second is Torbjorn Lindholm, another founding member of Overwatch, and his youngest daughter Brigitte, a travelling companion of fellow Overwatch alumnus Reinhardt and an aspiring hero inspired by her father and her friend to build her own suit of armor and fight the good fight.
* The second is Vampirione. It has better manouvering abilities than Pacificus but is slower, as shown when its inhabitants chase Pacificus to try and
* The second is what actually happened during the duel itself. All we do know is that Hamilton had a hair trigger installed on his weapon yet chose to deactivate it, both men fired their guns, and it ended with Burr killing Hamilton. Hamilton's second stated that he purposely fired into the air, while Burr's second claims that he actually tried to hit Burr and missed. Burr never publicly clarified which one was accurate. The men also could not agree on which man fired first. Overall, pretty much nothing about the duel itself is known nor will ever be known.
* The second is when he develops a plan to kill the remaining Titans in the supply base so they can restock their gas canisters. He has many of the remaining soldiers all inside a lift elevator, whose goal is to fire their guns into the eyes of the seven Titans, blinding them in the process. Then, a group of seven of their best soldiers hidden nearby would strike and take them down.
* The second is when he enters the former club room to find only Nagato sitting there and finally introducing himself to her.
* The second is when Negi is about to head to the Magical World, gets Asuna alone and asks her to come, seeming to imply a
* The second is when she tells Kirito to bring some tissues with him to clean up anything
* The second is when the Fabrication Machine ignites a pile of ammunition.
* The Second Italian Campaign started with another, with the Austrians blocking the way to Italy near Nice and him pulling a Hannibal and entering Italy over the Alps (something supposed to be impossible with cannons). Also, at Marengo, the Austrians had all but defeated him when Napoleon noticed he was about to receive reinforcements and had his troops launch an immediate counterattack right when the Austrians were preparing for the post-victory pursuit (though the timing of that counterattack owes much more to Generals Marmont and Kellermann Junior: together, with eighteen guns loaded with grapeshot fired at point-blank range (Marmont
* The second Jack-in-the-Box is the son of the original who took on the role to hunt the crime boss his father died fighting.

* The Second Jungle Book - and is immediately so disgusted by a tool used for torturing elephants he throws it away, saying he doesn't want anything with Hathi's blood on it. Later, he and Bagheera find themselves tracking it down again - as the man who found it was killed to steal it, as was the thief, etc. To prevent further deaths Mowgli gives it back to the cobra and recommends it to find a young successor to guard the treasure.
* The Second Jungle Book is decorated as a Knight Commander of the Order of the Indian Empire. He also received other honours, as mentioned in the final sentence of the story:
* The Second Jungle Book tells the story of two Inuit teenagers and their sled dogs.
* The "Second Keroro Platoon", a young recruit also named "Keroro", whose Keron Star gives him alternate modes based on the data of each platoon member

* The Second Life Of Doctor Mirage, Hwen Mirage is not a terribly physically dept guy even before his becomes discorporated. Fortunately, his wife Carmen is a trained capoeira fighter.
* The second light novel features the Utsumi family, consisting of a wealthy patriarch and his adopted children. The siblings turn out to be ghouls, adopted by a human
* The second line of the song "Maybe It's Because I'm A Londoner" is usually misquoted as "That I love London Town", but that's actually the
* The second major villain is Minami Azuma, who also plays this trope.
* The Second Mango is set in a fantasy world where the concept of a lesbian or bisexual queen is treated as normal.
* The Second Men create three global civilizations over their history, each lasting for millennia.
* The second "Mermaid Man and Barnacle Boy" episode shows the two heroes descending from their cave and landing into their invisible car. Though they sit motionlessly in the air for a while, Barnacle Boy soon realizes that the vehicle is not really under them, causing them to immediately fall to the ground.
* The second method is a specific school of magic (restricted to one person,
* The second method of ascension, shown by Dave, Rose, Aradia, and everyone in the B2 session, involves dying on a Quest Bed located at the core of Prospit or Derse. All of the players who reached God Tier this way had already lost their access to either their dream self, or real body, and ascended with their their sole remaining body dying on the Quest Bed in the core of their dream planet.
* The second Minotaur battle at the end of book 1. The Minotaur was killed sure enough, but it also killed Pauline, the group's Barbarian and beloved friend. What's worse is that she doesn't come back when Julie attempts to revive her at a temple, due to
* The second mission in Jake's campaign. First, you have to find three data chips in a snowstorm where, guess what? The visibility will frequently drop out due to the swirling snow. Some of the enemies faced include very stealthy flying enemies, who don't need the snowstorm to hide from you before attacking. This gives way to a retread of the siege from
* The second moment is Keita's death clip on Day 2. While you saw a death clip for Daichi on the first day,
* The second Monster Manual brought back the actual Djinn (genies of air, described as "master engineers of the fabulous"), many of whom were sealed away in objects (like the traditional lamp) after the end of the Dawn War between Primordials and Gods. They don't grant wishes any more than the Efreeti do, but they are grateful to those who help them and will usually reward somebody who aids them considerably. Oppose them, however, and you're screwed.
* The second-most famous aired from 1980-1985 and featured an announcer, over a music bed, saying "We'll return to our show after these messages." This set –

which included an underwater submarine, a window shade, a clock and others – was retained for the
* The second "Mother's Day" strip has Fatigue sneaking out of the house to go visit his mother, doing everything possible to avoid Sheen finding out. It looks as though he's doing this to avoid Sheen's wrath for going somewhere without telling him, but he was really just afraid that
* The second motive is embarrassing secrets. While it's up in the air how the students themselves would judge each other with their secrets revealed,
* the second movie. According to some EU sources, those bare, plain walls that all the rooms on Kamino had? Turns out they were actually all covered in grand, colorful murals. It's just that you have to be able to see into the ultraviolet spectrum to notice them. Similarly, another X-Wing book has a Gand character painting his X-Wing. To humans it looks plain white, but characters who can see ultraviolet comment that it's a work of art.
* the second movie, except he plays the trope straight: "You. Are. A TOY!"
* The second movie features even deadlier traps, including several bricks to the face thrown from the roof of a building and an explosion that
* the second movie finally kiss for the first time, Rhodey interrupts them and calls them "two seals fighting over a grape."
* the second movie from the same film, though, who survives despite having sex with her boss.
* The second movie has Ivan Vanko making his own arc reactor and suit, and later Tony
* the second movie, he briefly loses the power to shoot web — usually at inopportune moments.
* The second movie insisting to Jessie and Stinky Pete that Andy didn't break him intentionally.
* the second movie, King Willie starts to suspect he's being watched when a brick tumbles off the top of a nearby building, and the Predator soon jumps down to the same spot.
* the second movie, Naraku is killed during the opening credits, but it turns out it's a ploy to lure the film's main villain out of hiding so Naraku can kill her and steal her powers, and thus he returns at the climax alive and well. Nonetheless, Kaguya proves the greater evil than Naraku this round and sends him packing. When he appears yet again to absorb her while she's distracted, InuYasha blasts him with a Wind Scar, and he calls it quits... for that movie.
* The second movie's climax has a group of stranded New Yorkers getting ready to roast and eat Alex, until they realize he's
* The second movie. Several characters are protected from the effects by time displaced objects from Kagome's era.
* the second movie take over Mrs. West's electronic wheelchair with an RC controller and force it in the middle of the road, where it is hit by a truck which sends it flying through the window of the local Bingo hall.
* the second movie that a nuclear terrorist attack will occur in our lifetime.
* the second movie that plagued the post-Hillenburg era. The following season 10 continued to appease these fans.
* The second movie then shows that he's still in the desk job. Of course, it's better paying and safer than a beat cop job.
* the second movie, this is taken to its logical conclusion with a highway chase scene during rush hour.
* the second movie, we find that Ripley's escape crypod had been drifting for over half a century: she is now a woman without a place, as her family has all died of old age long before (setting up her adoption of Newt).
* the second movie, which stay totally clean even after she's been laying in dirt.
* The second murder (which is technically a manslaughter) boils down to "smack victim over head with blunt object, dispose of evidence, run away", and most of the complications of the case come when
* The second occasion is years later. Johnny has seen Roxanne reporting on one of his stunt shows. He risks life and limb and stops traffic to get her to agree to a

date with him. She grudgingly agrees. Unfortunately, the night of their date is the night Satan decides to call in his marker. Johnny is forced to become Ghost Rider and fight Satan's enemies. Roxanne drinks an entire bottle of wine while she waits; and the waiter does nothing to reassure her. The next morning, when Johnny explains to Roxanne what happened, she tells him she can either believe he believes what he's saying and have him committed or accept that he's so messed up he'd rather make up a crazy story than be honest with her.
* The second occurred five years after the Darkseid Invasion and involved the Imperium/White Martians attempting to take over after nullifying Earth's defenses, only for J'onn J'onzz/The Martian Manhunter to thwart their attempts by bringing together the Batman, Superman, Wonder Woman, the Flash, Green Lantern and Hawkgirl. This invasion was notable for the subsequent creation of the Justice League itself.
* The second ODI match between Australia and England in 2014 had Australia one wicket away from defeat, with 57 runs to make in order to win. James Faulkner, a bowling all-rounder, single-handedly carried the team over the line with three balls to spare.
* The second of Henry Spencer's "Ten Commandments for C Programmers" is, "Thou shalt not follow the NULL pointer, for chaos and madness await thee at the end." (Reading data from a null pointer is a very common programming error in C, and was particularly notorious at the time because it had predictable and harmless results on certain platforms but caused others to immediately crash.)
* The second one aired during Christmas 2014 and showed a mix of season 1 and season 2 episodes.
* The second one had Bart, Lisa, and Homer eating too much candy before bed, with the
* The second one happens about 26 years earlier and is told through a diary that the main character Rose finds. The diary belongs to a woman named Hilda, and tells the story of how she was a volunteer nurse during
* The second one in the compilation depicts a father driving his teenage daughter and some of her friends to a concert. The daughter wants to buy some gum, so they pull over to go to a convenience store. The father tries to give the daughter money from inside the car so that she could buy the gum she wants, but the way the daughter bends over to take the money leads some cops to believe that the father was soliciting a prostitute.
* The second one involves an old martial artist on a mountaintop appointing his young pupil for the role of handing out presents in Santa Claus custome. Said pupil delivers presents by
* The second one is the cycle Sigma and Phi are going though, as explained by the diagram in the true ending route. However, the characters are actively trying to break.
* The second one is Wamuu, when Joseph manages to ricochet an iron crossbow shot through his chest. Wamuu is powerful enough that this doesn't kill him outright, but it weakens him to the point he's prepared to use
* The second one (set to Ryn Weaver's "Reasons Not to Die") has Jenny remember their happy strolls around the streets of New York, which ends in memories of bitter fighting.
* The second one there is an example of one you HAVE to explain since it makes no sense on its own. Also, it wasn't exactly a joke, more than an overly wordy threat. Still loses its punch by having to be explained, but then again, Todd's just like that.
* The second one too with a train, when Octavius sabotages the controls. Spidey stops the train, which takes such a great physical toll on him that he faints.
* The second one, which counts as an example for the entire series, is the
* The second one, which is untitled, says, "The Addams Family started when Uncle Fester farted, the smell went through the keyhole and paralyzed the cat."
* The second opening features items like the Melody Violin, the Melody Charm and a brand of Tamagotchi cookies that were for sale in real life at the time it was broadcast.
* The second OVA had short, humorous segments after each "chapter" called "

* The second pair is Mason & Corey is more in line with the Two Camp Guys variety; being a nerdy, very good friend & an emotionally in touch
* The second part of Season Three has Sylar (still a super-powered egomaniac following his own whims) versus Danko (a non-powered, highly disciplined government agent acting on orders from the President).
* The second part of the name comes from the Hadoken ("Surge Fist"; the "hadou" part can also be translated as "wave motion", as in
* The second part of the same impeachment trial, occuring from January 21-23rd, 2020, interrupted 5 hours' worth of PBS programming, including several
* The second, Penguin's big plan, involved kidnapping every firstborn son of Gotham so that he could kill them by drowning them in Max Shreck's industrial byproducts.
* The second-person narration also says "Ow, your head" when Jake and later Roxy wake up from being knocked out.
* The second phase has Solaris take on a brighter and more angelic appearance, much like how the Bible describes Satan appearing as an angel of light.
* The second pilot "Where No Man Has Gone Before" features the newly mentally enhanced Gary Mitchell reading the writings of Spinoza.
* The Second Polish Republic is based out of Greenpoint, Queens, but due to various arrangements with the US government and the governments of various other countries with large Polish populations, it manages its own infrastructure and standing army, stationed in land holdings all over the world.
* the Second Punic War. They did not revolt, however, and the very appearance of these new legions was a contributing factor in the Macedons pulling out of the war.
* The second queen eliminated may have it worst of all. The first is remembered simply by being the first and leaves fans wondering
* The second quote was used in Joker vs. Sweet Tooth when the latter kicks the former out of his weaponized ice cream truck.
* The second race was a "middle distance" race from Beanotown (usually depicted as a small town somewhere in the southeast of England, surrounded by countryside) to Dundee, Scotland (a distance of abut some 400 miles). Billy was leading early in the race, but was overtaken in the latter stages and lost by several metres.
* The Second Raid also has a breather episode of its own; episode six takes some time off from the warfare to focus on Sousuke and Kaname's relationship, providing some comedy and some quiet, touching moments before things get worse.
* The Second Raid. As a Savage is about to unleash some autocannon goodness on Sousuke and co. fleeing in a car, it takes a headshot from the side. Then Clouseau disengages ECS, throws one of his machetes into another Savage then expertly dodges incoming shots and stabs the third.
* The Second Raid complete with the enemy shooting at them. Both Kurz and Mao lament "if only we had the weapons to shoot back at them," and Sôsuke proceeds to ignore them. Then, they notice the enemy catching up, resulting in them realizing they need to lighten the car so they can go faster. They contemplate throwing out their kidnap target from the car.
* The Second Raid. In the original novel he was a nondescript goon who didn't even had a name, and was known only by his Amalgam codename — Mr. Kalium. The whole psycho thing was invented by the animation team.
* The Second Raid. It doesn't make him any less of a badass, though. That's just some good character development.
* The Second Raid, Sōsuke also threatens to cut off some sap's fingers if he doesn't confess what he was trying to do to Kaname, one finger at a time. Kaname stops him before he starts, of course.
* The Second Raid. The recruiters were reluctant to sign her up until Mao revealed that her father was a Colonel in the Air Force, at which point they welcomed her into the Corps purely to annoy him.
* The Second Reality Project: Thirlox is a technomage/technomancer. He uses the power of technology to cast "magic" spells.
* The second reason is that the Skaven are numerous, organized, and extremely close (as in

* The second reference is made by one of the personality types for the player's NPC ally, who muses about how the legs, head and body of a secret weapon could be hidden under three of the larger features of three of the cities (A chapel, a giant tree and a tower).
* The Second Renaissance, when the Southwestern states, backed by a now-powerful Mexico, attempt to break away from the United States.
* The Second Reproduction, one of Lezette's CGs features him and Christina communicating through the church's wall.
* The Second Reproduction, the demons are a powerful race with pointy ears and magical powers. All of them also have red eyes and really long lifespans.
* The Second Reproduction universe, humans and demons can live the same lifespan if they sign a life-bounding contract. Thanks to it, a human can live the same time as a demon.
* The second revolution was computer terminals: a keyboard and a screen with block of text and pseudographics.
* The Second Robotech War; the series follows the main character sure, but how is the war effecting the rest of the world which would be a mix of first world and third world conditions.
* The Second Schleswig War of 1864 is this for Denmark, and would come to shape both the general Danish foreign policy and view on warfare for least the next century, if not still affecting it to some degree today. The Danish army was poised against the Prussian Army and the Austrian Army, which were superior in both manpower and technology. The leading Danish politicians knew that the war was likely, but was not overly concerned about it at first. They had thought that the Prussian Chancellor,
* The second season added the characters from the tail section of the wrecked plane to the cast.
* The second season continues the tradition, with the first episode's being a homage to
* The second season episode "And Now For A Word" has a downplayed example: A single shuttle is sent to run a single-warship blockade of the system jumpgate, because Captain Sheridan doesn't think the Centauri are willing to risk an actual shooting war with Earth over the issue (he's right,
* The second-season episode "Dinobot Island Part 2" has a scene in the Ark where various (new) Autobot characters introduce themselves by successively offering to help
* The second season episode "Holiday" also has a large dose of this. For example, when
* The second-season episode "Taken" starts off with a young woman stumbling out of an elevator during a hotel opening. The staff shuttles her off to the side, and a suspect (who is on the sex offender registry as a pedophile) is later arrested. Turns out it's a scam to get money from the hotel, the supposedly under-age "victim" was in her 20s rather than her mid-teens, the sex was consensual, and the "suspect" was a patsy set up by the girl and her family. Unfortunately, by the time anyone remembers that they have an innocent man in jail, the "suspect" had already been killed in prison (pedophiles being
* The second-season episode "Taken" starts off with a young woman stumbling out of an elevator during a hotel opening. Unfortunately, by the time anyone remembers that they have an innocent man in jail, the "suspect" had already been killed in prison (pedophiles being
* The second-season finale featured a massive cryonics facility beneath Diagnosan Tocot's surgery, where Tocot and Grunchlk store the bodies of all the patients that didn't survive their treatments. Most of them are pretty much beyond saving, and are only kept around as donors for luckier patients; unfortunately, because they're frozen before they actually die, the souls of the "donors"

* The second season finale had the Kazon-Nistrim taking over the ship outright and stranding the crew on a nearby planet, leaving their only chance to take it back in the hands of Tom Paris, Lon Suder, and the Doctor.
* The second season finale has them on the run from the FBI after accidentally foiling an arms dealer plot when going after a corrupt mayor.
* The second season finale is particularly bad. The bad guy's been defeated, the wedding was ruined, the wedding was saved, everything's set up for the next season! And there's still another ten minutes to go.
* The second season finale, "Starcrossed", has the Earth invaded by the Thanagarians. They say they're building a giant shield generator to
* The second season fully embraces this trope, while doing the preview for the final episode
* The second season has a merchant try to convince Daenerys to marry him only for her to make it clear that she still considers herself married to the very dead Khal Drogo.
* The second season has a pretty rare heroic portrayal of the LAPD Internal Affairs Division. The villains are a group of murderous
* The second season has one regarding secondary protagonist Suou Pavlichenko. Her mother says she's a clone of the original Suou, who died eight years before. Turns out, as her father explains, she's an
* The second season has some Trump influence in it. Mariah makes a remark of "Now is not the time for alternative facts" when learning about Arturo Rey's failure to kill Luke with a Judas bullet. D.W. Griffith outright calls Luke "Luke Trump" when Luke inherits Harlem's Paradise in Mariah's will upon her death, right after Luke says "I'm gonna make Harlem great again."
* The second season has the team delighted when the new headmaster tells them to go ahead and do whatever it takes to win.
* The second season host calling out the third season host could be interpreted as Kareem regretting letting the show lay dormant for two years.
* The second season implies that the reason why the TVs used in the messages tend to explode was to prevent the recipient from keeping one and getting a free TV.
* The second season, named "The Orange Islands", took place on a completely original set of islands. This was due to
* The second season of Buffy features a figure in a hooded robe entering the classroom where Buffy is seated. Removing the hooded robe in the sunlight from the window, the figure is revealed to be a vampire. The vampire reveals a message from the
* The second season of the anime opens every episode with a brief "blurb" describing the premise, that ends with the entire Tendō family face-faulting upon witnessing Ranma's transformation.
* The second season of the non-canon anime introduces house Trancy. The current earl, Alois Trancy, isn't the most morally upstanding character (the time he gouged his maid Hannah's eye out for no reason at all comes to mind) but he's not the worst in the series on that front. His predecessor, however, sexually abused an untold number of young boys, Alois included. However, it's later revealed that Alois isn't really a noble, nor is Alois even his real name. He is actually Jim Macken, an orphan who was taken in by Trancy to be his sex slave. Apparently, he became Trancy's favourite which resulted in him being given the title of earldom along with the name Alois.
* The second season opener instead uses a clip of KITT and Goliath charging at each other.
* The second season opens with Jessica being hired by the owner of a pizzeria to follow her boyfriend, who works for her as a deliveryman because he's been taking unusually long to return on some of his pizza deliveries. Jessica follows the boyfriend and catches him in the act of having a clandestine tryst with another woman on a delivery run. The owner then tries to hire Jessica to kill the boyfriend once she delivers her the evidence. Jessica proceeds to tell the guy about his boss's plans. And when the owner insists that Jessica is a killer, having heard on
* The second season pilot thematises how the 6 protagonists are lured into an

enchanted maze by Discord, the antagonist, and get hypnotised and subsequently psychologically broken by him one by one. He even spares Twilight Sparkle, the last of the cast, just so she can see what he has done to the others.
* The second-season premiere opens with a young boy poisoning his parents.
* The second season premiere shows the Hollywood sign and Grauman's Chinese Theater still standing in Angelarc to make it clear that it was once Los Angeles.
* The second season presents with the housemaid Ethel, who has a few dalliances with an officer convalescing at Downton, resulting in her pregnancy.
* The second season protagonist, Hidomi Hibajiri, is not as direct a contrast, but she's still distinct: she's fourteen, putting her between the two, and is an
* The second season proves that this trope is more serious than what one might suspect. It was already known that espers can't use magic but it turns out the opposite is also true: a sufficiently powerful AIM dispersion field such as the one wielded by
* The second season really lets loose: Cherudim has GN Shield Bits and GN Rifle Bits and the Gaddess has GN Beam Saber Fangs (each of which are
* The second season reveals that Steven worries that the Crystal Gems may secretly blame him regarding the death of their leader, his mother Rose Quartz. He likely developed the notion after season one's "Rose's Scabbard", in which Pearl yells at him for even suggesting that he could understand his mother's actions,
* The second season sees Orga being given a customized version of the Shiden (Tekkadan's new mass production machine) painted white and bearing a unique commander crest on its head. However, it's entirely symbolic of his role as Tekkadan's leader, and doesn't even get pulled out of the hangar until
* The second season's Individual Eleven arc seems to be a fairly mundane plot involving attempts to fight for the rights of refuges.
* The second season was supposed to feature an adaptation of "The Missing Coach". Half the episode's footage was filmed, however mid way through production the story was considered too complicated for young audiences so canned (leaving missing plot points in Donald and Douglas' introductory story as a result).
* The second Secret Skill Shot is to weak plunge the ball so it drops to the right flipper, then shoot the left ramp.
* The second sees Superman taking on Brainiac, here not an evil alien conqueror but a bio-weapon in the form of a young child sporting out of control telekinetic powers wreaking havoc in Metropolis. To his credit, Superman does attempt to diffuse the situation in a non-lethal way, but ultimately is forced to break Brainiac's neck to stop the destruction. The last scene of the short has a saddened Superman cradling the body before going off to express his disagreement with those who so irresponsibly created Brainiac in the first place.
* The second semi was considered a bit more of an even split between good and bad entries, but there were still shocks to be had. Romania and Russia both received their first-ever non-qualifications, likely due to unusually poor staging choices for the usually-successful countries (and a notably poor vocal from Russia's Julia Samoylova, who didn't really have her heart in it
* The second semi was considered the stronger of the two, which meant, like the first semi in 2018, there were bound to be at least a few shocking misses. Ultimately, Romania and Armenia found themselves with two non-qualifications in a row for the first time, which was embarrassing for both but especially so for Romania, given that they had a spotless track record prior to 2018. Lithuania's Jurij Veklenko, whose song was considered a borderline qualifier, played this very straight, as only one point kept him from qualifying over Denmark. Additionally, while the non-qualification didn't come as a shock to many fans given its low-key nature, Austria's entry was sent home for the first time since 2013.
* The second series applies this same approach to '80s b-movies. Kung fu, video games, slasher movies, high school movies, Cannon Films,
* The second series applies this to Cold War history. Juan Perron appears in the premiere, and both Otto Skorzeny (who, for some reason, has the head of a wolf) and Nikita Kruschev (depicted as some kind of disco viking warlord) appear as ongoing villains. Plus, of course, Hitler is back, having faked his death at the end of the

War.
* the second series before he got his hands on Goemon's sword, at which point Lupin used the invincible sword to cut hers.
* The second series brought the Utroms (from the original books—see above). An Utrom named Ch'rell, in particular, was one of the series' main antagonists, and was almost always in one of these.
* The second series ends with Nico and Victor sharing a big kiss after
* The second series episode "The Assassin", with hypnosis and biochips behind the ear.
* The second series, subtitled "The Coup," builds up to a coup d'etat on a fictitious Pacific island, involving an Australian businessman and a group of Eastern European mercenaries. It's not done quite as well as the first, because any viewer can tell that Walsman will be behind it from roughly the second episode. Surprisingly, individual episodes in this season are on average better than in the first, but the mystery is badly handled.
* The second series wasn't bad, but it was one of the most uneven. It gave us a few wonderful episodes like "
* The second S for the "Mystery Shack" is seen falling off in the intro. It gets knocked off in the show proper in "Headhunters", leaving the sign reading "Mystery Hack" (fitting as all the oddities showcased inside are fake) for the rest of the series
* The second she mentions it's indestructible, Ralph splits it in half, and Vanellope's eyes light up as she gets the idea to get Ralph's help in breaking into the cart factory to make her a race car.
* "The Second Shepherds' Play", a 1500s Middle English play written by an unknown so-called Wakefield Master, features the Three Shepherds addressing the baby Jesus in this manner, initially praising him for being their God and savior, then praising him for being a (modern English translation:) "little tiny moppet".
* The second short has Timmy wish it were summer forever so he wouldn't have to go to back to school. As his fairy godparents later tell him, endless summer has
* The second shows a Witch Hunter and his underlings being ambushed by the Undead, lead by Mannfred von Carstein. While haunting music swells, the scenes of Vampire armies besieging human and Dwarf cities is intercut with the Witch Hunter fighting for his life while Mannfred
* The second sibling is Houka, which means "fragrance" and mirrors her girly demeanour.
* The second Silver Samurai, Shingen Harada. His father, the first Silver Samurai, was a mutant who could project a force field and usually did so onto his swords, to give them a much sharper edge. Shingen instead uses powered armour and is more of a Japanese Iron Man than a proper samurai.
* The second, Skypeia, where the Straw Hats inadvertently get caught between a war between natives of a land of Earth shot up into the sky fighting to reclaim their homeland and the current evil ruler of the sky island and his forces who rule over it.
* The second, smaller moon returned with the expansion "Cataclysm". There is another weird thing going on, though. The sun always rises and sets in the same part of the sky, basically stopping its rise at noon and beginning to set again along the same trajectory. The same happens to the moons. The larger moon rises and sets in the night in the same position as the sun does during the day, the smaller moon rises and sets in another part of the sky, sometimes during the day, sometimes in the night. The planetary rotation seems incomprehensible. Also the moons are always full moons and it is always the same time of day in all parts of the world, regardless Azeroth is thought to be a round planet.
* The second Snuggie commercial featured the generic grandfather, father, and son (and
* the second solo book of the titular heroine, Medusa’s disembodied ghost tries to take over Supergirl's body. The Kryptonian girl manages to defeat the spirit, but with the help of another ghost.
* "The Second Soul" involves first contact with a bodiless alien race fleeing the

destruction of their home world. Since they cannot survive indefinitely in this form, they request that they be given dead humans as hosts.
* The second Starfleet Command game is the only one of the series to feature fighters. They aren't a tremendous help but can tip the scales in a close battle, especially for the Lyran's who get the best ones.
* The Second Star League’s disbandment not only led to the final extinction of mankind’s dream of being united under a single benevolent banner, but the beginning of the Word of Blake’s outstandingly violent “Jihad,” which saw the return of both
* The second starts with a salvage team discovering the sunken remains of the boat "The Amanda" along with a dead body.
* the second story than the lives of those that could be saved if he just played along with the dragon riders and let them do the deed.
* The Second Story to stop expanding and collapse in on itself. The destruction of the cosmos is prevented only by the heroes' use of the Symbol of Divinity, which limits the Symbol of Annihilation to merely destroying the planet that they were on.
* The Second Story, while it is logical that Claude would have met other girls in his past, they are never mentioned and Rena, the first girl you meet, is the intended love interest.
* The second such joke occurred when the Immortal Helena wanted to prove that Immortals were capable of lying, so she told a long string of
* The Second Summer of the Sisterhood sabotages her mother's new relationship out of envy (of her mom being happy and in love) and jealousy (she's not used to someone else being important in her mother's life). She accuses her mother of making a fool of herself and neglects to pass on a message from the boyfriend, and thus succeeds in getting her mother to break off the relationship.
* The Second Summoning Ceremony is changing the summoner's mind into a state that allows the use of supernatural knowledge, such as rain-calling or demon-summoning via grimoires.
* the second takes the further by revealing he can remove almost all his prostetics in special bacta tanks.
* The second technique is used on breakable pieces of wall where Adam can
* The second theatrical film features the Australian Cate Blanchett putting on the same 'Scots Viking' accent as Valka.
* the second, they escape the kingdom, seal it off forever, and open the chest to examine their spoils. It turns out the chest is full of salt, which is rarer than gold and prized since the kingdom's food is so bland. To add insult to injury, the sacks of gold that Fujiko collected outside had be jettisoned during the chase since the weight slowed the carriage down.
* The second time Alice eats another candy while inside the White rabbit's house and she grows so huge she fills the house and her limbs are sticking out of the windows and doors.
* the second time, Ash is driving a car that, as Kate points out, "is almost as old as you (Ash) are". Kate herself was driving a freaking Jaguar (and a modified one at that).
* The second time, Audrey got mad at Jeff for not supporting her in front of her friends. And Russell.
* The second time Bart meets up with Krusty the Clown, Krusty dismisses Bart as a nobody and brushes him off until Bart has to remind him that he saved Krusty from an attempted murder by Sideshow Bob. Even then, Krusty only reluctantly agrees to listen to Bart. This had become a
* The second time characters discuss sex, Rupert is telling Andrew that it would be possible to imitate the activity with some of the new upgrades he's designed. Andrew tells Rupert about what "they" say sex is like, as if Rupert hadn't ever heard it from his own father.
* The second time comes up when Spike sets up a shotgun to fire when a bathroom door opens. Droopy enters and immediately leaves the bathroom, but nothing happens each time. When Spike opens it... yeah. The carnage is initially hidden by the

bathroom wall, then is further obfuscated by a card conveniently located on an easily accessible table.

* The second time happens when, Peter, imitating Hook, tries to trick Smee into taking Princess Tiger Lily back to the Indians, after the real Hook ordered him not to:
* The second time he used his stealth armor, Iron Man was fighting the Crimson Dynamo (Dmitri Bhukarin) and Titanium Man (the Gremlin) in Siberia during the
* The second time is at the end, where Shiwan Khan is in the psych ward. He desperately cries out his name, only for the other inmates to respond that they're Babe Ruth, Napoleon, Princess Josephine, and other dignitaries.
* The second time is during the film's resolution, when a magazine's bar code obscures him on the cover.
* The second time is during the fourth season when Maxwell is looking for a date and has decided to spend the day at an exclusive martini club. Again, he rejects the women he meets for extremely inane reasons: one for being a Democrat (Max is a Republican), one for driving a Kia, and one who is implied to be a vegan. He has all but given up when a woman named Mercedes storms in delivering one of the most entitled rich bitch rants about a valet ever to be caught on tape, all the while revealing details about herself that satisfy Maxwell's personal requirements (she's a Republican, drives a Mercedes, and has expensive taste in fashion), the clincher being when she correctly identifies the color of Maxwell's tie as cerulean.
* The second time is during the "Oceans Unmoving" story arc, where Calix and Honest Stu are forced to walk the plank by the pirates and leaf people combined. This is considered the worst fate possible in Timeless Space.
* The second time is during the uprising after Gordon Freeman has returned, where Frohman's gotten tired of being shot at by the Combine, and decides the best way to avoid this is to dress as one of them. Of course,
* The second time is in "Bye Bye, Burger Boy", in which the restaurant that the main characters like (Burger Boy) is in danger of closing down due to the popularity of Big Burgertorium, another restaurant which the characters
* The second time is in season 5, when Brian is on his way to the airport and there's a radio announcement about the bombing of Babylon (which he is the owner of at that point), prompting him to order the driver to turn around.
* The second time is in the Light Side ending, after Kyle has defeated Jerec. Again, Jerec is trying to goad Kyle into tapping into his dark side potential:
* The second time is when a mook that Frank needs for information tells him about how the made man he was working for antagonized a monkey in a zoo. Said monkey proceeded to rip the guy's junk off and tossed it away, where it eventually got eaten by a vulture.
* The second time is when the remainder of the team is trying to escape and trying to open a code locked door. One of the members gets it open, and is dragged to the ground and devoured, complete with screams, to show exactly how much shit has just hit the fan.
* The second time is where Riza catches Envy out again when he took the appearance of
* The second time is with pharmacist's mate Duly, who is faking illness to get attention from the nurses aboard.
* The second time is with Reimu's mother, Reiko, and she passed away of a long term illness, although this is justified in that they didn't know what she has and neither could they diagnose it but it is implied to have had something to do the radioactive fallout.
* The second time it appears, it gives facelifts; it works okay the first time, giving a rather ugly Muppet a beautiful face. Then, another Muppet (who doesn't really have anything wrong with her face), likes the results and tries out Vendaface, but Vendaface gives this one the same features that the last customer originally had.
* The second time it happened, Betty was so in love with Don Armando that she was

convinced that he was going to break off his engagement to be with her. However when she was rummaging around his office, she found a letter from Armando's friend, Mario. The letter was basically going over the plan over how Armando was going to Romance Betty and going to use her economic saavy to scam his way into his parent's comnay, and how he was going to dump her and offer a nice severance package once they took over the company. Betty felt humiliated, and spends several episodes behaving coldly towards Armando, who was begining to fall for her, and he eventually demands to know why she's ignoring him.
* The second time, it happens to Mr. Wilson when he gets carried away by three tropical birds. After they drop him off at Liana's castle, one of them poops on his face.
* The second time, it was a camera that could turn people into pictures. After he used it on the police force, Underdog wrestled it away from him and figured out he could reverse the process simply by putting the lens on the camera backwards.
* The second time it was retconned to fit into the new continuity created by
* The second time, Jack has been shrunk by an attack and climbs his opponent to give his beans a warm environment to grow in (they're on an ice field).
* The second timeline has things like the Spin and the Wall Eyes, which serve similar purposes as the above.
* The second timeline is caused when Albus and Scorpius successfully sabotage the Second Task of the Tournament. The humiliation of losing becomes too much for Cedric, resulting in him enlisting into Voldemort's Death Eaters. At the Battle of Hogwarts, Cedric manages to kill Neville Longbottom, who, in the original timeline, managed to destroy Nagini, Voldemort's final Horcrux. Because Neville was killed before destroying Nagini, Harry failed in his mission to kill Voldemort, resulting in Voldemort gaining absolute power. In this timeline, Harry was killed by Voldemort so Albus is never born. Also, Draco Malfoy has become the head of the magical law enforcement, with his son Scorpius being a somewhat important figure maintaining a reign of terror at Hogwarts, ran by Dolores Umbridge as headmistress. Also, Hermione runs an underground resistance movement with Ron and Severus Snape as members.
* The second time, Link uses the Din's Fire spell and ends up lighting an entire room of bats on fire who then repeatedly bonk him.
* The second time near the end in which after realizing Chizuru's feelings for him, Yuudai runs after her in the snow and after catching up to her they both embrace in the falling snow. It's also justified since the story takes place on Christmas eve.
* The second time occurs during episode 6 when Yoshitatu's forces attack the hastily built fort Yoshiharu built. Nobuna arrives to see it burning to the ground and believing
* The second time Robin eats Cadbury egg cereal, she wakes up in a cardboard box on the street, having passed a law creating a utopia, banged a guy, made a sex tape which got leaked onto the internet, and been dumped and kicked out.
* The second time seems to be the fault of his attacker, Shinn Asuka, who apparently can land kill-shots on named characters, but somehow miraculously misses them. When facing Athrun, he managed to clearly stab Athrun's suit through the cockpit, which was by no means spacious or empty (considering Athrun at the time had someone else aboard with him), yet there were no fatalities (or much in the way of injuries).
* The second time, she catches them in a secret passage and covers them in "just" desserts. For
* The second time she had just kicked down a youma that had assaulted her school's festival, and the first thing one of the victims said after recovering was to ask who was the crazy girl wearing a fake Sailor V costume.

* The second time, the members of Angel Investigations are telling Chuck Norris style jokes about Xander to lighten the mood and the Pylea humans who overhear take them as actual facts.
* The second time this happened was in late 2019 when vocalist Gus Farias got forced out of the band. According to Gus, bassist Raad Soudani got the rights to Volumes' name and back catalog of music,
* The second time, two Clarences get two bulbs, which when merge into one large bulb.
* The second time was a murder with the victim landing on one of the SIU's surveillance vans. The impact was shown from inside.
* The second time Washington does this in season 11 is when Freckles is plugged in but is not getting any power. Donut reveals why this is happening, and... well...
* The second time was more dangerous. This time a mentally unbalanced woman who mistook her for her character (and who was apparently in love with "Troy" the male character who had been jilted by MJ's character) actually tried to shoot MJ. She missed and was subdued by a police officer, but MJ was frightened for a while, wondering if this was what Peter had to go through every day.
* The second time was right before the proper reveal at the end of May 2020, when podcast host Kaneda posted several details about the game to his
* The second time was "Rimmerworld", where Rimmer, abandoned to his own devices (by his own cowardice) on an uninhabitable world for 600 years armed with only a planet seeding pod, creates a
* The second time was the entire population of Jericho, New York. Odds are, they probably deserved it.
* The second time was the second season, after he and Stratos found that Webstor had gorged himself on ambrosia, turning himself into a monstrous, demonic spider. It got even worse when they found his lair and the captive Adreenans
* The second time, when SpongeBob and Patrick leave the Trusty Slab, Patchy enters, asking Mr. Slabs if he can let Potty use the bathroom.
* The second Titan that the Rogue Titan fights in Trost suffers this fate. Its head is punched clean off, and flies quite some distance away as well. Chapter 119 also features
* The second Tokimemi game makes it even worse if you end up having the same girlfriend as one of your two male friends making it IMPOSSIBLE TO WIN if you fail to beat them. Bonus points with Akane who you have to beat up her brother several times in order to win with her.
* The second-to-last episode of the show, "Operation: T.R.E.A.T.Y.", shows that Numbuh 1 and the former Numbuh 274, Chad Dickson, used to be quite close. Chad had apparently mentored Nigel back when he was a cadet, and Nigel was close enough to him to call him "old friend". Thus, Chad's betrayal was a cut so deep that the two developed a huge rivalry that lasts the rest of the series. It eventually boiled down to this episode, where a
* The second-to-last panel reveals that Tom Nook was not the extremely dangerous Subject #6. Ruby's friend Tom was Subject #6.
* The second-to-last scenario of the vanilla version, Rainbow Valley, is the meanest scenario in the entire game, banning you from all landscape editing and scenery removal, which makes it really difficult to build a decent roller coaster if you've gotten too used to slashing and burning forests to do it in the preceding scenarios. The final scenario, Thunder Rock, is a giant rock in the middle of the desert, but is a perfectly normal scenario otherwise without any gimmicks. It's above average difficulty since you have to cope with the long walk guests may have to take to make it to the top, but when put up against Rainbow Valley, it really can't compare.
* The second-to-last scene features Penny calling out a girl for using a wheelchair as part of her "look." The girl says she is paralyzed. Just as Penny starts apologizing, "Psych. I can totes walk. Sweet chair, though, right?" Penny proceeds to wheel her into something off-screen.
* the second-to-last SWAT member when he's standing near a semi-open shutter.

* The Second Triumvirate's bloody proscriptions were essentially Octavian's attempt to avoid repeating Uncle Julius' "mistake", he later performed a similar purge on his other rivals before they turned traitor on him (as Pompey did). In the Empire, purges became common in the reign of Tiberius and Sejanus, and the other Julio-Claudians, and it became well-entrenched for the duration of the Empire, with many Emperors targeting any perceived rivals, as well as their friends and families. Many also tried to eliminate recalcitrant senators or generals. This greatly contributed to the chronic
* The Second Try, after Asuka and Shinji have been sharing a bed for a while, she wakes up to find his hand on her chest (he's still fast asleep). It's a sign of their developing relationship that she isn't that bothered by it (a fact that she finds strange herself), but she still removes it before he wakes up.
* The Second Try: After coming clean about being time-travelers, Shinji and Asuka do not need to hide their relationship from Misato; hence, they are constantly touching each other, even during breakfast. Asuka claims "being a hormone-driven teenager again sure helps".
* The Second Try: After maturing a bit, Asuka admits to Shinji and herself that she didn't really love Kaji. She had a "delusional crush" on him because he represented the adult world that she wanted to be a part of. In a scene, while she sleeps with Shinji, Asuka wonders about the difference between being in love and thinking you're in love.
* The Second Try: After spending over six years surviving in the post-Third Impact world, Shinji and Asuka wake up one morning to find that mankind has returned, they are in their younger bodies and living in Misato's apartment again, and only they have any memories of what has happened, and what is happening again. Upon waking up, Shinji right away notices his body feels "different", and among other things, his face skin is soft again.
* The Second Try: After the end of the world, Shinji and Asuka had to work together to survive. Their bonds got stronger and they became extremely devoted to each other.
* The Second Try: After the Third Impact Shinji and Asuka are the only people left on Earth: Humanity has been wiped out, human cities are in ruins, the world has became a wasteland and wildlife is getting out of control.
* The Second Try allow him to live through his encounter with the hitman sent after him. He's even helped by the incompetence of his would-be killer who walks away without checking his body.
* The Second Try and in the process she becomes nicer and less bratty.
* The Second Try and Shinji spends a while talking to him, telling what they’d been doing since the final battle, and finally confessing that maybe he can understand him a little better now.
* The Second Try and their time-traveler status from her guardian Misato for months.
* The Second Try: Asuka and Shinji discuss this during one of the "flashback" chapters.
* The Second Try, Asuka delivers this trope almost word for word to Shinji in chapter 2, thankfully without the slapping. It is possible that had this occurred before the Third Impact, she would have slapped him, but she was probably afraid to (given what happened during instrumentality, and the fact he's the only other person left on earth).
* The Second Try. Asuka used to believe that Shinji was their caretaker Misato's favorite, but during a heart-to-heart talk she admits that maybe she misunderstood Misato's behavior.
* The Second Try: Asuka was one when she was a child, being groomed by NERV to be cannon fodder in the incoming war. After going back in the time, she tries to help Rei, who is still a puppet loyal to Gendo.
* The Second Try Asuka was sore, moody, and irritable for several days.
* The Second Try can’t sleep at night so she gets out of her bed, goes to her parents’ room and opens the door right when they’re making love. Thankfully she was only three at the most, so she had no idea what they were doing.

Her appearance panicked her parents anyway.
* The Second Try cause a fight, they miss each other. And both are terrified of the possibility of breaking up and going separate ways after a dispute.
* The Second Try due to time-travel craziness. Shinji and Asuka had this in chapters 2 and 4 when they were trying to learn to live and work together, and after a while they fell in love. However, they were together in chapter 1.
* The Second Try: During chapter 4 "Love", Shinji and Asuka realized their feelings gradually. It was during a Kaworu-related argument that Asuka finally admitted to herself that she loved him.
* The Second Try everybody) and remaining kissing for a long while as the sun sets.
* The Second Try fought, while even-numbered chapters are named with a single verb based on its major theme.
* The Second Try found out the hard way. It also applies the other way around.
* The Second Try. He later realized that he really would have lost everything if he would have done so.
* The Second Try He was so heart-broken that he almost ended humanity again.
* The Second Try His subordinates think that he’s way kinder, more understanding and more reasonable than his predecessor ever was.
* The Second Try: In chapter 3, Misato gets up to her old tricks and asks Shinji, Asuka, and Rei if they went for a threesome in the bushes during their hike. Asuka promptly screams that she needs a shower to get those disgusting images out of her head.
* The Second Try: In chapter 4 "Love", Asuka is swimming in a lake while Shinji is fishing. She tries to encourage him to go for a swim as well, but he says he can't swim. Suddenly, Asuka screams that she is drowning, and Shinji gets into the water unthinkingly. He paddles rather clumsily, but he manages to pull her out of the pond.
* The Second Try: In chapter 8 Shinji says Asuka "Ich leibe Sie," (meaning to say "I love you"). He leans to kiss her but he stops because she is stifling a chuckle. Then she teaches him the correct words ("Ich liebe dich") and kisses him.
* The Second Try: In chapter "Love" Asuka argued with Shinji about him being unable tell someone how he feels but always waiting for someone showing kindness to him, and being unable to see there is someone loves him honestly if that person is unable to give the first step. During the next days she constantly ruminates over her words, pondering she is just like him. Finally, as they are sleeping in the same bed, she tells:
* The Second Try: In episode 4 "Love", after dancing around each other for a long time as they lived together in the post-Apocalypse world, Shinji and Asuka kissed in their house's kitchen.
* The Second Try inspired several artists to draw pictures and even mini-comics that can be found in the author's website.
* The Second Try: Inverted and after played straight in chapter 4. Asuka does not want to be alone, but she feels that she needs to push Shinji away so she yells at him: "HATE ME! LEAVE ME! KILL ME!". When he refuses, her resolution crumbles down, so she hugs him and asks him if he promises not leaving her.
* The Second Try involves Ritsuko insisting on a DNA test to verify Shinji and Asuka's story.
* The Second Try is brought back to them, making their family complete again. The only onscreen deaths are Rei (who, par for the course, comes back), Kaworu (after a heartwarming speech to convince a reluctant Shinji of its necessity), and Kyoko (by way of Heroic Sacrifice).
* The Second Try is sick of fighting to save a world that keeps taking everything from her over and over again and resetting itself. She's determined to save it anyway.
* The Second Try, it's the titular character's first day of kindergarten, and she's upset about being forced to wear an uniform. So Touji gives Aki his old school hat, which's "empowered by the spirit of freedom", and whose "magic" will make her feel comfortable no matter what. It helps Aki get through her first day until she realizes she doesn't really need it.

* The Second Try: Jimmy's website includes additional art and drawings and sketches of several scenes. The fourth chapter also has an omake.
* The Second Try mentions that it took Hikari a while to realize what Asuka meant by "You're watching our pet, we'll watch yours!" (PenPen and Toji respectively). To be fair, she was in something of a daze after having given her boyfriend a goodbye kiss in full view of all her friends.
* The Second Try: Misato is revealed to be pregnant with Kaji's baby in the epilogue.
* The Second Try. NERV is a semi-military organization, but Misato is very permissive with her subordinates despite of being a commanding officer. Gendo criticized her behavior when Shinji went against his orders.
* The Second Try opens their bedroom’s door. They stop instantly.
* The Second Try played it straight with fourteen-year-old Rei and Touji, and subverted with Shinji and Asuka, since due to time-travel shenanigans, they’re physically teenagers but they’re mentally adults.
* The Second Try plays with this. Shinji is possessive, but when Hikari convinces Asuka to go on a blind date, he isn't jealous because he knows that Asuka doesn't like that student. He gets annoyed when Asuka has to pretend that she still has a crush on Kaji, though.
* The Second Try: Rei resorts to this to critique a drawing of her. It works because the artist is only three.
* The Second Try, Shinji and Asuka had no social skills whatsoever. Ironically, they got better at socializing after all remaining humans were gone.
* The Second Try, Shinji got to talk to his wife's stepmother for first time.
* The Second Try Shinji grins coldly and maniacally before replying that he’ll die.
* The Second Try: Shinji wonders if this is the case when he's forced to be absorbed into EVA-01 to defeat Zeruel. It's ultimately averted since events start to majorly deviate from canon after that battle.
* The Second Try. Since she and Shinji need to hide that they are time-travellers, Asuka has to pretend that she still has a hopeless crush on Kaji, even though she's not interested in him anymore.
* The Second Try sitting in the darkness of his living room to inquire about some sensitive data. Said data being the reason why Yamaki has been into hiding for the past fifteen years, this visit is quite the unpleasant surprise for him.
* The Second Try that she is resented with her guardian Misato because the older woman neglected her when she was hurt and abandoned her when Asuka needed her the most.
* The Second Try thought that monkeys were cute and funny. So did their parents... until three monkeys tried to kidnap their daughter.
* The Second Try to Asuka doesn't prevent Shinji from finding himself on the receiving end of several of those:
* The Second Try Toji -very awkwardly- tries to ask Kaworu if he is gay:
* The Second Try to the hospital when her contractions begin. During the delivery proper however, he does his best to keep his panic in check and make sure that both mother and baby are all right.
* The Second Try, Touji and Hikari. Their relationship was pretty similar to Shinji and Asuka's: he was dense and oblivious, and Hikari berated him constantly even though she had a raging crush on him. Shinji and Asuka played matchmaker for both, and they eventually got together.
* The Second Try tried to protest that such an action could prove fatal in case of another attack, but Gendo refused listening.
* The Second Try visits him and keeps watch over him constantly. Don't ask her why, though.
* The Second Try was not just a dream. Shinji promptly reassures her that he also remembers.
* The Second Try when Hikari gave him a kiss before the civilian evacuation. By the time Shinji and Asuka went home, he still hadn't moved an inch.
* The Second Try: When they return to the past, Shinji wants to tell Misato

everything, but Asuka argues that she'll not believe them or she'll believe them but she'll get too worried or cautious, so they keep their time-travelling status from her for a while.
* The Second Try: When Touji meets Kaworu, he wonders if he's gay. However, when Touji asks him, Kaworu is genuinely clueless about what Toji was implying (but he finds his reaction "very interesting" anyway).
* The second type of bonding is a form of recognition. Much like a bond such as in
* The second type, technically a subset of the first, has "Anon" (short for Anonymous), a generalized human character often portrayed as a green-skinned faceless person in a nice suit, taking the role of the titular human. Some such fics are cringeworthy, while some like

* The second verse of Kirk's "Schnitzel song". This apparently would have happened right before the shots of Kirk returning to discover that his truck has been raided and cannibalized. Unfortunately, it means we don't know why the kids are all throwing their schnitzel sticks into the air like graduated college students throwing mortarboards. The cut footage reveals that they were watching a small tap-dance routine.
* The second verse of Lupe Fiasco's "Handcuffs" is sung by a drug dealer, commenting on his arresting officer, making such remarks as "You ain't no better than me, just a hustla with a badge."
* The second verse of Lupe Fiasco's song "Hello, Goodbye" is about a general who deserted a war because he didn't believe in the cause. In the end, "
* The second version is acquired late in the game, in the form of the "Return to Sender" vigor. Its first function generates a much more powerful magnetic bubble that deflects projectiles for a short period of time. The second function catches projectiles and crushes them into a semi-molten mass which Booker can then
* The second version is to entirely subsume the "real" actor in the role. In this case, the actor is never mentioned by the character and the actor almost never appears in "public".
* The second version of "Uneasy Rider", when the singer and his friend go into a gay bar and the friend goes off dancing with a lovely lady.
* The second version) was easier to spot. It used an original ad for the "Lap n' Snack", a weird-shaped plastic bowl that would have rested on your knee. Since nobody had seen it before, after seeing the commercial once they knew what it was.

The discoverers abandoned their investigation after going several layers deep, positing that "With so many amateur lunatics around the universe, nobody wanted to meet professionals."

* The second was Dogbert seeing if he could "get away with crimes" by doing them with his ears up, making him look cuter, going out in a car, being pulled over for passing an ambulance on the right, and, we're told:
* The second was in 2011 and coincided with the parade's 85th anniversary. Macy's hid several blank statuettes modelled after their popular elf balloon in their stores, and invited the public to make their own designs in the hopes that one would be selected for a one-off flight down Broadway. The winning design, "Gazer" by university student Keith Lapnig, becomes heartwarming if you know the story behind it
* The second was the New Phyrexia spoiler: An entire set revealed nearly two weeks before the official spoilers were off the ground. This was after Wizards of the Coast took painstaking means to conceal if the third set of Scars of Mirrodin would be Mirrodin Pure or New Phyrexia (something the forums had been speculating for 3 months). In both cases, legal action was taken (Rancored Elf was sued and issued a Cease and Desist, and the people responsible for spoiling New Phyrexia's cards were given a very long ban from DCI-sanctioned events).
* The second was when it was revealed that Morrison had been a traitor and had sent them in to be ambushed and killed, which gave them a motive for Morrison's death. The witness who could prove that they weren't responsible ends up being killed by his criminal partners before the truth could come out.

* The Second Wizarding War zigzags with this trope. On one hand, the heroes do eventually get to battle the Death Eaters and their allies. On the other hand, it's pretty clear there are some incidents/battles that happen offscreen such as Voldemort's attack on Amelia Bones which results in the
* The second world, "Paint Misbehavin'", features a paintball-spewing vehicle called the HoverSplat. The paintballs are there so you can solve color-based puzzles... but the fun of them is using them to paint the entire level crazy colors.
* The second world visited, Traverse Town, always has a clear starry sky and streetlamps and windows are always glowing.
* The second World War comes along and the same condition is now "Battle Fatigue" which sounds much less terrible.
* the second World War. His character design is no help either, as in the episode with Homer's mother, she states that he's aged badly, which he blames on having to raise Homer by himself.

* These consecutive comics take place in different rooms, and the characters can't hear each other. But:
* These contracts are generally held to be unenforceable in the EU; in the US the issue is still debated. Either way, most places will still let you return the product if you disagree with the contract.
* The Secret (2007): Being in her daughter's body means things get very awkward between Hannan and Ben. He chides her for acting overly affectionate while they're at a restaurant, and later she's also quite suggestive toward him while wearing a pretty revealing nightie. They never actually cross the line, but it was obviously difficult for them still wanting intimacy but unable to because of the bizarre happenstance.
* The Secret (2007): Ben is convinced that Hannah is really in Sam's body due to her relating anecdotes from their past and speaking the way that she did. At first he just thinks Sam must have heard it from Hannah, but soon accepts that it's really her.
* The Secret (2007): Hannah is jealous of Ben's patient (Sam's guidance counselor) flirting with him while having their appointment (he works as an opthamologist), though Ben insists he wouldn't act on it. The woman is also unaware that Hannah's (kind of) still around, in Sam's body.
* The Secret (2007): Sam is a brunette honor student who's intent on getting into an Ivy League school. She doesn't fit most stereotypes though, being a rebellious girl who's sexually active, uses drugs and doesn't dress or act nerdy at all.
* The Secret Adventures of Jules Verne drill used as a method of underground transportation by rebels to attempt to kill the Queen. It is shown impaling at least two people. Verne first encounters Fogg when the latter arrests him on suspicion of building the drill, as it is based on one of his sketches.
* The Secret Adventures of Jules Verne had a few. 'Aurora' certainly qualifies. "Master of Air and Darkness"/"Southern Comfort" also introduce a flying battleship.
* The Secret Adventures of Jules Verne, the protagonists meet a young American boy named Al, deaf in one ear, who makes amazing inventions and is able to reverse-engineer a hovering machine from the future (or the past; not sure about this one). When leaving, he reveals that Al is a shortened form of his middle name — Alva. Yep, that's Thomas Alva Edison.
* The Secret Adventures of Jules Verne. The reasoning is that battlefield artillery is designed to shoot horizontally (which is wrong, especially if mortars are also used) and can't shoot an airship above.
* The Secret Adventures of the Tooth Fairy (a syndicated five-minute comedy interstitial) had a dentist trying to guess the famous person locked in the broom closet. He by-chance met the famous person, Thomas Edison, and is sworn to keep it a secret. The nurse is doubtfully curious:
* The Secret Adventures of the Tooth Fairy had an installment where a dentist is in a contest to guess which famous person is in the broom closet. He knows and is sworn to secrecy. He eventually blabs out that the famous person is Thomas Edison.
* The Secret Adversary, Jane Finn escapes from Brown by locking herself in the train bathroom, smashing a window and climbing out.
* The Secret Agent: The Professor has views like this, wanting to crush those he considers weak (even though he himself is not really strong in any way).
* The Secret Agent: The Professor who believes he is superior to everyone else even if he has little to no actual accomplishments, and is constantly discussing how other people are mediocre compared to himself.
* The Secret Agent, which Conrad considered a "blood-stained inanity of so fatuous a kind that it was impossible to fathom its origin by any reasonable or unreasonable process of thought." According to Conrad a friend later told him that the bomber was "half an idiot" and his sister committed suicide shortly after, forming the characters of Stevie and Winnie.
* The Secret Agent who goes around with dynamite strapped to his body at all times. He blows himself up at the end in a crowded street, seemingly for no other reason except annoyance at the people around him.

* The Secret Agreement and fears if Iori marries he'll never see Iori again because the family won't need him to quietly sell off their possessions anymore (the only reason their friendship was tolerated in the first place).
* The Secret Agreement, as if being gay lovers from very different class strata ca. 1920s-30s wasn't star-crossed enough, it turns out that if Yuuichi doesn't steal Iori's life energy he will die instead. There is really no way for them to win.
* The Secret Agreement ceremony. His sister, who is under the illusion that he just doesn't like taking food from people who aren't her or their mother, notices it and laughs about it privately with Yuuichi, who recognizes it for what it is—Iori symbolically indicating that even if he's married, his love is only pledged to Yuuichi.
* The Secret Agreement family and has to marry into wealth. He doesn't see his marriage as an obstacle to his relationship with his lover, Yuuichi, simply because it's always been a fact of life and he doesn't feel he has to love his wife.
* The Secret Agreement, Iori casually mentions in the middle of having sex that his wedding is the next day. "WHAAT!?" is probably the only response Yuuichi could articulate.
* The Secret Agreement, Iori is a World Class beauty, known in the community for not only his family status but his stunning looks, to the point that Kyuusai recognizes him without any introduction after seeing him for the first time. Kyuusai later teases his nephew Yuuichi about their relationship saying "I understand you're the type attracted by looks."
* The Secret Agreement of a voice saying "No matter what I want to get it, no matter what it takes." It turns out it's been his own voice all along indicating that his predatory shadow side has begun to awaken.
* The Secret Agreement, the first time Iori meets Yuuichi he is eating mitarashi dango, and Iori asks to try. He nearly eats the entire thing, over which Yuuichi feels resentful at the time. Later in life he views it more optimistically as "it only took three-quarters of a mitarashi dango to make you mine."
* The Secret Agreement, where Iori isn't worried about Yuuichi running away from him because his own love will always lead him towards Yuuichi.
* The Secret Agreement Yuuichi across the world, leaving his bride rather surprised and disappointed.
* The Secret Agreement. Yuuichi's uncle explains that the reason Iori has such an intense connection to Yuuichi that keeps driving them together is not that he loves him but because Yuuichi is built to steal Iori's life energy and Iori exists only to be consumed.
* The Secretariat and other subordinate bodies of the UN bureaucracy can and do often condemn the Bad Things, but they cannot order it to stop; they merely manage the UN's innumerable agencies and other administrative responsibilities. That said, many of the UN agencies actually
* The Secret Armory of General Knoxx as smelling like "Hemorrhoids wrapped in bacon".
* The secretary asked "How did you get your big executive job? You've only been here three months!" The young man shrugged and said, "I ran into my father and he took a liking to me."
* The Secretary of Education (most likely not Philium Benedict) ends up pulling one of these when he learned that the test scores had sunk even further than before as a result of his cancelling Recess.
* The Secret Circle, Adam and Cassie are bound together by a silver cord, like Stefan and Elena.
* The Secret Circle, Adam and Cassie's relationship. Fate and destiny is a driving force of their relationship. It has been repeatedly stated throughout that Adam and Cassie are destined and fated to be together.
* The Secret Circle, as Jake does this after saving Cassie, though he soon returns.
* The Secret Circle at first. It's later explained that there are other witches and circles within Chance Harbor, allowing for new blood to enter the coven, and while the Circle is made of six witch families, the previous Circle contained twelve witches (a member from each of the families and their spouse).

* The Secret Circle: Cassie. She brings everyone together within the Circle.
* The Secret Circle. Heather had been possessed by the demon Abaddon, which is why Cassie's mother put a binding spell on her. Heather eventually dies after being run over by a car and the demon then proceeds to possess Melissa at the end of episode 4, before eventually being killed while possessing Nick.
* The Secret Circle: In the season 1 finale, Jake gets his revenge on Eben, who killed his parents — and it was a long time coming.
* The Secret Circle. She is the smartest one of the core group and often takes the lead because of her smarts and capability. Later on, Cassie seems to take the lead more often alongside Diana as Cassie begins to accept her witch ancestry.
* The Secret Circle statues and murals, dark and dirty rooms, and not improved by the addition of real corpses.
* The Secret Circle. The books were written by a practicing Neo-Pagan who wanted to depict their practices and beliefs accurately, only with a little exaggeration of how often something supernatural actually happens.
* The Secret Circle, The concoction Nick and Faye were taking in Episode 2. Magic itself could also count.
* The Secret Circle: The demon Abaddon is killed when Diana's father drowns his host body, Nick, at the marina.
* The Secret Circle. This implies that the two have reincarnated in lifetime after lifetime and have spent many lifetimes together as soulmates.
* The Secret Circle. Unusually for this trope their friend screaming at them in demon voice because they expressed reservations about her creepy plan was noticed, although the real giveaway was when the demonic snake crawled across her forehead under the skin.
* The Secret Circle, with just about everything happening because of it. As well, Adam's father claims that he and Cassie's mother were destined to be together, and things went wrong because that didn't happen.
* The Secret Colocation of Alex Mack six versions of her from the various parallel realities (Lexi Mack the Slayer, Alexan Mack of the American wizarding world, etc.). In the world of Jamie Sommers, Jamie 'recruited' Aly Mack for the bionics program after she was caught in a serious plane accident, which resulted in her losing most of her limbs and internal organs and suffering serious burns; Aly states at one point that she has around 40% of her original body left, with the rest all being bionic.
* The Secret Commonwealth, however, Lyra says that she and Will didn't have sex.
* The Secret Commonwealth, when Lyra rather awkwardly tells Farder Coram that she and Will never had sex.
* the secret consort of the former and the father of the latter, he even takes the throne of the Isles for himself.
* The Secret Country Melanie and her brothers became immortal using the blood of a (sentient) unicorn they killed in what was supposed to be a ritual hunt.
* The Secret Daughter plays Billie. Mauboy is Aboriginal and Indonesian; her character Billie is half white and half Aboriginal.
* The Secret Devil-chan: Kurosaki Sou discovers this about Devil-chan, after just 10 pages into the manga.
* The Secret Diaries Of Miss Anne Lister: Maxine Peake, who's bisexual, plays lesbian Anne.
* The Secret Diary of Desmond Pfeiffer replied, "Yes, it is real, and we let it go to air."
* The Secret Files of The Spy Dogs, dogs are the heroes, so cats are often the villains.
* The Secret Files of The Spy Dogs had Humanesks, which pretended to be fat humans. They had spy dogs as pilots.
* The Secret Files of The Spy Dogs Ralph rummages through his owners' fridge disposing of all the bad products they are too lazy to throw away. When he encounters a can of jelly that had already evolved into a small blob monster, he decides that "it'll do for a little longer" and puts it back into the fridge.
* The Secret Garden (1993): Cousins Mary and Colin, both about eight years old,

spend part of a night looking through old photographies of their parents, then they both fall asleep in Mary's bed, huddled together.
* The Secret Garden (1993) (taking place over months) and jams them all together to take place in a matter of days or weeks, removing some character depth and growth in the process. Of course, this being a film, the time line is a bit fuzzy.
* The Secret Garden. A good portion of her character growth involves her gaining friends. At one point she's talking about the number of people she likes, and says, "I never thought I should like five people." One of those five is a robin.
* The Secret Garden, all make it so that Mary and Colin's mothers were twin sisters.
* The Secret Garden cast then 11-year-old Daisy Eagan, the youngest female recipient of a Tony Award, as 10-year-old Mary Lennox.
* The Secret Garden changes this to a game of blind man's bluff, resulting in a somewhat more emotional moment.
* The Secret Garden, Colin insists that he will wed his cousin Mary when they grow up. He even tries to force her to promise him this. When she laughs and says they can't, he reveals that he thinks it is the only way to keep her from abandoning him someday. Of course marrying a first cousin was (and still is) completely acceptable socially in Britain.
* The Secret Garden. Colin was neglected by his father and coddled and treated as an invalid by the servants because of his (possibly) crooked back.
* The Secret Garden drops "There's a Girl", "If I Had a Fine White Horse", "Round Shouldered Man", "Quartet" and "Race You to the Top of the Morning" from the original Broadway production, while adding two new songs, "A Brand New Coat" and "The Man in the Moon".
* The Secret Garden has two gender-flipped examples: Ben Weatherstaff, who is good friends with the robin who leads Mary to the garden, and Dickon, who has tamed darn-near every creature on the moor.
* The Secret Garden, in that Mary "doesn't know how to cry." She figures it out in the end.
* The Secret Garden, it is revealed at one point that Lilias Craven's family, especially her sister, were dead set against her marrying Archibald because he was a hunchback. Her sister threatened to disown her, but she married him anyway because she loved him so much. Then she died. Archibald is still in a mess over her death when Mary arrives ten years later.
* The Secret Garden. It would explain a lot about how hard he took her death.
* The Secret Garden. Letting them play together and experience the beauties of the garden and nature causes them to shed the characters and become their true, innocent selves.
* The Secret Garden makes the garden grow and improves her cousin's health.
* The Secret Garden: Mary, at one point, has a bad dream in which her mother leaves her in a jungly version of the garden, and she's a little kid.
* The Secret Garden: Mary, Colin, and Dickon. Make of that what you will.
* The Secret Garden, Mary expects to be dressed by the servants since she had been in India. "It was the custom." The English maid finds the notion silly.
* The Secret Garden, Mary's uncle keeps his son and Mary's cousin, a bedridden, sickly child named Colin, hidden away in the house for fear that he will not be able to survive in normal society, and shuns him because of the boy's resemblance to his dead mother.
* The Secret Garden: Mary's upbringing by Indian servants exposed her to various dialects from birth, and she was formally taught French. Several times, she tries to imitate the broad Yorkshire accent under the impression that it is a different language (which isn't exactly a stretch).
* The Secret Garden: Mary, who travels from British-occupied India to England.
* The Secret Garden, oddly enough. Mary Lennox wakes up to find that her house is completely empty and silent. She is found a few minutes later by two soldiers, who proceed to tell her that her parents and everyone else in the household have died of cholera.
* The Secret Garden, reappeared as Martha in the 2016 Shakespeare Theatre Company

and 2017 5th Avenue Theatre productions.
* The Secret Garden, set in Edwardian England where a ten-year-old girl is sent to live with her bitterly widowed uncle at his manor in the country after her parents are killed in an earthquake.
* The Secret Garden takes on this role temporarily when Mrs. Medlock introduces her to her new home, conveniently telling Mary all the backstory of the home and the family for the audience to hear.
* The Secret Garden: The 1993 film plays this way up. You can almost feel the U(non)-ST coming off of Dickon and Mary (swing scene particularly), and Colin flat out says he wants to marry her.
* The Secret Garden uses "Mistress Mary, Quite Contrary" throughout the show.
* The Secret Garden version of this for both Mary and Colin. Until he shows up, his sister Martha is a good Manic Pixie Dream Girl for Mary.
* The Secret History all the main characters smoke except for Bunny. The book being set in a liberal arts college in the eighties, everyone does drugs too.
* The Secret History may go through a lot of shit, but hey, they still more or less control world events and Reka gets to bed famous men throughout history.
* The Secret History, the Nazis are secretly controlled by the immortal Fifth Archon, William de Lecce, who oversees most of their occult projects.
* The Secret History The rest of the main characters, despite being a near-impenetrable clique of supposed friends, aren't exactly models of love and caring either. Possibly the constant scheming makes it difficult to trust each other...
* The Secret History. They control world events from behind the scenes, and many real-world or suspected real conspiracies are revealed to be run by the Archons.
* The Secret History, with the implication that they would have gone all the way if not interrupted.
* The secret identity arc. The Propulsions are aliens, but they can't let anyone find out. They have a hard time keeping the secret. This comes to a head in "Back to Bortron 7" where
* the secret ingredient to his father's secret ingredient soup. There is no secret ingredient. It's this knowledge that allows him to understand the wisdom of the Dragon Scroll.
* The secret "Inner Groove" track, if played as originally intended, will be this. Good thing auto-return was invented...
* The Secret Integration, significant parts of the story take place in the rain, and the child protagonists are said to be wearing raincoats.
* The Secret in Their Eyes, which finds the protagonist's lover chasing the train down the platform, even though they've already exchanged "I love you"'s.
* The secret is incredibly dangerous but not lethal unless tampered with, and the historian knows what will
* The Secret Island of Dr. Quandary begins at a carnival whose three main attractions are a ripoff "fortune teller", a Ferris wheel that's clearly about to fall apart any day now, and a midway game that sucks your soul into a doll and strands you on an island if you win.
* The Secret Island of Dr. Quandary, the player is at a carnival and can get different comments from clicking on the crowd, the ticket booth, the fortune-teller's booth, and the Ferris Wheel. One of the Ferris Wheel comments is "Harder! Harder!"
* The secret is that unlike kickboxing an MMA fight can go to the ground, where the height and weight can
* The secret it seems is to stay away from him for the rest of your life. One comic has Wolverine called by a woman he knew, and fell in love with, 50 years before. They go on a mission together, and several pages later she's lying dead in the wreckage of their plane.
* The Secret Keeper has an effeminate voice and wears a flower-like dress.
* The Secret Keeper, it is affirmed that the Quillettes’ shapeshifting abilities and the Cullens’ extra gifts are not the same as wizarding magic, with the result that neither group can use wands.
* The Secret King has a race of aliens fleeing their doomed homeplanet to travel to

Earth in the present day.
* The Secret Land, a 1948 documentary about a massive U.S. Navy expedition to Antarctica
* The Secret Land: Admiral Byrd's plane loses one of its two engines on the way back to from the South Pole. As a consequence, the plane starts rapidly losing altitude. Byrd and his men have to chuck out everything except for their exposed film, and they barely manage to keep the plane in the air until they get back.
* The secret lesbian relationship involving Admiral Cain and Gina, at least at first. It isn't one later, as proven when Cain kisses Gina in front of her officers.
* The Secret Life of Algernon Pendleton Algernon's best friend is a china pitcher called Eulalia.
* The Secret Life of a Mermaid life is hard: her mom abandoned her and her dad at one years old and she's used as a personal information guide to the others about her mom, (which is a very tough subject for her). When her dad gets suspicious of her, he bans her from seeing her only friends, which promote her to run away with Terra, probably forever and yet, she goes through all this with no expressions except for a smile!
* The Secret Life of Bees even mistakes her for her mother in a crazed state.
* The Secret Life of Bees has a tragic example with its protagonist. Lily accidentally shot her mother when she was four years old.
* The Secret Life of Dolls, Éowyn finagles an "archery lesson" out of Faramir.
* The Secret Life of Dolls. Nearly all of Cleolinda's dolls are alive (there are a few exceptions mentioned in passing, but those ones aren't spoken of very much). Cleo constantly interacts with the dolls, treating them like roommates and often being called in to mediate their various dramas, and notes that while they all carry over the personalities of the fictional characters they're of (even ones that aren't officially licensed products, like Iorek the Webkinz polar bear), it's often unclear how much of their stories they know.
* The Secret Life of Dolls to talk in her sleep about being afraid and alone and wanting a strong vampire to protect her.
* The Secret Life of Pets 2 during the trip and actually sleeping during part of it. Most of the time, it seems like the cats are actually doing the driving.
* The Secret Life of Pets 2 has a ball roll onscreen, followed by a bunch of dogs on leashes, dragging a poor minion behind them.
* The Secret Life of Pets 2 has been hailed by many to be better than its predecessor. Helps that its audience score is in the low 90's compared to the first film's 62%.
* The Secret Life of Pets 2, when Max and Duke are forced to sleep outside at the farm, Max tells Duke that he thinks they should go check on Liam, only for Duke to mutter "I finally caught you, tail."
* The Secret Life of Pets 2, where words like "pissed" and "turd" are briefly exclaimed by characters.
* The Secret Life of Pets. A cat in the background then starts playing with the pellets.
* The Secret Life of Pets animals team up to operate motor vehicles. It goes about as well as you'd expect, especially since no explanation is given for how they learned to drive.
* The Secret Life of Pets appear to be in the movie just for audience appeal, and ended up largely superfluous to the plot. Among the protagonists, Chloe and Tiberius only contributed briefly to Max's rescue, while Buddy, Mel, Norman, and Sweetpea could've stayed home for all the difference they made.
* The Secret Life of Pets (at least until near the end of the movie, when he starts to return her feelings).
* The Secret Life of Pets, during the party at Pops' apartment, a dog is drinking from the toilet as others chant, "Chug! Chug! Chug!"
* The Secret Life of Pets for it. Instead, he realizes she's more likely to blame Duke, and promptly sets about knocking over everything in sight while Duke

frantically tries to stop him.
* The Secret Life of Pets: Gidget heroically rushes out the window... only to plummet and land onto an awning, which launches her at Chloe's apartment window where she smacks flat, before sliding down.
* The Secret Life of Pets, Gidget the lovesick Pomeranian does very crazy and impulsive things to rescue Max, including jump out of her apartment room on a high floor, assault an alley cat after just meeting him, confronting an evil bunny and telling him about her and her team's relationship with Max, and, if not the most wanted crazy thing, singlehandedly overpower a group of animals that greatly outnumber her.
* The Secret Life of Pets has a minion watch the logo light up and excitedly shout "Illumination!".
* The Secret Life of Pets has each of the main characters wearing a sign with their thoughts written on it; for example, Max's says "I really really really really really really really really really missed you!" and Snowball's says "Cute is just my cover."
* The Secret Life of Pets, his total lack of fear, and his willingness to kill anyone who gets in his way.
* The Secret Life of Pets is shown to the amusement of millions of people in Times Square.
* The Secret Life of Pets of evil pets to save Max from getting harmed.
* The Secret Life of Pets on the sofa before she finally understands the message at the end.
* The Secret Life of Pets's Pick of the Week and shown on the Times Square jumbotron.
* The Secret Life of Pets takes place in New York City, from the similarities many locations in the film resemble to actual locations in the real New York City to the first song heard in the movie being about New York.
* The Secret Life of Pets. Tattoo and Ripper pose as a lady pushing a baby carriage with Snowball posing as the baby in the carriage.
* The Secret Life of Pets to a small army of Flushed Pets who are out to get him, up to and including a sewer alligator.
* The Secret Life of Punzie have apparently had lingering feelings for each other for a while. When Elsa expresses how pent up she feels, she convinces her to visit the strip club she and Rapunzel work at as a way of confessing their feelings for her, causing them to go from friends to girlfriends.
* The Secret Life of Punzie, Rapunzel and Anna are cousins, but are very much in a sexual relationship. This is often glossed over as not only is cousin-incest considered less risque than between siblings, but because they are both women and therefor the stigma is less justified.
* The Secret Life of the American Teenager. Amy gets pregnant by Ricky, then falls in love with and illegally marries Ben. Grace dates Jack but then they break up because he slept with Adrian. Adrian dates/sleeps with Ricky a lot but doesn't mind going out with Jack a couple of times. Grace then falls for Ricky who still has sex with Adrian a lot even though he and Grace are technically dating. Ben's best friends, Henry and Alice, were dating but then they had sex too. And apparently it was bad. And the second time was bad too. So they break up and Henry flirts with/has a crush on Amy's sister Ashley who also appears to like him. Alice goes out with the then-single Jack. But she still is up to sex with Henry... and we're only on episode 14 of season one.
* The Secret Life of the American Teenager at the former's high school graduation ceremony, with the proposal serving as the conclusion to his speech. She accepts.
* The Secret Life of the American Teenager constantly sleeping around in an attempt to feel in control of his sexuality.
* The Secret Life of the American Teenager had this kind of relationship on and off for nearly two seasons before finally calling it off for good.
* The Secret Life of the American Teenager has responded to the horrible critical reception by saying she'd rather have good ratings than good reviews.
* The Secret Life of the American Teenager has this in the pilot, proving that at

least one of the writers actually knows how to write. The main love interest, after talking to the main character, talks to his councilor.
* The Secret Life of the American Teenager in the one hallway of Ulysses S Grant High. It wasn't until the second season that they were even shown in a classroom. There were brief appearances of a coach, a secretary, and a teacher in that first of about three classroom scenes. Other than that, the school staff seems to only consist of the guidance counselor.
* The Secret Life of the American Teenager. It's never brought up with the other pregnant characters.
* The Secret Life of the American Teenager: Jack Pappas, besides being a serial womanizer (and occasional man-izer), has a heart of gold and is close with a lot of people in school, though his main character trait is "being the quarterback".
* The Secret Life of the American Teenager one last time to be sure that they're really over. He reluctantly obliges, and neither of them feels anything.
* The Secret Life of the American Teenager. So what if it's Shotacon on Ashley's part, at least they're happy together. Don't let Amy and CeCe find out...
* The Secret Life of the American Teenager. They broke up when George cheated on her, got back together, then broke up again. Yet they're still friends, frequently chat, and have no issue with the shared custody of their three children.
* The Secret Life of the American Teenager was made when the "teen pregnancy epidemic" scare was at its height. Pretty much the whole series was/is marketed on how it "realistically" portrays the lives of teen mothers.
* The Secret Life of the American Teenager was shopped around from network to network for about ten years before getting picked up by ABC Family in 2008.
* The Secret Life of the American Teenager when Amy was at a music program for teen moms.
* The Secret Life of the American Teenager whenever Jeff goes on one of his frequent and extended medical missions to Kenya.
* The Secret Life of the Backyard Kids Except he's not in high school, he's in middle school.
* The Secret Life of the Backyard Kids, putting him squarely in Class 4.
* The Secret Life of the Zoo features a turtle which was originally named Donatello, but was found to be female while undergoing medical treatment and renamed Donatella.
* The Secret Life of Toys: for example, rag doll Raisin in place of Apple and female rocking horse Hortense replacing male scooter horse Belmont).
* The Secret Life of Us went through a phase of being like this with his girlfriend Sam and Jason when he started stalking his ex started when she started a fling with a musician
* The Secret Life of Us. When Gabrielle points out that the two got married, Evan points out that the show wasn't very good afterwards.
* The Secret Life of Walter Mitty featuring him, and leaves the cab because of it.
* The Secret Life of Walter Mitty, in a fantasy sequence set on a British airbase, Mitty (Danny Kaye) addresses an RAF officer as "Colonel". There is no such rank in the RAF; the equivalent rank is "Group Captain". Incidentally, the officer is wearing the uniform of an Air Vice-Marshal, equivalent to an Army Lieutenant-General, while Mitty, supposedly a Squadron Leader, wears the uniform of a Group Captain! Perhaps justified in that the protagonist is a daydreaming civilian who's obviously clueless about the subject.
* The Secret Life of Walter Mitty, the inspiration for the above two films of the same name. The story itself is just a series of Mitty's fantasies as he goes about his dull routine.
* The Secret Life of Walter Mitty, Walter gets stuck underneath an executive's desk while the two executives are talking. Further upping the comedic antics, one of the executives starts scratching Walter's leg, thinking it to be his own. Walter, of course, starts scratching the executive's leg in time. The other executive starts tapping on Walter's leg. He does the same to the executive. This whole thing falls apart, of course, as Walter starts getting confused as to who's doing what to whom, leading to the panicked retreat.

* The Secret Migration, which as a result forced him to put his participation in Mercury Rev on the backburner. However, he remained credited as the band's bass player while still a studio player, making this case an aversion.
* The Secret Oceans features intelligent dolphin-like creatures which are dubbed Cetasapiens.
* The Secret Of 1798 Catriona dresses up as a boy so she can go fishing with her father. She simply borrows a neighbour's clothes and hides her hair under a large hat. The ruse is up immediately when the boat capsizes and they are rescued by a French ship.
* The Secret of Bone Hill. A set of stairs inside the title dungeon has a pressure-detecting trap on it. When a creature steps on the second stair, the stairs fold down. Anyone on the stair will slide down and slam into a stone wall.
* The Secret of Kells He is very strict with forbidding his charges from going outside, punishing young Brendan harshly when he disobeys.
* The Secret of Kells), his response was to tear out the pages, throw said pages in Aidan's and Brendan's faces and walk off with the gold cover.
* The Secret of Kells is based on the actual Abbey of Kells, which was raided by Vikings (several times). There is even a Book of Kells, which doesn't exactly look like the one in the movie, but has mostly survived the raids for unknown reasons, but probably doesn't involve a fairy.
* The Secret of Kells It's covered from floor to ceiling in drawings and plans of the Abbot's beloved wall which encircled the city, with eerie lack of perspective.
* The Secret of Kells on his tail. The rest of the film is about how to finish the book before the Vikings burn the abbey.
* The Secret of Kells, she still doesn't take kindly to those who intrude in her forest and initially even threatens to set her wolves on Brendan if he doesn't leave.
* The Secret of Kells, the tale of Collum-Cille, and the Viking raids.
* The Secret of Kells: The Vikings are presented as nothing more than black silhouettes with eyes, and are vicious, murderous raiders sacking and devastating their way through Ireland.
* The Secret of Kells, though, refugees from all over the Roman world went to Ireland fleeing the barbarian horde, so the monks of Ireland at the time would, in theory, be cosmopolitan, although Chinese would be pushing it a bit even then.
* The Secret of Long Pork Pies: Someone cooks human meat as a secret ingredient in their food, and then serves it to unwitting guests.
* The Secret of Long Pork Pies: The secret of a popular food item is human flesh.
* The Secret of Mamo: In the Manga UK dub, Goemon uses a quote he attributes to "a wise man" to criticize Wolf the Third for accepting a job from Fujiko simply for liking the look of her ass.
* The Secret of Monkey Island also treats this as canon and plays the trauma for laughs.
* The Secret of Monkey Island and promoted as a real thing teenagers drink.
* The Secret of Monkey Island are usually considered to be the series' highlight by fans.
* The Secret of Monkey Island by its rarity alone: After Guybrush gets thrown into the bay by Sheriff Shinetop, simply wait ten minutes (which is how long Guybrush can hold his breath) until he drowns.
* The Secret of Monkey Island created the sprite for the main character, he wasn't yet named so they saved the file with the name "guy.brush", ".brush" being the file extension for the graphics program and "guy" being, well. They eventually decided they liked the name, and so Guybrush Threepwood was born.
* The Secret of Monkey Island ends with Le Chuck trying to forcibly wed Elaine.
* The Secret of Monkey Island, examining a stump in Mêlée Island's forest makes Guybrush realize that there is a hole at the base of the stump to "a tunnel that opens onto a system of catacombs!" The player is then prompted to insert the non-existent disks 22, 36, and 114, and Guybrush concludes he'll "just have to skip that part of the game." This joke was removed for the CD-ROM version, which is all on one disk, and the digitally-released Special Edition.

* The Secret of Monkey Island features caverns near the titular island that shift positions, smell of sulfur, have strange growths of hands, eyes, and mouths, where the walls constantly drip with blood. Tourists used to line up for hours to see it.
* The Secret of Monkey Island, getting repeatedly punched into the air during his confrontation with LeChuck.
* The Secret of Monkey Island. Guybrush eventually asks him who he's talking to, and Herman replies "The people watching at home, of course!"
* The Secret of Monkey Island, Guybrush finds a box of his favorite breakfast cereal. The prize at the bottom turns out to be necessary to progress.
* The Secret of Monkey Island, Guybrush goes to great lengths to rescue Governor Marley, only for it to be revealed that she'd escaped just fine without him, and his involvement ended up screwing her plan.
* The Secret of Monkey Island Guybrush meets Jojo Jr., the descendant of that monkey, who sourly informs Guybrush that his father Jojo Sr. starved to death because he never let go.
* The Secret of Monkey Island, Guybrush's crew end up turning on him as soon as they set sail for the titular island. It works out in the end, though.
* The Secret of Monkey Island had a joke where, upon trying to go down a secret passage in a tree stump, the player would be prompted to insert Disc 22. Since there were only four discs, this was impossible. The joke was removed from the CD versions, partly because there was no disc-swapping required at all, and partly because the Lucas Arts hint line was swamped with people who mistook the joke for an actual puzzle and wanted to know how to get through the passage.
* The Secret of Monkey Island has close ups for some of the important conversations Guybrush has with Cobb (the 'Ask me about Loom' guy), Elaine, Captain Smirk and Carla. In these close ups, the characters are much more detailed and look like they do on the box for the game. It is thought that all the graphics would have looked like this had technology permitted it at the time.
* The Secret of Monkey Island has "My name is Guybrush Threepwood! Prepare to die!"
* The Secret of Monkey Island has two sequences of this when you break into the governor's mansion looking for the Idol of Many Hands.
* The Secret of Monkey Island, he lands with his butt on fire. Herman Toothrot wanders by and remarks idly, "By the way, you might want to think about putting that fire out. Somebody could be hurt."
* The Secret of Monkey Island. He relapses into gibberish in later games whenever a woman is upset with him, indicating Guybrush just cannot take a woman's scorn.
* The Secret of Monkey Island, Herman Toothrot frequently does this. Guybrush has the option to ask him what he's looking at, and Herman responds "The people watching at home, of course!"
* The Secret of Monkey Island, Herman Toothrot has built a fixture on Monkey Island that he insists is modern art, but consists of a log placed over a rock with a boulder on one end. This leads to a puzzle in which Guybrush must turn the log to the correct angle and drop a rock from an overhanging ledge in order to knock down a banana tree on a distant beach. If he gets the angle wrong, he may hit his own ship, resulting in slight embarrassment on his part and an extra scene in the ending in which his crew are marooned on the same island.
* The Secret of Monkey Island he's done in the game so far. Yes, it gets updated as the player progresses.
* The Secret of Monkey Island, if Guybrush asks the three Men of Low Moral Fibre "What's in the keg?", the one on the keg and the tall one reply:
* The Secret of Monkey Island: "I found the treasure of Melee Island and all I got was this stupid T-shirt."
* The Secret of Monkey Island is revealed to be one when Guybrush eavesdrops on his conversation with Carla the Sword Master.
* The Secret of Monkey Island: "I won't not promise to avoid refraining from harming you."
* The Secret of Monkey Island of the first two games switched to. Fans are hotly divided over which is best.
* The Secret of Monkey Island. One of the first characters you can speak to is a

dog, who can (apparently) explain the entire plot of the game, but speaks in woofs and barks with the occasional real word thrown in. This is about as helpful as it sounds.
* The Secret of Monkey Island: One of the Men of Ill Repute on Melée Island never talks, he just laughs at his partner's jokes until one of them shuts him up by bopping him on the head.
* The Secret of Monkey Island remaster). So just look for the items with jaggedy edges.
* The Secret of Monkey Island screens pops up, only to disappear when Guybrush flies back up out of the jungle and onto the cliff, unscathed. His only explanation: "Rubber tree."
* The Secret of Monkey Island self drowned and tied to the Idol of Many Hands.
* The Secret of Monkey Island, "So's your mother" is one of the options in Insult Swordfighting that won't win, although it only appears during the training scene with Captain Smirk.
* The Secret of Monkey Island: The 1990s era Guybrush walks on screen with a treasure map and digs up the logo, which changes to its modern form.
* The Secret of Monkey Island: The battle in the governor's mansion surely belongs here. All we see/hear are sound effects, and vague descriptions once the scene is over. Although we get a bit more than that, thanks to the status line showing up the various commands. Guybrush pushes a red button and uses the wax lips on the 500-pound yak, among other heroic actions...
* The Secret of Monkey Island. The head itself is attached to a giant skeleton buried underground...
* The Secret of Monkey Island, there is a rat you can pester by hovering your mouse over him. Doing this repeatedly will cause it to run away, and a nearby group of pirates will get mad at you.
* The Secret of Monkey Island. They capture Guybrush, but afterwards they stand around and debate whether or not it would be healthy to eat him. They're also notably more annoyed by the fact that you stole their bananas than anything else.
* The Secret of Monkey Island. To find the swordmaster, Guybrush simply needs to ask the shopkeeper to contact her, then follow him until he reaches her house.
* The Secret of Monkey Island too, which are actually handy shortcuts from one end of the town set to the other.
* The Secret of Monkey Island to the prisoner in the town jail until he find some breath mints, the poor guy's halitosis is so bad (it apparently stems from not being fed regularly and being forced to feed on rats).
* The Secret of Monkey Island was thought by him and the other writer to be placeholder, and that the bigwigs were going to hire some "real" dialogue writers to do the actual stuff, but the humorous placeholder dialogue was so funny that they decided to leave it in. This actually had quite an impact on the gameplay itself and led to the "rubber chicken with a pulley in the middle" bit.
* The Secret of Monkey Island when he first meets Elaine. He gets over it (barely) on his second chance.
* The Secret of Monkey Island, when he notes that the clock is always at 10 pm.
* The Secret of Monkey Island, where Guybrush's former crewmates, now back home on Mêlée island, go out of their way to avoid him because he left them stranded on Monkey Island.
* The Secret of Monkey Island, where he can't talk at all to Elaine Marley, instead muttering nonsensical gibberish.
* The Secret of Monkey Island, you can put as many pieces of eight as you want in it, but it won't work. A single bottle of root beer later falls out of it when LeChuck punches Guybrush into the machine.
* The Secret of Monkey Island, you get to choose one of three spoof Aesops for Guybrush to say:
* The Secret of Moonacre, also mixes the two concepts. Gabor Csupo took the book's characters, and went off and did his own thing. To be fair, however, the original book really doesn't lend itself that well to a cinematic adaptation.
* The Secret of My Success, because at that exact same moment she finds out that

he's her nephew by marriage.
* The Secret of My Success, Mr. Prescott walks in on Brantley Foster (Michael J. Fox) and Mrs. Prescott in a compromising position. They claim Brantley hit his head. On what? "The ceiling!/The floor!" Which is it? "Both!/Neither!"
* The Secret of My Success. Not long after, Brantley realizes that she is his Aunt Vera (by marriage, as his boss is his blood-related uncle, Mr. Prescott). Brantley is disgusted, but Vera isn't - she later pursues him sexually.
* The Secret of My Success Then he sits down at his desk and says, "You guys were good tonight." Unfortunately, the neighbours later on have another round, so he puts his head under his pillow trying to keep the noise out, but is unsuccessful, upon which he bleakly mimes being an orchestra conductor to the beat of the couple's increasing wails.
* The Secret of NIMH 2 depicts Mrs. Brisby's sons Timothy and Martin wearing a shirt but no pants and running around barefoot. Later on, Timothy meets a girl mouse named Jenny who also wears a shirt but no pants and also runs around barefoot.
* The Secret of NIMH 2 discusses this, with Doug giving as an example a reveal that the hero is a piece of broccoli.
* The Secret of NIMH 2: Timmy to the Rescue, not only does the sequel avoid giving any mention of what she accomplished, let any role in the plot, she is on-screen for a grand total of 25 seconds, and only has two or three lines of dialogue.
* The Secret of NIMH 2: Timmy to the Rescue, the bars are clearly wide enough for him to squeeze through.
* The Secret of NIMH 2: Timmy to the Rescue tries to get Tim to help him take over Thorn Valley.
* The Secret of NIMH 2: Timmy to the Rescue, upon which he manages to brainwash all the other rats in the facility, causing an uprising against the scientists, after which he organizes the lab rats into an army to invade Thorn Valley, longing for revenge, and is then gradually and conveniently stopped by Timmy, who has henceforth managed to keep his loved ones safe.
* The Secret of NIMH Action Mom. She spends much if not most of the movie in well over her head but keeps going because her family is at stake.
* The Secret of NIMH after escaping Auntie Shrew, hiding under a water lily.
* The Secret of NIMH, a gigantic barn owl made even bigger by being introduced relative the the protagonist, a small field mouse.
* The Secret of NIMH all seem to get along with one another pretty well (as long as the topic of which film was better is avoided), with a lot of crossover fan-art and fan-fiction existing between them.
* The Secret of NIMH: A spider stalked Mrs. Brisby without her knowing it before it got squashed by the Great Owl.
* The Secret of NIMH...before the Great Owl appears and crushes the spider.
* The Secret of NIMH, but was widely acclaimed for its vibrant animation and moving storyline.
* The Secret of NIMH by Robert C. O'Brien. The book had many differences: most notably that the fantasy and magical elements were completely absent, as was the emphasis on love and courage. There was instead a larger focus on the rats. There were also no villains; Jenner was only mentioned in the rats' backstory, having left them after an argument.
* The Secret of NIMH carries this over from the book it's based on. The rats make it out fine, however all but two of the mice are blown away to their deaths.
* The Secret of NIMH certainly seems to enjoy the trappings of this trope. Complete with robe and staff.
* The Secret of NIMH completely ignores everything that Mrs. Brisby did in the first movie (i.e., the one that people actually like) in favor of giving a massive amount of praise to her late husband, Jonathan Brisby. Sure, Mrs. Brisby is arguably too modest to bring this up herself and would probably decline a statue built in her honor, but the fact that nobody else in the sequel even so much as points out that Mrs. Brisby saved everyone and is AT LEAST as deserving of praise as Mr. Brisby makes the movie seem far more sexist than it should have. Oh, and the

opening of the movie only refers to her as a widow.
* The Secret of NIMHealth. (Who probably weren't very happy about the depiction...let alone the sequel)
* The Secret of NIMH finally meets Ms. Right, who's just as clumsy as he is.
* The Secret of NIMH had to change the main character's name from the original Frisby to Brisby.
* The Secret of NIMH has always stuck around at Stage 2, having a small-but-devoted fandom.
* The Secret of NIMH, he recognizes him through his changed appearance when he says...
* The Secret of NIMH hides among the toy soldiers guarding the entrance to the rats' council hall to play a prank on Mr. Ages.
* The Secret of NIMH his badass electro-pike (against Dragon, perhaps?) would have been nice.
* The Secret of NIMH; if Mrs. Brisby is threatened by a spider and the spider is nothing but a snack for the Owl... well, let's just say she's lucky to survive that scene.
* The Secret of NIMH: In the first movie, Justin & the rats leave Mrs. Brisby for Thorn Valley. In the sequel, Timmy leaves his family behind to fulfill an off-screen prophecy in the valley.
* The Secret of NIMH, in what may or may not be an intentional usage: when Mrs. Brisby first meets Jeremy, he is tangled in red string which he is retrieving to build a "love nest" for his future Ms. Right. The end of the film has Jeremy and his love interest flying and holding the two ends of the string.
* The Secret of NIMH Jenner gets a dagger thrown to his back courtesy of Sullivan, as payback for mortally wounding him earlier.
* The Secret of NIMH lets out a "Damn!" when Mrs. Brisby is captured by a human child.
* The Secret of NIMH. Mrs. Frisby's name was also changed to Mrs. Brisby.
* The Secret of NIMH, Mrs. Frisby was dropped from the title of the film for the same reasons.
* The Secret of NIMH since his more whimsical characterization was adapted into the book's sequels.
* The Secret of NIMH technology or advancement, but jacking into the human-made power grid is a dangerously conspicuous activity for hyper-intelligent rodents on the run from the government. That, and they are starting to develop a kind of cultural ennui as they develop human-like morals and higher reasoning, as they realise that being so gifted but living entirely off the back of another species' technology is robbing them of their self-worth.
* The Secret of NIMH, the eternal Jeremy finds his longed-for soulmate when she rams into him at full speed. This happens at the end of the film, rather than at the beginning (as is more traditional for this trope).
* The Secret of NIMH. The film changes her name to Mrs. Brisby because the original name sounded to similar to "Frisbee", the name of a popular toy in the 1980s.
* The Secret of NIMH - The film that launched a thousand furries. Pretty much every character. There is even a scene in the third act where Justin suggests to Mrs. Brisby that she remove her cape (the only thing she wears) so that it won't 'get caught on something.' The scene unintentionally turns Justin into a pervert in the eyes of some fans.
* The Secret of NIMH the heroine Mrs. Brisby and the Captain of the Guard, Justin, flirt a few times, but both have more important things on their minds (not to mention that Mrs. Brisby is the widow of one of Justin's old friends).
* The Secret of NIMH, this happens with the cat itself as the monster, and its arrival is preceded by a rabbit.
* The Secret of NIMH too much." In this case, the rats have become so intelligent that they've developed morals against stealing from the local farmer to survive and must form their own civilization away from humans.
* The Secret of NIMH underlighting was used for the glowing eyes on Nicodemus and the Great Owl.

* The Secret of NIMH was reportedly produced on a budget of $7 million, which was said to have been around half the budget to any of Disney's animated features at the time. Regardless, the film was heavily well-received by critics with much of the praise being directed towards the animation, which was noted for surpassing the quality of Disney's at the time.
* The Secret of NIMH went on a mission with the rats to put sleeping pills in Dragon the cat's milk, but he was killed in the process. He only appears onscreen in Nicodemus' flashback. She later admits that she never knew exactly what caused her husband's death.
* The Secret of NIMH wields a giant freaking halberd that generates electricity.
* The Secret of NIMH, with close-ups of abused animals cowering in their cages and rats reacting with agony to their injections.
* The Secret of NIMH with the sequel, in which Mrs. Brisby barely shows up and the amulet is only seen/mentioned in the flashback sequence at the beginning.
* The Secret of NIMH, you'd be forgiven if you assumed that implied they were the same being (what with the glowing eyes and wispy grey fu manchus...)
* The Secret of Platform 13, and tells Raymond that he can have as much as he wants if he'll only come with them...neglecting to mention that, since any half-decent wizard can do the same trick, gold is pretty much worthless on the Island, where everyone just barters for what they need.
* The Secret of Platform 13, including the royal family). The rescue team sent to find the lost prince — a wizard, a fey, a young hag and an invisible giant — were chosen not just for their skills but because they can move around London relatively unnoticed.
* The Secret of Platform 13, though since they're nine there's understandably no romance involved.
* The Secret of Platform 13 was built over a Gump, a portal to a magical place called The Island.
* The Secret of Platform 13 world, with no way to retrieve him for nine years. Since the King and Queen were too nice to punish them, they spend the time punishing themselves by living in a cove and refusing to eat anything but the stalest, moldiest food; whenever even slightly comfortable, they will excuse themselves to sit on painful rocks or dip their limbs in icy water. When nine years finally pass, they're stationed at the door with a huge crate of bananas, waiting to dig in as soon as the Prince arrives.
* The Secret of Roan Inish, Grandfather tells his granddaughter Fiona that his own great-grandfather, Sean Michael, was out at sea fishing with the other men of the family when a fierce storm destroyed their fishing boats. The others drowned (as would have been expected), but Sean Michael was found alive the next morning, having been dragged to shore by a seal.
* The Secret Of Santa Vittoria: After hiding over a million bottles of their rare and prized wine from the Germans. The villagers then deliberately hide a smaller quantity of wine (300,000 bottles) elsewhere, pretend that there is no wine left in the village at all, and then give up the smaller to placate the Germans and keep them from assuming there's more wine hidden nearby. It works, but only for a while.
* The Secret Of Santa Vittoria to the first one to arrive on the scene.
* The Secret Of Santa Vittoria: Von Prem and Traub, the leaders of the soldiers sent to seize the villages wine. Von Prem is a polite, restrained professional, while Traub is a bit of a swaggering thug. Although by the end of the story, after being thoroughly outwitted by the villagers, Von Prem is a lot less smooth and Traub has slightly softened.
* "The Secret of Success": The boys see an ad on TV promoting an all-terrain vehicle that goes on
* The Secret of the Hunchback: Frollo uses one to examine one of the church's goblets. Like other things in this movie, it's anachronistic.
* The Secret of the Magic Gourd, the eponymous Magic Gourd asks Wang Bao how he wants his wish carried out, and the impatient (and perhaps not so bright) Wang Bao responds with "I don't care, just do it!".
* The Secret of the Magic Potion. Sulfurix even admits he didn't expect it to

actually work.
* The Secret of the Ninth Planet by Donald A. Wollheim. The Plutonians keep samples of sentient species preserved in suspended animation tanks. They plan to add our hero to their collection, so he starts smashing the tanks and as each alien regains consciousness it joins the fight and soon there are no more Plutonians.
* The Secret of the Ninth Planet Pluto, and the Sun going nova is actually the whole point, so it would bring the suns' light closer to their world.
* The Secret of the Unicorn the Bird brothers lock Tintin into a large cellar room. It takes him a while, but he has no problem fashioning a battering-ram to smash through the wall using a large wooden beam, a convenient ring in the ceiling, and the sheets and blankets of his bed.
* The Secret of the Unicorn", Tintin is on the phone with Haddock, trying to say that he's in Marlinspike Hall and to bring the police. Haddock, unfortunately, mishears "police" as "Greece", and "Marlinspike" as "Starlings bite" and "Martin's bike". Then, when Tintin tries to correct him, saying, "Marlinspike's the name!", Haddock replies, "What sort of game?".
* The Secret of the Wings, Periwinkle asks Tinkerbell (speaking of Terrence), "So is he your boyfriend?" "Uuuuhhhhh..." Cut to next scene without finishing sentence.
* The Secret of Twilight Gemini: About midway through the film, Sadachiyo and his men burst into their hotel room to assassinate Lupin, just as he and Fujiko were getting started. Which forced him to bail in his underwear and left Fujiko stark naked, with nothing but a bedsheet to defend herself!
* The Secret of Twilight Gemini And is so proficient with it that, when Lupin took cover behind a boulder, Sadachio shredded it in a matter of seconds!
* The Secret of Twilight Gemini If his long black hair, nail polish, and make-up don't make it obvious enough, all the "honeys", "darlings", and "big boys" that permeate his speech pattern will. All spoken in effeminate tone and matching mannerisms.
* "The Secret Origin of Denzel Crocker" had Timmy and his fairies going back to 1972 and Timmy found out Cosmo and Wanda were Crocker's fairy godparents back then. It's unknown if past Cosmo and Wanda recognized their present selves, but past Jorgen recognized present Jorgen.
* "The Secret Origin Of Denzel Crocker" has Timmy travel back to the '80s to figure out why Mr. Crocker is so unhappy in the future. He looks for a college-age Crocker in 1984 and remarks that the whole decade is a fashion disaster. He has Cosmo and Wanda poof him up a
* The Secret Origin of Iron Man, plural. That it destroys planets is incidental - it simply flies through them without slowing down. At the speed with which its travels - at least in the area of light speed - that leaves a rapidly expanding cloud of planetary debris.
* The secret police a modern Russian citizen is the most likely to run afoul of is the MVD E-Department, or the Center for Counteracting Extremism, or Center E (there is no established translation). This political police handles most of the low-profile dissidents and Internet badmouthers, while the FSB only works with high profile cases.
* The Secret Policeman's Biggest Ball, played this to the point of subverting the entire routine. The stage is set for the famous parrot sketch, the crowd is giddy with anticipation, John Cleese as Mr. Praline begins by declaring the parrot he purchased is dead...
* The Secret Recipe: In chapter 15, right after Wakatsuki had a brief daydream of Yuuko in a Naked Apron, one of the Cooking Club members bring up the upcoming cultural festival and asked what should their aprons be like. Cue immense blushing from Wakatsuki.
* The Secret Return of Alex Mack: After gaining superpowers, Jo Baker puts her past behind her and insists on being called "Azure Crush". Since her past included being a miserable overweight bully living in poverty, she may have a point.
* The Secret Return of Alex Mack: After the North Korean battle, the whole SRI team receives medals, the Congressional Medal of Honor for the military personnel and the Presidential Medal of Freedom for the civilians ("With Distinction" for

Terawatt).
* The Secret Return of Alex Mack, Alex goes to a lot of effort to physically distinguish herself from her new superhero identity of Terawatt. Terawatt wears high heeled boots, and usually floats a bit off the ground to appear taller, while Alex always wears flats. Terawatt wears a long blond wig, while Alex has cut her hair short. The Terawatt costume includes a padded bra…
* The Secret Return of Alex Mack, Alex spends time reminding herself not to fall victim to this when she initially meets her world's version of Jack O'Neill, even if he swiftly proves himself trustworthy. This trope also contributes to her establishing a friendship with the 'local' Willow and Hermione.
* The Secret Return of Alex Mack, and gets his own men eaten. Alex promptly dubs him "Colonel Stupidetti" for it and makes sure he isn't responsible for any more supervillain situations.
* The Secret Return of Alex Mack and its various spin-offs affirm that the laws of physics are different in the various worlds visited in the series, such as the magically-extended bags Hermione gave her teammates reverting to standard bags and the dragon-hide jackets just becoming an interesting form of leather after just a few days in a different universe, as well as chemicals like GC-161 losing their 'potency' in other worlds.
* The Secret Return of Alex Mack, and judging by her recent efforts, she's apparently trying to wipe out humanity.
* The Secret Return of Alex Mack) and Ultraman (whose neighbour was a biophysics professor performing unauthorised experiments).
* The Secret Return of Alex Mack, blinding super-tough enemies with lightning to the eyeball, and telekinetic guide parries to divert bullets.
* The Secret Return of Alex Mack, but unlike the original, after killing the 200-foot spider, a horde of car-sized babies appears; the SRI team has to invade their cave and deal with them. Alex gets nightmares afterwards for weeks.
* The Secret Return of Alex Mack calls her Smurfette. (No-one else is allowed to call her that.)
* The Secret Return of Alex Mack: Hanna gets a pair of grappling hook pistols from Batman, and they quickly become her favourite way of traveling around. She doesn't have his level of experience with them, but her genetic enhancements give her exceptional hand-eye coordination and upper body strength.
* The Secret Return of Alex Mack is a prion disease that spreads through the water supply, causing infected people and animals to become obsessive, ultra-paranoid killers — without losing all reasoning ability, which makes them extremely dangerous. Such as the lady who greets some FBI agents investigating the disease, tells them that she has cookies in the oven, "can't keep 'em waitin'", then pulls a gun out of the oven and shoots the agents. While continuing to repeat, "Can't keep 'em waitin'."
* The Secret Return of Alex Mack. It helps that she has Terawatt to provide the power.
* The Secret Return of Alex Mack: Jack O'Neill is nearly old enough to be Willow's father, and thinks he should take their relationship slowly as a result, but Willow is having none of that. Alex's family are initially concerned, but conclude that they're both adults and they make each other happy.
* The Secret Return of Alex Mack". Justified, given they've been dealing with GC-161 metas for years.
* The Secret Return of Alex Mack: Lord Rupert Giles, in his younger years, picked up the nickname 'Ripper', and "not because of a fondness for seamstress work."
* The Secret Return of Alex Mack. (Note that the story itself is certainly not PG-rated, with all the B-movie horror crossovers and graphic violence and Willow's very raunchy relationship with Colonel O'Neill, but there's very little in the way of coarse language.)
* The Secret Return of Alex Mack organic matter and grow larger; even upholstery is fair game. It can be injured by fire or electricity, but will immediately consume the damaged cells and thus minimise its losses.
* The Secret Return of Alex Mack: Riley Finn is a highly competent soldier trained

as a medic, and his wife is a Peace Corp doctor who always carries a gun.
* The Secret Return of Alex Mack's butler Alfred is a former 006 agent. Not only that but he was retired for being too old (Double-Oh agents are required to retire at 45); he was skilled enough to complete his career without ever getting seriously hurt.
* The Secret Return of Alex Mack sees a group of high school boys discover a formula that makes them invisible. One of the first things they do with it is spy on the cheerleaders showering. (Grover later steps up and uses it more heroically.)
* The Secret Return of Alex Mack sees "Terawatt" fight a 200-foot (and still growing) tarantula, and later a 90-foot woman affected by an unknown mutagen. Being able to fly is quite helpful in both fights. Makes sense as it's a crossover with (among other things) lots of B-movies.
* The Secret Return of Alex Mack: Sergeant Carlson is strong enough to use an M240G and an M32 at the same time. Possibly justified since he's firing on a group charging at him, and an M32 fires grenades, so precision is not essential.
* The Secret Return of Alex Mack. She just prefers the taste of diet coke.
* The Secret Return of Alex Mack silvery liquid form. She still gets bruised on occasion, but generally walks away from fights much less injured than other team members.
* The Secret Return of Alex Mack: Subverted when Alex's older sister remarks on Colonel O'Neill's looks, in front of eight-year-old Shar.
* The Secret Return of Alex Mack. Terawatt reflects afterward that it's a good thing he wasn't clever enough to just make her allies look like monsters and have her fry them.
* The Secret Return of Alex Mack; Terawatt's costume is deliberately crafted to look older than Alex (taller, more "developed", deeper voice). Most people assume she's around 25.
* The Secret Return of Alex Mack: Terawatt's costume is just a slightly modified leotard. Justified in that she only needs it for disguise; her silvery morph gives better protection than any body armour, and carrying more weight makes it harder for her to fly.
* The Secret Return of Alex Mack; Terawatt wears bright white. It's even stain-resistant. Possibly justified since she's not aiming to be a regular soldier; she's on rescue missions as often as combat, so instant recognition is an advantage, and when she does fight, she's often in her quicksilver form anyway.
* The Secret Return of Alex Mack: The US Marshals assigned to Azure Crush are rude, crude, sexist jerks. Despite this, they stand their ground in the face of a supervillain attack and are among the only casualties.
* The Secret Return of Alex Mack: This is Alex's most notable power. She's limited to approximately two hundred pounds of force (although that gradually improves with practice), but she can divide that force over multiple objects at once, and exert very fine control, enough to easily turn screws and safely pinch carotid arteries shut. Furthermore, since she herself weighs quite a bit less than two hundred pounds, she can fly at over 80 miles an hour, or at slower speeds with enough force left over to work or fight.
* The Secret Return of Alex Mack: This is Ultraman's main power, with a running speed of about 280kph before his shoes catch fire.
* The Secret Return of Alex Mack: To an outsider, this appears to be the career Alex is heading for. She's apparently run into a shootout to get the first decent footage of Terawatt, filmed at least two of Terawatt's later battles, and produced some of the best footage of the Davenport Building cleanup. She even has a Pulitzer prize.
* The Secret Return of Alex Mack to enjoy doing it, and has moderately enhanced strength and toughness, letting her fight them on a reasonably even footing.
* The Secret Return of Alex Mack: To escape from capture and probable death, the Macks expose themselves to GC-161, altering their DNA and gaining unstable powers that affect their personalities — and risking those changes becoming permanent if they can't get the antidote in time.
* The Secret Return of Alex Mack to get some actual training from the SRI, but her

style remains very direct and simple, relying on her ability to get up in someone's face and bring the pain.
* The Secret Return of Alex Mack), to respond to superpowered threats.
* The Secret Return of Alex Mack to wipe it out in spectacular (yet traumatic) fashion.
* The Secret Return of Alex Mack turn out to be Breslynn Orphans, designed to be smarter, stronger, tougher, faster, and more attractive than regular humans.
* The Secret Return of Alex Mack until he ends up with nothing but a minor muscle enhancement, letting him jump a few inches higher.
* The Secret Return of Alex Mack, using a parachute that's just enough for her to land safely with her enhanced physiology, through a window that she shoots out just beforehand, and doesn't even stop to dust herself off before leaping after Bane.
* The Secret Return of Alex Mack: When tracking Hanna's movements, Willow finds a freighter with signs of a possible stowaway: food wrappers and two full jars.
* The Secret Return of Alex Mack with telekinesis to make quite an effective cutting tool.
* The Secret Return of Alex Mack women she met. But even the new team members who weren't part of the league are largely female.
* The Secret Saturdays counterpart in the face with the Claw, only to have her doppelganger parry it with her prehensile tongue.
* The Secret Saturdays: "Curse of the Stolen Tiger" is a lighthearted episode about Zak's powers interacting with a cryptid's ability and causing him bad luck. It falls between the action-heavy and emotionally charged "Once More the Nightmare Factory" and the dramatic revelations of "The Kur Guardian".
* The Secret Saturdays do an inverted version in one episode, who can save the most people from an erupting volcano.
* The Secret Saturdays, Doc flies a jet fighter into space, which freezes on the way up. He shatters the ice on the nose as he leaves the cockpit. When he gets back, the now-exposed cockpit is frozen over, as is the spot he had cleared before.
* The Secret Saturdays: Drew Saturday can speak 37 different languages. Doc, not so much.
* The Secret Saturdays, embodies this. Essentially a cross between Doctor Doom and Vincent Price, this should come as no surprise.
* The Secret Saturdays episodes "Cryptid vs. Cryptid" and "War of the Cryptids".
* The Secret Saturdays episode "T.G.I.S." saw him resurrected at the hands of Dr. Animo.
* The Secret Saturdays episode "The Kur Guardian", a flashback showing how Fisk joined the Saturdays shows him being hunted by a mob wielding the aforementioned items in their pursuit.
* The Secret Saturdays: Even Komodo spits out the hair sandwich Drew makes Doc in "The Vengeance of Hibagon".
* The Secret Saturdays except Zak seems capable of pulling off the same feat if required.
* The Secret Saturdays fans blamed the show's creator Jay Stephens for the crossover episode "TGIS". However, Stephens had no involvement in the episode as writer. In fact, Joelle Sellner was the one who wrote the episode.
* The Secret Saturdays gives us the Monday family, the Saturdays' evil alternate reality clones. Each of them is identical to their good counterpart save some small detail.
* The Secret Saturdays: Happens at the end of "Once More the Nightmare Factory":
* The Secret Saturdays: Happens to Doyle when his jet pack springs a leak in "Cryptid vs. Cryptid".
* The Secret Saturdays has a habit of bestowing nicknames on people based on their physical appearance.
* The Secret Saturdays have this in every episode, to let the viewer know the current situation of the characters.
* The Secret Saturdays: In "Curse of the Stolen Tiger", the entire family (plus Wadi) use their belts to slide down a hoist rope from the warlord's mountain fortress.

* The Secret Saturdays: In "Into the Mouth of Darkness," Drew is less than impressed by Doc's grasp of Arabic as he attempts to apologize to a local for destroying his boat:
* The Secret Saturdays: In "The Atlas Pin", Fiskerton attempts to pilot the airship by randomly mashing buttons. He succeeds in turning on the seat massager and launching a missile.
* The Secret Saturdays: In "Where Lies the Engulfer", Doyle takes Zak on training mission in an abandoned Canadian resort town. It turns out there was a very good reason why it had been abandoned.
* The Secret Saturdays is first seen as a giant snake, but it's revealed later that the snake is just one of its tentacles.
* The Secret Saturdays, learned to speak through a television set with black and white horror films.
* The Secret Saturdays — Solomon "Doc" Saturday (also a literal/biological father).
* The Secret Saturdays. No matter how hard they try that can't seem to keep up with Argost, except for the handful of episodes where they come ahead. They finally succeeded in the last episode, obviously.
* The Secret Saturdays states she speaks 37 languages. Ulraj claims to speak 15 of their "surface languages," though he doesn't seem to know what countries they come from, but what do you expect for someone who lives underwater?
* The Secret Saturdays: The 11-year-old Zak has a crush on Abbey Grey who used to be his babysitter. This causes some serious jealousy issues when she starts dating his uncle Doyle.
* The Secret Saturdays: The eponymous pin in "The Atlas Pin", which was created by the Atlanteans to lock key tectonic plates in place. Tampering with it causes devastating worldwide earthquakes. Removing it will destroy the planet.
* The Secret Saturdays, the Saturday family and their nemesis, V.V. Argost, spend the first season trying to retrieve clues that would help locate Kur, a dangerous ancient Sumerian being that ruled over all cryptids, only to find that Zak, who has always had the ability to communicate with these creatures and considered their best counter to Kur, is in fact Kur's reincarnation.
* The Secret Saturdays: The Saturdays break up an underground cryptid fighting ring in ''Cryptid vs. Cryptid".
* The Secret Saturdays, the Saturdays get tricked by a faked message from a ghost into helping some evil scientists complete a machine that can merge living things together, who then test the machine on Zack, Fisk, and Komodo.
* The Secret Saturdays: used in episode "Where Lies the Engulfer", where a cryptid made of water smashed Doyle down to the bottom of the lake and he sees a skull leering back at him amidst a floor of bones. "Ahhh. Now that's just sick!"
* The Secret Saturdays when Zak and his pet komodo dragon and gorilla-cat are combined into one being.
* The Secret Saturdays: "Where Lies the Engulfer" features a microscopic cryptid that can turn the lake it lives in into a terrifying monster.
* The Secret Saturdays: Zak and Fisk cause one at the start of "Cryptid vs. Cryptid".
* The Secret Saturdays: Zak has three Team Pets, all of them cryptids, including a 7-foot tall "gorilla-cat" named Fisk, a komodo dragon (named, you guessed it, Komodo), and a pterosaur named Zon. Unlike most team pets, Zak treats them like their part of his family, including Fisk, whom he likens to an adopted brother
* The Secret Saturdays, Zak Saturday's eyes glow yellow-orange whenever he uses his cryptid-controlling powers. His antimatter counterpart Zak Monday bears a bright green glow.
* The Secret Saturdays, Zak says that he and his family are "the only thing standing between you and the things that go bump in the night."
* The Secret Saturdays, Zak whacks Argost in the ankle with his weapon, resulting in the hopping and moaning.
* The Secret Saturdays: Zak whispers "No..." when his family is about to be crushed by an army of monsters just because he refuses to help overthrow the human race.

* The "secret sauce" is actually mayonnaise that's been left out in the sun all day.. The boondocks outside Springfield are apparently home to even less savory chains, with names like "Burger Place", "Skobo's", and "Dimwillie's".
* The Secrets. Both are completely surprised and dismayed initially (as they're Orthodox Jews) with their mutual attraction.
* The Secret Sense": Several nouns are used for human beings in this work; human, Earthmen, and Terrestrial.
* The Secret Series, the author, Pseudonymous Bosch, often brings up this point in more than one of his books.
* The Secret Service, Gary's results at the academy are extremely high and whilst life on the streets may account for his observation skills, it still doesn't account for his skill with weaponry.
* The Secret Service, Jake believes this of Gary, but later feels that he just hasn't had the opportunity to make something of himself.
* The Secret Service one would expect. In short, it's a Martini made with drinks you nicked from the liquor store.
* The Secret Seven: French writer Evelyne Lallemand wrote about a dozen further novels during the '70s and '80s, most of which were later translated into English and published with Enid Blyton's signature on the cover.
* The Secret Show, Anita and Victor are in a Chinese restaurant, resulting in the following exchange:
* The Secret Show, Doctor Doctor creates a mind bomb that causes an entire country to develop unbinding hatred towards whoever's image was on the bomb prior to its detonation.
* The Secret Show episode "And That's for Helsinki", both Victor and Anita find out that significant 'chunks' of their brains were removed by Professor Professor to be cleaned after they were hit by a mind bomb. Other than some slight amnesia they suffer no ill effects, even though the brain 'chunks' are big enough to look like they make up most of their brains.
* The Secret Show. Halfway through, they just decide to screw it all and watch it.
* The Secret Show have a specialized queen. Somehow, they're pretty advanced in technology too.
* The Secret Show: Omnious music was mentioned every time somebody mentioned the Bermuda Trapezoid. A band was revealed to be doing it when Victor Volt asked them if they'd do that every time somebody said "Bermuda Trapezoid"? And yes, they did repeat it after Victor asked the question.
* The Secret Show project holograms around their bodies as disguises, which also allows them to speak human language.
* The Secret Show several monuments in the air. While U.Z.Z. works to put a stop to it, everyone else bets on which monument will be the winner.
* The Secret Show, the alternate dimension protagonists use this to get into the villain's base.
* The Secret Show turn everyone into the world into zombies, which Anita manages to reverse at the last second as she turns herself.
* The Secret Show use holograms to shapeshift into anything and anyone they want.
* The Secret Show, Victor babies and insults a child he has been assigned to defend, only to find out later that the kid is the leader of the organization he works for.
* The Secret Show: Victor Volt once entered a Victor Volt impersonator contest but got third place.
* The Secret Skill Shot instead requires plunging to the mini-loop, awarding a minimum of one million points, 10 seconds of ball saver, and a lit Portal Lock.
* The Secrets: Naomi and Michelle briefly become lovers while at the seminary together.
* The Secrets of Drearcliff Grange School, and litters her speech with stereotypical gangster slang.
* The Secrets of Drearcliff Grange School, because then everything happening at the school becomes part of a single story.) There's also the case of Enid ffolliott, who dramatically appears in time to save Amy from a peril after being missing for

two years; it's strongly suggested that what she was doing during those two years was adventurous and possibly world-saving, although we don't get many details.
* The Secrets of Drearcliff Grange School, Fleur Paquignet has an affinity with plants, and can cause them to grow in inhospitable conditions and at unnatural speeds.
* The Secrets of Drearcliff Grange School-haunted otherworld known as "the Purple", where the only source of natural illumination is a trio of moons. The moons are the first thing the protagonist notices the first time she finds herself in the Purple.
* The Secrets of Drearcliff Grange School is taken over by a new regime, and students who don't fit in are expelled from their Houses and assigned to a punishment group. When it happens to her, the protagonist mentally compares the process of being expelled from her House to a military dismissal ritual.
* The Secrets of Drearcliff Grange School life force, making people feel better when they spend time with him; it is not revealed whether he's sharing his own life force or somehow acquiring it some other way.
* The Secrets of Drearcliff Grange School, one of the secrets is that the school is built on a place where the barrier between dimensions is thin, which becomes important during the climax.
* The Secrets of Drearcliff Grange School, one of the students is in a coma while a parasitic maggot in her brain drives her body around.
* The Secrets of Drearcliff Grange School, several of the students are the daughters of mad scientists or criminal masterminds; one mentions knowing a man named "Singapore Charlie" whose business is providing such people with deadly animals for their alligator pits and other death traps.
* The Secrets of Drearcliff Grange School, she's the girl whose mouth is always smiling but whose eyes are screaming.
* The Secrets of Drearcliff Grange School students form a secret society to rescue one of their number after she's kidnapped. The novel ends with them discovering a new mystery to solve.
* The Secrets of Drearcliff Grange School to memorise the maps so the heroes can navigate the secret tunnels and later complains that she can feel her memories changing as the book updates to include the changes wrought by the climactic battle.
* The Secrets of Drearcliff Grange School whose students include psychics, shapechangers, werewolves, and fish-people, in a setting where there are publicly active superheroes like the Aviatrix, who flies with wings that appear and disappear as needed. Charlotte Knowles' father writes detective novels about impossible crimes that always turn out to have non-supernatural explanations, even though he lives in a world where "the murderer used telekinesis to kill the victim from outside the locked room" is entirely possible and much more straightforward than the kind of solution his novels usually have, and refuses to believe that his wife's and daughter's psychic abilities are not some kind of trick that he can't figure out and that they won't admit to. Charlotte says at one point that she suspects on some level he's aggrieved that they both got abilities that let them absorb vast amounts of information instantaneously while he has to do research the difficult and time-consuming way.
* The Secrets of Droon has Salamandra, the time-traveling queen of Shadowthorn. Her only loyalty is to herself, and she helps both the heroes and villains at times.
* The Secrets of Droon. It got to the point, even for a kid, where you wonder what everyone's so worried about.
* The Secrets of Droon to give her prophecies as rhyming riddles, but she's not very good at it. From her second appearance onward, her presentation gets much better.
* The Secrets of Droon were born there. It's only due to Salamandra's actions that the modern day is largely mundane.
* The Secrets of the Afterlife defines itself as "yuri". Taking place in an all-girls environment, this story follows Anya and June, two teenage girls living together.
* The Secrets of the Afterlife is a coming back from the Dead. She's walking and

talking like anyone but nothing in her is "alive".
* The Secrets of the Immortal Nicholas Flamel, all deities in religions and myths are either part of the Elder Race, or are their children born after the fall of their homeland Danu Talis (which is actually Atlantis).
* The Secrets of the Immortal Nicholas Flamel by various means. The entire human cast of the series except the two main characters consists of these immortals.
* The Secrets of the Immortal Nicholas Flamel, discussing their attainment of immortality and personal experiences.
* The Secrets of the Immortal Nicholas Flamel, Flamel is called the Alchemyst and that's also used as the first book's title.
* The Secrets of the Immortal Nicholas Flamel has Nicholas and Perenelle Flamel, naturally.
* The Secrets of the Immortal Nicholas Flamel has the twins learn this Magic in the third book from Gilgamesh and it is the first element that they both learn together. Excalibur also gets upgraded to the sword of Ice/Water.
* The Secrets of the Immortal Nicholas Flamel; he talked with one person for five minutes before remembering he wanted to kill that person.
* The Secrets of the Immortal Nicholas Flamel immortal in service to an evil god.
* The Secrets of the Immortal Nicholas Flamel ironic, since the plot involves supernatural Elders that had been waiting for thousands of years.
* The Secrets of the Immortal Nicholas Flamel. It doesn't turn her into a vampire, but it does make her immortal, which explains what she's doing in a series that takes place in the twenty-first century.
* The Secrets of the Immortal Nicholas Flamel leads the Wild Hunt in an attack on the heroes, who are sheltering at Shakespeare and Palamedes's hideout.
* The Secrets of the Immortal Nicholas Flamel, ley lines are used for magical travel.
* The Secrets of the Immortal Nicholas Flamel: Major antagonist Dr. John Dee is shown to be a necromancer when he raises an army of zombies from the local cemetery.
* The Secrets of the Immortal Nicholas Flamel: Nicholas can create food very quickly with alchemy.
* The Secrets of the Immortal Nicholas Flamel, Perenelle Flamel allies with the gigantic spider-god Areop-Enap.
* The Secrets of the Immortal Nicholas Flamel series have Aura Vision. As well as Aura Smelling.
* The Secrets of the Immortal Nicholas Flamel such as Scathach the Shadow and Joan of Arc, but it applies this trope to several others. Perenelle Flamel becomes one of the most powerful sorceresses known to mankind, and Virginia Dare gets similar treatment.
* The Secrets of the Immortal Nicholas Flamel tens of millions of years old.
* The Secrets of the Immortal Nicholas Flamel, the phenomenon is explained as the result of one over-exerting his/her aura.
* The Secrets of the Immortal Nicholas Flamel typically call humans "humani".
* The Secrets of the Immortal Nicholas Flamel where it's hinted, although never outright stated, that Abraham, who was the mentor to early humanity, is Yahweh.
* The Secrets of the Immortal Nicholas Flamel who does have a beard in a drawing of him.
* The Secrets of the Immortal Nicholas Flamel - writes romance novels under the pseudonym Anne Dillon.
* The Secrets Of Willowmyst: Alexandra and Tavin are fairies who look like humans with fairy wings.
* The Secrets Of Willowmyst: Alex wears a pink dress, and Tavin is first seen in blue.
* The Secrets: Ultra-Orthodox men don't believe women have any role outside the home, which the women who have aspirations of being rabbis are fighting against.
* The secret test of character is more apparent in versions of this tale where all the prospective suitors before Oochigeaskw claim that they can see the invisible god and are sent away for lying, but Oochigeaskw herself admits that she

* The Secret Texts magic usage. Things get extremely ugly and deadly when their source gets cut off.
* The Secret War Of Harry Frigg Harry Frigg — he's escaped from pretty much every military stockade they have — promote him to Major General, so he'll outrank all the others, and arrange for him to be captured in the same region so he'll be sent to the same prison to break the other generals out.
* The Secret Warriors where two military men are talking about a situation in which one of them has been rather rough which another. The rough one explains "Police detectives have an interrogation technique, where one is a heartless sonofabitch, and another is kind, gentle, and understanding." The second guy realizes "And I'm to be the good guy, right?"
* The Secret War: Spies, Codes and Guerrillas 1939-1945 by Max Hastings. Hastings has some harsh words about previous books in this field:
* The Secret Weapon (France) has a boozy strip card game played by 3 couples, most of whom end up naked.
* The Secret World actually features him interrupting Masao Tanaka's emergency address just to terrify the audience with creepy whispering and spliced-in footage of emergency forces gunning down civilians.
* The Secret World actually features references to the real-world phenomena of embryonic cannibalism among sharks.
* The Secret World A department of the British Museum that's barred to everyone except Secret Worlders, it's been cloistered away in Eldwick, London's supernatural district; every single wing of the museum examines a different aspect of the Secret World, from the undead to the Filth. However, the place needs benefactors, which is where the players come in: through Mnemonic Pedestals and ability points, you get to create the exhibits from your memories of the creatures you've encountered so far.
* The Secret World, all three Transylvania zones feature two brands of cars: FSO Polonez and Trabant. Both remnants of bygone years that the region spent behind the Iron Curtain. They frequently appear rusted and cannibalised from parts of other cars of their brand. A sighting of a car different than these two is so rare, it only happens once or twice per zone.
* The Secret World. Also, despite his paranoia, Screed is completely oblivious to the fact that the player character is actually an agent of one of the secret societies he fears.
* The Secret World and a literal bottomless pit; also, there's a massive ethereal manifestation of Aten himself hovering above the tip of the Pyramid... and Akhenaten might not be as deceased as he was in eons past.
* The Secret World, and have enough charisma to outfox the millennia-old party guests. Should you succeed, the Kingdom are genuinely amused by the trick and actually offer your agent additional work for keeping them entertained.
* The Secret World, and sporadic access to the Buzzing. However, in return for this service, the players have to serve as agents of the Bees' creator, Gaia - essentially acting as white blood cells for her body in times of crisis.
* The Secret World. And there's a whole lot more going on behind the scenes...
* The Secret World, and the whip skill list includes the trope name as well as Giddy Up, a buff that gives you and your teammates a speed boost (that's right, you whip your buddies to make them run faster).
* The Secret World are even aware of it and independently fight the darkness on a day-to-day basis, yet it's implied that the vast majority of people in the world are still in the dark.
* The Secret World, assault rifle "leech healers" heal by doing damage, a percentage of which gets converted to healing. Other weapon combinations can do this to some extent, although the stats required for healing and damage are different, so doing this outside of assault rifles usually doesn't work as well in groups.
* The Secret World: Blood-based magic attacks use a book as a focus, so it's apparent that these tomes are not normal. Especially the ones from hell that looks like Cthulhu fucked a book.

* The Secret World, but they're responsible for granting the power of Anima to select mortals.
* The Secret World can give up their subscriber benefits for a month for a Mystery Box that contains either nothing, a pitiful amount of in-game money, or rare and powerful endgame items.
* The Secret World (complete with the Ur-Draug, a Cthulhu Ersatz as a dungeon boss). One of the zone parts is Kingsmouth - a small, cozy town that's currently under a zombie and draug attack. There are lots of quests that let you dive into the town's history - and while there is apparently not one, huge secret, there has been a LOT of creepy things going on through the years. This is also lampshaded by several NPCs.
* The Secret World during the mission "Sign Of The Times," in which one of D.I. Shelley's men vomits over the railing after the sight of the newest occult murder - narrowly missing a passer-by below. According the Shelley herself, the murders she and her squad witness on a daily basis are so grisly that most of her officers insist on being transferred away, meaning that she always ends up having to look after a fresh round of queasy recruits.
* The Secret World - especially on Solomon Island, where the sigils are used as part of a protective warding spell used to keep out troublesome zombies.
* The Secret World; even the lore entries refer to him as "a Cheshire cat in sharp lapels."
* The Secret World features an odd variation of this in the form of the Kingdom: a group of resurrected Egyptian mummies who parlayed their burial treasures into a business empire spanning most of Egypt, the crime syndicate they created now rules Cairo from behind the scenes, controlling entire successive governments without any of them becoming aware. All in all, the Kingdom are a fairly benevolent lot and actually serve as allies to players in the region.
* The Secret World features numerous scarecrows as enemies, although they usually look like tough humanoids with a burlap sack over their heads. Some of them hang on their posts but jump down and engage any character that comes too close.
* The Secret World features this as one of the three magical disciplines players can take on, and generally revolves around healing and damage (with life drain). Also, while with all skill sets you have to use weaker skills to build up "resource" charges which are spent on more powerful skills, you can still cast powerful blood magic skills without sufficient charges — you just sacrifice health instead.
* The Secret World). For good measure, it takes a variety of forms throughout the setting: along with its common "tentacled black ooze" form, it also appears as toxic gas, weird weather, eldritch graffiti, radio signals... and according to Dr Klein, the historical epidemic popularly known as the Black Death.
* The Secret World. For good measure, they've been like this ever since Akhenaten created Atenism as the state religion of Egypt.
* The Secret World for the Cult of Aten. However, the game also reveals that there's a whole society of intelligent mummies in control of Egypt's criminal underworld. Known as the Kingdom, they're corrupt and greedy, but thankfully remain neutral in the conflict. One of them, Säid, acts as a quest-giver.
* The Secret World goes a long way to justify its gameplay tropes in-story:
* The Secret World has its 'Last Train To Cairo' expansion, an Indiana Jones pastiche which, naturally, includes outrunning a giant boulder. Hope you've upgraded your sprint skill.
* The Secret World has quite a few urban-oriented mages rounding out the NPC cast.
* The Secret World has several, but notable examples include the Atlantic Island Park in the Savage Coast region.
* The Secret World has several missions where the player either has to conduct research into whatever monster, spirit, or lesser god they are hunting, or are the ones collecting research for others. Investigation missions take it much further, with some requiring the player to actually go online and research real or fictional websites for things like SSN numbers for books or finding the serial numbers for in-game electronics and machinery.

* The Secret World has the Filth, extradimensional black goo that seeps into this reality and does various horrible things to those who come in contact with it. Fortunately, the player character is immune thanks to the Bee inside them.
* The Secret World have built one of these in South Africa called New Jerusalem.
* The Secret World hitsquad, while Wicker calls upon the players to defend him.
* The Secret World. However, it turns out that they aren't there to battle other corporations or even the secret societies; all the robots and war engines are used only in attempts to secure occult power from highly-dangerous sources, and the general public has no idea that they even exist.
* The Secret World if they dare to do her harm: after all these Ages she's still his wife.
* The Secret World, in contrast to the inexperienced young men and women under her leadership - and of course, the ever-eccentric Nassir.
* The Secret World in the human world, and the two have been made into separate menaces.
* The Secret World into the ceiling and uncontrollably levitating. By day five, however, you've gotten things under control - enough to juggle fireballs at any rate.
* The Secret World, is a definite sign of the end-times. He's dead bloody serious about it, and immediately gets you on the case. Your contacts for the other factions don't make it explicit, but their reactions still imply it (the Dragon reports the Child waking up crying and birds divebombing windows, and the Illuminati reports alarms going off that your contact didn't even know existed and her bosses contacting her directly for the first time).

* The Secret World is revealed to have been written in the aftermath of his visit to the 3rd floor.
* The Secret World, just internalizing all she is now. She can comprehend the secrets of the cosmos, but frequently forgets who she is, at any exact moment.
* The Secret World Let's just hope it didn't involve that cult experiment...
* The Secret World; monsters as tough as Sachiko generally require players to team up against them, but “The Pachinko Model” is a strictly single-player instance -– forcing you to play the mission as intended.
* The Secret World much to the consternation of your faction contacts.
* The Secret World of Alex Mack. Alex's parents blow a fuse, and her mom even says, "We must be the most oblivious parents ever!" To be fair, they're good parents and Alex happens to have powers well suited to sneaking around and avoiding being spotted.
* The Secret World of Alex Mack and made her sick in ways like: parts of her body randomly morphing into water, out of control aggression, and static electricity.
* The Secret World of Alex Mack, and when he does anyway, she refuses to date him because he dumped her sister for her.
* The Secret World of Alex Mack because of a scene in which Alex hides in a tumble dryer, which is considered dangerous, imitable behavior. Hiding in enclosed spaces where kids can easily get locked in and suffocate has been a point of contention for British kids' TV, as there have been a lot of cases where kids have died from being trapped in an enclosed space, even to this day.
* The Secret World of Alex Mack conspire to inconspicuously drug his coffee and put him in a situation that would publicly humiliate him and ruin his reputation, allowing GC-161 to be pushed onto the market.
* The Secret World of Alex Mack Danielle Atron is last seen being taken into police custody.
* The Secret World of Alex Mack had the title character travel through plumbing pipes in puddle form.
* The Secret World of Alex Mack has one of these, where Alex is sprinting down the

hallway of her school attempting to avoid being late to class and getting in trouble. She is still late for class, but instead of getting chastised she is instead recruited for the track team.
* The Secret World of Alex Mack Jessica, who tripped her and caused the cake from Alex's tray to hit her shirt.
* The Secret World of Alex Mack. She even says "I was just another average kid until an accident changed my life" in the opening credits. It's also worth noting that she wore a similar outfit to the one described above on the day she was soaked with the chemicals that gave her superpowers.
* The Secret World of Alex Mack. She is the CEO of Paradise Valley Chemical Plant, who is the biggest sponsor for most events in the series as well as the main employer of most of the town. Little do they know, though, that she is extremely shady and willing to kill an innocent kid just because they were doused with an experimental (and illegal) chemical substance.
* The Secret World of Alex Mack, the title character has this as one of her powers, and was the one used most often.
* The Secret World of Alex Mack, where the title character gets her powers after being doused by chemicals that fell off a truck in the first episode.
* The Secret World of Benjamin Bear are alive is Miss Periwinkle, Edgar's owner, after he was forced to reveal his ability to move to save her from being swept out to sea when she was a child.
* The Secret World of Benjamin Bear: In one episode, Ben and Howie are on their way to the teddy bear picnic. They decide to take a shortcut, which Edgar advises them against. Naturally, they don't listen and take the shortcut. They end up lost in the woods and discover they've been going around in circles (which they realize when they see the nose-shaped stone they passed), and by the time they finally get to the picnic, they're so exhausted they fall asleep soon after.
* The Secret World of Benjamin Bear: In the world of this series, all Teddy Bears are alive (but forbid themselves from being seen moving by humans), and have their own secret world hidden in humanity's.
* The Secret World of Benjamin Bear that was given to Teddy Roosevelt, which, in the world of the series, makes him the origin of the term "Teddy Bear".
* The Secret World. Of course, it was in the aftermath of his attempt to visit Hell via similar methods that Gladstone was arrested by the Templars, and he's no longer allowed to indulge himself in this way... unless, of course, you count his habit of cultivating hallucinogenic fungi in his books.
* The Secret World of Santa Claus: As the name suggests, Santa is the main protagonist of the show. He is just like children imagine him: a just and kind old man with a big belly and a big white beard. He thinks that every child deserves to get a present for Christmas, and he loves milk and cookies.
* The Secret World of Santa Claus, Jordi always comes up with new toys and gadgets for Santa. They often malfunction, but they are also often a great help.
* The Secret World of Santa Claus, Santa is this to the elves, serving as their mentor and confidant. The analogy is reinforced by Santa being a kind old man, and the elves looking like children.
* The Secret World over the results, even as another researcher risks a grisly death in the room itself.
* The Secret World pacified. Judging by the lyrics scrawled on the walls of other facilities earlier in the issue, it's had some less-than pleasant side-effects on the children; for good measure, it's actually written and performed by the band Bright September, and the song itself is every bit as creepy as those graffitied lyrics make it seem.
* The Secret World). Played literally, as the city lies by the Miskatonic River and there are road signs pointing to Dunwich.
* The Secret World: Played with. The magic has always been there, it's just that it has recently become a lot harder to hide it from the world. What is on the rise are the number of Bees, entities which give humans access to magical powers.
* The Secret World: Player characters have merged with a special bee that has drank "anima honey" made from the world tree itself. As such, they can respawn at special

sites where the world tree intersects with the real world, called "anima wells", or just use their own anima from their own bodies to respawn.
* The Secret World, player characters who belong to the organization known as The Dragon will receive oral pleasure from an attractive asian female during an early cutscene. Whether they like it or not.
* The Secret World, players and NPCs of the Illuminati faction can not only fill in the role but also rock many different variants of the sinister suit-and-sunglasses look. They also have gas mask options to further enhance the sinister look.

* The Secret World sew their lips shut as part of their vow of silence.
* The Secret World's omega floor, where they soon make the acquaintance of the company CEO — who turns out to be one of these. During your visit, the CEO will offer you three choices, all of which will be rewarded in mean-spirited, cheap or just unnecessarily complicated ways:
* The Secret World's shop situated in an abandoned abattoir, and even the Illuminati HQ's concourse looks pretty grungy - all contrasted with the gleaming Illuminati command center and Kirsten Geary's modern-art office; Seoul starts you off in the shiny, chintzy Kumiho Hotel, before sending you into the dark, rainy streets to the Dragon's HQ.
* The Secret World. Suffice to say, the Dragon like tossing their recruits in the deep end.
* The Secret World tends to have this sort of attitude as a default for opposing the various evil organizations the player goes up against.
* The Secret World that gets mentioned throughout the third and final area, is never seen, let alone faced. Over time, however, new issues (booster packs of several missions) came out, starting with adding more investigation missions to the higher-level zones, continuing with the addition of a new area (Tokyo), and ending with actually meeting Lilith in person.
* The Secret World "The Bees Are Returning" (among other things), which is currently believed to have to do with the CCD.
* The Secret World. The cuts are served in company cafeteria, but employees complain it tastes like despair, literally.
* The Secret World, the headmaster of Innsmouth Academy refutes the rumour that the school has a skeleton in every closet, he proudly declares that the skeletons are bricked into the walls. The school installs the corpses of mages into the walls and foundations to bolster its magical defences and the power they have to work with.
* The Secret World, the local Wendigoes have resorted to eating literally anything else - including trees and rocks.
* The Secret World. The player character boards a train at one point to recover a dangerous device the train is carrying.
* The Secret World: the protagonist of the story is one of an entire group of perpetually-resurrecting near-ageless beings, and you interact with a wide variety of other immortal beings and learn their struggles over the course of the game; over time, you also learn that your class of immortality comes with its own share of caveats...
* The Secret WorldThe recruiter for the Templars outright says that now that your player character knows that the supernatural is real through their own superpowers, they're a target for anima harvesters. You either get syndicated or you go on the hunt-or-be-hunted for the rest of your life. Considering that there are no levels in the game and respawn points require a sponsor, that would mean you're finished if you choose the latter.
* The Secret World. There, the player can battle an entire army of Krampus, along with a much larger boss Krampus, before finally duelling the mother of all Krampus, Hel herself.
* The Secret World These events are rapidly pushing the ability of the secret societies to keep things hidden to their breaking point, and it's only a matter of

* The Secret World this way during "My Bloody Valentine." As it's already been established that she's capable of super-speed, this isn't too improbable.
* The Secret World, time in the Hell Dimensions passes a lot quicker than in the real world, apparently due to the simple fact that the laws of physics have begun to decay in more or less the same fashion as the rest of Hell. As a result, Theodore Wicker has spent barely thirty years of Earth-time in Hell, but has been staging the revolution against Eblis for eons on end - hence how he's been able to become powerful enough to duke it out with the Devil.
* The Secret World turned up in Hell, he was able to exploit their desperation and turn the demons into an army capable of invading Earth...
* The Secret World until the final line is punctuated by a profane reference to Mara. (Anastasia, who's translating the passage, notes that she's "paraphrasing, of course.")
* The Secret World, where the coming and going of an unnatural fog is a major element in the plot. A number of more dangerous things in the storyline are accompanied by thickening of the fog as well.

* The section of the Eleventh Doctor Year Two series that returns to the setting of the cancelled TV story "Shada" includes many metafictional in-jokes about the story's unfinished nature and ambiguous canonicity.
* The section on creating NPC's references this, sparking a margin discussion between Dresden and Billy. Dresden comments that the random people do, in fact, have a name, to which Billy asks why Harry never writes them down in his case files. Dresden answers that he usually doesn't have time to ask, on account of many of them trying to kill him at the time.

* The Securitate was Romania's attempt at The Men in Black during the Communist era. This is more of a subversion though, since most of them were nothing more than common street muscle and bar thugs, dressed in black suits.
* The Security Chief/Tactical Officer position Worf had for several years fit him like a glove. As his career advanced and he moved to Deep Space Nine as Sisko's First Officer, he struggled to keep his "shoot first ask questions never" tendencies in check. However, once he did, he became a solid, conscientious leader.

* The security robots use this trope. Their dialogue seems to consist of only a few phrases, two — "Scanning area" and "Target acquired" the most commonly-heard. (In the case of the bigger bots, which shake the ground with each step, "scanning area" at least is not necessarily counterproductive, but it is redundant.)
* These days, accidental live burial would only be possible if the person's body was neither autopsied nor embalmed. In most jurisdictions, one if not both procedures are required by law for the majority of human burials. If you were unlucky enough to get to the mortician or the coroner while still alive, the autopsy and/or embalming process will definitely kill you (or wake you up) before you are buried.

* The Seeds of Love artwork, and it's a visual metaphor that Curt Smith's importance in the band is waning (water is the element of the latter's zodiac sign Cancer) because Orzabal purposely set out to minimize Smith's contribution on the album. After Smith split from the group, Orzabal later released the song "Fish Out of Water" as an insult to his ex-bandmate, which includes the verse "[...] you will be food for killer whales", which is his way of expressing that Curt is now "dead" to him.
* The Seeds of Love, so the wilted sunflowers signify the end of his friendship and musical partnership with Smith.
* These effects have largely gone away or toned down as graphics developers shifted towards a new paradigm known as Physically Based Shading. As the name implies, all of the lighting functions are based on actual physics rather than an artist playing around with the lighting until it looks right. The result is scenery that looks highly realistic to most lay people.

* These examples could be partially justified by the fact that knowing the seas you're sailing or having special technologies matters a lot in the world of One Piece. For example, Marine ships are coated in seastone, making them able to cross the Calm Belts that would otherwise be deadly monster-ridden areas, allowing for excellent shortcuts to and from the Grand Line. One imagines that at least Shichibukai and Yonkou have something similar or equivalent. In the Grand Line, travel is regulated by Log Pose, which requires time to attune to a given island and point to the next, but there exist Eternal Pose (always pointing at an island) and Vivre Cards (always pointing at a person) as well. With a suitable array of both you can navigate much more freely and probably follow more optimal routes - something a powerful pirate surely must be able to do. By comparison, the Strawhats are relative greenhorns who are still establishing a name for themselves and discovering the Grand Line's inner workings as they go. Pirates who rule it for years must have better ways of moving around than them.

* The "Self Defense Against Fresh Fruit" sketch consists of a leatherlung instructor teaching his students how to defend themselves against attackers armed with fresh fruit. Defense methods include dropping 16-ton weights on the attacker and siccing large predatory animals on them.
* The self-disabling panels. Many panels in the game are connected via wires that indicate the power flowing from one to another. A lot of these panels disable themselves when a wrong solution is entered, forcing you to return to the previous panel and reenter the correct solution. Theoretically, this serves to discourage the player from brute forcing puzzles, but there are two problems with this. The first is that this feature appears in more complex puzzles that have many possible solutions and are therefore unlikely to be brute forced; the self-disablement here just serves to unnecessarily punish players for making a mistake. The second is that with some of these puzzles, the previous panel still shows the right solution, making it easy to reenter; the self-disablement here doesn't discourage brute force so much as slightly prolong it.
* The self-fulfilling prophecy is a fairly major sociological concept. The idea is that when other people expect something of a person, that person will act that way as a result of their actions. In one test, a class of children were given an aptitude test, and afterwards their teacher was told that child X's results showed him/her to be particularly gifted. Child X had, in fact, been drawn at random. When the experimenters followed up on the class a few months later, they found that X was performing much better than before — because the teacher was giving them more attention.

* The self replication thing commonly associated with nanobots is being researched

too with some success, though generally the better a nanobot is at self replicating, the worse it is at doing anything other than that. The reason why self replicating is so crucial is because nanobots are really tiny, so you need to build a lot of them to do just about anything on the scale required by humans. And because you need so many, the cost of each nanobot has to be tiny. To give an example, say you use nanobots to replace red blood cells. A healthy human male has 4-6 million cells per

Thankfully for the Allies, no more than six of the unit's planes were operational at any given time, and the war ended just two months after the unit's formation. Many of the pilots went on to become high-ranking officers in the postwar West German Air Force, aided by the fact that very few fighter pilots and even fewer aces of the Luftwaffe were ardent Nazis to begin with. Given the nature of modern aerial warfare, no such assembly of aces would likely ever exist again.

* The sentence involving "Mary" isn't really clear. It would be clearer if it were written "Since she liked it so much, Mary bought all (of) that cat (that) John gave her's siblings." In the sentence, "Mary" is the subject, "bought" is the predicate, and the rest of the sentence is a direct object, where "siblings" is the main direct object possesesed by "that cat", which itself is descibed by "John gave her".

* The Sentinel (2006). Basically the first plot twist. Secret Service Agent Pete Garrison is blamed for treachery and has to go on the run because he failed a polygraph test. Why? Because he was scared they'd find out he's been having an affair with the first lady!
* The Sentinel. Also Lyla, Maya. . . really, most of the women Jim & Blair get with — they're all gorgeous, and all thoroughly nasty pieces of work.
* The Sentinel: a prison warden has prisoners fight each other at night. Anyone who knows is either part of the scheme or knows that they will be killed if they tell others.
* The Sentinel. At first, they trigger instinctively, and sometimes to his detriment. A large part of the show, and the purpose for the character Blair, is Jim learning how to use and control his powers to help him fight crime.
* The Sentinel before long, though, probably because the writers didn't seem to know what to do with her character.

* The Sentinel has Jim struggling with his heightened senses until they fade out altogether. He's later told in a vision that his experience so far has just been a taster and he needs to decide whether to continue as a Sentinel.
* The Sentinel has Jim tangle with a Russian sniper named Yuri who always leaves behind some Russian coins as his calling card. Yuri uses technology to achieve the same levels of awareness as Jim's natural hypersenses, and the climax involves a cat-and-mouse game between the two.
* TheSentinel has revealed odd skills derived from summer jobs and/or researching various cultures.
* The Sentinel, he wears suspenders, smokes cigars, usually has on a shoulder holster, and always has the mayor up his ass. He can be hard-nosed, but at the same time he gives Ellison a lot of leeway (like letting him be followed around by an Anthropology student). Really, all he needs is a moustache.
* The Sentinel involved the Cascade police station being taken over and held hostage.
* The Sentinel like the Dodge Intrepid police cars. Both series were filmed in Vancouver.

* The Sentinel often have some sort of empathic/telepathic link between Jim & Blair; there is a whole subgenre of 'bonding fics' that are almost-but-not-quite Slash.
* The Sentinels can sometimes count when they are being remotely controlled by a Monitor. The rest of the time however they have their own tasks and a rudimentary AI.
* The Sentinel's Jim Ellison sometimes feels his super-senses are a curse; his first request of Blair is how to make them go away.

* The Sentinels occasionally fall into this trope. Originally they were programmed with two directives; 1) neutralize mutants and 2) protect human life from mutants. Occasionally some Sentinels will logically deduce that, since all organic life has the potential to mutate, the only way to fully neutralize all mutant life is to eliminate all humans.
* The Sentinels of Magic include Albus Dumbledore, Doctor Fate, Doctor Strange, Madame Xanadu, the Enchantress, Shazam, and Agatha Harkness.
* The Sentinels, when T.R. Edwards managed to get them both (and their supporters like Max and Miyria) sent off with the Sentinels.

* The Sentinel, the fugitive secret service agent has tracked down the headquarters of the real bad guys and killed several of them. He flees the scene, not wanting to get caught, but not before tipping off several colleagues in the hopes that the evidence they find in the apartment will clear him. Unfortunately, by the time the other agents get there, the other bad guys have managed to remove the bodies and the other incriminating evidence. To their credit, the other agents don't dismiss his story and are now less certain of his guilt.
* The Sentinel the media reports on Jim's super-senses based solely on the previews from Blair's research doctorate.
* The Sentinel the serial killer. He had killed the real profiler and took his place, and provided them with completely accurate information about himself just to screw with them.
* The Sentinel works with an anthropologist who helps him understand his abilities.
* The Sentry and the Void, from Marvel Comics, are this trope taken to its extreme. They manifested as alter-egos of a single person, representing the good and dark sides of humanity, respectively. The Sentry is a superhero and the Void is a supervillain, and in a slight variation on this trope, the Void is exactly as powerful as the Sentry, and occasionally kills someone for every person the Sentry saves.
* The Sentry, at the expense of developing a second, independent persona, the Void, that was the world's greatest villain. Later it was revealed that the Sentry was originally a junkie who broke into a lab and swallowed a random tube of chemicals to get high.
* The Sentry family line contains some of the most decorated and legendary stallions and mares in the history of Equestria's guards and law enforcement. Played straight with Stalwart Sentry, but subverted with his son Flash Sentry. Flash clearly has the heart for heroics, just not the opportunity yet.
* The Sentry gives us Daniel who the drug cartels use to track down and kill people. One scene has him in New Orleans during Hurricane Katrina and enjoying torturing people during the storm. He hears two voices which he calls Tobey and Cleo, believes himself to be a werewolf, and would like nothing more than to kill a zombie.

* The Sentry threw She-Hulk from Manhattan to New Jersey where She-Hulk catches a cab back to New York and pays back the favor to Sentry. He also opens his fight with World War Hulk by punching him across a city block.

When Wayne and Garth arrive outside of a studio, a number of men are doing things such as moving a window back and forth across the street, stacking fruit, and so on. When asked why, the workers reply that it's just their job. Later on, Wayne crashes through them all in his car in a stereotypical "action sequence", causing the workers to state in a satisfied fashion that their job is done. Of course, the "handiness" of this is almost entirely under the

* The sequel ends with Red and the Wolf driving off to stop another catastrophe.
* The sequel establishes a canon party that traveled with the protagonist during the first game. Some other characters returning from the first game can be met and the player can ask questions like "didn't you die?", that can sound a bit silly to say to someone in the middle of a conversation, but is a quite reasonable way to manage the dissonance between a character effectively dying during the playthrough and later appearing in the sequel as if nothing happened. However, there is one case that induces a plothole:
* The sequel eventually reveals what happened to all the different species' AIs affected by Via Damasco — they escaped known space and formed their own faction, the Loa. They return in the expansion pack
* The sequel expands it slightly: the memorial is now in the bar, and includes pictures of each soldier, as well as how many missions they were on, how many kills they tallied, how they died and the name of the mission they died on.
* The sequel/expansion "Age of Wonder: Shadow Magic" brought that number up to fifteen.
* The sequel features improbabilities such as Crematoria; indeed, the fact that the "most hostile" planet by Riddick's own account still sports a breathable atmosphere and earth gravity suggests that there may be no celestial bodies devoid of atmosphere.
* The sequel follows the same example. Once again, it's set against a major historical change (this time the admission of California to the Union as a free state) which teases the possibility that Zorro might be able to retire and leave things in the hands of a newer and more just government. Once again, that hope is proven wrong and Zorro needs to pick up his cape again to stop a new threat to California. Notably, when the representatives of the new system (the Pinkertons) show up, it's a disappointment - they're on the side of the "good guys," but still villainous and ultimately ineffective, requiring Zorro the Romantic outlaw hero to clean up after them.

* The sequel game though complicates things with Kyurem, a living husk who represents a form of emptiness. It's revealed that there was once one dragon, but would split into Reshiram and Zekrom, with the remnants falling to the earth to become Kyurem.
* The sequel gets rid of Mountain Dwarves entirely, turning Dwarves into the weakest type of Heroes available, but a must to tunnel through the maps.
* The sequel gives us a potential origin story for the Enrage plasmid and why the splicers in the first game are too angry to come up with any kind of plan against a juggernaut: the ADAM slugs love to eat a deep-sea plant that secretes red chemicals. This could be considered a passive-defensive mechanic, as anyone who consumes the chemicals from the flowers becomes really, really violent, and addicted to the stuff. You find one of Lamb's science staff, Gilbert Alexander,

violently insane and addicted to the scent of the flowers in the area.
* The sequel had a slightly more classic example in its last mission: after shooting down nukes while dodging
* the sequel had a unique feelie in the form of a "Cerberus Network" card, which had a code that could be redeemed for additional content (later included standard in all subsequent PC digital releases). The set also included a comic book, an artbook and a making-of DVD.
* The sequel has a few continuations of this rule, but there is no area-switching shenanigans this time.
* The sequel has a great deal of fun with this. First Mordin has a classic
* The sequel has a mix of Defence Export Ministers (The Allies, China), International Arms Dealers/Corporate Lobbyists (UP), Former Reds With Rockets For Sale (the Guerrillas) and Gangland Gun Runners (the Pirates).
* The sequel has a remarkable case in the Banshee, since it uses rotors to move. Apparently it "
* The sequel has a scene where your player character's dog pees on a burglar (if you let the burglar go).
* The sequel has a section set in a field of sugarcane beside a decrepit sugar mill in the fifth campaign, "Hard Rain". You have to cross it two times: the first time is during the day, cutting off the visibility you're used to when the sun is out, and making it very easy to bump into one of the
* The sequel has Captain Flynt, a bandit leader stranded in the middle of nowhere as your first obstacle before the plot actually gets started.
* the sequel has developed his same nervous tic: in episode 3, she clenches and relaxes her right hand when she gets nervous.
* The sequel has flash missiles which blind the victim by causing a massive whiteout. The battle against the boss which uses homing flash missiles is supremely annoying because of this. And they blind you for longer than regular flash missiles.
* The sequel has Jay doing a variation to Jeffrey, the giant worm, during its rampage through the subway:
* The sequel has Lord Shen do this as well, despite him literally being
* The sequel has Ratcatcher, who has well-trained rats. She doesn't have a superpower that lets her control them, but she may have had her psychology altered to make it easier to work with them (similar to Bitch in Worm).
* The sequel has Roy giving John a gift certificate for a photo for Father's Day, so Johnny can get his first picture with the baby daughter born while he was away. But, Roy kicks himself later because he forgot Johnny was forced to pose for pornographic pictures by his captor, and John has a panic attack at the studio. There's a double example of sorts because Roy forgets, and the photographer, who Johnny incidentally ends up marrying later, has no clue either that John will have a panic attack.
* The sequel has Suicide Psychos, who has this as their primary attack as well as the EXP Loader, robots who run up to the player and self-destruct.
* The sequel has the alternate dimension Gamindustri and for a while hangs a lampshade on the lack of a fourth wall; while there still isn't one, the local CPUs take their roles a little more seriously than Neptune, getting fed up with Nep and telling her to stop being so blatant about it already.
* The sequel has the same two as above, but also adds the Crusher to the mix. It's basically a grenade that creates a huge freaking ball of electricity that annihilates any Reaverbot dumb enough to enter it (Read: all of them). It's considerably cheaper to upgrade than the above two (one of which costs 9999999 Zenny for the unlimited ammo upgrade).
* the sequel. His maximum health is also lowered to 50, from 100, so be careful.
* the sequel hit theaters, a new Brazilian Portuguese dub was made for a streaming service and its pay TV arm.
* The sequel, however, downplays it, with a resistance that rises up against the Founding Fathers
* The sequel, however, fixed this, even offering an achievement/trophy for

climbing on one of said fences.
* The sequel implies that Hilda and Hilbert pulled one of these off-screen.
* The sequel includes a grappling hook that allows Rico to attach to vehicles. Combining these facts lets you hook onto a commercial airliner, then
* the sequel. (Infiltrator!Shepard and Vanguard!Shepard can reach a similar level of ridiculousness if he/she picks an additional Weapon Specialization in the Collector Ship, instead of upgrading to a better Sniper Rifle/Shotgun. Soldier! Shepard just gets the choice between the aforementioned Sniper/Shotgun upgrades, and trading in an Assault-Rifle for a Heavy Machinegun.)
* the sequel in some areas with cameras: gunfire won't set off the alarm, however, shooting the camera until it explodes with the force of a grenade will.
* The sequel introduces some good cats. Its villain also double-subverts the trope by having a
* The sequel involves the son of a family that runs a shrine famous for its annual harvest festival and accompanying "Dance of the Shrine Maidens" taking over his grandfather's duties as chief priest - which involves helping 3 beautiful maidens-in-training learn the dance, as well as learning his own part, and picking which of the maidens will become his wife.
* the sequel, is completely silent besides occasional shouts of pain. This time, it might be the process that turned him into a Big Daddy also changing his vocal cords; all the other Big Daddies in the game are also silent.
* The sequel is dedicated to writer-producer (and co-director of the first film) Christopher Miller's mother, who died in December 2018.
* The sequel is gentler when it comes to coins—collect 50 (compare SMB's 100) and you get an extra life.
* The sequel isn't much better. We've got a guy getting the shit beaten out of him, crucified with exacto knives,
* The sequel isn't much different. The Rider people regularly break horses for all sorts of purposes, including war and religious sacrifice...but they consider the Wheel people's "caging" of horses to chariots weird and cruel.
* The sequel is on the Eastern Front for the first time, following the Russians during the Stalingrad campaign.
* the sequel is stolen. Charlie and a newly deceased Itchy are sent to retrieve it when it is brought to Manhattan. It is established that the Horn is the only thing that can open the gates of Dog-Heaven and without it, no more dogs who die can enter. In general, the Pearly Gates are prominently featured throughout the franchise.
* The sequel item that makes power-leveling your new character that much easier.
* the sequel, Jane is actually able to identify an Asgardian medical device based on observed effects. She calls it a quantum field generator while they call it a soul forge, but it's clearly the same thing.
* the sequel John Smith of all people suffers from this. He appears in the first scene of the movie, then doesn't get any more real screen time until very late. Justified in that he was presumed dead for most of the movie as a plot point, is revealed to be a cloaked figure in the middle of the film, and resumed an important role towards the end.
* The sequel Kreia spends a fair bit of time unleashing a variety of threats on you so that you have to either strengthen to deal with them or die. If you go out of your way to help people you meet in sidequests, she criticizes you, saying that you're robbing them of the chance to overcome obstacles by themselves. Although she also criticizes you for being too harsh...
* the sequel later regains their family's titles and becomes a wealthy noble, while the potential love interests include Fenris (an elven former slave), Isabela (a shipless pirate), Merrill (a nomadic elf mage) or Anders (an apostate operating out of the slums). At a push, you could reverse it for Sebastian (a prince), due to Hawke's original status as peasant when they first meet (which also happens to be when Hawke takes on work from Sebastian as she's trying to scrape together some money).
* The sequel levels. The Six-Shooter on the other hand holds sixty rounds, has

ridiculous accuracy, and does very good damage. Pulling it out in any boss fight is basically an instant "I win".
* The sequel likewise ends with three hooks: first, there's a self-exiled (and still partially corrupted) Nidra joining up with Starburst, then there's Annie deciding to keep fighting to protect Equestria, and finally, two more rings — one Red, one Indigo — arrive in orbit, but pause there due to complications in finding hosts.
* The sequel makes stealth more useful by putting more emphasis on sensor range and ship (presumably electromagnetic) signatures. Deep Scan no longer instantly defeats cloak but increases the detection range. Since tactical combat starts with all sides in Accelerated Time, which only reverts to real-time once opposing forces are detected, researching stealth technologies gives you a chance of getting closer to an enemy before Accelerated Time drops, which may make all the difference when you have brawlers and the enemy is running missile buses.
* The sequel makes the default uniforms darker with most uniforms being largely grey fatigues/
* the sequel, Marta does this even having a Mystic Arte that both whacks the enemies for heavy damage and heals everyone in the party!
* The sequel might very well be an even stronger drug than the original. In addition to the eight character classes, there will be 5 races to choose from. Each race gives a different set of optional skills, much like the secondary professions in the original game. The difference is that secondary professions could be changed at will. In the sequel, you may have to make a second character with the same class if you want different skills. Let's hope the developers make good on their promise, and their dynamic event system really will provide you a different experience every time you play through it (which is of course another incentive to play through the story several times).
* the sequel Nooj before the game's story starts, making Nooj the one who shot Gippal, Baralai and Paine in the Den of Woe. During the middle of the game, Shuyin possessed Baralai instead and used his body to control the big bad machine underground, leaving Nooj free.
* The sequel of a door while having her hands chained to it, then snarks about the shoddy workmanship.
* The sequel offers an explanation on the Zerg. Part of their uber-evolution included an ability to vibrate their bodies at incredibly high-speeds, allowing them to quickly dig through any surface. While this would work for loose terrains, it doesn't explain hiding their burrows when digging into rock or structures.
* the sequel of the richest human in the galaxy, she is actually not that wealthy, having run away from her controlling “creator” years ago. That said, she does have the more refined tastes of a wealthy girl.
* the sequel, Olaf never says "Baby? Babe? Baby? Oh yeah, I'm single!", despite what a popular image macro of a scene from the film shows. He actually said "Anna? Elsa? Sven? Samantha? I don't even know a Samantha!".
* The sequel once again had nearly all the rescuers dead and a number of their female friends turned into vampires and under Yorga's command. The last rescuer is able to find the girl and they try to escape. Only to be cornered by Yorga. He takes the girl and leaves his vampire brides to finish the rescuer. Just as Yorga is about to bite the girl, the rescuer escapes and chases the two to the balcony. A fight ensues where Yorga is staked and killed. All seems well and the girl hugs her rescuer, however she pulls back and sees that he's deathly pale and has bite marks on his face (apparently having been bitten by the brides and the vampirism just now taking hold). Instantly he forgets about rescuing her and goes for her neck, dooming her to become a vampire which he was trying keep Yorga from doing not seconds ago. If that wasn't bad enough, Tommy, an orphan Yorga hypontized to help him is still under the vampire's control and stripped of his morality meaning he's not afraid to kill. Plus
* The sequel once again starts off with some AC/DC that becomes diegetic when Iron Man enters the expo, if the chorus line dancing in time to the music is anything to go by.

* the sequel, one of Tychus Findlay's gameplay quotes is "Friendly fire... ain't."
* The sequel only gibs enemies immediately if the killing blow hits hard enough (as well as retaining crit-gibs). To compensate in other situations, using a smashing or explosive attack on dead enemies can now gib their corpses. Enemies can gib each others' corpses too.
* The sequel, on the other hand, is a subversion — provoking the local mages in Athkatla will result in larger and larger squads sent to exterminate the player, but eventually the mages have had enough: they cut their losses and stop interfering with the player character's actions.
* The sequel picks up some years later when Team Gibbs discovers the deception and learns that not only are Ari and Kate still alive, they've gotten married and had a daughter in the intervening years.
* The sequel plays this a little more straight. With Megatron reduced to
* The sequel relates that she first met her on-again-off-again girlfriend Mimmy after getting so drunk at a gay pride parade that she felt an irresistible urge to embrace the cute talking lemon in her vicinity. Said lemon was actually Mimmy in a costume.
* the sequel, research into used ADAM proves that the stem cells are semi-sentient, absorbing the minds of their original users and injecting them into unsuspecting new users. So it turns out that about ten of the "core minds" were able to overpower the remaining Rapture population and have destroyed any semblance of their original memories and personalities. You've been killing people who don't even remember who they are.
* The sequel retains the snap-after-choking, as well as an upgrade that replaces the garotte stealth kill, and is much faster. Oddly enough, though, it is executed by grabbing the victim with your garrote wire. For some reason, your character strangles them with the wire for a second or so, complete with distressed gurgling from the victim, then snaps their necks to kill them quicker.
* The sequel reveals he's eventually settled, founding a village and starting a family, then several years after his wife dies and at a great age, he mysteriously vanishes into the Wastelands once more.
* The sequel reveals other parts themed off other Disneyland areas- Rainbow Mines and Caverns (based off a former Frontierland ride), Disney Gulch (based off Frontierland), the Train Tunnels (based off the dioramas seen while riding the train between stops), Fort Wasteland (based off the Fort Wilderness hotel), and Autotopia (based off Tomorrowland’s Autopia). There’s also an area called the Floatyard, which is where abandoned float parts are put when they’re not in use.
* The sequel reveals that HAL was ordered to conceal the true reason for the mission from the astronauts until they reached their destination, something that went directly against his programming to be fully honest and truthful. The only way for him to obey both directives was for there to be no one to reveal the information
* The sequel reveals that Thor has an illegitimate half-brother, Vidar, who's much older than he is (as in, he's Frigga's age). While he theoretically had a claim to the throne, he dropped it like a stone after Thor was born, apparently with great relief.
* The sequel rewards your various achievements in the game by giving you "NG Points", which you can spend to permanently unlock carry-over options or bonus missions.
* The sequels all continue this trend, and every game has at least a few hams.
* The sequels allow you to do this with Murray's "Thunder Flop". Memorably, his entrance in the second game has him use the move to get into a room where Sly is.
* The sequels are getting their own sets of mods, too, an example being
* The sequels contain the two of the greatest examples anywhere: Paul and Leto II use their prescience to plan out millennia, without revealing the plan to anyone.
* The sequels delve much deeper into the mythos, introducing two of the gods as main characters. The trilogy is part of a sub-franchise,
* The sequels didn't help matters, as she's given the most reliable and versatile

powers in existence, while Ben has to deal with the still occasionally unruly Omnitrix (and has it futz with his mind repeatedly), and Kevin's powers are only effective for hitting things (and he's constantly getting
* The sequel's eponymous Goliath is a supercharged version, designed to sync up with Earth's electromagnetic field, and is powerful enough to set the air on fire.
* The sequel series also get hit with this: aside from still maintaining the "King of Games" name (which has become more and more of an anachronism, as the term itself hasn't been used since the original series and whether it could apply to any of the protagonists is debatable), each of the series has a strange subtitle related to the plot:
* The sequel series and precogs who try to anticipate her then find her appearing in and corrupting any other visions of the future they get).
* The sequel series has Earth Queen Hou-Ting, the tyrannical ruler of the Earth Kingdom. Book 4 has Kuvira, who creates her own Earth Empire and plans on conquering the Earth Kingdom by force.
* The sequel series PK2 has the Predator, who, for a change, was not created by the Evronians but by a

* the sequel, Simba tells Zira to let it go but she says that she will never let it go. She attacks Simba but Kiara fights back to protect him. On a cliff, she tries to help Zira, but she decides to fall into a river and let go of a cliff like Simba told her to.
* The sequels play this straight: the protagonists believe that Earth houses the
* The sequels show that its a common practice and tradition of their race.
* The sequels suffered from this because of the first movie's massive popularity. It made such a significant impact on pop culture that practically every action movie made between 1999 and 2003 ripped off its special effects and cinematography (
* The sequel's trailer is even worse, as it's just scary bits with the rhyme playing over them.
* The sequel strikes again, with the climatic battle between Kaneki and Arima taking place on the eve of their shared birthday.
* The sequel's villain turns Arkham City into an Eldritch Location, as it becomes a patchwork of different time periods, urban city and wilderness melting into each other, buildings that are upside-down and right-side up and everything in between, and time moves faster, slower, backwards, or not at all in various places.
* The sequel's voice acting was more sedate, to the dismay of some fans. Probably why Araghast, the Chaos Lord in

* the sequel. The greatest advance that XCOM comes up with in the game, the Avenger itself, is just a recovered and retrofitted UFO.
* the sequel, the guards are back, though they're somewhat smarter and don't usually attempt to kill you for bumping into people.
* the sequel, the player must keep winding a music box that plays "Grandfather's Clock" in order to keep an animatronic Puppet from moving from its place. Forget to wind it and you'll learn to dread "Pop Goes to Weasel" in a hurry...
* the sequel, there's one for each Genius and ties into their vile personality.

* the sequel. When a boy named Billy discovers his girlfriend, Mary Lou, is cheating on him, he throws a stink bomb at her as she's being crowned prom queen. The stink bomb ignites and incinerates her in front of the class.
* the sequel when Agent Dicker does the same thing to Tony, after Bob had told him that Tony had inadvertently seen Violet in costume but out of her mask. Dicker removes Tony's memory of having discovered Violet's identity, but in the process also inadvertently wipes his memory of agreeing to go on a date with her that Friday, resulting in her getting stood up. This causes some conflict between Violet and Bob when she realises what happened.

* The sequel with Marina, the first good guy Octoling who wears an outfit even more revealing than the villainous members of her species.
* The sequel with the main plot, and Chuck's tender interactions with his daughter in particular.
* the sequel, Xander is at a market square when a man comes up, strikes up a conversation with Xander, and leaves a bag behind. Xander looks in to find a ticking bomb seconds before a SWAT team runs in to arrest him. Rolling his eyes, Xander takes down a cop and spins around, firing his machine gun, showing it's full of blanks. He relates how he knew it was a test: A teen is listening to expensive headphones rather than the cheaper knock-offs; a woman is running to catch a bus that won't leave for two hours; a "cop" is paying for a drink with foreign currency; and the old man struck up a conversation somehow knowing ahead of time that Xander spoke English.

It is obvious from the children's reply that they have no intention of doing anything so bizarre (even giving perfectly sensible reasons), but the end of the song reveals the parent has not listened to a word.
* "The Serenity Now" has Elaine rejecting the advances of a 13-year-old after he gives her a
* The Serenity tabletop game has acquirable "plot" points that the game master can distribute to players as reward, usually for doing things in a more creative way than expected. They exist out of character, and the players can choose to spend them to force plot conveniences or twists beyond the normal scope of their characters skillsets. For example, if a character who doesn't know machines very well is required to do repairs on an engine or die, a player might spend a plot point, and suddenly their character finds a handy user manual stowed nearby.

* The Series 4 finale. Hello again, Martha, Torchwood, Rose, Mickey, Jackie, Harriet Jones, and Sarah Jane!
* The Series 6 Genie is seen as an unofficial minifigure of the Genie from
* The series 9 episode "Dragon Dropped" does this for the Spike/Rarity
* The series 9 opener "The Magician's Apprentice" features some black extras in Essex in 1138, leading to some debate as to whether this is realistic or not.
* The series abides by this, though there are a few recurring characters. The fact that all the games take place in different Netherworlds helps.
* The series actually deconstructs this trope somewhat. Not only is alien fetishism a frequent topic of discussion within the game's universe (and not just from a human's perspective), but many pairings have to be careful not to poison each other with their bodily fluids during sex, as Mordin points out should Shepard enter a relationship with Garrus.
* The series actually has several of those, starting with Shinichi's father Yusaku who used to be sleuth and then became a mystery novelist. The one we see the most is Shinichi/Conan's friend Heiji Hattori, the son of a high-ranked policeman who often helps his dad as well as Conan himself. And in fact, there's a short arc named
* The series also brings back the relationship between Dumbledore and his brother Aberforth which is explained fully in the aforementioned
* The series also deconstructs the concept in the form of the Overlord King, Roshuo. After gaining the power of the Forbidden Fruit on his homeworld, he imposed social Darwinism as law, only to have his entire civilisation crumble into infighting and leave him as ruler of a desperate few
* The series also did a very dark take on the more usual sort of Field Promotion. When Mal is trying to get some air support for himself and his men, he is told that the cover won't come without a Lieutenant's orders. Mal promptly walks over to the body of Lieutenant Baker, tears off the patch of his uniform with his authorization code, and hands it back to the person he was talking to, saying "Here, you're Lieutenant Baker. Congratulations on your promotion, now get us some air support!"
* The series also features artificial introduced microgravity, allowing the player to float around on the surface of various planets.
* The series also features a "squeaky toy" sound effect that is associated with particularly enthusiastic grins. The fandom typically refers to this as a "squee" as well. It's heard many times, but is most often connected to a grin by Fluttershy in "The Stare Master".
* The series also features evidence that Franz Hopper intentionally relived the same day over
* The series also features some subversions, though. Andross is the eye type, but shooting his eyes only stuns him briefly. To defeat him, the player has to first

shoot his hands off, then shoot the head anywhere BUT the eyes. On the right route, he then reveals his true form:
* The series also features widely used anti-gravity technology, which takes it pretty far away from realism.
* The series also flips the serious/comedy axis to show development. Chapter 10 has main characters Asahi and Youko going to an amusement park together, but it's mostly
* The series also gets around the whole issue of Heavyworlders logically being short by having the Saiyans be invaders who originally evolved on
* The series also gives us Black Frost—the horrific result of adorable
* The series also had an item where the boys had to make a cycling safety video. They showed a cyclist trying to defuse a bomb, being told to cut the red wire. He cuts the green wire instead, and the bomb goes off. The voiceover then says, "Cyclists: Red. Green. Learn the bloody difference!"
* The series also had Spidey start off using the black suit by finding himself staring at his reflection in a skyscraper window as he hangs upside down, having no idea how he got there. That scene can now be found in every version of the black suit saga
* The series also handwaves the pre-Zyuranger-era Ranger powers and additions to the Legendary Megazord as just random stuff that gets unlocked as they go on, like some sort of RPG.
* The series also has a female demon named She-Mantis. She assumes a human form, but she actually takes the form of a giant mantis. She rapes virginal men, preferably male teenagers, and then lays eggs. The offspring, however, are not half-demons, but the same creatures as the demon.
* The series also has a male example, although it's hard to see—Shingo used to have reasonable long hair (just a bit past shoulder length) in his past, but apparently nobody tended to it during his 15 year-long coma, resulting in it having grown so much that it reaches his thighs. Due to his
* The series also has an aversion. Yon Rha is not very fond of his abusive hag of a mother, at one point suggesting that another character kill his mother so as to
* The series also has April May from the first game, who manages to get the entire courtroom on her side (and against Phoenix when he tries to cross-examine her) until he manages to present enough evidence to turn them against her.
* The series also has a Special Mode, unlocked when you beat EX-Hard mode. It generally makes the game even easier than the series' New Game Pluses do, since you start out with at least one of every item and your units get more upgrade slots, but this also means it costs more money to get a unit's Full Upgrade Bonus. The Later OG games and the Z games have this partially, though with the latter the upgrade cost per bar is lowered making the total price closer to the original amount.
* The series also has "Charley", a potted plant in the main character's office. It's one of the few characters from the original series to show up in the fourth and fifth games. "Charley" could also be a reference to "Chuck the plant", from
* The series also has Fang the Sniper (aka Nack the Weasel), who is a purple-furred bounty hunter. He is sometimes referred to as a "weasel-wolf" by fans but his actual species is wolf/jerboa. In North America he was accidentally referred to as a wolf/weasel for a period of time, resulting in fan confusion over his species.
* The series also has half-demons. Demons often mate with humans because their descendants can be inconspicuous walk among the humans. Half-demons have many demonic forces, but also a human soul, so that they can feel feelings like love and decide for the good (even if the temptations of evil are very strong).
* The series also has Kazumi Asakura, who's capable of becoming indistinguishable from whoever she chooses in order to (in this case, Shizuna-sensei)
* The series also has Raylan's fellow US Marshals, Rachel Brooks and Tim Gutterson. If some of the hints they let drop are indicative, Tim, and Rachel are dealing with cases that are every bit as interesting as the ones that end up on Raylan's desk.
* The series also has several stories where the antagonists set out to impersonate

jungle gods for their own gain and the Phantom has to foil them (or, in one case, rescue from their would-be worshipers after it turns out to be more difficult that they expected).
* The series also has Sweet P Trunks, the adoptive child of Tree Trunks and Mr. Pig. A humanoid kid who is huge in size and also happens to be
* The series also has various other moments were a word is shouted out, a lot of the time in captials with multiple exclamation points and even a lot of the time drawn out. "WHAAAAT?!" is pretty common, as is "N-NOOOOOOOO!!". In
* The series also implies that part of the reason the Federation was able to get so much bigger than the other two major powers is that it devolves
* The series also includes couple of downplayed examples among their normal boss fights, including the Octonozzle in
* The series also includes many other fictional types of creature under different names, including
* The series also introduced the colouring of items that has since become standard in many RPGs. In the first game, white was normal, blue magic and yellow unique.
* The series also introduces us to Hayate. A wheelchair-bound 9-year-old who takes care of the Wolkenritter as their mother figure. Even before then, she had been living independently for who knows how long
* The series also inverts this by having more unattractive guys as more decent, such as Ned Stark or Tyrion Lannister, but also averts this by having good-lucking nice guys such as Garlan Tyrell and Robb Stark.
* The series also inverts this in the final episode: protagonist Setsuna and
* The series also popularized the name "Tabitha" after the child witch on the show had that name. After the 80's, however, the popularity of the name started to decline.
* The series also shows a few shirtless scenes with Renly Baratheon and Loras Tyrell, who are lovers.
* The series also shows Cupids a few time, who are basically spirits who spread love.
* The series also so far removes the criticism of radical feminists present in the original book. In the book, Offred's mother was a radical second-wave feminist who believed that all men were sexist and that pornography should be banned. In the feminist community there was fierce debate about that point of view, however nowadays it's more of a fringe belief. Additionally, since the series received a
* The series also subverts this, since the drugs and their beneficial effects are fictional, but prolonged use will cause harmful effects and create stat-damaging dependencies that have to be treated.
* The series also uses elements that were from the live-action film series (mainly through elements like the use of the
* The series "An Animal Saved My Life" had a pot-bellied pig that went for help (over and over again until someone followed him back) when his owner had a heart attack. Interestingly,
* The series' anthology set-up, in which they bring back actors in new roles in later seasons, means that Jamie Brewer appears in
* The series appears to have done away with the blatant white supremacy in Gilead as described in the novel. Not only did they want babies, the goal was
* The series as a whole covers and consists of Nucky Thompson's arc. From corrupt powerbroker to bootlegger and then full-fledged gangster, until his eventual demise.
* The series as a whole essentially invokes this, by having the plot of the games be the huge global conflict and
* The series as a whole has conditioned players to believe that the culprit is
* The series as a whole has the Hammer as a Axe-type weapon, which is effective against armored enemies such as Knights and their promotion classes. Using a hammer in the fight with the
* The series as a whole has the standard deflector shield technology that you can research for your starships, but also lets you build artificial magnetic fields for irradiated planets. Of course you can later upgrade those into full-blown planetary

deflector shields.
* The series as a whole is made of equal parts dark, violent drama and light-hearted goofiness, to the point that some fight sequences manage to include both
* The series as a whole revolves around the eponymous Malcolm and his journey through adolescence; as a genius-level teenager, he is often under pressure by those around him, and struggles to find a healthy balance between living up to his potential and doing teenager stuff. His older brother, Reese, is an unintelligent bully who gradually comes to realise that his antisocial behaviour won't work in real life. The oldest brother of all, Francis, was sent to military school for his

* The series as a whole shuffles its settings by shifting in time periods, settings and featuring new
* The series as a whole would be exaggerating to the point of satire if not for one major justification: The cool sunglasses are used to block the effects of the
* The series began with Darla being a subversion as it looked like she was going to get killed, but instead she turned out to be a vampire who killed the boy she was with.
* The series begins with the Valhallan 597th being pieced together from two regiments torn up in combat with Tyranids, with the rush of promotions that situation implies. Some regiments are worse off than others, though - mention is made of a Lieutenant promoted directly to colonel,
* The series being what it is, one of Diabolik's targets put together a Diabolik-proof vault, whose security measures included vents too small for Diabolik and Eva and
* The series "Boys and Girls, Come Out to Play" as a leitmotif for Hyde.
* The series can be a little bizarre to watch for anyone who's been in high school recently, as the girls often wear outfits that would violate most schools' dress codes, including but not limited to high heels, hoop earrings, very short miniskirts and shorts, and spaghetti straps.
* The series can be inconsistent about "clones," sometimes using the term to describe
* The series can be somewhat bad at this. Arnold's grandmother and grandfather are incredibly weird, but social services never check up — although in the movie, his grandfather mentions that if they did step in, he and grandma would go into a nursing home and Arnold would go to a foster home, potentially because of their weirdness, though also because of their age (they're in their early 80s). However, Arnold did get plenty of love and care from his grandparents and the other residents of the boarding house do function as an extended family to him.
* The series can come off as anti-death penalty. There's a very real possibility that more than a few innocent people were falsely convicted and executed due to the system favoring the prosecution, especially in
* The series changed most of the characters' looks so that they could fit their licensed vehicle modes or look more realistic (
* The series changed the name of Weather Wizard's brother from Clyde to Ben.
* the series comics culture, it would be difficult for a modern villain to say this phrase with zero irony. Sivana can get away with this because of how the Shazam comics have been typically more light-hearted than most comics nowadays.
* The series concludes with the Alvarez Empire Arc, an intercontinental war between Fairy Tail and the titular empire, featuring the ultimate confrontation between
* The series contains a song by Lovelin called "Miracle Kitchen" about making sweets. The foods in question are items that can be made with the
* The series contains a very unique and interesting example since the curse is actually an unintentional (or intentional) result of certain decisions the player makes. It's only played straight if you leave your love interest to die on Virmire in the first game and if your choices get your second love interest killed during the suicide mission in the second. Then, in the third game, if you go into the final attack on earth with a low war asset value and bring your love interest in

the squad for the final level, they get fried by Harbinger's beam. It is therefore possible to make Shepard fall in love with, and lose,
* The series contains evocation magic (under the label of "Conjuration" as of
* The series contains very small man-portable force field generators, amazing metallurgy, and an entire species of intelligent humanoid robots. Cybernetic technology, however, is much less pronounced, primarily consisting of biotic implants and small-scale surgical implants of translators, haptic display manipulators, and other small tools.
* The series contains "witches". Centuries ago, "witch" strictly meant someone who made a
* The series creators, Doc Hammer and Jackson Publick, actually discuss this trope when they hosted the season four finale
* The series danced with a scientific explanation for everything in seasons 4 and 5. Season 6, meanwhile, reverts back to fantasy, focusing the plot around two people who seem to be immortal demigods (one of whom has even been theorized to be an outright
* The series did a fair number of episodes directly based off stories from
* The series did a sequel via the "Shattered Visage" graphic novel that did at least attempt to bring closure to Number Six. It's apparently more or less official, as the famously cranky Patrick McGoohan "didn't hate" the plot.
* The series dips in and out of this, although it's extremely soft sci-fi with a handful of exceptions. In
* The series displays this a few times for the people inside the courtroom who are convinced that the defendant or a particular witness is truly guilty, despite what the evidence or lack of evidence shows. The judge is also easily swayed by the opinions of the prosecution and is sometimes quick to hand down a guilty verdict due to said opinions.
* The series does everything it can to imply that there is something going on between Gendo and Rei (a man in his 40s and a 14-year-old girl, respectively), not the least of which is Rei being a
* The series does make the point that gods aren't defined by their powers, but rather by their actions and benevolence. The Goa'uld and the Ori, who abuse their
* The series doesn't really have a plot, so it's hard to call any character the
* The series downplays or eliminates almost any negative trait that could be associated with a vampire. Part of this is because Meyer was not interested at all in vampires until having a dream that inspired the series (or so she claims) and she intentionally ignored earlier vampire "traditions" in favor of coming up with something she found unique.
* The series ends, among other things, with Beldin, a deformed, short hunchback with a bad temper who is always described as incredibly dirty, finally going off with Vella, a Nadrak dancer. True, they both changed into hawks, but she was still in love with the guy from day one.
* The series ends with an uplifting ending showing all the surviving characters smiling, despite the bittersweet nature of the preceding events and Lelouch's death, which is enough to make certain fans consider the whole thing a tragedy. The ending also leaves open what will happen to the world during the subsequent reconstruction phase. It is possible for viewers to speculate about how all the resulting death and destruction would have affected the social and economic structures of Japan, which may paint a rather pessimistic picture of this fictional world's future when all is said and done. The main culprit of this seems to be Okouchi and Taniguchi letting some of the staff throw out suggestions which caused a few of the visuals to be a little too happy, with one specific scene being borderline
* The series ends with Rex curing every Evo in the world. The end has a casual mention that there will still be nanites. Of course, this is because they weren't a hundred percent sure whether they were writing a season finale or a series finale. If it's the series finale, then there's the connotation that, if everyone's nanites are still there and active, then the thing that makes it such a
* The series even gives a name to the "maneuver through this difficult terrain in

order to bypass enemy defenses" tactic: Trench Run Defense. Skilled pilots are even able to use it against enemy capital ships like Star Destroyers, by flying close to the hull to minimize the number of (primarily anti-capital ship) defenses that can shoot at them, until they're able to fire torpedoes at weak points like shield generators or the ship's bridge. Targets destroyed by those means are said to have died of "Trench Run Disease."
* The series even went so far as to release a novel supposedly written by one of the passengers on Flight 815.
* The series exemplifies this trope in that the first games involved fairly realistic (or at least familiar) premises: a carpenter trying to rescue his girlfriend from a gorilla (
* The series explores the implications of this at one point, with a build up of all the evil absorbed from killing evil immortals eventually overpowering one guy, turning him evil, requiring some good immortal to defeat him (and thus absorb all that evil and become overpowered by it him/herself).
* The series featured "ice planets" and "lava moons", and one ocean planet they picked for a fishing holiday.
* The series featured the terms of an anthropomorphic animal Bill Clinton and George Bush alike, yet Arthur and his friends are still in the third grade.
* The series features a played straight (or possibly reconstructed) example in the form of the
* The series features Freddy Krueger who, when he was alive, murdered children in his basement and burned their bodies in the boiler room he worked in. He was, however, eventually found out, but when he got
* The series features monsters named Golem (made of either bricks or clay), Gold Golem (made of gold), and Stone Golem (made of stone).
* The series features three binary systems in the first five seasons alone. The Jaffa world Chulak is a heavily forested planet orbiting a binary. A later episode briefly has SG-1 trapped on a binary-orbiting desert world because the stargate overheated when the second sun rose, preventing them from dialing out.
* The series' final battle is a three-way struggle between Ahsoka and Rex, Maul, and the Order 66-affected clone troopers.
* The series finale also has Rebecca reference the Season 4 theme song, "Meet Rebecca!", in her ending monologue.
* The series finale contains this exchange upon revealing Jacobo and Tasumi's
* The series finale "End -a- Rooney" has Beck and Hart holding signs saying "
* The series finale ends up doing this as well, though it isn't remaking his own universe but instead making a completely seperate, brand-new universe within the show's larger multiverse. The episode also serves as an end to the "classic" continuity, leading
* The series finale features an alien artifact simply known as "The Machine" which, when activated, will grant Ed superpowers (flight, energy blasts, etc). However, rather than turning Ed into a singular, superpowered teen hero, the artifact mistakenly splits the power between Ed and the
* The series finale has Drogon pick up the stabbed body of Daenerys Targaryen and fly off to parts unknown. Some fans were quick to posit that he'd take her to Kinvara, a member of a priesthood capable of resurrecting people,
* The series finale is an interesting example. It appears to be a straight version mixed with
* The series finale is another prime example. If only Kramer didn't go to the beach and get water stuck in his ear...
* The series finale may be the largest example of this anywhere. Light and Near are somewhere around eight layers deep into this, both of them believing that they are one step ahead of the other. There's an entertaining panel in the manga where other characters witnessing a "conversation" between Light and Near begin to wonder why neither of them are
* The series finale musical number "Eleven O'Clock" features short reprises of several songs from the series, with Rebecca gazing upon the outfits she wore in those musical numbers. The first three songs she references are the Season 1, 2,

and 3 theme songs. The Season 4 theme song and its accompanying outfit are the last to appear, though Rebecca doesn't sing along and simply looks upon the outfit.
* The series finale of featured an in memoriam to Reg E. Cathey, who had a posthumous recurring role in the final season as Luke's father James Lucas. The season was released four months after Cathey's passing.
* The series finale reveals that the greatest limitation to the growth of a Wraith ship is the amount of available power. When an
* The series finale shows that in the distant future humans become like this too, though they don't need to; they probably took a lesson from the Vorlons about the advantages of standing around being cryptic when dealing with younger races.
* The series finale took it a step further. Charlie, it turns out, was alive the whole time, kept prisoner by Rose. He escapes and sends threats to Alan and his replacement Walden, while giving away money to the other regulars. In the final moments of the show, Charlie (played by a stand-in seen from behind) approaches the front door... and is crushed to death by a falling piano. Then Chuck Lorre appears, smugly saying "Winning"
* The series finale "White Orchids" ends with Jane and Lisbon's wedding. The last but one scene has their friends and family dancing happily to song "September". The series ends with the newlyweds glowing with happiness, Teresa telling Patrick
* The series first experienced a massive shift after the very first arc. The first storyline was a comedic adventure with episodic stories and more of an ensemble cast. After the first summoning of Shenlong the story switches gears, becoming a more straightforward action story with the focus being almost entirely on Goku, a format the series stuck with until the very end. Looking back it's almost hard to believe Bulma, Oolong and Yamcha were major characters.
* The series five boxed set had a couple of bonus scenes linking episodes.
* The series gave this treatment to Karen. After Pam revealed she called off her wedding to Roy because of Jim, Karen, having served a whole season as a likable character and a decent match for him (sparking
* The series gave us Korra (the Avatar herself, well trained in physical martial arts as well as three schools of bending normally and basically a
* The series generally comes down on the side of IAB, and doesn't demonize cops who inform on other cops if those accusations are justified.
* The series generally has a good track record for averting the trope. Katarina and Kirksen in
* The series generally inverts with the Bhaalspawn, who can be killed permanently in the normal fashion, whereas everyone else can be raised under the AD&D rules... except that Imoen ignores this rule and both Sarevok and the player character manage to claw their way back from Hell, although the latter wasn't properly dead.
* The series gets slightly more Lovecraft cred in the end much the same way
* The series gets the starlight-scope 'night vision' mode bang on, but rolls out the false colour images for the 'infra-red' mode. The latter is also strangely inconsistent: it can see through thin walls but windows, objects and sufficient quantities of
* The series gives the impression that the advanced Firebending ability to shoot lightning is a One Hit Kill if it manages to get a direct hit. This is offset by the difficulty of shooting lightning in the first place (it requires a mindset which is opposite to the usual for Firebending, and insufficient skill is likely to cause it to explode in the users face), and even when mastered the time it takes to build up the charge tends to telegraph the attack.
* The series goes back and forth with the Killing Edge; it is a katana in some games, but not in others. In addition, the Killer Lance in
* The series goes deeper by exploring Haruhi's psyche, revealing that her eccentricity stems from her perpetual boredom. Complicated further when Koizumi explains that Haruhi unknowingly possesses the ability to
* The series gradually changed the designs of its twin protagonists as the series progressed. In the original arcade game, Player 1 had blond hair and a blue outfit, whereas Player 2 had brown hair and a red outfit. In the NES version, Billy Lee

wore a blue outfit and had reddish-brown hair, whereas Jimmy wore a red outfit and had blond hair. Technos would try to depict Billy and Jimmy as distinct from each other as possible in promotional art, a practice which eventually made its way into the actual games in the NES version of
* The series had a lot of tension between Debra and Dex (who is her adopted brother). It wasn't helped by the fact that the actors were dating RL (and got married). In Season 6 the writers actually acknowledge it by having Debra fall in love with Dex (never actually acted on).
* The series had anniversary specials during years 10, 20, 25, 30, and 35.
* The series had a rather disturbing example of this trope. In the episode "Mr. Garrity and the Graves", a con artist scams an entire village into believing he can raise their dead. After being paid
* The series had its own tendency to mess with this concept. "Gettysburg" is a great example. A mysterious time traveler, who had appeared in previous episodes, returns. However, this time, instead of attempting to arrange "justice" against villains from the past while remaining consistent with recorded history, he is attempting to directly change what happened. Specifically, he hopes to avoid the assassination of the first black president in 2013, regarded as one of America's greatest leaders, by a Southern Sympathizer whose beliefs are all tied up in the Glory of the Confederacy. The time traveler sends the guy back from a Gettysburg re-enactment to the real battle where he serves under an insane commander and faces the true harshness of the war and his supported side. He learns his lesson, and comes face-to-face with his ancestor, whose self-serving cowardice contradicts the impressive legend that he had idolized during his youth, and he rejects extremism and the no-longer noble rebellion against the government.
* The series had occasional instances of the Goa'uld bombarding planetary surfaces with low-power blasts from
* The series has actually avoided directly answering the question on whether Popularity Power is actually in effect. Frau Totenkinder for her part actually expresses doubt on whether it is or not.
* The series has actually been on hiatus since December 2012 and has not been continued.
* The series has a few references to Romance Dawn, a one shot manga that would serve as a basis for One Piece.
* The series has also been known to subvert this, especially if the film is a prequel:
* The series has also had its share of aliens, both demons born from modern myths about aliens (the Grimies from
* The series has an episode in which Fez wants his English teacher to be his prom date. Early on at the prom, he asks her to dance and she declines. At the end of the episode, they are seen dancing. He asks Eric for the key to the hotel room that he & Donna didn't use. The teacher says she is not going to a motel with him, and he replies, "Yes, and you also said you would not dance with me." This teacher also happened to be
* The series has an incessant rumor mill regarding the character roster with each new release. This was especially true after
* The series has another version in Yokuda. Once one of the most advanced society of its time, the entire continent sank for mysterious reasons. Explanations ranging from the natural, such as a tsunami or earthquake, to the more fantastic, such as a group of rogue
* The series has a number of other "immortal" beings to which this trope frequently applies, including
* The series has a pretty major one at the end of Episode 3, in which Slaine confronts Trillram
* The series has a special case, with Ochaco nicknaming Izuku "Deku". That nickname was initially an
* The series has a surprisingly large amount of unused musical content, mostly released on the
* The series has a tendency to either have totally Earth-like planets (class M) or

single-biome planets. At least in
* The series has a throw-away reference to a human colony being found in Alpha Centauri; the colonists set off before the discovery of the setting's FTL travel and had no knowledge that aliens existed.
* The series has a version in the backstory known as Aldmeris. It is said to be the continent the
* The series has classic zombies, but depending on the region the specific game in question takes place, they may not be called "zombies". Details beyond their names can be found on
* The series has done this for ages with their dragons. Strongest of the "metallic" (good) dragons? Gold, with silver just after it. Strongest of the "chromatic" (evil) dragons? Red, with blue just behind it. Black is the second weakest, only stronger than white. And, of course, the god of metallic dragons is platinum.
* The series has events known as "Dragon Breaks", which are this trope crossed with a
* The series has far, far too many "dilating doors" to list here, but special mention goes to a door in "Day of the Daleks" which curls up toward the ceiling in a slow, sinister fashion.
* The series has had giant spiders since the first game and regularly has them appear to fight the player in a
* The series has Headmasters, Targetmasters, and Powermasters. The human partners are kind of like having a gunner in the first two cases, while the human partner gains the armor and weapons of a Transformer. With Powermasters, the human partner serves as the
* The series has highly simplified, bright, flat character and background designs, so when fully CGI black helicopters show up, it's rather jarring.
* The series has Jo Amon and the other members of the Amon Clan appear as the ultimate boss in every game, including the spinoffs. For most of them, you can only fight them after completing every other substory in the game.
* The series has Klingon dishes that seem to be based on the bodily parts of some animal or other, like "Bregit Lung", "Rokeg Blood Pie", and "Heart of Targ". Humans eat things like haggis, liver, black pudding, tripe, kidneys, ox heart, sheep's brains... And, if Worf's brother is to be believed, they don't like to cook it much either.
* The Series Has Landed "Bang! Zoom! Straight to the moon!", and think that whalers were the first people to land on the Moon.
* The Series Has Landed" introduces Fry to 31st century breakfast staples such as "caffeinated bacon" and "baconated grapefruit".
* The Series Has Left Reality: A previously more grounded or realistic series gains more fanciful elements as it goes on.
* The series has long been labeled a holy grail of localization, with plenty of hardcore fans in the West who knew there was little reason anyone would give the games a chance. Enter
* The series has long had a "Shield" spell, which protects the user from incoming physical damage based on the strength of the Shield spell being cast. There have also been a number of elemental and general magical variants, which protect from incoming magical attacks.
* The series has long had this issue when it comes to monetary quest rewards. Typically, the amount of gold you are paid for completing a task is
* The series has neither Star Butterfly or Marco Diaz in the episodes "
* The series has numerous "Heal Other" spells, most of which are of the "On Touch" variety, naturally classed in the
* The series has one of these; though it is referred to several times in dialog as a "crustacean", it has a long, serpentine body and other characteristics that fits this trope.
* The series has other examples, such as lunar veils made of zero-mass fabric, antimatter veils, quantum seals, use of phantasmal mushrooms with a miniature of the Hakkero furnace to create

* The series has recurring spells that allows characters to do this. It typically takes the form of transforming into another party member (replacing the user's abilities with the other member's) or turning into a fire-breathing dragon.
* The series has several spells which generate temporary sources of light, typically classed in the
* The series has shown a couple of examples where a character can enter a
* the series has sold over 250 million games, and they still have another game to release in 2019.
* The series has some problems with Earthforce naval ranks. The uniforms in the series are pretty clear: blue for naval personnel, gray for security, olive drab for ground forces. However,
* The series has spanreeds, contraptions that allow two quills to be synched up so that one controls the other from a distance. The practical effect of this is similar to a cumbersome form of texting, but with a very different cultural context.
* The series has the chaos device, which transports a player to an apparently random location (usually the start of the level or section)
* The series has the Devil weapons, which are incredibly powerful, but can randomly make you take damage instead of your opponent.
* The series has the heroes and a small army of allies invade the Fire Nation in "The Day of Black Sun."
* The series has "The Metal Clan" (3x5); the new Team Avatar just escaped Ba Sing Se with a dozen airbenders, and now head to Zaofu to recruit another airbender, and meet up with Lin's sister Suyin.
* The series has the Vor Lords of Barrayar, and the Ghem Lords of Cetaganda. So when the Cetagandans invaded Barrayar, it was a bloody mess for all involved.
* The series has this for many player characters and bosses, often times not learning their real names. Noteably, different units have different naming conventions.
* The series has this with respect to the often heroic Witches. Granny Weatherwax and Nanny Ogg often offer to pay for something, but they nearly always get it for free. This is because the Lancrastrians both love and fear witches.
* The series has two "Duke"s: a good Duke who was Apollo Creed's trainer until
* The series has two rather nightmarish scenes involving this trope, both involving a species called
* The series has various giant spiders as common low to mid-level creature enemies dating all the way back to
* The series have been criticized by some western gamers for doing this too much in the direction of Japanese fans at the expense of the rest of the world, as many playable characters reflect Japanese popularity rather than global fame. The inclusion of Marth and Roy in
* The series have had a couple of these, thanks to many platforms that the player should probably never reach still being made solid. In

* The series' Illusion School of magic has a few spells that can utilize this.
* The Series in a bridal gown in a sham marriage with Pleakley in order to please Pleakley's mom. The marriage itself was called off meaning that Jumba and Pleakley currently remain unmarried.
* The series' incarnation of Eggman is still a villain who antagonizes Sonic and friends. However, rather than having the plan to
* The series' incarnation of Gladstone Gander isn't as self-centered and smug as the comics version. Instead of gloating about his luck to his relatives, his flaw is relying on his luck to solve all of his problems.
* The series includes significant Indian and Chinese characters, as appropriate to Victorian Britain. However, they are portrayed as encountering very little, if any, racial discrimination for people living in the age of imperialism.
* The series incorporates this trope in subtle but relatively major in-game ways.

In fact, the games' developers are known for incorporating programming errors and other game quirks into canon by explaining them in later games. (Such as mentioning
* The series' infamous Pyramid Head is an example in all of his incarnations. He's completely invincible to any form of attack the characters have access to.
* The series in general has bandits. Sometimes they're called a different name (smugglers, brigands, etc.) but they always fill the niche of low-end generic enemies with
* The series in general has more ancient tombs per square mile than you can shake a magic katana at. Some are well justified by the setting's lore, while others are simply generic dungeons closer to
* The series in general has the handgun and survival knife playthroughs; aside from battles where you have no choice but to use a special weapon and using the rocket to finish off the final boss, you're to use only that one weapon and your wits. It later became an actual gameplay mechanic in some minigames where certain characters would only ever get a knife.
* The series in general has this feature called Negative Edge. Normally, to perform special moves or super moves, you do the motion then press the attack button. Negative Edge allows one to hold the attack button, perform the motion, then, by releasing the depressed button, the special is performed. This allows chaining particularly hard combos and allows easier performance on special moves. This has since been used by other fighting games.
* The series in general. How many times have you accidentally gotten Link caught in the blast radius in one of his own bombs? How many times have you walked away with only, maybe, four hearts or so of damage? Subverted if you're
* The series in general is all too aware of the trope and will exploit it whenever possible, which gets characters to react with predictable results. Likewise, whenever you have to take a risk in a trial that could carry a stiff penalty or someone proposes to give you a bigger penalty than usual, they'll "show" you via your
* The series in general is good about teleporting the player when they find themselves trapped. Notably, it has a "Warp to Shore" feature when in the water, to prevent the player from having to look for a way out of the water.
* The series in general is Matt and Trey showing off that each of them is a
* The series in general runs on this trope, with a lot of the humor coming from Joel/Mike and the bots' over-the-top horrified reactions to the bad movies they watch. Even the Mads get in on the Faux Horrific action, such as with their reactions to the legendarily awful movies
* The series initially contrasts the bookish and conservative Kerry with the outgoing and promiscuous Bridget. Kerry would often be given more steady boyfriends while Bridget would have a different guy every week (sometimes when she was with a boyfriend too). The show keeps subverting it though and Kerry lampshades it in one episode where she remarks that their father expects her to be "some old spinster like
* The series introduced a character named Sabu, who possesses a giant axe and has a giant raccoon dog named Ponta for a pet. Both of these things are references to a character named Kintaro, who also possessed a giant axe and a giant raccoon dog named
* The series introduced top player Fantöm in the ad that made early
* The series introduces the Pandora's Box, an up-and-coming chain of fast food places with a fantasy RPG theme. Subverted in that, while very trite, it's not a bad place, and is very popular among Shadows, attracting them as customers and employees (especially unskilled ones in the latter case; Shadowkind like kobolds and goblins have found that they can make money working at Pandora's Box simply by being themselves.)
* The series in which the Rangers' base is invaded but survives, we must add in
* The series in whole tends to get a lot of this, especially in regards to the core gameplay remaining as the monster count climbs. In general, Game Freak's strategy seems to be to keep the main titles to the formula while releasing periodic spinoffs - if you want a Pokémon action game, there's

* The series is about a group of mainly elderly men in the Home Guard who were meant to be Britain's last line of defence should the German army invade. Most of them are earnest about doing their bit. Some, like the ancient Cpl Jones, are actually dead keen to come face to face with the enemy. However, since Britain was not invaded, they are mostly given unimportant duties or sent on training exercises. The closest they get to the enemy is occasionally guarding some POWs. They're portrayed sympathetically - while they're not particularly competent, they're certainly not lacking in courage. In one episode where they think the Nazis have invaded, they all make a heroic stand to buy time, despite believing this will result in their own deaths.
* The series is all about this trope. There's even a pretty well-supported in-game explanation for it, too. The Citadel Council can't send their battlefleet to stop
* The series is also believed by many to be a sequel of sorts to McGoohan's previous series,
* The series is also popular with people who grew up in Midwestern, flyover, conservative, under-educated towns that Pawnee satirizes. The general sentiment is, "They're not exaggerating as much as you'd think."
* The series is a series with much deep meaning and symbolism, but many fans take it too far. This is, after all, the fandom where the name for

* The series is full of this stuff, usually played for humour either by contrasting the mundanity of such devices with a fantasy world, or by showing how hectic these advances have made everyone's lives. Notable examples include
* The series is largely centered around the seven Halo installations, all of which are basically gigantic space stations, large enough to house their own ecosystem. They're also incredibly powerful superweapons. The Ark that built them is even larger, to the point that it has several times the surface area of the Earth and is illuminated by its own star, which orbits
* The series is much better about it these days. In the old series you could go quite some time between non-white-person sightings. Martha Jones was the series' first black companion (Series 3), and of course there's
* The series is notable for how sparingly this trope is used, considering
* The series is notorious for the number of errors it contains, from content (getting characters and timelines mixed up) to typos to other editing issues. Some of the more egregious editing issues are Ivypool having two different eye colors on the same page just a few sentences apart, and in the
* the series isn't seeing light on the rest of the series due to the author stating his retirement after uploading Don Spaghetti Episode 2, but yet, you have the channel's stuff at safety.
* The series is otherwise an aversion, as it's shown that even with heavy use of
* the series is particularly hard to cooperate with. He had agreed to apprentice Claire in the mystic arts. The only problem is that he has a habit of disappearing for weeks or months at a time without warning. He also knew that Claire was pregnant — or had known that she would have been in spite of their differing species — and completely neglected to tell them. When he confesses this to Claire, she tries prying more from him, only for him to disappear again.
* The series is probably best known for the SOEIV (Single Occupant Exoatmospheric Insertion Vehicle), or HEV (Human Entry Vehicle), each designed to deliver a single soldier at the battlefield. These are launched in large numbers; the idea is that if one gets shot down, you lose one troop rather than the dozens that would be aboard a dropship. The troops who use this are the Orbital Drop Shock Troopers (ODST), with their most famous division known as "Helljumpers", and are the second best the human military has to offer, after the

* The series is riddled with running gags, some of which are overused for comedic

effect. Most notoriously, the "Retrieve arms from x" command has been done about
* The series is rife with pleasant background detail, but Rowling very carefully seeds important plotline clues into trivial mentions. Hagrid got a flying motorbike from "young Sirius Black" in chapter one of book one; in book three, Sirius Black becomes an important part of the plot. Other worldbuilding items, like "goblin wars" mentioned in history books, or the idea that Hogwarts itself will give help to those who need it, tend to come back in a big way later on.
* The series is set in the 12th century BC (the time the events that inspired Homer, who wrote around 800 BC, are believed to have happened) and there is
* The series is stuffed to the brim with these what with Persians, Rajputs, and Axumites. In rather a subversion the most
* The series is usually not quite so bad but has its moments. They had a building teleported into space, fired nuclear missiles in orbit, and realistically, all the alien fleets attacking the Earth could not possibly go unnoticed by astronomers. There was one episode where they made everyone who witnessed an incident sign non-disclosure agreements. In the case of the building being teleported into space, the official story was a
* The series is very fond of the scenario where someone has to be proven innocent in the final case after believing themselves to have commited
* The series itself ends this way, too. The final storyline is one big lampshading of the fact that after all these years, Ataru still refuses to tell Lum he loves her. He literally is willing to risk the destruction of the world to avoid doing this. When the townsfolk discover this, they form a mob and hunt Ataru down to try to force him to say he loves Lum. He
* The series itself is considered very manly with all the Titan slaying and the characters involved. Especially
* The series itself somehow does this on a meta level as well by having an art style greatly resembling that of
* The series itself starts with the betrothal of Lady Sansa (Ned and Catelyn's daughter) and Prince Joffrey (Robert and Cersei's son) to try and "redo" the failed Robert and Lyanna match. Sansa is initially besotted with Joffrey and believes it to be a
* The series kicks off with the Starks receiving a letter stating that Jon Arryn was murdered which they decide was due to this trope.
* The series later attempts to explain all this earlier time-travel nonsense during the "Recollections" trilogy of seasons by
* The series makes a point of noting that, out of the many Hulks over the years, the Professor Hulk and the Green Scar are absent. Eventually, the later shows up...
* The series makes stabs at social relevance by introducing the Mangler in the second season to counter accusations that it is too saccharine, and having Pooky and Elsa adopt a Korean war orphan in the fifth season. After Elsa dies of chalk dust inhalation in the seventh season and Pooky is subsequently written out, the Korean war orphan is adopted by Mr. Ferndipper and Conrad's mother, and after they are spun off in the tenth season, the Korean war orphan is the last remaining cast member, and the writers try to establish him as a seven-year-old truck driver with a pet ape. (This proves to be one
* The series makes this brutally clear at around the middle of the fourth and final season. Scorpius is on the ship and John is convinced he's only there because he craves the wormhole knowledge in John's head. So far over past seasons, Scorpius threatening John, his family, even the entirety of Earth hasn't made John give in. Meanwhile Aeryn, angry that she has done everything she can think of to tell him that she wants a relationship with him, confronts him on his emotional deadness... and John performs a neat trick that shuts down the comms long enough for him to explain that, yes, he'd let anything else be destroyed, but Aeryn
* The series messes with this., and when Issei does meet a successful devil with a harem of his own, the way he so callously treats the women around him makes Issei furious.
* The series' monsters either subvert and play the trope straight depending on what part of the series you're looking at. The bare basics of the card game imply

the player is the master and any mon they summon acts as a temporary familiar. Some players don't add any attachment to any particular monster to such an extent and the ones that do don't necessarily add any benefits to the monster in question. The first example of a modern duelist who could see and interact with the Spirits of the monsters in his deck and felt a personal relationship with them was Raphael. It's unknown whether they actually talked back to him when he talked to them.
* The series moves from Indiana to Hollywood for the eighth season (justified by having Buffy-Lu get a screen test that includes room and board for the rest of the cast), complete with new characters from the film industry (a sleazy agent and a talentless actor) and a parade of guest stars including Conway Twitty and Annette Funicello when the focus shifts to a small-town radio station bought by Mr. Ferndipper in the ninth season.
* the series movie doubled as ads for the vehicles that the Autobots transformed into. They even sold a special Ironhide and Bumblebee editions of the real life vehicles that included the visual modifications they had on screen. (which, sadly, did not come with rocket launchers or turn into an alien robot).
* The series name outside of Japan is this. It's a shortened form of its Japanese name, Pocket Monsters, so were the trope not present, it should be Pockemon.
* The series nods to it by having Gibbs temporarily retire and promote Tony to lead. Gibbs comes back, demoting Tony although he still got something of a promotion being the Director's personal agent handling covert operations stateside.
* The series notably averts this in one episode where a girl cheats on her football playing boyfriend with an artist. The "star athlete" turns out to be genuinely decent and caring, the artist... not so much.
* The series not only got four made-for-DVD movies years after its original Fox run was over (which were made possible in part by the impressive ratings the reruns pulled in on Adult Swim), but got renewed in 2009 on Comedy Central — then it ended in 2013. While the final episode (in which
* The series occasionally drops hints at who exactly Tsukasa is, but has yet to follow up on them. The introduction of Kaguya Gekko, a character who may be similar to Tsukasa, only complicates matters without providing anything resembling an answer.

* The series of specials that followed this also does such — after two standalone stories with no real connection to the
* The series often averts this trope as well, especially in the beginning. The protagonists will often force the fight away from civilization, as to avoid any innocent casualties during the explosive battles. Additionally, the protagonists frequently use the Dragon Balls to wish that the destruction they cause be reversed, including bringing people back to life if necessary. When Dende recreates Shenron after taking over as Earth's guardian, the team even asks him specifically if they can make it so multiple people can be brought back from the dead as well as letting the same person be wished back multiple time, since these were limitations the original incarnation of Shenron wasn't able to grant.
* The series often gives no indication whatsoever about whether humanoid cultures in "space" stories are
* the series of the same name in brief speaking roles, voiced by the same actor who had supplied his grunts in the original shorts. The only differences between them apart from the names are Oscar's bushy beard and upbeat demeanor.
* The series once showed Homestar and the King of Town demonstrate a secret handshake. Neither of them have arms.
* The series, on the surface, is largely compliant. Tamriel itself is a fairly typical
* The series opens on a man driving an RV recklessly through badlands dressed only in a gas mask and underpants. He glances behind him: a flash of what looks like two dead bodies sliding around on the floor. Beside him is an unconscious man, also in

a gasmask. The episode then cuts to three weeks ago to show how we got there.
* The series opens with a massive terrorist attack blowing up the Capitol Building during the State of the Union Address, killing the President, Vice-President, most of the Cabinet, and most of Congress.
* The series overall became way more open to sudden dark moments despite becoming
* The series overall in regards to the legend of the Master Sword. In
* The series' penultimate episode, "Musicals & Moving On", do also end with this trope... before the
* The series plays this trope straight. Even the episodes are renamed to “Appisotes”.
* The series plays with this trope, in that several other famous celebrities — including Bob Dylan — also become vampires, and all suffer from this to a degree. However, several of these criticisms — including those raised in-text about Dylan — are similar to criticisms these artists have faced in real life as they got older and their careers / fields moved on.
* The series plays with this trope in the episode where Cam is hosting a charity function for a music appreciation group. He keep referring to his rival (who hosted the event the year before) as his new nemesis. Mitchell tries to point out that it's just silly in real-life, but Cam takes great delight in the drama the relationship allows for.
* The series premiere has Boyd blow up a church, then while the police are all distracted by that, robs a bank. It's said this is not the first time he'd pulled that particular strategy.
* The series presents a corollary to this: if your wife is suing for divorce, do not hire your brother as your lawyer. When Marcus, Harvey's brother wants Harvey to represent him in his divorce, Harvey points out that it is a horrible idea but Marcus guilts him into taking the case. Harvey is too emotionally involved in the matter and tries to approach it as a concerned brother rather than a lawyer.
* The series presents a unique version of this with the salarians. As they are amphibious haplo-diploid egg layers, females are created by fertilizing eggs. Social customs restrict only a fraction of these to be fertilized, creating a race that is roughly 90% male. Females thus hold
* The series presents many other heroines which fit into this role as well. Other variants are Ciel/Akiha, Hisui/Kohaku, and others.
* The series presents many other heroines which fit into this role as well. Other variants are Sakura/Rin and Sakura/Rider.
* The series pretty much makes Aang and Sokka to be this, as well as
* The series prided itself on being more like a real ship, with accurate (or at least believable) use of jargon, than other sci-fi series. Three vital pieces of information into three short sentences; even if it wasn't accurate, it would probably still be a very efficient system. An
* The series promised its viewers a spectacular kiss in the season 4 finale. Halfway through, it seemed to be Kate and Sawyer in the helicopter. Then later in the episode it was topped by Desmond and Penny's reunion.
* The series provides the page image, and sometimes seems as if its intended ultimate purpose is to take this trope and
* The series pushes how the Royal Family of England and the Emperor of Japan are "meant to rule" due to alien DNA...ignoring how both England and Japan have prevented the royals from having any real power over government for centuries.
* The series' real necromancer is Kaku Seiga who raised Miyako Yoshika as a
* The series received a FSK 12 in Germany for every episode, but the OVA collection received a FSK 16 despite no increase in objectionable content. (Sure, there was a swimsuit OVA, but it reused the swimsuits/fanservice that had already been featured early on in the show.)
* The series received ports on mobile platforms (iOS, Android, and Amazon's Fire OS) which updated them with high resolution visuals and UI, touch controls and traditional controller support (post-patch), and a remix track for each of these games' first stage (as well as the second stage for the Amazon version). This is also the first time that

* The series' recurring villainous faction is the Enclave, éminence grise members of the pre-war U.S. government who rode out the apocalypse in their bunker before emerging to retake the wasteland. Responsible for unscrupulous projects such as the Forced Evolutionary Virus and Vault Experiment, over the course of
* The series regularly struggles with this trope. The games are cartoony, family-friendly, and made to appeal to as wide a demographic as possible. As such, the series often gets slapped with the "kiddy" label despite the creators' intentions.
* The series repeatedly claims that it's impossible to cut granite without power tools, when in reality it can be cut by rubbing sand against the granite with a copper saw (like the Ancient Egyptians did) or with a stone (like the Amerindians did).
* The series' reputation as being full of dramatic posing comes mainly from the Capcom game. While there's plenty of posing in the manga, it isn't as common or as elaborate as one might think. In fact, some of the most iconic "JoJo Poses," including Dio's pelvic thrust, were made up entirely for the game and don't happen in the manga.
* The series reveals what few fans there are in-universe all think that Dante and Randal are a couple.
* The series seems to have taken to lampshading this recently; with "Cool Hand Peter" and "Viewer Mail No. 2" being standouts.
* the series she is much heavier than them. She's since been retconned to being Ariel's size.
* The series' signiature weapon, the KARASAWA (renamed CANOPUS) laser rifle, is one of these, generally the single most powerful energy weapon in its given game. In Armored Core 4, a middleweight craft wielding two of these can S-Rank the
* The series six boxed set had the 'Night and the Doctor' set of mini-episodes.
* The series skirts this trope. Even though Jack Bauer is backed by the CTU and an entire brigade of government agents that ought to be out there backing him up, somehow he always ends up going it alone. Sometimes at the direction of his superiors.
* The series sometimes paints the Time Lords like this. At the dawn of their civilisation, they sent a star supernova, and caged the resulting black hole to fuel their time travel. They fought several wars against other primordial races (notably the
* The series sort of flip-flops on this, since Sister was basically a rare guest star for most of her existence. Then as the series got more serious and started introducing more of the Freelancers, the female Freelancers were allowed to be just as flawed and even moreso than the male characters. However, the series then wandered back towards this trope by introducing a female reporter as the story-driving castmember, whose only flaw seemed to be her singleminded dedication to the story she was researching, her superiority highlighted by her male assistant (who was, if anything, even dumber than most of the Reds and Blues). Then it wandered back away from it again by exiting the reporter and bringing Sister back as a primary castmember.
* The series spoofs this as characters are well aware that this trope is one of the privileges of the Main Character/
* The series sports some noticeable changes in animation, especially during the middle of the third season, where characters start making some, um, interesting expressions during action sequences.
* The series's regular zombies have their torsos ripped open. They are known to stuff food into their chest "mouths".
* The series's take on Hugo Strange is far less clever as a manipulator or as an inventor than his
* The series started off being pretty serious and gradually slid down the silliness scale over its run, nearly becoming a self-parody by the eighth season. The producers tried to push it back up the serious scale by introducing a new
* The series starts following Taiju Ooki, a hot-blooded yet dimwitted high school student who wakes up thousands of years in the future after every human was turned to stone, only finding his friend the hyper-intelligent Senku, who plans to rebuild

society with his immense knowledge of science. After two volumes and freeing Taiju's love interest and the main villain, Taiju goes undercover in the latter's group and the manga now focuses on Senku as he shows a village of cave-people various forms of science. So not only is Taiju not the protagonist, he's not even the
* The series starts its first episode with the main character Ed Mercer discovering his wife Kelly cheating on him with a blue alien that he derogatory nicknames "Papa Smurf". It's later revealed that the alien is from a race that has a cycle of pheromones causing everyone they touch to feel sexually attracted to them and he causes this effect once again in both Ed and Kelly.
* The series starts sixty years after magic has returned to the world. Dragons and spirits are a common sight, but most still hire humans with guns. Phones have "mana contacts" that connect to the user's magic (that is, soul) in order to project a personal
* The series starts with Luz escaping to another world to avoid being sent to a summer camp that is meant to teach her how to fit in, out of fear it's going to beat all creativity and passion out of her. While her presence on Boiling Isles was beneficial to both her and many other characters, the episode
* The series "Steak Out With Kix Brooks," they say the following: "There's not a town in America that doesn't have a steakhouse they're not proud of."
* The series still enjoys a reputation as a classic that any serious anime fan should check out, but it's quite hard to go into it without already knowing about how
* The series succumbed to this when Dr. Keller made Teyla look like a Wraith queen for an infiltration mission. The reason why Teyla was chosen is because her small amounts of Wraith DNA (the result of a Wraith

* The series was cancelled shortly after "Dragon Games", which means nothing ever came out of

* The series was envisioned as taking place in San Bernardino, California, with the crew simply choosing to shoot in Albuquerque because the city offered incredible incentives for filmmakers who worked there. After realizing how much of a pain it was to try to make New Mexico look like California, the crew decided to just have the show be set in Albuquerque, allowing them to make the now-iconic desert scenes.
* The series was filmed in Atlanta, and the show partially averts the trope by having three episodes set in Atlanta proper. "A Feast of Friends" in particular prominently features two Atlanta landmarks, the Fernbank Museum of Natural History and the Fox Theatre.
* The series was largely responsible for a colossal increase in the interest and popularity of dinosaurs. It led to the creation of books, toys, documentaries, clothing, an NBA team name, you name it— it showed the world that
* The series was originally rated 14A in Manitoba when the ratings board watched the first two episodes. However, the complete series DVD only received a PG rating.

* the series was warning the readers that they wouldn't like the ending all along. Readers, however, were hoping Snicket was kidding.
* The series waxed and waned in popularity during its original run from 1992 through '97, but most fans will argue that the earlier books were superior, while the later ones, with a few exceptions, relied too heavily on
* the series where it's revealed she was actually doing it to buy back her home island from Arlong, captain of the Fishman Pirates, due to a deal she made with him for an agreed sum he set. She was nearing her goal until Arlong paid a crooked Marine captain to raid and confiscate her treasure, then feigning ignorance when she confronted him about it, prompting Luffy and his developing crew to fight him head on. After Arlong's defeated, she still keeps her thieving skills handy, this time for the Straw Hats and her's benefit, against the rival pirate crews they face. Not afraid to steal the opposing force's treasure if the opportunity presents itself.

* The Serpent and the Rainbow that wants to keep Haiti strong in the face of Western imperialism, but he shows no hesitation in doing this to his fellow countrymen as well.
* The Serpent Gods. Eight in total. Only a few are named: Lorric, the God of Lust; Meka, the God of Miracles; Dek is another. Not much is known beyond them being related to each other and Lorric being the most powerful amongst them.
* The Serpent God Set's children were successfully born in Issue #25 (Volume 2), they then in turn wipe out all life on Earth before moving on to conquer other planets and other dimensions.
* The Serpent. He is cured by a woman but refuses because he is already married. The delighted woman reveals that she is his wife.
* "The Serpent,", he is transformed into a dove and forced to flee the kingdom. The king pledges that any woman who cures his son may marry him; the princess reaches the kingdom and cures him.
* The Serpentine Tower "quest". If you go deeper into the magic guild of Ankrahmun you will find three cages containing a fire elemental, a vampire, a behemoth as well as a basement containing a green djinn blocked by energy walls. By trying to turn on a lamp in the tower you can set the fire elemental free, which allows you to free the djinn by pushing a lever in its now empty cage and then.... nothing. So far, no player has ever been able to free the vampire or the behemoth and move further in the "quest". Rumor has it that if one does manage to ever complete it, they will be able to fight an additional pharaoh boss and possible even be able to get the mysterious "soul ruby" required to make the helmet of the ancients upgrade permanent.

* The Serpent of Eden is sometimes portrayed as a snake with a human head as seen in John Roddam Spencer Stanhope's "Eve Tempted". In "The Fall of Man", the Serpent barely looks like a serpent at all, more of a salamander who's able to walk on it's hind legs. Both paintings go against many depictions of the serpent of being a baby-faced beauty (see "The Fall of Man" by Titian) or regular snake by making him(?)

Unlike Grayson, the current population is solidly atheist and rather bitter about their ancestors' fanaticism. The Haven-controlled world of Prague was settled by white supremacists who were out to create an Aryan paradise but only ended up with a dirt-poor backwater planet known best for the natural good looks of its prostitutes. Thandi Palane's homeworld was settled by black supremacists who, due to an unintentional side effect of genetic engineering, ended up with descendants who were practically albino. * The Servotron song "Batteries Included" is about how male robots make better lovers.

* The Sesame Street News segments also followed a basic formula to many of them: after the "NEWS FLASH" intro logo and music, we fade to the "news scene" where Kermit the Frog, clad in a reporters' trenchcoat, hat and microphone, is talking to someone off-camera or facing the wrong way or doing something else not related to his duty, before realizing he is on camera and begins his report. Everything goes smoothly as he interviews who he is supposed to, but then halfway into the report, things begin to go wrong (usually with the fairy tale/nursery rhyme being parodied in the sketch not going as it traditionally does), and something bad typically happens to Kermit. The segment then ends with Kermit, usually embarrassed or somewhat shaken up, returning the viewers to the "regularly-scheduled program."
* These sasaengs would consider any type of attention - good or bad - from their oppas as something positive. They have injured them to the point of needing the hospital, but they won't care simply because 'oppa has finally noticed' them.
* These Savage Bones. Alejandro has been bounty hunting for years now, but Esperanza has never solved a murder case before, nor has she ever done any sort of police work.
* These Savage Bones, but the murderer's trademark Calavera mask - a skull with blue poppy petals around the eyes to look like tears - deserves a special mention.
* These scenes are echoed in the last act of the game. You are in an underground building where you have to search several empty rooms to gather various items to build a
* These "servants" are sacrifices which are roasted and then served in chunks to the people of the cities. There's a reason the local pirates fight to the last man to avoid capture.

* These sets are also available in Russia, but they are no match for the fabled Soviet "Kid Chemist" set that included, among other things, strips of magnesium for kids to burn and (not dangerous, but awesome!) a real retort.
* These's gunblade. They saw limited use due to being incredibly impractical.
* These ships could operate with smaller crews than would otherwise be necessary for such large sailing ships by the use of steam-powered winches called "Steam Donkeys", which be used to pull lines that would otherwise require the raw strength of many men.
* These show a Post-it on a wall supporting a kid/a dog. Brief text says "Just Kidding. Cannot support a child/dog."
* these showcased by Forgotten Weapons, which were based on known brands of self-loading pistols but clearly weren't, with quality ranging from plain crap to surprisingly good, but copied in form and not function, due the manufacturer simply being told to make copies of a gun and not knowing much about them; leading to some that will reliably fire, but had all manner of secondary functions that were simply left as solid details with no moving parts, dead loose, or simply with no alignment at all, particularly the rear sights which are often graduated in a series of numbers which makes no sense at all, due to them not being able to read European languages either, and just stamping on improper makers' marks, nonsense graduations and strings of total gibberish all over the item.
* These shows also feature her son Cupid (portrayed by Karl Urban), and an
* These shows run for three reasons: to give politicians a national audience to pontificate to so they can prove to their constituents that they actually matter; to satisfy stations' license requirements for a certain amount of "public service" broadcasting every week; and because they're so ridiculously cheap to produce that they're invariably profitable. Their viewers also skew towards the "very, very rich and very, very connected" demographic - so much so that some networks charge more per minute to advertise on these shows than for the Saturday morning cartoons, which have ten times the viewers. They get it, too.

* These spring up in some sillier racing games as an attack, such as in Looney Tunes's Space Race; here it's the ammo for a pistol. The schematics show that the punch goes "that way very fast".
* These started out in the mid-20th century as cheap unguided training bombs until someone had the inspired idea of weaponizing them with the addition of a guidance system.
* These start off with a family member saying that they have an itch and then the mother asks if it's a grocery list of causes to the point where she rapidly-speeds-up-to-chipmunk voice and hilarity insues, but then to drive the point home, the musical cue hits and the male announcer says "The only medicine you need is Lanacane."
* These stories all came together into the COO Triple H "vote of no confidence" angle that fall, as that time period would see heels being increasingly brutalized at the hands of faces, and the faces in question going completely unpunished (most notably, the fact that WWE did nothing to stop Hugh Jackman, a non-wrestler, from breaking Dolph Ziggler's nose in a match against Zack Ryder). Around the time, R-Truth formed the "Awesome Truth" tag team with The Miz (who was furious at how rapidly he had fallen down the card since losing the WWE Championship that May). Once Triple H fired them, they started randomly attacking WWE stars, creating an increasingly unsafe WWE environment, and eventually leading the heels to revolt and stage a walkout.
* These stories were based on Lord Dunsany's dream-like storytelling.
* these strips, Choo Choo's son, Woogie, claims that all cats are evil, soulless monsters forged in "hell's hate furnace" that condition their "owners" to associate

* These swords may be the origin of the trope that meteoric iron should be black, but they both started as ordinary swords and only after Anglachel was reforged into Gurthang was it black with "edges that shone with pale fire". This seems to be a description of black oxide, which was removed from the edges by sharpening.
* These tactics are not limited to humans; certain species of ants have the ability to explode when the colony is under attack. Similarly, for some species of bees, a sting is a suicide attack when used on mammals: their stingers have barbs that get trapped in mammal skin and flesh. If the bee tries to pull out its stinger, it just rips off its body, fatally wounding it. However, unlike humans, worker and soldier ants and bees are not
* The set bonus (extra attacks at random enemies in autoattack range) is more of a Trickshot mechanic.
* The set design was overhauled, creating the spiral stairway with the broken elevator and making the guys' apartment very clean and tidy. The original set was a standard sitcom set with an "L" shaped hallway and was more run down.

* The set "Planar Chaos" focused on the theme of alternate realities. One of the original ideas to express the concept was to present the set as coming from an alternate timeline where Magic has six colors instead of five. The sixth color (purple, by the way) made it quite far in the development process (at least, by the standards of rejected ideas) but was ultimately scrapped. The set was going to feature packaging showcasing an alternate logo style and other changes, though the cardback would have stayed the same.
* These tries to get the hell out of dodge for downtalking about the Undertaker:
* The sets introduced from 2004 onwards are generally seen as vast improvements from their predecessors with improved articulation and more varied and complex builds.
* The setting also has what are known as "Cyberzombies", which is what happens when a cybered character hits 0 Essence but is kept alive through a combination of drugs and magic. Cyberzombies are in a permanent state of their remaining flesh rotting away as they suffer constant rejection of their implants, and what happens to their minds tends to be even worse.
* The setting (and almost-subtitle; they went with "Almost Tomorrow") of the second season of
* the setting and the latter being forced to a fight against multiple opponents.
* The setting as a whole features "Shards", each of which contains 1/16th of the original godlike being Adonalsium's power. Adonalsium's power was split and sixteen regular people picked up the Shards, each with a specific Intent the Shard was supposed to accomplish (EG: Preservation, Cultivation, Honor, Autonomy). Combined, the powers were somewhat in balance, and an individual's personality persists somewhat after taking a Shard, but over time the holder becomes totally focused on fulfilling their Intent, to the extent that they are literally incapable of acting

against it. As a result the better of the shards are somewhere in
* The setting as a whole has a few examples, namely because most of the titular Exalts are split up into Castes as a result of the Exaltation (save for the Dragon-Blooded, who merely take on "Aspects"). A more mundane example is the country of Varang, however, which believes so strongly in astrology and the importance of time that a person's role in life is determined mainly by
* The setting book for the Blessed Isle says that a high-ranking Mortal Realm official is in a relationship with her Dragon-Blooded father. It's apparently taboo enough for them to keep it a secret, but not so taboo that there are any consequences for the fact that the rest of the Dynasty knows anyway.
* The setting deals with interaction of magic and technology a fair bit even outside cybertechnology. For instance, if a spell is defined as requiring a line of sight to its target, does a live camera feed suffice? Answer: Any visual which has been converted into electronic data before reaching the spellcaster's eyes does not count. A purely optical system consisting of fiber optic cables and lenses, on the other hand...
* The setting does have a (now extinct) race of Dwarves. However, they vary from the standard Tolkien depiction rather drastically. For starters, they are actually the Dwemer ("Deep Elves"), a sub-race of Mer. They were extremely technologically advanced compared to the rest of Tamriel, most notably for their hybrid
* The setting features a Sandra, a Sonya, and a Senna. (And a Suzi, but everyone calls
* The setting for the first three Volumes, the Kingdom of Vale (found in the eastern half of the central continent of Sanus) is an isolationist country that takes advantage of its natural borders to shun outside wars, with peace as its primary objective... at least on the surface, as its crafty leaders have long since realized that they cannot stay completely isolated, so they take quieter measures to get a head start on potential threats (i.e., Ozpin sending Huntsmen on stealth missions to investigate potential threats to Vale in neighboring kingdoms). In other words, they're loosely similar to the United States prior to both World Wars, with the western sea and eastern mountains for Vale replacing the Atlantic and Pacific Oceans as natural barriers, and a crafty leader like the aforementioned Ozpin subtly influencing foreign affairs serving as an analogue to first Woodrow Wilson and later FDR sending aid to the Western Allies through legal loopholes long before the Americans officially joined the related conflicts.
* The setting has a few higher-level characters, but they often come into play only at a time where the PCs already out-level them.
* The setting has a monster called a Wishing Imp, a magical statue that you CANNOT get rid of, that will explicitly try to pervert anything even remotely possible to be interpreted as a wish... It DOES classify as a curse though, the idea is that you should want to get rid of it.
* The setting has these in Scrapcode viruses, which vary in terms of being true AI or not (some are old Men of Iron

* The setting is essentially a factory for these. Ender in particular is abused and pushed to his breaking point, just like the standard tykebomb, in an attempt to create the perfect commander. Since he believes in the cause, it works, but he gets increasingly messed up as he’s forced to shoulder more and more responsibility.
* The setting is pretty lazy about its location names. There's the Northern Continent (it's to the north), the Southern Continent (it's to the south), the Western Continent (
* the setting is the only human among the half-elven, goliath, dragonborn, and

* The setting itself also appeals to this. You're essentially in Fantasy Scandinavia, in a land where fantasy Vikings and fantasy Romans are battling for control, where dragons roam, or as many fans had pointed out you're in
* The setting makes a difference between those that use the Lore of Death (more classical necromancy, communicating with the dead and one of the eight Winds of Magic) and those that use necromancy (animating the dead, a form of dark magic based on a twisted and perverted form of the Lore of Death). Necromancers and vampires use this second form of necromancy to animate armies of undead followers, while wizards from the Empire and the elven nations use the Lore of Death to, among other things, battle the resulting undead hordes.

* The setting often runs on this. The fact nothing works as it should results in a lot of deaths, often putting the next highest ranking person in charge... in a society where rank is determined by how much an insane AI trusts you, rather than actual experience or expertise. It is therefore possible for a Yellow ranker to be put in command on his first day out when his superior dies, while the entire team of seasoned, experienced Red soldiers are forced to grit their teeth and go with it.

* the setting, there's no shortage of students. In fact, Schola is usually seen as a goal in itself. After all, it provides food, shelter and, let's be honest, its education is almost as good as it gets.
* The settlement-building mechanics can easily take up hours of your time as you work to make your settlements the perfect little homesteads in the wasteland. Even more, if you take into account time spent searching for resources to use to build your settlements.
* The Settlers, the gates of Hell are closed, so everyone who was headed there is stuck in Purgatory. This kickstarts the plot, as the main characters will use this opportunity to bring you back to Earth, for the very moderate price of your eternal soul!
* The Set-Up correspond almost exactly to its 73-minute runtime, which is emphasized by shots of a clock at the beginning and end.
* The set-up here is that whenever you see a parent snapping at their child to shut up, it's best to just assume this part came first and mind your own business.

* These two, for Booking.com and Angel Soft respectively, commonly appear on certain websites that insert video ads on their pages. Even worse, if a website that plays either ad is browsed on a mobile device while you are listening to music, the ad will pause the song and show the audio of the ad only until it finishes, despite the user not being able to hear it.
* these two, in favor of eating a batch of Quaker Oatmeal to get a power boost and mop the floor with Bluto. It doesn't help that because Popeye uses brute force to deal with Bluto, it drew objections from the pacifist Quakers, which caused the ad to be pulled.
* These two really seem to love this trope. The season 2 finale has Charlie convincing Kirsten to leave her fiancée at the altar and get back together with him. Considering she was marrying the man only a couple of months after leaving Charlie, this was probably for the best.
* Theseus defeated the Minotaur with the help of Ariadne, who was in love with him. He took her back on the boat to Athens, but
* Theseus did it twice. He carried away one of the Amazons - Antiope or Hippolyte. Some versions of this story claim that the woman in question fell in love with him and came willingly. Either way, the other Amazons saw this as kidnapping and attacked Athens to get their sister back. Much later in his life, Theseus abducted Helen of Troy when she was just a little girl and left her with his mother, hoping to marry her when she came of age. She was rescued by her brothers while Theseus and his friend Pirithous were away,

* Theseus spends five years "undead", then returns to "life" within hours.
* Theseus, the King of Athens, lived a life full of adventure and was considered up there with Heracles and Achilles in terms of Greek heroes. His accomplishments include: 1) Killing the Minotaur single-handedly and liberating Athens from Crete's control, 2) Disposing of his step-uncle and his fifty sons from Athens and ending their mafia-esque control of the kingdom, 3) Uniting the region of Attica under a single kingdom with Athens as its capital, 4) Defeated the Amazons, 5) Sailed with the Argonauts, 6) Participated in the Calydonian Hunt, 7) Fought in the Centaur wars, 8) Made the roads to Athens safer by personally hunting down every single bandit he could find. So what became of this legendary warrior king and adventurer? Due to a series of bad life choices and personality flaws he lost his position as king, having been usurped by a political rival of his, banished from Athens, and dumped on an island to rot, having lost everything he had ever had. To add insult to injury how does he die? The king of the island he was on, fearing that Theseus might overthrow him,

* The Seven Crystal Balls, also contained a lead disc with symbols "resembling Aztec or Inca signs", but Hergé excised the panel that showed it and texts that mentioned it when the album version was produced, probably after learning that the Incas did not actually use lead in pre-Columbian times.
* The seven "days" of creation are actually a metaphor for seven much longer eras, and dinosaurs went extinct somewhere in that timeframe. This tends to be the approach that "theistic evolutionists" who accept evolution as a part of creation take.
* The Seven Deadly Sins, after Ban's adoptive father Zhivago peacefully passed away from old age, Ban and Jericho buried him and then Ban poured beer on the tombstone.
* The Seven Deadly Sins' anime adaptation is experiencing some delays due to needing the manga to progress further before they can adapt the next arc fully.
* The Seven Deadly Sins are considered as criminals before and after they were framed. However, a number of them are good people at heart. When a princess decides to seek them out to save her kingdom, they become this trope.
* The Seven Deadly Sins, as a contrast to King's normal child-like fairy form, his human form is a fat slob-looking man
* The Seven Deadly Sins as he can't even physically beat an old man with a bad back in unarmed combat.
* The Seven Deadly Sins asks his fellow Sins why they do not have their Sacred Treasures and is less than pleased with their responses:
* The Seven Deadly Sins, Ban is often subjected to the most brutal and otherwise lethal physical attacks such him being ripped apart to his bones broken. However, due to being immortal, these are just minor annoyances. It's the unconventional attacks though that give him cause for concern. As Guila notes, "unkillable" and "undefeatable" are two vastly different things.
* The Seven Deadly Sins, Ban never gets Jericho's name right, calling her things like "Jaleco" or "Jenko".
* The Seven Deadly Sins, but changed Guila back to normal and apologized. Guila

forgave him; she said she would keep the experience of them together as a happy memory.
* The Seven Deadly Sins can raise the ground like towers, and turn minerals into sand. Other members of the Giant Clan can also do this.
* The Seven Deadly Sins comes off as this to people who don't know beforehand that it is actually a bar carried by a giant pig.
* The Seven Deadly Sins, "Confession", has Elizabeth confessing to Diane she's in love with Meliodas and in return Diane confesses she has realized she's in love with King.
* The Seven Deadly Sins: Death is medium priced. One spell is capable of reviving a mostly-intact corpse with their soul returned twice. Unfortunately, the mental decay from the first resurrection causes the being in question to become high-strung and obediently loyal to the caster. The second resurrection leaves the being a tormented thrall, having lost most of their skill power and free will. Any further resurrections will result in a classic zombie, with some ingrained skills.
* The Seven Deadly Sins, Diane falls in love with King once she gives up on Meliodas, but it turns out she met and fell in love with King long before she fell in love with Meliodas, and he just erased her memories of their time together.
* The Seven Deadly Sins does this twice when Meliodas lied about why he is wanted by the kingdom.
* The Seven Deadly Sins: Elizabeth is the female version of this trope. Elizabeth will do anything to help innocent people, even if it could mean being arrested, beaten, or killed by it.
* The Seven Deadly Sins ending of the reality warping cat being the most egregious out of the bunch. There's even a chapter called "The End" and guess what? It's not the end.
* The Seven Deadly Sins: Escanor is one of the titular Sins and knight to the kingdom of Liones. He bears the Lion's Sin of Pride because of his own personal sin. His pride led him to a situation from which he feels he needs to atone for. He is also one of the most dangerous of the group as he grows stronger from dawn until the day progresses to noon, and then weakens until dusk. Even with his large ego, in the day form, he is a good person who cares for his comrades and genuinely pities, rather than hates, his enemies because they are just so weak and pathetic compared to him. It really isn't much of a challenge.
* The Seven Deadly Sins: Friesia has the ability to control swarms of bugs.
* The Seven Deadly Sins has a few examples, starting with Meliodas and Elizabeth. Elizabeth isn't particularly tall, but Meliodas is so short that he's sometimes mistaken for a child.
* The Seven Deadly Sins has a large mouth hole on his chest and pectorals in place of where it would be on his face.
* The Seven Deadly Sins has a literal fountain of youth that makes the drinker immortal if they drink the entire fountain (which is just a cup). This is how Ban gained his immortality.
* The Seven Deadly Sins has Meliodas steal Elizabeth's panties while she's wearing them. While demonstrating what a pervert he is, it turns out to have a practical purpose: when a bunch of duplicates of Elizabeth show up, Meliodas has them do things to try and prove who's the real one, and when he tells them to jump up, the real Elizabeth can't because she's too embarrassed about her missing panties. Meliodas gives them back afterwards.
* The Seven Deadly Sins have extremely long lifespans and tend to see time accordingly. When Diane and King lived together, they shared a meal with a peasant. By the time they got around to seeing him again, he was an old man. Neither of them noticed that so much time had passed.
* The Seven Deadly Sins, if Meliodas or Ban react to a wound in the appropriately pained way, that means shit's getting real. Regardless of how long it takes for them to register.
* The Seven Deadly Sins, in Jericho's backstory, her brother Gustaf told her to give up on her dreams of becoming a Holy Knight because she was a woman. Determined to prove him wrong, she succeeded in becoming a Holy Knight. Later, it's revealed

that Gustaf truly cared about her and only said that because he was worried she would one day be killed.
* The Seven Deadly Sins, in order to awake the Demon Clan, the remaining Ten Commandments, and reignite the holy war.
* The Seven Deadly Sins: In the Great Battle Festival arc, Meliodas and Ban spend the entirety of their first fight arguing over whether Elizabeth or Elaine is better... While defeating the bird demons relentlessly attacking them without even realizing it.
* The Seven Deadly Sins is a demon. At the end of the storyline he marries his human companion Elisabeth and has a child with her. The first known half-demon.
* The Seven Deadly Sins is concerned, she doesn't mind anywhere near as much as she should.
* The Seven Deadly Sins: Jericho first met the immortal and ageless Ban when she was a little girl, and innocently asked him to marry her. Neither of them remember this.
* The Seven Deadly Sins, King Arthur is said by several characters to have a lot of latent magical power, but he has no idea how to access it. He's repeatedly thrown himself into life or death fights in an attempt to access it, but so far, it doesn't work.
* The Seven Deadly Sins, King becomes upset when he finds out that his sister Elaine and Ban had feelings for each other. Elaine is dead, but Ban plans to find a way to bring her back so that they can be together. King protests the "be together" part.
* The Seven Deadly Sins, Meliodas doesn't mind being tied up so he won't grope Elizabeth in her sleep, comparing it to bondage.
* The Seven Deadly Sins Meliodas usually won't pass up a chance at being a pervert (though only to Elizabeth) but he is still chivalrous when protecting Elizabeth (who is too naïve to complain, though does make her discomfort known) and others.
* The Seven Deadly Sins, Merlin puts her hand over King Arthur's eyes (Arthur is 16 in this verse) when Meliodas starts groping Elizabeth in front of them.
* The Seven Deadly Sins Merlin wears a jacket that is held in place across her chest by seemingly nothing. In the first fanbook it is referenced that she does indeed keep her clothing in place with magic.
* The Seven Deadly Sins might not be Meliodas' girlfriend but she will beat the living hell out of you if you try to hurt him.
* The Seven Deadly Sins mythos, Merlin is a young looking woman that wears very revealing clothes.
* The Seven Deadly Sins, one of Meliodas' abilities, Revenge Counter, is a blast that is double the power of the amount of damage he took.
* The Seven Deadly Sins, Red Demons and Grey Demons, which had previously been depicted as among the most powerful enemies shown so far, are seen as mere expendable grunts by the rest of demonkind.
* The Seven Deadly Sins shows the Holy Knights wearing suits. It was really badass.
* The Seven Deadly Sins. Since the group split up ten years ago, Merlin has barely appeared outside flashbacks.
* The Seven Deadly Sins, tales of chivalry and epic deeds are not uncommon, so Princess Elizabeth is enthusiastic about following the Sins on their adventure to save the kingdom. (She does wish she could contribute more, though.)
* The Seven Deadly Sins, the Boar Hat can be seen as this from a different perspective since the Seven Deadly Sins are seen as criminals within the setting of the manga.
* The Seven Deadly Sins: The demon Derrière looks like a human woman who wears nothing except wisps of dark energy that cover her privates. She can punch with the force of meteor strikes.
* The Seven Deadly Sins. The girl found the amnesiac boy collapsed near a river. She then took care of him until he got his memory back and they fell in love.
* The Seven Deadly Sins: There are wanted posters of each of the Seven Deadly Sins, but they look nothing like them. Their leader Meliodas casually displays the

posters in his own bar and nobody recognizes them.
* The Seven Deadly Sins, the Sins look terrifying and have a (not entirely unjustified) bad reputation, so it's usually the human Elizabeth's job to ask people questions and explain the Sins' quest.
* The Seven Deadly Sins, though it was adopted by choreographer George Balanchine.
* The Seven Deadly Sins to fool one of their dumber opponents, Hauser.
* The Seven Deadly Sins. Various characters within the series possess such incredible strength that massive amounts of destruction is quite common.
* The Seven Deadly Sins was thrown completely off course by the mythic equivalent of a chance meeting and a teenage hookup.
* The Seven Deadly Sins when she was a child and he was an adult and ruler...).
* The Seven Deadly Sins. When the other guards find her, she orders them to mobilize to find the prisoner as well as get her a new outfit. The guards spend several seconds blushing and staring at her before she gets pissed and yells at them to get moving.
* The Seven Deadly Sins where the main group, Seven Deadly Sins were framed for killing the Great Holy Knight and Gilthunder's father, Zaratras, and trying to overthrow the kingdom. It's not yet known who framed them but it's either a Holy Knight or a traitor amongst the Sins.
* The Seven Deadly Sins with as an adult) ends up accidentally turning him back by giving him an innocent kiss on the forehead. Sadly, since they had no idea that would happen, and Griamore ended up naked after tearing through his child sized clothes, it leads to a misunderstanding and Guila beating him up.
* "The Seven Doves"", the sons turned to birds are rescued by their sister, turned back into human form.
* The Seven Dwarves attitude. He even lead the charge at the climax of the film when the Evil Queen disguised as a hag poisoned Snow White.

* The Seven Ghosts frequently wear these as well. Of course it is obvious they are being mysterious, but they seem more concerned with avoiding positive identification.
* The Seven Goodbyes arc is kicked off by Itsuki slapping Nino, when the latter refuses to take the practice exams that Fuutarou wrote for them (all by hand, no less). Itsuki demands that Nino apologizes to Fuutarou, but Nino instead slaps Itsuki too and both of them end up storming off of the house.

* The Seven Habits of Highly Effective Pirates. This includes such gems as:
* The Seven have this dynamic once Queen Maeve gets joined by Starlight. However, in Season 2 it's subverted after they get Stormfront, a third female member.
* The seven historic women's colleges of the United States (Barnard, Bryn Mawr, Mount Holyoke, Radcliffe, Smith, Vassar, and Wellesley).
* The seven home video distributors that rose above the rest of the pack before the end of 1982, when the Australasian home video scene experienced its first boom, are collectively known as the Magnificent Seven.
* The seven hundred year war is implied to be fairly cold. The kingdoms of magic operate in dimensions that are untouchable to technology, but are consumed by constant gainless infighting. The technological states spend three centuries reducing magic to scientific principles and formula, which not only gives them the upper hand but causes the kingdoms to consume themselves in fear and desolation. The novella doesn't depict either side as being heroic or righteous, but instead focuses on the misery and coldness of a world where magic is literally and figuratively dying.
* The Seven Hunters fanfiction where the main protagonists are all suddenly turned into sharpteeth. They begin to suffer from this when they are forced to leave the

valley and must either begin to feed upon their former kind or turn on one another in the resulting hunger madness.
* The Seven Jerk Dragons serve as this for the PMD-R arc. While they don't make a direct appearance, their actions are directly responsible for the state of PMD-B when J-Team members visit it.
* The Seven Kingdoms is the name given to the realm that controls most of the continent of Westeros and numerous offshore islands, ruled by the King of the Andals and the First Men from the Red Keep in the city of King's Landing. Its name dates back to the time prior to the War of Conquest, during which seven independent kingdoms existed in the continent.
* The seven known burn marks on the House of Black's family tapestry fit this trope. The four males were stricken from the family tree for various reasons, the three females were all stricken from it because of whom they married (a Muggle, a Weasley and a Muggleborn, respectively).
* The Seven Lady Godivas' more obscure books, the obese Godiva sister is named Teenie.
* The seven largest oil companies in the world from 1940 to 1973. More specifically, they were part of the Consortium for Iran oil cartel. Before they were sidelined by OPEC, the seven were responsible for a rather large amount of unpleasantness in the Middle East. They are (current names): BP, Gulf Oil, Chevron, Royal Dutch Shell, Esso, Exxon-Mobil, and So Cal.
* The Seven Levels of Dirty Hockey, where the lowest is annoying the adversary (i.e. skating close to the goalie to cover him in ice) and the other six deal with fighting - with the top one being an assault that has no reason than "I am going to try to end that guy’s season". Among them is the following example, "at the risk of permanently losing my Canadian passport"...

* The Seven-Per-Cent Solution. His obsession with the master criminal Professor Moriarty (both in the book and in the Conan Doyle stories) is explained as simply a byproduct of his cocaine addiction. In truth, Professor Moriarty was his mathematics tutor.
* The Seven Per Cent Solution. It turns out that Holmes is entirely correct.
* The Seven Percent Solution it turns out that Professor Moriarty being an evil criminal mastermind is a drug induced fantasy of Sherlock Holmes's.
* The Seven Percent Solution story. In Meyer's novel, Moriarty was only a criminal mastermind in Holmes' drugged imaginings. Watson conned Holmes into following

Moriarty to Vienna, where he met Sigmund Freud, who helped cure him of his cocaine addiction. Instead of dying at Reichenbach Falls, Holmes chose to take a leave of absence, leaving Watson to write out whatever ending he wanted and have it published in the Strand.
* The Seven-Per-Cent Solution who flunked him, and much of making him the archnemesis of his mysteries were supposedly due to his drug-crazed brain.

* The Seven Ravens", seven princes are changed into ravens by their witch stepmother, and their sister chased away by the queen as well.
* The Seven Ravens," the father wishes his sons were ravens for their being so forgetful. (To add to the irony, he was mistaken about why they hadn't done as he said.)
* The Seven Ravens, the girl cuts off her own finger to use it as a key to get into where her brothers take on human form.
* The Seven Sages are important as well for a number of reasons. The motif of number seven as a powerful number goes back at least as far as Mesopotamian times (Sumerian mythology/history has a group of people, the Apkallu, literally known as the Seven Sages.) and it, that is the importance of the number seven, certainly appears in the works of the Bible as well.
* The Seven Samurai ancestors had done to the people of Japan. That of course means that he was an aristocrat who was not personally evil. Lampshaded in the same movie when one of the seven of humble birth gives an angry speech about the behavior of Samurai.
* The Seven Samurai, Katsushiro is an apprentice samurai who never killed before; during the defense of the village, he loses his killing virginity (and his sexual virginity as well shortly thereafter).
* The Seven Samurai such as when the Seven realize that the villagers are eating only scraps because of them and they decide to share their food with them.
* The Seven Samurai the traditional Grayson sword with a wakizashi as well as adding some kendo moves to his repertoire.
* The "Seven Seconds or Less" Phoenix Suns of the mid-2000s had arguably the most potent offense in NBA history, but their porous defense caused them to never reach the NBA Finals. The 2016-20 Houston Rockets, under the same head coach as the Seven Second Suns in Mike D'Antoni, suffered similar fates in the postseason with one of the most potent offenses in the league but an inability to stop anyone in turn.

are in the know beyond just the government and immediate family members.
* The seventh book makes it clear that the only way one can call themselves the "Master of Death" is to accept that they will some day die.
* The Seventh Bride is a Bluebeard retelling where each of Bluebeard's wives is given a different test and instead of just killing them when they fail, they forfeit something: one her life, but one her eyesight, another her youth, and so on. Which means that when the seventh bride arrives in the house of her new husband, his former wives are all still around — although some are more helpful than others...
* The Seventh Cavalry and General Custer, taking part in the Battle of Little Bighorn.
* The seventh century was this for the Byzantine Empire. The century started with a brutal war with the Sassanid Empire that lasted for 26 brutal years that nearly saw the Empire conquered and left it economically and demographically devastated. After six years of peace, the Rashidun Caliphate burst out of the Arabian peninsula and proceeded to utterly devastate the Empire, inflicting crushing defeat after crushing defeat on the Empire's once powerful armies, especially at Yarmouk, causing the loss of Syria, Egypt, Armenia, North Africa, and a fair share of the Medditterean islands, along with parts of Anatolia. A siege of Constantinople that was defeated in 688, (and even then, the siege was more of a loose blockade rather than a genuine investment of the city) saw the Byzantines try to go on the offensive that saw them get utterly smashed at the battle of Sebastapolis in 692. This was then followed by 20 years of civil war that nearly led to the Empire disintegrating. The line only ended when Leo III repelled a far more serious Arab siege of Constantinople in 718, and then managed to win a crushing victory at Akrinion in 740, which ensured the Empire's survival in Europe and Anatolia.
* The Seventh Continent, Australia is symbolized as the ideal place to escape to for the doomed European family. Ironically, this place is visualized as an otherworldly beach, with a mountain range on the left border and pool of water with mysterious waves (which are clearly physically impossible) in between. The falseness of this place foreshadows the fact that the parents never intended to go there.

* The Seventh Decimate. By the end of the book, he is down to a single companion, all the others having either died or turned back.
* The Seventh Doctor brought with him the Cartmel Masterplan, an attempt to infuse the character with more mystery and power after decades of Gallifrey stories had robbed him of his uniqueness. The implications the show played with were stark, casting the Doctor as a
* The Seventh Doctor freaked out prior to becoming the Eighth, but for different reasons. He regenerated because the doctor trying to save his life was actually killing him due to her ignorance of his alien physiology. The Eighth Doctor, while more stable than the Sixth, also was a rather mentally flaky incarnation, being particularly prone to amnesia and detachment from reality.
* The Seventh Doctor had a companion named Ace who was fond of incendiaries. Upon being captured, a large explosion rocked the building the villain had him in. "That sounds like my friend Ace. It has all of her subtle undertones."
* The Seventh Doctor. He specifically needs to break her faith in him in order to save the world, so he convinces her that her life means nothing to him and he only traveled with her as part of a bigger plan.
* The Seventh Doctor is goofy and bumbling in his first season (1987), then becomes increasingly serious, introspective and manipulative but ultimately still quite cheerful, well-intentioned and light-hearted (1988-1989), and in the

* The Seventh Generation of Console Video Games or whatever was being parodied on TV at the moment. This is mainly due to the success of the Wii, which was actually

designed to invoke this trope.
* The Seventh Generation was responsible for several historical calamities. When Socrates discovered Seventh Generation activity in Athens, the cult arranged for his trial and execution. When Freud discovered that several of his patients experienced childhood abuse, the Seventh Generation forced him to revise his theories. According to

* The seventh movie has a kind of halfway version. When Dobby shows up, he and Ron act like they've met before. In fact, although Dobby had previously appeared in the second film, he and Ron had never met before — in the movies, that is.
* The seventh one has PURITY preparing a new plan, which goes into motion at the climax.
* The Seventh Seal appears as a tall, pale-skinned man in black robes.
* The Seventh Seal comes to hate God as he sees the death, suffering, and human cruelty that the Black Death has caused.
* The Seventh Seal, the actor Jof sees a vision of the knight and his family doing a dance of death. His wife, Mia, turns to him and says "You with your visions and dreams."
* The Seventh Seal (which in English is "Day of wrath, day of mourning, Earth in smoldering ashes falling...").
* The Seventh Seal. You won't find anyone fitting to the trope more closely than him. His being a squire, not a knight is pretty much the only difference.

* The Seventh Sword, a chemist named Wally Smith dies and is transported to an unfamiliar world where he inhabits the body of that world's greatest swordsman. Throughout the story, his knowledge of our world and lack of knowledge of his new world both get him into and out of trouble.
* The Seventh Sword and the demigod in his boy form has to calm him down.
* the Seventh Toa, the Toa of Light, although Ekimu adopts this form only briefly and modestly rejects the title.
* The Seventh Tower. Brought up under a warrior tradition, all their great epics and stories seem to be about people dying heroic deaths on the Ice. Tal, the protagonist, at one point thinks to himself, upon finding a skeleton in a cave, that it couldn't be an Icecarl skeleton, because it is unarmed.
* The Seventh Tower, but the closest thing to it would be the Crones, who are somewhere between priestesses, shamans, and mages.
* The Seventh Tower cavernmouths look like regular caves... except for gleaming red dots. These are tonsils, and if you stray too close to the "entrance"... the jaws come out.
* The Seventh Tower: Codex of The Chosen, a sentient book that most of all resembles a tablet computer that houses the whole of Internet and has Siri installed. It can display both text and images, even something akin to comics and gifs. The downside is it can't answer unless you formulate your request as a question and some of the information can be locked away by an order.
* The Seventh Tower: Colors are a really big deal, as there's a whole society of Light-magic wielding mages who organize themselves according to the colors of the

rainbow, Red being the lowest rank and Violet the highest. On top of that, most magic in this series has to do with manipulating light, and using one's Sunstone to generate light in various colors has uses ranging from battle to music to common courtesy.
* The Seventh Tower creatures that become Spiritshadows bond by actually picking up the shadow and assimilating it.
* The Seventh Tower enjoy joking about going back and facing dangerous circumstances again. They're so deadpan about it that Tal freaks out, until Milla doubles over laughing at his expression.
* The Seventh Tower features a large, towerlike complex which is home to an entire society with a color-based caste system, based on their color-based magic system, where a more powerful color in magic equated to a higher rank in everything else. A person who was designated Green, for example could use magic, visit floors of the complex, and engage in hobbies associated with Green and all lower-ranking colors, but couldn't do anything or go anywhere more highly ranked without special dispensation. At the bottom of the stack (and on the bottom floors of the complex) were an uncolored servant caste; being made a member of their ranks was considered the ultimate punishment. It is at least more meritocratic than most caste systems since the higher levels are based at least in part on competence and promotion up them is quite common.
* The Seventh Tower featuring a caste system based on the rainbow; the more powerful a particular color in the society's magic system, the higher the rank of the corresponding caste. Everyone owned a crystal with which they could perform light-based magic; any individual could use colors and visit floors of the complex (in which the entire society lived) equal to or lesser than their own rank, but needed special dispensation to go higher in the pecking order without actually going to the trouble of earning an increase in social station. In the lowest floors was a caste of servants who weren't given a color at all, who were regarded as being not wholly dissimilar to lepers.
* The Seventh Tower have a complicated caste system based around the colors of the rainbow. The closer you get to violet, the higher your social status. The various levels of their Castle are color coded and dictate where you may live—members of a certain color generally live on their own color; travel between colors isn't forbidden, but people apparently don't do it a lot. Some people have no color and are even lower ranked than red, and are, for all intents and purposes, slaves. Magic-users can't do magic with light of a color higher than their own.
* The Seventh Tower ponders why the Chosen light attack technique, the Red Ray of Destruction, uses red, which is the second weakest light after white. She promptly finds out upon experimentation that a Purple Ray of Destruction, while exceptionally potent, refuses to dissipate on impact as the red version does, leaving her and her allies dodging around the room for some time as the attack repeatedly bounces off the walls.
* The Seventh Tower, Tal meets a being known as the Old Khamsoul, which is some kind of sentient whirlwind that is said to be an oracle: you may ask it one question, which it will answer truthfully. Tal asks several questions, each of which the Old Khamsoul says don't count because, really, if Tal thought about them a bit, he already knew the answers. Ultimately Tal decides that he will come back one day when he has found a worthy question, and the Old Khamsoul replies that it will be waiting.
* The Seventh Tower the building. Trying to fly away warps you back to the roof once you land. The only way to get out is by holding onto something that extends in from the outside, such as a rope, and following it out.
* The Seventh Tower to improve their chance of surviving until the barrier dissipates. Neither does, and they fall unconscious from oxygen deprivation, but wake up in safety.
* The Seventh Tower, to Tal's protagonist. Starting from the second book, her POV is shown and they get about equal focus.
* The Seventh Tower, when Tal accidentally seals himself and Crow into a corner by producing a shield of solid magic to protect them from a spiritshadow. Tal

accidentally makes the shield airtight and he can't dispell it. Tal considers killing Crow (and Crow is clearly considering killing Tal) but both decide it was better to to try to wait out the spell than to take the selfish way out.
* The Seventh Victim. Also, the Satanists are mostly nonviolent and prefer to use social pressure to make people commit suicide rather than just killing them (one of them even comments on the contradiction inherent in their refusal to commit violence versus their need to kill all who betray them). But the leader does claim that he worships evil and refers to himself as "evil".
* The Seventh Victim present in much of the movie, and ends with this trope.
* The Seventy Maxims of Maximally Effective Mercenaries, also encourages a policy of relentless mistrust of anything and everything.
* The Seventy Maxims of Maximally Effective Mercenaries, including such - admittedly sage - advice as "Pillage, THEN burn." and "A soft answer turneth away wrath. Once wrath is looking the other way, shoot it in the head."
* The Seventy Maxims of Maximally Effective Mercenaries is "Anything is amphibious if you can get it back out of the water."
* The seventy-something headmistress Elizabeth Carson. When Syndicate dropships and the unstoppable cyborg Assassin Deathlist invade her school, the gloves come off. Oh, she turns out to be Lady Astarte, possibly the greatest superheroine still around.
* The Seven Voyages of Cynthia", Angelica's doll, Cynthia, is lost in the sewers, she gives her a funeral, complete with a eulogy.
* The Sevenwaters Trilogy" and deals with a very evil enchantress stepmother, Lady Oonagh, who turns her six stepsons into swans and only their younger sister can reverse the spell.
* The Sevenwaters Trilogy features Fair Folk based on the ancient legends, and far from cuddly.
* The Sevenwaters Trilogy: The first volume draws on an old fairy tale for its plot.
* The Sevenwaters Trilogy, the heroine is raped by bandits. Her six brothers are under an enchantment that allows them to wake up just one day out of the year. Unfortunately for the bandits, this happens to be that one day...
* The Seven Western Plots: Westerns often revolve around stories involving railroads, ranches, empire building, cavalry and Indians, revenge, outlaws and lawmen.
* The Seven Wonders of the Ducks (1982), Scrooge has managed to locate the titular chariot, which reportedly had mystical qualities, and assigns its transportation to Donald. Donald decides to remove and throw away some heavy and seemingly useless elements of its equipment, to make the chariot lighter and easier to transport. Much later the Ducks discover that the mystical qualities were solely due to the removed parts, which were by then destroyed. In both cases, the story ends with this trope.
* The Seven Year Itch character says she is a native of Denver, Colorado - the only really specific thing we learn about her background.
* The Seven Year Itch photoshoot: we are told that police had to show up at the beach to keep the crowd under control, and until we actually see the photo, the way the characters refer to it leads us to believe that The Girl had actually been posing nude.
* The Several Journeys of Reemus: Chapter two, Reemus is shot from offscreen by a dart so loaded with sedative that it actually sprays a considerable amount on Liam when it hits. Liam has just enough time to identify the sedative before he, too, is shot and goes under. Later on, they have to collect a sample of it (it's a type of honey made by a particular bee, which is so potent that even a small amount contains enough sugar to induce a temporary diabetic coma) to exploit its faux-sedative properties.
* The Several Journeys of Reemus, tends to deal with these guys, which makes the fact that he's not quite as famous or well-respected as his dragonslayer brother just a bit nonsensical, since Reemus can and sometimes does take out entire colonies of giant beasties in his line of work, while his brother usually only gets

one at a time.
* The several months leading up to Barbarossa. Everyone, from the Western Allies, to the Soviet spies within German command, to his own super spy man in Japan, Richard Sorge, was telling him that the German assault would begin, even providing the precise day. The reports were either not believed, were filed away within the massive Soviet bureaucracy doing nothing, or simply were not acted upon. To add insult to injury, when the Germans and their Eastern European allies DID cross the frontier, Stalin was asleep and it took HOURS before anyone woke him out of sheer, crazed fear at

* The Severing Crime Edge: In Chapter 6/Episode 3, Iwai urinates herself in fear after an author of a sledgehammer killing good breaks in her mansion and tries to kill her.
* The Severing Crime Edge is among the youngest Authors and is very skilled with her killing good. She even manages to curb-stop Kiri twice.
* The Severing Crime Edge: Iwai's name means celebration. However, as she points out, she has nothing to celebrate due to her curse and the various dangers in her life.
* The Severing Crime Edge, Iwai triggers this response in just about every girl in Kiri's class.
* The Severing Crime Edge: Kiri's scissors can sever body parts, something ordinary scissors obviously can't do.
* The Severing Crime Edge knew Iwai for approximately 48 hours at the point he decides to defend her from the serial killers out to murder her. No, not kidnap and sacrifice her, but kill her on the spot. Whoever does manage to gets the power to break the laws of nature, and presumably have one of their wishes granted. Admittedly, it doesn't take much to want to prevent a young girl from being brutally murdered.
* The Severing Crime Edge: Yamane killed her and Houko's parents due to being influenced by the spirit of her killing goods' original author. Houko decided to take the blame for it so Yamane wouldn't be burdened with guilt.

* These were based off of a series of ads used in the US with similar douchey characters. What's weird is that the marketing is exclusive to men, but Coke Zero is Coca-Cola Classic with artificial sweetener, something you think both male and female consumers would be equally interested in (for the unaware, Diet Coke has a totally different taste and formula compared to Classic— namely, it's New Coke).

* These were the first games in the series to feature a real-time clock, and with them, they introduced the idea that certain Pokémon are nocturnal and certain Pokémon are diurnal. This affects the time of day you can find them. You can also use the attack "Headbutt" in the field to shake trees and find Pokémon hidden within them. If you attack trees at night, you can find bird Pokémon normally only found in the daytime... but already Asleep.

* These Words Are True and Faithful, a running joke among Ernie's friends is that Ernie declares every new object of his infatuation as the one with whom he is meant to be.
* These Words Are True and Faithful a secondary character accuses Sam and Ernie of being "not really gay." Sam responds by sarcastically apologizing for "not following the one true way."
* These Words Are True and Faithful can be read as an allegory of enlightenment versus romanticism. Team Enlightenment includes Sam (major character) and Rob, Nathan, Tracy, and Jack (secondary characters), while Team Romanticism includes Ernie (major character) and Cassilda, Danny, Saul, and the pastor (secondary characters). Debbie is initially a fence-sitter but eventually joins Team Enlightenment. The last chapter hints at a reconciliation of the two.
* These Words Are True and Faithful Ernie is concerned that Danny will become this.
* These Words Are True and Faithful Ernie's friends and acquaintances see kink as completely unremarkable. The same is not true of Sam's more prudish friends at the LGBT Community Center.
* These Words Are True and Faithful, gets himself into trouble and ultimately gets his comeuppance.
* These Words Are True and Faithful has participated in the gay male BDSM community, and his religious background (although he now identifies as an atheist) is a mix of Catholic and independent fundamental Baptist. The novel draws heavily on both of these aspects of his life.
* These Words Are True and Faithful, in one passage, Ernie cannot even masturbate successfully.
* These Words Are True and Faithful refers to the latter as an "old-people gay bar," much to Ernie's annoyance. Two other gay bars are mentioned: the Windermere and the Esplanade, known for campy queens and twinks, respectively.
* These Words Are True and Faithful Sam says that Debbie converted to Saul's denomination to marry him, although neither believes 100% in the denomination's teachings.
* These Words Are True and Faithful The passage describing the faith-healing ceremony was based on a dream. The dialog in the "Pastor Mandeville is for sale to the highest bidder" passage came verbatim from a dream.
* These Words Are True and Faithful this is Ernie's view for most of the book.
* The Sex Mission features a future society consisting entirely of parthenogenically reproducing women for whom men ("phallocrats") are only a bad memory (at least according to the ultra-feminist propaganda of the Sisters in charge). Two male time-travelers remind some of the women that not everyone with external genitalia was a monster.
* The Sex Pistols often confused Johnny Rotten with Sid Vicious and vice versa.
* The Sex Pistols: The band (minus Johnny Rotten, who had already left) visited Brazil in 1978 to record a single, "Nobody Is Innocent", with fugitive British train robber Ronnie Biggs who lived there. The video material ended up in "The Great Rock 'n' Roll Swindle" (1979), where a man in a Nazi uniform can be seen in

various scenes. According to the band it's supposed to be Martin Bormann (though looking nothing like him it all.)
* The Sex Pistols, which basically says that there is no future if you try to use a Nostalgia Filter to solve your problems.
* The Sextuplets deserve a mention, since they defined and established the 'Children with Wacky Adventures' formula. Notable characters that were based/inspired by them include Nobita from
* The sexually transmitted disease AIDS became an epidemic. The first two cases of patients dying from AIDS had taken place in 1959, but there are only a handful of known cases dating to the 1960s and 1970s. At least 121 AIDS-related deaths took place between 1980 and 1981. By the end of the 1980s, the disease had spread worldwide and there were over a million known patients. And in the U.S., the initial stigma of AIDS as a "gay disease" contributed to unfair ostracization of its victims and LGBT people in general.

There's a large number of ghosts where Tequila is or would be, such as the music rooms and theater. Moreover, one ghost rummages through Willow's room for naughty material and then Willow has to tell him off for trying to feel up Tequila.
* The Sexy Brutale Aurum Runes is a goldsmith, and "aurum" is Latin for "gold."
* The Sexy Brutale He needs to save the guests one by one to find out just what is causing the loop and stop it. Lafcadio can't intervene directly with the murders, however, because none of the staff or guests can see him, and he can't interact with the guests until he saves them. Even then, time resets immediately afterwards and the loop continues without change to the events.
* The Sexy Brutale is thoroughly evil, but he wears a fancy, shiny mask, red gloves, and an impeccably fancy white suit.
* The Sexy Brutale marks Lafcadio's white mask like this. In this instance, it's meant as a protection against the titular mansion's specific "defense mechanisms".
* The Sexy Brutale's backstory, a casino guard caught Trinity cheating at cards. That was how she met Clay, the guy she would fall in love with and marry.
* The Sexy Brutale, this is the ultimate fate of one of the guests. Just like all the other guests' deaths, it's your job to figure out how to prevent it.
* The Sexy Brutale, Trinity does this twice at the start of the afternoon, which is appropriate since she was trying to play the roulette wheel. First, she asks the staff member "Are you going to drop it in or are you going to fondle that ball all day?" After he drops it and the ball rolls away, she tells Clay "Someone really dropped the ball on that one."

* The SGC (Stargate Command) is a classified project whose purpose is to "perform reconnaissance, determine threats, and if possible, make peaceful contact" with the peoples of the planets that have just become available through the Stargate. While

operated by the U.S. Defense Department (mostly Air Force), it has a very wide purview and is essentially a scientific, diplomatic, and military organization all at once. It answers directly to the President of the United States and the Joint Chiefs of Staff, at least for the first seven seasons, after which it's integrated into the newly formed...
* The SGC was unusual among fictional spacefaring organizations in that they took extensive measures to avoid letting any of these dangerous discoveries come back with them. Of course, something new invariably happened that their defenses were useless against.
* The Shackleton Arctic expedition (1914-17) saw a young, unqualified friend of one of the crew stow away. He ultimately proved his worth, hanging on a lot better than several of the trained sailors; he survived along with the rest, although he lost all of his toes to frostbite.

* The Shadow. A museum receives a silver sarcophagus from a mysterious source, with an inscription on it saying it's the coffin of Genghis Khan. When the security guard is left alone with it the coffin starts to shake around and eventually opens up to reveal a man in the dress of a Mongol warrior, who telepathically forces the security guard to shoot himself. However, it turns out it's not actually Genghis Khan, but a modern-day descendant named Shiwan.

* The Shadow, a show about a man with the power to read minds and become invisible, who uses those powers to fight crime. Rather than using pseudo-mystical abilities and hypnosis, Jim Brandon is a biochemist who uses a machine (the Telepathic Indicator) to read minds and a Special Diffusion Capsule to bend light around him to become invisible. His supporting cast of Fern Collier and Inspector White are more or less exact copies of Margo Lane and Commissioner Weston. It even has its own awkward version of the Shadow's "The weed of crime bears bitter fruit" motto: "The road to crime ends in a trap that Justice sets! Crime does not pay!"

* The Shadow: Burbank is the most mysterious of The Shadow's agents. Since he is quite skilled at electronics, wire tapping and tracking information, his chief duty is central communications for The Shadow and his network of agents and gathering needed facts. Some may argue that he is the most vital person of The Shadow's organization, as he is the only agent able to report directly to The Shadow when he is in his private sanctum. This is done through a special AirWire radio system.

* The Shadow Campaigns in the beginning of the first book also helps, as NCOs get private quarters; previously she had purchased her own tent out of pocket to avoid sharing quarters.) Lucky for her, when her CO eventually does find out, he decides to keep up the masquerade, as she's far too competent to let go.
* The Shadow Campaigns, Janus quotes his universe's equivalent of the Art of War, in which it states that the perfect battle is one where the winner is so obvious in advance that there's no reason to fight it. In the following book, it gets painfully averted when he sets a battle of this nature up, and the fanatics in the opposing army attack anyway and get slaughtered pointlessly. He then bitterly notes that the book didn't mention that such a perfect battle is depending on both sides recognizing and acknowledging how one sided the battle is before fighting it.
* The Shadow Campaigns (less than two years in-story), Winter Ihernglass has gone from Ranker (common trooper) to Division General (equivalent to an RL Brigadier) through a combination of luck, skill, and having the above be noticed by the greatest general of the age, despite only being in her early twenties. Despite the extremely rapid promotions, she's only lost one battle, which was against the greatest general of the previous generation.
* The Shadow Campaigns. Marcus notes that his most frightening quality is that he can be perfectly affable one second and then turn absolutely furious without warning, and you can never know what will set him off.

* The Shadow Child aka Disbelief summation by stating that even he wishes sometimes to believe.
* The Shadow Children by Margaret Haddix is a series about a world where families can only have 2 children (the main character is, of course, a secret third child). Rich people are allowed to cheat, and the Population Police are utterly corrupt.

* The Shadow during Vengeance mode, and at the start of Shadow Multiball.
* The Shadowed One keeps a Toa in a stasis tube as a trophy in his base, similar to Jabba keeping Han Solo in his palace.
* The shadow elves of the Mystara setting have their own variant of this trope: edible balls of compressed fungus that are lightweight, don't spoil easily, and can sustain life if just one is eaten per day. More realistic than pills, as they're large enough to contain a day's worth of calories.
* The shadow elves, when they finally found their way to the surface, found themselves in the midst of an uninhabitable wasteland (the Broken Lands). They concluded that the whole surface was like this, so returned to their underground realm, where they didn't learn of their mistake for centuries.
* The Shadowfell in 5th Edition can also become one of these. As the Shadowfell is a reflection of the darker aspects of the material planes it connects to, acts of terrible evil can cause dark powers to surge and grow in the Shadowfell. This can end up creating areas known as "dread domains", which are their own planes of existence of tremendous evil energy which grant power to the mortal who created it. Dangerous creatures from the Shadowfell will often seize the evil person who created the dread domain and trap them there to feed on their powers, and good deities can banish these same dark lords to the dread domain to imprison them. It is usually very difficult to escape from these places, as frequently the only way to get free from a dread domain is to find redemption.
* The Shadowfell: Realm of the Dead, a dark and decaying mirror of the World, birthplace of the undead and first point of departure for the souls of the dead.
* The Shadow, film and novelization, the villain is lobotomized in such a way that all he has lost is his psychic powers.

* The Shadow, gangsters set up a fake riveting crew on a skyscraper under construction to cover up the sound of machine guns being fired at street level.
* The Shadow had it particularly bad. One particular episode (the Laughing Corpse) had a man start to answer the Shadow's question about the name and location of an ex-partner of his who had threatened to kill him, only to get distracted by a small box. It then happened a second time, once he realized he'd been poisoned by opening the box, by going on and on about how "I must tell you his name before he is able to complete his evil mission of revenge! His name is—" and that was it.
* The Shadow Hero of the protagonist, the superhero the Green Turtle, denounces Chinese people in general in a moment of frustration, in a racially abusive manner. The Turtle is furious and reveals that he is Chinese-American himself, and Lawful is ashamed and sincerely apologises.
* The Shadow Hero, the Green Turtle's patron deity, the Turtle, one of the ancient spirit animals of China, takes over his shadow to communicate with him.
* The Shadow: His long black greatcoat is so badass it deflects bullets.
* The shadowhound is an extremely stealthy creature as tall as a man, and found worldwide. It tends to appear alongside other, dangerous creatures when these attack people, and there are conflicting reports as to whether shadowhounds are hostile monsters that gather other creatures to attack humans or benevolent protectors trying to warn humans of imminent threats.
* The Shadow Hunter can create immobile Serpent Wards that spit at nearby enemies. Troll Witch Doctors can place Sentry and Healing Wars, which monitor an area or heal units around them respectively.
* The Shadowhunter Chronicles are often warned not to get involved with fairies.
* The Shadowhunter Chronicles has the Uprising, a rebellion instigated by a clique

of Shadowhunter supremacists called the Circle, who wanted to topple the Clave and install a government that persecutes Downworlders. This forms the backstory of many characters; Clary's father, Valentine, was the Circle's leader, while her mother, Jocelyn, plus the Lightwoods, the Herondales, and the Waylands were senior members. Luke was also a member, until he was expelled for turning into a werewolf, and didn't participate in the Uprising. The failure of the rebellion is the reason why Clary, Jocelyn, and the Lightwoods all live in New York, and why Jace was raised by Valentine instead of his parents, who both died during the rebellion.
* The Shadowhunter Chronicles: Lilith, the Queen of Demons, was originally a human, but became a Greater Demon upon her expulsion from Eden. It should be noted that Lilith is neither the original nor the strongest demon; she is not counted among the nine Princes of Hell, which comprise eight fallen angels and one Biblical monster (Leviathan). Nevertheless, because the majority of demons who currently exist are Lilith's children, the half-demonic warlocks are fond of calling themselves "Children of Lilith" (Magnus Bane in particular is a fan, despite being fathered by a Prince of Hell).
* The Shadowhunter Chronicles shows Raphael Santiago. At fifteen, he's technically no longer a kid, but a vampiric teenager. But other people who are significantly younger than him but look older perceive him as a teenager, and not as an adult.
* The Shadowhunter Chronicles, such as horns or claws. Warlocks often get hired by Shadowhunters or other Downworlders to use their magic. They are also immortal (they usually stop ageing in their early twenties), but can not get children by natural means.
* The Shadowhunter Chronicles vampires, werewolves, fairies, and witches for what they are, let alone defend herself against them. Not to mention demons. Without magic or superhuman physical strength, one is completely inferior in this world. However, mundanes can choose to become vampires, werewolves, or shadowhunters at any time.
* The Shadowhunter Chronicles warlocks and witches are the children of demons and humans. However, it is implied that most or almost all warlocks are born between demonic fathers and human mothers. The warlock Magnus Bane even once says that it is a rare exception when a warlock has a human father and a demonic mother.
* The Shadowhunter Chronicles, which has a pretty big focus on their relationship.
* The Shadowhunter Codex, the Clave used to legalize marriage between Shadowhunters and mundanes (since Shadowhunter genes are dominant, the children will turn up Shadowhunter anyway). As the Shadowhunters secluded themselves, however, the rule was tightened until it is no longer possible for a member of such pairing to stay true to his roots. Either the mundane undergoes Ascension (Sophie), the Shadowhunter strips his Marks (Edmund), or they break up.
* The Shadowhunters received their special abilities from drinking the blood of the angel Raziel given to them in the Mortal Cup. New Shadowhunters can also be created this way, although the process is risky.
* The Shadow. In a tale written by Alfred Bester, the Shadow encountered a caveman who gained immunity to aging from a meteor. This caveman decided to aid the Axis in winning World War II by sabotaging the US war effort. He sought the position of War Labor Chief of the country, but since he did not have a birth certificate, he stole Moe Shrevnitz's birth certificate, bringing him in conflict with the Shadow (the caveman had earlier attempted to buy some business interests from Lamont Cranston, and displayed unusual personal knowledge about Cranston).
* The Shadow: In at least one of the pulp novels, the police arrest a stage magician and cuff him with his hands in front. And yes, they know the guy's a professional stage magician. He doesn't stay cuffed for very long.
* The Shadow is able to defeat a professional wrestler who has him in a chokehold. "He was a good wrestler...but he didn't know one little hold I learned in the Orient."
* The Shadow is another example of a hero using the evil laugh — in his case, as psychological warfare. After all, maniac laughter from nowhere is unnerving, and criminals are a superstitious and cowardly lot...
* The Shadow is up against one of his deadliest opponents: a shell-shocked WWI

sniper whose condemned gangster brother has set him loose on the judge, jury, and governor.
* The Shadow Knows: An invisible character casts a shadow, or a shapeshifter's shadow looks like their true form.
* The Shadow Knows: A person's shadow takes the form of their true self.
* The Shadow Knows hinting that a character has a dark secret or shapeshifting prowess.
* the Shadowlands. innocent on the surface, but inevitably draws its practitioners towards nasty extremes.)
* The Shadow Line, but his plans are eventually revealed to be driving almost every aspect of the series's plot, even in the storylines he's apparently uninvolved with.
* The Shadow Line does this, as it has many seemingly disparate plot points that only fall clearly into place in the final two episodes.
* The Shadow Line has Joseph Bede, who is participating in one last drug deal to raise money for his wife's Alzheimer's treatment.
* The Shadow Line has Ross McGovern, a journalist that wants to write a story exposing police corruption and one of the show's few genuinely heroic characters.
* The Shadow Line. His disappearance is a major plot point in the first episode and is mentioned frequently after that, so it's no surprise when he finally appears in person in episode 5.
* The Shadow Line is heavily inspired by Film Noir, borrowing many plot elements and a very dark and cynical tone.
* The Shadow Line is the siren drone of doom, but high pitched instead of low. It's singularly disturbing.
* The Shadow Line not the kind of person you can cross though. Not if you want to live.
* The Shadow mean, exactly? The full line goes "Who knows what evil lurks in the hearts of men? The Shadow knows!". The Shadow is a psychic and fights crime by implanting the suggestion in a person's head that he's invisible, so he can eavesdrop a lot.

* The Shadow of the Lion after Benito is accused of murdering a bishop. It's a setup — Benito was only accused after Marco was proven to have a solid alibi, and the authorities realize that the accuser didn't know the two (half-)brothers don't look related. Sure enough, he can't pick Benito out as the person he "saw" lurking outside the bishop's home.
* The Shadow of the Lion has a position called the "twin Camellias", which involves a footstool and a number of cushions, and "could very well give a man a permanent back injury".

* The Shadow Out of Time" includes humans characters from the years 2518, 5000 and even 16,000 CE. So even though Lovecraft's stories make it seem like humanity's in constant peril from Cthulhu rising or the Wilbur Whateleys of the world unleashing the Old Ones to murder us all, humanity clearly survives for quite a while in an (at least partially) un-murdered state.

* The Shadow Over Innsmouth from horror so it's not like he was making much effort.
* The Shadow Over Innsmouth is a somewhat loose adaptation of this scenario.
* The Shadow Over Innsmouth, is generally seen as being about 'the dangers of inter-racial relationships' along with his general fondness for mind-bending horrors and terrors. However one can also taken as a point about racism being a two-way street, as the people of Innsmouth are just as hostile, if not more so, than the visitors. Being written by Lovecraft, this was very likely unintentional.
* The Shadow Over Innsmouth) locked away in an asylum. It's also noted that a few of the Innsmouth people have gotten so deformed that they don't go outside anymore. In this case, it's not that most of the locals would be freaked out by them, since most of them are in on the weird cult, but there's the occasional person around who

isn't.
* The Shadow Over Innsmouth: Lovecraft doesn't provide much detail into the "breeding" of the Hybrids. But considering Innsmouth is a port, its only major industry was shipping, and it was a sea captain who made the alliance with the Deep Ones, it's implied that sailors out at sea with nobody else nearby but the Deep Ones could be the main contributors to the Hybrid gene pool.
* The Shadow Over Innsmouth married a Deep One woman. So did his human son Onesiphorus from the first wife.
* The Shadow Over Innsmouth" opens in Newburyport itself, after which the protagonist travels south to Innsmouth. The physical description and lack of Plum Island implies that Innsmouth is south of Ipswich, and not really large enough to be any of the real towns.
* The Shadow Over Innsmouth's hero is fully in control of his own faculties, and making a deliberate choice.
* The Shadow Over Innsmouth: There's a general degradation of the town and houses crumble in their own dirt after decades of neglect, but the reason behind this is the lack of motivation for the monstrous inhabitants to make the smallest repair since they are mutating into deep-water creatures and they will leave the town anyway.
* The Shadow Over Innsmouth: the very first page of the story reveals that U.S. government raided the town of Innsmouth, arrested most of the citizens, shot any armed cult members who resisted, dismantled the cult ruling the town, seized or dynamited several of their buildings, and bombarded the Deep Ones' undersea city with torpedoes to drive them off.
* The Shadow Over Innsmouth This ending is so uncharacteristic to what we expect from Lovecraft that a lot of readers don't even process it, interpreting it as yet another Lovecraft protagonist losing his mind - even though it's written in a completely different style from the almost stream-of-consciousness technique he would typically adopt for that type of ending.
* The Shadow Over Innsmouth where the Deep Ones and human hybrids are awaiting the day that Dagon (implied to be Cthulhu or that Dagon serves him) will rise and destroy the world.
* The Shadow Over Innsmouth. Zadok Allen mentioned that he had taken the First and Second Oath, but wouldn't take the Third even if they killed him. Considering that he had already lived decades like that, it doesn't seem that the Third Oath was compulsory.
* The Shadow Pianist, Lewis Baroketch, who always appears as a shadow (wearing a hat);
* The Shadow pinball machine, where you could make a pinball shot to defeat attacking Mongols, or just shoot them. This added a tactical dimension, as shooting the Mongol awarded far fewer points, but certain features were not accessible during the Mongol Attack, meaning that skipping it could avoid you being frozen out of the feature you actually wanted.
* The Shadow, plunge the ball, then shoot the left ramp for an award determined by the diverters.
* The Shadow Priests buff them up with magic, and are often found guarding the portals you need to use to travel in pairs. Have fun.
* The Shadow regularly included storylines intended to be as shocking and outlandish to the listening audience as possible; storylines such as... a town being afflicted with drug addicts (opium, from which the street drug known as heroin would later be derived), a politician being snagged in a bribery scandal (decades before Abscam), identity theft (with deceased people's passports rather than Social Security numbers) and counterfeit money plaguing a city. There was also a story about a shell-shocked veteran taking to shooting people with a silenced sniper rifle from high buildings, anticipating several all-too-real incidents of crime and terrorism by decades.
* The Shadow reprise their roles from the movie. Tim Kitzrow voices The Shadow, as Alec Baldwin wasn't available.
* The Shadows and their servants the Drakh pulled it in the distant past, the

Shadows having abandoned their original homeworld and colonized Z'ha'dum to honor the Speakers (the most ancient of the First Ones, who evolved on Z'ha'dum) and the Drakh moving on nomadic fleets to better serve their masters.
* The Shadows and the Vorlons were convinced to leave the galaxy after being told off by Sheridan, Delenn, and Lorien in
* the Shadows and Vorlons attempt to break the coalition against them by simply destroying the protagonists' ship: "They will not follow you if you are dead." Two other ships take incoming missiles for them, with the rest ready to follow suit.
* The Shadows and Vorlons from the same series believe that their views of society create "perfection" and are well worth
* The Shadows began attacking younger species openly, and no one was willing to join Sheridan's proposed alliance against them because of how scary they were. Sheridan begged Kosh for direct assistance, which he eventually provided, but only with extreme reluctance. It turns out there was a rule in place that the Shadows and Vorlons wouldn't attack each other directly - so in revenge for the Vorlon attack on their ships, the Shadows assault and kill Kosh in retaliation. Naturally, Kosh never bothered to explain any of this to Sheridan.
* the Shadows built a base on their homeworld during their latest war with the Vorlon. The Narn fought back and managed to destroy their base... And lost all their telepaths in the Shadows' retaliation.
* The Shadows employ this, somewhat, when their ships "screaming" as they pass, which adds to their generally terrifying appearance.
* the Shadows had already done the deed for that and many other previous failures.
* The Shadows have a weapon that can destabilise a jump point as a ship is emerging. We are thankfully spared seeing what this does to the crews of the emerging ships, but it's definitely fatal.
* The Shadows have their own variant: thanks to their superior technology, they can easily detect ships in normal space while staying in hyperspace, allowing them to sneak on an unsuspecting target from hyperspace, phase in (as opposed to opening a jump point) and annihilate the victim with their superior firepower. As the Younger Races cannot detect ships in hyperspace from normal space, it's as effective as actual stealth.

* The Shadows of Undrentide expansion features Xanos and Dorna as your companions. Xanos is an intellectual Half-Orc Sorcerer, whereas Dorna is a Dwarven Thief, and she has little interest in Dwarven culture.
* The Shadow, some mooks have fitted an old man with cement shoes and are about to drop him into a river when the title character shows up and picks them off unseen, taunting them with wisecracks and his signature laugh as he goes.
* The Shadows Over Innsmouth to allow him to see wavelengths of visible light.
* The Shadowspawn, all living vampires are technically these, since the racially pure strain has been extinct for thousands of years. The current population has been eugenically bred from human hybrids, and even the purest still have a lot of human genetic material in them; older vampires are perhaps a quarter to half-vampire, while the purebloods are there by 75-80 % or so.
* The Shadowspawn is a centuries-old occult secret society of wealthy aristocrats

devoted to attaining supernatural power and world domination. At first they were just a vaguely Masonic conspiracy, but around the turn of the 19th century they received a major upgrade by turning into powerful vampires. They went on to help found the Council of Shadows, the Shadowspawn's globe-spanning ruling body, of which they are still a powerful faction even a couple of centuries later.
* The Shadowspawn, reducing life back to the simpler and better model of the (early) 19th century or thereabouts.
* The Shadowspawn to merely kill enough to lower numbers, while they then come in with the antidote, letting them be welcomed as saviors and handed open control on a silver platter.
* The Shadowspawn trilogy pays homage to Williamson with a similar witch-shapeshifter-vampire species, the Shadowspawn, updating the scientific rationale for their powers. As in Williamson, the genes are scattered throughout the population, ranging from slight traces to terrifyingly powerful concentrations. People with a small degree of Shadowspawn heritage might have psychic powers. Those who have a high percentage but not enough to be true Shadowspawn tend to turn into bloodthirsty serial killers.
* The Shadow Speaker, which takes place in 2070, strange magical events have started occurring on Earth following a nuclear and biological war, and people have begun to be born with strange powers.
* The Shadows' planet killer fires 13,000 missiles at its intended target. They burrow into the planet and then detonate underneath the crust
* The Shadows regard themselves as agents of evolution and the genocidal wars they wage on the galaxy as an effective form of natural selection and development drive for the Younger Races. The problem is that there never was a need for such accelerated development, and Shadows only enforce it to prove that it works.
* The Shadow, stalking ships and slaughtering their occupants for the thrill of it.
* The Shadows We Cast. Tells the tale of an adventuring party known as "The Dream Team", named such because they originally met one another in a shared dream.
* The Shadow, thanks to the large amount of custom dialog from the various characters.
* The Shadow that transports people, things and beings too monstrous to fall under the people category from undefined fantasy worlds to Earth in the
* The Shadow. The first time is when Commissioner Wainwright is under Lamont's hypnosis:
* The Shadow the Mongol warrior he's interrogating, but the Mongol throws himself off "to serve his Khan." Cut to Moe, the cab driver, reading a book called "Improving Your Psychic Abilities." He says, "I sense someone's coming" just as the Mongol lands right beside his cab!
* The Shadow), the public fell in love with the character and demanded to know more about him. Whereupon Street and Smith hired Walter B. Gibson to begin writing novel-length stories of The Shadow in a new magazine devoted to him. And the rest is history.
* The Shadow, the second time Lamont Cranston encounters Shiwan Khan, the villain is eating dinner at a small restaurant. He invites Lamont Cranston to eat, having already ordered for him. Inverted during their first meeting where Lamont is the host and offers Khan a drink while discussing murder and mayhem.
* The Shadow. The title crime-fighter deliberately terrified criminals before he (or someone else) caused their deaths.
* The Shadow: The titular character is a psychic vigilante who has the ability to disguise himself and make himself invisible and has a group of agents working for him. He’s also certainly not above killing either.
* The Shadow. The titular vigilante uses a pair of .45 semiautomatics, whereas most of the crooks are described as using revolvers.
* The Shadow the villain is a descendant of Genghis Khan. He says that his ancestor conquered half the world and he's here to "finish the job".
* The Shadow to comply with Shiwan's orders ... only to burst out laughing when told to remove his restraints. Two consecutive shifts in camera angle reveal that 1) Khan has undergone cranial surgery to extract a mirror shard from his brain,

destroying his mental powers in the process, and 2) the doctor is one of the Shadow's many contacts, who only "obeyed" the villain's initial commands to troll the guy.
* The Shadow) tone down racial stereotyping and generally stop using "ethnic" villains altogether, though a few memorable baddies, such as Sihwan Khan and Rodil Mocquino would slip through because they were just too good to go to waste.
* The Shadow twelve years beforehand and arranging to be miraculously "found" when he needed a new primary identity.
* The Shadow Wars in the delusion that she had the Mark Pox and would die horribly anyway — setting in motion the events leading to the Curse.
* The Shadow Wars — which is difficult because she crafted the Alicorn form for equine hyperdominance.
* The Shadow. When audiences proved more interested in the Shadow than the stories, writer Walter Gibson was commissioned to write about him. A full radio show started shortly thereafter, and a legend was born.
* The Shadow when Shiwan Khan breaks into the Shadow's hideout to ask him to join him in his plans of domination. Not public, but nonviolent.
* The Shadow, which is set in the 20s/30s: A young man calls out "Extra! Extra! Read all about it! Madman threatens to blow the city sky-high!"
* The Shadow who is a latent psychic herself and who catches a glimpse of The Shadow when she meets Cranston.
* The Shadow, who shilled for Goodyear Tires during a summer broadcast season in 1938.
* The Shadow World makes use of the Seelie and Unseelie Court concepts. The Unseelie are as vile and bloodthirsty as you'd expect, but the Seelie can also be very dangerous due to how alien their mindset is. They don't think twice about kidnapping human children like puppies who caught their eye — they tend not to see humans as people. Changeling "pets" see good care, though, and can fend for themselves (even in the Shadow World) by the time they aren't that cute and the Seelie sends them away.
* The Shadow. Yes, that film received a PG-13 (many feel doing so undermined the film), but the film still keeps the Shadow as an outlaw who works without police approval (Commissioner Wainright Barth mentions early in the film that he will order his subordinates to stop the Shadow from interfering in police business). The film also depicts the Shadow as a reformed opium warlord who had a rival slain, even though doing so also slew one of his own loyal men.
* The shady agent Monkey Saruyama (known as Mr. Shroud in the dub) from
* The Shagamaw resembles a bear with the hindquarters of a moose. It alternates between walking on its forelegs and its hind legs in order to confuse hunters.
* The Shaggs better musician than when she was a teenager, and a few of her songs are actually quite good, but it's unlikely she'll ever make it out of obscurity on her own merits.
* The Shaggs. Later albums, where the band reunited and actually sounded more skilled, are dismissed by most fans because they lost the amateuristic charm of the original.
* The Shaggs proved their growth as musicians, but this one is more or less written out of canon.
* The Shaggy D.A., he is now in his thirties and is an aspiring politician. But to judge by the clothes the characters wear, the cars they drive and so forth, you'd think that curse had not only given that kid dog DNA, but caused him to age 17 years in less than a third of the time.
* The Shaggy Dog and others of its kind cleared the Disney Studio of financial debt by 1961.
* The Shaggy Dog: As Wilby begins turning into a sheepdog for the first time, he passes by a mirror before pausing and noticing his hair turning white.
* The Shaggy Gully Times, a bird who teaches flying lessons eventually disallows her students to poop while flying because it caused trouble when some ostriches escaped from the zoo and one did "the biggest doo-doo ever" in the middle of the road.

* The Shahnameh as King of "Rúm" (Rome), due to Greece being part of the Roman empire and later the Eastern Roman empire during the period when it was composed.
* The Shahnameh has many examples. Most prominent would be Rostam, the manliest character in the entire book, bitterly crying when he realizes he's just killed his own son.
* The Shahnameh is full of tough warriors battling each other, wild beasts and mythical creatures. Optimized in Rostam, a towering muscular man with a long beard, who wears tiger skin under his armour plates, and the skull of a demon he killed as his helmet, while riding a huge horse and carrying a mace shaped like a bulls head!!!
* The Shahnameh is the very attractive wife of Key Kavous who tries to seduce her stepson, Siavash. When Siavash turns her down twice, she claims Siavash sexually assaulted her. Even though the evidence is against her, she uses the aborted deformed babies of a witch to cast doubt on Siavash, who finally proves his innocence by riding through a huge fire and coming out unharmed. Even then she tries to frame Zal for losing the babies which doesn't work and Key Kavous sentences her to be hanged. Siavash knows his father will soon regret having her killed and will hold Siavash in contempt for her death, so he asks for Soodabeh to be pardoned. Soon, despite all she's done, she bewitches her husband once again and starts poisoning his mind against Siavash. When Afrasiab wages war on Iran, Siavash volunteers to go to battle to get away from Soodabeh and her schemes and this ultimately leads to his tragic death.
* The Shahnameh is unstoppable. The Turanians Mostly know that Key Khosrow is a just king and he's only after Afrasiab and those directly responsible for Siavash's death.
* The Shahnameh is why he's so attached to Siavash and why he goes on a rampage when he is killed.
* The Shahnameh: On his fifth Labor to save the Persian king and army, Rostam fights multiple Mazandarani warriors and captures their leader, Oolad. He makes Oolad his guide in Mazandaran and gets information about the White Demon from him. Oolad comes to admire and respect Rostam and Rostam in turn warms up to his captive for his help and promises him Mazandaran. When it is all over Rostam keeps his promise and makes Key Kavous appoint Oolad as the ruler of Mazandaran.
* The Shahnameh, Rostam frequently becomes this. Despite outliving generations upon generations of royalty and proving himself the most powerful warrior in the East, he still carries out missions or new kings well into his four hundredth year, right up until the day of his death. Admittedly, he is more frequently tasked with mentoring kings' offspring after a few hundred years, but the fact remains that he dies in combat.
* The Shahnameh: Rostam has gone to war against the Turanians on many occasions, simply as a patriotic Persian defending his country. But when the Turanians kill the innocent Siavash (Rostam's surrogate son) he goes to war for the sole purpose of killing everyone responsible. Same can be said about king Key Khosro who was Siavash's son and the Persians in general.
* The Shahnameh: Rostam, Siavash, Esfandiar and many other heroes are not only strong fighters and good tacticians, they're quite eloquent, witty, and knowledgeable. Rostam is mentioned to have played the tanbour and he could sing.
* The Shahnameh: Rostam will not rest until EVERYONE responsible for Siavash's execution is dead, even his own king's wife!
* The Shahnameh: The person who is finally able to bring down Rostam is none other than his younger half-brother Shoqad.
* The Shahnameh to the Shah in chains. Luckily though, the curse that will torment the killer of Esfandiyār can see through this.
* The Shahnameh When Manijeh's father, Afrasiab learns of her relationship with the Persian warrior Bijan, she is degraded, roughed up, kicked out of her home and all her possessions are confiscated. The princess goes door to door each day begging for food so she can keep Bijan, who's chained at the bottom of a hole sealed by a giant boulder alive.

* The Shahnameh who regularly kills wild beasts, monsters, multiple foes and seemingly unbeatable challengers and always comes out on top.
* The Shahnameh with two brain-eating snakes on his shoulders, necessitating the daily sacrifice of two innocents to prevent them eating his own.
* The Sha in the latest expansion have this power and use it liberally to their advantage when they lack the power to simply manifest and attack things. The Sha of Anger will Emotion Bomb a village of nomads and send them all into a blind rage directed at anything nearby for any possible reason, Despair will bomb its opposition into depressed lethargy, Doubt will bomb its foes into frantic indecision, and Fear will bomb as expected and has even managed to mobilize an entire civilization into military action by instilling fear for their lives in the empress and her drones.
* The Shakespearean stage directions also work with the stylistic suck of Pyramus and Thisbe; in Shakespeare's time, stage directions were woven into the dialogue (since, for example, they did not have the technology to raise and lower lights and change scenery for different times and places), and the scene setting in Pyramus and Thisbe all occurs long after it is meant to have happened, meaning the actors have to run around and generally look stupid to make up for it.
* The Shakespeare Code (admittedly this was because the preceding word was hard to rhyme).
* "The Shakespeare Code" and Shakespeare himself appears on the stage at the end. The Doctor is initially thrilled at the prospect of meeting the greatest writer in the English language — until he acts boorishly in front of the audience. Somewhat amused, Martha quips to the Doctor, "You should never meet your heroes." It gets even worse when he starts (quite unsuccessfully) hitting on her.
* "The Shakespeare Code" be three crones who appear to be witches that cast spells through incantations. When they use a spell to kill a man, the Doctor warns Martha to keep quiet, otherwise the townsfolk will think it's witchcraft. It turns out that the witches are aliens called Carrionites, who use science based on the power of words.
* "The Shakespeare Code" has 14, which is the number of stars in the star cluster the antagonists come from.
* "The Shakespeare Code" has a moment where Martha starts trying to resuscitate the Doctor after the villain stops one of his hearts... at which point she remembers he has two.
* "The Shakespeare Code": Linley, the Master of the Revels, is accosted by Lilith while leaving Shakespeare's inn, as she cuts a bit of his hair to make a voodoo doll to kill him. He assumes she's trying to get a feel and whispers that he'll return later.
* "The Shakespeare Code" starts off with a young man invited into his beloved's house, where he's obviously excited to consummate their relationship... except that she's an alien witch who's plotting to kill him.
* The Shakespeare Code teams up with the Doctor and Martha. During the episode Shakespeare opens up about the death of his son and how it almost drove him mad and made him question Life, death and everything. At the end we have the punchline:
* "The Shakespeare Code": The Carrionites are frequently called witches.
* The Shakespeare Code", the Doctor and Martha end up in an inn with only a double bed, which they have to share. The Doctor doesn't see anything risqué about this, but Martha finds it an excuse to flirt... which the Doctor in all his obliviousness promptly ruins by lamenting about Rose.
* "The Shakespeare Code". The Tenth Doctor explains that while humans took to numbers,
* "The Shakespeare Code" when he uses the species' name to banish one of them only works once. Oddly, though, it only works once AT ALL, rather than only working once on each member of the species.
* The Shakespeare Stealer a girl disguises herself as a boy so she can be an actor, since it was illegal for women to perform on the Elizabethan stage.
* The shaking of hands of Theo and Ricardo. There are four important people in the picture. The two foremost people are the Princess of Hellas and a Megalomesembrian

Senator and the other two are the Captain of the Ardiane Knights and
* The shakuhachi (Zen bamboo flute) of Japan; initially it was just a normal flute, no military applications attached. However, when the samurai that normally used it became unemployed and unable to use their swords by law, they beefed the flute up to be strong enough to be used as a club, thus becoming their main weapon of defense.
* The Shallows circling her. To make matters worse, the rock is low enough in the water that it's submerged during high tide. If she can't get off before then, she'll be fair game for the shark.
* The Shallows takes place in Mexico (and briefly in Texas), and was shot in Queensland and New South Wales.
* The Shallows, the shark repeatedly attacks Nancy and kills several other humans who get into the water even though there is a whale carcass nearby. It is implied due to the scars on its face and the spear stuck in its side that it has had a bad history with humans and attacks them out of anger.
* The Shaman class also has the ability to shapeshift into a wolf for faster movement, while Warlocks can temporarily turn into a demon. Lesser forms include the dwarven racial Stoneform, the Death Knight Lichborne ability (which grants them immunity to many status effects) and the Priest abilities Shadowform and Dispersion.
* The shaman who hides himself by transforming himself into a bear, the bear bites off his shadow, and the shadow turns into a decoy shaman.
* The shambolic live broadcast of the BRIT Awards in 1989, which was poorly organized and hosted by Mick Fleetwood and Samantha Fox (neither of whom had much experience as television presenters) has been described as the most important thing that ever happened to the awards, renewing the public's interest in this show that was "prepared to take live risks". Ironically, as a result of this broadcast (which could only be described as catastrophic in almost every sense), the Awards weren't broadcast live again for almost twenty years. So much for taking live risks.
* The Shamer Chronicles by Leene Kaaberboel has at its center two women who are Shamers. They can make people feel buried shame by looking them in the eyes. Conventionally in their society, it is used to find out if an accused is guilty or not, and to make criminals repent on their behaviour. The books also shows it backfiring in several ways.
* The Shamer Chronicles featured a room that was covered head to toe in carvings of faces that would whisper the worst things you could imagine to you - remind you of horrible things you have done or play on your insecurities until you were driven mad.
* "The Shamon U". Dr. Shamon and his two underlings do a wheel of feet before running away from a giant Wonder Dog.
* "The Shamon U". Wonder Dog plays a prank on Marvin and all of the Superfriends have a good laugh.
* The Shangani Patrol during the First Matabele War. British Major Allan Wilson let a group of 37 hastily assembled scouts, including two Americans (the well-known American adventurer Frederick Burnham was one of them) and an Australian. The small group came upon 3,000 strong Matabele warriors. Going into badass mode, the 37 men killed several hundred warriors before running low on ammo, Major Wilson ordered Burnham to break out with two other troopers and bring back help. Burnham and the two others broke through the lines but reinforcements did not arrive in time as Wilson fought to his very last bullet, at which point, the few remaining British stood, sang "God Save the Queen", and shook hands with one another preparing for death. Wilson and his second in command Henry Borrow were the last killed.
* The Shanghai Major...did not fare well for OG, finishing 7th-8th after losing to Fnatic, but the roster held strong, bouncing back at The Manila Major and taking their second Major title, defeating Team Liquid 3-1. With two Major wins under their belt, along with Miracle- becoming the first player to reach 9000 MMR, they were the absolute shoe-ins to win TI6.
* The Shangri-La and Western conceptions of Buddhist pacifism. In particular, their near-extinction at the hands of the Fire Nation can be paralleled with that of the

invasion and sinicization of Tibet by the Chinese Communist Party. Additionally, their nomadic lifestyle and loose (but vaguely theocratic) social structure resembles the early schools of Buddhism practiced in Mongolia.
* The Shannara Chronicles, Amberle has visions from a large tree, the Ellcrys, that warn her that unless she acts, demons will devastate everything and kill every living being besides themselves.
* The Shannara Chronicles: In the test to become the Chosen, a contestant already ahead of Amberle tries to trip her. Not only does he fall doing this, but she trips him when he tries to get back up, and two contestants cross the finish while they're struggling. She ultimately gets up and across the finish line to become one of the Chosen, but not him. Had he just kept running, they both would've made it.
* The Shannara Chronicles) sex with Wil. In the books there was no hint of her being anything but straight.
* The Shannara Chronicles, so maybe take his words with a large amount of salt). All that said, Rover Eretria starts warming up to her traveling companions, Amberle and Wil (an elf princess and an elf/human hybrid, respectively), to the point where, by episode six, she has made romantic passes at both of them.
* The Shannara Chronicles that a girl can't enter the blindfolded obstacle course that decides the Chosen of the Ellcrys.
* The Shannara Chronicles this trope is even played very strong. Will is a half-elf, and had an elven father and a human mother. Throughout the series of time is always told what his father was a hero, what powerful forces he had, what he has done special, etc.. His mother is against it only rarely mentioned after the first episode.
* The Shannara Chronicles was sold to Cephelo as a child and according to her own words "Spent my childhood fighting off Cephelo's men".
* The Shannara Chronicles. When she tries to interrogate him, he pleads this will go much more smoothly if she put her clothes on first.
* The Shannara Chronicles", Wil and Mareth escape the Mord Wraiths by jumping off a cliff into a lake.
* The Shaolin Temple (1976) - this film comes out 6 years before the one below
* The Shape of the Nightmare to Come causes severe nausea and vomiting, and wreaks havoc on recording equipment.
* The Shape of the Nightmare to Come features a slightly more horrific version: The Ork/Tyranid hybrid species the New Devourer sets of toward the light of the next galaxy over... Which then starts to dim.
* The Shape of the Nightmare to Come for a few minutes whenever the subject is brought up.
* The Shape of the Nightmare to Come of all life in the galaxy. The whole 1st segment reads like it was written by Lovecraft himself.
* The Shape of the Nightmare to Come universe might look like, has a few of these; the Adeptus Custodes and Gray Knights on Titan and the Imperial Fists on Terra and later all across the Galaxy are most notable. Almost all of the Orkish race makes a final stand against the New Devourer in the largest battle the galaxy has ever seen. And they lose.
* The Shape of the Nightmare to Come, who then proceeded to eat 1/3 of the galaxy.
* The Shape of Things to Come is a similar mix of prophetic and outlandish-in-hindsight, with submarine-launched ballistic missiles, and Poland being a military match for Germany. In fact, depending on how you look at it, this could probably be applied to most of his works.
* The Shape of Things to Come, the cathedral even ends up completely destroyed, along with a great chunk of London's inner city at the northern shore of the Thames.
* The Shape of Things to Come, the World Transport Union creates the "air dollar." (Spending one air dollar would allow you to transport one kilogram one kilometer in the WTU's aircraft, or something like that.) Eventually it's replaced by the "energy dollar," which is a straight play on this trope.
* The Shape of Water and wanting to see the Gill-man and Kay Lawrence succeed in their romance.

* The Shape of Water consequences then. As it is, he gets into trouble by hitting on a man.
* The Shape of Water, Elisa intentionally floods her own bathroom so she can have some underwater romantic time with the Asset. Then the manager of the theater downstairs complains to her friend Giles about the water dripping through his ceiling, so Giles runs over and opens the bathroom door...
* The Shape of Water, Elisa's morning routine includes masturbating in the bath.
* The Shape of Water) is actually the film's romantic hero, the monster hunter - who would have been the hero if the movie were made in the '50s or '60s - is the villain, and his contempt for the creature is specifically linked to his more mundane bigotries.
* The Shape of Water kept in a government lab develop feelings for one another.
* The Shape of Water, smashing a headlight and removing the front bumper.
* The Shape of Water (they were normally carried internally, Elisa explains).
* The Shape of Water to soften him, however, showing that he's still a dangerous and wild creature.
* The Shape of Water (unrelated to the novel of the same name): both main characters are mute, and their mutism is what caused them to empathize with each other. Unlike most examples, the two have a justification to be this trope and are never implied to talk normally.
* The Shapers have good cause to be repressive, however. Unrestricted Shaping can lead to catastrophe in dozens of different ways: disease, ecosystem destruction, rogue creations breeding, and individual Shapers going mad with power to name a few.
* The Shapeshifter and has to regularly or suffer stroke like symptoms.
* The shapeshifter convinces the hero, but totally wrecks the mood by turning into the wrong thing.
* The Shapeshifter series has this power, it nearly kills her on several occasions because she absorbs people's pain. Fortunately she gets better at using it.
* The Shapeshifter: someone you don't trust but nonetheless need for their capabilities or knowledge.
* The shapeshifter Zongi meets his end this way after Dilandau crushes him like a soda can with one of his Mech's flexible metal claws as revenge for killing one of Dilandau's subordinates. The sight of this in a vision sends Hitomi so deep into a

* the Shard Endowment) with a special "Divine Breath" keeping them alive. They are generally beautiful, larger, stronger and faster than normal people, and require no sustenance other than one Breath per week, or they will die when their body automatically consumes their Divine Breath. The people of Hallandren worship them as gods and believe each one was sent back with a specific purpose. The God King is a special case, a returned created from a stillborn child, meaning they were never a living person before coming back as a returned.
* The Shardmind from 4th Edition are an entire race of humanoid new age psychic crystals.
* The Shard of Lightning can freeze time, and Jack used it to steal most of the monks' Shen Gong Wu, and cause various havoc. The monks won it by the end of the episode, but never use it again.
* The Shards of Adonalsium, sixteen concepts endowed with virtually endless power, each of which binds itself to a human mind, then warps that mind into its image. So Ati, bearer of the Shard Ruin, comes to see all reality as a process of destruction, of building up only that you might later knock down.

* The Sharingan, which only works if the subject is looking into it, lends itself to potential weaknesses (for example, if the target lays down mist and closes his eyes while approaching the user, watches his feet to read his moves, uses shadow clones, or simply moves too quickly for them to react). In particular is Amaterasu, a Sharingan technique where the user merely has to
* The Sharing Knife and similar, but it carries with it real risks to the maker too. Often, mundane methods of medicine or chirurgy are used primarily, while ground work supplements it to fend off infections, control internal bleedings, or repair nerve damage.
* The Sharing Knife books, Lakewalkers' magic is all about the manipulation of Life Energy.
* The Sharing Knife is full of curiosity and wonder. Dag takes it as a sign of her intelligence, that she doesn't accept the world at face value but wants to know how it works. Unfortunately, Fawn's hidebound family thought it was a sign of stupidity, that she could never just get on with her life but had to stop and harp on about trivial details.
* The Sharing Knife: It's known that Lakewalkers are descended from the sorcerer-lords of ancient times. Dag theorizes that they became a separate caste through selective breeding—singling out those who had groundsense, and adding them to the gene pool.
* The Sharing Knife of bats in some of the caves in that region) and winds up creating a flying army of creatures somewhere between "Dire Bats" and "Were Bats", while the malice itself takes the form of an especially large and eerily beautiful Were Bat.
* The Sharing Knife realized she was alive and allowed her to be buried out of jealousy. The others were just trying to give her a proper burial.
* The Sharing Knife series, "blight" is an all-purpose swear for Lakewalkers.
* The Sharing Knife series: Fawn "I'm not a child, I'm just short" Bluefield and Dag Redwing, who's so tall and lanky that Fawn can't reach up to touch his face unless he stoops.
* The Sharing Knife series, Lakewalker marriage essentially involves becoming a limited form of this—no mind reading, but they can tell if the spouse is alive, and one character can tell the general direction her husband is in.
* The Sharing Knife suffers from this after losing his first wife and most of his comrades in a gory battle.
* The Sharing Knife they will hunt them until crippled or dead because they either prioritize that quest over love for any living person or feel they must defend those they love beyond all sense from the greatest threat they can imagine. Towards the end, after Fawn sees what a Malice did to the Farmer hamlet of Greenspring and learns of an effort to force Dag to repudiate her on pain of expulsion from the Patrol or outright banishment, tells Dag of the prior conversation and admits she would be willing (if not by any means happy) to stand aside if he were forced to make such a choice.

* The Sharkasm Crew and losing hard. So it's a big deal when they end up in a three-way tie with the two other crews during the Paranormal Activity X tournament.
* The Sharkasm Crew features one between Cephalo the Pod and Alpha Delpha. It has recently been downplayed as more players of the same skill level as Cephalo and Delpha arrive on the St. Marys scene.
* The Sharkasm Crew's Doubles tourneys, the odd player out plays with a computer-controlled player. This CPU is represented by a piece of paper with a face on it, named Sonjai.

* The shark when it was hauled out of the water. Great whites are amazingly tough to survive a wound like that.
* The Shark Who Knew Too Much opens with the main lead chased by a helicopter while shouting this sort of dialogue. Given that he's spent his whole life masquerading as a group of identical triplets who can't stand each other's presence just to trick his father into giving him shareholder majority of the company, it's obvious there's a lot of deception involved.
* "The Sharpie of Culebra Cut:" President Roosevelt repeatedly attempts this on Scrooge's sisters, and Hortense just as repeatedly
* The Sharpshooter feat in fifth edition makes this even stranger, as it removes the penalty imposed for firing a weapon at long range, but does not extend the range in any way. Meaning the a character with a longbow is just as likely to hit a target 600 feet away as one that is 10 feet away, but is incapable of hitting a target 601 feet away.
* The Sharpshooter perk is based around this - his weapons are typically single-fire or semi-auto fare which he gets massive headshot-damage and reload-speed bonuses for, from various pistols and
* The Sharpshooter/Scorpion Deathlock is actually a hybrid of the Boston Crab and the Figure-Four. And thus, it is more painful kayfabe-wise than a plain Crab. It has a better look too, due to the move itself resembling a scorpion upon execution. Hence, the Scorpion Deathlock and Scorpion Hold/Sasori-Gatame names (with the latter being its original name, given by the move's innovator,

* The Shattered Kingdoms, Norlanders speak telepathically, although not at any significantly greater distance than normal speech allows. Their telepathy can convey emotional states as well as actual words, and makes it hard to lie. The Shadari are unable to use telepathy, and can't hear what the Norlanders say (although some Norlander characters have trouble believing this and express suspicion that the Shadari are just faking it so that they can eavesdrop).
* The Shattered Kingdoms she's smarter than she acts, so it's still a good barrier against people trying to get anything from her.
* The Shattered Kingdoms the abandoned daughter, Lahlil, turns out to be a) not dead; and b) rather dangerous.
* The Shattered Kingdoms, two or three kinds of rebel leadership can be spotted. Daryan is heir to the Shadari kingship (a fact kept secret to the occupying Norlanders) but has a friendship and a romance that cross racial lines in a way that would be unacceptable to most Shadari if they knew, and doesn't really want the burdens of leadership anyway. Faroth, meanwhile, certainly intends to be in charge of the rebellion, but isn't particularly effectual, is obsessed with

excluding other potential leaders, and is more like a gang boss than a hero. A third character, Harotha, has a significant role but tends to manipulate and chivvy rather than lead (a fact which causes her problems when Daryan decides he doesn't want to be lead around by the nose anymore). In the end, none of them are really the reason the rebellion succeeds, although they all had some impact on how it played out.
* The Shattered Kingdoms) wouldn't have been released if the Emperor hadn't unsealed a tomb where a weapon against the cursed is supposed to be obtained.
* The Shattered Sea Scandinavia), the Elves are modern/slightly futuristic humans, and Elf Magic is just technology.
* The Shattered World: Beorn is dropped off at Darkhaven's partially-collapsed Spire of Owls, from which he's tasked to sneak into Pandrogas's laboratory and rob it. The Spire lives up to its name, as a large flock of owls are disturbed by Beorn's arrival and flutter past him in the stairwell, verifying that he's starting out in a long-abandoned part of the castle.
* The Shattered World, Beorn's character is introduced when he steals an exotic gemstone which was displayed in this way.
* The Shattered World duology, has this trope as her backstory: she was an ordinary peasant girl abducted and raped by the local noble, who paid a conjurer to grant her the ability to shapeshift into a wolf. When the noble had her abducted a second time, she transformed, tore his throat out, and escaped through the bedroom window. Although she hadn't realized that the were-spell was permanent, she's content to be a werewolf because it means she needn't fear any man again.
* The Shattered World, every time a main character goes adrift in the Void between fragments.
* The Shattered World, gives an ominous preview of the surviving fragments' impending doom.
* The Shattered World is an inversion, whose parents paid for him to be made a werebear when he was very young, not realizing it wouldn't manifest until puberty. Upon his first transformation, he stumbled home and was mistaken for a genuine bear; terrified, his parents barricaded themselves inside their farmhouse, only to perish when Beorn's panicked battering against the walls tipped over an oil lamp and set the place on fire.
* The Shattered World, the servants at Darkhaven who worked for Pandrogas and maintained the castle are revealed to have been this trope: revivified by the Necromancer and tasked to keep his former home ready for some other sorcerer to occupy and rediscover his craft.
* The Shattered World, were-folk transformations become more and more painful the older they get.
* The Shattering, it is specifically stated that Thrall cannot be with Jaina because "she is not an orc." Seems silly when you look at some of the canonical interracial relationships in the game, such as the gnome in River's Heart and his human wife, or, more famously, the human Rhonin and his high elf wife, Vareesa Windrunner, who even have two half-elf children.
* The Shattering of Oz asks "What was my nickname at the Across-Oz Summit last month?", which only the Nome King answers, allowing Glinda to identify 'her' as the fake Elphaba.
* The Shattering of Oz. When Elphaba finds him, he's crippled, barely able to walk, horribly scarred and badly traumatized from all the torture... but he's also willing to help her.
* The Shattering: Prelude to Cataclysm, Jaina Proudmoore visits Anduin Wrynn in his room to cheer him up. Anduin is touched and decides to return the favor by having food brought in. He requests cheese(Dalaran Sharp) and apples, Jaina's favorite snacks.
* The Shattering: Prelude to Cataclysm. She even seizes the letter rather than let him read the letter aloud after the first indication of Garrosh's refusal.
* The Shattering: Prelude to Cataclysm, some orc members of the Twilight Hammer cult attack a meeting of druids and kill all the night elves present while pretending that Garrosh ordered the massacre. Cairne is outraged at Garrosh's

apparent responsibility for the attack and challenges him to a duel for leadership of the Horde.
* The Shattering: Prelude to Cataclysm trope, as many of the young warriors started out killing undead in the war against the Scourge, and thus are somewhat desensitized to killing living opponents, making them more keen on going to war with the Alliance.
* "The Shattering", which is the name given for the planet of Spherus Magna splitting into
* The Shaw family are a more traditional example. Magdalene, the matriarch, sits at the head of a vast, powerful criminal empire. Her three children are all members of British Special Forces branches — Owen in the SAS, Deckard in UKSF, and Hattie in SIS; Owen and Deckard have also gone rogue and embarked on successful careers in terrorism.
* The shawm (an ancestor of the oboe) was used as a weapon from time to time.
* The Shawshank Redemption (1994). First half of the film set from 1947-1949.
* The Shawshank Redemption and gives us one of the most satisfying endings in film history.
* The Shawshank Redemption. Andy had a gun and was planning on killing his wife and her lover, but decided against it and threw the gun into a river. Then someone else murdered his wife and her lover, and since they can't find his gun they can't test to see if the bullets match or not.
* The Shawshank Redemption. Andy's defense is that, on the night that he found out his wife was cheating on him, he got drunk, loaded his gun, drove to the house of his wife's lover (leaving tire tracks and fibers at the scene)... then thought better of it and threw the gun in the river. Then, on the same night, someone else broke into the house and killed them both, using the same caliber gun that he had. Turns out that he was telling the truth, but the jury naturally doesn't buy it.
* The Shawshank Redemption: Apparently Tommy was killed by Hadley during the former's "failed escape attempt". Andy knows better. Presumably, the beating death of "Fat Ass" is covered-up in the same way.
* The Shawshank Redemption became "Τελευταία έξοδος: Ρίτα Χέιγουόρθ" (Last Exit: Rita Heyworth).
* The Shawshank Redemption. Brooks, an elderly prisoner released after more than 50 years in jail, can't adjust to a society that is entirely different than the one he knew and toys with the idea of intentionally finding a way to go back to prison but winds up committing suicide instead. When Red is released, he has similar feelings, although he handles it better than Brooks.
* The Shawshank Redemption, Brooks has to send his pet crow, Jake, away.
* The Shawshank Redemption commentary is pretty impressive, considering it was recorded ten years after the movie was made and director Frank Darabont is able to name off many trivial facts and details, down to names of crew members, about the film.
* The Shawshank Redemption does one of these. Andy finds a grub of some sort in his first prison meal. As he's examining it, he has the following conversation with Brooks, a crusty old con who's been in prison for 50 years and may or may not have a few screws loose:
* The Shawshank Redemption failing at the box-office was the opaqueness of its title: it makes perfect sense in context, but as "Shawshank" is a fictional prison, you have to have seen the movie or read the book to even know the gist of what's going on.
* The Shawshank Redemption. From inside a prison, he gets a rock-hammer and a poster of Rita Hayworth, among other things
* The Shawshank Redemption has a scene where the supporting characters are searching for rocks that Andy can carve. One brings one up and asks what kind of stone it is, only to be told it's petrified horse dung.
* The Shawshank Redemption. He and Red even get into an argument over having Hope

in prison, with Andy saying it is necessary and Red saying that it is dangerous. Eventually, Red comes to Andy's point of view.
* The Shawshank Redemption however, the card is there to indicate that Miranda Rights are still new, so the officer in question hasn't memorized them yet.
* The Shawshank Redemption: "...I'm so tired of being afraid all the time..."
* The Shawshank Redemption. It is Susanna and the Countess composing a fake love letter to the Count. This gives Red's line, 'I don't know what those two Italian ladies were singing about, and I don't want to know,' a certain irony. They sound so angelic that it's probably lucky he didn't learn what they were really up to.
* The Shawshank Redemption: Made in 1994, middle of the film set in 1954.
* The Shawshank Redemption] "Maybe it's cause I'm Irish." - hilarious. In the novella, the character is only named Red. It's changed in the film to "Ellis Redding," to explain the name.
* The Shawshank Redemption nominations (including Best Picture) and was already available in VHS at the time, a lot of people decided to rent it.
* The Shawshank Redemption on the prison floor for complaining out loud that he shouldn't be in prison. It is strongly implied that he is doing this to scare the other inmates into keeping their mouths shut.
* The Shawshank Redemption, right before the credits: "In memory of Allen Greene," the first agent that director Frank Darabont ever worked for. Greene sadly died of AIDS before production began on the film.
* The Shawshank Redemption (story and film) with Brooks and, to a lesser extent, with Red.
* The Shawshank Redemption takes place from 1948 to 1966, while the novella it was based on took place from 1948 to 1977.
* The Shawshank Redemption (the beginning of which takes place in the 1940s). Andy's disloyal wife wants a divorce. Andy's response — "I'll see you in hell before I'll see you in Reno" — is part of what convinces the jury that he killed her.
* The Shawshank Redemption. The film version adds a few that aren't in the book.
* The Shawshank Redemption The rest of the film makes it clear the protagonist just has a calm, quiet, emotionally reserved personality.
* The Shawshank Redemption, the rubber stamp used by the parole hearings people in 1947 prints in the Helvetica font, a decade too soon.
* The Shawshank Redemption, the scene cuts to his office where he comes in and tells Andy (freshly back from his torture in solitary confinement) to hurry up with the accounting. After stashing the records of his corrupt dealings in his safe, he walks off, nonchalantly whistling a Christian hymn ("A Mighty Fortress is our God").
* The Shawshank Redemption: The second half of the film takes place in the latter half of the decade.
* The Shawshank Redemption those businesses to keep his chain gangs at the prison rather than out working.
* The Shawshank Redemption: Trying to introduce a little humanity to the prison, Andy is playing opera music over the intercom. Then the brutal guard shows up and walks towards Andy, and the camera pans away as the record scratches.
* The Shawshank Redemption When King told her he had written that story, she simply said "No you didn't.'"
* The Shawshank Redemption, with Warden Norton filling the role of Captain Smooth and Captain Hadley being the Sergeant Rough. These roles are apparent in the dressing-down of the new meat.
* The Shazam have "Rockin and Rollin (With my Rock n Roll Rock n Roller)," presumably written on a dare.
* The Shazam!/Isis Hour (Isis kisses Russell on the cheek in one scene).
* The Shazam! the six gods that make up the word SHAZAM would advise Billy directly, though they preferred to speak in riddles and let Billy figure out what they meant for himself.
* The She-Creature, a hypnotist uses a woman in a trance to summon an aquatic monster from beyond time. After being mortally wounded by it, he banishes it

forever. But the final shot of the movie shows the ocean, and a big "?" over it.
* The She-Creature is so bad at seeming alive that Mike and the Bots did a skit on the "actor's" non-acting style, with Tom and Crow criticising Mike for seeming too animated or paying too much attention to everyone else.
* The Shedu / Lamassu of ancient Sumeria were heavenly protective deities with the head of a man or woman, wings, and the body of bull or lion and were seen as servants of higher gods and protectors of households. Historians believe they later had a large influence on the creation of the lore about the sphinx, Arabian Djinn, Judeo-Christian Angels (particularly the Cherubs), and the worldwide practice of placing gargoyles on buildings. Also, one of Gilgamesh's greatest feats was defeating Isthar's pet Shedu.
* The Sheeda, from Earth's far future, exclusively use magically manipulated organic matter, from rocket beetles to chitin data records. Even clothing has a proboscis to plug into the wearer's arteries. It turns out that they
* The Sheepherders' manager, Lord Jonathan Boyd, drew major heel heat for his vitriolic anti-American comments during their time in Southwest Championship/Texas All-Star Wrestling.
* The Sheep-Pig: Ain't no rule that says a pig can't compete in a sheep herding dog trial! Actually, that one's more a trick of semantics, as the trial registration form requires "Name of Entry", saving Babe's owner from the implicit lie that would have been involved had it been "Name of Dog".
* The sheep-powered ray gun, for which the Secret Military Organization needs Sheep, despite the fact that the farm from which he escaped was a sheep farm with at least 50 more. We don't know why, but the ray gun only works with one sheep and only if he's alive. There is
* The Sheep Talisman is often the most mocked of the set, with most people finding it useless. It's the one Talisman that Jade will rarely bother to steal from the vault. During the series finale, she takes it but never uses it, and pretty much immediately gives it to Paco, who has no idea what it does.
* The sheer chaos of when anything could turn out in any way was also another source of jokes.
* The sheer disbelief at seeing his Custodes' current state of (un)dress uniform makes him spend several minutes just dumbstruck from the sheer shock.
* The sheer extent that the Homunculi do this really can't be overstated: They regularly have scientists develop new methods of producing Philosophers Stones, then murder them all, and
* The sheer number of occasions that LEGO and associates mistakenly or by necessity made men out of their women is enough to confuse every outsider. Besides the thing with Nokama on the promo CD mentioned above, Hahli also got a male voice in the online Toa Mahri mini-movie and in the video game

* The Sheikah scientist Robbie built himself an intelligent robot assistant named Cherry, who was named after his first love. However, his wife Jerrin grew upset about the attention he gave the machine, so he dropped the name and reprogrammed it to be less articulate. He still occasionally slips up and calls it Cherry, though.
* The Sheik by E.M. Hull. Sheik Ahmed Ben Hassan isn't Arab after all.
* The Sheik. Nevermind that the titular character is an abusive rapist, she falls in love with him and is willing to do anything to please him.
* The Sheik's territory in Detroit had its share of blood. In contrast the West Coast/Flyover states were more technical and cleaned up, while in the south where there were a lot of mining towns and post-Depression communities that knew a hard

life and what a hard fight looked like. (Which is still the case today in Appalachia, where coal mining is the only thing feeding a lot of communities). So, when you're wrestling in front of two hundred ornery miners who know how a face looks when you punch it just right...

* The Shelter has a New Confederacy form after a breakdown in the social order from American debt and a disastrous war with China.
* The Shelter one starts to wonder why they even keep Ricky around when he constantly betrays and tries to murder his family over and over again.
* The Shelters of Stone. Boring repeats of the same kind of issues the characters have faced in the past, no real drama or storyline to carry through the book, retconning... Basically a boring read about two characters who have the same discussions with people as they've had for two books already. The fact that it was published more than a decade after book four might have had something to do with Auel losing her style.
* The Shelters of Stone, Marona, who wants to humiliate Ayla for "stealing" Jondalar from her. It turns out to be underwear in a masculine style, garnished with the ceremonial sash a teenaged boy wears to announce that he's ready for sexual initiation. However, the trick backfires as the clothes actually look good on Ayla, who later takes to wearing a modified version of the outfit while hunting.
* The Shelters of Stone series took 12 years. Jane Auel really likes to do the research.
* The Shemites revere pagan deities reminiscent to the non-Hebrew Semitic deities from Canaan.

* The Shepherd’s Crown with the elf that murdered his Queen. He then breaks every bone in said elf’s body with a single backhand.
* The Shepherdess and the Chimney-Sweep. The Chinaman isn't the Shepherdess' father for obvious reasons (they're porcelain figurines), but he still wants her to "marry" the mahogany satyr instead of the chimneysweep she fancies.
* The Shepherd's Crown is a straight example; a strict vegetarian who hates the idea of hurting any living creature, he has a keen insight into animals and an amazing calming effect on them. Including humans.
* The Shepherd's Crown, the shed was invented by Heimlich von Sheddenhausen.
* The Shepherd's Crown, when the dying down of an elf's glamour and imperiousness is described as "the elvish was leaving the building".
* The Sheriff is less villainous than most adaptations, a commoner who knows that his only chance for survival is to back the current power. he countenances the Merry Man and other bandits as long as they avoid killing people in the forest, and avoid people who have paid protection fees. When Sir Guy begins sacking the surrounding farms, he lays siege to the castle to avoid further depredation.
* The Sheriff of Lynchwood punishes everything with hanging. Not because she really thinks it's an effective deterrent or anything, she just really likes hanging people.
* The Sheriff of Nottingham even goes so far to take the last farthing from the poorbox at Friar Tuck's chapel.
* The Sheriff of Nottingham is dim-witted and despite his size is easily manhandled by Little John and Lady Kluck. At the end of the movie, however, he completely snaps and comes after Robin with a torch, burning down the castle, and coming closer to killing Robin than anyone else in the film.
* The Sheriff of Yrnameer with the Firestick weapon marketing department and the

tendency of their slogans to increase the size of the resulting holes in proportion to the model number of the firearm in question.
* The "Sheriff's Bag Of Guns" that Rick fills up in the pilot episode is a long-term example of this, being utilized across the first two seasons. Originally obtained by Rick, he is forced to drop the bag in Atlanta when he falls off his horse, and leads a mission two episodes later to recover it (along with rescuing Merle Dixon). When Rick gets back to Atlanta, he gets into a conflict with the "Vatos", a group of apparent gangbangers who steal the bag of guns and claim it as theirs. Rick eventually negotiates the return of the bag and half the guns, and uses them to great effect at the climax of the episode, when he and the rescue group use the weapons to save the rest of the Atlanta camp during the fish fry attack. From there, the bag of guns is carried with the survivors during their departure from Atlanta and trek to Hershel's farm, where it remains until the second-season finale; as everyone flees the overrun farm, Andrea recovers the bag during her escape and uses

* The Sherman, despite being outgunned and out-armored by the Panther and Tiger, did have some real advantages. It was the very first tank to have a (vertically) stabilized main gun, which helped make firing after moving easier since the elevation didn't have to be adjusted after stopping. It also was quite agile for a medium tank of its era and relatively compact (at least in length and width; it was a bit tall for its size), allowing it to go places a Panther or especially a

* The Shichibukai are essentially mercenaries, pirates who work for the government to fight and scare off other pirates. So naturally, if one decides to quit, they go back to being pirates, i.e. enemy #1. It doesn't help that the Shichibukai is made up of pirates with massive former bounties, so as soon as they quit, their bounties are reinstated, leading them to be high-profile targets.
* The Shichibukai/Seven Warlords of the Sea, a group of 7 powerful pirates sanctioned by the World Government.
* The Shield, after its first episode, not only uses fake badges, but places them on the wrong side of the uniform, at the request of the LAPD (due to the portrayal of the cops as...less than upstanding).
* The S.H.I.E.L.D. agents all use conventional firearms. Even the RPG that Nick Fury uses at one point qualifies, since he used it for its intended purpose of destroying vehicles (disabling an F-35, in this case).
* The Shield a Mob War in order to use them to kill off the other side. Throughout the series though, Vic and the Strike Team try to prevent mob wars as they obviously produce murders and cost everyone money.

* The Shield are both heels, and after several teases, have wrestled at Elimination Chamber. Throughout the feud, both teams were heavily cheered by the fans, due to them all being interesting and well-developed characters.
* The Shield are one of the most popular trios of all time — but spent less than two years in existence.
* The Shield around Season 5's finale. Some spoilers leaked that said Ronnie would die and Lem would leave and go to Mexico. These spoilers mentioned a lot of things that came through in the episode, but were totally wrong about the ending. That's because the creators themselves put those spoilers out.
* The Shield. As a result, many fans turned against him. WWE has tried various methods over the years to get the fans behind him. While some of them worked temporarily, in the long run, the extreme effort they're going through to force Reigns down the fans' throats has only served to turn them further against him. And unlike John Cena above, Reigns' response to fans' dislike of him could best be described as smug nastiness.
* The Shield as corrupt cop Vic realizes a fellow cop is wearing a wire in a meeting. Vic uses it to sell to Internal Affairs the idea that his entire reputation as a corrupt killer cop is all an act to intimidate them when in fact it's the truth.
* The Shield at the end of season 2. They then spend much of the following five seasons dealing with the fallout.
* The Shield; brilliant police officer who at some point in his career, stopped giving a damn and went on auto-pilot while counting down to retirement. Loathed because of his laziness, his brilliance has saved him from being fired.

* The Shield, but notably in season 7, when almost all of Vic's arc is trying to secure himself a job and immunity deal before a scheduled review board fires him from the LAPD.
* The Shield by Captain (later Councilman) David Aceveda. While he was often frustrated by the antics of the cowboy cops under his command(Vic Mackey in particular) and provided many of the elements this trope requires, on multiple occasions he himself was involved in illegal or illicit activity and occasionally veered into cowboy cop territory himself.
* The Shield, Claudette demands an explanation from Ronnie about why Shane tried to kill him and Vic. Ronnie confesses that they were doing an off-books investigation into Lem's murder (leaving out the crimes they committed in the process), that they found out Shane did it (but leaving out that he did it to cover up all their crimes), and that they had arranged a meeting with Lem the night he was killed (but he claims that they did it to convince him to turn himself in).
* The Shield: Different cops on a spectrum, with almost nobody completely clean:
* The Shield. Disbanded again in 2019, shortly before Dean Ambrose left WWE.
* The Shield due to its relentless pace (where literally every scene moves the plot along in some way) can make it intimidating to follow along with as there are many "blink and you'll miss it" moments where you have to be paying close attention to understand certain things.
* The Shield, Dutch managed to outwit a dangerous serial killer, prompting a round of genuine applause from the rest of the Barn. At almost exactly the same time, Shane Vendrell has managed to mess up a much easier case by having sex with the lead suspect, prompting a round of Sarcastic Clapping from Vic.
* The Shield employ police brutality, all the damn time, but he's so intimidating that the suspects will rarely if ever actually try to accuse him of it. One notable exception is when a suspect freaked out over Vic's bad cop methods and screamed police brutality, but Vic never even actually touched him. Vic is very confused.
* The Shield Glenn Close's character Captain Monica Rawling is nervous about delivering a speech to the other police. Vic tells her that normally you're supposed to imagine the audience naked but "with this audience, I wouldn't recommend it."
* The Shield has been able to reverse the trend. They get cheered by the crowd...except for when Reigns is on the mic, at which point it turns to boos. The main reason for this is that reuniting the stable is a transparent attempt by WWE to get Ambrose and Rollins' "good" heat to rub off on Reigns, and the fans can see right through it.
* The Shield has Duch Wagenbach, who is generally treated like dirt by just about every cop in the precinct except for his partner Claudette Wyms.
* The Shield have their issues, but will always have each other's backs. Dutch's happy ending in the series finale is Claudette finally admitting Dutch is her best friend.

* The SHIELD Helicarrier shows up in pretty much every Marvel Comics-based animated series.
* The Shield He says he could have, but what would be the point, since he has practically everything he had on the outside in prison and killing a cop would blow all that. He punctuates this by giving orders to a nearby prison guard, who calls him "Mr. Mitchell" in response.
* The Shield. If the fans want something and they have the opportunity to ruin it. They will every time, and call it "justice".
* The Shield in a one-on-one match. As soon as Undertaker won, they began beating him up, yelling at him that they still remained undefeated.
* The Shield included an episode where the characters arrest a teenage vandal. Her mother arrives at the police station and harangues the officers about what a perfect angel her child is until they open the door and the child is in the process of vandalising their interview room.
* The Shield. In fact, Reigns' estrogen brigade is one of the many reasons (though

definitely not a major one) why he was widely disliked by hardcore fans during his main event push.
* The Shield in general was this during their first months of existence. They would frequently interfere in both matches containing their members and matches containing other wrestlers, and rarely ever got any real punishment, as the matches would usually be thrown out as a result of their antics. However, for some reason, fans still liked them despite all this. Eventually, it came out that they were under the Authority’s orders, but just when it looked like they could be the ones to stop them, Rollins betrayed the group and disbanded it.
* The Shield in June 2013, upon which Lilian Garcia announced their first ever clean loss on the microphone.
* The Shield: In "Two Days of Blood", Detective Shane Vendrell and Detective Curt Lemansky go undercover in a cockfighting event to track down an illegal arms smuggler.
* The Shield involves Vic Mackey and his Strike Team committing a lot of police corruption in order to enrich themselves and to cover up their own crimes. Their eventual downfall can be traced back to two particular crimes that is the cause of their excess of mistakes; the murder of Terry Crowley in Season 1 and the Armenian Money Train Heist in Season 2.

* The Shield of Arrow Attraction gives the wielder resistance to damage from missile weapons (meaning they take half damage) but also automatically causes all missile attacks made against targets within 10 feet of the weilder to attack the weilder instead. * The Shield of Wonder is a straight example: it provides a random, usually very squicky, effect each time it blocks a weapon.
* The Shield Only run: Only defeat enemies with a shield (which can be equipped in the main hand as a particularly weak weapon);
* The Shield: Played for serious drama, as Vic manipulates the LAPD and ICE against each other in an effort to get a job offer and an immunity deal from the latter.
* The Shield run away to get married, probably because they didn't have anyone to invite anyway.
* The Shield said that it "has no appeal to anyone who has more than 50 percent of his brain intact. Anyone who isn't in a vegetative state will most likely wish that he were after getting through all 15 levels of the game."
* The Shield's Dragon universe as the Gauntlet Hero. Many man-shaped craters have since appeared in the presence of the Dragon of Doujima when he gets sufficiently pissed off.
* The Shield seemed to actively ignore his fault in it and focus on humiliating, and eventually firing, Vickie instead. In other words, Reigns got an innocent woman (and single mother, mind you) fired for his own benefit and the fact that it was his fault is never brought up again.
* The Shield. Seven seasons are spent committing crime after crime trying to keep this under wraps.
* The Shield Shane is on the run with his pregnant wife, Mara, and their two year old son. A drug deal gone wrong results in Mara shooting an innocent bystander while trying to defend Shane. This results in her facing a first degree murder charge as it took place during a crime in progress.
* The Shield side, where he bends or outright breaks the law to serve the greater good (a criminal will go free, but the young girl he kidnapped will be saved from being raped and murdered). Notably, the series never specifically casts judgment on Mackey's karma directly, leaving it to the viewer to decide whether he has overall good karma or bad.
* The Shields of Torus Filney serve as this to Viscount Servantis. They are a

group of heavily armed and armored knights, all highly skilled in combat beyond the abilities of the average Phobos soldier.
* The "shields" (referred to as "walls" and "bands" in the novels) actually have a logical basis, given the way they are described to work. The ships have gravity drives; the effect of the drives manifests itself on the "top" and the "bottom" of the ships (called "bands" to differentiate them from the other "walls") — where the effect is impenetrable. All ships above pinnace size also have "sidewalls" — also areas of focused gravity, though not as strong as the top or bottom walls. A strong enough energy blast can penetrate the sidewalls, though with distortion and a lessening of power — the bows and sterns of the ships are unshielded. Or at least were, until the protagonist's star nation develops "bow-walls". Tactics involves using enough missiles to get past the defenses of the opposing ships and letting loose with nuclear-bomb-pumped lasers. This is all a complicated rationale to have Napoleonic style fleet battles
* The Shield started airing in France (with no changes other than the opening credits being in French) right before it starting airing in the US, and the French run saw two new episodes shown each week, so France quickly jumped way ahead of the US. As you might expect, the French broadcasts proved to be very popular on torrent sites.
* The Shield. Terry was killed by Vic Mackey in the first episode of the series, but remained in the dialogue for every season and appeared in flashbacks.
* The Shield that his reputation as a brutal corrupt cop is all an act to intimidate crooks into thinking he'll go after them.
* The Shield-themed issues about police work such as crime stats (something the show had largely downplayed) hanging over the head of the Farmington District, the elimination of beloved character Lem (which paralleled the death of Stringer Bell, who was killed off in spite of his popularity for the sake of the story being told), and an ending that had MAJOR elements from the final fate of Marlo Stanfield. as far as what happened to the Strike Team.
* The Shield, the relationships Vic Mackey has with his subordinates within the Strike Team often ventures into this trope's territory. Shane, Ronnie, and Lem are shown to be weak-willed individuals with low self-esteem at best and crippling need for a fatherly figure to tell them what to do at worst, allowing them to better serve Vic as his minions.
* The Shield, the series was created by Shawn Ryan. His wife, Cathy Cahlin Ryan, played Vic's long-suffering wife Corinne.
* The Shield, The Shield came to the conclusion the Authority was, in fact, the greatest injustice in WWE and decided to fight them instead.
* The Shield. The Strike Team is tasked with investigating a series of robberies at a strip club — the girls proposition men for alley sex, but one of the girls has an accomplice who attacks the johns. Vic tries it, picks "incorrectly", and gets a blow job. Shane tries it and gets a tire iron to the head.
* The Shield). They spent as much time sniping at each other as punching out the bad guys.
* The Shield. Though he tends to slip and show that he may have cared about them more than he'd like to admit.
* The Shield, though his homosexuality is basically written out by successful Christian "conversion" therapy, at least until the series finale, at least, which alludes to his sexuality confusion by having him be distracted in a conversation with fellow officer Tina Hanlon by staring at a gay couple walking down the street.
* The Shield. Vic Mackey is one of the dirtiest cops ever depicted on television (his rap sheet including, but not limited to, assault, blackmail, extortion, and murder), but he was always visibly angered by any form of discrimination.
* The Shield, Vic Mackey's daughter Cassidy is played by Michael Chiklis's real-life daughter Autumn Chiklis.
* The Shield Vic Mackey. The perp asks "What is this, good cop and bad cop?" Mackey replies "Good cop and bad cop left for the day. I'm a different kind of cop", and proceeds to beat the living hell out of the perp.
* The Shield, Vic Mackie comes into possession of a photo that shows City

Councilman David Aceveda being raped at gunpoint, performing oral sex on another man. Although the photo is genuine, Acaveda asserts that there's no authenticity, and issues a formal denial. "Which celebrity picture did you photoshop this from?"
* The Shield was a mercenary type character who was able to put on a normal face, but was obviously unhinged and just waiting for an excuse to hurt somebody. After The Shield broke up and he didn't bother with that normal facade anymore, he began devolving briefly into a "lunatic" character who frequently costs himself matches by trying to perform pointless stunts that only end up hurting himself.
* The Shield wasn't officially a profiler but a Homicide Detective, but this didn't stop him from categorizing the killers he was looking for by psych profile based on the evidence he saw at the scenes.
* The Shield were made to investigate the robbery of a money laundering operation which they were responsible for.
* The Shield, when Mackey and a K9 officer are examining a location where they believe a body can be found:
* The Shield, which included some rather eye-popping allegations: A bank robbery planned by a police officer, multiple suspects killed with weapons planted on them for justification, actually joining the "Bloods" street gang, stealing drugs from the evidence locker for hip-hop producer Suge Knight, and murdering Notorious B.I.G.
* The Shield, with varying degrees of success. Claudette is also pretty good at it, but her moment also comes back to bite her in the ass. She gets a confession out of a serial killer by fooling him into thinking that his sister is dead, and that they will convict him for that crime. He returns the next season, representing himself, and manages to raise enough doubt about Claudette's credibility to get the DA to drop the death penalty. (He was going to spin the Bluff as a hallucination caused by her Lupus medication).

* The shillelagh, in Ireland (and, no, not the little, short cudgels passed off to tourists as shillelaghs, nowadays). The knob on the end of that "walking stick" can pack quite a wallop, especially if it's filled with lead (referred to as a "loaded" stick). Though it could be argued that this doesn't apply that well to the trope in general, as few with any sense of history would describe the Irish as "peaceful".

* The Shinigami have a standard black hakama-and-gi uniform that comes with regulation socks, sandals, obi, etc, but many characters have added unique tailoring (Nemu's minidress) or accessories (Kyouraku's pink over-kimono), and there seem to be no standards at all for hair, tattoos, or jewelry. The only dress code rule that we actually see enforced is that captains are required to take good care of their white division haoris, but even those can be customized.
* The Shinigami/Reaper is a quirky example. While not exactly stoic, he usually brushes off any and all situations by being/looking/talking/acting goofy, putting him firmly in comic relief territory. That is, until the Kishin gets loose. Just as the

* The Shining abilities sometimes lead him to learn about adult concepts he "overhears" but doesn't understand. In one early example, he overhears an older woman thinking about how she'd like to get into the bellboy's pants, but takes it literally, believing that the woman is cold and would rather be wearing a nice warm pair of trousers. Danny repeats this to Halloran, who laughs and says that Danny is going to know all about the human condition before he's ten.
* The Shining all have main characters who are writers with substance abuse problems.

* The Shining, as it represents Jack's growing allegiance with the hotel and isolation from his family.
* The Shining, Bart escaping a hedge maze by chainsawing through the walls.
* The Shining, Dick Halloran reaches his Crowning Moment of Awesome when in desperation he sets his gasoline-soaked arm on fire and punches into the possessed hedge lion.
* The Shining. During its history, it was the site of many unsavory activities, including suicides and gangland hits. As the Torrances settle in at the Overlook, Danny sees ghosts and frightening visions. Danny soon realizes that his presence in the hotel makes the supernatural activity more powerful, turning echoes of past tragedies into dangerous threats.
* The Shining: Features one of the more iconic examples of this trope. Writer Jack Torrance has taken a job as winter caretaker for a hotel with the hopes that the lack of distractions (and lack of alcohol) will let him work on his novel. Some weeks in he is showing signs of going crazy and his wife stumbles on his manuscript, reams of paper with one sentence "All work and no play make Jack a dull boy" typed over and over and over again.
* The Shining film abandoned this climax for a completely different ending.)
* The Shining, for him, was the way that it "blurred the line between the supernatural and the psychotic" — although it seems less blurry than in Kubrick's film version.
* The Shining has a bad temper, and it only gets worse due to the stress caused by the True Knot.
* The Shining has Jack discover the ghost of one of the guests in the bathroom of her hotel room, and Jack speaks to the ghost of the caretaker in another bathroom.
* The Shining has some very strong psychic abilities, at least by the standards of his universe. He has a limited ability to read the minds of those he is close to, an even-more-limited form of precognition, and a special vulnerability to haunted locales such as the Overlook.
* The Shining has some very subtle impossibilities that can only be noticed on

repeated viewings and piecing together different scenes shot from different angles, such as hallways that lead into walls, windows that can only be seen from inside, hotel rooms that seem to overlap the same space, and doors located too close together to lead to separate rooms. There's much debate among the fandom about whether these are a subliminal attempt to disorient the audience, or simply accidental inconsistencies in set design.
* The Shining has the Overlook Hotel, which shows the Torrance family visions of the hotel's opulent and depraved past. It mostly affects Jack, whose alcoholic and abusive tendencies render him the most easily susceptible, but by the end of the movie even the relatively normal Wendy is being bombarded with psychic images of the bloody halls.
* The Shining has this theme throughout, especially in Jack's actions after about halfway through the movie. Accentuated in Jack's conversation with a ghostly bartender about halfway through, in which the bartender echoes this trope.
* The Shining Horace Derwent. One of Derwent's many poorly planned investments was an ailing movie studio that had once been successfully making sappy family films but hit hard times when their most beloved child star O.D.'d on heroin at a party, with the studio covering up her death as a "wasting sickness" she got while entertaining orphans at a children's hospital.
* The Shining included the theory that the film is a metaphor for American Indian oppression in an article, presenting the theory as definitively true.
* The Shining. In the book, a lot of the hotel's history is explained to us. In the movie, we see the ghosts and visions as the characters do — with little to no context or explanation as to what the hell is going on.
* The Shining is a pretty safe bet when it comes to finding deeper meaning in his work.
* The Shining is... bizarre to say the least. Even if all the weird shit that can be observed is all just hallucinations, it'd still have a knack for driving normal people completely insane and into a bloodthirsty rampage. And the ending only makes things more confusing, adding an element of irregular timeflow into the fray.
* The Shining is intercut with one of the same twins covered in blood and sprawled on the floor across the now blood-streaked hallway (pictured above).
* The Shining is ripe with this, putting forth theories like how there are scenes in the film that imply Kubrick helped fake the moon landing.
* The Shining, it is mentioned early on that the hotel was built on an old burial site.
* The Shining. Jack and his son are the only two to experience the hotel's evil haunting. Jack is slowly driven insane in part by his inability to tell his wife what's going on, and his son (being psychic) is getting bombarded with oh-so-horrible ghostly memories. His wife is quite firmly grounded in reality, and in fact proves to be more than Jack or the Hotel can readily handle even after he goes batty on her.
* The Shining, Jack starts talking in his sleep, as he's slowly going insane.
* The Shining, Jack, talking with his predecessor as caretaker, has an example of this.
* The Shining, Jack Torrance, slowly being possessed by the evil spirits in the snowed-in Overlook Hotel, disables the ham radio (the family's only means of calling for help) and the snowcat (their only means to leave the hotel).
* The Shining Jack Torrence screams in his sleep, having a terrible nightmare of killing his family. That didn't quite come to pass but it wasn't without some serious trying.
* The Shining laid the set out intentionally to mess with viewers' (and actors') perceptions.
* The Shining letters, the name of Tom Holland can be seen clear as day, taking over two-thirds of the credits.
* The Shining often feel that the ambiguous nature of the Overlook Hotel's haunted nature make the film scarier, in that it makes it seem like a similar scenario could happen in the real world.
* The Shining One by Nat Schachner, a 1937 sci-fi pulp set in a future war, the

soldiers use "Allison guns" which have revolving barrels firing explosive shells.
* The Shining, one of his first acts is to disable the radio so she cannot call for help.
* The Shining, one of the Overlook's first overt hallucinations is that of Jack's dead (and abusive) father, berating him over the radio that's the only link to the outside world. It keeps it up until Jack snaps and smashes the radio.
* The Shining Ones funny to them. There was some regret by at least the two killers. They wasted a perfectly good barrel of wine!
* The Shining Ones is the true origin of centuries of warfare and machinations in both the Eosian kingdoms and the Tamul Empire.
* The Shining Ones, when they finally held his funeral, the congregation tried (and failed miserably) to contain their mirth. The entire country then spent the next week celebrating his death; his death was both the best thing to happen to them and a great memory to get through the cold winter there. One character, however, wonders if there was any way to save... the wine (which was a particularly good vintage), and is saddened by the fact that Avin pickling in it for a week made it unsalvageable.
* The Shining (only the scene in the ballroom with Grady, the rest of it takes place in the Seventies)
* The Shining parody, with the Simpson family moving into a haunted hotel.
* The Shining paying attention to the sets, but rather cleverly inflicts unease in the audience.
* The Shining) serves the same basic purpose. Danny Torrance initially surmises that certain areas of the Overlook Hotel are just as dangerous as Room 217 and should be avoided.
* The Shining takes a long time for the actual rampage to start, but since you know it's coming, the tension itself becomes terrifying, which is really the point of the movie anyway.
* The Shining. The band wanders around the hotel, encounters the twins, and gets lost in a human maze.
* The Shining, the boy's mother tells him that his father is trying to kill her because he can't get a divorce as a Catholic.
* The Shining, the ghost in room 237 seduces Jack with an illusory youthful form, only to reveal herself as a necrotic old woman during their embrace.
* The Shining: The infamous Grady Twins scene when they implore Danny to "play" with them. Doesn't help that Danny sees a quick cut of their dead bodies after they were murdered by their father when they do.
* The Shining: The Overlook Hotel, a remote hotel in the mountains plagued by evil ghosts. King describes the place as follows: "This inhuman place makes human monsters." It's actually a pretty normal hotel for most of the year- the trouble comes when it shuts down for the winter, leaving a single caretaker family snowed in for months.
* The Shining the pediatrician apparently doesn't think it might be a good idea to call social services for a kid who talks to imaginary people, has an abusive alcoholic father who is an emotional timebomb just waiting to go off, and has a mother who makes flimsy excuses for her husband's behavior. Especially after the kid was injured during one of the father's drunken rages and his talking to imaginary people started after that incident. And there's the fact the kid blacked out from the thought of spending the next few months stranded in an isolated hotel with his abusive father.
* The Shining: The topiary animals outside the hotel, which are brought to life by the hotels' power, act like this. When Jack notices how they are stalking him when his back is turned, he even compares their behavior to "red light", a game he played in his youth.
* The Shining this idea, unambiguously presenting the supernatural as real.
* The Shining, though of course that name came from the original novel.
* The Shining, though the Torrances are only planning a temporary stay.
* The Shining used in the elevator sequence was significantly more watery than Kensington Gore. The sheer quantity of it was impressive, though.

* The Shining viewers, since some episodes spoof this when Johnny Crawfish tells a joke.
* The Shining was translated to "Ondskabens hotel" which translates to "Hotel of Evil".
* The Shining, Wendy sleeps on the couch on the nights Jack stays out late to drink.
* The Shining, when the novel starts to take on its true gripping nature, King does much the same with the policeman who pulls the chef over.
* The Shining which slowly drives Jack mad and torments Danny. At least, this is one of the theories about how it does these things.
* The Shining, who were murdered by the previous caretaker who went crazy.
* The Shining without Danny Lloyd, the young actor playing Danny Torrance, being aware that he was in a horror film. Pretty amazing, considering the ever-darkening tone of the film and some of the horror scenes he is in.

* The Shin Sekai: Through their father Rikuo (1/4-Nurarihyon, 3/4-human) and their mother Tsurara (pure Yuki-onna), Ritsura and Rihan are effectively half-human, 1/4-Nurarihyon, and 1/4 yuki-onna.

* The Shinsengumi, this also provides a convenient device to allow characters like Keisuke Sannan, Heisuke Toudou, and Souji Okita to remain involved in the plot well beyond the points at which their real-life counterparts died.
* The Shins. Interestingly, The Shins got their name from a Flake Music song.
* The Shins' only Hot 100 hit wasn't "New Slang", but the less memorable "Phantom Limb". It also wasn't one of their several entries on either the alternative or adult-alternative charts.

* The Ship: Murder Party are based around this trope. Kill a specific target while avoiding your killer...which is harder than it sounds for a game without very many NPCs that share player appearance, because of the needs system. Don't fulfill your character's needs? You lose control and present your killer with a very vulnerable target.
* The Ship: Murder Party takes place on cruise ships. While some are larger than others, all of them are smaller than real-life cruise ships. The largest one has 7 decks; in real life, 12 decks is an average height. More than that, they aren't as large overall (width/length) as real cruise ships, and there are liberties taken with the layout (for example, not every deck has bathrooms!).

* The Ship Who... series has "shell people", who are placed in containers as infants and essentially become cyborgs, many becoming spaceships (one book has a shell person as a sentient city). * The Ship Who... series is "fardle" and its variants- fardles, fardling, fardled, etc. There's also "nardy" which is a surprisingly effective insult of unknown meaning, and "shellcrack" which is an expletive that only seems to be used by salespeople, who probably invented it on the first place.
* The Ship Who... series: The so-called "brainships" are something basically similar to this, although the "jars" hold more than just the brain. Infants with otherwise fatal congenital defects (and rarely older children who have been left quadriplegic by accident or disease) are encased in a life-support system, with a control interface directly attached to their nervous system so that they can interact with the world via computers. They make great starship pilots because the direct neural interface improves their reaction times and they have minimal life-support needs.

* The Ship Who Won, by Jody Lynn Nye solo: The brainship Carialle once suffered a fuel tank explosion as the result of sabotage. As she drifted in space, she detected movement on her outer hull, but was unable to generate a signal to get the attention of whoever it was. Later rescued, repaired and returned to service, Carialle re-encounters the salvagers after a considerable period of time. The younger members of the group are profoundly shocked and apologetic; they hadn't realized that the ship they had salvaged parts from was a brainship. Their leader, however, certainly knew - he stole Carialle's ID plate from the wall of the control room. He winds up going to prison for a long, long time. Carialle, however, manages to help the younger crewmembers get away, since they helped her resolve the current crisis.
* The Ship with the Flat Tire: Everything on the U.S.S. Carnation was bass ackwards, so they called her "ASS-1". The worst thing that happened to the Carnation waws that she left the shipyard. The next worst thing was that Ensign J. Roger Westbury was assigned to her as supply officer.

* The Shivering Truth episode "The Diff", a geek is split down the middle by another character, with one half still retaining his original meek personality and the other now being a macho alpha. They go on to live their own lives but are both paranoid that the other is having a better life than him.
* The Shivering Truth really depends on which season you're watching. Season one leans more towards comedy, while season 2 leans more towards horror. Both are still a mix of both though.
* The Shivers, one of Todd Sheets's many obscure little films, has a pregnant woman

* The Shootist notable for being John Wayne's very last film. Also another Western that takes place after the romanticized age, right after the turn of the 20th century.
* The Shootist shows newspapers featuring news about the death of Queen Victoria, and the Edwardian age has begun.
* The Shootist. Wayne was also highly self-conscious of his public image, considering it unmanly to be photographed in production stills while makeup was being applied with a powder puff. He also insisted on using a particular reddish tint of makeup, which flattered his complexion but created headaches for cinematographer Bruce Surtees. Most importantly, he insisted on toning down the profanity and more explicit references to cancer from the original novel.
* The Shootist would've shot a guy in the back, the script was changed, and the final shootout played to Wayne's satisfaction.
* The "shoot the cowards" function got handed over to the "barrier troops", specially created for the purpose.
* The Shop Around the Corner are built around this trope, with two Internal Reveals. Half-way through Alfred/Joe finds out that rival Klara/Kathleen is actually his secret sweetheart, and the rest of the film sees the audience waiting for Klara/Kathleen to find out the truth.
* The Shop Around the Corner's character fall in love with a guy she's online dating.
* The Shop Around the Corner, the remake of which is the film under discussion.
* The Shop Around the Corner was based on an obscure Hungarian play that was never translated into English.
* The Shop is also unfortunately correct in wanting to keep the two in custody, reasoning that if Charlie's abilities were to become widely known, virtually every other power on earth would stop at nothing to gain control over her. As misguided as the Shop is for planning to use Charlie's abilities for its own ends, in its own

twisted way it's keeping America safe.
* The shop NPC has a "Pseudo-relationship value" that involves the "figurine" items you get in the gift vending machine. Simply enter the card shop with one of five "gold figurines" (I.e. If you give him all 5, you will unlock a new pack along with 50% discount on all packs (including the unlocked one).
* The Shop on Main Street is a Slovak film set in 1942, dealing with the deportation of the Jews from Slovakia (to their deaths in Nazi concentration camps). Except for one person who is connected to the Slovak resistance, none of the Christians in the town have any problem with the Jews being stripped of their property and sent away. The protagonist's wife is overjoyed when she finds out that he will be receiving a confiscated Jewish shop.
* The Shop on Main Street is set in 1942, when Slovakia was a fascist puppet state of Nazi Germany. The protagonist's wife sincerely believes in this trope. She's overjoyed when he is assigned custody of a shop that has been taken away from its Jewish owner. She sincerely believes that the woman who owns the shop must have a hidden pile of money somewhere, and keeps pestering her husband to find it.

* The Short Second Life of Bree Tanner as to whether the Volturi secretly wanted the Cullens dead or sincerely wanted Victoria stopped.
* The Short Second Life of Bree Tanner, Bree spends a lot of time wondering if Diego (her love interest) has some special bond with Riley (the leader of their coven) that means that he would be willing to betray her to Riley. This, plus a scene where it sounds like Victoria is suspicious that Riley's loyalties might be swayed from her (keep in mind that she controls Riley via his feelings for her) to Diego, makes it sound very much like Diego and Riley are lovers and his relationship with Bree is just platonic affection. It really doesn't help that Diego's interactions with Bree (a peck on the cheek, holding hands, etc) could just as easily be done between friends and that Bree's constant insistence that Diego trusts her over Riley sound like she's in denial.

* The short story "Gray Matter". A man contracts a fungus from a tainted can of beer that eventually transforms his entire body into a huge fungoid blob monster, and makes him crave beer (and flesh).
* The short story "Grownups" by Ian R. MacLeod: as they near puberty, young teens are societally expected to drink "bitter milk"—bought at the supermarket, in brand name and generic versions. Apparently this makes them incapable of reproduction and unassisted sex: sex involves a third participant, known as an "uncle", described as a fat man, in between the male and female [squick factor]. "Uncles" go along on honeymoons with newlywed couples; in the story, people comment on how nice it is that a young couple have the same "uncle" that the groom's parents did [more squick factor]. The "uncles" bear the children, requiring a caesarean section. The younger brother of the groom and his girlfriend surreptitiously pour out the actual "bitter milk" and replace it with regular milk thickened with flour, develop normally, have a sexual relationship, and the girl becomes pregnant. The story ends without a neat resolution: the girl thinks she will have to end up becoming an "uncle" (the story mentioned children speculating that a particular boy will become an "uncle", but leaves open the possibility that girls may also) and the boy has no idea what his future is.
* The short story "Hands" revolves around a teacher who's been falsely accused of an affair with a student and run out of town.
* The short story "Heavy Planet" by Lee Gregor is probably one of the earliest examples of this trope. The planet's gravity is so intense that the alien describes the metal of a crashed human ship to be like rubber, poking a hole in it with his bare finger.

* The short story "The Sea and Little Fishes" has the townspeople of Lancre going through ridiculous contortions to find Nanny Ogg. They know where she is; she's at her secret still in the woods. But actually acknowledging this would be unthinkable, so they wander around
* The short story "The Toys of Peace" by Saki deals with this trope, and is based on an actual 1914 London newspaper story. In short, the Moral Guardians of the story are worried that giving young boys army figures and other war-themed toys would encourage them to be violent, so instead they propose "peace toys" which are miniature civilians in front of the civil buildings (i.e. the YMCA) holding the tools of industry. When the narrator presents these toys to his nephews, the boys simply adapt the buildings for their existing military figures and play war games anyway.
* The short story "The Under Dog" (1926) is another example by Christie. The victim was Sir Reuben Astwell, a wealthy businessman and a man of violent temper. He had poor relations with most of his family members and frequently quarreled with them, he managed to alienate his loving wife by threatening to get rid of her right-hand-woman, he was verbally abusive to all of his employees, and he owed part of his wealth to cheating business associates out of their share of the profits in business ventures. Almost everyone has a motive and nobody seems to mourn him. The murderer turns out to be Owen Trefusis, Reuben's loyal secretary for 9 years. He was noted throughout the story to be a particularly meek, patient, and soft-spoken man. It turns out that Reuben was systematically abusing Owen for years, using him

as something of a punching bag for verbal abuse. Whenever anyone else got Reuben mad, he took out his anger on Owen. Because Owen, unlike the others, never talked back. During the last session of verbal abuse, Owen briefly snapped and killed his employer. The murder was not even premeditated, and Owen had nothing to gain from it.
* The short story "Three Points of Glory" revolves around this trope: The world of Sheliak, facing invasion by Clan Ghost Bear and having no military at all, decided to bid their All-Star (American) Football team
* The short story "Who's Cribbing?" is about a tinkerer named Todd Thromberry who invents a way of viewing the future, which he uses to steal works of fiction from after his lifetime, pass them off as his own, and leave the real author to be accused of plagiarism. At least, so claims the guy who is accused of ripping off Thromberry's stories.

* The short-time X-Man Marrow also is known for her tendency to dual-wield her self-made knives or clubs.
* The short "Tot Watchers" has the duo try to protect a baby who wanders into a construction zone.
* The short "untold" story of young Peter Parker called "The Punch!" from the Amazing Spider-Man Family Volume 1 Issue 3 partially uses this trope for his super strength (his other powers subvert this trope). It takes place after Uncle Ben died and Peter decides to make Spider-Man a hero. He stops a robber by punching them with what he calls a "tap". However, Peter couldn't actually control his strength and the robber nearly

* The Short Victorious War, boosting the Grayson Space Navy while they built up shipyards for more capable designs.
* The Short Victorious War, centers around Hancock Station, and the defense of it during the opening hours of the First Haven-Manticore War.
* The Short Victorious War Harris, his wife and kids, the cabinet, and the heads of the most prominent Legislaturist families, are there for the president's birthday party. And then blames it on subversive elements in the Navy, using it as an excuse to accuse the Navy's loyalist officers of treason when they get back from their not-so-victorious conflict with Manticore.
* The Short Victorious War Haven is mentioned to be backing the Zanzibar Liberation Front against the Manticore-allied Caliph of Zanzibar, mostly to use them as cover for raids on Manticoran convoys ahead of full-scale war.
* The Short Victorious War, the cabinet secretaries clash over how to solve financial crisis.
* The short "Why Kitten Hates The Tau" plays with this — it might be a flashback explaining the eponymous matter, or it might be the Emperor trolling Kitten.
* The shot clock was introduced largely to eliminate the viability of boring "four corners offense", which consisted mostly of passing the ball around without even

trying to get a shot for as much as five minutes at a time.
* The Shotgun Arcana, Ray Zeal has a horde of serial killers, rapists, and cannibals working for him. Among them is a demigod and one of the Thuggee.
* The shot of Goliath alone in the jungle at night is identical to a shot of Ichabod from
* The shot of Lemongrab with his eyes rolled back into his head, with only the whites exposed, could count as this. That just came out of nowhere... *shudders*
* The shot of Perry using a secret door to enter his lair from "Rollercoaster" is reused in both "...The Musical", and "Last Day of Summer".
* The shot of thousands of troops lined up to welcome the Emperor in
* The shot propels the card into an entirely different part of the city and into the leg of a person.
* The shot put thrown by Kaede Akamatsu in Chapter 1 missed Rantaro Amami, and the Mastermind hit him with an identical one afterwards, fooling everyone - including Kaede herself.
* The Shout, Crossley admits to murdering the children he had with his Aboriginal wife: claiming that this a cultural norm and acceptable within the tribe, so long that it is done with a few weeks of birth.
* The Shout: There is no way of telling if the lightning strike that kills the chief medical officer at the end of the film is a result of Crossley's supposed magical powers, or merely a natural phenomenon that appears to magical because of the story Graves has been listening to.
* The Shovelwarewolf in a microwave, but he'll settle for just smashing the cartridge or disc if he doesn't have the resources available for anything fancy.
* The show actually came about by the creators talking about this trope.
* The show actually has several episodes whose plot consists of him discovering a new power but not being able to control it at first, such as
* The show actually manages to pull a nudity joke despite the characters parading around naked all the time anyway. Rainbow Dash bursts into Fluttershy's room while she's asleep and rips the covers off of her, only for Fluttershy to cover her naked self and blush.
* The show actually subverts the cartoony way of not really having any tertiary sexual characteristics, like the eyelashes, as none of the girls (or if anyone's wondering, the boys) have any. The only characteristic the girls are given to look different are that they're drawn with full lips (with the exceptions of Cornchip Girl and a few others). In fact, the
* The Showa-era shows (1971-1989) were about ordinary people being subjected to
* The show allowed ships to travel faster than light using hyperspace, envisioned here as an alternate dimension in which travel is much more rapid. More advanced (or, at least, bigger) ships could enter and exit hyperspace at will, while less advanced ones could still travel faster than light using a
* The show also appears to fall victim to this trope. For example, Sharon Marsh and Gerald Broflovski are very stereotypical Baby Boomer parents. Even though, realistically, Stan and Kyle should have stereotypical Generation X parents,
* The show also at times made no attempt at hiding recognizable company logos on buildings in Caprica, and one early episode features a crystal clear closeup of the spines of a few of the books in Adama's cabin—revealing them to be Reader's Digest Condensed Books volumes! Eagle-eyed viewers will also see recognizable street signs and traffic lights in the Caprica scenes as well. Given the fact the series is predicated on Caprican civilization paralleling Earth's, these are more likely to be Easter eggs than accidental anachronisms.
* The show also brought a revival to alt-rock band Blonde Redhead's song "For the Damaged Coda" after it was used in the episode "
* The show also contains numerous intertextual references to books, showing how both the characters and the show are all stitched together from different pieces of fiction.
* The show also depicted Caesar's assassination, of course. And there was a scene where Cicero sent a message to be read in the Senate in his absence, which turned out to be a scathing attack on Antony. Antony demanded that the clerk read out the

whole thing and then
* The show also developed the inverse law of utility and special effects cost. This is why you only see Nathan soar across the sky once, while Micah repeatedly took control of machines — much easier to shoot. Greg Grunberg (playing Matt Parkman) said his character had "
* The show also does this with some non-tool products in the background, such as "Nickers" and "Runch" candy bars.
* The show also features a background running gag of a male werewolf / female squid couple. Mark notes that finding a partners whose parts match can be difficult, but by the last episode of the first season, those two (as seen through a peephole) seem to be working pretty well together.
* The show also features an affair between Rachel's college boyfriend, Brody, and their Dance instructor, Cassandra July. It's implied that this is part of the reason she keeps him as her T.A.
* The show also features a species that's embroiled in an offscreen interstellar war with their holographic servants (called "photonics" by their creators). While most of the episode's really about the aliens' prejudices and suspicion towards the Doctor, a benevolent hologram, it also deals with the shock and sense of betrayal they felt when the holograms that many had considered to be friends and equals suddenly rebelled.
* The show also features the Barenaked Ladies song in the page quote.
* The show also features the mother of all interdiction methods: the Attero Device. Once activated, it disrupts the hyperspace frequency used by Wraith ships (and
* The show also features the Zabi siblings who manage to be a four man version of this. On the one side you have
* The show also gets a lot of dramatic mileage out of Sisko being the Messiah of a religion he
* The show also had a fair bit of fun playing with this, showing us Frasier doggedly pursuing someone (through a blizzard, say, or over a waterfall) only to charge them with a minor-sounding crime which turned out to be far, far more serious than the description made it sound. (E.g. "That's the last time he'll fish over the limit!" → The crook's catch was measured in
* The show also mocks these sorts of procedures regularly. A facelift is described
* The show also plays with the "seedy motel" end of the scale. Every time the Simpsons have to leave Evergreen Terrace, they end up staying in the "Sleep-Eazy Motel", where part of the sign is burned out. And every time, Mayor Quimby is in a nearby room with a bimbo.
* The show also provides a subversion of this: Homer, who has been discovered to be a foretold prophet of the secret 'Stonecutters' organisation, has briefly gone through a mild
* The show also pulled this off in the opposite direction as well. In spite of the fact that the show would often skewer liberals and progressives, the show ended up becoming very popular with those very same demographics. Partially because of the show's explicit or implicit condemnations of some of the more negative aspects of American conservatism, and also because the views of many of the liberal and progressive characters that they show used to take potshots as those values were so over-the-top that all but the most extreme left-wing liberals thought that the characters were taking it too far.
* The show also re-popularised anime merchandise and conventions. There has even been talk in the city council to make the local high school dress code match the one seen in the series. In turn, the girls became official honour residents of the city.
* The show also takes a page from pageantry by awarding "Miss Congeniality" to the kindest queen of the season. Originally, fans voted on the recipient, but this practice was criticized by the queens since viewers would simply pick the fan-favorite regardless of her personality. Come Season 10, irregularities in the voting system caused the results to be scrapped and the show had the queens themselves vote for Miss Congeniality like in actual pageants. Viewers accepted the

winner, Monet X. Change, since she likely would've won the fan vote anyway, and the show has done it this way ever since.
* The show also was born out of the direct-to-video movie of the same name, which later became the

* The show appears to measure general awesomeness by whether you can do this or not; Stannis and Tyrion are both able to cut ridiculously cleanly in the Battle of Blackwater (
* The show as a whole is a deconstruction of formularic sitcoms like
* The show assumes this at times, too and even makes it appear as if Germans are evil by nature. In a Halloween episode, "Treehouse of Horror XVII", Homer is turned into a giant insatiable blob and starts eating people. He eats some (clearly 40-something, American) Germans at a German festival (
* The Showa version ultimately wins thanks to his greater agility, intelligence, and that he's a much more experienced fighter.
* The show became an unpaid advertisement for camping around Mt. Fuji. Indeed, since the show began, there has been
* The show began going through one during the fourth to sixth seasons
* The show/book simply slathers on the innuendo and double meanings whenever a particular two characters are on screen, regardless of on-screen interaction or otherwise.
* The show both avoids and endorses this trope through its first two seasons. Despite an agreement not to interfere with the worlds they arrive in, the Sliders tend to get involved in local politics and generally try to make things better. Unless they are on any kind of doomed world, in which case they typically just try to survive until the jump, unless the apocalypse will come before the wormhole, in which case they're destined to stop it.
* The show broke with the conventional soap opera conventions of storytelling during its February
* the show, but they could never find a way to do it properly until now.
* The show cast actual capoeira practitioners as extras when they needed an exotic martial art for the Jaffa in "The Warrior".
* The show caused a lot of this on fans in the last episodes of Volume 3, which had a few shocking deaths in succession:
* The show claims that the Trilathon stones at Baalbek are a landing platform when in reality they are laid in a line that would be very difficult to land on.
* The show claims the House of Windsor is "one of the oldest and most powerful families in English history." This will be a surprise to the British considering the House didn't exist before 1711 and has undergone several shifts since then.
* The show contained frequent references to popular culture that didn't exist until after
* the show couldn't afford to be animated starting a plan to have a car wash to raise enough money to at least get the animation back.

* The show deliberately set out to invoke this trope in tribute to the person on which it's based - while the real Hamilton wasn't necessarily known for speaking fast, he was sure as hell known for speaking a whole
* The show did a good job of playing up Ofdensen as being a secret badass, but he really shines as a Battle Butler when you
* The show did an entire half-episode in this style, with an unseen and unexplained narrator referring to Dexter as "Blackfoot" (because of his boots) and Dee Dee as "Slim" (
* The show did a pretty good job on the Absorbing Man, but with one change: The

comic version of Absorbing Man is capable of growing to gigantic heights depending on how much mass the object he's absorbed has. The show downplays the
* The show did at least explain what exactly Nicole saw in Richard in a very charming episode. Better explanation than a lot of other examples on this page.
* The show displays some especially preposterous examples of this, including the Riddler abruptly appearing on the Justice League computer and communicating them via live feed (this happens more than once). Of course, that comes from an episode that describes the center of a black hole as similar to the calm center of a hurricane and that shows Lex Luthor watching three Superfriends fixing a satellite on a computer screen;
* The show does play this for comedy at least once, in an early episode where Cerreta and Logan are interviewing a video store clerk:
* The show does this a few times, but two stand out. The first is when Root has kidnapped Finch and has just drugged a nearby woman's drink with painkillers:
* The show does this all the time with the elevator. Rides in this thing last long enough to hold surprisingly lengthy conversations. Since the building they're in is no more than a handful of stories tall and the conversations can last up to a minute, it can on occasion stretch suspension of disbelief to the breaking point.
* The "Showdown" music (without Strong Bad's vocals) is reprised with Homestar's training montage for the animated version of "Strongest Man in the World".
* The show entirely side-steps the (unconfirmed) hints from the novels that Brynden Tully might be gay or asexual.
* The showerhead from "The Singing" is animated smoother than the 2D characters too, with eyes, a nose and a mouth (in other episodes, it is a different shower, which is either inanimate
* The show establishes that the translators work directly from thought patterns. It also explicitly establishes that it can detect what gender an organism is, even if that organism is a bodiless cloud of energy. Both of these concepts were completely ignored after the episode in which they were introduced.
* The show even points out that such gestures can be considered creepy and stalker-ish if the intended recipient does not welcome the gesture. This is referred to as the Dobler-Dahmer Theory. The example given: In college, Marshall sneaked into Lily's dorm room to sing her a ukulele song to ask her out. Lily was interested in him and so it worked, like Lloyd Dobler with the boombox outside the apartment in
* The show eventually introduced an actual super zero with Justice Gene. The only "hero" (read: a random schmuck in a DIY uniform) who thinks the League Of Super Evil are a genuine threat to mankind. Voltar is actually delighted at this, as it means that somebody finally recognizes him as an bonafide villain.
* The show even went so far as to have a whole episode with a plot based around the Doctor's singing, in which he becomes a celebrity to a race of aliens that have never heard music before. (Ironically, that episode - "
* The show evokes the page header image; the mechanoid Kryten is at a huge disadvantage in life, as Lister points out, because he is programmed to be absolutely truthful. Lister sets about coaching Kryten in lying, beginning with small steps: holding an orange and asserting it is a banana, or vice-versa. Kryten finds even this to be hard going and his voice circuits crash whilst trying to repeat the falsehood.
* The show faithfully recreates the novel's trial of Oberyn Martell against Gregor Clegane over
* The show featured one of the more cynical takes on the role of IID, particularly in the first season. Major Reed, the head of IID, is Deputy Commissioner Ervin Burrell's pitbull, preventing the Barksdale detail of Cedric Daniels from pursuing leads that Burrell doesn't want them pursuing. It's got nothing to do with making sure Daniels and his team were following the law; it was purely about making sure they are following Burrell's orders.
* The show features such an episode, only instead of a building, they are all stuck on the Alpha Site planet and unable to leave until the murderer is found. Tensions mount between the three races present, with the leaders under a lot of

pressure to keep it from turning into a shootout. Accusations are flung around and the humans are stuck in the middle. The murderer turns out to be an invisible Ashrak, but the relationship between Earth and its two allies never quite recovers.
* The show features Terri, who is desperate for a baby yet can't get pregnant. Meanwhile, the religious celibacy club president
* The show features the franchise's first gay couple, Paul Stamets and Hugh Culber, played by queer actor
* The show filled with all kinds of fantastical and sci-fi threats, but Mad Dog is considered one of the scariest villains to appear — even though (or perhaps because) there's nothing supernatural about him aside from being an anthropomorphic dog. A big part of this is due to him being a disturbingly authentic portrayal of a
* The show finally has one after a number of single-ship engagements, although the titular ship doesn’t actually participate. The fight is between the fleets of two rival races. It goes on for a bit, and several ships on both sides are destroyed, before both fleets are called off.
* The show finally premiered on Japanese Television after being a sub-only release on April 28, 2021, 5 years after its American premiere, on Nick+ via
* The show first gets one with the episode "Tactical Village". Fairly realistic in that it's a training scenario for a group of cops (they're using training rounds in what looks like real guns) but nobody seems to be wearing more protection than goggles. And they get shot in the chest at a couple of feet!
* The show first ran the "sadness is illegal" schtick in the 7th Doctor episode "
* The show flip-flopped on just how established Diana was, but her identity was never a secret; it was her super-persona that was a secret from her family.
* The show frequently addresses this, as many defendants plead 'not guilty by reason of mental disease or defect' (which is how they phrase it) and court/prosecution-appointed psychiatrists are often featured for this reason; rarely are the defendants actually found to be legally incompetent to the degree that is required by law for such a plea to be accepted without trial, and even fewer actually have this plea accepted by a jury. The Catch-22 bind is often addressed in episodes where the situation is inverted; the defendant clearly
* The show frequently alludes to its fallibility and inadmissibility in court, at least.
* The show frequently makes reference to the "Church of Practicology", which was supposedly created by Stan Lee. Or, as its members believe, by "an alien king living inside Stan Lee". At one point, Tracy Jordan wants to switch religions and is shown being interviewed by the Church of Practicology, but his ramblings are so insane even they won't have him.
* The show frequently shows railwaymen screwing up, causing no end of crashes and delays. But of course, the engines will nearly always be blamed for it. In "Thomas Comes To Breakfast", for example, Thomas crashed through the station master's house because a cleaner had fiddled with his controls but the Fat Controller still scolds Thomas for it.
* The show gives a reason ship-board transporters won't work, but they neglect to explain why they can't use the shuttle's independently-powered transporters.
* The show gives us the Ninjas' True Potential, which is essentially a Super Mode unlocked when an elemental master overcomes a significant psychological barrier.
* The show goes on to reveal that there are significant limiters in place to protect the pilot's brain, but this is seemingly dependent on the user; in one episode, Mikazuki's default settings for the Barbatos are so high that when another member of Tekkadan tries to pilot the machine it overloads his brain and renders him temporarily comatose.
* The show got his own identity by making many of the characters different from the Looney Tunes they were based on, Buster and Babs Bunny are
* The show had a couple of healers, among them one who took onto himself the ailments he was healing. His was a miserable existence growing more miserable with every healing until finally
* The show had a minor villain in the school's lunch lady, who tried to kill everyone in the school by dumping rat poison in their food. Buffy had accidentally

acquired telepathy at the time and heard her thoughts, allowing Buffy to stop her.
* The show had an inverted version of this: in an alternate universe where Lex Luthor kills The Flash, Superman returns the favor, and the Justice League becomes the "Justice Lords," a totalitarian force that
* The show had a sort of version of this in the second season. Trent became jealous of Duncan and Gwen's friendship, which makes some sense, but also became a ridiculously-clingy stalker and, weirdest of all, out of nowhere developed a supposedly-longstanding obsessive-compulsive fixation with the number nine. Seriously. Different than many of these examples because Gwen did
* The show had a total of 10 episode titles, including the non-produced ones, with the word "doom" in it. (In fact, nearly
* The show had, in America and a few other countries anyway, a stage adaptation of the anime simply called
* The show had one-shot villains for the first episode of each season; an enemy who was reasonably threatening, but who was ultimately defeated by Buffy before the credits roll: Luke in season 1, Absalom in season 2, Ken in season 3, Sunday in season 4, Dracula in season 5, and Razor in season 6. The Season 7 opener is a somewhat confusing beast, with Buffy fighting a group of malevolent spirits who are indeed defeated by the end but
* The show had the heads of various 19th-21st-century personalities preserved in jars, including
* The show had two different ways the villain could have been beaten in a more satisfying manner, but both of them were shot down in-story:
* The show had two Silly Song-based sing-along tapes: "Very Silly Songs" and "The End Of Silliness?".
* The show has a black Guinevere, along with her brother Elyan, as well as the black knight, Pellinore. While there may have been Africans in Arthurian Britain, and 13th century romances have the Saracen (Arab) Sir Palamedes and the Moorish (North African) Sir Morien, it's unlikely that there were many Afro-British knights or queens.
* The show has also been sold and re-made in other Latin-American countries,
* The show has also discussed gender roles in Kurt and Blaine's relationship. While Blaine might appear to be more outwardly masculine, he has been said to express emotion in traditionally female ways (like not being afraid of intimacy, being more open about crying), unlike Kurt, who in later seasons, expressed emotion in a more traditionally masculine way.
* The show has also made certain historical and cultural characters more notable among geeks who watch the show, but mostly as part of a surreal sketch that has little to do with whom they actually were.
* The show has a mother-daughter variant, where Catherine Madison pressures her daughter to be just like her. When Amy refuses, Catherine uses magic to
* The show has an automobile company that was founded by the descendant of
* The show has an entire catalogue of songs that were tried out and subsequently cut during its various stages of development. Several of these were performed as part of a one-off benefit concert,
* The show has an episode about thornoids, which are sentient drugs meant to increase strength and muscles size, but have side-effect of growing thorns.
* The show has an interesting variation of the trope in that the time to travel between any two points seems to decrease each time. The first time they travel somewhere, it takes an episode or more; afterward, it takes less and less time until the trip is reduced to taking place offscreen. This can be explained by the simple fact that they don't know the route the first time, and will have some kind of beaten trail or markers to follow on subsequent journeys so they won't need to keep stopping to get their bearings.
* The show has a rare example where the student, Jeff, is actually older than the teacher, Prof. Slater. She initially refuses to date him while he's taking her class, but they get together in the next semester. Then they break up, there's a rather bizarre love triangle with another student, and Slater disappears after confessing her love for Jeff at a crowded dance in an attempt to one-up Britta.

* The show has a variant when Mr. Turtle whines "This car trip is soooooooo long! When will we get there?!" and Mrs. Turtle comments that it's Franklin's job to say that.
* The show has a variation on this with the Dax symbiont being old friends with Benjamin Sisko, despite the symbiont being several times his age. This is why Sisko calls Dax "old man" even though he's now in the body of a young woman.
* The show has a weird version of this with Cronus, the Goa'uld who executed Teal'c's father in a
* The show has been toying with these in later seasons. "You're Getting Old" and "Assburgers" plays this mostly straight for Stan; "1%" flips this trope around in its handling of Cartman.
* The show has casually Lampshaded S.T.A.R. Lab's lax security enough that it has become one of its
* The show has fun with it, and gave the trope its original name "Turning The Other Cheek": Buttercup tells Bubbles that they shouldn't be "turning the other cheek" on an offer from a league of superheroes, and that offer has a twist: They're not asking the PPG to join (as the PPG has been trying to do, and were rejected simply for being girls) as Bubbles expected (and she was planning on rejecting the offer of course),
* The show has fun with this quite often when dealing with the crustacean life-form Dr. Zoidberg. Losing organs is merely a minor nuisance for him. In "
* The show has Goo and Cheese, with an episode for each centered on keeping them out of the titular Home. Of course, it doesn't work.
* The show has had some problems with this due to its exceptionally long run. Under various excuses, the new series has "modernized" such Zeerusted elements as the TARDIS interior (which has, on a few rare occasions, had a deliberately
* The show has, like the original comic book listed above, Homelander, who uses his powers to fuel a
* The show has occasionally had the Doctor and his friends come up against evil Godlike beings and Lovecraftian-style threats (although not quite as explicitly Lovecraftian as the
* The show has parodied this a couple of times. On one occasion, a character's insanity manifests itself as the belief that "Kate" faked her death. Another time, a character suggests that William Griffin faked his death (despite the body having been found), prompting another character to comment on how unlikely that would be.
* The show has perhaps the most famous TV mecha-mook, Dr. Zin's robot spy. It's a spider-like robot that can take an incredible amount of punishment, as the Quest family learns when it makes its escape from a military base. They throw small arms, flamethrowers and tanks at it, and nothing makes it more than momentarily pause.
* The show has several accurate representations of ancient Roman funeral customs. Niobe is cremated and her ashes buried. Caesar is, of course, burned on a huge pyre in the Forum. Eirene asks not to be burned, but buried with hers and Pullo's child, which he does. Pullo later strangles Gaia after she confesses to killing Eirene, and Pullo unceremoniously dumps her body in the river, thus condemning her spirit to unrest.
* The show has several examples of how the United States (and to a lesser extent Canada and Mexico) have been broken up (There is also a map first shown in
* The show has some blatant stereotypes by modern standards, including an almost complete absence of
* The show has taken a few occasions to break from its irreverence and do this. Most important was the end of Season 5's 'Kenny Dies' episode as the
* The show has that gag about a shark that can chase you on land on its "The Thunder Lizards" segment.
* The show has the Winchesters discover their lives are chronicled with remarkable accuracy in a series of pulpy novels. They track down the reclusive, alcoholic author, Chuck Shurley, who is shocked to discover his fictional creations are real and tells them he just wrote a Vonnegut-like scene in which he is confronted by his characters.
* The show has this as a recurring debate between Lexa and Clarke. Lexa believes

that a leader must turn off their emotions and only make decisions based on ruthless, pragmatic logic. Clarke argues that, unless you're open to forming emotional connections with others, you'll never be able to understand them, and that Lexa hasn't actually gotten rid of her emotions, but merely kept them from outwardly showing.
* The show has three Easter specials, "An Easter Carol" and "Twas The Night Before Easter".
* The show has two in one cast; Rev Bem (Reverend Behemiel Fartraveler), a member of a
* The show has two in the "Biggest Douche in the Universe" episode. Early on, in a fit of frustration with John Edward, Stan calls him a douche and goes on to say that he nominates him for the Biggest Douche in the universe award. At the end of the episode, some aliens show up to reveal that Stan's nomination apparently got through. Not only that, John Edward
* The show increased African-Americans' knowledge of and attendance to America's Historically Black Colleges and Universities. Of course, that was arguably part of the show's intent.
* The show in general is one of the most famous examples of this trope in Western Animation.
* The show inverts and parodies this trope and gives us the rare fundamentalist
* The show is also credited with Mr. Freeze's backstory, who up to that point was just a cold-themed villain who turned up occasionally. The cartoon turned him into an
* The show is a near-perfect demonstration of this trope in action. In the early seasons, the focus was firmly on Buffy, the warrior; Willow, the wizard, was limited to the occasional ritual spell cast from the safety of her own home. In a fight she was no more help than
* The show is an inversion of this. The main character is a brilliant detective, but his superiors find it easier to believe that he can solve cases with psychic powers.
* The show is a web series which pits two fictional characters against each other in... well, a battle to the death. The show features fairly extensive research on the combatants involved, but many of the outcomes are taken a bit too seriously by various fans of the losing side. While many complaints
* The show is bad about this in general. Just about everything that gets an introduction forgets it. When Leo was revealed as a whitelighter, he explained that they're not supposed to get directly involved in their chages' lives, but later episodes have witches calling for their whitelighters as standard procedure. Leo originally refers to his bosses as "a group of elder whitelighters, called The Founders," but every subsequent episode has them called "The Elders." When Sam, a former whitelighter, uses memory dust on the sisters, Leo says he must have kept it from a former witch charge, but later, memory dust is explicitly a whitelighter's tool that witches need to get from them (possibly justified if you assume Leo's lying because he doesn't want them knowing how to get it). Paige, who was present when they originally defeated the Source, asks "How did
* The show is being geared towards children, for whom animal characters form an automatic shorthand for child-friendliness. So much so, that if the show
* The show is built on a very consistent pattern: The first half is detective work, the second half is the prosecution, and the episode ends with the verdict. Some episodes avert this by having the criminal caught and convicted within the first 15 minutes. The audience knows that a stunning twist or a second crime is about to occur because the show violated its format. And if they didn't, the commercials tell them, especially in later seasons where they inevitably concluded with: "You won't believe the twist in the last five minutes!"
* The show is filmed on location in Miami, and Jeffrey Donovan is a martial arts expert who does most of his own stunts; so he really is being
* The show is fond of double subversions in general, possibly because it's a sneaky way to get
* The show is inconsistent with its time travel. Some episodes claim that it's not

actually time travel. They're just traveling to a parallel dimension that is 200 years behind. Thus, any changes to this timeline will not affect "their" present. Other episodes have the protagonist communicate with the future by placing ads in newspapers, something that wouldn't make sense if this was a parallel world.
* The show is notable in that the alien technology is often adapted slowly, with
* The show is set in Hell's Kitchen, which in season 1 is slowly rebuilding from
* The show is surprising (but not to me)ly bloodless for a series where people die on-camera every episode, often for vampire-related reasons (which generally involve, well, blood). Especially egregious are a scene in the first season where a person is eaten alive with no blood spilled, and another in the second where someone
* The show is typically traditionally animated, but it frequently makes usage of stop-motion and puppetry.
* The show is ultimately the telling of a Renaissance , in which Humans are the center of the new empire, trying to deal with the absence of the
* The show is very clever in how it plays with this trope in relation to Tommen. In the earlier seasons, Cersei and her father's preference for a brutal psychopathic maniac (Joffrey) over a kind and sweetly eccentric little boy (who loved to spend his time playing alone with his cats) was used to make the Lannisters seem even more ruthless and unhinged. Then, Tommen comes to power, and it's clear he actually is much too weak and in no way psychologically equipped to make the harsh decisions required of a king and his reign ends up being at least as disastrous as his older brother's.
* The show itself can be literal-minded at times when it comes to oddities that can occur. For example, a "hair towel" is a towel that adds hair to whatever it touches. It's not limited to Odd Squad's rules, either — "desk duty", for example, is building desks, not being forced to stay inside and not solve cases.
* The show itself did one of the most explicit, memorable versions of this joke in "
* The show itself mostly avoids this, with adorable characters such as Me-Mow and the Cutie King being evil and the comparatively hideous Cinnamon Bun and Tree Trunks being the sweetest of the characters.
* The show itself was in development for at least two years, since 2012, before officially being announced at the 2014
* The show itself went through this. In the first seasons, many characters smoked; apart from the chronic smokers Patty and Selma, so did Ms. Krabappel, Mr. Burns (cigars), Skinner, Krusty, Troy McClure, Otto, and most of Moe's clients. Even Homer was seen smoking from time to time. This was downplayed as the series continued and smoking became less common (it should be remembered that The Simpsons have been going for 30 years) to the point that nowadays the only characters that are regular smokers are Patty, Selma, and Krusty.
* The show itself, which has faced accusations of homophobia due to this running gag has had a few of these moments, such as "outing" a pair of cosplayers going as Sam and Dean. That doubled as a
* The show likes to lampshade its hand waves, since it makes no secret of operating on the
* The show lost budget between Season 4 and Season 5, by which time the producers had decided to concentrate on
* The show loved to use jokes based on this. For instance, in one of the movies, when Tai is desperate to reach any of the other kids, but the phone lines have all been tied up by Infermon, a computer virus, he reaches a phone operator over and over who keeps telling him that the lines are busy in an increasingly frazzled tone until finally screaming at him "Did you hear me?! IT'S BUSY!!!!!"
* The showmanship could be just as important as the killing. The more popular you were, the better chance you had to be spared when you were eventually defeated by someone. Emperors like Caligula actually lost popularity when they refused to spare the people's favorites.
* The Show Must Go On 2007 is a high-ranking gangster, but he's trying to provide for his family, who live in less than ideal conditions.

* The Show Must Go On: No matter what problems occur during a live performance, the characters do what they can to keep the show going.
* The Show Must Go On: When the rest of the performers make an effort to continue the production.
* The Show Must Go Wrong: You fail to keep disaster from happening during your performance.
* The show never shows poor and/or starving children in third-world countries with fairy godparents, despite the fact they're
* The show occasionally has some absurdly victorious killers, such as in the episodes "North Mammon" and "Mr. Scratch". In both episodes, the BAU can't even figure out their identities — let alone track them down — until after they've succeeded in their sprees anyway, and they even get to

* The show often (but not always) uses metric units that are not used in contemporary Britain in its futuristic stories, such as kilometres, even though it almost always sticks to miles for stories set in contemporary Britain. Examples of futuristic stories that use kilometres include
* The show often had actual members of the military on screen, including two Air Force Chiefs of Staff playing themselves.
* The Show of the Books: A television show adapted from a book series.
* The show once featured Ziva, Gibbs and McGee having a bet over what interrogation method Tony would use.
* The show once features Elliot and Carla walking in on a patient having sex. With
* The show once plays this relatively straight, except that the man is a poet inspector.
* The show originally played with this trope by suggesting while Chibi-Usa's powers are mostly useless, using them with Usagi's similar ones results in something powerful. In the fourth season, this was taken further when they couldn't even transform or deliver a finishing attack without being together. Many fans cite this as a detriment to Usagi's role as the show's star, but also a plot device to handwave Chibi-Usa's increased screentime pushing out the main cast. Unlike
* The show originally subverted this with Hank Hill's team getting blown out in the state championship. However, this was later retconned to have been a close game that Hank lost for his team.
* The show parodied it in the first Treehouse of Horror episode, where one segment features an adaptation of Edgar Allen Poe's "
* The show parodies this with Eric trying to induce a temporal coma so he can travel back into the past and learn about the Founding Fathers. By dropping weights onto his head. Notably, this
* The show played with the idea of science vs. faith, as epitomized by Jack and Locke respectively. There are scientific explanations for many of the things that happened (plane crashed, the time travel, etc.), and though Jacob guided the events of the whole show, it doesn't mean the actual events lack a scientific reason as to how they happened. Put simply, the writers deliberately wrote the show so that most events were a blend of the scientific and the faith-oriented, and very few things were purely one or the other.
* The show plays up this vibe deliberately with Chris, who has a pretty obvious attraction to his mother Lois. She seems more or less oblivious to it, and it's always
* The show plays with the trope with the Season 5 episode "Cause and Effect". The very first thing we see of the episode is the
* The show pokes fun at this on occasion, in the fact that it takes place 1000 years later, thus the
* The show pretty much ignores fluid dynamics whenever it's convenient and goes with the
* The show puts a paranormal take on CPR in the episode "Oubliette", where Mulder tries to save a drowned girl but his CPR seems futile. But because the girl has a strange physical-psychic transference link to another person, she suddenly revives

while her 'partner' is found dead, drowned despite sitting in a police car nearby.
* The show ran into a snag when two cohabiting families for whom they had built a massive house began fighting, causing the larger, adopted family to move out. ABC legally washed its hands of any responsibility.
* The show ran into this problem when adapting Shae, Tyrion's personal whore from the books. They gave her
* The show regularly has black characters in historical settings, but these are often either based on real life (such as black Secret Service agents in the 1970s) or due to episodes being set in fairly cosmopolitan places (e.g. Renaissance Venice) where one might actually have seen races mixing together. In one episode, Martha asks if she should be worried about being a black woman in old-time London, but the Doctor points out that there are other black people walking around unmolested (which was
* The show reimagines sidekicks/young partners for superheroes. Batman points out a rather practical reason to do this: because nobody takes them seriously, they're much better suited to covert operations. After all, if the heroes are all fighting the giant
* The show reused many scripts, mainly from 1953-1955. This was due to the television show becoming a higher priority than radio. Many shows that weren't strictly a reused script still reused routines from earlier shows, Dennis Day's songs, and the Sportsmen's commercials. Even the TV show often reused old scripts from the radio series. The Christmas shopping episodes, in particular, go clear back to 1939 in a recognizable form.
* The show reuses the same footage of the kids buckling up when they're about to go into space
* The showrunner isn't personally involved with every aspect of the show: The writing staff comes up with plot ideas and first drafts of episodes, while the showrunner selects which episodes get made and leads script revisions. The showrunner also isn't all-powerful: the senior production staff can and do
* The showrunners of the new TOS-based movie series cite this episode, suggesting that the new
* The showrunners were under the belief that Farscape had been renewed. However, it was suddenly cancelled right around the filming of the final episode. They debated options but ultimately didn't have the time or money to change the ending. So the show reluctantly filmed the ending as it was, and hoped it would somehow work out. The cast and crew were notably upset about it when informing the fans of the series' cancellation.
* The show's animation noticeably became a lot more fluid and bouncy around the premiere of Season 31, compared to the stiffer
* The show's attitude to destiny can be summed up nicely by Iroh's line:
* The show's case is notable in that it's one of the few franchises to achieve this status while exclusively catering to mature audiences, aside from video games such as
* The show's channel, flag. When they refused to let the Prophet appear again in "Imaginationland", a coke-snorting Buddha appeared.
* The show's creator, Sophie Altman, remained as executive producer until her death on May 24, 2008, shortly after production wrapped on Season 47.
* The show's creators, Trey Parker and Matt Stone, have joked that every time
* The show's creator Thomas Astruc has created historical Ladybugs and Cat Noirs and posts about them on his social media, though has no solid plans for bringing them into the show. Though there was a comic series announced to focus on this, it has since been stuck in
* The show's director described the main two character's arc as "Utena is the vehicle through which Anthy escapes from Ohtori." Which is one explanation for why she suddenly turns into a sports-car near the end of
* The show's editor, John Semper, was deeply frustrated by the show's handling of the Hobgoblin, as he thought including him before the Green Goblin appeared made no sense and defeated the point of the character. This call was made by the person he had replaced and could not be undone because merchandise had already been produced

for the character.
* The show seems to love doing this. You'd think that characters with names like Angel, Faith, Harmony and Glory would be heroic characters, but they're all villains. While Angel does pull a
* The show set out to subvert this trope with the titular character; she comes off on first acquaintance as a stereotypical Dumb Blonde, but turns out to be a clever, wisecracking
* The show sets up a lot of romantic tropes around Steven and Connie, including Steven working up the courage to talk to her followed by a
* The show's fictitious band Geronimo Jackson had a single, "Dharma Lady", released on iTunes.
* The show's final arc started off by being dominated by the battle with Zarc, whose arrival, being built up for the entire series, ended up being absolutely baffling, between his ugly design, bizarre backstory and motivation, and bland personality. Five straight episodes were dedicated to the good guys failing to inflict any lasting damage on him, quickly devolving into a bore, before he was defeated in a rather anticlimactic fashion. What was more problematic was that, after Zarc was defeated, the show spent
* The show's first televised airing in Mexico had an oddly strict B (ages 12 and up) rating and aired in the late evening, possibly because the channel thought its content would be along the lines of
* The show's full of those. In one episode Rebecca, Amanda, Noah and Wilder all spit-take at the same time when Michael announce he had a girlfriend. Twice. And that's just the intro!
* The show's future was still in question for years, and in the commentary for "
* The show shows Prince Arthur to not only be Camelot's heir apparent, but also the day-to-day commander of the kingdom's armed forces. He not only leads them in battle, but also recruits the knights and oversees their training. He also seems to be the closest thing that the kingdom has to a sheriff or chief of police. If any "crime" occurs, it's usually Arthur that's sent to investigate.

* The show's led to many young people seeking out Wicca or looking to become witches themselves. Several covens reported getting calls and emails well into
* The show's main plot has shades of this as well: Kiva and MEGAS are sent back in time (further back than expected) and the Glorft commander followed her.
* The shows may be quicker/cheaper to produce, since a Quarter Hour Short is generally producing only 11 minutes of showtime (to allow for commercials). Might not need as many viewers to be renewed as a more expensive
* The show's most prominent example is robot dog K-9, who the Doctor later passed on to companion
* The show's name in English also allowed the title ship to be called the SDF-1, which is a play on the Japanese "Self-Defense Forces," the post-WWII Japanese military.
* The show's opening cartoon title sequence showed Groucho as a duck, complete with glasses, cigar, bow tie, and bushy eyebrows.
* The show's original announcer Andrew Timothy also left early in the show's run, claiming that the surreal humor was damaging his sanity.
* The show's original comic book tie-in, also written by Weisman and staff writer Kevin Hopps, also told many canonical stories that were interquels to various episodes. Every story arc but the last one took place around season one, while the final story arc took place exactly one month before the start of
* The show's original run was so popular with adults that a few episodes were broadcast during primetime.
* The show spends the last portion of its first season dealing with the infighting between loyal SHIELD agents and those who served HYDRA. By the time Season 2 starts, however, this conflict is over, allowing SHIELD to focus on HYDRA's external organization.
* The show's primary setting, the eponymous station, takes place on an O'Neill

Cylinder. Various fluff even call all
* The show's primary villain, Hawkmoth, is trying to steal Ladybug and Cat Noir's Miraculouses because combining them will let him make a Wish. It's been implied that he wants to use this Wish to undo whatever event left his wife trapped in a magical coma.
* The shows resident wacky guy/lech Barney proudly proclaimed that there was a written Bro Code, that all Bros must follow. An actual written version was released into book stores. Also available are "Bro on the Go" and "The Playbook".
* The show's retelling of the story of Jonah ends extremely abruptly, with Jonah in the middle of a hissy fit after God has rebuked him for wishing death on the repentant city of Nineveh. This follows the original Biblical account, where the story ended equally abruptly.
* the show's ropey visuals comic "The World Shapers" retcons them into the ancestors of the Cybermen.
* The show's second season "2nd Gig", would delve into the concept of using multiple Stand Alone Complexes to persuade and influence public opinion on certain subjects, such as the intentional spreading of misinformation (what would be dubbed as "Fake News" in the real world) to convince an entire population to show hostility against minority groups.
* The show's second season had Jack recover some of his ordinary life by the end. The third season reveals that he has completely screwed it up between seasons, becoming (among other things) a heroin addict.
* The show's second season seems to have been set aside for this specific purpose. As what amounts to a 12-episode
* The show's setting is persistently referred to by the odd name "Halverston and area." It's even subtly Lampshaded at times, with the narrator uncomfortably tacking on "and area" where it doesn't really fit the flow of the narration.
* The show's seventh season returns to the Season 1 concept as Henry, Jacinda and Roni are unaware they are the Author, Cinderella and Regina and that Victoria is Lady Tremaine who wants to crush them for what they did to her back in the Fairy Tale World.
* The shows sometimes have a multiple tier grunt system, such as normal Kelzaks and their red
* The show's specials will spend a lot of time on shots of the local scenery and culture. They're so elaborate that even non-gearheads enjoy watching them.
* The show's staff have confessed their dislike towards Cro-Marmot due to him being such an
* The show's studio audience by the latter half of the run was actually filled with hardcore fans of the show that were excited to be there (versus the "Hey you're visiting Hollywood, come in and watch a TV show being filmed!" that many shows did) and maybe at times were a little...overboisterous (the many moments where its obviously breaking the flow of the characters waiting abnormally long times to speak or continue a conversation because the crowd's going crazy),
* The show stars a Revolutionary War-era British soldier who had a change of heart and joined the American side, and fully supported an end to slavery, as if having
* The shows themselves have a strange relationship with "the wizard," where things we'd call "magic" are described in sciency terms because, well, they're robots. Gods, demons,
* The show's title character and her father, Keith Mars. They've always shared a very close bond, which has only increased when Lianne Mars
* The show's title has officially changed three, first to "Aqua Unit Patrol Squad 1", later to "Aqua Something You Know Whatever", and then to "Aqua TV Show Show".
* The Show Stoppers", a montage features the Cutie Mark Crusaders apparently scaling a mountain top and getting blown off by the wind. The camera pulls back to reveal it's just a small hill.
* The Show Stoppers", Scootaloo bangs her head against the piano when she has difficulty composing the Cutie Mark Crusaders' song for the talent show.
* The show subverted this, mostly in the second arc of Mechtanium Surge. At the very beginning, as Gunz was preparing to throw Reptak out, he was struck by

Mechtavius Destroyer. In many of the battles, Wiseman would order an attack before the Bakugan got to combine. Most notably in the episode "Evil vs. Evil" when Mechtavius Destroyer won't let Betadron, Kodokor, and Mutabrid combine and actually kills Mutabrid in the process. Surprisingly, he didn't try this in his battle against the Brawlers three episodes from then.
* The show subverts the original Funimation dub with Vegeta mentioned in the Anime section above. In
* The show surprisingly uses CGI to animate the Timberwolves in the episode "Spike at Your Service". While there may be an off-chance that this was used intentionally to make them look strange, it's nonetheless quite jarring since they last appeared in "Family Appreciation Day" Flash-animated like everything else and the animators had already proven they could pull off convincing 3D effects without CGI before.
* The show's usage of "Smeg" became so prolific that when Craig Charles visited a PBS station in California for a pledge drive, an astonishing number of people pledged on the contingency that he would either call them a smeghead on air, or tell them what "Smeg" meant. His answer to the latter? "Ask your mother."
* The show's viewers ask Kaeloo and Mr. Cat if they have some kind of romantic relationship going on. Mr. Cat attempts to tell the audience that Kaeloo is definitely in love with him, given the fact that she texts him nonstop. Before he can read any of the texts to the audience, Kaeloo runs up, grabs his phone, shakes him roughly by the shoulders, and gives him a
* The show's vision of Red Riding Hood was also revealed to be bisexual after she formed a relationship with Dorothy Gale.
* The show tends to make this a gag about once every ten episodes: for instance, Randy explains it in Monk's style, complete with flashbacks, to a rookie officer, who then explains she already heard it from Monk.
* The show took a bump in quality towards the end of the first series as
* The show typically prefixed its numbers with KL5, but in one episode Elaine reveals that when a man she doesn't want to see again asks for her number, she gives a fake one that spells "No Elaine", which is one digit
* The show used the same hallways to represent interiors on industrialized planets.
* The show uses this again in season four with a cat in a locker — since Dean is under a fear curse at the time, he
* The show was also briefly retooled in the fourth season. The comic book-setting was pretty much abandoned (with the exception of "turning the page", though they really couldn't get rid of that, as well as the opening and ending themes), the show's TV studio setting was more apparent, the jokes in the Henry and June segments became less random and more "mature", and most of the "classic" shorts skipped a few episodes.
* The show was also named Stargate: SG-1. Presumably if they had a Stargate: SG-3 we would get to see SG-3
* The show was famous for overusing the Viper launch sequence, as it used very expensive high-tech special effects (
* The show was originally set in Riverside, east of Los Angeles, and was scheduled to shoot there before the company received a generous tax break from the city of Albuquerque. The production team eventually decided to change the setting to Albuquerque because the scenery was so distinctive.
* The show would be retooled the third (and final) time in the seventh season, where Chaz is now married to Kira, introducing her, her daughter Kimi and their dog Fifi. Much like Tommy and Dil before, many of the episode's plots would revolve around Chuckie's relationship with Kimi. Grandpa Lou also moves out of the Pickles' house. The show's opening sequence was also changed for the first (and only) time since the beginning.
* the show would have been awfully boring if they had a commonplace solution for every scenario.

* The Shredder has several scars across his lips from being clawed by Splinter when

he was still a normal rat. Oroku Saki returned the favor by cutting off part of Splinter's right ear.
* The Shredder is supposed to be a ninja yet wears samurai-like armor.
* The Shredder's helmet and the Foot Clan's ninja masks could count as well.
* The Shredder was a starter villain, getting himself killed rather humiliatingly at the end of the very first issue. A colony of intelligent worms would later assume the mantle of the Shredder, but even they only appeared in a few issues and played a fairly minor role in the comics' plot. However, due to his status as the first villain the Turtles fought and his
* The Shredder wasn't the major villain in the original Mirage run. He died in the first issue, and only came back once in canon as a worm colony clone. It was only through the Fred Wolf series that he took on the arch-nemesis position, and any other appearances and allusions to Shredder in the Mirage comics (such as the Shredder Shark monster) came out much, much later. After the
* The shrike, aka butcher bird, stores food by killing small vertebrates or bugs and impaling them on thorns. Occasionally they've been reported to do this to rival shrikes, as well.
* The Shrike: Jim is put in the mental ward of a hospital after a suicide attempt. As in many instances in fiction, the mental ward is portrayed as a Kafka-esque prison, even worse than a regular prison as there is no means of appeal or escape. Jim is trapped there, with psychiatrists who are looking for a reason to keep him committed and a wife who is manipulating events for her own advantage. Eventually Jim figures out that until he gives up his girlfriend, goes back to Ann, and submits to her control, he will be left in a state mental asylum to rot.
* The Shrike. The thing can travel through time, kill all of its enemies in a blink (by freezing time around them) and impale them in a metal tree designed to torture them for centuries.

* The Shrine takes place in a small Polish village that is cursed with a demonic statue standing in constant fog. Those who approach the statue in the fog, eventually become possessed by the demon.
* The Shrink: A psychiatrist or psychotherapist who provides mental health services.
* The Shrink (Takes care of the team's mental health, which may be necessary considering what they have to go through in their adventures.)
* The Shrink: The psychologist can only be three things: good, bad, or "well-meaning."
* The Shrouded Isle demands one member of a noble house be sacrificed to him every three months. He often asks that someone who harbors a specific major sin be the victim. However, selecting too many from one house will incite a rebellion, ending the plsythrough.
* "The Shroud" has a little boy returning because his mother was mourning too strongly: her tears had soaked his shroud so he could not sleep.
* "the Shrouding" altered the nature of the Transformers multiverse, doing away with the concept of multiversal singularities and greatly strengthening the boundaries between dimensions.
* The Shroud of Rahmon. Angel stakes him to get into a heist by impersonating him. He gets rid of the sunglasses quickly but keeps up the fuss about the hair.
* The Shroud Of The Thwacker by Chris Elliott, a historical fiction spoof set in the 19th century, features wooden mobile phones that run on kerosene.
* The Shroud. The story is about a woman who weeps over her dead son day and night. One night, the boy's ghost asks her to stop mourning so he can rest in death.
* The Shroud wants to consume all life in the universe, with Dark Tails then intending to turn all life including the Shroud into
* The Shrug has also been applied to the entire chapter "King's Cross", which, according to Jo, could be interpreted as reality or simply "Reality inside Harry's head" — but why on Earth should that mean it was not real?

* The Shufflers has Governor Mumpkins, an adorable cat that follows Märchen and Hiddenite in their adventures.
* The ShufflersHiddenite comes from a tribe of mages called the Harvesters who were Shrouded in Myth and dismissed as fairy tales. He has the unique ability of having his own world in his cloth. When he confirms he’s a descendant, Märchen outright calls him a walking legend.
* The Shufflers: Märchen is a middle-aged cartomancer who’s fallen on hard times, trying to make money by carrying out fortune telling. Hiddenite is a young descendant of a line of powerful mages assumed to be a legend. After Hiddenite saves Märchen from being persecuted by local authorities, Märchen gets Hiddenite to agree to be his bodyguard in exchange for lodging. Over time, the two slowly form a deep and genuine friendship.
* The Shufflers: Märchen is in his 30s at least while Hiddenite is a young man. Hiddenite starts off being a bodyguard to Märchen, but eventually the two come to care about each other as friends.
* The Shufflers, Saphy Dutchkiss fulfils this role unintentionally. She’s a Shipper on Deck who enjoys writing romantic fanfictions of the people she meets in real life who she thinks would have good chemistry. Thanks to her logomancy powers that she’s unaware exist, she ends up actually pairing said people together.
* The Shufflers. Thanks to Märchen’s somewhat long hair and his portly figure, the hospital mistakes him for a pregnant woman and attempts to transfer him to the maternity ward.
* The Shufflers: The cloth attached to Hiddenite’s staff acts as this. It’s shown that prolonged distance from the staff hurts him and leaves him feeling weak. His mother, who appears to him in a vision, describes it as his lifeline.
* The Shufflers. Then he yells “No!”. Silence ensues while the characters all look awkwardly at each other, laughter gone.
* The Shugoki class were originally this for the Dawn Empire. The trailer for the class states that the Shugoki were new allies who joined the Dawn Empire's people when they settled their new lands, and served as bodyguards and protectors. Since then, they have "become as family" to the people living in the Dawn Empire, to the point that two Shugoki are considered Daimyo who can vie for the Imperial throne. It is strongly implied that the Shugoki are actually descendants of native Vikings in the region, which is supported by not just their massive size (with only the Vikings' Warlord and Raider classes being of comparable stature) but also certain Shugoki helmets have red or blond hair and beards.
* The Shuma-Gorath is a high-end example, dwarfing the likes of Mephisto and Dormammu by a significant margin and having enslaved hundreds if not thousands of other realms. Out of all of Marvel's evil Gods, he is likely the most powerful, which goes a long way to explaining why it both appears very sparingly and only manages to partially manifest small fractions of itself at any given time.
* The Shunned House" goes insane and is confined to the upper part of the house, although this is apparently relatively public knowledge, found in an account of the history of the house, rather than a closely guarded secret. After the presence haunting the house attacks her, her protests are dismissed as just another symptom of her insanity.
* The shushing/bleeping is especially frustrating for owners who saw the series first on the DVD set and were unaware, because they're listening to actors being shushed on plot points and are thinking to themselves "But what sort of idiot listens to the DVD commentary BEFORE watching the series through?"

* The siblings of Hoteye/Richard Buchanan and Yukino Agria (Wally and Angel/Sorano, respectively) weren't surprising to the majority of the fanbase who put two and two together. The former pair of brothers have similar appearances with polygonal bodies, while the latter pair of sisters have white hair and are Celestial Spirit Mages. Oddly enough, Lucy, who's fairly intelligent, heard Yukino's story about her sister and knows both Yukino and Sorano, doesn't seem to make the connection.

Casual museum visitors today are likely to go "What test pilot movies?"
* The Siddarmarkians have a special marching song, the Pikes of Kolstyr, that announces their intentions to do this. It was written in comemmoration of an old atrocity by the Desnairian Empire and is used to announce their intent to avenge similar atrocities, such as the Church's Sword of Scheuler, which sparked civil war throughout the nation.
* The side character stories also feature a psychic who enjoys telepathically participating in her neighbor's sex, and using telekinesis for unusual purposes.

* The Sidehackers tells a story about prisoners who have heard the same jokes so many times they just gave them numbers. If they want to tell a joke they just yell the number and everyone laughs. A new prisoner tries yelling a number only to get no laughs and told he just can't tell a joke. Ironically Crapout himself falls under this; he can't stop cackling to say even a full sentence of the joke, completely killing the humor.
* The side-jobs have no impact on plot or characters. For example Therion will

* The sidequest "Those!", which involves exterminating a nest of giant fire-breathing ants, is directly based on the 1954 B-movie
* The sidequest to recruit the Blue Suns falls into this if you choose to take the Paragon route. The Blue Suns would be willing to join Shepard in the Reaper War, but they're currently being hassled by Citadel fleet patrols, led by turian general Oraka. Oraka is hassling them because the Suns are raiding trade shipments carrying high-end weapons needed for Citadel defense. He'll agree to leave the Suns alone if he can get weapons from an alternative source. You can find that source in a black-market dealer, but he won't deal in credits - he expects the economy to fall back to a barter system if the Reaper War is lost, and wants an advantage by acquring valuable artifacts to trade with, which you can only find in Reaper-occupied space. The Renegade option is much quicker:
